Completed Document Type: Operation & Maintenance Order/Agreement
Completed Date: 01/19/2017
Comments: Effective January 19, 2017, the California Department of Toxic Substances Control (DTSC) and Safety-Kleen Systems, Incorporated (Proponent) enter into this Operation and Maintenance Agreement (Agreement) for the site located at 400 Market Street, Oakland, Alameda County, California 94607 (Site). A DTSC-approved remedy has been installed at the Site for the remediation of soil gas and groundwater. The remedy consists of continued operation and maintenance of the sub-slab depressurization system and soil vapor and groundwater monitoring wells for monitored natural attenuation of groundwater. Proponent shall fully implement the DTSC-approved Operation and Maintenance Plan dated February 19, 2016 or any successor O&M Plan as later approved by DTSC, including any requirements for inspections, monitoring, reporting and record keeping.

Completed Document Type: RFI Report
Completed Date: 08/20/2013
Comments: Revised RFI Report Addendum. The RFI Addendum field investigation was conducted pursuant to the December 2012 RFI Work Plan Addendum. Additional groundwater data at the facility has been further characterized and an indoor air investigation was completed to further evaluate the effectiveness of the SSD system. PCE and TCE, the two primary constituents of concern identified during 2011/2012 soil gas sampling, were not detected in the March 2013 indoor air samples. Acrolein, benzene, and carbon tetrachloride were detected in indoor air above RSLs, but at similar concentrations to background. Chloroform was detected in three indoor air samples above the residential RSL but below the industrial RSL. Chloroform is commonly detected in indoor air and often attributed to use of water from chlorine treated water systems. Ethylbenzene was detected above the residential RSL, but also below the industrial RSL in all samples. Potential indoor air sources of ethylbenzene include paint, paint thinner, wood office furniture, scented candles, and gasoline. Information provided in the September 2012 RFI Report indicated the current SSD system met industry standard pressure differential benchmarks within the building. Evaluation of the March 2013 indoor air data further supports the SSD system is effective in mitigating potential vapor intrusion attributable to soil gas impacts beneath the building. March 2013 groundwater data was generally consistent with historical results. It should be noted that the March 2013 TPH-MS concentration in the sample collected from well MW-14 (2.11

Comments: Quarterly Progress Report (July through September 2011). Per DTSC's formal request and in accordance with the CACA, Safety-Kleen Systems, Inc. (S-K) submitted an RFI Work Plan and two additional revised work plans between April 9, 2010 and May 20, 2011. S-K provided an additional RFI Work Plan Addendum to DTSC on July 8, 2011. DTSC issued formal approval of the RFI Work Plan in a letter dated July 12, 2011. Pursuant to previous notifications, S-K is scheduled to commence the additional RFI field activities the week of October 24, 2011. S-K will report the findings of the RFI in general accordance with the project schedule presented in the DYSC-approved RFI Work Plan.

Completed Document Type: Technical Report
Completed Date: 09/18/2014
Comments: Corrective Measures Study Update. Per the April 2014 DTSC-approved CMS Work Plan, Safety-Kleen Systems, Inc. (S-K) and DTSC agreed to evaluate data from a minimum of two consecutive quarterly groundwater monitoring events in April 2014 and July 2014. Pending results of the April and July 2014 monitoring events, S-K and DTSC would determine if two additional quarterly events are appropriate to evaluate monitored natural attenuation (MNA) as a remedial strategy for the site. The purpose of this letter report is to present the data collected during the April 2014 and July 2014 CMS quarterly groundwater monitoring events, and reach concurrence with DTSC on a path forward in finalizing submittal of the CMS Report. S-K believes that data presented in this letter report shows ample and appropriate evidence that MNA is a strong remedial option and would prefer to move forward with submittal of the CMS Report. If DTSC agrees that two additional quarterly MNA events are not necessary to complete the CMS, S-K intends to submit the CMS Report within 30 days of receiving formal DTSC concurrence. In the event that DTSC prefers additional information for evaluating MNA, the CMS will progress in general accordance with the timeline in the approved CMS Work Plan (two additional quarterly monitoring events and submittal of the CMS Report on or before March 31, 2015). DTSC approves the Update and agrees that no further monitoring for MNA evaluation is necessary.

Completed Date: 01/20/2017
Comments: Land Use Covenant and Agreement - Environmental Restrictions, recorded with Alameda County on January 20, 2017. This Land Use Covenant and Agreement ("Covenant") is made by and between Safety-Kleen Systems, Incorporated (the "Covenantor"), the successor in interest to the owner of record located at 400 Market Street, Oakland, in the County of Alameda County, State of California (the "Property"), and the Department of Toxic Substances Control (the "Department"). The Property that is subject to this Covenant, totaling approximately 0.6 acres, is more particularly described in the attached Exhibit A, Legal Description, and depicted in Exhibit B, Assessor's Map. The Property is located in the area now generally bounded by 5th Street on the north, 4th Street on the south, Brush Street on the east, and Market Street on the west. The Property is also identified as County of Alameda, Assessor Parcel Numbers 001-0113-001-02 and 001-0113-002-02. This Property has been investigated and/or remediated under the Department's oversight. The Department approved a Corrective Measures Study (CMS), dated April 2, 2015, and an Operations and Maintenance Plan and Monitored Natural Attenuation Plan, dated February 19, 2016, in accordance with Health and Safety Code, division 20, chapter 6.5. The remediation activities conducted at the Property include installation and continued operation and maintenance of the sub-slab depressurization system, monitored natural attenuation for groundwater, and land use restrictions. As part of the DTSC-approved remedy at the Site, the sub-slab depressurization system layout and a monitoring well location diagram showing the location(s) of the installed remedy are attached as Exhibit C and Exhibit D.

Quarterly Update: Entered 8/27/04 - The Oakland Service Center is a service and operation center which leases and services Safety-Kleen parts cleaning equipment and solvents to Safety-Kleen customers. The service center also collects spent parts washer solvents, aqueous-based solvents, dry cleaning wastes, spent silver-bearing waste and transfer wastes. Transfer wastes include industrial solvents, Freon, antifreeze, and paint waste/laquer thinners. The facility's hazardous waste storage permit expired in March, 1997. Safety-Kleen submitted a permit renewal application (Application) for the facility on February 14, 1997. Immediately after the completion of technical review of the revised Part B Application with three Notices of Deficiencies (NODs), Safety-Kleen submitted supplements to the facility's permit renewal application to add three new waste streams (aqueous cleaners, used oil and used antifreeze) to be managed in the underground storage tank (UST) at the facility. The 12,000-gallon UST is currently only permitted for storage of spent parts washer solvent. The Fiscal Year 2004/2005 Annual Work Plan calls for completion of technical review of the Application, preparation of draft permit, issuance of draft Neg Dec, public participation, and final permit determination. Update 6/29/07 - On April 17, 2006, SK notified DTSC that they intend to terminate their permitted activities and thus close the Oakland facility. The permitted units are: Tank Storage (one nominal 12,000-gallon double-walled underground storage tank used to store spent parts washer solvent), a Return/Fill Shelter (two drum washer units that hold a maximum of 1,500 gallons of sediment), and Container Storage (two container storage areas with a total waste storage capacity of 8,254 gallons). DTSC reviewed the closure plan of April 25, 1994 and determined that it was not up to current standards, and as a result, DTSC provided comments to SK on August 14, 2006. SK submitted a revised closure plan on September 21, 2006 by a Class 1

Comments: CFA for pilot study approved.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 06/12/2012
Comments: In situ treatments effective at site even with difficult lithology.
Recommend contaminated soil removal prior to further injections to improve effectiveness of oxidant.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 07/29/2010
Comments: Indoor air sampling completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 09/29/2010
Comments: Investigation didn't find the Harris Site contaminants of concerns, PCE,TCE or cis-DCE, in the indoor air or crawl space. However, low level concentration of vinyl chloride (VC) was detected in on residential unit. Due to the absence of VC in the crawl space or at the site soil, soil gas or groundwater, VC inside house is considered consistent with a household source.

Comments: DTSC issued the Work Order for Contract 19-T4785 to RMD for groundwater monitoring at two on-site and three off-site wells.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Project Management
Completed Date: 06/30/2021
Comments: Activity completed on 6/30/2021.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract
Completed Date: 06/24/2020
Comments: Contract 19-T4785 covers groundwater monitoring activity. The term is from 6/24/2020 to 6/30/2021.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 01/15/2021
Comments: DTSC issued the Stop Work Order because all work under Contract No. 19-T4785 for the Harris Dry Cleaners site in Oakland, California is complete.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Field Order
Completed Date: 11/16/2020
Comments: The Field Order specifies the following changes: Perform groundwater monitoring at off-site wells MW-1, MW-3, and MW-4 and arrange IDW drum pick up on the same day. Replace well box for MW-4. To keep total cost within the approved contractual budget of \$15,000, prepare an email summarizing the sampling activities implemented, transmit the laboratory report, and forward a copy of the manifest signed by the transporter. Authorizes utilization of the budgeted contingency of \$156.60 as necessary to complete the Field Order tasks.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Triage Meeting
Completed Date: 01/20/2022
Comments: Harris Dry Cleaner was given orphan status on October 5, 2015, and since then past costs have been deemed unrecoverable. Per DPM-CR-08 instructions, a separate NFCRA memorandum for an orphan site is not necessary. Once a viable financial party or other funding is established, new site cotes will be assigned to track new costs incurred for future investigation and remediation work.

Completed Document Type: Site Characterization Report
Completed Date: 02/01/2007
Comments: Investigation conducted by City of Oakland. Tetrachloroethylene (PCE) was detected om groundwater off-site above screening levels. DTSC did not oversee this investigation.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 09/10/1993
Comments: Investigation conducted by Penn Environmental. Soil samples had tetrachloroethylene (PCE) up to 0.14 milligrams per kilogram (mg/kg) and trichloroethylene (TCE) up to 0.19 mg/kg. Groundwater had PCE up to 8100 micrograms per liter (ug/L) and chloroform up to 2.3 ug/L. The report concluded that there had been an on-site release of PCE impacting groundwater, with evidence of off-site migration. DTSC did not oversee the investigation.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 08/04/1993
Comments: Investigation conducted by Penn Environmental. Limited soil sampling detected tetrachloroethylene (PCE) at concentrations up to 4.6 milligrams per kilogram (mg/kg). Report recommended further investigation of soil and groundwater. DTSC did not oversee this investigation.

Description: Harris Dry Cleaners (Site) is a former dry-cleaning facility located at the corner of 28th Street and Martin Luther King Jr. Way in a mixed commercial and residential area of Oakland. A two-story residential fourplex and three-story commercial and residential building are located on-site, along with a cinder block garage used for parking. The buildings have been vacant and not maintained since about 1996. The City of Oakland has identified this property as a blighted property. Harris Dry Cleaners began operations sometime after 1951 in the commercial unit at the corner of 28th Street and Martin Luther King Jr. Way. In 1983, Harris Dry Cleaners ceased operation and Telegraph Cleaners continued operating the business as a dry cleaner. In 1991, the commercial units in the three-story building were occupied by Telegraph Cleaners, a laundromat called Washouse and a small retail store. Telegraph Cleaners moved to another location in 1996. Site investigations conducted on the property detected tetrachloroethene (PCE) as the primary contaminant in soil, soil gas, and groundwater. Other contaminants of concern (COCs) include trichloroethylene (TCE) and cis-1,2-dichloroethene (cis-1,2-DCE) in groundwater. In November 2011, an in situ chemical oxidation pilot study was conducted at the Site. Although some reduction in PCE concentrations in groundwater was observed, PCE concentrations rebounded to similar levels prior to the pilot study. In 2014 and 2020, groundwater sampling was conducted only on offsite monitoring wells. The onsite monitoring well was not sampled because the property owner did not provide access. The offsite well located immediately adjacent to the Site reported the highest concentrations of PCE and TCE on both sampling events. PCE concentrations increased from 2,100 g/L to 5,200 g/L and TCE concentration increased from 7 g/L to 9.4 g/L, respectively. DTSC is currently planning to conduct two rounds of groundwater monitoring of onsite and offsite monitoring wells and indoor air quality assessment. Indoor air sampling will occur on a voluntary basis at properties located on 663 - 687 28th Street and 2721 Martin Luther King Jr. Way. MC 05/2022

 Eligibility: Eligible
 Has Projects: Yes
 NPL Status: Not on the NPL
 Property History: In 1942, the U.S. entered into a contract for ship repair facilities with Hurley Marine Works, Inc. (which leased 19.4 acres of land from the Port of Oakland) beginning in 1940 to form the NIR Repair Facility. In 1944, Amendment No. 4 to the Hurley contract provided for an expansion of the property to establish the NIR, which was comprised of approximately 3.4 acres of the Hurley property in Alameda County. The property was used by the 12th Naval District, Alameda for shipbuilding and ship repair during WWII. A Government-owned 2,800 ton Auxiliary Floating Drydock Light was moored at the NIR during WWII. Beginning in 1955 through the mid-1960s, the Martinolich Ship Repair Company leased the AFDL from the Government at the Hurley facility. The Department of Defense lease expired on 30 June 1965. The United States Navy leased the property from the City of Oakland and occupied it from 1942 to 1951 and sub-leased the property from 1951 to 1962. Pacific Dry Dock leased the site from the Port of Oakland and began operations at the site on July 14, 1964 for vessel maintenance. The parent company of Pacific Dry Dock (Crowley Maritime Corporation) informed the Port of

Fiscal Year:	2013
Federal Facility ID:	CA9799F5980
RAB:	Not reported
NPL Status:	Not Listed
Description:	The 3.4-acre site is located in Alameda County, California, and is approximately five miles southwest of the City of Oakland on the port waterfront in the San Francisco Bay (Inner Oakland Harbor). After the Department of Defense left the site, Crowley Maritime Corporation used the site for vessel maintenance until 1992. There were three underground storage tanks, and one aboveground storage tank located on the site. One 500 gallon leaded gasoline underground tank was removed in September 1994 by Crowley. The two remaining underground storage tanks, each having a 5,000 gallon capacity, were removed on June 30, 1998 by the Port of Oakland. The Port of Oakland razed the buildings comprising the Naval Industrial Reserve (NIR) in 1998 in a renovation of the industrial waterfront. The Port of Oakland still owns the site and currently leases out the property to the Oakland Strokes boating school.
History:	In 1942, the U.S. entered into a contract for ship repair facilities with Hurley Marine Works, Inc. (which leased 19.4 acres of land from the Port of Oakland) beginning in 1940 to form the NIR Repair Facility. In 1944, Amendment No. 4 to the Hurley contract provided for an expansion of the property to establish the NIR, which was comprised of approximately 3.4 acres of the Hurley property in Alameda County. The property was used by the 12th Naval District, Alameda for shipbuilding and ship repair during WWII. A Government-owned 2,800 ton Auxiliary Floating Drydock Light was moored at the NIR during WWII. Beginning in 1955 through the mid-1960s, the Martinolich Ship Repair Company leased the AFDL from the Government at the Hurley facility. The Department of Defense lease expired on 30 June 1965. The United States Navy leased the property from the City of Oakland and occupied it from 1942 to 1951 and sub-leased the property from 1951 to 1962. Pacific Dry Dock leased the site from the Port of Oakland and began operations at the site on July 14, 1964 for vessel maintenance. The parent company of Pacific Dry Dock (Crowley Maritime Corporation) informed the Port of Oakland that Pacific Dry Dock closed its operation at the site site on 17 May 1991. Currently the Oakland Strokes lease the property from the Port of Oakland. A hazardous, toxic, and radioactive waste (HTRW) project is proposed to further investigate the former tanks on site.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/27/2022	Source: EPA

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMs by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/20/2022	Source: Environmental Protection Agency

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Number of Days to Update: 79	Next Scheduled EDR Contact: 01/02/2023
	Data Release Frequency: Quarterly

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 02/23/2022	Source: Environmental Protection Agency

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

CERS HAZ WASTE: CERS HAZ WASTE

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.

