CEQA Analysis**

**Pursuant to California Resources Code Sections 21083.3, 21094.5.5, and 21166
and State CEQA Guidelines Sections 15164, 15183, 15183.3**

Date: July 25, 2016
 Project Address: 2800-2820 Broadway – 2855 Broadway
 Case Number: PLN16-110
 Zoning: D-BV-3 (Mixed Use Boulevard Commercial Zone)
 D-BV-4 (Mixed Use Commercial Zone)
 General Plan: Central Business District
 APNs: 9-685-69-1; 9-685-68; 9-686-3
 Lot Size: 1.38 acres
 Plan Area: Broadway Valdez District Specific Plan Area
 Applicant: M&M Property Company, LLC
 Staff Contact: Peterson Z. Vollmann – (510) 238-6167
 pvollmann@oaklandnet.com

EXECUTIVE SUMMARY

The proposed 2800-2820 Broadway – 2855 Broadway project (proposed project) would be constructed on an approximately 1.38-acre site in Subdistrict 4 of the North End Subarea of the Broadway Valdez District Specific Plan (BVDSP)¹ area (Plan Area). The proposed project would construct two mixed-use residential buildings on opposite sides of the 2800 block of Broadway. These two buildings are henceforth referred to as the “East Building” and the “West Building” portions of the project. The proposed project would consist of a total square footage of up to 332,800. Each building would consist of seven above-ground levels for a height of 74 feet, 11 inches. The project would include a total of up to 217,000 square feet (sf) of residential space (up to 218 residential units), 6,500 sf of amenities, and up to 18,000 sf of ground-floor commercial/retail space along Broadway and Webster Street. The project would provide a total of up to 91,300 sf of parking, consisting of two above-ground levels in the East Building, and two basement levels in the West Building, with as many as 263 total parking spaces and 111 bike parking spaces plus 23 short-term bicycle parking stalls. Apartment-style residential units would be above the parking and retail space on levels three through seven in both buildings. Three courtyards in the East Building and one courtyard in the West Building would provide open space for the residential units.

Two hundred and sixty-three total car parking spaces are provided in the garage and are unbundled parking available for residents.

¹ City of Oakland, 2014. Broadway Valdez District Specific Plan. Adopted June 2014.

The BVDSP Environmental Impact Report (EIR)² analyzed environmental impacts associated with adoption and implementation of the BVDSP and, where the level of detail available was adequate for analyzing potential environmental effects, provided a project-level California Environmental Quality Act (CEQA) review of reasonably foreseeable development. Project-level analysis allows the use of CEQA streamlining and/or tiering provisions for projects that are developed under the BVDSP.

Applicable CEQA streamlining and/or tiering code sections are described below, each of which, separately and independently, provides a basis for CEQA compliance.

- 1. Community Plan Exemption.** Public Resources Code Section 21083.3 and State CEQA Guidelines Section 15183 allow streamlined environmental review for projects that are “consistent with the development density established by existing zoning, community plan, or general plan policies for which an EIR was certified, except as might be necessary to examine whether there are project-specific significant effects that are peculiar to the project or its site.” Section 15183(c) specifies that “if an impact is not peculiar to the parcel or to the proposed project, has been addressed as a significant effect in the prior EIR, or can be substantially mitigated by the imposition of uniformly applied development policies or standards..., then an EIR need not be prepared for the project solely on the basis of that impact.”
- 2. Qualified Infill Exemption.** Public Resources Code Section 21094.5 and State CEQA Guidelines Section 15183.3 allow streamlining for certain qualified infill projects by limiting the topics that are subject to review at the project level, provided the effects of infill development have been addressed in a planning-level decision or by uniformly applicable development policies. Infill projects are eligible if they are located in an urban area and on a site that either has been previously developed or adjoins existing qualified urban uses on at least 75 percent of the site’s perimeter, able to satisfy the performance standards provided in State CEQA Guidelines Appendix M, and consistent with the general use designation, density, building intensity, and applicable policies specified for the project area in either a sustainable communities strategy or an alternative planning strategy. No additional environmental review is required if the infill project would not cause any new specific effects or more significant effects or if uniformly applicable development policies or standards would substantially mitigate such effects.
- 3. Addendum.** Public Resources Code Section 21166 and State CEQA Guidelines Section 15164 state that an addendum to a certified EIR is allowed when minor changes or additions are necessary and none of the conditions for preparation of a subsequent EIR or negative declaration, per Section 15162, are satisfied.

The CEQA Checklist provided below evaluates the potential project-specific environmental effects of the proposed project and whether such impacts were adequately covered by the BVDSP EIR to allow the above-listed streamlining and/or tiering provisions of CEQA to apply. The analysis conducted incorporates by reference the information contained in the BVDSP EIR. Mitigation measures and Standard Conditions of Approval (SCAs) identified in the BVDSP EIR that would apply to the proposed project are listed at the end of the CEQA Checklist. The proposed project is legally required to incorporate and/or comply with the applicable requirements of the mitigation measures identified in the BVDSP EIR as well as applicable City of Oakland (City) SCAs; therefore, the measures and SCAs are herein assumed to be included as part of the proposed project (see Attachment A).

² ESA (Environmental Science Associates). 2013. *Broadway Valdez District Specific Plan, Draft Environmental Impact Report*. SCH No. 2012052008. September.

ESA (Environmental Science Associates). 2014. *Broadway Valdez District Specific Plan, Responses to Comments and Final*. May.

(These documents can be obtained at the Bureau of Planning at 250 Frank Ogawa Plaza, #3115, or online at <http://www2.oakland.net.com/Government/o/PBN/OurServices/Plans/DOWD008194>.)

The proposed project satisfies each of the foregoing CEQA provisions, as summarized below.

- **Community Plan Exemption.** As stated in Section 1.2.2 of the BVDSP, when development proposals in the BVDSP area are brought before the City, the staff and decision-makers use the BVDSP as a guide for project review. Projects are evaluated for consistency with the intent of BVDSP policies and conformance with development regulations. The environmental review of the BVDSP was intended to expedite the processing of future projects that are consistent with the BVDSP. Therefore, consistent with Section 1.2.3 of the BVDSP and State CEQA Guidelines Section 15183, this CEQA analysis satisfies, based on the analysis conducted in this document, the requirements for a community plan exemption. The proposed project is permitted in the zoning district where the project site is located and consistent with the bulk, density, and land use standards envisioned in the BVDSP. The CEQA Checklist below concludes that the proposed project would not result in significant impacts that (1) would be peculiar to the project or project site; (2) were not identified as significant project-level, cumulative, or off-site effects in the BVDSP EIR; or (3) were previously identified as significant but later found to have a more severe adverse impact than that discussed in the EIR. Findings regarding the proposed project's consistency with the BVDSP are included as Attachment B to this document.
- **Qualified Infill Exemption.** The analysis conducted indicates that the proposed project is eligible for a qualified infill exemption, pursuant to State CEQA Guidelines Section 15183.3. The infill eligibility criteria are evaluated in Attachment C and supported by the CEQA Checklist included below.
- **Addendum.** The analysis conducted, as described in this document, demonstrates that preparation of an addendum to the BVDSP EIR is allowed for the proposed project. Therefore, this CEQA analysis is considered to be the addendum. The BVDSP EIR analyzed the Broadway Valdez Development Program (Development Program), which represents the maximum level of feasible development that can reasonably be expected to occur in the Plan Area over a 25-year planning period, according to City of Oakland projections. In total, the Development Program includes approximately 3.7 million sf of development, including approximately 695,000 sf of office space, 1,114,000 sf of restaurant/retail space, 1,800 residential units, a new 180-room hotel, 6,500 parking spaces, and 4,500 new jobs. The BVDSP allows for flexibility with respect to the quantity and profile of future development within each subarea, and between subareas, as long as such development conforms to the general traffic generation parameters established by the Plan. The Development Program is not intended to be a cap that would restrict development.

Although the proposed project would include more net square feet of commercial uses than set forth for in the Development Program (up to 18,000 sf, instead of 10,000 sf under the program, see Table 1), this represents a minor change from the Development Program. Moreover, the Development Program is conceptual only and illustrates one of many possible development scenarios under the BVDSP. The BVDSP EIR identified the traffic as the key environmental factor constraining development in the Plan area. Trip generation that falls within the scope of the overall program analyzed under the BVDSP EIR is consistent with the Development Program analyzed.³

³ It should also be noted that the BVDSP EIR assumed 1,797 residential units for the Specific Plan area. With the proposed project, the total number of constructed, under construction, approved and proposed residential units is now 2,573. However, because the non-residential square footage is much less than that assumed in the EIR, the trip generation for the Specific Plan area continues to be less than what was evaluated in the EIR.

As described below in Section 13, Transportation and Circulation, the proposed project would generate 101 AM and 161 PM peak-hour vehicle trips. Given the change to existing traffic patterns, the net new trip generation created by the proposed project would be 37 new AM peak trips and 79 new PM peak trips. Together with the trips generated by other projects that are currently under construction, approved, and proposed for development in the Plan Area, this would represent approximately 39 percent of the AM and 44 percent of the PM peak-hour trips anticipated in the BVDSP EIR; 30 percent of the AM and 34 percent of the PM peak-hour trips anticipated in the BVDSP EIR for the North End subarea; and 18 percent of the AM and 21 percent of the PM peak-hour trips anticipated in the BVDSP EIR for Subdistrict 4. Because the trip generation from the proposed project combined with other projects currently being developed under the BVDSP would be within the program analyzed under the BVDSP EIR for the Plan Area, the Valdez Triangle, and Subdistrict 1, the traffic impact analysis in the EIR remains valid. Therefore, the proposed project meets the requirements for preparation of an addendum, as evidenced in Attachment D to this document.

