This appendix presents the inventory of sites suitable for residential development in Oakland to meet the 2023-2031 Regional Housing Needs Allocation (RHNA), as determined by the State Department of Housing and Community Development (State HCD), and summarized in Chapter 3. The sites inventory is divided into two major groups:

- Sites where development is underway or approved (known as “pipeline projects”) or otherwise can be credited to meet the RHNA; and
- Opportunity sites where additional development could occur.

The following sections explore the capacity of these two major groups, as well as the various subgroups contained within each. The complete Housing Sites Inventory (Inventory) is included as a separate Excel file (see Table C-26), as well as a map of sites identified in the Inventory (see Figure C-1).

The RHNA is a critical component of State housing law that mandates all California cities and counties plan for the housing needs of its residents. Under the RHNA mandate, State HCD, in collaboration with the Association of Bay Area Governments (ABAG), first determines the total number of new homes the nine-county Bay Area needs, and how affordable those homes need to be, in order to meet the housing needs of people at all income levels. For the planning period running from January 31, 2023, to January 31, 2031, State HCD determined that the Bay Area region must plan for 441,176 new housing units. After receiving this regional determination, ABAG was responsible for developing a RHNA Methodology for distributing a share of the region’s housing need to each city and county in the region. The RHNA Methodology must meet five objectives specified in State law, which include promoting infill development and socioeconomic equity, promoting improved intraregional jobs-housing relationships, and affirmatively further fair housing. The RHNA Methodology also must be consistent with the forecasted development pattern from Plan Bay Area 2050.

In accordance with Government Code Section 65584, the final RHNA plan was adopted by ABAG’s Executive Board on December 16, 2021 and was approved by State HCD on January 27, 2022.¹ The RHNA plan distributes regional housing need across jurisdictions by the following income categories:

- Very-low-income - less than 50 percent of the county median income.
- Low-income - between 51 and 80 percent of the county median income.
- Moderate-income - between 81 and 120 percent of the county median income.
- Above-moderate-income - greater than 120 percent of the county median income.

¹ More information on the Bay Area RHNA process is available on ABAG’s website: <https://abag.ca.gov/our-work/housing/rhna-regional-housing-needs-allocation>. The Final RHNA Plan is available at the following link: https://abag.ca.gov/sites/default/files/documents/2021-12/Final_RHNA_Allocation_Report_2023-2031-approved_0.pdf

The 2023-2031, or 6th cycle, RHNA identifies an overall need of 26,251 new units in Oakland, a nearly 77.8 percent increase from the prior cycle’s allocation of 14,765 new units. Oakland’s RHNA is about 6.0 percent of the nine-county Bay Area allocation of 441,176 units. The region’s total RHNA increased by nearly 135.0 percent since the previous cycle, partly due to changes in methodology that now address existing needs such as housing cost burdens, overcrowding, and vacancy. The increase in Oakland’s RHNA is mostly driven by the overall regional increase, although a smaller portion is due to the 6th Cycle RHNA methodology’s emphasis on proximity to jobs and higher resource areas,² as well as the share of future growth projected by Plan Bay Area.³ To meet the 6th cycle RHNA, Oakland would need to produce an average of 3,281 units annually.

Table C-1 shows the income breakdown of the RHNA. The RHNA does not specifically break down the need for extremely-low-income households. As provided by State law, the housing needs of extremely-low-income households, or those making less than 30 percent of area median income (AMI), is estimated as 50 percent of the very-low-income housing need, or about 3,256 units during the planning period.

Table C-1: Oakland Regional Housing Needs Assessment, 2023-2031

<i>Income Level¹</i>	<i>Needed Units</i>	<i>Needed Units with 15% Buffer</i>	<i>Percent of Needed Units</i>
Very-Low-Income (0-50% AMI)	6,511	7,488	24.8%
<i>Extremely-Low-Income (<30% AMI; part of Very-Low-Income in previous row)²</i>	3,256	3,745	-
Low-Income (51-80% AMI)	3,750	4,313	14.3%
Moderate-Income (81-120% AMI)	4,457	5,126	17.0%
Above-Moderate-Income (>120% AMI)	11,533	13,263	43.9%
Total	26,251	30,189	100.0%

1. Income levels reflect Alameda County Area Median Income. 2022 AMI limits are available at https://www.acgov.org/cda/hcd/hud-income-rent_limits.htm. 2. Extremely-low-income housing need is assumed to be 50 percent of very-low-income housing need.

Source: ABAG, Final RHNA Plan, December 2021

To meet “no net loss” requirements, an additional 15 percent buffer beyond the RHNA is assumed in each income category (see Table C-1). No net loss requirements (Government Code Section 65863) ensure that adequate sites are maintained throughout the planning period to accommodate the remaining RHNA by income category. To ensure that sufficient capacity exists throughout the planning period, State HCD recommends that jurisdictions create a buffer of at least 15 percent more capacity than required or project site capacity at less than the maximum density to allow for

² To quantify access to opportunity at the neighborhood level, State HCD and the California Tax Credit Allocation Committee (TCAC) convened to form the California Fair Housing Task Force to develop Opportunity Maps that visualize accessibility of low-income adults and children to resources within a jurisdiction. High Resource areas are those that offer low-income adults and children the best access to a high-quality education, economic advancement, and good physical and mental health.

³ The Final Plan Bay Area 2050, adopted by MTC-ABAG on October 21, 2021, is the region’s official long-range plan. More information on Plan Bay Area 2050 is available at the following link: <https://www.planbayarea.org/finalplan2050>

some reductions in density at a project level. The City is employing a combination buffer and reduced capacity strategy to remain compliant with no net loss provisions.

C.1 Sites Inventory Overview

Oakland’s 2023-2031 Housing Sites Inventory identifies sufficiently zoned land to accommodate the RHNA at all income levels. Total capacity is derived from both site-specific approaches—including pipeline projects and opportunity sites—as well as non-site-specific projections of accessory dwelling units (ADUs), discussed further below. In addition to providing adequate capacity to meet the RHNA, a buffer of at least 15.0 percent was identified in each income category to ensure that the City can meet the no net loss requirement pursuant to State law. See Table C-2 below for a summary of Oakland’s residential capacity and ability to accommodate the 2023-2031 RHNA. The complete 2023-2031 Inventory is provided in Table C-26 as a separate Excel file in Figure C-1 below.

Based on the City’s current General Plan and zoning regulations, there is sufficient capacity to accommodate its RHNA allocation with a buffer. In addition, rezoning will also occur in select areas to accommodate additional density such as parcels around BART stations, along transit corridors, and in existing residential neighborhoods to allow for “missing middle” housing. Sites included in the inventory reflect those that are most likely to develop during the planning period; as the development potential of sites newly made available by one of these rezoning efforts is difficult to project, these new sites are not considered as part of this inventory.

Table C-2: Summary of Residential Capacity to Accommodate the 2023-2031 RHNA

	Residential Units				Total
	Very-Low-Income ^{1,2}	Low-Income ¹	Moderate-Income	Above-Moderate-Income	
Total Credits	2,013	2,247	776	9,933	14,969
<i>Pipeline Projects</i>	1,241	1,555	182	9,931	12,909
<i>Projected ADUs</i>	692	692	594	0	1,978
<i>Adequate Sites Alternative</i>	80	0	0	2	82
Potential Development Projects ³	374,440	1,494	5,374	5,374	7,437,374
<i>Vacant</i>	220,303	787	1,156	1,156	2,168,156
<i>Non-Vacant</i>	172,238	707	4,218	4,218	5,269,218
Available 5th Cycle RHNA		746	3,578	380	4,704,380
<i>Vacant</i>		23	596	3	622,3
<i>Non-Vacant</i>		723	2,982	377	4,082,377
New Opportunity Sites		5,082,06	895	2,035	8,012,035
<i>Vacant</i>		142	218	0	360,0
<i>Non-Vacant</i>		4,940,64	677	2,035	7,652,035
Total Capacity		11,956,046	5,443	17,722	35,122,211
6th Cycle RHNA		10,261	4,457	11,533	26,251
<i>RHNA + 15% Buffer</i>		11,801	5,126	13,263	30,189
Surplus Over RHNA		1,695,785	986	6,189	8,189,960
		116.57.4%	122.1%	153.7%	133.84.1%

1. Low- and very-low-income capacity on opportunity sites is consolidated per default density assumptions as described in Government Code Section 65583.2(c)(3).