Date of Government Version: 07/18/2022	Source: CalEPA
Date Data Arrived at EDR: 07/18/2022	Telephone: 916-323-2514
Date Made Active in Reports: 09/30/2022	Last EDR Contact: 10/17/2022
Number of Days to Update: 74	Next Scheduled EDR Contact: 01/30/2023
	Data Release Frequency: Quarterly

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 07/29/2022	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 08/18/2022	Telephone: 202-307-1000

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

East Map:	12016463 OAKLAND EAST, CA
Version Date:	2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

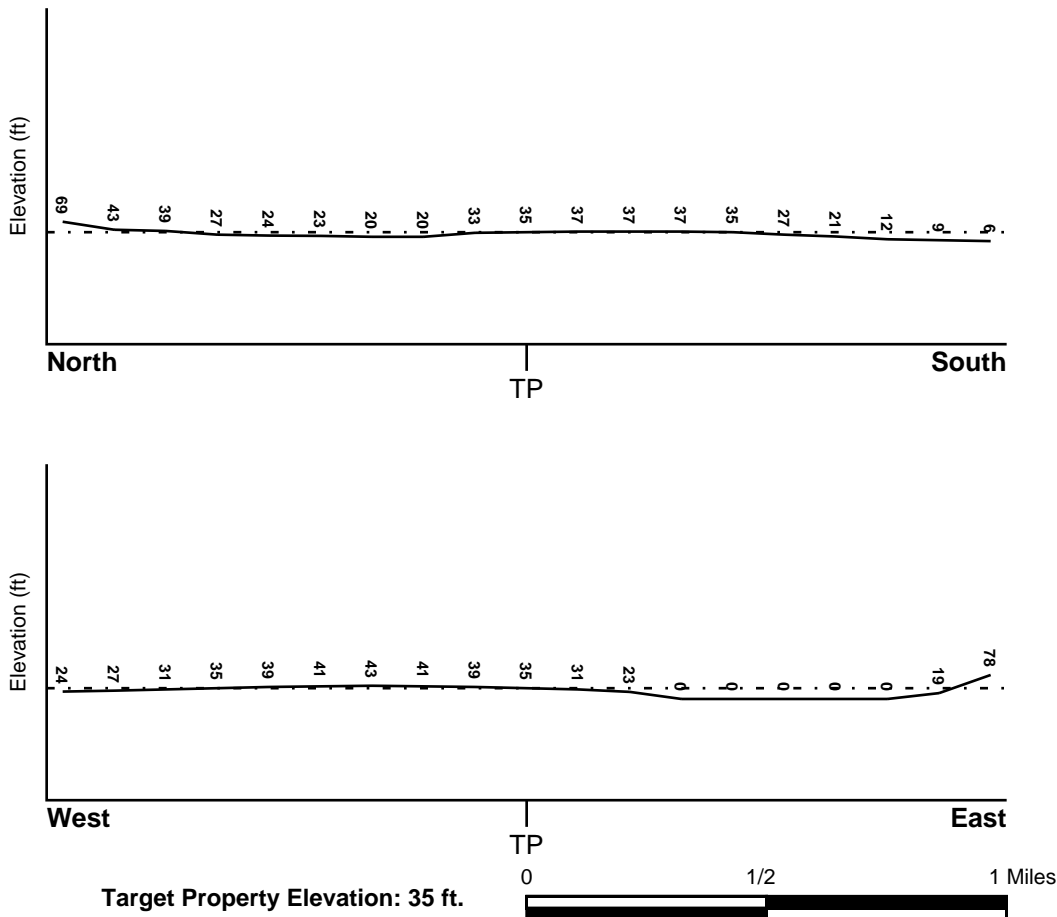

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
OAKLAND WEST	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

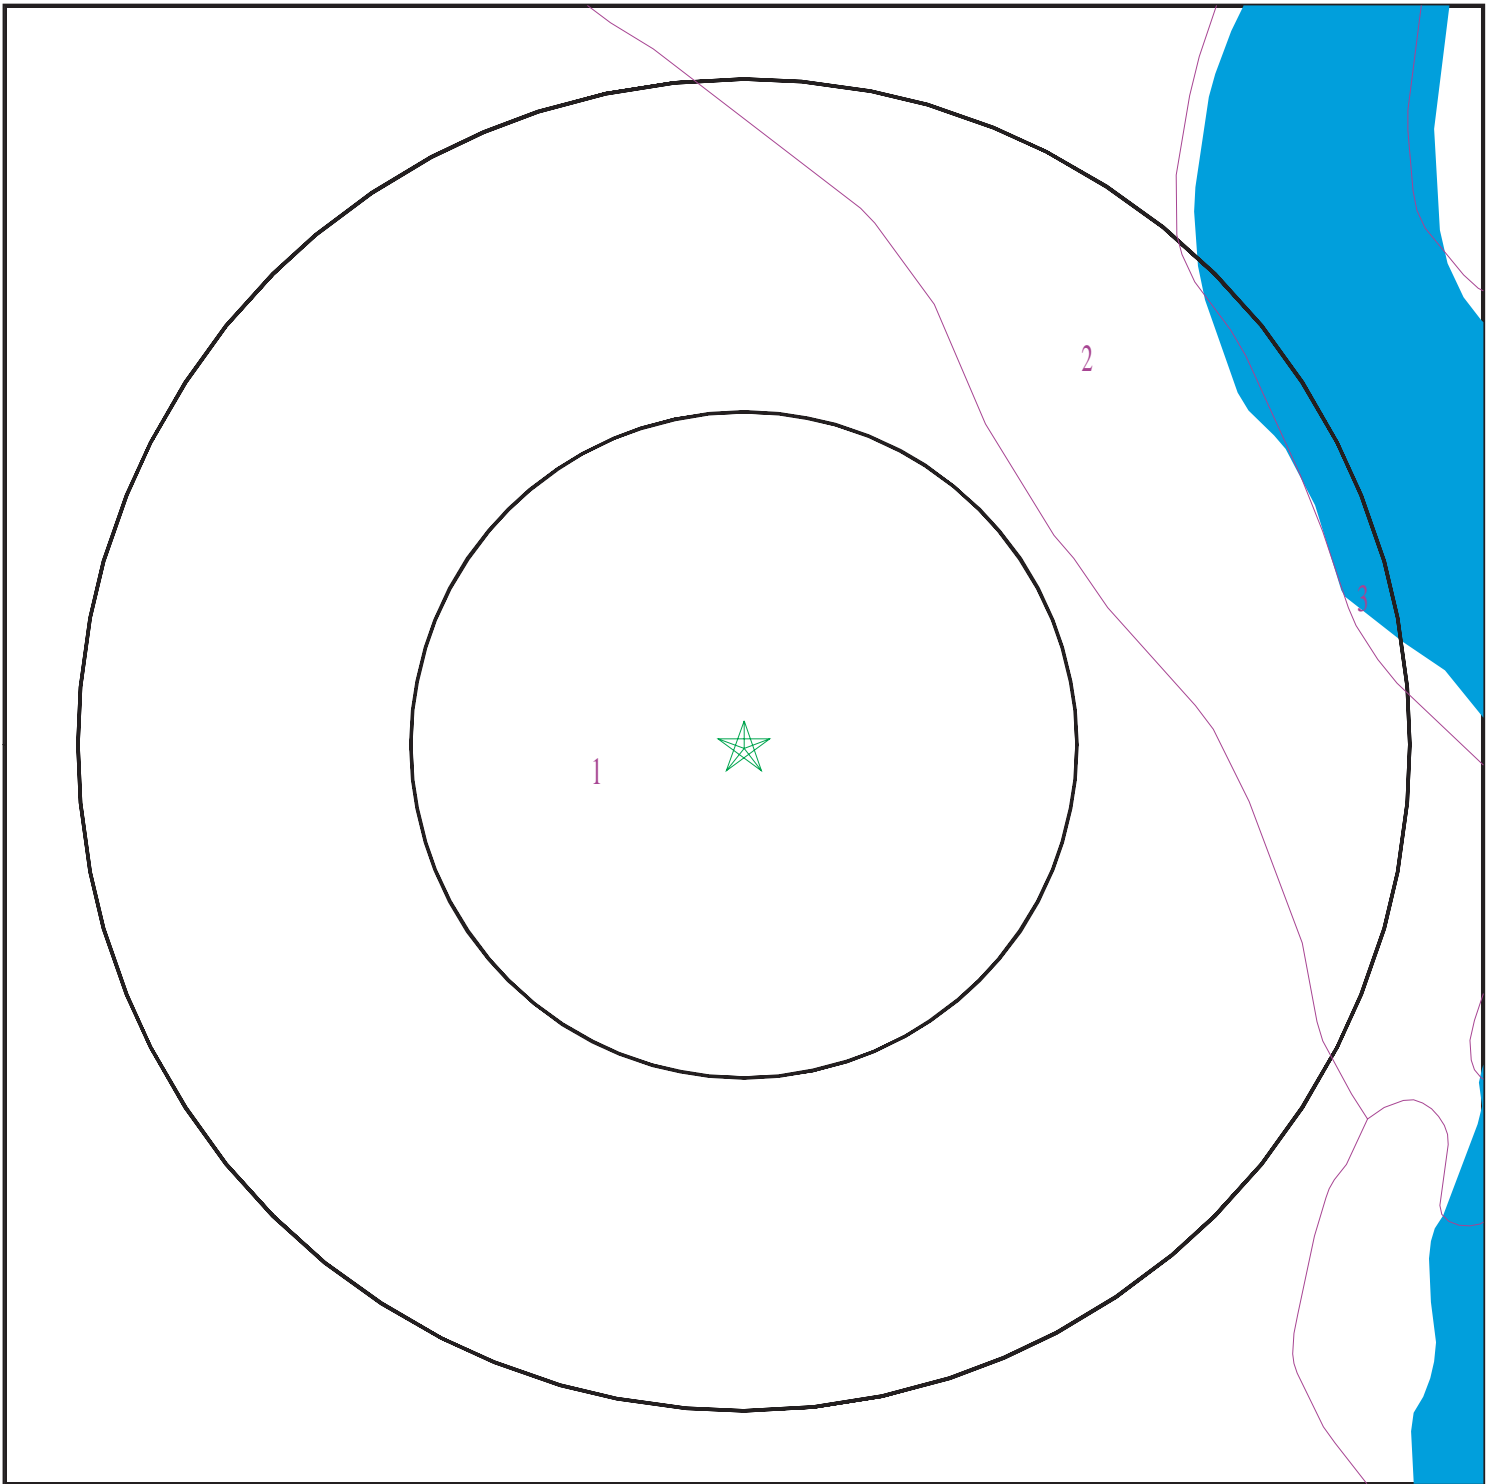

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q (*decoded above as Era, System & Series*)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 3

Soil Component Name: Water

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Contact: Janey Lange

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Rincon were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Rincon were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RE: Limited Destructive Pre-Renovation Hazardous Materials Survey
1600 Harrison Street, Oakland, CA 94612
SCA Project No.: K-13823.01

Dear Mr. Pineda:

This report summarizes the results of a limited destructive pre-renovation hazardous materials survey of the building located at 1600 Harrison Street, Oakland, CA 94612 in preparation for the future redevelopment of the building into offices and potentially into housing.

SCA was tasked with limited destructive pre-renovation asbestos, lead, and PCB sampling of visually identified suspect building materials to provide a cursory evaluation of building materials prior to the renovation of the building. Sampling was conducted on May 19, 2023 by Mr. Chaowen Huang, CSST, CDPH of SCA under the supervision of Tucker Kalman, CAC, CDPH, REPA also of SCA. SCA conducted sampling of asbestos-, PCB-, and lead-containing materials, and visual identification of suspect PCB-containing materials, ballasts and mercury-containing light tubes. Limited destructive sampling of some materials (e.g., coring of concrete building slab) was performed.

Asbestos

Sampling activities were conducted per Federal AHERA regulations (40 CFR Part 763). Samples of suspect materials were collected following modified AHERA sampling protocols, and sample locations were documented on the sample location diagrams (**Figures 1-2**). All asbestos samples collected by SCA were submitted to Eurofins Built Environment Testing Reservoirs (Eurofins) in Arvada, CO for analysis by polarized light microscopy with dispersion staining (DS/PLM).

SCA has entered the sampling data into **Table 1: Materials Matrix Reports (MMRs)** which present the detailed sample results, locations, and quantity estimates, as well as a summary of identified asbestos containing materials. Sample locations are included on the sample location diagrams in **Figures 1-2**, and Laboratory results in **Attachment A**. Note the following:

- 1. Three (2) suspect materials identified by SCA were found to contain asbestos over 1% and are summarized in the attached MMRs (**Table 1**).

Sample ID	Asbestos-containing Materials
PARAPET-16	Off-white painted (-) black tar (+) on parapet
RFMAS-18	Black roofing mastic/tar (+) on equipment curbs and skylights

(+): Positive; (-): Negative

2. Non-asbestos materials – Twenty-seven (27) suspect materials were tested or visually determined to be non-asbestos. All non-asbestos containing materials are tabulated in **Table 1**.

Sample ID	Asbestos-containing Materials
WLSH-1	Off-white painted non texture wall sheetrock (-) with tape and joint compound (-)
WLSH/CLSH-2	Off-white painted wall/ceiling sheetrock (-) with knockdown texture (-), tape and joint compound (-)
BBMAS-3	Tan mastic (-) behind 5" gray/white vinyl baseboard
FORMICA-4	White Formica countertop (-) with clear glue
FLVCS-5	Gray vinyl floor sheeting (-) with beige mastic (-) on concrete
FLVCS-6	Beige vinyl floor sheeting (-) with beige mastic (-) on concrete
WLSH/CLSH-7	Off-white painted wall/ceiling sheetrock (-) with orange peel texture (-), tape and joint compound (-)
CAULK-8	Limited gray caulking (-) on ducts
BEAM-9	Perimeter structural concrete (-) beams
COLUMN-10	Perimeter structural concrete (-) columns
SLAB-11	Concrete slabs (-) of the building
CURB-12	Perimeter concrete curbs (-) at the base of north and south perimeter walls
BRICK-13	Large red brick (-) with beige mortar (-) on perimeter walls
PUTTY-14	Gray window putty (-) on old colonial windows on the east perimeter wall
RFROLL-15	Gray/black rolled roofing felt (-) and tar (-) on main roof
PENMAS-17	Black penetration mastic (-) around pipes
CAULK-19	Tan caulking (-) along metal flashing on parapet
RF-20	Gray shingle roofing (-) with black tar (-) on the east end pop-up roof
RFMAS-21	Black roofing mastic (-) at the bases of reinforced metal trusses along the east and south parapets
STUCCO-22	Exterior stucco (-) at the west end of south exterior wall
BRICK-23	Red brick (-) with beige/gray mortar (-) on west perimeter wall
COAT-24	Residual black coating (-) over floor concrete at the west end of warehouse area by the roll-up door
SB1	Baserock and soil (-) underneath concrete slabs
SB2	Baserock and soil (-) underneath concrete slabs
SB3	Baserock and soil (-) underneath concrete slabs
SB4	Baserock and soil (-) underneath concrete slabs
CARPET-NNN	Gray/brown carpet with gray padding and no mastic over concrete

(+): Positive; (-): Negative

SCA assumes that this survey report may be referenced by Abatement Contractors providing bids for abatement of materials prior to renovation at the surveyed work areas. SCA requests that this text portion of the report be provided to bidding contractors for review. Bidding Contractors are hereby notified that the quantities included herein are estimates only, and all quantities should be field verified by the Contractor for any budgeting, planning or bidding decisions.

Lead

SCA performed bulk lead sampling of representative interior/exterior coatings and building materials to confirm the presence and extent of lead-containing paints. Samples were analyzed by McCampbell Analytical, Inc. (MAI) in Pittsburg, CA for lead by Inductively Coupled Plasma – Mass Spectrometry (ICP-MS) methodology.

In general, lead results ranged between 4.5 and 11,000 mg/kg (ppm) in paints and building materials.

The MMR (**Table 1**) shows detailed lead sample results and locations of the sampled materials. Sample locations are included on the sample location diagrams in **Figures 1** and laboratory reports in **Attachment B**.

None of the applicable regulations require removal of lead paint prior to demolition if the paints are securely adhered to the substrates (i.e., non-flaking or non-peeling). Disposal of the demolition debris in this case can be handled as non-hazardous and non-RCRA waste after the loose and flaking paint have been removed, as long as demolition practices do not compromise worker safety and waste stream characterization testing has been performed by the Contractor on the entire waste stream for verification.

Conventional demolition techniques should be employed for all painted surfaces with the Contractor complying with applicable OSHA and Cal/OSHA statutes regarding:

- Worker awareness training;
- Exposure monitoring, as needed;
- Medical examinations, which may include blood lead level testing; and
- Establishing a written respiratory protection program.

As lead was identified in most paints and a detailed inventory of paints was not performed for the project, for the purpose of complying with the Cal/OSHA lead in construction regulation (8 CCR 1532.1), all coated surfaces shall be considered to contain some lead and require demolition dust control procedures and presumed respiratory protection usage for compliance with Cal/OSHA's Construction Lead Standard under 8 CCR 1532.1. The aforementioned regulation contains requirements for lead air monitoring, work practices, respiratory protection, etc., that are triggered by the presence of any detected levels of lead.

