Local Case Number: RO0002984
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Heating Oil / Fuel Oil, Lead
Site History: In 2006, the site was being redeveloped with a multi-story office building. During construction activities, an UST was discovered and subsequently removed. Elevated concentrations of petroleum hydrocarbons were detected at the site. Several borings were installed to delineate the extent of the groundwater contaminant plume.

US BROWNFIELDS:
 Name: FOX COURTS SITE
 Address: SAN PABLO AVENUE & 18TH STREET
 City,State,Zip: OAKLAND, CA 94612
 Recipient Name: Oakland Redevelopment Agency
 Grant Type: Cleanup
 Property Number: 0080642017-00
 Parcel size: 1.1
 Latitude: 37.808056
 Longitude: -122.271667
 HCM Label: Address Matching-Nearest Intersection
 Map Scale: -
 Point of Reference: Center of a Facility or Station
 Highlights: Former Use: The subject site is located adjacent to the historic Fox Theater in downtown Oakland. The site was used for housing in the early 1900s, but from 1928 onwards, it was used for various commercial uses such as auto parking and garage, paint & wallpaper

store, furniture store, sign painting, art glass works, and metal/machine works. The site had been occupied by an art school for the past few years. Based on the site investigations, the soils are contaminated with petroleum hydrocarbons and lead. As part of the redevelopment, the contaminated soils will be removed and disposed off at a landfill.

- Property Description:

The subject site is located adjacent to the historic Fox Theater in downtown Oakland. The site was used for housing in the early 1900s, but from 1928 onwards, it was used for various commercial uses such as auto parking and garage, paint & wallpaper store, furniture store, sign painting, art glass works, and metal/machine works. The site had been occupied by an art school for the past few years. Based on the site investigations, the soils are contaminated with petroleum hydrocarbons and lead. As part of the redevelopment, the contaminated soils will be removed and disposed off at a landfill.

(RECs) which had not yet been evaluated which are outlined below: 1) On-site historic gasoline and oil service station at 570 16th Street; 2) Off-site historic gasoline and oil service station at 620 17th Street (Oak Grove North); 3) Off-site leaking underground storage tank case adjacent to the Site at 1700 Jefferson Street; 4) Multiple adjacent historical and active dry cleaning facilities; and 5) Former adjacent historical auto-station (Mash Petroleum Inc.) at 1721 Jefferson Street. These RECs were investigated as part of a soil and soil vapor subsurface investigation conducted by Rincon Consultants, Inc. in February 2019 on behalf of the Oakland Housing Authority (the property owner). The results of this subsurface investigation indicate that contaminants associated with petroleum hydrocarbons, lead, and halogenated hydrocarbons are present in soil and soil vapor at the Site. At this time, further investigation is warranted to identify the source and characterize the extents and stability of subsurface contamination at and in the vicinity of the Site. Further investigation is also warranted to evaluate potentially complete and unacceptable exposure pathways at the Site to determine if implementation of remediation and/or mitigation measures are necessary for the protection of human health and the environment.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1
Completed Date: 07/27/1995
Comments: Pursuant to the MOU, DTSC has reviewed a Phase I Preliminary Environmental Assessment for Asian Health Services (AHS). The subject property currently contains a vacant three-story commercial office building. AHS is proposing to remodel the building in order to accommodate a community health clinic. A Supplemental Phase I Environmental Assessment Report was prepared by DTSC and concluded that no action was needed for this property; there was no contamination on the property.

Lead Agency: ALAMEDA COUNTY LOP
Case Type: LUST Cleanup Site
Geo Track: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0600101486
Global Id: T0600101486
Latitude: 37.798989492
Longitude: -122.269965472
Status: Open - Remediation
Status Date: 07/15/2014
Case Worker: EH
RB Case Number: 01-1611
Local Agency: ALAMEDA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: RO0000231
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Three UST were removed in 1990 and significantly elevated concentrations of petroleum hydrocarbons were detected in soil during the UST removal. A program of groundwater monitoring was implemented in 1991 and dissolved phase contamination is migrating offsite and impacting the downgradient sites located at 726 and 706 Harrison Street. Soil and groundwater sampling completed in 2007 detected elevated levels of MTBE in the deeper water bearing zone at 48 feet bgs. This site is part of a commingled plume and remedial action is proposed to remove residual mass beneath the sites. A pilot test of multi-phase extraction and air sparging/soil vapor extraction was conducted in 2013. Based on the results of the pilot test, remediation of 706 and 726 Harrison Street is planned to begin in 2014 using air sparging and soil vapor extraction. A Remedial Action Plan that describes the planned remediation was approved in July 2014 following a public comment period on the Remedial Action Plan.

Treat To Water: Major Threat to Water Quality. A violation could render unusable a ground water or surface water resource used as a significant drink water supply, require closure of an area used for contact recreation, result in long-term deleterious effects on shell fish spawning or growth areas of aquatic resources, or directly expose the public to toxic substances.
Complexity: Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility

Name: LIM PROPERTY GAS STATION
Address: 250 8TH STREET
City,State,Zip: OAKLAND, CA 94607
Lead Agency: ALAMEDA COUNTY LOP
Case Type: LUST Cleanup Site
Geo Track: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0600100535
Global Id: T0600100535
Latitude: 37.7985604517513
Longitude: -122.269098758698
Status: Open - Eligible for Closure
Status Date: 06/01/2022
Case Worker: NL
RB Case Number: 01-0582
Local Agency: ALAMEDA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: RO0000479
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Lead, Benzene, Diesel, Ethylbenzene, Gasoline, MTBE / TBA / Other Fuel Oxygenates, Methane, Naphthalene, Toluene, Xylene

Site History: A gasoline service station formerly occupied the site. Ten USTs were removed in May 1992. Soil over-excavation was conducted between December 1992 and March 1993. Various site investigation activities have been conducted since 1995. Several remedial actions have taken place since 1999. A remedial system consisting of a soil vapor extraction and ozone sparging system was installed at the site in early 2011. The systems operated at the site until April 2015 when they were shut down to monitor for potential rebound. Based on data collected in 2022, ACDEH has determined that the Site is a low risk Site under the State Water Resources Control Board's low threat closure policy and therefore is eligible for closure conditioned upon maintenance of hardscape and building foundations as engineering controls for direct contact with soil and recordation of an environmental deed restriction on the property.

<http://ehgis.acgov.org/dehpublic/dehpublic.jsp>. On June 16, 1987, three gasoline underground storage tanks (USTs) were removed from the Site and a suspect unauthorized release was confirmed. Two USTs had a capacity of 1,000 gallons and one UST held 550 gallons of gasoline. Soil was reportedly excavated to 9 feet bgs, aerated onsite for one month to acceptable levels (no confirmation samples were analyzed), and used as fill material to backfill the UST excavation. Groundwater monitoring wells MW-1 through MW-3 were installed in June 1987 and well MW-1 initially contained 30 inches of free phase floating product. Free product also detected in monitoring well at off-site down-gradient property. Free phase has not been seen recently in site or vicinity wells; however, groundwater concentrations in onsite well MW-1 and off-site well MW-5 are substantially above concentrations that the LTCP Soil Vapor Technical Justification paper states is indirect evidence of free phase. At a minimum substantial residual soil contamination appears to reside at or below the depth of the UST excavation to groundwater, generally encountered at a depth of approximately 22 to 23 feet below surface grade. The historic groundwater contaminant plume extends northward; however, groundwater currently appears to flow westward, and additional investigation into this aspect is required. The potential for soil vapor intrusion to on- and offsite properties has been undertaken with the installation of four offsite groundwater monitoring wells (MW-7 to MW-10), the installation of 24 soil vapor wells (SV-1 to SV-24) of varying depth, installation of eight sub-slab vapor points (SS-1 to SS-8), and the collection of indoor air at multiple locations and times. A Soil Vapor Extraction (SVE) pilot test has been conducted utilizing this groundwater and vapor well network, and appears to be a viable corrective action option. Air Sparging (AS), including offsite horizontal AS wells, has been proposed as the corrective action option, but has not been fully tested. A CAP was submitted in July 2019, comments on the CAP by the adjacent property owner in August 2019, and a meeting was requested in September 2019 to identify a path forward. Not all historic documents for the fuel leak case may be available on GeoTracker. A complete case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>.

Lead Agency Case Number: RO0002914
Latitude: 37.800928255328
Longitude: -122.273056082174
Case Type: Cleanup Program Site
Case Worker: KEN
Local Agency: ALAMEDA COUNTY LOP
RB Case Number: NA
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Total Petroleum Hydrocarbons (TPH)
Site History: The site is currently developed as a 5-story hotel having a slab-on-grade foundation. At the time this case was opened, the property was owned by Oakland Garden Hotel LLC. The property, a former parking lot, had recently been transferred from the Redevelopment Agency of the City of Oakland following closure of the Alameda County Department of Environmental Health (ACDEH) Spills, Leaks, Investigation and Cleanup (SLIC) Program case RO0002673, STID 5803 and GeoTracker Global ID T0601975838, for the subject site. Residual petroleum hydrocarbon (PH) contamination was encountered along the sidewalk area along Ninth Street during excavation activities for the hotel foundation. The residual PH concentrations exceeded the case closure concentrations reported for RO0002673, closed on April 13, 2000. PH contaminated soil was excavated and the hotel constructed. However, the case had not been closed. ACDEHs review of the case file determined the case met all General Criteria of the State Water Resources Control Boards (SWRCBs) Low Threat Underground Storage Tank Case Closure Policy (LTCP) and two of the three Media Specific LTCP Criteria (Groundwater and Direct Contact and Outdoor Air Criteria). It was unclear to ACDEH if the site met the LTCP Media Specific Criteria for Vapor Intrusion to Indoor Air (VI-IA). Therefore, in a letter dated May 20, 2016, ACDEH requested the collection and analysis of indoor air samples in order to satisfy the VI-IA criteria. The findings of the vapor intrusion study, presented in a report dated June 8, 2016, demonstrated concentrations of PHs were below the laboratory reporting limits for the indoor air samples, thus satisfying the LTCP VI-IA Criteria.

 Potential Media Affected: Aquifer used for drinking water supply, Other Groundwater (uses other than drinking water), Under Investigation
 Potential Contaminants of Concern: Tetrachloroethylene (PCE), Lead, Diesel, Gasoline
 Site History: Alameda County Department of Environmental Health (ACDEH) provided regulatory environmental oversight for the investigation and cleanup activities associated with Cleanup Site Program Case No. RO0003305 from April 2018 to April 2021 subsequent to referral by the City of Oakland Planning and Building Department. Subsurface investigations have been conducted to evaluate historical operations at the Site including but not limited to residential dwellings and various commercial configurations such as automobile service and repair operations with associated former underground storage tanks. Results of these subsurface investigations has identified chemicals of concern (COCs) in environmental media (soil and soil vapor).