Based on an examination of the analysis, findings, and conclusions of the BVDSP EIR, as summarized in the CEQA Checklist below, the BVDSP EIR adequately analyzed and covered the potential environmental impacts associated with the proposed project, and the streamlining and/or tiering provisions of CEQA apply to the proposed project. Therefore, no further review or analysis under CEQA is required.

**Table 1
Comparison of BVDSP Development Program and Proposed Project**

Development Characteristics	Total BVDSP Development Program	Development Program¹	Proposed Project – East Building	Proposed Project – West Building	Proposed Project – Totals
Height	Varied	85 feet	74 feet 11 inches (7 above-ground levels)	74 feet 11 inches (7 above-ground levels)	74 feet 11 inches (7 above-ground levels)
Residential Units	1,800	387	up to 150	up to 68	up to 218
Retail Square Feet (net square feet)	695,000 sf of office space; 1,114,000 sf of restaurant/retail space; 181 hotel rooms	111,086	up to 8,600	up to 9,400	up to 18,000

Notes:

¹ Development Program totals for Subdistrict 4 listed in Table D.1: Illustrative Development Plan Program by Subdistrict.

Sources: City of Oakland, 2014. Broadway Valdez District Specific Plan. Adopted June.

Based on an examination of the analysis, findings, and conclusions of the BVDSP EIR, as summarized in the CEQA Checklist below, the BVDSP EIR adequately analyzed and covered the potential environmental impacts associated with the proposed project. The streamlining and/or tiering provisions of CEQA apply to the proposed project. Therefore, no further review or analysis, under CEQA, is required.

PROJECT DESCRIPTION

Project Location

The project site is at 2800-2820 Broadway and 2855 Broadway, and consists of three parcels (Assessor's Parcel Numbers 9-685-69-1, 9-685-68, and 9-686-3), two of which are contiguous and one of which is separated from the other two by a public right of way. The two contiguous parcels along the east side of the project site (APNs 9-865-69-1, 9-685-68, henceforth referred to as the "East Site") are bounded by 29th Street to the north, Broadway to the west, and 28th Street to the south. The single remaining parcel along the west side of the project site (APN 9-686-3, henceforth referred to as the "West Site") is bounded by Webster Street to the west, 29th Street to the north, and Broadway to the east. These parcels and their locations are shown on Figure 1. The project site is in Subdistrict 4 of the North End Subarea of the Broadway Valdez District Specific Plan (BVDSP) area, and is just east of the Temple Sinai.

The General Plan land use classification for the project site is Central Business District. This classification is intended to encourage, support, and enhance the downtown area as a high-density, mixed-use urban center of regional importance, and a primary hub for business, communications, office, government, high technology, retail, entertainment, and transportation. The entire West Site and part of the East Site is zoned as D-BV-3. The other part of the East Site (the part that does not touch Broadway) is zoned as D-BV-4. The intent of the D-BV-3 zone is to create, maintain, and enhance areas with direct frontage and access along Broadway for a wide range of ground-floor office and other commercial activities with upper story space intended to be available for a broad range of residential, office, or commercial activities. The intent of the D-BV-4 zone is to create, maintain, and enhance areas that do not front Broadway while allowing the widest range of uses on the ground and upper floors. The project site is in a height district that allows a maximum height of up to 85 feet.

The project site is accessible from Interstate 580, approximately 0.6 mile to the north; and I-980, approximately 0.4 mile to the west. Multiple transit routes serve the project site, including Alameda-Contra Costa County Transit District (AC Transit) Routes 822, 51A, and 851. The 19th Street Bay Area Rapid Transit (BART) District station is approximately 0.5 mile south of the site.

East Site Existing Conditions

The two parcels comprising the East Site section total approximately 1.00 acre and are currently occupied by an automobile dealership. The East Site is predominately flat and approximately 129 feet wide, with six curb cuts along Broadway and 28th Streets. These curb cuts provide access to the dealership. The East Site is partially occupied by the automobile dealership building, and also includes a parking lot on the east end containing about thirty parking spaces. The East Site is entirely covered with impervious pavement, and does not contain any landscaping; no street trees are present along the perimeter of the site.

Adjoining properties in the same block include three automobile parts and car shops (288 28th Street, 2840 Broadway, 2850 Broadway), a liquor store (2860 Broadway), a collision services business (295 29th Street), and a dining services business (280 28th Street). Surrounding land uses to the south of 28th Street include multi-story office buildings, multi-story residential complexes, and retail and food establishments serving the Central Business District. To the north of 29th Street and to the south of 28th Street on both the east and west sides of Broadway are automobile dealerships. South of 28th Street and east of Valdez Street is Westlake Middle School, a public school in Oakland Unified School District.

