Violations:

Site ID: 90485
Site Name: Alameda Contra Costa Transit District (General Office/GO)
Violation Date: 06-20-2016
Citation: 23 CCR 6.7 25284, 25286 - California Code of Regulations, Title 23, Chapter 6.7, Section(s) 25284, 25286
Violation Description: Failure to submit a complete and accurate application for a permit to operate a UST, or for renewal of the permit.
Violation Notes: Returned to compliance on 07/19/2016. OBSERVATION: UST facility operating permit information and UST tank information for the diesel tank and monitoring are not current in CERS. Any change of information must be updated in CERS within 30 days of the change. See Tank Information and Monitoring Plan with edits that ACDEH inspector provided. CORRECTIVE ACTION: Submit and maintain an accurate UST Operating Permit Application for Facility information and/or Tank information.
Violation Division: Alameda County Environmental Health
Violation Program: UST
Violation Source: CERS

Site ID: 90485
Site Name: Alameda Contra Costa Transit District (General Office/GO)
Violation Date: 12-20-2017
Citation: 23 CCR 16 2635(a)(2)(A) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2635(a)(2)(A)
Violation Description: Failure to comply with one or more of the following requirements for the cathodic protection system: Have corrosion protection equipment turned on and functioning properly. Inspect the impressed-current system every 60 calendar days. Inspect the impressed-current system within six months of installation and at least every three years thereafter. Test sacrificial anodes once every three years in accordance with the manufacturer's instructions.
Violation Notes: Returned to compliance on 01/19/2018. OBSERVATION: Failure to comply with the following requirements: 1) Inspect the impressed-current system every 60 calendar days; 2) Have corrosion protection equipment turned on and functioning properly; 3) Inspect the impressed-current system within six months of installation and at least every three years thereafter; 4) Test sacrificial anodes once every three years in accordance with the manufacturer's instructions. 23 CCR 16 2635(a)(2). CORRECTIVE ACTION: Provide ACDEH with copies of inspections and have the impressed-current system maintained and inspected properly. If unable to provide documentation for above inspections, this means that there are multiple individual 60 calendar day violations for the past 6 1/2 years, that may result in a civil penalty between \$500 to \$5000 per day. It would also be assumed that the steel UST and UST piping have been without corrosion protection for 18 years. Provide a work plan UST modification permit within 30 days to have the [Truncated]

Citation: HSC 6.7 25290.1(c),25290.2(c),25291(a)(2),2529.1(e) - California Health and Safety Code, Chapter 6.7, Section(s) 25290.1(c),25290.2(c),25291(a)(2),2529.1(e)
Violation Description: Failure to maintain secondary containment (e.g., failure of secondary containment testing).
Violation Notes: Returned to compliance on 12/18/2018. OBSERVATION: Secondary containment testing showed about 800 milliliters of Diesel in the secondary space. A vacuum test was conducted on 12/7/2017 by TEC Accutite and 12/20/2017. Vacuum held for both tests, but addition diesel fuel was found in the tank annular space. CORRECTIVE ACTION: Repair/Maintain secondary containment. Submit documentation. 12/18/18 - UST was removed
Violation Division: Alameda County Environmental Health
Violation Program: UST
Violation Source: CERS

Site ID: 90485
Site Name: Alameda Contra Costa Transit District (General Office/GO)
Violation Date: 12-20-2017
Citation: 23 CCR 16 2712(b) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)
Violation Description: Failure to comply with one or more of the following corrosion protection record retention requirements: Maintain records of cathodic protection systems testing within six months of installation and at least every three years thereafter. Maintain records for the 60 calendar day inspection of the impressed-current system. Maintain records for sacrificial anodes testing every three years. Have written monitoring and maintenance records on-site or off-site at a readily available location if approved by the UPA.
Violation Notes: Returned to compliance on 01/19/2018. OBSERVATION: Observed that an impressed current cathodic protection system was installed and approved on March 30, 1999 by Mr. Graig Michel'S, C.P.E. according to Impressed Current Cathodic Protection System Installation Report dated 4/22/1999. The cathodic protection system does not appear to be operating and the installation report says that "readings indicated that the tank and piping were steel (non-coated) in bare soil/backfill." Failure to comply with one or more of the following corrosion protection record retention requirements: (1) Maintain records of cathodic protection systems testing within six months of installation and at least every three years thereafter, (2) Maintain records for the 60 calendar day inspection of the impressed-current system, (3) Maintain records for sacrificial anodes testing every three years, (4) Have written monitoring and maintenance records on-site or off-site at a readily available location if approved by the CUPA. 23 CCR 16 [Truncated]

Eval Notes: Onsite to observe the 3-year Secondary Containment Test for AC Transit General Office - 1600 Franklin St., Oakland, CA. Met with Dan Ruslen, Tim Evans, and Annie Tran of AC Transit. Ron Breckenridge was conducting the secondary containment test. Observing the listed violations today, the integrity of the double-walled steel tank is in question. There is Diesel fuel present in the interstitial space and no recorded inspections are available for the corrosion protection system, which was installed March 30, 1999. 6 1/2 years of corrosion protection inspections are required to be available and there are no observed records of these inspections between 1999 and now. The UST secondary containment is required to be repaired and the cathodic protection system inspected and maintained properly. AC Transit will be required to provide ACDEH with a work plan permit application within 30 days and complete the work within a reasonable amount of time, which is defined in State Water [Truncated]

Description:	PER NRC FAX: The caller is reporting that maintenance people were using toxic cleaner to clean carpets at an office. The caller had to go to the hospital because the chemicals gave her chest pains and trouble breathing. It also made three other people sick. The caller stated that she found out that gasoline was in the chemicals that they were using to clean.

Case Worker: PK
RB Case Number: NA
Local Agency: ALAMEDA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: RO0002984
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Heating Oil / Fuel Oil, Lead
Site History: In 2006, the site was being redeveloped with a multi-story office building. During construction activities, an UST was discovered and subsequently removed. Elevated concentrations of petroleum hydrocarbons were detected at the site. Several borings were installed to delineate the extent of the groundwater contaminant plume.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-13-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: ACDEH staff arrived on site to complete an unannounced inspection for multi-story office complex and meet with facility chief engineer Albert Cedillo. Permit to operator from ACDEH is current and information in CERS is current, however the facility needs to list propane on the chemical inventory. The facility operates back up diesel generators with fuel stored in above ground storage tanks; however, the facility SPCC plan has not been updated since 2010, SPCC plans are required to be updated every 5 years. Employee training is complete from HAZCOM, fuel handling and emergency response. Once all the violations have been corrected, sign and complete the return to compliance (RTC) statement and provide a copy of the RTC to my attention. CERTIFICATION OF RETURN TO COMPLIANCE I certify that the violation(s) noted on the Notice to Comply and/or /Summary of Violations page(s) have been corrected. I have personally examined any documentation attached to the certification to [Truncated]

 Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
 Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
 Violation Notes: Returned to compliance on 05/01/2018. OBSERVATION: A clear 5 gallon container of used oil in the storage room did not have a start accumulation date. All hazardous waste containers shall be marked with the following information: 1) the words G Hazardous WasteG ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTED ON SITE. The Floor Supervisor Sandra Robles added the start accumulation date based on disposal records. This was corrected on site.

S121793006

Section(s) 25507

Violation Description: Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.

Violation Notes: Returned to compliance on 10/01/2018. OBSERVATION: The Hazardous Materials Business Plan has not been adequately implemented as demonstrated by a copy of the plan not being on site and available to employees to implement during an emergency. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that the Hazardous Materials Business Plan is on site and available to employees within 30 days.

Violation Division: Alameda County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 85484
Site Name: Western Dental
Violation Date: 05-01-2018
Citation: HSC 6.95 25505.1 - California Health and Safety Code, Chapter 6.95, Section(s) 25505.1

Violation Description: Failure to provide a copy of the business plan to the owner or the owner's agent within five working days after receiving a request for a copy from the owner or the owner's agent.

Violation Notes: Returned to compliance on 07/16/2018. OBSERVATION: The facility leases/rents the property and there is no documentation that the property owner has been notified in writing that a HMBP is required for the business and complied with all of its provisions. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that you have complied with the requirement within 30 days. ACDEH will provide a form to be utilized to fulfill this requirement.

Eval Date: 05-01-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: ALAMEDA COUNTY DEPARTMENT OF ENVIRONMENTAL HEALTH (ACDEH) ON SITE FOR HAZARDOUS WASTE GENERATOR (HWG) INSPECTION. ESCORTED BY SANDRA ROBLES, THE FLOOR SUPERVISOR. ALL VIOLATIONS NOTED IN THE INSPECTION REPORT SHALL BE CORRECTED BY MAY 31, 2018 AND ANY VERIFICATION DOCUMENTATION SUBMITTED WITHIN THE SAME TIME FRAME. AFTER REVIEWING THE GENERATOR'S DISPOSAL RECORDS AND BUSINESS OPERATIONS, IT WAS OBSERVED THE FACILITY IS A VERY SMALL QUANTITY HAZARDOUS WASTE GENERATOR WHO GENERATES LESS THAN 100 KG OF HAZARDOUS WASTE PER MONTH THE FACILITY HAS 1 EMPLOYEE THAT HANDLES HAZARDOUS WASTE CERTIFICATION OF RETURN TO COMPLIANCE I certify that the violation(s) noted in this Hazardous Waste Generator inspection report for Western Dental conducted on May 1, 2018 located at 1530 Broadway Ave, Oakland, CA have been corrected. I have personally examined any documentation attached to the certification to establish that the violations have been [Truncated]

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site ID: 409508
Site Name: CIM/Oakland 1 Kaiser Plaza, LP
Violation Date: 02-21-2020
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)

Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violation Notes: Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles), or has failed to comply with the conditions of CCR 66262.34(d) and has stored hazardous waste over 90 days. The waste drum accumulation date was from 2017. Dispose of hazardous waste that has been stored over the applicable time limit and provide documentation that the violation has been corrected. Provide manifests or bills of lading to the CUPA.

Citation: 40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174

Violation Description: Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.

Violation Notes: Based on the oil in the secondary containment, opened drums, incomplete or missing labels, it is apparent that the facility does not inspect the hazardous waste storage area weekly. Submit photos to the CUPA showing that these violations have been corrected and that the haz waste area is inspected weekly.

Violation Division: Alameda County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 409508
Site Name: CIM/Oakland 1 Kaiser Plaza, LP
Violation Date: 02-21-2020
Citation: HSC 6.67 25270.2(a)(8) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.2(a)(8)

Violation Description: Failure of an owner/operator of an excluded tank in an underground area (TIUGA) with less than 55-gallon capacity to have secondary containment, conduct monthly inspections, and/or maintain a log of inspections.

Violation Notes: Owner/operator of an excluded tank in an underground area (TIUGA) with less than 55-gallon capacity failed to have secondary containment, conduct monthly inspections, and/or maintain a log of inspections. Provide secondary containment, conduct monthly inspections and maintain log for excluded TIUGA or include in your SPCC plan.

Violation Division: Alameda County Environmental Health
Violation Program: APSA
Violation Source: CERS

Site ID: 409508
Site Name: CIM/Oakland 1 Kaiser Plaza, LP
Violation Date: 02-21-2020
Citation: 40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)

Violation Description: Failure to ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.

Violation Notes: Employees are not thoroughly familiar with proper waste handling and emergency procedures as demonstrated by the number and/or type of hazardous waste violations observed at the time of inspection. Submit documentation to the CUPA demonstrating that employees have been properly trained.

Case Type: Cleanup Program Site
Case Worker: KLD
Local Agency: ALAMEDA COUNTY LOP
RB Case Number: Not reported
File Location: Local Agency
Potential Media Affected: Under Investigation
Potential Contaminants of Concern: Heating Oil / Fuel Oil
Site History: Petroleum hydrocarbons were detected in soil samples collected during the removal of two underground storage tanks (USTs) from the site. The USTs were described as home heating oil tanks. The fuel leak was investigated. Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>

Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Case Type: LUST Cleanup Site
Geo Track: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0600100682
Global Id: T0600100682
Latitude: 37.8033636526497
Longitude: -122.267191214784
Status: Completed - Case Closed
Status Date: 05/29/2019
Case Worker: MYM
RB Case Number: 01-0739
Local Agency: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: RO0000266
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Site investigations were conducted at various times from July 1990 to October 1996. In December 1993, two 1,000-gallon gasoline underground storage tanks were removed from beneath the sidewalk along Harrison Street. In addition, three hydraulic lifts, one vault, one wash rack sump, and associated piping were reportedly excavate and removed from the site. A total of approximately 240 cubic yards of hydrocarbon-impacted soil was reportedly removed from these areas. Soil vapor extraction and air sparging remediation was conducted from December 2001 through April 2005. Not all historic documents for the fuel leak case are available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>.

Department of Defence: False
Solid Waste Assessment Test Program: Not reported
Threat to Water Quality: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

 Treat To Water: Major Threat to Water Quality. A violation could render unusable a ground water or surface water resource used as a significant drink water supply, require closure of an area used for contact recreation, result in long-term deleterious effects on shell fish spawning or growth areas of aquatic resources, or directly expose the public to toxic substances.
 Complexity: Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.

Name: SPARKS PROPERTY
Address: 1424 HARRISON
City,State,Zip: OAKLAND, CA 94612
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Case Type: LUST Cleanup Site
Geo Track: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T10000000619
Global Id: T10000000619
Latitude: 37.803163
Longitude: -122.267256
Status: Completed - Case Closed
Status Date: 06/07/2019
Case Worker: MYM
RB Case Number: 01-3613
Local Agency: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: RO0002992
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Two underground fuel tanks were closed in place beneath the sidewalk at 1424 Harrison Street in 1982. The tanks were filled with cement slurry. Site investigation activities conducted for a release from a UST system at the adjacent property at 1432 Harrison Street, detected petroleum hydrocarbons in soil adjacent to and beneath the USTs closed in place at 1424 Harrison Street. Further investigation of the site was requested. Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>.

