OUR COMMITMENT TO SUSTAINABILITY | ESA helps a variety of public and private sector clients plan and prepare for climate change and emerging regulations that limit GHG emissions. ESA is a registered assessor with the California Climate Action Registry, a Climate Leader, and founding reporter for the Climate Registry. ESA is also a corporate member of the U.S. Green Building Council and the Business Council on Climate Change (BC3). Internally, ESA has adopted a Sustainability Vision and Policy Statement and a plan to reduce waste and energy within our operations. This document was produced using recycled paper.

1919 WEBSTER STREET PROJECT

CEQA Checklist

1. General Project Information

1. **Project Title:** 1919 Webster Street Project
2. **Lead Agency Name and Address:** City of Oakland
Bureau of Planning
250 Frank H. Ogawa Plaza, Suite 2114
Oakland, CA 94612
3. **Project Case File Number** PLN22006
4. **Contact Person and Phone Number:** Peterson Vollmann, Planner IV
Bureau of Planning
250 Frank H. Ogawa Plaza, Suite 2114
Oakland, CA 94612
(510) 238-6167
pvollmann@oaklandca.gov
5. **Project Location:** 1919 Webster Street
Assessor's Parcel No. 008-0637-008-08
6. **Project Applicant's Name and Address:** 1919 Webster Street Owner, LLC
Attn: Matt Weber
111 Sutter Street, Suite 800
San Francisco, CA 94104
7. **Existing General Plan Designations:** Central Business District (CBD)
8. **Existing Zoning:** Central Business District General Commercial Zone (CBD-C) and Central Business District Pedestrian Retail Commercial Zone (CBD-P)
9. **Requested Permits:** Regular Design Review for new construction; Major Conditional Use Permit for development in the CBD Zone exceeding 200,00 square feet and 250 feet in height, Minor Conditional Use Permit for ground floor uses; Minor Variances for tower lot coverage, reduced loading berths, and reduced short-term bicycle parking; and Vesting Tentative Parcel Map to merge two existing lots.

2. Executive Summary

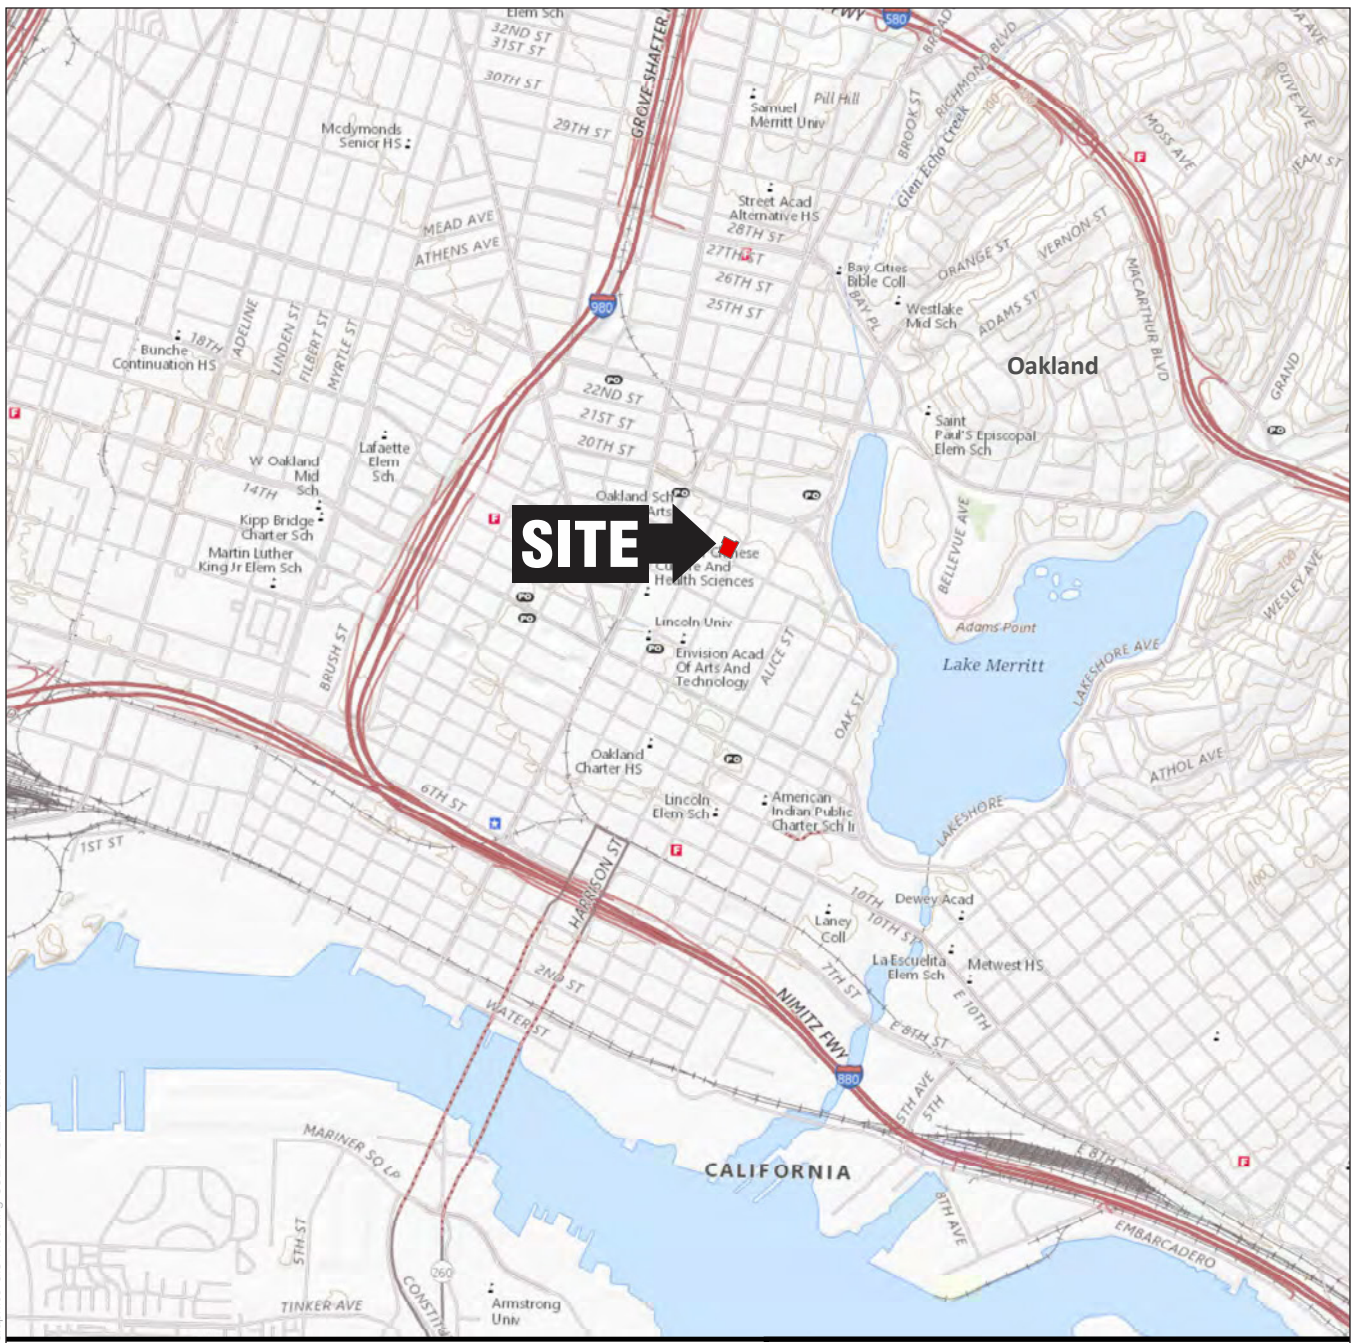

The Project Applicant, 1919 Webster Street Owner, LLC, proposes to develop a 0.6-acre lot at the corner of 19th and Webster Streets in Downtown Oakland. The Project, referred to as the 1919 Webster Street Project (Project), has two design schemes - Scheme 1 and Alternative Scheme 2. Although both schemes are fully analyzed in this document for CEQA clearance, the Project Applicant has applied to the City for Project entitlements for Scheme 1 only. The Project site is a single parcel of two privately-owned lots (combined Assessor's Parcel Number 008-0637-008-08).

The Project would demolish and remove the existing building and parking area. **Scheme 1 of the Project would construct a 17-story commercial office building** with approximately 407,000 square feet of office space and 2,900 square feet of ground floor commercial retail space. **Alternative Scheme 2 of the Project would construct a 25-story commercial office building** with approximately 521,000 square feet of office space and 2,008 square feet of ground floor commercial retail space. Each scheme includes one basement level partially used for parking, and Alternative Scheme 2 includes three additional parking levels above the ground floor street level (main lobby). Project construction is anticipated to start in 2024 and last for a period of approximately 27 months for Scheme 1 or 31 months for Alternative Scheme 2 – with the Project operational in 2026.

This California Environmental Quality Act (CEQA) Checklist evaluates the Project. Specifically, this analysis uses CEQA streamlining and/or tiering provisions under CEQA Guidelines Section 15183 (*Projects Consistent with a Community Plan or Zoning*), 15183.3 (*Streamlining for Infill Projects*), and 15180 (*Redevelopment Projects*) to tier from the program-level analyses completed in the City General Plan Land Use and Transportation Element (LUTE) and its Environmental Impact Report (EIR), and the Proposed Amendments to the Central District Urban Renewal Plan and its EIR (2011 Renewal Plan Amendments EIR). These are collectively referred to herein as the "Previous CEQA Documents" or "Previous EIRs," which analyzed environmental impacts associated with adoption and implementation of the General Plan and Renewal Plan.

The Project would incorporate applicable City of Oakland *Standard Conditions of Approval and Uniformly Applied Development Standards* (SCAs), which are designed to avoid or substantially reduce potential environmental impacts of the Project. The SCAs are mandatory City requirements, therefore the impact analysis of the Project assumes that the SCAs will be imposed and implemented by the Project Applicant as part of the Project. Generally, the incorporation of the SCAs are assumed prior to identifying the impact determination, unlike mitigation measures. SCAs are described in detail in Section 3.2 of this document, and SCAs applicable to the proposed Project are listed in **Attachment A** to this document.

Based on the information and conclusions set forth on the following pages, this CEQA Checklist consists of findings of consistency with the aforementioned provisions of the CEQA Guidelines. In addition, the analyses provided in the Previous EIRs previously analyzed the potential environmental effects associated with this Project and none of the criteria under Section 15162 (Subsequent EIRs) are present. No additional environmental documentation or analysis is required.

Project Location

3. Background

The following describes the Program EIRs that constitute the Previous CEQA Documents considered in this CEQA Checklist. Each of the following documents is hereby incorporated by reference and can be obtained from the City of Oakland Bureau of Planning at 250 Frank H. Ogawa Plaza, Suite 2114, Oakland, California 94612 or online at: <https://www.oaklandca.gov/resources/completed-environmental-review-ceqa-eir-documents>.

3.1 Applicable Program EIRs

3.1.1 General Plan Land Use and Transportation Element and EIR Analysis

The City certified the EIR for its General Plan Land Use and Transportation Element (LUTE) in 1998. The LUTE identifies policies for utilizing Oakland's land as changes occur, and sets forth an action program to implement the land use policy through development controls and other strategies.

The Project would be consistent with several 1998 General Plan LUTE objectives and policies. For example, the Project would help the City meet its objectives related to expanding Oakland's job base and economic strength (Objective I/C1) by providing opportunities for new short- and long-term employment associated with the construction and operation of the Project. The Project would improve the existing underutilized conditions of the Project site in Downtown Oakland. In doing so, the Project would be consistent with the City's Downtown goals and objectives related to enhancing the identity of Downtown Oakland and its distinctive districts (Objective D1); enhancing the visual quality of downtown by encouraging new, high quality development (Objective D2); and creating a pedestrian-friendly downtown (Objective D3).

The 1998 LUTE EIR is designated as a Program EIR under CEQA Guidelines Section 15168. Thus, the 1998 LUTE EIR provides the basis for use of the Qualified Infill streamlined review provisions under CEQA Guidelines Section 15183.3. The 1998 LUTE EIR is also the basis for use of the Community Plan Consistency provisions under CEQA Guidelines Section 15183. As such, subsequent activities under the LUTE are subject to the requirements of the applicable CEQA sections.

Mitigation measures identified in the 1998 LUTE EIR and that would apply to the environmental effects of the proposed Project have been replaced by one or more equally effective Oakland SCA (as detailed below in Section 3.2 and listed in Attachment A to this document).

3.1.1.1 *Environmental Effects Summary*

The 1998 LUTE EIR determined that development consistent with the LUTE would result in impacts that would be reduced to **a less-than-significant level with the implementation of mitigation measures**. Mitigations were required for the following resource topics: Aesthetics (views, architectural compatibility and shadow only); Air Quality (construction dust [including particulate matter less than 10 microns in diameter] and odor nuisance; Cultural Resources (except as noted below as less than significant); Hazards and Hazardous Materials; Land Use (use and density incompatibilities); Noise (use and density incompatibilities, including from

transit/transportation improvements); Population and Housing (induced growth, policy consistency/clean air plan); Public Services (except as noted below as significant); and Transportation and Circulation (intersection operations Downtown).

In the 1998 LUTE EIR, **less-than-significant impacts** were identified for the following resources: Aesthetics (scenic resources, light and glare); Air Quality (clean air plan consistency, roadway emissions in Downtown, energy use emissions, local/regional climate change); Biological Resources; Cultural Resources (historic context/settings, architectural compatibility); Energy; Geology and Seismicity; Hydrology and Water Quality; Land Use (conflicts in mixed use projects and near transit); Noise (roadway noise Downtown and citywide, multi-family near transportation/transit improvements); Population and Housing (exceeding household projections, housing displacement from industrial encroachment); Public Services (water demand, wastewater flows, stormwater quality, parks services); and Transportation and Circulation (transit demand). No impacts were identified for Agricultural and Forestry Resources or Mineral Resources.

The 1998 LUTE EIR identified **cumulative impacts** pertaining to Air Quality (roadway emissions from cumulative development in the Downtown and Coliseum Showcase Districts). **Significant unavoidable impacts** were identified for the following environmental resources in the 1998 LUTE EIR: Air Quality (regional emissions, roadway emissions Downtown); Noise (construction noise and vibration in Downtown); Public Services (fire safety); Transportation and Circulation (roadway segment operations); Wind Hazards; and Policy Consistency (clean air plan). Due to the potential for significant unavoidable impacts, a Statement of Overriding Considerations was adopted as part of the City's approvals.

3.1.2 2011 Central District Urban Renewal Plan Amendments and EIR Analysis

The Project site is located within the Central District Urban Renewal Plan Area, which generally encompasses the entire Downtown: approximately 250 city blocks (828 acres) in an area generally bounded by Interstate 980 (I-980), Lake Merritt, 27th Street and the Embarcadero. The Oakland City Council adopted the Central District Urban Renewal Plan (the "Renewal Plan") in June 1969. The City prepared and certified an EIR for proposed amendments to the Renewal Plan in 2011, and amended or supplemented the Renewal Plan up to April 3, 2012.¹ The 2011 Renewal Plan Amendments EIR was designated a Program EIR under CEQA Guidelines Section 15180; as such, subsequent activities are subject to requirements under CEQA Section 15168.²

¹ The 2011 Renewal Plan Amendments EIR addressed two amendments. A 17th Amendment to the Renewal Plan to (1) extend the duration of the Plan from 2012 to 2022 and extend the time period that the then-Redevelopment Agency could receive tax increment funds from 2022 to 2032, as allowed by Senate Bill (SB) 211 (codified as Health and Safety Code Section 33333.10 et seq.); (2) increase the cap on the receipt of tax increment revenue to account for the proposed time extensions; and (3) renew the then-Redevelopment Agency's authority to use eminent domain in the Project Area. An 18th Amendment further extended the then-Renewal Plan time limit from 2022 to 2023 and extended the time period that the then-Redevelopment Agency could receive tax increment funds from 2032 to 2033, as allowed by Health and Safety Code Section 33331.5.

² City of Oakland, 2011. *Proposed Amendments to the Central District Urban Renewal Plan Draft Environmental Impact Report*, March 2011.

The Renewal Plan was intended to facilitate future redevelopment activity within the Downtown area consistent with the City of Oakland General Plan. The 2011 Renewal Plan Amendments EIR analyzed the environmental impacts of the redevelopment activities associated with implementation of the proposed amendments to the Renewal Plan. As such, the Project would be consistent with the Renewal Plan as well as the analysis within the 2011 Renewal Plan Amendments EIR. Applicable mitigation measures and SCAs (described in Section 3.2) identified in the 2011 Renewal Plan Amendments EIR are considered in the analysis in this document; as similarly discussed above regarding the 1998 LUTE EIR, all mitigation measures from the 2011 Renewal Plan EIR have been replaced by one or more equally effective Oakland SCA.

Environmental Effects Summary

The 2011 Renewal Plan EIR determined that development facilitated by the proposed amendments would result in impacts to the following resources that would be **reduced to a less-than-significant level with the implementation of identified mitigation measures and/or SCAs**. Mitigation would be required in the following resource topics: aesthetics (light/glare only); air quality (except as noted below as less than significant and significant); biological resources (except no impacts regarding wetlands or conservation plans); cultural resources (except as noted below as significant); geology and soils; greenhouse gas emissions; hazards and hazardous materials; hydrology and water quality (stormwater and 100-year flooding only); noise (exceeding standards – construction and operations only); traffic/circulation (safety and transit only); utilities and service systems (stormwater and solid waste only).

Less-than-significant impacts were identified for the following resources in the 2011 Renewal Plan EIR: Aesthetics (except as noted above as less than significant with SCA); Air Quality (clean air plan consistency); Hydrology and Water Quality (except as noted above as less than significant with SCA); Land Use and Planning; Population and Housing; Noise (roadway noise only); Public Services and Recreation; Traffic/Circulation (air traffic and emergency access); and Utilities and Service Systems (except as noted above as less than significant with SCA). No impacts were identified for Agricultural or Forestry resources, and Mineral Resources.

The 2011 Renewal Plan EIR determined that the proposed amendments combined with cumulative development would have **significant unavoidable impacts** on the following environmental resources: Air Quality (toxic air contaminant exposure and odors); Cultural Resources (historic); and Traffic/Circulation (roadway segment operations).³ Due to the potential for significant unavoidable impacts, a Statement of Overriding Considerations was adopted as part of the City's approvals.

³ The 2011 Redevelopment Plan Amendments EIR also identified significant and unavoidable noise effects specifically associated with the potential development of a new baseball stadium at Victory Court, and multimodal safety at at-grade rail crossings, both near the Oakland Estuary. These effects would not pertain to the Project given the distance and presumably minimal contribution of multimodal trips affecting these impacts.

3.2 City of Oakland – Standard Conditions of Approval

The City of Oakland established its *Standard Conditions of Approval and Uniformly Applied Development Standards* (SCAs) in 2008, and they have since been amended and revised several times.⁴ The City's SCAs are incorporated into projects as conditions of approval regardless of a project's environmental determination. The SCAs incorporate policies and standards from various adopted plans, policies, and ordinances (such as the Oakland Planning and Municipal Codes, Oakland Creek Protection Ordinance, Stormwater Water Management and Discharge Control Ordinance, Oakland Protected Trees Ordinance, Oakland Grading Regulations, National Pollutant Discharge Elimination System [NPDES] permit requirements, Housing Element-related mitigation measures, California Building Code and Uniform Fire Code, among others), which have been found to substantially mitigate environmental effects. The SCAs are adopted as requirements of an individual project when it is approved by the City and are designed to, and will, substantially mitigate environmental effects.

Because the SCAs are mandatory City requirements, the impact analysis for the Project assumes that the SCAs will be imposed and implemented. In certain cases, for clarity, the preliminary effect of the Project (referred to as "uncontrolled") is presented prior to application of SCAs in order to determine and/or disclose the particular method selected by the applicant or warranted based on the uncontrolled effect, as well as to demonstrate the effectiveness of the SCA when implemented and ensure no mitigation measures is required. This means that in some instances, exactly how an SCA will be achieved awaits completion of future studies, an approach that is legally permissible where SCAs are known to be feasible for the impact identified; where subsequent compliance with identified federal, state, or local regulations or requirements apply; where specific performance criteria are specified and required; and where the Project commits to developing measures that comply with the identified SCA.

SCAs that would apply to the Project are listed in Attachment A to this document, which is incorporated by reference into this CEQA Checklist. If this CEQA Checklist or its attachments inaccurately identifies or fails to list a mitigation measure or SCA, the applicability of that mitigation measure or SCA to the Project is not affected.

⁴ The most recent set of SCAs was published by the City of Oakland on December 16, 2020.

4. Purpose and Determination

4.1 Purpose

The analysis in this environmental review document supports determinations, on separate and independent bases, that:

- (1) the Project qualifies for an **exemption** per CEQA Guidelines Section 15183 (Projects Consistent with a Community Plan or Zoning);
- (2) the Project qualifies for **streamlining and/or tiering** provisions under CEQA Guidelines Section 15180 (Redevelopment Projects) and Section 15168 (Program EIRs) which provides that the Previous CEQA Documents can be used as Program EIRs; and
- (3) the Project qualifies for **streamlining** provisions of CEQA under Public Resources Code (PRC) Section 21094.5 and CEQA Guidelines Section 15183.3 (Streamlining for Infill Projects).

As none of the conditions requiring a supplemental or subsequent EIR, as specified in PRC Section 21166, and CEQA Guidelines Sections 15162 (Subsequent EIRs) and 15163 (Supplement to an EIR), are present.

This environmental review document is intended to assist the City to determine the appropriate CEQA documentation for the Project—either a CEQA exemption or an EIR. It does not address every applicable CEQA topic or significance threshold, but focuses on those most pertinent to the City’s assessment of the appropriate CEQA documentation and whether a General Plan Consistency Project and/or an In-fill Development Project exemption, and/or streamlining or tiering from a Program EIR is viable for the Project.

4.2 Determination

The information presented in this environmental review document supports that none of the criteria under Sections 15162 or 15163 is present. As a result, the Project qualifies for CEQA exemption under CEQA Guidelines Section 15183, for streamlining and tiering provisions under 15180 and 15168, as well as for streamlining provisions under CEQA Section 15183.3.

5. Project Description

5.1 Project Setting

5.1.1 Project Location and Planning Context

The 1919 Webster Street Project site (Project site) is located at the northwest corner of 19th Street and Webster Street (see Figure 2-1, Project Location, in Section 2) in Downtown Oakland. The Project site is comprised of two privately-owned lots that, combined, total approximately 0.6 acres. The north lot is 0.26 acres, and the south lot is approximately 0.34 acres (combined Assessor's Parcel Number 008-0637-008-08).

The Project site is located within the Central Business District (CBD) General Plan land use designation. The CBD designation is intended to encourage, support, and enhance the downtown area as a high-density, mixed-use urban center of regional importance, and a primary hub for business, communications, office, government, high technology, retail, entertainment, and transportation.

The north lot of the site is zoned Central Business District General Commercial Zone (CBD-C), and the south lot is zoned Central Business District Pedestrian Retail Commercial Zone (CBD-P). The intent of the CBD Zones overall is to create, maintain, and enhance areas of the Central Business District appropriate for a wide range of ground floor retail, office and other commercial activities. Upper-story spaces are intended to be available for a wide range of residential and office or other commercial activities.

The intent of the CBD-C Zone is to create, maintain, and enhance areas of the Central Business District appropriate for a wide range of ground-floor office and other commercial activities. Upper-story spaces are intended to be available for a wide range of residential and office or other commercial activities.

The intent of the CBD-P Zone is to create, maintain, and enhance areas of the Central Business District for ground-level, pedestrian-oriented, active storefront uses. Upper story spaces are intended to be available for a wide range of office and residential activities.

The Project site is also within the Central Business District Height Limit 7, indicating there is no height limit.

The Project site is not within an adopted specific plan area. However, it is located within the boundaries of the proposed Downtown Oakland Specific Plan. The City of Oakland has prepared the draft Downtown Oakland Specific Plan to ensure continued growth and revitalization to benefit both Downtown residents and the larger community by providing policy guidance on development, linking land use, transportation, economic development, housing, public spaces, cultural arts, and social equity. The City released the Draft Downtown Oakland Specific Plan and Draft Environmental Impact Report for the Specific Plan on August 30, 2019.

5.1.2 Existing Site Conditions

The north lot of the Project site contains a vacant, approximately 74,000 square-foot, six-story commercial office (plus basement) building that fronts Webster Street. The building was constructed in 1950. The south lot of the Project site fronts the intersection of 19th Street and Webster Street and is currently a 47-space, asphalt-paved automotive fee parking lot. No landscaping or trees existing on or adjacent to the site. The office building on the north lot is not a historic resource (see **Appendix E** to this document).

5.1.3 Surrounding Context

The Project site is within an urban downtown context, surrounded by zero-lot line commercial development in buildings ranging from one-story to high-rises within an urban street grid. Primary land uses around the Project site include commercial and multifamily residential. Commercial uses include restaurants, office, retail, and professional services and parking.

A small surface parking area associated with adjacent uses exists immediately west of the Project site. East, west and south of the Project site, buildings contain primarily restaurants/bars and professional services at the ground floor. Uses north of the Project site along Webster are also primarily office and professional service buildings, in addition to a new residential building mid-block north of 19th Street, and another approximately mid-block south of 19th Street. The two historic buildings at the corner of 19th and Franklin Streets (discussed below) contain residential uses on the upper floors.

While the buildings directly fronting the Project site across 19th Street and Webster Street are one story in height, some with a mezzanine level, the area includes new mid-rise residential buildings that are generally seven stories, the two historic residential buildings at 19th and Webster Streets which are approximate ten stories each, relatively newer high-rise residential towers one block south (1717 Webster and 330 17th Streets), as well as high-rise office towers, including 1950 Franklin Street (Kaiser Permanente Regional Offices), several along Harrison Street (1800 Harrison Street, 1901 Harrison Street, 1999 Harrison Street) and at Thomas L. Berkley Way/Lakeside (Kaiser Center).

An Area of Primary Importance (API) partially exists on the same block as the Project site, westward, encompassing buildings on the east side of Franklin Street at 19th Street. Within the API is The Leamington Building (1814 Franklin Street) which is an Oakland Designated Landmark; The 1904 Franklin Building, which is a local historic resource; and a building generally located at 1736 Franklin Street (including the California Ballroom), which is a Potential Designated Historic Property (PDHP).

The closest parks to the Project site include Snow Park approximately one block (0.08 miles) east/northeast on Harrison; the Kaiser Center Roof Plaza generally one block (0.13 miles) north on Webster; the Henry J. Kaiser Memorial Park approximately four blocks (0.23 miles) west on Rashida Mohammed Street (west of Telegraph Avenue); and Frank H. Ogawa Plaza approximately seven blocks (0.30 miles) southwest.

Bay Area Rapid Transit (BART) provides daily commuter rail service between San Francisco, the East Bay, and northern San Mateo County. The nearest BART station is the 19th Street Oakland Station, with the nearest entrance located within 0.2 miles from the site (at 19th Street and Broadway). Also, Alameda County-Contra Costa Transit District (AC Transit) provides regional bus service along Broadway at 19th Street (Line 1T with 10-minute headways, Line 6 with 12 minute peak headways, Line 51A with 10-minute peak headways, and Line 72/72M/72R with combined 10- to 12-minute peak headways on weekdays as of June 2022). Regional automobile access to the Project site includes Interstate 980 (I-980), approximately 0.5 miles to the west; Interstate 880 (I-880), approximately 0.75 miles to the south; and Interstate 580 (I-580) approximately 1.0 miles to the north.

5.2 Project Characteristics

Project Figures for each Scheme are referenced throughout this document. For ease of review, all Project figures are compiled in numeric order at this end of this Section 5, Project Description.

5.2.1 Program

The Project analyzed in this CEQA document is referred to as the 1919 Webster Street Project (or Project). The Project has two design schemes - Scheme 1 and Alternative Scheme 2. Although both schemes are fully analyzed in this document for CEQA clearance, the Project Applicant has applied to the City for Project entitlements for Scheme 1 only. **Table 5-1**, Project Characteristics, summarizes Scheme 1 and Alternative Scheme 2, and both schemes are described in detail throughout this section.

**TABLE 5-1
PROJECT CHARACTERISTICS**

Characteristics	Scheme 1 ^a	Alternative Scheme 2 ^a
Office Space	407,000 sf.	521,000 sf.
Retail Space	2,900 sf.	2,008 sf.
Building Height (above grade)		
Highest Possible Element ^b	270 ft.	401 ft.
Top of Exterior Building Wall	244 ft.	367 ft.
Building Stories (above grade)	17	25
Below-grade Level (basement)	1	1
Above-grade Parking Levels	0	3
Long-Term Bicycle Parking ^c	>42 spaces	>82 spaces
Short-Term Bicycle Parking ^c	22 spaces	8 spaces
Off-Street Loading ^c	2 bays	2 bays
Usable Open Space	13,886 sf.	15,798 sf.
Average percentage of lot coverage above the building base ^c	87 percent	87 percent

^a Project Applicant seeks CEQA clearance only for Scheme 1; no City planning approvals are sought at this time for Alternative Scheme 2.

^b Penthouse-top canopy structure with photovoltaic (PV) panels.

^c Project Applicant seeks minor variance from minimum Planning Code requirements.

SOURCE: 1919 Webster Street Owner, LLC, 2022

Scheme 1. The Project Applicant proposes to demolish the existing approximately 74,000 square-foot office building and surface parking lot to construct a 17-story commercial office building. The new building includes approximately 407,000 square feet of office space and 2,900 square feet of ground floor commercial retail space, in addition to one basement level. (See **Figures 5.1-1A, 5.1-1B and 5.1-1C**, Perspective Renderings.)

Alternative Scheme 2. A taller version of Scheme 1, Alternative Scheme 2 is a 25-story commercial office building. The new building includes approximately 521,000 square feet of office space and 2,008 square feet of ground floor commercial retail space, in addition to one basement level. (See **Figures 5.2-1A and 5.2-1B**, Perspective Renderings.)

5.2.2 Building Layout and Access

Scheme 1. The main pedestrian entrance to the new building is proposed at the southeast corner of the Project site, at 19th and Webster Streets. The Ground Floor (street level) would include an expansive main lobby and reception area, the elevator lobby, as well as areas for building management offices, tenant lockers/showers, and long-term bicycle parking. Two adjacent spaces for retail/restaurant or office amenity uses (total 2,900 sq. ft.) are proposed on the Ground Floor and would be accessed from both 19th Street and the main building lobby. A bicycle entrance is also proposed from 19th Street via a recessed entrance at the southwest corner of the building. The Webster Street frontage of the building would include two loading docks and a driveway access to the basement level. The basement would include parking and building service areas. The roof level of the building would include the mechanical penthouse, a screened mechanical yard, and a usable open space area (see *Open Space and Landscaping*, below). (See **Figures 5.1-2 through 5.1-9**, Scheme 1 Floor Plans; and **Figures 5.2-10 and 5.2-11**, Scheme 1 Elevations.)

Alternative Scheme 2. In addition to the basement parking and service level accessed from Webster Street, Alternative Scheme 2 would also include a driveway from 19th Street to access three floors of parking (Floors 2 through 4) above the Ground Floor. Alternative Scheme 2 would also include a single retail/restaurant space (2,008 sq. ft.) fronting 19th Street and accessed from the main building lobby. All other basic characteristics of the Alternative Scheme 2 building layout and access are the same as for Scheme 1. (See **Figures 5.2-2 through 5.2-10**, Alternative Scheme 2 Floor Plans; and **Figures 5.2-12 and 5.2-13**, Alternative Scheme 2 Elevations.)

5.2.3 Building Height and Materials

Scheme 1. The maximum overall height of the proposed building and rooftop elements would be 270 feet. The floor-to-floor height of the Ground Floor (main lobby) would be approximately 19 feet, with the height of each office floor (Floors 2 through 17) proposed at approximately 14 feet. The total above-grade height to the top of the Scheme 1 building is 244 feet. The mechanical penthouse is two stories (approximately 22 feet tall), and the Project shall include an open canopy structure (10 feet tall) installed above, and extending out from, the top penthouse to support photovoltaic (PV) panels.

Glass of varying levels of transparency is proposed for the base of the building, except on the service doors and driveway areas along Webster Street, where dark metal panel cladding, louvers and roll-up doors are proposed. Curtain walls of high performance low-e coating glass are proposed on the

remainder of the building. Light-colored metal panels are proposed for a series of recessed terrace balconies (see *Open Space and Landscaping* below). Corrugated aluminum is proposed for the rooftop penthouse.

(See **Figure 5.1-10**, South and East Elevations, and **Figure 5.1-11**, North and West Elevations.)

Alternative Scheme 2. The maximum overall height of the proposed Alternative Scheme 2 building and rooftop elements would be 401 feet. The floor-to-floor height of the Ground Floor (main lobby) is approximately 20 feet, and the three parking levels (Floors 2 through 4) would add a combined 40 feet. The total above-grade height to the top of the Alternative Scheme 2 building is approximately 367 feet. The two -story mechanical penthouse is slightly taller (30 feet) for Alternative Scheme 2, and an open canopy structure and PV panels add 10 feet, same as for Scheme 1.

The exterior building materials for Alternative Scheme 2 would be similar to those described above for Scheme 1, except at the three parking levels above the Ground Floor. Three-story art zones are proposed on each street-facing elevation of the Alternative Scheme 2 building base and directly above the main pedestrian entrance at southwest corner of the building. Each art zone would be approximately 1,760 square feet in area. The remainder of these street-facing elevations where parking is proposed would be screens of laminated, frosted glass. Dark metal screening is proposed over the entire first four levels (Ground floor and three parking levels) on the non-street elevations of the building.

(See **Figure 5.2-12**, South and East Elevations, and **Figure 5.2-13**, North and West Elevations.)

5.2.4 Open Space and Landscaping

Scheme 1. Approximately 13,886 square feet of usable open space is proposed with Scheme 1. A portion of the open space area would be provided in recessed terrace balconies on alternating office floors (eight floors total) at the southwest corner of the building (see **Figure 5.1-1A**, Perspective Rendering). Each balcony would be between approximately 612 to 650 square feet (total of 5,086 square feet) and contain outdoor furnishings and landscape planters (see **Figure 5.1-12**, Typical Balcony Landscape Plan). Also, an 8,800 square-foot outdoor terrace is proposed adjacent to the mechanical penthouse and partially covered by the open canopy structure (see **Figure 5.1-8**, Low Roof and Penthouse 01 Floor Plan). The outdoor roof terrace would be a combination of paving (approx. 72 percent) and landscaped areas (approx. 28 percent) (see **Figure 5.1-13**, Roof Terrace Landscape Plan). The Project introduces two street trees along 19th Street and maintains curb to building sidewalks along both street frontages of the building (see **Figure 5.1-14**, Street Level Landscape Plan). No street trees are currently proposed along Webster Street due to lack of available space due to projected utility infrastructure.

Alternative Scheme 2. Approximately 15,798 square feet of usable open space is proposed in Alternative Scheme 2, more than for Scheme 1, since there are more office floors that would have a recessed terrace balcony. A total of 6,998 square feet of usable open space would be provided in the alternating office floors (11 floors total) at the southwest corner of the building, with the remainder provided in the 8,800 square-foot outdoor roof terrace. Alternative Scheme 2 street trees and sidewalks would be the same as described for Scheme 1. (See **Figure 5.2-1A**, Perspective Renderings;

Figure 5.2-14, Typical Balcony Landscape Plan; **Figure 5.2-10**, Low Roof and Penthouse 01 Floor Plan; **Figure 5.2-15**, Roof Terrace Landscape Plan; and **Figure 5.2-16**, Street Level Landscape Plan.)

5.2.5 Site Layout and Coverage

Scheme 1. The proposed building in Scheme 1 would cover most of the Project site (see **Figure 5.1-15**, Site Plan). The Ground Floor of the proposed building is built to each property line, except where the north property line projects approximately 12 feet northward at the northeast corner of the site. Also, a slight inset of the building base (Ground and 2nd Floors) at the main entrance creates an overhang from the floors above (see **Figure 5.1-3**, Ground Floor Plan, and **Figure 5.1-4**, 2nd Floor Plan). Starting at the 2nd Floor, the office tower would be set back 10 and 15 feet from the west property line and set back 5 feet from the north property line (see **Figure 5.1-10** South Elevation and East Elevation).

The average percentage of lot coverage when considering the building footprint area above the building base (22,500 sq. ft.) would be 87 percent of the 26,017 square-foot site. This exceeds the maximum “above-base average lot coverage” percentage allowed by City Code (85 percent), and the Project Applicant therefore seeks a required minor variance.

Alternative Scheme 2. The proposed building in Alternative Scheme 2 would also cover most of the project site (see **Figure 5.2-17**, Site Plan). The entire base of the building (Ground Floor and the three parking levels) is proposed built to each property line, except, as with Scheme 1, where the north property line projects approximately 12 feet northward at the northeast corner of the site. The slight inset and overhang at the main entrance however, would occur only at the Ground Floor (see **Figure 5.2-3**, Ground Floor Plan). Starting at the 5th Floor, the office tower would be set back 10 and 15 feet from the west property line and set back 5 feet from the north property line, same as with for Scheme 1 (see **Figure 5.2-12**, South Elevation and East Elevation). The average portion of lot coverage above the building base (22,500 sq. ft.) would also be 87 percent of the 26,017 square-foot site.

Alternative Scheme 2 would have the same 87 percent lot coverage as for Scheme 1 when considering the building footprint area above the building base (22,500 sq. ft.).

5.2.6 Parking and Loading

Scheme 1. The basement level of the building would provide approximately 37 automobile parking spaces (which may be increased to up to 75 parking spaces with parking lifts) that would be served by a two-way driveway via a 30-foot-wide curb cut from Webster Street. Although parking is not required for Scheme 1, ADA accessible parking spaces and electrical vehicle (EV) charging spaces would be provided at the Project Applicant’s discretion and City review and approval.

A total of at least 42 long-term bicycle parking spaces required by City Code) is proposed in a designated room on the Ground Floor of the building, and 22 outdoor short-term bicycle spaces required by City Code would be accommodated at 22 new bicycle racks proposed along Webster Street. A minor variance is sought to provide the proposed surplus of long-term spaces to counter the shortfall of short-term spaces. The variance may also address further reduction in the number

of short-term spaces if Pacific Gas & Electric (PG&E) prohibits bicycle parking spaces on or near its proposed underground vault on Webster Street.

Two loading docks are proposed along the Webster Street frontage of the building, accessed by a 30-foot-wide curb cut; this would be one bay less than required by City Code. The Project Applicant therefore seeks a minor variance to allow only two bays to allow adequate space for the building's required mechanical systems.

(See **Figure 5.1-2**, Basement Floor Plan, and **Figure 5.1-3**, Ground Floor Plan.)

Alternative Scheme 2. The basement level of the Alternative Scheme 2 building would provide 32 automobile parking spaces served by a two-way driveway from Webster Street. An additional 126 automobile parking spaces would be provided on the three levels (2nd through 4th Floors) of the building and accessed by a two-way driveway ramp from 19th Street. Alternative Scheme 2 would therefore provide a total 158 spaces (which may be increased to up to 75 spaces with parking lifts). At least 16 of the parking spaces provided would be equipped as EV charging spaces, as required by City Code. ADA accessible parking spaces would be provided on the 2nd Floor, standard parking spaces would be provided on the 3rd Floor, and mechanical parking could be installed on the 4th Floor, where the floor-to floor height would be increased to 20 feet (compared to 12 feet on the 2nd and 3rd Floors).

A total of at least 82 long-term bicycle parking spaces (30 more than required by City Code) is proposed in a designated room on the Ground Floor of the building. As with Scheme 1, 8 outdoor short-term bicycle spaces (14 fewer than required by City Code) are provided along Webster Street.

Two loading docks are proposed along Webster Street same as with Scheme 1.

(See **Figures 5.2-2**, Basement Floor Plan, through **Figure 5.2-6**, 4th Floor Plan)

5.2.7 Sustainability and Efficiency

Scheme 1 and Alternative Scheme 2. The Project Applicant intends to meet GreenPoint Rated standards, comply with the City's Green Building ordinance and requirements, and would qualify for Leadership in Energy and Environmental Design (LEED) Silver Certification at a minimum. The Project would be fully electric; no natural gas systems are proposed. The building for either Scheme 1 or Alternative Scheme 2 would involve a diesel-powered emergency generator. As indicated previously in this section, the Project shall install PV panels over rooftop open space canopy structure, and the Project proposes approximately 14 EV equipped parking spaces.

5.2.8 Construction and Phasing

Scheme 1. Site preparation would involve demolition of the existing approximately 74,000 square-foot office building and pavement on the site (resulting in approx. 9,400 tons of material to be hauled off the site) and excavation for the building foundation and basement level (resulting in approx. 21,000 cubic yards of soil to be hauled off the site). The depth of excavation required to construct the basement level could be up to approximately 20 to 30 feet deep. The foundation

system for the building would be a concrete mat/slab supported on drilled-in deep foundation elements, either drilled shafts or augered cast-in-place piles. The piles or shafts may extend between approximately 70 to 210 feet below the existing site grade. The total building area would be 425,000 gross square feet.

Total site preparation and project construction is to start in 2024 and last a total of approximately 27 months, with various construction activity phases overlapping in time through completion in 2025 and occupancy in 2026. Approximately 8 months of demolition and site preparation/grading would overlap a few of the 21 months of building construction, paving and architectural finishing.

Alternative Scheme 2. Same as for Scheme 1, site preparation would involve demolition of the existing approximately 74,000 square-foot office building and pavement on the site, resulting in approx. 9,400 tons of off-haul material. However, excavation for the Alternative Scheme 2 building foundation and basement level would result in approximately 24,000 cubic yards of soil to be hauled off the site. The depth of excavation, foundation system, and the depth of the drilled shafts or augered cast-in-place piles are the same as for Scheme 1. The total building area would be 613,000 square feet.

Total site preparation and project construction for Alternative Scheme 2 is anticipated to last a total of approximately 31 months, with various construction activity phases overlapping in time. Approximately 8 months of demolition and site preparation/grading would overlap a few of the 25 months of building construction, paving and architectural finishing.

5.3 Discretionary Project Approvals Requested

The Project Applicant requests, and the Project would require, discretionary actions/approvals, as well as ministerial permits/approvals, as listed below.

5.3.1 Actions by the City of Oakland

- **Bureau of Planning** – CEQA determination; Regular Design Review; Conditional Use Permit for Conditional Ground Floor Uses; Conditional Use Permit for CBD Large Scale Development; Minor Variances for Tower Lot Coverage, Loading, and Short Term Bike Parking; and Vesting Parcel Map to merge the two existing lots.
- **Bureau of Building and Department of Transportation** – Demolition permit, grading permit, and other related on- and offsite work permits (e.g., public right-of-way improvements, Off Site Infrastructure (PX) Permit, and tie backs) as well as encroachment permits.

5.3.2 Actions by Other Agencies

- **Bay Area Air Quality Management District (BAAQMD):** Issuance of permits for installation and operation of the emergency generator.
- **Regional Water Quality Control Board, San Francisco Bay Region (RWQCB):** Acceptance of a Notice of Intent to obtain coverage under the General Construction Activity Storm Water Permit, and Notice of Termination after construction is complete. Granting of required clearances to confirm that all applicable standards, regulations, and conditions for all previous contamination at the site have been met.

Site Plan – Alternative Scheme 2

This page is intentionally blank.

6. Summary of Findings

An evaluation of the Project is provided in Section 7 of this CEQA Checklist. This evaluation concludes that the Project qualifies for an exemption from additional environmental review. The Project is consistent with the development density and land use characteristics established by the City of Oakland General Plan, and any potential environmental impacts associated with its development were adequately analyzed and covered by the analysis in the applicable Previous CEQA Documents (or Previous EIRs): the 1998 LUTE EIR and the 2011 Renewal Plan Amendments EIR.

The Project would be required to comply with any applicable City of Oakland SCAs, each of which has modified, and in some cases wholly replaced, mitigation measures identified in the Previous EIRs to reflect the City's current standard language, protocols and requirements (see Attachment A to this document). With implementation of the applicable SCAs, the Project would not result in a substantial increase in the severity of previously identified significant impacts in the applicable Previous EIRs, or in any new significant impacts that were not previously identified in any of those Previous CEQA Documents.

As previously introduced in Section 3 of this document, in accordance with California Public Resources Code (PRC) and CEQA Guidelines, as set forth in the CEQA Checklist below, the Project qualifies for the following exemptions, streamlining and tiering provisions because the following findings can be made:

- **Community Plan Exemption:** *PRC Section 21083.3 and CEQA Guidelines Section 15183 (Projects Consistent with a Community Plan or Zoning).* The Project would not result in significant impacts that (1) are peculiar to the project or project site; and (2) were not previously identified as significant project-level, cumulative, or offsite effects in the applicable Previous EIR: 1998 LUTE EIR; or (3) were previously identified as significant effects, but—as a result of substantial new information not known at the time the Previous EIR was certified—would increase in severity beyond that described in those EIRs. Therefore, the Project would meet the criteria to be exempt from further environmental review. (See Attachment B to this document.)
- **Streamlining and Tiering from Other Applicable Previous CEQA Documents:** *CEQA Guidelines Section 15180 (Redevelopment Projects) and Section 15168 (Program EIRs).* The analysis in the 2011 Renewal Plan Amendments EIR and in this CEQA Checklist demonstrates that the Project would not result in substantial changes or involve new information that would warrant preparation of a subsequent EIR, per CEQA Guidelines Section 15162. This is because the level of development now proposed for the site is within the broader development assumptions analyzed in that EIR. The effects of the Project have been addressed in that EIR and no further environmental documents are required.
- **Streamlining for Qualified Infill Project:** *PRC Section 21094.5 and CEQA Guidelines Section 15183.3 (Streamlining for Infill Projects).* The Project would not cause any new specific effects on the environment that were not already analyzed in the applicable Previous EIR: the 1998 LUTE EIR. Further, the Project would not cause any new specific effects on the environment that are more significant than previously analyzed in the Previous EIR. The effects of the Project have been addressed in the Previous EIR, and no further environmental documents are required. (See Attachment C to this document.)

Overall, based on an examination of the analysis, findings, and conclusions of the 1998 LUTE EIR and the 2011 Renewal Plan Amendments EIR—both of which are summarized in the CEQA Checklist in Section 7 of this document—the potential environmental impacts associated with the Project have been adequately analyzed and covered in the Previous EIRs. Therefore, no further CEQA review or analysis is required.

Each of the above findings provides a separate and independent basis for CEQA compliance.

7. CEQA Checklist

The analysis in this CEQA Checklist identifies the potential environmental impacts that may result from the Project. The analysis in this CEQA Checklist also summarizes the impacts and findings of the certified Previous EIRs that covered the environmental effects of various projects encompassing the Project site and that are still applicable for the Project. As previously indicated, the Previous EIRs are referred to collectively throughout this CEQA Checklist as the “Previous CEQA Documents” or “Previous EIRs” and include the 1998 Land Use and Transportation Element EIR (1998 LUTE EIR) and the 2011 Central District Urban Renewal Plan Amendments EIR (2011 Renewal Plan Amendments EIR). Given the timespan between when these EIR were prepared, there are variations in the specific environmental topics addressed and in the significance criteria; however, as discussed above in Section 3 and throughout this Checklist, the overall environmental effects identified in each EIR are largely the same; any significant differences are noted.

This Checklist is generally organized to address each environmental topic specified in the City of Oakland’s *CEQA Thresholds of Significance Guidelines* (2020, as amended), which includes all topics in the current Appendix G to the CEQA Guidelines, in addition to certain City-specific environmental criteria and thresholds. The City’s Thresholds (and CEQA Guidelines’ Appendix G) include certain environmental topics and criteria/thresholds that were not required when the 1998 LUTE EIR or 2011 Renewal Plan Amendments EIR were prepared, or in some cases, were assessed under a different topic. There are also CEQA topics addressed in the Previous CEQA Documents that no longer apply under CEQA; while this Checklist summarizes the findings of those prior topics, it only analyzes CEQA topics specified under the City’s existing CEQA Thresholds.⁵

Several SCAs would apply to the Project because of the characteristics of the Project and/or its site and surroundings. Application of the SCAs is triggered because the City is considering discretionary actions for the Project.

Most of the SCAs that are identified for the Project were identified in the 2011 Renewal Plan Amendments EIR; the 1998 LUTE EIR was certified prior to the City’s application of SCAs. As discussed specifically in Attachment A to this document, since certification of the Previous EIRs, the City of Oakland has revised its SCAs, and the most current SCAs are identified in this CEQA Checklist.

This CEQA Checklist hereby incorporates by reference the discussion and analysis of all potential environmental impact topics as presented in the Previous CEQA Documents. This CEQA Checklist provides a determination of whether the Project would result in:

- Equal or Less Severity of Impact Previously Identified in the Previous CEQA Documents;

⁵ Organizationally, this Checklist presents (1) the analysis of *Agriculture and Forestry Resources* within Section 7.9, *Land Use, Plans and Policies*; (2) the analysis of *Energy* within Section 7.14, *Utilities and Service Systems, and Energy*; (3) the analysis of *Mineral Resources* within Section 7.5, *Geology, Soils, and Geohazards and Mineral Resources*; and (4) the analysis of *Recreation* within Section 7.12, *Public Services and Recreation Facilities*.

- Substantial Increase in Severity of Previously Identified Significant Impact in the Previous CEQA Documents; and/or
- New Significant Impact.

Where the severity of the impacts of the Project would be the same as or less than the severity of the impacts described in the Previous CEQA Documents, the checkbox for “Equal or Less Severity of Impact Previously Identified in Previous CEQA Documents” is checked.

If the checkbox for “Substantial Increase in Severity of Previously Identified Significant Impact in Previous CEQA Documents” or “New Significant Impact” were checked, there would be significant impacts that are:

- Peculiar to the project or project site (per CEQA Guidelines Sections 15183 or 15183.3);
- Not identified in the previous 1998 LUTE EIR (per CEQA Guidelines Sections 15183 or 15183.3) or 2011 Renewal Plan Amendments EIR (per CEQA Guidelines Section 15180), including offsite and cumulative impacts (per CEQA Guidelines Section 15183);
- Due to substantial changes in the Project (per CEQA Guidelines Section 15162 and 15168);
- Due to substantial changes in circumstances under which the Project will be undertaken (per CEQA Guidelines Sections 15162 and 15168); and/or
- Due to substantial new information not known at the time the Previous CEQA Documents were certified (per CEQA Guidelines Sections 15162, 15168, 15183, or 15183.3).

None of the aforementioned conditions regarding a new or substantially more severe significant impact were found for the Project, as demonstrated throughout the following CEQA Checklist and in its supporting attachments (Attachments B and, C) that specifically describe how the Project meets the criteria and standards specified in the CEQA Guidelines sections identified above.