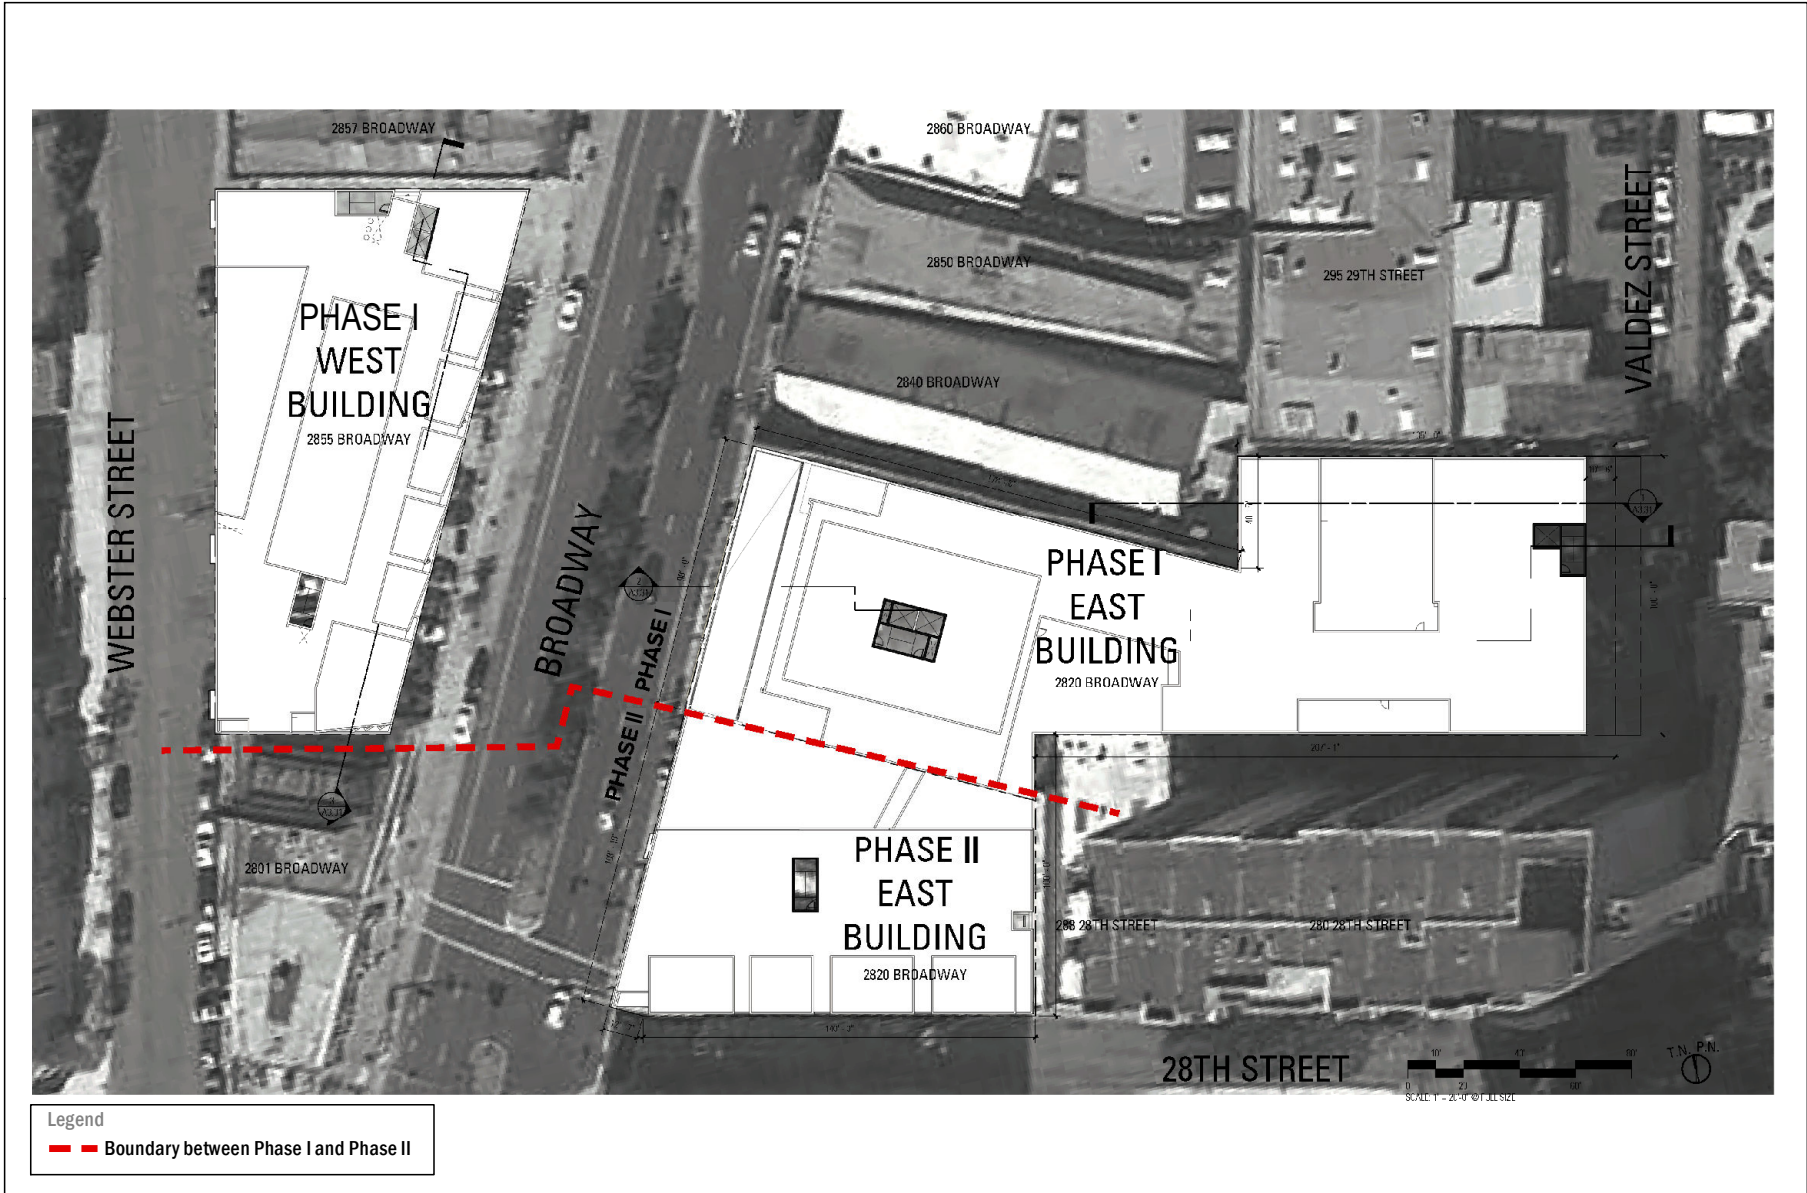

FIGURE 1: SITE PLAN
Broadstone on Broadway, Oakland, CA

Immediately to the south of the project site across 28th Street are additional automobile dealerships and retail shops. Land uses to the north of 29th Street are characterized by office buildings, retail uses, large parking lots, and residences.

West Site Existing Conditions

The parcel comprising the West Site section is approximately 0.38 acres and currently occupied by a parking lot for an automobile dealership. It is predominately flat and approximately 71 feet wide, with three curb cuts along Broadway and Webster Streets providing access to the parking lot. The site is entirely covered with impervious pavement, and does not contain any landscaping; there is one street tree present along the perimeter of the site.

Adjoining properties in the same block include an automobile dealership (2801 Broadway), a smog check station (2857 Broadway), and various retail and service shops (2853 Broadway, 2865 Broadway, and 2869 Broadway). Surrounding land uses to the south of 28th Street include additional automobile dealerships, restaurant and retail establishments, and churches and institutions. Land uses to the north of 29th Street are characterized by office buildings, automobile dealerships, and retail uses. Northwest of the West Site exists the Webster Medical Building which contains doctor office suites and a surgery center.

East Building Characteristics

The project applicant would construct a mixed-use residential building on the East Site of up to 217,600 sf and up to 74 feet and 11 inches in height, with seven above-ground levels. The East Building would include approximately 8,600 sf of retail space along Broadway, and up to 147,000 sf of residential uses (up to 150 residential units) with an additional 4,700 sf of amenities, including the leasing office. The East Building would provide up to 57,300 sf of parking, consisting of two podium levels, with up to 180 car parking spaces and 88 bicycle parking spaces. Apartment-style residential units would be above the retail and parking on levels three through seven. Three courtyards and one roof deck would provide open space for the residential units. The proposed landscape layout, building section, typical floor plans, and building perspective for the East Building are shown on Figures 2 through 7.

Along Broadway, the ground floor of the proposed new building would provide space for multiple retail/commercial tenants. Along 28th Street, the ground floor would consist of retail space, garage space, and loading space. Floors three through seven would be residential units, consisting of approximately 27 studio units, 62 one-bedroom units, and 61 two-bedroom units. The main residential entrance and lobby would be on Broadway. The parking garage would be accessed from Valdez Street, an existing private street without sidewalks and a 24-foot curb cut on 28th street. The 180 parking spaces provided in the garage would be provided as unbundled parking available for residents.

West Building Characteristics

The project applicant would construct a mixed-use residential building on the West Side of up to 115,200 sf and up to 74 feet and 11 inches in height, with seven above-ground levels and two basement levels. The West Building would include approximately 9,400 sf of retail space along Broadway, and up to 70,000 sf of residential uses (up to 68 residential units) with an additional 1,800 sf of amenities. The West Building would provide up to 34,000 sf of parking, consisting of two basement levels with up to 83 parking spaces and 39 bicycle parking spaces.

