

# **Environmental Review Record**

for the  
401 Santa Clara Avenue Project

## **Contents:**

Appendix A:	CalEEMod Air Modeling Results (Raney Planning & Management)
Appendix B:	Health Risk Assessment Modeling Results (Raney Planning & Management)
Appendix C:	Phase I Environmental Site Assessment (Ninyo & Moore)
Appendix D:	Asbestos Air Sampling Report (American Environmental Group)
Appendix E:	Asbestos Building Inspection (RegasGroup Environmental Consultants)
Appendix F:	Lead Paint Survey (Ninyo & Moore)
Appendix G:	Radon Test Report (Kellco Services, Inc.)
Appendix H:	Cultural Resources Study (Historic Resources Associates)
Appendix I:	Tribal Monitoring and Discovery Plan (Historic Resources Associates)
Appendix J:	Noise Assessment (Saxelby Acoustics)
Appendix K:	Additional Sources

# 401 Santa Clara Avenue Project Custom Report

## Table of Contents

1. Basic Project Information
  - 1.1. Basic Project Information
  - 1.2. Land Use Types
  - 1.3. User-Selected Emission Reduction Measures by Emissions Sector
2. Emissions Summary
  - 2.1. Construction Emissions Compared Against Thresholds
  - 2.2. Construction Emissions by Year, Unmitigated
3. Construction Emissions Details
  - 3.1. Site Preparation (2026) - Unmitigated
  - 3.3. Grading (2026) - Unmitigated
  - 3.5. Building Construction (2026) - Unmitigated
  - 3.7. Building Construction (2027) - Unmitigated
  - 3.9. Paving (2026) - Unmitigated
  - 3.11. Architectural Coating (2026) - Unmitigated
  - 3.13. Architectural Coating (2027) - Unmitigated

## 5. Activity Data

### 5.1. Construction Schedule

### 5.2. Off-Road Equipment

#### 5.2.1. Unmitigated

### 5.3. Construction Vehicles

#### 5.3.1. Unmitigated

### 5.4. Vehicles

#### 5.4.1. Construction Vehicle Control Strategies

### 5.5. Architectural Coatings

### 5.6. Dust Mitigation

#### 5.6.1. Construction Earthmoving Activities

#### 5.6.2. Construction Earthmoving Control Strategies

### 5.7. Construction Paving

### 5.8. Construction Electricity Consumption and Emissions Factors

### 5.18. Vegetation

#### 5.18.1. Land Use Change

##### 5.18.1.1. Unmitigated

#### 5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

8. User Changes to Default Data

# 1. Basic Project Information

## 1.1. Basic Project Information

Data Field	Value
Project Name	401 Santa Clara Avenue Project
Construction Start Date	6/1/2026
Lead Agency	City of Oakland
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.90
Precipitation (days)	41.0
Location	37.8131555231057, -122.24907798845712
County	Alameda
City	Oakland
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1503
EDFZ	1
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.28

## 1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Apartments Mid Rise	108	Dwelling Unit	0.93	71,076	21,344	—	305	—

Enclosed Parking with Elevator	41.0	Space	0.00	10,800	0.00	—	—	—
--------------------------------	------	-------	------	--------	------	---	---	---

### 1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

## 2. Emissions Summary

### 2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Un/Mit.	TOG	ROG	NOx	CO	SO2	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	BCO2	NBCO2	CO2T	CH4	N2O	R	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—

## 5. Activity Data

### 5.1. Construction Schedule

Phase Name	Phase Type	Start Date	End Date	Days Per Week	Work Days per Phase	Phase Description
Site Preparation	Site Preparation	6/1/2026	6/2/2026	5.00	2.00	—
Grading	Grading	6/3/2026	6/8/2026	5.00	4.00	—
Building Construction	Building Construction	6/23/2026	11/8/2027	5.00	360	—
Paving	Paving	6/9/2026	6/22/2026	5.00	10.0	—
Architectural Coating	Architectural Coating	7/7/2026	11/22/2027	5.00	360	—

### 5.2. Off-Road Equipment

#### 5.2.1. Unmitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Site Preparation	Graders	Diesel	Average	1.00	8.00	148	0.41
Site Preparation	Tractors/Loaders/Back hoes	Diesel	Average	1.00	8.00	84.0	0.37
Grading	Graders	Diesel	Average	1.00	6.00	148	0.41
Grading	Tractors/Loaders/Back hoes	Diesel	Average	1.00	7.00	84.0	0.37
Grading	Rubber Tired Dozers	Diesel	Average	1.00	6.00	367	0.40
Building Construction	Cranes	Diesel	Average	1.00	4.00	367	0.29
Building Construction	Forklifts	Diesel	Average	2.00	6.00	82.0	0.20
Building Construction	Tractors/Loaders/Back hoes	Diesel	Average	2.00	8.00	84.0	0.37

Paving	Tractors/Loaders/Back hoes	Diesel	Average	1.00	7.00	84.0	0.37
Paving	Pavers	Diesel	Average	1.00	7.00	81.0	0.42
Paving	Rollers	Diesel	Average	1.00	7.00	36.0	0.38
Paving	Cement and Mortar Mixers	Diesel	Average	4.00	6.00	10.0	0.56
Architectural Coating	Air Compressors	Diesel	Average	1.00	6.00	37.0	0.48

### 5.3. Construction Vehicles

#### 5.3.1. Unmitigated

Phase Name	Trip Type	One-Way Trips per Day	Miles per Trip	Vehicle Mix
Site Preparation	—	—	—	—
Site Preparation	Worker	5.00	11.7	LDA,LDT1,LDT2
Site Preparation	Vendor	—	8.40	HHDT,MHDT
Site Preparation	Hauling	0.00	20.0	HHDT
Site Preparation	Onsite truck	—	—	HHDT
Grading	—	—	—	—
Grading	Worker	7.50	11.7	LDA,LDT1,LDT2
Grading	Vendor	—	8.40	HHDT,MHDT
Grading	Hauling	0.00	20.0	HHDT
Grading	Onsite truck	—	—	HHDT
Building Construction	—	—	—	—
Building Construction	Worker	82.3	11.7	LDA,LDT1,LDT2
Building Construction	Vendor	13.3	8.40	HHDT,MHDT
Building Construction	Hauling	0.00	20.0	HHDT
Building Construction	Onsite truck	—	—	HHDT
Paving	—	—	—	—
Paving	Worker	17.5	11.7	LDA,LDT1,LDT2

Paving	Vendor	—	8.40	HHDT,MHDT
Paving	Hauling	0.00	20.0	HHDT
Paving	Onsite truck	—	—	HHDT
Architectural Coating	—	—	—	—
Architectural Coating	Worker	16.5	11.7	LDA,LDT1,LDT2
Architectural Coating	Vendor	—	8.40	HHDT,MHDT
Architectural Coating	Hauling	0.00	20.0	HHDT
Architectural Coating	Onsite truck	—	—	HHDT

## 5.4. Vehicles

### 5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

## 5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	143,929	47,976	0.00	0.00	—

## 5.6. Dust Mitigation

### 5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (cy)	Material Exported (cy)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)
Site Preparation	—	—	1.00	0.00	—
Grading	—	—	3.00	0.00	—
Paving	0.00	0.00	0.00	0.00	0.00

### 5.6.2. Construction Earthmoving Control Strategies

Non-applicable. No control strategies activated by user.

## 5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Apartments Mid Rise	—	0%
Enclosed Parking with Elevator	0.00	100%

## 5.8. Construction Electricity Consumption and Emissions Factors

### kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2026	0.00	204	0.03	< 0.005
2027	0.00	204	0.03	< 0.005

## 5.18. Vegetation

### 5.18.1. Land Use Change

#### 5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres
--------------------------	----------------------	---------------	-------------

### 5.18.1. Biomass Cover Type

#### 5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres
--------------------	---------------	-------------

### 5.18.2. Sequestration

#### 5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)
-----------	--------	------------------------------	------------------------------

## 8. User Changes to Default Data

Screen	Justification
Land Use	Lot acreage adjusted to represent overall acreage of the project site. Building square feet adjusted to represent the provided building square footage of the project.
Construction: Construction Phases	Building construction timing based on project-specific information provided by the project applicant. Based on typical construction practices, architectural coating assumed to start two weeks after the start of building construction and last for the same number of days. Demolition not required for the proposed project.

# EXECUTIVE SUMMARY

## CONCLUSIONS

Ninyo & Moore has performed this Phase I ESA in conformance with the scope and limitations of ASTM E1527-21 of the property located at 401 Santa Clara Avenue in Oakland, Alameda County, California (the Site). Based on the information compiled during the preparation of this report, this assessment has revealed no evidence of Recognized Environmental Conditions (RECs), Controlled RECs (CRECs), or Historical RECs (HRECs) in connection with the Site, and no RECs were identified on the adjoining properties.

## FINDINGS AND OPINIONS

Ninyo & Moore performed a Phase I Environmental Site Assessment (ESA) on the Site located at 401 Santa Clara Avenue, in Oakland, Alameda County, California. A Summary of Findings is provided below. It should be recognized that all report details are not included in this Summary, and the report should be read in its entirety.

### Site Location and Use

The approximately 0.96-acre Site is located along Santa Clara Avenue. The Site consisted of a vacant multi-story retirement home.

### Historical Information

Review of historical resources, such as aerial photographs, topographic maps, fire insurance maps, and available City Directory listings, as well as through review of historical records, interviews, and research, revealed that the Site was developed with multiple residential houses from sometime prior to 1911, until the late 1960s, when the residential houses were removed, and the current two-winged Site building was constructed. No significant development has occurred on the Site since the mid 2010s, when a gathering area was constructed between the wings of the building.

Adjoining properties have primarily been residential from at least 1911 until the present. No RECs were identified in the historical review.

### Records Review

Review of an environmental database report obtained for this project indicated that the Site was not listed on any of the *Standard Federal, State, and Tribal Environmental Record sources*. The Site was listed on the *Additional Federal, State, Tribal and Local Environmental Record sources* regulatory databases researched by EDR, including the FINDS, ECHO, HWTS, HAZNET, and RCRA NonGen / NLR databases. Selected federal and state environmental regulatory databases as well as responses from state and local regulatory agencies were reviewed, as available. Based on the available EDR information and the nature

of these specific databases listing types, no RECs were identified at the Site in connection with these database listings.

Selected federal and state environmental regulatory databases as well as responses from state and local regulatory agencies were reviewed, as available. Several off-Site facilities were located within the EDR search radius from the Site. None of the listed facilities are considered to be a REC to the Site based on several factors, including distance from the Site, location relative to the regional groundwater flow direction (e.g. hydraulically downgradient or crossgradient to the Site), database listing type, and/or affected media (soil only).

Based on the completion of the Vapor Encroachment Condition (VEC) screening matrix, it is presumed unlikely that a VEC currently exists beneath the Site.

### **Site Reconnaissance**

On May 20, 2024, Mr. Luke Swickard with Ninyo & Moore conducted a Site reconnaissance of the property that included a visual inspection of the Site, and observations of adjoining properties. At the time of the reconnaissance, the Site was improved with a 6-story vacant retirement home known as Grand Lake Gardens. The building consisted of an east wing and a west wing. The east wing included a sub parking garage, a parking garage/lobby level, floors 2-5 of residential tenant spaces, and floor 6 of common space and a dining hall. The west wing included floors 2-5 of residential tenant spaces. Due to the slope of the Site terrain, the west wing does not have a first floor. The wings were connected through a multi-story hallway. A gathering space and garden area were also part of the Site. In October 2022, the 5th floor on the west wing was damaged by a fire, which caused the building fire sprinklers to activate and resulted in the majority of the Site building being flooded by 1-2 feet of water. The fire and resulting flooding caused the asbestos in the ceiling to become friable and for mold to grow on the drywall. Extensive remediation efforts were undertaken to remove the asbestos and mold on the interior of the building. The building has therefore been vacant and unoccupied since the fire in October 2022. All interior furnishings have been removed, and the walls on the 5th floor were removed.

### **Adjoining Properties**

The areas surrounding the Site consist of residential properties. The Site is bordered on the north by Grand Lake Towers (377 Santa Clara Ave); on the south by an apartment building (411 Santa Clara Ave), and vacant land; on the east by residential development (396 and 404 Santa Clara Ave), and St Maarten Apartments (400 Santa Clara Ave); and on the northwest by an apartment complex (460 Crescent St).

Based on observations made during the Site reconnaissance and review of agency file information, the adjoining properties were not identified as a REC.

**Recognized Environmental Conditions:**

This assessment has revealed no evidence of RECs in connection with the Site or adjoining properties.

**Controlled Recognized Environmental Conditions:**

This assessment has revealed no evidence of CRECs in connection with the Site.

**Historical Recognized Environmental Conditions:**

This assessment has revealed no evidence of HRECs in connection with the Site.

**Business Environmental Risks:**

The following Business Environmental Risks were identified:

- Due to the age of the Site building, it is likely that lead based paint (LBP) and asbestos containing materials (ACM) are present.

**RECOMMENDATIONS**

Based on the findings of this ESA, no further investigation is recommended at this time.

**Certification Statement**

This report has been prepared by the staff of Ninyo & Moore for Oakland Housing Authority under the professional supervision of the principal and/or senior staff whose signatures appear hereon. Neither Ninyo & Moore, nor any staff member assigned to this assessment, has any interest or contemplated interest, financial or otherwise, in the subject or surrounding properties, or in any entity which owns, leases, or occupies the subject or surrounding properties or which may be responsible for environmental issues observed during the course of this assessment, and has no personal bias with respect to the parties involved. The information contained in this report has received appropriate technical review and approval. The conclusions represent professional judgments founded upon the findings of the assessment summarized in the report and the interpretation of such data based on our experience and expertise according to the existing standard of care. No other warranty or limitation exists, either expressed or implied. Anyone seeking defenses to Comprehensive Environmental Response, Compensation and Liability Act liability must take independent action to protect their position.

# 1 INTRODUCTION

Ninyo & Moore has performed this Phase I Environmental Site Assessment (ESA) of the property located at 401 Santa Clara Avenue in Oakland, Alameda County, California (Site). This ESA was conducted for Oakland Housing Authority as part of their due diligence on the property. This Phase I ESA meets the criteria set forth in the ASTM International (ASTM) E1527-21 Standard, was conducted by an Environmental Professional as defined by §312.10 of 40 CFR 312 and satisfies all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. The following sections identify the purpose, the involved parties, the scope of services, and the limitations and exceptions associated with this Phase I ESA.

## 1.1 Purpose

In accordance with the ASTM Standard Practice for ESAs on Commercial Real Estate E1527-21, the objective of the Phase I ESA is to identify recognized environmental conditions (RECs). The term recognized environmental conditions means: "(1) *the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.*"

Identification of RECs fall into three categories: an existing REC (as defined above), a Historical REC, or a Controlled REC, as defined below.

**Historical Recognized Environmental Condition (HREC)** An HREC is defined as "a previous release of *hazardous substances or petroleum products* affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, *activity and use limitations or other property use limitations*). A *historical recognized environmental condition* is not a *recognized environmental condition*."

**Controlled Recognized Environmental Condition (CREC)** A CREC is defined as a "*recognized environmental condition* affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with *hazardous substances or petroleum products* allowed to remain in place subject to implementation of required controls (for example, *activity and use limitations or other property use limitations*)."

**Business Environmental Risk (BER)** - A BER is defined as a "risk which can have a *material environmental or environmentally-driven impact* on the business associated with the current or

planned use of *commercial real estate*, not necessarily related to those *environmental issues* required to be investigated in this practice." BERs include risks to the subject property that are outside the scope of the ASTM standard. BERs are not considered RECs.

## 1.2 Involved Parties

Mr. Luke Swickard, Project Manager with Ninyo & Moore, conducted the Site visit and performed the project reporting and research. Mr. Brandon Wilken, Principal Geologist with Ninyo & Moore, was the environmental professional assigned to this project, and performed project oversight and quality review. Resumes of these individuals are included in Appendix A.

## 1.3 Scope of Services

Ninyo & Moore's scope of services for this Phase I ESA included the following:

- Performed a Site reconnaissance to visually and/or physically observe the interior and exterior of structures and other features on the Site, as well as observe visible exterior features of adjoining properties to observe areas of possibly contaminated surface soil or surface water, improperly stored hazardous materials, and possible risks of contamination from activities at the Site and adjoining properties.
- Reviewed reasonably ascertainable standard and additional environmental record sources including federal, state, local, and tribal regulatory agency databases for the Site and for properties located within a specified radius of the Site.
- Reviewed reasonably ascertainable standard physical setting sources including a current United States Geological Survey (USGS) topographic map, or historical 7.5-minute topographic map, and possibly including USGS and/or state groundwater and geologic maps, and soil maps. The purpose of this review was to note information about the geologic, hydrologic, or topographic characteristics of the Site and Site vicinity.
- Reviewed reasonably ascertainable standard historical resources, including aerial photographs, historical fire insurance rate maps, and city directories, as available. The purpose of this review was to review obvious uses of the Site from the present, back to the Site's first developed use, or back to 1940, whichever is earlier. The term "developed use" includes agricultural uses and placement of fill dirt, and other uses that may not involve structures.
- Conducted interviews with present owners, operators, and/or occupants, or a designated representative, of the Site, as well as other knowledgeable parties as appropriate. The purpose of these interviews was to obtain information regarding potential RECs in connection with the Site.
- Performed a preliminary vapor encroachment screening assessment on the Site and adjoining properties.
- Prepared this ESA report documenting the methodology, significant data gaps, and findings and opinions regarding identified RECs, HRECs, and CRECs.

## 1.4 Tasks Not Undertaken

Non-scope considerations, as noted in ASTM E 1527-21, are discussed in Section 7 as appropriate. Ninyo & Moore did not address interpretations of zoning regulations, building code requirements, or property title issues.

## 1.5 Limitations and Exceptions

The environmental services described in this report have been conducted in general accordance with current regulatory guidelines and the standard of care exercised by environmental consultants performing similar work in the project area. No other warranty, expressed or implied, is made regarding the professional opinions presented in this report.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ninyo & Moore should be contacted if the reader requires any additional information or has questions regarding the content, interpretations presented, or completeness of this document.

Our conclusions, recommendations, and opinions are based on an analysis of the observed Site conditions and the referenced literature. It should be understood that the conditions of a Site could change with time as a result of natural processes or the activities of man at the subject property or nearby sites. In addition, changes to the applicable laws, regulations, codes, and standards of practice may occur due to government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which Ninyo & Moore has no control.

Per Section 4.6 of the ASTM E1527-21 Standard, "an environmental Site assessment meeting or exceeding this practice is presumed to be viable when it is completed within 180 days prior to the date of acquisition of the subject property (or for transactions not involving an acquisition such as a lease or refinance, the date of the intended transaction). The dates of the components (*interviews, review of government records, visual Site inspections, and declaration by the environmental professional*, shall be identified in the report."

All of the following components must be conducted or updated within 180 days prior to the date of acquisition or prior to the date of the transaction:

- (i) interviews with owners, operators, and occupants;
- (ii) searches for recorded environmental cleanup liens;
- (iii) reviews of federal, tribal, state, and local government records;
- (iv) visual inspections of the subject property and of adjoining properties; and
- (v) the declaration by the environmental professional responsible for the assessment or update.

## 1.6 Special Terms and Conditions

Ninyo & Moore was not made aware of any special terms and conditions associated with the Site.

## 1.7 Reliance

This report may be relied upon by, and is intended exclusively for, the *Users* of this report, including Oakland Housing Authority, and any of its affiliates. Any use or reuse of the findings, conclusions, and/or recommendations of this report by parties other than the aforementioned *Users* is undertaken at said parties' sole risk.

## 2 PROPERTY OVERVIEW

The following sections describe the location and the current uses of the Site and adjoining properties. The Site Location is presented on Figure 1 and the Site Vicinity with additional information concerning the Site and surrounding properties is presented on Figure 2. At the time of the Site reconnaissance, the Site was developed with a multi-story vacant retirement home. The Site is generally located in Oakland, Alameda County, California. The 0.96-acre parcel is designated by Alameda County Assessor's Parcel Number 10-823-15-5.

### 2.1 Property Location and Land Use(s)

#### 2.1.1 Property Location

The Site is located at 401 Santa Clara Avenue in Oakland, Alameda County, California.

#### 2.1.2 Adjacent Property Location and Land Uses

Table 1 lists the properties adjoining the Site and associated land use. Based on the nature of the current uses of the adjoining properties and observations made during the Site reconnaissance, it is unlikely that the current uses of these properties have impacted the environmental integrity of the Site.

Location	Description
North	Grand Lake Towers (377 Santa Clara Ave)
South	Apartment building (411 Santa Clara Ave), and vacant land
East	Santa Clara Avenue, residential development (396 and 404 Santa Clara Ave), and St Maarten Apartments (400 Santa Clara Ave)
Northwest	Apartment complex (460 Crescent St)

#### 2.1.3 Utilities

##### 2.1.3.1 Potable Water

The East Bay Municipal Utilities District (EBMUD) provides potable water to the Site and vicinity.

### **2.1.3.2 Sewage Disposal System**

The EBMUD provides municipal sewer service to the Site and surrounding areas.

### **2.1.3.3 Source of Fuel for Heating and Cooling**

The fuel source for the on-Site heating and cooling systems was provided by PG&E.

### **2.1.4 Description of Structures, Roads, and Other Improvements**

As shown on Figure 2, the Site is accessible from Santa Clara Avenue. At the time of the Site reconnaissance, the Site was improved with a 6-story vacant retirement home known as Grand Lake Gardens. The building consisted of an east wing and a west wing. The east wing included a subterranean parking garage, a parking garage/lobby level, floors 2-5 of residential tenant spaces, and floor 6 of common space and a dining hall. The west wing included floors 2-5 of residential tenant spaces. Due to the slope of the Site terrain, the west wing does not have a first floor. The wings were connected through a multi-story hallway. A gathering space and garden area were also part of the Site. In October 2022, the 5th floor on the west wing was damaged by a fire, which caused the building fire sprinklers to activate and resulted in the majority of the Site building being flooded by 1-2 feet of water. The fire and resulting flooding caused the asbestos in the ceiling to become friable and for mold to grow on the drywall. Extensive remediation efforts were undertaken to remove the asbestos and mold on the interior of the building. The building has therefore been vacant and unoccupied since the fire in October 2022. All interior furnishings have been removed, and the walls on the 5th floor were removed.

## **2.2 Physical Setting**

The following sections include discussions of topographic, geologic, and hydrologic conditions.

### **2.2.1 Topography**

Based on a review of the United States Geological Survey (USGS) 7.5-Minute Topographic Quadrangle Map Series of the Oakland East, California 2021 Quadrangle, the Site is situated at an elevation of approximately 48 feet above mean sea level. The general topographic gradient (EDR 2024a) is in a southerly direction.

### **2.2.2 Geology/Hydrogeology**

The Site is located in the Coast Range geomorphic province of California. The Coast Ranges are northwest-trending mountain ranges (2,000 to 4,000, occasionally 6,000 feet elevation above sea level), and valleys. The ranges and valleys trend northwest, subparallel to the San Andreas Fault. Strata dip beneath alluvium of the Great Valley. To the west is the Pacific Ocean. The coastline is uplifted, terraced and wave-cut. The Coast Ranges are composed of thick Mesozoic and Cenozoic sedimentary strata. The northern and southern ranges are separated by a depression containing the San Francisco Bay. The northern Coast Ranges are dominated by irregular, knobby, landslide-topography of the Franciscan Complex. The eastern border is characterized by strike-ridges and valleys

in Upper Mesozoic strata. In several areas, Franciscan rocks are overlain by volcanic cones and flows of the Quien Sabe, Sonoma and Clear Lake volcanic fields. The Coast Ranges are subparallel to the active San Andreas Fault. The San Andreas is more than 600 miles long, extending from Pt. Arena to the Gulf of California. West of the San Andreas is the Salinian Block, a granitic core extending from the southern extremity of the Coast Ranges to the north of the Farallon Islands (CGS, 2002). The 1977 California Division of Mines and Geology, *Geologic Map of California*: (Jennings C.W.) shows the Site to be underlain by Quaternary Older Alluvium Deposits (Qoa). Based on our review of the EDR Radius Map report, the primary soil type beneath the Site is mapped as Tierra loam (EDR, 2024a).