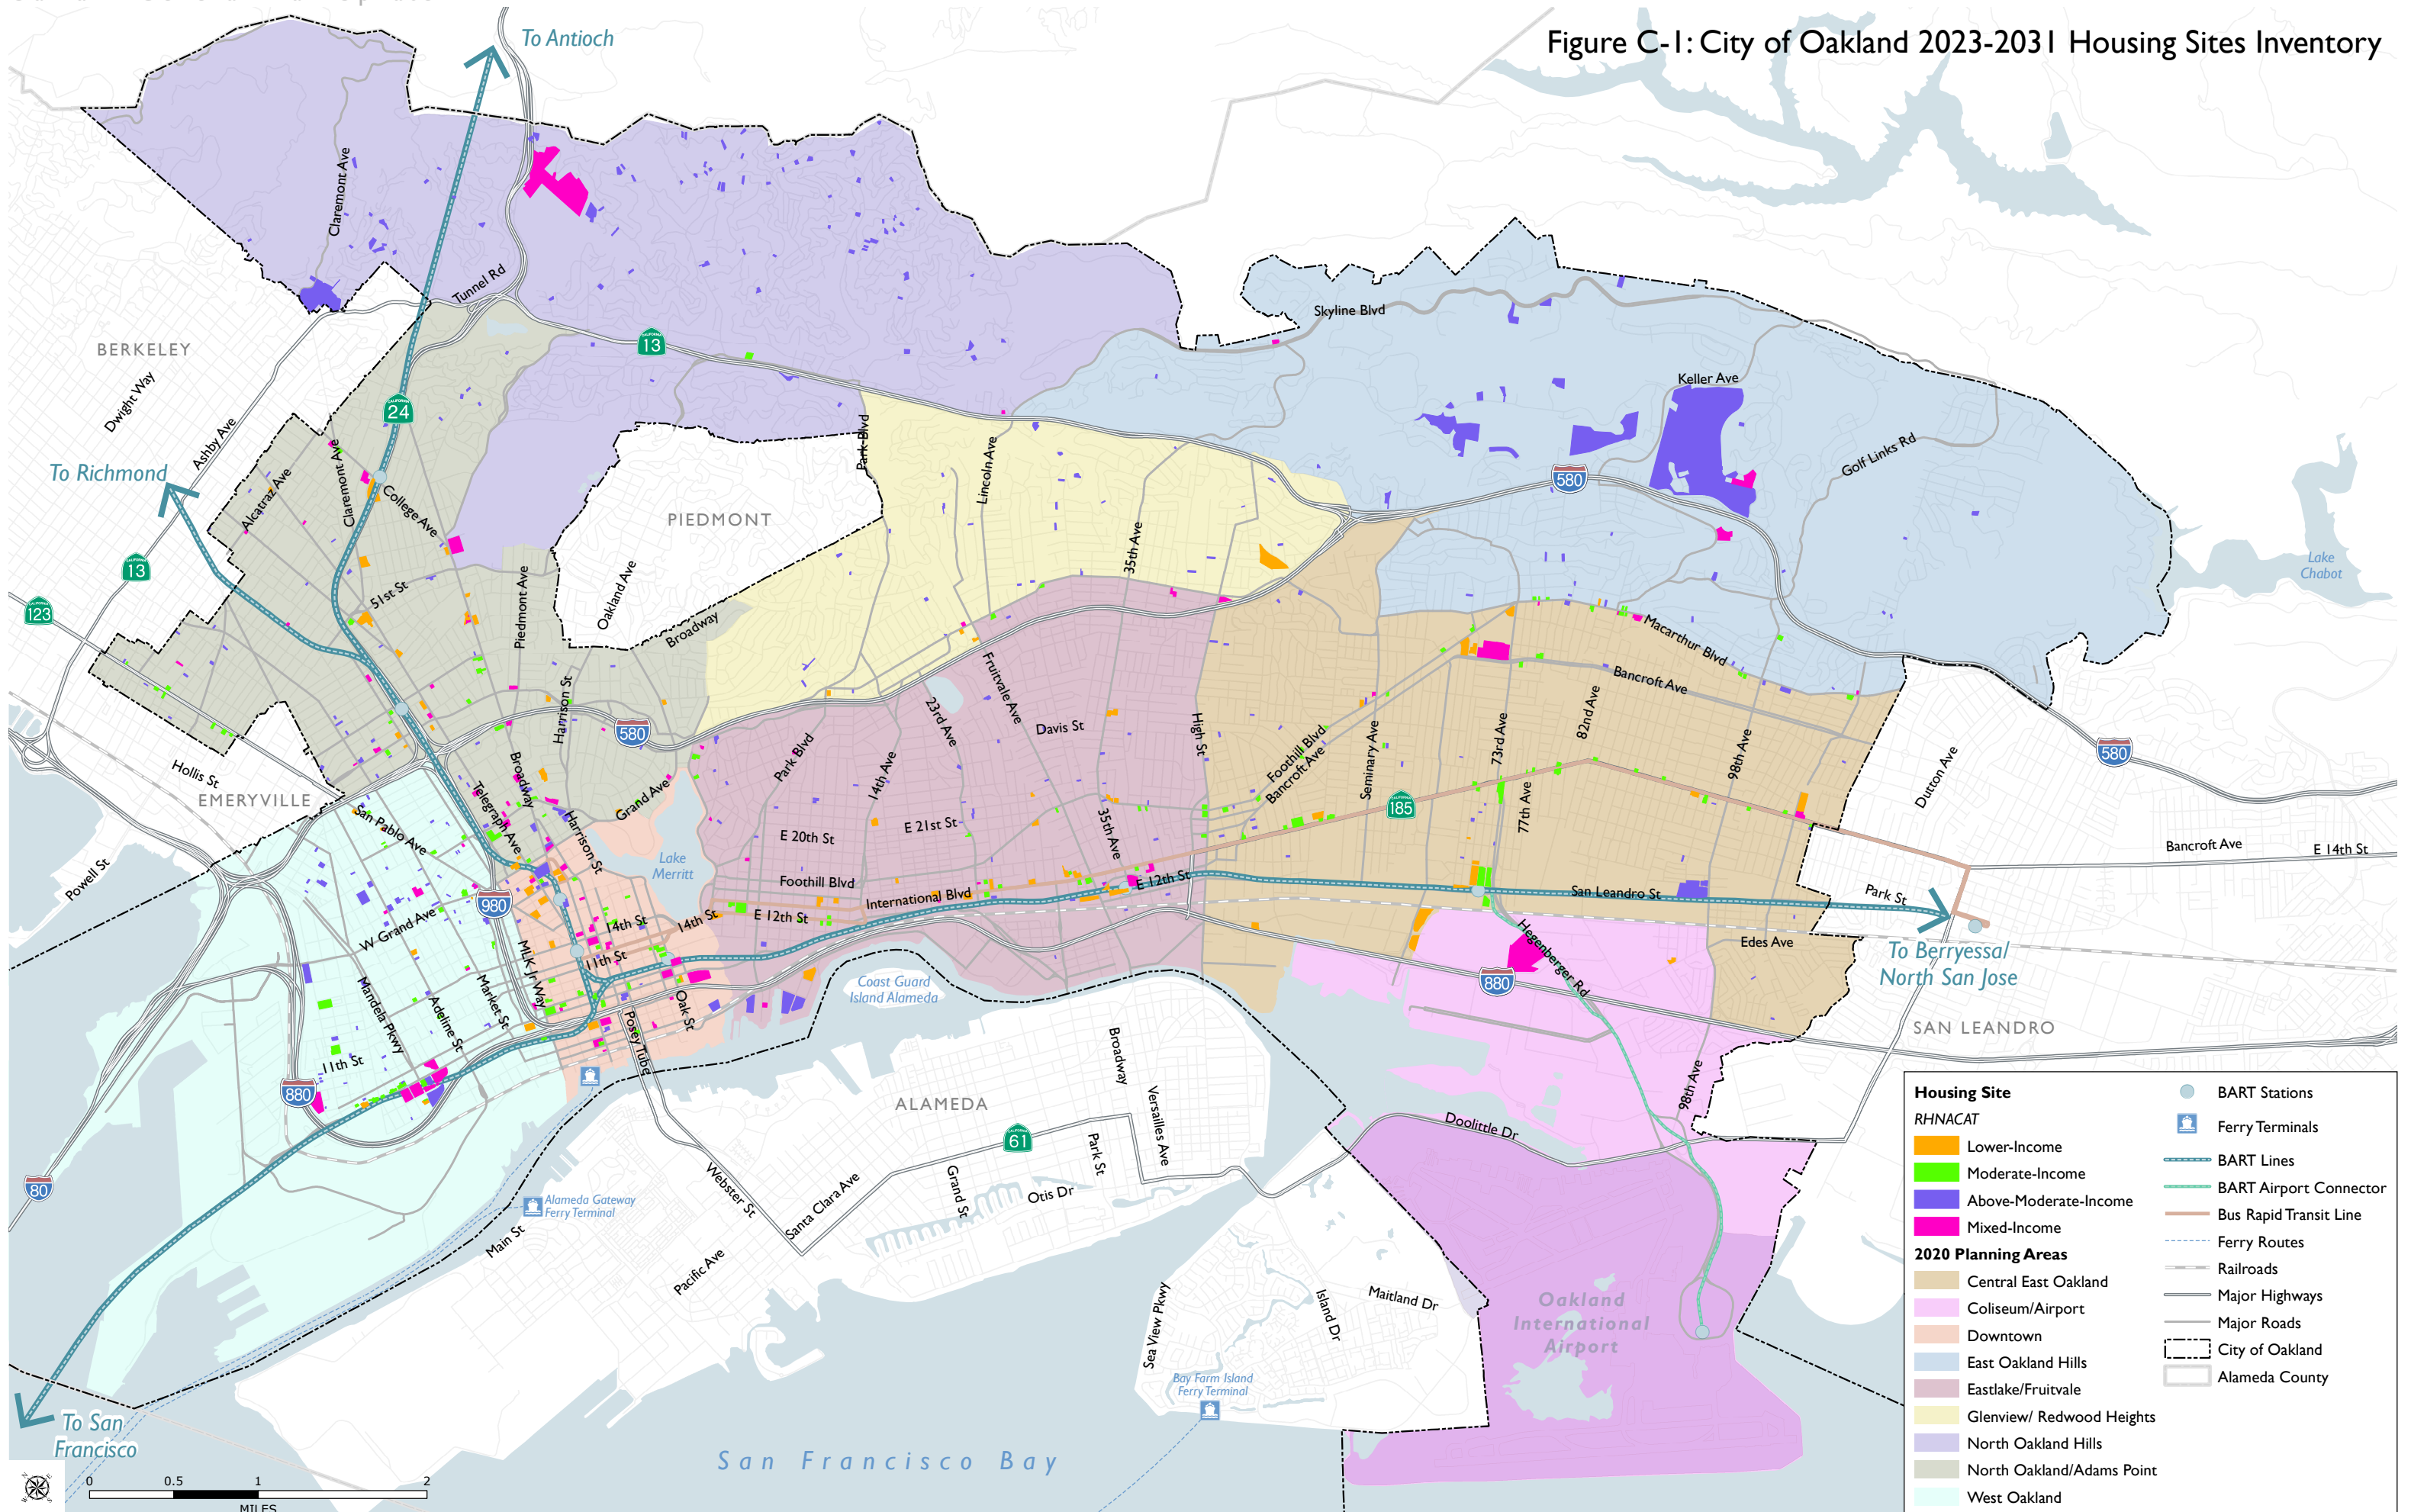

2. Extremely-low-income housing need is assumed to be 50% of the total very-low-income housing need, or about 3,256 units.

3. Potential development project totals are reduced by 10% to account for likelihood of pre-application or early-phase planning permits that may not move forward.

Note: The sum of Potential Development Projects, Available 5th Cycle RHNA, and New Opportunity Sites includes all units from Sheet A (sites already zoned) and Sheet B (sites to be rezoned) in Table C-26, the full Sites Inventory. While Oakland has adequate capacity to meet its 6th Cycle RHNA with existing zoning, Table B includes rezoning of sites to affirmatively further fair housing and increase the Sites Inventory buffer.

The Inventory was developed in a manner consistent with the City’s mandate to affirmatively further fair housing (AFFH), pursuant to State law. Given the City’s inability to meet the 5th cycle RHNA for lower- and moderate-income households (see Appendix A), an emphasis was placed on locating sites appropriate for these income groups – particularly in higher resource areas. However, it should be noted that increasing access to existing high resource neighborhoods represents just one strategy to increase access to opportunity for lower-income households – the City is also committed to investing in “lower resource” neighborhoods to increase opportunity for the existing residents of those neighborhoods – described further in Appendix D and the Housing Action Plan (Chapter 4). This includes investments in new affordable housing projects, which can help reduce displacement pressures in those neighborhoods and allow long-time residents to remain in their communities. As discussed in Chapter 2, community feedback regularly expressed the opinion that existing Oakland residents may want to remain in their current neighborhoods and may not want to relocate to higher-resource areas that may not provide resources available in ethnic enclaves such as culturally specific grocery stores, churches, and other neighborhood amenities. Therefore, efforts to increase access to exclusive neighborhoods should also be paired with investing in and preserving the culture in Racially or Ethnically Concentrated Areas of Poverty (R/ECAPs). Efforts taken to ensure that the Inventory remains compliant with the City’s AFFH mandate are described further in Section C.4 below.

C.2 Credit Towards RHNA

Before identifying the availability of land to accommodate the city’s 6thth Cycle RHNA, State HCD Guidance provides that the RHNA can be accommodated by looking at both projects that are currently in the development pipeline and by considering alternative means of meeting the RHNA.

Projects that have been approved, permitted, or receive a Certificate of Occupancy during the projection period (June 30, 2022 to December 15, 2030) can be credited toward the 6th cycle RHNA. It should be noted that the projection period differs from the planning period – while the planning period is the time between housing element due dates, the projection period is the time period for which the regional housing need is calculated.

According to State HCD, in order to credit units that are affordable to very-low-, low-, and moderate-income households toward the RHNA, a jurisdiction must demonstrate the units are affordable based on at least one of the following:

- Actual sales prices;
- Actual rents; or
- Subsidies, financing, or other mechanisms that ensure affordability (e.g., the development used funding from the state Multifamily Housing Program, federal HOME program, or low-income housing tax credits).

Pursuant to Government Code Section 65583.1, a variety of alternative methods may also be used to satisfy the RHNA. This includes projected accessory dwelling units (ADUs) and a limited number of rehabilitated, converted, or preserved units affordable to lower-income households. This

section discusses the capacity of each method to credit residential development towards the RHNA, summarized in Table C-3 below.

Table C-3: Credit Towards the 2023-2031 RHNA

	Very-Low- Income	Low-Income	Moderate- Income	Above- Moderate- Income	Total (units)
6th Cycle RHNA	6,511	3,750	4,457	11,533	26,251
6th Cycle RHNA + 15% Buffer	7,488	4,313	5,126	13,263	30,189
Pipeline Projects	1,241	1,555	182	9,931	12,909
Projected ADUs	692	692	394	0	1,978
Adequate Sites Alternative	80	0	0	2	82
Total Credits	2,013 1,924	2,247 1,63	776 5	9,933 772	14,969 634
Remaining Housing Need	4,498	1,503	3,681	1,600	11,282

Source: ABAG, Final RHNA Plan, December 2021; City of Oakland, 2022

PIPELINE PROJECTS

Pipeline projects are those projects that have already received an approved planning permit that have not yet applied for a building permit; are currently seeking a building permit; or have already received an approved building permit and will likely be completed during the projection period. Where there are pipeline projects located on Inventory sites, actual proposed densities and affordability levels are reflected. Unit affordability levels within a project are proposed by the developer and then reviewed by both the Planning and Building Department and Oakland HCD to assess whether the unit mix conforms with State law and local regulations, as related to density bonus projects. Other projects that have applied for planning approval, submitted a pre-application, or are otherwise under review are discussed as opportunity sites below.

Pipeline projects are spread across the city, with the majority of new capacity in the Downtown, West Oakland, Eastlake/Fruitvale, and North Oakland/Adams Point areas. See Figure C-2 for the location and affordability of these pipeline projects. The affordability of pipeline units was determined based on the affordability levels or projected rents specified on the project proposal as approved by the City. Approximately 20.9 percent of pipeline capacity is affordable for lower-income households, while 1.4 percent is affordable for moderate-income households. The remainder is assumed to be affordable for above-moderate-income households. Table C-5a below provides information on each pipeline project that have received entitlements but have not yet applied for a building permit, Table C-5b provides information on pipeline projects that have received entitlements and are actively seeking a building permit or have been issued a permit, and Table C-6 provides a summary of the residential capacity of one- and two-unit pipeline projects. The full list of one- and two-unit pipeline projects is available in the full Inventory in Table C-26.