FIGURE 2: LANDSCAPE LAYOUT PLAN
Broadstone on Broadway, Oakland, CA

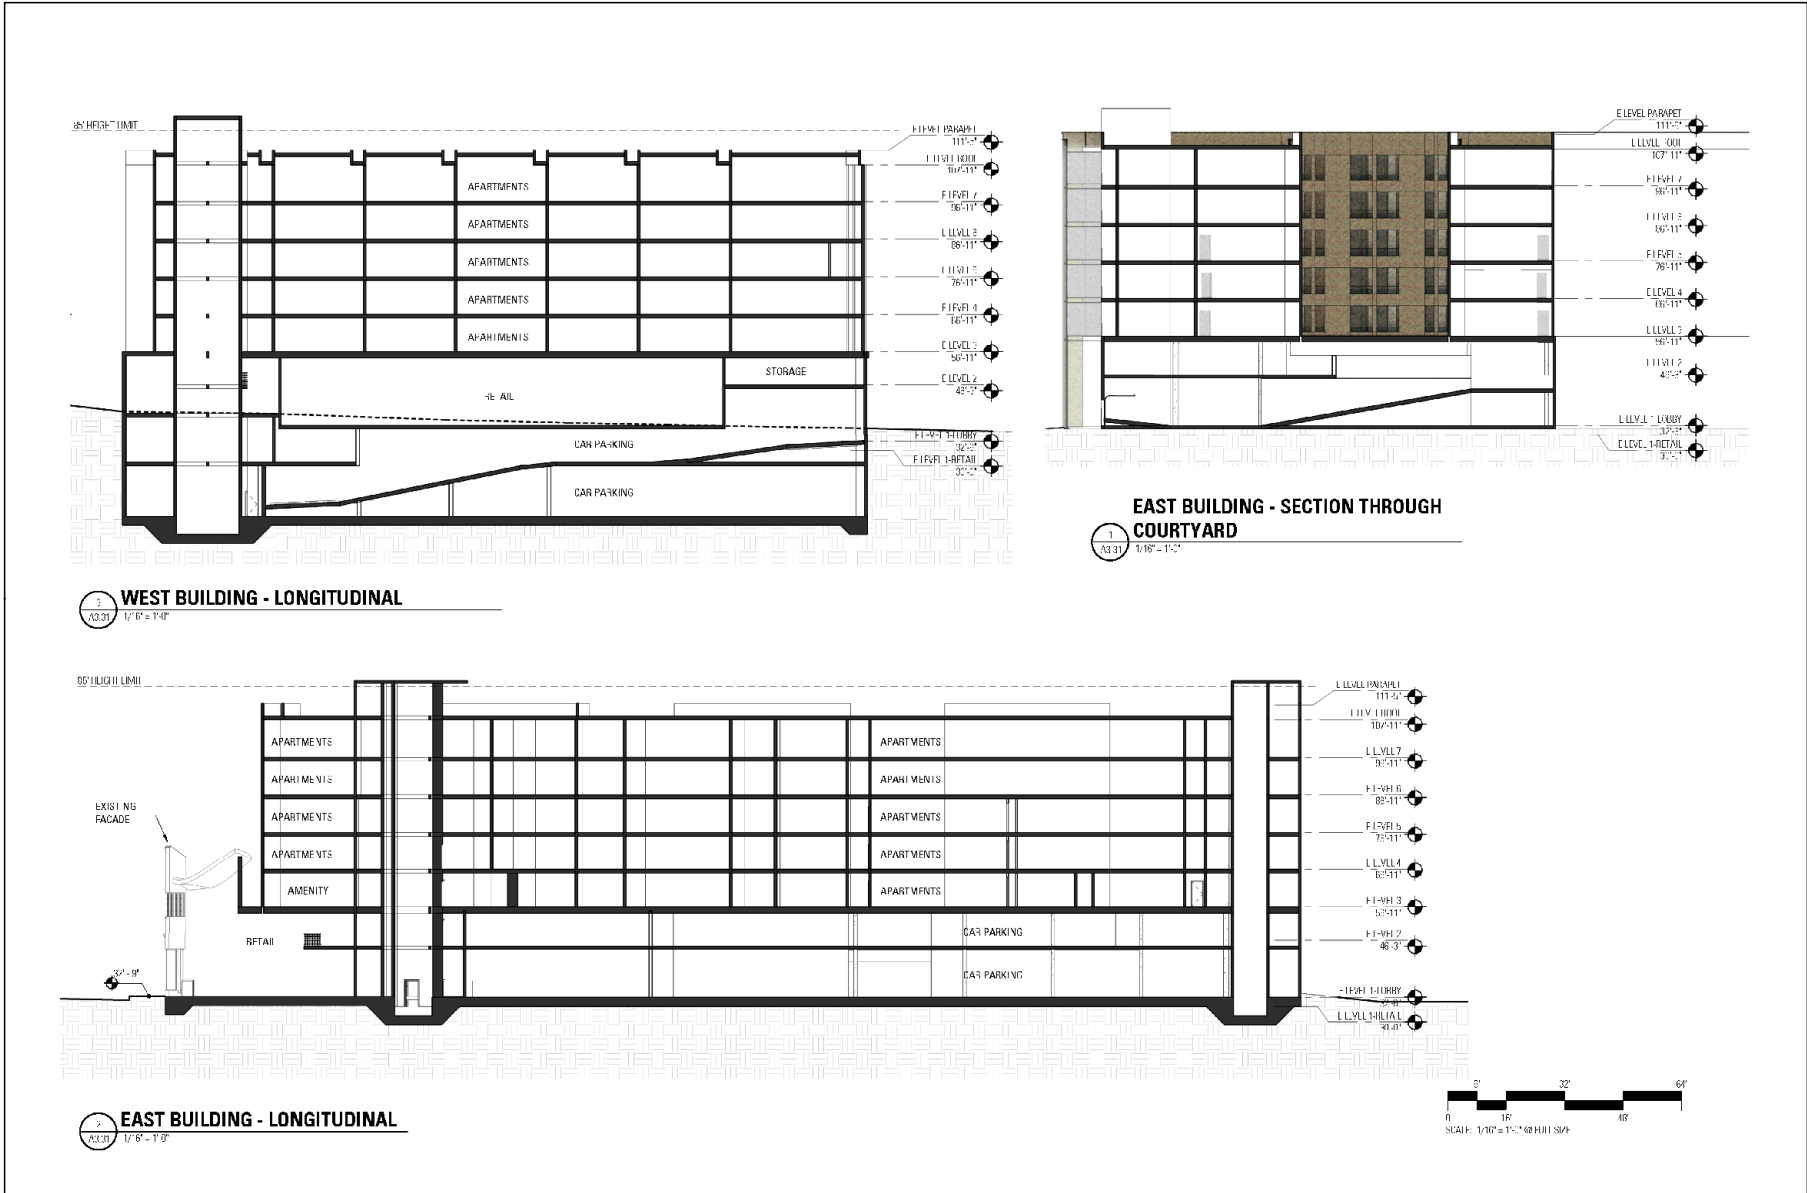

FIGURE 3: BUILDING SECTIONS
Broadstone on Broadway, Oakland, CA

FIGURE 5: EAST BUILDING FLOOR PLAN
LEVEL 3
Broadstone on Broadway, Oakland, CA

Apartment-style residential units would be above the retail and parking on levels three through seven. One courtyard and one roof deck would provide open space for the residential units. The proposed landscape layout and building section for the West Building are shown on Figure 2 and Figure 3, respectively. Typical floor plans and building perspective for the West Building are shown on Figures 8 through 11.

Along Broadway, the ground floor of the proposed new building would provide space for multiple retail/commercial tenants and garage space. Along Webster Street, the ground floor would consist of space for multiple retail/commercial tenants, garage space, and loading space. Floors three through seven would be residential units, consisting of approximately 44 one-bedroom units and 24 two-bedroom units.

The main residential entrance and lobby would be on Broadway; additional pedestrian egress for the West Building would be located on both Broadway and Webster Street. The parking garage would be accessed from a 24-foot curb cut on Webster Street. One commercial loading space located in the building would be accessed from Webster Street, via a 12-foot curb cut. The 83 parking spaces provided in the garage would be provided as unbundled parking available for residents.

Cumulative Project Characteristics

Commercial and Residential

The project would include a total of approximately 18,000 sf of retail space along Broadway and up to 217,000 sf of residential uses (up to 218 residential units and an additional 6,500 sf of amenities).

Parking

The project would provide up to 91,300 total sf of parking, consisting of two podium levels in the East Building, and two basement levels in the West Building, with up to 263 total parking spaces and 111 bicycle parking spaces plus 23 short-term bicycle parking stalls.

Open Space

The proposed project would be required to provide a minimum of 75 sf of usable open space per dwelling unit, per Planning Code 17.101C.050.B. The project would provide the required open space through 16,350 sf of common open space, provided in one courtyard on the third floor of the West Building, three courtyards on the third floor of the East Building, a roof deck on each building, and private balconies. The common space may include amenities such as a pool and deck, outdoor food preparation area, and a courtyard with multi-use artificial turf. Private open space would also be provided in decks for individual units.

Streetscape Improvements

Sidewalk/streetscape improvements would be installed as part of the project, consistent with the BVDSPP Public Realm Design Guidelines for Streetscape Design. Improvements would include replacement of the existing sidewalk fronting the three properties (2800, 2820 and 2855 Broadway) along Webster Street, Broadway and 28th Street, including installation of tree wells along Broadway and Webster. A bulb-out is proposed along Broadway adjacent to the 2800 Broadway property to provide a wider sidewalk at the corner of Broadway and 28th Street. Consistent with the BVDSPP, a London Plane tree will be planted along Broadway and a 'Saratoga' Bay Laurel will be planted along Webster Street. One tree will be removed for the construction of the project. If the tree is determined to be a "Protected Tree" as defined in Chapter 12.36 of the City of Oakland Code of Ordinances, Standard Condition of Approval 46 will be implemented. The tree to be removed is not anticipated to qualify as a Protected Tree.

FIGURE 11: WEST BUILDING PERSPECTIVE
Broadstone on Broadway, Oakland, CA

The project characteristics are summarized in Table 2.

Table 2
Cumulative Project Characteristics

	Commercial	Residential	Car Parking	Open Space
Square Feet	18,000 sf	217,000 sf	91,300 sf	16,350 sf
Units/Spaces	N/A	218 units	263 spaces	N/A

Project Phasing

The construction period will be phased in two parts due to hazardous waste remediation requirements at 2800 Broadway. The first phase (Phase I) which includes 2820 and 2855 Broadway consists of 171 units and approximately 12,000 sf of retail. Phase I is anticipated to commence construction in January 2017 and be completed by January 2019. The second phase (Phase II) which includes 2800 Broadway consists of 47 units and approximately 6,000 sf of retail. Phase II is anticipated to commence construction in January 2018, following Alameda County Environmental Health Department (ACEH) approval to start construction and be completed by January 2020.

Project Construction

Construction activities would consist of demolition, excavation, and new concrete and wood construction. During peak construction it is anticipated that up to 100 workers may be present.

The West Site would be excavated 12 to 24 feet below grade. No excavation is anticipated at the East Site. Up to 27,000 cubic yards of soil would be excavated and off-hauled from the West Site. No soils are anticipated to be imported to either site. A shoring system would be installed in excavation areas consisting of either soldier beam with pine lagging and tiebacks, or deep soil mix with soldier beams and tiebacks. Conventional foundation will be installed.

Project Approvals

The proposed project would require a number of discretionary actions and approvals, including, without limitation:

Actions by the City of Oakland

- Planning Bureau—Regular design review, CEQA determination, minor variance.
- Building Department—Grading permit and other related on-site and off-site work permits (e.g., public right-of-way improvements, tie backs, and public plaza improvements) as well as encroachment permits.

Actions by Other Agencies

- Alameda County Department of Environmental Health (ACDEH)—Site Cleanup Program
- Bay Area Air Quality Management District (BAAQMD)—Issuance of permits for installation and operation of the emergency generator. Permitting of asbestos abatement activities, if any.

- Regional Water Quality Control Board, San Francisco Bay Region (RWQCB)—Acceptance of a Notice of Intent to obtain coverage under the General Construction Activity Stormwater Permit and a Notice of Termination after construction is complete. Granting of required clearances to confirm that all applicable standards, regulations, and conditions for all previous contamination at the site have been met.
- East Bay Municipal Utility District (EBMUD)—Approval of new service requests and new water meter installations.

BVDSP AND EIR

The BVDSP provides a framework for future growth and development in an approximately 95.5-acre area along Oakland's Broadway corridor between Grand Avenue and I-580. Although it does not propose specific private developments, the BVDSP establishes a Development Program to project the maximum level of feasible development that can reasonably be expected during the 25-year planning period (i.e., approximately 3.7 million sf, including approximately 695,000 sf of office space, 1,114,000 sf of restaurant/retail space, 1,800 residential units, a new 180-room hotel, approximately 6,500 parking spaces, and approximately 4,500 new jobs). As described above, the BVDSP EIR analyzed the environmental impacts of adoption and implementation of the BVDSP, and where the level of detail available was adequate for analyzing potential environmental effects, the EIR provided project-level CEQA review for foreseeable and anticipated development.

On September 20, 2013, the City of Oakland released for public review the draft EIR for the BVDSP. The public review and comment period extended from September 20, 2013, through November 12, 2013. The Landmarks Preservation Advisory Board (LPAB) and the City of Oakland Planning Commission held hearings on the draft EIR, and comments received during the public review and comment period were addressed in the final EIR for the BVDSP. Prior to adoption of the final EIR, additional public hearings were held by both the LPAB and the Planning Commission. The final EIR was certified by the Planning Commission on May 21, 2014, and confirmed by the City Council on June 17, 2014.

The final EIR determined that impacts on the following resources would be less than significant, or would be reduced to a less-than-significant level with implementation of mitigation measures or compliance with City of Oakland SCAs: aesthetics; biology; geology, soils, and geohazards; hazardous materials; hydrology and water quality; land use, plans, and policies; population, housing, and employment; public services and recreational facilities; and utilities and service systems. The final EIR determined that implementation of the BVDSP would have significant unavoidable impacts related to the following environmental resources: wind and shadow, air quality, cultural resources, greenhouse gases and climate change, noise, and transportation. Because of the potential for significant unavoidable impacts, a Statement of Overriding Considerations with findings was adopted as part of BVDSP approval on May 21, 2014, and confirmed by the City Council on June 17, 2014. The City Council found that, for the significant and unavoidable impacts listed above, the BVDSP EIR provided the best balance between the City's goals and objectives and the BVDSP's benefits. In addition, the City Council made the following determinations:

- The BVDSP updates the goals and policies of the general plan and provides more detailed guidance for specific areas within the Broadway Valdez District;
- The BVDSP builds upon two retail enhancement studies, the Citywide Retail Enhancement Strategy and the companion Upper Broadway Strategy – A Component of the Oakland Retail Enhancement Strategy, which identified the City's need to reestablish major destination retail in Oakland as being

critical to stemming the retail leakage and associated loss of tax revenue that the City suffers from annually. These reports also identified the Broadway Valdez District as the City's best opportunity to reestablish a retail core with the type of comparison shopping that once served Oakland and nearby communities and that the City currently lacks;

- The BVDSP provides a policy and regulatory framework to achieve one of the primary objectives: to transform the Plan area into an attractive regional destination for retailers, shoppers, employers and visitors that serves, in part, the region's shopping needs and captures sales tax revenue for reinvestment in Oakland;
- The BVDSP could create employment opportunities (both short-term construction jobs as well as permanent jobs), increase revenues (sales, property, and other taxes), and promote spin-off activities (as Plan area workers spend some of their income on goods in the Plan area);
- The BVDSP Development Program promotes increased housing densities in proximity to employment-generating land uses that support City and regional objectives for achieving a jobs/housing balance and transit-oriented development;
- The BVDSP design guidelines will ensure that future development contributes to the creation of an attractive pedestrian-oriented district characterized by high-quality design and a distinctive sense of place; and
- The BVDSP identifies a series of needed and desired improvements related to transportation, affordable housing, historic resource preservation and enhancement, streetscape, plaza, parking, and utility infrastructure as well as regulatory tools, policies, and potential funding mechanisms to realize those improvements.