### **2.2.3 Surface Water Bodies**

Natural surface water bodies, including streams or other bodies of water, are not present on or adjoining to the Site. The nearest body of water is the Lake Merritt, located approximately 1,600-feet south of the Site.

### **2.2.4 Groundwater**

Groundwater information for the Site was not available. Ninyo & Moore reviewed the State Water Resources Control Board's GeoTracker website (GeoTracker) for groundwater information in the Site vicinity. According to GeoTracker, groundwater information reported in a July 2023 Groundwater Monitoring Report for the former Chevron service station 90121 located at 3026 Lakeshore Avenue (approximately 1,500 feet southeast of the Site), the groundwater flow direction in the Site vicinity was reported to be in a southeasterly direction and the depth to groundwater was reported to be approximately 4 to 8 feet below ground surface. Groundwater depths and flow directions can vary due to seasonal variations, groundwater withdrawal or injection, and other factors.

### **2.2.6 Flood Maps**

According to the FEMA flood maps, the Site lies in the flood zone classified as Zone X. Zone X designates an area that has been determined to be outside of the 0.2% annual chance floodplain.

## **3 PROPERTY BACKGROUND**

### **3.1 Interviews**

Interviews were conducted by Ninyo & Moore with the objective of obtaining information regarding potential RECs in connection with the Site. Interviews with the present owners, operators, and/or occupants of the Site, as available, as well as other knowledgeable parties as appropriate, is mandated by ASTM E1527-21.

### 3.1.1 Current Owner/Site Manager or Occupant

Mr. Keith Manson, with CBRE and the seller's real estate agent, was interviewed during the Site reconnaissance on May 20, 2024. Mr. Manson provided access during the Site visit. Mr. Manson was not aware of any hazardous materials incidents, spills, leaks or violations related to the Site.

### 3.1.2 Past Owner/Site Manager or Occupant

Past ownership entities were not made available to Ninyo & Moore during the preparation of this ESA. Therefore, interviews with past Site owners were not conducted.

### 3.1.3 State and/or Local Agencies

State and/or local agencies were contacted regarding available records for the Site. These interviews and the records reviewed are summarized in Section 4.3.

## 3.2 Review of Aerial Photographs

Ninyo & Moore reviewed the EDR Aerial Photo Decade Package report (EDR, 2024a) dated May 22, 2024. The report included aerial photographs that begin in 1939. A listing of the photographs reviewed is presented in Table 2. Copies of the historical aerial photographs are provided in Appendix D.

Based on the review of the aerial photographs listed below, the Site was developed with multiple residential houses from sometime prior to 1939, until the late 1960s, when the residential houses were removed, and the current Site building was constructed. The Site vicinity appeared to be developed since at least the 1930s. No RECs were identified for the Site or adjoining properties based on historical aerial photograph review.

Date	Sources	Site	Adjoining Properties
1939	EDR	The Site was noted to be developed with residential houses.	The areas surrounding the Site were noted to be developed with residential houses. A street was noted to the east of the Site.
1946-1958	EDR	No significant changes noted.	No significant changes noted.
1963	EDR	No significant changes noted.	Some of the residential houses to the north of the Site were replaced with an apartment building, and the residential houses to the west and south of the Site were removed and replaced with a freeway.
1968	EDR	The residential houses on the Site were removed and were replaced with the current Site building, which consisted of two connected wings.	No significant changes noted.

Date	Sources	Site	Adjoining Properties
1974	EDR	No significant changes noted.	Some of the residential houses to the north of the Site were replaced with an apartment building.
1982-2012	EDR	No significant changes noted.	No significant changes noted.
2016	EDR	A concrete gathering area was noted in between the two wings of the Site building.	No significant changes noted.
2020	EDR	No significant changes noted.	No significant changes noted.

### 3.3 Review of Topographic Maps

Ninyo & Moore reviewed the EDR Historical Topo Map Report, dated May 22, 2024 (EDR, 2024b). A listing of the maps reviewed is presented in Table 3 below. Copies of the historical topographic maps are provided in Appendix D.

The review of topographic maps listed below indicates the Site was undeveloped from sometime prior to 1895 to sometime prior to 1915, when residential houses were constructed on the Site. Structures were depicted adjacent to the north, south, east and west of the Site since at least 1915. No RECs were identified for the Site or adjoining properties based on a review of the historical topographic maps.

Date	Quadrangle	Uses
1895	San Francisco, Concord	The Site and Site vicinity were mapped as vacant land.
1899	San Francisco	The Site was unmapped.
1915	Concord, San Francisco	The Site and Site vicinity were mapped with several residential houses.
1947-1996	Oakland East	The Site and Site vicinity were mapped as urban land.
2012-2021	Oakland East, Oakland West	No buildings were mapped on the 2012 through 2021 topographic maps.

### 3.4 Review of Fire Insurance Maps

Ninyo & Moore reviewed the EDR Certified Sanborn Map Report, dated May 22, 2024 (EDR, 2024c) for historical fire insurance rate maps (Sanborn Maps) of the Site. A summary of the Sanborn Map coverage is discussed in Table 4 below. A copy of the EDR Sanborn Map Report is included in Appendix D.

Year(s)	Site Comments	Adjoining Area Comments
1903	The Site was unmapped.	Residential houses were depicted to the north of the Site.
1911	Two residential houses were depicted on the Site.	Residential houses were depicted to the north, south, and west of the Site.

Year(s)	Site Comments	Adjoining Area Comments
1912-1929	The Site was unmapped.	The Site vicinity was unmapped.
1950	A total of five residential houses and a garage were depicted on the Site.	Residential houses were depicted to the east of the Site.
1952	No significant changes depicted.	No significant changes depicted.
1954	An additional residential house was depicted on the Site.	No significant changes depicted.
1957	The Site was unmapped.	The Site vicinity was unmapped.
1959	No significant changes depicted.	No significant changes depicted.
1960	The Site was unmapped.	The Site vicinity was unmapped.
1962	One of the residential houses was removed from the Site.	Several residential houses to the west and south of the Site were removed and were replaced with the MacArthur Freeway.
1967	The residential houses and garage on the Site were removed and were replaced with a two-winged building, consistent with the current Site building, labeled Grand Lake Garden Apartments, Baptist Retirement Center.	Some of the residential houses to the north of the Site were replaced with an apartment building, and a multi-story residential building was depicted to the south of the Site.
1968-1969	The Site was unmapped.	The Site vicinity was unmapped.
1970	No significant changes depicted.	Some of the residential houses to the north of the Site were replaced with an apartment building.

### 3.5 Review of Reverse City Directories

Ninyo & Moore reviewed the EDR City Directory Image Report, dated May 23, 2024 (EDR, 2024d), for the Site and adjoining properties, to evaluate facilities of potential concern, which may have been historically located on or adjoining to the Site. A summary of historical City Directory listings for the Site and adjoining properties, as warranted, are discussed in Table 5 below. City directories for the Site and adjoining properties were researched from 1925 through 2020. A copy of the EDR City Directory Image report is included in Appendix D. Review of the City Directory listings did not identify any RECs associated with the Site or adjoining properties.

Site Address	Source Years	Site Uses
401 Santa Clara Avenue	1925-2020	All directory listings were residential
Adjoining Properties: 377 Santa Clara Ave 396 Santa Clara Ave 400 Santa Clara Ave 404 Santa Clara Ave	1925-2020	All directory listings were residential

Site Address	Source Years	Site Uses
411 Santa Clara Ave 460 Crescent St		

### 3.6 Title Records

A Preliminary Title Report was not provided to Ninyo & Moore. According to the Alameda County Assessor’s website, the Site is currently owned by Human Good.

### 3.7 Recorded Environmental Covenants and AULs

The EDR database report included a review of both Federal and State Engineering Control (EC) and Institutional Control (IC) databases, such as the *Engineering Controls Sites List* (US ENG CONTROLS), and *Institutional Controls Sites List* (US INST CONTROLS). Based on a review of the database report, the Site was not listed on the EC or IC databases, and ECs and ICs were not identified through review of the Department of Toxics Substances Control *Land Use Restriction Sites database*, or through review of the State Water Resources, *Sites with Deed Restrictions* database. In addition to these federal and state listings, AULs can be recorded at the county and municipal level that may not be listed in the regulatory database report. Environmental lien and AUL records recorded against the Site were not provided by the client. Performance of a review of these records was not included as part of the Phase I ESA scope of services, and unless notified otherwise, Ninyo & Moore assumes that the client is evaluating this information outside the scope of this report. An environmental lien search report was not requested by the client for review by Ninyo & Moore during the completion of this ESA.

### 3.8 Previous Investigations

Ninyo & Moore was not provided copies of prior environmental reports completed for the Site.

### 3.9 User-Provided Information

The following sections summarize information provided by the user to assist the Environmental Professional in identifying the possibility of RECs in connection with the Site and to fulfill the user’s responsibilities in accordance with ASTM E1527-21. The User Questionnaire was completed by Mr. Andrew McDonald, the Site owner. A copy of the User Questionnaire is included in Appendix B.

#### 3.9.1 Environmental Lien and Activity and Use Limitations Search Results

Ninyo & Moore was not informed of the existence of environmental liens or AULs associated with the Site.

#### 3.9.2 Specialized Knowledge

Ninyo & Moore was not informed of the existence of specialized knowledge pertaining to the Site that is material to the identification of RECs in connection with the Site.

### 3.9.3 Relationship of Purchase Price to Fair Market Value

The purchase price being paid for the property reasonably reflects the fair market value of the property.

### 3.9.4 Commonly Known or Reasonable Ascertainable Information

Ninyo & Moore was not informed of the existence of commonly known or reasonably ascertainable information pertaining to the Site that is material to the identification of RECs in connection with the Site.

### 3.9.5 Owner, Property Manager, and Occupant Information

According to the Alameda County Assessor’s website, the Site is currently owned by Human Good.

## 4 REGULATORY DATABASE SEARCH AND SIGNIFICANT FINDINGS

### REGULATORY DATABASE SEARCH AND FINDINGS

Environmental Data Resources, Inc. (EDR) performed a computerized environmental information database search for the Site and Site vicinity on May 22, 2024 (EDR, 2024e) that included searches of federal, state, tribal, and local databases. The purpose of the database search was to determine if the Site or adjoining properties were listed on one or more of the standard government environmental records resources, and if so, review agency records to determine if a REC, HREC, CREC, or de minimis condition exists at the Site. A summary of the listed properties of potential environmental concern to the Site are presented in Table 6 below. A list of the environmental databases searched, and their corresponding search distance is included in the EDR Radius Map Report provided in Appendix C.

Table 6 - Summary of Environmental Records Sources Database Search								
Database	Target Property	Search Distance (Miles)	< 1/8	1/8 - 1/4	1/4 - 1/2	1/2 - 1	> 1	Total Plotted

## 4.1 Subject Property

The following Table 7 summarizes the database listings associated with the Site.

Table 7 - On-Site Database Listings	
Site Name	GRAND LAKE GARDEN, HUMANGOOD NORCAL
Site Address	401 SANTA CLARA AVE
Database	FINDS, ECHO, HWTS, HAZNET, RCRA NonGen / NLR

<b>Comments</b>	The Site is listed on the RCRA NonGen / NLR, FINDS, and ECHO databases for handling but not generating hazardous waste in 2016, 2022, and 2023; on the HWTS database for having tracked hazardous waste on the Site in 2008, 2014, and 2016; on the HAZNET database for storing, transferring, and disposing of several tons of pharmaceutical waste, and asbestos containing waste from 2008 to 2020. These database listings are not considered RECs.
-----------------	---

## 4.2 Surrounding Properties

Off-Site properties/facilities listed in the Summary of Environmental Records Sources table above were evaluated for their potential to impact soil, soil vapor, and/or groundwater at the Site. Table 8 below presents the off-Site properties/facilities that were interpreted to represent a potential environmental concern to the Site, based on their proximity to the Site, the nature of the database(s) on which they are listed, and/or the location of the off-Site property in relation to the Site with respect to topography or expected groundwater flow direction (southeasterly).

Table 8 - Facilities of Potential Concern	
<b>Facility Name</b>	TRENT DEHART
<b>Address</b>	370 SANTA CLARA AVENUE
<b>Direction from Site</b>	Northwest and upgradient
<b>Distance from Site</b>	55 feet
<b>Database</b>	RCRA NonGen / NLR
<b>Notes/Comments</b>	This property is listed on the RCRA NonGen / NLR database for handling but not generating hazardous waste in 2022. This database listing is not considered a REC.
<b>Facility Name</b>	CHARLIE KALB
<b>Address</b>	370 SANTA CLARA AVENUE #3
<b>Direction from Site</b>	Northwest and upgradient
<b>Distance from Site</b>	55 feet
<b>Database</b>	RCRA NonGen / NLR
<b>Notes/Comments</b>	This property is listed on the RCRA NonGen / NLR database for handling but not generating hazardous waste in 2022. This database listing is not considered a REC.
<b>Facility Name</b>	VAUGHN MANAGEMENT GROUP
<b>Address</b>	377 SANTA CLARA AVE
<b>Direction from Site</b>	Northeast and upgradient
<b>Distance from Site</b>	78 feet
<b>Database</b>	RCRA NonGen / NLR
<b>Notes/Comments</b>	This property is listed on the RCRA NonGen / NLR database for handling but not generating hazardous waste in 2019. This database listing is not considered a REC.

<b>Facility Name</b>	CHONG WONG
<b>Address</b>	414 SANTA CLARA AVE
<b>Direction from Site</b>	Southeast and downgradient
<b>Distance from Site</b>	170 feet
<b>Database</b>	EDR Hist Cleaner
<b>Notes/Comments</b>	This property is listed on the EDR Hist Cleaner database for registered as a laundry service in 1943. This database listing is not considered a REC.

<b>Facility Name</b>	COMMERCIAL PROPERTY
<b>Address</b>	3315 GRAND AVE
<b>Direction from Site</b>	East and downgradient
<b>Distance from Site</b>	257 feet
<b>Database</b>	SWEEPS UST
<b>Notes/Comments</b>	This property is listed on the SWEEPS UST database for having a 500-gallon gasoline UST on the property. This database listing is not considered a REC.

<b>Facility Name</b>	SHERMAN JULIUS
<b>Address</b>	3217 GRAND AVE
<b>Direction from Site</b>	Southeast and downgradient
<b>Distance from Site</b>	263 feet
<b>Database</b>	EDR Hist Cleaner
<b>Notes/Comments</b>	This property is listed on the EDR Hist Cleaner database for registered as a laundry service in 1933. This database listing is not considered a REC.

<b>Facility Name</b>	ALBRIGHT G E
<b>Address</b>	468 SANTA CLARA AVE
<b>Direction from Site</b>	South-Southeast and downgradient
<b>Distance from Site</b>	289 feet
<b>Database</b>	EDR Hist Cleaner
<b>Notes/Comments</b>	This property is listed on the EDR Hist Cleaner database for registered as a laundry service in 1933. This database listing is not considered a REC.

<b>Facility Name</b>	GLEN VIEW LAUNDRY
<b>Address</b>	474 SANTA CLARA AVE
<b>Direction from Site</b>	Southeast and downgradient
<b>Distance from Site</b>	322 feet
<b>Database</b>	EDR Hist Cleaner
<b>Notes/Comments</b>	This property is listed on the EDR Hist Cleaner database for registered as a laundry service in 1933. This database listing is not considered a REC.

<b>Facility Name</b>	RICHARD MAHER
<b>Address</b>	455 CRESCENT STREET #102
<b>Direction from Site</b>	Northwest and upgradient
<b>Distance from Site</b>	334 feet
<b>Database</b>	RCRA NonGen / NLR
<b>Notes/Comments</b>	This property is listed on the RCRA NonGen / NLR database for handling but not generating hazardous waste in 2023. This database listing is not considered a REC.

<b>Facility Name</b>	COLLINS MGMNT.- 455 CRESCENT
<b>Address</b>	455 CRESCENT STREET UNIT 309
<b>Direction from Site</b>	Northwest and upgradient
<b>Distance from Site</b>	334 feet
<b>Database</b>	RCRA NonGen / NLR
<b>Notes/Comments</b>	This property is listed on the RCRA NonGen / NLR database for handling but not generating hazardous waste in 2022. This database listing is not considered a REC.

<b>Facility Name</b>	KILEY RUSSELL
<b>Address</b>	455 CRESCENT STREET APT 105
<b>Direction from Site</b>	Northwest and upgradient
<b>Distance from Site</b>	334 feet
<b>Database</b>	RCRA NonGen / NLR
<b>Notes/Comments</b>	This property is listed on the RCRA NonGen / NLR database for handling but not generating hazardous waste in 2019. This database listing is not considered a REC.

<b>Facility Name</b>	COLLINS MANAGEMENT COMPANY
<b>Address</b>	455 CRESCENT STREET #402
<b>Direction from Site</b>	Northwest and upgradient
<b>Distance from Site</b>	334 feet
<b>Database</b>	RCRA NonGen / NLR
<b>Notes/Comments</b>	This property is listed on the RCRA NonGen / NLR database for handling but not generating hazardous waste in 2020. This database listing is not considered a REC.

<b>Facility Name</b>	CHRISSY BARLOW
<b>Address</b>	455 CRESCENT STREET #313
<b>Direction from Site</b>	Northwest and upgradient
<b>Distance from Site</b>	334 feet
<b>Database</b>	RCRA NonGen / NLR
<b>Notes/Comments</b>	This property is listed on the RCRA NonGen / NLR database for handling but not generating hazardous waste in 2019. This database listing is not considered a REC.

<b>Facility Name</b>	YIHEIS GEDLE
<b>Address</b>	455 CRESENT STREET #306
<b>Direction from Site</b>	Northwest and upgradient
<b>Distance from Site</b>	334 feet
<b>Database</b>	RCRA NonGen / NLR
<b>Notes/Comments</b>	This property is listed on the RCRA NonGen / NLR database for handling but not generating hazardous waste in 2022. This database listing is not considered a REC.

<b>Facility Name</b>	COLLINS MANAGEMENT
<b>Address</b>	455 CRESCENT STREET #318
<b>Direction from Site</b>	Northwest and upgradient
<b>Distance from Site</b>	334 feet
<b>Database</b>	RCRA NonGen / NLR
<b>Notes/Comments</b>	This property is listed on the RCRA NonGen / NLR database for handling but not generating hazardous waste in 2021. This database listing is not considered a REC.

<b>Facility Name</b>	COLLINS MANAGEMENT
<b>Address</b>	455 CRESCENT STREET
<b>Direction from Site</b>	Northwest and upgradient
<b>Distance from Site</b>	334 feet
<b>Database</b>	RCRA NonGen / NLR
<b>Notes/Comments</b>	This property is listed on the RCRA NonGen / NLR database for handling but not generating hazardous waste in 2021. This database listing is not considered a REC.

<b>Facility Name</b>	PETER PROWS/KAREN NELSON-MUNSON
<b>Address</b>	483 CRESCENT STREET
<b>Direction from Site</b>	North-Northwest and upgradient
<b>Distance from Site</b>	337 feet
<b>Database</b>	RCRA NonGen / NLR
<b>Notes/Comments</b>	This property is listed on the RCRA NonGen / NLR database for handling but not generating hazardous waste in 2021. This database listing is not considered a REC.

<b>Facility Name</b>	ESQUIRE CLEANERS COMPANY
<b>Address</b>	3223 GRAND AVE
<b>Direction from Site</b>	East-Southeast and downgradient
<b>Distance from Site</b>	368 feet
<b>Database</b>	EDR Hist Cleaner
<b>Notes/Comments</b>	This property is listed on the EDR Hist Cleaner database for registered as a laundry service from 1967 to 1993. This database listing is not considered a REC.

<b>Facility Name</b>	ESQUIRE CLEANERS COMPANY
<b>Address</b>	3235 GRAND AVE
<b>Direction from Site</b>	East-Southeast and downgradient
<b>Distance from Site</b>	368 feet
<b>Database</b>	EDR Hist Cleaner
<b>Notes/Comments</b>	This property is listed on the EDR Hist Cleaner database for registered as a laundry service from 1994 to 2005. This database listing is not considered a REC.

<b>Facility Name</b>	LANDOWITZ JOS
<b>Address</b>	3249 GRAND AVE
<b>Direction from Site</b>	East-Southeast and downgradient
<b>Distance from Site</b>	370 feet
<b>Database</b>	EDR Hist Cleaner
<b>Notes/Comments</b>	This property is listed on the EDR Hist Cleaner database for registered as a laundry service in 1933. This database listing is not considered a REC.

### 4.3 Additional Environmental Record Sources

Local and state departments were contacted regarding available records for the Site. Results of the contacts and file reviews, as available, are discussed below. Copies of requests and responses, including public records, are included as Appendix E.

#### 4.3.1 State/County Environmental Record Sources

Ninyo & Moore reviewed the Department of Toxic Substances Control (DTSC) EnviroStor and the Regional Water Quality Control Board (RWQCB) GeoTracker websites for hazardous substances or hazardous materials files for the Site address on May 22, 2024. No records were available for the Site through review of these agency databases.

The Alameda County Environmental Health (ACEH) was contacted regarding hazardous materials or hazardous wastes records associated with the Site address on May 22, 2024. Files or records were not available for the Site address. A copy of the file review request response is included in Appendix E.

#### 4.3.2 Local Environmental Record Sources

A Public Records Request was submitted to the City of Oakland (City) regarding hazardous materials, hazardous wastes and/or underground storage tank records for the Site May 22, 2024. The City of Oakland has not responded by the publishing of this report. If the City does respond, and if their response indicates a REC, or alters the conclusions or recommendations of this report, an addendum to the report will be issued.

### 4.3.3 Federal Environmental Record Sources

Ninyo & Moore conducted an online search of the USEPA’s MyPropertyInfo database for the Site and the vicinity. The Site address was not listed in the database.

### 4.3.4 Gas & Oil Maps

According to the CalGEM Online Mapping System, the Site does not lie within the administrative boundaries of an oil field and no oil or gas wells are located on the Site.

## 5 SITE RECONNAISSANCE

### SITE RECONNAISSANCE

The following sections provide a general description of the Site and adjoining properties. The Site reconnaissance was conducted on May 20, 2024 by Mr. Luke Swickard with Ninyo & Moore. Mr. Swickard was accompanied by Mr. Keith Manson, with CBRE and real estate agent for the seller. Table 9 below summarizes key on-Site observations. Conditions of significant concern are discussed following the table. Photographs taken during the Site reconnaissance are provided in Appendix F.

Table 9 - On-Site Observations			
Conditions	Not Observed or Noted	Observed or Noted	Significant Concerns?
Hazardous Substances		X	No
Petroleum Products	X		
Underground Storage Tanks (USTs)	X		
Aboveground Storage Tanks (ASTs)		X	No
Chemical/Petroleum Odors or Staining	X		
Standing Water/Pools/Sumps	X		
Drums and Totes	X		
Unidentified Hazardous Substance Containers	X		
Transformers/Potentially PCB-Containing Materials		X	No
Stains or Corrosion on Floors, Walls, or Ceilings	X		
Drains and Sumps		X	No
Pits, Ponds, Lagoons	X		
Solid Waste	X		
Stained Soil or Pavement	X		
Stressed Vegetation	X		
Elevators		X	No
Waste or Storm Water Discharges	X		
Septic Systems	X		
Wells	X		
Other	X		

## Aboveground Storage Tanks (ASTs)

A 50-gallon used cooking oil tank was located in the building parking garage.