 Name: 2201 VALLEY REDEVELOPMENT
 Address: 2201 VALLEY ST
 City,State,Zip: OAKLAND, CA 94612
 Region: STATE
Facility Status: Open - Site Assessment
 Status Date: 07/24/2019
 Global Id: T10000013205
 Lead Agency: ALAMEDA COUNTY LOP
 Lead Agency Case Number: RO0003380
 Latitude: 37.8114
 Longitude: -122.26827
 Case Type: Cleanup Program Site
 Case Worker: DR
 Local Agency: ALAMEDA COUNTY LOP
 RB Case Number: Not reported
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Potential Media Affected: Soil
 Potential Contaminants of Concern: Lead, Total Petroleum Hydrocarbons (TPH)
 Site History: This case was opened to accommodate the potential redevelopment of the subject parcel, and an adjacent parcel, to mixed use. Site redevelopment may include ground floor residential; however, this has not been fully defined. An MPE pilot test has been approved to determine if this is a viable method to remediate the site to mix use. For the history of the adjacent parcel of the subject site, formerly a gasoline service station, please refer to the closed case

Name: ESSEX PARK
Address: 100 GRAND AVENUE
City,State,Zip: OAKLAND, CA
Region: STATE
Facility Status: Completed - Case Closed
Status Date: 03/17/2008
Global Id: SL0600140239
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number: Not reported
Latitude: 37.811406
Longitude: -122.265408
Case Type: Cleanup Program Site
Case Worker: Not reported
Local Agency: Not reported
RB Case Number: 01S0667
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Diesel, Heating Oil / Fuel Oil
Site History: Site used as curch from 1911 to 1950, upholtering warehouse from 1950-1970, parking lot from 1970 to 2006. Groundwater contamination likely from upgradient source(s). Site redeveloped as mixed-use multistory building.

Local Case Number:	RO0003165
Potential Media Affect:	Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern:	Benzene, Ethylbenzene, Heating Oil / Fuel Oil, Methane, Toluene, Xylene
Site History:	Site is an apartment building located at the northern corner of the intersection of Madison Street and 17th Street, approximately 300 feet southwest of Lake Merritt. The apartment building was previously serviced by a 1,500-gallon heating oil UST (HOT). Total petroleum hydrocarbons (C10-C28) were detected at concentrations up to 13,800 milligrams per kilogram in soil samples collected during the removal of the HOT. Contractor reported holes observed in tank and odors/staining observed during sampling. Site investigation did not reveal presence of petroleum-related compounds in grab-groundwater

samples. Soil samples did not contain total petroleum hydrocarbons (TPH) as gasoline (TPHg) or as motor oil (TPHmo), benzene, toluene, ethyl benzene, and xylenes (BTEX), methyl tertiary butyl ether (MTBE), and naphthalene at concentrations above the laboratory reporting limit. Diesel range petroleum hydrocarbons (TPHd) were reported up to 7.2 mg/kg.

 Case Type: Cleanup Program Site
 Case Worker: DR
 Local Agency: ALAMEDA COUNTY LOP
 RB Case Number: Not reported
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Potential Media Affected: Other Groundwater (uses other than drinking water), Soil
 Potential Contaminants of Concern: Lead, Benzene, Diesel, Ethylbenzene, Gasoline, Naphthalene, Toluene, Total Petroleum Hydrocarbons (TPH), Waste Oil / Motor / Hydraulic / Lubricating, Xylene

 Site History: This case was opened by Alameda County Department of Environmental Health in 2017 to investigate subsurface impacts from historic land use (including single family homes, a commercial fueling station, and installation of Bart within a right of way traversing the parcel) and develop a corrective action plan necessary to facilitate a property transaction and redevelopment of the site and an adjacent parcel, to mixed use. The commercial gas station was demolished in 2019 and the following corrective actions have been completed at the site: (1) remediation of soil and groundwater using multi-phase extraction followed by an evaluation of rebound conditions, (2) excavation of petroleum hydrocarbon impacted soil, and (3) partial excavation of soil containing lead concentrations above residential environmental screening levels. The case was closed by ACDEH in February 2020, based on information in the case file and with the provision that the information provided to ACDEH is accurate and representative of site conditions. ACDEHs closure determination was based on an analysis of risk to human health and the environment under the land use scenario as a vacant lot at the time of case closure. Risk to receptors under different land use scenarios or site configurations, were not considered in the closure determination of this SCP case. Additional excavation of lead impacted soil on the subject site is proposed in a corrective action plan prepared for a mixed-use redevelopment project located at both the 2200 Telegraph Avenue site and the 2201 Valley Street. Regulatory oversight of excavation of lead impacted soil on the parcel will be conducted under a Separate Site Cleanup Program Case No. RO3380 concurrent with site redevelopment activities that are expected to commence in June 2020.

Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A complete case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>. In 1986 tank basin soil and a groundwater sample were collected during the replacement of USTs in a pre-existing tank basin; hydrocarbon concentrations were encountered. Sixteen soil vapor wells are reported to have been installed in 1986 and 1987 over the BART tube, located directly below the site; however, no data has been submitted. In 1992 a groundwater sample was collected from a former vadose zone well (VW-2) and concentrations of concern were encountered; however, the location of VW-2-1 is unknown. In July 1994 product lines were removed and upgraded and low hydrocarbon concentrations were encountered. In March 2000 eight hand-augered bores were installed at the site; most bore depths were limited to 10 feet by the presence of the BART tube. In Mach 2002 wells MW-1 to MW-3 were installed on either side of the BART tube and right-of-way. In April 2012 soil bores B-9 to B-12 were installed to define the downgradient extent of the dissolved-phase groundwater plume. Groundwater was collected; however, appeared to define a deeper non-impacted groundwater zone. The groundwater plume was defined using the LTCP groundwater technical justification paper 90th percentile plume length, and conducting a downgradient sensitive receptor survey for water supply wells and potential basements that might encounter the impacted groundwater.

 Property Description:

The subject site is located adjacent to the historic Fox Theater in downtown Oakland. The site was used for housing in the early 1900s, but from 1928 onwards, it was used for various commercial uses such as auto parking and garage, paint & wallpaper store, furniture store, sign painting, art glass works, and metal/machine works. The site had been occupied by an art school for the past few years. Based on the site investigations, the soils are contaminated with petroleum hydrocarbons and lead. As part of the redevelopment, the contaminated soils will be removed and disposed off at a landfill.

- Property Description:

The subject site is located adjacent to the historic Fox Theater in downtown Oakland. The site was used for housing in the early 1900s, but from 1928 onwards, it was used for various commercial uses such as auto parking and garage, paint & wallpaper store, furniture store, sign painting, art glass works, and metal/machine works. The site had been occupied by an art school for the past few years. Based on the site investigations, the soils are contaminated with petroleum hydrocarbons and lead. As part of the redevelopment, the contaminated soils will be removed and disposed off at a landfill.

- Property Description:

The subject site is located adjacent to the historic Fox Theater in downtown Oakland. The site was used for housing in the early 1900s, but from 1928 onwards, it was used for various commercial uses such as auto parking and garage, paint & wallpaper store, furniture store, sign painting, art glass works, and metal/machine works. The site had been occupied by an art school for the past few years. Based on the site investigations, the soils are contaminated with petroleum hydrocarbons and lead. As part of the redevelopment, the contaminated soils will be removed and disposed off at a landfill.

Potential Contaminants of Concern: Benzene, Diesel, Ethylbenzene, Gasoline, MTBE / TBA / Other Fuel Oxygenates, Toluene, Xylene

Site History: Site is undergoing redevelopment as a 7-story hotel with commercial 1st floor. The USTs and service station structures have been removed (April 2019). Excavation of impacted soil has occurred and was followed by ISCO application (pit & injection). This LOP case will remain open for the monitoring of the effectiveness of the remedial actions. The case was opened in 1989 following the discovery of a release from the UST fueling system during a 1988 site assessment conducted for a service station exchange between Texaco and Exxon. A follow up assessment conducted in 1989 detected 11,000 mg/kg TPHg and 40 mg/kg benzene in soil; 9,500 a%/L TPHg in groundwater; and 6,100 a%/L TPHg and 10 a%/L benzene in soil vapor indicating that a release from the underground storage tanks had occurred. Two gasoline USTs, one diesel UST and one waste-oil UST (WOT) were replaced in November and December 1991. Soil samples from the fuel tank pit were reported to contain up to 10,000 mg/kg TPHg and 130 mg/kg benzene. Groundwater remediation occurred from 1990 to 1993. A 1,000-gallon waste-oil UST was removed on September 22, 1997. Soil samples collected beneath the waste-oil tank were below the detection limits for many constituents with TEPH at 32 mg/kg, TRPH at 120 mg/kg and TTLC lead at 7.2 mg/kg. A P&T groundwater remediation system operated at the site from 1991 until 1996. A dual-phase extraction pilot test was performed in 2001 and found that DPE would be an effective remediation method for the site. An AS/DPE feasibility test was performed in January 2014. The test results indicates focused DPE and/or AS/DPE may be an effective remedial option. Based on the data ACDEH recommended preparation and implementation of a CAP using DPE supplemented by AS if sufficient water is present beneath the site. High intensity targeted (HIT) AS/DPE event conducted 7/28- 8/01/2014. Another HIT round performed 8/03- 8/18/2016. On-site monitoring wells destroyed in January 2019 prior to station demolition. Additional soil excavation and ISCO application occurred as part of the remedial strategy prior to hotel construction. Perimeter wells remain for monitoring the effectiveness of the remedial activities.

Global Id: T10000011197
Lead Agency: ALAMEDA COUNTY LOP
Lead Agency Case Number: RO0003273
Latitude: 37.8117
Longitude: -122.26929
Case Type: Cleanup Program Site
Case Worker: KEN
Local Agency: ALAMEDA COUNTY LOP
RB Case Number: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Not reported
Potential Contaminants of Concern: Trichloroethylene (TCE), Benzene, Diesel, Ethylbenzene, Gasoline, Naphthalene, Toluene, Xylene

Site History: This project was formerly named 'Millennial Hotel Redevelopment Project' and was renamed 'Uptown Moxy' at meeting of July 23, 2018. Site is currently operating as a Valero branded retail gasoline station located on the southwest corner of the intersection of West Grand Avenue and Telegraph Avenue in a mixed-use commercial / residential area of Oakland and is currently an open leaking underground fuel tank (LUFT) case (Case No. RO0000358) under regulatory guidance by Alameda County Department of Environmental Health (ACDEH). A seven story modular-unit hotel is planned for the site with ground breaking anticipated for spring 2019. Due to the presence of residual petroleum hydrocarbon contamination, this site cleanup program (SCP) case was created to address the change in land use from that of an active fueling station to commercial (hotel). Remediation, performed in conjunction with property redevelopment, will include removal of primary and secondary contaminant sources. Additional residual source material will also be removed to the extent practicable. Post remediation groundwater monitoring will be conducted using four perimeter wells transferred to this case from the existing LUFT case monitoring well network. The on-site wells have been abandoned and project schedule is for station decommissioning with UST system removal, soil excavation, ISCO application and groundwater monitoring.

Address: 2250 TELEGRAPH
City,State,Zip: OAKLAND, CA 94612
Lead Agency: ALAMEDA COUNTY LOP
Case Type: LUST Cleanup Site
Geo Track: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0600100431
Global Id: T0600100431
Latitude: 37.8120714082878
Longitude: -122.268500646661
Status: Completed - Case Closed
Status Date: 11/03/2016
Case Worker: KEN
RB Case Number: 01-0475
Local Agency: ALAMEDA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: RO0000359
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History:

This UST release case has been evaluated for closure consistent with the State Water Resource Control Board Low-Threat Underground Storage Tank Closure Policy (LTCP) for petroleum related contaminants. Case closure is granted for the current commercial land use. In addition, the release included lead, chlorinated solvents, and polycyclic aromatic hydrocarbons (PAHs). Although the chemicals released at the site are predominately not chlorinated solvents, the case has also been evaluated consistent with criteria described in the Regional Water Boards Assessment Tool for Closure of Low-Threat Chlorinated Solvents, as they are relevant and appropriate for evaluating closure. The site does not meet scenarios 1 through 4; however, a determination been made that under current and reasonably expected future scenarios, the contaminant plume poses a low threat to human health and safety and to the environment and water quality objectives will be achieved within a reasonable time frame (Scenario 5). The site does not meet any of the Vapor Specific Criteria due to the lack of analysis for naphthalene in soil gas. Confirmation soil sampling conducted following over-excavation of the former fuel tank pit reported maximum naphthalene concentrations of 1.7 mg/kg at 10 feet and non-detect <0.010 mg/kg at the former waste oil tank location. Based on these findings, ACDEH has made a determination that the low- to no- residual concentrations of naphthalene do not present a significant vapor intrusion to indoor air risk. This site does not meet this LTCP criterion due to the lack of analysis in soil for poly-aromatic hydrocarbons (PAHs) in the 5- to 10-foot zone for remaining site soil. Based on the low levels of residual contaminant concentrations for other analytes in the vicinity of the waste oil UST (WOT), the two rounds of over excavation of the WOT location appear to have removed the bulk of the residual contamination. Thus ACDEH concludes that the potential for residual PAH soil contamination in the 5- to 10-foot zone to be present at concentrations below the LTCP media-specific numeric values listed above.