The status of pipeline projects is pulled directly from the City's Accela permitting system. "Approved" and "Approved-Pending Appeal" have received entitlement and approval from City Council. Projects designated "Approved-Pending Appeal" should be considered approved, as Oakland's appeal period is only ten days after issuance – this designation is maintained to retain consistency with the City's records. While there are various planning approval statuses, as shown in Table C-4, this sites inventory only includes projects that are Approved and Approved-Pending

Appeal for maximum likelihood of development. For building permits, all projects are considered highly likely to be completed within the planning period, especially as expired permits can be reinstated up to three years after issuance. A survey of projects approved in 2015 shows that 98.6 percent of these projects were built in eight years. Thus, realistic capacity for pipeline projects is taken directly from provided from building permit applications. Other pre-application and early-stage projects with planning permits are described in 'Potential Development Projects.'

Expected completion dates are estimates provided by Planning staff based on typical project timelines; all pipeline projects are estimated to be available within the Housing Element planning period (completed by 2031). Pipeline projects with lower income units (including extremely-low, very-low, low-, and moderate-income units) have either been entitled as a density bonus project, which requires lower-income unit affordability as part of development approval and construction concurrently with market rate units; or have deed restriction agreements either in progress or in place. Housing Action Plan 3.3.19 establishes a coordination system to coordinate tracking units with Development Services staff to ensure that as projects are developed, there is adequate capacity available citywide to meet RHNA targets and no net loss requirements.

Table C-4: Planning and Building Permit Descriptions

Type of Permit	Permit Status	Description
Planning Permit	Approved	Planning entitlement was approved by Planning Commission and/or City Council.
	Approved - Pending Appeal	Project was approved by Planning Commission and/or City Council. The City's appeal period is only 10-days following issuance of planning approval. Projects with this status that are over 10 days past the approval status date should be considered approved. This status is maintained to retain consistency with the City's record keeping.
	Assigned	Project application was submitted and assigned to a Planner for review.
	Complete	Project or application is complete and moving forward for review by Planning Commission and/or City Council.
	Extended	Project application received planning approval from Planning Commission or zoning entitlements, but permit expired and applicant requested an extension.
	Filed	Project application was submitted to the City by applicant and fees are paid.
	Incomplete	Project was assigned to a Planner, but application lacked sufficient information to process or partial fees were paid and application status was changed from "Under Review" to "Incomplete."
	Under Review	Planner is reviewing the project application.
Building Permit	Permit Reinstated, Reinstated	After building permits are issued, the permit will become inactive if no inspection activity initiated by the applicant occurs for 180 days and the permit will expire after 730 days of inactivity as per California Building Code. Permits may become inactive or expire due to factors such as construction delays, labor or supply shortages, and/or the scale of the project itself. Once the applicant pays a fee to the City, the City will reinstate an active building permit.
	Permit Issued, Issued	The permit is approved and active. The applicant can begin construction and schedule inspection anytime they are ready.
	Permit Expired	The building permit is expired. Building permits expire if no inspection activity initiated by the applicant occurs for 730 days, as per California Building Code. Issued permits may be reinstated for up to 3 years in increments of 6 months to 1 year. Requests after 3 years require further review due to code changes, impact fees, etc.
	Application Inactive	The building permit application is considered inactive after 180 days of no activity from the applicant, due to issues such as insufficient documentation, payment of fees, etc. Permit applications may be reinstated for up to 3 years in increments of 6 months to 1 year. Requests after 3 years require further review due to code changes, impact fees, etc.
	On Hold - Fee Due	The issuance of the permit is on hold, requiring applicant action to address payment of fees. Once fees are paid and the applicant meets all the documentation requirements, the building permit will be issued.
	Permit on Hold	The issuance of the permit is on hold requiring applicant action to address issues such as insufficient documentation, payment of fees, or missing required submittals from applicant including regulatory agreements, Construction Management Plans, recycling requirement, etc.
	Final Check - On Hold	The last step prior to building permit issuance is Final Check by the City and it is on hold due to incomplete status for one or more of the following: verification of stamped plans, required standard reviews by City, fees paid, required submittals from applicant, etc.

Note: ELI= extremely low-income units; VLI= very low-income units; LI= low-income units; MI= moderate-income units; AMI= above moderate units

1. Please see Table C-4 for Planning Permit Status Description

2. "Density Bonus" indicates the project is entitled to include lower and moderate-income units, and a regulatory agreement is pending. Density Bonus Projects must provide the agreed-upon number of lower and moderate-income units and are required to maintain those units' affordability as part of development approval and must construct the units concurrently with market rate units. "Density Bonus Regulatory Agreement Recorded" indicates there is an agreement on record.

- Please see Table C-4 for Planning Permit Status Description**
- “Density Bonus” indicates the project is entitled to include lower and moderate-income units, and a regulatory agreement is pending. Density Bonus Projects must provide the agreed-upon number of lower and moderate-income units and are required to maintain those units’ affordability as part of development approval and must construct the units concurrently with market rate units. “Density Bonus Regulatory Agreement Recorded” indicates there is an agreement on record.**

PROJECTED ACCESSORY DWELLING UNITS

Since 2017, the State has continued to pass and implement laws that have removed obstacles to the construction of Accessory Dwelling Units (ADUs) and increased their development potential. Like other California cities, Oakland has continued to amend its Planning Code to remain compliant with new ADU development regulations. The City has seen continued interest in ADU development and has continued to approve building permits for ADU development.

Cities may consider the development potential of ADUs or junior ADUs (JADUs) to meet the RHNA. To determine the potential of ADU development during the 6th cycle, the City has analyzed building permit approval patterns since 2018. Table C-7 below shows ADU permits issued from 2018 to 2021, during which an average of approximately 247 permits were issued annually. Over the course of the upcoming eight-year planning period, the City anticipates the development of ADUs at least at the same pace as recent approvals, or 1,978 total ADUs (about 247 average permits per year times eight years). This is a conservative estimate, which is likely impacted by the drop in ADU approvals during the onset of the COVID-19 pandemic—as evidenced by the drop off between 2019 and 2020—and does not account for potential increased development capacity as restrictive regulations continue to be eased.

Table C-7: Annual ADU Approvals, 2018-2021

<i>Year</i>	<i>ADU Building Permits Issued</i>
2018	252
2019	289
2020	174
2021	274
Total Units Permitted	989
Annual Average	247.25
Projected ADU Development (2023-2031)	1,978

Source: State HCD, Annual Progress Reports, 2018-2021

As an alternative housing model, ADUs can often be a potential source of affordable housing. To estimate affordability during the projection period, the City used the results of its recent online survey of ADU owners.⁴ According to the survey, all ADUs are considered affordable to moderate- or lower-income households. Although the survey had limited responses to the question regarding monthly rent, it provides useful local information on ADU affordability in Oakland and is used to estimate the breakdown of projection affordability. To ensure that affordability projects are realistic, the affordability breakdown is further modified based on regional technical assistance provided by ABAG. Table C-8 below summarizes the estimated proportion of ADUs affordable to each income level and the projected number of ADUs by affordability during the planning period. Housing Action Plan actions also seek to implement new ADU standards that streamline approvals to address unpermitted units (Action 3.4.9), provide financial incentives for lower-income

⁴ This survey was conducted in preparation of the “Oakland ADU Initiative: Existing Conditions and Barriers Report,” which was published January 2020 and revised June 2020. There were 56 responses to the question “How much does the current ADU occupant pay in rent per month? If the occupant is staying in the ADU for free, then mark \$0.”

homeowners to legalize ADUs (Action 3.2.4); reduce constraints to development of ADUs (Action 3.2.5); and monitor affordability of permitted ADUs (Action 3.2.6).

Table C-8: Projected ADU Capacity by Affordability Level, 2023-2031

<i>Income Level</i>	<i>Local Affordability Breakdown</i>	<i>Regional Affordability Breakdown</i>	<i>Modified Affordability Breakdown</i>	Projected ADU Capacity
Very-Low-Income	45.9%	30.0%	35.0%	692
Low-Income	45.9%	30.0%	35.0%	692
Moderate-Income	8.1%	30.0%	30.0%	593
Above-Moderate- Income	0.0%	10.0%	0.0%	0
Total Units	100.0%	100.0%	100.0%	1,978

Source: Oakland ADU Initiative, Existing Conditions and Barriers Report, January 2020 (Revised June 2020); ABAG, Technical Assistance – Using ADUs to Satisfy RHNA, 2022; State HCD, Annual Progress Reports, 2018-2021

ADEQUATE SITES ALTERNATIVE

According to State HCD, under limited circumstances a local government may credit up to 25 percent of their adequate sites requirement per income category through existing units.⁵ These limited circumstances include sites that are:

- Substantially rehabilitated;
- Located on a foreclosed property or in a multifamily rental or ownership housing complex of three or more units that are converted from non-affordable to affordable rental;
- Units in a motel, hotel, or hostel that are converted from nonresidential to residential and made available for people experiencing homelessness as part of a long-term recovery response to COVID-19;
- Preserved at levels affordable to low- or very-low-income households, where the local government has provided those units with committed assistance; or
- Preservation of mobile home park through acquired spaces.

According to Oakland HCD’s 2021-2023 Strategic Action Plan, the City has acquired and converted and/or preserved 600 affordable units between 2018 and 2020. As an ongoing City strategy, there are a number of units that the City will convert and/or preserve during the 2023-2031 planning period. Table C-9a below presents projects in which the City has committed assistance through a legally enforceable agreement such that the projects can be used to meet the RHNA. As indicated in the footnotes, the City will provide committed assistance for the duration of the RHNA period, and funds are indicated in the “Funding Sources” column. Both properties represent conversions of hotels to permanent housing for Oaklanders experiencing homelessness, largely funded by

⁵ Further specific conditions that sites included under this option must meet are provided by State HCD on their website: <https://www.hcd.ca.gov/community-development/building-blocks/site-inventory-analysis/adequate-sites-alternative.shtml>

Project Homekey grants. The affordability of these projects reflects the actual affordability levels pursuant to the regulatory agreements that will maintain such income-restricted units.

The City anticipates that additional units will be created through the 2023-2031 planning period through further opportunities for preservation and rehabilitation Notices of Funding Availability, Acquisition and Conversion to Affordable Housing (ACAH) Program Notices of Funding Availability, and future Project Homekey grants. However, only projects that already have committed assistance at the time of this Housing Element’s adoption can be utilized under the Adequate Sites Alternative requirements.

Table C-9a: Adequate Sites Alternative Capacity

Project Name	Project Address	APN	Project Type	Funding Sources	Unit Count			
					Very-Low-Income	Low-Moderate-Income	Above-Moderate-Income ³	Total
Piedmont Place ^{1,2}	55 MacArthur Blvd	010 08130080	Acquisition/Conversion	SRO/Studio Apartment Preservation Program, BB-KTH, Homekey	44	0	0	1
Coliseum Way ¹	4801 Coliseum Way	034 22950160	Acquisition/Conversion	SRO/Studio Apartment Preservation Program, BB-KTH, Homekey	36	0	0	1
Total					80	0	0	2
Percent of RHNA					1.2%	0.0%	0.0%	0.02%

1. Per FY2023 MTW Annual Plan, OHA plans to fund a local capitalized operating agreement for a 15-year term for project Homekey funding recipients. Project opening dates are projected to be November 2022.

2. Project sponsors BACS and Memar Properties, Inc. are under contract to purchase the property by March 31, 2022.

3. Above-moderate-income units include manager’s units.

C.3 Availability of Land to Address the Remaining RHNA

Oakland has very few vacant or “greenfield” sites available for additional housing. Further, development is constrained by environmental conditions—including wildfire risk in the hills and hazards in and near industrial lands—as discussed in Appendix F. However, the City has a long track record of encouraging infill and high density projects, and there are many opportunities for these types of projects across Oakland. This section provides an overview of the Inventory’s residential capacity beyond the RHNA credits described above, as well as a discussion of the methodology behind realistic capacity assumptions and opportunity site selection. Table C-10 below summarizes the residential capacity available on opportunity sites. The complete 2023-2031 Inventory is provided in Table C-26 in an Excel file and in Figure C-1 above.

Table C-10: Summary of Opportunity Site Residential Capacity

	Very-Low- Income ¹	Low-Income ¹	Moderate- Income	Above-Moderate- Income	Total Units
6th Cycle RHNA	6,511	3,750	4,457	11,533	26,251
6th Cycle RHNA + 15% Buffer	7,488	4,313	5,126	13,263	30,189
Remaining Housing Need ²	4,498	4,533	1,559	1,503	3,681
Potential Development Projects ⁴	374	440	1,494	194	5,374
Vacant	203	203	787	23	1,156
Non-Vacant	172	238	707	171	4,218
Available 5th Cycle RHNA		746	3,578	380	4,704
Vacant		23	596	3	622
Non-Vacant		723	2,982	377	4,082
New Opportunity Sites		5,082	106	895	2,035
Vacant		142	142	218	0
Non-Vacant		4,940	964	677	2,035
Total Capacity		12,037	956	5,443	17,722
Capacity Shortfall(-)/ Surplus(+)³		+1,695	785	+986	+6,189

1. Low- and very-low-income capacity on opportunity sites is consolidated per default density assumptions as described in Government Code Section 65583.2(c)(3).