### ASSOCIATED PHOTOGRAPHS

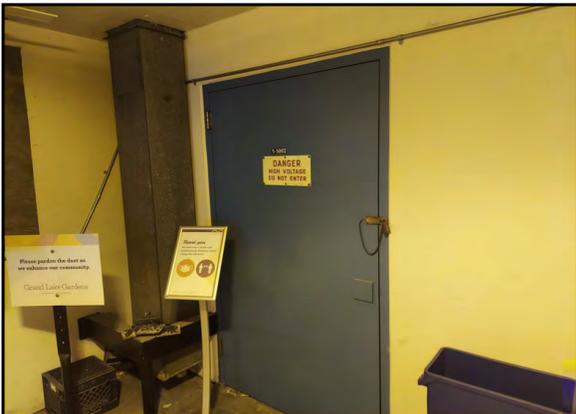

View of the 50-gallon used cooking oil tank.

## Transformers/Potentially PCB-Containing Materials

A transformer was located in the sub level parking garage but was not accessible through a locked door.

### ASSOCIATED PHOTOGRAPHS

View of the transformer room (inaccessible).

## Drains and Sumps

A sump pump was located in the maintenance storage area in the subterranean level parking garage.

## ASSOCIATED PHOTOGRAPHS

View of the sump pump in the maintenance area.

## Elevators

Two electric powered cable elevators were located in the Site building.

## ASSOCIATED PHOTOGRAPHS

View of the elevators.

View of the electric-powered elevator motors.

## 5.1 Adjoining Properties

The areas surrounding the Site consist of residential properties. The Site is bordered on the north by Grand Lake Towers (377 Santa Clara Ave); on the south by an apartment building (411 Santa Clara Ave), and vacant land; on the east by residential development (396 and 404 Santa Clara Ave), and St Maarten Apartments (400 Santa Clara Ave); and on the northwest by an apartment complex (460 Crescent St).

## 6 VAPOR ENCROACHMENT

Ninyo & Moore conducted a preliminary vapor encroachment screen (pVES) for potential chemicals of concern (COCs) that may migrate as vapors onto the Site as a result of contaminated soil and/or groundwater near the Site. The purpose of the pVES is to identify a vapor encroachment condition (VEC), which is the presence or likely presence of COC vapors in subsurface soils at the Site caused by the release of vapors from contaminated soil or groundwater either on or near the Site. The potential for VEC beneath the Site was evaluated using a Vapor Encroachment Screening Matrix (VESM). The VESM included performing a

Search Distance Test to identify if there are any known or suspect contaminated properties surrounding or upgradient of the Site within specific search radii, a COC Test (for those known or suspect contaminated properties identified within the Search Distance Test) to evaluate whether or not COCs are likely to be present, and a Critical Distance Test to evaluate whether or not COCs in a contaminated plume may be within the critical distance of the Site (100 feet for non-petroleum contaminants, and 30 feet for petroleum hydrocarbon contaminants).

Based on the results of the VESM, it is unlikely a VEC currently exists beneath the Site. A copy of the VESM is included in Appendix G.

## **7 NON-SCOPE CONSIDERATIONS**

In accordance with ASTM E1527-21, the following, which is not intended to be all inclusive, represent non-scope considerations and, therefore, were not addressed in this Phase I ESA: asbestos, radon, lead-based paint, lead in drinking water, emerging contaminants, regulatory compliance, cultural and historical risk, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, and high voltage power lines. In addition, Ninyo & Moore did not address interpretations of zoning regulations, building code requirements, or property title issues.

## **8 FINDINGS AND OPINIONS**

### **FINDINGS AND OPINIONS**

Ninyo & Moore performed a Phase I Environmental Site Assessment (ESA) on the Site located at 401 Santa Clara Avenue, in Oakland, Alameda County, California. A Summary of Findings is provided below. It should be recognized that all report details are not included in this Summary, and the report should be read in its entirety.

#### **Site Location and Use**

The approximately 0.96-acre Site is located along Santa Clara Avenue. The Site consisted of a vacant multi-story retirement home.

#### **Historical Information**

Review of historical resources, such as aerial photographs, topographic maps, fire insurance maps, and available City Directory listings, as well as through review of historical records, interviews, and research, revealed that the Site was developed with multiple residential houses from sometime prior to 1911, until the late 1960s, when the residential houses were removed, and the current two-winged Site building was constructed. No significant development has occurred on the Site since the mid 2010s, when a gathering area was constructed between the wings of the building.

Adjoining properties have primarily been residential from at least 1911 until the present. No RECs were identified in the historical review.

## **Records Review**

Review of an environmental database report obtained for this project indicated that the Site was not listed on any of the *Standard Federal, State, and Tribal Environmental Record sources*. The Site was listed on the *Additional Federal, State, Tribal and Local Environmental Record sources* regulatory databases researched by EDR, including the FINDS, ECHO, HWTS, HAZNET, and RCRA NonGen / NLR databases. Selected federal and state environmental regulatory databases as well as responses from state and local regulatory agencies were reviewed, as available. Based on the available EDR information and the nature of these specific databases listing types, no RECs were identified at the Site in connection with these database listings.

Selected federal and state environmental regulatory databases as well as responses from state and local regulatory agencies were reviewed, as available. Several off-Site facilities were located within the EDR search radius from the Site. None of the listed facilities are considered to be a REC to the Site based on several factors, including distance from the Site, location relative to the regional groundwater flow direction (e.g. hydraulically downgradient or crossgradient to the Site), database listing type, and/or affected media (soil only).

Based on the completion of the Vapor Encroachment Condition (VEC) screening matrix, it is presumed unlikely that a VEC currently exists beneath the Site.

## **Site Reconnaissance**

On May 20, 2024, Mr. Luke Swickard with Ninyo & Moore conducted a Site reconnaissance of the property that included a visual inspection of the Site, and observations of adjoining properties. At the time of the reconnaissance, the Site was improved with a 6-story vacant retirement home known as Grand Lake Gardens. The building consisted of an east wing and a west wing. The east wing included a subterranean parking garage, a parking garage/lobby level, floors 2-5 of residential tenant spaces, and floor 6 of common space and a dining hall. The west wing included floors 2-5 of residential tenant spaces. Due to the slope of the Site terrain, the west wing does not have a first floor. The wings were connected through a multi-story hallway. A gathering space and garden area were also part of the Site. In October 2022, the 5th floor on the west wing was damaged by a fire, which caused the building fire sprinklers to activate and resulted in the majority of the Site building being flooded by 1-2 feet of water. The fire and resulting flooding caused the asbestos in the ceiling to become friable and for mold to grow on the drywall. Extensive remediation efforts were undertaken to remove the asbestos and mold on the interior of the building. The building has therefore been vacant and unoccupied since the fire in October 2022. All interior furnishings have been removed, and the walls on the 5th floor were removed.

## **Adjoining Properties**

The areas surrounding the Site consist of residential properties. The Site is bordered on the north by Grand Lake Towers (377 Santa Clara Ave); on the south by an apartment building (411 Santa Clara Ave), and vacant land; on the east by residential development (396 and 404 Santa Clara Ave), and St Maarten Apartments (400 Santa Clara Ave); and on the northwest by an apartment complex (460 Crescent St).

Based on observations made during the Site reconnaissance and review of agency file information, the adjoining properties were not identified as a REC.

## **8.1 Recognized Environmental Conditions**

### **Recognized Environmental Conditions:**

This assessment has revealed no evidence of RECs in connection with the Site or adjoining properties.

## **8.2 Controlled Recognized Environmental Conditions**

### **Controlled Recognized Environmental Conditions:**

This assessment has revealed no evidence of CRECs in connection with the Site.

## **8.3 Historical Recognized Environmental Conditions**

### **Historical Recognized Environmental Conditions:**

This assessment has revealed no evidence of HRECs in connection with the Site.

## **8.4 Business Environmental Risks**

### **Business Environmental Risks:**

The following Business Environmental Risks were identified:

- Due to the age of the Site building, it is likely that lead based paint (LBP) and asbestos containing materials (ACM) are present.

## **9 DATA GAPS**

No data gaps were encountered during this Phase I ESA.

## **10 CONCLUSIONS**

### **CONCLUSIONS**

Ninyo & Moore has performed this Phase I ESA in conformance with the scope and limitations of ASTM E1527-21 of the property located at 401 Santa Clara Avenue in Oakland, Alameda County, California (the Site). Based on the information compiled during the preparation of this report, this assessment has revealed no evidence of Recognized Environmental Conditions (RECs), Controlled RECs (CRECs), or Historical RECs (HRECs) in connection with the Site, and no RECs were identified on the adjoining properties.

## **11 RECOMMENDATIONS**

### **RECOMMENDATIONS**

Based on the findings of this ESA, no further investigation is recommended at this time.

## **12 LIMITING CONDITIONS/DEVIATIONS**

This report was prepared in accordance with ASTM E1527-21. No deviations from the standard occurred in this ESA. Based on the information gathered by Ninyo & Moore for the purposes of this ESA, it is Ninyo & Moore's opinion the data obtained from the Site reconnaissance, records reviewed, and interviews conducted, is adequate to make a conclusion on the environmental condition of the Site with respect to the existence or lack of RECs.

## 14 ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined by 312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquires in conformance with the standards and practices set forth in 40 CFR Part 312.

# Luke I. Swickard

## Project Manager

### EDUCATION

B.S., Environmental Science and Management, 2017, University of California, Davis, California

### REGISTRATIONS/CERTIFICATIONS

AHERA Accredited Asbestos Inspector, #45593

40-Hour HAZWOPER with Annual Updates

As a Project Manager for Ninyo & Moore, Mr. Swickard has 6 years of experience in various environmental field work, including Phase I and Phase II ESAs, corridor studies, oversight of soil boring drilling, well installation and UST removal activities, as well as water, soil and soil vapor sampling. He has also conducted Spill Prevention, Control, and Countermeasure (SPCC) audits, prepared Storm Water Pollution Prevention Plan (SWPPP), and designed stormwater Best Management Practices (BMP).

### EXPERIENCE

**FCS New Solano County Hall of Justice Phase I Environmental Site Assessment (ESA), Fairfield, California:** Provided project management for the completion of a Phase I ESA on the approximately 15-acre Solano County Justice Campus that includes the Solano County Courthouse, Law Library, Office of Emergency Operations, Solano County Coroner, and the Solano County Jail. The Phase I ESA was conducted to evaluate the potential for Recognized Environmental Conditions (RECs) on and adjacent to the site for ongoing use of the property. Phase I ESA activities included reviewing historical and regulatory environmental data, conducting a site reconnaissance and preparing the Phase I ESA Report.

**US Agriculture Phase I ESA, Yakima, Washington:** Provided project management for the completion of four Phase I ESAs on approximately 350-acres of agricultural property that are utilized as fruit orchards. The Phase I ESAs were conducted to evaluate the potential for RECs on and adjacent to the sites for ongoing use of the properties. Phase I ESA activities included reviewing historical and regulatory environmental data, conducting a site reconnaissance and preparing the Phase I ESA Reports.

**SWCA, Transmission Line Corridor Assessments, California:** Provided project management for the completion of three corridor assessments on over 1,000 parcels along over 100-mile long transmission line routes in San Jose and the California Valley. Activities included the created of parcel information databases, reviewing historical and regulatory environmental data, conducting site reconnaissance and preparing the corridor assessments and figures.

**Mikesell Avenue Properties Reports Manteca, California:** Provided project management and oversight for the completion of six Phase I ESAs, Pipeline Risk Analyses, Railroad Safety Studies, Geotechnical Hazard Surveys, and California Department of Education Checklists, for the Manteca Unified School District. The reports were conducted to evaluate the potential for environmental hazards and RECs. Activities included reviewing historical and regulatory environmental data, conducting a site reconnaissance and preparing the Phase I ESA Report.

**City of West Sacramento Sacramento River West North Levee Corridor Assessment, West Sacramento, California:** Provided project management and implementation for the completion of a corridor assessment on over 200 parcels along a 5.8-mile long area, as part of the Sacramento River levee expansion project. Activities included reviewing historical and regulatory environmental data, conducting site reconnaissance and preparing the corridor assessment. The project was conducted in accordance with EPA Brownfields Grant guidelines and requirements.

# Luke I. Swickard

## Project Manager

**MIG Anthony Chabot Sewer Line Project San Leandro, California:** Provided project management for the completion of a Phase I ESA for the new sewer line installation in the Anthony Chabot Regional Park. Ninyo & Moore conducted the Phase I ESA to evaluate the potential for Recognized Environmental Conditions (RECs) along the 8-mile long project route, through the regional park and adjacent golf course. Activities included reviewing historical and regulatory environmental data, conducting a site reconnaissance and preparing the Phase I ESA Report.

**Floating Photovoltaic (PV) Solar Array, Windsor, California:** Provided project support for the completion of a Phase I Environmental Site Assessment (ESA) of a proposed floating PV solar array on an existing water treatment facility. Ninyo & Moore conducted the Phase I ESA to evaluate the potential for Recognized Environmental Conditions (RECs) adjacent to the site so that electrical infrastructure could be installed from the floating PV solar array to a collection system. Phase I ESA activities included reviewing historical and regulatory environmental data, conducting a site reconnaissance and preparing the Phase I ESA Report.

**Duncan Enterprises Phase I Environmental Site Assessment (ESA), Fresno, California:** Provided project management for the completion of a Phase I ESA on an approximate 14-acre industrial property that is utilized for paint, ceramics, and craft goods manufacturing and distribution. The Phase I ESA was conducted to evaluate the potential for Recognized Environmental Conditions (RECs) on and adjacent to the site for ongoing use of the property. Phase I ESA activities included reviewing historical and regulatory environmental data, conducting a site reconnaissance and preparing the Phase I ESA Report.

**Lemoine Ranch Property Phase I ESA, Alturas, California:** Provided project management for the completion of a Phase I ESA on an approximate 2,026-acre agricultural property that is utilized for cattle grazing. The Phase I ESA was conducted to evaluate the potential for RECs on and adjacent to the site for ongoing use of the property. Phase I ESA activities included reviewing historical and regulatory environmental data, conducting a site reconnaissance and preparing the Phase I ESA Report.

**Former Richmond Hospital, Richmond, California:** Provided project support for the completion of a Phase I Environmental Site Assessment (ESA) of the former Richmond Hospital for potential redevelopment. Ninyo & Moore conducted the Phase I ESA to evaluate the potential for Recognized Environmental Conditions (RECs) on or adjacent to the site. Phase I ESA Activities included reviewing historical and regulatory environmental data, conducting a site reconnaissance and preparing the Phase I ESA Report.

**City of Sacramento, 3739 Marysville Boulevard Phase II ESA, Sacramento, California:** Staff Environmental Scientist a Community Wide Assessment under an existing US EPA Brownfields grant. Review of historical information indicated the site was formerly a gasoline station and convenience store and a former dry cleaner was also identified on the adjacent parcel. Soil samples collected from beneath seven former USTs and the associated piping and dispensers indicated that an unauthorized release of petroleum hydrocarbons had occurred from the former fuel dispensing system. In 2018, Ninyo & Moore conducted a Phase I ESA on the site and the adjoining dry cleaner property. Results of the Phase I ESA, along with the results of the prior sampling and remediation were used to prepare a Sampling and Analysis Plan (SAP) for review by the RWQCB to conduct a Phase II ESA, which included installing and sampling 33 temporary soil gas samples, collecting soil samples from five soil borings, and collecting grab groundwater samples from three on-site borings.

# Brandon S. Wilken, PG

## Principal Geologist

### EDUCATION

B.S., Geology, 1996, University of Nebraska-Lincoln

### REGISTRATIONS/ CERTIFICATIONS

PG 7564 (California)

OSHA 8 hour Refresher

### PROFESSIONAL AFFILIATIONS

California Groundwater Resource Association (GRA)

Geologic Society of America (GSA) – Hydrogeology Division

As a Principal Geologist for Ninyo & Moore, Mr. Wilken has 25 years of experience in the Environmental industry and started his career working in the field all over North America for a hard rock mineral exploration company. His experience in field geophysics led him to the contaminant assessment and remediation industry, providing professional geologic services including environmental hydrogeology, site investigation, remedial planning and implementation, health risk screening, due diligence, regulatory negotiations, and litigation support. Mr. Wilken has lead investigation and remediation projects driving risk-based solutions to successfully close environmental projects and reduce client's costs. He works closely with regulators, stakeholders, and clients to negotiate effective solutions utilizing sound science, strong technical expertise, and clear communication skills. Mr. Wilken has completed projects for a wide range of clients, including major oil companies, municipalities, manufacturing groups, and individual small business owners.

### EXPERIENCE

**Aerospace Manufacturing, Confidential Manufacturing Business, Torrance, City, California:** Principal Geologist for the PFAS assessment at an operating Aerospace manufacturing facility. Assessed PFAS in soil, wastewater effluent, storm water, and groundwater by advancing five soil borings, installing three monitoring wells, collecting wastewater effluent, municipal water, and storm water samples. The data was compared, and recommendations were provided to the RWQCB.

**Major Oil Company Refinery, Martinez, California:** Principal Geologist for the environmental services at a 640-acre refining complex. The team is developing a PFAS assessment strategy for the facility to comply with a RWQCB request for assessment. Furthermore, the project team was planning to demolish an old wastewater treatment pond and developing a replacement treatment facility. Lastly the team operated, maintained, and optimized 27 groundwater extraction systems for contaminant plume control, to limit impacts to adjacent wetlands and surface water bodies.

**S Street Redevelopment Project, Sacramento, California:** Principal Geologist for the soil, soil vapor, and groundwater assessment and in situ ELSTM and zero valent iron injections to remediate site CVOC's. Assessment included advancement of soil borings, installation of groundwater monitoring and soil vapor wells, and routine sampling. Remedial activities included closing an UST in-place and injecting approximately 6,900 pounds of ELSTM and 58,000 pounds of zero valent iron into targeted areas. Interfaced with multiple stakeholders and agencies including property owner/client (Capitol Area Development Authority), City of Sacramento, RWQCB, and SCEMD.

**Former Orchard Supply Facility, Sacramento, California:** Principal Geologist for in situ EHC® injections to remediate site VOC's. Approximately 24,525 gallons of 30% EHC® slurry was injected into the subsurface; approximately 1,272 gallons of EHC® slurry was injected into the shallow zone aquifer; and approximately 23,253 gallons of EHC® slurry was injected into the deep zone aquifer. Interfaced with multiple stakeholders and agencies including property owner, client (Capitol Area Development Authority), DTSC, City of Sacramento, RWQCB, and SCEMD.

**Stewart's Automotive, Sacramento, California:** Principal Geologist for soil, soil vapor, and groundwater assessments, SVE system operation, and in situ

# Brandon S. Wilken

## Principal Geologist

EDS-ERTM and zero valent iron injections to remediate site CVOC's. Assessment included vertical delineation of groundwater, the installation of soil vapor wells, and routine sampling. Remedial activities included upgrading and operating an SVE system and the injection of approximately 31,900 pounds of EDS-ERTM; 19,900 pounds of mZVI; and 82 liters of KB-1 into targeted areas. Interfaced with multiple stakeholders and agencies including property owner/client, site tenant, City of Sacramento, Caltrans, RWQCB, and SCEMD.

**Manufacturing Facilities, San Carlos, California:** Principal Geologist and previous Senior Project Manager for assessment and remediation of PCBs and CVOCs at two adjacent manufacturing facilities. Project required managing corrective action account between two clients that at times had competing interests. Also, over saw the sale of one of the properties and the development of a plan to meet redevelopment goals which included a cap for PCBs, stormwater infrastructure decontamination, and other redevelopment activities.

**Ecodyne Pond Site, Windsor, California:** Principal Geologist for the assessment and remediation of a former wood treatment facility that utilized creosote and pentachlorophenol to treat lumber. The facility also had a lead dip-treatment tank for coating metal hardware. Brandon's team designed a remedial excavation to remove residual dioxin, lead, and poly aromatic hydrocarbons from soil at the site. The excavation extended offsite, which involved removing soil beneath a concrete-lined drainage ditch that conveyed stormwater from the site to a nearby creek. In addition, a natural gas transmission line was located approximately 2 to 4 feet below the grade of the drainage ditch. To minimize potential damage, Brandon's team worked closely with the owner of the natural gas line and excavated soil by hand digging around the natural gas line. The work was completed safely without incident. A total of 15,587 tons of non-hazardous and 6,411 tons of hazardous soil were excavated, and 4,718,739 gallons of water were extracted, and properly handled and disposed of offsite. The team also provided technical assistance to the client's legal team prior to and during remedial activities for several lawsuits related to the site. All lawsuits were resolved in our client's favor.

**Ranch Headquarters, Woodland, California:** Principal Geologist and previous Senior Project Manager for fixed fee remediation of a several acre light non aqueous phase liquid plume near a network of irrigation canals at an operating ranch/farm headquarters. He managed a cost cap and a pollution liability limit insurance policy to provide long term liability protection for the client. This project also utilized a land discharge permit obtained from the RWQCB to discharge treated groundwater from the multi-phase extraction treatment system. Successfully negotiated with the RWQCB to shut down and remove the remediation system after no reoccurrences of LNAPL were observed and approximately 1 month after the treatment system's mass removal rate went asymptotic. Post-remediation groundwater monitoring has ceased. He was working with the stakeholders to get a land covenant in place to facilitate case low threat case closure.

**Former Paint Manufacturing Facility, San Leandro, California:** Senior Project Manager for a former paint manufacturing facility contaminated with various chlorinated and non-chlorinated volatile organic compounds (VOCs). The project consisted of environmental investigations, agency liaison, and the operation and maintenance of a multi-phase extraction treatment system. The team successfully implemented a carbohydrate injection program, after active mechanical remediation reached asymptotic recovery, to increase the rate of reductive dechlorination to accelerate the timeframe to regulatory case closure.

**Service Station Site, Fremont, California:** Senior Project Manager for a service station that has petroleum hydrocarbons impacts in the first water-bearing zone, in an aquitard, and the Newark Aquifer. He was given this site to manage, and he completely reevaluated the conceptual site model during the production of a remedial action plan proposing the installation of multiple groundwater extraction recirculation wells screened in the Newark Aquifer. He convinced the client to not invest in the \$1,800,000 remediation project and to challenge the regulatory agency. He was successful in negotiating with the regulatory agency that remediation in the drinking water aquifer was not necessary. Allowing the client to pursue a more cost feasible remedial solution.

**Former Bulk Terminal, Rio Vista, California:** Senior Project Manager for a former bulk terminal with LNAPL detections directly adjacent to the Sacramento River. The site had been utilized by many businesses in its history and the first known crude oil above ground storage tank (AST) was onsite as early as 1896. Defined the extent of hydrocarbons in soil and groundwater, including LNAPL plume. Planned and submitted a remedial excavation along the Sacramento River to the Army Corps of Engineers and received approval without further review. During negotiations with the RWQCB, successfully negotiated a soil cleanup goal of 1,000 milligrams per kilogram (mg/kg) total petroleum hydrocarbons (TPH), which saved the client hundreds of thousands of dollars in cleanup costs.