Polychlorinated Biphenyls (PCBs), Mercury-Containing Items & Other Hazardous Materials

SCA collected a bulk sample of the suspect window putty to be analyzed for PCBs by McCampbell Analytical, Inc. (MAI) in Pittsburg, CA. SCA quantified lighting ballasts that were observed in conjunction with mercury-containing, fluorescent lighting fixtures in various locations throughout the building. PCB Sampling results, and quantities of lighting ballasts and fluorescent tubes in various locations are summarized in the attached **Table 1**, and laboratory reports in **Attachment C**.

Note the following regarding PCBs, mercury-containing items & Other Hazardous Materials:

1. Gray window putty on old colonial windows on the east perimeter wall contains total PCBs concentration of <0.5 mg/kg (PPM).
2. Various lighting ballasts were identified throughout the building. These ballasts should be inspected for a "No PCBs" label. These items would therefore be considered non-PCB-containing and would not require disposal as PCB wastes. If there are not any "No PCBs" labels, the ballasts will require disposal as PCB waste. SCA has quantified these ballasts in the attached **Table 1**.

3. Mercury-containing fluorescent tubes were identified in various areas. Fluorescent light tubes are required to be either disposed of as hazardous material, or recycled for their mercury contents. Note that costs for fluorescent tube disposal do not tend to be significant compared to overall abatement costs. SCA has quantified these lighting tubes in the attached **Table 1**.

If you have any questions or would like more information, please contact us.

Sincerely,
SCA ENVIRONMENTAL, INC.

Dear Tucker,

Eurofins Reservoirs is an analytical laboratory accredited for the analysis of Industrial Hygiene and Environmental matrices by the National Voluntary Laboratory Accreditation Program (NVLAP), Lab Code 101896-0 for Transmission Electron Microscopy (TEM) and Polarized Light Microscopy (PLM) analysis and the American Industrial Hygiene Association (AIHA LAP, LLC), Lab ID 101533 for Phase Contrast Microscopy (PCM) analysis. This laboratory is currently proficient in both Proficiency Testing and PAT programs respectively.

Eurofins Reservoirs has analyzed the following samples for asbestos content as per your request. The analysis has been completed in general accordance with the appropriate methodology as stated in the attached analysis table. The results have been submitted to your office.

RES 562806-1 is the job number assigned to this study. This report is considered highly confidential and the sole property of the customer. Eurofins Reservoirs will not discuss any part of this study with personnel other than those of the client. The results described in this report only apply to the samples analyzed, as received by the customer. This report must not be used to claim endorsement of products or analytical results by NVLAP or any agency of the U.S. Government. This report shall not be reproduced except in full, without written approval from Eurofins Reservoirs. Samples will be disposed of after sixty days unless longer storage is requested. If you have any questions about this report, please feel free to call 303-964-1986.

Sincerely,

A handwritten signature in blue ink that reads "Jeanne Spencer".

EREI establishes a unique Lab Sample ID, for each sample, by preceding each unique Client Sample ID with the laboratory RES Job Number.

EREI will analyze incoming samples based on information received and will not be responsible for errors or omissions in calculations resulting from the inaccuracy of original data. By signing, client/company representative agrees that submission of the following samples for requested analysis as indicated on this Chain of Custody shall constitute an analytical services agreement with payment terms of NET 30 days. Failure to comply with payment terms may result in a 1.5% monthly interest surcharge.

"When Quality Counts"

Analytical Report

WorkOrder: 2305E21

Report Created for: SCA Environmental, Inc.

320 Justin Drive
San Francisco, CA 94112

Project Contact: Tucker Kalman

Project P.O.:

Project: K13823.01; 1600 Harrison, OHA

Project Received: 05/19/2023

Analytical Report reviewed & approved for release on 05/26/2023 by:

Yen Cao

Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in a case narrative.

Glossary of Terms & Qualifier Definitions

Client: SCA Environmental, Inc.

WorkOrder: 2305E21

Project: K13823.01; 1600 Harrison, OHA

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LQL	Lowest Quantitation Level
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit ¹
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting limit ²
RPD	Relative Percent Difference
RRT	Relative Retention Time
RSD	Relative Standard Deviation
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure

¹ MDL is the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. Definition and Procedure for the Determination of the Method Detection Limit, Revision 2, 40CFR, Part 136, Appendix B, EPA 821-R-16-006, December 2016.

² RL is the lowest level that can be reliably determined within specified limits of precision and accuracy during routine laboratory operating conditions. (The RL cannot be lower than the lowest calibration standard used in the initial calibration of the instrument and must be greater than the MDL.)

Comments:

NOTE: Soil samples are discarded 60 days after receipt unless other arrangements are made (Water samples are 30 days).
Hazardous samples will be returned to client or disposed of at client expense.

NOTES: * STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U** = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.

NOTES: * STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U** = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.

1.0 INTRODUCTION

SCA Environmental, Inc. (SCA) has prepared this limited Phase II Environmental Site Assessment (ESA) report to summarize the discrete soil and soil vapor sampling activities at 1600 Harrison Street in Oakland, CA 94612 (hereafter referred to as the “Site”, as shown on **Figure 1**). Field work was performed on May 16-17, 2023 by SCA. Results for this sampling event apply only to the 1600 Harrison Street area as shown in **Figures 1 and 2**.

The Site consists of a 0.27-acre parcel located on Harrison Street in Oakland, California. The Site consists of a vacant commercial office space, formerly used as an automotive repair facility. The building covers the entire Site. The north and south ends of the building are lined with small offices, conference rooms, bathrooms, and a small kitchenette. The center of the building has an open floor plan and was previously filled with cubicle spaces. The Site is surrounded by multi-family residential buildings to the south and east, commercial offices and an associated parking lot to the northeast, and multi-family residences and commercial offices to the northwest across Harrison Street.

SCA completed this work for Oakland Housing Authority (OHA). SCA understands that the scope of redevelopment at the Site includes renovations for office space in the immediate future and potentially redevelopment for residential housing in the future.

A Phase I ESA performed by Rincon Consultants (Rincon) in 2022 identified one recognized environmental condition (REC) and other notable findings associated with the Site¹. This preliminary Phase II site investigation was designed and completed to assess the soil and soil vapor conditions at the Site and to determine if on-site and off-site sources as identified in the Phase I ESA have adversely affected subsurface conditions. A summary of RECs and other notable findings identified in Rincon’s 2022 Phase I ESA and sampling activities to address these items are presented below:

1. **REC #1:** The Site was formerly used as an automotive repair shop from at least 1938 to 1992. These sites are associated with usage of petroleum hydrocarbons and solvents that may adversely impact subsurface conditions.

Phase II Scope to address REC #1: Shallow soil and soil vapor sampling was completed throughout the building footprint. The soil sample locations and depths were selected to be representative of potential contamination at the Site and were targeted to be placed in locations where auto repair likely occurred.

¹ Phase I Environmental Site Assessment, 1600 Harrison Street, Oakland, CA. Prepared by Rincon Consultants, Inc. December 16, 2022.

2. **Notable Finding #1:** Surrounding properties near the Site (both up gradient and cross gradient) that have documented subsurface contamination from previous leaking Underground Storage Tanks (USTs) that have resulted in soil-, soil vapor-, and/or groundwater-contamination (petroleum hydrocarbon) above the applicable residential Environmental Screening Levels (ESLs) established by the San Francisco Regional Water Quality Control Board (RWQCB). There have also been numerous historical auto facilities and historical dry-cleaning facilities in the general area of the Subject Property within 1000 feet.

Phase II Scope to address the Notable Finding #1: Preliminary soil vapor sampling was performed throughout the footprint of the existing structure to assess the subslab soil vapor conditions.

This Phase II investigation was performed to provide a cursory review of environmental conditions related to the REC and notable finding listed above. Additional investigations including delineation of soils, soil sampling to profile soils for offsite disposal, additional soil gas or groundwater sampling, etc. may be warranted or required by the Alameda County Department of Environmental Health (ACDEH) prior to redevelopment.

2.0 BACKGROUND

The Site is located in the City of Oakland, Alameda County. The Site is bounded by Harrison Street to the west, and by mixed commercial-residential properties to the north, east, and south.

Historical site uses included commercial and residential spaces as early as 1925. Usages of the property included a plumbing supply store (1933), an auto repair shop (1938), a car garage (1952), and a towing and transmission service center (1970). Since the early 2000s, the current building has been used for a variety of commercial office spaces. Currently, the surrounding sites include a mix of multi-family residential and commercial properties along Harrison Street.

Rincon's 2022 Phase I ESA confirmed known petroleum hydrocarbon releases at properties nearby to the Site. A former gas station (1933-1972) with a leaking underground storage tank was identified 115 feet cross-gradient from the site at 1633 Harrison Street. Another leaking underground storage tank case was found at a former automotive repair shop (1967-1970) on 1532 Harrison Street, located 380 feet cross-gradient from the Site. Additional historical auto repair shops and laundry cleaners near the Site may also have impacted subsurface conditions at the Site.

SCA was retained by OHA to perform a preliminary Phase II ESA to evaluate existing soil and soil vapor conditions prior to redevelopment of the Site. For this preliminary Phase II ESA, soil sampling was completed throughout the site in order to evaluate exposure potential to future potential commercial and residential occupants, as well as construction personnel. Soil vapor sampling was completed, with locations targeted at upgradient and downgradient locations on the site to evaluate existing conditions under the building footprint as well as evaluate potential vapor migration from offsite sources onto the Site.

3.0 PHYSICAL SETTING

3.1 Topography and Geology

The Site is located in the City of Oakland, Alameda County with an elevation of approximately 38 feet above mean sea level with topography sloping down to the southwest. The adjacent terrain is relatively flat with a slight slope towards the southwest.

According to the USGS geologic map, the soil on the site is classified as slightly clayey and silty sand. The Site is not located in an area on the USGS's Geographic Ultramafic Rock Unit (GURU) map, which indicates if a site is likely to have naturally occurring asbestos (NOA). Although not part of a GURU, SCA collected representative NOA samples during this limited Phase II sampling.

3.2 Hydrogeology

The nearest surface water body is the Lake Merritt, which is approximately 0.23 miles to the east of the Site. No standing water bodies or flowing surface water were present on the Site at the time of SCA's site reconnaissance.

Rincon's 2022 Phase I ESA reported groundwater flow between 11 and 22 feet below ground surface (bgs) approximately 0.12 miles northwest of the site. Moisture was encountered at between 3 and 4 feet bgs at various sample locations during SCA's field sampling, but groundwater was not encountered.

4.0 FIELD INVESTIGATION ACTIVITIES

Field activities were conducted using standard industry practices regarding workers' health and safety, sample collection and handling, and chain-of-custody documentation.

SCA marked proposed boring locations with stakes and notified Underground Services Alert (USA) at least 48 hours prior to the start of intrusive activities. SCA also retained a private utility locator to clear all proposed boring locations. **Figure 2** presents the sample locations that were completed in the field.

Sampling equipment was decontaminated before and after each use. The two soil vapor sampling wells (SV-1 and SV-2) were installed using Vapor Pin methodology, meaning only a small hole was drilled through the slab at each location. The four soil borings (SB-1 through SB-4) were hand augured to a depth of 5 feet bgs and were backfilled with remaining cuttings and cement to grade.

4.1 Boring Activities for Soil Sample Collection

Soil sample collection activities were completed on May 17, by Ryan Kau, PE, and Michael Felix of SCA. A private utility locator (Subtronic) was retained to scan each location for utilities, and a concrete coring contractor (Concrete Demo Works) was retained in order to core the building slab at each sampling location. SCA advanced the following borings using hand sampling equipment which were decontaminated between boring locations:

- SB-1 through SB-4: Soil borings completed to 5 feet below ground surface (bgs) to collect discrete samples at depths of 1 foot and 5 feet bgs.

SCA's field personnel logged each boring in accordance with the Unified Soil Classification System (USCS) and screened soil in the field using a Photo-ionization Detector (PID) which measures the presence of organic vapor such as gasoline and solvents.

The discrete samples were collected in order to be compared to the RWQCB's ESLs for a residential land use, commercial land use, and construction worker exposure scenario.

The following laboratories were involved in the sample analysis:

- Eurofins Built Environment Testing Reservoirs, Inc. (Reservoirs) in Denver, Colorado is accredited by the National Voluntary Laboratory Accreditation Program (NVLAP) for analysis of asbestos, via Polarized Light Microscopy (PLM) with California Air Resources Board (CARB) 435 methodology.
- McCampbell Analytical, Inc. (MAI) in Pittsburgh, CA is accredited by the California Environmental Laboratory Accreditation Program (ELAP) for all required soil analyses.

The soil samples were collected and placed into sterile sample containers including glass jars, Zip-Loc bags (naturally-occurring asbestos), and 5-gram encore samplers. The soil samples were stored inside of coolers with ice and transported under Chain of Custody to MAI. Soils samples for naturally-occurring asbestos were transported under Chain of Custody protocol to Reservoirs. Following soil sample collection, all soil borings were backfilled with remaining cuttings and cement to grade.

4.2 Drilling Activities for Soil-Vapor Sample Collection

On May 16, 2023, SCA completed the following for soil vapor sampling:

- The soil vapor sample locations are presented in the attached **Figure 2**.
- SCA scanned these locations with a Hilti Scanner to confirm there was no rebar within the slab at the proposed coring location. A private utility locator (Subtronic) also scanned all of these locations for confirmation.
- SCA advanced an approximately $\frac{3}{4}$ inch diameter core through the slab using a rotary hammer and a drill bit. The building slab was found to be approximately 8" inches in thickness.
- SCA then installed Vapor Pins at each location in accordance with the manufacturer's specifications.
- Once these Vapor Pins sat undisturbed for 2 hours, SCA purged each probe location to ensure that stagnant air was removed from the sampling system and to ensure that the samples were representative of subsurface conditions. A default of three purge volumes was utilized at each location.
- Prior to the start of sample collection, a leak test shroud was placed over the sample probe at the surface. Under the shroud, helium was applied from a canister for all samples. A helium percentage of 20-30% was maintained under the shroud during all sampling.
- SCA then collected the two soil vapor samples (samples SV1 and SV2) inside of laboratory batch-certified clean 1.4-Liter Summa canisters. Laboratory-calibrated flow control valves (critical orifices) were used to regulate the vapor collection at approximately 200 milliliters per minute. Once the soil vapor sample was collected and the Summa canister reached an internal pressure of -4 " Hg, the sample was placed in a covered box to protect the sample from direct exposure to sunlight.
- SCA also collected a duplicate sample at sample location SV1.
- In addition to the two soil-vapor samples and a duplicate sample, the following blank samples were also collected:
 - **Equipment Blank:** An Equipment Blank was collected following decontamination of non-dedicated equipment to evaluate potential cross contamination from the sampling equipment. Collection of the equipment

blank involved pouring distilled water over the push rods and collecting the water in 40-mL VOA vials.

- **Material Blank:** SCA obtained an approximately 1.5-foot section of new 0.25-inch diameter Teflon tubing for the collection and analysis of a material blank sample. SCA collected the Material Blank by pouring distilled water through the tubing and collecting the water in 40-mL VOA vials.
- **Trip Blank (Water):** SCA was provided with a laboratory prepared trip blank. This trip blank consisted of two (2) 40-mL VOA vials.
- The Equipment Blank and Material Blank samples were sealed and all three water blanks were placed in a chilled (ice-filled) ice-chest pending delivery to the chemical testing laboratory.
- Lastly, the Vapor Pins were removed from each location and the cores were patched with neat cement. The samples were then transported to MAI in Pittsburg, CA.

5.0 SUBSURFACE CONDITIONS

The uppermost soil horizons included variable layers comprised of mixtures of clays, silts, and sands. The dominant soil type encountered was brown silty sands at the upper depths of 1-2 feet bgs with brown sandy clays below this depth to 5 feet bgs. Fine gravels were encountered at various depths. Logs of borings are presented in **Appendix A**.

No hydrocarbon or solvent odors were encountered in any of the soils. The handheld PID readings for hydrocarbons from the soils were below 0.2 ppm, comparable to the background readings in the building. Black stains were noted in boring locations SB-2, SB-3, and SB-4 at approximately 3 feet to 5 feet bgs.

Soils remained dry throughout the borings with slight moisture between 3 feet to 4 feet bgs. No groundwater was encountered in any of the borings.

6.0 CHEMICAL TESTING PROGRAM

6.1 Quality Assurance/Quality Control

SCA implemented QA/QC procedures during this field investigation as described below:

- One (1) Trip Blank sample was submitted along with the soil-vapor samples to confirm that no sample contamination was in the canister or occurred during sample transport. The trip blank sample was analyzed for VOCs using Method TO-15.
- One (1) Equipment Blank sample was collected and analyzed for VOCs using Method 8260 to ensure no cross-contamination between the soil-vapor probes.
- One (1) Material Blank sample was collected and analyzed for VOCs using Method 8260 to ensure no contamination from the new Teflon tubing used for the soil-vapor sampling.
- One (1) duplicate sample was collected at the SV-1 location for soil vapor.