2. Remaining housing need is the difference between the RHNA and the units credited towards the RHNA through pipeline projects, ADU projections, and adequate alternative sites.

3. Capacity shortfall/surplus is the difference between the remaining housing need and the total residential capacity of opportunity sites.

4. Potential development project totals are reduced by 10% to account for likelihood of pre-application or early-phase planning permits that may not move forward.

SITE DEVELOPMENT CAPACITY

Government Code Section 65583.2(c) requires, as part of the analysis of available sites, a local government to demonstrate the projected residential development capacity of the sites identified in the housing element can realistically be achieved. In order to calculate realistic capacity in Oakland, a survey of recently constructed and approved projects from 2018 through 2021 was conducted to understand current and ongoing residential development patterns. Completed projects were derived from 2018-2020 Annual Progress Reports (APRs) and Accela records pulled in March 2022 for completed and entitled projects in 2021. This includes some pipeline projects.

The amount of density provided in each project was compared to the maximum density as allowed by the applicable zoning designation, and then stated as a percentage of meeting the maximum allowable density. Densities are calculated as dwelling units per acre (du/ac). Each project is assigned to its appropriate Planning Area, which is derived from the Oakland Department of Transportation (OakDOT) Geographic Equity Toolbox. The locations of projects included in the survey are shown in Figure C-3 below.

Table C-11a below summarizes the results of this survey and provides realistic capacity estimates for opportunity sites included in the Inventory. Pipeline development projects provide a snapshot of larger projects developed and approved from 2018-2021, and a full table of all projects included in the survey (including completed projects) is shown in Exhibit 1 of this appendix. Realistic capacity is based on the average percentage of maximum permitted density met by developments within Planning Areas by base zone and height area. If a height area of a particular base zone has no recent development history, the average percent of maximum density met for the entire base zone within that Planning Area is assumed. If there is no development history for a base zone within a Planning Area, the average percent of maximum density met of related or similar base zones within the Planning Area is assumed. Finally, if there is no comparable development history within the Planning Area, citywide averages for the base zone and height area are assumed. If development history shows that projects typically exceed the maximum permitted density, then realistic capacity is capped at that maximum density.

Realistic capacities provided in Table C-11a are applied to sites that do not otherwise include active development applications. These sites are also subject to *additional* capacity modifiers, as shown in Table C-13.

The presence of a development application is the strongest indicator that a site will be developed with housing during the planning period. Development projects listed in as “potential projects”, at a minimum, have submitted for a formal entitlement application or for pre-application review (a Preliminary Review Procedure (PRP) application or an SB 330 preliminary application). Where a site has an ongoing pre-application or planning permit application, or where there is expressed developer interest or preliminary discussions, a modifier of 0.9 is applied to densities and affordability for the to approximate realistic capacity.

As described in Appendix F: Constraints, Oakland permits housing in almost all zones, with the exception of some industrial zones. Within some commercial zones, such as CN-1, CN-2, CN-3, CC-1, CC-2, CC-3, and some D-BV zones, 100 percent residential projects may be limited to

maintain ground floor commercial in commercial districts. Despite this conditioning, several projects in commercial zones have developed from 2018 to 2021, and realistic capacity assumptions reflect the densities of completed and approved projects in each Oakland neighborhood. Of all pipeline development sites, approximately 25 percent of all project units are within these commercial zones, with many projects far exceeding the maximum capacity, as shown in Table C-11. In addition, future development on parcels within the Housing Sites Overlay Zone will be required to include a majority residential use, and will not allow a 100% non-residential use in this overlay.

1. Same density regulations as abutting RH, RD, or RM Zone. When there is more than one of these abutting zones, then the regulations of the zone allowing the greatest density shall apply.

2. Density is limited to one unit per lot for parcels less than 4,000 sq. ft. in base zones RM-2 through RM-4. If a parcel in the RM-2 and RM-3 Zones is larger than 4,000 sq. ft., then two units per lot are permitted by right, while 17.42 du/ac is permitted in RM-2 with a Conditional Use Permit (CUP) and 29.04 du/ac is permitted in RM-3 with a CUP. If a parcel in the RM-4 Zone is larger than 4,000 sq. ft., up to four units are permitted by right, while 39.6 du/ac is permitted in RM-4 with a CUP. In the case of base zones RM-2, RM-3, and RM-4 below 4,000 sq. ft. assume the site will develop at the maximum allowed unit per lot if the average percent of density met is above 50 percent – otherwise assume development is not feasible. In the case of base zone RM-4 above 4,000 sq. ft., apply the percentage of density met to the permitted 39.6 du/ac.

Non-Residential to Residential Conversion

Oakland permits residential development on a number of commercial and other non-residential base zones. The City has a substantial track record of encouraging and facilitating the conversion of non-residential uses to residential or mixed uses. See Table C-12a for a summary of parcels that converted from existing non-residential uses during the 5th cycle planning period, based on use changes between historic 2014-2015 and 2021 Alameda County Assessor parcel data.⁶ The locations of these conversions are provided in Figure C-4. Based on residential unit counts provided in the 2021 Assessor data, there are about 8,487 residential units located on converted parcels. These parcels are not included in the Inventory but are rather provided to demonstrate that additional conversions from non-residential to residential uses are likely during the planning period.

6. Assessors data does not provide information on what affordability level these uses were converted to.

Table C-12a: Summary of Non-Residential to Residential Conversion, 2014-2021

<i>Conversion Type</i>	<i>Number of Converted Parcels</i>	<i>Number of Residential Units</i>
Commercial to Residential	481	6,649
Commercial to Residential Mixed-Use	16	720
Industrial to Residential	87	766
Industrial to Residential Mixed-Use	1	24
Institutional to Residential	28	328

Mixed-Use and Infill Development

The City has a significant track record of encouraging mixed-use and infill development. According to APRs submitted to State HCD, all new development in Oakland since 2018 is considered infill development. As noted in Table C-12, which provides a list of completed and approved⁷ projects from 2018 to 2021, about 744 units developed on parcels that converted from solely non-residential uses to mixed residential uses.

A sample of projects that converted from an existing commercial or industrial use to a residential use are shown below in table C-16a.

⁷ Includes one pre-application project

Development Capacity Modifiers

As noted previously, Oakland’s RHNA has increased by nearly 77.8 percent between the 5th and 6th RHNA cycles. However, the City fell short of meeting its lower- and moderate-income housing need during the planning cycle, and many sites included in the 5th cycle housing inventory did not develop with housing. An analysis from the UCLA Lewis Center confirmed that Oakland was on track to develop no more than about 21.0 percent of the sites identified during the 5th RHNA cycle as opportunity sites.⁸ However, on those sites that were developed, the number of units developed was three times higher than anticipated as the realistic capacity. Further, a significant amount of residential development—nearly 73.0 percent of all residential development in Oakland—occurred on sites that were *not* identified as opportunity sites. These data reflect the challenges in predicting where development will occur but also show that Oakland’s development standards generally allow for higher density development than anticipated.

Nonetheless, the City of Oakland has and continues to undertake a robust effort to identify those sites, with the assistance of community input, that provide the best opportunity for development for the upcoming 6th RHNA Cycle. Further, to meet this increased housing need and increase capacity citywide, the City is committing to a number of actions meant to streamline the development process and incentivize affordable housing development. This includes the implementation of objective design standards, increased permitted densities in historically lower density and higher resource areas, revisions to restrictive development standards, and other zoning reforms expected to increase density overall – as described in the Housing Action Plan. Despite these efforts, the development capacity of opportunity sites should be discounted to account for falling short of previous RHNA goals.

Opportunity sites included in the Inventory are those likely to redevelop with housing considering recent development patterns as well as a variety of factors that indicate incentives to redevelop, as discussed above. While Table C-11 accounts for land use controls and typical densities of residential projects, it is likely that not every site selected in the Inventory will develop with housing during the planning period and that some housing projects will occur on sites not considered in the Inventory. To account for this fact, additional development capacity modifiers are applied to all opportunity sites to discount total residential capacity. This means that other opportunity sites are subject to both realistic capacity modifiers (Table C-11) as well as development capacity modifiers (Table C-13). Development capacity modifiers are derived from the existing use of a site, as well as its assessed value (AV) ratio and floor area ratio (FAR). When a site has a low AV ratio or FAR, it indicates that the site is underutilized and has potential to redevelop – especially in Oakland, where demand for housing is extremely high. Sites with pre-applications Table C-13 below summarizes the percentage modifiers applied to opportunity sites.

⁸ Kapur et al., “What Gets Built on Sites that Cities ‘Make Available’ for Housing.” *UCLA Lewis Center for Regional Policy Studies*. August 2021. Available at <https://www.lewis.ucla.edu/research/what-gets-built-on-sites-that-cities-make-available-for-housing/>.

Table C-13: Development Capacity Modifiers

<i>Existing Use/Site Type</i>	<i>AV Ratio</i>	<i>FAR</i>	<i>Capacity Modifier</i>
Pre-Application/Early-Stage Planning Application ¹			90%
Vacant	-	-	90%
	Low (<0.5)	Low (<0.5)	80%
Non-Vacant	Low (<0.5)	Medium to High (>0.5)	60%
	Medium (Between 0.5 and 1.0)	Low to High (>0.0)	40%

I. This modifier is applied to “Potential Project” totals in Table C-1, as the capacity likelihood would not be site-specific

Source: Dyett & Bhatia, 2022

OPPORTUNITY SITE SELECTION

To identify adequate sites and determine realistic capacity for the 2023-2031 Inventory, a parcel-based analysis of properties within City limits was conducted using Alameda County Assessor data supplemented with information from the City. This analysis was carried out in accordance with the framework provided by the 2020 State HCD Housing Element Site Inventory Guidebook. This section outlines how sites were selected, as well as the assumed affordability level of those sites.

Non-residential pipeline projects, completed projects, and those under construction but likely to be completed prior to the start of the projection period are excluded from consideration, as these sites are unlikely to develop with additional housing over the next eight years. Sites that are very small and not viable for lot consolidation (i.e., less than 0.1 acres with no common ownership across adjacent parcels) are also excluded.

The remaining vacant and non-vacant sites were then considered as potential sites to include in the Inventory. Non-vacant opportunity sites include those with an existing use that is likely to discontinue during the planning period, those with expressed developer interest, and those generally underutilized or developed with low intensity, such as underperforming strip commercial uses, warehouses, sites with mixed-use potential, and sites located in specific plans that encourage higher density development.

Sites are primarily considered underutilized based on their AV ratio and FAR. A low AV ratio, which is typically anything below 1.0, means that the land is worth substantially more than the improvements built on top of it – indicating that there is a strong incentive for the property owner to redevelop with new uses than can command higher rents or sales prices. Similarly, a low FAR indicates that building area of the structure is small compared to the entire site, which indicates potential for redevelopment at higher intensities. When available, building age was also considered in evaluating underutilized sites. Further, the existing uses and location of sites in relationship to current development patterns were also considered.

Environmental constraints were also considered in site selection. Sites located in the Alquist-Priolo fault zone, 100-year flood hazard areas mapped by Federal Emergency Management Agency (FEMA), and Very High Fire Hazard Severity Zones (VHFHSZ) were excluded from inclusion in

the Inventory. Contaminated sites and those with known hazards were excluded for lower-income projects. However, environmentally constrained sites were not excluded if they contain planned projects with environmental mitigation provisions already factored into development costs or if a developer has shown interest in development. Further, environmentally constrained City- or publicly-owned sites that have been deemed feasible for residential development are also included. There are no other known environmental constraints that could substantially impact housing development on identified sites during the planning period.

Opportunity sites were also selected in a manner consistent with the City's mandate to affirmatively further fair housing. Housing sites, especially lower-income sites, were selected as to reduce segregation and increase affordable development in high resource neighborhoods, where possible. Sites located in Priority Development Areas (PDAs) and near transit were also prioritized for lower-income housing. A full analysis of the sites inventory as it relates to fair housing is provided in Section C.4 and Appendix D.

Housing Site Selection Engagement

Extensive community outreach was conducted in identifying sites appropriate to include in the Inventory. The initial pool of sites was provided by City staff and supplemented with suggestions made by Oakland City Councilmembers, community members, and housing organizations. These sites included both vacant sites and non-vacant sites with additional development capacity.

During the four Housing Element workshops, which were open to the public, Oakland residents provided suggestions for housing sites throughout the city. The first housing workshop was focused on sites and was accompanied by an online interactive mapping survey where residents could select specific sites for housing. The survey was open from February 11, 2022, through March 7, 2022, received 480 individual responses, and generated a total of 1,976 unique map responses. It included two interactive mapping questions regarding potential locations for future housing in the city of Oakland. Feedback from the first focus group meeting—which had an emphasis on housing sites—was also incorporated. Sites selected as part of the survey are noted in Table C-25 below.