 Name: HPN 2300 WEBSTER, LLC
 Address: 2300 WEBSTER STREET
 City,State,Zip: OAKLAND, CA 94611
 Region: STATE
Facility Status: Open - Site Assessment
 Status Date: 02/25/2020
 Global Id: T10000013395
 Lead Agency: ALAMEDA COUNTY LOP
 Lead Agency Case Number: RO0003387
 Latitude: 37.81211
 Longitude: -122.26505
 Case Type: Cleanup Program Site
 Case Worker: JES
 Local Agency: ALAMEDA COUNTY LOP
 RB Case Number: Not reported
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Potential Media Affected: Other Groundwater (uses other than drinking water), Soil Vapor
 Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Ethylbenzene, Total Petroleum Hydrocarbons (TPH)
 Site History: Historic on-site operations include automotive repair and retail restaurants. Tetrachloroethene has been identified in soil vapor at the Site at concentrations up to 8,600 ug/m3. Carbon tetrachloride has also been identified in soil gas at a maximum concentration of 105 ug/m3. The source of these vapor phase contaminants of concern has not yet been identified and there are several data gaps in the existing data set which have not yet been evaluated. ACDEH has requested submittal of a Work Plan to evaluate the extents of

 File Location: All Files are on GeoTracker or in the Local Agency Database
 Potential Media Affected: Soil, Soil Vapor, Under Investigation
 Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Vinyl chloride, Lead, Benzene, Total Petroleum Hydrocarbons (TPH)
 Site History: As part of a refinancing, a Phase I Environmental Site Assessment (ESA) was conducted on the Oak Grove North property in February of 2019. This ESA identified several recognized environmental conditions (RECs) which had not yet been evaluated which are outlined below: 1) On-site historic gasoline and oil service station at 570 16th Street; 2) Off-site historic gasoline and oil service station at 620 17th Street (Oak Grove North); 3) Off-site leaking underground storage tank case adjacent to the Site at 1700 Jefferson Street; 4) Multiple adjacent historical and active dry cleaning facilities; and 5) Former adjacent historical auto-station (Mash Petroleum Inc.) at 1721 Jefferson Street. These RECs were investigated as part of a soil and soil vapor subsurface investigation conducted by Rincon Consultants, Inc. in February 2019 on behalf of the Oakland Housing Authority (the property owner). The results of this subsurface investigation indicate that contaminants associated with petroleum hydrocarbons, lead, and halogenated hydrocarbons are present in soil and soil vapor at the Site. At this time, further investigation is warranted to identify the source and characterize the extents and stability of of

subsurface contamination at and in the vicinity of the Site. Further investigation is also warranted to evaluate potentially complete and unacceptable exposure pathways at the Site to determine if implementation of remediation and/or mitigation measures are necessary for the protection of human health and the environment.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Case Type: Cleanup Program Site
 Case Worker: MD
 Local Agency: ALAMEDA COUNTY LOP
 RB Case Number: Not reported
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Soil Vapor
 Potential Contaminants of Concern: Arsenic, Lead, Benzene, Diesel, Gasoline, Polynuclear aromatic hydrocarbons (PAHs), Waste Oil / Motor / Hydraulic / Lubricating
 Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A complete case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>. A former fuel leak case (RO0000807) at the site was closed on July 31, 1998 with site management requirements that require the case to be re-evaluated if the site is to be redeveloped. This Site Cleanup Program case was been opened to review the site for potential unrestricted land use. As a result of case review and the collection of additional environmental analytical data, a Site Management Plan (SMP) has been prepared on behalf of CRP/WP Alta Waverly Owner, LLC for use during the development of eight parcels located between 2302 to 2342 Valdez Street, and between 2321 and 2335 Waverly Street, in Oakland, California. The SMP was generated to provide soil and groundwater management procedures during planned development activities that include the excavation of contaminated soil from past site uses that are potentially hazardous to human health or the environment during and after site construction. The SMP was generated based on the results of historic and recent site investigations conducted at site properties, and site development plans prepared by Pyatock Architect and Urban Design dated October 12, 2015. Included parcels are as follows: 8-669-9; 8-669-10; 8-669-12; 8-669-13; 8-669-14; 8-669-15; 8-669-16; and 8-669-17. The eight parcels will be merged into a new

single parcel at the time of redevelopment. The proposed development consists of a mixed-use redevelopment that includes partially to fully below grade parking, street level commercial space, and residential units on floors two through seven. Residential parking will be below grade along Valdez Street, and at grade along Waverly Street. The redevelopment will cover the entire eight parcels. During redevelopment, soil will be excavated up to approximately 14 feet below grade surface (bgs) with one deeper excavation for an elevator pit (four additional feet of excavation). Due to the natural slope of the land surface, limited excavation is necessary along Waverly Street, and the development will be essentially at grade. The estimated volume of excavated soil that will be exported from the site has been estimated at approximately 26,000 cubic yards.

FUDS Detail as of Jan 2015:	
Fiscal Year: Federal Facility ID: RAB: NPL Status: Description: History: CTC: Current Program: Future Program: Institutional ID:	2013 CA9799F5811 Not reported Not Listed The 4.259-acre site is located in Alameda County, CA within the city of Oakland. The Hotel Oakland (former Army Hospital building) has been renovated several times since Department of Defense (DoD) activity was terminated. Current owners of the associated parcels include Hotel Oakland Associates, ICH Associates, and four private owners. In 1943, the U.S. acquired 12 leases for a total of 4.259 acres. The site was used as a station hospital by the U.S. Army Medical Corps. In 1946, 1.377 acres were transferred to the Veterans Administration (VA). In 1947, the remaining acres were transferred to the VA. No potential hazards have been identified at this site. 190 Not reported Not reported 61285

Case Worker: KMB
RB Case Number: 01-0210
Local Agency: ALAMEDA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: RO0000151
Potential Media Affect: Indoor Air, Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern: Benzene, Gasoline
Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A complete case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>. On June 16, 1987, three gasoline underground storage tanks (USTs) were removed from the Site and a suspect unauthorized release was confirmed. Two USTs had a capacity of 1,000 gallons and one UST held 550 gallons of gasoline. Soil was reportedly excavated to 9 feet bgs, aerated onsite for one month to acceptable levels (no confirmation samples were analyzed), and used as fill material to backfill the UST excavation. Groundwater monitoring wells MW-1 through MW-3 were installed in June 1987 and well MW-1 initially contained 30 inches of free phase floating product. Free product also detected in monitoring well at off-site down-gradient property. Free phase has not been seen recently in site or vicinity wells; however, groundwater concentrations in onsite well MW-1 and off-site well MW-5 are substantially above concentrations that the LTCP Soil Vapor Technical Justification paper states is indirect evidence of free phase. At a minimum substantial residual soil contamination appears to reside at or below the depth of the UST excavation to groundwater, generally encountered at a depth of approximately 22 to 23 feet below surface grade. The historic groundwater contaminant plume extends northward; however, groundwater currently appears to flow westward, and additional investigation into this aspect is required. The potential for soil vapor intrusion to on- and offsite properties has been undertaken with the installation of four offsite groundwater monitoring wells (MW-7 to MW-10), the installation of 24 soil vapor wells (SV-1 to SV-24) of varying depth, installation of eight sub-slab vapor points (SS-1 to SS-8), and the collection of indoor air at multiple locations and times. Vapor Extraction (SVE) pilot test has been conducted utilizing this groundwater and vapor well network, and appears to be a viable corrective action option. Air Sparging (AS), including offsite horizontal AS wells, has been proposed as the corrective action option, but has not been fully tested. A CAP was submitted in July 2019, comments on the CAP by the adjacent property owner in August 2019, and a meeting was requested in September 2019 to identify a path forward. Not all historic documents for the fuel leak case may be available on GeoTracker. A complete case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>.

RB Case Number: 01S0802
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Potential Media Affected: Other Groundwater (uses other than drinking water), Soil Vapor
 Potential Contaminants of Concern: Tetrachloroethylene (PCE)
 Site History: Former body shop and vehicle maintenance facility. Operations ceased in 2018. Site redevelopment proceeding with Water Board oversight to achieve clean closure following construction completion. Structure demolition, debris removal and site grading being completed under approved Site Management Plan. Soil sampling and testing was done during site grading per the approved site management plan and TPH/metals impacted soils were removed and transported for offsite disposal. Soil vapor sampling conducted in 2019 (after site grading) revealed low levels of PCE in limited areas of the site. VIMS are being designed for Water Board approval prior to construction.

Case Type: Cleanup Program Site
Case Worker: UUU
Local Agency: Not reported
RB Case Number: 01S0717
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Under Investigation
Potential Contaminants of Concern: Arsenic, Diesel, Heating Oil / Fuel Oil, Kerosene, Stoddard solvent / Mineral Spruits / Distillates, Waste Oil / Motor / Hydraulic / Lubricating
Site History: As described in the Limited Phase II Environmental Site Sampling Report dated August 5, 2010, prepared by Basics Environmental, it appears that soil and groundwater contamination at the site consists of petroleum hydrocarbons and heavy metals. The sampling results indicate that diesel, kerosene, motor oil and bunker oil were detected in one grab groundwater sample at concentrations exceeding their respective environmental screening levels (ESLs) for groundwater. Arsenic was detected in two shallow soil samples at concentrations exceeding the ESL for arsenic in shallow soil (0-10 feet).

ONE HOUR DRY CLEANER (Continued)

S122855447

Site History: One Hour Dry Cleaner business has been operating at 190 14th Street in Oakland from at least 2006. During environmental investigations conducted between 2006 and 2017 at the former Mobil site located at 160 14th Street in Oakland, located adjacent and down-gradient of the One Hour Dry Cleaner Site (see Figure below), the chlorinated solvents Tetrachloroethylene (PCE) and Trichloroethene (TCE) were detected in groundwater samples. The highest PCE and TCE concentrations were detected in Boring B-5 at the Mobile site at 820 micrograms per liter (a%g/L) and 42 a%g/L, respectively. Therefore, it appears that a release of PCE and TCE has occurred at the One Hour Dry Cleaner site, has reached the groundwater beneath the Dry Cleaner, and has been transported by the groundwater from the Dry Cleaner site to the, which has been redeveloped to residential housing in 2009. On December 10, 2018, ACDEH sent a Request for Site History to the dry cleaning facility operators. A response is due by February 6, 2019.

Case Type: Cleanup Program Site
Case Worker: TF
Local Agency: ALAMEDA COUNTY LOP
RB Case Number: Not reported
File Location: Not reported
Potential Media Affected: Not reported
Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Gasoline, Other Petroleum, Waste Oil / Motor / Hydraulic / Lubricating

Site History: This Site Cleanup Case No. RO0003247 was opened by Alameda County Department of Environmental Health (ACDEH) in June 2017 to evaluate soil, groundwater and soil vapor conditions at the site to facilitate land use change from commercial to residential and redevelopment with a multiuse facility. In April 2020, ACDEH issued a No Further Remedial Action Letter base on a review of the case file including the following documents submitted by Terracon Consultants, Inc. on behalf of TDP-Webster, LLC. Case Closure Request, County File #RO 3392, dated February 24, 2020 Limited Subsurface Investigation Report, dated February 24, 2020 Soil and Groundwater Management Report, dated October 16, 2019 These reports collectively document soil excavation and construction dewatering activities conducted during construction of the underground parking structure and multi-use building at the Site, confirmation groundwater sampling to evaluate post-excavation groundwater quality at and in the vicinity of the Site, and an evaluation of potential vapor intrusion risk from volatile organic compounds (VOCs) in groundwater to occupants of the TDP-Websters recently developed multi-use facility. With the provision that the information provided to this agency is accurate and representative of currently known Site conditions, ACDEH determined that no further remedial action is required at the Site and therefore ACDEH has no objection to use of the underground parking structure and occupancy of the multi-use building. TDP-Webster, LLC is still responsible for working with the adjacent property owner to evaluate the source of elevated VOCs in soil vapor detected in the subsurface at the adjacent property located at 2300 Webster Street and mitigate those impacts if it is determined that the source of the VOCs originated from the Site. Upon resolution of this matter, ACDEH will proceed with closure of this Site Cleanup Program Case No. RO0003247.

