HOMELESS COUNT & SURVEY
COMPREHENSIVE REPORT
2019

APPLIED SURVEY RESEARCH

Applied Survey Research (ASR) is a social research firm dedicated to helping people build better communities by collecting meaningful data, facilitating information-based planning, and developing custom strategies. The firm was founded on the principle that community improvement, initiative sustainability, and program success are closely tied to assessment needs, evaluation of community goals, and development of appropriate responses.

EVERYONE HOME

EveryOne Home is leading the collective effort to end homelessness in Alameda County. We're building momentum, using data to improve our efforts and aligning resources for long-term solutions. By emphasizing an efficient regional response, EveryOne Home envisions that by 2023, no person will need to sleep on the street because they have a place to call home.

ASPIRE CONSULTING LLC

Aspire Consulting LLC empowers communities to refine its programs and housing crisis response system to be housing-focused, oriented to outcomes, effective, efficient, and well-coordinated. Focal points of Aspire Consulting LLC's work include: training and project management for measuring and improving outcomes; staff training, retreats, and learning collaboratives to align organizational culture and practices toward housing first, low barrier approaches; planning and launching coordinated entry systems; optimizing rapid rehousing services; and training diverse community stakeholders about the cultural shift to be more permanent housing and outcome-focused. Aspire Consulting LLC also has many years of experience in Point-in-Time Counts, Homeless Management Information Systems, Homeless and Caring Court, and 100 Day Challenge performance improvement initiatives. Kathie Barkow is the founder and principal consultant of Aspire Consulting LLC.

Acknowledgments

The *EveryOne Counts! 2019 Homeless Count and Survey* planning team, consisting of EveryOne Home, ASR, and Aspire Consulting LLC, would like to thank the many individuals and organizations for their time and commitment to this project. This year, recruitment and training efforts yielded an extraordinary community response, resulting in a 68% increase in volunteer and guide participation over the last biennial count in 2017. There were 164 trained guides with lived experience of homelessness and 489 volunteers who, together, canvassed all of Alameda County's census tracts during the early morning hours of January 30, 2019. We would like to express our deep gratitude to the teams of guides and surveyors with lived experience of homelessness, including youth, for their outstanding fieldwork and invaluable insight in ensuring the accuracy of the count, and for sharing their first-hand knowledge of encampments, communities living in vehicles, and locations where unsheltered youth reside.

As in 2017, our non-profit partners, city and county employees, and local law enforcement teams assisted with many aspects of the Point-in-Time Count, including planning meetings; conducting a pre-count survey of people living in tents and vehicles; offering special outreach on count day; supporting the youth count; and assisting us in successfully implementing the housing survey on the streets and in shelters and transitional housing programs.

In addition, hundreds of incredible community members answered the call to volunteer in the early hours of the morning. These volunteers were partnered with guides to methodically cover their assigned census tracts, conduct the visual tally, and submit their results. Thank you to each volunteer for showing up and getting this work done to measure our efforts.

EveryOne Home and the Alameda County Continuum of Care (CoC) provided oversight for the *EveryOne Counts! 2019 Homeless Count and Survey.* We thank the members of the HUD Continuum of Care Committee for their input and guidance. We are also very grateful to the jurisdictional partners who worked closely with our team to ensure communities were well represented in the planning efforts and data collection activities.

Trevor Mells of Alameda County Housing and Community Development Department led the sheltered count, collecting the HUD-required data from agencies that utilize the countywide Homeless Management Information System as well as those that do not.

Special thanks to the following programs, jurisdictions, and individuals, who went above and beyond in providing support, resulting in the critical success of *EveryOne Counts! 2019*:

Introduction

Every two years, during the last ten days of January, communities across the country conduct comprehensive counts of the local population experiencing homelessness in order to measure the prevalence of homelessness in each community.

The Point-in-Time Count is required by the U.S. Department of Housing and Urban Development (HUD), but more importantly also informs local strategic planning, investment, capacity building, and advocacy campaigns to prevent and end homelessness.

The Alameda County Continuum of Care worked in conjunction with ASR to conduct the *EveryOne Counts! 2019 Homeless Count and Survey*. ASR is a social research firm with extensive experience in homeless enumeration and needs assessment that has worked with Alameda County on the *EveryOne Counts! Homeless Count and Survey* since 2017.

In order for the *EveryOne Counts! 2019 Homeless Count and Survey* to best reflect the experience and expertise of the community, EveryOne Home held planning meetings with local community members, including people with lived experience of homelessness, city and county departments, community-based service providers, and other interested stakeholders. These partners were instrumental to ensuring the *EveryOne Counts! 2019 Homeless Count and Survey* reflected the needs and concerns of the community while accomplishing several important project goals:

- To preserve current federal funding for homeless services and to enhance the ability to raise new funds;
- To measure changes in the numbers and characteristics of the homeless population since the EveryOne Counts! 2017 Homeless Count and Survey, and to track progress toward ending homelessness;
- To improve the ability of policy makers and service providers to plan and implement services that meet the needs of the local population experiencing homelessness;
- To increase public awareness of overall homeless issues and generate support for constructive solutions; and
- To assess the status of specific subpopulations, including veterans, families, unaccompanied children, transition-age youth, and those experiencing chronic homelessness.

The *EveryOne Counts! 2019 Homeless Count and Survey* consisted of four primary components: (1) the general street count, an observation-based enumeration of unsheltered persons between the hours of approximately 5:00 a.m. and 10:00 a.m.; (2) the youth count, a targeted enumeration of unsheltered youth under the age of 24 between the hours of approximately 2:30 p.m. and 7:30 p.m.; (3) the sheltered count, an enumeration of persons residing in emergency shelter, safe haven, and transitional housing facilities the night before the general street count; and (4) the survey, an in-person survey of a randomized sample of unsheltered and sheltered persons conducted by trained peer surveyors and program staff in the weeks following the general street count.

On January 30, 2019, every census tract in Alameda County was covered with the support of 164 individuals with lived experience of homelessness and 489 community volunteers, staff from various city and county departments, and law enforcement. This resulted in a peer-informed visual count of individuals and families residing on the streets and in vehicles, makeshift shelters, encampments, and other places not meant for human habitation. Emergency shelter, safe haven, and transitional housing facilities also reported the number of individuals and families who occupied their facilities on the night prior to the morning of the count.

A specialized count of unaccompanied children and transition-age youth under the age of 25 was conducted on the same day. This dedicated count was designed to improve the understanding of the scope of youth homelessness. Trained youth enumerators who currently or recently experienced homelessness conducted the count in specific areas where young people experiencing homelessness were known to congregate. The dedicated youth count methodology was improved in 2019 to screen for age and to better ensure unaccompanied children and transition-age youth were not included in both the general street count and youth count.

In the weeks following the street count, an in-depth survey was administered to a sample of 1,681 unsheltered and sheltered individuals and families experiencing homelessness. The survey gathered basic demographic details as well as information on residency, housing history, personal characteristics, and intersections with the service system.

This report provides data regarding the number and characteristics of people experiencing homelessness in Alameda County on a single night, January 29, 2019. Special attention is given to specific subpopulations defined by HUD, including persons experiencing chronic homelessness, veterans, families, unaccompanied children under the age of 18, and transition-age youth between the ages of 18 and 24. This report is intended to assist service providers, policy makers, funders, and local, state, and federal governments in gaining a better understanding of the population currently experiencing homelessness, measuring the impact of current policies and programming, and planning for the future.

To better understand the dynamics of homelessness, results from the previous count in 2017 and comparisons to countywide data from 2019 are provided where applicable.

FEDERAL DEFINITION OF HOMELESSNESS FOR POINT-IN-TIME COUNTS

In this study, the HUD definition of homelessness for the Point-in-Time Count is used. This definition includes individuals and families:

- Living in a supervised publicly or privately operated shelter designated to provide temporary living arrangement; or
- With a primary nighttime residence that is a public or private place not designed for or ordinarily used as a regular sleeping accommodation for human beings, including a car, park, abandoned building, bus or train station, airport, or camping ground.

For more information regarding the count and dedicated youth count, de-duplication, and project methodology, please see *Appendix A: Methodology*.
City of Oakland
2019 EveryOne Counts
Homeless Point-in-Time Count & Survey

Every two years, during the last 10 days of January, communities across the country conduct comprehensive counts of people experiencing homelessness in order to measure the prevalence of homelessness in each local community.

The 2019 Alameda County EveryOne Home Point-in-Time Count was a community-wide effort conducted on January 30th, 2019. In the weeks following the street count, a survey was administered across Alameda County. In the city of Oakland, 660 unsheltered and sheltered homeless individuals were surveyed, in order to profile their experience and characteristics.

Disabling Conditions

38% of survey respondents reported having at least one disabling condition.

A disabling condition is defined by HUD as a developmental disability, HIV/AIDS, or a long-term physical or mental impairment that impacts a person's ability to live independently, but could be improved with stable housing.

ASR

Point-in-Time Count: Key Data Findings

The *EveryOne Counts! 2019 Homeless Count and Survey* includes a complete enumeration of all people who were unsheltered and people who were residing in a publicly or privately funded emergency shelter, safe haven, or transitional housing facilities. The general street count was conducted on January 30, 2019 from approximately 5:00 a.m. to 10:00 a.m. The weather was seasonally normal with no rain. The shelter count was conducted on the previous evening and included all individuals staying in emergency shelter, winter shelter, safe haven, and transitional housing facilities. The general street count and shelter count methodologies were similar to those used in 2017, with some improvements.

NUMBER AND CHARACTERISTICS OF PERSONS EXPERIENCING HOMELESSNESS IN THE CITY OF OAKLAND

TOTAL POPULATION AND TREND DATA

A total of 4,071 individuals experiencing homelessness were counted in the city of Oakland on January 30, 2019, an increase of 1,310 individuals (+47%) from 2017. The population of persons experiencing homelessness in Oakland represented over half (51%) of the total number of persons enumerated in Alameda County during the 2019 Point-in-Time Count (8,022).

FIGURE 1. TOTAL NUMBER OF PERSONS EXPERIENCING HOMELESSNESS IN THE CITY OF OAKLAND DURING THE POINT-IN-TIME COUNT
FIGURE 2. TOTAL NUMBER OF PERSONS EXPERIENCING HOMELESSNESS IN THE CITY OF OAKLAND WITH COUNTY COMPARISON
SHELTERED AND UNSHELTERED STATUS

While the number of individuals served by shelters remained stable (+0.2%) between 2017 and 2019, there was an increase of 2,449 unsheltered individuals (+63%). In 2019, 79% of the people experiencing homelessness in the city of Oakland were unsheltered compared to 69% in 2017.

FIGURE 3. TOTAL NUMBER OF PERSONS EXPERIENCING HOMELESSNESS BY SHELTER STATUS
	UNSHELTERED	SHELTERED	TOTAL
City of Oakland	3,210	861	4,071
Alameda County	**6,312**	**1,710**	**8,022**

Over one-third (35%) of the population were residing in vehicles. An additional 32% were residing in tents or makeshift shelters and 10% were identified sleeping on the streets and in other outdoor locations. One percent (1%) were identified in non-residential buildings.