7.1 Aesthetics, Shadow, and Wind

Would the project:	Equal or Less Severity of Impact Previously Identified in Previous CEQA Documents	Substantial Increase in Severity of Previously Identified Significant Impact in Previous CEQA Documents	New Significant Impact
a. Have a substantial adverse effect on a public scenic vista; substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings, located within a state or locally designated scenic highway; substantially degrade the existing visual character or quality of the site and its surroundings; or create a new source of substantial light or glare which would substantially and adversely affect day or nighttime views in the area;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Introduce landscape that would now or in the future cast substantial shadows on existing solar collectors (in conflict with California Public Resource Code sections 25980-25986); or cast shadow that substantially impairs the function of a building using passive solar heat collection, solar collectors for hot water heating, or photovoltaic solar collectors;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c. Cast shadow that substantially impairs the beneficial use of any public or quasi-public park, lawn, garden, or open space; or, cast shadow on an historical resource, as defined by CEQA Guidelines Section 15064.5(a), such that the shadow would materially impair the resource's historic significance;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d. Require an exception (variance) to the policies and regulations in the General Plan, Planning Code, or Uniform Building Code, and the exception causes a fundamental conflict with policies and regulations in the General Plan, Planning Code, and Uniform Building Code addressing the provision of adequate light related to appropriate uses; or	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e. Create winds that exceed 36 mph for more than one hour during daylight hours during the year. The wind analysis only needs to be done if the project's height is 100 feet or greater (measured to the roof) and one of the following conditions exist: (a) the project is located adjacent to a substantial water body (i.e., Oakland Estuary, Lake Merritt or San Francisco Bay); or (b) the project is located in Downtown.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Since certification of the Previous CEQA Documents, the CEQA statutes have been amended related to the assessment of impacts for aesthetics. Under CEQA Section 21099(d), "Aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site located within a transit priority area shall not be considered significant impacts on the

environment.”⁶ Accordingly, aesthetics is no longer considered in determining if a project has the potential to result in significant environmental effects for projects that meet all three of the following criteria:

- The project is residential, mixed-use residential, or an employment center.⁷
- The project is on an infill site.⁸
- The project is in a transit priority area.⁹

The Project meets all three of the above criteria because the Project is (1) a high-rise commercial office building or “employment center”; (2) is on an infill site that has been previously developed within an urban area of Oakland; and (3) located approximately 0.2 -miles (two blocks or approx. 1,056 ft.) east of the 19th Street Oakland BART Station, therefore within a “transit priority area”. Thus, this document does not consider aesthetics, including the aesthetic impacts of light and glare, in determining the significance of Project impacts under CEQA.¹⁰ Nevertheless, the City recognizes that the public and decision makers may be interested in information about the aesthetic effects of a proposed Project; therefore, the information contained in this section related to aesthetics, light, and glare is provided solely for informational purposes, and is not used to determine the significance of environmental impacts pursuant to CEQA.

7.1.1 Previous CEQA Documents Findings

Scenic vistas, scenic resources, visual character, light and glare, and shadow were analyzed in each of the Previous CEQA Documents, which found that the effects to these topics would be less than significant. The 2011 Renewal Plan Amendments EIR cited applicable SCAs that would ensure the less-than-significant visual quality effects. The 1998 LUTE EIR identified mitigation measures that are functionally equivalent to the SCAs to reduce certain potential effects to less-than-significant levels.

The 2011 Renewal Plan EIR found less-than-significant shadow effects, assuming incorporation of applicable SCAs. The 1998 LUTE EIR identified mitigation measures, functionally equivalent to the SCAs, to reduce potential shadow effects to less-than-significant levels. The 1998 LUTE EIR also identified significant and unavoidable impacts regarding wind hazards.

⁶ CEQA Section 21099(d)(1).

⁷ CEQA Section 21099(a)(1) defines an “employment center” as a project situated on property zoned for commercial uses with a floor area ratio of no less than 0.75 and located within a transit priority area.

⁸ CEQA Section 21099(a)(4) defines an “infill site” as either (1) a lot within an urban area that was previously developed; or (2) a vacant site where at least 75 percent of the site perimeter adjoins (or is separated by only an improved public right-of-way from) parcels that are developed with qualified urban uses.

⁹ CEQA Section 21099(a)(7) defines a “transit priority area” as an area within one-half mile of an existing or planned major transit stop. A “major transit stop” is defined in CEQA Section 21064.3 as a rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the a.m. and p.m. peak commute periods.

¹⁰ CEQA Appendix G includes light and glare under the topic of aesthetics. Therefore, light and glare, in addition to aesthetics, is not a CEQA consideration.

7.1.2 Project Analysis

7.1.2.1 Aesthetics (Criterion 1a)

Scheme 1. The Project under Scheme 1 involves construction of a 17-story commercial office building with 407,000 square feet of office use and 2,900 square feet of ground floor commercial retail space. The Project site has been previously developed and is currently occupied with a vacant commercial building and a paved, surface parking lot. Above-grade height to the top of the proposed building is 244 feet; the maximum height including all rooftop elements would be approximately 270 feet. As discussed in Section 5.1.3, Surrounding Context, the Project site is within an urban downtown context, surrounded by zero-lot line commercial development in buildings ranging from one-story to high-rises within an urban street grid. Given the relative height of the Project building compared to taller and varied building heights in Downtown Oakland in general, as well as the limited views in the area due to the dense, multi-story development surrounding the Project site, the Project would not obstruct views of any scenic vistas.

While the buildings directly fronting the Project site across 19th Street and Webster Street are one story in height, some with a mezzanine level, the area includes new mid-rise residential buildings that are generally seven stories, the two historic residential buildings at 19th and Webster Streets which are approximate ten stories each, relatively newer high-rise residential towers one block south (1717 Webster and 330 17th Streets), as well as high-rise office towers, including 1950 Franklin Street (Kaiser Permanente Regional Offices), several along Harrison Street (1800 Harrison Street, 1901 Harrison Street, 1999 Harrison Street) and at Thomas L. Berkley Way/Lakeside (Kaiser Center).

As shown in the Figures 5.1-1A and 5.1-1B (Perspective Renderings), glass of varying levels of transparency is proposed for the two-story base of the building, except on the service doors and driveway areas where dark metal panel cladding, louvers and roll-up doors are proposed. Curtain walls of high performance low-e coating glass are proposed on the remainder of the building. Light-colored metal panels are proposed for a series of recessed terrace balconies, and corrugated aluminum is proposed for the rooftop penthouses. Therefore, the appearance and character of the Project building for Scheme 1 would result in development that is compatible with the surrounding visual character and patterns of recent development in Downtown Oakland. Therefore, the Project under Scheme 1 would not substantially degrade the existing visual character or quality of the site and its surroundings.

The Project also would not create a new source of substantial light or glare that would adversely affect day or nighttime views in the area. The Project would utilize nighttime lighting for operational and security purposes, and would result in similar levels of light and glare typical of high-rise office buildings of this scale.

Although not considered significant under CEQA, the potential impacts of the Project under Scheme 1 regarding scenic vistas, scenic resources, visual character, and light and glare would be similar to, or less severe than, those identified in the Previous CEQA Documents considered in this analysis. Development of the Project under Scheme 1 also would be required to comply with the City of Oakland SCA AES-1, Trash and Blight Removal; SCA AES-2, Graffiti Control; SCA AES-3,

Landscape Plan; and SCA AES-4, Lighting, related to landscaping, street frontages, landscape maintenance, public right-of-way improvements, graffiti control, and lighting plans to enhance aesthetics. Therefore, the visual impacts of the Project under Scheme 1 would be less than significant.

Alternative Scheme 2. The Project under Alternative Scheme 2 on the same Project site involves construction of a 25-story commercial office building with 521,000 square feet of office use and 2,008 square feet of ground floor commercial retail space. The above-grade height to the top of the proposed building is 367 feet; height including all rooftop elements would be 401 feet. Given the existing urban downtown context described above and the relative height of the Alternative Scheme 2 building compared to Downtown Oakland in general, the Project under Alternative Scheme 2 would not obstruct views of any scenic vistas.

As shown in the Figure 5.2-1A and 5.2-1B (Perspective Renderings), screens of laminated, frosted glass are proposed for the four-story base of the building, except dark metal panel cladding, louvers and roll-up doors are proposed on the service doors and driveway areas. The glass curtain walls on the rest of the tower (starting at the 5th floor), the metal panels on the recessed terrace balconies, and the corrugated aluminum on the rooftop penthouses are the same as described above. Therefore, the appearance and character of the Project building for Alternative Scheme 2 would result in development that is compatible with the surrounding visual character and patterns of recent development in Downtown Oakland. Therefore, the Project under Alternative Scheme 2 would not substantially degrade the existing visual character or quality of the site and its surroundings. Also, the proposed use and effects of lighting with Alternative Scheme 2 are the same as described above, and would result in similar levels of light and glare typical of high-rise office buildings of this scale.

Although not considered significant under CEQA, the potential impacts of the Project under Alternative Scheme 2 regarding scenic vistas, scenic resources, visual character, and light and glare would be similar to, or less severe than, those identified in the Previous CEQA Documents considered in this analysis. Development of the Project under Alternative Scheme 2 also would be required to comply with the same City of Oakland SCAs identified above. Therefore, the visual impacts of the Project under Alternative Scheme 2 would be less than significant.

7.1.2.2 Shadow (Criteria 1b through 1d)

Prevision Design prepared a shadow study for the Project in July 2022. This analysis relies on the information in that study (**Appendix A**).

Scheme 1. The Project under Scheme 1 would construct a 17-story building measuring approximately 270 feet in height, including all rooftop elements (which measure up to 32 feet); the height to the top of the exterior building wall with Scheme 1 is approximately 244 feet. Consistent with the City of Oakland methodology for shadow analyses, shadow diagrams were prepared for Scheme 1 of the Project. Using a virtual 3D model, the Scheme 1 building was rendered in the existing shading conditions. Graphical depictions of the shadows that would be cast by the Project building at 9:00 a.m., 12:00 p.m., and 3:00 p.m. for the summer solstice (June 21st), spring/fall equinoxes (March 20th and September 22nd), and winter solstice (December 21st) were prepared. Graphics

showing the extents of net new shading that would be cast by Scheme 1, as well as other future planned projects in the vicinity under the cumulative scenario, are provided in **Appendix A-1**.

Between the hours of 9 a.m. and 3 p.m. annually, Scheme 1 would cast net new shadow in the westward across Telegraph Avenue between 19th and William Streets, northward along Webster Street between Thomas L Berkley Way and 21st Street, and northeast along Thomas L Berkley Way towards the intersection with Harrison Street. Within this area are qualifying shadow-sensitive sites per City of Oakland criteria that are evaluated in this section.

Public Parks / Open Spaces. Public open spaces near the Project site include Snow Park approximately one block (0.08 miles) east/northeast on Harrison; the Kaiser Center Roof Plaza generally one block (0.13 miles) north on Webster; the Henry J. Kaiser Memorial Park approximately four blocks (0.23 miles) west on Rashida Mohammed Street (west of Telegraph Avenue); and Frank H. Ogawa Plaza approximately seven blocks (0.30 miles) southwest. Of these open spaces, Scheme 1 would only cast shadow on portions of the Kaiser Center Roof Plaza located on a podium above the 3-story parking garage of 300 Lakeside Drive (Kaiser Center).

Scheme 1 would cast net new shadow on the plaza starting as early as 2 p.m. and be present for up to one hour between mid-November through mid-January (see Sheet C3-P280 in Appendix A-1). Over the course of the affected daily period (9 a.m. to 3 p.m.), the net new shadow would move across the plaza from west to east, affecting portions of the southern half of the plaza at various times. The largest shadows would occur near 3 p.m. on dates nearest the winter solstice; near 3 p.m. a band of shadow would extend halfway into the center of the plaza, covering approximately 25 percent of the total park area, affecting grassy areas, benches, landscaped areas, and the pond. While almost half the plaza would be affected at certain times, including areas of potential heightened sensitivity such as fixed seating areas, the shadow would occur only during late-fall through early winter and be present in the afternoon for one hour or less. Therefore, Scheme 1 shadow would not substantially impair any public open space, and the shadow cast by Scheme 1 on the Kaiser Center Roof Plaza would be considered less than significant.

Under cumulative conditions, the Kaiser Center Roof Plaza (at 300 Lakeside Drive) would receive shadow cast by one or more cumulative condition projects.¹¹ Most relevant, the approved 300 Lakeside Drive development would itself take up a large portion of the footprint of the existing plaza, renovate the remaining portion of the plaza, and would include new towers that would shade the remaining portion of plaza throughout the year - from after midday during the summer and throughout the day during spring, fall and winter. Scheme 1 would not shadow any additional areas not already shadowed by the approved 300 Lakeside Drive development (see Sheet C3-C280 in Appendix A-1). Accordingly, the cumulative condition shadow cast on Kaiser Center Roof Plaza would be considered less than significant.

¹¹ Nearby planned cumulative projects considered include 2015 Telegraph Avenue, 1750 Broadway, 2100 Telegraph Ave (max envelope), 415 Thomas L. Berkley Way, 2044 Franklin Street, 300 Lakeside Drive (Kaiser Center) and 2 Kaiser Center.

Solar Collectors. No observed site with solar collectors would be affected by Scheme 1's net new shadow, therefore shadow cast by the Scheme 1 on the solar collectors would be considered less than significant.

Historic Resources. Scheme 1 would cast shadow for periods of time throughout the year between the hours of 9am and 3pm on eleven buildings that are either landmark structures, historic resources, or eligible for historic resource status (with rating "C" or higher).¹² The only affected building that possesses shadow-sensitive features that contribute and/or justify their designation as an historic resource is the 1814 Franklin Street Leamington Hotel.

1814 Franklin Street features a series of three large skylight windows that provide daylight to an interior court on the south and east interior corner of the L-shaped building tower. While these skylights are less than 150-ft from the Project site, the intervening massing of 1814 Franklin Street currently overshadows the skylights during times Scheme 1 shadow would be cast in that direction (see Sheet A1-P280 in Appendix A-1). While net new shadow would fall on the northern façade and rooftop of 1814 Franklin, such shadow would not impair any historic defining features, so the shadow cast by Scheme 1 on 1814 Franklin Street would be considered less than significant.

Overall, the potential impacts of the Project under Scheme 1 regarding shadows would be similar to, or less severe than, those identified in the Previous CEQA Documents considered in this analysis.

Alternative Scheme 2. The Project under Alternative Scheme 2 would construct a 25-story building measuring approximately 401 feet in height, including all rooftop elements (which measure up to 40 feet); the height to the top of the exterior building wall with Alternative Scheme 2 is approximately 367 feet. Graphics showing the extents of net new shading that would be generated by Alternative Scheme 2, as well as other future planned projects in the vicinity under the cumulative scenario, are provided in **Appendix A-2**. Between the hours of 9 a.m. and 3 p.m. annually (the "analysis period"), Alternative Scheme 2 would cast net new shadow in the westward direction as far as the intersection of William Street and Rashida Muhammad Street, northwest across 21st Street near the intersection with Telegraph Avenue, northward along Franklin Street just short of the intersection of 21st Street and northeast across 21st near to the intersection with Harrison Street. Within this area, there exist qualifying shadow-sensitive sites per City of Oakland criteria that are evaluated in this section.

Public Parks / Open Spaces. Alternative Scheme 2 would cast shadow on two of the nearby open spaces: Henry J. Kaiser Memorial Park located on the western one-third of the block bounded by Rashida Muhammad Street, William Street, Telegraph Avenue and 19th Street; and, like for Scheme 1, portions of the Kaiser Center Roof Plaza.

Henry J. Kaiser Memorial Park would receive net new shadow from Alternative Scheme 2 starting at 9:00 a.m. and be present for up to approximately five minutes between mid-October through early November. The Alternative Scheme 2 net new shadow would affect only the northeastern

¹² 464 19th Street, 1916 Telegraph Avenue, 1915 Broadway, 1933 Broadway, 1932 Telegraph Avenue, 1954 Telegraph Avenue, 1770 Broadway, 1900 Broadway, 1904 Franklin Street, and 1814 Franklin Street (Leamington Hotel)

corner of the park, which contains concrete hardscape and a raised planting area. (See Sheet B1-P400 in Appendix A-2). Given the very short daily duration and limited annual days of occurrence, the shadow cast by Alternative Scheme 2 on Henry J. Kaiser Memorial Park would be considered less than significant.

The Kaiser Center Roof Plaza would receive net new shadow from Alternative Scheme 2 starting around 1 p.m. and be present for up to two hours between early November through mid-February (see Sheet C1-P400 in Appendix A-2). Over the course of the affected daily period (9 a.m. to 3 p.m.), the net new shadow would move across the plaza from west to east, affecting portions of the entire plaza at various times. As described for Scheme 1, the largest shadows would occur near 3 p.m. on dates nearest the winter solstice; near 3 p.m. a band of shadow would extend halfway into the center of the plaza, covering approximately one-third of the total park area, affecting grassy areas, benches, landscaped areas, and the pond. While all of the plaza would be affected at certain times, including areas of potential heightened sensitivity such as fixed seating areas, the shadow would occur only during late-fall through early winter and be present in the afternoon for two hours or less. Therefore, Alternative Scheme 2 shadow would not substantially impair any public open space, and the shadow cast by Alternative Scheme 2 on the Kaiser Center Roof Plaza would be considered less than significant.

Under cumulative conditions, both the Henry J. Kaiser Memorial Park and Kaiser Center Roof Plaza would receive shadow cast by one or more cumulative condition projects (see footnote 10). All areas of Henry J. Kaiser Memorial Park would receive some net new shadow over the affected period under cumulative conditions, excluding Scheme 1. In combination with the small amount of shadow cast by Alternative Scheme 2, the shadow cast by other cumulative condition projects would only affect the park for short periods and be confined to morning hours. Accordingly, the cumulative condition shadow cast on Henry J. Kaiser Memorial Park would be considered less than significant.

As discussed under Scheme 1, the proposed 300 Lakeside Drive development involve renovation of the plaza; therefore, this would be considered “self-shadowing” which is not considered as an impact under CEQA (see Sheet C3-C400 in Appendix A-2). Accordingly, the cumulative condition shadow cast on the Kaiser Center Roof Plaza would be considered less than significant.

Solar Collectors. One site with solar collectors was observed at 1922 Webster Street, within the area affected by Alternative Scheme 2 net new shadow between 9 a.m. and 3 p.m. The collectors would receive net new shadow from Alternative Scheme 2 starting at around 2:50 p.m. and would be present for up to approximately 10 minutes (prior to the 3 p.m. evaluation time) between early June through mid-July. During this time, the shadow would affect less than 25 percent of the total solar panel array. While the shadow would occur during a time of year associated with peak solar energy output, key considerations under Alternative Scheme 2 are the late afternoon timeframe, the short duration and limited area where shadow would be cast, and the limited dates annually that would be affected. Moreover, any reduced amount of energy able to be produced by the collector would not substantially impair the function of the building at 1922 Webster Street. Any loss in energy could be made up for with additional power drawn from the local electricity provider, PG&E, with no impairment to the functionality of the building. Therefore, the Alternative Scheme 2 shadow

would not result in a substantial loss of power, income, or use from the collectors and, therefore, Alternative Scheme 2 would not cast shadow that would substantially impair the function of existing solar collectors in use on surrounding buildings. Also, no shadow from cumulative development would affect the 1922 Webster Street solar panel site. The impact would be considered less than significant.

Historic Resources. Alternative Scheme 2 would cast shadow for periods of time throughout the year between the hours of 9am and 3pm on six additional buildings (in addition to those affected under Scheme 1, see footnote 11) that are either landmark structures, historic resources, or eligible for historic resource status (with rating “C” or higher).¹³ The 1814 Franklin Street Leamington Hotel continues to be the only affected building that possesses shadow-sensitive features that contribute and/or justify their designation as an historic resource. Intervening massing of 1814 Franklin Street that currently overshadows the skylights during times Alternative Scheme 2 shadow would be cast in that direction, including under cumulative conditions (see Sheets A1-P400 and A1-C400 in Appendix A-2). Therefore, Alternative Scheme 2 shadow would not impair any historic defining features, so the shadow cast by Alternative Scheme 2 on 1814 Franklin Street would be considered less than significant.

Overall, the potential impacts of the Project under Alternative Scheme 2 regarding shadows would be similar to, or less severe than, those identified in the Previous CEQA Documents considered in this analysis.

7.1.2.3 Wind (Criterion 1e)

Pursuant to the City of Oakland’s significance thresholds, a wind analysis was prepared by RWDI for the Project, as the Project would construct a building taller than 100 feet in height in Downtown Oakland. The assessment of wind hazards conditions resulting with the Project and cumulative conditions was conducted to evaluate potential hazards related to wind force. Predicted wind hazards are depicted in tables and on area plans (including the Project site) in **Appendix B** to this document. RWDI conducted the wind tunnel study considering wind statistics recorded at the Metropolitan Oakland International Airport, and a 3D model of the Project (Scheme 1 and Alternative Scheme 2). The study considered 54 wind sensor locations (SL) around the project site and surrounding area.

In the existing condition, wind speeds comply with the hazard criterion at all areas assessed, except for a location to the southeast of the site, on the sidewalk of 19th Street near Harrison Street (SL #37).

Scheme 1. Existing wind hazard conditions are expected to remain with Scheme 1, and the same wind hazard conditions are also predicted under cumulative conditions, considering future surrounding buildings and Scheme 1 (see Appendix B Figures 1A, 1B and 1D, and see Table 1). As such, Scheme 1 would have a less than significant wind hazard impact and would not result in a new or more severe significant impact with respect to wind. The impact would be considered less than significant.

¹³ 1807 Telegraph (Fox Theatre), 518 Thomas L. Berkley Way, 1755 Broadway, 1759 Broadway, 1763 Broadway, and 2525 Broadway (Paramount Theatre)

Alternative Scheme 2. Existing wind hazard conditions (SL #37) are expected to be eliminated with Alternative Scheme 2; however, a new exceedance (SL #10) was predicted at the southwest corner of the proposed Alternative Scheme 2 building, adding two hours of exceedance per year (see Appendix B Figures 1A, 1C and Table 1 SL #10). The City of Oakland considers a significant wind impact to occur if a project were to create winds exceeding 36 mph for more than one hour during daylight hours during the year. Alternative Scheme 2 would increase the existing 25 mph wind speed to 39 mph for two additional hours per year, which exceeds the applicable threshold.

To address the exceedance, RWDI specifies that the Alternative Scheme 2 design incorporate specific building design elements. As described and illustrated in Appendix B, the design elements include introducing a recessed and a re-entrant corner at the entrance at the southwest corner of the ground level, which will disrupt the accelerating winds around the corner; adding a canopy feature above the recessed area at the height of one story above grade, which will help deflect the wind downdrafts; and extended the porous screens wall enveloping the parking levels around the southwest corner, which will help redirect the wind downdrafts to the parking levels instead of grade level and dissipate the wind energy. Implemented together, these modifications to the Alternative Scheme 2 design are expected to reduce wind speeds at the southwest corner. If in the future the Project Applicant elects to pursue Alternative Scheme 2, the Applicant will prepare and submit revised Project plans incorporating the aforementioned design elements and verification that the modified design would mitigate the wind exceedance at the southwest corner of the building.

Moreover, as mentioned previously, the environmental impact of wind exceedances Downtown is captured in the 1998 LUTE EIR, which identified significant and unavoidable impacts regarding wind hazards. Thus, Alternative Scheme 2 would not result in a new significant impact not addressed in one of the Previous CEQA Documents.

Under cumulative conditions with Alternative Scheme 2, no exceedances are predicted (see Appendix B Figure 1E and Table 1 SL #10). Overall, Alternative Scheme 2 would have a less than significant wind hazard impact and would not result in a new or more severe significant impact with respect to wind. The impact would be considered less than significant.

7.1.3 Conclusion

Based on an examination of the analysis, findings, and conclusions of the Previous CEQA Documents, the Scheme 1 and Alternative Scheme 2 of the Project would not result in new or more severe significant impacts related to aesthetics, shadow, or wind than those already identified in the Previous CEQA Documents. Implementation of **SCA AES-1, Trash and Blight Removal; SCA AES-2, Graffiti Control; SCA AES-3, Landscape Plan; and SCA AES-4, Lighting** (see Attachment A) would be applicable to and would be implemented by Scheme 1 and Alternative Scheme 2 and would further ensure that aesthetics-related impacts would be less than significant. No mitigation measures are required.

7.2 Air Quality

Would the project:	Equal or Less Severity of Impact Previously Identified in Previous CEQA Documents	Substantial Increase in Severity of Previously Identified Significant Impact in Previous CEQA Documents	New Significant Impact
Project-level Thresholds: a. During project construction result in average daily emissions of 54 pounds per day of ROG, NO _x , or PM _{2.5} or 82 pounds per day of PM ₁₀ ; during project operation result in average daily emissions of 54 pounds per day of ROG, NO _x , or PM _{2.5} , or 82 pounds per day of PM ₁₀ ; result in maximum annual emissions of 10 tons per year of ROG, NO _x , or PM _{2.5} , or 15 tons per year of PM ₁₀ ; or	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. For new sources of Toxic Air Contaminants (TACs), during either project construction or project operation expose sensitive receptors to substantial levels of TACs under project conditions resulting in (a) an increase in cancer risk level greater than 10 in one million, (b) a noncancer risk (chronic or acute) hazard index greater than 1.0, or (c) an increase of annual average PM _{2.5} of greater than 0.3 microgram per cubic meter; or, under cumulative conditions, resulting in (a) a cancer risk level greater than 100 in a million, (b) a noncancer risk (chronic or acute) hazard index greater than 10.0, or (c) annual average PM _{2.5} of greater than 0.8 microgram per cubic meter; or expose new sensitive receptors to substantial ambient levels of Toxic Air Contaminants (TACs) resulting in (a) a cancer risk level greater than 100 in a million, (b) a noncancer risk (chronic or acute) hazard index greater than 10.0, or (c) annual average PM _{2.5} of greater than 0.8 microgram per cubic meter.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

7.2.1 Previous CEQA Documents Findings

7.2.1.1 Construction and Operational Emissions and Odors

The 1998 LUTE EIR identified mitigation measures that would reduce odorous emissions, construction dust (including particulate matter less than 10 microns in diameter), and operational emissions effects to less-than-significant levels. The 1998 LUTE EIR also found significant and unavoidable cumulative impacts regarding increased criteria pollutants from increased traffic regionally.

The 2011 Renewal Plan Amendments EIR did not include a detailed analysis of construction and operational criteria air pollutants. The 2011 Renewal Plan Amendments EIR identified effective SCAs to address potentially significant effects regarding dust/particulate matter (PM)₁₀, and consistency with the applicable regional clean air plan. The 2011 Renewal Plan Amendments EIR also found significant and unavoidable impacts related to odors.

7.2.1.2 Toxic Air Contaminants

Analysis of TACs was not required when the 1998 LUTE EIR was prepared, therefore the EIR did not quantify or address cumulative health risks. The 2011 Renewal Plan Amendments EIR concluded that risks from exposure to TACs, primarily gaseous TACs, would be significant and unavoidable even with the implementation of City's SCAs.

7.2.2 Project Analysis

7.2.2.1 Construction and Operational Emissions (Criterion 2a)

Methodology and Assumptions

Construction and operational emissions that would result from both proposed Project schemes were estimated using CalEEMod (version 2020.4.0). For mobile source emissions, CalEEMod uses emission factors from the EMFAC2017 database. A more recent version of the EMFAC model, EMFAC2021, became available that is not included in this version of CalEEMod. However, the differences in emission factors between EMFAC2017 and EMFAC2021 are not substantial enough to alter the conclusions discussed further below, because the emissions that would be generated from construction and operation of Scheme 1 and Alternative Scheme 2 are so minimal and far below the significance thresholds. Inputs to the model included scheme-specific information including size of the project area, size of the proposed commercial retail/office building, construction equipment to be utilized, construction schedule, volume of export and import, as well as project trip generation for each proposed Project scheme, provided by Fehr & Peers.

The City of Oakland is located within the San Francisco Bay Area Air Basin (SFBAAB) which falls under the jurisdiction of the Bay Area Air Quality Management District (BAAQMD). The BAAQMD uses their thresholds of significance, specified in the BAAQMD California Environmental Quality Act Air Quality Guidelines (CEQA Guidelines), to assess air quality impacts of proposed development projects within the air basin. The applicable thresholds for emissions of criteria air pollutants are summarized below:

**TABLE 7.2-1
BAAQMD AIR QUALITY SIGNIFICANCE THRESHOLDS**

Pollutant	Construction Thresholds	Operational Thresholds	
	Average Daily Emissions (lbs./day)	Average Daily Emissions (lbs./day)	Annual Average Emissions (tons/year)
Criteria Air Pollutants			
ROG, NO _x , PM _{2.5}	54 ^a	54	10
PM ₁₀	82 ^a	82	15
CO	Not Applicable	9.0 ppm (8-hour average) or 20.0 ppm (1-hour average)	
Fugitive Dust (PM _{2.5} , PM ₁₀)	Construction Dust Ordinance or other Best Management Practices	Not Applicable	

**TABLE 7.2-1
BAAQMD AIR QUALITY SIGNIFICANCE THRESHOLDS**

Pollutant	Construction Thresholds	Operational Thresholds	
	Average Daily Emissions (lbs./day)	Average Daily Emissions (lbs./day)	Annual Average Emissions (tons/year)
Health Risks and Hazards			
Excess Cancer Risk	10 per one million	10 per one million	
Chronic or Acute Hazard Index	1.0	1.0	
Incremental annual average PM _{2.5}	0.3 µg/m ³	0.3 µg/m ³	

NOTE:

^a Construction emissions PM₁₀ and PM_{2.5} thresholds are for exhaust emissions only. The BAAQMD takes a qualitative approach to PM₁₀ and PM_{2.5} fugitive dust, as discussed further below.

SOURCE: BAAQMD, 2017, 2022.

The BAAQMD recommends that all projects implement the BAAQMD Basic Construction Mitigation Measures (BMPs) whether or not construction-related emissions exceed the applicable quantitative thresholds of significance. According to the CEQA Guidelines, projects that implement the BAAQMD BMPs for fugitive dust during construction would have a less-than-significant impact with respect to fugitive dust emissions, consistent with the approach applied in the Previous CEQA Documents (see 7.2.1.1, above).

As stated in the BAAQMD's CEQA Guidelines, the criteria air pollutant thresholds were developed to represent a cumulatively considerable contribution to regional air quality, and, as such, represent not only a project level threshold but a cumulative threshold as well.

Analysis

Construction Emissions

Construction emissions associated with the Project would primarily be generated from the use of heavy-duty construction equipment as well as worker, haul truck, and vendor truck trips to and from the project site.

Scheme 1. Construction of the proposed Project would begin in 2023 and conclude in 2025 (with building operation commencing in 2026). The average daily construction-related emissions for Scheme 1, as estimated using CalEEMod, are presented in **Table 7.2-2**. As shown in the table, annual average daily construction emissions for Scheme 1 would not exceed the applicable BAAQMD thresholds for reactive organic gases (ROG), oxides of nitrogen (NO_x), exhaust particulate matter less than or equal to 10 microns in diameter (PM₁₀), or exhaust particulate matter less than or equal to 2.5 microns in diameter (PM_{2.5}), and the emissions from Scheme 1 would be considered less than significant.

Scheme 1 would comply with City of Oakland SCA AIR-1, Dust Controls – Construction Related; SCA AIR-2, Criteria Air Pollutant Controls – Construction Related; and SCA AIR-3, Diesel Particulate Matter Controls – Construction Related, which incorporate dust control measures, including the

BAAQMD BMPs, applicable control measures for criteria air pollutants during construction of the Project. Therefore, Scheme 1 would result in a less than significant impact with respect to emissions of fugitive dust.

**TABLE 7.2-2
UNCONTROLLED EMISSIONS FROM CONSTRUCTION - SCHEME 1 (AVERAGE LBS. PER DAY)^a**

Emissions Source	ROG	NO _x	PM ₁₀ (exhaust)	PM _{2.5} (exhaust)
Average Daily Construction Emissions	9.0	14.0	0.6	0.5
BAAQMD Significance Thresholds	54	54	82	54
Significant (Yes or No)?	No	No	No	No

NOTE:

^a Project construction emissions estimates were made using CalEEMod, version 2020.4.0. Emissions are average daily pounds per day and are estimated by dividing the total construction emissions generated by the Project by the total number of construction workdays, estimated to be 594 workdays.

SOURCE: Appendix C

Alternative Scheme 2. As with Alternative 1, construction of the proposed Project would begin in 2023 and conclude in 2025 (with building operation commencing in 2026). The average daily construction-related emissions for Alternative Scheme 2, as estimated using CalEEMod, are presented in **Table 7.2-3**. As shown in the table, annual average daily construction emissions for Alternative Scheme 2 would not exceed the applicable BAAQMD thresholds for reactive organic gases (ROG), oxides of nitrogen (NO_x), exhaust particulate matter less than or equal to 10 microns in diameter (PM₁₀), or exhaust particulate matter less than or equal to 2.5 microns in diameter (PM_{2.5}), and the emissions from Alternative Scheme 2 would be considered less than significant.

**TABLE 7.2-3
UNCONTROLLED EMISSIONS FROM CONSTRUCTION - ALTERNATIVE SCHEME 2
(AVERAGE LBS. PER DAY)^a**

Emissions Source	ROG	NO _x	PM ₁₀ (exhaust)	PM _{2.5} (exhaust)
Average Daily Construction Emissions	9.8	13.5	0.5	0.5
City of Oakland Thresholds	54	54	82	54
Significant (Yes or No)?	No	No	No	No

NOTE:

^a Project construction emissions estimates were made using CalEEMod, version 2020.4.0. Emissions are average daily pounds per day and are estimated by dividing the total construction emissions generated by the Project by the total number of construction workdays, estimated to be 682 workdays.

SOURCE: Appendix C

The Project would comply with City of Oakland SCA AIR-1, Dust Controls – Construction Related; SCA AIR-2, Criteria Air Pollutant Controls – Construction Related; and SCA AIR-3, Diesel Particulate Matter Controls – Construction Related, which incorporate dust control measures, including the BAAQMD BMPs, and applicable control measures for criteria air pollutants during construction of

the Project. Therefore, Alternative Scheme 2 would result in a less than significant impact with respect to emissions of fugitive dust.

Operational Emissions

Scheme 1. Operation of the proposed Project is anticipated to begin in 2026. The daily operational emissions that would be generated from Scheme 1 are presented in **Table 7.2-4**. As shown in the table, neither annual nor average daily emissions for Scheme 1 would exceed the BAAQMD thresholds of significance for ROG, NO_x, PM₁₀ or PM_{2.5}.

**TABLE 7.2-4
EMISSIONS FROM OPERATION - SCHEME 1 (LBS. PER DAY/TONS PER YEAR)^a**

Source	ROG	NO _x	PM ₁₀	PM _{2.5}
Area Source Emissions	10.0 / 1.8	<0.1 / <0.1	<0.1 / <0.1	<0.1 / <0.1

SOURCE: Appendix C

Summary

Scheme 1. As shown in Tables 7.2-2 and 7.2-4, Scheme 1 would not generate emissions that would exceed the BAAQMD thresholds of significance for construction and operational emissions. Scheme 1 would have less-than-significant project-level impacts with respect to construction and operational emissions and thus would not result in a new or more severe significant impact compared with the Previous CEQA Documents.

Alternative Scheme 2. As shown in Tables 7.2-3 and 7.2-5, Alternative Scheme 2 would not generate emissions that would exceed the BAAQMD thresholds of significance for construction and operational emissions; it would not result in a new or more severe significant impact compared with the Previous CEQA Documents. Alternative Scheme 2 would be considered to have a less than significant project-level impacts with respect to construction and operational emissions.

7.2.2.2 Toxic Air Contaminants (Criterion 2b)

Assumptions and Methodology

The BAAQMD defines sensitive land uses as those where sensitive population groups are located, including residences, schools, childcare centers, convalescent homes, and hospitals. These land uses are considered more sensitive than the general public to poor air quality because the populations associated with those uses have an increased susceptibility to respiratory distress. Residences are also considered sensitive uses because these individuals could be present there. In addition, people generally spend more time at home than at other locations and are, therefore, exposed to ambient air pollutant concentrations for extended periods of time. The nearest sensitive receptors to the proposed Project site are residents at an apartment complex east of Webster Street, approximately 80 feet from the project site.

Toxic air contaminants (TACs) are types of air pollutants that can cause health risks such as cancer or chronic and acute health effects. Most TACs do not have ambient air quality standards and are, therefore, regulated using a risk-based approach through preparation of a health risk assessment (HRA) to determine what sources and pollutants to control as well as the degree of control. A HRA evaluates increased probability of cancer and/or chronic, long-term effects. The predominant TAC of concern in urban air is diesel particulate matter (DPM) which is emitted in diesel exhaust. In addition to DPM, BAAQMD recommends an analysis of PM_{2.5} concentrations associated with a project. BAAQMD considers PM_{2.5} to be one of the pollutants of concern related to health hazards (BAAQMD, 2017, 2022). In the 2022 updates to its CEQA Guidelines, BAAQMD introduced new guidance recommending the assessment of a project's potential health impacts from directly emitted TACs and PM_{2.5} concentrations during construction. BAAQMD's new fugitive dust health risk guidance is recommended and not mandatory, and during the preparation of this CEQA document, the City of Oakland did not elect to employ the new guidance while it considered the potential effects on balance with the City's housing and environmental justice goals and other related policies. Therefore, the impact determination in this document continues to rely on implementation of BAAQMD BMPs (which are incorporated into the City's SCAs) to adequately address fugitive dust emissions to less than significant. As discussed below, the 1998 LUTE EIR mitigation measures are consistent with the BAAQMD BMPs.

BAAQMD recommends that a HRA be conducted when sensitive receptors are located within 1,000 feet of project construction activities. As discussed above, the nearest receptor to the project site is located 80 feet from the eastern boundary. Consequently, a detailed construction HRA was conducted to determine the level of risk generated by TACs from construction of both of the proposed Project schemes and nearby sensitive receptors (see **Appendix C, Air Quality and Health Risk Assessment Information**). In accordance with Office of Environmental Health Hazard Assessment's (OEHHA) 2015 *Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments*, the HRA incorporated the highest estimated concentrations of TACs at the receptors analyzed with established cancer potency factors and acceptable reference concentrations for non-cancer health effects (OEHHA, 2015). The DPM concentration at the maximum exposed individual receptor (MEIR) was modeled using the American Meteorological Society/Environmental Protection Agency Regulatory Model (AERMOD). Increased cancer risks were calculated using the modeled maximum DPM concentrations and OEHHA-recommended methodologies for residential receptors (starting at 3rd trimester through the duration of construction).

Health risks to sensitive receptors from exposure to DPM and PM_{2.5} generated during Project construction are discussed below.

Analysis

Construction

Scheme 1. Construction-related activities over the 27-month construction period associated with Scheme 1 would result in the generation of DPM and PM_{2.5} from on-road heavy-duty trucks and off-road equipment. Due to the variable nature of construction activity, the generation of DPM emissions in most cases would be temporary, especially considering the short amount of time such equipment is typically within an influential distance that would result in the exposure of sensitive receptors to substantial concentrations.

The maximum pollutant concentration under Scheme 1 occurred at the residential receptors at an apartment complex located at 1940 Webster Street, 80 feet from the Project site. This would be considered the MEIR from construction emissions associated with Scheme 1. **Table 7.2-6** shows the cancer risk, chronic Hazard Index (HI) and the PM_{2.5} concentration at the MEIR from Scheme 1 construction activities. The table shows that cancer risk from uncontrolled Scheme 1 construction emissions at the MEIR would exceed the BAAQMD significance thresholds.

Scheme 1 would be required to implement enhanced construction-related air pollution controls pursuant to SCA AIR-3, Diesel Particulate Matter Controls – Construction Related, which would reduce DPM exhaust emissions by requiring best available control technology on diesel off-road equipment. Implementation of SCA AIR-3 assumes use of engines that meet the Tier 4 Final standards as the best available control technology for all construction equipment consistent with the SCA. Currently, Tier 4 engines or installation of Level 3 verified diesel emission control strategies (VDECS) represent best available control technology for control of DPM, and are expected to reduce emissions by 85 percent.¹⁴ Table 7.2-6 shows that with the use of Tier 4 controls,

¹⁴ <http://www.arb.ca.gov/diesel/verdev/vt/cvt.htm>

all health risks at the MEIR associated with construction of Scheme 1 would be below the BAAQMD significance thresholds for the residential receptors.

**TABLE 7.2-6
MAXIMUM HEALTH RISKS FROM CONSTRUCTION - SCHEME 1**

Health Risk at MEIR	Maximum Cancer Risk (in a million)	Chronic Risk (Hazard Index)	Maximum PM _{2.5} concentration (µg/m ³)
Uncontrolled Scenario (prior to application of SCAs)			
Residential Receptor	110.7	0.16	0.65
Project-level Threshold	10	1.0	0.3
Significant?	Yes	No	Yes
SCA Scenario (With Tier 4 Final Equipment)			
Residential Receptor	7.3	0.01	0.05
Project-level Threshold	10	1.0	0.3
Significant?	No	No	No

SOURCE: Appendix C.

Also, as initially discussed in this section (see 7.2.1), the 1998 LUTE EIR identified program-level mitigation measures that would reduce the potential impacts of construction dust, including PM_{2.5}, resulting from development in the Downtown Showcase District (in which the Project site is located) to less than significant. The 1998 LUTE EIR mitigation measures included basic and enhanced control measures and BAAQMD dust control measures (from the then-applicable 1996 OSCAR IS/MND BAAQMD CEQA Guidelines), which the Air District has subsequently expanded over time and that continue to apply to the proposed Project (updated as SCA AIR-1, SCA AIR-2, and SCA-3).

Scheme 1 would include demolition of the existing building and pavement (parking lot). It is estimated that a total of 2,250 tons of debris would be removed as part of the demolition of the existing structures. The existing building was constructed in 1950 and may contain Asbestos Containing Materials (ACM), which could pose a health risk to workers and nearby receptors during demolition. Consistent with SCA AIR-5, Asbestos in Structures, the Scheme 1 would comply with all applicable laws and regulations regarding demolition and renovation of ACM.

Alternative Scheme 2. Construction-related activities over the 31-month construction period associated with Alternative Scheme 2 would result in the generation of TACs, specifically DPM, from on-road heavy-duty trucks and off-road equipment. Due to the variable nature of construction activity, the generation of TAC emissions in most cases would be temporary, especially considering the short amount of time such equipment is typically within an influential distance that would result in the exposure of sensitive receptors to substantial concentrations.

The maximum pollutant concentration from Alternative Scheme 2 occurred at the residential receptors at an apartment complex located at 1940 Webster Street, 80 feet from the Project site. This would be considered the MEIR from construction emissions associated with Alternative Scheme 2. **Table 7.2-7** shows the cancer risk, chronic Hazard Index (HI) and the PM_{2.5} concentration at the MEIR from Alternative Scheme 2 construction activities. The table shows that cancer risk from uncontrolled Alternative Scheme 2 construction emissions at the MEIR would exceed the BAAQMD significance thresholds.

**TABLE 7.2-7
MAXIMUM HEALTH RISKS FROM CONSTRUCTION - ALTERNATIVE SCHEME 2**

Health Risk at MEIR	Maximum Cancer Risk (in a million)	Chronic Risk (Hazard Index)	Maximum PM _{2.5} concentration (µg/m ³)
Uncontrolled Scenario (prior to application of SCAs)			
Residential Receptor	117.0	0.17	0.68
Project-level Threshold	10	1.0	0.3
Significant?	Yes	No	Yes
SCA Scenario (With Tier 4 Final Equipment)			
Residential Receptor	7.8	0.01	0.05
Project-level Threshold	10	1.0	0.3
Significant?	No	No	No

SOURCE: Appendix C

Alternative Scheme 2 would be required to implement enhanced construction-related air pollution controls pursuant to SCA AIR-3, Diesel Particulate Matter Controls – Construction Related, which would reduce DPM exhaust emissions by requiring best available control technology on diesel off-road equipment. Implementation of SCA AIR-3 assumes use of engines that meet the Tier 4 Final standards as the best available control technology for all construction equipment consistent with the SCA. Currently, Tier 4 engines or installation of Level 3 verified diesel emission control strategies (VDECS) represent best available control technology for control of DPM, and are expected to reduce emissions by 85 percent.¹⁵ Table 7.2-7 shows that with the use of Tier 4 controls, all health risks from Alternative Scheme 2 at the MEIR would be under the City’s significance thresholds for the residential receptors. Also, as discussed for Scheme 1, program-level mitigation impact and mitigation measures identified in the 1998 LUTE EIR to address the potential impacts of PM_{2.5} concentration from construction activities would also continue to apply to the proposed Project as current SCA AIR-1, SCA AIR-2, and SCA-3.

Alternative Scheme 2 would involve the same demolition of the existing building and pavement (parking lot) discussed above, and therefore adhere to SCA AIR-5, Asbestos in Structures, and comply with all applicable laws and regulations regarding demolition and renovation of ACM.

¹⁵ <http://www.arb.ca.gov/diesel/verdev/vt/cvt.htm>

Operations

Scheme 1 and Alternative Scheme 2. A back-up diesel emergency generator is proposed for each Scheme 1 and Alternative Scheme 2 of the Project. The back-up diesel generator under each scheme would not be used routinely but rather serve as a back-up power source should a power outage occur. Emissions would also occur during the routine testing and maintenance of the generator.

Installation and operation of a back-up diesel generator would require a Permit to Operate and an Authority to Construct from the BAAQMD, which would evaluate emissions based on generator size and location and would require Best Available Control Technology, if warranted. A site-specific HRA would be conducted as part of the BAAQMD's permitting process, and the BAAQMD would deny an Authority to Construct or a Permit to Operate for any new or modified source of TACs that exceeds a cancer risk of 10 in one million or a chronic or acute hazard index of 1.0. This would be consistent with the requirements of SCA AIR-4, Stationary Sources of Air Pollution (Toxic Air Contaminants), and therefore, operation of an emergency generator associated with either Scheme 1 or Alternative Scheme 2 of the proposed Project would result in a less than significant impact.

In addition, DPM emissions associated with the retail and office uses in Scheme 1 and Alternative Scheme 2 would be generated by a limited number of delivery and service vehicle trips that would not meaningfully add to the health risk exposure, especially since only a fraction of the total emissions would take place within the zone of influence (defined by the BAAQMD as a 1,000-foot radius) and affect the health risk at offsite receptors. Therefore, both Scheme 1 and Alternative Scheme 2 would result in a less-than-significant impact with respect to operational TAC emissions, and City SCA AIR-4, Stationary Sources of Air Pollution (Toxic Air Contaminants), requiring an operational HRA, would not be required.

Cumulative Health Risk

Cumulative community health risk impacts were addressed through an evaluation of TAC sources located within 1,000 feet of the existing off-site MEIR. There are no highways within 1,000 feet of the MEIR; however, a review of the BAAQMD's stationary source GIS map tool identified seven stationary sources with the potential to affect the MEIR. The BAAQMD stationary source GIS map tool provides the maximum health risk impacts from stationary sources at the location of each source; therefore, the risk presented below is very conservative. Actual cumulative risk at the MEIR would be reduced due to the distance between each of the sources presented below and the MEIR location. The risks presented in this section are also conservative in that the Project's construction is considered in combination with the operation of nearby stationary sources, which, together, is reasonably estimated to be greater than the effects of the cumulative operational scenario (operation of the Project combined with operations of the nearby stationary sources).

Table 7.2-8 and **Table 7.2-9** both report the project construction and cumulative community risk impacts. Without SCA reduction measures, Scheme 1 and Alternative Scheme 2 could exceed the significance criteria with respect to community risk caused by Project construction activities. However, with the use of Tier 4 Final engines (as required by the SCAs) in construction equipment, health risk at the MEIR would be less than the City's significance thresholds.

Under both the uncontrolled scenario and controlled (with SCA's implemented) scenario, the cumulative cancer risk and PM_{2.5} concentrations would not exceed their cumulative source thresholds of greater than 100 per million and greater than 0.8 µg/m³, respectively. Thus, a less-than-significant cumulative impact would occur during construction and operation of both Scheme 1 and Alternative Scheme 2.

**TABLE 7.2-8
CUMULATIVE HEALTH IMPACTS TO EXISTING RESIDENTIAL RECEPTORS – SCHEME 1**

Source (BAAQMD Facility ID)	Source Type	Source Address	Cancer Risk (per million)	Chronic Risk (Hazard Index)	PM _{2.5} concentration (µg/m ³)

SOURCE: Appendix C

Summary

Scheme 1 and Alternative Scheme 2. As shown in Tables 7.2-6 and Table 7.2-7, with implementation of SCA AIR-3, neither Scheme 1 nor Alternative Scheme 2 of the Project would generate emissions of TACs during construction that would exceed the BAAQMD thresholds of significance. Further, implementation of SCA AIR-5 prior to and during demolition activity would ensure that airborne asbestos would not impact receptors near the project.

During operation of Scheme 1 or Alternative Scheme 2 of the Project, negligible TAC emissions would be generated from mobile sources, which would not result in a significant health risk to nearby sensitive receptors. In addition, operational TAC emissions would be generated from the testing and maintenance of a standby emergency diesel generator; however, a site specific HRA would be completed as part of the permitting process to ensure that emissions from the generator to sensitive receptors would be less than significant. Finally, the evaluation of BAAQMD-permitted stationary sources of TAC emissions along with Project-related construction emissions would not generate a

significant cumulative impact to off-site sensitive receptors. Thus, Scheme 1 and Alternative Scheme 2 of the Project would have less-than-significant health impacts to sensitive receptors and therefore would not result in a new or more severe significant impact compared with the Previous CEQA Documents.

7.2.3 Conclusion

Based on an examination of the analysis, findings, and conclusions of the previous CEQA documents considered throughout this analysis, Scheme 1 or Alternative Scheme 2 of the Project would not result in new or more severe significant impacts related to air quality than those previously identified in environmental evaluations. Based on the analysis, with implementation of the applicable SCAs, neither Scheme 1 nor Alternative Scheme 2 would exceed any of the applicable BAAQMD significance thresholds. Therefore, construction and operation of either Scheme 1 or Alternative Scheme 2 would result in less-than-significant impacts relating to air quality, including health risk. **SCA AIR-1, Dust Controls – Construction Related; SCA AIR-2, Criteria Air Pollutant Controls – Construction Related; SCA AIR-3, Diesel Particulate Matter Controls – Construction Related; SCA AIR-4, Stationary Sources of Air Pollution (Toxic Air Contaminants); and SCA AIR-5, Asbestos in Structures** (see Attachment A), would be applicable to and implemented by Scheme 1 or Alternative Scheme 2 of the Project to further ensure that, to the extent feasible, air quality impacts associated with the Project would be less than significant. Therefore, no mitigation measures are required.