The Notice of Determination (NOD) for the BVDSP EIR was filed with the State Clearinghouse on June 18, 2014, and was not challenged. Therefore, the BVDSP EIR remains valid.

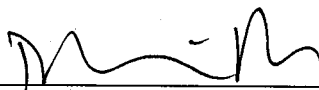

SUMMARY OF FINDINGS

An evaluation of the proposed project is provided in the CEQA Checklist below. This evaluation concludes that the proposed project qualifies for an exemption/addendum from additional environmental review. It is consistent with the development density and land use characteristics established by the City of Oakland in the BVDSP, and any potential environmental impacts associated with its development were adequately analyzed and covered by the analysis in the BVDSP EIR. The proposed project would be required to comply with the applicable mitigation measures identified in the BVDSP EIR, as well as any applicable City of Oakland SCAs (see Attachment A, at the end of the CEQA Checklist). With implementation of the applicable mitigation measures and SCAs, the proposed project would not result in a substantial increase in the severity of significant impacts that were previously identified in the BVDSP EIR or any new significant impacts that were not previously identified in the BVDSP EIR.

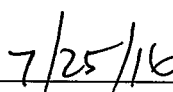

In accordance with Public Resources Code Sections 21083.3, 21094.5, and 21166 and State CEQA Guidelines Sections 15183, 15183.3, and 15164, and as set forth in the CEQA Checklist below, the proposed project qualifies for an exemption/addendum because the following findings can be made:

- The proposed project would not result in significant impacts that (1) would be peculiar to the project or project site; (2) were not previously identified as significant project-level, cumulative, or off-site effects in the BVDSP EIR; or (3) were previously identified as significant but—as a result of substantial new information that was not known at the time the BVDSP EIR was certified—would increase in severity above the level described in the EIR. Therefore, the proposed project is exempt from further environmental review in accordance with Public Resources Code Section 21083.3 and CEQA Guidelines Section 15183.
- The proposed project would not cause any new significant impacts on the environment that were not already analyzed in the BVDSP EIR or result in more significant impacts than those that were previously analyzed in the BVDSP EIR. The effects of the proposed project have been addressed in the BVDSP EIR, and no further environmental documents are required, in accordance with Public Resources Code Section 21094.5 and State CEQA Guidelines Section 15183.3.
- The analyses conducted and the conclusions reached in the BVDSP EIR that was certified by the Planning Commission on May 21, 2014, and confirmed by the City Council on June 17, 2014, remain valid, and no supplemental environmental review is required for the proposed project modifications. The proposed project would not cause new significant impacts that were not previously identified in the EIR or result in a substantial increase in the severity of previously identified significant impacts. No new mitigation measures would be necessary to reduce significant impacts. No changes have occurred with respect to the circumstances surrounding the original project that would cause significant environmental impacts to which the proposed project would contribute considerably, and no new information has been put forward that shows that the proposed project would cause significant environmental impacts. Therefore, no supplemental environmental review is required beyond this addendum, in accordance with Public Resources Code Section 21166 and State CEQA Guidelines Section 15164.

Each of the above findings provides a separate and independent basis for CEQA compliance.

 Environmental Review Officer

 Date

CEQA CHECKLIST

Overview

This CEQA Checklist provides a summary of the potential environmental impacts that may result from adoption and implementation of the BVDSP, as evaluated in the BVDSP EIR. Potential environmental impacts of development under the BVDSP were analyzed and covered by the BVDSP EIR, and the EIR identified mitigation measures and Standard Conditions of Approval (SCAs)⁴ to address these potential environmental impacts.

This CEQA Checklist hereby incorporates by reference the BVDSP EIR discussion and analysis of all potential environmental impact topics; only those environmental topics that could have a potential project-level environmental impact are included. The EIR significance criteria have been consolidated and abbreviated in this CEQA Checklist for administrative purposes; a complete list of the significance criteria can be found in the BVDSP EIR.

This CEQA Checklist provides a determination of whether the proposed project would result in:

- Equal or Less Severity of Impact Previously Identified in BVDSP EIR;
- Substantial Increase in Severity of Previously Identified Significant Impact in BVDSP EIR; or
- New Significant Impact.

Where the severity of the impacts of the proposed project would be the same as or less than the severity of the impacts described in the BVDSP EIR, the checkbox for Equal or Less Severity of Impact Previously Identified in BVDSP EIR is checked. Where the checkbox for Substantial Increase in Severity of Previously Identified Significant Impact in BVDSP EIR or New Significant Impact is checked, there are significant impacts that are:

- Peculiar to project or project site (per CEQA Guidelines Sections 15183 or 15183.3);
- Not identified in the previous EIR (BVDSP EIR) (per CEQA Guidelines Sections 15183 or 15183.3), including offsite and cumulative impacts (per CEQA Guidelines Section 15183);
- Due to substantial changes in the project (per CEQA Guidelines Section 15162);
- Due to substantial changes in circumstances under which the project will be undertaken (per CEQA Guidelines Section 15162); or
- Due to substantial new information not known at the time the BVDSP EIR was certified (per CEQA Guidelines Sections 15162, 15183, or 15183.3).

⁴ These are Development Standards that are incorporated into projects as SCAs, regardless of a project's environmental determination, pursuant, in part, to CEQA Guidelines Section 15183. As applicable, the SCAs are adopted as requirements of an individual project when it is approved by the City, and are designed to, and will, substantially mitigate environmental effects. In reviewing project applications, the City determines which of the SCAs are applied, based on the zoning district, community plan, and the type(s) of permit(s)/approvals(s) required for the project. Depending on the specific characteristics of the project type and/or project site, the City will determine which SCA applies to each project.

The proposed project is required to comply with applicable mitigation measures identified in the BVDSP EIR, and with City of Oakland SCAs. The project sponsor has agreed to incorporate and/or implement the required mitigation measures and SCAs as part of the proposed project. This CEQA Checklist includes references to the applicable mitigation measures and SCAs.

A list of the mitigation measures and SCAs is included in Attachment A, and is incorporated by reference into the CEQA Checklist analysis. If the CEQA Checklist (including Attachment A) inaccurately identifies or fails to list a mitigation measure or SCA, the applicability of that mitigation measure or SCA to the proposed project is not affected. If the language describing a mitigation measure or SCA included in the CEQA Checklist (including Attachment A) is inaccurately transcribed, the language of the mitigation measure as set forth in the BVDSP EIR or City of Oakland SCAs shall control.

Consistent with the requirements of CEQA, a determination of whether the project would have a significant impact has occurred prior to the approval of the proposed project and, where applicable, standard conditions of approval and/or mitigation measures in the BVDSP EIR have been identified that will mitigate them. In some instances, exactly how the measures/conditions identified will be achieved awaits completion of future studies, an approach that is legally permissible where measures/conditions are known to be feasible for the impact identified, where subsequent compliance with identified federal, state or local regulations or requirements apply, where specific performance criteria is specified and required, and where the proposed project commits to developing measures that comply with the requirements and criteria identified.

Attachments

The following attachments are included at the end of this CEQA Checklist:

- A. Standard Conditions of Approval and Mitigation Monitoring and Reporting Program;
- B. Project Consistency with Community Plans or Zoning, per CEQA Guidelines Section 15183;
- C. Infill Performance Standards, per CEQA Guidelines Section 15183.3;
- D. Criteria for Use of Addendum, per CEQA Guidelines Sections 15164 and 15162;
- E. Quantitative Shading Calculations for 2820 Broadway;
- F. Air Quality Health Risk Assessment Screening Memorandum for the Broadstone on Broadway Project, per the Broadway Valdez District Specific Plan Environmental Impact Report;
- G. Preliminary Geotechnical Evaluation Broadway & 28th Street, Oakland California;
- H. Greenhouse Gases and Climate Change Screening Analysis for Broadstone on Broadway Project, per the Broadway Valdez District Specific Plan Environmental Impact Report;
- I. Phase I Environmental Site Assessment for Premier Hyundai of Oakland 2800, 2820, and 2855 Broadway, Oakland, California; and
- J. Limited Phase II Environmental Assessment Report 2800, 2820, and 2855 Broadway Oakland, California.