While the number of individuals sleeping on the streets and other outdoor locations decreased by 33% (206 individuals), the number of individuals sleeping in tents increased by 130% (747 individuals). The total number of persons residing in their vehicles increased by 131% (812 individuals), with the number of persons residing in RVs increasing by 131% (399 individuals) and the number of persons residing in cars or vans increasing by 132% (413 individuals).

HOUSEHOLD STATUS AND AGE

Persons in families with at least one adult and one child under age 18 represented approximately 5% of the overall population experiencing homelessness in Oakland, slightly lower than Alameda County overall (7%). Most persons in families (99%) were enumerated in shelters and transitional housing programs.

Ninety-five percent (95%) of the population experiencing homelessness were single individuals. Unaccompanied children and transition-age youth represented 12% of the population experiencing homelessness in Oakland, higher than the county overall (9%).

—

ETHNICITY AND RACE

The U.S. Census Bureau as well as HUD report race and ethnicity separately. In 2019, 13% of individuals experiencing homelessness in Oakland identified as Hispanic/Latinx.

FIGURE 8.   TOTAL NUMBER OF PERSONS EXPERIENCING HOMELESSNESS BY HISPANIC/LATINX ETHNICITY

City of Oakland Homeless Count n=4,071; Alameda County Homeless Count n=8,022

Individuals identifying as Black/African American were overrepresented in the population experiencing homelessness. An estimated 70% of persons experiencing homelessness in Oakland identified as Black/African American compared to 47% of the overall county's population experiencing homelessness and 24% of the city's general population. Alternatively, 2% of those counted identified as Asian compared to 16% of the general population.
FIGURE 9.   TOTAL NUMBER OF PERSONS EXPERIENCING HOMELESSNESS BY RACE

City of Oakland Homeless Count n=4,071; Alameda County Homeless Count n=8,022
Note: Percentages may not add up to 100 due to rounding.

GEOGRAPHIC DISTRIBUTION

Similar to 2017, the population of individuals experiencing homelessness in Alameda County was concentrated in the urban centers. Over half (51%) were enumerated in Oakland, followed by 14% in Berkeley. Eight percent (8%) of those experiencing homelessness were located in Fremont and 6% were in Hayward.

With the exception of Albany and Piedmont, increases in the number of unsheltered individuals experiencing homelessness were observed in every jurisdiction within Alameda County.

FIGURE 10. TOTAL NUMBER OF PERSONS EXPERIENCING HOMELESSNESS BY JURISDICTION AND SHELTER STATUS

Total	**1,766**	**3,863**	**5,629**	**1,710**	**6,312**	**8,022**

The following map of the Point-in-Time Count population illustrates the jurisdictions with the highest density of individuals experiencing homelessness; the city of Oakland reported the highest numbers of individuals experiencing homelessness in the county.

FIGURE 11.   TOTAL NUMBER OF PERSONS EXPERIENCING HOMELESSNESS BY JURISDICTION
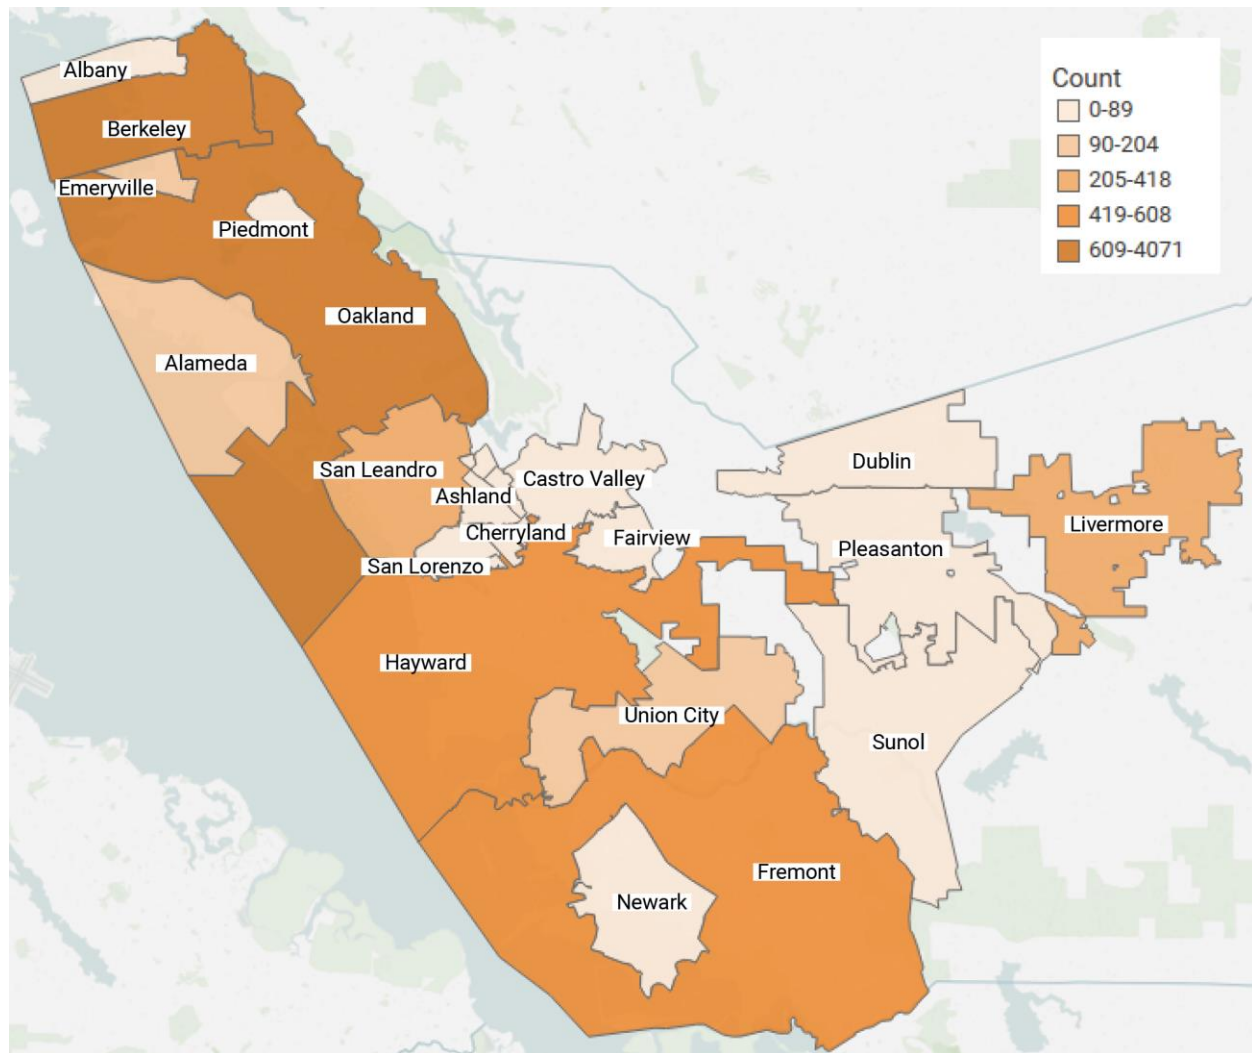

On January 30, 2019, volunteers and guides were assigned to count every census tract in Alameda County on to ensure full coverage. Census tract level data provides a more nuanced understanding of where individuals were located on the morning of the count. Many census tracts with the greatest number of individuals enumerated were located in the city of Oakland.

FIGURE 12. TOTAL NUMBER OF UNSHELTERED PERSONS IN THE CITY OF OAKLAND BY CENSUS TRACT
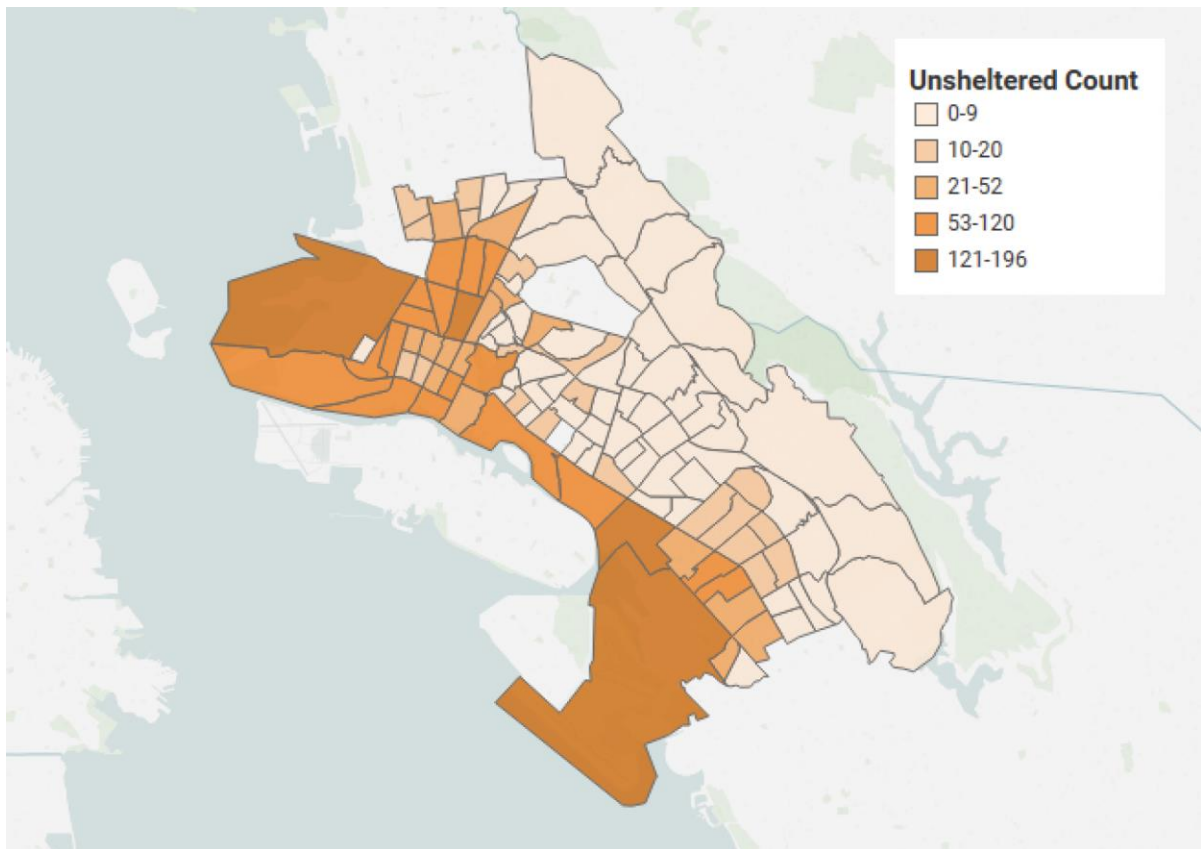

SUBPOPULATIONS

Home, Together: The Federal Strategic Plan to Prevent and End Homelessness outlines national objectives and evaluative measures for ending homelessness in the United States. To adequately address the diversity within the population experiencing homelessness, the federal government identifies four subpopulations with particular challenges or needs. Consequently, these subpopulations represent important reportable indicators for measuring local progress toward ending homelessness. Additional detail on families, unaccompanied children and transition-age youth, veterans, chronically homeless, and veteran populations are provided in the *Subpopulation* section of this report.