Respondents to the online interactive mapping tool and survey wrote enthusiastically about a variety of areas located around Oakland appropriate for housing through 1,275 individual survey comments. Areas included surface parking lots, underutilized sites near transit, and areas with high resources that would be appropriate for housing. In selecting specific locations, respondents most frequently selected sites near downtown, along Broadway and near the Rockridge Bay Area Rapid Transit (BART) station, in lower Dimond, and along Macarthur Boulevard in Upper Dimond/Redwood Heights. Through 701 individual comments, respondents mentioned a variety of sites including empty/vacant lots, surface parking lots, potential sites near transit, and high resources areas. See Figure C-5 for a heat map of suggested housing sites provided via the online survey.

Figure C-5: Online Survey Housing Sites Heatmap

Housing Site Affordability

For a site to be designated as capable of accommodating development for lower-income households, Government Code Section 65583.2(c)(3) requires that such sites in urban jurisdictions allow for at least 30 du/ac, known as the “default density.” In metropolitan counties, such as Alameda County, zoning that allows for residential density of at least 30 du/ac is considered appropriate to accommodate the economies of scale needed to produce affordable housing. In this Housing Element, all vacant and non-vacant sites identified to accommodate lower-income units are located in zoning designations that permit at least 30 du/ac. The only exceptions to this are pipeline projects and other potential development projects that include affordable units and are located in a lower density designation.

Sites that are permitted to develop with at least 30 du/ac but are not otherwise appropriate for lower-income housing (e.g., are located above environmental constraints, are assumed to develop below 30 du/ac, or do not meet State HCD size parameters) are used to meet the moderate-income RHNA. Other sites that permit medium densities below 30 du/ac are also considered suitable for moderate-income housing, as are larger sites in the RM-2 and RM-3 base zones since these projects are likely to develop with mixed uses that can support moderate-income housing. All other sites in the RH-1 through RH-4, RD-1, RD-2, and RM-1 base zones are considered appropriate for above-moderate-income housing, as are smaller sites in the RM-2 to RM-4 base zones.

Finally, a number of sites—including those with pre-applications indicating a mixed-income development and other potential projects—are likely to develop at a variety of income levels. Where specific information has been provided by the developer on affordability levels and total capacity, these estimates are used to approximate realistic capacity (with a 0.9 capacity modifier, as described above). Where specific affordability levels and capacity have not been provided, the affordability breakdown is assumed to be as follows – 24.0 percent lower-income, 2.0 percent moderate-income, and 74.0 percent above-moderate-income. This breakdown is derived from the average affordability of mixed-income projects surveyed in Figure C-3. Larger opportunity sites (i.e., those larger than 10 acres) with high potential capacities are also assumed to develop as mixed-income.

As discussed further below, a mixture of incomes is also assumed on larger (i.e., greater than 10 acres) City- and publicly-owned sites to avoid an overconcentration of affordable housing. Further, many of these sites are in lower resource or high segregation and poverty neighborhoods. These larger City-owned sites are assumed to develop with a higher proportion of affordable housing (30.0 percent lower-income, 20.0 percent moderate-income, and 50.0 percent above-moderate-income) than other mixed-income sites due to the prioritization of affordable housing projects on City-owned land. Following Council direction and City priorities, City-owned land should be prioritized for uses that maximize the production of affordable housing; the disposition of such sites should follow a transparent and accountable public process that is inclusive of Oakland’s many diverse communities; and projects should adhere to certain green building standards and local hire requirements. Additional prioritization efforts are outlined in the Housing Action Plan. City- and publicly-owned sites between 0.5 and 10 acres in size are assumed to accommodate 100 percent affordable housing, and City-owned parcels have either been declared “surplus” or are otherwise are planned for housing development – see Appendix E for more details.

Potential Development Projects

While pipeline projects are those that have received planning approval or are in the building permit process, there are also a number of other potential projects at various stages in the planning process. This includes projects ranging from the pre-application stage to those with filed and under review planning permits. As these projects have not yet received entitlement, they cannot be credited towards the RHNA. However, a pre-application or an application for a planning permit indicates developer interest and that a site is likely to redevelop with housing. Where a potential project is on non-vacant land, this is counted towards the reliance on non-vacant sites.

The presence of a development application is the strongest indicator that a site will be developed with housing during the planning period. Development projects listed in as “potential projects”, at a minimum, have submitted for a formal entitlement application or for pre-application review (a Preliminary Review Procedure (PRP) application or an SB 330 preliminary application). As noted above, 98.6 percent of planning projects approved in 2015 developed as housing over an eight-year period. While there is no available data on how many pre-application or early-phase planning application projects receive an ‘approved’ status, the total inventory applies a modifier of 0.9 to densities and affordability drawn from the pre-application or planning permit application to approximate realistic capacity. This capacity modifier is applied to the “Potential Projects” total as shown in Table C-1, as it would not apply to any one site.

Distribution of unit affordability is taken from applications. In the case where a pre-application project does not specify capacity or affordability, or proposes development that exceeds the permitted density, realistic capacity assumptions as described above are applied.

These projects are derived from Accela records pulled in March 2022 and are provided in Table C-14 below. Actions in the Housing Action Plan support development of these potential sites through streamlining the permitting process (Action 3.6.1); expanding by-right approvals and implementation of entitlement reform (Action 3.6.3); continuing online permitting (Action 3.6.5); providing access to low-cost financing for development (Action 3.3.6); adjusting or waiving City fees and payment timing for affordable housing developments (Action 3.3.9); and expanding the availability of predevelopment finding and low-debt products for affordable housing development (Action 3.3.13).

Available 5th Cycle RHNA Sites

There are a number of opportunity sites selected as part of the 5th cycle RHNA that did not develop over the 2015-2023 Housing Element period and are still available for housing. Pursuant to Government Code Section 65583.2(c), sites identified to accommodate a portion of Oakland's lower-income RHNA that were also contained in previous Housing Element cycles must be zoned at residential densities of at least 30 du/ac and must also be rezoned to allow for residential use by right for housing developments in which at least 20 percent of the units are affordable to lower income households. This applies to non-vacant sites included in at least one prior cycle and vacant sites included in two or more consecutive cycles. These requirements do not apply to the moderate- and above-moderate-income RHNA.

The proposed Inventory contains sites identified to accommodate a portion of Oakland's housing need for lower-income households that were included during the previous Housing Element cycles. There are six vacant parcels that were included in both the 4th and 5th Housing Element cycles (APNs 044 501400603, 044 501400500, 012 098602501, 032 208405100, 043 462000102, 023 047602101, 010 077202001, 032 208405100). One of these parcels (APN 012 098602501) is part of a pipeline project and may be carried forward. Of the remaining five parcels, three parcels (APNs 044 501400603, 044 501400500) are part of a single City-owned surplus site that is currently subject to a Homekey proposal at City Council direction for a 124-unit modular development. The remaining two sites are located in high resource areas that permit development over 30 du/ac and will be subject to by right zoning provisions as part of this Housing Element's Housing Action Plan to allow development with at least 20 percent affordable housing (Action 3.4.10).

There are 28 non-vacant parcels included in at least one prior RHNA housing element cycle (APNs 001 016900100, 001 017100200, 025 073300802, 025 073300803, 008 062403700, 041 416402403, 008 066700503, 010 079800307, 025 071900701, 013 110802401, 001 020901500, 026 083402201, 014 124000901, 008 062100807, 011 083600101, 026 083500601, 025 072000702, 016 142402205, 003 003900300, 002 005500200, 010 078001508, 004 007700300, 006 001702200, 006 001702100, 006 001702000, 006 001701800, 006 001701900). Eleven of these parcels are part of pipeline projects and may be carried forward (APNs 010 078001508, 004 007700300, 006 001702200, 006 001702100, 006 001702000, 006 001701800, 006 001701900, 001 016900100, 001 017100200, 025 073300802, 025 073300803, 008 062403700, 041 416402403, 008 066700503, 010 079800307, 025 071900701, 013 110802401, 001 020901500, 026 083402201, 014 124000901, 008 062100807, 011 083600101, 026 083500601, 025 072000702, 016 142402205, 003 003900300, 002 005500200, 008 067200500) and an additional five parcels are included as part of active permit applications or pre-applications (APNs 008 066700503, 010 079800307, 025 071900701, 013 110802401, 001 020901500, 026 083402201, 014 124000901, 008 062100807, 011 083600101, 026 083500601, 025 072000702, 008 062403700,). Two parcels (APNs 025 073300802, 025 073300803) are City-owned surplus sites with priority for affordable housing production, and an additional site (APN 041 416402403) is owned by BART. All but two of the remaining sites are located in higher resource areas. These sites are permitted to develop over 30 du/ac and will also become subject to by right zoning provisions as part of this Housing Element's Housing Action Plan.

There are also several moderate- and above-moderate-income RHNA sites included in the inventory that were included in previous Housing Element cycles. Realistic capacity and development likelihood assumptions as described above are used to estimate the capacity of

available 5th cycle sites included in the 6th cycle Inventory. Table C-15 provides a summary of development capacity for available 5th cycle RHNA sites by Planning Area. Specific sites carried over from the 4th and 5th Housing Element cycles are noted in Table C-26.

Table C-15: Development Capacity of Available 5th Cycle RHNA Sites, 2022

Planning Area	Total Residential Capacity (units)		
	Lower-Income	Moderate-Income	Above-Moderate-Income
Central East Oakland	174	754	0
Coliseum/Airport	124	0	0
Downtown	0	1360	306
East Oakland Hills	4	10	0
Eastlake/Fruitvale	146	682	1
Glenview/Redwood Heights	61	0	0
North Oakland Hills	0	0	0
North Oakland/Adams Point	117	531	0
West Oakland	120	458	381
Total Units	746	3795	688

New Opportunity Sites

New opportunity sites not included in previous Housing Element cycles were identified to meet the remaining RHNA. These sites include both vacant and non-vacant sites and consist of City-owned sites, sites owned by BART, sites located within a specific plan area, and other sites with expressed or potential development interest. As most of these sites have lower FAR and AV ratios, appropriate capacity modifiers as described in Table C-13 are also applied to these sites, including vacant sites

City-owned sites are deemed appropriate for lower-income housing as they are prioritized for development that maximizes the production of affordable housing and typically support the densities required.^{9,10}

⁹ The City-owned Barcelona Parcel (APN 048 687000200) is assumed to develop as mixed-income in line with the medium density development scenario. See: <https://cao-94612.s3.amazonaws.com/documents/Barcelona-Parcel-Analysis-PPT-10-30-19-FINAL.PDF>

¹⁰ As noted previously, there are a number of market rate units assumed on City-owned land due to a mixed-income assumption on sites larger than 10 acres. This is to ensure that affordable units are not overconcentrated in any one project or geographic location. Further, although City Council provided direction to prioritize 100% affordable development in the December 2018 Public Lands Policy resolution, no specific City policy has yet been implemented to enforce this provision. The City will utilize public land to maximize the production of affordable housing – which may include mixed-income projects that can produce more total units than a 100% affordable project would be able to.

Similarly, BART-owned sites are permitted to develop at high densities pursuant to AB 2923, which mandates a baseline density of 75 du/ac.¹¹ When developed with lower-income housing, these sites are also permitted to undergo a streamlined approval process pursuant to SB 35. BART has also reviewed property sites and designated them appropriate to include in the inventory.

Oakland’s major specific plan areas also provide opportunities for higher-density residential development. The West Oakland Specific Plan (WOSP), the Lake Merritt Station Area Plan (LMSAP), the Broadway Valdez District Specific Plan (BVDSP), and the Draft Downtown Oakland Specific Plan (DOSP) in particular contain a number of opportunity sites. Many of the sites in these areas are parking lots, as shown in Table C-16a. These projects are also more likely to redevelop, as they may “tier” off the specific plan environmental impact reports. All of the sites below are also subject to capacity modifiers as described in Table C-13.

Other opportunity sites include those suggested by community members and members of the Oakland City Council, those likely to redevelop during the planning period due to current use obsolescence, and sites owned by faith-based organizations that are likely to be developed in partnership with the Local Initiatives Support Coalition (LISC).¹² LISC and other faith-based organizations have submitted interest in residential development, and details of the projects are provided in Table C-16a when available. The development capacity of these new opportunity sites is summarized in Table C-16a below.

Sites owned by the City are shown in Table C-16b. Action 3.3.1 in the Housing Action Plan notes will continue to release land designated as surplus for development of affordable housing and other uses. The City will continue to release one to two surplus sites per year, noticing them via a Notice of Availability (NOA) to local Bay Area affordable housing developers, as well as to all California Housing Finance Agency (CalHFA) housing sponsors. All surplus sites are tracked on the City’s website and NOAs are available on the website as well. All surplus sites disposed of pursuant to the SLA will include a minimum of 25 percent affordable units and in many cases will include up to 100 percent affordable units.