## **Appendix B -**

# **Assessor's Information and Questionnaires**

**PHASE I ESA/AAI REQUIREMENTS**

According to the All Appropriate Inquiry (AAI, 40 CFR 312) requirements and ASTM (E 1527-05) guidance on conducting Phase I Environmental Site Assessments, the "user" of the assessment must provide the following information, if available, to the environmental professional in order to qualify for Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001. Please check yes or no and provide any additional information you may have regarding the site. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

**(1) Environmental cleanup liens that are filed or recorded against the site (40 CFR 132.25).**

Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state, or local law?

Yes  No

If yes, please explain:

**(2) Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).**

Are you aware of any activity use limitations (AULs), such as engineering controls, land use restrictions, or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

Yes  No

If yes, please explain:

**(3) Specialized knowledge or experience of the person/department requesting the Phase I ESA and seeking to qualify for the landowner liability protections (40 CFR 312.28).**

As the user of this ESA, do you have any specialized knowledge or experience related to the property or adjoining properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes  No

If yes, please explain:

**(4) Relationship of the purchase price to the fair market value of the property, if it were not contaminated (40 CFR 312.29).**

Does the purchase price offered for this property reasonably reflect the fair market value of the property? If there is a difference between the purchase price and the fair market value, have you considered whether the lower purchase price is because contamination is known or believed to be at the property?

Please discuss: We believe the purchase price appropriately reflects the fair market value of the property.

**(5) Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).**

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

- (a) Do you know the past uses of the property? Residential Care Facility for the Elderly
- (b) Do you know of specific chemicals that are present or once were present at the property? friable asbestos
- (c) Do you know of spills or other chemical releases that have taken place at the property? n/a
- (d) Do you know of any environmental cleanups that have taken place or are ongoing at the property?

Yes  No

If yes, please explain: The building has always been used for senior housing. A fire on the 5th floor caused existing asbestos in the building to become friable and through water used to put the fire out, transfer to other floors. Extensive remediation efforts were undertaken to remove the friable asbestos and related mold damage.

**(6) The degree of obviousness of the presence or likely presence of contamination at the property and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).**

As the user of this ESA, based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?

Yes  No

If yes, please explain: As mentioned in #5, friable asbestos was released by the fire and water damage led to mold but both impacts were remediated in collaboration with a fire and flood damage professional, third party vendors and our property insurance provider, AFM.

Andrew McDonald *Andrew McDonald* 5/28/2024

What is the intended future use of the property? \_\_\_\_\_

**Site Tenant History**

Year(s)	Tenant / Type of Business

Please fill in the following information regarding the site utilities, as appropriate and indicate the date service was originally initiated/installed:

Water Provider: EBMUD  
 Sewer Provider: EBMUD  
 Electrical Provider: PG&E  
 Natural Gas Provider: PG&E

Is the property currently used, or previously been used, for an industrial or manufacturing operation, as a gasoline station, a motor repair facility, a commercial printing facility, a dry cleaners, a photo developing laboratory, a junkyard or a landfill, or as a waste treatment, storage, disposal, processing or recycling facility?

Yes  
 No  
 Unknown  
 Type: \_\_\_\_\_

Has the facility or the property ever generated, treated, stored, transported or disposed of hazardous waste or hazardous substances other than on an incidental basis? Are waste manifest forms available?

Yes  
 No  
 Unknown

Description: \_\_\_\_\_

Have any demolition debris, hazardous substances, petroleum products, unidentified waste materials, automotive or industrial batteries, tires, trash or refuse been dumped, buried and/or burned on the property?

Yes  
 No  
 Unknown

Description: \_\_\_\_\_

**TANKS (fuel tanks, oil tanks, etc)**

Are there currently, or have there been previously, any underground storage tanks on the property such as gasoline/diesel fuel tanks, waste oil tanks?

Yes  No  Unknown

If YES, please provide number, size, age of tanks

# Tanks	_____	Size	_____	Contents	_____	Age	_____
# Tanks	_____	Size	_____	Contents	_____	Age	_____
# Tanks	_____	Size	_____	Contents	_____	Age	_____
# Tanks	_____	Size	_____	Contents	_____	Age	_____

Has there ever been a reported or unreported release or spill (including failed leak tests) from the tank? (If YES, provide details).

Yes  No  Unknown

Are there currently, or have there been previously, any above ground storage tanks on the property?

Yes  No  Unknown

If YES, please provide number, size, age of tanks

# Tanks	_____	Size	_____	Contents	_____	Age	_____
# Tanks	_____	Size	_____	Contents	_____	Age	_____
# Tanks	_____	Size	_____	Contents	_____	Age	_____
# Tanks	_____	Size	_____	Contents	_____	Age	_____

Has there ever been a reported or unreported release or spill (including failed leak tests) from the tank? (If YES, provide details).

Yes  No  Unknown

Has there ever been a reported or unreported release or spill from the tank? (If YES, provide details).

Yes  No  Unknown

Details: \_\_\_\_\_  
\_\_\_\_\_

**UTILITIES/DISCHARGES**

Is the property served, or has the property been served, by a private water well?

Yes  No  Unknown

If yes, is groundwater under the property used as a source of drinking water?

Yes  No  Unknown

Has the water from the well ever been tested? (If YES, please provide test results)

Yes  No  Unknown

Has the well water been identified as contaminated by any governmental agency?

Yes  No  Unknown

Are there any groundwater monitoring wells or irrigation wells on the property?

Yes  No  Unknown

If Yes, how many \_\_\_\_\_ and when were they installed? \_\_\_\_\_

Does the property discharge waste water, or storm water into a municipal sanitary sewer system? If Yes, does the facility discharge under an NPDES Permit or Waste Discharge Permit?

Yes  No  Unknown Permit Number/Agency: \_\_\_\_\_

Are there any current or previous sumps used for waste-water collection/treatment on the property?

Yes  No  Unknown

Are there any septic systems, dry wells or leach fields on the property?

Yes  No  Unknown If Yes, Where?: \_\_\_\_\_

**ENVIRONMENTAL COMPLIANCE**

Is there knowledge of environmental liens or governmental notification or involvement relating to past or current use or disposal of hazardous substances?

Yes  No  Unknown

Is there any environmental litigation, administrative action or cleanup action involving the property related to a release or threatened release of any hazardous substance or petroleum product?

Yes  No  Unknown

Has the property or related facilities or operations ever been the subject of enforcement actions by governmental authorities resulting in penalties of any kind?

Yes  No  Unknown

**ENVIRONMENTAL CONDITIONS**

Has groundwater or soils on the property ever been tested?

Yes  No  Unknown

If Yes, provide details:

---

Have any contaminants been identified which exceed standards or guidelines levels?

Yes  No  Unknown

If Yes, provide details:

---

**BUILDING CONDITIONS**

What is/are the age of the structure(s)? 50+

Have any major renovations been completed and if so, describe type and when completed:

New roof (2015 eastwing) (2020 westwing), new generator 2022, new boilers 2022

---

Has an asbestos and/or lead-based paint survey been performed on the site structure(s)?

Yes  No  Unknown

If Yes, was asbestos containing materials identified?

Yes  No

If Yes, was lead-based paint present identified?

Yes  No

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

## EXECUTIVE SUMMARY

### DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

### STANDARD ENVIRONMENTAL RECORDS

#### ***Lists of Federal NPL (Superfund) sites***

NPL..... National Priority List  
Proposed NPL..... Proposed National Priority List Sites  
NPL LIENS..... Federal Superfund Liens

#### ***Lists of Federal Delisted NPL sites***

Delisted NPL..... National Priority List Deletions

#### ***Lists of Federal sites subject to CERCLA removals and CERCLA orders***

FEDERAL FACILITY..... Federal Facility Site Information listing  
SEMS..... Superfund Enterprise Management System

#### ***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE..... Superfund Enterprise Management System Archive

#### ***Lists of Federal RCRA facilities undergoing Corrective Action***

CORRACTS..... Corrective Action Report

#### ***Lists of Federal RCRA TSD facilities***

RCRA-TSDF..... RCRA - Treatment, Storage and Disposal

#### ***Lists of Federal RCRA generators***

RCRA-LQG..... RCRA - Large Quantity Generators  
RCRA-VSQG..... RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

#### ***Federal institutional controls / engineering controls registries***

LUCIS..... Land Use Control Information System  
US ENG CONTROLS..... Engineering Controls Sites List  
US INST CONTROLS..... Institutional Controls Sites List

#### ***Federal ERNS list***

ERNS..... Emergency Response Notification System

#### ***Lists of state- and tribal (Superfund) equivalent sites***

RESPONSE..... State Response Sites

## EXECUTIVE SUMMARY

### ***Lists of state and tribal landfills and solid waste disposal facilities***

SWF/LF..... Solid Waste Information System

### ***Lists of state and tribal leaking storage tanks***

INDIAN LUST..... Leaking Underground Storage Tanks on Indian Land

### ***Lists of state and tribal registered storage tanks***

FEMA UST..... Underground Storage Tank Listing  
AST..... Aboveground Petroleum Storage Tank Facilities  
INDIAN UST..... Underground Storage Tanks on Indian Land

### ***Lists of state and tribal voluntary cleanup sites***

INDIAN VCP..... Voluntary Cleanup Priority Listing  
VCP..... Voluntary Cleanup Program Properties

### ***Lists of state and tribal brownfield sites***

BROWNFIELDS..... Considered Brownfields Sites Listing

### **ADDITIONAL ENVIRONMENTAL RECORDS**

#### ***Local Brownfield lists***

US BROWNFIELDS..... A Listing of Brownfields Sites

#### ***Local Lists of Landfill / Solid Waste Disposal Sites***

WMUDS/SWAT..... Waste Management Unit Database  
SWRCY..... Recycler Database  
HAULERS..... Registered Waste Tire Haulers Listing  
INDIAN ODI..... Report on the Status of Open Dumps on Indian Lands  
ODI..... Open Dump Inventory  
DEBRIS REGION 9..... Torres Martinez Reservation Illegal Dump Site Locations  
IHS OPEN DUMPS..... Open Dumps on Indian Land

US HIST CDL..... Delisted National Clandestine Laboratory Register  
HIST Cal-Sites..... Historical Calsites Database  
SCH..... School Property Evaluation Program  
CDL..... Clandestine Drug Labs  
Toxic Pits..... Toxic Pits Cleanup Act Sites  
US CDL..... National Clandestine Laboratory Register

#### ***Local Land Records***

LIENS..... Environmental Liens Listing  
LIENS 2..... CERCLA Lien Information  
DEED..... Deed Restriction Listing

## EXECUTIVE SUMMARY

### **Records of Emergency Release Reports**

HMIRS.....	Hazardous Materials Information Reporting System
CHMIRS.....	California Hazardous Material Incident Report System
LDS.....	Land Disposal Sites Listing
MCS.....	Military Cleanup Sites Listing
SPILLS 90.....	SPILLS 90 data from FirstSearch

### **Other Ascertainable Records**

FUDS.....	Formerly Used Defense Sites
DOD.....	Department of Defense Sites
SCRD DRYCLEANERS.....	State Coalition for Remediation of Drycleaners Listing
US FIN ASSUR.....	Financial Assurance Information
EPA WATCH LIST.....	EPA WATCH LIST
2020 COR ACTION.....	2020 Corrective Action Program List
TSCA.....	Toxic Substances Control Act
TRIS.....	Toxic Chemical Release Inventory System
SSTS.....	Section 7 Tracking Systems
ROD.....	Records Of Decision
RMP.....	Risk Management Plans
RAATS.....	RCRA Administrative Action Tracking System
PRP.....	Potentially Responsible Parties
PADS.....	PCB Activity Database System
ICIS.....	Integrated Compliance Information System
FTTS.....	FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
MLTS.....	Material Licensing Tracking System
COAL ASH DOE.....	Steam-Electric Plant Operation Data
COAL ASH EPA.....	Coal Combustion Residues Surface Impoundments List
PCB TRANSFORMER.....	PCB Transformer Registration Database
RADINFO.....	Radiation Information Database
HIST FTTS.....	FIFRA/TSCA Tracking System Administrative Case Listing
DOT OPS.....	Incident and Accident Data
CONSENT.....	Superfund (CERCLA) Consent Decrees
INDIAN RESERV.....	Indian Reservations
FUSRAP.....	Formerly Utilized Sites Remedial Action Program
UMTRA.....	Uranium Mill Tailings Sites
LEAD SMELTERS.....	Lead Smelter Sites
US AIRS.....	Aerometric Information Retrieval System Facility Subsystem
US MINES.....	Mines Master Index File
ABANDONED MINES.....	Abandoned Mines
UXO.....	Unexploded Ordnance Sites
DOCKET HWC.....	Hazardous Waste Compliance Docket Listing
FUELS PROGRAM.....	EPA Fuels Program Registered Listing
PFAS NPL.....	Superfund Sites with PFAS Detections Information
PFAS FEDERAL SITES.....	Federal Sites PFAS Information
PFAS TSCA.....	PFAS Manufacture and Imports Information
PFAS TRIS.....	List of PFAS Added to the TRI
PFAS RCRA MANIFEST.....	PFAS Transfers Identified In the RCRA Database Listing
PFAS ATSDR.....	PFAS Contamination Site Location Listing
PFAS WQP.....	Ambient Environmental Sampling for PFAS
PFAS NPDES.....	Clean Water Act Discharge Monitoring Information
PFAS ECHO.....	Facilities in Industries that May Be Handling PFAS Listing

## EXECUTIVE SUMMARY

PFAS ECHO FIRE TRAINING	Facilities in Industries that May Be Handling PFAS Listing
PFAS PART 139 AIRPORT	All Certified Part 139 Airports PFAS Information Listing
AQUEOUS FOAM NRC	Aqueous Foam Related Incidents Listing
BIOSOLIDS	ICIS-NPDES Biosolids Facility Data
PFAS	PFAS Investigation Site Location Listing
AQUEOUS FOAM	Former Fire Training Facility Assessments Listing
CA BOND EXP. PLAN	Bond Expenditure Plan
CHROME PLATING	Chrome Plating Facilities Listing
CUPA Listings	CUPA Resources List
EML	Emissions Inventory Data
ENF	Enforcement Action Listing
Financial Assurance	Financial Assurance Information Listing
ICE	Inspection, Compliance and Enforcement
HWP	EnviroStor Permitted Facilities Listing
HWT	Registered Hazardous Waste Transporter Database
MINES	Mines Site Location Listing
MWMP	Medical Waste Management Program Listing
NPDES	NPDES Permits Listing
PEST LIC	Pesticide Regulation Licenses Listing
PROC	Certified Processors Database
HAZMAT	Hazardous Material Facilities
UIC	UIC Listing
UIC GEO	UIC GEO (GEOTRACKER)
WASTEWATER PITS	Oil Wastewater Pits Listing
WDS	Waste Discharge System
WIP	Well Investigation Program Case List
MILITARY PRIV SITES	MILITARY PRIV SITES (GEOTRACKER)
PROJECT	PROJECT (GEOTRACKER)
WDR	Waste Discharge Requirements Listing
CIWQS	California Integrated Water Quality System
CERS	CERS
NON-CASE INFO	NON-CASE INFO (GEOTRACKER)
OTHER OIL GAS	OTHER OIL & GAS (GEOTRACKER)
PROD WATER PONDS	PROD WATER PONDS (GEOTRACKER)
SAMPLING POINT	SAMPLING POINT (GEOTRACKER)
WELL STIM PROJ	Well Stimulation Project (GEOTRACKER)

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

EDR MGP	EDR Proprietary Manufactured Gas Plants
EDR Hist Auto	EDR Exclusive Historical Auto Stations

### EDR RECOVERED GOVERNMENT ARCHIVES

#### ***Exclusive Recovered Govt. Archives***

RGA LF	Recovered Government Archive Solid Waste Facilities List
RGA LUST	Recovered Government Archive Leaking Underground Storage Tank

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

## EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### **STANDARD ENVIRONMENTAL RECORDS**

#### ***Lists of Federal RCRA generators***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/04/2023 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

#### ***Lists of state- and tribal hazardous waste facilities***

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/22/2024 has revealed that there are 4 ENVIROSTOR sites within approximately 1 mile of the target property.

### ***Lists of state and tribal leaking storage tanks***

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 31 LUST sites within approximately 0.5 miles of the target property.

### **Lists of state and tribal registered storage tanks**

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 3 UST sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

### ADDITIONAL ENVIRONMENTAL RECORDS

#### **Local Lists of Hazardous waste / Contaminated Sites**

CERS HAZ WASTE: List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.

A review of the CERS HAZ WASTE list, as provided by EDR, and dated 01/16/2024 has revealed that there is 1 CERS HAZ WASTE site within approximately 0.25 miles of the target property.

#### **Local Lists of Registered Storage Tanks**

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 5 SWEEPS UST sites within approximately 0.25 miles of the target property.

### **Other Ascertainable Records**

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/04/2023 has revealed that there are 93 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER site within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 18 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### *EDR Exclusive Records*

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 14 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Site Name: GRAND MOBIL  
Violation Date: 11-12-2015  
Citation: 22 CCR 16 66266.130 - California Code of Regulations, Title 22, Chapter 16, Section(s) 66266.130  
Violation Description: Failure to properly handle, manage, label, and recycle used oil and fuel filters.  
Violation Notes: Returned to compliance on 11/12/2015. OBSERVATION: One black metal 55-gallon open top drum containing drained used oil filters missing accumulation start date on label. CORRECTIVE ACTION: Accumulation start date was entered at time of inspection.  
Violation Division: Alameda County Environmental Health  
Violation Program: HW  
Violation Source: CERS,

Site ID: 120348  
Site Name: GRAND MOBIL  
Violation Date: 11-04-2019  
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)  
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.  
Violation Notes: Returned to compliance on 11/04/2019. The used oil tank was observed without the accumulation start date. Corrected on site. Ensure that the accumulation start date is on the tank.  
Violation Division: Alameda County Environmental Health  
Violation Program: HW  
Violation Source: CERS,

Site ID: 120348  
Site Name: GRAND MOBIL  
Violation Date: 11-09-2017  
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665  
Violation Description: Failure to comply with one or more of the following: Failure to install or maintain a liquid-tight spill bucket. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container. Be resistant to galvanic corrosion.  
Violation Notes: Returned to compliance on 11/13/2017. OBSERVATION: The Regular Unleaded direct bury spill container failed when tested. All spill containers shall have a minimum capacity of five gallons and be

capable of containing a spill or overfill until it is detected or cleaned up. CORRECTIVE ACTION: Immediately contact a properly licensed, trained, and certified contractor to repair or replace the spill container under permit and inspection of the CUPA. Since the spill container is a direct bury, red tag 0019 was affixed to prevent fuel input.

Violation Division: Alameda County Environmental Health  
Violation Program: UST  
Violation Source: CERS,

Site ID: 120348  
Site Name: GRAND MOBIL  
Violation Date: 11-04-2019  
Citation: HSC 6.5 25160.2 - California Health and Safety Code, Chapter 6.5, Section(s) 25160.2

Violation Description: Failure of a generator of hazardous waste that meets the conditions to be transported on a consolidated manifest to comply with one or more of the required consolidated manifesting procedures and retain copies of receipts for three years.

Violation Notes: Returned to compliance on 11/20/2019. Owner/Operator failed to comply with one or more consolidated manifesting requirements. Manifests for the paper filters were not maintained onsite. Provide used oil filter manifests to ACDEH within 30 days. Continue to maintain the manifests and have three years of manifests onsite.

Violation Division: Alameda County Environmental Health  
Violation Program: HW  
Violation Source: CERS,

Site ID: 120348  
Site Name: GRAND MOBIL  
Violation Date: 11-04-2019  
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)

Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.

Violation Notes: Returned to compliance on 11/20/2019. Uniform Hazardous Waste Manifests for the paper used oil filters were not available at the time of inspection. Locate a copy of all manifests for the paper used oil filters and submit copies to the CUPA.

Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)

Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violation Notes: Returned to compliance on 11/20/2019. Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days. Used oil bills of lading were available for December 2018 and July 26, 2019 but nothing in between. You are required to dispose of hazardous waste every 180 as a small quantity generator. Provide a bill of lading for the time period between December 2018 and July 2019. Ensure that waste is picked up at least every 180 days.

Eval Notes: ACDEH inspector arrived on site at 3374 Grand Ave Oakland, Grand Mobil, for the Hazardous Materials Business Plan inspection. Facility owner Christina Pham assisted with the inspection. Facility is a gas station that also runs an auto repair shop in garage. The facility utilizes a 150-gallon tank storing new motor oil. The following hazardous waste was observed above threshold quantities: -250 gallon used oil tank -2x55 gallon drum used oil filter -55-gallon waste antifreeze Waste streams include used oil, used oil filters, antifreeze and oily rags. Facility utilizes a 250-gallon single wall tank for used oil. The tank is encased in a secondary metal containment housing that provides visual access to any overflow or leak. The tank is equipped with a pump, which is utilized during the transport of used oil, from the 20-gallon carboy observed on site, into the used oil tank. The tank satisfies overfill through use of a gauge that... [TRUNCATED: Refer to full Inspection Report]

Environmental Interest/Information System:

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

RWQCB Region: SAN FRANCISCO BAY RWQCB (REGION 2)  
Site History: Alameda County Department of Environmental Health (ACDEH) has been providing regulatory environmental oversight for the investigation and cleanup activities associated with Cleanup Site Program Case No. RO0003405 since December 2019 subsequent to referral by the City of Oakland Planning and Building Department and a property transaction. To redevelop the Site, environmental investigations are required to evaluate impacts to the subsurface from historic land use and develop corrective actions to reduce potential risk to construction workers, the surrounding community, and occupants of the new development. Subsurface investigations have been conducted to evaluate historical operations at the Site including but not limited to residential dwellings and various commercial configurations such as churches and restaurants. Results of these subsurface investigations has identified chemicals of concern (COCs) in environmental media (soil). To address this contamination prior to development, proposed corrective actions include the hazardous material survey and abatement of the existing onsite building and hardscape; demolition of existing Site buildings and above ground infrastructure; remediation and off-Site disposal of impacted soil at a permitted disposal facility or capping and consolidation under site hardscape. Proposed redevelopment of the Site includes a 6-story 53-residential unit building with commercial and parking on the ground floor, additional parking and open scape on floor 2 and residential units on the upper four floors The half-acre Site is currently occupied by Vegan Mob, a restaurant located at 500 Lake Park Avenue. The Site is in the Grand Lake Neighborhood, a mixed commercial and residential area, and near Interstate 580, City of Oakland parks (East Shore and Splash Pad) are located adjacent to the Site in northeast tip of Lake Merritt. The Site operated as residential use until approximately 1957 when the former building was demolished, and the current-day

restaurant building was constructed along Lake Park Avenue. The northeast portion of the Site, located along Cheney Avenue, contained residential buildings and a church until 1968. Since then this portion of the Site has been used as a parking lot for the restaurant. No industrial activities are known to have occurred on the Site. Environmental investigations were conducted in 2018 to assess the type and extent of contamination in fill, soil, and groundwater at the Site from historic land uses and aerial deposition from vehicle exhaust from Interstate 580. Lead has been detected in soil above applicable regulatory agency screening levels for residential land use in the portion of the Site located along Lake Shore Avenue. Diesel and motor oil range total petroleum hydrocarbons (TPH-d and TPH-mo), acetone, and methyl ethyl ketone has also been detected in soil at concentrations that do not exceed applicable regulatory screening levels. TPH-d has been detected in groundwater at concentration below applicable regulatory screening levels. Additional subsurface investigations will be conducted (Q2020) to assess the extent of elevated lead in soil. Soil samples will also be analyzed for asbestos and polychlorinated biphenyls (PCBs), constituents typically associated with building materials and demolition before the 1980s. Sampling results from this subsurface investigation will guide corrective actions to address the elevated lead during Site construction.