REPORTED SUBPOPULATIONS

Unaccompanied children and transition-age youth represented 11% of the overall population in 2019, a decrease from 22% in 2017. This decrease may be attributed, in part, to a shift in the methodology used to estimate the number of unaccompanied children and transition-age youth experiencing homelessness as well as the challenges in enumerating this population. Please reference *Appendix A* for more information. Additionally, please note that unaccompanied children and transition-age youth may also be referred to as unaccompanied youth and young adults.

In 2019, 5% of the overall population experiencing homelessness were persons in families with children under the age of 18 (198 individuals). This was a decrease from 2017, when families represented 9% of the population (262 individuals). This may be due in part to challenges in enumerating unsheltered families; for more information about limitations of methodology, please reference *Appendix A*.

Twenty-one percent (21%) of the population were identified as chronically homeless in 2019, compared to 33% in 2017. Fifteen percent (15%) of the population were identified as veterans, representing over half (52%) of the county's homeless veteran population.

FIGURE 13.   FEDERALLY REPORTED SUBPOPULATIONS

	CITY OF OAKLAND		ALAMEDA COUNTY	
	#	%	#	%

Chronically Homeless	865	21%	2,236	28%
Veterans	361	15%	692	9%
Total Homeless Population	**4,071**		**8,022**	

Survey Findings

This section provides an overview of the findings generated from the survey component of the *EveryOne Counts! 2019 Homeless Count and Survey*. Surveys were administered to a randomized sample of homeless individuals between February 1 and 28, 2019. This effort resulted in 1,681 complete and unique surveys.

Based on a Point-in-Time Count of 8,022 persons experiencing homelessness, with a randomized survey sampling process, these 1,681 valid surveys represent a confidence interval of +/- 2% with a 95% confidence level when generalizing the results of the survey to the entire estimated population of individuals experiencing homelessness in Alameda County. In other words, if the survey were conducted again, we can be 95% certain that the results would be within two percentage points of the current results.

There were 660 valid surveys conducted in the city of Oakland. Based on a Point-in-Time Count of 4,071 persons experiencing homelessness, these 660 surveys represent a confidence interval of +/- 4% with a 95% confidence level when generalizing the results of the survey to the entire estimated population of individuals experiencing homelessness in the city of Oakland. In other words, if the survey were conducted again, we can be confident that the results would be within four percentage points of the current results.

In order to respect respondent privacy and to ensure the safety and comfort of those who participated, respondents were not required to complete all survey questions. Missing values were intentionally omitted from the survey results. Therefore, the total number of respondents for each question will not always equal the total number of surveys conducted. For more information regarding the survey methodology, please see *Appendix A: Methodology*.
LIVING ACCOMMODATIONS

Where individuals lived prior to experiencing homelessness and where they have lived since impacts the way they seek services, as well as their ability to access support from friends or family. Previous circumstances can also point toward gaps in the system of care and opportunities for systemic improvement and homelessness prevention.

PLACE OF RESIDENCE

Knowing where individuals were living prior to their housing loss informs discussions regarding how local the homeless population is to the region. This information can also influence changes to available support systems if Alameda County finds increasing numbers of individuals living locally before experiencing homelessness.

Seventy-eight percent (78%) of respondents in the city of Oakland reported living in Alameda County at the time they most recently became homeless. Thirteen percent (13%) reported living in another county in California; this included 4% from San Francisco and 2% from Contra Costa County. Three percent (3%) reported living out of state at the time they lost their housing.

FIGURE 14.   PLACE OF RESIDENCE AT TIME OF HOUSING LOSS

- Out of State: 3% / 3%
- Refuse: 6% / 6%

City of Oakland n=631; Alameda County n=1,633
Note: Percentages may not add up to 100 due to rounding.

In total, 54% of respondents reported they had been living in Alameda for 10 years or more (this included individuals who were born or grew up in the county). Approximately 13% of the population had been living in Alameda County for less than one year.

FIGURE 15.   LENGTH OF TIME SPENT IN ALAMEDA COUNTY

Note: Percentages may not add up to 100 due to rounding.

Respondents were asked why they stay in their current location. Responses varied among sheltered and unsheltered respondents. Among unsheltered respondents, 43% reported that they grew up in the area or considered the area their home and 18% reported they stayed in the location because they felt safe there. Among sheltered respondents, 39% stayed there because they grew up in the area or considered the area their home and 19% reported staying in the location because shelter or housing programs were located there. Seven percent (7%) of both sheltered and unsheltered respondents reported staying in a location because it was close to services.

FIGURE 16.   REASON FOR STAYING IN THE CITY OF OAKLAND

Note: Multiple response question, percentages will not add up to 100.

PRIOR LIVING ARRANGEMENTS

Similar to previous place of residence, the type of living arrangements maintained by individuals before experiencing homelessness provides a look into what types of homeless prevention services might be offered to help individuals maintain their housing.

Twenty-seven percent (27%) of survey respondents in the city of Oakland reported living in a home owned or rented by themselves or a partner immediately prior to experiencing homelessness, compared to 32% of respondents countywide. Twenty-three percent (23%) of respondents in the city of Oakland reported staying with friends or relatives.

FIGURE 17.   LIVING ARRANGEMENTS IMMEDIATELY PRIOR TO EXPERIENCING HOMELESSNESS
City of Oakland n=638; Alameda County n=1,641
Note: Percentages may not add up to 100 due to rounding.

CURRENT LIVING ARRANGEMENTS

Understanding the types of places individuals experiencing homelessness are sleeping can help inform local outreach efforts. While basic information on where individuals were observed during the general street count effort was collected, survey respondents were also asked about their living arrangements on the night of the count.

When asked about their living arrangements, 32% of survey respondents reported sleeping outdoors, either on the streets, in parks, or encampments. Another 45% reported staying in an emergency, transitional, or other type of shelter. Fourteen percent (14%) reported staying in a structure or indoor area not intended for human habitation and 8% were residing in a vehicle.

FIGURE 18. CURRENT LIVING ARRANGEMENTS

A Structure or Indoor Area Not Normally Used for Sleeping	1%	15%
Vehicle (Car/Van/RV/Camper)	35%	8%

*City of Oakland n=660; Alameda County n=1,682*
Note: Percentages may not add up to 100 due to rounding.

DURATION AND RECURRENCE OF HOMELESSNESS

Unstable living conditions, poverty, housing scarcity, and many other issues often lead to individuals falling into homelessness. For some, the experience of homelessness is part of a long and recurring history of housing instability. While there is research that demonstrates how housing instability has many of the same effects as literal homelessness, particularly on families and children, extended periods of homelessness can affect a person's ability to obtain housing and employment and lead to increased health risks.[1] The length of time individuals remain on the street can also indicate the strain on the homeless assistance and housing systems.
Twenty-five percent (25%) of 2019 survey respondents in the city of Oakland reported experiencing homelessness for the first time, compared to 31% of respondents countywide.

FIGURE 19.   EXPERIENCING HOMELESSNESS FOR THE FIRST TIME

n=634

Some individuals who experience homelessness will cycle in and out of stable housing. One-third (33%) of respondents reported experiencing homelessness three or more times in the past three years compared to 27% of respondents in Alameda County.

FIGURE 20.   NUMBER OF EPISODES OF HOMELESSNESS IN THE PAST THREE YEARS

[1] Buckner, J.C. (2008). Understanding the impact of homelessness on children: Challenges and future research directions. American Behavioral Scientist 51 (6), 721-736.

The majority (55%) of survey respondents reported their current episode of homelessness lasting for one year or longer compared to 63% of survey respondents countywide. Three percent (3%) of respondents reported experiencing homelessness for one week or less.
FIGURE 21.   LENGTH OF CURRENT EPISODE OF HOMELESSNESS

■ City of Oakland   ■ Alameda County

City of Oakland n=642; Alameda County n=1,638
Respondents were asked the age at which they first experienced homelessness. This question provides some insight into how homelessness and housing instability affect the population over their lifetime. Ten percent (10%) of respondents first experienced homelessness as a child under the age of 18, 10% first experienced homelessness as a young adult between the ages of 18 and 24, and 70% reported their first time experiencing homelessness occurring over the age of 24. Among those who first experienced homelessness at age 25 and older, 19% reported first experiencing homelessness at age 50 or older.

FIGURE 22.   AGE AT FIRST EXPERIENCE OF HOMELESSNESS

Note: Percentages may not add up to 100 due to rounding.

PRIMARY CAUSE OF HOMELESSNESS

The primary cause of an individual's inability to obtain or retain housing is often difficult to pinpoint, as it is often the result of multiple and compounding causes. An inability to secure adequate and affordable housing can also lead to an inability to address other basic needs, such as health care and adequate nutrition.

When asked to identify the primary event or condition that led to their current homelessness experience, from a limited list of predominantly personal reasons, 31% cited economic factors such as job loss (13%), rent increase (11%), and other money issues (10%). Nearly one-quarter of survey respondents (24%) cited mental health (14%) and substance use (10%) issues.

Although not among the most frequent responses, other reported causes of homelessness included eviction or foreclosure (7%), family or friends could not afford to let them stay (6%), and physical health issues (5%).

FIGURE 23.   PRIMARY CAUSE OF HOMELESSNESS (TOP SIX RESPONSES)

■ City of Oakland   ■ Alameda County

City of Oakland n=648; Alameda County n=1,655
Note: Multiple response question, percentages will not add up to 100.

SUPPORT THAT MIGHT HAVE PREVENTED HOMELESSNESS

Many individuals experiencing homelessness face significant barriers in retaining permanent housing. These barriers can range from housing affordability and availability to accessing the economic and social supports (e.g., increased income, rental assistance, and case management) needed to access and retain permanent housing.

When asked what might have helped them retain their housing, respondents most often cited income-related resources (50%), including benefits, increased income, employment assistance, and child support. Forty-one percent (41%) cited the need for behavioral health services (i.e., mental health services and alcohol or drug counseling) while 35% reported that rental assistance would have prevented their current homelessness.

Other supports cited in 2019 included help obtaining resources after leaving a hospital, treatment, jail, or prison facility (9%); legal assistance (8%); and family counseling (6%).

FIGURE 24. SUPPORT THAT MIGHT HAVE PREVENTED HOMELESSNESS (TOP FIVE RESPONSES)

City of Oakland n=647; Alameda County n=1,658
Note: Multiple response question, percentages will not add up to 100.

