Contact: Randy Wheeler

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ninyo & Moore were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EDR Historical Topo Map Report

07/26/19

Site Name:

International Boulevard
2700 International Boulevard
Oakland, CA 94601
EDR Inquiry # 5730763.1

Client Name:

Ninyo & Moore
1401 Halyard Drive, Suite 110
West Sacramento, CA 95691
Contact: Randy Wheeler

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Ninyo & Moore were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Appendix F:

VAPOR ENCROACHMENT SCREENING MATRIX

Vapor Encroachment Screening Matrix

Phase I ESA Vapor Encroachment Conditions (VEC) matrix includes a (1) Search Radius Test, (2) Chemicals of Concern Test (COC), and (3) a Critical Distance Test [1].

(1) Search Radius Test: Are there any known or suspect contaminated properties in the primary area of concern within the corresponding search radii (including the site)?

Yes No If **No**, then screening for a VEC is complete and no VEC *currently* exists, go to #4. If **Yes**, then:

(2) Chemicals of Concern Test: Are COC likely to be present within the area of concern for those known or suspect contaminated sites identified based on the Search Distance Test?

Yes No If **No**, then screening for a VEC is complete and no VEC *currently* exists, go to #4. If **Yes**, then:

(3) Critical Distance Test*: A plume test to determine whether or not COC in the contaminated plume(s) may be within the critical distance.

Yes No (3a) Is information related to the contaminated(s) plume available (i.e. iso-concentration maps, site drawings, etc.)?

(3b) If **No**, then a VEC cannot be ruled out; check **Yes** in #4 below indicating it is likely a VEC exists. If **Yes**, then:

Yes No (3c) Is the site less than 100 feet to the nearest edge of a contaminated [non-petroleum hydrocarbon] plume(s)? If **Yes**, then check **Yes** in #4 below indicating it is likely a VEC exists.

Yes No (3d) Is the site less than 30 feet to the nearest edge of a dissolved petroleum hydrocarbon plume(s)? If **Yes**, then check **Yes** in #4 below indicating it is likely a VEC exists.

*If the distance from the nearest edge of a contaminated plume to the nearest existing or planned structure on the site is less than 100 feet for non-petroleum hydrocarbon COC, or less than 30 feet for dissolved petroleum hydrocarbons, then it is presumed that a VEC *currently* exists beneath the site. If the distance from the nearest edge of the contaminated plume is greater than or equal to 100 feet for non-petroleum hydrocarbons, or 30 feet for dissolved petroleum hydrocarbon chemicals of concern, then it is presumed unlikely that a VEC *currently* exists beneath the site.

(4) Is it likely that a VEC *currently* exists beneath the site?

Yes No If **No**, then the VEC screening is complete and no further investigation is recommended at this time. If **Yes**, Ninyo & Moore recommends performing additional assessment, such as a Tier 2 VEC assessment according to ASTM E 2600-10.

[1] Based on guidance presented in the ASTM E 2600-10 Standard.

1 INTRODUCTION

Ninyo & Moore was retained by the Association of Bay Area Governments (ABAG) to perform a Phase II Environmental Site Assessment (ESA) on the parcels located at 2700-2720 International Boulevard and 1409 and 1415 Mitchell Street in Oakland (Site, Figure 1).

The Phase II ESA scope and methodologies were described in Ninyo & Moore's Draft Sampling Scope letter (SAP Scope of Work Letter), which was submitted to ABAG and the United States Environmental Protection Agency (US EPA) on October 29, 2019 (Ninyo & Moore, 2019b). On June 8, 2020, Ninyo & Moore advanced 8 soil borings, and collected 16 primary shallow soil samples at the 1415 Mitchell Street parcel at the Site.

2 BACKGROUND

The following background information is based on Ninyo & Moore's August 28, 2019 Phase I ESA (Ninyo & Moore, 2019a).

2.1 Site Description

The Site consists of five parcels, and a brief description of each parcel is presented below:

- **2700 International Boulevard:** The western parcel was developed with residential buildings and lawns in the early 1900s. The parcel was then developed with medical offices around 1950. The current building was constructed around 1968, when it appears the 2700 International Boulevard parcel was merged with a parcel addressed as 2708 International Boulevard. The parcel is currently developed with commercial office space and a parking lot.
- **2712-2716 International Boulevard:** The central parcel was developed with the current two-story building, with commercial space on the ground floor and residential above, sometime between 1911 and 1950 based on available historical information.
- **2720 International Boulevard:** The southeastern parcel was developed with doctor's offices sometime around 1950 until around 1982. The parcel is currently developed as a parking lot.
- **1409 Mitchell Street:** The central eastern parcel was developed with a residential building sometime before 1939 and then was developed as a parking lot sometime after 1974.

- **1415 Mitchell Street:** The northeastern parcel was developed with a residential building sometime before 1939 and was then used as a "utility service yard" from 1964 until sometime before 2005. The parcel is currently developed with a parking lot. This address was also listed in regulatory databases as a Resource and Conservation Recovery Act (RCRA)-Small Quantity Generator (SQG) of hazardous waste in 1996 and as a RCRA-Large Quantity Generator (LQG) of hazardous waste in 1981. It is unclear what substances were generated for these database listings; however, they indicate hazardous substances were likely used on Site, and releases of hazardous substances may have occurred due to this former use.

Due to the age of the buildings on Site, building materials containing asbestos may have been used during construction.

The areas surrounding the Site consist primarily of office and commercial buildings to the northwest, residential development (apartments) to the southwest, residential properties to the north and southeast, and City property to the southeast.

2.2 Previous Investigations

The Site is not listed on either the State Water Resources Control Board's GeoTracker database or the Department of Toxic Substances Control's Envirostor database. No historical regulatory investigations appear to have been conducted at the Site.