Corrective actions have been completed at the Site including remedial soil excavation and off-Site disposal of impacted soil at a permitted disposal facility; and installation of vapor mitigation engineering controls to control potential vapor intrusion to indoor air. The redevelopment of the Site is currently being conducted and includes one mixed-use building approximately 156 feet tall. The building will generally be at grade, with finished floor elevations approximately matching the surrounding sidewalk grade, with an approximately 40 square foot partial basement level that daylights at the lower driveway level to the adjacent parking garage. The partial basement and first floor of the building will be utilized for retail, residential amenities and building support purposes (i.e. non-residential use). Residential apartments will be constructed over the first floor. Cleanup Program Site Case No. RO0003305 was opened by Alameda County Department of Environmental Health (ACDEH) in 2018 under a Voluntary Remedial Action Agreement with CIM Group to facilitate investigation and cleanup of chemicals of concern in the subsurface associated with historical land use at and in the vicinity of the Site and redevelopment of the site with a mixed-use commercial/residential building. The Site was underlain by 1 to 14.5 feet of fill. Chemicals of concern (COCs) detected in subsurface soil/fill, groundwater, and soil vapor beneath the Site included but were not limited to lead, total petroleum hydrocarbons (TPH), and chlorinated volatile organic compounds (CVOCs). Lead and TPH soil impacts were removed during excavation of fill across the Site during redevelopment activities and subsequent offsite investigations delineated the residual dissolved]phase TPH plume. CVOC impacts in groundwater and soil vapor were identified from off]site sources. Site development activities were completed in 2021 and included installation of vapor mitigation engineering controls (VMECs) to mitigate risk to occupants of the building from potential vapor intrusion of soil gas impacted with CVOCs into indoor air. VMECs installed at the site include: the concrete building foundation (cap); waterproofing/vapor barrier; trench plugs along utility corridors; and conduit seals to mitigate potential vapor intrusion risks from off]site vapor impacts including but not limited to tetrachloroethene concentrations detected in the former offsite boring LBJ24 located adjacent south of the Site. A Risk Management Plan and VMEC Operations and Maintenance Plan have been prepared for the Site and include procedures and instructions associated with long]term maintenance and repair of VMECs installed at the Site. Strict adherence to the protocols and repair procedures outlined in both documents must be followed in order to adequately protect site occupants and users from exposure to potential residual contamination from new vapor intrusion pathways. With the provision that the information provided to this agency is accurate and representative of known Site conditions, ACDEH has determined that no further remedial action is required at the Site and therefore closed the case associated with environmental investigation and remediation (RO0003305) and opened a new case (RO0003478) to act as a document repository for long]term management of the VMECs.

Local Agency: ALAMEDA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: RO0000196
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Benzene, Diesel, Ethylbenzene, Gasoline, Naphthalene, Toluene, Waste Oil / Motor / Hydraulic / Lubricating, Xylene

Site History:

Prior to 1989 the site operated as a gasoline service station. Previous investigations indicate that five underground storage tanks (USTs) previously existed on site including two 6,000-gallon gasoline USTs, one 550-gallon waste oil, and one 1,000-gallon solvent UST. One of the USTs was said to have been removed prior to 1988; however, no documentation exists regarding this UST and its removal. Available records do not indicate who pulled the tank, the contents of the tank, or the exact date of the removal, but it is believed that this tank was located close to the location of monitoring well MW 1. The other four USTs were removed in 1989. During the 1989 UST excavation, soil samples were collected from beneath each tank, and the tanks were observed to have no obvious pitting or corrosion. 10 cubic yards of soil that were deemed contaminated were stockpiled onsite, and sent for analysis. High concentration of fuel contamination was detected in the northeastern excavation, and in the waste oil/solvent UST excavation. In September and October 1989, a preliminary investigation was conducted to determine whether fuel detected in soil during UST excavation activities impacted groundwater. Two locations (north western, and waste/oil solvent excavation area) were re-excavated and 25 cubic yards of additional contaminated soil was removed. The northwestern excavation was backfilled with a combination of clean fill and re-used uncontaminated soil from the initial excavation of the two gasoline USTs while the waste oil/solvent excavation was backfilled with clean fill. Construction of the existing commercial 2-story building began in early 1991. Starting from October 1989, monitoring wells (onsite and offsite) and soil borings were installed to define the lateral extent of the contaminant plume. A periodic subsurface monitoring program was implemented to monitor contaminants from October 1989 to December 2015. Trend analysis from these subsurface investigation indicates that dissolved-phase hydrocarbon plume in the groundwater appears to be generally stable. Two soil vapor probes and two sub-slab soil

vapor probes were installed in November 2006 and December 2015 respectively to assess vapor intrusion risk to indoor air within the on-site building. Based on the sample results obtained from these vapor probes, no concentrations were detected above regulatory screening levels, and it was determined that no potential risk for vapor intrusion to the site building exists. Potential Exposure to Chemicals of Concern The chemicals of concern at the site are residual TPHg, TPH as diesel, and BTEX in groundwater and soil from the former gasoline USTs located in the northwest portion of the site and the former USTs located in the sidewalk along 8th Street. Since soil vapor results showed no concentrations were detected above regulatory screening levels, direct contact and ingestion appear to be the two potential exposure to these chemicals of concern. Remediation Activities Remediation was conducted by over excavating hydrocarbon contaminated soil below the former USTs. No additional corrective actions were performed at the site.

 RB Case Number: 01-1244
 Local Agency: Not reported
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Local Case Number: RO000202
 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Gasoline
 Site History: The site is currently occupied by Vics Auto, an automotive repair facility equipped with one 13,000-gallon underground storage tank (UST). Surrounding land use is mixed commercial and residential. Soils in the vicinity of the site are mostly fine to medium sand, with varying silt and clay content. On June 17, 1993, four 1,000-gallon gasoline USTs and one 250-gallon waste oil UST were removed from the site. No groundwater was encountered during excavation activities. The tank conditions were slightly rusted, with two visible holes noted in the waste oil tank. Soil samples collected from the gasoline UST pit and waste oil UST pit contained up to 24 parts per million (ppm) Total Petroleum Hydrocarbons as gasoline (TPHg) and 2,100 ppm Total Oil and Grease (TOG), respectively. The waste oil tank pit was over-excavated and re-sampled. The over-excavation soil sample contained 3.9 ppm TPHg. On August 23, 1994, the two remaining 6,000-gallon gasoline tanks were removed from the site. The UST located in the northern corner of the site was replaced with a 13,000-gallon gasoline UST. Fourteen soil samples were collected from the tank pits and soil stockpiles. The soil samples collected from beneath the southern-most tank contained the greatest petroleum hydrocarbon concentrations of 160 ppm TPHg and 0.82 ppm benzene. The two tank pits were subsequently over-excavated to approximately 19 feet below ground surface (bgs). Heavily contaminated groundwater and soils were encountered. Confirmation soil samples collected after over-excavation contained up to 3,900 ppm TPHg and 6.1 ppm benzene. On July 14, 1995, two soil borings were advanced and completed as groundwater monitoring wells (MW-1 and MW-2). Soil samples were collected from each boring at approximately five-foot intervals. Well MW-1 was not sampled for groundwater because free product was observed in the well at a thickness of 2.22 feet. Groundwater depth at the site was measured to be 17.21 feet bgs. The soil samples contained up to 390 ppm TPHg and 0.3 ppm benzene. The groundwater sample from MW-2 contained 68,000 parts per billion (ppb) TPHg and 480 ppb benzene. On August 8, 1996, three soil borings (SB-1 through SB-3) were advanced to depths ranging between

VIC'S AUTOMOTIVE SERVICE (Continued)

S102657129

24 and 25 feet bgs. Soil samples were collected from each boring at 24 feet bgs, with an additional sample collected from boring SB-1 at 18 feet bgs. Grab groundwater samples were also collected from each boring. The soil sample collected from boring SB-1 at 18 feet bgs contained the greatest contamination of 9,100 ppm TPHg, 57 ppm benzene, and 47 ppm MTBE. The grab groundwater samples contained concentrations of up to 140,000 ppb TPHg, 19,000 ppb benzene, and 27,000 ppb MTBE. Manual bailing and pumping of Light Non-Aqueous Phase Liquid (LNAPL) from well MW-1 occurred intermittently from 1997 to 1998. On May 25, 2001, two soil borings were advanced and converted to monitoring wells MW-3 and MW-4. Soil samples were collected from each boring at 15 and 20 feet bgs. The completed wells were sampled during the next monitoring event on June 29, 2001. Soil samples collected from the borings did not contain petroleum hydrocarbons or fuel oxygenates at concentrations above reporting limits. Groundwater from wells MW-3 and MW-4 contained up to 550 ppb TPHg. Groundwater from well MW-2 collected during the same monitoring event contained 69,000 ppb TPHg, 7,200 ppb benzene, and 4,400 ppb MTBE. Due to the continued presence of free product, a LNAPL recovery system was installed in well MW-1 in July 2001. Well MW-1 is located within the backfill of the southern-most gasoline UST. The LNAPL recovery system operated between 2001 and 2003. On April 2 and 3, 2003, fourteen soil borings (SB-4 through SB-17) were advanced both on-site and off-site. Soil samples were collected from the borings at depths ranging between 11 and 18 feet bgs. Grab groundwater samples were collected from each boring and soil vapor samples were collected from five of the borings. The soil samples collected from boring SB-7 at 18 feet bgs and SB-11 at 16 feet bgs contained the highest TPHg concentrations of 4,900 ppm and 2,700 ppm, respectively. Borings SB-7 and SB-11 are located southwest of the former UST locations. Similarly, groundwater samples collected southwest of the former UST locations contained the highest TPHg concentrations. TPHg and benzene were detected in grab groundwater samples at concentrations up to 310,000 ppb and 45,000 ppb, respectively. Soil vapor samples did not contain petroleum hydrocarbons at concentrations above reporting limits. On January 11, 19, and 20, 2005, six extraction/monitoring wells (MW-5 through MW-7 and MW-10 through MW-12) were installed both on-site and off-site, with the intent of utilizing a High Vacuum Dual-Phase Extraction (HVDPE) system in the near future. At least one soil sample was selected for analysis from each well. Groundwater samples were collected from newly completed and previously constructed wells (MW-1 through MW-4) on February 3, 2005. The soil samples contained up to 3,200 ppm TPHg, 35 ppm benzene, and 8.5 ppm MTBE. Results of the groundwater samples were similar to previous investigations with the high petroleum hydrocarbon concentrations detected south of the former UST locations. From July 11 to July 27, 2005, a 15-day HVDPE event was conducted in five of the extraction/monitoring wells. During the event, an estimated 10,600 pounds of hydrocarbons were removed in the vapor phase. Following this event, preparations were made to implement a fixed HVDPE system at the site. Startup of the HVDPE system began on June 26, 2007. On July 13, 2006, eight soil borings were advanced throughout the site and off-site in the downgradient direction. Four of the borings were converted to permanent, nested soil gas probes (GP-1 through GP-4). Soil samples and soil gas samples were collected from the gas probes at depths of five and ten feet bgs. The soil samples contained up to 1.6 ppm TPHg, with no concentrations of MTBE above reporting limits.