7.3 Biological Resources

Would the project:	Equal or Less Severity of Impact Previously Identified in Previous CEQA Documents	Substantial Increase in Severity of Previously Identified Significant Impact in Previous CEQA Documents	New Significant Impact
<p>a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service;</p> <p>Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service;</p> <p>Have a substantial adverse effect on federally protected wetlands (as defined by Section 404 of the Clean Water Act) or state protected wetlands, through direct removal, filling, hydrological interruption, or other means;</p> <p>Substantially interfere with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites;</p>	☒	☐	☐
<p>b. Fundamentally conflict with the City of Oakland Tree Protection Ordinance (Oakland Municipal Code [OMC] Chapter 12.36) by removal of protected trees under certain circumstances; or</p> <p>Fundamentally conflict with the City of Oakland Creek Protection Ordinance (OMC Chapter 13.16) intended to protect biological resources.</p>	☒	☐	☐

7.3.1 Previous CEQA Documents Findings

The Previous CEQA Documents identified less-than-significant impacts related to biological resources, with the 2011 Renewal Plan Amendments EIR identifying applicable City of Oakland SCAs. No mitigation measures were necessary.

7.3.2 Project Analysis

7.3.2.1 Special-Status Species, Wildlife Corridors, Riparian and Sensitive Habitat, Wetlands, Tree and Creek Protection (Criteria 3a and 3b)

The Project site is located in the fully developed urban area of Downtown Oakland. It is fully paved and covered by an existing commercial building and a paved parking lot. The site does not contain vegetation or hydrology conditions suitable for sustaining wetlands, nor are any known special status species or sensitive habitats, including those that could support migratory fish or birds,

located on the site. No existing street trees are present on 19th Street or Webster Street – the two street frontages of the Project.

Scheme 1 and Alternative Scheme 2. Exterior glass curtain walls are proposed for Scheme 1 and Alternative Scheme 2. The Project site is not located immediately adjacent to a substantially vegetated park larger than one acre or a substantial body of water. However, the series of recessed terrace balconies on alternating office floors, and the 8,800 square-foot outdoor roof terrace, would contain vegetation in containers including potted trees and shrubs (see Figure 5.1-13 and Figure 5.2-15, Roof Terrace Landscape Plan). The Project would also install two street trees along 19th Street. Neither of these landscaped areas would be considered a substantial vegetated green roof or substantial vegetated area.

In addition, the Project site is not located within an area mapped as critical habitat for the Alameda Whipsnake by the U.S. Fish and Wildlife Service. As discussed in Section 7.1.2.1 above, neither Scheme 1 nor Alternative Scheme 2 of the Project would create a new source of substantial light or glare. Therefore, Scheme 1 and Alternative Scheme 2 would not cause an adverse impact to birds from light or glare. Scheme 1 and Alternative Scheme 2 would also comply with SCAs relating to stormwater runoff from construction and operation to ensure that biological resources are protected (see Section 7.8, *Hydrology and Water Quality*, below and Attachment A).

7.3.3 Conclusion

Based on an examination of the analysis, findings, and conclusions of the Previous CEQA Documents, the Scheme 1 and Alternative Scheme 2 of the Project would not result in any new or more severe significant impacts related to biological resources than those identified in the Previous CEQA Documents. Implementation of **SCA HYD-1, Erosion and Sedimentation Control Measures for Construction; SCA HYD-2, NPDES C.3 Stormwater Requirements for Regulated Projects; and SCA UTIL 7, Water Efficient Landscape Ordinance (WELO)** (see Attachment A) would be applicable to and would further ensure that impacts related to biological resources associated with Scheme 1 or Alternative Scheme 2 of the Project are less than significant. Therefore, no mitigation measures are required.

7.4 Cultural Resources and Tribal Cultural Resources

Would the project:	Equal or Less Severity of Impact Previously Identified in Previous CEQA Documents	Substantial Increase in Severity of Previously Identified Significant Impact in Previous CEQA Documents	New Significant Impact
a. Cause a substantial adverse change in the significance of an historical resource as defined in CEQA Guidelines Section 15064.5. Specifically, a substantial adverse change includes physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of the historical resource would be "materially impaired." The significance of an historical resource is "materially impaired" when a project demolishes or materially alters, in an adverse manner, those physical characteristics of the resource that convey its historical significance and that justify its inclusion on, or eligibility for inclusion on an historical resource list (including the California Register of Historical Resources, the National Register of Historic Places, Local Register, or historical resources survey form (DPR Form 523) with a rating of 1-5);	☒	☐	☐
b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines Section 15064.5;	☒	☐	☐
c. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature; or	☒	☐	☐
d. Disturb any human remains, including those interred outside of formal cemeteries.	☒	☐	☐
Tribal Cultural Resources			
a. Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:			
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or	NA	☐	☐
ii A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall	NA	☐	☐

Would the project:	Equal or Less Severity of Impact Previously Identified in Previous CEQA Documents	Substantial Increase in Severity of Previously Identified Significant Impact in Previous CEQA Documents	New Significant Impact
consider the significance of the resource to a California Native American tribe.			

7.4.1 Previous CEQA Documents Findings

The 1998 LUTE EIR identified potentially significant impacts to historical resources and identified mitigation measures to reduce the impact to less-than-significant levels. The 2011 Renewal Plan Amendments EIR, which addresses much of the oldest part of Downtown Oakland, identified a significant and unavoidable impact to historical resources, even with the implementation of mitigation measures.

Both of the Previous EIRs identified less-than-significant effects to archaeological and paleontological resources and human remains, specifically with the incorporation of City of Oakland SCAs, except that the 1998 LUTE EIR identified mitigation measures that are functionally equivalent to current SCAs to reduce the effects to archaeological resources to less-than-significant levels.

7.4.2 Project Analysis

7.4.2.1 Historical Resources (Criterion 4a)

The Project would include demolition of the building located on the Project site. The building was constructed in 1950 and exceeds the age threshold for consideration as a potential historical resource. ESA completed an evaluation of the building in November 2022 and found it ineligible for listing on the California Register of Historical Resources (California Register) or for consideration as a City of Oakland A- or B-rated historical resource. Therefore, for the purposes of CEQA, the existing building on 1919 Webster is not considered an historical resource (see **Appendix D**).

An Area of Primary Importance (API), the Leamington Hotel Group, exists one parcel west of the Project site, encompassing buildings on the east side of Franklin Street at 19th Street. The API includes the following three properties:

- 1814 Franklin Street (The Leamington Building), which is an Oakland Designated Landmark (OCHS Rating A1+);
- 1904 Franklin Street (The 1904 Franklin Building), which is a local historic resource (OCHS Rating B+1+); and
- 1736 Franklin Street (including the California Ballroom), which is a Potential Designated Historic Property (PDHP) and a local historic resource (OCHS Rating Cb+1+).

The Lake Merritt API is located less than one block northeast of the project site with the nearest property being 300 Lakeside Drive. The 17th Street Commercial API is located one block south of the project site with the nearest properties including 300 17th Street, 1709 Webster Street, 378 17th Street,

and 394 17th Street. The Uptown Commercial API is located one block west of the project site with the nearest properties including 1770 Broadway, 1900 Broadway, and 1901 Franklin Street.

Additional individual properties located in the vicinity of the Project site are considered to be historical resources for the purposes of CEQA. These include:

- 1734 Webster Street
- 1701 Franklin Street
- 426 17th Street

Impacts

Vibration

Scheme 1 and Alternative Scheme 2. While the parcel that includes 1904 Franklin Street (local historic resource) shares a property line with the Project site, the 1904 Franklin Street building itself is approximately 50 feet west of the property line. The Project Applicant would be required to adhere to the conditions of SCA NOI-7, Vibration Impacts on Adjacent Structures or Vibration-Sensitive Activities, which entails completion of a Vibration Analysis that establishes pre-construction baseline conditions and threshold levels of vibration that could damage the structure and/or substantially interfere with activities at the Leamington Hotel Group API. The Vibration Analysis shall identify design means and methods of construction that shall be utilized in order to not exceed the thresholds and will be submitted to the Bureau of Building prior to construction. The Project Applicant shall implement the recommendations during construction. Therefore, with the implementation of SCA NOI-7, potential effects from construction vibration on historical resources would be less than significant, and no additional mitigation is required.

Shadow

Scheme 1 and Alternative Scheme 2. A shadow study for the Project was completed by Prevision Design in November 2022 (see Appendix A). As previously discussed in Section 4.1, Aesthetics, Shadow and Wind, of this Checklist, 1814 Franklin Street features a series of three large skylight windows that provide daylight to an interior court on the south and east interior corner of the L-shaped building tower. While these skylights are less than 150-ft from the Project site, the intervening massing of 1814 Franklin Street currently overshadows the skylights during times Scheme 1 or Alternative Scheme 2 shadow would be cast in that direction. While net new shadow would fall on the northern façade and rooftop of 1814 Franklin, such shadow would not materially impair any historic defining features, so the shadow cast by Scheme 1 or Alternative Scheme 2 on 1814 Franklin Street would be considered a less-than-significant impact.

Based on the discussion above, Scheme 1 or Alternative Scheme 2 of the Project would not result in any new or more severe significant impacts on historical resources than those identified in the Previous CEQA Documents.

7.4.2.2 *Archaeological and Paleontological Resources and Human Remains* (Criteria 4b through 4d)

Scheme 1 and Alternative Scheme 2. The Project would involve excavation, grading, foundation installation, and removal of asphalt and dirt for building construction. The Project site is underlain by two to five feet of clayey sand and clayey gravel; sandy deposits extend to about 10 to 18 feet below ground surface (bgs) of the medium to very dense Merritt Sands which overlie stiff clays. Construction would involve excavation up to a depth of up to approximately 20 to 30 feet. The drilled-in deep foundation elements may require piles or shafts to extend between approximately 70 to 210 feet below the existing site grade.¹⁶ Therefore, there is the potential to impact unknown archeological resources, as well as potential unknown paleontological resources or human remains, as noted in the Previous CEQA Documents. SCA CUL-1, *Archaeological and Paleontological Resources – Discovery During Construction*, would require all work within 50 feet of inadvertent discoveries of any subsurface archaeological materials to be halted and a qualified archaeologist or paleontologist hired to both assess the significance of the find, and deal with the find according to regulatory guidance. Since the Project is located in an area in which the 2011 Renewal Plan Amendments EIR has identified as a higher likelihood of archaeological finds, the Project would be required to implement SCA CUL-2, *Archaeologically Sensitive Areas – Pre-Construction Measures*, so that archaeological resources are further protected and accounted for. While the discovery of human remains on the Project site is unlikely, in the case that human remains are inadvertently encountered during construction, implementation of SCA CUL-3, *Human Remains – Discovery During Construction*, would ensure that the remains are handled properly by the Coroner or in consultation with the California Native American Heritage Commission (NAHC).

7.4.3 Conclusion

Based on an examination of the analysis, findings, and conclusions of the Previous CEQA Documents, the Scheme 1 and Alternative Scheme 2 of the Project would not result in any new or more severe significant impacts related to cultural resources than those identified in the previous CEQA documents. Implementation of **SCA CUL-1, Archaeological and Paleontological Resources – Discovery During Construction; SCA CUL-2, Archaeologically Sensitive Areas – Pre-Construction Measures; SCA CUL-3, Human Remains – Discovery During Construction; and SCA NOI-7 Vibration Impacts on Adjacent Structures or Vibration-Sensitive Activities** (see Attachment A), would further ensure that potential impacts associated with cultural resources would be less than significant. No mitigation measures are required.

¹⁶ GEI Consultants, 2022. *Geotechnical Information Summary for CEQA Document, 1919 Webster Street, Oakland, California*, August 3, 2022.

7.5 Geology, Soils, and Geohazards, and Mineral Resources

Would the project:	Equal or Less Severity of Impact Previously Identified in Previous CEQA Documents	Substantial Increase in Severity of Previously Identified Significant Impact in Previous CEQA Documents	New Significant Impact
Geology, Soils, and Geohazards: a. Expose people or structures to substantial risk of loss, injury, or death involving: <ol style="list-style-type: none"> 1. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map or Seismic Hazards Map issued by the State Geologist for the area or based on other substantial evidence of a known fault; 2. Strong seismic ground shaking; 3. Seismic-related ground failure, including liquefaction, lateral spreading, subsidence, collapse; or 4. Landslides; 	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Be located on expansive soil, as defined in Section 1802.3.2 of the California Building Code (2007, as it may be revised), creating substantial risks to life or property; result in substantial soil erosion or loss of topsoil, creating substantial risks to life, property, or creeks/waterways.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Mineral Resources: c. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state, or of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Note: Thresholds regarding paleontological resources are addressed under 7.4, <i>Cultural Resources and Tribal Cultural Resources</i> .			

7.5.1 Previous CEQA Documents Findings

The Previous CEQA Documents identified that impacts to geology, soils, and geohazards would be less than significant, with the 2011 Renewal Plan Amendments EIR identifying applicable City of Oakland SCAs. No mitigation measures were necessary. The 1998 LUTE EIR identified no impact regarding mineral resources, and the topic was not addressed in the 1996 OSCAR IS/MND.

7.5.2 Project Analysis

7.5.2.1 Seismic Hazards, Expansive Soils, and Soil Erosion (Criteria 5a and 5b)

Based on a review of the State of California Earthquake Fault Zones and Seismic Hazard Zones Maps, the Project site is not located within or adjacent to an Alquist-Priolo Earthquake Fault Zone.¹⁷ The primary geologic hazard at the site is strong ground shaking during a seismic event. The closest active fault to the Project site is the Hayward fault, with the nearest mapped distance approximately three miles northeast of the site. The nearest mapped distance to the San Andreas fault is approximately 15 miles southeast of the site. Therefore, the Project would not result in significant impacts with respect to rupture of a known earthquake fault.

The Project site is located on flat land, with no adjacent hillsides, and is not located in a landslide area.¹⁸ Also, the Project site is not located within a liquefaction hazard area, as mapped by the California Geological Survey (CGS). Site-specific subsurface conditions indicate that the risks of liquefaction, lateral spreading, and seismically-induced ground settlement are relatively low. The near-surface soils have relatively low potential to exhibit expansive behavior. (GEI, 2022) The risk of surface fault rupture, seismically-induced landsliding, and tsunami hazard are considered negligible. The Project site is underlain by two to five feet of clayey sand and clayey gravel; sandy deposits extend to about 10 to 18 feet below ground surface (bgs) of the medium to very dense Merritt Sands which overlie stiff clays.

Scheme 1. The Project would involve excavation, grading, foundation installation, and removal of asphalt and dirt for building construction. Excavation for the building foundation and basement level would result in approximately 21,000 cubic yards of soil to be hauled off the site. The depth of excavation required to construct the basement level will vary within the footprint of the building, depending on the configuration of the foundation system and the elevation of the adjacent ground surface. The depth of excavation required to construct the basement level is estimated to be up to approximately 20 to 30 feet deep. Temporary excavation support will be required to minimize settlement and lateral movement of the adjacent ground surface and structures.

To control differential and total settlements under the design loadings, the foundation system for would be a concrete mat/slab supported on drilled-in deep foundation elements, either drilled shafts or augered cast-in-place piles. The specific diameters and tip elevations chosen for the deep foundation elements will be a function of the magnitude and distribution design loads and constructability. The piles or shafts may extend between approximately 70 to 210 feet below the existing site grade.

The Project would include grading and excavation across the entire Project site and would require a grading permit. As such, SCA GEO-2, Soils Report, would apply to the Project and would require the Project Applicant to implement the recommendations contained in an approved site-specific soils report to ensure that the grading practices and Project design are appropriate in regard to the nature, distribution and strength of existing soils. Likewise, SCA HYD-1, Erosion and

¹⁷ GEI, 2022. Accessed <https://maps.conservation.ca.gov/cgs/informationwarehouse/regulatorymaps/>. CGS, 2003.

¹⁸ MTC, MTC/ABAG Hazard Viewer Map, Landslide Hazard (Rainfall Induced), <https://mtc.maps.arcgis.com/apps/webappviewer/index.html?id=4a6f3f1259df42eab29b35dfcd086fc8>, accessed August 6, 2020.

Sedimentation Control Plan for Construction, would apply to the Project and would ensure that erosion, sedimentation, and water quality impacts during construction are reduced to the maximum extent practicable. SCA GEO-1, Construction-Related Permit(s), would address all applicable regulatory standards and regulations pertaining to Project grading and excavation activities.

Given proximity to the Hayward Fault, discussed above, the Project would be required to comply with the California Building Code's current seismic standards, which require specific design parameters for construction in various seismic environments per City of Oakland SCA GEO-1, Construction-Related Permit(s), and SCA GEO-2, Soils Report, to ensure that development of the Project would avoid and minimize potential geologic impacts through compliance specifically with local and state regulations governing design and construction practices. Further, adherence to requirements of the State Building Code and the Seismic Hazards Mapping Act would prevent exposure of people or structures to substantial risk of loss, injury, or death during a large regional earthquake.

It is possible that unknown groundwater wells and abandoned structures (pits, mounts, septic tank vaults, sewer lines, etc.) could be present and disturbed during grading and construction activities, which would be appropriately addressed through implementation of SCA GEO-2, Soils Report, and SCA HYD-1, Erosion and Sedimentation Control Plan for Construction, applicable to Scheme 1 and Alternative Scheme 2 of the Project.

In summary, the potential impacts regarding seismic hazards, expansive soils, and soil erosion with Scheme 1 would be considered less than significant.

Alternative Scheme 2. Proposed on the same Project site, the site conditions described above apply with Alternative Scheme 2. Further, all excavation, foundation and construction approaches described above also apply to Alternative Scheme 2, except that excavation for the building foundation and basement level would result in approximately 24,000 cubic yards of soil and to be hauled off the site (3,000 cu. yd. more than with Scheme 1). Also, with the increased building height of Alternative Scheme 2, the sizes and number of deep foundation elements would be increased to carry the larger loads and the mat-slabs and/or grade beams used to connect the deep foundation elements would be stiffer, but the general approach to supporting the structural loads (type of foundation system for the building) would not change. Alternative Scheme 2 would also adhere to the same SCAs, Building Code and seismic standards identified above for Scheme 1. The impact would be considered less than significant.

7.5.2.2 Availability and/or Loss of Availability of Delineated Mineral Resources or Recovery Site (Criterion 5c)

The Project site is located on land classified by DOC's Division of Mines and Geology as Mineral Resource Zone 1 (MRZ-1), or an area where adequate geologic information indicates that no significant mineral deposits are present, or where it is judged that little likelihood exists for their

presence.¹⁹ The Project site is not zoned for, or immediately adjacent to, lands designated as a mineral resource zone by the City's General Plan. As a result, the Project would not interfere with any mineral extraction operations, and would not result in the loss of land designated for mineral resources. As such, the Project would not result in the loss of availability of a known mineral resource and would not result in the loss of a locally important mineral resource recovery site. Therefore, no impact on mineral resources would occur.

7.5.3 Conclusion

The Project would not impact to potential mineral resources. Also, based on an examination of the analysis, findings, and conclusions of the Previous CEQA Documents, Scheme 1 and Alternative Scheme 2 of the Project would not result in any new or more significant impacts related to geology and soils than those identified in the Previous CEQA Documents. Furthermore, implementation of **SCA GEO-1, Construction-Related Permit(s); SCA GEO-2, Soils Report; and SCA HYD-1, Erosion and Sedimentation Control Plan for Construction** (see Attachment A), would ensure that potential impacts associated with hazardous geologic and soils conditions would be less than significant. No mitigation measures are required.

¹⁹ DOC, 1987. *Special Report 146, Part II, Mineral Land Classification: Aggregate Materials in the San Francisco-Monterey Bay Area*. Division of Mines and Geology.

7.6 Greenhouse Gas and Climate Change

Would the project:	Equal or Less Severity of Impact Previously Identified in Previous CEQA Documents	Substantial Increase in Severity of Previously Identified Significant Impact in Previous CEQA Documents	New Significant Impact
<p>a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment, specifically:</p> <ol style="list-style-type: none"> 1. For a project involving a stationary source, produce total emissions of more than 10,000 metric tons of CO₂e annually. [NOTE: Stationary sources are projects that require a BAAQMD permit to operate.] 2. For a project involving a land use development,²⁰ fail to demonstrate consistency with the 2030 Equitable Climate Action Plan (ECAP) adopted by the City Council on July 28, 2020. [NOTE: Land use developments are projects that do not require a BAAQMD permit to operate.] Consistency with the 2030 ECAP can be shown by either: <ol style="list-style-type: none"> (a) committing to all of the GHG emissions reductions strategies described on the ECAP Consistency Checklist,²¹ or (b) complying with the GHG Reduction Standard Condition of Approval that requires a project-level GHG Reduction Plan quantifying how alternative reduction measures will achieve the same or greater emissions than would be achieved by meeting the ECAP Consistency Checklist. 	☒	☐	☐
<p>b. Fundamentally conflict with an applicable plan, policy, or regulation adopted for the purposes of reducing greenhouse gas emissions.</p>	☒	☐	☐

7.6.1 Previous CEQA Documents Findings

Climate change and greenhouse gas emissions (GHG) were not expressly addressed in the 1998 LUTE EIR. The 2011 Renewal Plan Amendments EIR identified less-than-significant GHG impacts with the implementation of applicable City of Oakland SCAs. No mitigation measures were necessary.

²⁰ For projects that involve both a stationary source and a land use development, calculate each component separately and compare to the applicable threshold.

²¹ The ECAP Consistency Checklist includes all of the project-level GHG emissions reduction strategies that are either regulatory requirements or are necessary at a project level to meet the adopted city-wide GHG emissions reduction targets of 56% reduction from 2005 levels by 2030 and 83% reduction by 2050. As new strategies are adopted to align with the 2030 ECAP, the Checklist will be updated and new projects will be expected to achieve the revised strategies or comply with GHG Reduction Standard Condition of Approval.

7.6.2 Project Analysis

7.6.2.1 Greenhouse Gas Emissions (Criterion 6a)

CEQA Guidelines require the analysis of GHG emissions and potential climate change impacts that could result from new development. Both BAAQMD and the California Air Pollution Control Officers Association (CAPCOA) consider GHG impacts to be exclusively cumulative impacts in that no single project could, by itself, result in a substantial change in climate. Therefore, the evaluation of GHG emissions impacts evaluates whether the Project would make a considerable contribution to cumulative climate change effects.

The City of Oakland evaluates impacts related to GHG emissions through implementation of its 2030 Equitable Climate Action Plan (ECAP). The City's GHG thresholds rely upon the technical and scientific basis of the City's ECAP, which provides substantial evidence that adherence to the 2030 ECAP action items will achieve GHG emissions reduction targets of 56 percent below 2005 levels by 2030 and 83 percent below 2005 levels by 2050, that would be achieved through implementation of the ECAP (City of Oakland, 2020). These reduction targets are more aggressive than the State's adopted 2030 reduction target of 40 percent below 1990 levels (per AB 32). Therefore, achievement of the City of Oakland goal stated in the ECAP would be consistent with the State's adopted 2030 goals. For compliance with CEQA, the City has developed its ECAP Consistency Checklist (ECAP Checklist) through which projects are analyzed for consistency with the City of Oakland ECAP and its GHG emissions reduction targets.

Scheme 1 and Alternative Scheme 2. The Project Applicant prepared and submitted with its Project Application an ECAP Consistency Review Checklist for the proposed Project to the City (see **Appendix E**). Given the nature of the ECAP Consistency Review Checklist Items and the Project characteristics under Scheme 1 and Scheme 2, the checklist applies to both schemes. The purpose of the ECAP Consistency Review Checklist is to determine, for purposes of compliance with CEQA, whether a development project complies with the ECAP and with the City's GHG reduction targets.

According to the Project's ECAP Consistency Review Checklist, the proposed Project has not committed to all applicable GHG emissions reduction strategies. Therefore, the Project would be required to implement **SCA GHG-1, Greenhouse Gas (GHG) Reduction Plan**, which requires the development and implementation of a GHG Reduction Plan (GHGRP) to reduce GHG emissions to at least the amount that would be achieved by committing to all of the emissions reductions strategies identified in the ECAP Consistency Checklist. According to the ECAP Checklist that the Project Applicant prepared and that applies to each Scheme 1 and Alternative Scheme 2, either scheme would comply with all applicable ECAP Checklist items, with the exception of Checklist Item #4 discussed below. Therefore, a GHGRP (see **Appendix F**) was prepared for the proposed Project consistent with SCA GHG-1. The GHGRP demonstrates the alternative GHG reduction measures that would be implemented under both Scheme 1 and Alternative Scheme 2 to achieve the same or greater emissions reductions as would have been achieved through consistency with ECAP Consistency Checklist Item #4, which requires implementation of employer-provided transit passes.

Based on input from the traffic consultant, Fehr & Peers, compliance with ECAP Checklist Item #4, provision of employer-provided transit passes, would reduce project-generated VMT by

approximately three percent for both proposed Project schemes. In order to determine the GHG reductions that would result from implementing employer-provided transit passes, mobile source GHG emissions were calculated in CalEEMod using the reduced VMT that would result from the implementation of transit passes. Mobile-source emissions under the transit passes scenario for both proposed Project schemes were then compared to mobile-source emissions that would result from Scheme 1 and Alternative Scheme 2 of the Project, as proposed. Overall, it was determined that the provision of employer-provided transit passes to project employees would result in an annual reduction of 50.5 metric tons (MT) of CO₂ equivalents (CO₂e) for Scheme 1 and an annual reduction of 66.7 MT CO₂e for Scheme 2.

The GHGRP identified three reduction measures that would apply to Scheme 1 and Alternative Scheme 2: (1) provision of ridesharing program, (2) implementation of commute trip reduction marketing, and (3) installation of rooftop solar photovoltaic (PV) panels.

**TABLE 7.6-1
GHGRP MEASURES AND EMISSIONS REDUCTIONS – SCHEME 1**

Measure	GHG Reduction (MT CO₂e)
Provision of a Ridesharing Program	129.8
Implement Commute Trip Reduction Marketing	64.9
Provision of On-site Solar Panels	8.0

NOTES:

^a Emissions reductions calculated based on the guidance included in the Handbook for Analyzing Greenhouse Gas Emissions Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity (SMAQMD, et al., 2021).

SOURCE: Appendix F

**TABLE 7.6-2
GHGRP MEASURES AND EMISSIONS REDUCTIONS – ALTERNATIVE SCHEME 2**

Measure	GHG Reduction (MT CO₂e)
Provision of a Ridesharing Program	166.2
Implement Commute Trip Reduction Marketing	83.1
Provision of On-site Solar Panels	8.0

NOTES:

^a Emissions reductions calculated based on the guidance included in the Handbook for Analyzing Greenhouse Gas Emissions Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity (SMAQMD, et al., 2021).

SOURCE: Appendix F

Implementation of the alternative measures identified in the GHGRP would result in an annual reduction of approximately 202.7 MT CO₂e from Scheme 1, which is greater than the emissions reductions as would have been achieved through the provision of transit passes under Scheme 1 of the proposed Project (50.5 MT CO₂e per year). Implementation of the GHGRP measures would result in an annual reduction of 257.3 MT CO₂e from Alternative Scheme 2, which exceeds the reductions that would have been achieved through implementation of employer-provided transit

passes (66.7 MT CO₂e per year).²² Therefore, both Scheme 1 and Alternative Scheme 2 would achieve the emissions reductions that are required for consistency with the City's ECAP Checklist. SCA GHG-1, GHG Reduction Plan, also contains reporting requirements and corrective procedures to ensure proper implementation of the GHGRP. Therefore, with implementation of SCA GHG-1, the GHG emissions from both of the proposed Project schemes would be less than significant.

A back-up diesel emergency generator is proposed as part of the Project, either Scheme 1 or Alternative Scheme 2, to comply with the California Building Code requirement for elevator safety in all buildings in excess of 70 feet in height, which would represent a new stationary source of GHG emissions. According to the City's GHG thresholds, for projects that involve both a stationary source and a land use development, the stationary source emissions should be calculated separately and compared to the stationary source threshold. The CalEEMod model runs for Scheme 1 and Alternative Scheme 2 (see Appendix C) also calculated the GHG emissions that would be generated by stationary sources associated with each of the Project schemes. Stationary source-related emissions would total approximately 2.8 MT CO₂e annually, which is below the BAAQMD threshold for stationary sources of 10,000 metric tons CO₂e per year (BAAQMD, 2017). Therefore, GHG emissions associated with the Project's emergency generator with Scheme 1 or Alternative Scheme 2 would also result in a less-than-significant impact.

The Project would be required to implement applicable City of Oakland SCAs that would contribute to minimizing potential GHG emissions from Project construction and operations. These include **SCA AES-3, Landscape Plan; SCA AIR-2, Criteria Air Pollutant Controls - Construction Related; SCA AIR-3, Diesel Particulate Matter Controls - Construction Related; and SCA UTIL-1, Construction and Demolition Waste Reduction and Recycling; SCA TRA-2, Bicycle Parking; SCA TRA-4, Transportation and Parking Demand Management Plan; SCA UTIL-3, Construction and Demolition Waste Reduction and Recycling; SCA UTIL-4, Green Building Requirements; and SCA UTIL-7, Water Efficient Landscape Ordinance (WELO).**

7.6.2.2 Consistency with GHG Emissions Plans and Policies (Criterion 6b)

Scheme 1 and Alternative Scheme 2. The Project would comply with state and regional plans, policies, and regulations that are related to the reduction of GHG emissions and relevant to the Project. Specifically, the Project, both Scheme 1 or Alternative Scheme 2, would be consistent with the State's 2017 Climate Change Scoping Plan, Title 24 Building Energy Efficiency Standards, City of Oakland Ordinance Requiring All-Electric Construction in Newly Constructed Buildings, the City of Oakland Municipal Code for Plug-In Electric Vehicle Charging Stations, the City's relevant General Plan policies, and the City of Oakland's ECAP (see Appendix E).

The 2017 Climate Change Scoping Plan is intended to guide the state to achieving its target of reducing GHG emissions to 40 percent below 1990 levels by 2030, and substantially advance toward the 2050 goal of 80 percent below 1990 levels. The 2017 Climate Change Scoping Plan

²² Effectiveness levels for multiple transportation measures within the Trip Reduction Programs subsector are multiplied to determine a combined effectiveness level, as recommended by the CAPCOA Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity.

outlines the various programs throughout the State that will contribute to the achievement of GHG reduction goals including the Low Carbon Fuel Standard, the Renewables Portfolio Standard, the Advanced Clean Cars Program, the Sustainable Freight Action Plan, a more stringent Cap-and-Trade Program, and other programs that will deliver climate and other benefits (CARB, 2017). The Project would not conflict or otherwise interfere with the statewide GHG reduction measures identified in CARB's 2017 Scoping Plan Update. For example, proposed buildings would be constructed in conformance with California Green Building Standards (CALGreen) Code (CCR Title 24, Part 11) and the Title 24 Building Code, as discussed further below.

The 2022 Scoping Plan is the state's roadmap for achieving net zero GHG emissions by 2045 and to reduce statewide anthropogenic GHG emissions at least 85 percent below 1990 levels by 2045. The 2022 Scoping Plan also updates the state plan to achieve the SB 32 target of reducing emissions to 40 percent below 1990 levels by 2030. Because the project will be built out and fully operational by 2026, well before 2030, the 2022 Scoping Plan's strategies for achieving the state's 2045 target are less relevant to the proposed Project. Therefore, the project's consistency with the statewide target for 2030 is the relevant statewide plans related to GHG emissions reduction for the purposes of this analysis. As discussed above, the Project would be consistent with the 2017 Climate Change Scoping Plan and statewide target for 2030 via the ECAP Consistency Checklist and SCA GHG-1.

The Energy Efficiency Standards for Residential and Nonresidential Buildings (CCR Title 24, Part 6) requires increased energy efficiency and reduced consumption of electricity, natural gas, and other fuels; while CALGreen) is intended to encourage more sustainable and environmentally friendly building practices, require low-pollution emitting substances that cause less harm to the environment, conserve natural resources, and promote the use of energy-efficient materials and equipment. Scheme 1 or Alternative Scheme 2 would be required to comply with the requirements of both Title 24, Part 6 and Title 24, Part 11 of the California Code of Regulations that would reduce the GHG emissions from the proposed Project compared to if it were to include less energy efficient buildings. On December 15, 2020, the Oakland City Council adopted an Ordinance, adding to the Oakland Municipal Code Chapter 15.37, "All-Electric Construction in Newly Constructed Buildings." These new regulations require all newly constructed buildings to meet the definition of an All-Electric Building, as defined therein and, as a result, the Project would be prohibited from having natural gas or propane plumbing installed in the building. Designing the building to use a permanent supply of electricity would reduce the estimated annual operational GHG emissions from energy emission sources of the Project. Furthermore, the City of Oakland Municipal Code for Plug-In Electric Vehicle Charging Stations requires that all new multifamily and non-residential buildings to include full circuit infrastructure for plug-in electric vehicle (PEV) charging stations for at least 10 percent of the total parking spaces and inaccessible conduits for future expansions of PEC spaces must be installed at an additional 10 percent of the total parking at non-residential buildings. The Project would be required to comply with these requirements, which could encourage the use of PEVs within the City and result in associated reductions of GHG emissions.

The Project would also be consistent with the relevant Oakland General Plan policies contained in the Land Use and Transportation Element (LUTE) and Open Space, Conservation and Recreation Element (OSCAR) that would indirectly reduce GHG emissions. The Project would be an infill development located approximately 0.2 miles (two blocks or approx. 1,056 ft.) from the 19th Street

Oakland BART Station and would also be served by various regional AC Transit bus routes. In addition, the Project would improve energy efficiency through implementation of the aforementioned Title 24 requirements along with the City of Oakland Municipal Code requirements for all-electric facilities in newly constructed buildings and plug-in electric vehicle charging stations. Therefore, the Project would be consistent with the General Plan policies that would indirectly reduce GHG emissions.

As discussed under Criterion a, above, both of the proposed Project schemes would also be consistent with the reduction goals identified in the City of Oakland's ECAP in that a GHGRP has been prepared pursuant to SCA GHG-1. Implementation of the measures identified by the GHGRP would reduce the GHG emissions for each of the proposed Project schemes at least as much or greater than that would be achieved through implementation of all ECAP Consistency Checklist items. Furthermore, each of the proposed Project schemes would comply with SCA GHG-1, which would ensure the implementation of the GHGRP for both Scheme 1 or Alternative Scheme 2.

In summary, the Project would be consistent with the 2017 Climate Change Scoping Plan, relevant state regulations for increasing energy efficiency, relevant City of Oakland regulations, relevant policies included in the Oakland General Plan, and the City of Oakland ECAP. Therefore, the Project, whether Scheme 1 or Alternative Scheme 2, would be considered to be consistent with applicable goals, policies, and regulations adopted to reduce GHG emissions and this impact would be less than significant.

7.6.3 Conclusion

Based on the analysis above, and on an examination of the analysis, findings, and conclusions of the Previous CEQA Documents, Scheme 1 or Alternative Scheme 2 of the Project would not result in any new or more severe significant impacts related to GHG emissions or compliance with applicable plans, policies, or regulations adopted for the purposes of reducing GHG emissions than those identified in the Previous CEQA Documents. Implementation of **SCA GHG-1, GHG Reduction Plan** (see Appendix F), would be applicable to and would ensure that impacts related to GHG emissions associated with the Project are less than significant. In addition, implementation of SCAs relating to other environmental topics (all listed in Attachment A) would further ensure that impacts associated with GHG emissions would be less than significant; these include **SCA AES-3, Landscape Plan; SCA AIR-2, Criteria Air Pollutant Controls - Construction Related; SCA AIR-3, Diesel Particulate Matter Controls - Construction Related; and SCA UTIL-1, Construction and Demolition Waste Reduction and Recycling; SCA TRA-2, Bicycle Parking; SCA TRA-4, Transportation and Parking Demand Management Plan; SCA UTIL-3, Construction and Demolition Waste Reduction and Recycling; SCA UTIL-4, Green Building Requirements; and SCA UTIL-7, Water Efficient Landscape Ordinance (WELO)**. No mitigation measures are required.

7.7 Hazards and Hazardous Materials

Would the project:	Equal or Less Severity of Impact Previously Identified in Previous CEQA Documents	Substantial Increase in Severity of Previously Identified Significant Impact in Previous CEQA Documents	New Significant Impact
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials; Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment; Create a significant hazard to the public through the storage or use of acutely hazardous materials near sensitive receptors; Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 (i.e., the "Cortese List") and, as a result, would create a significant hazard to the public or the environment;	☒	☐	☐
b. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school;	☒	☐	☐
c. Result in less than two emergency access routes for streets exceeding 600 feet in length unless otherwise determined to be acceptable by the Fire Chief, or his/her designee, in specific instances due to climatic, geographic, topographic, or other conditions; or Fundamentally impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan.	☒	☐	☐
d. Be located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, and would result in a significant safety hazard for people residing or working in the project area; or Be located within the vicinity of a private airstrip, and would result in a significant safety hazard for people residing or working in the project area.	☒	☐	☐

7.7.1 Previous CEQA Documents Findings

The Previous CEQA Documents found less-than-significant effects regarding hazards and hazardous materials including risk of upset in school proximity and emergency response/evacuation plans, with

the 2011 Renewal Plan Amendments EIR identifying applicable City of Oakland SCAs. The 1998 LUTE EIR identified mitigation measures to reduce potentially significant effects regarding exposing workers and the public to hazardous substances to less-than-significant levels. These mitigation measures are now incorporated into the applicable City of Oakland SCAs.

7.7.2 Project Analysis

7.7.2.1 *Exposure to Hazards, Hazardous Materials Use, Storage and Disposal (Criterion 7a)*

The following is a summary of the 2016 Phase I and Phase II Environmental Site Assessments (ESAs) prepared for the Project site, by Nova Consulting Group, on behalf of the prior property owner, Pacific Gas & Electric (PG&E), as summarized in the 2020 Phase I ESA prepared by Roux Associates, Inc., for the proposed Project and included as **Appendix G** to this checklist.²³

2016 Phase I ESA and Phase II Investigation

There have been various prior land uses on the Project site. Uses include residential buildings, a gasoline service station on the southern portion of the property, which was demolished and converted into a parking lot in the early 1950s. The existing office building was constructed in 1950 and expanded in the 1960s. Known tenants include Blue Cross Hospital Plan/California Hospital Service between the 1950s and 1970s and PG&E since the late 1970s. PG&E vacated the building in 2016.

The surrounding area has historically been occupied by numerous gas stations and dry cleaning facilities, including adjacent facilities. Additionally, there are numerous LUST and cleanup cases in the vicinity of the property. The north adjacent Kaiser Permanente office buildings at 1935 Webster Street and 1950 Franklin Street are registered for 5,000-gallon and a 6,000-gallon diesel USTs, which may both still be active. Since environmental database report (EDR) listings indicate that the USTs were single-walled in design when installed in the 1970s and may not have been replaced with a more secure tank design, it is possible that a historical release could have impacted the Property with diesel.

In 1978 PG&E installed a 6,000-gallon gasoline underground storage tank (UST) and fuel pump used for fleet vehicle servicing and a 500-gallon waste oil UST, both in the parking lot on the property. The waste oil UST was removed in 1988, reportedly under City of Oakland Fire Department supervision, and the gasoline UST was removed in 1994 under Alameda County Department of Environmental Health (ACDEH) oversight. According to EDR listings, there is a closed leaking underground storage tank (LUST) case for PG&E associated with the property, listed between 1993 and 2003. In their 2016 Phase I ESA for the property, Nova Consulting Group concluded that the LUST case may be related to the 500-gallon waste oil UST not receiving regulatory closure. As discussed below, subsequent ground penetrating radar (GPR) did not detect any evidence of a remaining UST.

²³ Roux Associates, Inc., 2020. *Phase I Environmental Site Assessment Report*, 1919 Webster Street and 360 19th Street, Oakland, California, September 1, 2020.

Based on recognized environmental conditions (RECs) identified in Nova Consulting's 2016 Phase I ESA, Environmental Resources Management-West, Inc. (ERM) conducted a Phase II Investigation in 2016 on behalf of PG&E. The results generally involved numerous hazardous materials and petroleum hydrocarbon exceedances for residential development based on applicable screening levels and concentrations observed in soil, groundwater, and soil vapor on the property. Of relevance to the Project and as discussed in the 2020 Phase I assessment below, the Phase II Investigation indicated benzene in soil vapor exceeded the 2019 residential and commercial environmental screening levels (ESLs), perchloroethene (PCE) in groundwater and soil vapor exceeded the 2019 residential ESLs, and chloroform in soil vapor exceeded the 2019 residential ESL. The 2016 investigation did not detect evidence of USTs or associated piping onsite.

2020 Phase I ESA

Initiated by the current property owner and Project applicant prior to purchasing the properties, Roux performed the 2020 Phase I ESA to identify RECs indicating past, current, or material threats of the release of hazardous materials or petroleum hydrocarbons to the Property's soil, groundwater, or surface water. The ESA was conducted by investigating past property uses, reviewing the results of a search of environmental databases, reviewing records at relevant government agencies, and performing a property reconnaissance.

The benzene commercial exceedance in soil vapor is a concern for future commercial use of the property, even though the source exceedance may be offsite. Therefore, the Project Applicant will prepare and implement a Site Management Plan (SMP) prior to construction to address potential soil vapor. The SMP will include offsite soil disposal requirements, soil import criteria, soil and groundwater management during construction, and, if needed, basis of design for a vapor intrusion mitigation system (VIMS) consisting of a vapor barrier. Site development would involve a significant amount of soil excavation across the entire parking lot for the one basement level proposed in Scheme 1 (approx. 21,000 cu.yds) and Alternative Scheme 2 (approx. 24,000 cu.yds). While it is not anticipated that any potential source of vapor intrusion would remain, whenever site redevelopment occurs in a dense urban area with known surrounding environmental impacts, incorporating a vapor barrier as part of the foundation design is typical and proposed.

Although the benzene exceedance in soil vapor is also a concern for residential use, no residential use is proposed. Additionally, since no historical use of chlorinated hydrocarbons was identified at the property, these impacts are likely related to an offsite source for chlorinated hydrocarbons. Also, the property has likely generated asbestos waste in the past.

During property reconnaissance in 2020, Roux observed surface features indicative of a UST in the sidewalk outside the building at 1935 Webster Street. Other business environmental risks identified at the property include that the 500-gallon diesel AST (that feeds the above ground generator in the parking lot) will need to be removed. To do so, the Project Applicant will obtain a tank removal permit from the Oakland Fire Department at time of building permit. Given prior land uses and numerous LUST and cleanup cases in the vicinity of the property, there's likelihood that petroleum hydrocarbon and chlorinated hydrocarbon impacts could have migrated onto the property. Also, based on the age of the existing commercial building on the property (72 years, constructed in

1950), it is possible that it contains hazardous materials such as lead-based paint, asbestos, and PCBs.

The Project site properties are not on the Cortese List compiled pursuant to Government Code Section 65962.5 5.²⁴

Scheme 1 and Alternative Scheme 2. The Project would be required to adhere to SCA HAZ-2, Hazardous Building Materials and Site Contamination, which obligates the Project Applicant to submit a Phase I and II to the City for approval. Submitted with the Project Applicant's application for environmental review for purposes of this CEQA analysis, the Phase I and II will also be submitted during the construction permitting phase of the Project, if approved. SCA HAZ-2 further requires the Project Applicant follow the recommendations of the Phase I and II, which in this case includes installing a vapor barrier. Given there is no proposed remedial action or open regulatory cases, no regulatory clearances are anticipated to be necessary. As such, compliance with SCA HAZ-2 would ensure that the recommendations of the 2020 Phase I ESA are implemented. SCA HAZ-2 would also ensure that any extracted groundwater is contained on-site in a secure and safe manner, prior to treatment and disposal, to ensure environmental and health issues are resolved pursuant to applicable laws and policies.

The Project Applicant would also be required to implement SCA HAZ-1, Hazardous Materials Related to Construction, to ensure best management practices are followed during construction activities. The Project uses during operation include general building management, which would not involve the transportation, use, and storage of a significant amount of hazardous materials. The transportation, use, and storage of all hazardous materials involved with construction and operation of the Project would be required to follow the applicable laws and regulations adopted to safeguard workers and the general public. The Project would also be subject to the City of Oakland's SCA AIR-5, Asbestos in Structures, and SCA HAZ-1, pertaining to the removal of asbestos-containing materials from structures and implementation of best management practices for hazardous materials during construction, respectively.

Since development of the Project would be subject to the SCAs pertaining to the handling of hazardous materials related to construction activities and the actions required when site contamination is encountered, consistent with the findings and conclusions of the Previous CEQA Documents, the potential impacts under Scheme 1 or Alternative Scheme 2 would be reduced to less-than-significant levels.

7.7.2.2 Hazardous Materials within a Quarter Mile of a School (Criterion 7b)

Schools within proximity of the Project site include the Envision Academy of Arts and Technology approximately two blocks south at 1515 Webster Street.²⁵ The next closest schools are both approximately 0.5 miles from the Project site (Westlake Middle at 2657 Harrison St. and Lincoln Elementary at 225 11th St.). The proposed Project would be a high-rise commercial office building which does not involve the use of significant quantities of hazardous materials or generate

²⁴ EnviroStor Database (ca.gov)

²⁵ An independently run public charter school overseen by the Oakland Unified School District (OUSD).

significant amounts of hazardous waste. As discussed above, during construction, the Project Applicant would be required to implement SCA HAZ-1 to ensure best management practices are followed during construction activities pertaining to any potentially contaminated materials. Therefore, consistent with the findings and conclusions of the Previous CEQA Documents, the potential impacts would be reduced to less-than-significant levels.

7.7.2.3 Emergency Access Routes (Criteria 7c)

The Project would not interfere with established emergency response plans or evacuation plans. Project construction may result in temporary road and lane closures. Therefore, pursuant to City of Oakland ordinances and General Plan policies, a traffic control plan would be required to ensure at least two emergency access routes are available for streets exceeding 600 feet in length. The Project would not permanently change the configuration or close surrounding streets or roadways. Additionally, SCA TRA-1, Construction Activity in the Public Right-of-Way, would ensure that the Project obtain an obstruction permit from the City prior to placing any temporary construction-related obstruction in the public right-of-way, which includes City streets and sidewalks.

7.7.2.4 Airport Hazards (Criterion 7d)

The Project site is not located within an airport land use plan or private airstrip. Nor does the Project involve the introduction of development that could create a significant safety hazard for people residing or working in the project area. There would be no impact.

7.7.3 Conclusion

Based on an examination of the analysis, findings, and conclusions of the Previous CEQA Documents, Scheme 1 or Alternative Scheme 2 of the Project would not result in any new or more severe significant impacts related to hazards and hazardous materials than those identified in the Previous CEQA Documents. Implementation of **SCA HAZ-1, Hazards Materials Related to Construction; SCA HAZ-2, Hazardous Building Materials and Site Contamination; SCA AIR-5, Asbestos in Structures; and SCA TRA-1, Construction Activity in the Public Right-of-Way** (see Attachment A), would further ensure that potential impacts associated with hazardous conditions would be less than significant. Therefore, no mitigation measures are required

7.8 Hydrology and Water Quality

Would the project:	Equal or Less Severity of Impact Previously Identified in Previous CEQA Documents	Substantial Increase in Severity of Previously Identified Significant Impact in Previous CEQA Documents	New Significant Impact
<p>a. Violate any water quality standards or waste discharge requirements; Result in substantial erosion or siltation on- or off-site that would affect the quality of receiving waters; Create or contribute substantial runoff which would be an additional source of polluted runoff; Otherwise substantially degrade water quality; Fundamentally conflict with the City of Oakland Creek Protection Ordinance (OMC Chapter 13.16) intended to protect hydrologic resources.</p>	☒	☐	☐
<p>b. Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or proposed uses for which permits have been granted);</p>	☒	☐	☐
<p>c. Create or contribute substantial runoff which would exceed the capacity of existing or planned stormwater drainage systems; Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course, or increasing the rate or amount of flow, of a creek, river, or stream in a manner that would result in substantial erosion, siltation, or flooding, both on- or off-site</p>	☒	☐	☐
<p>d. Result in substantial flooding on- or off-site; Place housing within a 100-year flood hazard area, as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map, that would impede or redirect flood flows; Place within a 100-year flood hazard area structures which would impede or redirect flood flows; Expose people or structures to a substantial risk of loss, injury, or death as a result of inundation by seiche, tsunami, or mudflow; or Expose people or structures to a substantial risk of loss, injury, or death involving flooding.</p>	☒	☐	☐

7.8.1 Previous CEQA Documents Findings

The 2011 Renewal Plan Amendments EIR found less-than-significant effects regarding stormwater and 100-year flood hazard with implementation of applicable City of Oakland SCAs. The 1998 LUTE EIR acknowledged that areas considered under that EIR could potentially occur within a 100-year flood boundary. Adherence to existing regulatory requirements that are incorporated in the City of Oakland's SCAs would address potentially significant effects regarding flooding. No mitigation measures were warranted.

7.8.2 Project Analysis

7.8.2.1 *Water Quality, Stormwater, and Drainages and Drainage Patterns (Criteria 8a and 8c)*

Scheme 1 and Alternative Scheme 2. The Project site is located in a densely developed, urban area and contains no lakes, creeks, or other surface waters on or adjacent to the site. Lake Merritt is the closest water body to the Project site and is located approximately 0.2 miles (approximately three blocks) to the east. Thus, the Project is not located directly adjacent to a significant water body. The Project site is approximately 0.6 acres is currently entirely covered with impervious surfaces, including an existing commercial building and a paved surface parking lot. The entire site will continue to be covered with impervious surfaces after constructing of the Project.²⁶ Best Management Practices (BMPs) proposed for on-site stormwater control include treatment through a media filter vault located within the proposed building to treat stormwater runoff prior to discharge into the City's storm drain system. Other source control measures include interior and garage drains, fire sprinkler test water, and air conditioner discharge water would all be plumbed to or otherwise discharged to the sanitary sewer. Also, the loading area will be within the building and covered. Therefore, the Project would not increase existing area of impervious surface on the site and would not substantially alter existing drainage patterns or impair water quality.

Further, since the Project would require a grading permit, the Project would be required to comply with SCA HYD-1, Erosion and Sedimentation Control Plan for Construction, relating to water quality and stormwater runoff from construction, and since the Project would create or replace 10,000 square feet or more of new or existing impervious surface area, the Project would be required to comply with SCA HYD-2, NPDES C.3 Stormwater Requirements for Regulated Projects, relating to water quality and stormwater runoff during operation. The Project would also be subject to SCA UTIL-6, Storm Drain System, which requires, to the maximum extent practicable, a peak stormwater runoff reduction from the Project site by at least 25 percent compared to the pre-Project condition.