Ninyo & Moore's Phase I ESA revealed no evidence of recognized environmental concerns (RECs, Ninyo & Moore, 2019a); however, a potential environmental concern was noted in our Phase I ESA and is discussed below. The 1415 Mitchell Street parcel is listed on several of the regulatory databases researched by Environmental Data Resources Inc., including the RCRA-LQG and RCRA-SQG databases. The address was listed as a Pacific Bell RCRA-SQG in 1996, and as a RCRA-LQG in 1981. It is unclear what substances were generated for either of these database listings (LQG or SQG). Based on the database listings, hazardous substances were likely used on Site, and releases of hazardous substances may have occurred due to this former use. Ninyo & Moore requested agency records from the Alameda County Department of Environmental Health, and the City of Oakland Fire Department; neither agency had any records for 1415 Mitchell Street. Based on the historical use of this parcel as a "utility service yard" from 1964 until sometime before 2005, and the documented generation and disposal of hazardous wastes, this portion of the Site is considered a potential environmental concern, but not a REC since there is no evidence of a release.

3 PHASE II ACTIVITIES

The Phase II ESA activities performed by Ninyo & Moore are detailed below.

3.1 Scope of Work

Based on the potential environmental concern identified in the Phase I ESA, Ninyo & Moore proposed shallow soil sampling at the 1415 Mitchell Street parcel (Figure 2). The SAP Scope of Work Letter proposed advancing eight soil borings for the collection of sixteen soil samples, two duplicate samples, and one rinsate blank to be analyzed for polychlorinated biphenyls (PCBs), total petroleum hydrocarbons (TPH) as motor oil (TPHmo), TPH as diesel (TPHd), TPH as gasoline (TPHg), volatile organic compounds (VOCs), Title 22 Metals and asbestos. Soil samples were proposed to be collected at depths of 0.0-0.5 foot below ground surface (bgs) and 2.5-3.0 feet bgs.

3.2 Pre-Field Activities

Ninyo & Moore conducted the following pre-field activities prior to implementing the Phase II ESA. No permit was required for the work as the borings were advanced by hand tooling above 5 feet bgs.

3.2.1 Health and Safety Plan

Ninyo & Moore prepared a Site-specific Health and Safety Plan (HASP) to protect Site workers and the general public from potential hazards associated with drilling, chemical exposure, dust and associated field work being performed during field activities. The HASP included a map to the closest medical emergency facility.

3.2.2 Utility Locating

Prior to conducting subsurface activities, Ninyo & Moore personnel marked out the drilling area and the locations of the proposed soil borings. Underground Service Alert (USA) was notified of the drilling, including location and date. USA personnel subsequently marked utility locations in the project area. Prior to drilling, Ninyo & Moore contracted Coast Wide Utility Locators (CWUL) of Felton, California to clear the boring locations on May 29, 2020. No issues were identified by CWUL with any of the proposed boring locations.

3.3 Field Activities

Field activities performed included advancing eight soil borings, subsurface soil logging, implementation of quality assurance/quality control (QA/QC) protocols, decontamination activities, Site restoration and handling of investigation-derived waste (IDW).

On June 8, 2020, Ninyo & Moore procured the services of VTS Drilling Inc. (VTS) of Hayward, California (C57 license No. 916085) to advance eight soil borings using a 2.75-inch diameter hand auger to 3 feet bgs at each location. Seven soil borings (SB-1, SB-2, SB-3, and SB-5 through SB-8) were advanced to 3 feet bgs, and one soil boring (SB-4) was advanced to 4 feet bgs. Borings were advanced as a grid-lattice at the locations shown on Figure 2. Soil boring logs for each boring are provided in Appendix A.

Soil borings were logged in the field by a Ninyo & Moore geologist under the direction of a State of California professional geologist according to the Unified Soil Classification System. To evaluate potential organic vapors in soils at each boring, representative soils were placed in re-sealable plastic bags, allowed to equilibrate for a minimum of 20 minutes, and the headspace was screened with a photoionization detector (PID) for the presence of organic vapors. The PID readings were noted by the field geologist on soil boring logs provided in Appendix A.

Ninyo & Moore collected 16 primary soil samples and 2 duplicate samples using hand tooling on June 8, 2020. Each boring was sampled at 0.0-0.5 foot bgs and 2.5-3.0 feet bgs. Two duplicate samples were collected at the site, one at 0.0-0.5 foot bgs and another at 2.5-3.0 feet bgs. The soil samples were collected in laboratory-provided 16-ounce jars, which were labeled with the boring identification, time, date, sampler, and sample depth; placed in re-sealable plastic bags; and transferred to an ice-filled cooler pending transport to the analytical laboratory. The samples were transported under chain of custody (COC) documentation to Eurofins TestAmerica (Eurofins) of Pleasanton, a California state-certified laboratory. Soil samples were analyzed for TPHmo and TPHd by US EPA Method 8015B, TPHg and VOCs by US EPA Method 8260B, PCBs by US EPA Method 8082, asbestos by California Air Resources Board 435 and Title 22 Metals by US EPA Method 6010B/7471A. Laboratory analytical reports are provided in Appendix B.

To limit potential for cross-contamination, the sampling equipment was decontaminated between each sample location using a triple-wash rinse of Liquinox[®] and tap water. A rinsate blank sample was also submitted with the soil samples following decontamination procedures. The rinsate blank was analyzed for TPHmo and TPHd by US EPA Method 8015B, TPHg and VOCs by US EPA Method 8260B, PCBs by US EPA Methods 8082, and Title 22 Metals by US EPA Method 6010B/7470A.

3.4 Investigation-Derived Waste

IDW generated from the sampling activities was comprised of soil cuttings and construction debris, which was placed in a properly labeled 55-gallon steel drum. One IDW drum is being temporarily stored on Site pending transportation for off-Site disposal. One IDW soil sample (IDW-06082020) was collected as a 4-point composite from the drum. The IDW soil sample collected for laboratory analysis was placed in laboratory provided sample jar which was labeled with the sample identification, time, date, and sampler, placed in re-sealable plastic bags, transferred to an ice-filled cooler and transported to Eurofins under COC documentation. Laboratory results indicate the soil in the drum is non-hazardous (Appendix B). The drum was removed from the Site on July 22, 2020 and transported to Soil Safe in Adelanto, California.