 File Location: All Files are on GeoTracker or in the Local Agency Database
 Local Case Number: RO0003138
 Potential Media Affect: Other Groundwater (uses other than drinking water), Soil, Soil Vapor
 Potential Contaminants of Concern: Heating Oil / Fuel Oil
 Site History: An underground storage tank (UST) was discovered during excavation on the property near the sidewalk along 21st Street. At the time of discovery, the UST was filled with oily water and low viscosity petroleum hydrocarbons. The approximately 500-gallon UST was removed from the site on May 20, 2014. Multiple corrosion holes were observed

in the middle and bottom of the UST. The soil underneath the UST exhibited a strong petroleum odor. Soil samples collected from the tank pit contained up to 1,100 parts per million (ppm) of total petroleum hydrocarbons (TPH) as diesel (TPHg) and 1,100 ppm TPH as bunker oil. A groundwater sample collected from the tank pit contained 4,600 parts per billion (ppb) of TPH as diesel and 4,700 ppb as bunker oil. Additional soil and groundwater sampling that was completed at the site in July and August 2014 indicated that the residual contamination was generally limited to the area of the former tank pit. The site was evaluated for case closure under the State Water Resources Control Board Low-Threat Underground Storage Tank Closure Policy and was closed on November 25, 2014. Based upon the information available in our files to date, no further investigation or cleanup for the fuel leak case is necessary at this time.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Status Date: 01/28/2019
Case Worker: KLD
RB Case Number: NA
Local Agency: ALAMEDA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: RO0002922
Potential Media Affect: Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern: Benzene, Diesel, Ethylbenzene, Gasoline, MTBE / TBA / Other Fuel Oxygenates, Naphthalene, Toluene, Waste Oil / Motor / Hydraulic / Lubricating, Xylene
Site History: The site is currently a mixed-use commercial and residential multi-story building. The ground floor is occupied by commercial space and a podium-style parking structure with below-grade stacked parking. A 10,000-gallon gasoline UST, one 6,000-gallon gasoline UST, and one 550-gallon waste-oil USTs were removed from a commercial gas station in May 1986 and the station was permanently closed. Soil samples collected beneath both gasoline USTs did not detect TPHg at or above the laboratory detection limit of 2 mg/kg TPHg. TPH waste oil (TPH wo) was not detected at or above the laboratory detection limit of 10 mg/kg in the soil sample collected from the waste oil UST. None of the confirmation soil samples taken during the UST removal were analyzed for benzene, toluene, ethylbenzene and xylene (BTEX). In 2006, grab groundwater samples collected from three soil borings detected 18,000 ug/L TPHg and 690 ug/L benzene, indicating that an unauthorized release of petroleum hydrocarbons had occurred and this Leaking Underground Fuel Tank (LUFT) case was opened to investigate the release. Environmental investigations were conducted between 2001 and 2006, prior to and during site redevelopment into a mixed commercial and residential multi-story building. To accommodate the below-grade stacked parking associated with the podium-style parking structure on the ground floor, the northeastern portion of the property was excavated in a rectangular-shaped area measuring 150 feet in length by 20 feet width by 15 to 21 feet in depth. This excavation was oriented perpendicular to the two former gasoline USTs and possibly resulted in the partial removal of secondary source associated with the former gasoline USTs. This LUST case was evaluated for closure consistent with the State Water Resource Control Boards Low-Threat Underground Storage Tank Closure Policy (LTCP) for petroleum related contaminants. ACDEH determined that the site meets all the LTCP General Criteria and the Media Specific Criteria for Direct Contact and Outdoor Air Exposure, but not the Media Specific Criteria for Groundwater or the Media Specific Criteria for Vapor Intrusion to Indoor Air. Although the site does not meet the distance criteria to the nearest surface water body, ACDEH has determined that the extent of dissolved petroleum hydrocarbons for the site should be expected to extend an average distance or less of approximately 250 feet. This estimate is conservative because the USTs were removed in 1986 and additional secondary source was removed during excavation and prior to development in 2006. Additionally, although the site does not meet the Media Specific Criteria for Vapor Intrusion to Indoor Air, documentation indicates that a vapor barrier was installed below the building. However, since the plans were not provided for ACDEHs review and approval or a record report of construction for the vapor barrier installation was not submitted, ACDEH cannot verify that the

vapor barrier was installed to specifications. The ground floor is occupied by commercial space and a podium-style parking structure with below-grade stacked parking, ACDEH is reasonably confident that the site poses a low risk to human health and safety and the environment. The determination was based on receptors and environmental conditions identified at and in the vicinity of the site at the time of closure and reasonably anticipated near-term future scenarios. Therefore, case closure is granted for the current commercial land use as a mixed-use commercial and residential multi-story building. If a change in land use to any residential, commercial other than as a mixed-use commercial and residential multi-story building, or conservative land use, or if any site redevelopment is planned, Alameda County Department of Environmental Health (ACDEH) must be notified as required by Government Code Section 65850.2.2. Any below grade work require planning and implementation of appropriate healthand safety procedures by the responsible party prior to and during excavation and construction activities.

OAK GROVE NORTH (Continued)

S123532650

Potential Media Affected: Soil, Soil Vapor, Under Investigation
Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Vinyl chloride, Lead, Benzene, Total Petroleum Hydrocarbons (TPH)
Site History: As part of a refinancing, a Phase I Environmental Site Assessment (ESA) was conducted on the Oak Grove North property in February of 2019. This ESA identified several recognized environmental conditions (RECs) which had not yet been evaluated which are outlined below: 1) On-site historic gasoline and oil service station; 2) Off-site historic gasoline and oil service station at 570 16th Street (Oak Grove South); 3) Off-site leaking underground storage tank case adjacent to the Site at 1700 Jefferson Street; 4) Multiple adjacent historical and active dry cleaning facilities; and 5) Former adjacent historical auto-station (Mash Petroleum Inc.) at 1721 Jefferson Street. These RECs were investigated as part of a soil and soil vapor subsurface investigation conducted by Rincon Consultants, Inc. in February 2019 on behalf of the Oakland Housing Authority (the property owner). The results of this subsurface investigation indicate that contaminants associated with petroleum hydrocarbons, lead, and halogenated hydrocarbons are present in soil and soil vapor at the Site. At this time, further investigation is warranted to identify the source and characterize the extents and stability of subsurface contamination at and in the vicinity of the Site. Further investigation is also warranted to evaluate potentially complete and unacceptable exposure pathways at the Site to determine if implementation of remediation and/or mitigation measures are necessary for the protection of human health and the environment.

Local Case Number: RO0003295
Potential Media Affect: Aquifer used for drinking water supply, Soil, Soil Vapor
Potential Contaminants of Concern: Tetrachloroethylene (PCE), Benzene, Diesel, Gasoline, Total Petroleum Hydrocarbons (TPH)
Site History: The Site is located in a mixed-use area of downtown Oakland and is currently developed as a 7,500 square foot building formerly doing business as Aqua Skin Care & Day Spa. Paved parking areas are located to the west and northeast of the Site building. The eastern and southern property lines are bound by 12th street and Alice Street, respectively. Historical records indicate that the Site was occupied by residential dwellings from 1889 to 1911 and from 1939 to 1974 by two different gas stations. From 1980 onwards the Site has been occupied with the present-day structure and two adjacent parking lots. Review of historical Sanborn Maps and aerial photographs indicate the former service stations included multiple fueling configurations. Results of recognized environmental conditions identified in the Phase I were further investigated as part of the Phase II subsurface investigation conducted at the Site without regulatory oversight during November and December 2017. Five borings and six sub-slab vapor pins were advanced for the collection of soil, soil vapor, sub-slab vapor, and groundwater samples. Data from the Phase II investigations indicate that total petroleum hydrocarbons as gasoline (TPH-g) was detected in soil located in the southern corner of the Site building. Grab groundwater samples collected from five borings reported detections of TPHg, TPH as diesel (TPH-d), and other volatile organic compounds (VOCs) including chloroform, 1,1-dichloroethane, 1,1 dichloroethene, 1,2-dichloropropane, trans-1,2-dichloroethene, tetrachloroethene (PCE), 1,1,1 trichloroethane, and styrene. A potential new tenant is proposing to redevelop the Site into a Day Care Center which would include remodeling of the existing building and installation of new subsurface utilities and construction of a proposed outdoor play area in the western parking lot. The potential tenant will be conducting site investigations activities under agree with the property owner in order to evaluate potential human risk to occupants of the proposed Day Care Center. In July 2018 an additional subsurface investigation was conducted at the site and included the advancement of 12 indoor sub-slab vapor pins and 3 outdoor soil vapor probes. The sub-slab vapor pin locations were advanced in a 25-foot by 25-foot grid across the entire building footprint and generally located over or near former gas station subsurface infrastructure. Three soil vapor probes were advanced in the western parking area to evaluate subsurface vapor in this area. All sub-slab vapor and soil vapor samples were analyzed for TPH-g, VOCs, and fixed gases by EPA Method TO-15. Results from sub-slab vapor pins (SS-6 through SS-17) indicate total petroleum hydrocarbons as gasoline (TPH-g) was detected in all sub-slab pins at concentrations up to 890 micrograms per cubic meter (µg/m³). Volatile organic compounds (VOCs) were also reported in sub-slab samples including acetone, 2 butanone, tetrahydrofuran, toluene, isopropyl alcohol, xylenes, and tetrachloroethene (PCE). Soil gas probes (SVP 1 through SVP-9), collected in the area of the

S112904293

proposed outdoor play area, reported TPH-g concentrations in all soil vapor probes with a maximum reported concentration of 770 a%g/m3. Soil and soil vapor samples collected at a depth of five foot below ground surface (bgs) or greater beneath the onsite building and adjacent vicinity indicate TPH concentrations remain low. Oxygen results reported from the sub-slab and soil vapor probes installed at the 5-foot bgs interval indicate the presence of a bioattenuation zone. Investigation results indicate media-specific criteria for vapor intrusion to indoor air criteria is considered low risk under the State Water Resources Control Board's Low Threat Underground Storage Tank Case Closure Policy (LTCP) under the current building configuration and outdoor air exposure in the proposed play area from residual contamination in the subsurface from historic use as a commercial fueling station. A soil and groundwater management plan (SGMP) was prepared to describe procedures to be followed by environmental consultants, construction contractors and workers, and other property owner representatives during any proposed property improvements. Furthermore, tenant improvements include the installation of new subsurface utilities, potentially affecting preferential pathway contaminant vapor migration from subsurface to indoor air, therefore, additional sub-slab vapor and indoor air samples will be collected post utility installation to insure vapor migration to indoor air is not a completed pathway. Case files also indicate additional soil and groundwater investigations are warranted to address LTCP General Criteria e (site conceptual model) , f (secondary source), and media specific criteria for groundwater.

Local Case Number: RO0000137
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Benzene, Gasoline
Site History: In July 1988 an ATT manhole 300 feet west of the site was found to have gasoline leaking into it, and a request to test the USTs was made. In February 1989 a soil vapor survey (VP-1 to VP-19) was conducted at the site; concentrations indicated a release. In March 1989 wells MW-1 to MW-5 were installed. In June 1990 wells MW-6 to MW-9 were installed offsite. In June 1990 the station was demolished and three 10,000-gallon gasoline USTs and one 1,000-gallon waste oil

UST were removed. Well MW-2 was destroyed in the process of overexcavating impacted soil in 1990 and 1991; approximately 1,500 cubic yards were excavated. Of that total approximately 800 cubic yards were aerated and reused onsite. In December 1992 the City of Oakland purchased the property. A parking lot and landscaping was constructed over the western portion of the site and Bay Place was expanded over the eastern portion. In January 1993 a groundwater extraction system was installed in well MW-5. The system was shut down in January 1995 due to low production rates. On December 1, 1995 wells MW-1 and MW-3 were decommissioned. In November 1996 an additional 200 cubic yards of soil was excavated due to the installation of a new storm drain on Montecito Avenue. A one week long two-phase extraction pilot test was conducted on well MW-5 in September 2005. In August 2008 periodic injection of oxygen into well MW-5 was proposed; work was implemented in February 2009 and successfully reduced hydrocarbon concentrations in groundwater. Soil bore B-6 was installed in mid 2014 to determine if groundwater is in a confined or unconfined condition, and to help determine the downgradient extent of contamination. Subsequent investigations into a storm drain preferential pathway allowed dissolved-phase contamination to bypass the well network and discharge to Glen Echo Creek. Upon analysis, the storm drain may not be of concern; however, substantial contaminant concentrations remain in and around well MW-5. Consequently, a targeted corrective actions have been identified to be implemented in the vicinity of well MW-5.

NEGHERBON (Continued)

S112241534

Completed Document Type: Technical Report
Completed Date: 01/30/2018
Comments: Revised Proposed Termination of Groundwater Monitoring at the former Negherbon Site, Oakland CA (dated 25 January 2018). This memorandum provides information and analysis to support a recommendation for cessation of further groundwater monitoring on the Site. Site data demonstrate there are no identified soil or soil vapor sources of 1,1-DCA on the Site. The 1,1-DCA plume is migrating onto the Site from an upgradient source. The 1,1-DCA plume on the Site is stable. DTSC has no additional comments and hereby approves the request to terminate groundwater monitoring. As a reminder, the Operation and Maintenance Agreement signed with Hive Development Group, LLC remains in effect. The Operation and Maintenance Agreement requires implementation of the Operation and Maintenance Plan. The Operation and Maintenance Plan covers installation and sampling of groundwater monitoring wells. Groundwater monitoring wells that are not being regularly sampled can serve as a conduit for contamination migration. Therefore, it may be prudent to properly abandon these wells. Following receipt of documentation that the monitoring wells have been properly abandoned, DTSC will initiate steps to terminate the Operation and Maintenance Agreement. This includes conducting an annual inspection and submitting an annual inspection report to DTSC by January 15th of each calendar year.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 04/04/2018
Comments: 4/24/2018 Emails from consultant indicated that the well destruction went well. They are just finalizing the well destruction report and will submit the report this week.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Well Decommissioning Report
Completed Date: 07/16/2018
Comments: DTSC reviewed the Report and has no comment. Therefore, DTSC approved the GW Monitoring Well Abandonment Report. (YS 8.14.2018)

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Well Decommissioning Workplan
Completed Date: 03/28/2018
Comments: Work plan for groundwater monitoring well abandonment for wells (HMW-1, HMW-2, HMW-3) located at the Negherbon Site. A well closure report will be submitted to DTSC within 30 days of abandonment. The report will summarize the well abandonment activities, and include copies of the permits, well completion reports for the destroyed wells that are sent to the State of California Department of Water Resources, and off-Site disposal of wastes, if generated.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Application
Completed Date: 10/30/2012
Comments: Confirmation letter of submittal receipt, dated October 30, 2012. DTSC received Request for Oversight of a Brownfield Site application

for Negherbon Site. Under Memorandum of Agreement, agencies determined that DTSC is appropriate oversight agency for project.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 01/02/2013
Comments: Phase I Environmental Site Assessment Report and All Appropriate Inquires Report dated November 8, 2012, approved by DTSC letter dated January 1, 2013. Per report recommendation, given Client s plans to redevelop the property for residential and commercial uses, limited additional assessment consistent with the proposed land use appears warranted and will be proposed in a separate document. DTSC reviewed the report for compliance with the All Appropriate Inquiries Final Rule at 40 CFR Part 312.