7.8.2.2 *Use of Groundwater (Criterion 8b)*

Scheme 1 and Alternative Scheme 2. Potable water is supplied by the East Bay Municipal Utility District (EBMUD), and groundwater in Oakland is generally not considered potable and is not utilized in the public drinking water supply. Depths to groundwater at adjacent sites and observed

²⁶ The outdoor roof terrace would be a combination of paving (approx. 72 percent) and landscaped areas (approx. 28 percent) and utilized as a self-treating area.

during the October 2021 field exploration ranged from as much as about 20 feet bgs to as little as about 13 feet bgs; groundwater levels typically fluctuate seasonally in response to rainfall and other environmental and human factors. As noted above, the Project would not result in an increase in impervious surfaces and thus would not substantially affect groundwater recharge. Also, the Project would adhere to the City of Oakland's SCA GEO-1, Construction-Related Permit(s), that address all applicable regulatory standards and regulations pertaining to remediation and grading and excavation activities.

7.8.2.3 *Flooding and Substantial Risks from Flooding (Criteria 8d)*

Scheme 1 and Alternative Scheme 2. As identified in the Previous EIRs, the Project site is not located within a flood hazard zone or tsunami-inundation zone.^{27,28} Risk of seiches in the Project site or throughout Oakland is minimal, given there are no large confined bodies of water with depths that would cause this hazard.²⁹ In addition, the Project site is not located near a levee or a dam. The Project site is not located in either a 100-year or 500-year flood boundary, and therefore would not be subject to a substantial risk from flooding.³⁰

7.8.3 Conclusion

Based on an examination of the analysis, findings, and conclusions of the Previous CEQA Documents, implementation of Scheme 1 or Alternative Scheme 2 of the Project would not result in any new or more severe significant impacts related to hydrology and water quality, groundwater, or flooding than those identified in the Previous CEQA Documents. Implementation of **SCA HYD-1, Erosion and Sedimentation Control Plan for Construction; SCA HYD-2, NPDES C.3 Stormwater Requirements for Regulated Projects; SCA GEO-1, Construction-Related Permit(s); and SCA UTIL-6, Storm Drain System** (see Attachment A), would ensure that potential impacts to hydrology and water quality would be less than significant. No mitigation measures are required.

7.9 Land Use, Plans, and Policies

Would the project:	Equal or Less Severity of Impact Previously Identified in Previous CEQA Documents	Substantial Increase in Severity of Previously Identified Significant Impact in Previous CEQA Documents	New Significant Impact
a. Physically divide an established community;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Result in a fundamental conflict between adjacent or nearby land uses; or	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c. Fundamentally conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect and actually result in a physical change in the environment.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

7.9.1 Previous CEQA Documents Findings

The 2011 Renewal Plan Amendments EIR found less-than-significant impacts related to land use, plans, and policies, and no mitigation measures were warranted. The 1998 LUTE EIR, however, identified a significant and unavoidable effect associated with inconsistencies with policies in the Clean Air Plan (resulting from significant and unavoidable increases in criteria pollutants from increased traffic regionally). The 1998 LUTE EIR identified mitigation measures, which largely align with current City of Oakland SCAs involving Transportation Demand Management (TDM), and which apply to all projects within the City of Oakland. No impacts were identified for Agricultural and Forestry Resources in the 2011 Renewal Plan EIR or the 1998 LUTE EIR.

7.9.2 Project Analysis

7.9.2.1 Division of Existing Community, Conflict with Land Uses (Criteria 9a and 9b)

Scheme 1 and Alternative Scheme 2. The Project would construct a new high-rise commercial office building with ground level retail uses on a corner lot within the developed urban area of Downtown. The proposed uses and design of Scheme 1 and Alternative Scheme 2 would be consistent with nearby development; the Project will fill in a largely vacant lot within the grid development. Therefore, the Project would not physically divide an established community. The Project also would not result in a fundamental conflict with adjacent land uses, including adjacent historical resources (see Section 7.1, *Aesthetics, Shadow and Wind*, and Section 7.4, *Cultural Resources and Tribal Cultural Resources*).

7.9.2.2 Conflict with Land Uses Plans (Criterion 9c)

Scheme 1 and Alternative Scheme 2. The Project would not fundamentally conflict with an applicable land use plan, policy, or regulation of an agency with jurisdiction over the Project site.

General Plan LUTE Land Use and Policies. Development of a new commercial office tower in Downtown, near multiple local and regional transportation modes, is directly aligned with the Central Business District (CBD) General Plan land use designation, which applies to areas suitable for a high density large-scale commercial office, among many other high density uses, in the central Downtown core of the City. The proposed Project also forwards General Plan policies in the LUTE through the commercial office redevelopment of an underutilized, fully-paved parcel, including increase pervious surface area via a rooftop greenspace.

Zoning Ordinance and Regulations. The north lot of the site is zoned Central Business District General Commercial Zone (CBD-C), and the south lot is zoned Central Business District Pedestrian Retail Commercial Zone (CBD-P). The intent of the CBD zones is to create, maintain, and enhance areas of the Central Business District appropriate for a wide range of ground floor retail, office and other commercial activities. Upper-story spaces are intended to be available for a wide range of residential and office or other commercial activities. The main difference between the CBD-C and CBD-P zones is that the CBD-P zone is intended to create ground-level, pedestrian-oriented, active storefront uses. With retail/restaurant space oriented at the ground level street frontage and office uses in the upper stories of the building, Scheme 1 and Alternative Scheme 2 are consistent with the intent of the CBD-C and CBD-P zones.

The Project Applicant seeks a minor variance for Scheme 1 and would also seek a minor variance for Alternative Scheme 2 to provide two loading bays in the Project, thereby allowing adequate space for the building's required mechanical systems. Although not intended to reduce or avoid an environmental effect under CEQA, the City Planning Code requires three loading bays for the Project. The City Code regulates loading facilities to ensure adequate off-street loading to reduce traffic congestion, allow more efficient use of on-street parking, promote efficient loading operations, and reduce the use of public streets for loading purposes. Allowance of the reduced loading proposed would not equate to a significant impact due to a fundamental conflict with a regulation adopted for the purpose of avoiding or mitigating an environmental effect.

The Project Site is located in CBD Height Area 7 which regulates the average percentage of lot coverage above the building base. The Project seeks a minor variance to allow a coverage of 87 percent for Scheme 1 and would also seek a minor variance for Alternative Scheme 2, which would exceed the maximum coverage in the CBD Height Area 7 of 85 percent. The percentage of lot coverage above a building's base or podium represents the bulk of the building's tower relative to the area of the project site. Generally, a higher percentage of lot coverage reflects a tower that has a footprint that is more similar to the area of the project site. As a result, the higher percentage coverage could influence the environmental effects of wind hazards and shadow, for example. If the variance is granted, it would not equate to a significant impact due to a fundamental conflict with a regulation adopted for the purpose of avoiding or mitigating an environmental effect. The Project would not result in a significant impact associated with the mass of the office tower, as evaluated in Section 7.1, *Aesthetics, Shadow and Wind*, and Section 7.4, *Cultural Resources and Tribal Cultural Resources*.

Agriculture and Forestry Resources. The Project site is located within an area designated as urban and built-up land by the California Department of Conservation's (DOC) Farmland Mapping and

Monitoring Program (FMMP).³¹ There are no Williamson Act contracts on or adjacent to the Project site.³² Also, the City of Oakland does not designate land uses for agriculture or forestry in its General Plan. Since the Project site is located on land designated as urban and built-up land, and is not subject to a Williamson Act contract, the Project would not convert FMMP-designated Farmland or cause a conflict with an existing Williamson Act contract. The Project site does not contain agricultural production or propose agricultural-related land uses as part of the Project. Thus, the Project would not conflict with existing zoning for agricultural use, forest land, or timberland, nor would it result in the loss or conversion of forest land.

Draft Downtown Oakland Specific Plan. The Project site is not within an adopted specific plan area. However, it is located within the boundaries of the proposed Downtown Oakland Specific Plan. The City of Oakland has prepared the Draft Downtown Oakland Specific Plan to ensure continued growth and revitalization to benefit both Downtown residents and the larger community by providing policy guidance on development, linking land use, transportation, economic development, housing, public spaces, cultural arts, and social equity. The City released the Draft Downtown Oakland Specific Plan and Draft EIR for the Specific Plan on August 30, 2019. While the City has not yet prepared a Final EIR to adopt the Specific Plan, and specific proposed zoning-level detail is still under development, both Scheme 1 and Alternative Scheme 2 of the Project would be consistent with the intent of the Draft Specific Plan, most generally by developing a commercial office building with ground level retail uses on a site designated in the Draft Specific Plan as an “Office Priority Development Site” and located less than a quarter mile from the 19th Street Oakland BART Station and the 12th Street Oakland BART Station.

Scheme 1. CBD Height Area 7 provides no maximum height limit and sets a 120-foot maximum allowable building base height. Scheme 1 proposes an office tower over an approximately 33-foot-tall base that is the first two stories of the building: the Ground Floor and 2nd Floor.

The Project Applicant seeks a minor variance to provide fewer short-term bicycle parking spaces than required by City Code. Specifically, Scheme 1 proposes to provide 22 short-term bicycle spaces per City requirements) outdoors. The total bicycle parking spaces provided would meet the total required, notwithstanding their term of use. If granted for Scheme 1, this would not equate to a significant impact due to a fundamental conflict with a regulation adopted for the purpose of avoiding or mitigating an environmental effect, because it would generally meet the intent by meeting the number of total bicycle parking spaces than are required, even though the ratio of long-term to short-term spaces would be altered. The variance may also address further reduction in the number of short-term spaces if PG&E prohibits bicycle parking spaces on or near its proposed underground vault on Webster Street.

³¹ *California Important Farmland Finder*. Alameda County Important Farmland 2016, database updated December 27, 2019.

³² California Department of Conservation (DOC). 2015. Division of Land Resource Protection, *Alameda County Williamson Act FY 2014/2015*.

Alternative Scheme 2. Compared to 120-foot maximum allowable building base height prescribed by CBD Height Area 7, Alternative Scheme 2 proposes an office tower over an approximately 64-foot-tall base that is the first four stories of the building: the Ground Floor and three parking levels.

For Alternative Scheme 2, the Project Applicant would also seek a minor variance to provide 8 short-term bicycle spaces (14 fewer than required by City requirements) outdoors. The total bicycle parking spaces provided would exceed the total required, notwithstanding their term of use. As discussed for Scheme 1, if granted for Alternative Scheme 2, this would not equate to a significant impact.

7.9.3 Conclusion

Based on an examination of the analysis, findings, and conclusions of the Previous CEQA Documents, Scheme 1 and Alternative Scheme 2 of the Project would not result in any new or more severe significant impacts related to land use and planning than those identified in the Previous CEQA Documents. The Previous CEQA Documents did not identify any mitigation measures related to land use, and no City of Oakland SCAs directly addressing land use and planning apply to the Project. Therefore, no mitigation measures are required.

7.10 Noise

Would the project:	Equal or Less Severity of Impact Previously Identified in Previous CEQA Documents	Substantial Increase in Severity of Previously Identified Significant Impact in Previous CEQA Documents	New Significant Impact
a. Generate noise in violation of the City of Oakland Noise Ordinance (Oakland Planning Code Section 17.120.050) regarding construction noise, except if an acoustical analysis is performed that identifies recommend measures to reduce potential impacts. During the hours of 7 p.m. to 7 a.m. on weekdays and 8 p.m. to 9 a.m. on weekends and federal holidays, noise levels received by any land use from construction or demolition shall not exceed the applicable nighttime operational noise level standard; Generate noise in violation of the City of Oakland nuisance standards (Oakland Municipal Code Section 8.18.020) regarding persistent construction-related noise;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Generate noise in violation of the City of Oakland Noise Ordinance (Oakland Planning Code Section 17.120.050) regarding operational noise;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c. Generate noise resulting in a 5 dBA permanent increase in ambient noise levels in the project vicinity above levels existing without the project; or, if under a cumulative scenario where the cumulative increase results in a 5 dBA permanent increase in ambient noise levels in the project vicinity without the project (i.e., the cumulative condition including the project compared to the existing conditions) and a 3-dBA permanent increase is attributable to the project (i.e., the cumulative condition including the project compared to the cumulative baseline condition without the project);	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d. Expose persons to interior L_{dn} or CNEL greater than 45 dBA for multi-family dwellings, hotels, motels, dormitories and long-term care facilities (and may be extended by local legislative action to include single-family dwellings) per California Noise Insulation Standards (CCR Part 2, Title 24); Expose the project to community noise in conflict with the land use compatibility guidelines of the Oakland General Plan after incorporation of all applicable Standard Conditions of Approval (see Figure 1); Expose persons to or generate noise levels in excess of applicable standards established by a regulatory agency (e.g., occupational noise standards of the Occupational Safety and Health Administration [OSHA]); or	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e. During either project construction or project operation expose persons to or generate groundborne vibration that exceeds the criteria established by the Federal Transit Administration (FTA).	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

7.10.1 Previous CEQA Documents Findings

The 2011 Renewal Plan Amendments EIR identified less-than-significant effects related to roadway noise and found construction and operational noise impacts would be mitigated to a less-than-significant level with implementation of SCAs. The 1998 LUTE EIR identified mitigation measures to address potential noise conflicts between different land uses. Regarding construction noise, the 1998 LUTE EIR identified a significant and unavoidable construction noise and vibration impact in Downtown, even after the implementation of mitigation measures.

7.10.2 Project Analysis

7.10.2.1 Construction and Operational Noise and Vibration, Exposure of Receptors to Noise (Criteria 10a, 10b, and 10e)

Construction Noise and Vibration

Scheme 1 and Alternative Scheme 2. Construction activities for the Project would entail demolition, site preparation and grading, building construction, paving, and interior/exterior finishing. Noise levels from construction activity at nearby sensitive receptors would fluctuate depending on the particular type, number, and duration of uses of various pieces of construction equipment. Construction-related material haul trips would raise ambient noise levels along haul routes, depending on the number of haul trips made and types of vehicles used. **Table 7.10-1** shows typical noise levels in terms of the instantaneous maximum noise level for a specified period of time (L_{max}) and the energy-equivalent sound level over a period of one hour (L_{eq}) produced by the types of construction equipment that would likely be used during construction of the Project.

**TABLE 7.10-1
REFERENCE CONSTRUCTION EQUIPMENT NOISE LEVELS (50 FEET FROM SOURCE)**

Type of Equipment	L_{max} , dBA	Hourly L_{eq} , dBA/% Use
Grader	85	81/40%
Scraper	84	80/40%
Dozer	82	78/40%
Paver	77	74/50%
Roller	80	73/20%
Loader	78	74/40%
Air Compressor	78	74/40%
Excavator	81	77/40%

SOURCE: Federal Highway Administration, 2008. *FHWA Roadway Construction Noise Model, Version 1.1*, December 2008.

The operation of each piece of equipment would not be constant throughout the day, as equipment would be turned off when not in use. Over a typical workday, the equipment would be operating at different locations and all the equipment would not operate concurrently at the same location of the Project site. To quantify construction-related noise exposure that would occur at the nearest

sensitive receptors, it was assumed that the two loudest pieces of construction equipment would operate at the closest location on the Project site to the nearest off-site sensitive receptors. The combined L_{eq} noise level associated with the two loudest pieces of construction equipment (i.e., grader and scraper) would be approximately 84 dBA at 50 feet. There are residences located as close approximately 80 feet from the project site, at an apartment complex southeast of the Project site perimeter across Webster Street. The existing ambient noise environment in the vicinity of the Project site is generally between 65 to 70 dBA, which is considered the baseline noise threshold level. Assuming a grader and scraper would operate at the closest point to this residence, the closest residences to the Project site would be exposed to a construction noise level of up to approximately 79 dBA L_{eq} , which would exceed the existing baseline threshold as well as the City's Municipal Code noise exposure standard for residential uses of 65 dBA. However, this is a conservative exterior estimate, as sound would also be attenuated by approximately 25 dBA more at the sensitive receptors located within an enclosed building and operable windows could be shut during louder events.

Ground-borne vibration from onsite equipment, such as large dozers, would produce vibration. The typical reference vibration level for a large dozer is 0.089 peak particle velocity (PPV) (in/sec) at 25 feet. The nearest existing structure to the Project site is immediately north, adjacent to the existing onsite office building that will be demolished as part of the Project. Therefore, the vibration level at the nearest structure could exceed the 0.12 PPV in/sec criterion established by the Federal Transit Administration (FTA) for buildings extremely susceptible to vibration damage.³³

Required implementation of applicable City of Oakland SCAs would minimize construction noise impacts by limiting hours of construction activities, by requiring best available noise control technology and notification of any local residents of construction activities, and by tracking and responding to noise complaints. Further, required implementation of applicable SCAs would limit vibration impacts through the identification of design means and methods of construction to be utilized in order to not exceed vibration level thresholds. Specifically, Project construction would comply with the following SCAs: SCA NOI-1, Construction Days/Hours, limits construction hours mirroring Noise Ordinance requirements; SCA NOI-2, Construction Noise, requires projects to implement construction noise reduction measures; SCA NOI-3, Extreme Construction Noise, addresses extreme construction noise by requiring a Noise Management Plan and public notification of Project construction activities; SCA NOI-4, Construction Noise Complaints, sets a protocol for receiving and addressing construction noise complaints from the public; and SCA NOI-7, Vibration Impacts on Adjacent Structures or Vibration-Sensitive Activities, requires preparation of a Vibration Analysis for City review and approval that establishes pre-construction baseline conditions and threshold levels of vibration that could damage the structure and/or substantially interfere with activities.

There is nothing unique or peculiar about the Project or its construction that would suggest that the Project would have greater noise and vibration impacts than other typical mixed-use construction projects within the City. Required implementation of applicable City of Oakland SCAs would minimize construction noise by limiting hours of construction activities, requiring best available

³³ Federal Transit Administration, 2018. *Transit Noise and Vibration Impact Assessment Manual*, September 2018.

noise control technology and notification of any local residents of construction activities, and by tracking and responding to noise complaints. With the implementation of SCAs, construction noise and vibration impacts of Scheme 1 or Alternative Scheme 2 of the Project would be less than significant.

Operational Noise

Scheme 1 and Alternative Scheme 2. Once operational, the Project would include stationary sources such as heating, ventilating, and air conditioning (HVAC) mechanical equipment. The HVAC equipment would be located on the rooftop and would operate within the restrictions of the City's Noise Ordinance. These operational sources would result in negligible vibration levels, but may result in audible noise levels in the vicinity of the site. Chapter 17.120.050 of the City of Oakland Planning Code specifies the maximum sound level that could be received at residential, public open spaces, and commercial land uses. The Project would be required to comply with SCA NOI-6, Operational Noise, which ensures compliance with operational noise limits in the City's Noise Ordinance and would result in a less-than-significant impact with respect to noise from stationary sources on the Project site.

7.10.2.2 Project Traffic Noise (Criterion 10c)

For operational noise impacts from increases in Project-related traffic, the analysis relies on vehicle trip generation and distribution information prepared by Fehr & Peers (see Appendix H). Peak hour intersection turning data from the Transportation Analysis were analyzed to evaluate traffic volume increases and resulting traffic-generated noise increases on roadway links most affected by Project-related traffic. The roadway segments analyzed and the results of the noise increases determined by modeling are shown in **Table 7.10-2**, below.

Scheme 1. As shown in Table 7.10-2, traffic from the Scheme 1 Existing plus Project scenario compared to the Existing scenario would increase peak hour noise levels by less than 5.0 dBA at all roadway segments. The roadway segment of Thomas L. Berkley Way west of Webster Street would experience the greatest increase in traffic noise due to the Project, which would be 0.6 dBA above existing traffic noise levels under Scheme 1. As the noise increase would not exceed 5.0 dBA, the noise impact on these roadway segments is not considered to be significant. Overall, traffic noise impacts associated with Scheme 1 of the Project at all analyzed roadway segments in the Project vicinity would be less than significant.

Alternative Scheme 2. As shown in Table 7.10-2, traffic from the Alternative Scheme 2 Existing plus Project scenario compared to the Existing scenario would increase peak hour noise levels by less than 5.0 dBA at all roadway segments. The roadway segment of Thomas L. Berkley Way west of Webster Street would experience the greatest increase in traffic noise due to the Project, which would be 0.7 dBA above existing traffic noise levels. As the noise increase would not exceed 5.0 dBA, the noise impact on these roadway segments is not considered to be significant. Overall, traffic noise impacts associated with Alternative Scheme 2 of the Project at all analyzed roadway segments in the Project vicinity would be less than significant.

Harrison St. from 19 th St. to 17 th St.	61.6	61.9	0.3	62.9	63.2	1.6	0.3

NOTES:

- ^a Road center to receptor distance is 15 meters (approximately 50 feet) for all roadway segments. Noise levels were determined using the Federal Highway Administration (FHWA) Traffic Noise Prediction Model.
- ^b The analysis considered the vehicle mix based on 95 percent cars, three percent medium trucks, and two percent heavy trucks. Traffic speeds for all vehicle classes were set at 30 mph.
- ^c Considered significant if the incremental increase in noise from traffic is greater than the existing ambient noise level by 5.0 dBA Leq, per City of Oakland, CEQA Thresholds/Criteria of Significance Guidelines. Rounding may affect calculated differences.
- ^d Considered a cumulatively considerable contribution to a significant noise increase if the incremental increase in noise is greater than 3 dBA.

SOURCE: ESA, 2022.

7.10.2.3 Project and Cumulative Traffic Noise (Criterion 10c)

As noted above, the Project would generate noise from HVAC mechanical equipment. The HVAC equipment would operate within the restrictions of the City's Noise Ordinance. Chapter 17.120.050 of the City of Oakland Planning Code specifies the maximum sound level received at residential, public open spaces, and commercial land uses. This restriction can be used in combination with the predicted roadway noise levels increase presented in Table 7.10-2 above to estimate a worst-case prediction of cumulative noise increase from both stationary and roadway noise sources. **Table 7.10-3** presents the cumulative noise increase at the location of the greatest cumulative traffic increase on Thomas L. Berkley Way. This determination assumes stationary sources on the Project site operating at the maximum property line limit allowed by the noise ordinance.

TABLE 7.10-3
PEAK-HOUR CUMULATIVE NOISE LEVELS AT SENSITIVE RECEPTORS IN THE PROJECT AREA

Location	(A) Existing Noise Level (Leq, dBA)	(B) Stationary Source Restriction (L ₃₃ , dBA)	(C) Maximum Cumulative Traffic Noise Level Increase (Leq)	(D) (A+B)+C Resultant Cumulative Noise Level (Leq)	(D-A) Increase in Noise Level over Existing
SCHEME 1					
Thomas L. Berkley Way from Franklin St. to Webster St.	61.4	60	1.8	65.6	4.2
ALTERNATIVE SCHEME 2					
Thomas L. Berkley Way from Franklin St. to Webster St	61.4	60	1.9	65.7	4.3

SOURCE: ESA, 2022.

Scheme 1. When the contribution from maximum allowable stationary source noise is added to noise from cumulative traffic increase with Scheme 1, the worst-case cumulative increase in noise level at this location would be 4.2 dBA, and thus would be considered less than significant.

Alternative Scheme 2. When the contribution from maximum allowable stationary source noise is added to noise from cumulative traffic increase with Alternative Scheme 2, the worst-case cumulative increase in noise level at this location would be 4.3 dBA, and thus would be considered less than significant.

7.10.2.4 Exposure to Project Receptors (Criterion 10d)

Scheme 1 and Alternative Scheme 2. Oakland’s land use compatibility guidelines specify the community ambient noise level that would be considered “normally acceptable,” “conditionally acceptable,” “normally unacceptable,” and “clearly unacceptable” for various uses. The ambient noise environment in the vicinity of the Project site is generally between 65 to 70 dBA and within the “conditionally acceptable” range for development of office buildings.³⁴ The Project Applicant will adhere to the conditions of SCA NOI-5, Exposure to Community Noise, which requires the Project Applicant to submit a Noise Reduction Plan for City review that contains noise reduction measures (e.g., sound-rated window, wall and door assemblies) to achieve an acceptable interior noise level in compliance with the land use compatibility guidelines of the Noise Element of the Oakland General Plan. Therefore, with the implementation of SCA NOI-5, this impact would be less than significant and no mitigation is required.

7.10.3 Conclusion

Based on an examination of the analysis, findings, and conclusions of the Previous CEQA Documents considered in this analysis, Scheme 1 and Alternative Scheme 2 of the Project would not result in any new or more significant impacts related to noise than those identified in the Previous CEQA Documents. Implementation of **SCA NOI-1, Construction Days/Hours; SCA NOI-2, Construction Noise; SCA NOI-3, Extreme Construction Noise; SCA NOI-4, Construction Noise Complaints; SCA NOI-5, Exposure to Community Noise; SCA NOI-6, Operational Noise, and SCA NOI-7, Vibration Impacts on Adjacent Structures or Vibration-Sensitive Activities** (see Attachment A), would be applicable to, and would be implemented by, Scheme 1 and Alternative Scheme 2 of the Project, which would ensure that noise- and vibration-related impacts associated with the Project would be less than significant. Therefore, no mitigation measures are required.

³⁴ City of Oakland, 2019. *Draft Downtown Oakland Specific Plan EIR*, August 2019.

7.11 Population and Housing

Would the project:	Equal or Less Severity of Impact Previously Identified in Previous CEQA Documents	Substantial Increase in Severity of Previously Identified Significant Impact in Previous CEQA Documents	New Significant Impact
a. Induce substantial population growth in a manner not contemplated in the General Plan, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extensions of roads or other infrastructure), such that additional infrastructure is required but the impacts of such were not previously considered or analyzed;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere in excess of that contained in the City's Housing Element; or Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere in excess of that contained in the City's Housing Element.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

7.11.1 Previous CEQA Documents Findings

The Previous CEQA Documents found less-than-significant impacts related to population and housing, as well as employment. The 1998 LUTE EIR identified mitigation measures to address unanticipated employment growth (compared to regional ABAG projections), and no other mitigation measures were warranted.

7.11.2 Project Analysis

7.11.2.1 Population Growth and Displacement of Housing and People (Criteria 11a and 11b)

The Project would demolish a vacant commercial building and no residential uses exist on the Project site. Therefore, the Project would not displace any housing or people.

Scheme 1. The approximately 407,000 square feet of office space and approximately 2,900 square feet of retail space would generate approximately 1,814 employees in Scheme 1.³⁵ Construction of the Project also would involve temporary employees. However, the Scheme 1 employees, combined with the temporary construction employees, would not result in a significant population increase.

According to the Association of Bay Area Government's (ABAG's) *Plan Bay Area 2040*, the City of Oakland is projected to have an increase of approximately 93,700 jobs between 2010 and 2040.³⁶ The

³⁵ An employment density of 1.0 employee per 225 square feet of office space, and 1.0 employee per 500 square feet of retail space, as established in the Downtown Oakland Specific Plan Draft EIR. The EIR is currently in progress and includes the Project Site within the Plan Area boundary.

³⁶ Metropolitan Transportation Commission (MTC) and Association of Bay Area Governments (ABAG), 2017. *Plan Bay Area 2040 Land Use Modeling Report*. July 2017.

approximately 1,814 employees added by Scheme 1 of the Project would not constitute a substantial contribution to the projected and planned employment growth.

Alternative Scheme 2. The approximately 521,000 square feet of office space and approximately 2,008 square feet of retail space would generate approximately 2,320 employees in Alternative Scheme 2.³⁷ Even when combined with the temporary construction employees that would be involved, new employment with Alternative Scheme 2 would not result in a significant population increase. Nor would the approximately 2,320 employees added by Alternative Scheme 2 be considered a substantial contribution to the projected and planned employment growth for the City set forth in *Plan Bay Area 2040*.³⁸

7.11.3 Conclusion

Based on an examination of the analysis, findings, and conclusions of the Previous CEQA Documents, Scheme 1 and Alternative Scheme 2 of the Project would not result in any new or more severe significant impacts related to population and housing than those identified in the Previous CEQA Documents. The Previous CEQA Documents did not identify any mitigation measures related to population and housing, and the Project would comply with City of Oakland **SCA POP-1, Jobs/Housing Impact Fee** (in Attachment A) which addresses impacts to housing. Therefore, no mitigation measures are required.

³⁷ An employment density of 1.0 employee per 225 square feet of office space, and 1.0 employee per 500 square feet of retail space, as established in the Downtown Oakland Specific Plan Draft EIR. The EIR is currently in progress and includes the Project Site within the Plan Area boundary.

³⁸ MTC and ABAG, 2021. *Plan Bay Area 2040 Land Use Modeling Report*. July 2017.

7.12 Public Services, Parks and Recreation Facilities

Would the project:	Equal or Less Severity of Impact Previously Identified in Previous CEQA Documents	Substantial Increase in Severity of Previously Identified Significant Impact in Previous CEQA Documents	New Significant Impact
a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the following public services: 1. Fire protection; 2. Police protection; 3. Schools; or 4. Other public facilities.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Increase the use of existing neighborhood or regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated; or Include recreational facilities or require the construction or expansion of recreational facilities which might have a substantial adverse physical effect on the environment.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

7.12.1 Previous CEQA Documents Findings

The 2011 Renewal Plan Amendments EIR found less-than-significant impacts related to public services and recreational facilities; no mitigation measures were warranted nor City of Oakland SCAs identified. The 1998 LUTE EIR identified a significant and unavoidable impact for fire safety, with mitigation measures pertaining to the North Oakland Hills area. The 1998 LUTE EIR also identified a significant and unavoidable impact regarding increased student enrollment, particularly in Downtown (and the Waterfront). The 1998 LUTE EIR identified mitigation measures, although the measures would not reduce the impact to a less-than-significant level. Thus, the impact was significant and unavoidable.³⁹

7.12.2 Project Analysis

7.12.2.1 Public Services and Parks and Recreation (Criteria 12a and 12b)

Scheme 1 and Alternative Scheme 2. The Project would create demands on public services typical of high-rise commercial office building in an urban setting. As noted above, the Previous CEQA

³⁹ The 1998 LUTE EIR addressed effects on solid waste demand and infrastructure facilities for water, sanitary sewer and stormwater drainage under *Public Services*. These topics are addressed in this document under *14. Utilities and Service Systems*, consistent with current City approach.

Documents determined that the anticipated growth associated with Scheme 1 or Alternative Scheme 2 of the Project would not impose a burden on existing public services to create a significant impact, with the exception of fire safety pertaining to the North Oakland Hills area and increased student enrollment (1998 LUTE EIR). The Project site is not in the North Oakland Hills and compliance with standard City practices would further ensure the less-than-significant impact. These include City practices and requirements, such as the Oakland Fire Services' review of Project plans, and Project Applicants' required contributions to school impact fees to offset any impacts to school facilities from the Project.

The Project would comply with the requirements of the City of Oakland Capital Improvements Fee Ordinance (chapter 15.74 of the Oakland Municipal Code) by incorporating City of Oakland SCA PUB-1, Capital Improvements Impact Fee, to address potential public services and park and recreation facilities impacts. In addition, adherence to the General Plan's OSCAR Element Recreation policies REC-3.1 (Level of Service Standards), REC-3.2 (Systematic Allocation of Finds), and REC-3.3 (Park Location Factors) would reduce potential impacts to recreational facilities. Further, any increases in need for police protection, fire protection, schools, or other public facilities would be mitigated by adherence to General Plan LUTE policies N.12.1 (Developing Public Service Facilities), N.12.2 (Making Schools Available), N.12.5 (Reducing Capital Improvement Disparities); in addition to adherence to the General Plan Safety Element policies FI-1 (Emergency Response, Fire Prevention and Fire Fighting Capacity) and FI-2 (Risk of Structure Fires).

7.12.3 Conclusion

Based on an examination of the analysis, findings, and conclusions of the Previous CEQA Documents, the Project would not result in any new or more severe significant impacts related to public services and parks and recreation services than those identified in the Previous CEQA Documents. The Project would also incorporate **SCA PUB-1, Capital Improvements Impact Fee**, (in Attachment A) which addresses impacts to public services, parks and recreation. Therefore, no mitigation measures are required.

7.13 Transportation and Circulation

Would the project:	Equal or Less Severity of Impact Previously Identified in Previous CEQA Documents	Substantial Increase in Severity of Previously Identified Significant Impact in Previous CEQA Documents	New Significant Impact
a. Conflict with a plan, ordinance, or policy addressing the safety or performance of the circulation system, including transit, roadways, bicycle lanes, and pedestrian paths (except for automobile level of service or other measures of vehicle delay)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Cause substantial additional vehicle miles traveled (VMT) per capita, per service population, or other appropriate efficiency measure	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c. Substantially induce additional automobile travel by increasing physical roadway capacity in congested areas (i.e., by adding new mixed-flow lanes) or by adding new roadways to the network.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

7.13.1 Previous CEQA Documents Findings

Various mitigation measures and City of Oakland SCAs are identified (except in the 1998 LUTE EIR, which does not identify SCAs) to reduce transportation/circulation effects identified in each of the documents. Both of the Previous EIRs identified significant and unavoidable impacts to roadway segment operations based on degradation of level of service (LOS) after the implementation of identified mitigation measures. However, subsequent changes to state law (Senate Bill [SB] 743). SB 743 required changes to the CEQA Guidelines to prescribe an alternative analysis metric to LOS, automobile delay, or other measures of traffic congestion, that would promote the reduction of GHG emissions: the assessment of vehicle miles traveled (VMT) per capita (July 1, 2020; CEQA Guidelines Section 15064.3).

7.13.2 Project Analysis

This section describes the potential impacts of the Project on the transportation system consistent with the City's 2017 *Transportation Impact Review Guidelines* (TIRG).

Scheme 1 and Alternative Scheme 2. Table 7.13-1 summarizes the automobile trip generation for both Scheme 1 and Alternative Scheme 2 of the Project based on the methodology recommended in the TIRG. Appendix H provides details on the trip generation calculations. Scheme 1 is estimated to generate about 2,240 daily, 304 AM peak hour, and 301 PM peak hour trips, and Alternative Scheme 2 is estimated to generate about 2,770 daily, 375 AM peak hour, and 368 PM peak hour trips. The trip generation based on the TIRG process may be overestimating the actual automobile trips generated by the Project. The TIRG process estimates about 304 AM peak hour and 301 peak hour trips for Scheme 1 and about 375 AM peak hour and 368 PM peak hour trips for Alternative Scheme 2, while the Project would only provide about 37 on-site parking spaces in

Scheme 1 (which may be increased to up to 75 parking spaces with parking lifts) and about 158 parking spaces in Alternative Scheme 2 which may be increased to up to 221 parking spaces with parking lifts. The peak hour vehicle trips generated by the Project's parking supply will be much less than the estimated peak hour Project trip generation using the TIRG procedures. Thus, the Project trip generation summarized in Table 7.13-1 may be overestimating the automobile trips that would be generated by the Project. However, there are several other parking facilities in the vicinity of the Project that are open to the public and can be used by the Project employees and visitors if the Project parking facility is at capacity. Although many of these public parking facilities operated at or near capacity on most weekdays before the start of the pandemic, this analysis assumes that parking would be available to Project employees and visitors who choose to drive. Therefore, this analysis uses the TIRG-based trip generation to present a conservative estimate of the automobile trips generated by the Project.

**TABLE 7.13-1
AUTOMOBILE TRIP GENERATION SUMMARY**

Project Scheme	Daily	Weekday AM Peak Hour			Weekday PM Peak Hour		
		In	Out	Total	In	Out	Total
SCHEME 1 (17-Story Project) ^a	2,240	266	38	304	57	244	301
ALTERNATIVE SCHEME 2 (25-Story Project) ^b	2,770	328	47	375	69	299	368

NOTES:

^a See 1919 Webster Street – Transportation Impact Review (Non-CEQA) Memorandum (Appendix H), Table 1, for detailed calculations.

^b See 1919 Webster Street – Transportation Impact Review (Non-CEQA) Memorandum (Appendix H), Table 2, for detailed calculations.

SOURCE: Fehr & Peers, 2023.

7.13.2.1 Conflicts with Plans, Ordinances, or Policies Relating to Safety, or Performance of the Circulation System (Criterion 13.a)

Scheme 1 and Alternative Scheme 2. Both Scheme 1 and Alternative Scheme 2 of the Project are consistent with applicable plans, ordinances, and policies, and would not cause a significant impact by conflicting with adopted plans, ordinances, or policies addressing the safety and performance of the circulation system, including transit, roadways, bicycle lanes, and pedestrian paths (except for automobile LOS or other measures of vehicle delay, since vehicle delay is no longer used to identify environmental impacts under CEQA due to changes in State laws).

The LUTE, as well as the City's *Public Transit and Alternative Mode and Complete Streets* policies, states a strong preference for encouraging the use of non-automobile transportation modes, such as transit, bicycling, and walking. The Project would encourage the use of non-automobile transportation modes by providing high-density office and commercial uses with minimal parking in a dense, walkable urban environment that is well-served by local and regional transit.

Both Scheme 1 and Alternative Scheme 2 of the Project are consistent with both the City's 2017 Pedestrian Master Plan (*Oakland Walks*) and the 2019 Bicycle Master Plan (*Let's Bike Oakland*) as neither would make major modifications to the public right-of-way, including existing pedestrian

or bicycle facilities in the surrounding areas and would not adversely affect installation of future facilities, including the proposed upgrade of the existing Class 2 buffered bike lane on Webster Street to a Class 4 Protected bike facility, as proposed in the 2019 Bicycle Master Plan.

Further, because both Scheme 1 and Alternative Scheme 2 of the Project would generate more than 50 peak hour trips, preparation and implementation of a Transportation Demand Management Plan (TDM Plan) is required (see **Appendix I**). The TDM Plan includes on-going operational strategies, as well as infrastructure improvements, that encourage the use of non-automobile travel modes.

Overall, the Project would not conflict with adopted plans, ordinances, or policies addressing the safety and performance of the circulation system under Scheme 1 or Alternative Scheme 2. This is a less-than-significant impact; no mitigation measures are required.

7.13.2.2 Vehicle Miles traveled (VMT) Assessment (Criterion 13.b)

On September 21, 2016, the City of Oakland's Planning Commission directed staff to update the City of Oakland's CEQA Thresholds of Significance Guidelines related to transportation impacts in order to implement the directive from Senate Bill 743 (Steinberg 2013) to modify local environmental review processes by removing automobile delay, as described solely by LOS or similar measures of vehicular capacity or traffic congestion, as a significant impact on the environment pursuant to CEQA. The Planning Commission direction with the technical advisory from the Governor's Office of Planning and Research (dated December 2018) and the City's approach to transportation impact analysis, with adopted plans and polices related to transportation, which promote the reduction of GHG emissions, the development of multimodal transportation networks, and a diversity of land uses. Consistent with the Planning Commission direction and the Senate Bill 743 requirements, the City of Oakland published the revised TIRG on April 14, 2017 to guide the evaluation of the transportation impacts associated with land use development projects.

Many factors affect travel behavior, including density of development, diversity of land uses, design of the transportation network, access to regional destinations, distance to high-quality transit, development scale, demographics, and transportation demand management. Typically, low-density development that is located at a great distance from other land uses, in areas with poor access to non-single occupancy vehicle travel modes generate more vehicle travel compared to development located in urban areas, where a higher density of development, a mix of land uses, and non-single occupancy vehicle travel options are available.

Given these travel behavior factors, most of Oakland has lower VMT per capita and VMT per worker ratios than the nine-county San Francisco Bay Area region. Further, within the City of Oakland, some neighborhoods may have lower VMT ratios than others.

VMT Estimate

Estimating VMT generally requires the use of travel demand models to fully capture the length of trips on the transportation network, as well as the changes in VMT behavior that may occur with

the introduction of the project. This analysis uses the latest version of the Alameda County Transportation Commission (CTC) Travel Demand Model which was released in May 2019 and is consistent with the Metropolitan Transportation Commission (MTC) Plan Bay Area 2040 (i.e., Sustainable Communities Strategy) transportation network and land uses for 2020 and 2040. The model produces forecasts that are generally consistent with the travel demand forecasts that the MTC has produced for Plan Bay Area 2040 for the Plan horizon year of 2040 and meets the regional model consistency requirements.

Neighborhoods within Oakland are expressed geographically in transportation analysis zones, or TAZs, which are used in transportation planning models for transportation analysis and other planning purposes. The Alameda CTC Travel Demand Model includes 369 TAZs within Oakland that vary in size from a few city blocks in the downtown core, to multiple blocks in outer neighborhoods, to even larger geographic areas in lower-density neighborhoods. The model assigns all predicted trips within, across, or to/from the county onto the roadway network and the transit system by mode (single-driver and carpool vehicle, biking, walking, or transit) and transit carrier (bus, rail) for a particular scenario.

The Alameda CTC Model outputs the home-work (i.e., commute) VMT per worker, which measures all of the worker commute VMT by a motor vehicle on a typical weekday between homes and workplaces. Based on the Alameda CTC Travel Demand Model, the regional average daily VMT per worker is 18.1 under 2020 conditions and 18.2 under 2040 conditions.

Thresholds of Significance for VMT

According to the City of Oakland TIRG, the following are thresholds of significance related to substantial additional VMT:

- For residential projects, a project would cause substantial additional VMT if it exceeds existing regional household VMT per capita minus 15-percent.
- For office projects, a project would cause substantial additional VMT if it exceeds the existing regional VMT per worker minus 15-percent.
- For retail projects, a project would cause substantial additional VMT if it results in a net increase in total VMT.

Screening Criteria

VMT impacts would be less than significant for a project if any of the identified screening criteria outlined below are met:

1. **Small Projects:** The project generates fewer than 100 vehicle trips per day.
2. **Low-VMT Areas:** The project meets map-based screening criteria by being located in an area that exhibits below threshold VMT, or 15-percent or more below the regional average.

3. **Near Transit Stations:** The project is located in a Transit Priority Area⁴⁰ or within one-half mile of a Major Transit Corridor or Stop⁴¹ and satisfies the following:
- Has a Floor Area Ratio (FAR) of more than 0.75
 - Does not include more parking for use by residents, customers, or employees of the project than other typical nearby uses, or more than required by the City (if parking minimums pertain to the site) or allowed without a conditional use permit (if minimums and/or maximums pertain to the site).
 - and is consistent with the applicable Sustainable Communities Strategy (as determined by the lead agency, with input from the MTC).

VMT Impact Analysis

Scheme 1 and Alternative Scheme 2. Per direction provided in the TIRG, the regional VMT per worker minus 15-percent is used as the threshold of significance for the office component of the Project. According to the TIRG, retail spaces less than 80,000 square feet are considered local serving and are not expected to contribute to an increase in VMT. Therefore, it is presumed that the retail component of either Scheme 1 or Alternative Scheme 2 of the Project would not result in substantial additional VMT and impacts of the retail component of the Project with respect to VMT would be less than significant.

The Project satisfies the Low-VMT Area (#2) and Near Transit Stations (#3) criteria as described below.

Criterion #1: Small Projects

As shown in Table 7.13-1, both Scheme 1 and Alternative Scheme 2 each would generate more than 100 vehicle trips per day and therefore would not meet Criterion #1.

Criterion #2: Low-VMT Area

Table 7.13-2 shows the estimated 2020 and 2040 VMT per capita and VMT per worker for TAZ 224, the TAZ in which the Project is located, as well as the applicable VMT thresholds of 15-percent below the regional averages. As shown in Table 7.13-2, the 2020 and 2040 estimated average daily VMT per worker in the project TAZ are less than the regional averages minus 15-percent. The Project therefore meets Criterion #2.

⁴⁰ The California Public Resource Code (PRC) defines a Transit Priority Area as a one-half mile area around an existing major transit stop or an existing stop along a high-quality transit corridor. PRC Section 21064.3 defines major transit stop as a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of 15 minutes or less during the morning and afternoon peak commute periods. PRC Section 21155 defines a high-quality transit corridor as a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.

⁴¹ "Major transit stop" is defined in California PRC Section 21064.3 as a rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.

**TABLE 7.13-2
DAILY VEHICLE MILES TRAVELED SUMMARY**

Geographic Area	Home-Work VMT per Worker	
	2020	2040
Proposed Project (SCHEME 1 or ALTERNATIVE SCHEME 2) (Alameda CTC Model TAZ 243)	10.4	9.5
Bay Area Regional Average	18.1	18.2
Bay Area Regional Average minus 15% (i.e., threshold of significance)	15.4	15.5
Significant Impact?	No	No

SOURCE: Alameda CTC Travel Demand Model results (<https://www.alamedactc.org/planning/sb743-vmt/>) accessed in August 2022 and summarized by Fehr & Peers, 2023.

Criterion #3: Near Transit Stations

The Project would be located within 0.2 miles of the 19th Street Oakland BART Station and frequent bus service along Broadway (Line 1T with 10-minute headways, Line 6 with 12-minute peak headways, Line 51A with 10-minute peak headways, and Line 72/72M/72R with combined 10- to 12-minute peak headways on weekdays as of August 2022). Both Scheme 1 and Alternative Scheme 2 of the Project would satisfy Criterion #3 because they would meet the following three conditions for this criterion:

- The Project would have an FAR greater than 0.75 as shown below:
 - Scheme 1 would have an FAR of 15.7
 - Alternative Scheme 2 would have an FAR of 20.0
- The Project would not provide more parking for use by employees or customers than other typical nearby uses, nor would they provide more parking than the maximum required by City Code as described below:
 - Scheme 1 would provide about 37 on-site parking spaces (which may be increased to up to 75 parking spaces with parking lifts), which is significantly less than the 818 maximum parking spaces allowed by the City Planning Code.⁴²
 - Alternative Scheme 2 would provide about 158 on-site parking spaces (which may be increased to up to 221 parking spaces with parking lifts), which is significantly less than the 1,044 maximum parking spaces allowed by the City Planning Code.
- The Project site (same for Scheme 1 and Alternative Scheme 2) is located within the Downtown and Jack London Square Priority Development Area (PDA) as defined by Plan Bay Area and is therefore consistent with the region’s Sustainable Communities Strategy.

⁴² The City of Oakland Planning Code (Section 17.116.080) has no parking minimum requirement and allows up to one space for each 300 square feet of ground floor area and one space for each 500 square feet of floor area above ground floor for office and retail use in the CBD-C and CBD-P zones.

VMT Screening Conclusion

Both Scheme 1 and Alternative Scheme 2 of the Project would satisfy the Low-VMT Area (#2) and the Near Transit Stations (#3) criteria. Therefore, the Project is presumed to have a less-than-significant impact on VMT.

7.13.2.3 Induced Automobile Travel (Criteria 13.c)

Scheme 1 and Alternative Scheme 2. Neither Scheme 1 or Alternative Scheme 2 of the Project would modify the roadway network surrounding the Project site. Therefore, the Project would not increase the physical roadway capacity or add new roadways to the network, and therefore would not induce additional automobile traffic. This is a less-than-significant impact; no mitigation measures are required.

7.13.3 Conclusion

Based on an examination of the analysis, findings, and conclusions of the Previous CEQA Documents, implementation of Scheme 1 or Alternative Scheme 2 of the Project would not substantially increase the severity of significant impacts identified in the Previous CEQA Documents, to the extent that previous transportation topics currently apply. As discussed in 7.13.1 above, the Previous CEQA Documents identified significant and unavoidable impacts based on degradation of LOS (even with mitigation measures); however, CEQA no longer applies factors of automobile delay or other measures of traffic congestion to evaluate transportation impacts under CEQA. Also, neither Scheme 1 or Alternative Scheme 2 would conflict with a plan, ordinance, or policy addressing the safety or performance of the circulation system.

Although the Previous CEQA Documents did not employ a VMT-based metric to evaluate the significance of transportation impacts, neither Scheme 1 or Alternative Scheme 2 would cause substantial additional VMT, or substantially induce additional automobile travel as compared to the transportation assumptions in the Previous CEQA Documents. Moreover, Scheme 1 and Alternative Scheme 2 of the Project would incorporate all applicable Oakland SCAs including **SCA TRA-1, Construction Activity in the Public Right-of-Way; SCA TRA-2, Bicycle Parking; SCA TRA-3, Transportation Improvements; SCA TRA-4, Transportation and Parking Demand Management, SCA-TRA-5, Transportation Impact Fee, and SCA-TRA-6, Plug-In Electric Vehicle (PEV) Charging Infrastructure** (see Attachment A). Therefore, the Project would have a less-than-significant impact according to the City of Oakland's *Transportation Impact Review Guidelines*.

While not required under the City's thresholds of significance, a trip generation analysis, a site plan review, and a collision analysis were provided for informational purposes. The analysis and recommendations that could improve multi-modal access, circulation, and safety are described in Appendix H.

7.14 Utilities and Service Systems, and Energy

Would the project:	Equal or Less Severity of Impact Previously Identified in Previous CEQA Documents	Substantial Increase in Severity of Previously Identified Significant Impact in Previous CEQA Documents	New Significant Impact
a. Exceed wastewater treatment requirements of the San Francisco Bay Regional Water Quality Control Board; Require or result in construction of new storm water drainage facilities or expansion of existing facilities, construction of which could cause significant environmental effects; Result in a determination by the wastewater treatment provider which serves or may serve the project that it does not have adequate capacity to serve the project's projected demand in addition to the providers' existing commitments and require or result in construction of new wastewater treatment facilities or expansion of existing facilities, construction of which could cause significant environmental effects;	☒	☐	☐
b. Exceed water supplies available to serve the project from existing entitlements and resources, and require or result in construction of water facilities or expansion of existing facilities, construction of which could cause significant environmental effects;	☒	☐	☐
c. Be served by a landfill with insufficient permitted capacity to accommodate the project's solid waste disposal needs and require or result in construction of landfill facilities or expansion of existing facilities, construction of which could cause significant environmental effects; Violate applicable federal, state, and local statutes and regulations related to solid waste;	☒	☐	☐
d. Violate applicable federal, state and local statutes and regulations relating to energy standards; or Result in a determination by the energy provider which serves or may serve the project that it does not have adequate capacity to serve the project's projected demand in addition to the providers' existing commitments and require or result in construction of new energy facilities or expansion of existing facilities, construction of which could cause significant environmental effects.	☒	☐	☐
e. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation	☒	☐	☐
f. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency	☒	☐	☐

Changes to Appendix G of the State CEQA Guidelines effective in December 2018 were intended to reflect recent changes to the CEQA statutes and court decisions. As a result, energy was added as a separate topic to the Appendix G checklist. The City of Oakland's thresholds of significance for Utilities and Service Systems include threshold questions related to energy (see [d] above); thus, the threshold questions related to energy from the Appendix G checklist are listed under this topic (see [e] and [f] above) and are discussed herein.

7.14.1 Previous CEQA Documents Findings

The 2011 Renewal Plan Amendments EIR found less-than-significant impacts related to water, wastewater, or stormwater facilities, solid waste, and energy, finding no mitigation measures were warranted except adherence to certain City of Oakland SCAs. The 1998 LUTE EIR identified significant effects regarding these topics and identified mitigation measures that reduced the effects to less-than-significant levels.