4 ENVIRONMENTAL INVESTIGATION FINDINGS

The findings of Ninyo & Moore's Phase II ESA are presented below. Soil analytical results are summarized in Table 1 for TPH, PCBs, VOCs, and asbestos, and in Table 2 for Title 22 Metals. The results for the QA/QC samples are presented in Table 3. Copies of the laboratory certified analytical reports, including COC documentation, are provided in Appendix B.

Analytical results have been compared to the following San Francisco Bay Regional Water Quality Control Board's (RWQCB's) Environmental Screening Levels (ESLs): Tier 1 ESLs, Direct Exposure Human Health Risk Levels Residential: Shallow Soil Exposure (Residential ESLs), and Direct Exposure Human Health Risk Levels Construction Worker: Any Land Use/ Any Depth Soil Exposure (Construction Worker ESLs). Arsenic has been compared to the background concentration of 11 milligrams per kilogram (mg/kg) in Bay Area soils (Duverge, 2011), which has been accepted by the RWQCB. Additionally, metals results have been compared to the State of California and federal hazardous waste classification criteria.

4.1 Soil Results

4.1.1 Total Petroleum Hydrocarbons

Concentrations of TPH_{mo} and TPH_d were detected above their respective laboratory reporting limits in several samples. TPH_g was not detected above its laboratory reporting limit in the project samples. One ESL exceedance was identified: TPH_d was detected in sample SB-2-0.0-0.5 at a concentration of 420 mg/kg. This concentration exceeds the Tier 1 ESL and the Residential ESL, but does not exceed the Construction Worker ESL.

4.1.2 VOCs, PCBs and Asbestos

No concentrations of VOCs, PCBs, or asbestos were detected above their respective laboratory reporting limits.

4.1.3 Title 22 Metals

Concentrations of 12 metals (arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, nickel, vanadium and zinc) were detected above their respective laboratory reporting limits. ESL exceedances are discussed below:

- Arsenic concentrations in each of the 16 samples exceeded Tier 1, Residential, and Construction ESLs. Three primary samples (SB-3-0.0-0.5, SB-4-0.0-0.5 and SB-5-0.0-0.5) exceeded the background level of 11 mg/kg.
- Lead was detected in each of the 16 samples. Thirteen concentrations of lead exceed Tier 1 ESLs, including each of the eight of the surface samples (collected from 0.0-0.5 foot). Of these Tier 1 exceedances, five samples (SB-1-2.5-3.0, SB-2-0.0-0.5, SB-3-0.0-0.5, SB-4-0.0-0.5, and SB-4-2.5-3.0) also exceed the Residential ESL of 80 mg/kg and three samples (SB-3-0.0-0.5, SB-4-0.0-0.5, and SB-4-2.5-3.0) exceed the Construction Worker ESL of 160 mg/kg.
- Nickel was detected in each of the 16 samples. Eleven concentrations of nickel exceed the Tier 1 and Construction Worker ESLs including each of the eight 2.5-3.0 foot samples. No nickel concentrations exceed Residential ESLs.
- Vanadium was detected in each of the 16 samples. Each concentration of vanadium exceeds the Tier 1 ESL of 18 mg/kg, which is based on terrestrial habitat. No vanadium concentrations exceed Residential or Construction Worker ESLs.

Due to the elevated total lead concentrations, Ninyo & Moore submitted three samples (SB-3-0.0-0.5, SB-4-0.0-0.5, and SB-4-2.5-3.0) for Soluble Threshold Limit Concentration (STLC) and Toxicity Characteristic Leaching Procedure (TCLP) testing, which are used to classify soil for disposal. STLC concentrations ranged from 11 to 43 milligrams per liter, and TLCP lead was not detected.

4.2 Data Quality

The analytical data obtained from the soil sampling were assessed for QA/QC to ensure the data met the requirements for their intended use. QA/QC procedures were outlined in the Sampling and Analysis Plan (SAP, Ninyo & Moore, 2019c) and implemented during the sampling to assure the project's data quality objectives were achieved so that the sample, analysis and reporting activities provide data that are accurate, precise, representative and legally defensible.

This project's QA/QC tasks included maintaining appropriate field documentation; sample collection following standard environmental sampling and handling methodology and collection of QA/QC samples including two duplicate samples, one matrix spike/matrix spike duplicate (MS/MSD) sample and a rinsate blank sample.

Ninyo & Moore reviewed Eurofins' analytical laboratory reports in accordance with the US EPA guidance documents National Functional Guidelines for Superfund Inorganic Methods Data Review (US EPA, 2017a) and National Functional Guidelines for Superfund Organic Methods Data Review (US EPA, 2017b). All samples were submitted in accordance with US EPA analytical procedures without significant analytical testing issues. Sample dilution was required on some samples due to the presence of high level non-target species that resulted in elevated reporting limits.

Eurofins prepared and analyzed method blank (MB) samples, continuing calibration verifications (CCV), laboratory control spike/laboratory control spike duplicates (LCS/LCSD), and matrix spike/matrix spike duplicates (MS/MSD) in accordance with their internal QC procedures. Multiple TPHd and TPHmo chromatograms do not match a typical fuel pattern and were qualified by the laboratory. These samples have not been qualified. Due to a matrix correction error with the Eurofins equipment, some non-detect metals data were qualified with an "L" indicating the correction resulted in a negative concentration. Each of these overcorrections were manually reviewed and deemed acceptable by Eurofins internal QC staff. These samples have not been qualified. No significant issues were identified by Eurofins on their internal QC samples.

4.2.1 Laboratory QA/QC - MB

The MB for water analytical batch 75073 detected antimony and molybdenum concentrations above the reporting limit. No concentrations of antimony or molybdenum were detected in the project samples; no project samples have been qualified.

No detections were reported in the remaining MBs during laboratory analysis.