VIC'S AUTOMOTIVE SERVICE (Continued)

S102657129

The soil gas samples contained up to 705 micrograms per cubic meter (a%/m³) TPHg and 6.1 a%/m³ benzene. On March 18, 2008, wells MW-8, MW-9, and MW-13 were installed to delineate the petroleum hydrocarbon plume in groundwater. Soil samples were collected from the new wells at depths of 15 and 20 feet bgs and contained up to 1.5 ppm TPHG, 0.37 ppm benzene, and 0.089 ppm MTBE. Between August 21 and 22, 2008, soil gas probes GP-3 and GP-4 were decommissioned due to property development. Horizontal HVDPE conveyance piping laterals were installed on wells MW-10 through MW-12 to continue remediation. On July 28, 2009, three monitoring wells (MW-14 through MW-16) were installed off-site to delineate the downgradient extent of the petroleum hydrocarbon plume in groundwater. Soil samples were collected from each of the monitoring well borings at depths ranging between 16 and 25 feet bgs. Groundwater samples were collected from the new wells during the next monitoring event on August 21, 2009. Results of the monitoring event incorporating the newly established wells indicated that the petroleum hydrocarbon plume extended laterally from the former UST location to approximately 7th Street. On March 17, 2010, four soil borings (SB-16 through SB-19) were advanced as part of a source zone delineation study. Soil samples were collected from the borings at approximately two or three foot intervals at depths ranging between 15 and 25 feet bgs. The highest concentrations of TPHg and benzene in soil were detected in soil samples collected below the water table at a depth of 20 feet bgs. Soil samples from borings SB-19, SB-16, and SB-17 contained TPHg at concentrations up to 7,500 ppm, 4,300 ppm, and 2,100 ppm, respectively. Benzene concentrations in soil were highest in borings SB-19 and SB-17 at concentrations of 100 ppm and 87 ppm, respectively (both samples collected at a depth of 20 feet bgs). Groundwater was first encountered in the borings at approximately 19.5 feet bgs with the exception of borings SB-16 and SB-19, where groundwater was encountered at approximately 25 and 21 feet bgs, respectively. One grab groundwater sample collected from boring SB-18 contained 230 ppb TPHg and 3.2 ppb benzene. On June 30 and July 1, 2010, four air sparge wells (AS-1 through AS-4) were installed within the source zone to a total depth of 30 feet bgs. A pilot test for HVDPE with air sparging was conducted between August and October 2010. Results indicated that air sparging in conjunction with the HVDPE system increased the effectiveness of petroleum hydrocarbon mass removal by increasing the off-gas vapor concentrations. High Vacuum Dual Phase Extraction (HVDPE) remediation was conducted at the site from June 2007 to June 2011 in both on-site and off-site wells. The remediation system removed an estimated total of 5,663 gallons of Total Petroleum Hydrocarbons as gasoline (TPHg). A soil vapor sampling event was conducted on October 16, 2012. Five new soil gas probes (GP-5 through GP-9) were installed and sampled along with the remaining two existing soil gas probes (GP-1 and GP-2) on October 31, 2012. TPHg was detected in soil vapor from vapor probe GP-1 at a concentration of 2,700 a%/m³. TPHg was not detected at concentrations above reporting limits in the remaining eight soil vapor samples. Benzene was not detected in soil vapor depth at concentrations above reporting limits in any of the nine soil vapor samples collected. Groundwater monitoring began at the site on June 29, 2001 and was conducted quarterly until the most recent groundwater monitoring event on May 5, 2012. The depth to groundwater in site monitoring wells has ranged between 12.61 to 20.44 feet bgs. Soil vapor was also monitored on a quarterly schedule from August 2006 to August 2008.

Results of soil, groundwater, and soil vapor investigations indicate that a plume of petroleum hydrocarbons extended from the former southern-most UST location a distance of approximately 200 feet southwest (downgradient) of the site. HVDPE and air sparging remediation has reduced the concentrations of TPHg in groundwater from the highest detection of 310,000 ppb in 2003 to a maximum concentration of 250 ppb during the most recent groundwater monitoring event in May 2012. Benzene has also been reduced from a maximum of 52,000 ppb in February 2005 to a maximum concentration of 250 ppb during the most recent groundwater monitoring event in May 2012. Groundwater monitoring data indicate that the plume of petroleum hydrocarbons is stable or shrinking in extent. Based on evidence from recent investigations, the residual soil, groundwater, and soil vapor contamination from the former USTs does not appear to pose a threat to public or environmental health. Therefore, no further action is required for the site.

Case Type: Cleanup Program Site
Case Worker: UUU
Local Agency: Not reported
RB Case Number: 01S0717
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Under Investigation
Potential Contaminants of Concern: Arsenic, Diesel, Heating Oil / Fuel Oil, Kerosene, Stoddard solvent / Mineral Spruits / Distillates, Waste Oil / Motor / Hydraulic / Lubricating
Site History: As described in the Limited Phase II Environmental Site Sampling Report dated August 5, 2010, prepared by Basics Environmental, it appears that soil and groundwater contamination at the site consists of petroleum hydrocarbons and heavy metals. The sampling results indicate that diesel, kerosene, motor oil and bunker oil were detected in one grab groundwater sample at concentrations exceeding their respective environmental screening levels (ESLs) for groundwater. Arsenic was detected in two shallow soil samples at concentrations exceeding the ESL for arsenic in shallow soil (0-10 feet).

Case Type: Cleanup Program Site
Case Worker: DR
Local Agency: ALAMEDA COUNTY LOP
RB Case Number: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Soil
Potential Contaminants of Concern: Lead, Total Petroleum Hydrocarbons (TPH)
Site History: This case was opened to accommodate the potential redevelopment of the subject parcel, and an adjacent parcel, to mixed use. Site redevelopment may include ground floor residential; however, this has not been fully defined. An MPE pilot test has been approved to determine if this is a viable method to remediate the site to mix use. For the history of the adjacent parcel of the subject site, formerly a gasoline service station, please refer to the closed case (Chevron #9-3600; T060016163; RO0002435). A Station Demolition Plan is currently pending.

 Case Type: Cleanup Program Site
 Case Worker: DR
 Local Agency: ALAMEDA COUNTY LOP
 RB Case Number: Not reported
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Potential Media Affected: Soil, Soil Vapor, Under Investigation
 Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Vinyl chloride, Lead, Benzene, Total Petroleum Hydrocarbons (TPH)
 Site History: As part of a refinancing, a Phase I Environmental Site Assessment (ESA) was conducted on the Oak Grove North property in February of 2019. This ESA identified several recognized environmental conditions (RECs) which had not yet been evaluated which are outlined below: 1) On-site historic gasoline and oil service station; 2) Off-site historic gasoline and oil service station at 570 16th Street (Oak Grove South); 3) Off-site leaking underground storage tank case adjacent to the Site at 1700 Jefferson Street; 4) Multiple adjacent historical and active dry cleaning facilities; and 5) Former adjacent historical auto-station (Mash Petroleum Inc.) at 1721 Jefferson Street. These RECs were investigated as part of a soil and soil vapor subsurface investigation conducted by Rincon Consultants, Inc. in February 2019 on behalf of the Oakland Housing Authority (the property owner). The results of this subsurface investigation

indicate that contaminants associated with petroleum hydrocarbons, lead, and halogenated hydrocarbons are present in soil and soil vapor at the Site. At this time, further investigation is warranted to identify the source and characterize the extents and stability of subsurface contamination at and in the vicinity of the Site. Further investigation is also warranted to evaluate potentially complete and unacceptable exposure pathways at the Site to determine if implementation of remediation and/or mitigation measures are necessary for the protection of human health and the environment.

Name: CHAN'S SERVICE STATION / SHELL
 Address: 726 HARRISON
 City,State,Zip: OAKLAND, CA 94607
 Lead Agency: ALAMEDA COUNTY LOP
 Case Type: LUST Cleanup Site
 Geo Track: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0600102122
 Global Id: T0600102122
 Latitude: 37.7984332875099
 Longitude: -122.270128726959
 Status: Open - Remediation
 Status Date: 07/14/2014
 Case Worker: EH
 RB Case Number: 01-2307
 Local Agency: ALAMEDA COUNTY LOP
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Local Case Number: RO0000321
 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Gasoline
 Site History: Three UST were removed in 1990 and significantly elevated concentrations of petroleum hydrocarbons were detected in soil during the UST removal. A program of groundwater monitoring was implemented in 1991 and dissolved phase contamination is migrating offsite and impacting the downgradient sites located at 726 and 706 Harrison Street. Soil and groundwater sampling completed in 2007 detected elevated levels of MTBE in the deeper water bearing zone at 48 feet bgs. This site is part of a commingled plume and remedial action is proposed to remove residual mass beneath the sites. A pilot test of multi-phase extraction and air sparging/soil vapor extraction was conducted in 2013. Based on the results of the pilot test, remediation of 706 and 726 Harrison Street is planned to begin in 2014 using air sparging and soil vapor extraction. A Remedial Action Plan that describes the planned remediation was approved in July 2014 following a public comment period on the Remedial Action Plan.