Comments: Well Closure Report for the Destruction of Monitoring Wells at the Negherbon Property, dated March 28, 2014, approved by DTSC letter dated April 18, 2014. Report documents DTSC-approved destruction of six (6) monitoring wells on March 3, 2014. Report attachments include Alameda County Department of Public Works Agency (ACPWA) Well Destruction Permits and California Department of Water Resources (DWR) Well Completion Reports.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 12/15/2015

Comments: Well Installation Report and Quarterly Groundwater Monitoring Report for July 2015, dated November 6, 2015. The report presents data related to the installation, development, and sampling of three monitoring wells in accordance with the Operation and Maintenance (O&M) Plan for groundwater (EK1, February 2015). Sampling results for the first round of groundwater monitoring, collected in July 2015, are included in the report. Contaminant levels in groundwater monitoring wells are consistent with historical levels in groundwater beneath the site. In addition to 1,1,1-dichloroethane (1,1-DCA), trichloroethene, vinyl chloride, 1,1-dichloroethene, 1,2-dichloroethane, and 1,1,2-trichloroethane were detected above their respective maximum contaminant levels in the newly constructed upgradient well; however, a remedial goal has only been established for 1,1-DCA per the Response Plan (EK1, June 2013). Per the O&M Plan, additional data from the newly-installed monitoring wells will be obtained quarterly to evaluate the contaminant trends over time and the evidence for natural attenuation. Report approved by DTSC letter dated December 15, 2015.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 02/23/2016

Comments: Quarterly Groundwater Monitoring for December 2015, dated February 10, 2016. Approved by DTSC letter, dated February 23, 2016. Analytical results for groundwater samples from the three wells are summarized in Table 3. The analytical lab reports and chain-of-custody are included in Appendix C. VOCs were detected above reporting limits in samples from monitoring wells HMW-1 and HMW-2 (including the blind duplicate sample from HMW-3). Detected VOCs include 1,1-DCA, 1,1-DCE, 1,2-DCA, 1,1,2-TCA, TCE, and VC. These VOCs were reported at concentrations similar to those reported in samples collected during the first quarter event (see Table 3) and the Response Plan (see Appendix A). TPH was not detected in groundwater

S112241534

samples. Groundwater elevations measured in July and December 2015 are included in Table 2. As shown, groundwater levels measured in December were 0.71 to 1.19 feet higher than levels measured in July 2015, reflecting autumn rain. Concentrations of 1,1-DCA were higher in samples collected during December than concentrations collected during July 2015. However, because there have been only two sampling events, there are insufficient data to evaluate the natural attenuation of 1,1-DCA. The next quarterly groundwater monitoring will be performed during April 2016. The DTSC will be notified regarding the exact date 7 days prior to the monitoring event.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 06/27/2016
Comments: Quarterly Groundwater Monitoring for April 2016. VOCs were detected above reporting limits in samples from monitoring wells HMW-1 and HMW-2 (including the blind duplicate sample from HMW-3). Detected VOCs include 1,1-DCA, 1,1-DCE, 1,2-DCA, 1,1,2-TCA, TCE, and VC. These VOCs were reported at concentrations similar to those reported in samples collected during the first quarter event and the Response Plan. TPH was not detected in groundwater samples. Groundwater levels measured in April were 1.74 to 1.86 feet higher than levels measured in July 2015, reflecting autumn and winter rain. The data collected during July and December 2015 and April 2016 indicate: TPH has not been reported in groundwater collected from HMW-1, HMW-2, or HMW-3. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are generally lower than in groundwater collected during the previous investigation. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are generally stable; concentrations do not appear to be increasing. Redox conditions are suitable for dechlorination of 1,1-DCA. As described in the DTSC approved O&M Plan, after 6 quarters of monitoring an evaluation of COCs in groundwater will be prepared and if appropriate, cessation of further groundwater monitoring events will be recommended. Based on the data collected during the first three quarterly events, it is anticipated the COC evaluation will be provided in early 2017, after the sixth quarterly event. The next quarterly groundwater monitoring will be performed during July 2016. DTSC will be notified regarding the exact date 7 days prior to the monitoring event.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 10/04/2016
Comments: Quarterly Groundwater Monitoring for July 2016. The data collected during July and December 2015 and April and July 2016 indicate: TPH has not been reported in groundwater collected from HMW-1, HMW-2, or HMW-3. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are similar to or lower than those detected during the previous sampling events. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are generally stable; concentrations do not appear to be increasing. Based on the data collected during the first three quarterly events, it is anticipated the COC evaluation will be provided in early 2017, after the sixth quarterly event. The next quarterly groundwater monitoring will be performed during October 2016. The DTSC will be notified regarding the exact date

approximately 7 days prior to the monitoring event.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 03/22/2017
Comments: Quarterly Groundwater Monitoring for October 2016. The data collected during the five quarters of sampling indicate: TPH has not been reported in groundwater collected from HMW-1, HMW-2, or HMW-3. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are similar to or lower than those detected during the previous sampling events. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are generally stable; concentrations do not appear to be increasing. However, The 10/18/2016 sample from HMW-2 shows a slight increase and the highest concentration of 1,1-DCA among the past five (5) quarterly monitoring events. As described in the DTSC approved O&M Plan (EKI, 2015a), after 6 quarters of monitoring an evaluation of COCs in groundwater will be prepared and if appropriate, cessation of further groundwater monitoring events will be recommended. Based on the data collected during the five quarterly events, it is anticipated the COC evaluation will be provided in early 2017, after the sixth quarterly event. The next quarterly groundwater monitoring will be performed during January 2017. The DTSC will be notified regarding the exact date approximately 7 days prior to the monitoring event.

demonstrate there are no identified soil or soil vapor sources of 1,1-DCA on the Site. The 1,1-DCA plume is migrating onto the Site from an upgradient source. The 1,1-DCA plume on the Site is stable. DTSC has no additional comments and hereby approves the request to terminate groundwater monitoring. As a reminder, the Operation and Maintenance Agreement signed with Hive Development Group, LLC remains in effect. The Operation and Maintenance Agreement requires implementation of the Operation and Maintenance Plan. The Operation and Maintenance Plan covers installation and sampling of groundwater monitoring wells. Groundwater monitoring wells that are not being regularly sampled can serve as a conduit for contamination migration. Therefore, it may be prudent to properly abandon these wells. Following receipt of documentation that the monitoring wells have been properly abandoned, DTSC will initiate steps to terminate the Operation and Maintenance Agreement. This includes conducting an annual inspection and submitting an annual inspection report to DTSC by January 15th of each calendar year.

Completed Date: 04/18/2014
Comments: Well Closure Report for the Destruction of Monitoring Wells at the Negherbon Property, dated March 28, 2014, approved by DTSC letter dated April 18, 2014. Report documents DTSC-approved destruction of six (6) monitoring wells on March 3, 2014. Report attachments include Alameda County Department of Public Works Agency (ACPWA) Well Destruction Permits and California Department of Water Resources (DWR) Well Completion Reports.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 12/15/2015
Comments: Well Installation Report and Quarterly Groundwater Monitoring Report for July 2015, dated November 6, 2015. The report presents data related to the installation, development, and sampling of three monitoring wells in accordance with the Operation and Maintenance (O&M) Plan for groundwater (EKI, February 2015). Sampling results for the first round of groundwater monitoring, collected in July 2015, are included in the report. Contaminant levels in groundwater monitoring wells are consistent with historical levels in groundwater beneath the site. In addition to 1,1,1-dichloroethane (1,1-DCA), trichloroethene, vinyl chloride, 1,1-dichloroethene, 1,2-dichloroethane, and 1,1,2-trichloroethane were detected above their respective maximum contaminant levels in the newly constructed upgradient well; however, a remedial goal has only been established for 1,1-DCA per the Response Plan (EKI, June 2013). Per the O&M Plan, additional data from the newly-installed monitoring wells will be obtained quarterly to evaluate the contaminant trends over time and the evidence for natural attenuation. Report approved by DTSC letter dated December 15, 2015.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 02/23/2016
Comments: Quarterly Groundwater Monitoring for December 2015, dated February 10, 2016. Approved by DTSC letter, dated February 23, 2016. Analytical results for groundwater samples from the three wells are summarized in Table 3. The analytical lab reports and chain-of-custody are included in Appendix C. VOCs were detected above reporting limits in samples from monitoring wells HMW-1 and HMW-2 (including the blind duplicate sample from HMW-3). Detected VOCs include 1,1-DCA, 1,1-DCE, 1,2-DCA, 1,1,2-TCA, TCE, and VC. These VOCs were reported at concentrations similar to those reported in samples collected during the first quarter event (see Table 3) and the Response Plan (see Appendix A). TPH was not detected in groundwater samples. Groundwater elevations measured in July and December 2015 are included in Table 2. As shown, groundwater levels measured in December were 0.71 to 1.19 feet higher than levels measured in July 2015, reflecting autumn rain. Concentrations of 1,1-DCA were higher in samples collected during December than concentrations collected during July 2015. However, because there have been only two sampling events, there are insufficient data to evaluate the natural

S112241534

attenuation of 1,1-DCA. The next quarterly groundwater monitoring will be performed during April 2016. The DTSC will be notified regarding the exact date 7 days prior to the monitoring event.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 06/27/2016
Comments: Quarterly Groundwater Monitoring for April 2016. VOCs were detected above reporting limits in samples from monitoring wells HMW-1 and HMW-2 (including the blind duplicate sample from HMW-3). Detected VOCs include 1,1-DCA, 1,1-DCE, 1,2-DCA, 1,1,2-TCA, TCE, and VC. These VOCs were reported at concentrations similar to those reported in samples collected during the first quarter event and the Response Plan. TPH was not detected in groundwater samples. Groundwater levels measured in April were 1.74 to 1.86 feet higher than levels measured in July 2015, reflecting autumn and winter rain. The data collected during July and December 2015 and April 2016 indicate: TPH has not been reported in groundwater collected from HMW-1, HMW-2, or HMW-3. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are generally lower than in groundwater collected during the previous investigation. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are generally stable; concentrations do not appear to be increasing. Redox conditions are suitable for dechlorination of 1,1-DCA. As described in the DTSC approved O&M Plan, after 6 quarters of monitoring an evaluation of COCs in groundwater will be prepared and if appropriate, cessation of further groundwater monitoring events will be recommended. Based on the data collected during the first three quarterly events, it is anticipated the COC evaluation will be provided in early 2017, after the sixth quarterly event. The next quarterly groundwater monitoring will be performed during July 2016. DTSC will be notified regarding the exact date 7 days prior to the monitoring event.

Completed Area Name: PROJECT WIDE

during the five quarters of sampling indicate: TPH has not been reported in groundwater collected from HMW-1, HMW-2, or HMW-3. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are similar to or lower than those detected during the previous sampling events. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are generally stable; concentrations do not appear to be increasing. However, The 10/18/2016 sample from HMW-2 shows a slight increase and the highest concentration of 1,1-DCA among the past five (5) quarterly monitoring events. As described in the DTSC approved O&M Plan (EKI, 2015a), after 6 quarters of monitoring an evaluation of COCs in groundwater will be prepared and if appropriate, cessation of further groundwater monitoring events will be recommended. Based on the data collected during the five quarterly events, it is anticipated the COC evaluation will be provided in early 2017, after the sixth quarterly event. The next quarterly groundwater monitoring will be performed during January 2017. The DTSC will be notified regarding the exact date approximately 7 days prior to the monitoring event.

Case Worker: REL
RB Case Number: 01-2416
Local Agency: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: Not reported
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Benzene, Gasoline, Waste Oil / Motor / Hydraulic / Lubricating
Site History: On July 28, 1994, one 295-gallon waste-oil UST, one 575-gallon gasoline UST and two hydraulic lifts were removed from the site. Holes were observed in the gasoline UST upon removal. Maximum concentrations of 1,500 ppm TPHg, 1,800 ppm TPHd and 7.4 ppm benzene were detected in soil. Subsequently, a work plan was submitted but has not been implemented. Soil vapor and groundwater sampling must occur to evaluate the elevate benzene and extent of contamination in groundwater. On the Project Information screen, add this phrase to the Staff Notes and Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historical case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>.

Global Id: T0600100666
Latitude: 37.8108858664631
Longitude: -122.274350523949
Status: Open - Assessment & Interim Remedial Action
Status Date: 04/17/2015
Case Worker: KMB
RB Case Number: 01-0722
Local Agency: ALAMEDA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: RO0000074
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Benzene, Diesel, Gasoline, Naphthalene
Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A complete case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>. In June 1989, a preliminary subsurface investigation, consisting of boring installations, detected hydrocarbon contamination in soil samples. Six out of service USTs were removed from the site in April 1990. Free product /groundwater recovery system began operating in November 1992 and ceased operating in January 1997. Fourteen groundwater extraction / monitoring wells, including BC-1 to BC-3, ES-1 to ES-11, 22 soil bores, and six vapor wells (SV-1 to SV-6) have been installed at the site. Review under the LTCP indicates that corrective actions are appropriate and that the site does not meet the groundwater, vapor intrusion, and potentially the direct contact media-specific criteria of the LTCP. Based on elevated vapor concentrations proximal to the existing bus terminal and offices, an additional soil vapor and sub-slab investigation has been proposed and conditionally approved. Pilot testing of the preferred remedial approach is also pending.