The 1998 LUTE EIR analyzed energy under its own CEQA topic and found that higher density transit-oriented development, such as the Project, would consume less energy than lower-density development. The LUTE EIR noted that although energy consumption during construction and operation would increase, implementation of the LUTE and other General Plan elements would perpetuate the existing pattern of Oakland residents driving to suburban communities for work and shopping. The LUTE EIR concluded that the anticipated marginal increase in energy consumption would be less than significant.

The 2011 Renewal Plan Amendments EIR indicated that projects facilitated by the Renewal Plan Amendments would have to comply with all standards of Title 24 of the California Code of Regulations, which requires construction activities to incorporate energy-conserving design measures into projects. The 2011 Renewal Plan Amendments EIR concluded that impacts to energy services would be less than significant.

7.14.2 Project Analysis

7.14.2.1 Water, Wastewater, and Stormwater (Criteria 14a and 14b)

Scheme 1 and Alternative Scheme 2. As discussed in Section 7.11 *Population and Housing*, above, given that Scheme 1 and Alternative Scheme 2 of the Project each represent a marginal increase in employment captured by the ABAG population projections, the Project is not anticipated to exceed water supplies available to serve the Project from existing entitlements and resources and require or result in the expansion or construction of water facilities that would cause significant environmental effects.

As the Project is located in an already built out urban area, no new infrastructure would be required for the Project. The Project would connect to existing water, sewer, and storm drain service mains and laterals located in Webster and 19th Streets. The Project would implement SCA UTIL-5, Sanitary Sewer System, and SCA UTIL-6, Storm Drain System, which require stormwater control after construction to address any potential impacts on stormwater treatment and sanitary sewer as a result of the Project. Implementation of SCA UTIL-2, Underground Utilities, would ensure that utility

infrastructure is placed underground, improving service reliability, creating greater public safety, and enhancing aesthetics. In addition, SCA HYD-1, Erosion and Sedimentation Control Plan for Construction, and SCA HYD-2, NPDES C.3 Stormwater Requirements for Regulated Projects, would ensure that stormwater would be controlled during and after construction. The Project would also require minimal amounts of water for landscaping in parts of the roof terrace and potted landscaping on the terraced balconies. Therefore, the Project would not result in any new or more substantial impacts on water, sewer, or stormwater services than those identified in the Previous CEQA Documents and, with the implementation of SCAs requiring stormwater control during and after construction, the impact on water, sewer, and stormwater services would remain less than significant.

7.14.2.2 Solid Waste Services (Criterion 14c)

Scheme 1 and Alternative Scheme 2. The Project Applicant would be required to comply with the City's construction and demolition debris recycling ordinance (Municipal Code Chapter 15.34), which requires submittal of a plan to divert at least 50 percent of the construction waste generated by the Project from landfill disposal. The California Green Building Standards Code (CALGreen) also requires recycling and/or salvaging for reuse of a minimum of 65 percent of non-hazardous construction and demolition waste. The Project Applicant would be required to comply with the City of Oakland Recycling Space Allocation Ordinance (Planning Code Chapter 17.118) to ensure the provision of adequate, accessible, and convenient locations for the collection and storage of recyclable materials. In addition, the Project would comply with City of Oakland SCAs pertaining to waste reduction and recycling. Specifically, implementation of SCA UTIL-1, Construction and Demolition Waste Reduction and Recycling, would ensure that solid waste during construction is minimized, and SCA UTIL-3, Recycling Collection and Storage Space, would ensure that operational solid waste is reduced. Thus, development of Scheme 1 or Alternative Scheme 2 of the Project would not impede the ability of the City to meet the waste diversion requirements or cause the City to violate other applicable federal, state, and local statutes and regulations related to solid waste. Therefore, the impacts associated with solid waste services and/or landfill capacity as a result of the Project would remain less than significant.

7.14.2.3 Energy (Criterion 14d through 14f)

Scheme 1 and Alternative Scheme 2. During construction, both Scheme 1 and Alternative Scheme 2 of the Project would result in the consumption of fuel through the use of construction equipment, hauling truck trips, building material delivery truck trips, and worker trips to and from the Project site. SCA AIR-2, Criteria Air Pollutant Controls - Construction Related, requires limiting idling from diesel-fueled off-road vehicles over 25 horsepower and construction vehicles to two minutes, which would reduce the wasteful, inefficient, or unnecessary consumption of fuel during Project construction. Additionally, SCA AIR-2 requires portable equipment to be powered by grid electricity if available, and diesel engines are only allowed if grid electricity is not available and propane or natural gas generators cannot meet the electrical demand.

The Project would result in less-than-significant impacts related to energy standards and use, and would comply with the standards of the applicable Title 24 of the California Code of Regulations and the CALGreen Code, included in Title 24, Part 11. The Project shall install PV panels on roof

elements and proposes EV parking infrastructure. In addition, SCA UTIL-4, Green Building Requirements, pertaining to compliance with the green building ordinance, would require construction projects to incorporate energy-conserving design measures. Also see Section 7.6, *Greenhouse Gas Emissions and Climate Change*, above, which discusses the Project's incorporate of all items in the ECAP Checklist, pursuant to SCA GHG-1, Project Compliance with the ECAP Consistency Checklist (Appendix D). With these considerations, the Project's impacts on energy would remain less than significant.

7.14.3 Conclusion

Based on an examination of the analysis, findings, and conclusions of the Previous CEQA Documents, implementation of the Project would not substantially increase the severity of significant impacts identified in the Previous CEQA Documents, nor would it result in new significant impacts related to utilities and service systems and energy that were not identified in the Previous CEQA Documents. Implementation of **SCA UTIL-1, Construction and Demolition Waste Reduction and Recycling; SCA UTIL-2, Underground Utilities; SCA UTIL-3, Recycling Collection and Storage Space; SCA UTIL-4, Green Building Requirements; SCA UTIL-5, Sanitary Sewer System; SCA UTIL-6, Storm Drain System; UTIL-7, Water Efficient Landscape Ordinance (WELO); SCAs related to Air Quality and Hydrology and Water Quality, SCA AIR-2, Criteria Air Pollutant Controls - Construction Related; SCA HYD-1, Erosion and Sedimentation Control Plan for Construction and SCA HYD-2, NPDES C.3 Stormwater Requirements for Regulated Projects**, (all listed in Attachment A) as well as compliance with Title 24 and CALGreen requirements, would ensure that impacts to sewer capacity, stormwater drainage facilities, solid waste services, and energy with Scheme 1 or Alternative Scheme 2 of the Project would be less than significant. Therefore, no mitigation measures are required.

7.15 Wildfire

Would the project:	Equal or Less Severity of Impact Previously Identified in Previous CEQA Documents	Substantial Increase in Severity of Previously Identified Significant Impact in Previous CEQA Documents	New Significant Impact
a. Substantially impair an adopted emergency response plan or emergency evacuation plan?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the controlled spread of a wildfire?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides as a result of runoff, post-fire slope instability, or drainage changes?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

7.15.1 Previous CEQA Documents Findings

Within its analysis of public services, the 1998 LUTE EIR identified a significant and unavoidable impact regarding the introduction of new population in areas of the City with various physical constraints (i.e., insufficient street widths, turning radii, steep slopes, vulnerable emergency water supply) and fire service deficiency that contribute to the risk of catastrophic wildfire, even with a mitigation measure requiring the construction of a fire station in the North Oakland Hills. Also, no impacts regarding fire hazards were identified in the 2011 Renewal Plan Amendments EIR. No mitigation measures were identified.

7.15.2 Project Analysis

7.15.2.1 Impair Adopted Emergency Response/Evacuation Plan and Infrastructure Exacerbating Fire Risk (Criteria 15a and 15c)

As previously discussed in Section 7.7, *Hazards and Hazardous Materials*, the proposed Project would not interfere with established, adopted emergency response plans or evacuation plans. Implementation of SCA TRA-1, Construction Activity in the Public Right-of-Way, would ensure that the Project obtain an obstruction permit from the City prior to placing any temporary construction-related obstruction in the public right-of-way and would ensure the impact is less than significant.

7.15.2.2 Exacerbate Wildfire Risks, Exposure to Pollutant Concentrations / Post-fire Drainage and Slope Instability (Criteria 15b and 15d)

The proposed Project is not located within a State Responsibility Area (SRA) for Fire Hazard Severity Zones (FHSZs) or Very High FHSZs (VHFHSZs), as mapped by CAL FIRE for the City of Oakland. The project site is located within a fully urbanized area, Downtown Oakland, and therefore not within an area of wildfire risk, the nearest boundary of which is located approximately 1.5 miles northeast of the Project site, beyond Interstate 580 (I-580).⁴³ Therefore, the proposed Project would not have impacts regarding exacerbating fire risk and exposure due to slope, wind or other site characteristic, or post-fire conditions.

7.15.3 Conclusion

Based on an examination of the analysis, findings, and conclusions of the Previous CEQA Documents, the proposed Project would not result in any new or more significant wildfire impacts than those identified in the Previous CEQA Documents. Implementation of **SCA TRA-1, Construction Activity in the Public Right-of-Way**, (see Attachment A) would apply and ensure that wildfire impacts associated with the Project would be less than significant. This SCA is equally or more effective compared to the program-level mitigation measures identified in the Previous CEQA Documents and that would relate to the proposed Project. No mitigation measures are required. No additional analysis is required.

ATTACHMENT A

Standard Conditions of Approval Reporting Program

This Standard Conditions of Approval (SCAs) Reporting Program (SCARP) is based on the CEQA Checklist prepared for the 1919 Webster Street Project and applicable to both Scheme 1 and Alternative Scheme 2 of the Project.

This SCARP is in compliance with Section 15097 of the CEQA Guidelines, which requires that the Lead Agency “adopt a program for monitoring or reporting on the revisions which it has required in the project and the measures it has imposed to mitigate or avoid significant environmental effects.” The SCARP lists SCAs that apply to the Project. Specifically, on December 16, 2020, the City of Oakland released a revised set of all City of Oakland SCAs, which largely still include SCAs adopted by the City in 2008, along with supplemental, modified, and new SCAs. The SCAs are measures that would minimize potential adverse effects that could result from implementation of the Project, to ensure the conditions are implemented and monitored. The revised set of the City of Oakland SCAs includes new, modified, and reorganized SCAs; however, none of the revisions diminish or negate the ability of the SCAs considered “environmental protection measures” to minimize potential adverse environmental effects. As such, the SCAs identified in the SCARP reflect the current SCAs only. This SCARP also identifies the monitoring requirements for each SCA.

This CEQA Checklist is also based on the analysis in the following Program EIRs that apply to the 1919 Webster Project: Oakland’s 1998 General Plan Land Use and Transportation Element (LUTE) EIR (1998 LUTE EIR) and the 2011 Renewal Plan Amendments EIR. None of the mitigation measures or SCAs from these Program EIRs are included in this SCARP because they, or an updated or equally effective SCAs, are identified in this CEQA Checklist for the 1919 Webster Street Project.

To the extent that there is any inconsistency between any mitigation measures and/or SCAs, the more restrictive conditions shall govern; to the extent any mitigation measure and/or SCA identified in the CEQA Checklist were inadvertently omitted, they are automatically incorporated herein by reference.

- The first column of the SCARP table identifies the SCA applicable to that topic in the CEQA Checklist. While a mitigation measure or SCA can apply to more than one topic, it is listed in its entirety only under its primary topic (as indicated in the mitigation or SCA designator). The SCAs are numbered to specifically apply to the Project and this CEQA Checklist; however, the

SCAs as presented in the City's *Standard Conditions of Approval and Uniformly Applied Development Standards* document⁴⁴ are included in parenthesis for cross-reference purposes.⁴⁵

- The second column identifies the monitoring schedule or timing applicable to the Project.
- The third column names the party responsible for monitoring the required action for the Project.

The Project Applicant is responsible for compliance with any recommendations identified in City-approved technical reports, all applicable SCAs set forth herein at its sole cost and expense, unless otherwise expressly provided in a specific mitigation measure or condition of approval, and subject to the review and approval of the City of Oakland. Overall monitoring and compliance with the mitigation measures will be the responsibility of the Bureau of Planning, Zoning Inspections Division. Prior to the issuance of a demolition, grading, and/or construction permit, the Project Applicant shall pay the applicable mitigation and monitoring fee to the City in accordance with the City's Master Fee Schedule.

⁴⁴ Dated December 16, 2020, as amended.

⁴⁵ This SCARP applies only to Scheme 1 for which a development application has been submitted to the City. Any future application of the SCARP to Alternative Scheme 2 would necessitate an updated SCARP.

Standard Conditions of Approval – Project Scheme 1	Mitigation Implementation/Monitoring	
	Schedule	Responsibility
General		
<p>SCA GEN-1 (Standard Condition Approval 15) Regulatory Permits and Authorizations from Other Agencies</p> <p><u>Requirement:</u> The project applicant shall obtain all necessary regulatory permits and authorizations from applicable resource/regulatory agencies including, but not limited to, the Regional Water Quality Control Board, Bay Area Air Quality Management District, Bay Conservation and Development Commission, California Department of Fish and Wildlife, U. S. Fish and Wildlife Service, and Army Corps of Engineers and shall comply with all requirements and conditions of the permits/authorizations. The project applicant shall submit evidence of the approved permits/authorizations to the City, along with evidence demonstrating compliance with any regulatory permit/authorization conditions of approval.</p>	Prior to activity requiring permit/authorization from regulatory agency.	City of Oakland Bureau of Planning and applicable regulatory agency with jurisdiction
Aesthetics, Shadow, and Wind		
<p>SCA AES-1 (Standard Condition of Approval 16) Trash and Blight Removal</p> <p>The project applicant and his/her successors shall maintain the property free of blight, as defined in chapter 8.24 of the Oakland Municipal Code. For nonresidential and multi-family residential projects, the project applicant shall install and maintain trash receptacles near public entryways as needed to provide sufficient capacity for building users.</p>	Ongoing.	City of Oakland Bureau of Building
<p>SCA AES-2 (Standard Condition of Approval 17) Graffiti Control</p> <p>a. During construction and operation of the project, the project applicant shall incorporate best management practices reasonably related to the control of graffiti and/or the mitigation of the impacts of graffiti. Such best management practices may include, without limitation:</p> <ol style="list-style-type: none"> i. Installation and maintenance of landscaping to discourage defacement of and/or protect likely graffiti-attracting surfaces. ii. Installation and maintenance of lighting to protect likely graffiti-attracting surfaces. iii. Use of paint with anti-graffiti coating. iv. Incorporation of architectural or design elements or features to discourage graffiti defacement in accordance with the principles of Crime Prevention Through Environmental Design (CPTED). v. Other practices approved by the City to deter, protect, or reduce the potential for graffiti defacement. <p>b. The project applicant shall remove graffiti by appropriate means within seventy-two (72) hours. Appropriate means include the following:</p> <ol style="list-style-type: none"> i. Removal through scrubbing, washing, sanding, and/or scraping (or similar method) without damaging the surface and without discharging wash water or cleaning detergents into the City storm drain system. ii. Covering with new paint to match the color of the surrounding surface. iii. Replacing with new surfacing (with City permits if required). 	Ongoing.	City of Oakland Bureau of Building

Standard Conditions of Approval – Project Scheme 1	Mitigation Implementation/Monitoring	
	Schedule	Responsibility
Aesthetics, Shadow, and Wind (cont.)		
<p>SCA AES-3 (Standard Condition of Approval 18) Landscape Plan</p> <p><i>a. Landscape Plan Required</i></p> <p>The project applicant shall submit a final Landscape Plan for City review and approval that is consistent with the approved Landscape Plan. The Landscape Plan shall be included with the set of drawings submitted for the construction-related permit and shall comply with the landscape requirements of chapter 17.124 of the Planning Code. Proposed plants shall be predominantly drought-tolerant. Specification of any street trees shall comply with the Master Street Tree List and Tree Planting Guidelines (which can be viewed at http://www2.oaklandnet.com/oakca1/groups/pwa/documents/report/oak042662.pdf and http://www2.oaklandnet.com/oakca1/groups/pwa/documents/form/oak025595.pdf, respectively), and with any applicable streetscape plan.</p> <p><i>b. Landscape Installation</i></p> <p>The project applicant shall implement the approved Landscape Plan unless a bond, cash deposit, letter of credit, or other equivalent instrument acceptable to the Director of City Planning, is provided. The financial instrument shall equal the greater of \$2,500 or the estimated cost of implementing the Landscape Plan based on a licensed contractor’s bid.</p> <p><i>c. Landscape Maintenance</i></p> <p>All required planting shall be permanently maintained in good growing condition and, whenever necessary, replaced with new plant materials to ensure continued compliance with applicable landscaping requirements. The property owner shall be responsible for maintaining planting in adjacent public rights-of-way. All required fences, walls, and irrigation systems shall be permanently maintained in good condition and, whenever necessary, repaired or replaced.</p>	<p>a. Prior to approval of construction-related permit.</p> <p>b. Prior to building permit final.</p> <p>c. Ongoing</p>	<p>a. City of Oakland Bureau of Planning</p> <p>b. City of Oakland Bureau of Building</p> <p>c. City of Oakland Bureau of Building</p>
<p>SCA AES-4 (Standard Condition of Approval 19): Lighting</p> <p>Proposed new exterior lighting fixtures shall be adequately shielded to a point below the light bulb and reflector to prevent unnecessary glare onto adjacent properties.</p>	Prior to building permit final.	City of Oakland Bureau of Building
Air Quality		
<p>SCA AIR-1 (Standard Condition of Approval 20) Dust Controls – Construction-Related</p> <p>The Project applicant shall implement all of the following applicable dust control measures during construction of the Project:</p> <p>a. Water all exposed surfaces of active construction areas at least twice daily. Watering should be sufficient to prevent airborne dust from leaving the site. Increased watering frequency may be necessary whenever wind speeds exceed 15 miles per hour. Reclaimed water should be used whenever feasible.</p> <p>b. Cover all trucks hauling soil, sand, and other loose materials or require all trucks to maintain at least two feet of freeboard (i.e., the minimum required space between the top of the load and the top of the trailer).</p> <p>c. All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.</p> <p>d. Limit vehicle speeds on unpaved roads to 15 miles per hour.</p> <p>e. All demolition activities (if any) shall be suspended when average wind speeds exceed 20 mph.</p> <p>f. All trucks and equipment, including tires, shall be washed off prior to leaving the site.</p> <p>g. Site accesses to a distance of 100 feet from the paved road shall be treated with a 6-to 12-inch compacted layer of wood chips, mulch, or gravel.</p>	During construction.	City of Oakland Bureau of Building

Standard Conditions of Approval – Project Scheme 1	Mitigation Implementation/Monitoring	
	Schedule	Responsibility
Air Quality (cont.)		
<p><i>Enhanced Controls</i></p> <p><i>Applies to</i></p> <ul style="list-style-type: none"> • Extensive site preparation (i.e., the construction site is four acres or more in size); or • Extensive soil transport (i.e., 10,000 or more cubic yards of soil import/export). <p>h. Apply and maintain vegetative ground cover (e.g., hydroseed) or non-toxic soil stabilizers to disturbed areas of soil that will be inactive for more than one month. Enclose, cover, water twice daily, or apply (non-toxic) soil stabilizers to exposed stockpiles (dirt, sand, etc.).</p> <p>i. Designate a person or persons to monitor the dust control program and to order increased watering, as necessary, to prevent transport of dust offsite. Their duties shall include holidays and weekend periods when work may not be in progress.</p> <p>j. When working at a site, install appropriate wind breaks (e.g., trees, fences) on the windward side(s) of the site, to minimize wind-blown dust. Windbreaks must have a maximum 50 percent air porosity.</p> <p>k. Post a publicly visible large on-site sign that includes the contact name and phone number for the project complaint manager responsible for responding to dust complaints and the telephone numbers of the City’s Code Enforcement unit and the Bay Area Air Quality Management District. When contacted, the project complaint manager shall respond and take corrective action within 48 hours.</p> <p>l. All exposed surfaces shall be watered at a frequency adequate to maintain minimum soil moisture of 12 percent. Moisture content can be verified by lab samples or moisture probe.</p>	During construction.	City of Oakland Bureau of Building
<p>SCA AIR-2 (Standard Condition of Approval 21) Criteria Air Pollutant Controls – Construction Related</p> <p><u>Requirement:</u> The project applicant shall implement all of the following applicable basic control measures for criteria air pollutants during construction of the project as applicable:</p> <p>a. Idling times on all diesel-fueled commercial vehicles over 10,000 lbs. shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to two minutes (as required by the California airborne toxics control measure Title 13, Section 2485, of the California Code of Regulations). Clear signage to this effect shall be provided for construction workers at all access points.</p> <p>b. Idling times on all diesel-fueled off-road vehicles over 25 horsepower shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to two minutes and fleet operators must develop a written policy as required by Title 23, Section 2449, of the California Code of Regulations (“California Air Resources Board Off-Road Diesel Regulations”).</p> <p>c. All construction equipment shall be maintained and properly tuned in accordance with the manufacturer’s specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation. Equipment check documentation should be kept at the construction site and be available for review by the City and the Bay Area Air Quality District as needed.</p> <p>d. Portable equipment shall be powered by grid electricity if available. If electricity is not available, propane or natural gas generators shall be used if feasible. Diesel engines shall only be used if grid electricity is not available and use propane or natural gas generators cannot meet the electrical demand.</p>	During construction.	City of Oakland Bureau of Building

Standard Conditions of Approval – Project Scheme 1	Mitigation Implementation/Monitoring	
	Schedule	Responsibility
Air Quality (cont.)		
<p>e. Low VOC (i.e., ROG) coatings shall be used that comply with BAAQMD Regulation 8, Rule 3: Architectural Coatings.</p> <p>f. All equipment to be used on the construction site and subject to the requirements of Title 13, Section 2449, of the California Code of Regulations (“California Air Resources Board Off-Road Diesel Regulations”) and upon request by the City, the project applicant shall provide written documentation that fleet requirements have been met.</p>		
<p>SCA AIR-3 (Standard Condition of Approval 22) Diesel Particulate Matter Controls–Construction Related</p> <p>a. Diesel Particulate Matter Reduction Measures</p> <p><u>Requirement:</u> The project applicant shall implement appropriate measures during construction to reduce potential health risks to sensitive receptors due to exposure to diesel particulate matter (DPM) from construction emissions. The project applicant shall choose one of the following methods:</p> <p>i. The project applicant shall retain a qualified air quality consultant to prepare a Health Risk Assessment (HRA) in accordance with current guidance from the California Air Resources Board (CARB) and Office of Environmental Health and Hazard Assessment to determine the health risk to sensitive receptors exposed to DPM from project construction emissions. The HRA shall be submitted to the City (and the Air District if specifically requested) for review and approval. If the HRA concludes that the health risk is at or below acceptable levels, then DPM reduction measures are not required. If the HRA concludes that the health risk exceeds acceptable levels, DPM reduction measures shall be identified to reduce the health risk to acceptable levels as set forth under subsection b below. Identified DPM reduction measures shall be submitted to the City for review and approval prior to the issuance of building permits and the approved DPM reduction measures shall be implemented during construction.</p> <p>- or -</p> <p>ii. All off-road diesel equipment shall be equipped with the most effective Verified Diesel Emission Control Strategies (VDECS) available for the engine type (Tier 4 engines automatically meet this requirement) as certified by CARB. The equipment shall be properly maintained and tuned in accordance with manufacturer specifications. This shall be verified through an equipment inventory submittal and Certification Statement that the Contractor agrees to compliance and acknowledges that a significant violation of this requirement shall constitute a material breach of contract.</p> <p>b. Construction Emissions Minimization Plan (if required by “a” above)</p> <p><u>Requirement:</u> The project applicant shall prepare a Construction Emissions Minimization Plan (Emissions Plan) for all identified DPM reduction measures (if any). The Emissions Plan shall be submitted to the City (and the Bay Area Air Quality District if specifically requested) for review and approval prior to the issuance of building permits. The Emissions Plan shall include the following:</p> <p>i. An equipment inventory summarizing the type of off-road equipment required for each phase of construction, including the equipment manufacturer, equipment identification number, engine model year, engine certification (tier rating), horsepower, and engine serial number. For all VDECS, the equipment inventory shall also include the technology type, serial number, make, model, manufacturer, CARB verification number level, and installation date.</p> <p>ii. A Certification Statement that the Contractor agrees to comply fully with the Emissions Plan and acknowledges that a significant violation of the Emissions Plan shall constitute a material breach of contract.</p>	<p>a. Prior to issuance of a construction related permit (i), during construction (ii).</p> <p>b. Prior to issuance of a construction related permit.</p>	<p>a. City of Oakland Bureau of Planning and Bureau of Building.</p> <p>b. City of Oakland Bureau of Planning and Bureau of Building.</p>

Standard Conditions of Approval – Project Scheme 1	Mitigation Implementation/Monitoring	
	Schedule	Responsibility
Air Quality (cont.)		
<p>SCA AIR-4 (Standard Condition of Approval 24) Stationary Sources of Air Pollution (Toxic Air Contaminants)</p> <p><u>Requirement:</u> The project applicant shall incorporate appropriate measures into the project design in order to reduce the potential health risk due to on-site stationary sources of toxic air contaminants. The project applicant shall choose one of the following methods:</p> <p>a. The project applicant shall retain a qualified air quality consultant to prepare a Health Risk Assessment (HRA) in accordance with California Air Resources Board (CARB) and Office of Environmental Health and Hazard Assessment requirements to determine the health risk associated with proposed stationary sources of pollution in the project. The HRA shall be submitted to the City for review and approval. If the HRA concludes that the health risk is at or below acceptable levels, then health risk reduction measures are not required. If the HRA concludes the health risk exceeds acceptable levels, health risk reduction measures shall be identified to reduce the health risk to acceptable levels. Identified risk reduction measures shall be submitted to the City for review and approval and be included on the project drawings submitted for the construction-related permit or on other documentation submitted to the City. The approved risk reduction measures shall be implemented during construction and/or operations as applicable.</p> <p>- or -</p> <p>b. The project applicant shall incorporate the following health risk reduction measures into the project. These features shall be submitted to the City for review and approval and be included on the project drawings submitted for the construction-related permit or on other documentation submitted to the City:</p> <ol style="list-style-type: none"> i. Installation of non-diesel fueled generators, if feasible, or; ii. Installation of diesel generators with an EPA-certified Tier 4 engine or engines that are retrofitted with a CARB Level 3 Verified Diesel Emissions Control Strategy, if feasible. 	Prior to approval of construction-related permit	City of Oakland Bureau of Planning and Bureau of Building.
<p>SCA AIR-5 (Standard Condition of Approval 26) Asbestos in Structures</p> <p><u>Requirement:</u> The project applicant shall comply with all applicable laws and regulations regarding demolition and renovation of Asbestos Containing Materials (ACM), including but not limited to California Code of Regulations, Title 8; California Business and Professions Code, Division 3; California Health and Safety Code sections 25915-25919.7; and Bay Area Air Quality Management District, Regulation 11, Rule 2, as may be amended. Evidence of compliance shall be submitted to the City upon request.</p>	Prior to approval of construction-related permit	Applicable regulatory agency with jurisdiction

SCA UTIL-7, Water Efficient Landscape Ordinance (WELO). See <i>Utilities and Service Systems, and Energy</i> , below.		

Standard Conditions of Approval – Project Scheme 1	Mitigation Implementation/Monitoring	
	Schedule	Responsibility
Cultural Resources and Tribal Cultural Resources		
<p>SCA CUL-1 (Standard Condition of Approval 32): Archaeological and Paleontological Resources – Discovery During Construction</p> <p><u>Requirement:</u> Pursuant to CEQA Guidelines section 15064.5(f), in the event that any historic or prehistoric subsurface cultural resources are discovered during ground disturbing activities, all work within 50 feet of the resources shall be halted and the Project applicant shall notify the City and consult with a qualified archaeologist or paleontologist, as applicable, to assess the significance of the find. In the case of discovery of paleontological resources, the assessment shall be done in accordance with the Society of Vertebrate Paleontology standards. If any find is determined to be significant, appropriate avoidance measures recommended by the consultant and approved by the City must be followed unless avoidance is determined unnecessary or infeasible by the City. Feasibility of avoidance shall be determined with consideration of factors such as the nature of the find, project design, costs, and other considerations. If avoidance is unnecessary or infeasible, other appropriate measures (e.g., data recovery, excavation) shall be instituted. Work may proceed on other parts of the project site while measures for the cultural resources are implemented.</p> <p>In the event of data recovery of archaeological resources, the Project applicant shall submit an Archaeological Research Design and Treatment Plan (ARDTP) prepared by a qualified archaeologist for review and approval by the City. The ARDTP is required to identify how the proposed data recovery program would preserve the significant information the archaeological resource is expected to contain. The ARDTP shall identify the scientific/historic research questions applicable to the expected resource, the data classes the resource is expected to possess, and how the expected data classes would address the applicable research questions. The ARDTP shall include the analysis and specify the curation and storage methods. Data recovery, in general, shall be limited to the portions of the archaeological resource that could be impacted by the proposed project. Destructive data recovery methods shall not be applied to portions of the archaeological resources if nondestructive methods are practicable. Because the intent of the ARDTP is to save as much of the archaeological resource as possible, including moving the resource, if feasible, preparation and implementation of the ARDTP would reduce the potential adverse impact to less than significant. The Project applicant shall implement the ARDTP at his/her expense.</p> <p>In the event of excavation of paleontological resources, the Project applicant shall submit an excavation plan prepared by a qualified paleontologist to the City for review and approval. All significant cultural materials recovered shall be subject to scientific analysis, professional museum curation, and/or a report prepared by a qualified paleontologist, as appropriate, according to current professional standards and at the expense of the Project applicant.</p>	During construction.	City of Oakland Bureau of Building
<p>SCA CUL-2 (Standard Condition of Approval 33): Archaeologically Sensitive Areas – Pre-Construction Measures</p> <p><u>Requirement:</u> The project applicant shall implement either Provision A (Intensive Pre-Construction Study) <u>or</u> Provision B (Construction ALERT Sheet) concerning archaeological resources.</p> <p>Provision A: Intensive Pre-Construction Study.</p> <p>The Project applicant shall retain a qualified archaeologist to conduct a site-specific, intensive archaeological resources study for review and approval by the City prior to soil-disturbing activities occurring on the project site. The purpose of the site-specific, intensive archaeological resources study is to identify early the potential presence of history-period archaeological resources on the project site. At a minimum, the study shall include:</p> <ol style="list-style-type: none"> Subsurface presence/absence studies of the project site. Field studies may include, but are not limited to, auguring and other common methods used to identify the presence of archaeological resources. A report disseminating the results of this research. Recommendations for any additional measures that could be necessary to mitigate any adverse impacts to recorded and/or inadvertently discovered cultural resources. 	Prior to approval of construction-related permit; during construction.	City of Oakland Bureau of Planning and Bureau of Building

Standard Conditions of Approval – Project Scheme 1	Mitigation Implementation/Monitoring	
	Schedule	Responsibility
Cultural Resources and Tribal Cultural Resources (cont.)		
<p>If the results of the study indicate a high potential presence of historic-period archaeological resources on the project site, or a potential resource is discovered, the project applicant shall hire a qualified archaeologist to monitor any ground disturbing activities on the project site during construction and prepare an ALERT sheet pursuant to Provision B below that details what could potentially be found at the project site. Archaeological monitoring would include briefing construction personnel about the type of artifacts that may be present (as referenced in the ALERT sheet, required per Provision B below) and the procedures to follow if any artifacts are encountered, field recording and sampling in accordance with the Secretary of Interior’s Standards and Guidelines for Archaeological Documentation, notifying the appropriate officials if human remains or cultural resources are discovered, and preparing a report to document negative findings after construction is completed if no archaeological resources are discovered during construction.</p> <p>Provision B: Construction ALERT Sheet.</p> <p>The Project applicant shall prepare a construction “ALERT” sheet developed by a qualified archaeologist for review and approval by the City prior to soil-disturbing activities occurring on the project site. The ALERT sheet shall contain, at a minimum, visuals that depict each type of artifact that could be encountered on the project site. Training by the qualified archaeologist shall be provided to the Project’s prime contractor, any project subcontractor firms (including demolition, excavation, grading, foundation, and pile driving), and utility firms involved in soil- disturbing activities within the project site.</p> <p>The ALERT sheet shall state, in addition to the basic archaeological resource protection measures contained in other standard conditions of approval, all work must stop and the City’s Environmental Review Officer contacted in the event of discovery of the following cultural materials: concentrations of shellfish remains; evidence of fire (ashes, charcoal, burnt earth, fire-cracked rocks); concentrations of bones; recognizable Native American artifacts (arrowheads, shell beads, stone mortars [bowls], humanly shaped rock); building foundation remains; trash pits, privies (outhouse holes); floor remains; wells; concentrations of bottles, broken dishes, shoes, buttons, cut animal bones, hardware, household items, barrels, etc.; thick layers of burned building debris (charcoal, nails, fused glass, burned plaster, burned dishes); wood structural remains (building, ship, wharf); clay roof/floor tiles; stone walls or footings; or gravestones. Prior to any soil-disturbing activities, each contractor shall be responsible for ensuring that the ALERT sheet is circulated to all field personnel, including machine operators, field crew, pile drivers, and supervisory personnel. The ALERT sheet shall also be posted in a visible location at the project site.</p>		
<p>SCA CUL-3 (Standard Condition of Approval SCA 34): Human Remains – Discovery During Construction</p> <p>Requirement: Pursuant to CEQA Guidelines section 15064.5(e)(1), in the event that human skeletal remains are uncovered at the project site during construction activities, all work shall immediately halt and the Project applicant shall notify the City and the Alameda County Coroner. If the County Coroner determines that an investigation of the cause of death is required or that the remains are Native American, all work shall cease within 50 feet of the remains until appropriate arrangements are made. In the event that the remains are Native American, the City shall contact the California Native American Heritage Commission (NAHC), pursuant to subdivision (c) of section 7050.5 of the California Health and Safety Code. If the agencies determine that avoidance is not feasible, then an alternative plan shall be prepared with specific steps and timeframe required to resume construction activities. Monitoring, data recovery, determination of significance, and avoidance measures (if applicable) shall be completed expeditiously and at the expense of the Project applicant.</p>	During construction.	City of Oakland Bureau of Building

Standard Conditions of Approval – Project Scheme 1	Mitigation Implementation/Monitoring	
	Schedule	Responsibility
Geology, Soils, and Geohazards, and Mineral Resources		
<p>SCA GEO-1 (Standard Condition of Approval 36): Construction-Related Permit(s) <u>Requirement:</u> The Project applicant shall obtain all required construction-related permits/approvals from the City. The Project shall comply with all standards, requirements and conditions contained in construction-related codes, including but not limited to the Oakland Building Code and the Oakland Grading Regulations, to ensure structural integrity and safe construction.</p>	Prior to approval of construction-related permit.	City of Oakland Bureau of Building
<p>SCA GEO-2 (Standard Condition of Approval 37): Soils Report <u>Requirement:</u> The project applicant shall submit a soils report prepared by a registered geotechnical engineer for City review and approval. The soils report shall contain, at a minimum, field test results and observations regarding the nature, distribution and strength of existing soils, and recommendations for appropriate grading practices and project design. The project applicant shall implement the recommendations contained in the approved report during project design and construction.</p>	Prior to approval of construction-related permit.	City of Oakland Bureau of Building
See SCA HYD-1, Erosion and Sedimentation Control Plan for Construction . See <i>Hydrology and Water Quality</i> , below.		
Greenhouse Gases and Climate Change		
<p>SCA GHG-1 (Standard Condition of Approval 42): Greenhouse Gas Reduction Plan <i>a. GHG Reduction Plan Implementation During Construction</i> <u>Requirement:</u> The project applicant shall retain a qualified air quality consultant to develop a Greenhouse Gas (GHG) Reduction Plan for City review and approval and shall implement the approved GHG Reduction Plan.</p> <p>The goal of the GHG Reduction Plan shall be to increase energy efficiency and reduce GHG emissions to <u>at least one</u> of the Bay Area Quality Management District’s (BAAQMD’s) CEQA Thresholds of Significance (1,100 metric tons of CO₂e per year or 4.6 metric tons of CO₂e per year per service population) to help implement the City’s Energy and Climate Action Plan. The GHG Reduction Plan shall include, at a minimum, (a) a detailed GHG emissions inventory for the project under a “business-as-usual” scenario with no consideration of project design features, or other energy efficiencies, (b) an “adjusted” baseline GHG emissions inventory for the project, taking into consideration energy efficiencies included as part of the project (including the City’s Standard Conditions of Approval, proposed mitigation measures, project design features, and other City requirements), and additional GHG reduction measures available to further reduce GHG emissions, and (c) requirements for ongoing monitoring and reporting to demonstrate that the additional GHG reduction measures are being implemented. If the project is to be constructed in phases, the GHG Reduction Plan shall provide GHG emission scenarios by phase.</p> <p>Potential GHG reduction measures to be considered include, but are not be limited to, measures recommended in BAAQMD’s latest CEQA Air Quality Guidelines, the California Air Resources Board Scoping Plan (December 2008, as may be revised), the California Air Pollution Control Officers Association (CAPCOA) Quantifying Greenhouse Gas Mitigation Measures (August 2010, as may be revised), the California Attorney General’s website, and Reference Guides on Leadership in Energy and Environmental Design (LEED) published by the U.S. Green Building Council.</p> <p>The types of allowable GHG reduction measures include the following (listed in order of City preference): (1) physical design features; (2) operational features; and (3) the payment of fees to fund GHG-reducing programs (i.e., the purchase of “carbon credits”) as explained below.</p>	Prior to approval of construction-related permit.	City of Oakland Bureau of Planning

Standard Conditions of Approval – Project Scheme 1	Mitigation Implementation/Monitoring	
	Schedule	Responsibility
Greenhouse Gases and Climate Change (cont.)		
<p>The allowable locations of the GHG reduction measures include the following (listed in order of City preference): (1) the project site; (2) off-site within the City of Oakland; (3) off-site within the San Francisco Bay Area Air Basin; (4) off-site within the State of California; then (5) elsewhere in the United States.</p> <p>As with preferred locations for the implementation of all GHG reductions measures, the preference for carbon credit purchases include those that can be achieved as follows (listed in order of City preference): (1) within the City of Oakland; (2) within the San Francisco Bay Area Air Basin; (3) within the State of California; then (4) elsewhere in the United States. The cost of carbon credit purchases shall be based on current market value at the time purchased and shall be based on the project’s operational emissions estimated in the GHG Reduction Plan or subsequent approved emissions inventory, which may result in emissions that are higher or lower than those estimated in the GHG Reduction Plan.</p> <p>For physical GHG reduction measures to be incorporated into the design of the project, the measures shall be included on the drawings submitted for construction-related permits.</p>		
<p>b. GHG Reduction Plan Implementation During Construction</p> <p><u>Requirement:</u> The project applicant shall implement the GHG Reduction Plan during construction of the project. For physical GHG reduction measures to be incorporated into the design of the project, the measures shall be implemented during construction. For physical GHG reduction measures to be incorporated into off-site projects, the project applicant shall obtain all necessary permits/approvals and the measures shall be included on drawings and submitted to the City Planning Director or his/her designee for review and approval. These off-site improvements shall be installed prior to completion of the subject project (or prior to completion of the project phase for phased projects). For GHG reduction measures involving the purchase of carbon credits, evidence of the payment/purchase shall be submitted to the City for review and approval prior to completion of the project (or prior to completion of the project phase, for phased projects).</p>	Ongoing.	City of Oakland Bureau of Planning
<p>c. GHG Reduction Plan Implementation After Construction</p> <p><u>Requirement:</u> The project applicant shall implement the GHG Reduction Plan after construction of the project (or at the completion of the project phase for phased projects). For operational GHG reduction measures to be incorporated into the project or off-site projects, the measures shall be implemented on an indefinite and ongoing basis.</p> <p>The project applicant shall satisfy the following requirements for ongoing monitoring and reporting to demonstrate that the additional GHG reduction measures are being implemented. The GHG Reduction Plan requires regular periodic evaluation over the life of the project (generally estimated to be at least 40 years) to determine how the Plan is achieving required GHG emissions reductions over time, as well as the efficacy of the specific additional GHG reduction measures identified in the Plan.</p> <p>Annual Report. Implementation of the GHG reduction measures and related requirements shall be ensured through compliance with Conditions of Approval adopted for the project. Generally, starting two years after the City issues the first Certificate of Occupancy for the project, the project applicant shall prepare each year of the useful life of the project an Annual GHG Emissions Reduction Report (“Annual Report”), for review and approval by the City Planning Director or his/her designee. The Annual Report shall be submitted to an independent reviewer of the City’s choosing, to be paid for by the project applicant.</p> <p>The Annual Report shall summarize the project’s implementation of GHG reduction measures over the preceding year, intended upcoming changes, compliance with the conditions of the Plan, and include a brief summary of the previous year’s Annual Report results (starting the second year). The Annual Report shall include a comparison of annual project emissions to the baseline emissions reported in the GHG Plan.</p>	Ongoing.	City of Oakland Bureau of Planning

Standard Conditions of Approval – Project Scheme 1	Mitigation Implementation/Monitoring	
	Schedule	Responsibility
Greenhouse Gases and Climate Change (cont.)		
<p>The GHG Reduction Plan shall be considered fully attained when project emissions are less than either applicable numeric BAAQMD CEQA Thresholds, as confirmed by the City through an established monitoring program. Monitoring and reporting activities will continue at the City’s discretion, as discussed below.</p> <p>Corrective Procedure. If the third Annual Report, or any report thereafter, indicates that, in spite of the implementation of the GHG Reduction Plan, the project is not achieving the GHG reduction goal, the project applicant shall prepare a report for City review and approval, which proposes additional or revised GHG measures to better achieve the GHG emissions reduction goals, including without limitation, a discussion on the feasibility and effectiveness of the menu of other additional measures (“Corrective GHG Action Plan”). The project applicant shall then implement the approved Corrective GHG Action Plan.</p> <p>If, one year after the Corrective GHG Action Plan is implemented, the required GHG emissions reduction target is still not being achieved, or if the project applicant fails to submit a report at the times described above, or if the reports do not meet City requirements outlined above, the City may, in addition to its other remedies, (a) assess the project applicant a financial penalty based upon actual percentage reduction in GHG emissions as compared to the percent reduction in GHG emissions established in the GHG Reduction Plan; or (b) refer the matter to the City Planning Commission for scheduling of a compliance hearing to determine whether the project’s approvals should be revoked, altered or additional conditions of approval imposed.</p> <p>The penalty as described in (a) above shall be determined by the City Planning Director or his/her designee and be commensurate with the percentage GHG emissions reduction not achieved (compared to the applicable numeric significance thresholds) or required percentage reduction from the “adjusted” baseline.</p> <p>In determining whether a financial penalty or other remedy is appropriate, the City shall not impose a penalty if the project applicant has made a good faith effort to comply with the GHG Reduction Plan.</p> <p>The City would only have the ability to impose a monetary penalty after a reasonable cure period and in accordance with the enforcement process outlined in Planning Code Chapter 17.152. If a financial penalty is imposed, such penalty sums shall be used by the City solely toward the implementation of the GHG Reduction Plan.</p> <p>Timeline Discretion and Summary. The City shall have the discretion to reasonably modify the timing of reporting, with reasonable notice and opportunity to comment by the applicant, to coincide with other related monitoring and reporting required for the project.</p>

Standard Conditions of Approval – Project Scheme 1	Mitigation Implementation/Monitoring	
	Schedule	Responsibility
Hazards and Hazardous Materials		
<p>SCA HAZ-1 (Standard Condition of Approval 43): Hazards Materials Related to Construction</p> <p><u>Requirement:</u> The Project applicant shall ensure that Best Management Practices (BMPs) are implemented by the contractor during construction to minimize potential negative effects on groundwater, soils, and human health. These shall include, at a minimum, the following:</p> <ol style="list-style-type: none"> Follow manufacture’s recommendations for use, storage, and disposal of chemical products used in construction; Avoid overtopping construction equipment fuel gas tanks; During routine maintenance of construction equipment, properly contain and remove grease and oils; Properly dispose of discarded containers of fuels and other chemicals; Implement lead-safe work practices and comply with all local, regional, state, and federal requirements concerning lead (for more information refer to the Alameda County Lead Poisoning Prevention Program); and If soil, groundwater, or other environmental medium with suspected contamination is encountered unexpectedly during construction activities (e.g., identified by odor or visual staining, or if any underground storage tanks, abandoned drums or other hazardous materials or wastes are encountered), the project applicant shall cease work in the vicinity of the suspect material, the area shall be secured as necessary, and the applicant shall take all appropriate measures to protect human health and the environment. Appropriate measures shall include notifying the City and applicable regulatory agency(ies) and implementation of the actions described in the City’s Standard Conditions of Approval, as necessary, to identify the nature and extent of contamination. Work shall not resume in the area(s) affected until the measures have been implemented under the oversight of the City or regulatory agency, as appropriate. 	During construction.	City of Oakland Bureau of Building
<p>SCA HAZ-2 (Standard Condition of Approval 44): Hazardous Building Materials and Site Contamination</p> <p>a. Hazardous Building Materials and Site Contamination</p> <p><u>Requirement:</u> The project applicant shall submit a comprehensive assessment report to the Bureau of Building, signed by a qualified environmental professional, documenting the presence or lack thereof of asbestos-containing materials (ACMs), lead-based paint, polychlorinated biphenyls (PCBs), and any other building materials or stored materials classified as hazardous materials by State or federal law. If lead-based paint, ACMs, PCBs, or any other building materials or stored materials classified as hazardous materials are present, the project applicant shall submit specifications prepared and signed by a qualified environmental professional, for the stabilization and/or removal of the identified hazardous materials in accordance with all applicable laws and regulations. The project applicant shall implement the approved recommendations and submit to the City evidence of approval for any proposed remedial action and required clearances by the applicable local, state, or federal regulatory agency.</p> <p>b. Environmental Site Assessment Required</p> <p><u>Requirement:</u> The project applicant shall submit a Phase I Environmental Site Assessment report, and Phase II Environmental Site Assessment report if warranted by the Phase I report, for the project site for review and approval by the City. The report(s) shall be prepared by a qualified environmental assessment professional and include recommendations for remedial action, as appropriate, for hazardous materials. The project applicant shall implement the approved recommendations and submit to the City evidence of approval for any proposed remedial action and required clearances by the applicable local, state, or federal regulatory agency.</p>	<ol style="list-style-type: none"> Prior to approval of demolition, grading, or building permits Prior to approval of construction-related permit Prior to approval of construction-related permit During Construction 	<ol style="list-style-type: none"> City of Oakland Bureau of Building Applicable regulatory agency with jurisdiction City of Oakland Bureau of Building City of Oakland Bureau of Building

	Schedule	Responsibility
Hazards and Hazardous Materials (cont.)		
<p><i>c. Health and Safety Plan Required</i> <u>Requirement:</u> The Project applicant shall submit a Health and Safety Plan for the review and approval by the City in order to protect project construction workers from risks associated with hazardous materials. The Project applicant shall implement the approved Plan.</p> <p><i>d. Best Management Practices (BMPs) Required for Contaminated Sites</i> <u>Requirement:</u> The Project applicant shall ensure that Best Management Practices (BMPs) are implemented by the contractor during construction to minimize potential soil and groundwater hazards. These shall include the following:</p> <ul style="list-style-type: none"> i. Soil generated by construction activities shall be stockpiled on-site in a secure and safe manner. All contaminated soils determined to be hazardous or non-hazardous waste must be adequately profiled (sampled) prior to acceptable reuse or disposal at an appropriate off-site facility. Specific sampling and handling and transport procedures for reuse or disposal shall be in accordance with applicable local, state, and federal requirements. ii. Groundwater pumped from the subsurface shall be contained on-site in a secure and safe manner, prior to treatment and disposal, to ensure environmental and health issues are resolved pursuant to applicable laws and policies. Engineering controls shall be utilized, which include impermeable barriers to prohibit groundwater and vapor intrusion into the building.