<p>1. Aesthetics, Shadow, and Wind Would the project:</p>	<p>Equal or Less Severity of Impact Previously Identified in BVDSP EIR</p>	<p>Substantial Increase in Severity of Previously Identified Significant Impact in EIR</p>	<p>New Significant Impact</p>
<p>a. Have a substantial adverse effect on a public scenic vista; substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings, located within a state or locally designated scenic highway; substantially degrade the existing visual character or quality of the site and its surroundings; or create a new source of substantial light or glare which would substantially and adversely affect day or nighttime views in the area;</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>b. Introduce landscape that would now or in the future cast substantial shadows on existing solar collectors (in conflict with California Public Resource Code Sections 25980 through 25986); or cast shadow that substantially impairs the function of a building using passive solar heat collection, solar collectors for hot water heating, or photovoltaic solar collectors;</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>c. Cast shadow that substantially impairs the beneficial use of any public or quasi-public park, lawn, garden, or open space; or, cast shadow on an historical resource, as defined by CEQA Guidelines Section 15064.5(a), such that the shadow would materially impair the resource’s historic significance;</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>d. Require an exception (variance) to the policies and regulations in the General Plan, Planning Code, or Uniform Building Code, and the exception causes a fundamental conflict with policies and regulations in the General Plan, Planning Code, and Uniform Building Code addressing the provision of adequate light related to appropriate uses; or</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>e. Create winds that exceed 36 mph for more than one hour during daylight hours during the year. The wind analysis only needs to be done if the project’s height is 100 feet or greater (measured to the roof) and one of the following conditions exist: (a) the project is located adjacent to a substantial water body (i.e., Oakland Estuary, Lake Merritt or San Francisco Bay); or (b) the project is located in Downtown.</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Scenic Vistas, Scenic Resources, and Visual Character (Criterion 1a)

The BVDSP EIR determined that potential impacts to scenic vistas and resources, visual character, and lighting and glare from development under the BVDSP would be less than significant with implementation of SCAs, and that no mitigation measures were necessary. The Physical Height Model analyzed in the BVDSP EIR⁵ represents the conceptual massing for projects to be developed under the BVDSP, and served as the basis for massing, view corridor, shadow, and wind analysis performed in the EIR. The Physical Height Model accounted for 65-foot building heights at the project site (five stories), which was one of various potential development scenarios. The proposed project is located in an 85-foot height district. It is consistent with the BVDSP and applicable zoning on the project site. The EIR found that new structures would partially obstruct views of the sky, but that such changes would not represent a substantial adverse effect on views, because no views considered scenic or unique (as defined by CEQA) and no visual access to protected scenic resources (as defined by the General Plan) would be obstructed. Changes anticipated under the BVDSP would generally create a more pedestrian-oriented aesthetic in the Plan Area, and the Design Guidelines would ensure that development under the BVDSP would be compatible with the existing built form and architectural character of the Plan Area as a whole, and compatible with the distinctive visual character of individual areas. Development in the Plan Area will be required to comply with SCAs related to landscaping, street frontages, landscape maintenance, utility undergrounding, public right-of-way improvements, and lighting plans.

Shadow (Criteria 1b through 1d)

The EIR determined that development under the BVDSP would result in less-than-significant impacts from shading, with the exception of potential shading on Temple Sinai, which is considered a historical resource. Temple Sinai is at 356 28th Street near the intersection with Webster Street. Under the BVDSP EIR, Mitigation Measure AES-4: Shadow Analysis, applies to the area bounded by Webster Street, 29th Street, Broadway, and 28th Street to reduce shadow impacts. Even with implementation of Mitigation Measure AES-4, impacts would conservatively remain significant and unavoidable. Development outside this area under the BVDSP was determined to result in less-than-significant shadow impacts. To address potential cumulative impacts, under the BVDSP EIR, Mitigation Measure AES-6, which requires implementation of Mitigation Measures AES-4 and AES-5 (described below), applies to projects bounded by the streets listed above to address significant cumulative aesthetics and wind impacts. The EIR concluded that, even with implementation of Mitigation Measure AES-6, cumulative impacts would conservatively remain significant and unavoidable.

Wind (Criterion 1e)

The BVDSP EIR determined that development under the BVDSP that has a height of 100 feet or greater, and is in the portion of the Plan Area designated as Central Business District (which extends north from downtown to 27th Street), could result in adverse wind conditions. Under the BVDSP EIR, Mitigation Measure AES-5: Wind Analysis, applies to those projects in the Central Business District portion of the Plan Area that are over 100 feet in height. Even with implementation of Mitigation Measure AES-5, impacts would conservatively remain significant and unavoidable. To address potential cumulative impacts, under the BVDSP EIR, Mitigation Measure AES-6, which requires implementation of Mitigation

⁵ The Broadway Valdez Development Program represents the maximum feasible development that the City has projected can reasonably be expected to occur in the Plan Area over the next 25 years, and is therefore the level of development envisioned by the Specific Plan and analyzed in the BVDSP EIR. The Broadway Valdez Development Program, together with the Specific Plan height limits, maximum base heights, and step-back requirements inform the Physical Height Model.

Measures AES-4 and AES-5, applies to those same projects and addresses significant cumulative wind and aesthetics impacts. Even with implementation of Mitigation Measure AES-6, cumulative impacts would conservatively remain significant and unavoidable.

Project Analysis and Conclusion

The proposed project's massing would be in accordance with the building envelope modeled in the BVDSP EIR. The proposed project would undergo the required design review process, pursuant to Section 17.101C.020 of the City's Planning Code. This would ensure consistency with the Design Guidelines. These architectural design features were created to be consistent with the BVDSP Design Guidelines. The guidelines call for "integration of new buildings into the existing character of the area," "[reinforcement of] the historic pattern with setbacks and upper-level step-backs," building facades with "doors, windows, and detailing that animate these facades...activate the streetscape and establish a pleasing sense of order and proportion," and high quality, durable building materials with "visual interest and identify." The proposed project would be consistent with these guidelines, with its design being contemporary in design, utilizing a variety of materials, including, but not limited to, stone, brick, glass, cementitious wall panels, and cement plaster. The proposed project would include changes in plane, shadow lines, balconies, and other projections; subtle color and material changes; and other architectural elements. The proposed project's height (i.e., up to 74 feet, 11 inches) would be above the 65-foot height analyzed in the Physical Height Model for the project area. However, the project would be consistent with the 85-foot height district zoning. Because the Physical Height Model was created to model only one of many possible scenarios, the proposed project does not automatically have impacts related to shadow due to its height being greater than the 65-foot model. Moreover, a shadow analysis was prepared that shows no new shadow impact from the proposed project.

The proposed project would be inside the area identified in the BVDSP EIR as having potential shading impacts on Temple Sinai. Therefore, a shadow analysis was completed for the proposed project in compliance with Measures AES-4 as identified in the BVDSP EIR (see Attachment E). Results from the shadow analysis indicate that the Temple Sinai would not receive any new shadow from the proposed project during its service hours of 7:15 a.m. to 12:30 a.m., based on the analyses performed weekly from June 21 to December 21, 2015. Therefore, it was found that Temple Sinai would not be impacted by shadows from the project during the morning hours when the temple is in service.

The proposed project is not in the Central Business District and will not be more than 100 feet tall and therefore would not contribute to potential wind impacts. For these reasons, Mitigation Measure AES-5, as identified in the BVDSP EIR, would **not** apply to the proposed project.

Based on an examination of the analysis, findings, and conclusions in the BVDSP EIR, implementation of the proposed project would not substantially increase the severity of the significant impacts identified in that report, nor would it result in new significant impacts related to aesthetics, shadows, or wind that were not identified in the BVDSP EIR. In addition, no mitigation measures from the BVDSP EIR related to aesthetics or wind are applicable to the proposed project. The proposed project would be required to implement SCAs related to landscaping, street frontages, landscape maintenance, utility undergrounding, public right-of-way improvements, and lighting plans, as identified in Attachment A (for reference, these are SCA-AES-1: *Graffiti Control*, SCA-AES-2: *Landscape Plan*, and SCA-AES-3: *Lighting*).

2. Air Quality Would the project:	Equal or Less Severity of Impact Previously Identified in BVDSP EIR	Substantial Increase in Severity of Previously Identified Significant Impact in EIR	New Significant Impact
a. During project construction result in average daily emissions of 54 pounds per day of ROG, NO _x , or PM _{2.5} or 82 pounds per day of PM ₁₀ ; during project operation result in average daily emissions of 54 pounds per day of ROG, NO _x , or PM _{2.5} , or 82 pounds per day of PM ₁₀ ; result in maximum annual emissions of 10 tons per year of ROG, NO _x , or PM _{2.5} , or 15 tons per year of PM ₁₀ ; or	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. For new sources of Toxic Air Contaminants (TACs), during either project construction or project operation expose sensitive receptors to substantial levels of TACs under project conditions resulting in (a) an increase in cancer risk level greater than 10 in one million, (b) a noncancer risk (chronic or acute) hazard index greater than 1.0, or (c) an increase of annual average PM _{2.5} of greater than 0.3 microgram per cubic meter; or, under cumulative conditions, resulting in (a) a cancer risk level greater than 100 in a million, (b) a noncancer risk (chronic or acute) hazard index greater than 10.0, or (c) annual average PM _{2.5} of greater than 0.8 microgram per cubic meter; or expose new sensitive receptors to substantial ambient levels of Toxic Air Contaminants (TACs) resulting in (a) a cancer risk level greater than 100 in a million, (b) a noncancer risk (chronic or acute) hazard index greater than 10.0, or (c) annual average PM _{2.5} of greater than 0.8 microgram per cubic meter.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Construction and Operational Emissions (Criterion 2a)

The BVDSP EIR determined that construction activities associated with development of projects under the BVDSP would generate air emissions from the use of heavy construction equipment; vehicle trips hauling materials, construction workers traveling to and from the project sites, and application of architectural coatings, such as paints; and would result in significant impacts. An SCA related to construction air pollution controls, along with Recommended Measure AIR-1, would reduce emissions from construction equipment, control fugitive dust, and reduce emissions from architectural coatings. Even with implementation of the SCA and Recommended Measure AIR-1, regional emissions were conservatively estimated to exceed the BAAQMD daily significance thresholds for reactive organic gases (ROG), resulting in a significant and unavoidable impact.