SEXUAL ORIENTATION AND GENDER IDENTITY

While limited data are available on the number of lesbian, gay, bisexual, transgender, and queer (LGBTQ+) individuals experiencing homelessness, available data suggest that LGBTQ+ individuals experience homelessness at higher rates – especially among those under the age of 25.[2][3]

Sixteen percent (16%) of survey respondents identified as LGBTQ+ in 2019. Of those, 32% identified as bisexual, 22% as gay, 14% as lesbian, 13% as transgender, and 11% as queer. Fourteen percent (14%) of LGBTQ+ respondents reported an unspecified identity.

FOSTER CARE SYSTEM

It has been estimated that one in five former foster youth experience homelessness within four years of exiting the foster care system.[4] In California, foster youth are eligible to receive services beyond age 18. Transitional housing and supportive services for youth aged 18-24 are provided through programs often referred to as Transitional Housing Placement-Plus (THP-+).

In 2019, 14% of respondents in both the city of Oakland and Alameda County reported a history of foster care. Twelve percent (12%) of youth under age 25 in the city of Oakland reported that aging out of the foster care system was the primary cause of their current homelessness.

FIGURE 26.   HISTORY OF FOSTER CARE

CRIMINAL JUSTICE SYSTEM

Homelessness and incarceration are often correlative. Individuals without stable housing are at greater risk of criminal justice system involvement, particularly those with mental health issues, veterans, and youth. Individuals with past incarceration face significant barriers to exiting homelessness due to stigmatization and policies affecting their ability to gain employment and access housing opportunities.[5] A recent study found that formerly incarcerated people were almost ten times more likely to experience homelessness than the general public.[6]

Ten percent (10%) of respondents in the city of Oakland reported being on probation at the time of the survey and 5% reported being on parole, compared to 9% and 3% countywide, respectively.

SCHOOL ENROLLMENT

Communities across the country are becoming increasingly aware of the number of students in schools and colleges experiencing homelessness. A recent study of community college students across the nation showed roughly 14% were experiencing homelessness.[7] Enrollment in school not only points to the resiliency and drive of the people but also can help to identify institutions with the potential to provide outreach and support to individuals experiencing homelessness in the community.

At the time of the survey, 6% of respondents in the city of Oakland were enrolled in some type of schooling. Surveys were only conducted with heads of households; therefore, many school-age children are not represented in the survey results.

FIGURE 28.   SCHOOL ENROLLMENT

HEALTH

The average life expectancy for individuals experiencing homelessness is up to 36 years shorter than the general population.[8] Without regular access to health care and without safe and stable housing, individuals experience preventable illness and often endure longer hospitalizations. It is estimated that those experiencing homelessness stay four days (or 36%) longer per hospital admission than patients not experiencing homelessness.[9]

HEALTH CONDITIONS

The most frequently reported health condition among survey respondents in the city of Oakland was psychiatric or emotional conditions (35%), followed by post-traumatic stress disorder (34%) and drug or alcohol abuse (31%). Twenty-five percent (25%) reported chronic health problems, 20% reported a physical disability, 12% reported a traumatic brain injury, and 5% reported living with an AIDS or an HIV-related condition.

Thirty-eight percent (38%) of respondents in the city of Oakland reported at least one of these conditions was disabling, preventing them from maintaining work or housing, compared to 42% of respondents countywide. Nineteen percent (19%) of respondents in the city of Oakland reported living with three or more disabling conditions.

DOMESTIC/PARTNER VIOLENCE OR ABUSE
Histories of domestic violence and partner abuse are prevalent among individuals experiencing homelessness and can be the primary cause of homelessness. Survivors often lack the financial resources required for housing, as their employment history or dependable income may be limited.

Seven percent (7%) of survey respondents in the city of Oakland reported currently experiencing domestic violence or abuse, compared to 6% of respondents in Alameda County.
Twenty-two percent (22%) of respondents in the city of Oakland reported a history of ever experiencing physical, emotional, or sexual abuse by a relative or by a person with whom they have lived, such as a spouse, partner, sibling, parent, or roommate, compared to 26% of respondents countywide.

SERVICES AND ASSISTANCE

Alameda County provides services and assistance to those currently experiencing homelessness through federal and local programs. Government assistance and homeless services work to enable individuals and families to obtain income and support. However, many individuals and families do not apply for services, as many believe that they are ineligible for assistance. Connecting homeless individuals and families to these support services creates a bridge to mainstream support services and can prevent future housing instability.

RECOMMENDED USES FOR SPENDING NEW MONEY TO END HOMELESSNESS

Survey respondents were asked to identify uses for funding to end homelessness in Alameda County if new money became available. Forty-seven percent (47%) of respondents in the city of Oakland identified affordable rental housing and forty-one percent (41%) identified permanent help with rent/subsidies. Employment training and job opportunities (30%), behavioral health services (24%), housing with supportive services (22%), and short-term financial assistance (18%) were also among the top recommendations. Seventeen percent (17%) recommended that new money should be spent on emergency shelter.

FIGURE 31.   HOW ANY NEW FUNDING TO END HOMELESSNESS IN ALAMEDA COUNTY SHOULD BE SPENT (TOP SIX RESPONSES)
City of Oakland n=645; Alameda County n=1,649
Note: Multiple response question, percentages will not add up to 100.

COORDINATED ENTRY

Coordinated entry is the front door of Alameda County's Housing Crisis Response System that is designed to problem-solve, assess, and match people to available resources and to ensure that individuals with the highest needs are prioritized. When asked whether they had accessed coordinated entry, less than half (42%) of respondents in the city of Oakland reported that they had been told to call 211, talked to an outreach worker, or visited a Hub/Housing Resource Center to access housing or services. Six percent (6%) were unsure whether they had used coordinated entry.

FIGURE 32.   COORDINATED ENTRY USE

■ City of Oakland   ■ Alameda County

City of Oakland n=625; Alameda County n=1,609
Note: Multiple response question, percentages will not add up to 100.
SHELTER SERVICES

Emergency shelters provide a safe, short-term alternative to the streets for people experiencing homelessness by providing support for immediate, basic needs as well as linkages to other support services and longer-term housing opportunities.

When asked what prevents them from using shelter services, survey respondents in the city of Oakland cited a number of reasons. Twenty-six percent (26%) said they do not use them because of lack of privacy, 24% cited concerns for personal safety, 22% cited bugs, 20% cited crowding, and 17% cited too many rules.

FIGURE 33.   REASONS FOR NOT USING SHELTER SERVICES (TOP FIVE RESPONSES)

■ City of Oakland   ■ Alameda County

City of Oakland n=625; Alameda County n=1,566
Note: Multiple response question, percentages will not add up to 100.
INTEREST IN HOUSING

While it is often believed that people experiencing homelessness do not want housing and choose to live on the street, just 2% of respondents in the city of Oakland reported they were not interested in housing. Half of respondents were interested in independent affordable housing (50%); however other respondents wanted clean and sober housing (18%), housing with support services (14%), and assisted living with 24-hour care (4%).

Subpopulations

Home, Together: The Federal Strategic Plan to Prevent and End Homelessness outlines national objectives and evaluative measures for ending homelessness among all populations in the United States.

In order to adequately address the diversity within the population experiencing homelessness, the federal government identifies four subpopulations with particular challenges or needs, including:

- Families with children;
- Unaccompanied children and transition-age youth;
- Persons experiencing chronic homelessness; and
- Veterans

Consequently, these subpopulations represent important reportable indicators for measuring local progress toward ending homelessness.

The following sections examine each of these four subpopulations, identifying the number and characteristics of individuals included in the *EveryOne Counts! 2019 Homeless Count and Survey*. Additional details on the number and characteristics of single individuals 25 years and older is also presented in this section, as it is the largest population of persons experiencing homelessness in Alameda County.

Of the 660 surveys completed in the city of Oakland in 2019, the results include 564 single adults 25 years and older, 37 individuals in homeless families, 59 unaccompanied children and transition-age youth, 377 chronically homeless individuals and 71 homeless veterans. Surveys were completed in unsheltered environments, emergency shelters, and transitional housing settings.

Note: Due to the small number of surveys completed with certain subpopulations, caution is advised in interpreting the following findings.

SINGLE ADULTS 25 YEARS AND OLDER

The largest number of people experiencing homelessness are adults over the age of 24 in households without children. This population is often referred to as single adults age 25 years and older, though it may include married or non-married couples and multi-adults households. It is often assumed that this population has high medical and mental health needs, yet data suggests that most of this population does not.[10]

NUMBER OF SINGLE ADULTS 25 YEARS AND OLDER

In 2019, there were 3,396 single adults age 25 years and older comprising 83% of the population experiencing homelessness in the city of Oakland. Unsheltered single adults 25 years and older represented 89% of the total unsheltered population in the city of Oakland (2,855 individuals).

LENGTH OF HOMELESSNESS AMONG SINGLE ADULTS 25 YEARS AND OLDER

The rate of first-time homelessness among single adults age 25 and older in the city of Oakland was higher for unsheltered respondents (27%) than sheltered respondents (22%). Overall, unsheltered single adults 25 years and older reported their current episode of homelessness was longer than their sheltered counterparts. Fifty-seven percent (57%) of unsheltered single adults age 25 and older reported experiencing homelessness for a year or longer, compared to 49% of sheltered single adults.

FIGURE 36.   LENGTH OF CURRENT EPISODE OF HOMELESSNESS AMONG SINGLE ADULTS 25 YEARS AND OLDER

Note: Percentages may not add up to 100 due to rounding.

PRIOR LIVING SITUATION OF SINGLE ADULTS 25 YEARS AND OLDER

Both unsheltered and sheltered single adults age 25 and older in the city of Oakland reported most frequently living in a home owned or rented by either friends, relatives, a partner, or themselves prior to experiencing homelessness.

FIGURE 37.   LIVING ARRANGEMENTS IMMEDIATELY PRIOR TO BECOMING HOMELESS AMONG SINGLE ADULTS 25 YEARS AND OLDER (TOP FIVE RESPONSES)

Unsheltered Single Adults 25+ n= 413, Sheltered Single Adults 25+ n=138

PRIMARY CAUSE OF HOMELESSNESS AND PREVENTIVE SERVICES NEEDED AMONG SINGLE ADULTS 25 YEARS AND OLDER

Job loss (16%) and mental health issues (16%) were identified as the primary causes of homelessness among unsheltered single adults age 25 and older, followed by a rent increase (13%), substance use issues (11%) and other money issues (11%). Among sheltered single adults age 25 and older, 13% attributed their current homelessness to mental health issues, 9% to job loss, 7% to a rent increase, 9% to substance use issues, and 4% to other money issues.

FIGURE 38.   PRIMARY CAUSE OF HOMELESSNESS AMONG SINGLE ADULTS 25 YEARS AND OLDER (TOP FIVE RESPONSES)

■ Unsheltered Single Adults 25+   ■ Sheltered Single Adults 25+
Unsheltered Single Adults 25+ n= 416, Sheltered Single Adults 25+ n=138
Note: Multiple response question, percentages will not add up to 100.

Both unsheltered and sheltered single adults 25 years and older most frequently reported that rental assistance would have helped to prevent their housing loss (35% and 32%, respectively). In identifying potential supports that might have prevented their homelessness, unsheltered single adults 25 years and older reported higher rates of benefits or increased income (34%) and alcohol or drug counseling (23%) while their sheltered counterparts reported higher rates of mental health services (26%) and employment assistance (18%).