4.2.2 Laboratory QA/QC – LCS/LCSD

The percent recoveries in the LCS for bromomethane and methylene chloride exceed quality control limits for water analytical batch 74424; bromomethane recovery is greater than project control limits and the recovery for methylene chloride was less than the project control limits. In the LCSD, bromomethane and 1,1,2-trichloro-1,2,2-trifluoroethane exceed the quality control limits for water analytical batch 74424; bromomethane recovery is greater than project control limits and 1,1,2-trichloro-1,2,2-trifluoroethane is less than the project control limits. As

bromomethane recoveries are greater than the project control limits in both the LCS/LCSD and the project sample was non-detect, there are no qualifiers. As methylene chloride and 1,1,2-trichloro-1,2,2-trifluoroethane only exceed quality control limits in either the LCS or LCSD, there are no qualifiers.

No remaining LCS/LSCD recoveries and relative percent differences (RPDs) were outside their respective limits for project and QA/QC samples.

4.2.3 Surrogate Recoveries

No surrogate recoveries were outside their respective limits for project and QA/QC samples.

4.2.4 Laboratory QA/QC - MS/MSD

MS/MSD analyses were conducted on soil sample SB-5-0.0-0.5. Recoveries of several VOCs were below the project control limits and are marked as an “F1” by Eurofins. These qualifiers should be converted to a “UJ” flag as the project sample did not have any VOC detections. Recoveries of arsenic, antimony, and lead were above the recovery limits in the MS/MSD and the project samples had detections; these analytes have been qualified with a “J flag” in sample SB-5-0.0-0.5. Recoveries of antimony and selenium were below the recovery limits in the MS/MSD and the project samples were non-detect; these analytes have been qualified with a “UJ flag” in sample SB-5-0.0-0.5. Recoveries of lead and mercury were either greater than or less than the recovery limits in either the MSD or the MS, respectively. As such, these project samples have not been qualified.

MS/MSD analyses were also conducted on soil sample SB-4-0.0-0.5 for leachate analyses. The MS/MSD percent recoveries are greater than the project control limits, so project sample SB-4-0.0-0.5 has been qualified with a “J flag”.

4.2.5 Rinsate Blank Sample

One rinsate blank sample (RB-06082020) was collected on April 15, 2020 following the soil sampling event. The analytical results are presented in Table 3. Chloroform and dichlorobromomethane were detected in the rinsate blank sample RB-06082020 at concentrations of 7.0 micrograms per liter ($\mu\text{g/L}$) and 0.76 $\mu\text{g/L}$, respectively. These VOCs were not detected in the soil samples collected on June 8, 2020 so no project samples were qualified.

4.2.6 Duplicate Samples

Two duplicate soil sample pairs (SB-5-0.0-0.5/SB-9-0.0-0.5 and SB-8-2.5-3.0/SB-9-2.5-3.0) were collected for analysis of TPHs, VOCs, PCBs, asbestos and Title 22 Metals. Relative percent differences were calculated between the primary/duplicate sample pairs, and the calculations are presented on Table 3. The US EPA Region 9 indicates the RPD for soil samples should be 30 percent (%) (US EPA, 2005). Any RPD exceedances are discussed below:

- TPHd and TPHmo were reported above laboratory reporting limits in the primary/duplicate sample pair SB-5-0.0-0.5/SB-9-0.0-0.5. The RPDs were calculated for these constituents to be 51% and 40%, respectively. These concentrations both exceed the RPD of 30%; the primary sample result has been qualified.
- Concentrations of arsenic and mercury were reported above laboratory reporting limits in the primary/duplicate sample pair SB-8-2.5-3.0/SB-9-2.5-3.0. The RPDs were calculated for these constituents to be 52% and 96.8%, respectively. These concentrations both exceed the RPD of 30%; the primary sample result has been qualified.

5 CONCLUSIONS AND RECOMMENDATIONS

Concentrations of TPHd, arsenic, lead, nickel, and vanadium exceed the Tier 1 ESLs in several samples. Concentrations of arsenic also exceed the established background level in Bay Area soils. TPHd, arsenic and lead detections exceed Residential ESLs, and arsenic, lead and nickel detections exceed Construction Worker ESLs. Concentrations of lead exceeding ESLs are present in each of the surface samples collected from 0.0-0.5 foot bgs. Additionally, elevated lead concentrations appear to be mostly located in the borings advanced at the western portion of the site (SB-1 through SB-4).

Based on these ESL exceedances, a soil management plan (SMP) should be developed prior to Site development to ensure that future Site workers and the community are adequately protected during development activities, such as excavating and grading. In addition, because several Site borings reported constituents of concern concentrations exceeding Residential ESLs, a plan to remediate and/or mitigate these areas of exceedances should be prepared. Remedial options for the Site would include removal and off-Site disposal of shallow soils and/or capping the soils under an engineered cap or durable cover.

The most elevated lead samples were submitted for leachability testing, and based on these results, soil generated from these areas may be classified as non-RCRA hazardous soil for off-Site disposal. Additional soil sampling would be required if soil is generated for off-Site disposal during Site redevelopment.

6 LIMITATIONS

The environmental services described in this report have been conducted in general accordance with current regulatory guidelines and the standard-of-care exercised by environmental consultants performing similar work in the project area. No warranty, expressed or implied, is made regarding the professional opinions presented in this report. Variations in Site conditions may exist and conditions not observed or described in this report may be encountered during subsequent activities. Please also note that this study did not include an evaluation of geotechnical conditions or potential geologic hazards.

Ninyo & Moore's opinions and recommendations regarding environmental conditions, as presented in this report, are based on limited subsurface assessment and chemical analysis. Further assessment of potential adverse environmental impacts from past on-Site and/or nearby use of hazardous materials may be accomplished by a more comprehensive assessment. The samples collected and used for testing, and the observations made, are believed to be representative of the area(s) evaluated; however, conditions can vary significantly between sampling locations. Variations in soil and/or groundwater conditions will exist beyond the points explored in this evaluation.

The environmental interpretations and opinions contained in this report are based on the results of laboratory tests and analyses intended to detect the presence and concentration of specific chemical or physical constituents in samples collected from the subject Site. The testing and analyses have been conducted by an independent laboratory which is certified by the State of California to conduct such tests. Ninyo & Moore has no involvement in, or control over, such testing and analysis. Ninyo & Moore, therefore, disclaims responsibility for any inaccuracy in such laboratory results.