 Case Type: Cleanup Program Site
 Case Worker: PK
 Local Agency: ALAMEDA COUNTY LOP
 RB Case Number: Not reported
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Potential Media Affected: Other Groundwater (uses other than drinking water), Sediments, Soil
 Potential Contaminants of Concern: Lead, Polynuclear aromatic hydrocarbons (PAHs), Total Petroleum Hydrocarbons (TPH)
 Site History: According to the Case file and the Alameda County Appraisal Office, the case is associated with six parcels (collectively, the Site). The assessors parcel number (APN), property address, and current ownership for each of these parcels as reported by the County of Alameda Assessors Office is summarized below: APN Property Address Listed Owner 8-671-4-2 295 27th St, Oakland, CA 94612 Leynse Lois A Tr; Lowry Anne C Tr 8-671-20-1 265 27th St, Oakland, CA 94612 Nash Holland 24th & Harrison Investors LLC 8-671-21-1 300 24th St, Oakland, CA 94612 Nash Holland 24th & Harrison Investors LLC 8-671-23-3 306 24th St, Oakland, CA 94612 Nash Holland 24th & Harrison Investors LLC 8-671-24 310 24th St, Oakland, CA 94612 Nash Holland 24th & Harrison Investors LLC 8-671-25 322 24th St, Oakland, CA 94612 Nash Holland 24th & Harrison Investors LLC Based on the Case file and the County of Alameda Assessors Office records, the total size of the Site is approximately 2.6 acres. A copy of the Assessors Map that is current as of the date of this letter is provided as Attachment A of this letter. The Site is currently being developed by Holland Partner Group (Holland) with a 19-story, 437-unit residential tower with podium style parking and approximately 16,000 square feet of retail space. The residential tower and parking structure will each include one below-grade level. ACDEH understands that historic on-site structures and improvements have been demolished and that the site is currently being excavated and dewatered as part of planned

development activities. The Site is planned to be excavated to a maximum total depth of approximately 20 feet below ground surface (ftbgs). Groundwater at the Site has historically been encountered at a depth of approximately 7-ftbgs. The last updated Conceptual Site Model (CSM) was provided in the Site Management Plan dated September 18, 2018 which was prepared by Northgate Environmental Management, Inc. (Northgate) on behalf of Holland. The Site is currently regulated by ACDEH under the authority of a Voluntary Remedial Action Agreement (VRAA) which was executed by ACDEH and Holland Partner Group (Holland) on June 19, 2018. The Site is being regulated due to the presence of the following constituents of concern (COCs): 1. Metals in soil, culvert sediment, culvert water, and groundwater; 2. Poly-aromatic hydrocarbons (PAHs) in soil and culvert sediment, predominantly in the shallow (5-ftbgs or less) soil culvert sediment. Specific PAHs identified include: A. bis(2-chloroisopropyl) ether B. Benzo[a]pyrene; C. Ideno[1,2,3-cd]pyrene; D. Dibenz[a,h]anthracene; and E. Benzo[b]fluoranthene; 3. Petroleum hydrocarbons, predominantly diesel range, but including gasoline range and oil range and benzene, toluene, ethylbenzene, and xylenes (collectively, BTEX), and naphthalene.

Status: Completed - Case Closed
Status Date: 12/27/2012
Case Worker: Not reported
RB Case Number: 01-2428
Local Agency: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: RO0000505
Potential Media Affect: Other Groundwater (uses other than drinking water), Soil Vapor
Potential Contaminants of Concern: Gasoline, Waste Oil / Motor / Hydraulic / Lubricating
Site History: The site is a small triangular commercial property located at the intersection of Harrison Street and Bay Place in Oakland, CA. The site was previously a Shell gas station and auto repair facility equipped with three underground storage tanks (USTs), one 550-gallon waste oil tank UST, three dispenser islands, a drive-on hoist, and a station building. The USTs were removed from the center of the property in March 1977, but no records are available that document their removal. Three dispenser islands existed to the west, north, and east of the former USTs. Currently, the site is occupied by a 7-Eleven convenience store and the surrounding area is predominantly a mix of commercial and residential use. During a light pole installation at the site, petroleum impacted soil was observed. Composite stockpile soil samples were collected on November 2, 1992 from the soil generated during the light pole removal and analyzed for Total Petroleum Hydrocarbons as gasoline (TPHg), Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX), lubricating oil, and other heavier petroleum hydrocarbons. The soil sample collected from Soil Pile 1 contained the highest concentrations of 3,200 parts per million (ppm) lubricating oil and 35 ppm Oil and grease (O&G). On March 4, 1993, four soil borings (#1 through #4) were advanced at locations across the site. One soil sample from each boring was analyzed for TPHg, TPHd, BTEX, O&G, Total Petroleum Hydrocarbons as kerosene (TPHk), Total Petroleum Hydrocarbons as mineral spirits (TPHms), and lubricating oil. The maximum concentrations of 7,900 ppm TPHmo and 620 ppm TPHg were detected in the soil sample from boring #4, in the east portion of the site. Six monitoring wells (S-1 through S-6) were installed throughout the site on June 2 through 5, 2008. Soil samples were collected from each boring between 5.5 and 15.5 fbg, along with one groundwater sample. Groundwater was first encountered at the site between 8.2 and 19 fbg. The soil samples indicated that the highest concentration of petroleum hydrocarbons occurred in shallow soils between 7 and 10 fbg. Shallow soils in the southeast portion of the site contained up to 2,300 ppm TPHg, 22,000 ppm TPHd, and 8,600 ppm O&G. Shallow soils near the western-most dispenser contained up to 2,700 ppm TPHg and 270 ppm TPHd. Groundwater samples collected from the former UST area and southeast corner of the site contained TPHg concentrations of 6,500 parts per billion (ppb) and 1,300 ppb, respectively. To investigate the potential for the petroleum plume to extend off-site, two grab groundwater samples (HP-1 and HP-2) were collected down gradient along Harrison Street on May 19 through 21, 2009. The grab groundwater sample collected furthest from the site (HP-2) contained

715,000 ppb O&G, 14,000 ppb TPHg, and 58,000 ppb TPHd, while the closer groundwater sample (HP-1) contained 111,000 ppb O&G, 11,000 ppb TPHg and 36,000 ppb TPHd. The grab groundwater samples indicated the potential for an offsite plume of heavier hydrocarbons. In addition to the off-site samples, four soil borings (B-1 through B-4) were advanced in the former waste oil tank area. The shallow soil sample collected from boring B-1 at 5.5 fbg contained the highest concentration of O&G at 3,000 ppm. TPHg and TPHd were detected in all borings at maximum concentrations of 920 ppm and 700 ppm, respectively. Three soil vapor probes (SVP-1 through SVP-3) were also installed near the former USTs and waste oil UST and sampled on May 28, 2009. The vapor probes contained up to 530,000 micrograms per cubic meter (a%/m³) benzene. On February 27, 2010, one soil vapor probe (SVP-2a) and two near sub-slab vapor probes (SVP-4 and SVP-5) were installed. Sampling of the vapor probes on occurred on March 23, 2010. TPHg and benzene were detected in soil vapor near the former USTs at concentrations up to 75,000,000 a%/m³ and 160,000 a%/m³, respectively. Soil vapor samples from the two near sub-slab probes did not contain TPHg, benzene, toluene, ethylbenzene, or xylenes (BTEX) at concentrations above the reporting limit. On June 25, 2010, six soil borings (B-5 through B-10) were advanced off-site to investigate contamination south of the site. The investigation revealed a large plume of petroleum hydrocarbons south of the site consisting of O&G, TPHd, and TPHg at maximum groundwater concentrations of 715,000 ppb, 58,000 ppb, and 14,000 ppb, respectively. The highest concentrations were detected along Harrison Street approximately 175 feet southwest of the site. The plume does not contain BTEX or other VOCs at concentrations above reporting limits. Since the maximum concentrations within the plume were detected approximately 175 feet downgradient from the site and the types of petroleum hydrocarbons are not consistent with the dissolved phase hydrocarbons detected on site, the plume is most likely from an off-site source. In 2011, a review of historical aerial photos and Sanborn maps identified five potential sources for the off-site heavy petroleum hydrocarbon plume. On March 30, 2011, soil vapor probes SVP-3 through SVP-5 were sampled. Soil vapor probes SVP-1, SVP-2, and SVP-2a could not be sampled due to water in the sampling tubing. Due to anomalous results of up to 190,000 a%/m³ TPHg in near sub-slab vapor probes SVP-4 and SVP-5, the probes were re-sampled on June 8, 2011. The re-sampling of probes SVP-4 and SVP-5 indicated non-detectable concentrations of TPHg and 2.2 a%/m³ benzene were present in the near sub-slab wells. Probe SVP-3, located less than five feet north of near sub-slab probe SVP-5, contained 26,000,000 a%/m³ TPHg, 1,400 a%/m³ benzene, and 1,700 a%/m³ xylenes. An air exchange rate test was performed on the existing convenience store building on December 19, 2011. The initial measurements of the air exchange rate indicated an overall average of 3.11 exchanges per hour. Due to a relatively low air exchange rate, the test was followed by system maintenance which increased the HVAC performance to an air exchange rate of 11.49 exchanges per hour. The minimum required air exchange rate was calculated to determine the potential for intrusion of benzene from soil vapor to indoor air to exceed the commercial indoor air Environmental Screening Level (ESL). Using site data and assumptions from EPA and RWQCB documents, the calculated necessary air exchange rate to prevent benzene vapor intrusion at concentrations exceeding the indoor air ESL is 2.3 exchanges per hour. The current air exchange rate is greater than the calculated

 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Gasoline
 Site History: Four USTs, located under the sidewalk on 11th Street near the Webster Street intersection were removed from the site in April 1987. Significantly elevated concentrations of soil and groundwater contamination was present at the site. In 1987, borings and monitoring wells were installed at the site. In 1988, a groundwater extraction system began operation. The site was later redeveloped to an multi-story office complex with three floors of sub-grade parking.

 Local Case Number: RO0003148
 Potential Media Affect: Other Groundwater (uses other than drinking water), Soil, Soil Vapor
 Potential Contaminants of Concern: Acetone, Dichloroethane (DCA), Benzene, Diesel, Ethylbenzene, Gasoline, MTBE / TBA / Other Fuel Oxygenates, Naphthalene, Toluene, Xylene

Site History: The site is a warehouse property occupied by a tenant operating a commercial business. This case was opened in 2014 following the removal of an underground storage tank 1,000 gallon underground sto(UST) from beneath the sidewalk along 15th Street. The UST, a 1,000-gallon tank and appurtenant piping, was removed in December 2013.. The UST historically contained gasoline. During tank excavation, reported concentrations included up to 906 milligrams per kilogram (mg/kg) Total Petroleum Hydrocarbons as gasoline (TPHg), 15.1 mg/kg toluene, 27.2 mg/kg ethylbenzene, 222 mg/kg total xylenes, 20.1 mg/kg naphthalene, and 0.560 mg/kg methyl ethyl ketone (MEK) were detected in soil taken from beneath the UST at a depth of eight (8) feet below ground surface. ACDEH requests work plan in letters dated January 26, 2015 and June 15, 2015. ACDEH has not received any correspondence from RP until receipt of the January 25, 2016 document entitled Well Installation and Interim Remedial Corrective Action

Report, documenting well installation, well sampling, operation of a groundwater pump & treat system, and well destruction. ACDEH requested a meeting to discuss clean up actions. Meeting held on 4/21/2016 with RP and consultant. ACDEH stated the site is an open case under the regulatory oversight of the ACDEH and that the work performed at this site was not performed with the knowledge or approval of a regulatory oversight agency. ACEH reviewed the data presented at the meeting. It was apparent that neither the ACDEH ftp nor SWRCB GeoTracker websites contained all the documents discussed at the meeting, including a Phase I/ Phase II document dated from 2013. ACDEH requested the submittal of the document and all other environmentally-related documents not currently present on the websites. ACDEH also requested the upload of supporting documentation for all GeoTracker submittals. The missing submittals were presented at the meeting. Additionally, ACDEH would prepared a letter requesting a Site Summary Report with condensed tables and updated figures and would request ESI submittals and would provide a listing of the GeoTracker supporting documentation not present on the website. Not reported

Potential Media Affect: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: Acetone, Benzene, Diesel, Ethylbenzene, Gasoline, Naphthalene, Toluene, Xylene

Site History:

Site is a 5-story multi-family mixed-use residential complex on Jackson between 11th and 12th Streets. The first floor of the building is commercial and on grade open ventilated parking with utility rooms and 2 elevators with retail suites along a portion of the Jefferson Street frontage. Previously, the site was developed with the Oakland Hospital as early as 1889. Residential structures were located on-site in the early 1900s, with an automobile repair garage present from at least 1911 through 1933. By the 1940s/1950s, a glass shop was present, as was a retail building and parking lots. By the 1960s/1970s, a store and warehouse were present, as was a private school. In 2005, site development included a warehouse, beauty salon, market, and offices. All historic on-site structures reportedly were demolished in January 2007. Construction of the current building was initiated in 2016. Three underground storage tanks (USTs) used for the storage of gasoline were removed from beneath the sidewalk adjacent to the site along Jackson St. during utility trench work associated with site redevelopment. The USTs, having capacities of 265 gallons, 265 gallons, and 110 gallons, were removed on April 15, 2016 and noted to be poor condition. Petroleum hydrocarbon contamination was observed in the tank pit. The laboratory analysis report for excavation samples included total petroleum hydrocarbons as gasoline (TPHg) to 2,480 milligrams per kilogram (mg/kg) and naphthalene to 4.59 mg/kg. On May 4, 2016 a limited excavation of the tank pit was performed with confirmation sample concentrations of TPHg reported to 6,320 mg/kg and benzene, toluene, ethyl benzene, and xylenes (BTEX) to 0.943 mg/kg, 0.805 mg/kg, 0.624 mg/kg, and 3.05 mg/kg, respectively, and naphthalene to 2.58 mg/kg. Additionally, several volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) were reported at concentrations above their respective reporting limits. A total of 78.20 tons soil manifested for off site disposal. A fourth sidewalk UST, having a capacity of 750 gallons, reported to be used for the storage of diesel fuel, was discovered and removed from beneath the sidewalk adjacent to the site