The BVDSP EIR also determined operational activities associated with development in the Plan Area would result in an increase in criteria air pollutant and precursor emissions from mobile on-road sources and onsite area sources, such as natural gas combustion for space and water heating and landscape maintenance, which would have a significant impact. Operational emissions of ROG, oxides of nitrogen (NO_x), and particulate matter less than or equal to 10 microns in diameter (PM₁₀) would exceed significance thresholds. An SCA that requires the implementation of Parking and Transportation Demand Management (TDM) would reduce vehicular trips and operational emissions. Even with implementation of the SCA, this impact would conservatively remain significant and unavoidable for emissions of ROG, NO_x, and PM₁₀.

Toxic Air Contaminants (Criterion 2b)

The BVDSP EIR determined that development under the BVDSP could generate substantial levels of Toxic Air Contaminants (TACs), resulting in significant impacts from construction activities and project operations. New operational sources, such as backup diesel generators, could result in significant impacts on new and existing receptors. SCAs would reduce potential air quality impacts related to TACs by reducing construction source impacts on new and existing receptors, and requiring a Health Risk Assessment of surrounding offsite sources on new onsite sensitive receptors. The EIR also identified Mitigation Measure AIR-4: Risk Reduction Plan, which would reduce the impacts associated with new operational sources on existing sensitive receptors. Even with the SCA and Mitigation Measure AIR-4, the EIR determined that these impacts conservatively would remain significant and unavoidable.

Project Analysis and Conclusion

Construction of the proposed project would occur in two overlapping phases of 24 months each. The first phase is projected to commence in January 2017 and be completed in January 2019; and the second phase is projected to commence in January 2018 and be completed in January 2020. Construction would include excavation and off-haul of up to 27,000 cubic yards of soil in the first phase of construction. The proposed project would include a new mixed-use building of approximately 332,800 gross square feet (gsf), consisting of up to 217,000 gsf of residential space (up to 218 residential units), and up to 18,000 gsf of ground-floor retail.

The proposed project would generate approximately 37 net new vehicle trips during the weekday AM peak hour (22 fewer inbound and 59 outbound), approximately 79 net new vehicle trips during the weekday PM peak hour (63 inbound and 16 outbound), and 670 total new daily trips, as described in the Transportation and Circulation section of this CEQA Checklist. As described below in Section 13, Transportation and Circulation, the number of trips associated with the proposed project together with trips generated by other projects that are constructed, currently under construction, approved, or proposed for development in the Plan Area are less than the BVDSP EIR estimates for the Development Program. Therefore, emissions associated with the proposed project's trips were accounted for in the BVDSP EIR. The proposed project would be required to comply with applicable SCAs related to parking demand and construction and operation source emissions, and Recommended Measures AIR 1 (to reduce project construction emissions) from the BVDSP EIR would also apply as conditions of approval, as described below.

Construction emissions associated with the proposed project (and other projects in the BVDSP area) would not result in a more severe impact than what was previously disclosed in the BVDSP EIR. The BVDSP EIR does not indicate that an additional project-level analysis of construction-related health risks is necessary. There is no evidence that the proposed project would have peculiar or unusual impacts or impacts that are new or more significant than previously analyzed in the BVDSP EIR. Moreover, the

project site's proximity to sensitive receptors—the nearest sensitive receptor would be the apartment building located adjacent to the project site at 280 28th Street—is typical of other project sites in the BVDSP area and other urban areas. Therefore, there would be nothing unique or peculiar about the Project's proximity to sensitive receptors. Consequently, the analysis and conclusions of the BVDSP EIR are still valid for this project.

Furthermore, a project-level analysis of construction-related health risks would ultimately reach the same conclusion and identify the same control measures established in the BVDSP EIR. The proposed project's construction health risk has been adequately addressed by the planning-level review and the project's conditions of approval. Implementation of subsections (w) and (x) of SCA-AIR-1: *Construction-Related Air Pollution Controls (Dust and Equipment Emissions)*, which require equipment and diesel trucks to be equipped with Best Available Control Technology and meet the California Air Resources Board's most recent certification standard, would reduce emissions of diesel particulate matter during construction. In order to comply with subsections (w) and (x) of SCA-AIR-1, the project sponsor would be required to ensure that construction equipment meet Tier 4 emissions standards, which can reduce emissions of diesel particulate matter by at least 85 percent relative to equipment without emission control technologies installed. SCA-AIR-1 also minimizes construction health risks by requiring the following: exposed surfaces be watered; trucks hauling sand, soil, and other loose materials be covered; visible dirt track-out be removed daily; new roads, driveways, sidewalks be paved within one month of grading or as soon as possible, stockpiles be enclosed, covered, and watered twice daily; vehicle speeds on unpaved roads be limited; and idling time be limited. SCA-AIR-1 also minimizes diesel emissions by minimizing idling under subsections (g) and (h); ensuring that construction equipment is running in proper condition under subsection (i); specifying that portable equipment would be powered by electricity if available under subsection (j); requiring that equipment meet emissions and performance requirements under subsection (u); requiring the use of low volatile organic compound coatings under subsection (v). Beyond SCA-AIR-1, there are no additional feasible control measures available to further reduce construction-related diesel particulate matter emissions.

The proposed project would introduce new sensitive receptors (i.e., residents) to the project site. In addition, it would be located within 1,000 feet of several roadways with significant traffic (at least 10,000 vehicles per day), such as Broadway, 27th Street, and Harrison Street, and other sources of TACs. Therefore, a screening-level analysis was completed to assess impacts from nearby sources of TACs on the proposed project's new sensitive receptors. The screening analysis evaluated the potential for siting new sensitive receptors that would result in exposures to (a) a cumulative cancer risk level greater than 100 in a million, (b) a cumulative non-cancer risk hazard index greater than 10.0, or (c) an increase of annual average PM_{2.5} concentrations greater than 0.8 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$). The analysis found that the total health risks from sources in the project vicinity would fall below the thresholds described above (see Attachment F). The analysis also found that the total health risk from sources in the project vicinity is below the City's threshold to prepare a Health Risk Assessment or adopt further risk reduction strategies to reduce the exposure of the project's sensitive receptors to TACs under SCA-AIR-2: *Exposure to Air Pollution (Toxic Air Contaminants)*. In addition, because the proposed project would not include stationary sources, SCA-AIR-3: *Stationary Sources of Air Pollution (Toxic Air Contaminants)*, and Mitigation Measure AIR-4: Risk Reduction Plan would not be applicable to the proposed project.

Conservative assumptions indicate that the cumulative cancer risk to the project's sensitive receptors would be less than the cumulative threshold of 100 in 1 million, and the risk to existing sensitive receptors from project sources, when combined with local cancer risks from cumulative sources within 1,000 feet, would also be less than 100 in 1 million. As a result, neither the SCA related to preparation of a

Health Risk Assessment nor Mitigation Measure AIR-4, development and adoption of further risk reduction strategies, are required.

An examination of the analysis, findings, and conclusions of the BVDSP EIR finds that implementation of the proposed project would not substantially increase the severity of the significant impacts that were identified in the BVDSP EIR, nor would it result in new significant impacts related to air quality that were not identified in the BVDSP EIR. The BVDSP EIR accounted for the construction and operational emissions from the development proposed on the project site within its analysis and the proposed project would be required to implement SCAs related to construction-related emissions controls and development, and a TDM (to address air quality issues), as identified in Attachment A at the end of the CEQA Checklist (SCA-AIR-1: *Construction-Related Air Pollution Controls [Dust and Equipment Emissions]*, SCA-AIR-2: *Exposure to Air Pollution [Toxic Air Contaminants]*, SCA-AIR-3: *Stationary Sources of Air Pollution [Toxic Air Contaminants]*, SCA-AIR-4: *Asbestos in Structures*, and SCA-TRANS-4: *Transportation and Parking Demand Management [TDM] Plan Required*). In addition, Recommended Measure AIR-1 from the BVDSP EIR would apply to the proposed project.

Recommended Measure AIR-1: During construction, the project applicant shall require the construction contractor to use prefinished materials and colored stucco, as feasible.

<p>3. Biological Resources Would the project:</p>	<p>Equal or Less Severity of Impact Previously Identified in BVDSP EIR</p>	<p>Substantial Increase in Severity of Previously Identified Significant Impact in EIR</p>	<p>New Significant Impact</p>
<p>a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service;</p> <p>Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service;</p> <p>Have a substantial adverse effect on federally protected wetlands (as defined by Section 404 of the Clean Water Act) or state protected wetlands, through direct removal, filling, hydrological interruption, or other means;</p> <p>Substantially interfere with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites;</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>b. Fundamentally conflict with the City of Oakland Tree Protection Ordinance (Oakland Municipal Code [OMC] Chapter 12.36) by removal of protected trees under certain circumstances; or</p> <p>Fundamentally conflict with the City of Oakland Creek Protection Ordinance (OMC Chapter 13.16) intended to protect biological resources.</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Special-Status Species, Wildlife Corridors, Riparian and Sensitive Habitat, Wetlands, Tree and Creek Protection (Criteria 3a and 3b)

As described in the BVDSP EIR, the Plan Area is in and surrounded by a fully developed urban environment, and impacts of development on biological resources under the BVDSP would be less than significant. Few special-status animals are present in the Plan Area, and no aquatic habitats that could support migratory fish or birds are present. In addition, very little natural vegetation exists; and because this vegetation is not connected to other nearby natural habitats, it would not constitute a wildlife corridor. There are no natural sensitive communities in the Plan Area. The nearest riparian habitat is at Glen Echo Creek near Adams Park, where the stream daylights for a short distance before flowing under Grand Avenue and into Lake Merritt. Potential increases in transmittal of hazardous materials from

construction activities via runoff from the impermeable surfaces of the site could result in adverse impacts to Glen Echo Creek. The EIR identified landscape trees in the Plan Area as potential nursery sites for nesting birds. In addition, projects developed under the BVDSP could cause harm to birds by increasing bird collisions with buildings.