Hydrology and Water Quality		
<p>SCA HYD-1 (Standard Condition of Approval 48): <i>Erosion and Sedimentation Control Plan for Construction</i></p> <p><i>a. Erosion and Sedimentation Control Plan Required</i> <u>Requirement:</u> The Project applicant shall submit an Erosion and Sedimentation Control Plan to the City for review and approval. The Erosion and Sedimentation Control Plan shall include all necessary measures to be taken to prevent excessive stormwater runoff or carrying by stormwater runoff of solid materials on to lands of adjacent property owners, public streets, or to creeks as a result of conditions created by grading and/or construction operations. The Plan shall include, but not be limited to, such measures as short-term erosion control planting, waterproof slope covering, check dams, interceptor ditches, benches, storm drains, dissipation structures, diversion dikes, retarding berms and barriers, devices to trap, store and filter out sediment, and stormwater retention basins. Off-site work by the project applicant may be necessary. The project applicant shall obtain permission or easements necessary for off-site work. There shall be a clear notation that the plan is subject to changes as changing conditions occur. Calculations of anticipated stormwater runoff and sediment volumes shall be included, if required by the City. The Plan shall specify that, after construction is complete, the project applicant shall ensure that the storm drain system shall be inspected and that the Project applicant shall clear the system of any debris or sediment.</p> <p><i>b. Erosion and Sedimentation Control During Construction</i> <u>Requirement:</u> The Project applicant shall implement the approved Erosion and Sedimentation Control Plan. No grading shall occur during the wet weather season (October 15 through April 15) unless specifically authorized in writing by the Bureau of Building.</p>	<ul style="list-style-type: none"> a. Prior to approval of construction-related permit. b. During construction. 	City of Oakland Bureau of Building

Hydrology and Water Quality (cont.)		
<p>SCA HYD-2 (Standard Condition of Approval 54): NPDES C.3 Stormwater Requirements for Regulated Projects</p> <p>a. Post-Construction Stormwater Management Plan Required</p> <p><u>Requirement:</u> The Project applicant shall comply with the requirements of Provision C.3 of the Municipal Regional Stormwater Permit issued under the National Pollutant Discharge Elimination System (NPDES). The project applicant shall submit a Post-Construction Stormwater Management Plan to the City for review and approval with the project drawings submitted for site improvements, and shall implement the approved Plan during construction. The Post-Construction Stormwater Management Plan shall include and identify the following:</p> <ul style="list-style-type: none"> i. Location and size of new and replaced impervious surface; ii. Directional surface flow of stormwater runoff; iii. Location of proposed on-site storm drain lines; iv. Site design measures to reduce the amount of impervious surface area; v. Source control measures to limit stormwater pollution; vi. Stormwater treatment measures to remove pollutants from stormwater runoff, including the method used to hydraulically size the treatment measures; and vii. Hydromodification management measures, if required by Provision C.3, so that post-Project stormwater runoff flow and duration match pre-Project runoff. <p>b. Maintenance Agreement Required</p> <p><u>Requirement:</u> The project applicant shall enter into a maintenance agreement with the City, based on the Standard City of Oakland Stormwater Treatment Measures Maintenance Agreement, in accordance with Provision C.3, which provides, in part, for the following:</p> <ul style="list-style-type: none"> i. The Project applicant accepting responsibility for the adequate installation/construction, operation, maintenance, inspection, and reporting of any on-site stormwater treatment measures being incorporated into the Project until the responsibility is legally transferred to another entity; and ii. Legal access to the on-site stormwater treatment measures for representatives of the City, the local vector control district, and staff of the Regional Water Quality Control Board, San Francisco Region, for the purpose of verifying the implementation, operation, and maintenance of the on-site stormwater treatment measures and to take corrective action if necessary. <p>The maintenance agreement shall be recorded at the County Recorder’s Office at the applicant’s expense.</p>	<ul style="list-style-type: none"> a. Prior to approval of construction-related permit. b. Prior to building permit final. 	<ul style="list-style-type: none"> a. City of Oakland Bureau of Building b. City of Oakland Bureau of Building

Standard Conditions of Approval – Project Scheme 1	Mitigation Implementation/Monitoring	
	Schedule	Responsibility
Noise		
<p>SCA NOI-1 (Standard Condition of Approval 62) Construction Days/Hours</p> <p><u>Requirement:</u> The project applicant shall comply with the following restrictions concerning construction days and hours:</p> <ol style="list-style-type: none"> Construction activities are limited to between 7:00 a.m. and 7:00 p.m. Monday through Friday, except that pier drilling and/or other extreme noise generating activities greater than 90 dBA shall be limited to between 8:00 a.m. and 4:00 p.m. Construction activities are limited to between 9:00 a.m. and 5:00 p.m. on Saturday. In residential zones and within 300 feet of a residential zone, construction activities are allowed from 9:00 a.m. to 5:00 p.m. only within the interior of the building with the doors and windows closed. No pier drilling or other extreme noise generating activities greater than 90 dBA are allowed on Saturday. No construction is allowed on Sunday or federal holidays. <p>Construction activities include, but are not limited to, truck idling, moving equipment (including trucks, elevators, etc.) or materials, deliveries, and construction meetings held on-site in a non-enclosed area.</p> <p>Construction activity proposed outside of the above days and hours for special activities (such as concrete pouring which may require more continuous amounts of time) shall be evaluated on a case-by-case basis by the City, with criteria including the urgency/emergency nature of the work, the proximity of residential or other sensitive uses, and a consideration of nearby residents'/occupants' preferences. The project applicant shall notify property owners and occupants located within 300 feet at least 14 calendar days prior to construction activity proposed outside of the above days/hours. When submitting a request to the City to allow construction activity outside of the above days/hours, the project applicant shall submit information concerning the type and duration of proposed construction activity and the draft public notice for City review and approval prior to distribution of the public notice.</p>	During construction.	City of Oakland Bureau of Building
<p>SCA NOI-2: (Standard Condition of Approval 63) Construction Noise</p> <p><u>Requirement:</u> The project applicant shall implement noise reduction measures to reduce noise impacts due to construction. Noise reduction measures include, but are not limited to, the following:</p> <ol style="list-style-type: none"> Equipment and trucks used for project construction shall utilize the best available noise control techniques (e.g., improved mufflers, equipment redesign, use of intake silencers, ducts, engine enclosures and acoustically-attenuating shields or shrouds) wherever feasible. Except as provided herein, impact tools (e.g., jack hammers, pavement breakers, and rock drills) used for project construction shall be hydraulically or electrically powered to avoid noise associated with compressed air exhaust from pneumatically powered tools. However, where use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used; this muffler can lower noise levels from the exhaust by up to about 10 dBA. External jackets on the tools themselves shall be used, if such jackets are commercially available, and this could achieve a reduction of 5 dBA. Quieter procedures shall be used, such as drills rather than impact equipment, whenever such procedures are available and consistent with construction procedures. Applicant shall use temporary power poles instead of generators where feasible. Stationary noise sources shall be located as far from adjacent properties as possible, and they shall be muffled and enclosed within temporary sheds, incorporate insulation barriers, or use other measures as determined by the City to provide equivalent noise reduction. The noisiest phases of construction shall be limited to less than 10 days at a time. Exceptions may be allowed if the City determines an extension is necessary and all available noise reduction controls are implemented. 	During construction.	City of Oakland Bureau of Building

Standard Conditions of Approval – Project Scheme 1	Mitigation Implementation/Monitoring	
	Schedule	Responsibility
Noise (cont.)		
<p>SCA NOI-3 (Standard Condition of Approval 64) <i>Extreme Construction Noise</i></p> <p>a. Construction Noise Management Plan Required</p> <p><u>Requirement:</u> Prior to any extreme noise generating construction activities (e.g., pier drilling, pile driving and other activities generating greater than 90dBA), the project applicant shall submit a Construction Noise Management Plan prepared by a qualified acoustical consultant for City review and approval that contains a set of site-specific noise attenuation measures to further reduce construction impacts associated with extreme noise generating activities. The project applicant shall implement the approved Plan during construction. Potential attenuation measures <u>include, but are not limited to, the following:</u></p> <ol style="list-style-type: none"> Erect temporary plywood noise barriers around the construction site, particularly along on sites adjacent to residential buildings; Implement “quiet” pile driving technology (such as pre-drilling of piles, the use of more than one pile driver to shorten the total pile driving duration), where feasible, in consideration of geotechnical and structural requirements and conditions; Utilize noise control blankets on the building structure as the building is erected to reduce noise emission from the site; Evaluate the feasibility of noise control at the receivers by temporarily improving the noise reduction capability of adjacent buildings by the use of sound blankets for example <u>and implement such measure if such measures are feasible and would noticeably reduce noise impacts;</u> and Monitor the effectiveness of noise attenuation measures by taking noise measurements. <p>b. Public Notification Required</p> <p><u>Requirement:</u> The project applicant shall notify property owners and occupants located within 300 feet of the construction activities at least 14 calendar days prior to commencing extreme noise generating activities. Prior to providing the notice, the project applicant shall submit to the City for review and approval the proposed type and duration of extreme noise generating activities and the proposed public notice. The public notice shall provide the estimated start and end dates of the extreme noise generating activities and describe noise attenuation measures to be implemented.</p>	<ol style="list-style-type: none"> Prior to approval of construction-related permit. During construction. 	City of Oakland Bureau of Building
<p>SCA NOI-4 (Standard Condition of Approval 66) <i>Construction Noise Complaints</i></p> <p><u>Requirement:</u> The project applicant shall submit to the City for review and approval a set of procedures for responding to and tracking complaints received pertaining to construction noise, and shall implement the procedures during construction. At a minimum, the procedures shall include:</p> <ol style="list-style-type: none"> Designation of an on-site construction complaint and enforcement manager for the project; A large on-site sign near the public right-of-way containing permitted construction days/hours, complaint procedures, and phone numbers for the project complaint manager and City Code Enforcement unit; Protocols for receiving, responding to, and tracking received complaints; and Maintenance of a complaint log that records received complaints and how complaints were addressed, which shall be submitted to the City for review upon the City’s request. 	Prior to approval of construction-related permit.	City of Oakland Bureau of Building

Standard Conditions of Approval – Project Scheme 1	Mitigation Implementation/Monitoring	
	Schedule	Responsibility
Noise (cont.)		
<p>SCA NOI-5 (Standard Condition of Approval 67) Exposure to Community Noise</p> <p><u>Requirement:</u> The project applicant shall submit a Noise Reduction Plan prepared by a qualified acoustical engineer for City review and approval that contains noise reduction measures (e.g., sound-rated window, wall, and door assemblies) to achieve an acceptable interior noise level in accordance with the land use compatibility guidelines of the Noise Element of the Oakland General Plan. The applicant shall implement the approved Plan during construction. To the maximum extent practicable, interior noise levels shall not exceed the following:</p> <ol style="list-style-type: none"> 45 dBA: Residential activities, civic activities, hotels 50 dBA: Administrative offices; group assembly activities 55 dBA: Commercial activities 65 dBA: Industrial activities 	Prior to approval of construction-related permit.	City of Oakland Bureau of Planning and Bureau of Building
<p>SCA NOI-6 (Standard Condition of Approval 68) Operational Noise</p> <p><u>Requirement:</u> Noise levels from the project site after completion of the project (i.e., during project operation) shall comply with the performance standards of chapter 17.120 of the Oakland Planning Code and chapter 8.18 of the Oakland Municipal Code. If noise levels exceed these standards, the activity causing the noise shall be abated until appropriate noise reduction measures have been installed and compliance verified by the City.</p>	Ongoing.	City of Oakland Bureau of Building
<p>SCA NOI-7 (Standard Condition of Approval 70) Vibration Impacts on Adjacent Structures or Vibration-Sensitive Activities</p> <p><u>Requirement:</u> The project applicant shall submit a Vibration Analysis prepared by an acoustical and/or structural engineer or other appropriate qualified professional for City review and approval that establishes pre-construction baseline conditions and threshold levels of vibration that could damage the structure at 1904 Franklin Street (local historic resource). The Vibration Analysis shall identify design means and methods of construction that shall be utilized in order to not exceed the thresholds. The applicant shall implement the recommendations during construction.</p>	Prior to construction	City of Oakland Bureau of Building
Population and Housing		
<p>SCA POP-1 (Standard Condition of Approval 70) Jobs/Housing Impact Fee Requirement: The project applicant shall comply with the requirements of the City of Oakland Jobs/Housing Impact Fee Ordinance (chapter 15.68 of the Oakland Municipal Code).</p>	Prior to issuance of building permit; subsequent milestones pursuant to ordinance.	City of Oakland Bureau of Building
Public Services, Parks, and Recreation Facilities		
<p>SCA PUB-1 (Standard Condition of Approval 73) Capital Improvements Impact Fee</p> <p><u>Requirement:</u> The project applicant shall comply with the requirements of the City of Oakland Capital Improvements Fee Ordinance (chapter 15.74 of the Oakland Municipal Code).</p>	Prior to issuance of building permit	City of Oakland Bureau of Building

Transportation and Circulation		
<p>SCA TRA-1 (Standard Condition of Approval 75) Construction Activity in the Public Right-of-Way</p> <p><i>a. Obstruction Permit Required</i></p> <p><u>Requirement:</u> The project applicant shall obtain an obstruction permit from the City prior to placing any temporary construction-related obstruction in the public right-of-way, including City streets, sidewalks, bicycle facilities, and bus stops.</p> <p><i>b. Traffic Control Plan Required</i></p> <p><u>Requirement:</u> In the event of obstructions to vehicle or bicycle travel lanes, bus stops, or sidewalks, the project applicant shall submit a Traffic Control Plan to the City for review and approval prior to obtaining an obstruction permit. The project applicant shall submit evidence of City approval of the Traffic Control Plan with the application for an obstruction permit. The Traffic Control Plan shall contain a set of comprehensive traffic control measures for auto, transit, bicycle, and pedestrian accommodations (or Detours, if accommodations are not feasible), including detour signs if required, lane closure procedures, signs, cones for drivers, and designated construction access routes. The Traffic Control Plan shall be in conformance with the City’s Supplemental Design Guidance for Accommodating Pedestrians, Bicyclists, and Bus Facilities in Construction Zones. The project applicant shall implement the approved Plan during construction.</p> <p><i>c. Repair of City Streets</i></p> <p><u>Requirement:</u> The project applicant shall repair any damage to the public right-of way, including streets and sidewalks caused by project construction at his/her expense within one week of the occurrence of the damage (or excessive wear), unless further damage/excessive wear may continue; in such case, repair shall occur prior to approval of the final inspection of the construction-related permit. All damage that is a threat to public health or safety shall be repaired immediately.</p>	<p>a. Prior to approval of construction-related permit.</p> <p>b. Prior to approval of construction-related permit.</p> <p>c. Prior to building permit final.</p>	<p>City of Oakland Department of Transportation</p>
<p>SCA TRA-2 (Standard Condition of Approval 76) Bicycle Parking</p> <p><u>Requirement:</u> The project applicant shall comply with the City of Oakland Bicycle Parking Requirements (chapter 17.118 of the Oakland Planning Code). The project drawings submitted for construction-related permits shall demonstrate compliance with the requirements.</p>	<p>Prior to approval of construction-related permit.</p>	<p>City of Oakland Bureau of Planning and Bureau of Building</p>
<p>SCA TRA-3 (Standard Condition of Approval 77): Transportation Improvements.</p> <p>The project applicant shall implement the recommended on- and off-site transportation-related improvements contained within the Transportation Impact Review for the project (e.g., signal timing adjustments, restriping, signalization, traffic control devices, roadway reconfigurations, transportation demand management measures, and transit, pedestrian, and bicyclist amenities). The project applicant is responsible for funding and installing the improvements, and shall obtain all necessary permits and approvals from the City and/or other applicable regulatory agencies such as, but not limited to, Caltrans (for improvements related to Caltrans facilities) and the California Public Utilities Commission (for improvements related to railroad crossings), prior to installing the improvements. To implement this measure for intersection modifications, the project applicant shall submit Plans, Specifications, and Estimates (PS&E) to the City for review and approval. All elements shall be designed to applicable City standards in effect at the time of construction and all new or upgraded signals shall include these enhancements as required by the City. All other facilities supporting vehicle travel and alternative modes through the intersection shall be brought up to both City standards and ADA standards (according to Federal and State Access Board guidelines) at the time of construction. Current City Standards call for, among other items, the elements listed below:</p> <p>a. 2070L Type Controller with cabinet accessory</p> <p>b. GPS communication (clock)</p>	<p>Prior to building permit final or as otherwise specified</p>	<p>City of Oakland Bureau of Building and City of Oakland Department of Transportation</p>

ATTACHMENT B

Project Consistency with Community Plan or Zoning, Per CEQA Guidelines Section 15183

Section 15183 (a) of the California Environmental Quality Act (CEQA) Guidelines states that “...projects which are consistent with the development density established by the existing zoning, community plan, or general plan policies for which an Environmental Impact Report (EIR) was certified shall not require additional environmental review, except as may be necessary to examine whether there are project-specific significant effects which are peculiar to the project or its site.”

Further, Section 15183 states,

- (b) In approving a project meeting the requirements of this section, a public agency shall limit its examination of environmental effects to those which the agency determines, in an initial study or other analysis:
 - (1) Are peculiar to the project or the parcel on which the project would be located,
 - (2) Were not analyzed as significant effects in a prior EIR on the zoning action, general plan or community plan with which the project is consistent,
 - (3) Are potentially significant off-site impacts and cumulative impacts which were not discussed in the prior EIR prepared for the general plan, community plan or zoning action, or
 - (4) Are previously identified significant effects which, as a result of substantial new information which was not known at the time the EIR was certified, are determined to have a more severe adverse impact than discussed in the prior EIR.
- (c) If an impact is not peculiar to the parcel or to the project, has been addressed as a significant effect in the prior EIR, or can be substantially mitigated by the imposition of uniformly applied development policies or standards, as contemplated by subdivision (e) below, then an additional EIR need not be prepared for the project solely on the basis of that impact.

Section 15183 (f) states, “An effect of a project on the environment shall not be considered peculiar to the project or the parcel for the purposes of this section if uniformly applied development policies or standards have been previously adopted by the city or county with a finding that the development policies or standards will substantially mitigate that environmental effect when applied to future projects, unless substantial new information shows that the policies or standards will not substantially mitigate the environmental effect.”

Project Consistency. In accordance with State CEQA Guidelines 15183, the Project qualifies for a Community Plan Exemption because the following findings can be made:

- The General Plan land use designation for the site is Central Business District (CBD). This designation applies to areas suitable for a high density large-scale commercial office, among many other high density uses, in the central Downtown core of the City. The proposed office and retail development, with Scheme 1 and Alternative Scheme 2, would be consistent with this designation.
- The site is zoned Central Business District Pedestrian Retail Commercial Zone (CBD-P) and Central Business District General Commercial Zone (CBD-C). The Project would be consistent with the purposes of the CBD-P zone, which is generally intended to create, maintain, and enhance areas Central Business District appropriate for a wide range of ground floor retail uses and office uses on the upper story spaces. The Project would also be consistent with the purposes of the CBD-C zone, which is generally intended to create, maintain, and enhance areas of the Central Business District appropriate for a wide range of ground floor office activities. Upper-story spaces are intended to be available for a wide range of office or other commercial activities. As the Project would develop ground floor retail spaces and office lobby, and upper level office and open space uses, the Project, both Scheme 1 and Alternative Scheme 2 would be consistent with the CBD-P and CBD-C zoning designations.
- The Project site is located in CBD Height Area 7, which has no maximum height limit and a 120-foot maximum allowable building base height. Scheme 1 proposes an approximately 212-foot tall office tower over an approximately 32-foot-tall base (244 feet to top of building, excluding the additional 26 feet of roof penthouse and PV elements above the top of exterior building wall). Alternative Scheme 2 proposes a 303-foot tall office tower over an approximately 64-foot-tall base (367 feet to top of building, excluding the additional 34 feet of roof penthouse and PV elements above the top of exterior building wall). Thus, the Project is consistent with the maximum limits of CBD Height Area 7. CBD Height Area 7 also has a maximum FAR of 20.0, with which the Scheme 1 FAR of 15.7 and the Alternative Scheme 2 FAR of 20.0 would be consistent.
- There are no peculiar aspects that would increase the severity of any of the previously identified significant cumulative effects in the 1998 LUTE EIR.
- The Project is consistent with the development goals in the Central District Urban Renewal Plan (2011 Renewal Plan Amendments EIR). The 2011 Renewal Plan Amendments EIR details particular projects and programs that are anticipated to include targeting investments and activities toward certain catalyst projects, infrastructure improvement projects and infill development projects that are consistent with the General Plan. The Project, Scheme 1 and Alternative Scheme 2, is consistent with the following major goals of these projects and programs:
 - Revitalization and strengthening of the Oakland Central District's historical role as the major regional retail center for the Metropolitan Oakland Area.
 - Provisions of employment and other economic benefits to disadvantaged persons living within or near the Redevelopment Project Area.
 - Improved environmental design within the Project Area, including creation of a definite sense of place, clear gateways, emphatic focal points and physical design which expresses and respects the special nature of each sub-area.

Project-specific impacts peculiar to the project or site, or those not analyzed in a prior EIR. Because the Project is consistent with the policies, land use designation, and development parameters in the 1998 LUTE EIR, the Project's potential contribution to cumulatively significant effects has already been addressed in those Previous EIRs. In addition, the 2011 Renewal Plan Amendments EIR analyzed the cumulative effects of development projects that would occur absent the Renewal Plan Amendments, which would include the Project, which is not specifically addressed in the EIR.

Therefore, consistent with CEQA Guidelines Section 15183 which allows for streamlined environmental review, this document needs only to consider whether there are project-specific effects peculiar to the project or its site, and relies on the streamlining provisions of CEQA Guidelines Section 15183 to not re-consider cumulative effects.

New Significant Effects

The Project, Scheme 1 or Alternative Scheme 2, would not cause new specific effects that were not addressed in the 1998 LUTE EIR or the 2011 Renewal Plan Amendments EIR. The analysis in the CEQA Checklist analysis includes all the resource topics identified as potentially incurring significant unavoidable impacts, and concludes that there would be no impacts that were not analyzed in Previous EIRs.

As these analyses demonstrate, neither Scheme 1 or Alternative Scheme 2 of the Project would substantially increase the severity of the significant impacts identified in the 1998 LUTE EIR or the 2011 Renewal Plan Amendments EIR, nor would the Project result in new significant impacts that were not identified in these Previous EIRs. Further, there have been no substantial changes in circumstances following certification of the Previous EIRs that would result in any new specific significant effects of the Project.

Substantial New Information

There is no new information that was not known when the Previous EIRs were certified that would cause more severe adverse impacts than discussed in the Previous EIRs. There have been no significant changes in the underlying development assumptions, nor in the applicability or feasibility of mitigation measures or SCAs included in the Previous EIRs.

Standard Conditions of Approval

SCAs incorporate policies and standards from various adopted plans, policies, and ordinances, which have been found to substantially mitigate environmental effects. The SCAs are adopted as requirements of an individual project when it is approved by the City and are designed to, and will, substantially mitigate environmental effects, thus meeting the provision of Section 15183 (f), which states that impacts that are addressed by uniformly applied development standards (in this case, City of Oakland SCAs) are not considered peculiar to the parcel for the purpose of requiring further environmental review. Therefore, the Project, for Scheme 1 or Alternative Scheme 2, requires no additional environmental review under California PRC Section 21083.3 and CEQA Guidelines Section 15183.

This page intentionally left blank

ATTACHMENT C

Infill Performance Standards, Per CEQA Guidelines Section 15183.3

Based on CEQA Guidelines Section 15183.3(d)(1), the Lead Agency must examine an eligible infill project in light of the prior EIR to determine whether the infill project will cause any effects that require additional review under CEQA. This evaluation shall:

- A. Document whether the infill project satisfies the applicable performance standards in Appendix M.
- B. Explain whether the effects of the infill project were analyzed in a prior EIR
- C. Explain whether the infill project will cause new specific effects (defined as “an effect that was not addressed in the prior EIR and that is specific to the infill project or the infill project site”).
- D. Explain whether substantial new information shows that the adverse environmental effects of the infill project are more significant (defined as “substantially more severe”) than described in the prior EIR.

If the infill project will cause new specific effects or more significant effects, the evaluation should indicate whether uniformly applicable development policies or standards will substantially mitigate those effects.

Table C-1 below shows how the Project satisfies each of the applicable requirements.

Consistent with CEQA Guidelines Section 15183.3(a), which allows streamlining for qualified infill Projects, this environmental document is limited to topics applicable to Project-level review where the effects of infill development have been addressed in other planning level decisions of the General Plan Land Use and Transportation Element (LUTE) and LUTE Environmental Impact Report (EIR) (1998), the Renewal Plan Amendments EIR (2011), or by uniformly applicable development policies (Standard Conditions of Approval) which mitigate such impacts. As the analysis in the section above titled “Consistency with Community Plan” demonstrates, the Project would not substantially increase the severity of the significant impacts identified in the Previous EIRs, nor would it result in new significant impacts that were not identified in the Previous EIRs. Further, there have been no substantial changes in circumstances following certification of the 2011 Renewal Plan Amendments EIR that would result in any new specific effects. Therefore, this document fulfills the review requirements for both Scheme 1 and Alternative Scheme 2 of the Project pursuant to Section 15183.3.

**TABLE C-1
PROJECT INFILL ELIGIBILITY**

CEQA Eligibility Criteria	Eligible?/Notes for Project
<p>1. Be located in an urban area on a site that either has been previously developed or that adjoins existing qualified urban uses on at least seventy-five percent of the site's perimeter. For the purpose of this subdivision "adjoin" means the infill project is immediately adjacent to qualified urban uses or is only separated from such uses by an improved right-of-way. (CEQA Guidelines Section 15183.3[b][1])</p>	<p>Yes, for both Scheme 1 and Alternative Scheme 2.</p> <p>The Project site has been previously developed with an existing vacant commercial building and parking lot, and other various uses (residential, a gasoline service station) prior to the 1950s. The Project site adjoins existing urban uses, including surface parking lots and commercial buildings, as described in the Project Description (Section 5).</p>
<p>2. Satisfy the performance Standards provided in Appendix M (CEQA Guidelines Section 15183.3[b][2]) as presented in 2a and 2b below:</p>	--
<p>2a. <i>Performance Standards Related to Project Design.</i> All projects must implement all of the following:</p>	--
<p>Renewable Energy.</p> <p><i>Non-Residential Projects.</i> All nonresidential projects shall include onsite renewable power generation, such as solar photovoltaic, solar thermal, and wind power generation, or clean back-up power supplies, where feasible.</p> <p><i>Residential Projects.</i> Residential projects are also encouraged to include such on-site renewable power generation.</p>	<p>Yes, for both Scheme 1 and Alternative Scheme 2.</p> <p>The Project shall include renewable power generation and provides for the installation of a penthouse-top canopy structure to support photovoltaic (PV) panels on the roof.</p>
<p>Soil and Water Remediation.</p> <p>If the project site is included on any list compiled pursuant to Section 65962.5 of the Government Code, the project shall document how it has remediated the site, if remediation is completed. Alternatively, the project shall implement the recommendations provided in a preliminary endangerment assessment or comparable document that identifies remediation appropriate for the site.</p>	<p>The Project site properties are not currently on the Cortese List. As discussed in Section 7.7, <i>Hazards and Hazardous Materials</i>, a 2016 Phase I ESA (Nova Consulting) and a 2016 Phase II Investigation (ERM) were conducted for the Project site, which indicated benzene in soil vapor that exceeded the 2019 commercial environmental screening levels (ESLs). A 2020 Phase I ESA (Roux Associates) requires the Project Applicant prepare and implement a Site Management Plan (SMP) prior to construction to address the potential soil vapor. Also, the ESA recommends an existing 500-gallon diesel AST will need to be maintained, and if removed, will need to be properly decommissioned; the Project Applicant will remove the AST. Given prior land uses and numerous LUST and cleanup cases in the vicinity of the property, there's likelihood that petroleum hydrocarbon and chlorinated hydrocarbon impacts could have migrated onto the property.</p> <p>The Project would be required to implement SCA HAZ-2, Hazardous Building Materials and Site Contamination, which obligates the Project Applicant to submit and implement the Phase I/II to the City for approval. SCA HAZ-2 further requires the Project Applicant to submit to the City evidence of approval for any proposed remedial action, including potential vapor intrusion mitigation systems, and required clearances by the applicable local, state, or federal regulatory agency.</p>

**TABLE C-1
PROJECT INFILL ELIGIBILITY**

CEQA Eligibility Criteria	Eligible?/Notes for Project
<p>2. (cont.) Residential Units Near High-Volume Roadways and Stationary Sources. If a project includes residential units located within 500 feet, or other distance determined to be appropriate by the local agency or air district based on local conditions, of a high volume roadway or other significant sources of air pollution, the project shall comply with any policies and standards identified in the local general plan, specific plan, zoning code, or community risk reduction plan for the protection of public health from such sources of air pollution.</p> <p>If the local government has not adopted such plans or policies, the project shall include measures, such as enhanced air filtration and project design, that the lead agency finds, based on substantial evidence, will promote the protection of public health from sources of air pollution. Those measures may include, among others, the recommendations of the California Air Resources Board, air districts, and the California Air Pollution Control Officers Association.</p>	No. The Project does not include residential use.
<p>2b. <i>Additional Performance Standards by Project Type.</i> In addition to implementing all the features described in 2a above, the project must meet eligibility requirements provided below by project type.</p>	
<p>Residential. A residential project must meet one of the following:</p> <p>A. <i>Projects achieving below average regional per capita vehicle miles traveled (VMT).</i> A residential project is eligible if it is located in a “low vehicle travel area” within the region;</p> <p>B. <i>Projects located within ½ mile of an Existing Major Transit Stop or High Quality Transit Corridor.</i> A residential project is eligible if it is located within ½ mile of an existing major transit stop or an existing stop along a high quality transit corridor; or</p> <p>C. <i>Low - Income Housing.</i> A residential or mixed-use project consisting of 300 or fewer residential units all of which are affordable to low income households is eligible if the developer of the development project provides sufficient legal commitments to the lead agency to ensure the continued availability and use of the housing units for lower income households, as defined in Section 50079.5 of the Health and Safety Code, for a period of at least 30 years, at monthly housing costs, as determined pursuant to Section 50053 of the Health and Safety Code.</p>	No. The Project does not include residential use.
<p>Commercial/Retail. A commercial/retail project must meet one of the following:</p> <p>A. <i>Regional Location.</i> A commercial project with no single-building floor-plate greater than 50,000 square feet is eligible if it locates in a “low vehicle travel area”; or</p> <p>B. <i>Proximity to Households.</i> A project with no single-building floor-plate greater than 50,000 square feet located within ½ mile of 1,800 households is eligible.</p>	<p>Yes. The Project is eligible under Section (A), both Scheme 1 and Alternative Scheme 2.</p> <p>(A) As summarized in Section 7.13, Transportation and Circulation, the estimated 2020 and 2040 VMT per capita and VMT per worker for TAZ 224, the TAZ in which the Project is located. These levels are 15 percent below the regional average.</p>

**TABLE C-1
PROJECT INFILL ELIGIBILITY**

CEQA Eligibility Criteria	Eligible?/Notes for Project
<p>2. (cont.) Office Building. An office building project must meet <u>one</u> of the following:</p> <p>A. <i>Regional Location.</i> Office buildings, both commercial and public, are eligible if they locate in a low vehicle travel area; or</p> <p>B. <i>Proximity to a Major Transit Stop.</i> Office buildings, both commercial and public, within ½ mile of an existing major transit stop, or ¼ mile of an existing stop along a high quality transit corridor, are eligible.</p>	<p>Yes. The Project is eligible under Section (A) and (B), both Scheme 1 and Alternative Scheme 2.</p> <p>(A) As summarized in Section 7.13, Transportation and Circulation, the estimated 2020 and 2040 VMT per capita and VMT per worker for TAZ 224, the TAZ in which the Project is located. These levels are 15 percent below the regional average.</p> <p>(B) The Project would be located within 0.2 miles of the 19th Street Oakland BART Station and frequent bus service along Broadway (Line 1T with 10-minute headways. Line 6 with 12-minute peak headways, Line 51A with 10-minute peak headways, and Line 72/72M/72R with combined 10- to 12-minute peak headways on weekdays as of August 2022).</p>
<p>Schools.</p> <p>Elementary schools within 1 mile of 50 percent of the projected student population are eligible. Middle schools and high schools within 2 miles of 50 percent of the projected student population are eligible. Alternatively, any school within ½ mile of an existing major transit stop or an existing stop along a high quality transit corridor is eligible.</p> <p>Additionally, to be eligible, all schools shall provide parking and storage for bicycles and scooters, and shall comply with the requirements of Sections 17213, 17213.1, and 17213.2 of the California Education Code.</p>	<p>Not Applicable.</p>
<p>Transit.</p> <p>Transit stations, as defined in Section 15183.3(e)(1), are eligible.</p>	<p>Not Applicable.</p>
<p>Small Walkable Community Projects.</p> <p>Small walkable community projects, as defined in Section 15183.3, subdivision (f)(5), that implement the project features in 2a above are eligible.</p>	<p>Not Applicable.</p>
<p>3. Be consistent with the general use designation, density, building intensity, and applicable policies specified for the project area in either a sustainable communities strategy or an alternative planning strategy, except as provided in CEQA Guidelines Sections 15183.3(b)(3)(A) or (b)(3)(B) below:</p> <p>(b)(3)(A). Only where an infill project is proposed within the boundaries of a metropolitan planning organization for which a sustainable communities strategy or an alternative planning strategy will be, but is not yet in effect, a residential infill project must have a density of at least 20 units per acre, and a retail or commercial infill project must have a floor area ratio of at least 0.75; or</p> <p>(b)(3)(B). Where an infill project is proposed outside of the boundaries of a metropolitan planning organization, the infill project must meet the definition of a “small walkable community project” in CEQA Guidelines §15183.3(f)(5).</p> <p>(CEQA Guidelines Section 15183.3[b][3])</p>	<p>Yes.</p> <p>(See explanation below)</p>

NOTE:

^a Where a project includes some combination of residential, commercial and retail, office building, transit station, and/or schools, the performance standards in this section that apply to the predominant use shall govern the entire project.

Explanation for Eligibility Criterion 3 (from Table C-1 above)

The adopted Plan Bay Area 2050 (2021) serves as the sustainable communities strategy (SCS) for the Bay Area, per Senate Bill 375.⁵⁰ As defined by the Plan, Priority Development Areas (PDAs) are areas where new development will support the needs of residents and workers in a pedestrian-friendly environment served by transit. The Project is located within the “Oakland Downtown & Jack London Square” PDA—the area bounded generally by I-580 on the north, I-980 on the west, the Oakland Estuary on the south, and Lake Merritt and 5th Avenue on the east. The Project is consistent with the Oakland General Plan and the Planning Code, as discussed in Attachment B and noted below.

- The General Plan land use designation for the site is Central Business District (CBD). This designation applies to areas suitable for a high density large-scale commercial office, among many other high density uses, in the central Downtown core of the City. The proposed office and retail development, with Scheme 1 and Alternative Scheme 2, would be consistent with this designation.
- The site is zoned Central Business District Pedestrian Retail Commercial Zone (CBD-P) and Central Business District General Commercial Zone (CBD-C). The Project would be consistent with the purposes of the CBD-P zone, which is generally intended to create, maintain, and enhance areas Central Business District appropriate for a wide range of ground floor retail uses and office uses on the upper story spaces. The Project would also be consistent with the purposes of the CBD-C zone, which is generally intended to create, maintain, and enhance areas of the Central Business District appropriate for a wide range of ground floor office activities. Upper-story spaces are intended to be available for a wide range of office or other commercial activities. As the Project would develop ground floor retail spaces and office lobby, and upper level office and open space uses, the Project, both Scheme 1 and Alternative Scheme 2 would be consistent with the CBD-P and CBD-C zoning designations.
- The Project site is located in CBD Height Area 7, which has no maximum height limit and a 120-foot maximum allowable building base height. Scheme 1 proposes a 216-foot tall office tower over an approximately 33-foot-tall base (249 feet to top of building, excluding additional 40 feet roof penthouse and PV elements). Alternative Scheme 2 proposes a 303-foot tall office tower over an approximately 64-foot-tall base (367 feet to top of building, excluding additional 40 feet roof penthouse and PV elements). Thus, the Project is consistent with the maximum limits of CBD Height Area 7. CBD Height Area 7 also has a maximum FAR of 20.0, with which the Scheme 1 FAR of 15.7 and the Alternative Scheme 2 FAR of 20.0 would be consistent.

⁵⁰ Metropolitan Transportation Commission (MTC) and Association of Bay Area Governments (ABAG), 2021. *Plan Bay Area 2050*. October 2021.

**Re: Pedestrian Wind Study
1919 Webster Street
RWDI Reference No. 2200848**

Dear Jeremy,

Rowan Williams Davies & Irwin Inc. (RWDI) conducted a pedestrian wind tunnel study for the proposed 1919 Webster Street project in Oakland, CA, results of which were presented in a report dated July 18, 2022 (see Appendix 1). These results pertain to the two designs of the proposed project (17-story and 25-story) within the context of existing and future surroundings.

In Image 1, the scale models of the two designs of the project are shown. Wind speeds that comply with the hazard criterion are predicted at all grade-level areas assessed. Exceptions are as follows:

- An area to the southeast of the site in the Existing, Existing + Project (17-story) and Project (17-story) + Cumulative configurations – see Location 37 in Figures 1A, 1B and 1D in RWDI’s report dated July 18, 2022
- An isolated area near the southwest corner of the proposed 25-story tower within the context of existing surroundings – see Location 10 in Figure 1C

Note that the existing wind hazard to the southeast of the site is expected to be eliminated with the addition of the 25-story tower to the site. Also, in the presence of future surrounding buildings, the wind hazard exceedance at the southwest corner of the 25-story tower will be resolved (see Figure 1E). Wind comfort conditions for the two designs of the proposed project are comparable, with slightly lower wind speeds for the 25-story tower.

Image 1: Two Designs of the Proposed Project: 17-Story Tower (Left) and 25-Story Tower (Right)

Following the completion of the wind tunnel study, RDWI received updated designs for both the 17-story and 25-story towers on July 1, 2022. In the new models, the bicycle entry zone at the southwest corner is recessed and a re-entrant corner is introduced. It is also our understanding that a canopy feature is being considered above the recessed area at the height of one story above grade. Additionally, for the 25-story tower, the porous screens wall enveloping the parking levels may be extended around the southwest corner. These proposed design changes are illustrated in Image 2.

17-Story Tower with Recessed Southwest Corner

25-Story Tower with Recessed Southwest Corner

Southwest Corner Canopy for the 17-Story Tower

Southwest Corner Canopy & Screen Wall extension for the 25-Story Tower

Image 2: Proposed Design Changes

1919 Webster Street
RWDI#2200848
September 8, 2022

The proposed canopy will help deflect the wind downdrafts, while the introduction of the re-entrant corner will disrupt the accelerating winds around the corner. If also implemented, the screen wall extension for the 25-story tower will help redirect the wind downdrafts to the parking levels instead of grade level and dissipate the wind energy. As a result, with the implementation of these changes, reduced wind speeds are expected at the southwest corner at grade level.

RWDI can perform further wind tunnel testing to quantify the effectiveness of these changes, if needed. Should you have any questions or require further information, please do not hesitate to contact us.

Yours very truly,

EXECUTIVE SUMMARY

RWDI was retained to conduct a pedestrian wind assessment for the proposed 1919 Webster Street project in Oakland, CA (Image 1). The assessment was conducted for the Existing, Existing + Project and Project + Cumulative configurations, for two different designs of the proposed project (17-story and 25-story). The project site and photographs of the wind tunnel study model and the wind statistics recorded at the Metropolitan Oakland International Airport used in the study are shown in Images 1, 2A through 2E and 3, respectively. The City of Oakland planning code requirement which deals with hazard as related to wind force, is also described to assist with the interpretation of the results presented. For information purposes, we also provide an assessment against the applicable pedestrian wind comfort criteria.

The predicted wind hazard and comfort conditions pertaining to the five site and surrounding configurations assessed are graphically depicted on site plans in Figures 1A through 2E. These conditions and the associated wind speeds are also presented in Table 1. These results are presented in the attached results package and can be summarized as follows:

Wind Hazard Conditions:

- In the Existing configuration, wind speeds comply with the hazard criterion at all areas assessed, except for a location to the southeast of the site, on the sidewalk of 19th Street.
- With the addition of the 17-story tower to the site (Existing + Project (17-story) configuration), wind hazard conditions are expected to be similar to those in the Existing configuration. Similar wind hazard conditions are predicted in the presence of the future surrounding buildings (Project (17-story) + Cumulative configuration).
- With the addition of the 25-story tower to the site (Existing + Project (25-story) configuration), the existing wind hazard is expected to be eliminated, but a new exceedance is predicted at the southwest corner of the proposed tower, with an additional hour per year. With the addition of the future surrounding buildings in the Project (25-story) + Cumulative configuration, the wind hazard criterion will be met at all areas assessed.

Wind Comfort Conditions:

- Wind speeds at 14 locations in the Existing configuration exceed the comfort criterion.
- With the addition of the 17-story tower to the site (Existing + Project (17-story) configuration), wind speeds are expected to exceed the comfort criterion at 21 locations. These conditions will be improved for the 25-story tower (Existing + Project (25-story) configuration), for which the comfort criterion is predicted to be exceeded at 16 locations.

**PEDESTRIAN WIND STUDY
1919 WEBSTER STREET**

RWDI #2200848
July 18, 2022

- A slight increase in wind comfort speeds is anticipated in the presence of future surrounding buildings, with the comfort criterion being exceeded at 22 and 19 locations for the 17-story and 25-story towers, respectively.

Following the completion of the wind tunnel study, RDWI received updated designs for both the 17-story and 25-story towers on July 1, 2022. In the new models, the bicycle entry zone at the southwest corner is recessed and a re-entrant corner is introduced. These changes are expected to slightly reduce the wind speeds at the southwest corner.

While referring to the Pedestrian Wind Criteria description that follows, we encourage the design team to review the results and assess them against the intended pedestrian usage at specific locations. If there are locations where improved conditions are desired, the RWDI team is prepared to discuss and suggest conceptual wind control strategies. Additional commentary regarding background on wind flow patterns, wind comfort levels and recommendations for wind control measures will be presented within the final report.

Significance Threshold and Comfort Criteria

Significance Threshold

A wind analysis needs to be done if the height of the project is 100 feet or greater (measured to the roof) and one of the following conditions exists: (a) the project is located adjacent to a substantial water body (i.e., Oakland Estuary, Lake Merritt or San Francisco Bay); or (b) the project is located Downtown. Since the proposed project exceeds 100 feet in height and is located Downtown, it is subject to the thresholds of significance.

For the purposes of this study, the City of Oakland considers a significant wind impact to occur if a project were to “Create winds exceeding 36 mph for more than one hour during daylight hours during the year”. Equivalent wind speeds (EWS), defined as average wind speed (mean velocity) adjusted to include the level of gustiness and turbulence, are used to determine significant wind impacts. EWS is calculated using the formula provided below, wherein the mean wind speed is increased when the turbulence intensity is greater than 15%:

$$EWS = V_m \times (2 \times TI + 0.7)$$

where *EWS* = equivalent wind speed

V_m = mean pedestrian-level wind speed

TI = turbulence intensity

Wind Comfort

Although not applicable towards Significant Wind Impacts as defined by the City of Oakland, wind comfort speeds have been calculated for informational purposes. Based on the San Francisco Planning Code Section 148, the comfort criteria are that wind speeds (EWS) do not exceed 11 mph for more than 10% of the time during the year, when calculated for daylight hours, in substantial pedestrian use areas. A lower wind speed threshold of 7 mph may be considered for public seating areas where calmer wind conditions are ideal.

Statement of Limitations

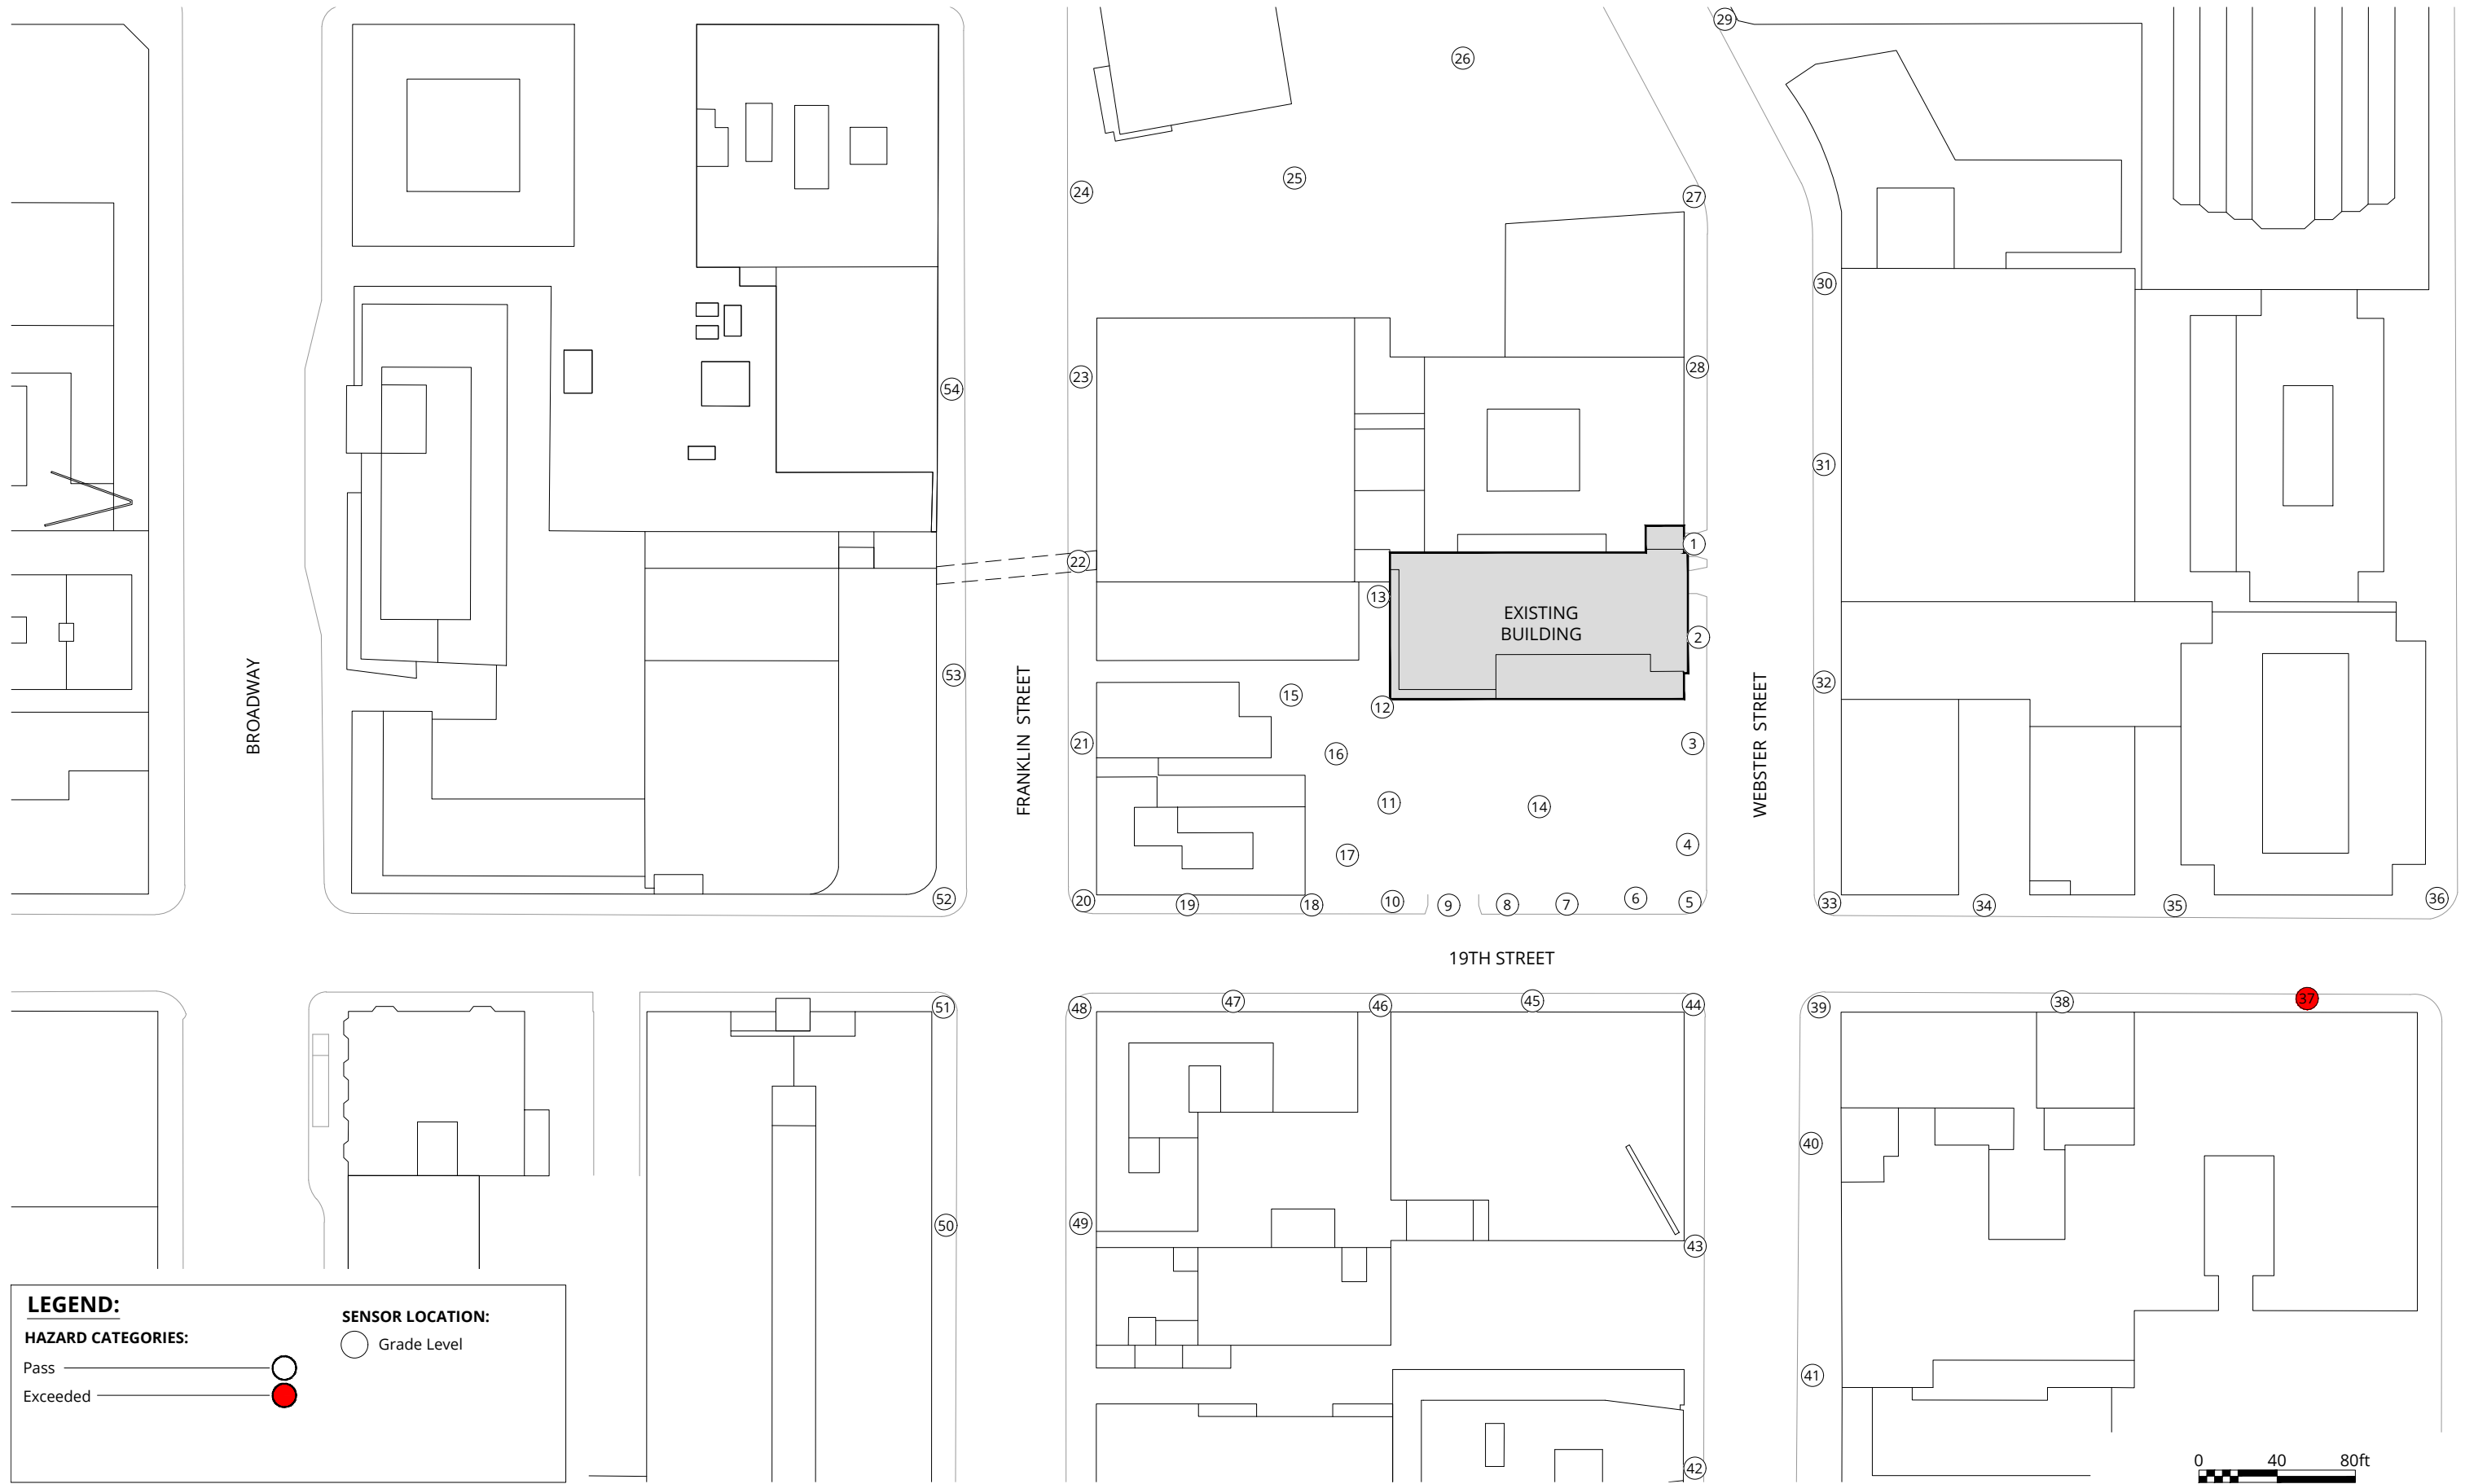

This report was prepared by Rowan Williams Davies & Irwin Inc. ("RWDI") for ESA | Environmental Planning ("Client"). The findings and conclusions presented in this report have been prepared for the Client and are specific to the project described herein ("Project"). The conclusions and recommendations contained in this report are based on the information available to RWDI when this report was prepared. Because the contents of this report may not reflect the final design of the Project or subsequent changes made after the date of this report, RWDI recommends that it be retained by Client during the final stages of the project to verify that the results and recommendations provided in this report have been correctly interpreted in the final design of the Project.