along Jackson St. in November 2016. The tank was reported in poor condition with visible holes. In September 2016, a tank removal report was prepared documenting the activities associated with the April 2016 removal of 3 USTs. Tank contents samples T1-TC, T2-TC and T3-TC were collected from each tank for profiling. Additionally, discrete soil stockpile samples, 9669-SP1-DISCRETE, 9669-SP2-DISCRETE and 9669-SP3-DISCRETE and an additional 4-point composite sample from the drummed soil (9669-DRUM-COMP) were also collected for disposal profiling. Samples were analyzed for TPH-g, TPH-d, TPH-mo, TPH-k and VOCs. Confirmation soil samples T1-C-9, T2-C-9, and T3-C9 (all having the 9699 prefix) were collected from the beneath each of the USTs. The areas delineated by these samples were subsequently over excavated. Confirmation soil samples (having the 9699 prefix) P1-4, P2-3.3 and P3-4, were recovered from the piping runs. Over-excavation soil samples, also having the 9699 prefix, are bottom samples T1-C-12, T2-C-12.5 and T3-C-12 and sidewalls samples T1-NW-8, T1-EW-8, T1-WW-8, T2-SW-8, T2-EW-8, T2-WW-8, T3-NW-8, T3-SW-6.5, T3-EW-9 and T3-WW-8 were analyzed for TPH-g, TPH-d and TPH-mo, TPH-k, VOCs, SVOCs and the 5 LUFT metals. TPH-g was detected at concentrations ranging from 78.8 to 6,320 milligrams per kilogram (mg/kg). TPH-d was non-detect for the eight (8) sidewall and 3 bottom samples. TPH-mo concentrations were reported to range from non-detect to 135 mg/kg in the 8 sidewall samples and non-detect for the 3 bottom samples. TPH-k concentrations of up to 580 mg/kg were reported. Several VOCs were present, including benzene, butylbenzenes, ethyl benzene, propylbenzenes, p-isopropyltoluene, naphthalene, 1,2,4-trimethylbenzene, toluene and xylenes; however, none of the detected VOC concentrations were reported to exceed their respective screening levels. MTBE was not detected above laboratory limits in any soil samples collected. Concentrations of the SVOCs acenaphthene, anthracene, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, chrysene, fluoranthene, fluorene, 1-methylnaphthalene, 2-methylnaphthalene, naphthalene, and phenanthrene and pyrene were also reported. Additionally, none of the detected metals concentrations exceeded their respective environmental screening levels. On 11 August, 2016, four borings (EB-1 through EB-4) were advanced through the sidewalk to a maximum depth of 28 feet bgs to assess soil and groundwater conditions adjacent to the 3 USTs. Only soil samples from the bore EB-2 were submitted for laboratory analysis. Scope of the analysis was TPH-g, TPH-d and TPH-mo, VOCs and the 5 wear metals. TPH-g, TPH-d and TPH-mo were detected in all three soil samples (EB-2-13, EB-2-15.5, and EB-2-22.5) with TPH-g reported at concentrations ranging from 200 to 5,000 mg/kg. TPH-d concentrations ranged from 18 to 830 mg/kg and TPH-mo concentrations ranged from 5.5 to 14 mg/kg. The VOCs, ethylbenzene, xylenes, butyl-benzenes, propylbenzenes, trimethylbenzenes and naphthalene were detected at concentrations above the laboratory reporting limit in all three samples. Benzene and MTBE were not detected above laboratory limits in any soil samples collected during this investigation. Metals concentrations were reported within background levels. Groundwater was encountered at depths ranging from 20 to 22 feet bgs. EB-1-GW through EB-4-GW GGW sample concentrations for TPH-g and TPH-d were reported at up to 30,000 "g/L and 55,000 "g/L, respectively. Concentrations of VOCs, including acetone, benzene, 2-butanone, sec-butyl benzene, cis-1,2-dichloroethene, ethylbenzene, naphthalene, isopropylbenzene, 4-isopropyl toluene, n-propyl benzene,

S112909506

trimethylbenzenes and xylenes, were also documented. The maximum benzene concentration of 320 µg/L was detected in the EB-2 GGW sample. In November 2016, a fourth UST was encountered during trenching for utility installation. Holes and stained soil were evident at the time of its removal. Two discrete soil samples, designated 9669-N-10 and 9660-S-10 were collected at a depth of 10 feet bgs from beneath each end of the tank. The samples were analyzed for TPH-d, BTEX and naphthalene. TPHd concentrations were reported at 1,400 mg/kg and 2,800 mg/kg, respectively, and naphthalene concentrations at 0.71 mg/kg and 3.1 mg/kg, respectively. Xylenes were reported in one sample, 9660-S-10 at 0.3 mg/kg. BTE compound concentrations were below their respective laboratory reporting limit. In November 2016, an on-site investigation consisting of installation and sampling six (6) sub-slab (SS-1 through SS-6) sample points and five (5) soil gas wells (SG-1 through SG-5) for the collection of soil vapor and 4 bores (EB-5 through EB-8) for the recovery of soil and GGW samples. Sub-slab sample point SS-6 was added to the investigation following the discovery of the fourth UST. The sub-slab and soil gas samples were analyzed for VOCs, methane, and the leak check gas helium. Soil and GGW samples were analyzed for TPH-g, TPH-d, and TPH-mo; VOCs and PAHs. Soil samples were additionally analyzed for LUFT metals. Of the six sub-slab vapor samples analyzed, a total of 12 VOCs, including acetone, benzene, 2-butanone or methyl ethyl ketone (MEK), carbon disulfide, cyclohexane, dichlorodifluoromethane (Freon 12), Freon 113, n-hexane, isopropanol, toluene, carbon disulfide, cyclohexane, dichlorodifluoromethane or Freon 12, Freon 113, n-hexane, isopropanol, and xylenes were detected. None of the VOCs concentrations reported for any of the six sub-slab samples analyzed exceeded Of the five soil gas samples analyzed, a total of 11 VOCs, including acetone, benzene, 2-butanone or MEK, carbon disulfide, cyclohexane, dichlorodifluoromethane or Freon 12, ethylbenzene, n-hexane, toluene, trichlorofluoromethane, and xylenes were detected. None of the VOCs detected in any of the five soil gas samples analyzed exceeded their respective Tier 1 ESLs, where established. Two of the five soil gas samples, SG3-2016-11-17 and SG5-2016-11-17, had detectable concentrations of methane at 1.22 %v and 1.21 %v, respectively. Soil samples were collected from depths of 4.5 and 8.5 feet bgs from each soil boring. TPH-d was detected in one (EB-6-4.5) of the eight samples analyzed, at a concentration of 15 mg/kg. TPH-mo was detected in two of the eight samples analyzed, at concentrations of 160 mg/kg (EB-6-4.5) and 5.1 mg/kg (EB-8-4.5). Naphthalene was the only VOC detected in the eight soil samples analyzed and was detected in a one sample, EB-6-4.5 at a concentration of 0.010 mg/kg. TPH-g was not detected at or above the laboratory reporting limit in any of the eight samples analyzed. Concentrations of PAHs were detected in two (EB-6-4.5 and EB-8-4.5) of the eight soil samples analyzed, with BaPe concentrations more than an order of magnitude below the LTCP Direct Contact and Outdoor Air threshold values. Four of the 5 LUFT metals were reported at concentrations within background levels. However, lead in 2 soil samples (EB-6-4.5 and EB-8-4.5) were detected concentrations above background at 150 mg/kg and 97 mg/kg, respectively. TPH-g was not detected in any of the 4 GGW samples analyzed. TPH-d was detected two of the four samples analyzed, at concentrations of 70 µg/L (EB-8-GW) and 290 µg/L (EB-6-GW). TPH-mo was detected in each of the four samples at concentrations ranging from 100 µg/L to 2,800 µg/L. Concentrations of TBA and PCE were the

only VOCs detected in the grab groundwater samples. Acenaphthylene, reported in three of the 4 GGW samples, was the only PAH detected. Acenaphthylene concentrations ranged from 0.133 "g/L to 0.607 "g/L. In December 2016, the tank pit for the fourth UST was over-excavated and confirmation samples (all having the 9669 prefix) recovered. Three bottom samples- C-14, C-17.5 and C-18.5, and four (4) sidewall samples (SW-9, EW-9, WW-8.5 and NW-9) were submitted for laboratory analysis for TPH-d, BTEX and naphthalene. Samples C-17.5 and C-18.5 were also analyzed for PAHs. Concentrations of TPH-d, ranging from 1,100 mg/kg to 11,000 mg/kg, were reported for the three bottom samples and ranged from 1.7 to 4,400 mg/kg for the 4 sidewall samples. Xylenes (1.2 mg/kg) and naphthalene (6.9 mg/kg) were reported for one bottom sample (C-14) and 2 sidewall samples, WW-8.5 and NW-9, at 0.53 and 1.2 mg/kg and 6.4 and 16 mg/kg, respectively. Samples C-17.5 and C-18.5 were reported to contain the PNA compounds phenanthrene, anthracene, fluoranthene, pyrene, benzo (a) anthracene, benzo (a) pyrene, benzo (b) fluoranthene, benzo (k) fluoranthene and dibenzo (a,h) anthracene. Additionally, sample C-17.5 contained detectable concentrations of fluorene, chrysene, benzo (g,h,i) perylene and ideno (1,2,3-cd) pyrene. An investigation conducted in January 2018 consisted of advancing five (5) soil bores (EB-9 through EB-13) for the collection of soil and GGW samples. The borings were advanced to depths ranging from 27 to 38 feet bgs. Groundwater was measured at depths ranging from 19 to 21 feet bgs. In each boring, two soil samples were collected within the first five feet, and at five foot intervals thereafter (i.e. 10, 15, 20 feet bgs) until groundwater was encountered. GGW samples were collected from four of the five borings at two discrete depths- shallow (first encountered water) and deep (10 feet below shallow water). Soil and GGW samples were analyzed for TPH-g, TPH-d and TPH-mo and VOCs. TPH-g was not detected above the laboratory reporting limit in the 34 soil samples analyzed; TPH-d was detected in two of 34 samples at concentrations of 1.6 and 1.9 mg/kg; TPH-mo was detected in five of 34 samples at concentrations ranging from 6.8 to 23 mg/kg; and VOCs were not detected above the laboratory reporting limit in any soil samples collected from EB-9 through EB-13. GGW analysis results documented TPH-g concentrations below laboratory reporting limits in the 10 samples analyzed; TPH-d concentrations were detected in seven of 10 samples analyzed ranging from 67 to 250 "g/L; TPH-mo was detected in five of 10 samples at concentrations ranging from 340 to 580 "g/L; and the VOCs chloroform, cis-1,2-dichloroethene, TBA, PCE and TCE were also detected. Remedial activities consisted of over-excavation of contaminated soil in conjunction with the removal of the four USTs. Size of the excavations were limited to sidewalk areas due to the proximity of underground utilities and the site structure. Approximately 78.8 tons of soil was disposed off-site with the removal of tanks 1, 2 and 3. An additional 24.74 tons of soil was disposed off-site with the over-excavation activities associated with the removal of the fourth UST. This LUST case was evaluated for closure consistent with the State Water Resource Control Boards Low-Threat Underground Storage Tank Closure Policy (LTCP) for petroleum related contaminants. ACDEH determined that the site met all the LTCP General Criteria and Media Specific Criteria and therefore poses a low risk to human health and safety and the environment. The determination was based on receptors and environmental conditions identified at and in the vicinity of the site at the time of closure and reasonably anticipated near-term

S101580405

Status Date: 08/14/2017
Case Worker: MD
RB Case Number: 01-2260
Local Agency: ALAMEDA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: RO0000342
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A complete case file for this site is located on the Alameda County Department of Environmental Health (ACDEH) website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>. Current Land-use at time of Case Closure The subject property (APN 003-00590-13-02) is located 1700 Castro Street, in the western portion of the City of Oakland near Interstate 980. At the time of this case closure, the site is a current active Chevron Gasoline Station with a convenient store building located near the eastern property boundary and accordingly this case is closed to the current commercial land-use risk scenario, consisting of an active gasoline service station with a convenient store structure developed at the site. Due to residual contamination, the site was closed with site management requirements that include notifying Alameda County Department of Environmental Health (ACDEH) of a proposed change in land use to any residential or conservative land use, or if any redevelopment or building alteration is proposed that affect or disturb the existing subsurface conditions at the site. Adjacent Property(ies) Land-use at Time of Case Closure At the time of this case closure, groundwater contamination extended off-site underneath Castro Street. However, should off-site redevelopment occur, ACDEH recommends evaluating the redevelopment site(s) for chemicals of concern identified on this site. Historic Land-use / Site Investigation The site is an active Chevron Service Station site, where an unauthorized release was discovered during a UST system upgrade in February 1997 to install under dispenser pans. In May 1997 wells MW-1 to MW-3 were installed. In March 1999 wells MW-4 to MW-6 were installed. In March 2001 well MW-7 was installed. In March 2004 bores B1 to B4 were installed to re-characterize soil for the installation of a new UST complex for a station remodel. In April 2004 four 10,000-gallon gasoline USTs were removed from the site, and two new USTs were installed in a new area south of the old UST complex. No other investigation or cleanup was performed in relation to the dispenser islands or USTs. The downgradient extent of the MTBE plume was defined using the State Water Boards (SWB) Technical Justification for Groundwater Media-Specific Criteria, dated April 24, 2012 by determining the area of the maximum extent of a potential MTBE groundwater plume as documented by the SWB paper, and requesting that the area be canvassed to determine the potential for an unknown private water supply well to be present and extract groundwater. After multiple attempts to identify one potential well owner, the address was identified, and the owner verbally indicated a well was not present at the address. The well location is at an approximate distance of 1,070 feet to the northwest. In general, groundwater flows to the west. The SWB paper found that the maximum plume length for methyl tert butyl ether (MTBE) is 1,046 feet. Because the potential well is at a distance greater than the SWBs maximum MTBE plume length and is located cross-gradient to the predominant direction of groundwater flow, the potential well does not appear to be at risk as a sensitive receptor from MTBE