FIGURE 39.   SUPPORT NEEDED TO PREVENT HOUSING LOSS AMONG SINGLE ADULTS 25 YEARS AND OLDER (TOP FIVE RESPONSES)

Unsheltered Single Adults 25+ n= 417; Sheltered Single Adults 25+ n=136
Note: Multiple response question, percentages will not add up to 100.

HEALTH CONDITIONS AMONG SINGLE ADULTS 25 YEARS AND OLDER

Overall, unsheltered and sheltered single adults 25 years and older reported similar rates of living with various health conditions (59% and 61%, respectively). Unsheltered single adults 25 years and older most often reported psychiatric or emotional problems (35%), PTSD (33%), drug or alcohol abuse (26%), and chronic health problems (23%). Sheltered single adults 25 years and older most often reported psychiatric or emotional conditions (39%), drug or alcohol abuse (38%), chronic health problems (36%), and PTSD (31%).

Unsheltered Single Adults 25+ n= 424, Sheltered Single Adults 25+ n=140
Note: Multiple response question, percentages will not add up to 100.

HOUSING INTEREST AMONG SINGLE ADULTS 25 YEARS AND OLDER

The percentage of unsheltered single adults 25 years and older who reported they were not currently interested in housing was 2%, compared to 1% of sheltered single adults 25 years and older. Independent, affordable rental housing was the most frequent type of housing desired by both unsheltered and sheltered single adults 25 years and older (44% and 61%, respectively).

FAMILIES WITH CHILDREN

National data from 2017 indicate that 33% of all people experiencing homelessness are persons in families.[11] Very few families experiencing homelessness are unsheltered, as public shelters serve 90% of families experiencing homelessness in the United States; this is a significantly higher proportion of the population compared with other subpopulations, including unaccompanied children and transition-age youth.

Nationally, the majority of families experiencing homelessness are households headed by single women and families with children under the age of six.[12] Children in families experiencing homelessness have increased incidence of illness and are more likely to have emotional and behavioral problems than children with stable living accommodations.[13]

HOMELESS FAMILIES WITH CHILDREN

There were 64 families consisting of 198 individuals counted in the city of Oakland in 2019. The number of people in families with children represented 5% of the city's overall population experiencing homelessness, and 38% of all family households experiencing homelessness across Alameda County. Children under 18 represented 52% of those in families.

Ninety-nine percent (99%) of persons in families were residing in emergency shelter or transitional housing programs on the night of the count, while 1% were unsheltered.

PRIMARY CAUSE OF HOMELESSNESS AMONG HOMELESS FAMILIES WITH CHILDREN

The most frequently reported cause of homelessness among individuals in families with children was family or domestic violence (19%), over six times the rate reported by all survey respondents. Sixteen percent (16%) reported aging out of foster care, compared to 4% of all survey respondents. Fourteen percent (14%) reported job loss, 14% reported other money issues, and 11% reported a rent increase as the primary cause of their homelessness.

HEALTH CONDITIONS AMONG HOMELESS FAMILIES WITH CHILDREN

Fifty-four percent (54%) of family respondents reported living with a health condition. Thirty-eight percent (38%) of families with children reported experiencing psychiatric or emotional conditions. Thirty-two percent (32%) reported PTSD, 16% reported chronic health problems, 5% reported a traumatic brain injury, 3% reported a physical disability, and 3% reported drug or alcohol abuse. Compared to all respondents, families with children reported notably lower rates of chronic health problems, physical disability, and drug or alcohol abuse.

UNACCOMPANIED CHILDREN AND TRANSITION-AGE YOUTH

Due to the nature of youth homelessness, limited data are available on unaccompanied children and transition-age youth experiencing homelessness. Young people experiencing homelessness have a harder time accessing services, including shelter, medical care, and employment. This is due to the stigma of their housing situation, lack of knowledge of available resources, and a dearth of services targeted to young people.[14]

Although largely considered an undercount, nationwide estimates from 2017 suggest there are at least 40,799 unaccompanied children and transition-age youth on the streets and in public shelters, an increase of 14% over 2016.[15] This increase may be due, in part, to the focus on unaccompanied youth during the 2017 Point-in-Time Count, which served as a nationwide baseline year.

In 2012, the U.S. Interagency Council on Homelessness amended the federal strategic plan to end homelessness to include specific strategies and supports to address the needs of unaccompanied homeless children and transition-age youth. As part of this effort, the U.S. Department of Housing and Urban Development placed increased focus on gathering data on unaccompanied homeless children and transition-age youth during the Point-in-Time Count.

UNACCOMPANIED CHILDREN AND TRANSITION-AGE YOUTH

Transition-age youth, young people between the ages of 18 and 24, represented 11% of the overall population experiencing homelessness in Alameda County (447 individuals). Unaccompanied children, under age 18, represented approximately 1% of the population (21 individuals). These young people represented 12% of the overall homeless population in the city of Oakland, compared to 9% of the countywide homeless population.

Seventy-three percent (73%) of unaccompanied children and transition-age youth experiencing homelessness in the city of Oakland were unsheltered on the night of the count, while 27% were residing in emergency shelter and transitional housing programs.

FIGURE 45.   SHELTER STATUS OF UNACCOMPANIED CHILDREN AND TRANSITION-AGE YOUTH EXPERIENCING HOMELESSNESS

Unaccompanied Children n=21; Transition-Age Youth n=447

PRIMARY CAUSE OF HOMELESSNESS AMONG UNACCOMPANIED HOMELESS CHILDREN AND TRANSITION-AGE YOUTH

Unaccompanied youth and the overall homeless survey respondents of the city of Oakland reported differences in their primary cause of homelessness. Unaccompanied youth attributed their homelessness to aging out of foster care or an argument with the person they were living with at notably higher rates. Eighteen percent (18%) of unaccompanied youth survey respondents in the city of Oakland reported not knowing why they were experiencing homelessness, compared to 7% of survey respondents citywide.

Note: Multiple response question, percentages will not add up to 100.

HEALTH CONDITIONS AMONG UNACCOMPANIED HOMELESS CHILDREN AND TRANSITION-AGE YOUTH

Though generally healthier than the adult homeless population, health is still an issue for young people experiencing homelessness. Over half (53%) of unaccompanied youth in the city of Oakland reported living with a health condition compared to 59% of the overall homeless population in the city of Oakland. Among youth survey respondents, PTSD (42%), psychiatric or emotional conditions (24%), and chronic health problems (20%) were among the most prevalent conditions reported. In comparison to the overall homeless survey respondents in the city of Oakland, young people reported notably lower rates of a physical disability, drug or alcohol use, and traumatic brain injury.

SEXUAL ORIENTATION AMONG UNACCOMPANIED CHILDREN AND TRANSITION-AGE YOUTH

LGBTQ+ youth remain overrepresented in the population experiencing homelessness; an estimated 40% of youth experiencing homelessness identify as LGBTQ+.[16] Overall, 29% of unaccompanied children and transition-age youth in the city of Oakland identified as LGBTQ+ compared to 15% of adults age 25 and older. Eighteen percent (18%) of unsheltered unaccompanied children and transition-age youth identified as LGBTQ+, compared to 42% of sheltered youth.

FOSTER CARE AMONG UNACCOMPANIED HOMELESS CHILDREN AND TRANSITION-AGE YOUTH

Over one-third (36%) of unaccompanied youth survey respondents in the city of Oakland reported a history of foster care, compared to 12% of all other survey respondents citywide. Twenty-seven percent (27%) of unsheltered youth reported a history of foster care, compared to 46% of sheltered youth. Twelve percent (12%) of youth survey respondents attributed their homelessness to aging out of foster care.

INDIVIDUALS EXPERIENCING CHRONIC HOMELESSNESS

HUD defines a person experiencing chronic homelessness as someone who has experienced homelessness for a year or longer—or who has experienced at least four episodes of homelessness totaling 12 months in the last three years—and also has a disabling condition that prevents them from maintaining work or housing. This definition applies to individuals as well as heads of household who meet the definition.

The chronically homeless population represents one of the most vulnerable populations on the street; the mortality rate for those experiencing chronic homelessness is four to nine times higher than that of the general population.[17] Data from communities across the country reveal that public costs incurred by those experiencing extended periods of homelessness include emergency room visits, interactions with law enforcement, incarceration, and regular access to social supports and homeless services. These combined costs are often significantly higher than the cost of providing individuals with permanent housing and supportive services.

In 2017, HUD reported that 86,962 individuals, representing 24% of the overall homeless population, were experiencing chronic homelessness nationally.[18] Chronic homelessness has been on the decline in recent years as communities across the country increase the capacity of their permanent supportive housing programs and prioritize those with the greatest barriers to housing stability.

NUMBER OF PERSONS EXPERIENCING CHRONIC HOMELESSNESS

In 2019, an estimated 865 individuals were experiencing chronic homelessness in the city of Oakland. These individuals represent 21% of the total population experiencing homelessness in the city of Oakland, and 39% of all those experiencing chronic homelessness across Alameda County.

Among individuals experiencing chronic homelessness in the city of Oakland, 72% were unsheltered while 28% were residing in emergency shelter on the night of the count.

FIGURE 50.   SHELTER STATUS OF PERSONS EXPERIENCING CHRONIC HOMELESSNESS

0%   100%

SINGLE INDIVIDUALS EXPERIENCING CHRONIC HOMELESSNESS

An estimated 812 single individuals were experiencing chronic homelessness in 2019. This constitutes a 9% decrease from the number of single individuals experiencing chronic homelessness in 2017. Seventy-six percent (76%) of individuals experiencing chronic homelessness in 2019 were unsheltered, while 24% were residing in emergency shelter and safe haven programs.

In 2019, single individuals experiencing chronic homelessness represented 20% of the overall population experiencing homelessness in the city of Oakland, compared to 26% countywide.
FAMILIES WITH CHILDREN EXPERIENCING CHRONIC HOMELESSNESS

In 2019, 18 families were experiencing chronic homelessness, including 18 heads of household and 35 family members for a total of 53 people. All families experiencing chronic homelessness were identified in emergency shelters. Twenty-eight percent (28%) of family households were experiencing chronic homelessness in 2019, compared to 36% countywide.

PRIMARY CAUSE OF HOMELESSNESS AMONG THOSE EXPERIENCING CHRONIC HOMELESSNESS

Survey respondents experiencing chronic homelessness in the city of Oakland most frequently cited mental health (30%) and substance use issues (25%) as the primary cause of their homelessness, compared to 14% and 10%, respectively, of respondents citywide. Job loss (13%), money issues (10%), and physical health issues (10%) were also among the top causes of homelessness among chronically homeless survey respondents.