CPS-SLIC: Name: A+A GAS & MART REDEVELOPMENT Address: 2200 TELEGRAPH AVENUE City,State,Zip: OAKLAND, CA 94612 Region: STATE Facility Status: Completed - Case Closed Status Date: 02/07/2020 Global Id: T10000010738 Lead Agency: ALAMEDA COUNTY LOP Lead Agency Case Number: RO0003258 Latitude: 37.8115720470152 Longitude: -122.268540175428 Case Type: Cleanup Program Site Case Worker: DR Local Agency: ALAMEDA COUNTY LOP RB Case Number: Not reported File Location: All Files are on GeoTracker or in the Local Agency Database Potential Media Affected: Other Groundwater (uses other than drinking water), Soil Potential Contaminants of Concern: Lead, Benzene, Diesel, Ethylbenzene, Gasoline, Naphthalene, Toluene, Total Petroleum Hydrocarbons (TPH), Waste Oil / Motor / Hydraulic / Lubricating, Xylene Site History: This case was opened by Alameda County Department of Environmental Health in 2017 to investigate subsurface impacts from historic land use (including single family homes, a commercial fueling station, and installation of Bart within a right of way traversing the parcel) and develop a corrective action plan necessary to facilitate a property transaction and redevelopment of the site and an adjacent parcel, to mixed use. The commercial gas station was demolished in 2019 and the following corrective actions have been completed at the site: (1) remediation of soil and groundwater using multi-phase extraction followed by an evaluation of rebound conditions, (2) excavation of petroleum hydrocarbon impacted soil, and (3) partial excavation of soil containing lead concentrations above residential environmental screening levels. The case was closed by ACDEH in February 2020,

based on information in the case file and with the provision that the information provided to ACDEH is accurate and representative of site conditions. ACDEHs closure determination was based on an analysis of risk to human health and the environment under the land use scenario as a vacant lot at the time of case closure. Risk to receptors under different land use scenarios or site configurations, were not considered in the closure determination of this SCP case. Additional excavation of lead impacted soil on the subject site is proposed in a corrective action plan prepared for a mixed-use redevelopment project located at both the 2200 Telegraph Avenue site and the 2201 Valley Street. Regulatory oversight of excavation of lead impacted soil on the parcel will be conducted under a Separate Site Cleanup Program Case No. RO3380 concurrent with site redevelopment activities that are expected to commence in June 2020.

File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: RO0002435
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A complete case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>. In 1986 tank basin soil and a groundwater sample were collected during the replacement of USTs in a pre-existing tank basin; hydrocarbon concentrations were encountered. Sixteen soil vapor wells are reported to have been installed in 1986 and 1987 over the BART tube, located directly below the site; however, no data has been submitted. In 1992 a groundwater sample was collected from a former vadose zone well (VW-2) and concentrations of concern were encountered; however, the location of VW-2-1 is unknown. In July 1994 product lines were removed and upgraded and low hydrocarbon concentrations were encountered. In March 2000 eight hand-augered bores were installed at the site; most bore depths were limited to 10 feet by the presence of the BART tube. In Mach 2002 wells MW-1 to MW-3 were installed on either side of the BART tube and right-of-way. In April 2012 soil bores B-9 to B-12 were installed to define the downgradient extent of the dissolved-phase groundwater plume. Groundwater was collected; however, appeared to define a deeper non-impacted groundwater zone. The groundwater plume was defined using the LTCP groundwater technical justification paper 90th percentile plume length, and conducting a downgradient sensitive receptor survey for water supply wells and potential basements that might encounter the impacted groundwater.

Status: Open - Remediation
Status Date: 07/14/2014
Case Worker: EH
RB Case Number: NA
Local Agency: ALAMEDA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: RO0000484
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Benzene, Gasoline
Site History: In February 1991 six USTs were removed and confirmation soil sampling detected elevated levels of hydrocarbon contamination beneath the site. Additional site characterization completed from 1993 through 1995 detected significantly elevated levels of TPHg and benzene in soil and groundwater. This site is part of a commingled plume and remedial action is proposed to remove residual mass beneath the sites. A pilot test of multi-phase extraction and air sparging/soil vapor extraction was conducted in 2013. Based on the results of the pilot test, remediation of 706 and 726 Harrison Street is planned to begin in 2014 using air sparging and soil vapor extraction. A Remedial Action Plan that describes the planned remediation was approved in July 2014 following a public comment period on the Remedial Action Plan.

Transit-Oriented Development (TOD), and proposed leasees, including Strada Investment Group, (Strada) and East Bay Asian Local Development Corporation (EBALDC) entered into a Voluntary Remedial Action Agreement (VRAA) in order for ACDEH to provide regulatory oversight of the investigation and cleanup of subsurface contamination at the Site to facilitate redevelopment by LMTOD, LLC and EBALDC. The Site consist of two properties which are made of two separate city blocks located in a mixed residential and commercial area of downtown Oakland near the Lake Merritt BART station. The properties consists of two rectangular parcels (Alameda County Assessor Parcel Numbers (APN) 1-169-1 located at 51 9th Street and 1-171-2 located at 107 8th Street in Oakland. Based on proposed construction APN 1-169-1 is referred to Block 1, Phase 1 and APN 1-171-2 is referred to Block 2, Phase 2. Both properties total approximately 2.75 acres. The current configuration of Block 1 includes the Lake Merritt BART parking lot and is bound by 9th Street to the northeast, Oak Street to the northwest, 8th Street to the southwest, and Fallon Street to the southeast. The current configuration of Block 2 contains a commercial office building and associated parking lot and is diagonally opposite to Block 1 and is bound by 8th Street to the northeast, Madison Street to the northwest, 7th Street to the southwest, and Oak Street to the southeast. Conceptual redevelopment plans on both parcels include construction of a total of four multi-story residential and commercial buildings. Block 1 is proposed to consist of Building A and Building B. Building A development will include over 350 residential housing units, as well as common living spaces and other amenities, and two commercial spaces. The Building B is proposed as affordable senior housing consisting of a seven-story building with over 80 residential housing units. Block 2 is proposed to include Building C and Building D. Building C will consists of 19-story office building with associated below grade 2-story parking garage. Building D is proposed as a seven-story affordable family residential housing. Excavation associated with building foundation elements (footers, etc) is anticipated at a depth of five to seven feet below grade. Excavation associated with the below grade parking at Building C is anticipated to a depth of 30 feet below grade.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 01/30/2018
Comments: Revised Proposed Termination of Groundwater Monitoring at the former Negherbon Site, Oakland CA (dated 25 January 2018). This memorandum provides information and analysis to support a recommendation for cessation of further groundwater monitoring on the Site. Site data demonstrate there are no identified soil or soil vapor sources of 1,1-DCA on the Site. The 1,1-DCA plume is migrating onto the Site from an upgradient source. The 1,1-DCA plume on the Site is stable. DTSC has no additional comments and hereby approves the request to terminate groundwater monitoring. As a reminder, the Operation and

Maintenance Agreement signed with Hive Development Group, LLC remains in effect. The Operation and Maintenance Agreement requires implementation of the Operation and Maintenance Plan. The Operation and Maintenance Plan covers installation and sampling of groundwater monitoring wells. Groundwater monitoring wells that are not being regularly sampled can serve as a conduit for contamination migration. Therefore, it may be prudent to properly abandon these wells. Following receipt of documentation that the monitoring wells have been properly abandoned, DTSC will initiate steps to terminate the Operation and Maintenance Agreement. This includes conducting an annual inspection and submitting an annual inspection report to DTSC by January 15th of each calendar year.

Completed Document Type: Operation and Maintenance Report
Completed Date: 10/04/2016
Comments: Quarterly Groundwater Monitoring for July 2016. The data collected during July and December 2015 and April and July 2016 indicate: TPH has not been reported in groundwater collected from HMW-1, HMW-2, or HMW-3. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are similar to or lower than those detected during the previous sampling events. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are generally stable; concentrations do not appear to be increasing. Based on the data collected during the first three quarterly events, it is anticipated the COC evaluation will be provided in early 2017, after the sixth quarterly event. The next quarterly groundwater monitoring will be performed during October 2016. The DTSC will be notified regarding the exact date approximately 7 days prior to the monitoring event.

Completed Document Type: Operation and Maintenance Report
Completed Date: 06/27/2016
Comments: Quarterly Groundwater Monitoring for April 2016. VOCs were detected above reporting limits in samples from monitoring wells HMW-1 and HMW-2 (including the blind duplicate sample from HMW-3). Detected VOCs include 1,1-DCA, 1,1-DCE, 1,2-DCA, 1,1,2-TCA, TCE, and VC. These VOCs were reported at concentrations similar to those reported in samples collected during the first quarter event and the Response Plan. TPH was not detected in groundwater samples. Groundwater levels measured in April were 1.74 to 1.86 feet higher than levels measured in July 2015, reflecting autumn and winter rain. The data collected during July and December 2015 and April 2016 indicate: TPH has not been reported in groundwater collected from HMW-1, HMW-2, or HMW-3. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are generally lower than in groundwater collected during the previous investigation. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are generally stable; concentrations do not appear to be increasing. Redox conditions are suitable for dechlorination of 1,1-DCA. As described in the DTSC approved O&M Plan, after 6 quarters of monitoring an evaluation of COCs in groundwater will be prepared and if appropriate, cessation of further groundwater monitoring events will be recommended. Based on the data collected during the first three quarterly events, it is anticipated the COC evaluation will be provided in early 2017, after the sixth quarterly event. The next quarterly groundwater monitoring will be performed during July 2016. DTSC will be notified regarding the exact date 7 days prior to the monitoring event.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 03/22/2017
Comments: Quarterly Groundwater Monitoring for October 2016. The data collected during the five quarters of sampling indicate: TPH has not been reported in groundwater collected from HMW-1, HMW-2, or HMW-3. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are similar to or lower than those detected during the previous sampling events. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are generally stable; concentrations do not appear to be increasing. However, The 10/18/2016 sample from HMW-2 shows a slight increase and the highest concentration of 1,1-DCA among the past five (5) quarterly monitoring events. As described in the DTSC approved O&M Plan (EKI, 2015a), after 6 quarters of monitoring an evaluation of COCs in groundwater will be prepared and if appropriate, cessation of further groundwater monitoring events will

Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 06/16/2017
Comments: Quarterly Groundwater Monitoring for February 2017, dated May 31, 2017. The data collected during the six quarters of sampling indicate: TPH has not been reported in groundwater collected from HMW-1, HMW-2, or HMW-3. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are lower than those detected during the pre-remedial Site investigation. The 1,1-DCA concentration measured in HMW-1 was lower in February compared to previous O&M sampling events. The 1,1-DCA concentration measured in HMW-2 was higher in February compared to previous O&M sampling events. The DTSC approved O&M Plan (EKI, 2015a) noted that an evaluation of COCs in groundwater would be prepared after 6 quarters of groundwater monitoring and if appropriate, cessation of further groundwater monitoring events could be recommended. Uptown will prepare the evaluation of COCs in groundwater and transmit the evaluation to the DTSC by 30 June 2017.

Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 12/15/2015
Comments: Well Installation Report and Quarterly Groundwater Monitoring Report for July 2015, dated November 6, 2015. The report presents data related to the installation, development, and sampling of three monitoring wells in accordance with the Operation and Maintenance (O&M) Plan for groundwater (EKI, February 2015). Sampling results for the first round of groundwater monitoring, collected in July 2015, are included in the report. Contaminant levels in groundwater monitoring wells are consistent with historical levels in groundwater beneath the site. In addition to 1,1,1-dichloroethane (1,1-DCA), trichloroethene, vinyl chloride, 1,1-dichloroethene, 1,2-dichloroethane, and 1,1,2-trichloroethane were detected above their respective maximum contaminant levels in the newly constructed upgradient well; however, a remedial goal has only been established for 1,1-DCA per the Response Plan (EKI, June 2013). Per the O&M Plan, additional data from the newly-installed monitoring wells will be obtained quarterly to evaluate the contaminant trends over time and the evidence for natural attenuation. Report approved by DTSC letter dated December 15, 2015.

Completed Area Name: PROJECT WIDE

chain-of-custody are included in Appendix C. VOCs were detected above reporting limits in samples from monitoring wells HMW-1 and HMW-2 (including the blind duplicate sample from HMW-3). Detected VOCs include 1,1-DCA, 1,1-DCE, 1,2-DCA, 1,1,2-TCA, TCE, and VC. These VOCs were reported at concentrations similar to those reported in samples collected during the first quarter event (see Table 3) and the Response Plan (see Appendix A). TPH was not detected in groundwater samples. Groundwater elevations measured in July and December 2015 are included in Table 2. As shown, groundwater levels measured in December were 0.71 to 1.19 feet higher than levels measured in July 2015, reflecting autumn rain. Concentrations of 1,1-DCA were higher in samples collected during December than concentrations collected during July 2015. However, because there have been only two sampling events, there are insufficient data to evaluate the natural attenuation of 1,1-DCA. The next quarterly groundwater monitoring will be performed during April 2016. The DTSC will be notified regarding the exact date 7 days prior to the monitoring event.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 01/30/2018
Comments: Revised Proposed Termination of Groundwater Monitoring at the former Negherbon Site, Oakland CA (dated 25 January 2018). This memorandum provides information and analysis to support a recommendation for cessation of further groundwater monitoring on the Site. Site data demonstrate there are no identified soil or soil vapor sources of 1,1-DCA on the Site. The 1,1-DCA plume is migrating onto the Site from an upgradient source. The 1,1-DCA plume on the Site is stable. DTSC has no additional comments and hereby approves the request to terminate groundwater monitoring. As a reminder, the Operation and Maintenance Agreement signed with Hive Development Group, LLC remains in effect. The Operation and Maintenance Agreement requires implementation of the Operation and Maintenance Plan. The Operation and Maintenance Plan covers installation and sampling of groundwater monitoring wells. Groundwater monitoring wells that are not being regularly sampled can serve as a conduit for contamination migration. Therefore, it may be prudent to properly abandon these wells. Following receipt of documentation that the monitoring wells have been properly abandoned, DTSC will initiate steps to terminate the Operation and Maintenance Agreement. This includes conducting an annual inspection and submitting an annual inspection report to DTSC by January 15th of each calendar year.

HMW-3. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are similar to or lower than those detected during the previous sampling events. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are generally stable; concentrations do not appear to be increasing. Based on the data collected during the first three quarterly events, it is anticipated the COC evaluation will be provided in early 2017, after the sixth quarterly event. The next quarterly groundwater monitoring will be performed during October 2016. The DTSC will be notified regarding the exact date approximately 7 days prior to the monitoring event.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 06/27/2016
Comments: Quarterly Groundwater Monitoring for April 2016. VOCs were detected above reporting limits in samples from monitoring wells HMW-1 and HMW-2 (including the blind duplicate sample from HMW-3). Detected VOCs include 1,1-DCA, 1,1-DCE, 1,2-DCA, 1,1,2-TCA, TCE, and VC. These VOCs were reported at concentrations similar to those reported in samples collected during the first quarter event and the Response Plan. TPH was not detected in groundwater samples. Groundwater levels measured in April were 1.74 to 1.86 feet higher than levels measured in July 2015, reflecting autumn and winter rain. The data collected during July and December 2015 and April 2016 indicate: TPH has not been reported in groundwater collected from HMW-1, HMW-2, or HMW-3. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are generally lower than in groundwater collected during the previous investigation. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are generally stable; concentrations do not appear to be increasing. Redox conditions are suitable for dechlorination of 1,1-DCA. As described in the DTSC approved O&M Plan, after 6 quarters of monitoring an evaluation of COCs in groundwater will be prepared and if appropriate, cessation of further groundwater monitoring events will be recommended. Based on the data collected during the first three quarterly events, it is anticipated the COC evaluation will be provided in early 2017, after the sixth quarterly event. The next quarterly groundwater monitoring will be performed during July 2016. DTSC will be notified regarding the exact date 7 days prior to the monitoring event.

Comments: Quarterly Groundwater Monitoring for October 2016. The data collected during the five quarters of sampling indicate: TPH has not been reported in groundwater collected from HMW-1, HMW-2, or HMW-3. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are similar to or lower than those detected during the previous sampling events. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are generally stable; concentrations do not appear to be increasing. However, The 10/18/2016 sample from HMW-2 shows a slight increase and the highest concentration of 1,1-DCA among the past five (5) quarterly monitoring events. As described in the DTSC approved O&M Plan (EKI, 2015a), after 6 quarters of monitoring an evaluation of COCs in groundwater will be prepared and if appropriate, cessation of further groundwater monitoring events will be recommended. Based on the data collected during the five quarterly events, it is anticipated the COC evaluation will be provided in early 2017, after the sixth quarterly event. The next quarterly groundwater monitoring will be performed during January 2017. The DTSC will be notified regarding the exact date approximately 7 days prior to the monitoring event.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 06/16/2017
Comments: Quarterly Groundwater Monitoring for February 2017, dated May 31, 2017. The data collected during the six quarters of sampling indicate: TPH has not been reported in groundwater collected from HMW-1, HMW-2, or HMW-3. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are lower than those detected during the pre-remedial Site investigation. The 1,1-DCA concentration measured in HMW-1 was lower in February compared to previous O&M sampling events. The 1,1-DCA concentration measured in HMW-2 was higher in February compared to previous O&M sampling events. The DTSC approved O&M Plan (EKI, 2015a) noted that an evaluation of COCs in groundwater would be prepared after 6 quarters of groundwater monitoring and if appropriate, cessation of further groundwater monitoring events could be recommended. Uptown will prepare the evaluation of COCs in groundwater and transmit the evaluation to the DTSC by 30 June 2017.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 12/15/2015
Comments: Well Installation Report and Quarterly Groundwater Monitoring Report for July 2015, dated November 6, 2015. The report presents data related to the installation, development, and sampling of three monitoring wells in accordance with the Operation and Maintenance (O&M) Plan for groundwater (EKI, February 2015). Sampling results for the first round of groundwater monitoring, collected in July 2015, are included in the report. Contaminant levels in groundwater monitoring wells are consistent with historical levels in groundwater beneath the site. In addition to 1,1,1-dichloroethane (1,1-DCA), trichloroethene, vinyl chloride, 1,1-dichloroethene, 1,2-dichloroethane, and 1,1,2-trichloroethane were detected above their respective maximum contaminant levels in the newly constructed upgradient well; however, a remedial goal has only been established for 1,1-DCA per the Response Plan (EKI, June 2013). Per the O&M Plan,

additional data from the newly-installed monitoring wells will be obtained quarterly to evaluate the contaminant trends over time and the evidence for natural attenuation. Report approved by DTSC letter dated December 15, 2015.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 02/23/2016
Comments: Quarterly Groundwater Monitoring for December 2015, dated February 10, 2016. Approved by DTSC letter, dated February 23, 2016. Analytical results for groundwater samples from the three wells are summarized in Table 3. The analytical lab reports and chain-of-custody are included in Appendix C. VOCs were detected above reporting limits in samples from monitoring wells HMW-1 and HMW-2 (including the blind duplicate sample from HMW-3). Detected VOCs include 1,1-DCA, 1,1-DCE, 1,2-DCA, 1,1,2-TCA, TCE, and VC. These VOCs were reported at concentrations similar to those reported in samples collected during the first quarter event (see Table 3) and the Response Plan (see Appendix A). TPH was not detected in groundwater samples. Groundwater elevations measured in July and December 2015 are included in Table 2. As shown, groundwater levels measured in December were 0.71 to 1.19 feet higher than levels measured in July 2015, reflecting autumn rain. Concentrations of 1,1-DCA were higher in samples collected during December than concentrations collected during July 2015. However, because there have been only two sampling events, there are insufficient data to evaluate the natural attenuation of 1,1-DCA. The next quarterly groundwater monitoring will be performed during April 2016. The DTSC will be notified regarding the exact date 7 days prior to the monitoring event.