Military DOD Site: No  
Facility Project Subtype: Not reported  
RWQCB Region: SAN FRANCISCO BAY RWQCB (REGION 2)  
Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A complete case file for this site is located on the Alameda County Environmental Health website at: <http://www.acgov.org/MAPS/DEH/InspectionResults/>. At the time of closure of LUST Case No. RO0003143; T1000006106 the Site is a single family residential home located at 811 Paramount Road in Trestle Glen, a historic residential district in Oakland, California. An approximately 350-gallon underground storage tank (USST) was removed from the site on December 16, 2013. The tank was found to be in poor condition with at least one visible hole. Soil discoloration and petroleum hydrocarbon odors were observed in the stockpiled soil and soil underlying the tank. Soil samples collected from the tank pit contained up to 9,290 ppm of total petroleum hydrocarbons (C10-C28). The tank pit was overexcavated to a depth of approximately 12 feet bgs to remove petroleum hydrocarbon contaminated soils. Following the overexcavation, two soil samples were collected from the bottom of the excavation at a depth of approximately 12 feet bgs. The soil sample from the western end of the tank pit contained 3,960 ppm of TPH (C10-C28). Soil vapor sampling has indicated elevated Total Petroleum Hydrocarbons as gasoline (TPHg) and benzene at the UST location, which is reported to have been a heating oil UST. Additionally 1,1,2-Trichloroethane was detected in soil vapor at concentrations two orders of magnitude above the San Francisco Bay Regional Board's Environmental Screening Levels (ESLs). The soil vapor sampling locations are within 5 feet of the residential home. Subsequent investigations indicated the chlorinated compounds were due to the use of batch certified Summa canisters. Investigation activities occurred between 2013 to 2018 and investigated hydrocarbon contamination in soil, soil gas, indoor air, and outdoor air at the subject site. Soil bores (SB1 through SB11) were installed at the site to a total depth of 36 feet bgs. Analysis for TPHd, TPHmo, and TPHg, (EPA Method 8015M) and full scan VOCs by EPA Method 8260 was conducted. Groundwater was not encountered to a depth of 36 feet bgs; consequently, a groundwater sample was not collected. Soil vapor was measured in two soil vapor wells (SG5.5 and SG-13) at depths 5.5 feet bgs and 13 feet bgs respectively. These samples were analyzed for TPHg, TPHd, and full scan VOCs using EPA analysis method TO-15 and TO-17. Subslab soil vapor was measured from samples SSG1, SSG1-d, and SSG2 and was analyzed using EPA analysis method TO-15 and TO-17. Indoor air samples were collected from the crawl space (IA-1), a basement room (IA-2), and the first floor living room (IA-3), using EPA analysis method TO-15 and TO-17. Ambient air samples were also taken from sample OA-1 using EPA analysis method TO-15 and TO-17. Remedial excavation was conducted in August 2018. Soil confirmation samples (EB-16, EE-13, ES-12) were taken from the base and sidewalls

of the remedial excavation. These samples were analyzed for TPHd, TPHmo, TPHg, and full scan VOCs. This LUST case was evaluated for closure consistent with the State Water Resource Control Board's Low-Threat Underground Storage Tank Closure Policy (LTCP) for petroleum related contaminants. ACDEH determined that the site met all the LTCP General Criteria and Media Specific Criteria and therefore poses a low risk to human health and safety and the environment. The determination was based on receptors and environmental conditions identified at and in the vicinity of the site at the time of closure and reasonably anticipated near-term future scenarios. While the site met all General and Media-Specific Criteria, the case was required to remain open due to the documentation of naphthalene vapor intrusion to the basement and upper floor in the living room. Ultimately, the identification of a storm drain preferential pathway and a data cable conduit between floors was determined to be the mechanism of vapor intrusion. Remedial overexcavation of the residual source in the vicinity of soil bore SB7 was conducted to a depth of 13 to 16 feet bgs, and all elevated concentrations of petroleum hydrocarbons in soil were removed from the site and disposed of offsite at the Keller Canyon Landfill. Limited residual contamination in the vicinity of SB4 remains beneath the site but is not expected to significantly affect vapor intrusion to the structure.

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Leak Reported Date: 01/21/2020  
How Discovered: Tank Closure  
How Discovered Description: Not reported  
Discharge Source: Piping, Tank  
Discharge Cause: Unknown  
Stop Method: Close and Remove Tank  
Stop Description: Not reported  
No Further Action Date: 03/31/2021  
CA Water Watershed Name: South Bay - East Bay Cities (204.20)  
Dwr Groundwater Subbasin Name: Santa Clara Valley - East Bay Plain (2-009.04)  
Disadvantaged Community: Not reported  
CA EnviroScreen 3 Score: 16-20%  
CA EnviroScreen 4 Score: 15-20%  
Military DOD Site: No  
Facility Project Subtype: Not reported  
RWQCB Region: SAN FRANCISCO BAY RWQCB (REGION 2)  
Site History: A Remedial Action Completion Certification and Case Closure Letter was issued by Alameda County Department of Environmental Health (ACDEH) on March 31, 2021 for Leaking Underground Storage Tank Cleanup Case RO0003427 for the completion of investigations and remedial actions for the unauthorized releases of petroleum into the environment from underground storage tanks (USTs), piping and other appurtenant structures at the site. ACDEH's LUST case closure determination was based on information in the above case file and an analysis and low threat determination of risk to human health, safety, and the environment from residual petroleum constituents in the subsurface in accordance with the State Water Resources Control Board's Low-Threat Underground Storage Tank Closure Policy and under the current land use scenarios at and in the vicinity of the Site at the time of issuance of this letter. Risk to receptors under different land use scenarios or development configurations, and to other non-UST petroleum chemicals of concern related to historical land use were not considered in the closure determination of this LUST Case.

 RWQCB Region: SAN FRANCISCO BAY RWQCB (REGION 2)  
 Site History: The site is currently an active fueling station with three dispenser islands. Four tanks were removed in October 1985. Stained odiferous soil was noted. Free product was observed in well S-1. In May 1990, three soil borings were advanced adjacent to the UST complex. Soil samples indicated that TPHg was present in concentrations up to 7,500 mg/kg. In June 1990 two 10,000-gallon gasoline USTs, one waste-oil UST (variously reported having a capacity of 120-, 280-, and 550 gallons), were removed and replaced by 2 12,000-gal fuel and 1 550-gal waste oil tank. Piping and dispensers were also removed and replaced at the site. Petroleum hydrocarbons were detected in soil.

Approximately 250 cu yds soil excavated and removed from site. Groundwater wells were subsequently installed on-site and petroleum hydrocarbons were detected in groundwater. Free product was observed in wells U-1 and U-2 in the late 1990s, and was last observed in March 1998. Free product skimmers operated in wells U-1 and U-2 in 1996 and 1997. The 550-gal waste oil tank removed and product piping was removed and replaced in November 1996. An additional 276 tons of soil was excavated and off-hauled at the time of the waste oil tank removal. A tank cavity well was installed on 6/24/1997 and one on 9/28/2000. A minimum of 36,700 gallons of contaminated groundwater was extracted via these wells and transported for off-site disposal. A 6-day DPE event was performed in April 1999. Ozone sparging pilot test was performed June through August 2006 with post test monitoring. Groundwater monitoring has been performed through May 2015.

Stop Method:	Close and Replace Tank
Stop Description:	UST infrastructure removal
No Further Action Date:	Not reported
CA Water Watershed Name:	South Bay - East Bay Cities (204.20)
Dwr Groundwater Subbasin Name:	Santa Clara Valley - East Bay Plain (2-009.04)
Disadvantaged Community:	Not reported
CA Enviroscreen 3 Score:	41-45%
CA Enviroscreen 4 Score:	40-45%
Military DOD Site:	No
Facility Project Subtype:	Not reported
RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	<p>The site has been a service station since the 1950s. In 1967 a 2,000-gallon release was discovered, and the adjacent property owner complained about gasoline odors in their basement. In 1980 the adjacent owner again complained about odors, and the USTs were replaced; however, they were found to be tight, and it was assumed air conditioning may have drawn in the vapors. A sheet of plastic was placed between 0 and 14 to 16 feet deep onsite, as a barrier to minimize infiltration into the next door basement. In May 1981 free-product was discovered, a 24-inch extraction well was installed, but appears not to have been used. In 1984 station upgrades found two USTs in the sidewalk and they were abandoned in place with grout, and tenants next door again complained of odors. Sheen was not seen on groundwater in the basement sump at that time; however, a 1985 sample of the sump water contained gasoline-related aromatic compounds. In 1985 a stick hole in a gas UST was discovered, repaired, and the UST put back in service. In 1991 a drive-off event occurred and a small volume of product was lost. In 1991 all extant wells (except the 24-inch well), were destroyed due to damage from the 1984 upgrades, and onsite wells MW-1 to MW-4 were installed. Groundwater monitoring was initiated at that time. In July 1992 offsite wells MW-5 to MW-8 were installed. In April 1999 offsite well MW-9 was installed, and wells MW-2 to MW-4 were abandoned and replaced with MW-2A to MW-4A. Basement sump water was again sampled in 2005 and TPHD, TPHG, BTEX, and several oxygenates were detected; additional events were proposed but do not appear to have occurred. In August 2006 two soil bores were installed offsite in an attempt to define the extent in soil to the northwest of the site. In August 2010, four 10,000-gallon gasoline USTs were removed from the site and excavation and product line confirmation samples were collected, and documented soil contamination. In November 2013 seven soil bores were installed on- and offsite, to help define the extent of the soil and groundwater plume. Crawl space, sub-slab, and indoor air vapor samples were also collected at the adjacent downgradient properties, 3008 and 3014 Lakeshore Avenue. In September and October 2016 soil bores B-8 to B-13 were installed onsite, and well MW-10 was installed downgradient of the site. Additional wells and soil bores across Lakeshore could not be installed as planned due to extensive underground utility locations. Additional soil gas and indoor air sampling was conducted in March 2018 at the adjacent downgradient properties, and is planned again in 2019. ACDEH met with the property owner FWS Highland, LLC in 2022 and CEMC in a stakeholder meeting on January 6, 2023, and was informed that the property owner is currently planning to redevelop the Site with a mixed-use or residential building, rather than the previously proposed commercial site redevelopment of an outdoor restaurant area. The property owner's intent to redevelop the Site with a mixed-use or residential</p>

building was confirmed in a letter sent to ACDEH on January 9, 2023 and uploaded to the Case file on GeoTracker. The schedule associated with the permit approval by the City of Oakland Building and Planning Department for a mixed use/residential building allows time for installation of the groundwater monitoring well network prior to excavation to support the extents of excavation presented in the Design Drawings, Former Chevron Service Station No. 90121, TPH Excavation Dated August 2022, and approved by ACDEH on September 16, 2022. The new monitoring well network will also inform the need for ISCO as a polishing step, and whether an ISCO pilot test will be required.

Military DOD Site: No  
Facility Project Subtype: Not reported  
RWQCB Region: SAN FRANCISCO BAY RWQCB (REGION 2)  
Site History: The site has been occupied by a service station since as early as 1946; however, the earliest date is unknown. The former USTs are reported to have been installed in the mid-1980 s. Wells MW-8A to MW-8D were installed in June 1988. In September 1988 a soil gas survey was conducted. In October 1988 soil bores B-1 to B-4 were installed. In March 1989 bore B-5 was installed, MW-8D was destroyed, and wells MW-8F and MW-8G were installed. In October 1989 bores B-8 to B-9 were installed. In January 1990 bores B-10 to B-12 and wells MW-8H to MW-8K were installed. Bores B-13 and B-14 are reported to have been installed in the second quarter 1990. The waste oil UST was removed in September 1990 and an overexcavation of the area was conducted in October 1990. In January 1991 a clay pipe previously used to convey waste oil to the waste oil UST was removed; the pipe was characterized as broken at the time of installation. In April 1992 three 10,000-gallon gasoline USTs, two dispenser islands, and piping were removed from the site, and UST pit was overexcavated. In May 1992 an overexcavation of the former dispenser area was conducted. In August 1992 wells MW-8A and MW-8E were decommissioned. In January 1993 the northern area of the site was excavated. In April 1993 wells MW-8A and MW-8C were decommissioned. In May 1993 wells MW-8K and MW-8L were installed. Between December 1996 and March 2000 ORC socks were installed and periodically replaced in wells MW-8F, MW-8G, and MW-8I. In November 2006 bores S-1 to S-3 were installed for a soil vapor investigation. In March 2008 soil vapor bores SV-4 to SV-8 were installed, but due to shallow groundwater, vapor samples could not be collected; grab groundwater samples were instead collected. Verification groundwater monitored was conducted in late 2009.

CA Enviroscreen 3 Score: 16-20%  
CA Enviroscreen 4 Score: 25-30%  
Military DOD Site: No  
Facility Project Subtype: Not reported  
RWQCB Region: SAN FRANCISCO BAY RWQCB (REGION 2)  
Site History: Alameda County Department of Environmental Health (ACDEH) opened case number RO0003533 in 2022 to investigate impacts to environmental media from historical land use at or in the vicinity of the Site following closure-in-place of a 1,500-gallon heating oil underground storage tank. Site investigations were conducted from 2022 to 2023. The lateral extent of the TPH-d plume has been defined to below 1,000 g/L, which is below the odor/nuisance level of 5,000 g/L for non-drinking water. No TPH-g or benzene were detected in the groundwater samples at or above their respective laboratory method reporting limit. The concentrations of ethylbenzene, total xylenes, and chloroform were below their respective vapor intrusion ESLs and are likely not sourced from the heating oil UST. With the provision that the information provided to this agency is accurate and representative of actual Site conditions, ACDEH has determined that there is a low threat to human health and safety and the environment at and in the vicinity of the Site from residual subsurface contamination associated with former uses of the Site and the Site configuration at the time of closure of the Case.

RWQCB Region: SAN FRANCISCO BAY RWQCB (REGION 2)  
Site History: Five USTs were removed from the site in 1991 and 1994. Contaminated soil was excavated and groundwater wells were installed. A case closure summary was issued by ACEH on November 19, 1996 with land use restrictions including a 15 foot set back from Grand Ave or the excavation of soil to 15 feet within the setback zone. Additional soil samples were collected in June 2001 to evaluate conditions within the setback zone. Following additional sampling and analysis in 2001, ACEH and RWQCB concurred with the recommendation that the site have unrestricted land use. ACEH issued a closure letter without restrictive land use conditions on October 11, 2001. Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>.

Military DOD Site: No  
Facility Project Subtype: Not reported  
RWQCB Region: SAN FRANCISCO BAY RWQCB (REGION 2)  
Site History: Three 10,000-gallon USTs were removed sometime prior to 1991; however, there is no documentation of the removals. A waste oil tank was removed in 1996. Subsurface investigations have been conducted between 1997 and 2019. The Site is being redeveloped in conjunction with the adjacent parcel. An SCP Case RO0003259 has been opened for the redevelopment of both parcels. Remediation and corrective action activities for this LUST case were performed in 2020 in conjunction with ACDEH-approved corrective actions being implemented during site redevelopment under SCP Case RO0003259. Corrective actions for petroleum hydrocarbons have included UST system removal, remedial soil excavation, groundwater remediation, and installation of vapor intrusion mitigation and migration engineering controls within the new building. Off-site groundwater monitoring wells were installed in March 2022 and the results indicate low residual concentrations of petroleum hydrocarbon constituents in groundwater. Elevated petroleum constituents remain in soil vapor at the site however the risk to occupants of the building are mitigated through the installation of the VIMMECs. Thus ACDEH has listed the case as eligible for closure conditioned upon a second two more quarterly groundwater events in June and September 2022 to confirm groundwater concentrations.

Surrounding land use is commercial. In April 1986, four exploratory borings (S-A through S-D) were advanced within the area of the tank complex to total depths of 20.5 feet below grade (fbg). Soil samples contained up to 5,700 ppm TPH. In December 1986, a semi-quantitative soil vapor survey was conducted using a portable gas chromatograph. The soil vapor survey reported very high vapor concentrations near the storage tank fills and pump island closest to MacArthur Boulevard. Moderately high concentrations were reported beneath much of the remaining area. No additional soil vapor sampling and laboratory analysis was conducted to confirm or quantify these results. In March 1987, three soil vapor extraction (SVE) wells (VR-1, VR-2, and VR-3) were installed. The SVE treatment system operated between April and November 1987. In August 1987, two soil borings (B-1 and B-2) were advanced to characterize petroleum hydrocarbons remaining in the soil. Soil samples contained up to 1,870 ppm TPHg. In November 1987, two 8,000-gallon gasoline USTs and one 10,000-gallon gasoline UST were removed. Soil samples collected from the bottom of the UST excavation contained up to 480 ppm TPHg, 4.3 ppm benzene, 2.2 ppm toluene, and 55 ppm xylenes. New USTs were installed in the same excavation. In August 1989, three soil borings (SB-1, SB-2, and SB-3) were advanced in the area adjacent to the pump islands. Soil samples contained up to 490 ppm TPHg. Benzene was not detected at concentrations above the reporting limit in these soil samples. On October 10, 1989, three borings (GS-1, GS-2, and GS-3) were advanced to obtain grab groundwater samples from the area adjacent to the pump islands. Grab groundwater samples taken from GS-2 contained up to 8,800 ppb TPHg, 380 ppb benzene, 27 ppb toluene, 1,200 ppb ethylbenzene, and 62 ppb xylenes. These constituents were not detected at concentrations above the reporting limit in the grab groundwater sample from GS-1. Monitoring well MW-4 was installed in January 1990. In May 1990, six borings (Probe 1 through Probe 6) were advanced in the sidewalk along West MacArthur Boulevard to obtain shallow groundwater samples. Grab groundwater samples contained up to 31,000 ppb TPHg, 430 ppb benzene, 600 ppb toluene, 240 ppb ethylbenzene, and 1,400 ppb xylenes. TPHg and BTEX were not detected at concentrations above the reporting limit in grab groundwater</p>

**SHELL #13-5676 (Continued)**

**S110060316**

samples collected from borings Probe 1 or Probe 3. In October 2002, a sensitive receptor survey (SRS) and conduit study identified a storm drain located just west of the site, along West MacArthur Boulevard, as a potential preferential pathway for contaminant migration. In October 2003, an additional SRS was completed to identify basements within 200 feet, surface water, and sensitive habitats within 500 feet, hospitals, residential care and childcare facilities within 1,000 feet, and water wells within one-half mile. No basements were observed within 200 feet and no surface water or sensitive habitats were observed within 500 feet. In March 2004, two soil borings (SB-1 and SB-2) were drilled adjacent to the storm drain located west of the site, and soil and groundwater samples were collected. Soil samples contained up to 43 ppm TPHg and 0.0099 ppm MTBE. BTEX were not detected at concentrations above the reporting limit in the soil samples. Grab groundwater samples contained up to 10,000 ppb TPHg, 430 ppb benzene, 75 ppb toluene, 98 ppb ethylbenzene, 44 ppb xylenes, and 320 ppb MTBE. In April 2005, soil samples were collected from beneath the site's dispensers and piping following an upgrade of the site's fueling system. Soil samples contained up to 2,700 ppm TPHg, 4.2 ppm benzene, 6.6 ppm toluene, 39 ppm ethylbenzene, 85 ppm xylenes, and 0.30 ppm MTBE. A UST Unauthorized Release/Contamination Site Report was filed on April 26, 2005 in conjunction with over-excavation of impacted soils. Following over-excavation, eight bottom and side-wall samples were collected. Soils samples contained up to 830 ppm TPHg, 1.4 ppm toluene, 4.1 ppm ethylbenzene, 1.5 ppm xylenes, and 0.017 ppm MTBE. In April 2006, four soil borings (SB-4, SB-6, SB-7, and SB-8) were advanced on site. Soil boring SB-8 was converted into on-site groundwater monitoring well MW-5. Soil samples from the borings contained up to 1,510 ppm TPHg, 2.90 ppm benzene, 9.47 ppm toluene, 9.46 ppm ethylbenzene, 70.6 ppm xylenes, 0.00970 ppm MTBE, and 0.0142 ppm di-isopropyl ether (DIPE). Grab groundwater samples contained up to 34,000 ppb TPHg, 404 ppb benzene, 22.5 ppb toluene, 110 ppb ethylbenzene, 56.8 ppb xylenes, 29.2 ppb MTBE, 40.2 ppb tertiary-butyl alcohol (TBA), and 26.6 DIPE. In February 2008, three off-site soil borings (SB-9, SB-10, and SB-11) were advanced southwest and west of well MW-5 to further delineate groundwater impacts down gradient. One on-site soil boring (SB-12) was drilled adjacent to well MW-5 for groundwater data comparison. MTBE was detected in one soil sample at a concentration of 0.0053 ppm in SB-12 at 15.5 fbg. TPHg, BTEX, TBA, DIPE, ethyl tertiary-butyl ether (ETBE), and tertiary-amyl methyl ether (TAME) were not detected at concentrations above the reporting limit in the soil samples. Off-site grab groundwater samples contained up to 1,700 ppb TPHg, 14 ppb toluene, and 120 ppb MTBE. Benzene, ethylbenzene, xylenes, TBA, DIPE, ETBE, and TAME were not detected in the off-site grab groundwater samples. The on-site grab groundwater sample contained 4,900 ppb TPHg, 120 ppb benzene, 11 ppb toluene, 170 ppb ethylbenzene, 42.2 ppb xylenes, 33 ppb MTBE, 100 ppb TBA, and 11 ppb DIPE. Groundwater monitoring has been conducted at the site since July 1988. Coordinated monitoring and sampling has been conducted with the adjacent former gas station, currently Oakland Auto works at the property of 240 West MacArthur Boulevard, since the fourth quarter of 2003. Significant seasonal variations in groundwater elevations have been observed. Constituent concentrations have generally been highest in monitoring well and MW-5, which is located immediately down gradient of the former UST and dispenser islands. Overall decreases in constituent concentrations have generally been

RWQCB Region: SAN FRANCISCO BAY RWQCB (REGION 2)  
Site History: Current Land-use at time of Case Closure The subject property (APN 10-776-8) is located at 378 Grand Avenue between Staten Avenue and Perkins Street, in the northwest portion of the City of Oakland, approximately 2 + miles east of San Francisco bay, approximately + mile southwest of Interstate 580, and 680 feet north of Lake Merritt. At the time of this case closure, the site is developed with an apartment building with a barber shop and hairstyling salon occupying the first floor. This diesel UST release case has been evaluated for closure consistent with the current site use and the State Water Resource Control Board Low-Threat Underground Storage Tank Closure Policy (LTCP) for petroleum related contaminants. This case is closed to the current residential and commercial land use. Due to residual contamination, the site is closed with site management requirements that include notifying Alameda County Department of Environmental Health (ACDEH) of a proposed change in land use to any residential or conservative land use on the ground floor, or if any redevelopment or building alteration is proposed that affects or disturbs the existing subsurface conditions at the site. Adjacent Property(ies) Land-use at Time of Case Closure The site is located in a mixed commercial and residential area. At the time of this case closure, potential off-site contamination is likely on Grand Avenue, but may not extend onto properties across Grand Avenue. However, should off-site redevelopment occur, ACDEH recommends evaluating the areas of redevelopment for chemicals of concern that were identified on this site. Historic Land-use / Site Investigation The owner had no prior knowledge of a tank or previous activities conducted at the site. On March 2, 2016, one 1,500-gallon underground storage tank (UST) used

for Total Petroleum Hydrocarbons as diesel was removed from the sidewalk at the southern side of the site. During the UST removal, sidewall and bottom soil samples were collected and 12.5 tons of impacted soil were over-excavated to remove contaminated soil. In order to further determine the extent of the contamination and to evaluate the site consistent with the State Water Resource Control Board Low-Threat Underground Storage Tank Closure Policy (LTCP) for petroleum related contaminants, additional soil, grab groundwater, and soil gas investigation was performed. Potential Exposure to Chemicals of Concern The main chemicals of concern (COCs) at the site were total petroleum hydrocarbons as diesel (TPH-d). Because the site is capped with the building slab foundation and the groundwater depth is at 40.5 feet below ground surface (bgs), the site poses a low potential threat to human health and safety for vapor intrusion and direct contact to soil for residential land use. As groundwater is not used as drinking water at the site, the most applicable sensitive receptor is Lake Merritt. Remediation Activities Corrective action consisting of excavation of the USTs and contaminated soil have been completed. Case Closure & Future Site Management Requirements This fuel leak case has been evaluated for closure consistent with the State Water Resource Control Board Low-Threat Underground Storage Tank Closure Policy (LTCP). This diesel UST release case has been evaluated for closure consistent with the current site use and the State Water Resource Control Board Low-Threat Underground Storage Tank Closure Policy (LTCP) for petroleum related contaminants. The site meets the criterion for vapor intrusion for scenario 3A and for direct contact and outdoor air criterion for soil for residential land use. For groundwater, the site does not meet scenarios 1 through 4; however, a determination been made that under current and reasonably expected future scenarios, the contaminant plume poses a low threat to human health and safety and to the environment and water quality objectives will be achieved within a reasonable time frame, and therefore meets scenario 5. In regard to the groundwater evaluation and data, one grab groundwater sample was collected in native soil immediately adjacent and downgradient of the tank excavation area. Laboratory analysis showed the following: Total Petroleum Hydrocarbons as diesel (TPH-d) at 360 g/L; benzene, toluene, ethylbenzene, and total xylenes (BTEX) all at <0.5 g/L; and methyl tert-butyl ether (MTBE) at <0.5 g/L. Based on the clayey lithology presented in the boring log and a thirty foot separation between the zone of soil impact and groundwater it is likely that the TPH-d detection in groundwater is a result of sampling bias due to drag down of contamination in the borehole. Although the plume boundary has not been defined through sampling, groundwater was encountered in sandy silt, and therefore, the TPH-d is not likely to be mobile As groundwater is not used as drinking water at the site, the most applicable sensitive receptor is Lake Merritt, which is located approximately 680 feet downgradient of the site, and the concentration of TPH-d at 360 g/L in groundwater is below the San Francisco Bay Regional Water Quality Control Board Environmental Screening Level (ESL) of 640 g/L for aquatic habitat. In addition, the depth to groundwater at the site is 40.5 feet, so the likelihood is low that groundwater will interact with surface water. Based on the evaluation, the site is being considered for closure as a low-risk site. Due to residual contamination, the site is closed consistent with the current site use of commercial ground floor and residential upper floors with site management requirements If there

is a proposed in land use on the ground floor to any residential or conservative land use, or if redevelopment occurs, ACDEH must be notified as required by Government Code Section 65850.2.2. ACDEH will reevaluate the site relative to the proposed redevelopment. Excavation or construction activities in areas of residual contamination require planning and implementation of appropriate Health and Safety procedures by the Responsible Party prior to and during excavation and construction activities.