contamination released at the site. Potential Exposure to Chemicals of Concern The USTs that were used to store diesel and gasoline are believed to be the source of the contamination discovered at the site. The main chemicals of concern (COCs) associated with the USTs and detected at the site were TPH-d, TPH-g, BTEX, and SVOCs including naphthalene. Inhalation and ingestion appear to have been the most likely potential routes of exposure to these COCs. Remediation Activities Source removal of the UST was performed at the site. No additional corrective actions was performed at the site. Case Closure & Future Site Management Requirements This fuel leak case has been evaluated for closure consistent with the State Water Resource Control Board Low-Threat Underground Storage Tank Closure Policy (LTCP). This site does not meet the Direct Contact criterion due to residual soil concentrations of benzene between 0 to 5 and 5 to 10 feet bgs that exceed the LTCP criteria; however, these soil samples are over 19 years old, were located in a silty sand matrix, and are expected to have decreased by natural processes in the intervening years. ACDEH has evaluated case information and, as a result of controlling exposure through the use of institutional and engineering controls, has determined that the concentrations of petroleum constituents in soil will not have a significant risk of adversely affecting human health. Specifically, except for limited areas around the perimeter of the site, the site is entirely paved and exposure to site soils is prevented, except in controlled conditions. Additionally, exposure to contaminated soil and soil vapors is limited by low permeability pavements. As a commercial fueling facility, maintenance or construction workers employed at the facility are required by California regulations to be trained in health and safety concerns associated with volatile motor fuels, and thus are expected to be prepared for potential exposures in their standard work routines. Potential exposures to the general public are expected to be transitory and could occur only while temporarily present for the purpose of fueling their vehicles or obtaining related automotive services. This site also does not meet the Direct Contact criterion due to the lack of analysis in soil for naphthalene at sampling locations CT-4 and CB-6 that document the highest residual soil concentrations for TPH as gasoline and TPH as diesel at the site. The locations are not currently available for sampling as they are near or beneath existing product pipeline runs. The LUFT manual indicates that naphthalene is present at an average of 0.25% and a maximum of 0.36% in fresh gasoline product and an average of 0.26% and a maximum of 0.8% in fresh diesel. This indicates that naphthalene may be present at a concentration up to 5.12 mg/kg at these samples. This is below the Table 1 criteria for naphthalene for a commercial facility. Due to residual contamination at the site, the site is closed as a commercial site with site management requirements. If there is a proposed change in land use to any residential, or conservative land use, or if any redevelopment occurs including station building modification, ACDEH must be notified as required by Government Code Section 65850.2.2. ACDEH will re-evaluate the site relative to the proposed redevelopment. Excavation or construction activities in areas of residual contamination require planning and implementation of appropriate health and safety procedures by the responsible party prior to and during excavation and construction activities. Not all historic documents for the fuel leak case may be available on GeoTracker. A complete case file for this site is located on the ACDEH website at:

Facility Status: Open - Site Assessment
 Status Date: 05/29/2018
 Global Id: T10000011580
 Lead Agency: ALAMEDA COUNTY LOP
 Lead Agency Case Number: RO0003305
 Latitude: 37.8033826454605
 Longitude: -122.274434187562
 Case Type: Cleanup Program Site
 Case Worker: JES
 Local Agency: ALAMEDA COUNTY LOP
 RB Case Number: Not reported
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Potential Media Affected: Aquifer used for drinking water supply, Other Groundwater (uses other than drinking water), Under Investigation
 Potential Contaminants of Concern: Lead, Diesel, Gasoline
 Site History: The Site is located in a commercial area of downtown Oakland and is currently developed as green space containing art sculptures and large trees that encloses the entryway and exit for the subterranean Oakland City Center parking garage and loading dock of the adjacent 1111 Broadway building. The Site is roughly rectangular, measuring approximately 200 by 90 feet, bounded by 12th Street to the north, the City Center Parking Garage and driveway to the east, 11th Street to the south, and Clay Street to the west. The Site (Parcel T6) consists of the 1100 Clay Street address. The City of Oakland has historically divided the Site into two parcels: Parcel T5, encompassing APNs 2-97-40 and 2-97-39, and Parcel T6, encompassing a portion of APN 2-97-38. The T5 parcel located adjacent east of the Site, is associated with the former 500 11th Street address and is developed as an entrance/exit ramp to subterranean parking garage. Numerous site investigation and assessment activities have been conducted at parcels T5 and T6 including case closure of T5 - former Alameda County Local Oversight Program [LOP] Case Number RO02503 (closed October 4, 2001). Proposed redevelopment is being considered at the Site including an one mixed-use building approximately 156 feet tall. The building will generally be at grade, with finished floor elevations approximately matching the surrounding sidewalk grade, with an approximately 40 square foot partial basement level that daylights at the lower driveway level to the adjacent parking garage per Thornton Tomasetti, Incorporated Permit Set drawings dated

23 August 2017. The partial basement and first floor of the building will be utilized for retail, residential amenities and building support purposes (i.e. non-residential use). Residential apartments will be constructed over the first floor. Fill material will be removed during excavation for the foundation of the building. Historical records indicate that the site was developed with commercial retail space, a boarding house and a stable as early as 1889. By 1912, a restaurant and a candy factory occupied the area. Results of a April 2016 Phase I Environmental Site Assessment (ESA) indicated four underground gasoline storage tanks (USTs) may be present on or directly adjacent to the Site since at least 1929 (within 11th Street or the sidewalk) and are associated with a former Shell branded service station. In approximately 1974 the site had merged with land to the east (Parcel T5) to become the current site and all buildings within 11th Street, 12th Street, Clay Street and Broadway had been demolished to make way for the City Center Development. By approximately 1993, underground parking and landscaped areas had been constructed that exist to this day. The Phase I ESA indicated previously site investigation and reporting activities have been conducted on both the T5 and T6 Parcels. previous operations included a former service station which operated from the late 1920's until the 1970s. Four underground gasoline storage tanks (USTs) were reportedly present on or directly adjacent to the Site since at least 1929 (within 11th Street or the sidewalk). A subsequent ground-penetrating radar (GPR) survey conducted in the location of the four USTs identified four subsurface anomalies, which are suspected to be USTs.

Local Case Number: RO0000148
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History:

The site was redeveloped in 2007 and is currently the site of a Whole Foods Market at the intersections of Bay Place, Harrison Street, and Vernon Street in Oakland, California. The site is approximately 1,000 feet north of Lake Merritt. Surrounding land use is mixed commercial and residential. Two underground storage tanks (USTs) were present at the Site as part of the automobile service facility. The two USTs consisted of a 3,000-gallon waste oil tank, which was removed in December 1988, and a 10,000-gallon gasoline UST, which was removed in January 1994. During the excavation and removal of the 10,000-gallon gasoline UST in January 1994, a hole was observed in the product piping that lead from the UST to the fuel dispenser. Free-phase product was observed on the groundwater surface in the gasoline UST excavation. In June 1994, approximately 100 cubic yards of total

petroleum hydrocarbon (TPH) affected soil adjacent to the former gasoline UST and along the western portion of the former product piping route, was excavated and removed. Several soil and groundwater investigations have been conducted at the Site since 1992. The investigations found petroleum contamination in soil and groundwater within the areas of the former USTs and former hydraulic lifts and tanks. Two areas with elevated concentrations of lead were also identified beneath the building. A total of eleven hydraulic lifts along with nine floor drains and associated piping were excavated and removed between June 2005 and November 2005. Approximately 1,010 tons of soil adjacent to the hydraulic lifts was excavated and transported to Waste Managements Altamont Landfill in Livermore, CA for disposal. A total of approximately 285 tons of lead-affected soil was transported to Clean Harbors Class I landfill in Button Willow, CA for disposal. During the period from September 16 to December 16, 2005, a total of approximately 5,000 tons of TPH-affected soil was excavated from the area of the former USTs and transported to Allied Wastes Forward Landfill located in Manteca, CA for disposal. Quarterly and later semiannual groundwater monitoring was conducted at the site between March 1993 and April 2010. The groundwater monitoring data indicate that a plume containing dissolved petroleum hydrocarbons is present in the area of the former USTs and extends beneath Bay Place. The highest concentration of MTBE detected during the most recent sampling event in April 2010 was 1,400 parts per billion. No water supply wells or other potential receptors are expected to be affected by the plume. Site investigation and cleanup activities have been completed and it does not appear that the fuel release presents a risk to human health for nearby residents or site workers. Therefore, Alameda County Environmental Health is considering potential closure of the fuel leak case.

Longitude: -122.27641582489
Status: Completed - Case Closed
Status Date: 09/19/2014
Case Worker: Not reported
RB Case Number: 01-1070
Local Agency: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: RO0002456
Potential Media Affect: Soil
Potential Contaminants of Concern: Tetrachloroethylene (PCE), * * Chloroform, * Chloroform, Gasoline
Site History: Two USTs were removed from the site in November 1987. In 1990, a preliminary site assessment was performed which discovered that contaminated soil had been left in place following the initial UST removals. Approximately 430 cubic yards of soil was excavated to depths of 25 ft bgs and removed from the site in 1991. Groundwater monitoring wells were installed and quarterly groundwater sampling followed during 1991 and 1992. The site had three groundwater monitoring wells and a 6-inch diameter water supply well prior to redevelopment. The closure condition of the three monitoring wells is not known, but presumed to be lost or destroyed during redevelopment. The 6-inch water supply well was destroyed per Zone 7 criteria.

Description: This site is currently occupied by two buildings and a garage. One building, a two-story fourplex, was used as apartments. The other building is three-stories, with three commercial units on the ground floor and apartments on the upper floors. Harris Dry Cleaners and later Telegraph Dry Cleaners operated in a ground floor commercial unit. Dates of operation and site occupancy for the dry cleaning operations are unknown, but all dry cleaning operations on-site ceased in 1996.

Name: LAKESIDE NON FERROUS METALS
Address: 412 MADISON ST
City,State,Zip: OAKLAND, CA 94607
Site ID: 535357
CERS ID: 236326
CERS Description: Industrial Facility Storm Water

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-19-2018
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: The facility recycles glass and nonferrous metal. The site is compact and crowded. A series of pipes and tanks collect, store and settle stormwater prior to discharge. Trench drains across driveways in uncovered areas collect and divert stormwater to the stormwater collection system. Lakeside used buckets to collect oil drips from the baler. The buckets are emptied into drums kept undercover. The waste oil is recycled.
Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS

CPS-SLIC:

Name: FRANCIS PLATING BUILDING
Address: 785 7TH STREET
City,State,Zip: OAKLAND, CA 94607
Region: STATE
Facility Status: Open - Verification Monitoring
Status Date: 05/17/2017
Global Id: T10000007028
Lead Agency: ALAMEDA COUNTY LOP
Lead Agency Case Number: RO0003174
Latitude: 37.80226
Longitude: -122.28193
Case Type: Cleanup Program Site
Case Worker: RS
Local Agency: ALAMEDA COUNTY LOP
RB Case Number: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern: Tetrachloroethylene (PCE), Trichloroethylene (TCE), Chromium VI
Site History: This case (RO0003174) is connected with Alameda County Department of Environmental Health Site Cleanup Case No. RO0002586 - Francis Plating Frog Pond (GeoTracker Global ID SL0600130797). The former plating facility operated from approximately 1957 to 1998. In 1998, the property was found to be abandoned with chemicals and equipment on site. As part of an emergency response action, the U.S. Environmental Protection Agency removed abandoned chemicals and equipment and excavated shallow soil in areas without asphalt or concrete coverings. The former plating facility site was separated into two separate parcels in 2016 designated as APN 1-223-7 and 1-223-6. Case RO0003174 was opened in 2015 for APN 1-223-7. Additional investigation and remedial activities have been focused on APN 1-223-6 (RO0002586). Residual contamination at the site is covered by a cap consisting of the site building and asphalt and concrete paving.

Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Benzene, Diesel, Ethylbenzene, Gasoline, Naphthalene, Polynuclear aromatic hydrocarbons (PAHs), Toluene, Waste Oil / Motor / Hydraulic / Lubricating, Xylene
Site History: Unauthorized release of petroleum hydrocarbons from historic automotive dealership land use at the site. Three USTs removed in December 1989. Site investigations conducted from 1989 to 2018 to investigate impacts to soil, groundwater and soil gas. Corrections actions implemented at the site include SVE system operation (1996 to March 1998) and gypsum injection and soil excavation (2016 through 2018) in conjunction with site redevelopment activities consisting of construction of mixed use commercial and residential project. Currently in verification monitoring for groundwater and vapor intrusion.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

(conditional approval) SV Monitoring Report.

Completed Area Name: Phase II OU
Completed Sub Area Name: Stage I
Completed Document Type: Operations and Maintenance Report
Completed Date: 10/07/2016
Comments: On Oct 7, 2016, DTSC conditionally approved the 1st Semi-Annual O&M Monitoring Report.

Completed Area Name: Phase II OU
Completed Sub Area Name: Stage II
Completed Document Type: Operations and Maintenance Report
Completed Date: 06/14/2017
Comments: On Jun 14, 2017, DTSC issues conditional approval of the 2nd Semi-Annual Soil Vapor Monitoring Report.

Completed Area Name: Phase II OU
Completed Sub Area Name: Stage I
Completed Document Type: Operations and Maintenance Report
Completed Date: 10/30/2017
Comments: On Oct 30, 2017, DTSC issued conditional approval of the 1st Semi-Annual 2017 SV Monitoring Report.

Completed Area Name: Phase II OU
Completed Sub Area Name: Stage I
Completed Document Type: Operations and Maintenance Report
Completed Date: 12/05/2018
Comments: On Dec 5, 2018, DTSC approved the 2nd 2017 Semi-Annual Soil Vapor Monitoring Report.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 05/26/2009
Comments: DTSC received two copies and an e-copy of the Phase I ESA, provided as background information for the project.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Workplan
Completed Date: 08/03/2009
Comments: DTSC conditionally approved the revised PEA workplan. Condition was that gw sample AOC9-B-2 in TPH and VOC analysis.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