FIGURE 51.   PRIMARY CAUSE OF HOMELESSNESS AMONG CHRONICALLY HOMELESS PERSONS

HEALTH CONDITIONS AMONG PERSONS EXPERIENCING CHRONIC HOMELESSNESS

The definition of chronic homelessness requires a condition that prevents an individual from maintaining work or housing. The definition requires that only one be limiting, however, many survey respondents experiencing chronic homelessness reported experiencing multiple physical or mental health conditions. The following data report all conditions regardless of severity. It is important to recognize that all survey data are self-reported and influenced by participant's self-awareness and knowledge of a diagnosis.

In general, chronically homeless survey respondents reported living with higher rates of all surveyed health conditions than other respondents.

Seventy-two percent (72%) of survey respondents experiencing chronic homelessness in the city of Oakland reported drug or alcohol use, while 68% reported living with psychiatric or emotional conditions and over half (54%) living with PTSD. Forty-five percent (45%) reported living with chronic health problems, while 37% reported a physical disability, 25% traumatic brain injury, and 7% living with an AIDS or HIV related illness.

FIGURE 52.   HEALTH CONDITIONS AMONG CHRONICALLY HOMELESS PERSONS

VETERANS

Many U.S. veterans experience conditions that place them at increased risk for homelessness, including higher rates of PTSD, traumatic brain injury, sexual assault, and substance abuse. Veterans experiencing homelessness are more likely to be unsheltered, and often remain unsheltered for extended periods of time.

The U.S. Department of Veterans Affairs (VA) provides a broad range of benefits and services to veterans of the U.S. Armed Forces. These benefits can involve different forms of financial assistance, including monthly cash payments to disabled veterans, health care, education, and housing benefits. In addition to these supports, the VA and HUD partner to provide additional housing and support services to veterans currently experiencing homelessness or at risk of experiencing homelessness.
According to data collected nationally during the 2017 Point-in-Time Count, 40,056 veterans experienced homelessness on a single night in January.[19]

HOMELESS VETERANS

In 2019, there were 361 veterans experiencing homelessness in the city of Oakland. These individuals represent 9% of the total population experiencing homelessness in the city of Oakland, and over half (52%) of the total veteran population experiencing homelessness in Alameda County.

Among veterans experiencing homelessness in the city of Oakland, 86% were unsheltered while 14% were residing in emergency shelter and transitional housing programs.

PRIMARY CAUSE OF HOMELESSNESS AMONG VETERANS

Veteran survey respondents in the city of Oakland most frequently cited a rent increase (18%) and mental health issues (13%) as the primary cause of their homelessness. Ten percent (10%) of veterans reported incarceration compared to 7% of the general homeless survey population of Oakland.

FIGURE 54.   PRIMARY CAUSE OF HOMELESSNESS AMONG VETERANS

Appendix A: Methodology

OVERVIEW

The purpose of the *EveryOne Counts! 2019 Homeless Count and Survey* was to produce a point-in-time estimate of people experiencing homelessness in Alameda County, a region which covers approximately 738 square miles. The results of the street and youth counts were combined with the results from the sheltered count to produce the total estimated number of persons experiencing homelessness in Alameda County on a given night according to the HUD definition of homelessness for the Point-in-Time Count. The subsequent, in-depth qualitative survey was used to gain a more comprehensive understanding of the experiences and demographics of those enumerated. A more detailed description of the methodology follows.

COMPONENTS OF THE POINT-IN-TIME COUNT METHOD

The Point-in-Time Count methodology used in 2019 had four primary components:

     i. <u>General street count</u>: an observation-based enumeration of unsheltered individuals between the hours of approximately 5:00 a.m. and 10:00 a.m.;

     ii. <u>Youth count</u>: a targeted enumeration of unsheltered youth under the age of 25 between the hours of approximately 2:30 p.m. and 7:30 p.m.;

     iii. <u>Sheltered count</u>: an enumeration of individuals residing in emergency shelter, safe haven, and transitional housing facilities on the night before the street count; and

     iv. <u>Survey</u>: an in-person survey of a randomized sample of unsheltered and sheltered individuals conducted by trained peer surveyors and program staff in the weeks following the general street count.

The Planning Process

To ensure the success and integrity of the count, many county and city departments and community-based agencies collaborated on community outreach, volunteer and guide recruitment, logistical plans, methodological decisions, interagency coordination efforts, and the inclusion of non-traditional programs such as Community Cabins and safe parking programs. ASR provided technical assistance for these aspects of the planning process while EveryOne Home convened stakeholders, provided project management support for implementing the methodology, and facilitated the training of volunteers and guides. This planning began in October of 2018.

Community Involvement

Local homeless and housing service providers, advocates, and people experiencing homelessness were valued partners in the planning and implementation of the count. Thanks to local efforts, the count included enumerators with a diverse range of knowledge, including expertise on areas frequented by persons experiencing homelessness, persons living in vehicles, and persons residing in encampments. Community partners were also key in recruiting individuals with lived experience of homelessness to participate in the street count and survey efforts. In 2019, a temporary position of Guide Recruitment

Lead was added. This position was key to increasing guide recruitment by 60% over 2017, and in the hiring and training of 164 guides with lived experience of homelessness for the general street count.

STREET COUNT METHODOLOGY

Goal

The goal of the general street count was to obtain an accurate count of persons sleeping outdoors and in vehicles, tents, or other places not meant of human habitation throughout Alameda County.

Definition

For the purposes of this study, the HUD definition of unsheltered homeless persons was used, as required for the federal Point-in-Time Count:

- An individual or family with a primary nighttime residence that is a public or private place not designed for or ordinarily used as a regular sleeping accommodation for human beings, including a car, park, abandoned building, bus or train station, airport, or camping ground.

Research Design

The methodology used for the *EveryOne Counts! 2019 Homeless Count and Survey* is commonly described as a "blitz count" since it is conducted by a large team of people over a very short period of time. For the general street count, every census tract in the county was canvassed in an observation-based count of individuals and families who appeared to be experiencing homeless.

In order to minimize potential duplicate counting, the timing of the general street count was coordinated to take place before most shelters released persons who slept there the previous night. General street count teams were also instructed to prioritize covering areas immediately surrounding any shelters in their assigned count location to eliminate any potential double-counting of individuals. The majority of general street count activities took place between 5:00 a.m. and 10:00 a.m., with teams in urban areas encouraged to complete their routes by 8:00 a.m. due to the higher density and mobility of the population experiencing homelessness in these areas.

Street count teams were generally comprised of at least one guide with lived experience of homelessness and up to three community volunteers. Guides assisted the team in navigating their assigned count area, identifying locations where unsheltered individuals were likely to be encountered while providing additional support in identifying people experiencing homelessness for inclusion in the tally. Volunteers assisted with transporting the team through their count area and performing the tally. Guides were compensated $15 per hour for their time spent in the field on the day of the count and an additional $15 for attending an in-person training session in advance of count day.

Census tracts served as the method of organizing the general street count; their boundaries are based on population density and determined by the federal government. Depending on the size and density of the census tracts, each team was assigned up to three contiguous census tract maps. Teams were instructed to canvas all accessible streets, roads, and highways within the boundaries of their assigned census tracts by foot, car, or a combination of both. Teams were asked to cover the entirety of their count assignment during the established hours of the street count, and to communicate with deployment center staff if they required additional assistance or time.

All street count teams were equipped with their assigned census tract map areas, tally sheets, training guidelines, deployment center staff contact information, and other supplies by ASR staff. ASR staff also verified that at least one person on each team had a cell phone available for use during the count and recorded their contact information on a volunteer deployment log.

In performing the tally, teams were instructed not to initiate direct contact with, or to otherwise disturb, people experiencing homelessness who were observed during the count. Leveraging the expertise of their guide and other team members, count volunteers were instructed to only observe and record basic demographic and location information.

Upon completion of their count assignment, teams returned to the deployment center to submit their tally sheets and maps and to debrief with deployment center staff. ASR staff reviewed all maps to verify that every accessible road and area within the map assignment had been covered, as well as all tally sheets to ensure information was recorded accurately.

Methodological Improvements
The 2019 street count methodology followed the established, HUD-approved methodology implemented in the 2017 count, with some key improvements.

To improve the local accuracy of the multiplier used to estimate the number of persons residing in tents and vehicles, a pre-count survey (*Multiplier for Persons in Vehicles and Tents*) was implemented countywide in December 2018. While general street count teams are typically able to observe a vehicle or structure that is being inhabited, they are not always able to accurately determine the number of persons residing in these locations through pure observation. Prior to the count, local outreach teams conducted a tally of persons residing in three different vehicle types (cars, vans, and RVs) as well as tents and improvised structures. The average household sizes of people identified residing in each of these location types during the pre-count survey were subsequently applied to tallies where the number of persons was unknown. In 2017, this multiplier was determined by survey responses only, which often resulted in a small sample of respondents, particularly among those residing in vehicles.

Additionally, gender for the unsheltered population was estimated using self-reported information from the survey in order to increase accuracy. In 2017, gender totals for the unsheltered population were determined using observation data collected from the general street count tally. In 2019, observational gender data from the tally sheet were used for deduplication purposes only.

Volunteer and Guide Recruitment and Training
Many individuals who live and/or work in Alameda County supported the county's effort to enumerate the local homeless population as volunteers. On the morning of January 30, 2019, nearly 500 volunteers and service providers participated in the general street count. An additional 164 individuals who were currently or had recently experienced homelessness served as guides to street count teams.

Extensive outreach efforts were conducted by EveryOne Home, including outreach to local non-profits serving people experiencing homelessness, local volunteer programs, and jurisdictional partners. Local shelters and service providers recruited and recommended the most knowledgeable and reliable individuals to participate in the count as guides. Additionally, the hiring of a Guide Recruitment Lead resulted in the increased participation, coordination, and training of guides throughout Alameda County. Volunteer recruitment goals were reached in December 2018.

In order to participate in the count, all volunteers and guides were requested to attend an hour-long training before the count. In addition to sharing a YouTube training for volunteers via email, in-person trainings were held and conducted by EveryOne Home in multiple locations throughout the county. Training covered all aspects of the count, including the definition of homelessness, how to identify individuals experiencing homelessness, potential locations where individuals experiencing homelessness may be located, how to safely and respectfully conduct the count, how to use the tally count sheets to accurately record observations, how to use the census tract maps to ensure the entirety of the assigned area was covered, and other tips to help ensure an accurate count.

On the morning of the count, all volunteers and guides received a brief refresher training conducted by ASR staff prior to forming teams and receiving their count assignment. The refresher training reiterated the instructions for navigating the census tract maps and recording observations on the tally sheet as well as essential safety protocols.

Deployment Site	# Census Tracts	RECRUITING GOAL		ACTUAL TURNOUT	
		# Guides	# Volunteers	# Guides	# Volunteers
Oakland	78	55	138	55	151
East Oakland	65	33	81	17	57
Total Oakland	**143**	**88**	**219**	**72**	**208**
North County	39	25	63	25	52
Mid County	70	34	85	30	104
East County	42	18	44	17	50
South County	66	29	73	20	75
Total	**360**	**194**	**484**	**164**	**489**

Safety Precautions

Every effort was made to minimize potentially hazardous situations. In census tracts with a high concentration of homeless encampments or with access restrictions, specialized outreach teams with knowledge of these specific areas were identified and assigned to these locations. Enumeration teams were advised to take every safety precaution possible, including bringing flashlights and maintaining a respectful distance from those they were counting.