Stop Method: Close and Remove Tank  
Stop Description: Tank Closed and Removed  
No Further Action Date: 03/11/2020  
CA Water Watershed Name: South Bay - East Bay Cities (204.20)  
Dwr Groundwater Subbasin Name: Santa Clara Valley - East Bay Plain (2-009.04)  
Disadvantaged Community: Not reported  
CA EnviroScreen 3 Score: 11-15%  
CA EnviroScreen 4 Score: 20-25%  
Military DOD Site: No  
Facility Project Subtype: Not reported  
RWQCB Region: SAN FRANCISCO BAY RWQCB (REGION 2)  
Site History: The Site is located in a residential area in the Adams Point neighborhood of Oakland and is currently developed as a single-family residential home doing business as administrative offices for the East Bay Agency for Children. The property consists of one parcel Assessor Parcel Number (APN) 10-775-1 and is located at the southeast corner of Van Buren Avenue and Lee Street. In April 2019, one approximately 250-gallon single-walled steel home heating oil underground storage tank (UST) identified as UST 1 was removed from within the property line along Lee Street. During removal activities the UST was observed to be in poor condition with visible holes in the tank. Based on information presented in the Underground Storage Tank Closure Report, dated May 9, 2019 and the Unauthorized Release Form, dated May 9, 2019 significant soil discoloration and hydrocarbon odors was observed in the UST excavation area. The associated fill port was reported at the west end of the tank and the bottom of the tank was reported at approximately 4.5 feet below ground surface (bgs). Groundwater was not observed in the UST excavation area. Residual liquid inside the UST was not reported during removal activities. Two discrete soil samples (9781-East and 9781-West) were collected from approximately 2 feet below the east and west end of the former UST 1 location at a depth of approximately 6.5 feet below ground surface (bgs) and analyzed for total petroleum hydrocarbon as diesel (TPH d); benzene toluene, ethylbenzene, and xylenes (BTEX); naphthalene; fuel oxygenates and lead scavengers including ethylene dibromide (EDB), ethylene dichloride (EDC), methyl tertiary butyl ether (MTBE), tertiary amyl methyl ether (TAME), ethyl tertiary-butyl ether (ETBE), diisopropyl ether (DIPE), tertiary butyl alcohol (TBA), and ethanol; and polynuclear aromatic hydrocarbons (PAHs/PNAs). An additional three point composite sample was collected and analyzed for the same chemicals mentioned above for waste profiling. Results indicated TPH-d was detected above laboratory detection limits in all samples with the highest concentration of 530 milligrams per kilogram (mg/kg) collected beneath the east end of the tank indicating an unauthorized release had occur at this site. Additionally, several PAHs were detected in the discrete soil samples and soil stockpile. Based on concentrations reported from 6.5 feet beneath the east and west ends of the former UST 1 area, over-excavation and additional soil sampling was conducted at the site in May 2019. The UST 1 excavation pit was over-excavated to an approximate depth of 7 feet bgs. Lateral over-excavation was not mentioned in the Report. Subsequent to over-excavation two additional soil samples (9781-E-9 and 9781-W-9) were collected from approximately 9 feet bgs beneath the east and west ends of former UST and analyzed for same analytes mentioned above. Results indicated TPH-d was detected above laboratory detection limits in all samples with the highest concentration of 2,900 mg/kg collected beneath the

**S124393535**

west end of the tank. These concentrations were higher than the previous soil samples collected at 6 feet bgs. Several PAHs were also detected in the 9 foot bgs soil samples including but not limited to increased concentrations of phenanthrene, pyrene, and 1-methylnaphthalene relative to the previous soil sampling event collected at 6 feet bgs. The potential source of PAH is currently unknown. In June 2019, an additional 130-gallon single-walled steel UST (UST 2) was removed from within the property line near Perkins Street and the adjacent residential property. Information presented in the UST Closure Report, dated July 17, 2019 indicated UST 2 to be in good condition with no visible holes. The bottom of the tank was reported at approximately 6.5 feet bgs and the associated fill port was reported at the south end of the tank. Groundwater was not observed in the UST 2 excavation area. One discrete soil sample (9781-C) was collected from the beneath the tank excavation floor at 8.5 feet bgs. Additionally, one four-point composite soil sample (9781-SP) was collected from the stockpiled overburden soil. Samples were analyzed for TPH d; BTEX; naphthalene; PAHs. Results indicated several PAHs were detected in the discrete soil sample and soil overburden sample. Similar to PAH detections at UST 1, the potential source of PAHs at UST 2 is currently unknown. ACDEH has evaluated the data presented in the UST Removal Report, dated July 17, 2019 for UST 1 and UST 2, in conjunction with the case files, to determine if the site is eligible for closure as a low risk site under the State Water Resources Control Board's Low Threat Underground Storage Tank Case Closure Policy (LTCP). Based on ACDEH's review, we have determined that the site fails to meet the following criteria: LTCP General Criteria e (Site Conceptual Model) and f (Secondary Source Removal); Media Specific Criteria for Groundwater; Media Specific Criteria for Petroleum Vapor Intrusion to Indoor, and Media Specific Criteria for Direct Contact and Outdoor Air Exposure. Please refer to the LTCP Checklist for additional information about each criteria. Additionally, several PAHs were detected in both the UST 1 and UST 2, therefore, additional delineation to determine the source of PAH is required. On August 14, 2019 Alameda County Department of Environmental Health (ACDEH) conducted a kick-off meeting with the responsible party (RP) and their environmental consultant as well as the potential buyer and their associated EC. Brokers from both the RP and potential buyer were also present. Discussions during the meeting included the submittal of a work plan for additional subsurface investigations including the advancement of additional bores for the collection of soil and groundwater, and potentially soil vapor.

Potential Media Affect: Other Groundwater (uses other than drinking water)  
Potential Contaminants of Concern: Heating Oil / Fuel Oil  
EPA Region: 9  
Coordinate Source: Google Geocode  
Cuf Case: YES  
Quantity Released Gallons: 0  
Begin Date: 02/28/2006  
Leak Reported Date: 03/23/2006  
How Discovered: Site Assessment/Site Investigation  
How Discovered Description: PRELIMINARY SITE ASSESSMENT  
Discharge Source: Tank  
Discharge Cause: Physc / Mech Damage  
Stop Method: Close and Remove Tank  
Stop Description: CORROSION & HOLES & CRACKS  
No Further Action Date: 08/24/2010  
CA Water Watershed Name: South Bay - East Bay Cities (204.20)  
Dwr Groundwater Subbasin Name: Santa Clara Valley - East Bay Plain (2-009.04)  
Disadvantaged Community: Not reported  
CA Enviroscreen 3 Score: 26-30%  
CA Enviroscreen 4 Score: 35-40%  
Military DOD Site: No  
Facility Project Subtype: Not reported  
RWQCB Region: SAN FRANCISCO BAY RWQCB (REGION 2)  
Site History: In February 2006, prior to the removal of the UST, a preliminary site assessment was completed and soil borings installed around the former tank location detected significantly elevated levels of hydrocarbon contamination in soil. In August 2007 one UST was removed and confirmation soil samples detected elevated levels of contamination beneath the tank. Remedial action was implemented in October 2008 and verification monitoring is currently in progress at the site.

RWQCB Region: SAN FRANCISCO BAY RWQCB (REGION 2)  
Site History: Closure Status: The SWRCB issued a Notice of Opportunity for Public Comment dated 7/15/2013 on the proposed underground storage tank case closure as recommended in the SWRCB UST Case Closure Review Summary Report dated 7/16/2013. ACEH is not in agreement with the SWRCB's recommendation for closure as documented in an email correspondence dated 5/14/2012. Subsequent to the end of the Public Comment Period on 9/13/2013, the SWQCB issued ORDER WQ 2013-097-UST dated 9/30/2013 ordering closure of the case after completion of monitoring well destruction and waste removal activities. The Order requires the following: 1) RP submittal of well destruction and waste removal documentation to the Alameda County Environmental Health's Local Oversight Agency within six month from the date of the Order (March 30, 2014). 2) ACEH notification to the SWRCB within 30 days of receipt of well destruction and waste removal documentation that the tasks have been satisfactorily completed. 3) SWRCB issuance of a closure letter within 30 days of notification from ACEH of completion of the well destruction and waste removal activities. Site History Summary: In September 1988, one 550-gallon steel waste oil UST was removed from the site by Kaprealian Engineering. In October 1989, Alton Geoscience oversaw the installation of three GW monitoring wells (MW-1 through MW-3) to verify potential impacts to GW following the removal the WO UST. In 1990, new USTs, dispenser islands, and canopy were installed at the site. In November 1994, EMCON conducted a site assessment that consisted of collecting two discrete soil samples (TD-1 and TD-3). In May 1999, Cambria performed a well

recovery test. In July 2005, five borings (SB-4 through SB-8) were installed by URS to further characterize the subsurface hydrocarbon contamination at the site. In October 2007, URS advanced three off-site borings (SB-1, SB-2, and SB-3) between the site and the storm drain under MacArthur Boulevard, and one on-site soil boring (SB-4A). In September 2010 ARCADIS installed one downgradient monitoring well (MW-4). Currently, downgradient extent of contamination has not been assessed.

 RWQCB Region: SAN FRANCISCO BAY RWQCB (REGION 2)  
 Site History: A fuel leak case (former Alameda County Environmental Health case RO000495) was closed for this site on August 6, 2010. Due to residual contamination, the case was closed with site management requirements that limit future use land use to commercial land use. Redevelopment of the site is in the planning phase. ACEH has opened this case with the current property owner to evaluate the site for the planned development. Additional site assessment activities are planned. The current property owner confirmed in a May 4, 2021 email that redevelopment is not proposed and the site will remain an active service station at this time. Therefore, ACDEH has administratively closed the open Cleanup Program site associated with proposed

The triangular-shaped site is located at the former confluence of Pleasant Valley Creek and Bushy Dell Creek. Both creeks are currently channeled in underground culverts beneath Grand Avenue (former Pleasant Valley Creek) and Wildwood Avenue (former Bushy Dell Creek). Drainage flows south through the culverts to discharge to Lake Merritt approximately 4,000 feet to the south. Following the removal and replacement of underground storage tanks (USTs) in August 1984, four soil borings (E-1 through E-4) were advanced at the site on August 6, 2008. Petroleum hydrocarbons were observed at approximately 5 feet bgs in three of the borings completed within the tank backfill. In June 1987, a 550-gallon waste oil tank was replaced. Soil samples collected during the waste oil tank removal did not contain petroleum hydrocarbons or volatile organic compounds at concentrations above reporting limits. In August 1988, five soil borings (B-1 through B-5) were advanced to 15.5 feet bgs adjacent to the USTs. Up to 6,500 ppm of total petroleum hydrocarbons as gasoline (TPHg) was detected in boring B-3 and up to 750 ppm of TPHg was detected in B-4. In July 1989, six soil borings were advanced (BH-D through BH-I) and three groundwater monitoring wells were installed (MW-1 through MW-3). Up to 710 ppm of TPHg was detected in soil samples collected from four of the borings. Petroleum hydrocarbons were detected in the initial groundwater samples collected from wells MW-2 and MW-3. In January 1990, three soil borings (BH-J through BH-L) were advanced and two groundwater monitoring wells were installed (MW-4 and MW-5). Petroleum hydrocarbons were not detected in soil samples collected from the three soil borings. On June 16, 1995, monitoring well MW-4, which was a flowing artesian well installed in a lower water-bearing zone, was decommissioned. The dispensers and piping were upgraded in March 1998. Petroleum hydrocarbons were detected in the soil sample collected beneath the northwestern dispenser at concentrations of 1,600 TPHg and 6.3 ppm benzene (D-2 at 2 feet bgs). The dispensers and piping were again upgraded in April 2005. Soil samples collected beneath the dispensers contained up to 610 ppm of TPHg and 890 ppm of TPHd. One 550-gallon waste oil tank was removed on May 9, 2007. Quarterly groundwater monitoring has been conducted at the site since July 1989. During the third quarter 2009 groundwater sampling event, groundwater from MW-3 contained 1,800 ppb TPHg, 21 ppb benzene, 17 ppb MTBE, and 53 ppb TBA. Groundwater samples were analyzed for halogenated VOCs from May 1998 through July 2001. Halogenated VOCs were detected in groundwater from off-site wells MW-4 and MW-5, which are located on the opposite side of Grand Avenue from the site, but were not detected in the on-site monitoring wells. The halogenated VOCs are likely from an off-site source.

**Environmental Interest/Information System:**

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

CA Water Watershed Name: South Bay - East Bay Cities (204.20)  
Dwr Groundwater Subbasin Name: Santa Clara Valley - East Bay Plain (2-009.04)  
Disadvantaged Community: Severely Disadvantaged Community  
CA Enviroscreen 3 Score: 71-75%  
CA Enviroscreen 4 Score: 80-85%  
Military DOD Site: No  
Facility Project Subtype: Not reported  
RWQCB Region: SAN FRANCISCO BAY RWQCB (REGION 2)  
Site History: Unauthorized release of petroleum hydrocarbons from historic automotive dealership land use at the site. Three USTs removed in December 1989. Site investigations conducted from 1989 to 2018 to investigate impacts to soil, groundwater and soil gas. Corrections actions implemented at the site include SVE system operation (1996 to March 1998) and gypsum injection and soil excavation (2016 through 2018) in conjunction with site redevelopment activities consisting of construction of mixed use commercial and residential project. Currently in verification monitoring for groundwater and vapor intrusion.

**Environmental Interest/Information System:**

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Preliminary Endangerment Assessment Report  
Completed Date: 01/02/2013  
Comments: Phase I Environmental Site Assessment Report and All Appropriate Inquires Report dated November 8, 2012, approved by DTSC letter dated January 1, 2013. Per report recommendation, given Client s plans to redevelop the property for residential and commercial uses, limited additional assessment consistent with the proposed land use appears warranted and will be proposed in a separate document. DTSC reviewed the report for compliance with the All Appropriate Inquiries Final Rule at 40 CFR Part 312.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Application  
Completed Date: 10/30/2012  
Comments: Confirmation letter of submittal receipt, dated October 30, 2012. DTSC received Request for Oversight of a Brownfield Site application for Negherbon Site. Under Memorandum of Agreement, agencies determined that DTSC is appropriate oversight agency for project.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Fieldwork  
Completed Date: 06/24/2014  
Comments: Fieldwork performed per DTSC-approved Implementation Plan dated November 2013.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Well Decommissioning Report  
Completed Date: 04/18/2014  
Comments: Well Closure Report for the Destruction of Monitoring Wells at the Negherbon Property, dated March 28, 2014, approved by DTSC letter dated April 18, 2014. Report documents DTSC-approved destruction of six (6) monitoring wells on March 3, 2014. Report attachments include Alameda County Department of Public Works Agency (ACPWA) Well Destruction Permits and California Department of Water Resources (DWR) Well Completion Reports.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Work Notice  
Completed Date: 03/06/2014  
Comments: Work Notice of Negherbon Soil Excavation and Removal Work to Begin March 17, 2014. DTSC will oversee this work to ensure that the activities take place in accordance with the DTSC-approved Response Plan and Implementation Plan dated June 2013 and October 2013, respectively.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Well Decommissioning Workplan  
Completed Date: 10/14/2013  
Comments: Request to Destroy Monitoring Wells at the Negherbon Property, dated October 11, 2013, approved by DTSC email dated October 14, 2013. Request includes tables/figures/attachments, Groundwater Monitoring Well Construction Details, Groundwater Monitoring Well Locations, and Monitoring Well Construction Logs. Well abandonment activities will be conducted in accordance with Alameda County Department of Public Works Agency (ACPWA) Well Standards Program requirements and any specific conditions of the ACPWA permit. A well closure report will be submitted to DTSC within 30 days of abandonment of each well. The report(s) will include copies of the well completion reports for the destroyed wells that are sent to the State of California Department of Water Resources.

Comments: Quarterly Groundwater Monitoring Event

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Operation and Maintenance Report  
Completed Date: 03/22/2017  
Comments: Quarterly Groundwater Monitoring for October 2016. The data collected during the five quarters of sampling indicate: TPH has not been reported in groundwater collected from HMW-1, HMW-2, or HMW-3. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are similar to or lower than those detected during the previous sampling events. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are generally stable; concentrations do not appear to be increasing. However, The 10/18/2016 sample from HMW-2 shows a slight increase and the highest concentration of 1,1-DCA among the past five (5) quarterly monitoring events. As described in the DTSC approved O&M Plan (EKI, 2015a), after 6 quarters of monitoring an evaluation of COCs in groundwater will be prepared and if appropriate, cessation of further groundwater monitoring events will be recommended. Based on the data collected during the five quarterly events, it is anticipated the COC evaluation will be provided in early 2017, after the sixth quarterly event. The next quarterly groundwater monitoring will be performed during January 2017. The DTSC will be notified regarding the exact date approximately 7 days prior to the monitoring event.

Comments: Quarterly Groundwater Monitoring for February 2017, dated May 31, 2017. The data collected during the six quarters of sampling indicate: TPH has not been reported in groundwater collected from HMW-1, HMW-2, or HMW-3. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are lower than those detected during the pre-remedial Site investigation. The 1,1-DCA concentration measured in HMW-1 was lower in February compared to previous O&M sampling events. The 1,1-DCA concentration measured in HMW-2 was higher in February compared to previous O&M sampling events. The DTSC approved O&M Plan (EKI, 2015a) noted that an evaluation of COCs in groundwater would be prepared after 6 quarters of groundwater monitoring and if appropriate, cessation of further groundwater monitoring events could be recommended. Uptown will prepare the evaluation of COCs in groundwater and transmit the evaluation to the DTSC by 30 June 2017.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Technical Report  
Completed Date: 01/30/2018  
Comments: Revised Proposed Termination of Groundwater Monitoring at the former Negherbon Site, Oakland CA (dated 25 January 2018). This memorandum provides information and analysis to support a recommendation for cessation of further groundwater monitoring on the Site. Site data demonstrate there are no identified soil or soil vapor sources of 1,1-DCA on the Site. The 1,1-DCA plume is migrating onto the Site from an upgradient source. The 1,1-DCA plume on the Site is stable. DTSC has no additional comments and hereby approves the request to terminate groundwater monitoring. As a reminder, the Operation and Maintenance Agreement signed with Hive Development Group, LLC remains in effect. The Operation and Maintenance Agreement requires implementation of the Operation and Maintenance Plan. The Operation and Maintenance Plan covers installation and sampling of groundwater monitoring wells. Groundwater monitoring wells that are not being regularly sampled can serve as a conduit for contamination migration. Therefore, it may be prudent to properly abandon these wells. Following receipt of documentation that the monitoring wells have been properly abandoned, DTSC will initiate steps to terminate the Operation and Maintenance Agreement. This includes conducting an annual inspection and submitting an annual inspection report to DTSC by January 15th of each calendar year.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: California Land Reuse and Revitalization Agreement  
Completed Date: 04/02/2013  
Comments: Standard Agreement for participating under California's Land Reuse and Revitalization Act (CLRRA) Program, between Hive Development Group, LLC, a California limited liability company, and DTSC, fully executed on April 2, 2013.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Land Use Restriction  
Completed Date: 08/19/2015  
Comments: Land Use Covenant (LUC) and Agreement for Environmental Restrictions recorded at County of Alameda on 8/19/2015. LUC made by and between Hive Development Group, LLC, a California limited liability company, current owner of property, and DTSC.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Correspondence  
Completed Date: 03/28/2013  
Comments: Letter dated March 27, 2013, notifying agencies of DTSC's intent to enter into an agreement under the California Land Reuse and Revitalization Act of 2004 (CLRRA) with the Hive Development Group, LLC, for the property located at 2345 and 2333 Broadway and 421 24th Street in Oakland, Alameda County, California. Entry into this agreement provides Hive Development Group, LLC with immunity from liability for certain hazardous materials response costs and damage claims. Under the agreement, Hive Development Group, LLC will perform a site assessment and prepare and implement a response plan.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: CEQA - Notice of Exemption  
Completed Date: 07/23/2013  
Comments: CEQA Notice of Exemption by General Rule [CCR, Sec. 15061(b)(3)]: It can be seen with certainty that there is no possibility that the activities in question will result in a significant effect on the environment.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Operation & Maintenance Order/Agreement  
Completed Date: 05/11/2016  
Comments: The California Department of Toxic Substances Control (DTSC) and Hive Development Group, LLC, a California limited liability company (Proponent) enter into this Operation and Maintenance Agreement (Agreement) for the site located at 2333 Broadway and 421 24th Street, Oakland, Alameda County, California (Site). A DTSC-approved remedy has been installed at the Site for the remediation of groundwater. The remedy consists of groundwater monitoring, a land use covenant restricting the use of Environmental Area 1 for sensitive uses without further DTSC review, and restricting the use of groundwater. The Site is owned by Hive Development Group, LLC. A site location map and the assessor's parcel map are attached as Exhibit A and Exhibit B. A site map or diagram showing the