Completed Document Type: Annual Oversight Cost Estimate
Completed Date: 09/10/2013
Comments: Annual Oversight Cost Estimate letter with enclosures (Activity Schedule and Cost Estimate) of DTSC oversight for 2013/2014 Fiscal Year.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction
Completed Date: 08/19/2015
Comments: Land Use Covenant (LUC) and Agreement for Environmental Restrictions recorded at County of Alameda on 8/19/2015. LUC made by and between Hive Development Group, LLC, a California limited liability company, current owner of property, and DTSC.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 03/28/2013
Comments: Letter dated March 27, 2013, notifying agencies of DTSC's intent to enter into an agreement under the California Land Reuse and Revitalization Act of 2004 (CLRRA) with the Hive Development Group, LLC, for the property located at 2345 and 2333 Broadway and 421 24th Street in Oakland, Alameda County, California. Entry into this agreement provides Hive Development Group, LLC with immunity from

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 07/05/2000
Comments: Soil samples show elevated levels of metals.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/30/2003
Comments: The PEA was approved by U.S. EPA. No further action is required under CERCLA. However, elevated levels of metals are present. Further action required by the State.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 06/01/1987
Comments: Completed Site Screening. The site is an active metal junk yard. PA recommended because soluble copper, zinc and lead were detected in soil at levels in excess of the CAM limits. Evidence of onsite contamination needs to be checked and verified. The site received several violation notices from DTSC and Alameda County Environmental Health Department.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Address: 412 MADISON ST
City,State,Zip: OAKLAND, CA 94607
Site ID: 535357
CERS ID: 236326
CERS Description: Industrial Facility Storm Water

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-19-2018
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes:

The facility recycles glass and nonferrous metal. The site is compact and crowded. A series of pipes and tanks collect, store and settle stormwater prior to discharge. Trench drains across driveways in uncovered areas collect and divert stormwater to the stormwater collection system. Lakeside used buckets to collect oil drips from the baler. The buckets are emptied into drums kept undercover. The waste oil is recycled.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction
Completed Date: 10/29/2010
Comments: The land use covenant for the site was signed by DTSC on October 28, 2010 and recorded with Alameda County on October 29th. The covenant requires notification to DTSC and a soil management plan if soil beneath the site is disturbed or brought to the surface. The covenant also prohibits the use of the site for single-family, unattached residences.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 11/12/2020
Comments: Pacific Gas and Electric Company notified DTSC of an upcoming project in the road adjacent to the A Bercovich 2nd Street Site. The project includes soil disturbance activities and PG&E provided a soil management plan for the work. DTSC has no objections to the PG&E project, which is scheduled for December 2020. -EC

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction Monitoring Report
Completed Date: 03/06/2015
Comments: The annual compliance report has been submitted by the property owner and approved by DTSC. Soil intrusion activities did not occur at the site during 2014.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction Monitoring Report
Completed Date: 07/08/2016
Comments: DTSC has reviewed and approved the annual compliance letter for the site. The site remains in compliance with the land use covenant.

Completed Document Type: Certification
Completed Date: 11/09/2010
Comments: The first and second floors of the building at the site are used for parking and commercial purposes. The third through eighth floors consist of for-lease condominiums. The land use covenant for the site was recorded with Alameda County on October 29, 2010. The site will be inspected annually to insure that the cap over the contaminated soil which remains at the site is maintained.

Completed Date: 05/25/2001
Comments: CERT - This site is known as Smith's Wrecking Yard and was remediated as part of the South Prescott Neighborhood Park, Oakland. The site is located in the eastern part of the San Francisco Bay area. After completion of the remedial actions, construction of the neighborhood park began. It is anticipated that the park will be turned over to the City of Oakland in October 2001. DTSC has determined that all appropriate response actions have been completed, that all acceptable engineering practices were implemented and that no further removal/remedial action is necessary.

Completed Date: 01/22/2002
Comments: DTSC approved discontinuation of groundwater monitoring activities in letter dated 1/22/02.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 07/29/2011
Comments: DTSC concurs with the conclusion in the Five-Year Review Report that no areas of noncompliance with the Land Use Covenant were found and the remedy remains protective of human health and the environment. DTSC approved the Five-Year Review Report.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 05/04/2016
Comments: Terraphase Engineering conducted a Five-Year Review on behalf of the Port of Oakland to evaluate the performance and protectiveness of the remedy selected and implemented at the Site in 1995. The Five-Year Review was the fourth for the Site, with prior five-year reviews report being completed in December 2000, December 2006, and July 2011. As part of the Five-Year Review, Terraphase performed an inspection of the Site on March 10, 2016 that included visual observation of the concrete pavement along the exterior walls of the cinema complex and portions of the interior. There was no visible evidence of potential problems with the vapor barrier and concrete cap. The findings of the Five-Year Review indicate the remedy continues to be protective of human health and the environment.

Completed Document Type: Well Decommissioning Report
Completed Date: 01/22/2002
Comments: DTSC approved discontinuation of groundwater monitoring activities in letter dated 1/22/02.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 07/29/2011
Comments: DTSC concurs with the conclusion in the Five-Year Review Report that no areas of noncompliance with the Land Use Covenant were found and the remedy remains protective of human health and the environment. DTSC approved the Five-Year Review Report.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 05/04/2016
Comments: Terraphase Engineering conducted a Five-Year Review on behalf of the Port of Oakland to evaluate the performance and protectiveness of the remedy selected and implemented at the Site in 1995. The Five-Year Review was the fourth for the Site, with prior five-year reviews report being completed in December 2000, December 2006, and July 2011. As part of the Five-Year Review, Terraphase performed an inspection of the Site on March 10, 2016 that included visual observation of the concrete pavement along the exterior walls of the cinema complex and portions of the interior. There was no visible evidence of potential problems with the vapor barrier and concrete cap. The findings of the Five-Year Review indicate the remedy continues to be protective of human health and the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/28/2002
Comments: PEA - PA/SI - Preliminary Assessment completed for U.S. EPA which found that no further action was needed at the site. Starting in 1998, the United States Environmental Protection Agency (US EPA) did an emergency removal of the hazardous substances. In October 1999, soil was removed in selected areas from 6 inches to 2 feet. There are no current operations at the site. Francis Plating used various plating solutions for aluminum anodizing, nickel and cadmium plating, and chromic acid passivation for stainless steel parts. Acids, bases, and dyes were used in the operation. Copper, lead, cadmium, nickel, cyanides, silver, zinc, sulfates, phosphates, chlorides, and soap solutions located in tanks and vats were some of the many chemicals used in the plating process. Some of these were located in a stainless steel containment tank 32 feet by 15 feet by 5 feet inside the building. There was a concrete pit area 15 feet by 68 feet by 3.5 feet outside in the "front yard" called the "Frog Pond". In the Front Yard along the 7th Street (east side) and along the fence next to the Shell Gas Station (north side) were limited areas of exposed soil. Most of the site was either paved, or had concrete or buildings on it. Francis Plating had a discharge permit and sent treated wastewater to the municipal sanitary system. East Bay Municipal Utility District (EBMUD) sealed the sanitary connection with concrete in the fourth quarter of 1996. Wastewater was then treated on-site. Wastewater, sent through the boiler to concentrate and precipitate the metals, was then fed into a filter press. The filter cake was spread out on the cement in the northern portion of the site and dried. There are no records of hazardous materials or waste removed from the site after 1993. After 1994, the property was used to store hazardous material picked up by Earthco Environmental for disposal. The trailers located in the "Rear Yard" area were used. Starting in 1994, hazardous substances generated by operations on site were recycled back into the manufacturing process. US EPA led the cleanup after the fire in 1992. Some runoff from the fire reached the Oakland Estuary from storm drains in the area of the Howard Terminal. Much of the runoff was captured and contained and later disposed off site. The Regional Water Quality Control Board (RWQCB) sampled the water and sediments in the estuary for US EPA. In July 1999, eight surface composite samples were taken in the front yard and three in the rear

yard area along Brush Street. In addition, there were 12 subsurface borings taken around the site and five waste sediment locations. The results ranged as follows: cadmium up to 2,100 milligrams per kilogram (mg/kg), lead up to 26,000 mg/kg, arsenic up to 26 mg/kg, and chromium up to 84,000 mg/kg. Based on the initial results, exposed soil to the depth of one-foot was removed along Brush Street and in the Front yard. After confirmation sampling, selected areas were excavated an additional six inches. After additional confirmation sampling, the site soil contained cadmium 0.7-7.5 mg/kg, lead 22-450 mg/kg, arsenic 1.2-7.4, and total chromium 13-300 mg/kg. Only one of the confirmation samples was above the residential cleanup levels for chromium and lead.

Name: FRANCIS PLATING BUILDING
Address: 785 7TH STREET
City,State,Zip: OAKLAND, CA 94607
Region: STATE
Facility Status: Open - Site Assessment
Status Date: 02/13/2022
Global Id: T10000007028
Lead Agency: ALAMEDA COUNTY LOP
Lead Agency Case Number: RO0003174
Latitude: 37.80226
Longitude: -122.28193
Case Type: Cleanup Program Site
Case Worker: NL
Local Agency: ALAMEDA COUNTY LOP
RB Case Number: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern: Tetrachloroethylene (PCE), Trichloroethylene (TCE), Chromium VI
Site History: This case (RO0003174) is connected with Alameda County Department of Environmental Health Site Cleanup Case No. RO0002586 - Francis Plating Frog Pond (GeoTracker Global ID SL0600130797). The former plating facility operated from approximately 1957 to 1998. In 1998, the property was found to be abandoned with chemicals and equipment on site. As part of an emergency response action, the U.S. Environmental Protection Agency removed abandoned chemicals and equipment and excavated shallow soil in areas without asphalt or concrete coverings. The former plating facility site was separated into two separate parcels in 2016 designated as APN 1-223-7 and 1-223-6. Case RO0003174 was opened in 2015 for APN 1-223-7. Residual soil contamination at the site is covered by a cap consisting of the site building and asphalt and concrete paving.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Workplan
Completed Date: 11/24/2015
Comments: The work plan describes procedures for investigation of a former underground storage tank (UST) at the site. The location of drilling is on the sidewalk adjacent to the site near a former fuel dispenser. The work plan describes the methods for sample collection and groundwater, soil, and a soil gas sample and fuel-related laboratory analysis.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Public Notice
Completed Date: 03/10/2016
Comments: The Public Notice briefly described the approval of the Preliminary Endangerment Assessment (PEA) report and recommendation to restrict usage of the property with a Land Use Covenant (LUC). The Public Notice was published in a local newspaper.