Our conclusions, recommendations, and opinions are based on an analysis of the observed Site conditions. It should be understood that the conditions of a Site could change with time as a result of natural processes or the activities of man at the subject Site or nearby sites. In addition, changes to the applicable laws, regulations, codes, and standards of practice may occur due to government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which Ninyo & Moore has no control.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ninyo & Moore should be contacted if the reader requires any additional information, or has questions regarding content, interpretations presented, or completeness of this document.

This report may be relied upon by, and is intended exclusively for the client. Any use or reuse of the findings, opinions, and/or conclusions of this report by parties other than those listed above is undertaken at said parties' sole risk.

Construction Worker ESLs ³	1,100	54,000	1,800,000	Various

Notes:

TPH - total petroleum hydrocarbons

VOCs - volatile organic compounds, analyzed by United States Environmental Protection Agency (US EPA) Method 8260B

ID - identification

bgs – below ground surface

TPHd - TPH as diesel, analyzed by US EPA Method 8015B

TPHmo - TPH as motor oil, analyzed by US EPA Method 8015B

TPHg - TPH as gasoline, analyzed by US EPA Method 8260B

PCBs - polychlorinated biphenyls, analyzed by US EPA Method 8082

Asbestos analyzed by California Air Resource Board 435

mg/kg – milligrams per kilogram

µg/kg - micrograms per kilogram

J - concentration is considered estimated

* - Duplicate of preceding sample

ND<X – analyte not detected at or above the laboratory reporting limit X

Job ID: 720-98799-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
Z	The chromatographic response does not resemble a typical fuel pattern.

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD recovery exceeds control limits.
L	A negative instrument reading had an absolute value greater than the reporting limit

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments

No additional comments.

Receipt

The samples were received on 6/8/2020 3:10 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.3° C.

GC/MS VOA

Method 8260B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for the following sample associated with preparation batch 570-74600 and analytical batch 570-74627 were outside control limits: SB-5-0.0-0.5 (720-98799-9[MS]) and SB-5-0.0-0.5 (720-98799-9[MSD]). The associated laboratory control sample (LCS) recovery met acceptance criteria.

Method 8260B: The initial calibration curve analyzed in batch 570-74424 was outside method criteria for the following analyte(s): Vinyl acetate. As indicated in the reference method, sample analysis may proceed; however, any detection or non-detection for the affected analyte(s) is considered an estimated concentration.

Method 8260B: The initial calibration verification (ICV) result for batch 570-74424 was above the upper control limit for bromomethane. Sample results were non-detects, and have been reported as qualified data.

Method 8260B: The continuing calibration verification (CCV) associated with batch 570-74424 recovered above the upper control limit for bromomethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8260B: The laboratory control sample (LCS) for analytical batch 570-74424 recovered outside control limits for the following analytes: Bromomethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 570-74424.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method 8082: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 570-74406 and analytical batch 570-74501 recovered outside control limits for the following analytes: PCB-1016 and PCB-1260.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method 6010B: The method blank for preparation batch 570-74910 contained Antimony and Molybdenum above the reporting limit (RL). None of the samples associated with this method blank contained the target compound; therefore, re-extraction and/or re-analysis of samples were not performed.

Method 6010B: The absolute response for Molybdenum was greater than the method reporting limit (RL) in the following sample: SB-1-2.5-3.0 (720-98799-8). The instrument raw data has been manually reviewed and the result can be reported as ND.

Method 6010B: The absolute response for Molybdenum, Antimony, and Selenium was greater than the method reporting limit (RL) in the following sample: SB-3-2.5-3.0 (720-98799-4). The instrument raw data has been manually reviewed and the result can be reported as ND.

Method 6010B: The absolute response for Molybdenum, Selenium, and Thallium was greater than the method reporting limit (RL) in the following samples: SB-4-0.0-0.5 (720-98799-1), SB-2-0.0-0.5 (720-98799-5), SB-5-0.0-0.5 (720-98799-9), SB-5-2.5-3.0 (720-98799-10)

Case Narrative

Client: Ninyo & Moore
Project/Site: 2700 International

Job ID: 720-98799-1

Job ID: 720-98799-1 (Continued)

Laboratory: Eurofins TestAmerica, Pleasanton (Continued)

and SB-9-0.0-0.5 (720-98799-17). The instrument raw data has been manually reviewed and the result can be reported as ND.

Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 570-74882 and analytical batch 570-75102 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6010B: Due to the high concentration of Barium, the matrix spike / matrix spike duplicate (MS/MSD) for preparation batch 570-74882 and analytical batch 570-75102 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Method 6010B: The absolute response for Molybdenum, Selenium, and Silver was greater than the method reporting limit (RL) in the following samples: SB-4-2.5-3.0 (720-98799-2) and SB-6-2.5-3.0 (720-98799-12). The instrument raw data has been manually reviewed and the result can be reported as ND.

Method 6010B: The absolute response for Molybdenum and Thallium was greater than the method reporting limit (RL) in the following sample: SB-3-0.0-0.5 (720-98799-3). The instrument raw data has been manually reviewed and the result can be reported as ND.

Method 6010B: The absolute response for Antimony, Molybdenum, and Thallium was greater than the method reporting limit (RL) in the following samples: SB-2-2.5-3.0 (720-98799-6) and SB-1-0.0-0.5 (720-98799-7). The instrument raw data has been manually reviewed and the result can be reported as ND.

Method 6010B: The absolute response for Antimony, Molybdenum, Selenium, and Thallium was greater than the method reporting limit (RL) in the following sample: SB-6-0.0-0.5 (720-98799-11). The instrument raw data has been manually reviewed and the result can be reported as ND.

Method 6010B: The absolute response for Molybdenum, Selenium, Silver, and Thallium was greater than the method reporting limit (RL) in the following sample: SB-7-0.0-0.5 (720-98799-13). The instrument raw data has been manually reviewed and the result can be reported as ND.