Street Count Deployment Centers

To achieve complete coverage of the county within the early morning timeframe, the planning team identified six areas for the placement of dispatch centers on the morning of the count: Berkeley (North County), Downtown Oakland, East Oakland, Hayward (Mid-County), Livermore (East County), and Fremont (South County). Deployment centers were supported by staff from ASR and EveryOne Home, who were responsible for greeting volunteers and guides; facilitating the refresher training and deployment process; distributing count instructions, maps, and supplies to enumeration teams; and collecting and reviewing data from returning teams.

Volunteers selected their preferred deployment center at the time of registration based on their familiarity with the area or their convenience. The planning team determined the enumeration routes and assigned them to the deployment center closest or most central to the coverage area to facilitate the timely deployment of enumeration teams into the field.

YOUTH COUNT METHODOLOGY

Goal

The goal of the dedicated youth count was to improve the representation of unaccompanied children and transition-age youth under the age of 25 experiencing homelessness during the 2019 Point-in-Time Count. Many unaccompanied children and transition-age youth experiencing homelessness do not use existing homeless services and often stay in locations that are difficult to find or are separate from the unsheltered adult population. In addition, youth experiencing homelessness are generally difficult for adult street count volunteer to identify using observational methods, as young people frequently "hide in plain sight." Therefore, traditional street count efforts are not as effective in reaching and counting youth.

Definition

For the purposes of the count, the HUD definition of unaccompanied youth was used. This definition includes children under the age of 18 and transition-age youth between the ages of 18 and 24 who are not accompanied by a parent or guardian, and who are also not parents presenting with or sleeping in the same place as their own child(ren). Unaccompanied youth include single youth, youth couples, and groups of youth presenting together as a household.

Research Design

The 2019 youth count methodology was comprised of two primary components:

i. <u>Youth street count:</u> A street-based questionnaire of unsheltered and unaccompanied children and transition-age youth conducted in specific areas throughout Alameda County by teams comprised of young people (age 18-24) with lived experience of homelessness and service providers; and

ii. <u>Youth count sites:</u> A site-based questionnaire of unsheltered and unaccompanied children and transition-age youth conducted at specific service locations throughout Alameda County.

As in 2017, planning for the 2019 youth count included homeless youth service providers and youth with lived experience of homelessness. Participation of local youth service providers increased in 2019 to include an array of organizations representing the geographic diversity of the region as well as the population of young people experiencing homelessness.

A focus group was held in January 2019 with young people currently experiencing homelessness to identify "hot spot" locations that would be covered on the day of the youth street count where youth experiencing homelessness were known to congregate. It was also determined that youth experiencing homelessness would be more prominent on the street during the late afternoon and early evening hours rather than in the early morning when the general street count was conducted.

Service providers recruited youth with lived experience of homelessness and knowledge of where to locate other young people experiencing homelessness to serve as youth guides for the youth count. Covenant House Oakland, Youth UpRising (East Oakland), UC Berkeley Suitcase Clinic, YEAH! Covenant House, REACH Ashland Youth Center, Beyond Emancipation, VOICES Youth Center, and the Alameda County Youth Action Board led the recruitment of youth guides and of their staff to accompany and transport youth guides during the count. Youth guides were compensated $15 per hour for their time, including time spent in training immediately prior to deployment.

The youth street count was conducted from approximately 2:30 p.m. to 7:30 p.m. on January 30, 2019. Youth street count teams comprised of at least one service provider staff member and between one and three youth guides administered the Youth Count Screening Tool to unsheltered young people in pre-identified areas of Alameda County. The Youth Count Screening Tool contained questions pertaining to young people's age, gender identity, and current housing situation. Youth guides and service provider staff were trained to administer the questionnaire to any young person under the age of 25 who they believed to be unsheltered, and to provide young people who completed the questionnaire a $5 BART ticket as a thank you gift for their participation. Youth street count teams were also provided tally sheets to count any young person who was believed to be unsheltered but who was unable to complete the Youth Count Screening Tool due to refusal, safety concerns, or other circumstances.

Additionally, service provider staff from MISSSEY, Our Kids, Youth UpRising, and REACH Ashland Youth Center administered the Youth Count Screening Tool to young people at their service locations during regular hours of operation. These locations were strategically selected in order to ensure youth who were less likely to be encountered via street outreach were included in the count.

Methodological Improvements

In 2019, the youth count methodology changed from an observation-based enumeration to a survey-based enumeration in order to improve the accuracy of the youth count and gain a better understanding of how young people experience housing crises in Alameda County.

Previously, youth count teams performed a visual tally similar to general street count teams, only focused on unsheltered youth under 25 years old. The methodology was updated to incorporate the Youth Count Screening Tool, a brief questionnaire designed to collect more detailed information on young people's living situation. The Youth Count Screening Tool was administered by youth street count teams and selected youth count site locations to every unsheltered youth encountered. Youth street count teams were also able to count youth using a tally sheet if the team believed the youth was unsheltered but was unable to complete the Youth Count Screening Tool.

While the Youth Count Screening Tool also collected information on young people experiencing housing instability, only data reported by young people who met the definition of the Point-in-Time Count are included in this report.

Street Count De-Duplication

Data from the youth count and general street count were compared and de-duplicated by assessing location, gender, and age. In total, five persons under the age of 25 were identified as duplicates and removed from the data set.

SHELTERED COUNT METHODOLOGY

Goal

The goal of the sheltered count is to gain an accurate count of persons temporarily housed in emergency shelter, safe haven, and transitional housing facilities across Alameda County. These data are vital to gaining an accurate, overall count of the homeless population and understanding where homeless persons receive shelter.

Definition

For the purposes of this study, the HUD definition of sheltered homelessness for the Point-in-Time Count was used. This definition includes individuals and families living in a supervised publicly or privately-operated shelter designated to provide temporary living arrangements.

Research Design

The occupancy and demographic information of people occupying emergency shelter, safe haven, and transitional housing facilities in Alameda County was collected for the night of January 29, 2019. All data for sheltered persons were gathered by Alameda County Department of Housing and Community Development lead staff either directly from the program or from Alameda County's Homeless Management Information System.

ENUMERATION CHALLENGES AND LIMITATIONS

Even though the Point-in-Time Count is most likely an undercount of the homeless population, the methodology employed—coupled with the housing survey—is still one of the most comprehensive approaches available. There are many challenges in any homeless enumeration, especially when implemented in a community as large and diverse as Alameda County. Point-in-Time Counts are "snapshots" that quantify the size of the population experiencing homelessness at a given point during the year. Hence, the count may not be representative of fluctuations and compositional changes in the homeless population seasonally or over time.

Regardless of how successful outreach efforts are, an undercount of the homeless population will result, especially of hard-to-reach subpopulations such as unsheltered families, unaccompanied youth, and limited English-language speakers. For a variety of reasons, unsheltered persons generally do not wish to be seen and make concerted efforts to avoid detection. Alternatively, persons residing in emergency shelter, safe haven, and transitional housing programs are much easier to enumerate due to the facility of collecting information directly from program site locations.

The methods employed in a non-intrusive visual homeless enumeration, while academically sound, have inherent biases and shortcomings. Even with the assistance of dedicated homeless service providers and persons with lived experience of homelessness, the methodology cannot guarantee 100% accuracy. Many factors may contribute to missed opportunities, such as the difficulty of identifying persons who are sleeping in vans, cars, recreational vehicles, abandoned buildings, or structures unfit for human habitation as well as families with children experiencing homelessness, who often seek opportunities to stay on private property rather than sleep on the streets.

SURVEY METHODOLOGY

Planning and Implementation

A survey of 1,681 unique individuals experiencing homelessness was conducted between February 1 and 28, 2019 to yield qualitative data about people experiencing homelessness in Alameda County. Data collected through the survey effort were used to estimate characteristics such as gender, race, and ethnicity of the unsheltered population by applying percentages of respondents to the number of individuals tallied during the street count. These data are also used for the McKinney-Vento Continuum of Care Homeless Assistance funding application as well as for the local development, planning, and evaluation of the community's rehousing efforts.

The survey elicited information such as gender, family status, military service, duration and recurrence of homelessness, nighttime accommodations, causes of homelessness, and health conditions through open-ended, closed-ended, and multiple response questions. Specific demographic characteristics such as ethnicity, race, health conditions, and subpopulations, were defined by and in compliance with HUD. Other research questions were formulated through community input, such as questions pertaining to residency and coordinated entry. The survey data bring greater perspective to current issues of homelessness and to the provision and delivery of services.

Surveys were conducted by peer survey workers with lived homeless experience. Training sessions were facilitated by ASR and EveryOne Home staff immediately following the general street count. Potential interviewers were led through a comprehensive orientation that included project background information as well as detailed instruction on respondent eligibility, interviewing protocol, and confidentiality. Peer survey workers were compensated at a rate of $7 per completed survey.

It was determined that survey data would be more easily obtained if a thank you gift was offered to respondents in appreciation for their time and participation. Socks were provided as an incentive for participating in the 2019 homeless survey. The socks were easy to distribute, had wide appeal, and could be provided within the project budget. The incentives proved to be widely accepted among survey respondents. A thank you gift of a $5 gift card was provided to adult survey respondents in emergency shelter and transitional housing programs and to youth survey respondents.

Survey Sampling

Based on a Point-in-Time Count estimate of 8,022 homeless persons, with a randomized survey sampling process, the 1,681 valid surveys represented a confidence interval of +/- 2% with a 95% confidence level when generalizing the results of the survey to the estimated population of individuals experiencing homelessness in Alameda County.

The 2019 survey was administered in shelters, transitional housing facilities, and on the street. Unsheltered survey quotas were developed based on the previous count year's unsheltered data and established for each jurisdiction within Alameda County. In order to ensure the representation of emergency shelter and transitional housing residents, survey quotas were created for each housing program to reach individuals and heads of family households living in these programs.

Strategic attempts were also made to reach individuals in various geographic locations and of various subset groups such as unaccompanied youth, racial and ethnic groups, veterans, domestic violence survivors, and families. One way to increase the participation of these groups was to recruit peer survey workers. As in 2017, *EveryOne Counts!* prioritized a peer-to-peer approach to data collection by increasing the number of surveyors currently experiencing homelessness.

In order to increase randomization of sample respondents, peer survey workers were trained to employ an "every third encounter" survey approach. Surveyors were instructed to approach every third person they considered to be an eligible survey respondent. Emergency shelter and transitional housing staff administering the survey to program residents were also instructed to survey every third head of household. If the person declined to take the survey, the surveyor could approach the next eligible person they encountered. After completing a survey, the randomized approach was resumed.