Completed Area Name: PROJECT WIDE

letter and an attached checklist to verify the Site was in compliance with the environmental restrictions of the Land Use Covenant during 2017.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 06/01/1995
Comments: Certificate of completion for removal and disposal of asbestos containing materials.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 06/05/2015
Comments: The report was prepared prior to DTSC's involvement with the site. The report documented asbestos containing materials associated with the site buildings.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 01/28/2015
Comments: The investigation was conducted prior to DTSC's involvement with the site. The report documented investigation of soils for metals and polynuclear aromatic hydrocarbons (PAHs).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1
Completed Date: 03/13/1990
Comments: This report was prepared prior to DTSC's involvement with the site. The report is an abbreviated Environmental Site Assessment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1
Completed Date: 10/15/2014
Comments: The report was prepared prior to DTSC's involvement with the site. The report documented site conditions after the SAF Keep Storage facility was constructed in 1997.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1
Completed Date: 01/18/2005
Comments: The report was prepared prior to DTSC's involvement with the site. The report documented site conditions after construction of the SAF Keep Storage Facility in 1997.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1
Completed Date: 01/05/1995
Comments: The assessment was conducted prior to DTSC's involvement with the site. The report recommended additional characterization of shallow soils for hydrocarbons, asbestos, creosote-related compounds, and

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 04/21/1989
Comments: The report was prepared prior to DTSC's involvement with the site. The report documented soil sampling and/or inspection of drainage ditches, an underground vault, underground pipes, other areas with potential environmental concerns.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 12/30/1994
Comments: The report was prepared prior to DTSC's involvement with the site. The report documented environmental conditions related to historical operations of environmental concern including a lumber yard, asbestos factory, and a fuel dispenser. Surface soil samples were collected for lead and asbestos analysis. Subsurface soil samples were collected in the area of the suspected former underground storage tank (UST).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 07/25/1995
Comments: The report was prepared prior to DTSC's involvement with the site. The report documented shallow soil testing results for hydrocarbons, polynuclear aromatic hydrocarbons (PAHs), asbestos and lead.

Completed Sub Area Name: Not reported

Completed Document Type: Annual Oversight Cost Estimate

Completed Date: 09/13/2016

Comments: Estimate of DTSC costs for regulatory oversight for the fiscal year (July 1, 2016 to June 30, 2017).

Completed Area Name: PROJECT WIDE

Completed Sub Area Name: Not reported

Completed Document Type: Correspondence

Completed Date: 02/23/2017

Comments: Notification of a change in the DTSC project manager was provided to Merritt Partners LP, the site owner.

Completed Area Name: PROJECT WIDE

Completed Sub Area Name: Not reported

Completed Document Type: Standard Voluntary Agreement

Completed Date: 03/23/2015

Comments: The Voluntary Cleanup Agreement (VCA) covers tasks for reviewing existing data, reviewing and commenting on a Preliminary Endangerment Assessment (PEA) report, and preparing a Land Use Covenant.

Completed Area Name: PROJECT WIDE

Completed Sub Area Name: Not reported

Completed Document Type: Land Use Restriction

Completed Date: 04/20/2016

Comments: The Land Use Covenant restricts the parcel from sensitive usage. The site can only be used for industrial/commercial usages.

Completed Area Name: PROJECT WIDE

Completed Sub Area Name: Not reported

Completed Document Type: Certification

Completed Date: 05/12/2016

Comments: The Merritt Two site was investigated and slightly elevated levels of lead and polynuclear aromatic hydrocarbons (PAHs) were found in shallow soils (the contaminant concentrations are above established residential levels but acceptable for commercial/industrial levels) from historical industrial operations. Since the owner intends to continue commercial/industrial usage of the property, a Land Use Covenant was recorded with the County Recorder to restrict future usage to commercial/industrial purposes (and a copy was sent to the City of Oakland Planning Department for placement in the property file). On an annual basis the owner is required to certify that the site is in compliance with the usage restrictions.

Completed Document Type: Correspondence
Completed Date: 09/25/2020
Comments: Activity not within restricted area, no additional follow up needed

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 12/28/2015
Comments: The Preliminary Endangerment Assessment (PEA) report documented site conditions related to historical industrial usage of the site which included a lumber mill, bottle washing operations, warehouse, garbage truck storage, and current usage as a storage facility. The report documented that surface soils contained elevated levels of polynuclear aromatic hydrocarbons (PAHs) which may have occurred via air deposition (from nearby historical manufactured gas plant operations) and the metal lead possibly related to historical residences or industrial operations. The report recommended placement of a Land Use Covenant (LUC) on the property to restrict future usage of the site to industrial usages. Other environmental issues were investigated from 1989-2015 which did not find significant contamination including: an asbestos manufacturing, an underground storage tank (UST), industrial piping, and former sumps.

Comments: Estimate of DTSC costs for regulatory oversight for the fiscal year (July 1, 2016 to June 30, 2017).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 02/23/2017
Comments: Notification of a change in the DTSC project manager was provided to Merritt Partners LP, the site owner.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Standard Voluntary Agreement
Completed Date: 03/23/2015
Comments: The Voluntary Cleanup Agreement (VCA) covers tasks for reviewing existing data, reviewing and commenting on a Preliminary Endangerment Assessment (PEA) report, and preparing a Land Use Covenant.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction
Completed Date: 04/20/2016
Comments: The Land Use Covenant restricts the parcel from sensitive usage. The site can only be used for industrial/commercial usages.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 05/12/2016
Comments: The Merritt Two site was investigated and slightly elevated levels of lead and polynuclear aromatic hydrocarbons (PAHs) were found in shallow soils (the contaminant concentrations are above established residential levels but acceptable for commercial/industrial levels) from historical industrial operations. Since the owner intends to continue commercial/industrial usage of the property, a Land Use Covenant was recorded with the County Recorder to restrict future usage to commercial/industrial purposes (and a copy was sent to the City of Oakland Planning Department for placement in the property file). On an annual basis the owner is required to certify that the site is in compliance with the usage restrictions.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 09/25/2020
Comments: Activity not within restricted area, no additional follow up needed

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 12/28/2015
Comments: The Preliminary Endangerment Assessment (PEA) report documented site conditions related to historical industrial usage of the site which included a lumber mill, bottle washing operations, warehouse, garbage truck storage, and current usage as a storage facility. The report documented that surface soils contained elevated levels of polynuclear aromatic hydrocarbons (PAHs) which may have occurred via air deposition (from nearby historical manufactured gas plant operations) and the metal lead possibly related to historical residences or industrial operations. The report recommended placement of a Land Use Covenant (LUC) on the property to restrict future usage of the site to industrial usages. Other environmental issues were investigated from 1989-2015 which did not find significant contamination including: an asbestos manufacturing, an underground storage tank (UST), industrial piping, and former sumps.

Waste Code:	D042
Waste Description:	2,4,6-TRICHLOROPHENOL
Waste Code:	D043
Waste Description:	VINYL CHLORIDE
Waste Code:	F001
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F002
Waste Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste Code:	F003
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Risk Assessment Report
Completed Date: 09/04/2012
Comments: Revised Risk Assessment Report. The conservative RA performed for the site indicated potential site-related risks and hazards above target levels for some chemicals in soil, groundwater, and soil vapor. Specifically, elevated risk and hazard estimates for onsite receptors were associated with benzo(a)pyrene in soil, TPHms in groundwater, and 1,2,4-trimethylbenzene, benzene, and ethylbenzene in soil vapor. 1,4-Dichlorobenzene and PCE in soil vapor also contributed, but to a lesser extent, to the elevated risk estimates. Offsite risks that were considered to be potentially site-related were mainly due to 1,2-DCA, PCE, and 1,1-DCA in groundwater. Each of the exposure

scenarios associated with these elevated risks and hazards is further discussed within the Report. Target concentrations for chemicals in onsite groundwater and soil vapor were developed to assist with future site monitoring and management decisions. Based on recent comments from DTSC (2012b) for another S-K site in California, single chemical values, rather than multiple chemical adjusted values, were calculated. Target concentrations were determined by identifying the concentrations of each chemical in groundwater or soil vapor that would result in a risk estimate of 10⁻⁶ or a hazard quotient of 1 (whichever was lower). These values could be used to determine when operation of the SSD system, or continuation of long-term monitoring, is no longer necessary, or to assist with remedial or mitigation efforts in the event of a future land use change. Target groundwater and soil vapor concentrations are shown in Table 26, and summarized within the Report.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 10/24/2006
Comments: FACILITY CLOSURE WORKPLAN, September 21, 2006. Resource Conservation Recovery Act (RCRA) closure activities are anticipated to occur in 2006. Closure of this facility will include decontamination of the hazardous waste management units (HWMUs). The maximum waste inventory at the facility is 21,754 gallons based on the HWMUs capacities: Tank Storage: One nominal 12,000-gallon double-walled UST (underground storage tank) used to store spent parts washer solvent. Return/Fill Shelter: Two drum washer units and the Return/Fill Shelter (maximum of 1,500 gallons of sediment). Container Storage: Two container storage areas with a total waste storage capacity of 8,254 gallons.

Completed Date: 07/07/2017
Comments: Monitoring Well Abandonment Activity Summary, dated June 29, 2017, documents the removal and abandonment of three groundwater monitoring wells (MW-5, MW-6, and MW-12) and four soil vapor monitoring wells (SVW-6, SVW-7, SVW-8, and SVW-9) at the site. Note, three soil vapor monitoring wells (SVW-1, SVW-2, and SVW-3) designated for abandonment were inaccessible during May 2017 field activities due to a homeless encampment (Figure 2). S-K intends to conduct a quarterly sub-slab depressurization system sampling and operation/maintenance event in August 2017. S-K will evaluate potential accessibility of soil vapor wells SVW-1, SVW-2, and SVW-3 for future abandonment during quarterly site visits.

Completed Area Name: PROJECT WIDE

laboratory analysis of volatile organic compounds by Method TO-15.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 09/14/2016
Comments: Sub-slab depressurization (SSD) system sampling and operation and maintenance (O&M) activities, performed in accordance with the Sub-Slab Depressurization System Operation and Maintenance Plan and Monitored Natural Attenuation Plan, including verifying SSD system fans are operating properly, collection of system readings, and collection of a vapor sample from SSD system point SP-2 for laboratory analysis of volatile organic compounds by Method TO-15.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 12/02/2016
Comments: Safety-Kleen Systems, Inc. conducted groundwater monitoring in June 2016 to further evaluate monitored natural attenuation (MNA) in groundwater as part of the DTSC-approved remedy. The groundwater monitoring (GWM) report summarizes procedures and results of the June 2016 groundwater monitoring event. The June 2016 GWM data are generally consistent with information provided in previous reports. Anaerobic biodegradation of contaminants of concern at the Site is ongoing, as concentrations continue to decrease from historical levels. Per the DTSC-approved MNA Work Plan, the next groundwater monitoring event for the Site is scheduled for June 2021.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 07/30/2018
Comments: Report documents well abandonment activities conducted pursuant to the 2/19/2016 Sub-Slab Depressurization System O&M Plan and Monitored Natural Attenuation Plan and overseen by the Alameda County Public Works Agency. The work was performed under the responsible charge of a registered geologist.