MAP FINDINGS

**NEGHERBON (Continued)**

**S112241534**

location(s) of the installed remedy (groundwater monitoring wells) is attached as Exhibit C. Proponent shall fully implement the DTSC-approved Operation and Maintenance Plan dated February 2015, including any requirements for inspections, monitoring, reporting and record keeping as approved by DTSC on March 4, 2015 or any successor O&M Plan as later approved by DTSC.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Operation and Maintenance Report  
Completed Date: 02/23/2016  
Comments: Quarterly Groundwater Monitoring for December 2015, dated February 10, 2016. Approved by DTSC letter, dated February 23, 2016. Analytical results for groundwater samples from the three wells are summarized in Table 3. The analytical lab reports and chain-of-custody are included in Appendix C. VOCs were detected above reporting limits in samples from monitoring wells HMW-1 and HMW-2 (including the blind duplicate sample from HMW-3). Detected VOCs include 1,1-DCA, 1,1-DCE, 1,2-DCA, 1,1,2-TCA, TCE, and VC. These VOCs were reported at concentrations similar to those reported in samples collected during the first quarter event (see Table 3) and the Response Plan (see Appendix A). TPH was not detected in groundwater samples. Groundwater elevations measured in July and December 2015 are included in Table 2. As shown, groundwater levels measured in December were 0.71 to 1.19 feet higher than levels measured in July 2015, reflecting autumn rain. Concentrations of 1,1-DCA were higher in samples collected during December than concentrations collected during July 2015. However, because there have been only two sampling events, there are insufficient data to evaluate the natural attenuation of 1,1-DCA. The next quarterly groundwater monitoring will be performed during April 2016. The DTSC will be notified regarding the exact date 7 days prior to the monitoring event.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Operation and Maintenance Report  
Completed Date: 10/04/2016  
Comments: Quarterly Groundwater Monitoring for July 2016. The data collected during July and December 2015 and April and July 2016 indicate: TPH has not been reported in groundwater collected from HMW-1, HMW-2, or HMW-3. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are similar to or lower than those detected during the previous sampling events. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are generally stable; concentrations do not appear to be increasing. Based on the data collected during the first three quarterly events, it is anticipated the COC evaluation will be provided in early 2017, after the sixth quarterly event. The next quarterly groundwater monitoring will be performed during October 2016. The DTSC will be notified regarding the exact date approximately 7 days prior to the monitoring event.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Operation and Maintenance Report  
Completed Date: 06/27/2016  
Comments: Quarterly Groundwater Monitoring for April 2016. VOCs were detected above reporting limits in samples from monitoring wells HMW-1 and

MAP FINDINGS

**NEGHERBON (Continued)**

**S112241534**

HMW-2 (including the blind duplicate sample from HMW-3). Detected VOCs include 1,1-DCA, 1,1-DCE, 1,2-DCA, 1,1,2-TCA, TCE, and VC. These VOCs were reported at concentrations similar to those reported in samples collected during the first quarter event and the Response Plan. TPH was not detected in groundwater samples. Groundwater levels measured in April were 1.74 to 1.86 feet higher than levels measured in July 2015, reflecting autumn and winter rain. The data collected during July and December 2015 and April 2016 indicate: TPH has not been reported in groundwater collected from HMW-1, HMW-2, or HMW-3. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are generally lower than in groundwater collected during the previous investigation. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are generally stable; concentrations do not appear to be increasing. Redox conditions are suitable for dechlorination of 1,1-DCA. As described in the DTSC approved O&M Plan, after 6 quarters of monitoring an evaluation of COCs in groundwater will be prepared and if appropriate, cessation of further groundwater monitoring events will be recommended. Based on the data collected during the first three quarterly events, it is anticipated the COC evaluation will be provided in early 2017, after the sixth quarterly event. The next quarterly groundwater monitoring will be performed during July 2016. DTSC will be notified regarding the exact date 7 days prior to the monitoring event.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Fieldwork  
 Completed Date: 12/16/2015  
 Comments: Second round of quarterly groundwater monitoring samples, collected on December 16, 2015, of three monitoring wells in accordance with the O&M Plan for groundwater.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Remedial Action Completion Report  
 Completed Date: 12/15/2015  
 Comments: Well Installation Report and Quarterly Groundwater Monitoring Report for July 2015, dated November 6, 2015. The report presents data related to the installation, development, and sampling of three monitoring wells in accordance with the Operation and Maintenance (O&M) Plan for groundwater (EKI, February 2015). Sampling results for the first round of groundwater monitoring, collected in July 2015, are included in the report. Contaminant levels in groundwater monitoring wells are consistent with historical levels in groundwater beneath the site. In addition to 1,1,1-dichloroethane (1,1-DCA), trichloroethene, vinyl chloride, 1,1-dichloroethene, 1,2-dichloroethane, and 1,1,2-trichloroethane were detected above their respective maximum contaminant levels in the newly constructed upgradient well; however, a remedial goal has only been established for 1,1-DCA per the Response Plan (EKI, June 2013). Per the O&M Plan,

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Operation and Maintenance Report  
Completed Date: 03/22/2017  
Comments: Quarterly Groundwater Monitoring for October 2016. The data collected during the five quarters of sampling indicate: TPH has not been reported in groundwater collected from HMW-1, HMW-2, or HMW-3. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are similar to or lower than those detected during the previous sampling events. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are generally stable; concentrations do not appear to be increasing. However, The 10/18/2016 sample from HMW-2 shows a slight increase and the highest concentration of 1,1-DCA among the past five (5) quarterly monitoring events. As described in the DTSC approved O&M Plan (EKI, 2015a), after 6 quarters of monitoring an evaluation of COCs in groundwater will be prepared and if appropriate, cessation of further groundwater monitoring events will be recommended. Based on the data collected during the five quarterly events, it is anticipated the COC evaluation will be provided in early 2017, after the sixth quarterly event. The next quarterly groundwater monitoring will be performed during January 2017. The DTSC will be notified regarding the exact date approximately 7 days prior to the monitoring event.

Completed Date: 06/16/2017  
Comments: Quarterly Groundwater Monitoring for February 2017, dated May 31, 2017. The data collected during the six quarters of sampling indicate: TPH has not been reported in groundwater collected from HMW-1, HMW-2, or HMW-3. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are lower than those detected during the pre-remedial Site investigation. The 1,1-DCA concentration measured in HMW-1 was lower in February compared to previous O&M sampling events. The 1,1-DCA concentration measured in HMW-2 was higher in February compared to previous O&M sampling events. The DTSC approved O&M Plan (EKI, 2015a) noted that an evaluation of COCs in groundwater would be prepared after 6 quarters of groundwater monitoring and if appropriate, cessation of further groundwater monitoring events could be recommended. Uptown will prepare the evaluation of COCs in groundwater and transmit the evaluation to the DTSC by 30 June 2017.

Completed Document Type: Technical Report  
Completed Date: 01/30/2018  
Comments: Revised Proposed Termination of Groundwater Monitoring at the former Negherbon Site, Oakland CA (dated 25 January 2018). This memorandum provides information and analysis to support a recommendation for cessation of further groundwater monitoring on the Site. Site data demonstrate there are no identified soil or soil vapor sources of 1,1-DCA on the Site. The 1,1-DCA plume is migrating onto the Site from an upgradient source. The 1,1-DCA plume on the Site is stable. DTSC has no additional comments and hereby approves the request to terminate groundwater monitoring. As a reminder, the Operation and Maintenance Agreement signed with Hive Development Group, LLC remains in effect. The Operation and Maintenance Agreement requires implementation of the Operation and Maintenance Plan. The Operation and Maintenance Plan covers installation and sampling of groundwater monitoring wells. Groundwater monitoring wells that are not being regularly sampled can serve as a conduit for contamination migration. Therefore, it may be prudent to properly abandon these wells. Following receipt of documentation that the monitoring wells have been properly abandoned, DTSC will initiate steps to terminate the Operation and Maintenance Agreement. This includes conducting an annual inspection and submitting an annual inspection report to DTSC by January 15th of each calendar year.

Comments: The California Department of Toxic Substances Control (DTSC) and Hive Development Group, LLC, a California limited liability company (Proponent) enter into this Operation and Maintenance Agreement (Agreement) for the site located at 2333 Broadway and 421 24th Street, Oakland, Alameda County, California (Site). A DTSC-approved remedy has been installed at the Site for the remediation of groundwater. The remedy consists of groundwater monitoring, a land use covenant restricting the use of Environmental Area 1 for sensitive uses without further DTSC review, and restricting the use of groundwater. The Site is owned by Hive Development Group, LLC. A site location map and the assessor's parcel map are attached as Exhibit A and Exhibit B. A site map or diagram showing the location(s) of the installed remedy (groundwater monitoring wells) is attached as Exhibit C. Proponent shall fully implement the DTSC-approved Operation and Maintenance Plan dated February 2015, including any requirements for inspections, monitoring, reporting and record keeping as approved by DTSC on March 4, 2015 or any successor O&M Plan as later approved by DTSC.

Completed Area Name: PROJECT WIDE

Completed Sub Area Name: Not reported

Completed Document Type: Operation and Maintenance Report

Completed Date: 02/23/2016

Comments: Quarterly Groundwater Monitoring for December 2015, dated February 10, 2016. Approved by DTSC letter, dated February 23, 2016. Analytical results for groundwater samples from the three wells are summarized in Table 3. The analytical lab reports and chain-of-custody are included in Appendix C. VOCs were detected above reporting limits in samples from monitoring wells HMW-1 and HMW-2 (including the blind duplicate sample from HMW-3). Detected VOCs include 1,1-DCA, 1,1-DCE, 1,2-DCA, 1,1,2-TCA, TCE, and VC. These VOCs were reported at concentrations similar to those reported in samples collected during the first quarter event (see Table 3) and the Response Plan (see Appendix A). TPH was not detected in groundwater samples. Groundwater elevations measured in July and December 2015 are included in Table 2. As shown, groundwater levels measured in December were 0.71 to 1.19 feet higher than levels measured in July 2015, reflecting autumn rain. Concentrations of 1,1-DCA were higher in samples collected during December than concentrations collected during July 2015. However, because there have been only two sampling events, there are insufficient data to evaluate the natural attenuation of 1,1-DCA. The next quarterly groundwater monitoring will be performed during April 2016. The DTSC will be notified regarding the exact date 7 days prior to the monitoring event.

Comments: Quarterly Groundwater Monitoring for April 2016. VOCs were detected above reporting limits in samples from monitoring wells HMW-1 and HMW-2 (including the blind duplicate sample from HMW-3). Detected VOCs include 1,1-DCA, 1,1-DCE, 1,2-DCA, 1,1,2-TCA, TCE, and VC. These VOCs were reported at concentrations similar to those reported in samples collected during the first quarter event and the Response Plan. TPH was not detected in groundwater samples. Groundwater levels measured in April were 1.74 to 1.86 feet higher than levels measured in July 2015, reflecting autumn and winter rain. The data collected during July and December 2015 and April 2016 indicate: TPH has not been reported in groundwater collected from HMW-1, HMW-2, or HMW-3. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are generally lower than in groundwater collected during the previous investigation. 1,1-DCA concentrations in groundwater collected from HMW-1 and HMW-2 are generally stable; concentrations do not appear to be increasing. Redox conditions are suitable for dechlorination of 1,1-DCA. As described in the DTSC approved O&M Plan, after 6 quarters of monitoring an evaluation of COCs in groundwater will be prepared and if appropriate, cessation of further groundwater monitoring events will be recommended. Based on the data collected during the first three quarterly events, it is anticipated the COC evaluation will be provided in early 2017, after the sixth quarterly event. The next quarterly groundwater monitoring will be performed during July 2016. DTSC will be notified regarding the exact date 7 days prior to the monitoring event.

related to the installation, development, and sampling of three monitoring wells in accordance with the Operation and Maintenance (O&M) Plan for groundwater (EKI, February 2015). Sampling results for the first round of groundwater monitoring, collected in July 2015, are included in the report. Contaminant levels in groundwater monitoring wells are consistent with historical levels in groundwater beneath the site. In addition to 1,1,1-dichloroethane (1,1-DCA), trichloroethene, vinyl chloride, 1,1-dichloroethene, 1,2-dichloroethane, and 1,1,2-trichloroethane were detected above their respective maximum contaminant levels in the newly constructed upgradient well; however, a remedial goal has only been established for 1,1-DCA per the Response Plan (EKI, June 2013). Per the O&M Plan, additional data from the newly-installed monitoring wells will be obtained quarterly to evaluate the contaminant trends over time and the evidence for natural attenuation. Report approved by DTSC letter dated December 15, 2015.

Completed Document Type: Site Characterization Report  
Completed Date: 06/28/2012  
Comments: The investigation characterized soil, groundwater, and soil gas at the site for dry cleaning solvent (perchloroethylene). Based on the findings of the investigation the consultant recommended additional downgradient delineation of shallow groundwater (approximately 20 feet below ground surface or less) and additional soil gas sampling inside the on-site building. The consultant recommended that a workplan for the additional investigation should be prepared.

Completed Document Type: Correspondence  
Completed Date: 01/15/2014  
Comments: Email correspondence from October 1 - December 31, 2013.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Annual Oversight Cost Estimate  
Completed Date: 09/24/2013  
Comments: Estimated costs for regulatory oversight by DTSC for the 2013-14 fiscal year.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Annual Oversight Cost Estimate  
Completed Date: 10/29/2012  
Comments: The cost estimate is for anticipated regulatory oversight activities from July 1, 2012 to June 30, 2013.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Site Characterization Report  
Completed Date: 06/28/2012  
Comments: The investigation characterized soil, groundwater, and soil gas at the site for dry cleaning solvent (perchloroethylene). Based on the findings of the investigation the consultant recommended additional downgradient delineation of shallow groundwater (approximately 20 feet below ground surface or less) and additional soil gas sampling inside the on-site building. The consultant recommended that a workplan for the additional investigation should be prepared.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Phase 1  
Completed Date: 04/14/2008  
Comments: The report recommended additional investigation since the property was used as a dry cleaning facility. This report included as background information, but was not prepared under DTSC oversight.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Voluntary Cleanup Agreement Termination Notification  
Completed Date: 04/02/2014  
Comments: VCA terminated at the request of the property owner's attorney.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### *Lists of Federal NPL (Superfund) sites*

#### NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 02/29/2024	Source: EPA
Date Data Arrived at EDR: 03/01/2024	Telephone: N/A
Date Made Active in Reports: 03/27/2024	Last EDR Contact: 05/01/2024
Number of Days to Update: 26	Next Scheduled EDR Contact: 07/08/2024
	Data Release Frequency: Quarterly

#### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 02/29/2024	Source: EPA
Date Data Arrived at EDR: 03/01/2024	Telephone: N/A
Date Made Active in Reports: 03/27/2024	Last EDR Contact: 05/01/2024
Number of Days to Update: 26	Next Scheduled EDR Contact: 07/08/2024
	Data Release Frequency: Quarterly

#### NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## ***Lists of Federal Delisted NPL sites***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 02/29/2024  
Date Data Arrived at EDR: 03/01/2024

Last EDR Contact: 03/26/2024  
Next Scheduled EDR Contact: 07/08/2024  
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMs by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 01/29/2024

Data Release Frequency: Quarterly

## ***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 01/29/2024	Source: EPA
Date Data Arrived at EDR: 02/01/2024	Telephone: 800-424-9346

Number of Days to Update: 6	Next Scheduled EDR Contact: 07/01/2024
	Data Release Frequency: Quarterly

## ***Lists of Federal RCRA TSD facilities***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 12/04/2023	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/06/2023	Telephone: (415) 495-8895
Date Made Active in Reports: 12/12/2023	Last EDR Contact: 03/19/2024

## ***Federal institutional controls / engineering controls registries***

### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 02/14/2024	Source: Department of the Navy
Date Data Arrived at EDR: 02/16/2024	Telephone: 843-820-7326
Date Made Active in Reports: 04/04/2024	Last EDR Contact: 05/17/2024
Number of Days to Update: 48	Next Scheduled EDR Contact: 08/19/2024
	Data Release Frequency: Varies

### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 02/13/2024	Source: Environmental Protection Agency
Date Data Arrived at EDR: 02/21/2024	Telephone: 703-603-0695
Date Made Active in Reports: 04/04/2024	Last EDR Contact: 05/21/2024
Number of Days to Update: 43	Next Scheduled EDR Contact: 09/02/2024
	Data Release Frequency: Varies

### US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 02/13/2024	Source: Environmental Protection Agency
Date Data Arrived at EDR: 02/21/2024	Telephone: 703-603-0695

Next Scheduled EDR Contact: 08/05/2024

Data Release Frequency: Quarterly

## ***Lists of state- and tribal hazardous waste facilities***

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 01/22/2024

	Data Release Frequency: Quarterly

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### ***Local Brownfield lists***

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 03/11/2024	Source: Environmental Protection Agency

## CERS HAZ WASTE: California Environmental Reporting System Hazardous Waste

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.

Date of Government Version: 01/16/2024	Source: CalEPA
Date Data Arrived at EDR: 01/16/2024	Telephone: 916-323-2514
Date Made Active in Reports: 04/03/2024	Last EDR Contact: 04/16/2024
Number of Days to Update: 78	Next Scheduled EDR Contact: 07/29/2024
	Data Release Frequency: Quarterly

## US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 12/31/2023	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 02/21/2024	Telephone: 202-307-1000
Date Made Active in Reports: 04/04/2024	Last EDR Contact: 05/21/2024

### DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## Records of Emergency Release Reports

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## HMIRS: Hazardous Materials Information Reporting System

Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 12/12/2023	Source: U.S. Department of Transportation
Date Data Arrived at EDR: 12/13/2023	Telephone: 202-366-4555
Date Made Active in Reports: 02/28/2024	Last EDR Contact: 03/20/2024
Number of Days to Update: 77	Next Scheduled EDR Contact: 07/01/2024
	Data Release Frequency: Quarterly

## CHMIRS: California Hazardous Material Incident Report System

California Hazardous Material Incident Reporting System. CHMIRS contains information on reported hazardous material incidents (accidental releases or spills).

Date of Government Version: 12/31/2023	Source: Office of Emergency Services
Date Data Arrived at EDR: 01/23/2024	Telephone: 916-845-8400
Date Made Active in Reports: 04/09/2024	Last EDR Contact: 04/16/2024
Number of Days to Update: 77	Next Scheduled EDR Contact: 07/29/2024
	Data Release Frequency: Semi-Annually

## LDS: Land Disposal Sites Listing (GEOTRACKER)

Land Disposal sites (Landfills) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

Date of Government Version: 12/04/2023	Source: State Water Quality Control Board
Date Data Arrived at EDR: 12/05/2023	Telephone: 866-480-1028
Date Made Active in Reports: 02/27/2024	Last EDR Contact: 03/05/2024
Number of Days to Update: 84	Next Scheduled EDR Contact: 06/17/2024

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/21/2014	Telephone: 617-520-3000
Date Made Active in Reports: 06/17/2014	Last EDR Contact: 04/29/2024
Number of Days to Update: 88	Next Scheduled EDR Contact: 08/12/2024
	Data Release Frequency: No Update Planned

### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Date of Government Version: 09/30/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 05/08/2018	Telephone: 703-308-4044

## ROD: Records Of Decision

Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 02/29/2024	Source: EPA
Date Data Arrived at EDR: 03/01/2024	Telephone: 703-416-0223
Date Made Active in Reports: 03/27/2024	Last EDR Contact: 05/01/2024
Number of Days to Update: 26	Next Scheduled EDR Contact: 06/10/2024
	Data Release Frequency: Annually

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104

## RADINFO: Radiation Information Database

The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

Date of Government Version: 07/01/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/01/2019	Telephone: 202-343-9775
Date Made Active in Reports: 09/23/2019	Last EDR Contact: 03/25/2024
Number of Days to Update: 84	Next Scheduled EDR Contact: 07/08/2024
	Data Release Frequency: Quarterly

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### PFAS TSCA: PFAS Manufacture and Imports Information

EPA issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. EPA publishes non-confidential business information (non-CBI) and includes descriptive information about each site, corporate parent, production volume, other manufacturing information, and processing and use information.

### PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST\_HANDLING\_INSTR), Non-hazardous waste description (NON\_HAZ\_WASTE\_DESCRIPTION), DOT printed information (DOT\_PRINTED\_INFORMATION), Waste line handling instructions (WASTE\_LINE\_HANDLING\_INSTR), Waste residue comments (WASTE\_RESIDUE\_COMMENTS).

### PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

### PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

## PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

## PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

## PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

## AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

## CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## HWT: Registered Hazardous Waste Transporter Database

A listing of hazardous waste transporters. In California, unless specifically exempted, it is unlawful for any person to transport hazardous wastes unless the person holds a valid registration issued by DTSC. A hazardous waste transporter registration is valid for one year and is assigned a unique registration number.

Date of Government Version: 01/02/2024	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 01/03/2024	Telephone: 916-440-7145
Date Made Active in Reports: 03/21/2024	Last EDR Contact: 04/04/2024
Number of Days to Update: 78	Next Scheduled EDR Contact: 07/15/2024
	Data Release Frequency: Quarterly

## HWTS: Hazardous Waste Tracking System

DTSC maintains the Hazardous Waste Tracking System that stores ID number information since the early 1980s and manifest data since 1993. The system collects both manifest copies from the generator and destination facility.