Method 6010B: The absolute response for Molybdenum and Selenium was greater than the method reporting limit (RL) in the following samples: SB-7-2.5-3.0 (720-98799-14) and SB-8-0.0-0.5 (720-98799-15). The instrument raw data has been manually reviewed and the result can be reported as ND.

Method 6010B: The absolute response for Molybdenum and Silver was greater than the method reporting limit (RL) in the following sample: SB-8-2.5-3.0 (720-98799-16). The instrument raw data has been manually reviewed and the result can be reported as ND.

Method 6010B: The absolute response for Silver, Molybdenum, Antimony, and Selenium was greater than the method reporting limit (RL) in the following samples: SB-9-2.5-3.0 (720-98799-18) and IDW-06082020 (720-98799-20). The instrument raw data has been manually reviewed and the result can be reported as ND.

Method 7471A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 570-74883 and analytical batch 570-75046 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 570-74406. LCS/LCSD was performed to meet QC requirements.

Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 570-74825. LCS/LCSD was performed to meet QC requirements.

Case Narrative

Accreditation/Certification Summary

Client: Ninyo & Moore
Project/Site: 2700 International

Job ID: 720-98799-1

Laboratory: Eurofins TestAmerica, Pleasanton

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
California	State	2496	01-31-20 *

Laboratory: Eurofins Calscience LLC

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
California	State	2944	09-29-20

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids

* Accreditation/Certification renewal pending - accreditation/certification considered valid.

6/8/20	1600	Carrier
6/8/20	1005	Carrier

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of retained samples & accreditation compliance upon our industrial laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/elements being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody enabling to send compliance to Eurofins TestAmerica.

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

Return To Client Disposal By Lab Archive For Months

Approved by:

Dates of Analysis:
Asbestos-CARB 435 (400 pt ct): 06-15-2020

Technical Manager
Murali Putty

Service SOPs: Asbestos-CARB 435 (400 pt ct) (EM-AS-S-1265)
NVLAP Lab Code 200728-0

All samples were received in acceptable condition unless noted in the Report Comments portion in the body of the report. Due to the nature of the analyses performed, field blank correction of results is not applied. The results relate only to the samples as received.

Eurofins EMLab P&K ("the Company") shall have no liability to the client or the client's customer with respect to decisions or recommendations made, actions taken or courses of conduct implemented by either the client or the client's customer as a result of or based upon the Test Results. In no event shall the Company be liable to the client with respect to the Test Results except for the Company's own willful misconduct or gross negligence nor shall the Company be liable for incidental or consequential damages or lost profits or revenues to the fullest extent such liability may be disclaimed by law, even if the Company has been advised of the possibility of such damages, lost profits or lost revenues. In no event shall the Company's liability with respect to the Test Results exceed the amount paid to the Company by the client therefor.

 Date of Report: 06-15-2020

ASBESTOS POINT COUNT REPORT: CARB METHOD 435

Location:	SB-4-0.0-0.5 (720-98799-1)		
Total Points Counted:	400		
Lab ID-Version‡:	11539983-1		
Sample Layers	Asbestos Type	Asbestos Points Counted	Asbestos Concentration (%)
Brown Soil	-	-	ND
Layer Totals:	-	-	-

Comments:No asbestos was detected and no points were counted.

Location:	SB-4-2.5-3.0 (720-98799-2)		
Total Points Counted:	400		
Lab ID-Version‡:	11539984-1		
Sample Layers	Asbestos Type	Asbestos Points Counted	Asbestos Concentration (%)
Brown Soil	-	-	ND
Layer Totals:	-	-	-

Comments:No asbestos was detected and no points were counted.

Location:	SB-3-0.0-0.5 (720-98799-3)		
Total Points Counted:	400		
Lab ID-Version‡:	11539985-1		
Sample Layers	Asbestos Type	Asbestos Points Counted	Asbestos Concentration (%)
Brown Soil	-	-	ND
Layer Totals:	-	-	-

Comments:No asbestos was detected and no points were counted.

The analytical sensitivity is 1 asbestos point. The limit of detection is 1 asbestos point divided by the total number of points counted and multiplied by 100.

The results relate only to the items tested. Interpretation is left to the company and/or persons who conducted the field work. The test report shall not be reproduced except in full, without written approval of the laboratory. The report must not be used by the client to claim product certification, approval, or endorsement by any agency of the federal government.

All samples were received in acceptable condition unless otherwise noted. Eurofins EMLab P&K reserves the right to dispose of all samples after a period of thirty (30) days, according to all state and federal guidelines, unless otherwise specified.

‡ A "Version" indicated by "-x" after the Lab ID# with a value greater than 1 indicates a sample with amended data. The revision number is reflected by the value of "x".

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments

No additional comments.

Receipt

The samples were received on 6/8/2020 3:10 PM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.3° C.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Creator: Mullen, Joan

List Source: Eurofins TestAmerica, Pleasanton

Question	Answer	Comment
Radioactivity wasn't checked or is <=/ background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

No additional comments.

Receipt

The samples were received on 6/8/2020 3:10 PM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.3° C.

Metals

Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 570-79842 and 570-80252 and analytical batch 570-80282 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Detection Summary

Client: Ninyo & Moore
Project/Site: 2700 International

Job ID: 720-98799-3

Subject: RE: Eurofins TestAmerica EDD and report files from 720-98799-1 2700 International

Hi Helen,

They should still have the samples, they will just have to make sure they have enough sample volume. Can you provide the list so they can check the volumes on those?

Thank you,

Please note our adjusted schedule for Independence Day >>

Justinn Gonzales

Site History

This site includes parcels located at 2700 International Boulevard, 2712-2716 International Boulevard, 2720 International Boulevard, 1409 Mitchell Street, 1415 Mitchell Street in Oakland, California. The site is currently occupied by a parking lot and two small commercial buildings, as well as one second-floor residential unit. Previous uses included various commercial uses, including a store, restaurant, donut shop, gunsmith, and doctors office. The 1425 Mitchell Street parcel was listed as a "utility service yard" that at various times was reported hazardous waste generation under the Resource Conservation and Recovery Act (RCRA). A Phase I environmental assessment could not determine the nature of the hazardous waste associated with the site. A Phase II environmental assessment included subsurface soil samples taken from the 1425 Mitchell Street parcel, results of which exceed screening levels for petroleum hydrocarbons, arsenic, lead, nickel, and vanadium.