¹¹ These projects meet the default density of 30 du/ac and are prioritized for affordable housing projects, and are thus assumed to appropriate to accommodate lower-income development.

¹² Through the Alameda County Housing Development Capacity Building Program, Bay Area LISC provides targeted technical assistance, training, and tailored grant resources to support a cohort of faith-based landowners to develop affordable housing on their properties. The roster of projects currently in the program was provided by LISC during the community outreach process, and includes residential capacity and affordability levels for each project.

OTHER CONSIDERATIONS

In addition to realistic capacity and density provisions, there are several other considerations that should be factored into site selection and capacity. This section provides an assessment of Oakland's 2023-2031 Inventory in light of these factors.

Site Size

State HCD has established parameters for the size of lower-income sites in view of feasibility considerations. Parcels that are less than 0.5 acres in size are generally not considered suitable for lower-income housing development as they may not support the number of units necessary to be competitive and to access scarce funding resources. Parcels that are larger than 10.0 acres in size are also not considered suitable, as they may lead to an over concentration of affordable housing or make the project infeasible. These parameters do not apply to sites selected for moderate- or above-moderate-income housing. There have been a number of recent projects with lower-income units that have been permitted on parcels smaller than 0.5 acres in recent years. These projects, as reported in the City's Annual Progress Reports, are provided in Table C-17a below. Further, on November 16, 2021, the City updated its zoning regulations to authorize residential occupancy of recreational vehicles (RVs), mobile homes, and manufactured homes on private property in all areas where housing is permitted. While these housing options may not meet State HCD's parameters for site size, they provide an additional avenue through which housing for extremely-low-income and unhoused residents can be provided.

Source: State HCD, Annual Progress Reports, 2018-2021; City of Oakland, 2022

There are 107 parcels in the inventory smaller than 0.5 acres selected to accommodate lower-income units (only including those parcels not part of a pipeline project). However, 47 of these parcels are part of sites that are larger than 0.5 acres in total. An additional 41 of these parcels are considered potential projects due to either an active permit application or pre-application – these proposals explicitly include provisions for lower-income units and provide indication that a developer has interest in developing the site. An additional four sites are owned by BART and will be prioritized for affordable development, six sites are owned by faith-based organizations that have expressed interest in development, on one site there is active loan interest from Oakland HCD, and finally one site is the location of the Piedmont Place Homekey site. There are eight remaining parcels smaller than 0.5, (APNs 013 110802401, 023 047602101, 026 083402201, 014 124000901, 010 077202001, 011 083600101, 026 083500601, 016 142402205) which are considered appropriate for lower-income housing (approximately 137 units, with sites estimates ranging from approximately 25 to 59 percent of the maximum capacity) since they are located in high or highest resource TCAC designations and are in close proximity to transit and other amenities, both of which will increase the financial feasibility of development on these sites. These sites were identified in the prior RHNA cycle; all eight of these sites are permitted to develop with at least 30 du/ac and will permit at least 20 percent of units to be affordable by right. There are 3 parcels larger than 10.0 acres that have been identified to accommodate lower-income units (not including parcels that are part of an active pipeline project). Two parcels are part of the same pre-application project (APNs 048H752400101 and 048H752300900, Record ID – ZP210085), which consists of a subdivision of 67 lots for single-family homes and one 131-unit mixed-income multifamily development. It is assumed that 24.0 percent of the 131-unit project will be suitable for lower-income households. This project includes eight parcels in total across about 39.0 acres. The second parcel (APN 042 432800116) is owned by the City and consists of an empty lot next to the Operation HomeBase Site.¹³ This is a surplus lands site that is part of the Coliseum City project and subject to exclusive negotiations with the African American Sports and Entertainment Group. It is assumed to develop at a mix of income levels so as to not concentrate lower-income units. Further, there is an additional site consisting of multiple parcels (APNs 039 329900300, 039 329900202, 039 329102200, 039 329900102) which is about 10.6 acres consisting of opportunity areas in and around the Eastmont

¹³ Operation HomeBase is a COVID-19 isolation trailer program located on Hegenberger Road in East Oakland. Operation HomeBase provides a safe place for high-risk people to self-isolate and maintain their safety and health.

Mall, including parking lots. Since the site is large it is assumed to develop with a mix of incomes. Information about mixed-income affordability mix is found on p. C-46.

Reliance on Non-Vacant Sites

State law requires that if non-vacant sites are relied upon to accommodate more than 50 percent of the RHNA for lower-income households, then a housing element must provide findings based on substantial evidence that the existing use does not constitute an impediment to development and that it will likely be discontinued during the planning period. Per State HCD guidance, the sum of lower-income RHNA capacity on vacant sites and other alternatives not related to capacity on non-vacant sites should be used to determine this percentage. Over 52 percent of the lower-income RHNA capacity is met through vacant sites and other alternatives, see Table C-18.

Table C-18: Lower-Income Reliance on Non-Vacant Sites

<i>Adjustment Factor</i>	<i>Number of Lower-Income Units</i>
Pipeline Projects	2,796
ADU Capacity ¹	1,384
Adequate Sites Alternative	82
Capacity on Vacant Sites	1,154
Total Capacity²	5,416
Oakland Lower Income RHNA	10,261
RHNA on Non-Vacant Sites	10,261 – 5,416 = 4,845
Percentage of Lower-Income RHNA Accommodated on Non-Vacant Sites	4,815/10,261 = 47.2%

1. Affordable to lower-income households.

2. Residential capacity not related to non-vacant sites.

Replacement Housing Requirements

The Housing Crisis Act of 2019 mandates that new residential development must replace any demolished residential units on a one-to-one ratio. Further, new development must also replace “protected units” subject to rent or price control with comparable affordable units and provide displaced tenants with a right of return. All sites included in the inventory with existing units are likely to develop at a higher capacity than is currently available on the site, including pipeline projects. There are no known sites with lower-income or protected units that will be demolished contained in the Inventory.

C.4 Fair Housing Assessment of the Inventory

The City of Oakland is committed to ensuring that all of its actions are “fair and just” and further racial equity in Oakland. At the same time, the Environmental Justice Element of the General Plan seeks to address equity issues—including adequate provision and support of affordable, healthy homes—in Environmental Justice¹⁴ Communities. As explored in the [Environmental Justice and Racial Equity Baseline](#) (March 2022), there are many factors that contribute to the livability of a healthy community, ranging from physical aspects of the natural and built environment to less tangible aspects like historic, socioeconomic, and cultural settings and conditions. By assessing the

¹⁴ SB 1000 requires Cities to identify low-income communities that are disproportionately affected by environmental pollution and other hazards that can lead to negative health effects, exposure, or environmental degradation. While State law refers to these as “disadvantaged communities,” the City of Oakland has opted to use the term “environmental justice communities,” in line with recommendations from the California Environmental Justice Alliance. For more information, see: California Environmental Justice Alliance/PlaceWorks, SB 1000 Implementation Toolkit: Planning for Healthy Communities, October 2017, available for download at <http://www.caleja.org/sb1000-toolkit>.

housing sites inventory against AFFH criteria and ongoing environmental justice efforts, the Housing Element is an important step in achieving an equitable future in Oakland.

In the context of AFFH, the site identification requirement involves not only an analysis of site capacity to accommodate the RHNA, but also whether the identified sites serve the purpose of replacing segregated living patterns with truly integrated and balanced living patterns, transforming racially and ethnically concentrated areas of poverty (R/ECAPs) into areas of opportunity. To achieve these ends, the Housing Element must identify improved or exacerbated conditions and the isolation of the RHNA (i.e., geographic concentration of units by income category). Traditionally, this assessment is conducted using the opportunity areas mapped by State HCD/TCAC—as described further in Appendix D—and other AFFH factors. While these factors are important considerations – they are not the final decision factor in site selection, especially as statewide mapping efforts may not always match the lived experience of residents. For instance, as can be seen in Figure C-8 below, industrial areas with very low population densities in West Oakland are considered “high resource.”

Chart C-1 summarizes the development process of the housing sites inventory and demonstrates how the inventory meets the criteria for AFFH. In the subsequent sections, the methodology for each step is explained.

Chart C-1: Housing Sites Inventory Development Process

ESTABLISH RHNA TARGET

As discussed in Section C.1, the RHNA for the 2023-2031 cycle is 26,251 units. The City has determined that a 15.0 percent buffer will be adequate to ensure that the housing inventory will meet the requirement of the no net loss rule. In total, the 6th cycle RHNA with the 15.0 percent buffer is a target of 30,189 units – 7,488 very-low-income, 4,313 low-income, 5,126 moderate-income, and 13,263 above-moderate-income units. This also includes a target of 3,744 extremely-low-income units, which is assumed to be half of very-low-income need.

PRELIMINARY SITES INVENTORY

The initial sites considered for inclusion in the Inventory were active pipeline projects, projects with expressed developer interest, and other City- and community-identified underutilized sites without known environmental constraints and near amenities like transit. These “earmarked” housing sites either displayed potential for development or were otherwise vetted as appropriate for additional housing development.

As shown in Table C-19, earmarked sites—comprised of those that can be credited toward RHNA and those still available from the 5th cycle inventory—met 74.6 percent of the 6th cycle RHNA target. An additional 16,682 units located on new opportunity sites were identified (using the

methodology described in Section C.3 above) to meet the remaining 6,167 units still needed to meet the target and create a significant buffer. By income level, the overall total of earmarked and new opportunity sites results in a surplus capacity of 1,601 very-low- and low-income units, 1,289 moderate-income units, and 7,133 above-moderate-income units. However, the proportion of lower-income capacity provided in moderate to highest resource areas falls below the average for the total sites inventory.

Table C-19: Preliminary Housing Sites Inventory

<i>Housing Site Type</i>	<i>Very-Low- and Low-Income</i>	<i>Moderate-Income</i>	<i>Above-Moderate-Income</i>	Total (units)
RHNA Credits ¹	4,260	776	9,933	14,969

2. Census tract resource levels are derived from TCAC Opportunity Maps.

Source: Dyett & Bhatia, 2022

AFFH ASSESSMENT OF PRELIMINARY SITES INVENTORY

While the RHNA is met for each income category based on these pre-established housing sites, lower-income capacity in “moderate” to “highest” resource neighborhoods remained relatively low. As discussed further in Appendix D, the California Fair Housing Task Force Opportunity maps developed by TCAC and State HCD indicate that a significant portion (about 60.0 percent) of Oakland is considered low resource or high segregation and poverty. However, many of these areas are in fact thriving communities in close proximity to Bay Area Rapid Transit (BART) and Alameda-Contra Costa Transit District (AC Transit) lines, and are generally suitable to develop at the densities typically required for lower-income projects. For example, much of the Downtown area—which permits some of the highest densities in the city—is considered low to moderate resource. It should also be noted that investment in “lower resource” neighborhoods, including through affordable housing projects, should not be discouraged in neighborhoods that have been traditionally disinvested in – including neighborhoods like West and East Oakland. The City should also invest in affordable housing in lower resource neighborhoods with a focus on improving opportunity and outcomes for existing residents—especially historically marginalized BIPOC communities—in parallel with other investments in equitable access to transit, public facilities, food access, and other amenities.

Providing opportunity for lower-income households must be a multipronged approach – the provision of affordable housing in areas that are already higher resourced must be coupled with

continued investments in place-based strategies¹⁵ for communities in historically marginalized neighborhoods. As outlined in Appendix D, the production of affordable housing and other strategies that enhance opportunity and housing security where lower-income residents already live—including gentrifying neighborhoods that face significant displacement pressures—must complement strategies to locate additional affordable housing in existing high-opportunity areas.