6.2 Discrete Soil Samples

The discrete soil samples were submitted to MAI for analysis. The chemical testing for soil samples collected from the Site is presented below:

Table 1: Discrete Soil Sample Analyses

Sample ID	Sample Description	Depth (ft)	TPH	VOCs	SVOCs	CAM17	PCBs	NOA
SB1-1	Discrete sample collected at 1 bgs	1	X	X	X	X	X	X
SB1-5	Discrete sample collected at 5 bgs	5	X	X	X	X	X	X
SB2-1	Discrete sample collected at 1 bgs	1	X	X	X	X	X	X
SB2-5	Discrete sample collected at 5 bgs	5	X	X	X	X	X	X
SB3-1	Discrete sample collected at 1 bgs	1	X	X	X	X	X	X
SB3-5	Discrete sample collected at 5 bgs	5	X	X	X	X	X	X
SB4-1	Discrete sample collected at 1 bgs	1	X	X	X	X	X	X
SB4-5	Discrete sample collected at 5 bgs	5	X	X	X	X	X	X
Totals:			8	8	8	8	8	8

Notes:
 VOCs = Volatile Organic Compounds by EPA 8260 with EPA Method 5035 Encores
 CAM17 = California Assessment Metals by EPA 6020
 TPH = Total Petroleum Hydrocarbons (Gas, Diesel, and Motor Oil ranges) with silica gel cleanup by EPA 8015M
 SVOCs = Semi-Volatile Organic Compounds by EPA 8270C to meet ESLs
 PCBs = Polychlorinated biphenyls by EPA Method 8082 to meet ESLs
 NOA = Naturally-occurring asbestos by CARB 435

6.3 Soil-Vapor Samples

Two (2) soil-vapor samples (SV-1, SV-2) were collected to evaluate soil vapor conditions at the Site. A duplicate sample was collected for QA/QC purposes at the SV-1 location. An equipment blank and materials blank were also collected.

Two (2) trip blanks were also provided by the laboratory. All samples were submitted to MAI under chain-of-custody documentation and analyzed for the following:

Table 2: Soil Vapor Analyses

Sample ID	Depth	VOCs (Number of samples)
SV-1 through SV-2	Directly Sub Slab (Vapor Pins)	2
Duplicate Samples*	Directly Sub Slab (Vapor Pins)	1
Equipment Blanks**	n/a	1
Material Blanks**	n/a	1
Trip Blanks** (Water and Canisters)	n/a	2
Totals:		7
Notes: n/a = not applicable *Duplicate samples were collected at location/depth field determined dependent on field conditions. **Material and equipment blanks were collected as part of the soil gas sampling. VOCs = Volatile Organic Compounds by TO-15 (by off-site laboratory) and by 8260 for blank samples		

7.0 SUMMARY OF RESULTS & FINDINGS

The following section summarizes sample results and discusses data validation and QA/QC. Sample locations are presented on **Figure 2**. Results of analyses on discrete soil and soil-vapor samples collected are summarized in **Tables 1 and 2**. Copies of all laboratory reports are included in **Appendix B**.

7.1 Quality Assurance/Quality Control (QA/QC)

Based on SCA's review of the field and laboratory QA/QC protocols, data validation and findings, the sampling and resulting analyses are considered representative of Site conditions at the locations tested. Laboratory and field QC sampling are discussed below.

7.1.1 Laboratory QA/QC Samples

To assess the completeness of the data, SCA reviewed all laboratory reports and determined that all requested tests were completed. As a result, all laboratory reports are considered complete. In addition, MAI completed all internal QA/QC analyses.

To determine the accuracy of the laboratory data, SCA reviewed the laboratory report to confirm compliance with the laboratories' internal QA/QC limits. Based on our review, SCA concludes that MAI's internal QA/QC findings are valid and that the resulting chemical analyses of soil vapor and soil are representative of Site conditions.

7.1.2 Field Quality Control Samples

Analyses detected levels of Acetone and Ethanol in the laboratory-provided trip blank air canister, at 5.2 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) and 7.5 $\mu\text{g}/\text{m}^3$ respectively. No other VOCs were detected in any of the trip blanks (soil-vapor) submitted to the analytical laboratories. No other contaminants were noted in the Trip blanks.

Helium was used as a leak check compound for the soil-vapor sampling chain for all soil vapor samples. Helium was reported in sample SV-1 and the associated duplicate, but at low levels of 0.13% and 0.12% respectively. DTSC considers intrusion below 5% to have not significantly impacted samples, thus all soil vapor sample results are considered valid.

SCA collected a duplicate soil vapor sample at the SV-1 location. The overall results of the duplicate sample were comparable with the results of the original sample.

7.2 Soil Sampling Results

The discrete soil sample results are presented in the attached **Table 1**. Results were generally below applicable residential land use, commercial land use, and construction worker exposure ESLs except for the following:

- Arsenic was measured in all samples at concentrations above respective ESLs for residential land use, commercial land use, and construction worker exposure, and ranged from 1.3 mg/kg to 3.2 mg/kg. These results are within the range of typical background arsenic levels in the Bay Area² (up to 11 mg/kg), as well as CalOSHA's regulation of definition of arsenic containing material (200 mg/kg)
- Lead was detected in sample SB3-1 at 200 mg/kg, below the commercial land use ESL of 320 mg/kg, but above the residential ESL of 80 mg/kg and construction worker ESL of 160 mg/kg. Lead was detected in all other samples ranging from 2.0 mg/kg to 12 mg/kg, below the respective residential, commercial, and constructor worker ESLs.

7.3 Soil-Vapor Results

The analytical laboratory identified various VOCs in the soil vapor samples, as summarized in the attached **Table 2**. Various VOCs were detected in the samples. These results were compared to the ESLs for a potential residential and commercial vapor intrusion concern. Results were generally below applicable residential land use and commercial land use ESLs except for the following:

- Benzene was detected in all samples, ranging from 1.1 $\mu\text{g}/\text{m}^3$ to 5.3 $\mu\text{g}/\text{m}^3$. Results remain below commercial land use ESL of 14 $\mu\text{g}/\text{m}^3$, however SV-1 and SV-1 duplicate samples exceed the residential land use ESL of 3.2 $\mu\text{g}/\text{m}^3$.
- Naphthalene was detected in sample SV-1 and SV-1 duplicate at 44 $\mu\text{g}/\text{m}^3$ and 41 $\mu\text{g}/\text{m}^3$ respectively, above the residential land use ESL of 2.8 $\mu\text{g}/\text{m}^3$ and commercial land use ESL of 12 $\mu\text{g}/\text{m}^3$.

² Duverge, D.J., 2011, Establishing Background Arsenic in Soil of the Urbanized San Francisco Bay Region [M.S. Thesis]: San Francisco State University, 77 p.

The following VOCs were not detected in the samples; however, either the reporting limits or the Method Detection Limits (MDLs) exceeded relevant ESLs for SV1 and SV1-Duplicate locations. The reporting limits and MDLs were likely elevated due to the increased dilution factors for samples SV-1 and SV-1 Duplicate. Refer to **Table 2** for specific details.

Bromodichloromethane	Hexachlorobutadiene
Chloroform	Hexachloroethane
1,2-Dibromo-3-chloropropane*	Methylene chloride
1,2-Dibromoethane (EDB)	1,1,1,2-Tetrachloroethane
1,4-Dichlorobenzene	1,1,2,2-Tetrachloroethane
1,2-Dichloroethane (1,2-DCA)	1,1,2-Trichloroethane
1,2-Dichloropropane	1,2,3-Trichloropropane
1,3-Dichloropropene	Vinyl Chloride

*RL & MDL above relevant ESLs

8.0 DISCUSSION & CONCLUSIONS

Based on review of the analytical data, SCA forwards the following discussion and conclusions related to the investigation.

8.1 Soil Sampling Results

Based on the results of the soil sampling to characterize soil conditions and worker exposure, SCA has made the following conclusions:

1. Arsenic exceeded the residential land use, commercial land use, and construction worker exposure ESL levels at all depths sampled (but were all below the CalOSHA arsenic-containing material standard). It is common for background levels of arsenic to be elevated above the regulatory levels throughout California. All sample results were below these background levels in the greater Bay Area, which have been reported up to 11 mg/kg.

Given the arsenic results were below background levels for the greater Bay Area, no remedial action is recommended. Specific soil handling procedures and pre-qualification requirements should be addressed in a site-specific Site Mitigation Plan (SMP). SCA recommends an SMP be developed if redevelopment plans for the site involve any earth disturbance, including but not limited to, removal of the concrete slab or coring, trenching, etc. through the concrete slab.

2. Lead was detected in sample SB3-1 with a result of 200 mg/kg. The result exceeds the residential land use ESL of 80 mg/kg and construction worker exposure ESL of 160 mg/kg, but remains below the commercial land use ESL of 320 mg/kg.

SCA recommends that if the site is to be redeveloped and the concrete slab is to be removed or the subsurface is to be impacted, additional step out sampling should be completed around location SB3 in order to delineate the lead contamination. Specific soil handling procedures and soil disposal requirements should be addressed in a site-specific SMP.

Discussion of Soil Results in Relation to RECs and Notable Findings: As SVOC and VOCs were not identified in the soils above the residential or commercial screening levels, it appears that the listing of the Target Property on the EDR Historical Auto database (REC #1 for the Site) has not resulted in soil contamination at the Site from this previous site usage. The soil sampling results do indicate shallow soil contamination in the form of heavy metals, specifically lead, is present under the building. This is likely due to fill placed at the property during redevelopment of the current building.

8.2 Soil-Vapor

Various VOCs were either detected or had elevated reporting limits in samples SV-1 and SV-1 duplicate as summarized below:

1. The reporting limit and method detection limit of 1,2-Dibromo-3-chloropropane both exceed the residential screening level of $0.0056 \mu\text{g}/\text{m}^3$ and commercial screening level of $0.068 \mu\text{g}/\text{m}^3$ in all samples, with no detections reported by the laboratory. The laboratory's analytical methods cannot achieve the required reporting limits to meet current ESLs, consistent with other laboratories and common locally due to the low ESL for the RWQCB. Given that no detectable concentrations of 1,2-Dibromo-3-chloropropane were reported, no further action is recommended.
2. The reporting limit and method detection limit of Vinyl Chloride both exceed the residential screening level of $0.0056 \mu\text{g}/\text{m}^3$ in samples SV-1 and SV-1 Duplicate, with no detections reported by the laboratory. Given that no detectable concentrations of Vinyl Chloride were reported, no further action is recommended.
3. The reporting limits for the various VOCs exceed the respective residential screening levels in samples SV-1 and SV-1 duplicate; however, the method detection limits remain below the residential ESLs. Given that no detectable concentrations of these VOCs were reported, no further action is recommended.
4. Benzene and naphthalene were detected in concentrations exceeding residential and commercial ESLs.
 - o Benzene was detected in all samples, ranging from $1.1 \mu\text{g}/\text{m}^3$ to $5.3 \mu\text{g}/\text{m}^3$. Results remain below commercial land use ESL of $14 \mu\text{g}/\text{m}^3$, however samples SV-1 and SV-1 Duplicate exceed the residential land use ESL of $3.2 \mu\text{g}/\text{m}^3$.
 - o Naphthalene was detected in samples SV-1 and SV-1 Duplicate at $44 \mu\text{g}/\text{m}^3$ and $41 \mu\text{g}/\text{m}^3$ respectively, above the residential land use ESL of $2.8 \mu\text{g}/\text{m}^3$ and commercial land use ESL of $12 \mu\text{g}/\text{m}^3$.

Benzene and Naphthalene are common constituents of crude oil and petroleum products. Rincon's 2022 Phase I ESA indicated that many automotive businesses were present at adjacent site properties, including automotive repair shops from 1938-1980, 1928, and 1943, and a gas station from 1933-1970 (other notable finding). Elevated levels of Benzene and Naphthalene appear to originate from off-site sources and may have migrated onto the Site from groundwater and/or through soil vapor plumes.

Discussions of Soil Vapor Results in Relation to RECs and Notable Findings: The elevated soil vapor concentrations reported at the Target Property, specifically for Benzene and Naphthalene, indicate that subsurface contamination at the Target Property is present and most likely attributed to nearby sites with documented subsurface contamination.

SCA recommends that a licensed Professional Engineer (PE) in the State of California who has extensive experience in vapor mitigation be engaged to review the data and design a Vapor Intrusion Mitigation System (VIMS) for the Site. The VIMS design should be approved by the ACDEH prior to implementation.

In addition, ACDEH may require additional soil, groundwater, or soil vapor testing prior to approval of the VIMS design. Additional soil, groundwater, or soil vapor testing may also be driven by the VIMS consultant in order to fully characterize the subsurface contamination prior to design and implementation of the VIMS.