Date of Government Version: 01/26/2024	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 01/30/2024	Telephone: 916-324-2444
Date Made Active in Reports: 04/17/2024	Last EDR Contact: 05/09/2024
Number of Days to Update: 78	Next Scheduled EDR Contact: 07/15/2024
	Data Release Frequency: Varies

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2023	Source: California Environmental Protection Agency
Date Data Arrived at EDR: 01/03/2024	Telephone: 916-255-1136

## WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

## WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

## CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

## UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

Date of Government Version: 06/08/2023

## UST FINDER RELEASE: UST Finder Releases Database

US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

## EDR HIGH RISK HISTORICAL RECORDS

### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 02/05/2024  
Date Data Arrived at EDR: 02/06/2024  
Date Made Active in Reports: 04/25/2024  
Number of Days to Update: 79

Source: Department of Energy & Environmental Protection

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

## AHA Hospitals:

Source: American Hospital Association, Inc.  
Telephone: 312-280-5991

OAKLAND, CA 94610

### TARGET PROPERTY COORDINATES

Latitude (North):	37.812997 - 37° 48' 46.79"
Longitude (West):	122.249113 - 122° 14' 56.81"
Universal Transverse Mercator:	Zone 10
UTM X (Meters):	566095.1
UTM Y (Meters):	4185127.2
Elevation:	48 ft. above sea level

### USGS TOPOGRAPHIC MAP

Target Property Map:	50005377 OAKLAND EAST, CA
Version Date:	2021
West Map:	50005378 OAKLAND WEST, CA
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

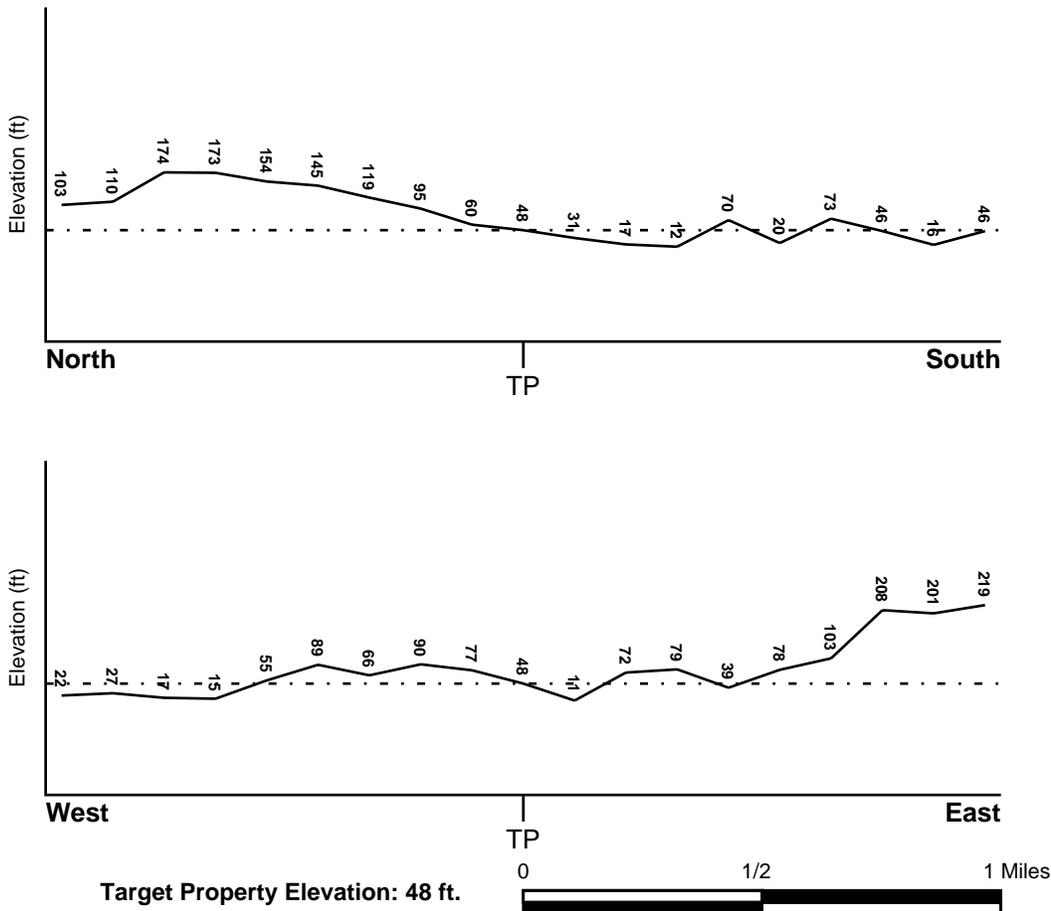

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **FEMA FLOOD ZONE**

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06013C0405F	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
06001C0059G	FEMA FIRM Flood data
06001C0067G	FEMA FIRM Flood data
06001C0086G	FEMA FIRM Flood data

## **NATIONAL WETLAND INVENTORY**

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
OAKLAND EAST	YES - refer to the Overview Map and Detail Map

## **HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### ***Site-Specific Hydrogeological Data\*:***

Search Radius:	1.25 miles
Status:	Not found

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

#### **ROCK STRATIGRAPHIC UNIT**

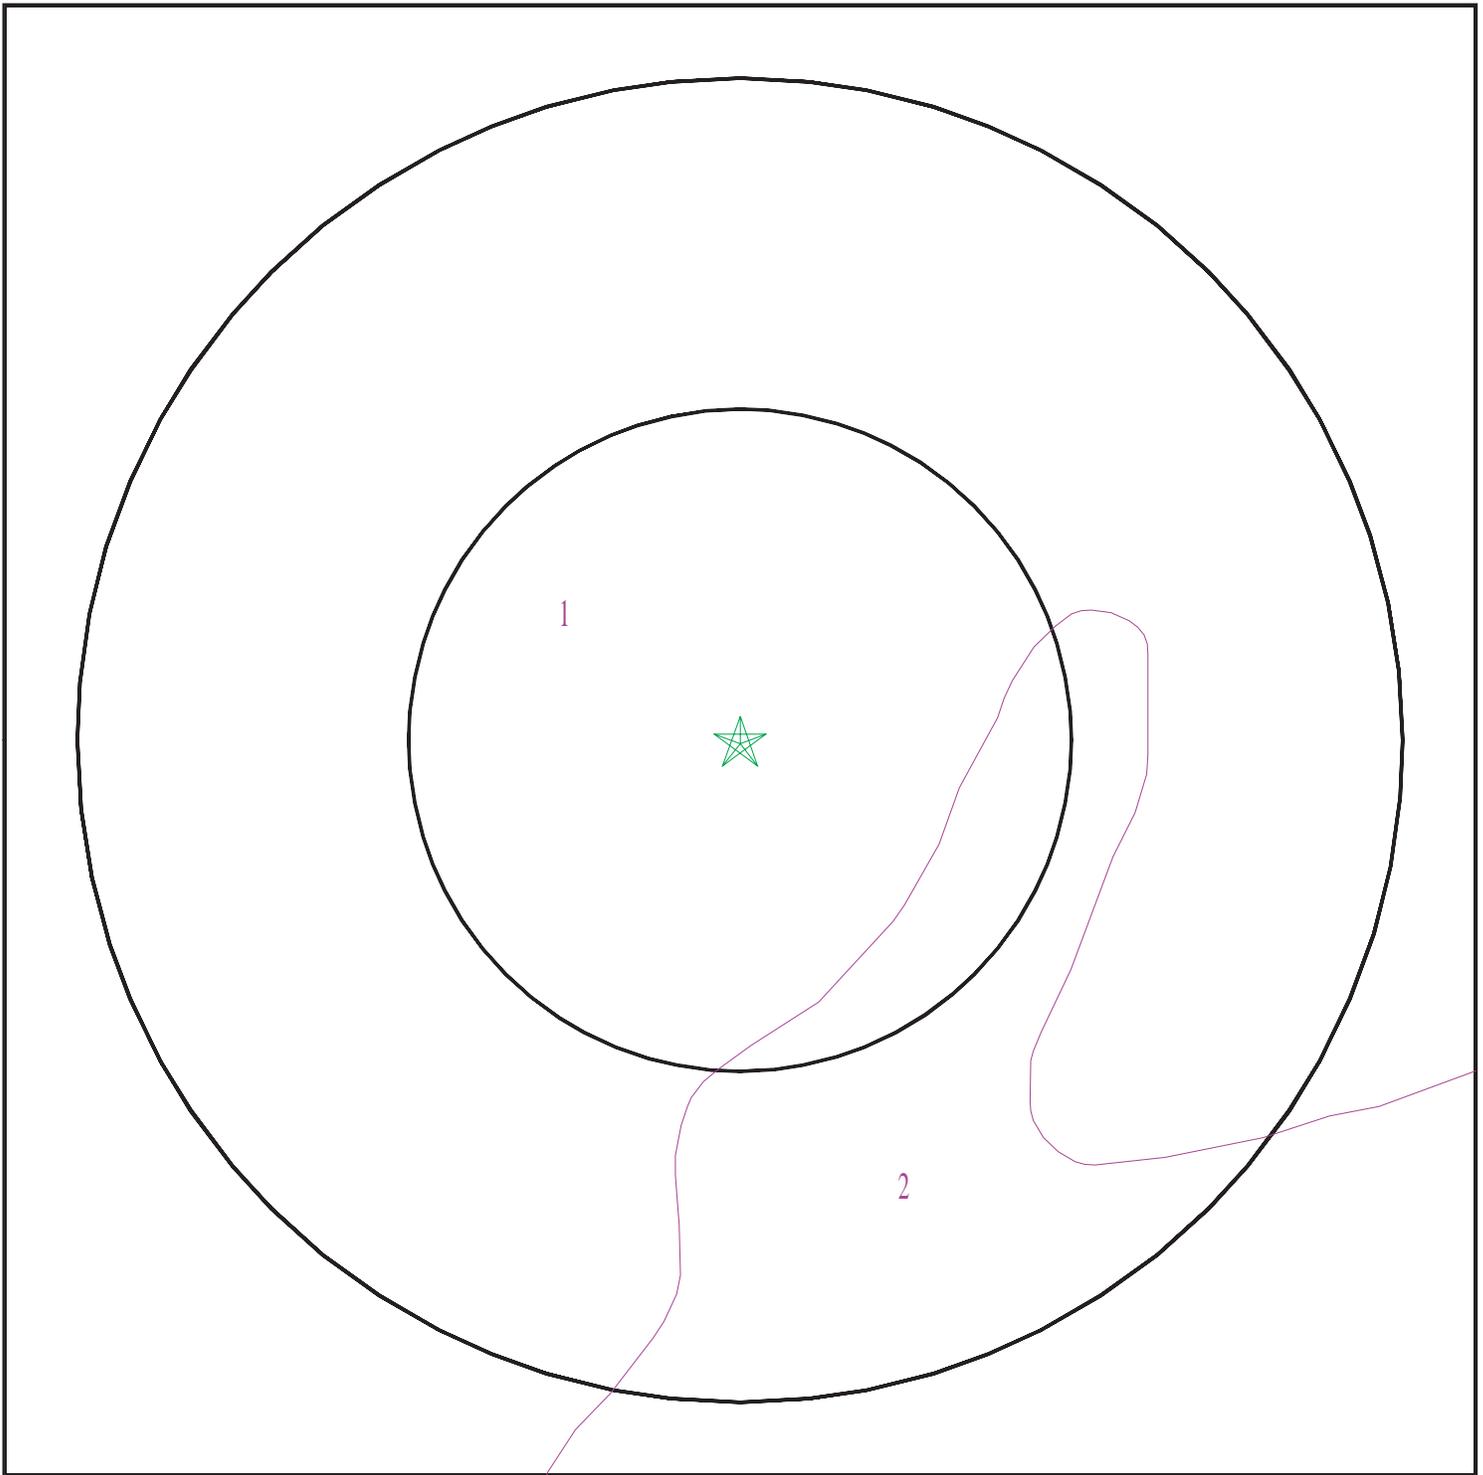

Era: Cenozoic  
System: Quaternary  
Series: Quaternary  
Code: Q (*decoded above as Era, System & Series*)

#### **GEOLOGIC AGE IDENTIFICATION**

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

### Soil Map ID: 1

Soil Component Name: Tierra

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 5.6
2	11 inches	31 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 5.6
3	31 inches	59 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 5.6

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## Soil Map ID: 2

Soil Component Name: Urban land

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:  
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

## LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## WELL SEARCH DISTANCE INFORMATION

<u>DATABASE</u>	<u>SEARCH DISTANCE (miles)</u>
Federal USGS	1.000
Federal FRDS PWS	Nearest PWS within 1 mile
State Database	1.000

## FEDERAL USGS WELL INFORMATION

<u>MAP ID</u>	<u>WELL ID</u>	<u>LOCATION FROM TP</u>
No Wells Found		

## FEDERAL FRDS PUBLIC WATER SUPPLY SYSTEM INFORMATION

<u>MAP ID</u>	<u>WELL ID</u>	<u>LOCATION FROM TP</u>
No PWS System Found		

Note: PWS System location is not always the same as well location.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

## OTHER STATE DATABASE INFORMATION

### Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

### Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

### California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

### Geothermal Wells Listing

Department of Conservation

Telephone: 916-445-9686

Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservation's Geologic Energy Management Division (CalGEM, formerly DOGGR).

### California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

## RADON

### State Database: CA Radon

Source: Department of Public Health

Telephone: 916-210-8558

Radon Database for California

### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

## OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

## EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### **STANDARD ENVIRONMENTAL RECORDS**

#### ***Lists of Federal RCRA generators***

RCRA-SQG: A review of the RCRA-SQG list, as provided by EDR, and dated 12/04/2023 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

401 SANTA CLARA AVENUE  
OAKLAND, CA 94610

### TARGET PROPERTY COORDINATES

Latitude (North):	37.812997 - 37° 48' 46.79"
Longitude (West):	122.249113 - 122° 14' 56.81"
Universal Transverse Mercator:	Zone 10
UTM X (Meters):	566095.1
UTM Y (Meters):	4185127.2
Elevation:	48 ft. above sea level

### USGS TOPOGRAPHIC MAP

Target Property Map:	50005377 OAKLAND EAST, CA
Version Date:	2021
West Map:	50005378 OAKLAND WEST, CA
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

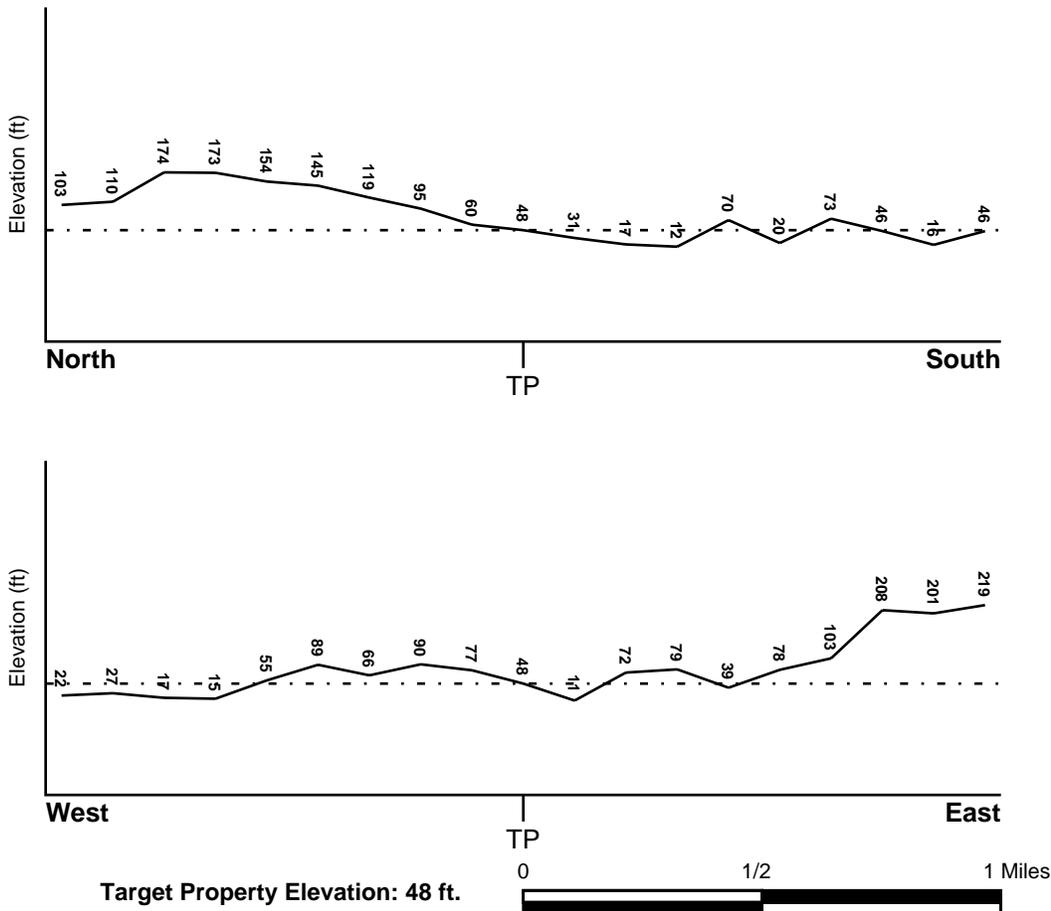

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **FEMA FLOOD ZONE**

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06013C0405F	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
06001C0059G	FEMA FIRM Flood data

06001C0086G	FEMA FIRM Flood data

## **NATIONAL WETLAND INVENTORY**

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
OAKLAND EAST	YES - refer to the Overview Map and Detail Map

## **HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### ***Site-Specific Hydrogeological Data\*:***

Search Radius:	1.25 miles
Status:	Not found

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

#### **ROCK STRATIGRAPHIC UNIT**

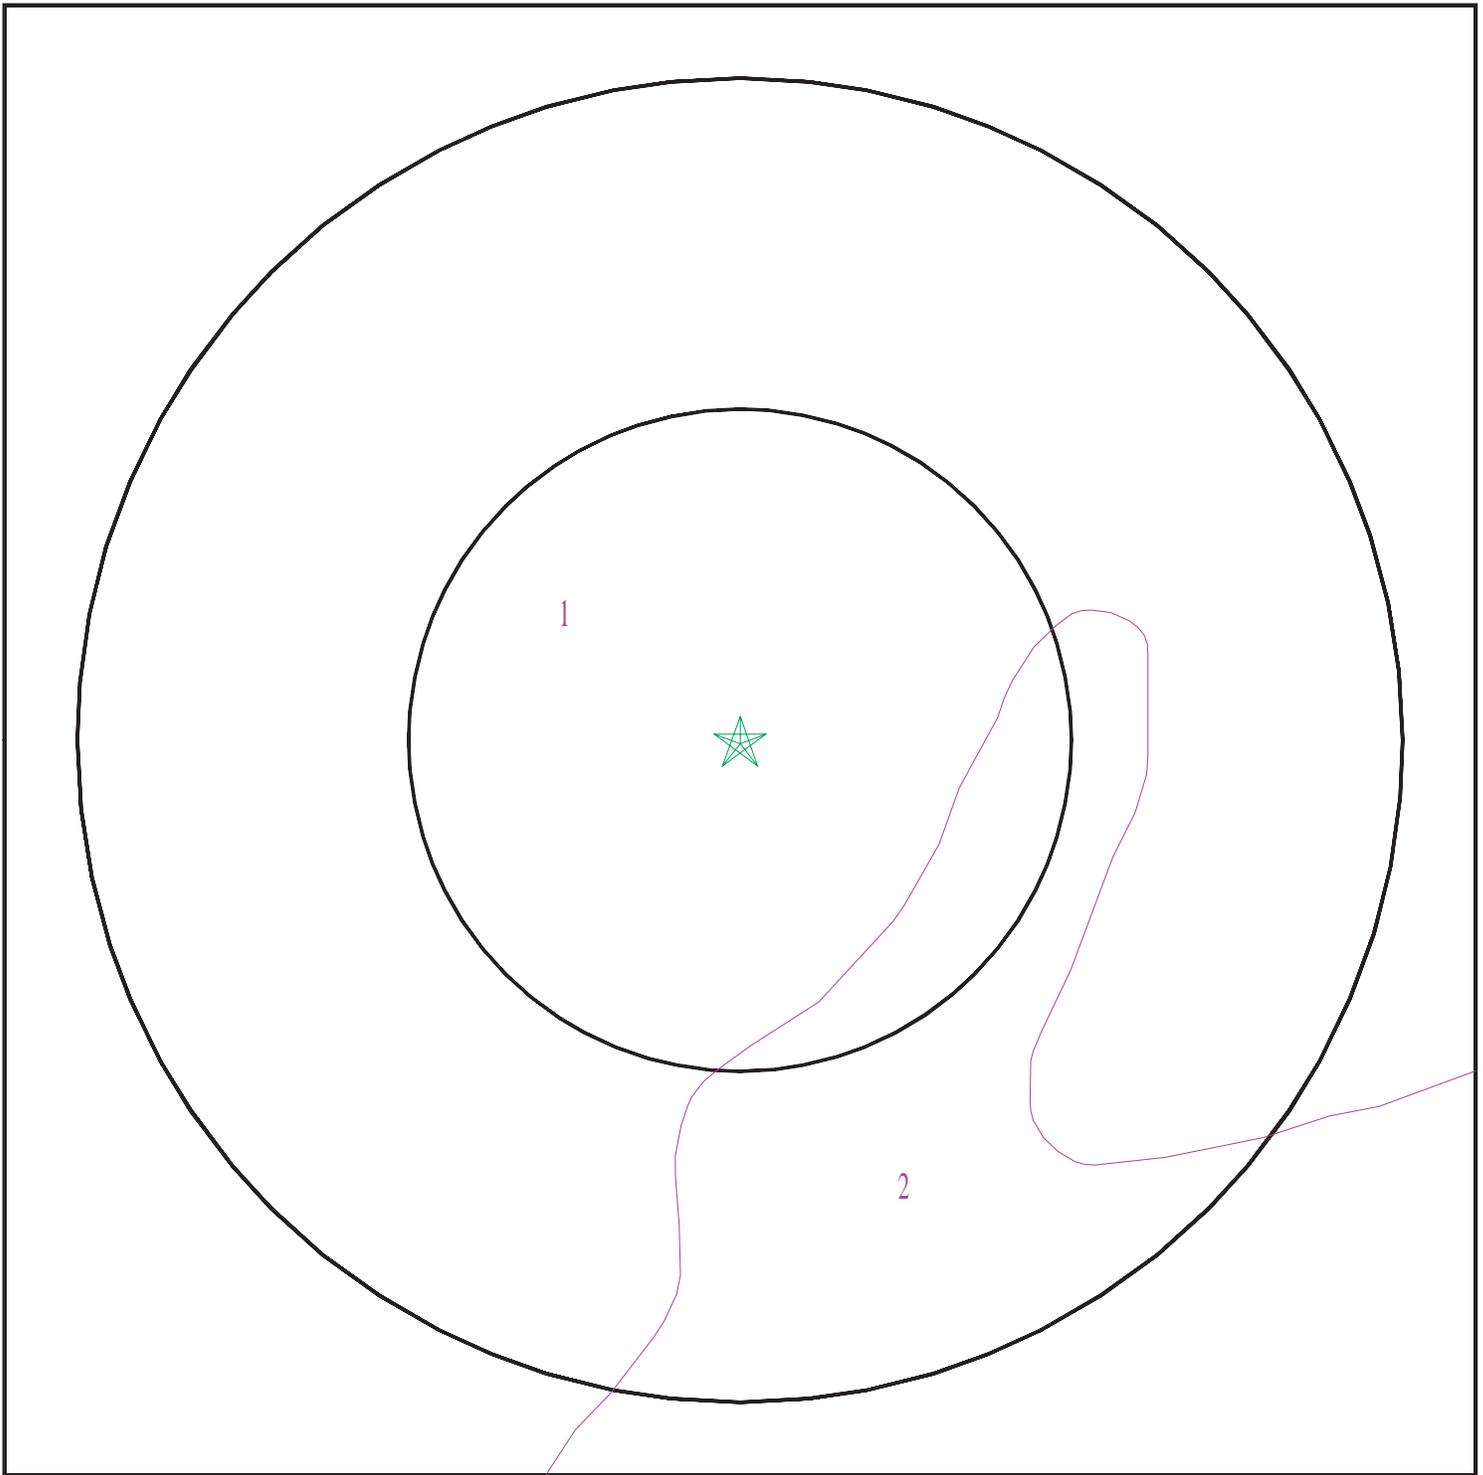

Era: Cenozoic  
System: Quaternary  
Series: Quaternary  
Code: Q (*decoded above as Era, System & Series*)

#### **GEOLOGIC AGE IDENTIFICATION**

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

### Soil Map ID: 1

Soil Component Name: Tierra

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 5.6
2	11 inches	31 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 5.6
3	31 inches	59 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 5.6

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## Soil Map ID: 2

Soil Component Name: Urban land

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:  
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

## LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## WELL SEARCH DISTANCE INFORMATION

<u>DATABASE</u>	<u>SEARCH DISTANCE (miles)</u>
Federal USGS	1.000
Federal FRDS PWS	Nearest PWS within 1 mile
State Database	1.000

## FEDERAL USGS WELL INFORMATION

<u>MAP ID</u>	<u>WELL ID</u>	<u>LOCATION FROM TP</u>
No Wells Found		

## FEDERAL FRDS PUBLIC WATER SUPPLY SYSTEM INFORMATION

<u>MAP ID</u>	<u>WELL ID</u>	<u>LOCATION FROM TP</u>
No PWS System Found		

Note: PWS System location is not always the same as well location.