The Unity Council purchased the site in 2020, and intends to construct Affordable housing. The Unity Council applied for a Standard Voluntary Agreement with the DTSC under the Voluntary Cleanup Program. DTSC has reviewed and approved a supplemental site investigation work plan, so that The Unity Council can determine the full nature and extent of any contamination at the site. Results of that investigation will inform appropriate cleanup actions.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of state and tribal registered storage tanks

CA AST: A listing of aboveground storage tank petroleum storage tank locations.

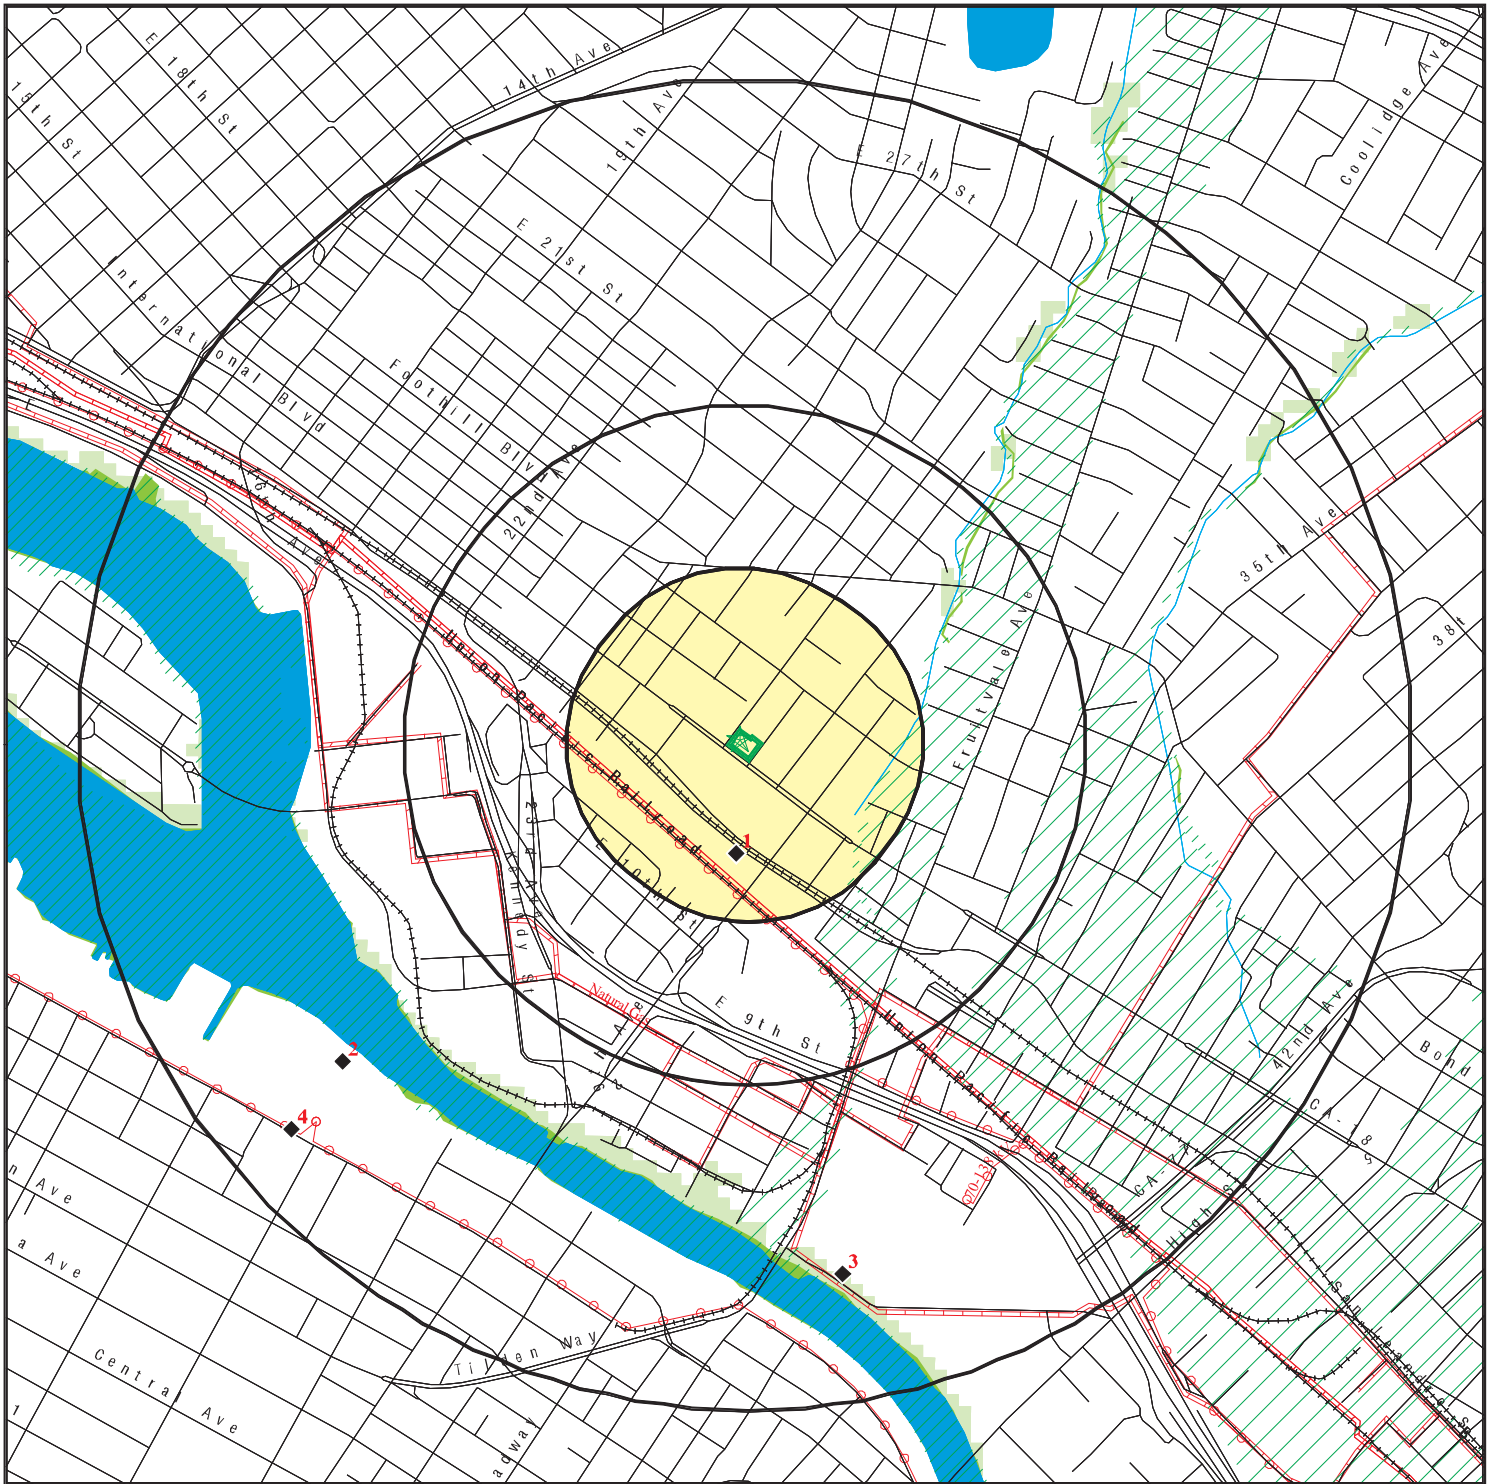

A review of the CA AST list, as provided by EDR, has revealed that there are 3 CA AST sites within approximately 1 mile of the target property.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/06/2023	Source: Department of Energy & Environmental Protection
Date Data Arrived at EDR: 11/07/2023	Telephone: 860-424-3375
Date Made Active in Reports: 01/31/2024	Last EDR Contact: 02/06/2024
Number of Days to Update: 85	Next Scheduled EDR Contact: 05/20/2024
	Data Release Frequency: No Update Planned

NJ MANIFEST: Manifest Information

Hazardous waste manifest information.

Date of Government Version: 12/31/2018	Source: Department of Environmental Protection
Date Data Arrived at EDR: 04/10/2019	Telephone: N/A
Date Made Active in Reports: 05/16/2019	Last EDR Contact: 12/27/2023
Number of Days to Update: 36	Next Scheduled EDR Contact: 04/15/2024
	Data Release Frequency: Annually

NY MANIFEST: Facility and Manifest Data

Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

Date of Government Version: 12/31/2019	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 11/30/2023	Telephone: 518-402-8651
Date Made Active in Reports: 12/01/2023	Last EDR Contact: 01/26/2024
Number of Days to Update: 1	Next Scheduled EDR Contact: 05/06/2024
	Data Release Frequency: Quarterly

PA MANIFEST: Manifest Information

Hazardous waste manifest information.

Date of Government Version: 06/30/2018	Source: Department of Environmental Protection
Date Data Arrived at EDR: 07/19/2019	Telephone: 717-783-8990

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Acceptable Separation Distance (ASD) Electronic Assessment Tool