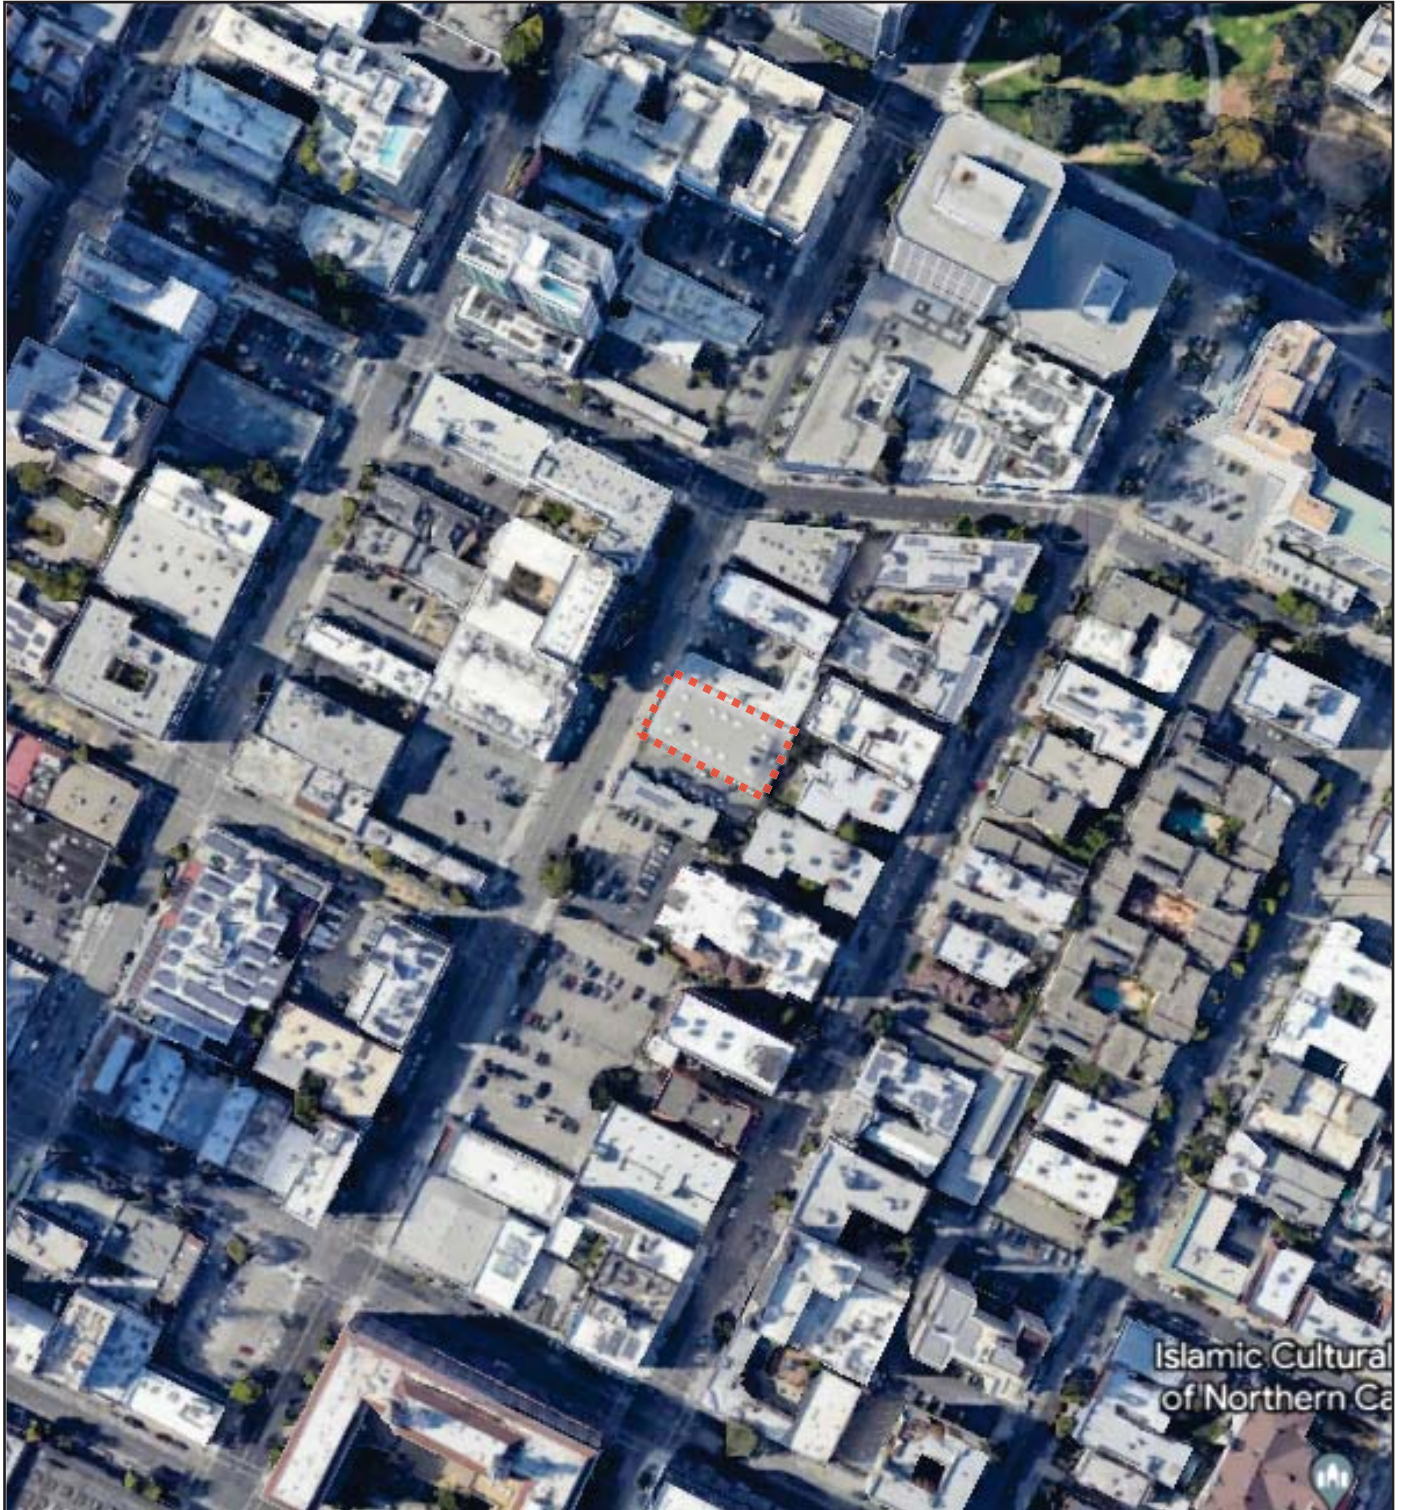

9.0 LIMITATIONS

This document is intended to be used only in its entirety. This report has been prepared for the exclusive use of the Client (Oakland Housing Authority). No reliance on this report shall be made by anyone other than those for whom it was prepared unless authorized in writing by a signed Principal of SCA.

SCA's conclusions, recommendations and opinions presented in this report are based solely on the findings of the investigation discussed herein. This report has been prepared in accordance with generally accepted methodologies and standards of practice by environmental professionals performing similar services. No warranty, expressed or implied, is made regarding the findings, conclusions, and recommendations included in the report. Variations in site conditions may exist and conditions not observed or described in this report may be encountered during subsequent activities including additional sampling, excavation, construction, etc.

The findings of this report are valid as of the date of the report. SCA's opinions and recommendations regarding environmental conditions as presented herein are based on limited subsurface assessment and chemical analysis. The samples collected and used for testing, and the observations made, are believed to be representative of the areas evaluated; however, conditions can vary significantly between sampling locations. Variations in the subsurface conditions may exist beyond the areas explored in this evaluation. Additionally, site conditions may change with time, natural processes, or human intervention, which can invalidate the findings and conclusions presented in this report. As such, this report should be considered a reflection of the site conditions at the time of sampling.

Laboratory Report: RES 562510-1

Project #/P.O. #: K13823.02

Project Description: OHA 1600 Harrison

Ryan Kau
SCA Environmental, Inc.
320 Justin Drive
San Francisco CA 94112

Dear Ryan,

Eurofins Reservoirs is an analytical laboratory accredited for the analysis of Industrial Hygiene and Environmental matrices by the National Voluntary Laboratory Accreditation Program (NVLAP), Lab Code 101896-0 for Transmission Electron Microscopy (TEM) and Polarized Light Microscopy (PLM) analysis and the American Industrial Hygiene Association (AIHA LAP, LLC), Lab ID 101533 for Phase Contrast Microscopy (PCM) analysis. This laboratory is currently proficient in both Proficiency Testing and PAT programs respectively.

Eurofins Reservoirs has analyzed the following samples for asbestos content as per your request. The analysis has been completed in general accordance with the appropriate methodology as stated in the attached analysis table. The results have been submitted to your office.

RES 562510-1 is the job number assigned to this study. This report is considered highly confidential and the sole property of the customer. Eurofins Reservoirs will not discuss any part of this study with personnel other than those of the client. The results described in this report only apply to the samples analyzed, as received by the customer. This report must not be used to claim endorsement of products or analytical results by NVLAP or any agency of the U.S. Government. This report shall not be reproduced except in full, without written approval from Eurofins Reservoirs. Samples will be disposed of after sixty days unless longer storage is requested. If you have any questions about this report, please feel free to call 303-964-1986.

Sincerely,

by Paul LoScalzo

Jeanne Spencer
President

"When Quality Counts"

Analytical Report

WorkOrder: 2305D43

Report Created for: SCA Environmental, Inc.

320 Justin Drive
San Francisco, CA 94112

Project Contact: Tucker Kalman

Project P.O.:

Project: K13823.02; OHA 1600 Harrison Phase II

Project Received: 05/18/2023

Analytical Report reviewed & approved for release on 06/01/2023 by:

Jennifer Lagerbom

Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in a case narrative.

Glossary of Terms & Qualifier Definitions

Client: SCA Environmental, Inc.

WorkOrder: 2305D43

Project: K13823.02; OHA 1600 Harrison Phase II

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LQL	Lowest Quantitation Level
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit ¹
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting limit ²
RPD	Relative Percent Difference
RRT	Relative Retention Time
RSD	Relative Standard Deviation
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure

¹ MDL is the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. Definition and Procedure for the Determination of the Method Detection Limit, Revision 2, 40CFR, Part 136, Appendix B, EPA 821-R-16-006, December 2016.

² RL is the lowest level that can be reliably determined within specified limits of precision and accuracy during routine laboratory operating conditions. (The RL cannot be lower than the lowest calibration standard used in the initial calibration of the instrument and must be greater than the MDL.)

Glossary of Terms & Qualifier Definitions

Client: SCA Environmental, Inc.

WorkOrder: 2305D43

Project: K13823.02; OHA 1600 Harrison Phase II

TEQ Toxicity Equivalents
TZA TimeZone Net Adjustment for sample collected outside of MAI's UTC.
WET (STLC) Waste Extraction Test (Soluble Threshold Limit Concentration)

Analytical Qualifiers

B Analyte detected in the associated Method Blank at a concentration greater than 1/10 the reported sample result.
J Result is less than the RL/ML but greater than the MDL. The reported concentration is an estimated value.
a9 Reporting limit near, but not identical to, our standard reporting limit due to variable Encore, Terracore, or Solid sample weight.

Quality Control Qualifiers

F1 MS/MSD recovery and/or RPD is out of acceptance criteria; LCS validates the prep batch.
F2 LCS/LCSD recovery and/or RPD/RSD is out of acceptance criteria.
F5 LCS/LCSD recovery is outside of acceptance limits; however, the data is acceptable based upon the TNI allowable marginal exceedances.
F10 MS/MSD outside control limits. Physical or chemical interferences exist due to sample matrix.

Prepared by: Yvette Gallegos

The following SampleIDs: 001A, 002A, 003A, 004A, 005A, 006A, 007A, 008A contain testgroup Multi RangeWSG_S.

Comments:

NOTE: Soil samples are discarded 60 days after receipt unless other arrangements are made (Water samples are 30 days). Hazardous samples will be returned to client or disposed of at client expense.

Table with columns: LabID, ClientSampID, Matrix, Test Name, Containers /Composites, Bottle & Preservative, U**, Head Space, Dry-Weight, Collection Date & Time, TAT, Test Due Date, Sediment Content, Hold, Sub Out. Rows include samples 001A, 002A, and 003A with various test names like Multi-Range TPH w/ S.G. Clean-Up and SW6020 (CAM 17).

NOTES: * STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).
- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.
- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.
U** = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate \$250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

* If metals are requested for water samples and the water type (Matrix) is not specified on the chain of custody, MAI will default to metals by E200.8.						Comments / Instructions											
Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.

Memorandum

To: All MAI Clients
From: Theresa Johnson, Director of QAQC & Safety
Date: May 9, 2023
Subject: CA ELAP – Changed FOAs for Method Update Rule 2021

This memo is to inform all McC Campbell Analytical clients that CA ELAP released the new Fields of Accreditation for laboratories to comply with in order to maintain compliance with specific methods. The memo from the State Waterboard is below for your reference.

The link to the 2021 MUR webpage: https://www.waterboards.ca.gov/drinking_water/certlic/labs/mur.html

From: California Water Boards <public@info.waterboards.ca.gov>
Sent: Wednesday, March 29, 2023 1:01 PM
To: Theresa Johnson
Subject: ELAP Updates FOA Tables to include 2021 Methods Update Rule (MUR) Changes

Attention Wastewater and Ambient Water Laboratories!

The Environmental Laboratory Accreditation Program has updated its Field of Accreditation (FOA) Tables to include to include 2021 Methods Update Rule (MUR) changes at the request of the State Water Board and promulgation by the US EPA. This extensive update impacts all wastewater and ambient water FOA Tables and includes both newly approved Alternative Test Procedure methods as well as updates to the method versions. ELAP has created a new [2021 Method Update Rule webpage](#) which contains guidance documents, implementation assistance, and instructions on how to apply for and receive an updated certificate. One highly requested guidance document is a [2021 MUR Changelog](#) which identifies every analytical method and versions that are added or replaced by a newer version.

This webpage, as well as ELAP policy and guidance materials, were developed with input from several members of the laboratory community. ELAP iterated on their questions, suggestions, and comments throughout the development process, with community members providing valuable input and information. ELAP would like to thank those who participated and offered assistance.

Please visit the materials on the [2021 Method Update Rule webpage](#) for specific guidance and instructions on how your laboratory could obtain accreditation for methods specific to the Methods Update Rule.

Update your subscriptions, modify your password or email address, or stop subscriptions at any time on your [Subscriber Preferences Page](#). You will need to use your email address to log in. If you have questions or problems with the subscription service, please visit subscriberhelp.govdelivery.com.

This service provided to you at no charge by the [California Water Boards](#).

This email was sent to theresa.johnson@mcccampbell.com using govDelivery Communications Cloud on behalf of: California Water Boards · 1001 I Street · Sacramento, CA 95814

Best Regards,

Theresa Johnson
Director, QAQC & Safety

"When Quality Counts"

Analytical Report

WorkOrder: 2305D26

Report Created for: SCA Environmental, Inc.

320 Justin Drive
San Francisco, CA 94112

Project Contact: Tucker Kalman

Project P.O.:

Project: K13823.02; OHA 1600 Harrison Phase II

Project Received: 05/18/2023

Analytical Report reviewed & approved for release on 06/02/2023 by:

Christine Askari
Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in a case narrative.

Glossary of Terms & Qualifier Definitions

Client: SCA Environmental, Inc.

WorkOrder: 2305D26

Project: K13823.02; OHA 1600 Harrison Phase II

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LQL	Lowest Quantitation Level
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit ¹
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting limit ²
RPD	Relative Percent Difference
RRT	Relative Retention Time
RSD	Relative Standard Deviation
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure

¹ MDL is the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. Definition and Procedure for the Determination of the Method Detection Limit, Revision 2, 40CFR, Part 136, Appendix B, EPA 821-R-16-006, December 2016.

² RL is the lowest level that can be reliably determined within specified limits of precision and accuracy during routine laboratory operating conditions. (The RL cannot be lower than the lowest calibration standard used in the initial calibration of the instrument and must be greater than the MDL.)

Glossary of Terms & Qualifier Definitions

Client: SCA Environmental, Inc.

WorkOrder: 2305D26

Project: K13823.02; OHA 1600 Harrison Phase II

TEQ Toxicity Equivalents

TZA TimeZone Net Adjustment for sample collected outside of MAI's UTC.

WET (STLC) Waste Extraction Test (Soluble Threshold Limit Concentration)

Analytical Qualifiers

J Result is less than the RL/ML but greater than the MDL. The reported concentration is an estimated value.

S Surrogate recovery outside accepted recovery limits.

c2 Surrogate recovery outside of the control limits due to suspected matrix interference.

Quality Control Qualifiers

F2 LCS/LCSD recovery and/or RPD/RSD is out of acceptance criteria.

F7 The LCS/LCSD recovery is above the upper control limit. The target analyte(s) were Not Detected (ND); therefore, the data is reportable.

Case Narrative

Client: SCA Environmental, Inc.
Project: K13823.02; OHA 1600 Harrison Phase II

Work Order: 2305D26
June 02, 2023

TO-15 ANALYSIS

All summa canisters are EVACUATED 5 days after the reporting of the results. Please call or email if a longer retention time is required.

NOTES: * STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U** = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.

Memorandum

To: All MAI Clients
From: Theresa Johnson, Director of QAQC & Safety
Date: May 9, 2023
Subject: CA ELAP – Changed FOAs for Method Update Rule 2021

This memo is to inform all McCampbell Analytical clients that CA ELAP released the new Fields of Accreditation for laboratories to comply with in order to maintain compliance with specific methods. The memo from the State Waterboard is below for your reference.

The link to the 2021 MUR webpage: https://www.waterboards.ca.gov/drinking_water/certlic/labs/mur.html

From: California Water Boards <public@info.waterboards.ca.gov>
Sent: Wednesday, March 29, 2023 1:01 PM
To: Theresa Johnson
Subject: ELAP Updates FOA Tables to include 2021 Methods Update Rule (MUR) Changes

Attention Wastewater and Ambient Water Laboratories!

The Environmental Laboratory Accreditation Program has updated its Field of Accreditation (FOA) Tables to include to include 2021 Methods Update Rule (MUR) changes at the request of the State Water Board and promulgation by the US EPA. This extensive update impacts all wastewater and ambient water FOA Tables and includes both newly approved Alternative Test Procedure methods as well as updates to the method versions. ELAP has created a new [2021 Method Update Rule webpage](#) which contains guidance documents, implementation assistance, and instructions on how to apply for and receive an updated certificate. One highly requested guidance document is a [2021 MUR Changelog](#) which identifies every analytical method and versions that are added or replaced by a newer version.

This webpage, as well as ELAP policy and guidance materials, were developed with input from several members of the laboratory community. ELAP iterated on their questions, suggestions, and comments throughout the development process, with community members providing valuable input and information. ELAP would like to thank those who participated and offered assistance.

Please visit the materials on the [2021 Method Update Rule webpage](#) for specific guidance and instructions on how your laboratory could obtain accreditation for methods specific to the Methods Update Rule.

Update your subscriptions, modify your password or email address, or stop subscriptions at any time on your [Subscriber Preferences Page](#). You will need to use your email address to log in. If you have questions or problems with the subscription service, please visit subscriberhelp.govdelivery.com.

This service provided to you at no charge by the [California Water Boards](#).

This email was sent to theresa.johnson@mccampbell.com using govDelivery Communications Cloud on behalf of: California Water Boards · 1001 I Street · Sacramento, CA 95814

Best Regards,

Theresa Johnson

"When Quality Counts"

Analytical Report

WorkOrder: 2305D28

Report Created for: SCA Environmental, Inc.

320 Justin Drive
San Francisco, CA 94112

Project Contact: Tucker Kalman

Project P.O.:

Project: K13823.02; OHA 1600 Harrison Phase II

Project Received: 05/18/2023

Analytical Report reviewed & approved for release on 05/25/2023 by:

Yen Cao
Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in a case narrative.

Glossary of Terms & Qualifier Definitions

Client: SCA Environmental, Inc.

WorkOrder: 2305D28

Project: K13823.02; OHA 1600 Harrison Phase II

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LQL	Lowest Quantitation Level
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit ¹
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting limit ²
RPD	Relative Percent Difference
RRT	Relative Retention Time
RSD	Relative Standard Deviation
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure

¹ MDL is the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. Definition and Procedure for the Determination of the Method Detection Limit, Revision 2, 40CFR, Part 136, Appendix B, EPA 821-R-16-006, December 2016.