Comments: Sub-Slab Depressurization System 2017 Annual Operation Summary (Report); January 23, 2018. During 2017, The Sub-Slab Depressurization (SSD) system was monitored by a qualified environmental professional on a quarterly basis in accordance with the Permit. During quarterly O&M activities, the system was inspected to verify fans were running and providing vacuum as designed. The SSD system remained operable throughout 2017 with no repairs required. Current Permits are included as Attachment A. Analytical laboratory reports for samples collected during 2017 are included as Attachment B. Field notes for the quarterly events are included as Attachment C. Calibration information for the anemometer is included as Attachment D. Safety-Kleen (S-K) intends to conduct quarterly SSD system and O&M and sampling activities in 2018. Per the O&M Agreement, S-K will notify DTSC in writing a minimum of seven days before conducting O&M

Comments: On April 19, 2017, Safety-Kleen Systems, Inc. (S-K) obtained all necessary permits from the City of Oakland for well abandonment activities approved in the February 2016 Sub-Slab Depressurization System Operation and Maintenance Plan and Monitored Natural Attenuation Plan. S-K performed well abandonment activities on May 2 and 3, 2017, per the April 24, 2017 Monitoring Well Abandonment Field Activity Notification letter submitted to DTSC. S-K plans to submit a brief letter-style report, documenting well abandonment, within 60 days of completion of activities (July 2, 2017). DTSC provided field oversight of the fieldwork activities on May 2/3, 2017.

Completed Date: 05/05/2017

Comments: Revised Sub-Slab Depressurization System 2016 Annual Operation Summary (Report), May 4, 2017. The Sub-Slab Depressurization (SSD) system was monitored and sampled by a qualified environmental professional in 2016 on a quarterly basis in accordance with the Permit. During quarterly O&M activities, the system was inspected to verify fans were running and providing vacuum as designed. Safety-Kleen Systems, Inc. (S-K) observed that the fan attached to riser SP-1 was inoperable during the June 22, 2016, quarterly O&M event. A new fan was installed to the same riser on June 28, 2016. The former fan attached to riser SP-1 was operational during the March 2016 quarterly event; therefore, it is estimated that fan SP-1 was nonoperational for a maximum period of 3.5 months, during which time all other SSD fans operated continuously. A manual that includes product specifications for the replacement RadonAway HS5000 high suction fan is included as Attachment B. S-K performed quarterly sampling of the SSD system according to the procedures outlined in the February 2016 Plan. S-K collected air flow readings from each exhaust stack on the roof of the building using a VelociCalc anemometer. Vapor samples were collected from exhaust stack SP-2 on a quarterly basis in 2016. Analytical laboratory reports for samples collected during 2016 are included as Attachment C. Field notes for the quarterly events are included as Attachment D. Calibration information for the anemometer is included as Attachment E. A summary of individual effluent VOC concentrations detected in each sample is included as Table 1. Air flow readings and magnehelic gauge readings are included as Table 2. Calculated VOC removal rates, in pounds per day (lbs/day), are included as Table 3. Because the SSD emission stacks extract commingled vapor beneath the slab, the maximum

SAFETY-KLEEN OAKLAND (Continued)

1001407764

concentration of individual and total VOCs was used to conservatively calculate daily VOC removal rates for comparison to Permit limits. The mass removal rates for the 2016 operation period, ranged from 0.00017 to 0.00174 lbs/day and were well within Permit conditions of 10 lbs/day. In a letter dated May 5, 2017, DTSC approved the Report and provided the following comment and requirement for future monitoring/sampling and reporting: The Report Attachment E, TSI Model 8360 VelociCalc Calibration Certificate, states, Calibrations are valid for one year. However, the DTSC-approved Sub-Slab Depressurization System Operation and Maintenance Plan and Monitored Natural Attenuation Plan (Plan), dated February 19, 2016, states, All instruments will be calibrated according to manufacturer s specifications prior to use. (2-1) The TSI Model 8360 VelociCalc or other anemometer (air velocity meter), used for measuring and recording air velocity through the sub-slab depressurization system extraction pipes, must be calibrated prior to each monitoring and sampling event scheduled quarterly in March, June, September, and December.

Completed Date: 10/17/2017
Comments: Pursuant to the September 21, 2009 Corrective Action Consent Agreement (CACA), the Department of Toxic Substances Control (DTSC) issues this RCRA Corrective Action Completion Determination for the Safety-Kleen Systems, Incorporated (S-K) property located at 400 Market Street, Oakland, Alameda County, California 94607 (Site). S-K is the owner of the Site. On October 17, 2017, DTSC issued a Cleanup Complete (CC) determination that Cleanup Complete - Controls Required Long Term Stewardship has been achieved. The facility was completely characterized and assessed with respect to all media onsite and offsite (if applicable), and not all media met cleanup requirements. Noncompliant media were remediated so that no further operation of engineered remedies is required for industrial land use. Nevertheless, some amount of hazardous waste still remains beneath the facility and limited periodic examination and care are required to continue into the long-term future to ensure that certain installed engineered barriers, covers, caps, fences, signage, etc. and certain active and/or passive remedies, e.g., SSDS and MNA, remain efficacious. A No Further Action Determination is not applicable.

Completed Date: 05/20/1996
Comments: RCRA FACILITY INVESTIGATION (RFI) REPORT, March 27, 1996. The focus of the RFI activities was to define the presence and extent of potential impacts associated with SWMUs (Solid Waste Management Units) and AOC (Area of Concern) and on collecting data to evaluate potential corrective measures. Safety-Kleen believes that the site characterization activities which have been completed adequately assess the subsurface in the vicinity of SWMU No. 2, SWMU No. 3, and AOC No. 1. Investigation of SWMU No. 1 will be conducted as part of facility closure or partial closure activity. Safety-Kleen does not propose to conduct additional site characterization work at this time. Safety-Kleen requests that the soil vapor extraction (SVE) system be considered the final interim corrective measure. The operation of the SVE system and the product recovery system is continuing. Safety-Kleen will not initiate groundwater extraction and treatment at this time due to the encroaching VOC plume. Groundwater extraction will only be considered when mitigation of the upgradient source the VOCs has been performed by the responsible parties.

Completed Date: 06/29/2011
Comments: RCRA FACILITY INVESTIGATION (RFI) WORK PLAN, May 20, 2011. This RFI Work Plan proposes further activities to characterize groundwater impacts on the upgradient portion of the Site and proposes a soil gas survey for the purpose of conducting a future human health risk assessment. According to DTSC's February 2010 correspondence, when Site characterization is deemed complete, S-K will continue with previously proposed risk assessment activities, with formal approval by the DTSC. S-K proposes installing and sampling twelve soil vapor wells near the former service center to estimate potential vapor intrusion impacts and additional groundwater investigation activities to further characterize impacts in the upgradient portion of the

Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Plan
Completed Date: 02/23/2016
Comments: Sub-Slab Depressurization System Operation and Maintenance Plan and Monitored Natural Attenuation Plan (Plan), dated February 19, 2016, for Former Safety-Kleen Systems, Inc. (S-K) Service Center, located at 400 Market Street, Oakland, California. Plan approved by DTSC letter, dated February 23, 2016. Plan documents an operation and maintenance (O&M) plan for the existing sub-slab depressurization system (SSDS) and contains planned activities for long-term monitored natural attenuation (MNA) for groundwater at the site. Plan Appendices include the SSDS Technical Memorandum, Bay Area Air Quality Management District Authority to Operate Permit, SSDS Standard Operating Procedure, and Revised Standardized Sampling and Analysis Plan. The active SSDS reduces the potential for vapor intrusion by creating a negative pressure differential that reverses the direction of airflow inside a structure (i.e. intrusion to extrusion) and dilutes the indoor air with additional ambient air. A figure showing the SSDS layout is provided as Figure 3. A Technical Memorandum describing the SSDS design and installation, along with

MAP FINDINGS

SAFETY-KLEEN OAKLAND (Continued)

1001407764

further information, is included as Appendix A. A field log will be kept to document maintenance, repairs, and replacements performed on the SSDS. A schedule for planned O&M visits and quarterly sampling is presented in Table 1. Field readings and laboratory data are evaluated every quarter to confirm emission rates are within BAAQMD Permit limits. Field readings and data are kept available and on file per current BAAQMD Permit conditions. S-K will submit a summary of field readings and results to the DTSC on an annual basis. Quarterly laboratory data, field readings, and equipment replacement information will be submitted to DTSC on or before the last day of January of each calendar year. Natural attenuation involves the breakdown of constituents of concern (COCs) by microbial degradation processes. MNA includes monitoring the groundwater conditions that indicate natural attenuation is occurring. As part of the approved remedy for the site, S-K will evaluate attainment of cleanup levels in groundwater by conducting routine groundwater monitoring at the site once every five years, with an estimated time frame of fifteen years (4 events total over estimated 15 years). Consistent with the Corrective Measures Study (CMS), S-K will gauge and sample monitoring wells MW-1, MW-2R, MW-3, MW-4, MW-8R, MW-11R, and MW-14, during each monitoring event. Groundwater samples will be submitted for VOCs, TPH-MS, and TPH-D. S-K will implement the first MNA event within 60 days of DTSC approval of this document, with the following three events occurring approximately every five years. S-K will evaluate and compare groundwater data to the corrective action objectives (CAOs) defined by the CMS. S-K will submit groundwater-sampling reports to the DTSC, for each event, within 60 days receipt of complete and accurate laboratory data. A proposed schedule for groundwater sampling is presented in Table 2. S-K proposes to abandon monitoring wells MW-5, MW-6 and MW-12 because they are no longer included in the monitoring plan. Additionally, S-K proposes to plug and abandon soil gas wells SVW-1, SVW-2, SVW-3, SVW-6, SVW-7, SVW-8, and SVW-9 as they were utilized for the previous RFI activities. S-K will leave soil gas wells SVW-4, SVW-5, SVW-10, SVW-11, and SVW-12 in place in the event future soil gas sampling on the perimeter of the building is warranted. A figure showing proposed abandonment locations is provided as Figure 4.

Completed Date: 03/28/2018
Comments: Notification of Change in DTSC Project Manager as of April 2, 2018.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 02/06/2013
Comments: Quarterly Progress Report (October through December 2012). Safety-Kleen Systems, Inc. (S-K) submitted an RFI Work Plan Addendum and a Revised RFI Work Plan Addendum for installing an additional groundwater monitoring well and conducting indoor air monitoring on November 2, 2013 and December 26, 2012, respectively. S-K received formal DTSC approval of the December 2012 Revised Work Plan in a memorandum dated January 28, 2013. S-K anticipates working with DTSC to finalize RFI field scheduling during the January through March 2013 quarter.