The Environmental Planning Division (EPD) has developed an electronic-based assessment tool that calculates the Acceptable Separation Distance (ASD) from stationary hazards. The ASD is the distance from above ground stationary containerized hazards of an explosive or fire prone nature, to where a HUD assisted project can be located. The ASD is consistent with the Department's standards of blast overpressure (0.5 psi-buildings) and thermal radiation (450 BTU/ft² - hr - people and 10,000 BTU/ft² - hr - buildings). Calculation of the ASD is the first step to assess site suitability for proposed HUD-assisted projects near stationary hazards. Additional guidance on ASDs is available in the Department's guidebook "Siting of HUD- Assisted Projects Near Hazardous Facilities" and the regulation 24 CFR Part 51, Subpart C, Siting of HUD-Assisted Projects Near Hazardous Operations Handling Conventional Fuels or Chemicals of an Explosive or Flammable Nature.

Note: Tool tips, containing field specific information, have been added in this tool and may be accessed by hovering over the ASD result fields with the mouse.

Acceptable Separation Distance Assessment Tool

Is the container above ground?	Yes: <input checked="" type="checkbox"/> No: <input type="checkbox"/>
Is the container under pressure?	Yes: <input checked="" type="checkbox"/> No: <input type="checkbox"/>
Does the container hold a cryogenic liquified gas?	Yes: <input type="checkbox"/> No: <input checked="" type="checkbox"/>
Is the container diked?	Yes: <input type="checkbox"/> No: <input type="checkbox"/>
What is the volume (gal) of the container?	<input type="text" value="2000"/>
What is the Diked Area Length (ft)?	<input type="text"/>
What is the Diked Area Width (ft)?	<input type="text"/>
<input type="button" value="Calculate Acceptable Separation Distance"/>	
Diked Area (sqft)	<input type="text"/>
ASD for Blast Over Pressure (ASDROB)	<input type="text" value="275.44"/>

ASD for Blast Over Pressure (ASDBOP)	279.11
ASD for Thermal Radiation for People (ASDPPU)	369.16
ASD for Thermal Radiation for Buildings (ASDBPU)	69.27
ASD for Thermal Radiation for People (ASDPNPD)	
ASD for Thermal Radiation for Buildings (ASDBNPD)

Providing Feedback & Corrections

After using the ASD Assessment Tool following the directions in this User Guide, users are encouraged to provide feedback on how the ASD Assessment Tool may be improved. Users are also encouraged to send comments or corrections for the improvement of the tool.

Please send comments or other input using the **Contact Us** (<https://www.hudexchange.info/contact-us/>) form.