² RL is the lowest level that can be reliably determined within specified limits of precision and accuracy during routine laboratory operating conditions. (The RL cannot be lower than the lowest calibration standard used in the initial calibration of the instrument and must be greater than the MDL.)

NOTES: * STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U** = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.

Abstract

This study has been prepared for Raney Planning & Management, Inc., on behalf of their client in regards to a proposed project to be located at 1600 Harrison Street, Oakland, Alameda County, California. The proposed parcel, containing 0.27 acres, is identified as Assessor's Parcel Number (APN) 08-626-30-01 and is illustrated on the United States Geological Survey (USGS) 7.5' *Oakland West, California* topographic quadrangle map (1980, updated 2018) (Figures 1-4). The project site is located in the Lake District neighborhood of Oakland, surrounded by commercial and multi-use buildings dating from the late-nineteenth century through the last few decades. The project involves the reuse of the project building by the Oakland Housing Authority as well as interior seismic retrofit with no exterior changes or ground disturbing activities.

The proposed project is receiving Moving to Work funding through the federal government (U.S. Department of Housing and Urban Development, and, thus, requires National Environmental Policy Act (NEPA) compliance. The National Historic Preservation Act of 1966 requires federal agencies to consider the impact of their projects on historic properties through the "Section 106" review process and its implementing regulations - 36 CFR Part 800. The Area of Potential Effects for both historic and archeological resources is only the project site.

Research for the project was conducted at the Northwest Information Center (NWIC) of the California Historical Resources Information System (CHRIS) in Rohnert Park. According to the Built Environment Resources Directory (BERD), the project building, constructed in 1921-1922 and referred to as the Alliance Land Company/Blood Appleton Garage (P-01-000700), was rated 6Z on September 30, 1995 and 7R in September 2003. At the same time, 1500 Harrison Street received the same rating codes in the BERD and is apparently represented by the same building and parcel. The ratings given in the BERD imply that the subject property was found to be ineligible for the NRHP, CRHR, and local listing through a survey evaluation.

Additional research for this project was conducted at the City of Oakland, Public Library; History Room, California State Library, Sacramento; San Francisco Public Library; Ancestry Website; historic newspapers and maps; and the archives and library of Historic Resource Associates. On June 10, 2022, a record search was submitted to the Native American Heritage Commission (NAHC) requesting any information on file regarding the project parcel. However, this report does not contain an archeological analysis since this project does not involve ground disturbing activities that could affect archeological resources.

Due to the passage time (the last historic assessment of the building was in 2003), a reevaluation of the building was performed. In determining the significance of 1600 Harrison Street, historic documents and photographs were examined and the subject property was compared to other similar properties in Oakland. Most importantly, the building, which was constructed in 1921-1922, was carefully examined to determine whether it still retained adequate integrity to convey its historical significance. In addition to assessing the building's integrity through a physical inspection, an historic photograph of the building taken in 1923 was valuable as well.

In summary, the subject property, which was constructed as an automobile repair garage, lacks integrity of design, materials, workmanship, feeling, and association, and does not appear to be individually eligible for the CRHR and the NRHP under any of the aforementioned Criteria. The building does not appear to be eligible for designation or listing on City of Oakland Historic Register,

nor does the building appear to be a potential contributor to a CRHR, NRHP, or locally designated historic district. No archeological esources will be affected as the project is a building reuse and no ground disturbing activities are proposed.

Introduction

This historic resource analysis was completed by Dana E. Supernowicz, M.A., RPA of Historic Resource Associates in accordance with federal and state guidelines (California State Historic Preservation Office). It is intended to provide information that will enable the California State Historic Preservation Office (CASHPO) to review the subject project. The Principal Investigator meets and/or exceeds the qualifications described in the Secretary of the Interior’s Professional Guidelines (Federal Register 48:190:44738-44739) (United States Department of the Interior 1983).

Subject Property and Area of Potential Effects

The subject property, located at 1600 Harrison Street, is enumerated as Assessor’s Parcel Number (APN) 08-626-30-1. The project area of potential effect (APE) for both archeological and historic resources is delineated below in Figure 1.

Figure 1: Assessor’s Parcel Map (08-626-30-1) and APE.

Figure 2: 3D Project Aerial Location Map (Google Earth 2022)

Historic Context

During the Spanish occupation of California, the land that included Oakland belonged to Don Luis Maria Peralta (1759-1851). After California gained statehood, Peralta's vast land holdings in the East Bay were largely lost (Bagwell 1982:12). The area owes its early history to the development of industries related to logging and lumber. Following the discovery of gold at Coloma in January 1848, one of the first industries in what was to become Oakland was lumber manufacturing. In the hills surrounding the town, a coastal redwood (*sequoia sempervirens*) forest flourished. In just ten short years, almost all of the virgin timber had been logged off the nearby hills (Bagwell 1982:15). Most of the logs were dragged from the woods via teams of oxen to the wharves and sawmills. It is likely that present-day Park Boulevard once provided relatively easy access into the groves of coastal redwoods that lined the hills above Oakland. During the early 1850s, Carpentier, Moon, and Adams leased land from Vicente Peralta and began to subdivide the property into lots. They hired Swiss engineer Julius Kellerberger to map out the streets in a standard grid pattern (Bagwell 1982:27). On May 4, 1852, Oakland was incorporated as a city. The original townsite was located on the west side of the marsh that was to later become Lake Merritt. East of San Antonio Slough, the region became known as Brooklyn and ultimately merged with Oakland to form one city (Bagwell 1982:34). By 1860, according to the U.S. Federal Census, there were 1,543 residents living in Oakland and 1,341 in Brooklyn (Bagwell 1982:41).

Oakland's central location in the East Bay and proximity to the waterfront made it an ideal candidate as a terminus for the Central Pacific Railroad in 1869. The railroad influenced the development of industry in Oakland and provided jobs and passenger service to various points to the east. By the 1870s, besides its rail service, Oakland had its share of industries, which included planing mills, breweries, canneries, and cotton mills. Child labor was still quite common in America's factories during

the 1870s and 1880s, and Oakland was beginning to see its fair share of crime and social problems. During this same period, Oakland's population was becoming more ethnically diverse, with Irish, German, Chinese, and African-Americans contributing significantly to the shaping of Oakland's cultural heritage.

Oakland thrived through World War II, propelled by new industry related to wartime production. The post-World War II years led to increased social problems, including unemployment, poverty, and the physical deterioration of the inner city. But, like other cities surrounding the bay, Oakland has witnessed an economic rebirth during the last decade of the twentieth century. Many of Oakland's historic buildings have been renovated or are in the process of being restored, and migration back to the inner city has begun. The subject property lies near the Glenview neighborhoods of East Oakland, east of the 580 Freeway. Park Boulevard forms the key roadway through the neighborhoods which were developed in the 1920s, as the city expanded to the east into the hills above the central city (Gebhard 1985:304-306).

While Oakland fared much better than San Francisco following the 1906 earthquake, considerable damage to its infrastructure and buildings did occur. Following the earthquake, Oakland became a sanctuary for individuals and families who had lost everything in San Francisco. Between 1900 to 1910, Oakland's population grew from 67,000 to over 150,000 (Bagwell 1982:179). The 1910s through the 1930s were a progressive era for Oakland, characterized by growth in transportation, improvements in sanitation, city streets, and continued expansion of the city's boundaries. In 1908, the Oakland Park Commission was formed (Bagwell 1982:183). Shortly afterward, Lakeside Park at Lake Merritt was developed. During the 1910s, Major Mott defended municipal planning and, in 1912, Oakland's City Hall was constructed followed by other civic buildings of stature. As the downtown developed so did the city's waterfront district. By the 1920s shipbuilding became one of the city's dominant industries and the Port of Oakland witness major expansion (Bagwell 1982:191). With the growth of industry came the need to provide adequate housing, so during the 1910s through the 1930s housing projects sprang up throughout the city, including hundreds of new apartment and commercial buildings.

The city of Oakland had two major renaissance periods in commercial construction – the 1920s prior to the Great Depression and the 1950s and early 1960s associated with the post-World War II expansion of the city and its growth as a leader in attracting large corporations to its core downtown area. Unlike the 1920s when most of the high-rise architecture included Neo-Classical, Classical Revival, Renaissance Revival, and Beaux-Arts designs, the 1950s ushered in a period of contemporary architects who adapted modern designs to their buildings using state of the art materials, such as cast steel, aluminum, and precast concrete. Unlike other low-rise and high-rise buildings being constructed in the city at the same time, newspaper articles do not call out 2030 Franklin Street as an important example of modern architecture. The inference is more that the building would provide additional space for corporations and accelerate the city's building boom.

History of 1600 Harrison Street

The subject property, based upon newspaper accounts, was built around 1921 and opened in 1922. The building was developed by the Alliance Land Company of San Jose and was designed by E.J. Burke and W.C. Marshall of Marshall & Burke a partnership. The building was constructed as service garage for the new location of McAfee & Nickles who had begun their business at 30th and San Pablo Street in Oakland in 1918. The building along Harrison Street was described as having employed

“Dickey Mastertile” which was reportedly first used by Marshall & Burke in the East Bay Area. The hollow core tile blocks were reported to be fire-proof, light weight, and affordable. While the front of the new building on Harrison Street was largely built of Dickey Mastertile, the front façade was built of common clay brick and the dome roof was supported by numerous spans of scissor-trusses tying each wall together and supporting the roof (refer to Figures 3-5).

As described in the *Oakland Tribune* on August 26, 1923, “Marshall & Burke have established utility and beauty and permanent construction without excessive costs in the erection of three garages in the “East of the Lake district” and in this work they have used exclusively Dickey Mastertile” (*Oakland Tribune*, August 26, 2023). The buildings were described as “fireproof throughout having cement floors, steel windows, and skylight sash and fireproof roofs in conjunction with the Mastertile walls. The bricks for the building were reported produced by the California Brick Company and the Livermore Fire Brick Works, allied plants (Ibid). In August 1923, the *Oakland Tribune* described the work of Marshall & Burkes:

The third example of Marshall A. Burks’ garage construction work is the McAfee & Nickel garage, 1600 Harrison Street. This building was promoted by Marshall & Burks, the space being leased to the partners before construction started, the building being owned by the Alliance Land Company of San Jose. Marshall & Burks started McAfee & Nickel in business in a small way four years ago at San Pablo and Thirtieth Street. Two years later they sold their lease and business to buy the lease and establish themselves in the new Marshall & Burks building on Harrison Street. Since opening there they have built up a prosperous business and recently opened a branch garage in San Jose, erecting a new 175 by 200 foot building. The growth of McAfee & Nickel’s business is typical of the three garages and indicates the general success of the Marshall & Burks type of building. “We are glad to see the men in the garages we have built so successful,” Mrs. W. C. Marshall said in commenting on the growth of their business in the last year, “and we believe it is directly due to the prosperous condition in Oakland and the individual ability of the men. As to the type of buildings, we are strongly back this type of construction with Mastertile walls and Livermore pressed brick front, and feel that it is one of the most practical and efficient types of construction for this kind of work.” W. C. Marshall was the first builder in the Oakland section to advocate the use of hollow tile in bungalow and general construction. Coming four years ago from Kansas City, where the hollow tile has been used for some time, he was familiar with its advantages and use and immediately started a fight to make the use of this building material legitimate under Oakland’s building ordinances. After several months work he secured the passage of an ordinance permitting the use of hollow tile in building work and since that time has used Dickey Mastertile exclusively in all buildings erected by Marshall & Burks. R. J. Burks, building supervisor for the firm, was formerly in charge of the City of Oakland building department and resigned to help form the company of Marshall & Burks. Burks is recognized as one of the foremost construction engineers in Oakland. He has had extensive experience and had charge of the building of the new wharf at Honolulu (*Oakland Tribune*, August 26, 1923).

In later years the building changed hand several times, but remained as an automobile repair shop through the 1940s reportedly known as Appleton’s Garage. In the early-1950s the building is listed as “Wilton’s Home of Maple.” By the 1960s, the property was listed in local newspapers as selling used vehicles (*Oakland Tribune*, 1940-1970).

Figures 3 and 4 illustrate the original garage building in 1923 and the current building in 2023. A comparison of the original building and current building configuration reveals alterations to the building's fenestration, including filling windows and bay openings with wood panels, eliminating brick skirts, and changing the third opening from the left, formerly a picture window, with an awning to an entry door. In recent years, the formerly open left side wall is now shared by a contemporary office building and the "GARAGE" sign on the front of the building has long since disappeared. There was also once contrast in the different colored brick, which has since been painted over. Note what appears to be a gas pump on the sidewalk in front of the original building.

Pedestrian Survey

A pedestrian survey of the APE was completed by Dana E. Supernowicz, M.A., RPA on February 25, 2023. The field visit focused on documenting the physical characteristics of the project building. A review of the seismic work was also conducted to confirm no exterior work and no ground disturbing activities.

Regulatory Setting

Because federal funds are included in the future reuse of the project building compliance falls under the National Historic Preservation Act (NHPA) of 1966 (as amended) (16 U.S.C., Section 470f) and its implementing regulations 36 CFR Part 800 as amended. Because the property lies in the City of Oakland, CEQA and the city's Historic Preservation Ordinance were also taken into consideration.

Criteria for listing on the NRHP (see 36 CFR Part 63), include significance in American history, architecture, archaeology, engineering, and culture as present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association, and that are:

(A) associated with events that have made a significant contribution to the broad patterns of our history;

(B) associated with the lives of persons significant in our past;

(C) embody the distinctive characteristics of a type, period, or method of construction; represent the work of a master; possess high artistic values, represent a significant and distinguishable entity whose components may lack individual distinction; or,

(D) have yielded, or may be likely to yield, information important in prehistory or history.

Criterion D is usually reserved for archaeological and paleontological resources.

The subject property was assessed under the regulatory framework within the guidelines imposed for the California Environmental Quality Act (CEQA) and the California Register of Historic Resources (CRHR) under Public Resources Code section 5024.1. A historical resource may be eligible for inclusion in the CRHR if it:

1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2. Is associated with the lives of persons important in our past;
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, represents the work of an important creative individual, or possesses high artistic values; or
4. Has yielded, or may be likely to yield, information important to prehistory or history.

City of Oakland Historic Preservation Criteria

In 1998 the Oakland City Council amended the Historic Preservation Element to create a category called Local Register of Historical Resources. This is a list that recognizes the city's historic buildings and districts, whether or not they have been designated by the Landmarks Board. Oakland has this information in detailed citywide survey work and research conducted by the Planning Department.

The term Local Register is used in State law to identify buildings covered by the State Historical Building Code and California Environmental Quality Act. The Historic Preservation Element and Oakland Planning Code define "**Local Register Property**" as any building, object, property or district listed in the City of Oakland's Local Register of Historical Resources, which includes all Landmarks, Designated Historic Properties, Heritage Properties, Study List Properties, Preservation Districts, and S-7 and S-20 Preservation Combining Zone Properties; and those Potential Designated Historic Properties (PDHPs) that are determined by the City's Cultural Heritage Survey to have an existing rating of "A" or "B", or to contribute or potentially contribute to an Area of Primary Importance (API).

The Rating System, adopted in the Oakland General Plan, Historic Preservation Element, is shorthand for the relative importance of properties. The system uses letters A to E to rate individual properties and numbers 1 to 3 for district status. Individual properties can have dual ("existing" and "contingency") ratings if they have been remodeled, and if they are in districts they can be contributors, noncontributors, or potential contributors. In general, A and B ratings indicate landmark and California/National Register eligible buildings. C ratings are considered of local interest and are classified as "Potential Designated Historic Properties" or PDHPs. The Oakland Cultural Heritage Survey conducted the survey based on the rating system as summarized below.

A: Highest Importance: Outstanding architectural example or extreme historical importance (about 150 properties total).

B: Major Importance: Especially fine architectural example, major historical importance (about 600 total).

C: Secondary Importance: Superior or visually important example, or very early (pre-1906). Cs "warrant limited recognition (about 10,000 total).

D: Minor Importance: Representative example. About 10,000 Ds are PDHPs, either because they have a higher contingency rating ("Dc") or because they are in districts ("D2+").

E: Of no particular interest: Less than 45 years old or modernized.

* or F: Less than 45 years old or modernized.

Some Es, Fs, and *s are also PDHPs because they have higher contingency ratings or are in districts.

Contingency Ratings (lower-case letter, as in "Dc" or "Fb"): potential rating under some condition, such as "if restored" or "when older" or "with more information."

District Status (numbers):

"1": In an Area of Primary Importance (**API**) or National Register quality district.