The conclusions and recommendations contained in this report have also been made for the specific purpose(s) set out herein. Should the Client or any other third party utilize the report and/or implement the conclusions and recommendations contained therein for any other purpose or project without the involvement of RWDI, the Client or such third party assumes any and all risk of any and all consequences arising from such use and RWDI accepts no responsibility for any liability, loss, or damage of any kind suffered by Client or any other third party arising therefrom.

Finally, it is imperative that the Client and/or any party relying on the conclusions and recommendations in this report carefully review the stated assumptions contained herein and to understand the different factors which may impact the conclusions and recommendations provided.

Historical Resource Evaluation

memorandum

date November 1, 2022

to Pete Vollmann, Oakland Planning Division

cc Crescentia Brown, ESA

from Amber Grady and Becky Urbano, ESA

subject 1919 Webster Street – Historical Resource Evaluation Memo - DRAFT

The building at 1919 Webster Street is proposed for demolition in connection with redevelopment of the site with a new ~~26-story~~[commercial](#) office building ([a 17-story Scheme or a 25-story Scheme](#)) with ground floor retail/restaurant/bar/office space. The present building was constructed in 1950 and is currently 72 years of age, making it age-eligible as a potential historical resource for the purposes of the California Environmental Quality Act (CEQA). This memo serves as a preliminary assessment of eligibility as a historic resource for the purposes of CEQA.

Methodology

Research conducted for this report includes:

- Historical aerial photographs available online;
- Sanborn Fire Insurance Co. maps (Sanborn maps) available online;
- Historical newspapers and periodicals available online; and
- Other online research (e.g., *Internet Archive*, company websites, digital archives and finding aids, etc.)

ESA senior architectural historian Amber Grady, M.A., is the author of this report and meets the Secretary of the Interior's Professional Qualifications Standards for architectural history. Becky Urbano, M.S., who meets the Secretary of the Interior's Professional Qualification Standards for architectural history, provided quality assurance and review.

Architectural Description

The subject property at 1919 Webster Street is a 26,084-square-foot, rectangular parcel on the northwest corner of Webster and 19th streets. It is occupied by the subject building, a 68,000-square-foot, six story plus basement office building designed in the Modern style. The building's rectangular footprint occupies the northern portion

of the parcel with a parking lot on the southern portion. It is constructed of steel and concrete. The subject property contains no landscaping or other site features.

The primary façade faces east on Webster Street (**Figures 1 and 2**). The first and second floor are boarded up. The third through sixth floors are dominated by glass with large plate glass windows and a single door at the north end of each floor. The brick cladding at both ends of the façade wraps around the corners to the north and south facades. The nearly full facade balconies on the 2nd through 6th floors are clad in stucco and are topped with metal railings.

The secondary (south) façade faces a parking lot to the south. The façade is clad in brick that has been painted with a large mural (c2017) and layers of graffiti. There are no doors or windows on this façade.

The north façade at least partially abuts the building to the north. The façade is minimally visible from the public street and sidewalk. Based on aerial photographs there appear to be windows on this façade at the fourth, fifth, and sixth floors. The upper floors appear to be clad in brick that matches that used on the other three facades.

Historical Context

The following brief history of development in downtown Oakland is an excerpt from the Downtown Oakland Specific Plan Draft EIR:

By World War I, there was an increased number of industrial establishments in both downtown and along Oakland's waterfront, which in turn contributed to enhanced residential construction in areas made more easily accessible by the popularity and use of the automobile. Oakland's population almost topped 300,000 in the 1920s with new residential enclaves built in both the more upper-scale North Oakland and East Oakland, providing housing for industrial workers... The downtown commercial center was further built out during this era with additional department stores or expansions to older stores; two large movie palaces, the Fox and the Paramount; and skyscrapers, including the Tribune Tower and the Art Deco 1928 Financial Center Building. Many of these buildings and those from the post-earthquake boom are within the boundaries of the Downtown Oakland National Register Historic District [which is located approximately ¼ mile south and west of the project site...]

Like most of the country, Oakland fell into a period of financial instability in the 1930s, with little to no development, especially downtown. Some construction activity was spurred both by the Federal Housing Act (FHA) of 1934 and the construction of the Oakland Bay Bridge, completed in 1936... It was not until full-scale preparations for, and the outset of, World War II that Oakland entered its next era of intense industrial, commercial, and economic development. From 1940 to 1945, Oakland's population increased by one third, with a population of nearly 385,000 in 1950. Intensified shipbuilding and harbor activities, including the construction of the Oakland Army Base and the Naval Supply Center, provided much-needed employment for migrating newcomers and established Oakland residents alike [...]

The 1960s also brought the introduction of the [Bay Area Rapid Transit (BART)] system to provide alternatives to an increasingly car-dependent Bay Area. Several stations along the BART lines serve [d]owntown Oakland, including the Lake Merritt, the 12th Street-City Center, and the 19th Street Stations. These stations resulted in changing uses, development of new building types, and modern construction in their immediate vicinity. A new wave of office skyscrapers, and smaller office and financial institution-related buildings cropped up near these important transit hubs at 12th and 19th streets. ... The Kaiser Center (Welton Beckett and Associates, 1960), the Oakland Museum (Roche Dinkeloo and Associates, Architects, with Dan Kiley Landscape Architect, 1969) and Laney College (Skidmore, Owings & Merrill, 1971) brought a wave of Modern buildings to Lake Merritt's shore.¹

Modern Architecture

The building at 1919 Webster is built in the Modern style of architecture. The following is an excerpt from the Getty Research Foundation Museum’s website:²

The term “Modern architecture” describes architecture designed and built within the social, artistic, and cultural attitude known as Modernism. It put an emphasis on experimentation, the rejection of predetermined “rules,” and freedom of expression in art, literature, architecture, and music. The Modern Movement in architecture was born in the 20th century and really took off after World War I. Advancements in engineering, building materials, social equality, health, and industry converged, while past historical styles were rejected. This created a perfect storm that allowed architecture to enter a new era of design.

Modern architecture also attempted to help solve a practical problem: a boom in the urban population. Immigration and new industries like steelmaking were attracting people from rural areas to cities, and there was a need for new offices, factories, and housing to keep up with growth. New mass production techniques meant buildings (and furniture) could be produced quickly and relatively cheaply.

“Modernism, which was particularly dominant in the commercial and institutional architecture of the mid-twentieth century, began to decrease in popularity by the 1970s.”³

Site and Vicinity History

Prior to 1950, the site was used for auto parking and was not developed with any buildings or structures (**Figure 3**).⁴ The building at 1919 Webster Street is part of the mid-20th century period of growth in downtown Oakland. It was designed and constructed to house Blue Cross’s offices, an insurance company (see **Figures 3 through 8**).^{5- 6, 7} Blue Cross occupied the building until at least 1972. PG&E occupied the building by 1978 and remained until 2021.^{8, 9, 10} The building currently appears to be vacant.

1919 Webster Street was constructed in 1950 by the Hospital Service of California, a precursor to the present-day company Blue Cross-Blue Shield, for a cost of \$560,000.²⁰ The contractor of record was Swinerton & Walberg of Oakland.²¹ It was originally constructed as a three story building with a basement and penthouse.²² In 1964, three floors were added.²³ A variety of smaller modifications have also occurred over the years (**Table 1**).

1919 Webster Street is currently vacant.

Health Insurance

The following is a brief history of health care and insurance in the 20th century:²⁴

One hundred years ago, in 1908, health care was virtually unregulated and health insurance, nonexistent. Physicians practiced and treated patients in their homes. The few hospitals that existed provided minimal therapeutic care. Both physicians and hospitals were unregulated. When patients saw a physician, they paid their modest fees out-of-pocket; they were more concerned about the wages they would lose if illness kept them out of work than about the cost of their medical care.[...]

Commercial insurance companies did not write health insurance policies in 1908; they saw no way to avoid the risks of adverse selection (those who were sick would seek coverage, and those who were healthy would not) and moral hazard (coverage would encourage the insured to seek unnecessary services), and they lacked the means to calculate risks accurately and set appropriate premiums. Within the next 10 years, many European nations would adopt some form of compulsory national health insurance, but similar proposals in the U.S. were rejected because of lack of interest and resistance from physicians and commercial insurers.[...]

During the 1920s, the cost of medical care rose due to growing demand and higher quality standards for physicians and hospitals. Families had more money to spend but less room in their homes to care for sick family members. Advances in medical technology, tougher licensing criteria, and the growing acceptance of medicine as a science led to the emergence of hospitals as credible centers for treatment. They were now modern scientific institutions that valued

antiseptics and cleanliness and used medications for the relief of pain. When the American College of Surgeons was founded in 1913, it was the first body to accredit hospitals. Of the 692 hospitals examined in 1918, only 13 percent received accreditation. By 1932, the percentage had grown to 93 percent of the 1,600 hospitals surveyed. In 1929, the average American family had medical expenses of about \$103—roughly 5 percent of the average annual income of \$1,916. Typically[,] 14 percent of these expenses were for hospital care.

In 1929, a group of Dallas school teachers contracted with Baylor University Hospital to receive up to 21 days of inpatient care a year for regular monthly payments of 50 cents. Similar prepaid service plans, many involving more than one hospital, were formed during the Depression years. While they gave consumers an affordable way to pay for inpatient care, their primary purpose was to assure hospitals a steady income stream during a period of declining revenues. By 1937, there were 26 such plans with more than 600,000 members total. These combined under the auspices of the American Hospital Association (AHA) to form the Blue Cross network of plans, the first of which had been established in 1932 in Sacramento. The creation of these plans was facilitated by state legislation that allowed them to organize as nonprofit corporations, enjoy tax-exempt status, and avoid the onerous insurance regulations (particularly financial reserve requirements) that applied to commercial insurers.

In the 1930s, physicians became concerned about proposals for compulsory national health insurance and the threat of insurance competition from Blue Cross. Specifically, doctors worried that third-party payers would lower their incomes by restricting their ability to set their own fees. In response, physicians established a network of their own insurance plans covering physician services. These plans, known as Blue Shield, preempted the hospital-oriented Blue Cross plans from entering into the primary care sector. Meanwhile, in 1935, the Social Security Act was passed without a health insurance component.

The success of the Blue Cross and Blue Shield plans showed commercial insurers that adverse selection could be overcome by focusing on insuring groups of young, healthy, employed workers. The commercial plans also benefited from a legal advantage: as non-profit entities, the Blues had to "community rate" their policyholders, while the for-profit commercial plans (strictly regulated insurance companies) were free to engage in experience rating. As a result[,] the market for health insurance of all kinds increased dramatically during the 1940s, from a total enrollment of 20,662,000 in 1940 to 142,334,000 in 1950.

Another spur to health insurance sales came during World War II, when wage and price controls prevented employers from using higher salaries to attract workers. They were, however, allowed to offer fringe benefits like health insurance for up to 5 percent of a worker's wages. In addition, the National Labor Relations Board ruled that health insurance benefits were a legitimate subject of labor-management negotiations. Lastly, the IRS determined that employers could deduct the cost of employee health benefits from taxable business income, and employees did not have to include the value of those benefits in calculating their taxable income. The role of employers as the primary source of health insurance coverage was now firmly entrenched

Blue Cross / Blue Shield

Blue Cross / Blue Shield is a company that provides health insurance plans. It began in Texas in 1929 as a nonprofit organization to provide coverage for hospital expenses only in a partnership between a local hospital and its patients.^{25, 26} Justin Ford Kimball oversaw the initial development of the program within his responsibility of managing the finances of the Baylor University Hospital.²⁷ Kimball had previously served as a superintendent of schools in Dallas where he had established a sick benefit for teachers.²⁸ “By 1937, there were 26 such [insurance] plans with more than 600,000 members total. These combined under the auspices of the American Hospital Association (AHA) to form the Blue Cross network of plans, the first of which had been established in 1932 in Sacramento. “By the end of the 1930s, approximately half of the states had passed enabling legislation for hospital care service plans like Blue Cross.”²⁹ Blue Shield was developed to provide insurance for medical services outside of the hospital setting.³⁰ The following is taken from the company’s website:³¹

In 1978, the Blue Cross and Blue Shield Associations consolidated staff and operations, and the Blue Cross Blue Shield Association was formed in 1982. The next decade brought challenges in the form of economic turbulence and increased competition. However, BCBS persevered, with a focus on expanding member services with innovative programs like BlueCard®, which enables members of one BCBS company to obtain healthcare services while traveling or living in another BCBS company's service area. By the late 1990s and early 2000s, Blue Cross Blue Shield became synonymous with quality healthcare Americans could trust, and enrollment topped 100 million members.

Architects

1919 Webster was designed by Willis and Confer, Architects, which was headquartered at 366 40th Street in Oakland, California, c. 1955.³² The only other building that is associated with the firm is the County of Contra Costa, Administration Building #1 in Martinez, California.³³

Raymond Godfrey Willis was born in 1910 in Alameda, California.³⁴ Willis was an undergraduate student at the University of California, Berkeley in 1928 and graduated in 1933.^{35, 36}

Frederick Leroy Confer was born in 1903 in Oakland, California.³⁷ He received his B.Arch. from the University of California, Berkeley and married his wife Melba Lynette Coughlan c. 1929; they lived in a variety of East Bay

- Carey Snoddy House, Vallejo, CA (1934)

Contractor

Swinerton & Walberg Company are the contractors of record for the original construction and some of the alterations (**Table 1**). The company, originally known as the Lindgren Company, was established by in 1888 as a brick masonry and contracting business in Los Angeles, California, by Charles and Fred Lindgren.^{42, 43} Fred Lindgren and Alfred Swinerton led the company in 1913 as the president and vice president.⁴⁴ The partnership of Alfred Bingham Swinerton and Richard Walberg was formed in 1942.⁴⁵ During World War II the company worked on infrastructure projects, including dams, highways, railways, and shipyards.⁴⁶ In the 1950s the company’s projects included warehouses, paper mills, healthcare facilities, and chemical plants.⁴⁷ The 1960s saw the restructuring of the company and the death of A.B. Swinerton.⁴⁸ In the 1970s, Swinerton & Walberg merged with Rothschild & Raffin and opened a new office in Portland, Oregon.⁴⁹ In the 1980s the company constructed more than 20 high-rise offices in San Francisco and Los Angeles.⁵⁰ By 2005, the company became known as Swinerton Builders and still operates today.

Building Alteration and Ownership History

ESA was able to confirm the construction chronology of 1919 Webster Street based on archival newspaper and permit research as well as Sanborn Maps and aerial photography (**Table 1**).

**TABLE 1
CONSTRUCTION CHRONOLOGY OF 1510 WEBSTER STREET**

Date	Description of Work	Sources
1950	Originally constructed - Swinerton & Walberg (contractor), R.G. Willis and F.L. Confer (architects), W.C. Hamilton and J.A. Williges (engineers).	1952 Sanborn Map, Building Permit #B29836
1951	Alterations – construct 96 L.F. of temporary partitions, Swinerton & Walberg Co. (contractor)	Building Permit #B35458
1952	Alterations – partition a storage room, R. Asturiss (contractor)	Building Permit #B42216
1955	Alterations – partitions, HJK Co. (owner)	Building Permit #B58284
1955	Alterations – cut openings in north masonry wall and install windows and door, Swinerton Walberg (contractor), Hospital Service of California (owner)	Building Permit #B58507
1955	Alterations – remove one wall and door to combine two rooms, Blue Cross Hospital (owner)	Building Permit #B58586
1956	Alterations – interior at 3 rd floor, Kaiser Engineers (owner and contractor)	Building Permit #B65827
1957	Alterations – partitions, Blue Cross Plan (owner), Kaiser Engineers (contractor)	Building Permit #B67351

TABLE 1
CONSTRUCTION CHRONOLOGY OF 1510 WEBSTER STREET

Date	Description of Work	Sources
1958	Alterations – new partitions, relocate doors and cut mechanical openings; Hospital Service of California (owner), Swinerton & Walberg (contractor)	Building Permit #B78223
1960	Unknown Alterations – Hospital Service Co. (owner), Swinerton & Walberg (contractor)	Building Permit #B90866
1964	Alterations – addition of floors 4, 5, and 6; Hospital Service of California (owner); Stolte, Inc (contractor)	Building Permit #C19560
1964	Alterations – install sidewalk elevator	Resolution No. 44812
1966	Alterations – electrical for two wall signs	Building Permit #44423
1966	Alterations – construction partition, Hospital Service of No. California, Christensen & Smith (contractor)	Building Permit #C34276
1968	Alterations – temporary partitions on 6 th floor, Hospital Service of California (owner), Harry K. Jensen (contractor)	Building Permit #C46129
1969	Alterations – removal of existing wall and new partition, Hospital Service of California (owner), Harry K. Jensen (contractor)	Building Permit #C46279
1969	Alterations – add new interior wall and new access floor system (ramp), Blue Cross Plan (owner), W.A. Rose Co. (contractor)	Building Permit #C49187
1971	Alterations - first floor east façade and entry; Hospital Services of California (owner), Skidmore, Owings & Merrill (architects/engineers); Dinwiddle Construction Company of San Francisco.	Letter from Marc Herbert, Director of City Planning re: permit #D71-23 ⁵³
1971	Alterations – close two existing exits and add a partition exit corridor on the first floor, Hospital Service of California (owner), Dinwiddle Construction Company (contractor)	Building Permit #C57814
1976	Alterations – interior remodeling (new suspended ceiling, lighting, partitions, and counter; mechanical and electrical systems), Pacific Gas & Electric Company (owner), Gensler & Assoc. (architect), R.V. Bettinger (engineer)	Building Permit #C91873
1984	Alterations – 2 nd floor conference room remodeled into offices, Pacific Gas and Electric (owner), Red Top Electric Co. (contractor)	Building Permit #R641-84
1984	Alterations – basement and 3 rd floor structure, PG&E (owner)	Building Permit #19566
1984	Alterations – interior remodel on 2 nd and 3 rd floors and basement, PG&E (owner), Iyama & Assoc. (architect/engineer)	Building Permit #D34943
1985	Alterations – remodel office interior of 6 th floor, PG&E (owner), Iyama & Assoc. (architect/engineer)	Building Permit #D38461
1985	Alterations – remodeling of office space, Pacific Gas and Electric (owner)	Building Permit #D38434
1985	Alterations – remodel bathrooms to comply with accessibility requirements, Pacific Gas and Electric (owner), Iyama & Assoc. (architect/engineer)	Building permit #D39317
1985	Alterations – remodel for “handicap standards,” PG&E (owner)	Building Permit #22931
1986	Alterations – plumbing, PG&E (owner), Copper Clad Plumbing (contractor)	Building Permit #031297
1988	Alterations – ground floor lobby and installation of card-key access system, Pacific Gas and Electric (owner), John Ellis (architect/engineer)	Building Permit #B8805087
1988	Alterations – electrical for a wall sign, PG&E (owner)	Building Permit #E8803911

Date	Description of Work	Sources
1990	Alterations – install emergency generator, Pacific Gas and Electric (owner)	Building Permit #B9002492
1991	Alterations – replace water tower and connections, PG&E (owner)	Building Permit #B9103794
1992	Alterations – install poles with lighting standard fixtures, PG+E (owner), Red Top Electric Co. (contractor)	Building Permit #E9200459
1994	Alterations – upgrade 3 rd floor lighting, PG+E (owner)	Building Permit #E9401729

Evaluation of Historical Significance

Under Section 17.158.090 of the City of Oakland Planning Code (2005), for purposes of evaluating environmental impacts CEQA, a historical resource is a resource that meets any of the following criteria:

1. A resource listed in, or determined to be eligible for listing in, the California Register of Historical Resources (California Register);
2. A resource included in Oakland’s Local Register of historical resources, unless the preponderance of evidence demonstrates that it is not historically or culturally significant. As defined in General Plan Historic Preservation Element Policy 3.8, for purposes of environmental review under the California Environmental Quality Act, the following properties will constitute the City of Oakland’s Local Register of Historic Resources:
 - a. All Designated Historic Properties [Landmarks, Heritage Properties, Study List Properties, Preservation Districts, and S-7 and S-20 Preservation Combining Zone Properties]; and
 - b. Those Potential Designated Historic Properties that have an existing rating of “A” or “B” or are located within an Area of Primary Importance (API);
3. A resource identified as significant (e.g., rated 1–5) in a historical resource survey recorded on Department of Parks and Recreation Form (DPR) 523, unless the preponderance of evidence demonstrates that it is not historically or culturally significant;
4. Any object, building, structure, site, area, place, record, or manuscript which the Oakland City Council determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California, provided the determination is supported by substantial evidence in light of the whole record. Generally, a resource is considered “historically significant” if it meets the criteria for listing on the California Register CEQA Guidelines Section 15064.5; or
5. A resource that is determined by the City Council to be historically or culturally significant even though it does not meet the other four criteria listed here.

California Register of Historical Resources

The California Register is “an authoritative listing and guide to be used by state and local agencies, private groups, and citizens in identifying the existing historical resources of the state and to indicate which resources

deserve to be protected, to the extent prudent and feasible, from substantial adverse change” (PRC Section 5024.1(a)). Certain resources are determined by law to be automatically included in the California Register, including California properties formally determined eligible for, or listed in, the National Register of Historic Places (National Register).

To be eligible for the California Register, a historical resource must be significant at the federal, state, or local level under one or more of the following criteria (PRC Section 5024.1(c)):

- (1) Is associated with events that have made a significant contribution to the broad patterns of California’s history and cultural heritage.
- (2) Is associated with the lives of persons important in our past.
- (3) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
- (4) Has yielded, or may be likely to yield, information important in prehistory or history.

Integrity is the authenticity of a historic resource’s physical identity as shown by the survival of characteristics that existed during the period of significance. For a resource to be eligible for the California Register, it must also retain enough integrity to be recognizable as a historic resource and to convey the reasons for its significance. Integrity is evaluated with regard to the retention of location, design, setting, materials, workmanship, feeling, and association. A resource that does not retain sufficient integrity to meet the National Register criteria may still be eligible for listing in the California Register.

Oakland Cultural Heritage Survey⁵⁴

In March 1994, the Oakland City Council adopted the Historic Preservation Element of the Oakland General Plan (amended July 21, 1998). The Historic Preservation Element sets out a graduated system of ratings and designations resulting from the Oakland Cultural Heritage Survey (OCHS) and Oakland Zoning Regulations. The OCHS is an ongoing survey process conducted by the City of Oakland. It uses a five-tier rating system for individual properties.

A – Highest Importance – These properties are of “exceptional historical or architectural value.” They are individually eligible for listing on the National Register.

B – Major Importance – These properties are of “major historical or architectural value, but less important than those rated A.” Buildings in this category are generally eligible for listing on the California Register and may be eligible for the National Register.⁵⁵

C – Secondary Importance – These properties have “sufficient historical or visual/architectural value to warrant limited recognition but which do not appear individually eligible for the National Register.”

⁵⁴ All quotes in this section are taken from *Oakland General Plan: Historic Preservation Element*, September 1993. Available online at: www.oaklandca.gov/resources/historic-preservation-element.

⁵⁵ The OCHS predates the California Register and listing on the California Register is not explicitly codified into the Oakland Preservation Element.

D – Minor Importance – Buildings with this ranking are “not individually distinctive but which are typical or represent examples of an important style, type, convention, or historical pattern.”

E – Of No Particular Interest – These properties meet the age criteria but are “visually undistinguished.”

F/* – Not Rated – This designation was applied to buildings in the original survey area that were not age-eligible at the time of survey.

This letter rating is termed the “Individual Property Rating” of a building and is based on the following criteria:

1. **Visual Quality/Design:** Evaluation of exterior design, interior design, materials and construction, style or type, supporting elements, feelings of association, and importance of designer.
2. **History/Association:** Association of person or organization, the importance of any event, association with patterns of history, and the age of the building.
3. **Context:** Continuity and familiarity of the building within the city, neighborhood, or district.
4. **Integrity and Reversibility:** Evaluation of the building’s condition, its exterior and interior alterations, and any structural removals.

District status is indicated by numbers. “1” is applied to buildings in an Area of Primary Importance (API) or a National Register-eligible district. “2” is applied to buildings in an Area of Secondary Importance (ASI) or a district of local interest. “3” indicates a building that is not located in a district. Additional notations are applied to indicate whether the building contributes to the district (+), potentially contributes to the district (*), or does not contribute to the district (-).

Areas of Primary Importance (API) are “historically or visually cohesive areas or property groups which usually contain a high proportion of individual properties with rankings of ‘C’ or higher and appear eligible for the National Register either as a district or as a historically-related complex. At least two-thirds of the properties in an API must be ‘contributors’ to the API. [...] Properties which do not contribute to the API because of alterations, but which could contribute if the alterations are at least partly reversed are ‘potential contributors’ to the API.” Only contributors count toward the two-thirds requirement.

Areas of Secondary Importance (ASI) are similar to APIs except both contributors and potential contributors count toward the two-thirds requirement and ASI do not appear eligible for the National Register.

Additionally, the City of Oakland maintains a list of Potential Designated Historic Properties (PDHPs). These buildings have at least a contingency rating of C or contribute or potentially contribute to an API or ASI. PDHPs have not been officially designated or evaluated but may “warrant consideration for possible preservation.”

Evaluation – California Register

Criterion 1 (Events)

There is no evidence to suggest that 1919 Webster Street is associated with any local or regional events that have made a significant contribution to broad patterns of history. While medical insurance was an innovation in the health care industry, the Blue Cross Building was constructed in 1950, which was decades after the creation of the medical insurance business in Texas at Baylor University. Archival research does not suggest that Blue Cross

made important contributions to, or is associated with, a significant event or trend that shaped local or regional development during its period of ownership and occupation at 1919 Webster (1950-1972). The organization both pre-dates and post-dates this period of association with the subject property. As such, 1919 Webster Street does not appear to be individually eligible for listing in the California Register under Criterion 1.

Criterion 2 (Persons)

Archival research did not reveal any historically significant individuals or groups associated with 1919 Webster Street. The business located in the building during the historic period was Blue Cross. As discussed above, the most significant individual, Justin Ford Kimball, the founder of Blue Cross, was associated with Baylor University in Texas not 1919 Webster Street in Oakland, California. There is no evidence that any significant individuals from Blue Cross were associated with 1919 Webster Street. Additionally, the Blue Cross offices have been located in various locations in the San Francisco Bay Area. As such, 1919 Webster Street does not appear to be individually eligible for listing in the California Register under Criterion 2.

Criterion 3 (Architecture/Design)

1919 Webster Street has a distinctive design and is clearly associated with Modern commercial design. It exhibits simplicity of form and was constructed of brick and concrete, which visually distinguished it from the highly decorated brick and terra cotta office buildings in the area that were already present in the 1950s. Little is known about the architectural firm of Willis and Confer, which is credited with the design of 1919 Webster Street. As described above, Confer appears to have been mostly involved in residential construction. The building at 1919 Webster Street is also associated with the Swinerton Builders, a construction firm that has a large portfolio of buildings throughout the San Francisco Bay Area and California. Within the portfolio of Swinerton Builders' projects, this is not the best representation of their work. Prominent projects of the firm in the San Francisco Bay Area in the mid-20th century include the Coca-Cola Bottling Company in Oakland (1940), the Santa Fe Railway in Barstow (1944), Mount Zion Hospital in San Francisco (1950), Union Oil Company in San Francisco (1954), the Bank of America Service Center in San Francisco (1959), and the Marin County Civic Center (1962). 1919 Webster Street was originally designed as a modest Modern style building and was later modified with a three story addition that doubled the size of the building. The building also does not appear to represent the work of a master craftsman, nor does it possess high artistic value. Therefore, 1919 Webster Street does not appear to be individually eligible for listing in the California Register under Criterion 3.

Criterion 4 (Potential to Yield Information)

Criterion D applies to properties that have the potential to inform important research questions about human history. According to National Register Bulletin 15, to qualify for listing, the property must “have or have had information to contribute to our understanding of human history or prehistory and the information must be considered important.” The California Register follows a similar threshold for consideration under Criterion 4. 1919 Webster Street does not meet this criterion and therefore does not appear to be individually eligible for listing in the California Register under Criterion 4.

Potential Historic District Contributor

1919 Webster Street is located on the same block as 1904 Franklin Street, which is identified as part of the Leamington Hotel Group, an Area of Primary Importance. 1904 Franklin which is rated ‘A’ or ‘B’ on the Oakland Cultural Heritage Survey. The Leamington Hotel Group includes two 1920s buildings that front Franklin

Street. The design, period of significance, and historical uses of 1919 Webster Street do not contribute to any known historic districts, nor does it appear to reside in an immediate grouping of similar or related buildings. Therefore, 1919 Webster Street does not appear to be a contributor to a potential historic district.

Evaluation – City of Oakland

1919 Webster Street does not appear to have important historical associations or contextual relationships. It is associated with an architect that appears to have been mostly involved in residential construction. It is associated with a construction firm that has a large portfolio of buildings throughout California and this is not a notable representation of their work. It does not appear to qualify as either an “A” or “B” rated building. Therefore, 1919 Webster Street would not be eligible for consideration as a CEQA resource at the local level.

Integrity

In addition to being eligible for listing under at least one of the California Register criteria, a property must also retain sufficient integrity to convey its historical significance in order to be considered a historical resource. Because 1919 Webster Street does not appear to meet any California Register criteria and does not appear to meet the criteria for City of Oakland Landmark listing, no evaluation of integrity is included here.

Conclusion

Based on archival research and analysis, ESA recommends the subject building at 1919 Webster Street as ineligible for individual listing in the California Register under Criteria 1, 2, 3, and 4. Additionally, ESA recommends 1919 Webster Street as ineligible for individual consideration as an “A” or “B” rated building on the City of Oakland Cultural Heritage Survey.

APPENDIX E

Equitable Climate Action Plan Consistency Checklist

CITY OF OAKLAND

Equitable Climate Action Plan Consistency Checklist

250 Frank H. Ogawa Plaza, Suite 2114, Oakland, CA 94612-2031

Zoning Information: 510-238-3911

<https://www.oaklandca.gov/topics/planning>

The purpose of this Equitable Climate Action Plan Consistency Review Checklist is to determine, for purposes of compliance with the California Environmental Quality Act (CEQA), whether a development project complies with the City of Oakland Equitable Climate Action Plan (ECAP) and the City of Oakland's greenhouse gas (GHG) emissions reduction targets. CEQA Guidelines require the analysis of GHG emissions and potential climate change impacts from new development.

- If a development project completes this Checklist and can qualitatively demonstrate compliance with the Checklist items as part of the project's design, or alternatively, demonstrate to the City's satisfaction why the item is not applicable, then the project will be considered in compliance with the City's CEQA GHG Threshold of Significance.
- If a development project cannot meet all of the Checklist items, the project will alternatively need to demonstrate consistency with the ECAP by complying with the City of Oakland GHG Reduction Plan Condition of Approval.
- If the project cannot demonstrate consistency with the ECAP in either of those two ways, the City will consider the project to have a significant effect on the environment related to GHG emissions.

Application Submittal Requirements

1. The ECAP Consistency Checklist applies to all development projects needing a CEQA GHG emissions analysis, including a specific plan consistency analysis.
2. If required, the ECAP Consistency Review Checklist must be submitted concurrently with the City of Oakland Basic Application.

Application Information

Applicant's Name/Company: 1919 Webster Street Owner, LLC c/o Ellis Partners LLC

Property Address: 1919 Webster Street

Assessor's Parcel Number: 008-0637-008-08

Phone Number: (415) 391-9800

E-mail: mweber@ellispartners.com

Equitable Climate Action Plan (ECAP) Consistency Review Checklist

Checklist Item (Check the appropriate box and provide explanation for your answer).			
Transportation & Land Use			
1. Is the proposed project substantially consistent with the City’s over-all goals for land use and urban form, and/or taking advantage of allowable density and/or floor area ratio (FAR) standards in the City’s General Plan? (TLU1)	Yes	No	N/A
	✗		
<p>Please explain how the proposed project is substantially consistent with the City’s General Plan with respect to density and FAR standards, land use, and urban form.</p> <p>Project conforms to all city land use requirements for a project in CBD-P/CBD-C zone and height area 7.</p>			
2. For developments in “Transit Accessible Areas” as defined in the Planning Code, would the project provide: i) less than half the maximum allowable parking, ii) the minimum allowable parking, or iii) take advantage of available parking reductions? (TLU1)	Yes	No	N/A
	✗		
<p>Please explain how the proposed project meets this action item.</p> <p>Project does qualify as located in a Transit Accessible Area, has no minimum parking requirement, and a maximum allowable parking of 818 stalls for Scheme 1 and 1,044 stalls for Scheme 2. Project is proposing to construct far less than half the maximum allowable parking stalls.</p>			
3. For projects including structured parking, would the structured parking be designed for future adaptation to other uses? (Examples include, but are not limited to: the use of speed ramps instead of sloped floors.). (TLU1)	Yes	No	N/A
	✗		
<p>Please explain how the proposed project meets this action item.</p> <p>There is no above ground structured parking for Scheme 1. Although not currently proposed at this time, as discussed in the CEQA Analysis for the Project, the upper parking level for Alternative Scheme 2 would allow conversion to office use through use of speed ramps and flat floor plates, anticipation of future loads, connection to vertical circulation, etc.</p>			
4. For projects that <i>are</i> subject to a Transportation Demand Management Program, would the project include transit passes for employees and/or residents? (TLU1)	Yes	No	N/A
		✗	
<p>Please explain how the proposed project meets this action item.</p> <p>The Project does not propose to include transit passes for employees as the tenant is not currently known at this time. A GHG Reduction Plan has been prepared to address this non compliance with the ECAP</p>			

Equitable Climate Action Plan (ECAP) Consistency Review Checklist

<p>5. For projects that are <i>not</i> subject to a Transportation Demand Management Program, would the project incorporate one or more of the optional Transportation Demand Management measures that reduce dependency on single-occupancy vehicles? (Examples include but are not limited to transit passes or subsidies to employees and/or residents; carpooling; vanpooling; or shuttle programs; on-site carshare program; guaranteed ride home programs) (TLU1 & TLU8)</p>	Yes	No	N/A
<p>Please explain how the proposed project meets this action item.</p>			X
<p>6. Does the project comply with the Plug-In Electric Vehicle (PEV) Charging Infrastructure requirements (Chapter 15.04 of the Oakland Municipal Code), if applicable? (TLU2 & TLU-5)</p>	Yes	No	N/A
<p>Please explain how the proposed project meets this action item. Project will include required EV charging infrastructure at parking levels.</p>	X		
<p>7. Would the project reduce or prevent the direct displacement of residents and essential businesses? (For residential projects, would the project comply with SB 330, if applicable? For projects that demolish an existing commercial space, would the project include comparable square footage of neighborhood serving commercial floor space.) (TLU3)</p>	Yes	No	N/A
<p>Please explain how the proposed project meets this action item. Project occupies a site which includes an unoccupied commercial building and surface parking. No existing tenancies or uses will be disrupted.</p>			X

Equitable Climate Action Plan (ECAP) Consistency Review Checklist

<p>8. Would the project prioritize sidewalk and curb space consistent with the City’s adopted Bike and Pedestrian Plans? (The project should not prevent the City’s Bike and Pedestrian Plans from being implemented. For example, do not install a garage entrance where a planned bike path would be unless otherwise infeasible due to Planning Code requirements, limited frontage or other constraints.) (TLU7)</p>	Yes	No	N/A
<p>Please explain how the proposed project meets this action item. Project has proposed sidewalk frontage improvements on both Webster and 19th Street, enhancing the pedestrian experience along the project sidewalk frontage. The proposed frontage improvements do not preclude a protected bike lane along Webster Street, provide specialty paving at building entrances, provide short term bike parking at the sidewalk, and add new street trees along 19th Street.</p>	X		
Buildings			
<p>9. Does the project not create any new natural gas connections/hook-ups? (B1 & B2)</p>	Yes	No	N/A
<p>Please explain how the proposed project meets this action item. Project does not include natural gas systems of any kind.</p>	X		
<p>10. Does the project comply with the City of Oakland Green Building Ordinance (Chapter 18.02 of the Oakland Municipal Code), if applicable? (B4)</p>	Yes	No	N/A
<p>Please explain how the proposed project meets this action item. City of Oakland Green Building Ordinance requires this project to achieve a LEED Silver certification at minimum. The project is preliminarily targeting LEED Gold and will ensure that LEED Silver is achieved at a minimum.</p>	X		
<p>11. For retrofits of City-owned or City-controlled buildings: Would the project be all-electric, eliminate gas infrastructure from the building, and integrate energy storage wherever technically feasible and appropriate? (B5)</p>	Yes	No	N/A
<p>Please explain how the proposed project meets this action item.</p>			X

Equitable Climate Action Plan (ECAP) Consistency Review Checklist

Material Consumption & Waste			
12. Would the project reduce demolition waste from construction and renovation and facilitate material reuse in compliance with the Construction Demolition Ordinance (Chapter 15.34 of the Oakland Municipal Code)? (MCW6)	Yes	No	N/A
	✗		
Please explain how the proposed project meets this action item. Project will fully comply with City Construction Demolition Ordinance during the existing building's demolition and the new building's construction.			
City Leadership			
13. For City projects: Have opportunities to eliminate/minimize fossil fuel dependency been analyzed in project design and construction? (CL2)	Yes	No	N/A
			✗
Please explain how the proposed project meets this action item.			
Adaptation			
14. For new projects in the Designated Very High Wildfire Severity Zone: Would the project incorporate wildfire safety requirements such creation of defensible space around the house, pruning, clearing and removal of vegetation, replacement of fire resistant plants, as required in the Vegetation Management Plan? (A4)	Yes	No	N/A
			✗
Please explain how the proposed project meets this action item.			

Equitable Climate Action Plan (ECAP) Consistency Review Checklist

Carbon Removal			
15. Would the project replace a greater number of trees than will be removed in compliance with the Tree Preservation Ordinance (Chapter 12.36 of the Oakland Municipal Code) and Planning Code if applicable and feasible given competing site constraints? (CR-2)	Yes	No	N/A
	X		
Please explain how the proposed project meets this action item. Project will plant trees on a site without existing trees.			
16. Does the project comply with the Creek Protection, Stormwater Management and Discharge Control Ordinance (Chapter 13.16 of the Oakland Municipal Code), as applicable? (CR-3)	Yes	No	N/A
	X		
Please explain how the proposed project meets this action item. Project is not located adjacent to a creek. All stormwater runoff from the site will be collected and treated prior to discharge into the storm drain, as required by C.3 regulations. Refer to supplemental stormwater form for additional information.			

I understand that answering **yes** to all of these questions, means that the project **is in compliance with** the City’s Energy and Climate Action Plan as adopted on to July 28, 2020 and requires that staff apply the Project Compliance with the Equitable Climate Action Plan (ECAP) Consistency Checklist Condition of Approval as adopted by the Planning Commission on December 16, 2020 and all Checklist items must be incorporated into the project

I understand that answering **no** to any of these questions, means that the project **is not in compliance with** the City’s Energy and Climate Action Plan as adopted on to July 28, 2020 and requires that staff apply the Greenhouse Gas (GHG) Reduction Plan Condition of Approval as adopted by the Planning Commission on December 16, 2020 which will require that the applicant prepare a quantitative GHG analysis and GHG Reduction Plan for staff’s review and approval. The GHG Reduction Plan and all GHG Reduction measures shall be incorporated into the project and implemented during construction and after construction for the life of the project.

APPENDIX F

Greenhouse Gas Reduction Plan

APPENDIX F

Greenhouse Gas Reduction Plan

Introduction

This Greenhouse Gas Reduction Plan (GHGRP) has been prepared pursuant to the City's Standard Condition of Approval (SCA) GHG-1, since the project does not commit to implementing all the GHG emission reduction strategies specified in the City's 2030 Equitable Climate Action Plan (ECAP) consistency checklist (2020).

Project Overview

The project consists of demolition of all existing structures on the project site (an approximately 74,000 square-foot office building and surface parking lot) followed by construction of a new office building - one of two possible schemes.

Scheme 1. Scheme 1 would construct a 17-story commercial office building that would include approximately 407,000 square feet of office space and 2,900 square feet of ground floor commercial retail space, in addition to one basement level.¹

Alternative Scheme 2. Alternative Scheme 2 would construct a 25-story commercial office building that would include approximately 521,000 square feet of office space and 2,008 square feet of ground floor commercial retail space, in addition to one basement level and two above-ground parking levels.²

City of Oakland 2030 Equitable Climate Action Plan

In July 2020, via Resolution 88267, the Oakland City Council adopted the 2030 ECAP, a comprehensive plan to achieve the 2030 greenhouse gas (GHG) reduction target and increase Oakland's resilience to the impacts of the climate crisis, both through a deep equity lens.³ Alongside the 2030 ECAP, the Council also adopted a goal to achieve community-wide carbon neutrality no later than 2045.

The ECAP calls for ambitious reductions in carbon emissions intended to achieve a 36 percent reduction in total GHG emission as compared to the 2005 baseline by the year by 2020, a

¹ The modeling in Attachment F-1 to this document conservatively assumed 6,000 square feet of ground floor commercial retail space.

² The modeling in Attachment F-2 to this document conservatively assumed 6,000 square feet of ground floor commercial retail space.

³ City of Oakland, 2020. *Oakland 2030 Equitable Climate Action Plan*. July 2020. Available at <https://cao-94612.s3.amazonaws.com/documents/Oakland-ECAP-07-24.pdf>. Accessed April 2022.

56 percent reduction by the year 2030, and an 83 percent reduction in GHG emission as compared to 2005 emissions by the year 2050. To achieve these targets, GHG emission reductions are needed throughout all sectors, but with a particular emphasis on new development and the transportation sectors. As stated in the ECAP, “by implementing all Actions in the ECAP, Oakland can reduce GHG emissions by at least 60 percent by 2030, and 84 percent by 2050.”

The 2030 ECAP includes a set of 40 Actions that lay the foundation for the City to meet these emission reductions. Actions are organized into seven sectors:

- Transportation and Land Use
- Buildings
- Material Consumption and Waste
- Adaptation
- Carbon Renewal
- City Leadership
- Port of Oakland

The ECAP’s Transportation and Land Use Action-2, calls for better aligning the City’s permit and project approval process with ECAP priorities:

ECAP Action Transportation + Land Use (TLU)-2: Amend Standard Conditions of Approval (SCAs), as well as mitigation measures and other permit conditions to align with the City’s GHG reduction priorities stated in this ECAP. Explore, through the Planning Commission, adoption of a threshold of significance for GHG impacts to align with this ECAP. In applying conditions on permits and project approvals, ensure that all cost-effective strategies to reduce GHG emissions from buildings and transportation are required or otherwise included in project designs, including infrastructure improvements like bicycle corridor enhancements, wider sidewalks, crossing improvements, public transit improvements, street trees and urban greening, and green stormwater infrastructure. Where onsite project GHG reductions are not cost-effective, prioritize local projects benefiting frontline communities.”⁴ In December 2020, the City updated its SCAs related to GHG emissions to be consistent with Action TLU-2 of the ECAP.

ECAP Checklist

The City has developed the ECAP Consistency Checklist to determine, for purposes of compliance with the California Environmental Quality Act (CEQA), whether a development project complies with the ECAP and the City of Oakland’s GHG emissions reduction targets. The ECAP Consistency Checklist includes a series of design measures and infrastructure systems that, if implemented, would systematically achieve cost-effective GHG emission reductions to meet the City’s targets.

⁴ City of Oakland, 2020. *Oakland 2030 Equitable Climate Action Plan*. July 2020. Available at <https://cao-94612.s3.amazonaws.com/documents/Oakland-ECAP-07-24.pdf>. Accessed June 2022.

For the analysis of GHG emissions under CEQA, the Checklist states that “if a development project completes the Checklist and can qualitatively demonstrate compliance with the Checklist items as part of the project’s design, or alternatively, demonstrate to the City’s satisfaction why the item is not applicable, then the project will be considered to be in compliance with the City’s CEQA GHG Threshold of Significance. If a development project cannot meet all of the Checklist items, the project will alternatively need to demonstrate consistency with the ECAP by complying with the City of Oakland GHG Reduction Plan Condition of Approval – consistency with the ECAP. If the project cannot demonstrate consistency with the ECAP in either of those two ways, the City will consider the project to have a significant effect on the environment related to GHG emissions” (City of Oakland, 2021).

Standard Condition of Approval GHG-1

SCA GHG-1: GHG Reduction Plan, as described under Section 7.6 of the *1919 Webster Street Project CEQA Checklist*, applies to projects under two scenarios:

Scenario A: Projects which involve land use development (i.e., a project that does not require a permit from the Bay Area Air Quality Management District [BAAQMD] to operate), and do not commit to all of the GHG emissions reductions strategies described on the ECAP Consistency Checklist, as originally adopted by the Planning Commission on December 16, 2020.

Scenario B: Projects which involve a stationary source of GHG (i.e., a project that requires a permit from BAAQMD to operate) and after a GHG analysis is prepared would produce total GHG emissions of more than 10,000 metric tons of CO₂e annually [MT CO₂e per year]).

For projects that do not comply with all emission reduction strategies in the ECAP checklist, SCA GHG-1 requires that the project applicant shall retain a qualified air quality consultant to develop a GHGRP for City review and approval and shall implement the approved GHG Reduction Plan.

The goal of the GHGRP shall be to increase energy efficiency and to reduce GHG emissions by at least the amount that would be achieved by committing to all of the emissions reductions strategies identified in the ECAP Consistency Checklist.

As specified by SCA GHG-1, the GHG Reduction Plan shall include:

- (a) A detailed GHG emissions inventory for the project taking into consideration energy efficiencies included as part of the project (including proposed mitigation measures, project design features, those strategies being implemented and other City requirements);
- (b) For each ECAP Consistency Checklist strategy that the project will not meet, a quantified calculation of the additional GHG emission reductions that would have occurred had it implemented the GHG emissions reduction measure consistent with the ECAP Consistency Checklist;
- (c) A quantified strategy for achieving a GHG emission reduction equivalent to the reduction that would have resulted from complying with the ECAP Consistency Checklist strategy; and

- (d) Requirements for ongoing monitoring and reporting to demonstrate that the additional GHG reduction measures are being implemented.

Project GHG Emissions Inventory (a)

The project site is currently occupied by a vacant six-story commercial office building and 47-space asphalt-paved automotive fee parking lot. GHG emissions would be generated during construction and operation of both proposed office project schemes.

Construction

GHG emissions would be generated during construction of both proposed project schemes from the use of heavy-duty construction equipment onsite, as well as vehicles transporting workers, equipment, and materials to and from the site. Construction emissions that would result from both proposed project schemes were estimated using CalEEMod (version 2020.4.0). Inputs to the model included scheme-specific project information including size of the project area, size of the proposed commercial retail/office building, construction equipment to be utilized, construction schedule, volume of export and import, as well as project trip generation for each proposed project scheme.

Scheme 1. GHG emissions generated from construction activities for Scheme 1 are presented in **Table 1**. As shown in the table, Scheme 1 construction activities would generate approximately 1,123.2 MT CO₂e in total, with maximum annual emissions of 593.0 MT CO₂e in 2023. Consistent with City methodology, construction emissions are amortized over a project life of 40 years for consideration with operational emissions which are discussed further below. Construction emissions amortized over the life of the proposed project amount to approximately 28.1 MT CO₂e per year for Scheme 1.

TABLE 1
PROJECT GHG EMISSIONS FROM CONSTRUCTION – SCHEME 1

Year	MT CO ₂ e
2023	593.0
2024	469.1
2025	61.1
Project Total	1,123.2
Amortized Construction Emissions Over the 40-year Life of the Project	28.1

SOURCE: Appendix C-2 to the CEQA Checklist

Alternative Scheme 2. GHG emissions from construction activities associated with Alternative Scheme 2 are presented in **Table 2**. As shown in the table, Alternative Scheme 2 construction activities would generate approximately 1,268.7 MT CO₂e in total, with maximum annual emissions of 616.1 MT CO₂e in 2023. Construction emissions from Alternative Scheme 2 were amortized over the 40-year life of the proposed project and are amount to approximately 31.7 MT CO₂e per year for Alternative Scheme 2.

TABLE 2
PROJECT GHG EMISSIONS FROM CONSTRUCTION – ALTERNATIVE SCHEME 2

Year	MT CO₂e
2023	616.1
2024	464.3
2025	188.4
Project Total	1,268.7
Amortized Construction Emissions Over the 40-year Life of the Project	31.7

SOURCE: Appendix C-2 to the CEQA Checklist

Operation

Operation of both of the proposed project schemes would generate GHG emissions from mobile sources (i.e., vehicle trips to and from the proposed project site), area sources (i.e., use of consumer products, use of landscaping equipment, reapplication of architectural coatings), energy use, waste generation, and water use. In addition, both proposed project schemes would generate emissions from testing and maintenance of an emergency backup generator. Operational emissions that would result from each proposed project scheme were estimated using CalEEMod (version 2020.4.0).