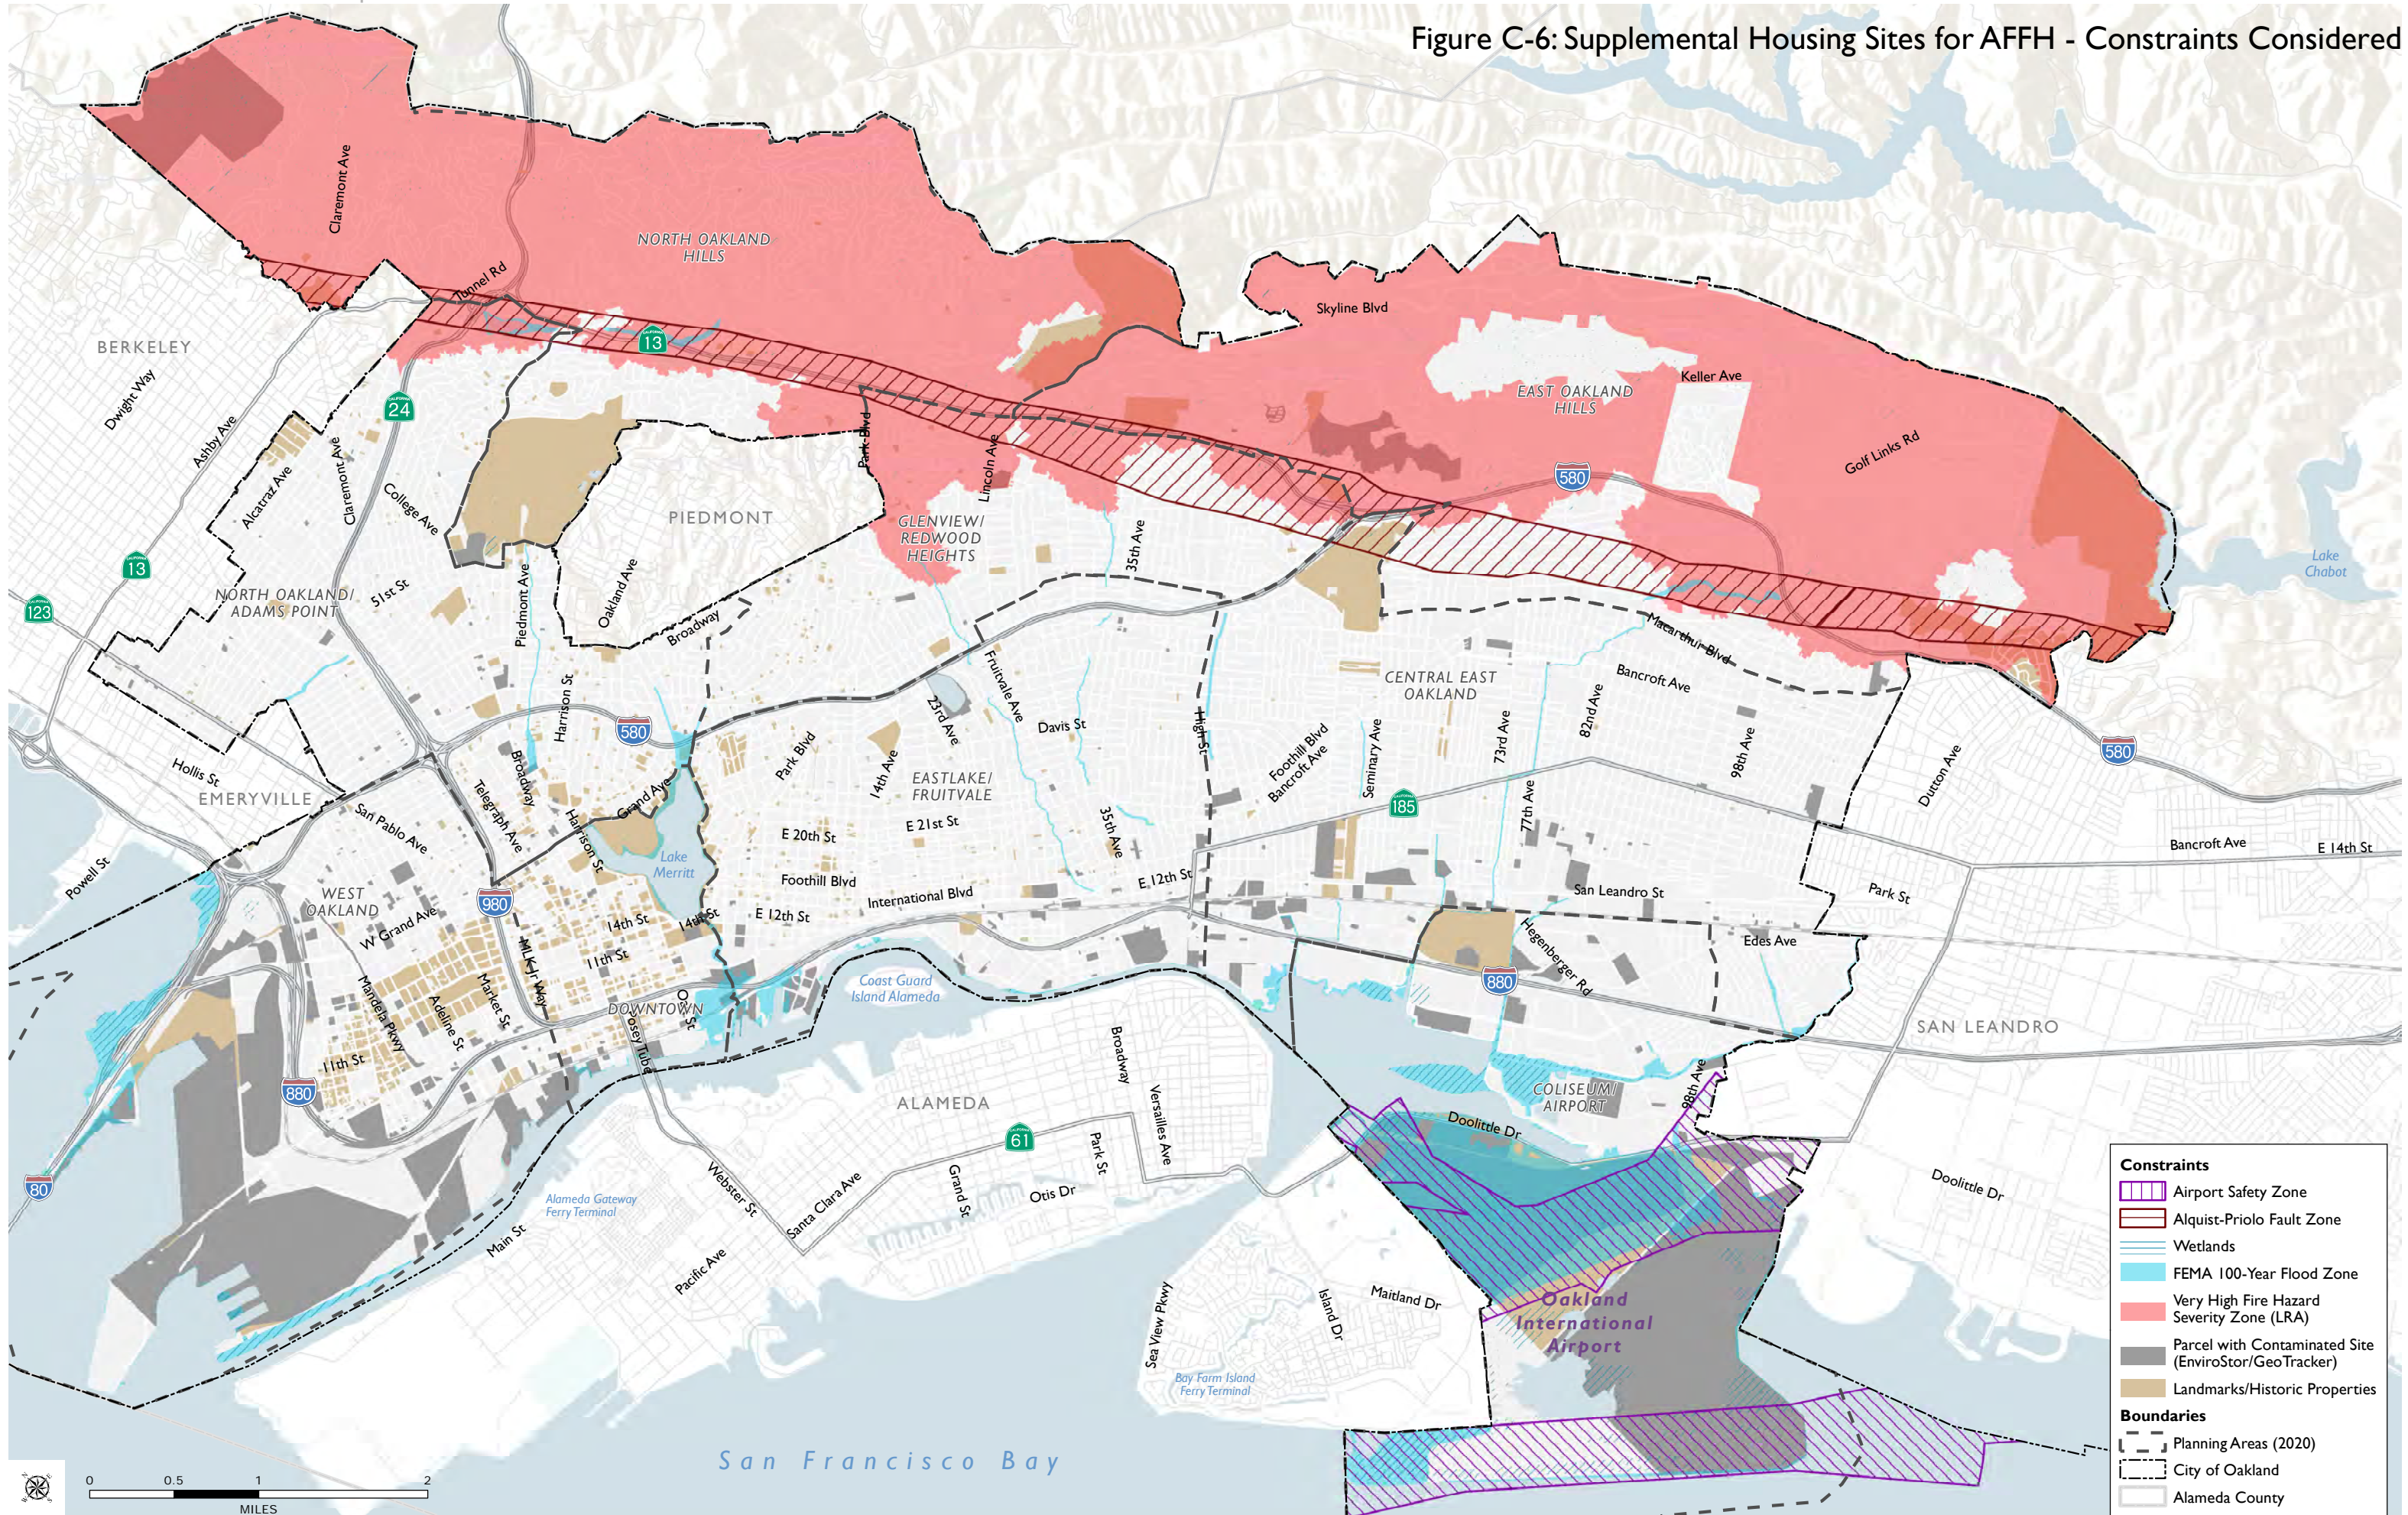

SUPPLEMENTAL SITES TO ACHIEVE AFFH

Increased provision of affordable housing in existing higher resource neighborhoods is a State priority; therefore, the City undertook the additional effort to locate suitable supplemental sites appropriate for lower-income development in these neighborhoods.

Starting from the entire universe of parcels in Oakland, sites were filtered out based on objective physical constraints and opportunity metrics. As discussed earlier, opportunity sites were selected based on their vacancy status, AV ratio, and FAR. Constrained sites—including those in the Alquist-Priolo fault zone, 100-year flood hazard areas mapped by FEMA, VHFHSZ identified by the California Department of Forestry and Fire Protection (CAL FIRE), and contaminated sites or those with known hazards (identified in EnviroStor or GeoTracker)—were removed from consideration. Further, sites smaller than 0.5 acres and larger than 10 acres in size were removed from consideration per State HCD guidance, as were sites with existing uses that serve the community (e.g., community health centers and grocery stores) and those that are not appropriate for housing development (e.g., industrial). Sites already included in the preliminary sites inventory were also excluded. Figure C-6 provides the considerations applied in filtering for viable sites.

¹⁵ Place-based strategies address the physical, social, structural and economic conditions of a community that affect the well-being of the children, families and individuals who live there. Place-based strategies include any effort to enhance the livability and quality of life in a given community. An important purpose of place-based strategies is to develop local solutions to poverty and inequality by addressing community-level problems such as limited employment opportunities, poor housing, under-resourced schools, social isolation and poor or fragmented service provisions that lead to gaps or duplication of effort. For more information, see: Rood, S. and McGroder, S. “Promoting Place-Based Strategies to Address Poverty: Exploring the Governor’s Role.” *National Governors Association*, 2017. Available at <https://www.ddcf.org/globalassets/17-0118-nga-place-based-strategies-to-address-poverty-issue-brief.pdf>.