Data Collection

Care was taken by interviewers to ensure that respondents felt comfortable regardless of the street or shelter location where the survey occurred. During the interviews, respondents were encouraged to be candid in their responses and were informed that these responses would be framed as general findings, remain confidential, and would not be traceable to any single individual. Respondents were also allowed to skip or refuse to answer any question that made them uncomfortable or for which they were unwilling to share

Data Analysis

The survey requested respondents' initials and date of birth so that duplication could be avoided without compromising the respondents' anonymity. Upon completion of the survey effort, an extensive verification process was conducted to eliminate duplicates. This process examined respondents' date of birth, initials, gender, ethnicity, length of homelessness, and consistencies in patterns of responses to other survey questions.

SURVEY CHALLENGES AND LIMITATIONS

The 2019 Alameda County Homeless Survey methodology relies heavily on self-reported data collected from peer surveyors and program staff. While self-report allows individuals to represent their own experiences, self-reported data are often more variable than clinically reported data. However, using the peer-to-peer interviewing methodology is believed to enable respondents to be more candid with their answers and to help reduce the uneasiness of revealing personal information. Further, service providers recommended individuals who would be the best suited to conducting interviews and these individuals received comprehensive training about how to conduct interviews. The service providers and/or county staff who collected completed surveys also reviewed the surveys to ensure quality responses. Surveys that were considered incomplete or containing false responses were not accepted.

It is important to recognize that variations between survey years may result from shifts in the demographic profiles of surveyors, accessibility to certain populations, and changes to the survey instrument. While every effort was made to collect surveys from a random and diverse sample of unsheltered and sheltered individuals, the hard-to-reach nature of the population experiencing homelessness prevents a true random sampling. Recruitment of diverse and geographically dispersed surveyors was prioritized; however, equal survey participation across all populations may be further

limited by the participation and adequate representation of subpopulations in planning and implementation processes. This includes persons living in vehicles, unsheltered families, and limited English-language speakers.

It is for these reasons that Point-in-Time Count data should be used in conjunction with other community sources of data on individuals and families experiencing homelessness to gather a comprehensive understanding of the community.

Appendix B: Definitions and Abbreviations

Chronic homelessness – Defined by HUD as an unaccompanied individual or head of a family household with a disabling condition who has either continuously experienced homelessness for a year or more, or has experienced at least four episodes of homelessness totaling 12 months, in the past three years.

Disabling condition – Defined by HUD as a physical, mental, or emotional impairment, including an impairment caused by alcohol or drug abuse, PTSD, or brain injury that is expected to be long-term and impacts the individual's ability to live independently; a developmental disability; or HIV/AIDS.

Emergency shelter – The provision of a safe alternative to the streets, either in a shelter facility or through the use of stabilization rooms. Emergency shelter is short-term, usually for 180 days or fewer. Domestic violence shelters are typically considered a type of emergency shelter, as they provide safe, immediate housing for survivors and their children.

Family – A household with at least one adult and one child under the age of 18.

Homeless – Under the Category 1 definition of homelessness in the HEARTH Act, includes individuals and families living in a supervised publicly or privately operated shelter designated to provide temporary living arrangements, or with a primary nighttime residence that is a public or private place not designed for or ordinarily used as a regular sleeping accommodation for human beings, including a car, park, abandoned building, bus or train station, airport, or camping ground.

HUD – Abbreviation for the U.S. Department of Housing and Urban Development.

Precariously housed – A person who is staying with the household because they have no other regular or adequate place to stay due to a lack of money or other means of support.

Sheltered homeless individuals – Individuals who are living in emergency shelters or transitional housing programs.

Single individual – Refers to an unaccompanied youth or adult. The individual may be an unaccompanied child under the age of 18 living without a parent or guardian over the age of 18, or an adult who is part of a collection of adults living together as a household without any minor children living with them.

Transition-age youth – Young people between the ages of 18 and 24 years old who are not accompanied by a parent or guardian and are not a parent presenting with or sleeping in the same place as their own child(ren).

Transitional housing – Housing in which homeless individuals may live up to 24 months and receive supportive services that enable them to live more independently. Supportive services – which help promote residential stability, increased skill level or income, and greater self-determination –may be provided by the organization managing the housing, or coordinated by that organization and provided by other public or private agencies. Transitional housing can be provided in one structure or several structures at one site, or in multiple structures at scattered sites.

Unaccompanied children – Children under the age of 18 who are not accompanied by a parent or guardian and are not a parent presenting with or sleeping in the same place as their own child(ren).

Unsheltered homeless individuals – Individuals who are living on the streets, in abandoned buildings, storage structures, vehicles, encampments, or any other place unfit for human habitation.

Appendix C: Point-in-Time Count Results

The following tables feature a subset of the *EveryOne Counts! 2019 Homeless Count and Survey* data submitted to HUD for individuals experiencing homelessness in Alameda County. These tables only include data for persons experiencing homelessness in the city of Oakland. Data are reported by three household types (households with at least one adult and one child, households with no children, and households with only children) and by shelter status (sheltered and unsheltered). Specific data on veteran households, youth and young adult households, and various subpopulations are also reported and included in the tables found in this section.

Appendix D: Adult Survey & Youth Screening Tool

2019 Alameda County Housing Survey

Interview Date: _____ Neighborhood or City: _____

Refusals: _____
Interviewer's Name: _____
Site _____

Shade Circles Like This→ ●
Not Like This→ ⊗ ✕

Section A: Demographics

1. What are your initials?

First _____ Middle _____ Last _____

2. What is your birth date?

Month _____ Day _____ Year _____

3. Which of the following best represents how you think of your gender?
- ○ Male
- ○ Female
- ○ Transgender male
- ○ Transgender female
- ○ Gender non-conforming
- ○ Refuse

4. Are you Hispanic or Latino?
○ Yes ○ No ○ Don't know ○ Refuse

5. Which racial group do you identify with most? (Shade all that apply)
- ☐ White ☐ Black or African American ☐ Asian
- ☐ American Indian or Alaska Native ☐ Other
- ☐ Native Hawaiian or Pacific Islander ☐ Refuse

6. Do you consider yourself...?
- ○ Straight ○ Lesbian ○ Bisexual ○ Gay
- ○ Queer ○ Other: _____ ○ Refuse

7. Are you currently pregnant?
○ Yes ○ No ○ Don't know ○ Refuse

8. Have you ever been in foster care?
○ Yes ○ No ○ Don't know ○ Refuse

9. Are you currently enrolled in school?
○ Yes ○ No ○ Don't know ○ Refuse

Section B: Veteran Status

1. Have you served in the U.S. Armed Forces? (Army, Navy, Air Force, Marine Corps, or Coast Guard)
○ Yes ○ No ○ Don't know ○ Refuse

2. Were you ever called into active duty as a member of the National Guard or as a Reservist?
○ Yes ○ No ○ Don't know ○ Refuse

3. Have you ever received health care or benefits from a VA (Veterans Administration) center?
○ Yes ○ No ○ Don't know ○ Refuse

Section C: Accomodation

1. Where were you staying on the night of Tuesday, January 29th? (Shade 1)
- ○ Backyard or storage structure
- ○ Motel/Motel
- ○ A place in a house not normally used for sleeping
- ○ Emergency shelter
- ○ Transitional housing **(Skip to question 2)**
- ○ Public facility (train station, transit center, bus depot) (kitchen, foyer, hallway) or unconverted garage
- ○ Outdoors/streets/parks
- ○ Van
- ○ Automobile/car
- ○ Camper/RV
- ○ Abandoned building/squat
- ○ Tent
- ○ Encampment
- ○ Other: _____

1a. How many people, including yourself, usually stay inside your tent, car, van, or RV/camper?
people _____

2. Is this the first time you have been homeless?
○ Yes ○ No ○ Refuse

3. How long have you been homeless this current time? (Shade 1)
- ○ 7 days or less ○ 4–6 months ○ More than 1 year
- ○ 8–30 days ○ 7–11 months ○ Refuse
- ○ 1–3 months ○ 1 year

4. How many different times have you been homeless in the past 3 years, including this current time? (Shade 1)
- ○ 1 time ○ 3 times ○ 5 times
- ○ 2 times ○ 4 times ○ 6 or more times
- ○ Refuse

5. Have you been living in an emergency shelter and/or on the streets (including bus stations, underpasses, encampments, abandoned buildings, etc.) for the past year (12 months) or more?
○ Yes ○ No ○ Refuse

6. In addition to right now, how long would you say you have stayed in these kinds of places (total) in the past 3 years?
Days _____ Weeks _____ Months _____ Years _____

7. How old were you the first time you experienced homelessness?
- ○ 0–17 years ○ 25–39 years ○ 50–64 years
- ○ 18–24 years ○ 40–49 years ○ 65 or older
- ○ Refuse

Section D: Household Members

1. How many people are in your household, including yourself?

2. Do you have any children under age 18? ○ Yes ○ No ○ Don't know ○ Refuse

3. Are any of your children under 18 currently living with you? ○ Yes ○ All ○ Some ○ None ○ Refuse

4. Do you live alone or with other household members? ○ With other household members ○ Alone ==> Please skip to Section E

I am going to ask you a few questions about the people in your household that were staying with you on Tuesday, January 29th. I'll ask about each person, one at a time. In order for us to keep track of who we are talking about I am going to ask you for the first and last initial of each person.

Section E: Residency

1. Immediately before you became homeless, what type of place were you living in? (Shade 1)
- A home owned or rented by you or your partner
- A home owned or rented by friends/relatives
- Hospital or treatment facility
- Subsidized housing or permanent supportive housing
- Juvenile justice facility
- Foster care placement
- Jail or prison
- Motel/hotel
- Other: _____
- Refuse

2. At the time you most recently became homeless, what county were you living in? (Shade 1)
- Alameda County
- San Francisco
- Marin County
- Santa Clara County
- San Mateo County
- Contra Costa County
- Other County in CA
- Out of State
- Refuse

3. How long have you lived in Alameda County? (Shade 1)
- Less than 6 months
- 6 months to 1 year
- 1-4 years
- 5-9 years
- 10+ years
- Refuse

4. Which city in Alameda County do you consider your home? (Shade 1)
- Albany
- Fremont
- Piedmont
- Berkeley
- Hayward
- Pleasanton
- City of Alameda
- Livermore
- San Leandro
- Dublin
- Newark
- Union City
- Emeryville
- Oakland
- Unincorporated area
- Refuse
- None/Other

5. What is the primary reason you stay in this location? (Shade 1)
- I grew up here/it's my home
- For a job/seeking work
- Family/friends are here
- LGBTQ community/acceptance
- Feel safe here
- Shelter/housing program
- Access homeless services and/or benefits
- Access to VA services or clinic
- Other: _____

Section F: Prevention

1. What do you think is the primary event or condition that led to your homelessness? (Shade 1)
- Aging out of foster care
- Incarceration
- Mental health issues
- Physical health issues
- Substance use issues
- Eviction/Foreclosure
- Family or friends couldn't afford to let me stay
- Job loss
- Rent increase
- Other money issues
- Argument with family/friend/roommate
- Death of a parent/spouse/child
- Divorce/Separation/Break-up
- Family/Domestic Violence
- Other: _____
- Don't know

2. What could have prevented you from experiencing homelessness? (Shade all that apply)
- Mental health services