Scheme 1. GHG emissions from operation of Scheme 1 are presented in **Table 3**. As shown in the table, with amortized construction emissions, operation of Scheme 1 would generate approximately 2,486.6 MT CO₂e per year, the majority of which would be from mobile sources.

TABLE 3
PROJECT GHG EMISSIONS FROM OPERATION – SCHEME 1

Sources	MT CO₂e
Area Sources	<0.1
Energy Use	431.4
Mobile Emissions	1,733.2
Solid Waste	193.5
Water and Wastewater	100.4
<i>Total Operational Emissions</i>	<i>2,458.5</i>
Amortized Construction Emissions	28.1
Total Scheme 1 GHG Emissions	2,486.6

SOURCE: Appendix C-2 to the CEQA Checklist

Emissions from the proposed diesel emergency generator for Scheme 1 were estimated assuming a maximum of 8 hours per year of operation for non-emergency purposes of testing and maintenance. **Table 4** compares the estimated GHG emissions from the generator to the City's threshold of 10,000 MT CO₂e for stationary sources.

**TABLE 4
STATIONARY SOURCE GHG EMISSIONS**

Year	MT CO₂e
Emergency Generator	2.8
City of Oakland Stationary Source Threshold	10,000
Exceeds Threshold?	No

SOURCE: Appendix C-2 to the CEQA Checklist

Alternative Scheme 2. As shown in **Table 5**, with amortized construction emissions, operation of Alternative Scheme 2 would generate approximately 3,175.9 MT CO₂e per year, of which 2,218.5 MT CO₂e would be from mobile sources.

**TABLE 5
PROJECT GHG EMISSIONS FROM OPERATION – ALTERNATIVE SCHEME 2**

Sources	MT CO₂e
Area Sources	<0.1
Energy Use	550.6
Mobile Emissions	2,218.5
Solid Waste	246.8
Water and Wastewater	128.1
<i>Total Operational Emissions</i>	<i>3,144.1</i>
Amortized Construction Emissions	31.7
Total Alternative Scheme 2 GHG Emissions	3,175.9

SOURCE: Appendix C-2 to the CEQA Checklist

Emissions from the proposed diesel emergency generator for Alternative Scheme 2 were estimated assuming a maximum of 8 hours per year of operation for non-emergency purposes of testing and maintenance. **Table 6** compares the estimated GHG emissions from the generator to the City's threshold of 10,000 MT CO₂e for stationary sources.

**TABLE 6
STATIONARY SOURCE GHG EMISSIONS**

Year	MT CO₂e
Emergency Generator	2.8
City of Oakland Stationary Source Threshold	10,000
Exceeds Threshold?	No

SOURCE: Appendix C-2 to the CEQA Checklist

Quantification of GHG Reductions from ECAP Measures with which the Project would not Comply (b)

Based on the ECAP Checklist completed by the project applicant, both schemes of the proposed project answers “No” to the following transportation and land use strategy in the ECAP checklist, hence necessitating the preparation of this GHGRP:

4. For projects that are subject to a Transportation Demand Management Program, would the project include transit passes for employees and/or residents?

Based on the average daily vehicle miles traveled (VMT) per worker in the proposed project area (10.4 miles), Scheme 1 and Alternative Scheme 2 of the proposed project would generate approximately 18,866 and 24,128 daily VMT, respectively. Fehr & Peers estimated that the effectiveness of providing transit passes, assuming all employees would receive a transit pass equal to half the cost of transit, would reduce total employee VMT by approximately 3 percent.⁵ Thus, with implementation of discounted transit passes, daily VMT for Scheme 1 would be reduced to approximately 18,300, and daily VMT for Alternative Scheme 2 would be reduced to approximately 23,404.

Scheme 1

To determine the operational GHG reductions that would result from providing transit passes to employees, mobile source GHG emissions were calculated in CalEEMod using the reduced VMT that would result from the implementation of transit passes. Mobile-source emissions under the transit passes scenario were then compared to mobile-source emissions that would result from Scheme 1 of the proposed project, as proposed. Overall, it was determined that providing transit passes under Scheme 1 of the proposed project would result in an annual reduction of 50.5 MT CO₂e. See Attachment F-1 to this document for GHGRP emission reduction measure calculations.

Alternative Scheme 2

Similarly, for Alternative Scheme 2, GHG emissions reductions that would be achieved through the implementation of transit passes were calculated in CalEEMod using the reduced VMT associated with the provision of employee transit passes. Mobile-source emissions under the transit passes scenario were then compared to mobile-source emissions that would result from the Alternative Scheme 2 of the project, as proposed. Overall, it was determined that providing transit passes would result in an annual reduction of 66.7 MT CO₂e. See Attachment F-2 to this document for GHGRP emission reduction measure calculations.

Equivalent GHG Reduction from Other Measures (c)

Had the proposed project implemented all measures in the ECAP consistency checklist, the project would have achieved an additional reduction of approximately 50.5 or 66.7 MT CO₂e per year from Scheme 1 and 2, respectively. This section identifies equivalent reduction in GHG

⁵ Email correspondence between ESA and Fehr & Peers on March 21, 2023.

emissions that the project could achieve through implementation of GHG reduction measures, some of which are already included in the design of the proposed project but not accounted for when deriving the GHG emissions estimates for each scheme of the project (Table 3 through Table 6).

As discussed above, the greatest source of project-generated GHG emissions for both Scheme 1 and Alternative Scheme 2 is attributed to mobile sources. As shown in Table 3 above, operational mobile source emissions from Scheme 1 account for approximately 1,733.2 MT CO₂e per year, or about 70 percent of the total GHG emissions from Scheme 1 of the proposed project. In addition, as shown in Table 5, mobile sources from Alternative Scheme 2 account for approximately 2,218.5 MT CO₂e per year which is also about 70% percent of the total GHG emissions from Alternative Scheme 2 of the proposed project. Therefore, the GHG reduction measures identified in this GHGRP target mobile source emissions for each scheme as the best opportunity to reduce emissions and satisfy SCA GHG-1 requirements for consistency with the ECAP Checklist.

The following GHG reduction measures are already included within the proposed project (either as shown on the proposed project plans or agreed to by the project applicant and would reduce GHG emissions from Scheme 1 and Alternative Scheme 2:

- **Provision of Ridesharing Program.** Implementation of a ridesharing program would encourage carpooled vehicle trips in place of single-occupied vehicle trips. Reduced single-occupancy vehicle trips would reduce VMT as well as associated GHG emissions. This measure includes designation of a certain percentage of desirable parking spaces for ridesharing vehicles, designating adequate passenger loading and unloading and waiting areas for ridesharing vehicles, and providing an app or website for coordinating rides.
- **Implementation of Commute Trip Reduction Marketing.** Includes the implementation of a marketing strategy to educate and inform employees about their employer's commute trip reduction programs. This measure would encourage conscious travel choices, such as carpooling, public transit, walking, and biking, which would reduce VMT and result in further GHG emissions reductions.
- **Provision of On-site Solar.** Includes the installation of rooftop solar photovoltaic (PV) panels covering an approximate roof area of 7,500 square feet. The GHG reduction achieved by this measure would be the same for both Schemes 1 and 2. The estimated GHG reduction is anticipated to decrease by approximately 12 to 15 percent due to degradation of the panels over the 25-to-30-year lifespan of the panels.

Scheme 1

GHG emissions reductions that would be achieved through the implementation of the GHG reduction measures described above are presented in **Table 7**, below.

TABLE 7
GHGRP MEASURES & EMISSIONS REDUCTIONS - SCHEME 1

Measure	GHG Reduction (MT CO₂e)
Provision of a Ridesharing Program	129.8
Implement Commute Trip Reduction Marketing	64.9
Provision of On-site Solar Panels	8.0

SOURCE: Attachment F-1 to this document

By implementing the measures identified and quantified in this GHGRP, Scheme 1 of the proposed project would achieve emissions reductions of up to 202.7 MT CO₂e per year.⁶ Implementation of these measures exceed the GHG reductions that would have been achieved through the implementation of employer-provided transit passes (approximately 50.2 MT CO₂e per year), and Scheme 1 would be consistent with the emissions reductions required for ECAP consistency.

Alternative Scheme 2

GHG emissions reductions that would be achieved through the implementation of the GHG reduction measures described above are presented in **Table 8**, below.

TABLE 8
GHGRP MEASURES & EMISSIONS REDUCTIONS – ALTERNATIVE SCHEME 2

Measure	GHG Reduction (MT CO₂e)
Provision of a Ridesharing Program	166.2
Implement Commute Trip Reduction Marketing	83.1
Provision of Onsite Solar	8.0

SOURCE: Attachment F-2 to this document

By implementing the measures identified and quantified in this GHGRP, Alternative Scheme 2 of the proposed project would achieve emissions reductions of up to 257.3 MT CO₂e per year.⁷ This reduction is greater than what would be achieved through consistency with ECAP Checklist Item 4, which requires provision of employer-provided transit passes (approximately 66.7 MT CO₂e per year), and Alternative Scheme 2 would be consistent with the emissions reductions required for ECAP consistency.

⁶ Effectiveness levels for multiple transportation measures within the Trip Reduction Programs subsector are multiplied to determine a combined effectiveness level, as recommended by the CAPCOA Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity.

⁷ Effectiveness levels for multiple transportation measures within the Trip Reduction Programs subsector are multiplied to determine a combined effectiveness level, as recommended by the CAPCOA Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity.

Monitoring and Reporting (d)

SCA GHG-1 (City of Oakland SCA #42) requires that the GHGRP include requirements for ongoing monitoring and reporting to demonstrate that the GHG reduction measures are being implemented. This GHGRP includes the following monitoring and reporting program.

Requirement

The project applicant shall implement the GHGRP after construction of the project. For operational GHG reduction measures to be incorporated into the project, including those listed in Tables 7 and 8 above, the measures shall be implemented on an indefinite and ongoing basis.

For physical GHG reduction measures to be incorporated into the design of the project, the measures shall be included on the drawings submitted for construction-related permits and implemented during construction. The City shall confirm inclusion of these measures in the plans prior to issuance of a building permit for the applicable phase and confirm the measures were built as part of the final inspection for a Temporary Certificate of Occupancy (TCO).

The project applicant shall satisfy the following requirements for ongoing monitoring and reporting to demonstrate that the additional GHG reduction measures are being implemented.

The GHGRP requires regular periodic evaluation over the life of the project (at least 40 years) to determine how the GHGRP is achieving required GHG emissions reductions over time, as well as the efficacy of the specific additional GHG reduction measures identified in the GHGRP.

Annual Report

Implementation of the GHG reduction measures and related requirements shall be ensured through compliance with Conditions of Approval adopted for the project. Generally, starting two years after the City issues the first Certificate of Occupancy for the project, the project applicant shall prepare each year of the useful life of the project an Annual GHG Emissions Reduction Report (“Annual Report”), for review and approval by the City Planning Director or his/her designee.

The Annual report shall be submitted to an independent reviewer of the City’s choosing, to be paid for by the project applicant. The Annual Report shall summarize and verify the project’s implementation of GHG reduction measures over the preceding year; describe any intended upcoming changes; describe compliance with the conditions of the GHGRP; include a brief summary of the previous year’s Annual Report results (starting the second year); and demonstrate whether the implemented GHG reduction measures achieved the GHG emissions reductions specified in the GHGRP.

The GHGRP shall be considered fully attained when the GHG emissions reductions are achieved, as confirmed by the City through an established monitoring program. Monitoring and reporting activities will continue at the City’s discretion, as discussed below.

Corrective Procedure

If the third Annual Report, or any report thereafter, indicates that, in spite of the implementation of the GHGRP, the project is not achieving the GHG reduction goal, the project applicant shall prepare a report for City review and approval, which proposes additional or revised GHG measures to better achieve the GHG emissions reduction goals, including without limitation, a discussion on the feasibility and effectiveness of the menu of other additional measures (“Corrective GHG Action Plan”). The project applicant shall then implement the approved Corrective GHG Action Plan.

If, one year after the Corrective GHG Action Plan is implemented, the required GHG emissions reduction target is still not being achieved, or if the project applicant fails to submit a report at the times described above, or if the reports do not meet City requirements outlined above, the City may, in addition to its other remedies, (a) assess the project applicant a financial penalty based upon actual percentage reduction in GHG emissions as compared to the percent reduction in GHG emissions established in the GHGRP; or (b) refer the matter to the City Planning Commission for scheduling of a compliance hearing to determine whether the project’s approvals should be revoked, altered or additional conditions of approval imposed.

The penalty described in (a) above shall be determined by the City Planning Director or his/her designee and be commensurate with the percentage GHG emissions reduction not achieved compared to the applicable numeric significance thresholds described in the GHGRP.

In determining whether a financial penalty or other remedy is appropriate, the City shall not impose a penalty if the project applicant has made a good faith effort to comply with the GHGRP.

The City would only have the ability to impose a monetary penalty after a reasonable cure period and in accordance with the enforcement process outlined in Planning Code Chapter 17.152. If a financial penalty is imposed, such penalty sums shall be used by the City solely toward the implementation of the ECAP.

Timeline Discretion and Summary

The City shall have the discretion to reasonably modify the timing of reporting, with reasonable notice and opportunity to comment by the applicant, to coincide with other related monitoring and reporting required for the project.

GHG Reduction Measures

1. Reduction from Provision of End of Trip Bicycle Facilities

Source: https://www.airquality.org/ClimateChange/Documents/Handbook%20Public%20Draft_2021-Aug.pdf

$$A = \frac{C * (E - (B * E))}{D * F}$$

Where,

- A = Percent reduction in GHG emissions from project employee commute VMT -6.3%
- B = Bike mode adjustment factor (source: Fehr&Peers Transportation Impact Review Report) 4.86
- C = Existing bike trip length for all trips in the region (Table T-10.1) 0.9 miles
- D = Existing vehicle trip length for all trips in the region (source: Fehr&Peers Traffic Impact Review Report) 5.2 miles
- E = Existing bicycle mode share for work trips in the region (source: Fehr&Peers Transportation Impact Review Report) 5.10%
- F = Existing vehicle mode share for work trips in the region (source: Fehr&Peers Transportation Impact Review Report) 53.10%

Redox from individual measure -130.5

GHG Reduction Formula

$$A = \frac{C \times (E - (B \times E))}{D \times F}$$

GHG Calculation Variables

ID	Variable	Value	Unit	Source
Output				
A	Percent reduction in GHG emissions from employee project/site commute VMT	0.1–4.4	%	calculated
User Inputs				
None				
Constants, Assumptions, and Available Defaults				
B	Bike mode adjustment factor	1.78 or 4.86	unitless	Buehler 2012
C	Existing bicycle trip length for all trips in region	Table T-10.1	miles	FHWA 2017a
D	Existing vehicle trip length for all trips in region	Table T-10.1	miles	FHWA 2017a
E	Existing bicycle mode share for work trips in region	Table T-10.2	%	FHWA 2017b
F	Existing vehicle mode share for work trips in region	Table T-10.2	%	FHWA 2017b

Table T-10.1. Average One-Way Bicycle and Vehicle Trip Length of All Trips by California Core-Based Statistical Area

Core-Based Statistical Area	Trip Length (miles)	
	Bicycle	Vehicle
Los Angeles-Long Beach-Anaheim	1.7	9.7

2. Provide Ridesharing Program

Source: https://www.caleemod.com/documents/handbook/full_handbook.pdf

$$A = B * C$$

A= Percent reduction in GHG emissions from project employee commute VMT	-8.00%
B= Percent of employees eligible for program	100.0%
C= Percent reduction in employee commute VMT (Table T-8.1)	-8.0%

Redox from individual measure **-166.2**

GHG Reduction Formula

$$A = B \times C$$

GHG Calculation Variables

ID	Variable	Value	Unit	Source
Output				
A	Percent reduction in GHG emissions from project/site employee commute VMT	0-8.0	%	calculated
User Inputs				
B	Percent of employees eligible for program	0-100	%	user input
Constants, Assumptions, and Available Defaults				
C	Percent reduction in employee commute VMT	Table T-8.1	%	SANDAG 2019

Table T-8.1. Reduction in Employee Commute Vehicle Miles Traveled by Place Type

Place Type	Reduction in Employee Commute VMT
Urban	-8%
Suburban	-4%
Rural	—

Source: San Diego Association of Governments (SANDAG). 2019. Mobility Management VMT Reduction Calculator Tool – Design Document. June. Available: https://www.icommutesd.com/docs/default-source/planning/tool-design-document_final_7-17-19.pdf?sfvrsn=ec39eb3b_2. Accessed: January 2021

— = measure not applicable in this place type; VMT = vehicle miles traveled.

3. Implement Commute Trip Reduction Marketing

Source: https://www.caleemod.com/documents/handbook/full_handbook.pdf

$$A = B * C * D$$

A=	Percent reduction in GHG emissions from project/site employee commute VMT	-4%
B=	Percent of employees eligible for program	100%
C=	Percent reduction in employee commute vehicle trips	-4%
D=	Adjustment from vehicle trips to VMT	1

Redox from individual measure **-83.1**

GHG Reduction Formula

$$A = B \times C \times D$$

GHG Calculation Variables

ID	Variable	Value	Unit	Source
Output				
A	Percent reduction in GHG emissions from project/site employee commute VMT	0–4.0	%	calculated
User Inputs				
B	Percent of employees eligible for program	0–100	%	user input
Constants, Assumptions, and Available Defaults				
C	Percent reduction in employee commute vehicle trips	-4	%	TRB 2010
D	Adjustment from vehicle trips to VMT	1	unitless	assumed

GHG Reduction Summary

Reduction Measure	Percent Reduction	Reductions Achieved
2 End of Trip Bicycle Facilities (w showers & lockers)	-6.3%	-130.5
4 Ridesharing Program	-8.00%	-166.2
5 Commute Trip Reduction Marketing	-4%	-83.1
Overall Reductions from Measure Combination		
Measures 1, 2, & 3	-19.4%	-402.55

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/27/2020 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/23/2020 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/23/2020 has revealed that there are 4 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/23/2020 has revealed that there are 20 RCRA-SQG sites within approximately 0.25 miles of the target property.

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there are 4 RESPONSE sites within approximately 1 mile of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/27/2020 has revealed that there are

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 78 LUST sites within approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 34 CPS-SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 7 UST sites within approximately 0.25 miles of the target property.

Local Lists of Hazardous waste / Contaminated Sites

HIST Cal-Sites: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

A review of the HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there is 1 HIST Cal-Sites site within approximately 1 mile of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 12 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/23/2020 has revealed that

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

PG AND E GAS PLANT O	FIRST AND WASHINGTON	SW 1/2 - 1 (0.946 mi.)	404	1464

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 25 EDR Hist Auto sites within approximately 0.125 miles of the target property.

up with Environmental Field Specialist, Nicole Reese. Observed that the facility is unoccupied and has been for a years. The interstitial space of the 500 gallon tank of diesel has no inspection records. Facility representative inspected during inspection and was found dry. Recommends at least periodically. Nicole Reese mentioned removing the facility from the program. PG&E would need to remove ALL of the diesel product from the tank to make it "empty" according to California Health and Safety Code. (dry of material - drip empty)

 Lead Agency: ALAMEDA COUNTY LOP
 Case Type: LUST Cleanup Site
 Geo Track: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T10000004348
 Global Id: T10000004348
 Latitude: 37.8070073
 Longitude: -122.2664031
 Status: Completed - Case Closed
 Status Date: 12/28/2018
 Case Worker: KLD
 RB Case Number: Not reported
 Local Agency: ALAMEDA COUNTY LOP
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Local Case Number: RO0003100
 Potential Media Affect: Other Groundwater (uses other than drinking water), Soil, Soil Vapor
 Potential Contaminants of Concern: Lead, Benzene, Diesel, Ethylbenzene, Gasoline, Kerosene, MTBE / TBA / Other Fuel Oxygenates, Naphthalene, Stoddard solvent / Mineral Spruits / Distillates, Toluene, Total Petroleum Hydrocarbons (TPH), Waste Oil / Motor / Hydraulic / Lubricating, Xylene

Site History:

The site is currently occupied by a two-story commercial building built in 1969 which occupies the entire parcel. The former gasoline service station was demolished and cleared in 1966, but no records were on file with the Oakland Building Department, Alameda County Environmental Health Services Department or Oakland Fire Department regarding the number of USTs, removal of the USTs, and/or confirmation sampling of the USTs. In July 2011, three soil borings

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

BUTTNER PROPERTY (Continued)

S112186515

were advanced around the site building. Concentrations up to, 59,000 parts per billion (ppb) Total Petroleum Hydrocarbons as gasoline (TPHg) and 200,000 ppb Total Petroleum Hydrocarbons as diesel (TPHd) were documented in grab groundwater samples. These concentrations indicate an unauthorized release has occurred from the UST(s) at the site and this Leaking Underground Fuel Tank (LUFT) case was opened to investigate the release. Environmental investigations have occurred from 2011 through 2017 and have included installation of four soil vapor points and the collection of soil, groundwater and soil gas samples. This LUST case was evaluated for closure consistent with the State Water Resource Control Boards Low-Threat Underground Storage Tank Closure Policy (LTCP) for petroleum-related contaminants. ACDEH has determined that the site meets the LTCP General Criteria and Media Specific Criteria for Groundwater and Vapor Intrusion but not Media Specific Criteria for Direct Contact and Outdoor Air. Although PAHs were not detected at/above the laboratory detection levels used by the laboratory in soil samples taken within the 0 to 5 foot depth interval in the building footprint, the laboratory detection levels used by the laboratory exceeded the Table 1 concentrations for residential and commercial/industrial worker exposure current maximum concentrations of PAHs as benzo(a)pyrene toxicity equivalent (BaPe). ACDEH has determined that there is low potential for direct contact exposure because of the current land use as a commercial building resulting in a low potential for direct contact exposure to shallow soil beneath the building footprint. Therefore, the site poses a low risk to human health and safety and the environment. The determination was based on receptors and environmental conditions identified at and in the vicinity of the site at the time of closure and reasonably anticipated near-term future scenarios. Therefore, case closure is granted for the current commercial land use as a two-story commercial building. If a change in land use to any residential, commercial other than as a two story commercial building, or conservative land use, or if any site redevelopment is planned, Alameda County Department of Environmental Health (ACDEH) must be notified as required by Government Code Section 65850.2.2. Any below grade work require planning and implementation of appropriate health and safety procedures by the responsible party prior to and during excavation and construction activities.

Violation Notes: three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Returned to compliance on 02/24/2017. OBSERVATION: Copies of designated facility signed hazardous waste disposal records for 2014, 2015, and 2016 were not found on site. Hazardous waste generators shall retain copies of all manifests signed off by the disposal facility and all receipts used in a consolidated manifesting procedure on site for three years and have them readily available for review. Designated Facility manifests copies are remitted to 1800 Harrison Kaiser Building for record keeping; this practice provides a centralized method of maintaining manifests. However, each generator location shall maintain a copy of the designated facility signed manifest that ensures cradle to grave tracking of all hazardous waste shipped. CORRECTIVE ACTION: Immediately locate a copy of all manifests and receipts for the last three years, maintain them on site. Inform ACDEH inspector when facility receives designated facility signed copies.

Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Routine hazardous materials business plan (HMBP) inspection of Kaiser Permanente Regional offices at 1950 Franklin St, Oakland, CA 94612. Facility walk through and permission granted by David R Woods, Chief Engineer. Email inspection reports to: David R Woods (david.r.woods@kp.org). This facility is an office / administration building for Kaiser Permanente. The building has one UST located in the sidewalk along Webster St., a propane storage area in the loading bay / basement, an emergency backup generator and day tank located on the 21st floor, and a building engineering shop on the 21st floor. All violations noted in this Hazardous Materials Business Plan (HMBP) inspection report are to be corrected within THIRTY (30) days and proof of those corrections submitted to this office in the same time frame. CERTIFICATION OF RETURN TO COMPLIANCE I certify that the violation(s) noted in this Hazardous Materials Business Plan [Truncated]

Eval Notes: Routine triennial hazardous materials business plan (HMBP) inspection. Fire extinguishers checked monthly and certified annually by ACME annually. Intellitech services halon systems. UW annually disposed by RecycLights (bulbs and batteries). One gallon of compressor oil disposed every two years.

Eval Division: Alameda County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-29-2020
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Routine triennial hazardous waste generator (HWG) inspection. Facility is an administrative business office for Kaiser Permanente. Facility generates small quantity of hazardous waste primarily from off-spec, aged, or surplus chemicals. Some waste is asbestos-containing waste from remodels. Universal waste consists of fluorescent lamps and small alkaline batteries.

Eval Division: Alameda County Environmental Health
 Eval Program: HW
 Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
 Eval Date: 01-31-2017
 Violations Found: Yes
 Eval Type: Routine done by local agency
 Eval Notes: Routine hazardous waste generator (HWG) inspection of Kaiser Permanente Regional offices at 1950 Franklin St, Oakland, CA 94612. Facility walk through and permission granted by David R Woods, Chief Engineer. This Kaiser location is a RCRA conditionally-exempt small quantity generator. California non-RCRA status is small quantity generator. The majority of hazardous waste (42% to 97%) is friable asbestos. The rest of the hazardous waste streams are generated periodically/episodically due to facility clean-outs of aged materials. Email inspection reports to: David R Woods (david.r.woods@kp.org). This facility is an office / administration building for Kaiser Permanente. The building has one UST located in the sidewalk along Webster St., a propane storage area in the loading bay / basement, an emergency backup generator and day tank located on the 21st floor, and a building engineering shop on the 21st floor. All violations noted in this Hazardous Waste [Truncated]

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Site History: The 0.7-acre subject site consists of two land parcels associated with Assessor's Parcel Numbers (APNs) 008-0638-006-05 and 008-0638-007-10. The current site owner is 19th & BWAY Associates, LLC however a property transaction with Behring Capital is pending. Site redevelopment activities have been permitted by the City of Oakland and will include excavation of depths of up to 32 feet below ground surface (bgs) and construction of subsurface parking and an office/retail tower; Historic land use at the site dates back as early as 1889 and includes but is not limited to dry cleaning, blacksmith and wagon shop, office, typewriter and carbon ribbon company, physician offices, automotive, photoshop, theater, and parking lots. Historic land use at nearby properties include a brewery, planning mill, laundry, plating and polishing facility,

paints, vulcanizing, plumbing supplies, and motorcycle repair. Undocumented fill material (including debris consisting of concrete, metal, glass, and wood) has been document to depths of approximately 12 feet bgs. Results from limited site investigations conducted in 2016 document chemicals of concern in soil and groundwater at concentrations above environmental risk based screening levels.

File Location:	All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected:	Under Investigation
Potential Contaminants of Concern:	Not reported
Site History:	In 1993 a proposed redevelopment project consisting of an open air multi-story parking structure at 1750 Webster Street prompted a Phase II investigation that identified contamination at the site. Subsequently, a case was opened and subsurface investigations were conducted at the site including installation of three groundwater monitoring wells (A-1, A-2 and A-3). Based on data collected during soil and groundwater investigations and a 1998 Risk-Based Corrective Action ACDEH and the Regional Water Board determined that contamination detected on the site appeared to be related to an up-gradient source and did not pose a risk to human health under the proposed redevelopment scenario or under the existing land use as an at-grade parking lot. In a letter dated February 9, 2000, ACDEH required recordation of a deed restriction for the site to ensure that the site was re-evaluated if the proposed development changed to include enclosed structures and directed that the three monitoring wells not be destroyed so the responsible party for the groundwater contaminant plume beneath the property could use the wells for future monitoring. The proposed open air parking structure failed to

materialize and the site remained as an at-grade parking lot until 2017 when a new residential project was proposed. In 2017, Site Cleanup Program Case No. RO0002672 was administratively closed and the three groundwater monitoring wells transferred to a new Site Cleanup Program Case No. RO0003229 for the Lennar Multifamily Communities redevelopment project.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Site History: Holland Partner Group (Holland) entered into a Voluntary Remedial Action Agreement with Alameda County Department of Environmental Health (ACDEH) to provide regulatory oversight of redevelopment of the former Douglas Parking Garage (Fuel Leak Case No. RO0000129) into a twenty five story (including six levels of parking) mixed-use residential building due to the potential for soil and groundwater contamination from the former adjacent off-Site USTs and other potential off-Site groundwater contaminant sources. Street site redevelopment project will be from lot line to lot line across the property and consist of six levels of parking, one below grade and five above grade, with retail and office space fronting Webster Street on the ground and fourth floor, respectively. Above the sixth parking level is the amenities level containing a fitness center, party room, media center, conference rooms, lounge, and three residential units. Above the amenities level are eighteen floors of residential living spaces in different configurations (e.g., two-bedroom, one-bedroom, or studio apartments). Above the last residential level is a skylounge area with an upper and lower roof terrace, skylounge, and pool. A portion of this level also houses part of the mechanical roof deck. The top level houses more of the mechanical roof deck as well as the elevator mechanical control room. The Site comprises two separate lots that are currently developed from lot line to lot line. The southern portion of the property has been assigned Alameda County Assessors Parcel Number (APN): 008-0624-7, and the northern parcel is 008-0624-6. Existing site improvements include two slab on-grade buildings constructed in 1930. The southern half is two stories fronting Webster Street and a single story beyond that. The northern portion is two stories. The buildings are constructed of cinder block and brick walls and have wooden trusses supporting wooden roofing systems. The southern portion of the property is occupied by a 14,000-square foot structure that was mainly used for vehicle parking and was owned and operated by Douglas Parking Company. Former retail/commercial spaces along Webster Street frontage of the building included Coloso Coffee, Pablo Brady Hair Salon, RAWR (cat food), and Amanda Kate Hill (AKH) Fitness and Nutrition. Above the retail/commercial spaces along Webster Street frontage of the building were the offices of Douglas Parking Company. The northern portion of the property is occupied by a 7,500-square foot structure used mainly for vehicle parking though there is some storage space on the ground floor. Historical research documented that the subject property parcels were developed with a residence and a nursery including a greenhouse in the late 1800s, residences in the early 1900s, and by the 1930s with buildings in the approximate configuration of the present day. Vehicle parking and a variety of automotive service operations including painting and auto repairing were present in at least the 1950s and 1960s, and through the present other operations including restaurants, pet food sales, a hair salon and a fitness center.

(<http://www.acgov.org/aceh/lop/ust.htm>). Both databases should be reviewed to obtain a complete history. Please refer to the Case Closure Summary Form dated May 10, 2018 and the case file found on both Alameda County Department of Environmental Health website (<http://www.acgov.org/aceh/lop/ust.htm>) and on GeoTracker. Leaking Underground Storage Tank (LUST) Cleanup Site Case No. T0600100140/RO0000129 was opened in 1993 by ACDEH to investigate and evaluate impacts to human health and the environment associated with an unauthorized release from three USTs and associated UST system components that were removed from the site in 1992. Site investigation activities associated with the LUFT case were conducted from 1993 to 2017 to evaluate the extent of subsurface impacts to soil, soil vapor and groundwater from the UST system release. This UST release case has been evaluated for closure consistent with the State Water Resource Control Boards Low-Threat Underground Storage Tank Closure Policy (LTCP) for petroleum related contaminants. ACDEH has determined that the site meets all the LTCP General Criteria and Media Specific Criteria and thus the site poses a low threat to human health and safety and to the environment under current and reasonably anticipated near-term future scenarios. Other potential chemicals of concern from historic land use and operations at the site were not evaluated in association with this LUST case. ACDEH recommends that during the environmental due diligence process (initiated as part of activities including, but not limited to, property transactions, bank refinancing, and redevelopment) that the site and parcels in the vicinity of the site be evaluated for risk from and exposure to potential chemicals of concern identified at this site. Please refer to the Case Closure Summary Form dated May 10, 2018 and the case file found on both Alameda County Department of Environmental Health website (<http://www.acgov.org/aceh/lop/ust.htm>) and on GeoTracker.

Hazardous Waste Summary:

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING:
TETRACHLOROETHYLENE, TRICHTHLORETHYLENE, METHYLENE CHLORIDE,
1,1,1-TRICHTHLORETHANE, CARBON TETRACHLORIDE AND CHLORINATED
FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING
CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF
ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site ID: 373301
Site Name: SOF XI WFO Harrison Owner, LLC
Violation Date: 01-30-2020
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)

Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violation Notes: The business failed to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material including familiarity with the emergency response plan or failure to document and maintain training records for a minimum of three years. Establish and electronically submit an employee training program containing provisions to ensure initial and annual training for all employees in safety procedures in the event of a release or threatened release of a hazardous material and document and maintain training records for a minimum of three years.

Violation Date: 01-30-2020
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: The business failed to complete and electronically submit chemical inventory information for all reportable hazardous materials on site at or above reportable quantities. The volume of hydraulic oil in the elevator reservoir needs to be added to the business plan since this is now a tank in an underground area. This will cover the tank facility statement if submitted annually. Add the volume of hydraulic oil in the elevator reservoir to the HMBP even if it is below 55 gallons due to it being in the TIUGA program.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
 Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
 Violation Notes: Returned to compliance on 01/07/2020. Black plastic pharmaceutical waste container was observed without a Cal EPA mandated hazardous waste label. Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date. Submit a photo to the CUPA demonstrating that the container listed above has been properly labeled.

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 10/20/2016. OBSERVATION: Facility hazardous materials inventory statement details maximum oxygen as 37,600 cubic feet (cf) with maximum cylinder size of 4,700 cf. Inspector observed these quantities: 6 x 251 cf oxygen cylinders in gas closet; 7 x 25 cf oxygen cylinders in gas closet; 4 x 25 cf carbon dioxide cylinders in gas closet; In-service gas cylinders: 2 x 25 cf CO2 cylinders on cart; 1 x 25 cf O2 cylinder on crash cart and 1 x 25 cf O2 cylinder on cart. CORRECTIVE ACTION: Facility shall correctly state the amount of gases that exceed 200 cf. ADD carbon dioxide maximum amount 225 cf, maximum cylinder size is 25 cf. CHANGE oxygen to maximum amount of 1,750 cf with maximum size cylinder of 251 cf. Update hazardous materials quantities within the CERS on-line system within 30 days.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-05-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Routine, unannounced, triennial hazardous materials business plan inspection of East Bay Endosurgery at 300 Frank Ogawa Plaza, Suite 135, Oakland. Facility walk through conducted with Laurie McNease, clinical director. Note that Aaron McCombs, chief engineer, is the engineer for the entire Rotunda Building. Facility provides outpatient endoscopy (gastroenterology) including: colonoscopy, flexible sigmoidoscopy, and upper endoscopy. The medical center maintains the following hazardous materials above threshold reporting limits (200 cubic feet for gases, 500 pounds for solids, and 55 gallons for liquids): Oxygen (approx. 1,700 cf); Carbon dioxide (approx 225 cf). The facility has numerous hard-piped gas outlets at patient bedsides. Emergency shut-off valves and pressure gauges are located throughout the facility. The facility does not have oxygen or CO2 sensors installed, rather leaks would be detected through manifolded pressure monitoring. Pressure would [Truncated]

Eval General Type: Compliance Evaluation Inspection
Eval Date: 11-13-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Initial hazardous waste generator triennial inspection. Facility is a provider of colonoscopy, flexible sigmoidoscopy, and upper endoscopy. HMBP annual training provided by Health Stream. Stericycle provides 49 CFR USDOT training every 3 years. Training provided for 10 employees (all nurses and technicians on staff); however only 6 employees are HW manifest signatories. Inspector discussed the significance and importance of uniform hazardous waste manifest tracking and collating. Inspector demonstrated one method to ensure TSDF signed manifests are matched to Generator copy. Land Disposal Restrictions (LDR) significance and importance were discussed with facility representative; develop and maintain a system to collate the LDRs with the Uniform Manifest. The LDRs are maintained to ensure that hazardous waste is properly managed (e.g. the risks are reduced) at the TSDF. These two documents are utilized to track cradle to grav...

S123100398

Longitude: -122.26681
Case Type: Cleanup Program Site
Case Worker: CCM
Local Agency: Not reported
RB Case Number: 01S0772
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: Tetrachloroethylene (PCE), Diesel, Ethylbenzene, Gasoline, Naphthalene, Toluene, Xylene
Site History: The site contained a parking lot with two fuel pumps in the southwestern corner in 1933. By 1957, a car wash was operating on the property. By 1965, a commercial office and warehouse were built on the site with covered parking (current). In preparation of redevelopment, a soil, soil vapor and groundwater investigation was implemented in 2016. Petroleum hydrocarbons and chlorinated volatile organic compounds have been found on the subsurface; soil cleanup was completed in 2017. Groundwater impacts have been addressed with a vapor barrier and institutional constraints (i.e., deed restriction, site management plan, vapor intrusion mitigation system and operation and maintenance plan . The site has been redeveloped into a mixed-use (commercial/residential) property. Building occupancy planned in February 2019.

transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.

Violation Notes: Returned to compliance on 11/08/2019. Manifests missing Generator copy: 011490909file 02433150file 012433151file 0124433152file 011490910file 0124414819file 012415030file 012415028file Manifests without TSDf-signed copy: 011490908file (5/15/2019) 012431766file (4/30/2019) Locate a copy of all missing Generator and TSDf-signed manifests and submit copies to the CUPA Inspector. Implement and maintain a Generator/TSDf-signed manifest tracking system that ensures and demonstrates facility is able to track and correlate all hazwaste shipments from cradle to grave.

Violation Division: Alameda County Environmental Health
Violation Program: HWLQG
Violation Source: CERS

Site ID: 109728
Site Name: CVS Pharmacy #9957
Violation Date: 10-22-2019
Citation: HSC 6.5 25201(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25201(a)

Violation Description: Failure to obtain a permit or grant of interim status to accumulate hazardous waste longer than 90 days.

Violation Notes: Returned to compliance on 11/08/2019. The most recent hazwaste pickup was Mid-Oct 2019 as relayed verbally by shift supervisor and pharmacist (generator manifest was not available for review). Prior hawaste disposal dates were: Jan 2019 (012414818FLE, 012414817FLE, 012414819FLE), Feb 2019 (012415030FLE), 4/30/2019, and 5/15/2019. From available records, it appears five months elapsed between the May and October 2019 hazwaste pickups/disposals. Dispose of all hazardous waste shall not exceed 90 days. Transmit the next uniform hazardous waste manifest to ACDEH Inspector.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-01-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Onsite to conduct the Hazardous Waste Generator Inspection at CVS Pharmacy #9957 - 344 Thomas L. Berkley Way, Oakland, CA. Met with Store Manager, Kellie Carmody. Observed that facility does not currently generate enough P and U listed waste to be considered a Large Quantity Generator according to hazardous waste manifests reviewed. Facility does still have the possibility to generate over 1 KG per month to make them a Large Quantity Generator. No Hazardous waste was observed being stored anywhere onsite due to recent pick up by Stericycle on 5/26/16.

Eval Type: Routine done by local agency
Eval Notes: Routine triennial hazardous waste generator (HWG) inspection. Facility walk through conducted with Antonia Antalán, shift supervisor. Report findings reviewed with Bellma Valencia, store manager. Reverse distribution vendor/transporter is GENCO. All RCRA and CA pharmaceutical hazardous waste is disposed of via StrongPak (a Stericycle company). Consumer/public pharmaceutical waste is collected via self-service secured kiosk adjacent to the pharmacy. CVS only logs the date the inner liner from the kiosk is collected. CVS does not, by law, open the liner or take any inventory of pharmaceutical waste deposited by consumers into the kiosk. During inspection, this facility was observed generating less than 1,000 kg/month of HW and less than 1 kg/month of acute HW; facility is currently a small quantity generator: 2016: CA 0.0374 tons/month; RCRA 0.0112 tons/month; P-listed 0.0004 tons/month. 2017: CA 0.0525 tons/month; RCRA 0.0... Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Global Id: T0600100304
Latitude: 37.8051642137941
Longitude: -122.266503721475
Status: Completed - Case Closed
Status Date: 01/27/2015
Case Worker: MD
RB Case Number: 01-0331
Local Agency: ALAMEDA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: RO0000143
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline, Waste Oil / Motor / Hydraulic / Lubricating
Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A complete case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>. The subject site was used as a service station until 1972 when the site was demolished and the tanks removed. The station building, two dispenser islands, one waste oil UST, and two gasoline USTs were removed. An earlier generation of USTs had previously been removed. Since 1975 it has been used as a parking lot. A soil vapor survey was conducted in 1988 to determine if the site had been impacted, three wells were installed in October 1988, four wells were installed in 1989, four wells were installed offsite in June 1990, two offsite wells were installed in October 1991, and another two wells were installed offsite in late 1992, for a total of 16 wells. Limited soil excavation was conducted in January 1992. An SVE system operated onsite in 1993, but showed minimal effectiveness. In June 2004 the first generation UST pit was investigated and impacts were discovered. In April 2007 four bores were installed to investigate the extent of contamination associated with the first generation USTs. In June 2007 a vapor survey was conducted and elevated concentrations were detected in all vapor points. In early 2008 105 bucket auger bores were installed to remove impacted soil associated with the first generation USTs. A report on the installation of a post-remediation groundwater monitoring well and the installation of several soil bores to infill a data gap in the downgradient extent of the groundwater plume was generated. Well MW-17 was installed in October 2010. Additional excavation of soil impacted by the second generation USTs and the waste oil UST was conducted between January and June 2011 as part of the redevelopment project for the subject site.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.

Violation Notes: Facility did not comply with one or more of the following DO monthly inspection requirements: Performed by an ICC certified DO; Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy; Inspect for the presence of liquid/debris in spill containers; Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly; Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit; Check that all testing and maintenance has been completed and documented; Verify that all facility employees have been trained in accordance with 23 CCR 2715(f)(c). DO inspections conducted after 9/30/2018 must be every 30 days and in accordance with sections

Violation Date: 04-25-2017
Citation: 23 CCR 16 2715(i) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(i)

Violation Description: Failure to have a properly qualified service technician test leak detection equipment as required every 12 months (vapor, pressure, hydrostatic (VPH) system, sensors, line-leak detectors (LLD), automatic tank gauge (ATG), etc.).

Violation Notes: Returned to compliance on 11/01/2017. OBSERVATION: Owner/Operator did not perform and pass annual line integrity test for pressurized piping that does not utilize fail safe or shut down. This tank system is being operated as an emergency generator system with line testing substituted for positive shutdown and the use of a pressurized line leak detector. CORRECTIVE ACTIONS: Perform an annual line test to a leak threshold of 0.1 gallons per hour. A State licensed tank tester shall conduct the testing using equipment certified to conduct this testing. Notify this office at least 48 hours prior to testing at dehust@acgov.org

to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, - 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 04/11/2019. Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. The overfill prevention inspection was not completed before October 13, 2018. This was corrected on site.

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)

Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. The facility could not conduct the overfill prevention inspection on the four 7,000 gallon UST's located in the basement due to the original construction of the tanks. The Service Technician attempted to remove the drop tubes, but could not pull them completely out of the fill pipe because the ceiling in the basement. Maintain overfill prevention system to comply with the deficiencies noted above. The drop tubes may have to be modified to comply with the regulations. Please submit a permit application to ACDEH if modifications are required.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-11-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: ALAMEDA COUNTY DEPARTMENT OF ENVIRONMENTAL HEALTH (ACDEH) ON SITE FOR ROUTINE INSPECTION. THE TECHNICIAN WAS GAGE HART OF TAIT WHO POSSESSES THE ICC SERVICE TECHNICIAN CERTIFICATION THAT EXPIRES 6/12/19, THE VEEDER ROOT CERTIFICATION THAT EXPIRES 7/6/19 AND THE INCON LEVEL 4 CERTIFICATION THAT EXPIRES 7/12/19. ALL VIOLATIONS NOTED IN THE INSPECTION REPORT SHALL BE CORRECTED BY MAY 11, 2019 AND ANY VERIFICATION DOCUMENTATION SUBMITTED WITHIN THE SAME TIME FRAME. THE FACILITY HAS 5 DOUBLE WALL TANKS USED FOR EMERGENCY GENERATOR FUEL. NO DISPENSERS OR LEAK DETECTORS. FOUR 7370 GALLON TANKS HAVE A REMOTE FILL WITH AUDIBLE VISUAL ALARM AS OVERFILL PROTECTION. ONE 5470 GALLON TANK HAS DIRECT BURY SPILL CONTAINER. THE LAST AMC WAS 4/12/18, HE LAST SECONDARY TEST WAS 3/8/17.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-25-2017
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Annual routine UST monitoring system certification and spill bucket testing performed today. No line integrity tests performed during the inspection today. Historically only tank #Q1002U005 has had the line integrity testing performed. However, the other four USTs are required to have the testing performed. The four USTs are manifolded from two USTs into one line, for a total of two lines connected to the two day tanks for redundancy. The violation noted in this inspection for failure to perform a line test is for the USTs in the basement and numbered #Q1002U001 through Q1002U004. Testing the pressurized piping for the two lines is consistent with the requirement for tank Q1002U005. There are no records of testing being performed for the last 3 years. This testing is required since the Veeder Root is not programmed for positive shutdown and to satisfy provisions in Title 23, section 2636(f)(4). We are considering this system to have secondary containment for the piping the [Truncated]

AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

STATE MASTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This

information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Site ID: 127123
CERS ID: 10468381
CERS Description: Chemical Storage Facilities

Violations:

Site ID: 127123
Site Name: Kaiser Center
Violation Date: 03-29-2017
Citation: HSC 6.75 25299.30-25299.34 - California Health and Safety Code, Chapter 6.75, Section(s) 25299.30-25299.34

Violation Description: Failure to submit and maintain complete and current Certification of Financial Responsibility or other mechanism of financial assurance.

Violation Notes: Returned to compliance on 09/05/2018. OBSERVATION: The UST element in CERS was "accepted" by ACDEH in error. The Certification of Financial Responsibility and the Certificate of Insurance were not current at the time. CORRECTIVE ACTION: Upload current Certificate of Financial Responsibility and Certificate of Insurance to CERS.

Violation Division: Alameda County Environmental Health
Violation Program: UST
Violation Source: CERS

Site ID: 127123
Site Name: Kaiser Center
Violation Date: 01-22-2018
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violation Notes: Returned to compliance on 01/22/2018. OBSERVATION: The facility has not submitted the Hazardous Materials Inventory Chemical Description page for 386 cubic feet of Acetylene and 447 cubic feet of compressed oxygen to the CUPA. CORRECTED ONSITE: Facility corrected and submitted during inspection.

Violation Division: Alameda County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 127123
Site Name: Kaiser Center
Violation Date: 01-22-2018
Citation: 22 CCR 23 66273.35 - California Code of Regulations, Title 22, Chapter 23, Section(s) 66273.35

Violation Description: Failure to accumulate universal waste for one year or less and to demonstrate the length of time that the universal waste has been accumulated from the date it became a waste or was received.

Violation Notes: Returned to compliance on 09/05/2018. OBSERVATION: Generator had storage of waste lamps, with one container having an accumulation start date of 11/17/2015. Records show the most recent Universal Waste lamps disposal was on 9/29/2016. All universal waste shall be disposed of within 1 year of accumulation storage. CORRECTIVE ACTION: Contact a universal waste hauler and provide ACDEH with documentation of disposal for all currently stored universal waste within 30 days.

Violation Date: 03-29-2017
Citation: 23 CCR 16 2715(c) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(c)

Violation Description: Failure to comply with one or more of the following designated operator (DO) monthly inspection requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been properly trained.

Violation Notes: Returned to compliance on 03/29/2017. OBSERVATION: May 2016 monthly inspection was not available for review. Current regulations require at least the last 12-months of monthly inspections be retained. CORRECTIVE ACTION: Submit the May 2016 monthly inspection to ACDEH. CORRECTED AT THE TIME OF INSPECTION.

Violation Division: Alameda County Environmental Health

Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: Returned to compliance on 09/05/2018. OBSERVATION: Observed one 55 gallon drum of used oil with no hazardous waste label. All hazardous waste containers shall be marked with the following information: 1) the words G Hazardous Waste; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTIVE ACTION: Immediately label these containers and ensure that all containers are marked with all the required information. Since it cannot be determined how long the the 55 gallon drum has been at 27 gallons on site, immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the CUPA by 2/21/2018.

Violation Date: 03-07-2019
Citation: 23 CCR 16 2715(f) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(f)

Violation Description: Failure to have a properly qualified service technician test leak detection equipment as required every 12 months (vapor, pressure, hydrostatic (VPH) system, sensors, line-leak detectors (LLD), automatic tank gauge (ATG), etc.).

Violation Notes: Returned to compliance on 03/07/2019. Owner/Operator did not have a properly qualified service technician test leak detection equipment every 12 months (VPH, sensor, LLD, ATG, etc.). Annual testing was required to be completed in the month of February. Conducted today on 3/7/2019, which is 6 days of being out of compliance. Have a properly qualified service technician test leak detection equipment every 12 months.

Violation Date: 03-29-2017
Citation: 23 CCR 16 2715(c) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(c)

Violation Description: Failure to comply with one or more of the following designated operator (DO) monthly inspection requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been properly trained.

Violation Notes: Returned to compliance on 04/29/2017. OBSERVATION: May 2016 monthly

Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violation Notes: Returned to compliance on 01/22/2018. OBSERVATION: The facility has not submitted the Hazardous Materials Inventory Chemical Description page for 386 cubic feet of Acetylene and 447 cubic feet of compressed oxygen to the CUPA. CORRECTED ONSITE: Facility corrected and submitted during inspection.

Violation Description: Failure to accumulate universal waste for one year or less and to demonstrate the length of time that the universal waste has been accumulated from the date it became a waste or was received.

Violation Notes: Returned to compliance on 09/05/2018. OBSERVATION: Generator had storage of waste lamps, with one container having an accumulation start date of 11/17/2015. Records show the most recent Universal Waste lamps disposal was on 9/29/2016. All universal waste shall be disposed of within 1 year of accumulation storage. CORRECTIVE ACTION: Contact a universal waste hauler and provide ACDEH with documentation of disposal for all currently stored universal waste within 30 days.

Violation Date: 03-29-2017
Citation: 23 CCR 16 2715(c) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(c)

Violation Description: Failure to comply with one or more of the following designated operator (DO) monthly inspection requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been properly trained.

Violation Notes: Returned to compliance on 03/29/2017. OBSERVATION: May 2016 monthly inspection was not available for review. Current regulations require at least the last 12-months of monthly inspections be retained. CORRECTIVE ACTION: Submit the May 2016 monthly inspection to ACDEH. CORRECTED AT THE TIME OF INSPECTION.

Darin Reinholdt of Reinholdt Engineering is the technician conducting secondary containment test. The annual UST inspection was conducted along with the monitoring equipment certification. Consent to inspect was given by and the inspection report was reviewed with Adwoa Dora, Chief Engineer. A modified Lake test was used for the piping sump using the incon measuring device. Nitrogen gas was used to pressurize the piping interstitial. All passed. Test results must be submitted to ACDEH within 30-days of completion of testing.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Violation Status: No violations found