From this list of sites filtered by physical suitability characteristics, other important decision factors were applied, including: sites within moderate to highest resource TCAC Opportunity Areas, within Priority Development Areas (PDAs), within a half-mile of a BART station, and within a “transit-rich” area as defined by the Metropolitan Transportation Commission (MTC).¹⁶ After completing this exercise, an additional 74 potential parcels were identified – generally in the North Oakland/Adams Point, Eastlake/Fruitvale, Glenview/Redwood Heights, North Oakland Hills, and Downtown areas. Among these, 16 parcels were identified as supplemental sites that would further the objectives of AFFH. Feasibility of future residential development on these additional sites were “ground-truthed” by City staff based on underutilization factors, local knowledge of the sites, and aerial images of the current state of the property. Four parcels in the Rockridge area will be upzoned and encourage to develop with residential uses under actions in the Housing Action Plan. Figure C-7 maps the locations of these supplemental “AFFH sites,” which are listed in Table C-20 below and identified in Table C-25.

IMPROVED OR EXACERBATED CONDITIONS

As noted in the previous section, sites were selected in a manner to both further invest in historically disadvantaged communities and decrease displacement pressures, and to provide additional access to existing higher resourced neighborhoods. The breakdown of residential capacity by resource area and other AFFH considerations is included in Table C-21 below, and the location of all sites contained in the Inventory compared to TCAC opportunity areas are provided in Figure C-8.

Most residential capacity at all income levels is located in the low resource and high segregation and poverty areas, as shown in Table C-21. This is largely due to the fact that over 60.0 percent of land in Oakland is considered lower resource or high segregation and poverty. The high and highest resource neighborhoods carry a relatively small portion of the total unit allocation – influenced by environmental constraints present in the Oakland Hills including fault zone hazards and fire risks, limited densities reflected in recent development patterns, and active pipeline projects. It should also be noted that ADU projections, which estimate significant numbers of units affordable to lower- and moderate-income households, are not included in these estimates. As these units are typically provided in lower-density and higher resource neighborhoods, they will likely further increase the proportion of lower-income housing available in these neighborhoods. As supported by sites analysis in Appendix D, section D.5, an affirmative effort was made to locate affordable housing in higher resource neighborhoods to reduce patterns of exclusion and segregation, and the City remains committed to increasing opportunity in neighborhoods that have experienced historic disinvestment. These actions, as outlined in the Housing Action Plan, will ensure that lower-income housing does not become concentrated in neighborhoods without active efforts to provide the needed place-based strategies to let historic Oakland neighborhoods thrive. Further, rezoning actions included in the Housing Action Plan will increase the number of sites viable for lower-income housing in high resource neighborhoods; however, since the City is able to meet the RHNA under existing zoning and due to the difficulty associated with projecting the affordability and capacity of sites newly made available for housing during the planning period, sites resulting from these actions are not considered in the sites inventory. Further, the City remains committed to enacting strong tenant protections and anti-displacement strategies to ensure that the same market forces that promote market rate development in gentrifying neighborhoods do not lead to the displacement of residents who call those neighborhoods home.

Source: City of Oakland, 2022; State HCD AFFH Data and Mapping Resources (HCD & TCAC Opportunity Areas Mapping Analysis, 2021); Dyett & Bhatia, 2022

Much of the land in Oakland designated high or highest resource is located within the Alquist Priolo fault Zone or Very High Fire Hazard Severity Zone (VHFHSZ), and is therefore not suitable for higher-density residential development. For instance, Table C-22 shows that 70.1 percent of the City’s highest resource and 25.7 percent of the high resource areas are located within the VHFHSZ. The Oakland Hills fire of 1991 was at its time the most damaging fire in California history. It should be noted that the constraints listed in Table C-22 may overlap, and therefore percentages should not be summed. However, this table also does not include all of the environmental constraints, such as steep slopes or landslide areas. The balance of access to opportunity with environmental constraints, both in terms of development feasibility and safety for lower-income projects, was a key factor in creating the Inventory.

Table C-22: Opportunity Area Constraints, 2021

<i>Opportunity Area</i>	<i>Percent of Citywide Area¹</i>	<i>Percent of Land Constrained</i>		
		<i>100-Year Flood Zone</i>	<i>Alquist Priolo Zone</i>	<i>VHFHSZ</i>
Highest Resource	10.1%	0.6%	5.0%	70.1%
High Resource	9.2%	6.8%	2.2%	25.7%
Moderate Resource (Rapidly Changing)	2.4%	14.0%	13.5%	9.3%
Moderate Resource	17.0%	0.7%	5.5%	53.8%
Low Resource	53.6%	8.8%	1.4%	5.0%
High Segregation & Poverty	7.7%	4.1%	0.0%	0.0%

1. Based on parcel acreage – does not include rights-of-way.

Source: City of Oakland, 2022; State HCD AFFH Data and Mapping Resources (HCD & TCAC Opportunity Areas Mapping Analysis, 2021); Dyett & Bhatia, 2022

Recent City Council direction to explore more diverse housing typologies in traditionally single-family neighborhoods—including fourplexes—as well as recent State laws like SB 9 will also help to promote affordable housing options in higher resource neighborhoods. Efforts to further encourage both the provision of affordable housing in higher resource areas and provide investments to lower resource neighborhoods through place-based strategies are further outlined in the Housing Action Plan.

Lower-Income Financial Feasibility

During outreach, affordable housing developers indicated that an evaluation of sites selected for lower-income housing with consideration to State funding requirements would be a useful tool to identify and facilitate affordable housing development on those sites. Scoring guidelines for the nine percent Low Income Housing Tax Credit Program provided by the California Tax Credit Allocation Committee (TCAC) are summarized in Table C-23. Credits provided by TCAC are a popular funding mechanism in the construction of affordable housing, and prioritize the development of affordable housing in neighborhoods with existing access to opportunity. Further information on TCAC opportunity areas is available in Appendix D.

Table C-23: TCAC Scoring Guidelines, 2022

<i>Site & Service Amenities</i>	<i>Points Criteria</i>
Transit	<p>3 The site is within 0.5 miles of a bus rapid transit station, light rail station, commuter rail station, ferry terminal, bus station, or public bus stop.</p> <p>4 The site is within 0.33 miles of the above.</p> <p>5 The site is within 0.5 miles of the above, with service at least every 30 minutes during the hours of 7-9 a.m. and 4-6 p.m. Monday through Friday.</p> <p>6 The site is within 0.33 miles of the above.</p> <p>7 The site is within 0.33 miles of the above and the project's density exceeds 25 du/ac.</p>
Public Park	<p>2 The site is within 0.75 miles of a public park or a community center accessible to the general public.¹</p> <p>3 The site is within 0.5 miles of the above.¹</p>
Book-Lending Public Library	<p>2 The site is within 1 mile of a book-lending public library that also allows for inter-branch lending when in a multi-branch system.</p> <p>3 The site is within 0.5 miles of the above.</p>
Full-Scale Grocery Store, Supermarket, Neighborhood Market, or Farmers' Market	<p>1 The site is within 1 mile of a weekly farmers' market on the list of Certified Farmers' Markets by the California Department of Food and Agriculture and operating at least 5 months in a calendar year.</p> <p>2 The site is within 0.5 miles of the above.</p> <p>3</p> <ul style="list-style-type: none"> • The site is within 0.5 miles of a neighborhood market of 5,000 gross interior square feet or more where staples, fresh meat, and fresh produce are sold; or • The site is within 1.5 miles of a full-scale grocery store/supermarket of at least 25,000 gross interior square feet where staples, fresh meat, and fresh produce are sold. <p>4</p> <ul style="list-style-type: none"> • The site is within 0.25 miles of a neighborhood market of 5,000 gross interior square feet or more where staples, fresh meat, and fresh produce are sold; or • The site is within 1 mile of a full-scale grocery store/supermarket of at least 25,000 gross interior square feet where staples, fresh meat, and fresh produce are sold. <p>5 The site is within 0.5 miles of a full-scale grocery store/supermarket of at least 25,000 gross interior square feet where staples, fresh meat, and fresh produce are sold.</p>
Public Elementary Middle, or High School	<p>2 The site is within 0.75 miles of a public elementary school; 1 mile of a public middle school; or 1.5 miles of a public high school, and the site is within the attendance area of that school.</p> <p>3 The site is within 0.25 miles of a public elementary school; 0.5 miles of a public middle school; or 1 mile of a public high school, and the site is within the attendance area of that school.</p>

<i>Site & Service</i>	
<i>Amenities</i>	<i>Points Criteria</i>
Medical Clinic or Hospital	<p>2 The site is within 1 mile of a qualifying medical clinic with a physician, physician's assistant, or nurse practitioner onsite for a minimum of 40 hours each week, or hospital (not merely a private doctor's office).</p> <p>3 The site is within 0.5 miles of the above.</p>
Highest or High Resources Area	<p>8 The site is located in a census tract designated on the TCAC/State HCD Opportunity Area Map as Highest or High Resource.</p>

1. A public park shall not include 1) school grounds unless there is a bona fide, formal joint-use agreement between the jurisdiction responsible for the park's/recreation facilities and the school district or private school providing availability to the general public of the school grounds and/or facilities. 2) greenbelts or pocket parks, or 3) open space preserves or biking parkways unless there is a trailhead or designated access point within the specified distance.

Source: TCAC, *Nine Percent Application, 2022*

Table C-24 below provides an estimate of the points available for the nine percent TCAC application for lower-income sites contained in the Inventory. Point estimates are derived from nine percent TCAC application scoring guidelines as listed in Table C-23 above. Points are only estimated for lower-income sites that do not already have a pipeline or potential development project. It should be noted that points are only estimated for site-related amenities and do not reflect the full scope of available points. Further, provided point totals are only estimates and may not reflect actual point allocations for specific projects. Finally, while sites with lower scores may be less competitive for State funding, this does not mean that they do not have the zoned capacity to accommodate lower-income housing. It should be noted that TCAC scoring guidelines make it difficult to secure funding for needed affordable housing projects in Oakland's lower-income neighborhoods. The lack of access to the amenities that score well is due to historic racism and public/private disinvestment. Actions the City will take to increase the financial feasibility of development in historically disinvested neighborhoods are provided in the Housing Action Plan.

1. Derived from ABAG-MTC’s 2021 Existing and Planned dataset, which relies on General Transit Feed Specification (GTFS) data for stop location and frequency.

2. TCAC neighborhood market definitions do not match Oakland’s Food Facilities dataset definitions, which groups facilities below 3,000 sq. ft., between 3,000 sq. ft. and 10,000 sq. ft., and above 10,000 sq. ft. Certified farmers’ markets match TCAC definitions exactly. “Neighborhood markets” and “Supermarkets” were approximated as follows:

- Neighborhood Markets (TCAC definition is at least 5,000 sq. ft.) – a review of Yelp entries for “Grocery” or “Fruits & Veggies” was conducted. This better aligns with the Food Facilities dataset and helps capture stores about 1,000 sq. ft. in size that sell fresh fruits and vegetables—including those located in Chinatown. Note that this category may include some supermarkets or larger grocery stores.
- Supermarket (TCAC definition is at least 25,000 sq. ft.) – Oakland Food Facilities that have the description "Food Market Over 10,000 SqFt." There are about 30 such locations in Oakland. Based on limited parcel-level spot-checking, the average size of a supermarket in Oakland is likely less than 25,000 sq. ft. Note that some of these locations may also be included in the neighborhood market level.

3. There are a total of 32 points available.

ISOLATION OF THE RHNA

While seeking to locate lower-income sites in higher resource areas to the extent practical given the extensive environmental constraints, the Inventory actively seeks to reduce geographic concentration of housing by income. This is done in two ways – by locating sites of all income levels throughout the city, and by assuming mixed-income developments on larger sites. This ensures that households are not segregated by income either within a neighborhood or within a specific project. Dispersing housing types of varying affordability levels throughout the city will help reduce historic patterns of geographic concentration by income. ADUs—although not explicitly reflected in Table C-21 or Figure C-8—provide an additional strategy to promote dispersed housing and to ensure that more affordable housing options are available in lower-density neighborhoods, which also tend to be higher resource. As discussed in Section C.2, ADUs in Oakland tend to be affordable to lower- and moderate-income households. The sites inventory by resource area by neighborhood are included in Table C-25.

Table C-25: Housing Units by TCAC Resource Area, by Neighborhood

<i>Resource Areas by Neighborhood</i>	<i>Lower-Income Units</i>	<i>Moderate-Income Units</i>	<i>Above-Moderate-Income Units</i>
Central East Oakland	2,437	373	1,085

The full Sites Inventory is provided in Table C-26, available in a separate Excel file. Table B includes sites, primarily in moderate or higher-resourced areas, that will be upzoned, as described in Appendix J. Rezoning results in around 650 units more than the realistic capacities predicted for the prior zoning designations, for a total of nearly 1,900 units (shown in Table B of Table C-26). Appendix M includes a list of sites identified by the community that will be considered for rezoning as part of Phase 2; sites included in the current Inventory are highlighted in yellow.