"2": In an Area of Secondary Importance (**ASI**) or district of local interest.

"3": Not in a historic district.

For properties in districts, + indicates contributors, - non-contributors, * potential contributors. (1), the shorthand "X" was used to indicate "not a PDHP" This could be D3, "Minor importance or representative period example, not in a District" or F3 (too recent to rate at the time of the survey.

The subject property at 1600 Harrison Street was rated D3 (Minor Importance) by the Oakland Cultural Heritage Survey, is not in a historic district, and therefore, is not on the Local Register and not considered a historic property.

Property Description

The subject property is a light-industrial style, combination clay brick and hollow-core tile, rectangular-shaped, single-story building sited on a 0.27 acre rectangular level parcel and having approximately 11,550 square feet of interior space. Built in 1921-1922, the character defining features of the building include a domed roof, with contemporary skylights, on the front of the building facing Harrison Street a modest parapet roof with a small eave at the roof line, followed below by five plain rectangular-shaped friezes, a horizontal row of tie bolts running the full length of the front façade, two large wooden bay openings, now filled with wood panels, flanking an inset entry way (formerly a large window) with 3 top-lights above the painted over entry door.

On the far left and right of the front façade are paneled walls with 3 top-lights above each panel, with the far right or western-most side having a single-entry door. The front-entry is canted and covered with wood, leading to the non-original entry door. Graffiti covers the front walls of the building and the entry. The rear or east elevation of the building is the only elevation with the original hollow-core tile exposed, along with what appears to be original steel sash windows. The north and west elevation lack any fenestration and expose the hollow core tiles used for the bulk of the building's structure, rows of tie bolts, with the front west elevation having been covered with a concrete or stucco finish. The north elevation of the building, once open, shares a common wall with 1610 Harrison Street, a contemporary two-story office building.

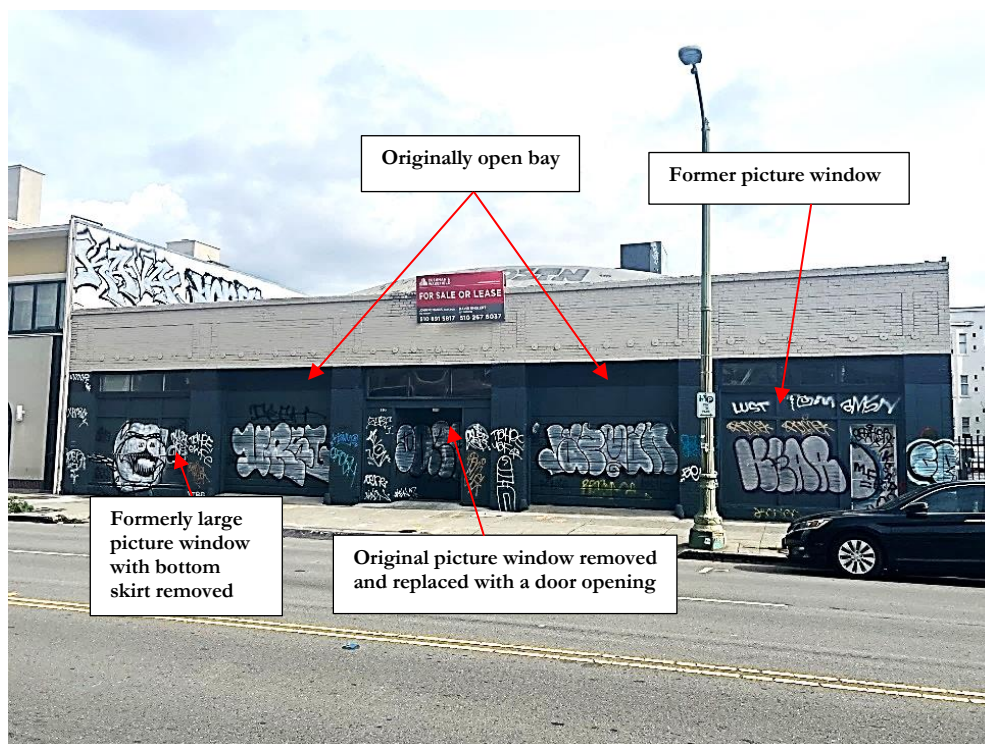

Figure 8: View looking east at 1600 Harrison Street.

Finding of Significance

In determining the significance of 1600 Harrison Street, historic documents and photographs were examined, and the subject property was compared to other similar properties in Oakland. Most importantly the building, which was constructed in 1921-1922, was carefully examined to determine whether it still retained adequate integrity to convey its historical significance. In addition to assessing the building's integrity through a physical inspection, an historic photograph of the building taken in 1922 was valuable as well.

In applying CRHR Criterion 1 and NRHP Criterion A, the subject property does not appear to be associated with a significant event or events in the history of Oakland.

Under CRHR Criterion 2 and NRHP Criterion B, the subject property does not appear to be associated with a person or persons of significance in the history of Oakland.

Under CRHR Criterion 3 and NRHP Criterion C, the subject property lacks integrity of design, materials, workmanship, association, and feeling as result of alterations to the building's front or primary façade. This finding is based upon a physical inspection of the property and reviewing historic photographs.

Under CRHR Criterion 4 and NRHP Criterion D, the subject property does not retain data or scientific information potential.

In summary, the subject property does not appear to be individually eligible for the CRHR and the NRHP under any of the aforementioned Criteria. Nor does the property appear to meet the criteria prescribed by the City of Oakland's Historic Preservation Ordinance for listing and the subject property does not appear to be a potential contributor to a CRHR or a NRHP historic district.

Conclusion and Recommendations

Although the subject property does not appear to be a significant resource under any of the aforementioned criteria, restoration of the front façade remains possible revealing the original brick surfaces.

Professional Qualifications

Dana E. Supernowicz, M.A., RPA, owner and principal of Historic Resource Associates, served as Principal Investigator for this project and meets and/or exceeds the qualifications described in the Secretary of the Interior's Professional Guidelines (Federal register 48:190:44738-44739) (United States Department of the Interior 1983) in Architectural History, Archaeology, and History. Mr. Supernowicz, who is an Architectural Historian and Register Professional Archaeologist (RPA), has over 40 years of experience in cultural resource management, having worked for several federal and state agencies and as a Section 106 project reviewer at the SHPO office in Sacramento.

IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

2800 Cottage Way, Room W-2605
Sacramento, CA 95825-1846

NOT FOR CONSULTATION

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Draw the project location and click CONTINUE.
2. Click DEFINE PROJECT.
3. Log in (if directed to do so).
4. Provide a name and description for your project.
5. Click REQUEST SPECIES LIST.

Listed species¹ and their critical habitats are managed by the [Ecological Services Program](#) of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries²).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact [NOAA Fisheries](#) for [species under their jurisdiction](#).

-
1. Species listed under the [Endangered Species Act](#) are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the [listing status page](#) for more information. IPaC only shows species that are regulated by USFWS (see FAQ).

2. [NOAA Fisheries](#), also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following species are potentially affected by activities in this location:

Mammals

NAME	STATUS
Salt Marsh Harvest Mouse <i>Reithrodontomys raviventris</i> Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/613	Endangered

Birds

NAME	STATUS
California Clapper Rail <i>Rallus longirostris obsoletus</i> Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/4240	Endangered
California Least Tern <i>Sterna antillarum browni</i> Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/8104	Endangered
Western Snowy Plover <i>Charadrius nivosus nivosus</i> There is final critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/8035	Threatened

Reptiles

NAME	STATUS
Alameda Whipsnake (=striped Racer) <i>Masticophis lateralis euryxanthus</i> Wherever found There is final critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/5524	Threatened

Green Sea Turtle *Chelonia mydas*

Threatened

No critical habitat has been designated for this species.

<https://ecos.fws.gov/ecp/species/6199>

Amphibians

NAME

STATUS

California Red-legged Frog *Rana draytonii*

Threatened

Wherever found

There is **final** critical habitat for this species. Your location does not overlap the critical habitat.

<https://ecos.fws.gov/ecp/species/2891>

Foothill Yellow-legged Frog *Rana boylei*

Proposed Threatened

No critical habitat has been designated for this species.

<https://ecos.fws.gov/ecp/species/5133>

Fishes

NAME

STATUS

Tidewater Goby *Eucyclogobius newberryi*

Endangered

Wherever found

There is **final** critical habitat for this species. Your location does not overlap the critical habitat.

<https://ecos.fws.gov/ecp/species/57>

Insects

NAME

STATUS

Monarch Butterfly *Danaus plexippus*

Candidate

Wherever found

No critical habitat has been designated for this species.

<https://ecos.fws.gov/ecp/species/9743>

Flowering Plants

NAME

STATUS

Santa Cruz Tarplant *Holocarpha macradenia*

Threatened

Wherever found

There is **final** critical habitat for this species. Your location does not overlap the critical habitat.

<https://ecos.fws.gov/ecp/species/6832>

Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

There are no critical habitats at this location.

You are still required to determine if your project(s) may have effects on all above listed species.

Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act¹ and the Bald and Golden Eagle Protection Act².

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described [below](#).

1. The [Migratory Birds Treaty Act](#) of 1918.
2. The [Bald and Golden Eagle Protection Act](#) of 1940.

Additional information can be found using the following links:

- Birds of Conservation Concern <https://www.fws.gov/program/migratory-birds/species>
- Measures for avoiding and minimizing impacts to birds <https://www.fws.gov/library/collections/avoiding-and-minimizing-incident-take-migratory-birds>
- Nationwide conservation measures for birds <https://www.fws.gov/sites/default/files/documents/nationwide-standard-conservation-measures.pdf>

The birds listed below are birds of particular concern either because they occur on the [USFWS Birds of Conservation Concern](#) (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ [below](#). This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the [E-bird data mapping tool](#) (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your

list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found [below](#).

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON
<p>Allen's Hummingbird <i>Selasphorus sasin</i></p> <p>This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9637</p>	Breeds Feb 1 to Jul 15
<p>Bald Eagle <i>Haliaeetus leucocephalus</i></p> <p>This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.</p>	Breeds Jan 1 to Aug 31
<p>Belding's Savannah Sparrow <i>Passerculus sandwichensis beldingi</i></p> <p>This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/8</p>	Breeds Apr 1 to Aug 15
<p>Black Oystercatcher <i>Haematopus bachmani</i></p> <p>This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9591</p>	Breeds Apr 15 to Oct 31
<p>Black Skimmer <i>Rynchops niger</i></p> <p>This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/5234</p>	Breeds May 20 to Sep 15
<p>Black Turnstone <i>Arenaria melanocephala</i></p> <p>This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.</p>	Breeds elsewhere

<p>Bullock's Oriole <i>Icterus bullockii</i> This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA</p>	Breeds Mar 21 to Jul 25
<p>California Gull <i>Larus californicus</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.</p>	Breeds Mar 1 to Jul 31
<p>California Thrasher <i>Toxostoma redivivum</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.</p>	Breeds Jan 1 to Jul 31
<p>Clark's Grebe <i>Aechmophorus clarkii</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.</p>	Breeds Jun 1 to Aug 31
<p>Common Yellowthroat <i>Geothlypis trichas sinuosa</i> This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/2084</p>	Breeds May 20 to Jul 31
<p>Golden Eagle <i>Aquila chrysaetos</i> This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1680</p>	Breeds Jan 1 to Aug 31
<p>Gull-billed Tern <i>Gelochelidon nilotica</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9501</p>	Breeds May 1 to Jul 31
<p>Lawrence's Goldfinch <i>Carduelis lawrencei</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9464</p>	Breeds Mar 20 to Sep 20
<p>Marbled Godwit <i>Limosa fedoa</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9481</p>	Breeds elsewhere

Nuttall's Woodpecker <i>Picoides nuttallii</i> This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/9410	Breeds Apr 1 to Jul 20
Oak Titmouse <i>Baeolophus inornatus</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9656	Breeds Mar 15 to Jul 15
Olive-sided Flycatcher <i>Contopus cooperi</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/3914	Breeds May 20 to Aug 31
Short-billed Dowitcher <i>Limnodromus griseus</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9480	Breeds elsewhere
Tricolored Blackbird <i>Agelaius tricolor</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/3910	Breeds Mar 15 to Aug 10
Western Grebe <i>Aechmophorus occidentalis</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/6743	Breeds Jun 1 to Aug 31
Willet <i>Tringa semipalmata</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds elsewhere
Wrentit <i>Chamaea fasciata</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds Mar 15 to Aug 10
Yellow-billed Magpie <i>Pica nuttalli</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9726	Breeds Apr 1 to Jul 31

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is $0.25/0.25 = 1$; at week 20 it is $0.05/0.25 = 0.2$.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

Breeding Season (■)

Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)

Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

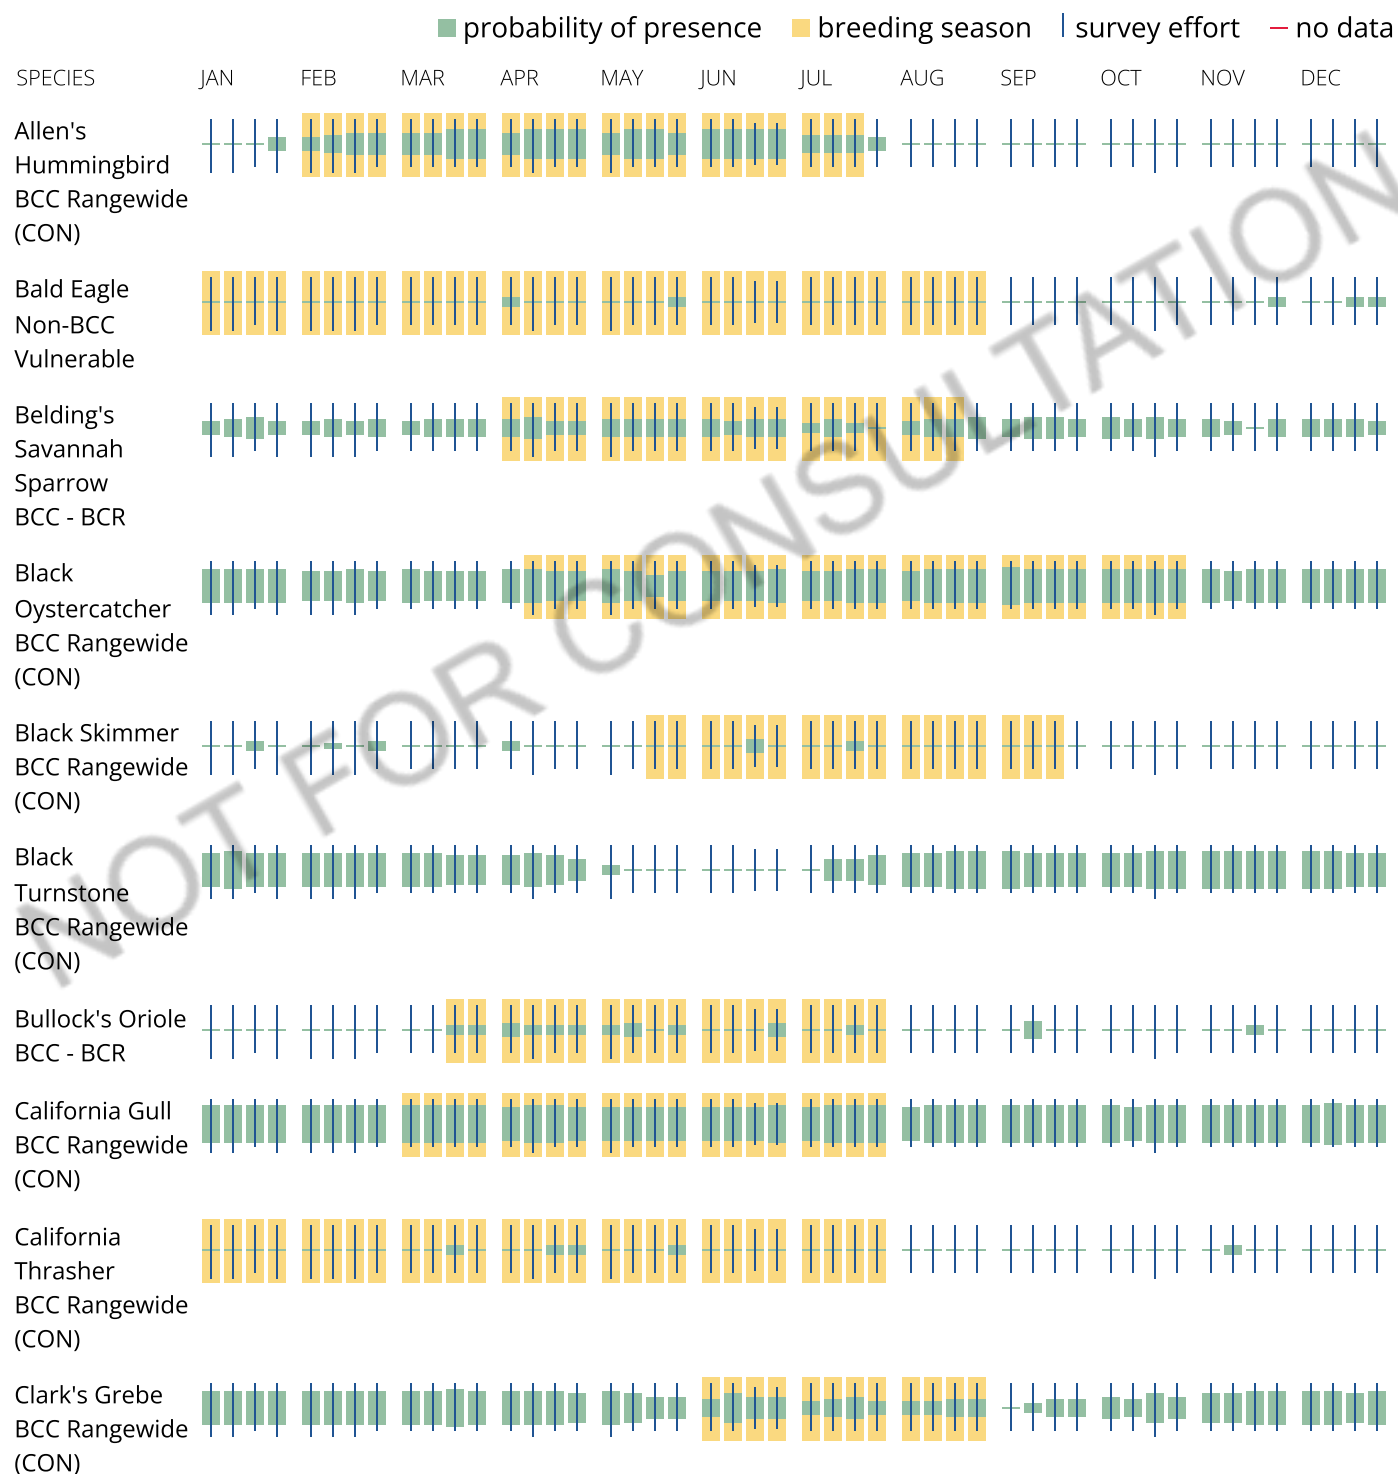

To see a bar's survey effort range, simply hover your mouse cursor over the bar.

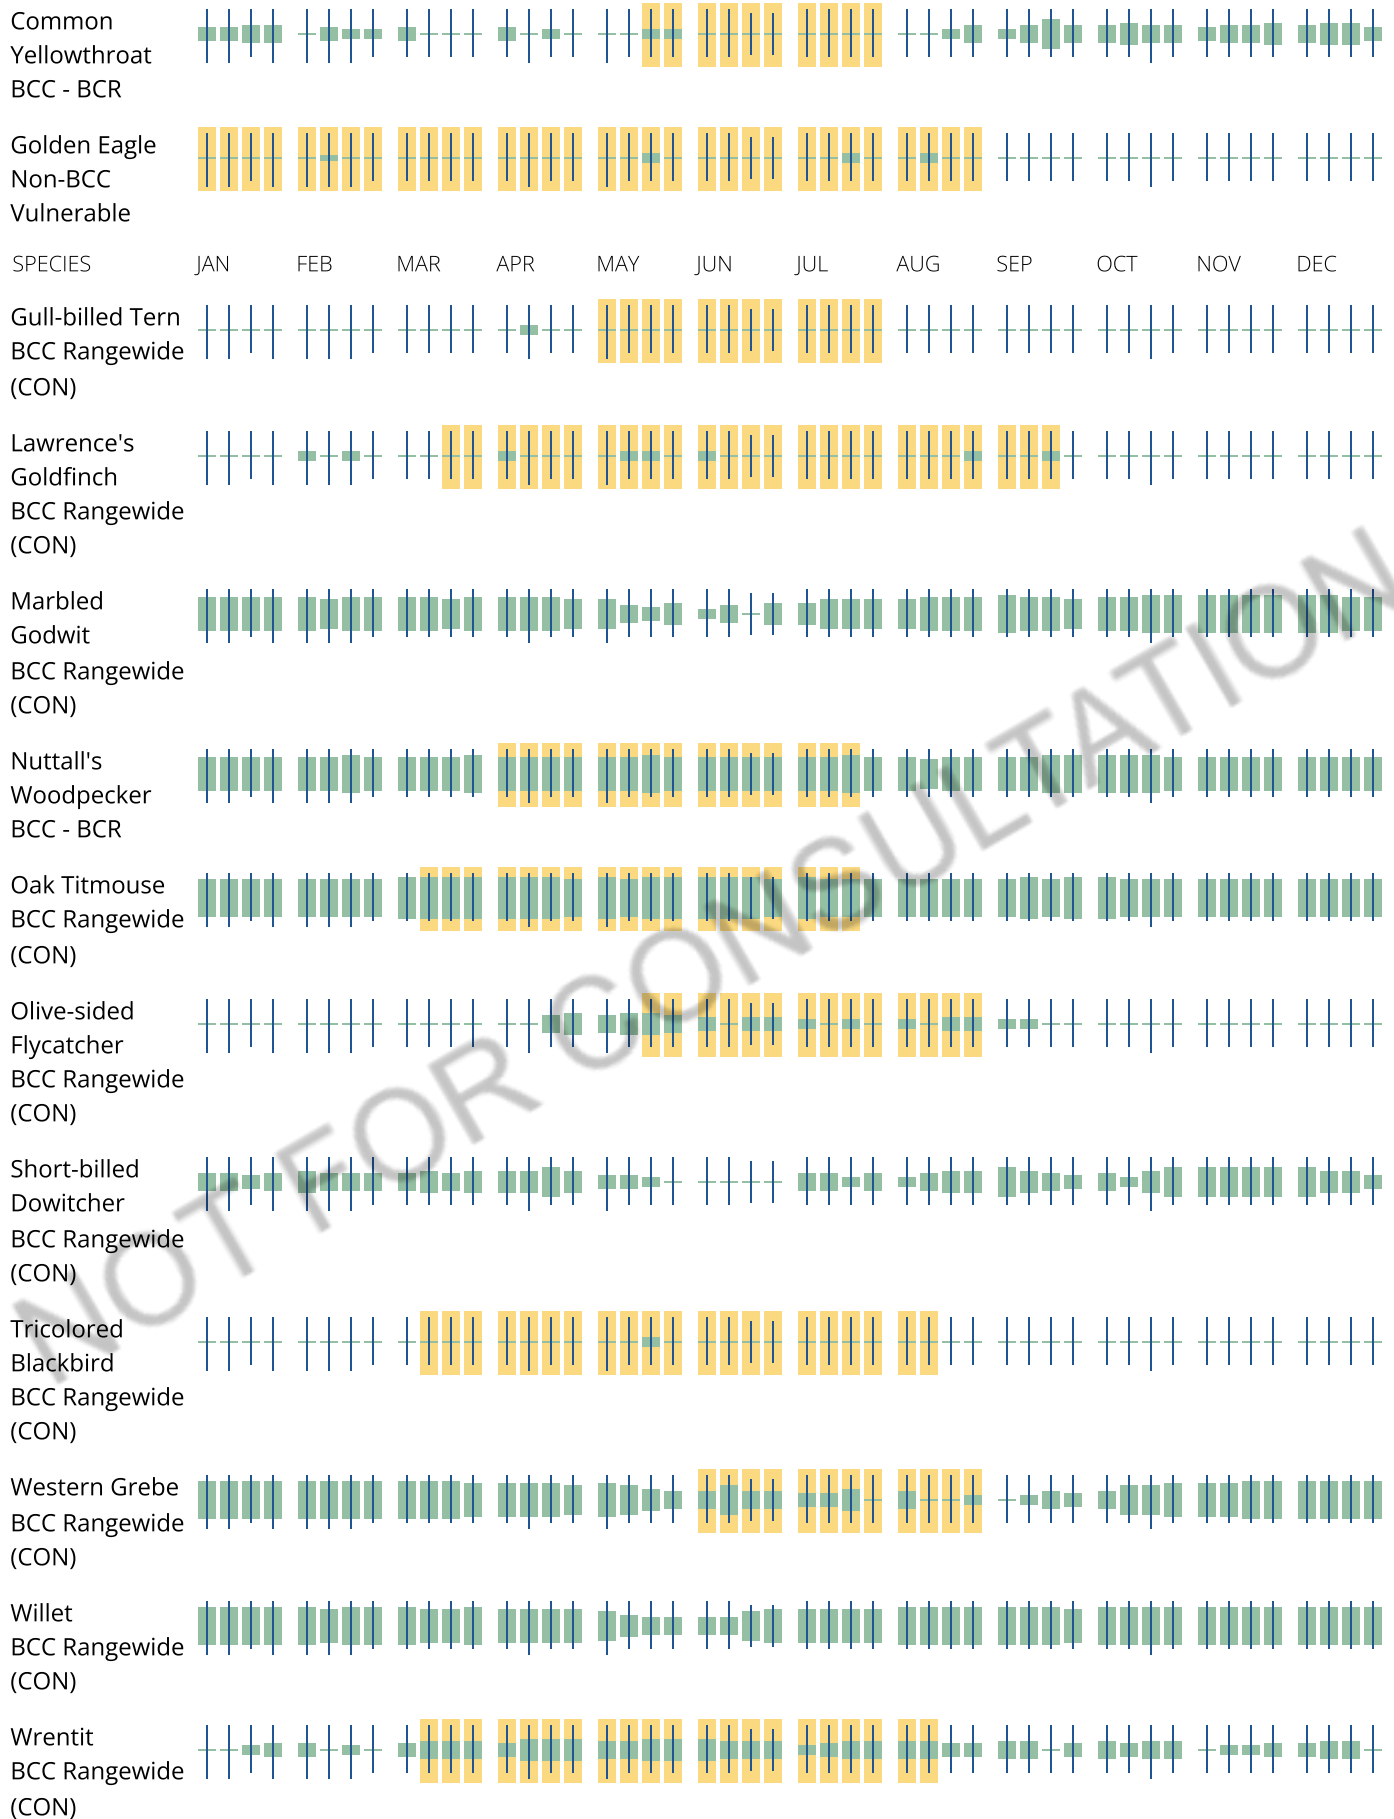

No Data (-)

A week is marked as having no data if there were no survey events for that week.

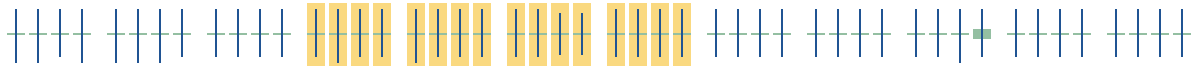

Survey Timeframe

Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

Magpie
BCC Rangewide
(CON)

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

[Nationwide Conservation Measures](#) describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. [Additional measures](#) or [permits](#) may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the list of migratory birds that potentially occur in my specified location?

The Migratory Bird Resource List is comprised of USFWS [Birds of Conservation Concern \(BCC\)](#) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the [Avian Knowledge Network \(AKN\)](#). The AKN data is based on a growing collection of [survey, banding, and citizen science datasets](#) and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle ([Eagle Act](#) requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the [Rapid Avian Information Locator \(RAIL\) Tool](#).

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the [Avian Knowledge Network \(AKN\)](#). This data is derived from a growing collection of [survey, banding, and citizen science datasets](#).

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering or migrating in my area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may query your location using the [RAIL Tool](#) and look at the range maps provided for birds in your area at the bottom of the profiles provided for each bird in your results. If a bird

on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are [Birds of Conservation Concern](#) (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the [Eagle Act](#) requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the [Northeast Ocean Data Portal](#). The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the [NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf](#) project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the [Diving Bird Study](#) and the [nanotag studies](#) or contact [Caleb Spiegel](#) or [Pam Loring](#).

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to [obtain a permit](#) to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is

the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

Facilities

National Wildlife Refuge lands

Any activity proposed on lands managed by the [National Wildlife Refuge](#) system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

There are no refuge lands at this location.

Fish hatcheries

There are no fish hatcheries at this location.

Wetlands in the National Wetlands Inventory (NWI)

Impacts to [NWI wetlands](#) and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local [U.S. Army Corps of Engineers District](#).

Wetland information is not available at this time

This can happen when the National Wetlands Inventory (NWI) map service is unavailable, or for very large projects that intersect many wetland areas. Try again, or visit the [NWI map](#) to view wetlands at this location.

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tubercid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate Federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

Environmental Justice & Supplemental Indexes

The environmental justice and supplemental indexes are a combination of environmental and socioeconomic information. There are thirteen EJ indexes and supplemental indexes in EJScreen reflecting the 13 environmental indicators. The indexes for a selected area are compared to those for all other locations in the state or nation. For more information and calculation details on the EJ and supplemental indexes, please visit the [EJScreen website](#).

EJ INDEXES

The EJ indexes help users screen for potential EJ concerns. To do this, the EJ index combines data on low income and people of color populations with a single environmental indicator.

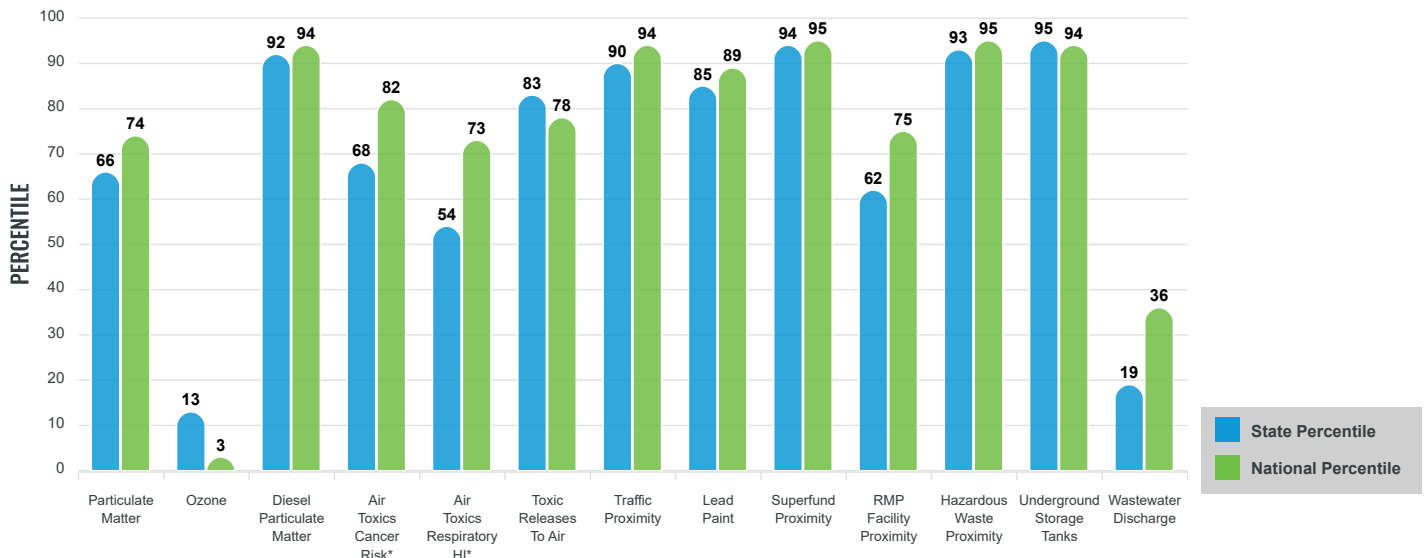

EJ INDEXES FOR THE SELECTED LOCATION

SUPPLEMENTAL INDEXES

The supplemental indexes offer a different perspective on community-level vulnerability. They combine data on percent low-income, percent linguistically isolated, percent less than high school education, percent unemployed, and low life expectancy with a single environmental indicator.

SUPPLEMENTAL INDEXES FOR THE SELECTED LOCATION

These percentiles provide perspective on how the selected block group or buffer area compares to the entire state or nation.

*Diesel particulate matter, air toxics cancer risk, and air toxics respiratory hazard index are from the EPA's Air Toxics Data Update, which is the Agency's ongoing, comprehensive evaluation of air toxics in the United States. This effort aims to prioritize air toxics, emission sources, and locations of interest for further study. It is important to remember that the air toxics data presented here provide broad estimates of health risks over geographic areas of the country, not definitive risks to specific individuals or locations. Cancer risks and hazard indices from the Air Toxics Data Update are reported to one significant figure and any additional significant figures here are due to rounding. More information on the Air Toxics Data Update can be found at: <https://www.epa.gov/haps/air-toxics-data-update>.