Development in the Plan Area will be required to comply with SCAs related to removal and replacement of trees, including trees on creekside properties; tree protection during construction; and protection of nesting birds during the breeding season, which would protect natural resources from potential degradation that could result from construction of development projects under the Plan Area. An SCA pertaining to reducing bird collisions with buildings would reduce potential impacts to birds by constructing features in compliance with Best Management Practice strategies to limit bird strikes. SCAs pertaining to landscaping and vegetation management on creekside properties; protection of creeks from construction vibration and dewatering; hazardous materials management; and stormwater and erosion control would ensure that development under the BVDSP is in compliance with all aspects of the Creek Protection Ordinance, reduce the potential impacts on water quality, and minimize potential indirect impacts from pollution in Glen Echo Creek.

Project Analysis and Conclusion

The approximate 1.38-acre project site is located in an urban setting that includes a surface parking lot, auto-service land uses, and an existing auto service building. Vegetation is limited to ruderal weeds that grow between the cracked pavement and one small street tree. The project site is entirely covered with impervious surfaces. Implementation of the proposed project would result in a similar amount of impervious surfaces. The proposed project would remove one on-site tree on the West Site of the project. The one tree slated for removal has not been identified as a heritage tree. Landscaping would be provided in the courtyard. Stormwater would be treated through features in the courtyard, both mechanical treatment features and planters. Street trees would be planted as part of the project, consistent with the BVDSP Public Realm Design Guidelines for Streetscape Design.

Based on an examination of the analysis, findings, and conclusions in the BVDSP EIR, implementation of the proposed project would not substantially increase the severity of the significant impacts identified in that report, nor would it result in new significant impacts related to biological resources that were not identified in the BVDSP EIR. The BVDSP EIR did not identify any mitigation measures related to biological resources, and none would be needed for the proposed project. SCAs related to tree removal, identified in Attachment A at the end of the CEQA Checklist, would apply to the project (for reference, these are SCA-BIO-1: *Tree Removal During Bird Breeding Season* and SCA-BIO-2: *Tree Permit*).

4. Cultural Resources Would the project:	Equal or Less Severity of Impact Previously Identified in BVDSP EIR	Substantial Increase in Severity of Previously Identified Significant Impact in EIR	New Significant Impact
a. Cause a substantial adverse change in the significance of an historical resource as defined in CEQA Guidelines Section 15064.5. Specifically, a substantial adverse change includes physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of the historical resource would be “materially impaired.” The significance of an historical resource is “materially impaired” when a project demolishes or materially alters, in an adverse manner, those physical characteristics of the resource that convey its historical significance and that justify its inclusion on, or eligibility for inclusion on an historical resource list (including the California Register of Historical Resources, the National Register of Historic Places, Local Register, or historical resources survey form (DPR Form 523) with a rating of 1-5);	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines Section 15064.5;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature; or	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d. Disturb any human remains, including those interred outside of formal cemeteries.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Historical Resources (Criterion 4a)

The BVDSP EIR found that development under the BVDSP could result in the physical demolition, destruction, relocation, or alteration of historical resources that are listed in or may be eligible for listing in the federal, state, or local registers of historical resources, which would be considered a significant impact. The Plan Area contains 20 individual properties, including two in an Area of Primary Importance⁶ that are considered historical resources for CEQA purposes. There are also many older

⁶ Area of Primary Importance is an area or district that appears eligible for the National Register of Historic Places, and is considered a historical resource under CEQA.

buildings that possess architectural merit, either in Areas of Secondary Importance (ASIs)⁷ or standing alone, that contribute to the variety and texture of the Plan Area.

The EIR identified Mitigation Measure CUL-1 to reduce the impacts to historical resources throughout the Plan Area, as well as the site-specific impacts associated with the demolition of individual historical resources. In addition, the EIR concluded that incompatible new construction immediately adjacent to historical resources, as well as inappropriate reuse of such resources, could result in significant impacts in the Plan Area. Specifically, development on parcels across Webster Street to the northeast of Temple Sinai could extend shadows far enough south to shade the temple's stained-glass windows during the early morning hours, resulting in significant impacts. Even with implementation of Mitigation Measure AES-4, Shadow Analysis, described in Section 1 above, Aesthetics, Shadow and Wind, impacts would conservatively remain significant and unavoidable.

The BVDSP EIR determined that significant cumulative impacts to historical resources could result from development of projects under the BVDSP, and identified Mitigation Measure CUL-5, which would require implementation of Mitigation Measure CUL-1. However, even with implementation of Mitigation Measure CUL-5, the EIR determined that cumulative impacts would remain significant and unavoidable.

In addition to the mitigation measures described above, the BVDSP EIR identified Oakland Municipal Code Section 17.136.075, Regulations for Demolition or Removal of Designated Historic Properties and Potentially Designated Historic Properties, as well as SCAs related to property relocation instead of demolition, and protection of historic structures from vibration impacts during adjacent construction projects, which will also address impacts to historical resources.

Even with the above mitigation measures and SCAs, impacts to historical resources would remain significant and unavoidable.

Archaeological and Paleontological Resources (Criteria 4b and 4c)

No known archaeological resources have been recorded in the Plan Area; however, the EIR revealed that the Plan Area is potentially sensitive for archaeological and buried sites that are not visible due to urban development. The EIR determined that implementation of an SCA, which would ensure that resources are recovered and that appropriate procedures are followed in the event of accidental discovery, would minimize potential risk of impact to archaeological resources to a less-than-significant level.

The Plan Area was also identified as having low to moderate paleontological sensitivity, and it is possible that fossils would be discovered during excavation in the Plan Area. Implementation of an SCA, which would require a qualified paleontologist to document a discovery, and monitor that appropriate procedures be followed in the event of a discovery, would ensure that the potential impact to fossils discovered in the rock units would be less than significant.

⁷ Area of Secondary Importance is an area or district that is of local interest, but is not eligible for the National Register of Historic Places and is not considered a historical resource under CEQA.

Human Remains (Criterion 4d)

Although the BVDSP EIR did not identify any locations of buried human remains in the Plan Area, the inadvertent discovery of human remains during ground-disturbing activities cannot be entirely discounted. In the event that human remains are discovered during excavation, implementation of an SCA, which would ensure that the appropriate procedures for handling and identifying the remains are followed, would reduce impacts to a less-than-significant level.

Project Analysis and Conclusion

Historical Architectural Resources. The building located at 2816-20 Broadway is rated Cb-2+ in the Oakland Cultural Heritage Survey (OCHS). The building was formerly Gray (Harry)-Neher (Don) Ford Co. garage, and is considered a historic property under Oakland's Preservation Element, according to the OCHS.⁸ Constructed on the project site in 1916, the structure is not listed as a historic resource under CEQA though it is a primary contributor to the locally-important Upper Broadway Auto Row district (Area of Secondary Importance). The façade, sidewall, and first 25 feet of the structure will be incorporated into the East Building as part of the project.

Archaeological and Paleontological Resources and Human Remains. The proposed project would entail excavation of up to approximately 24 feet below grade. The project site appears to be underlain by a mixture of sand, silt and clay, according to the preliminary geotechnical exploration report that was prepared for the project site (Attachment G).⁹ As shown on Figure 4.4-1 of the BVDSP EIR, the geology at the project site includes Pleistocene alluvium and late Pleistocene to Holocene alluvial fan deposits. According to the BVDSP EIR, Pleistocene landforms do not have the potential to contain deeply buried archaeological resources. However, Holocene alluvium has high potential for buried surfaces that would have once been available for human use and occupation prior to being covered with sediment. Implementation of SCAs associated with archaeological and paleontological resources and human remains would reduce impacts to a less-than-significant level.

An examination of the analysis, findings, and conclusions of the BVDSP EIR finds that implementation of the proposed project would not substantially increase the severity of the significant impacts that were identified in the BVDSP EIR, nor would it result in new significant impacts related to cultural resources that were not identified in the BVDSP EIR. The project would be required to implement SCAs related to the discovery of archaeological and paleontological resources during construction and the discovery of human remains during construction as identified in Attachment A at the end of the CEQA Checklist (for reference, these are SCA-CUL-1: *Archaeological and Paleontological Resources – Discovery During Construction*, SCA-CUL-2: *Human Remains – Discovery During Construction*, and SCA-CUL-3: *Property Relocation*).

⁸ Saturn of Oakland building is rated Cb-2+ in the OCHS. A building is given two individual property ratings, an "existing rating" (+) and a "contingency rating" (b) if it is believed that future conditions or circumstances could significantly change.

⁹ Langan Treadwell Rollo. 2015. *Preliminary Geotechnical Evaluation, Broadway & 28th Street, Oakland, California*. Langan Project No. 750631701. September 10.

5. Geology, Soils, and Geohazards Would the project:	Equal or Less Severity of Impact Previously Identified in BVDSP EIR	Substantial Increase in Severity of Previously Identified Significant Impact in EIR	New Significant Impact
a. Expose people or structures to substantial risk of loss, injury, or death involving: <ul style="list-style-type: none"> • Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map or Seismic Hazards Map issued by the State Geologist for the area or based on other substantial evidence of a known fault; • Strong seismic ground shaking; • Seismic-related ground failure, including liquefaction, lateral spreading, subsidence, collapse; or • Landslides; 	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Be located on expansive soil, as defined in Section 1802.3.2 of the California Building Code (2007, as it may be revised), creating substantial risks to life or property; result in substantial soil erosion or loss of topsoil, creating substantial risks to life, property, or creeks/waterways.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Seismic Hazards, Expansive Soils, and Soil Erosion (Criterion 5a and 5b)

The BVDSP EIR determined that very strong ground shaking and associated liquefaction in certain soils could expose people to injury or harm during earthquakes. In addition, the soils in the Plan Area are largely composed of artificial fill material overlying natural deposits of Bay Mud. The northern half of the Plan Area is primarily underlain by streambed deposits. The BVDSP identified the artificial fills and expansive soils underlying the Plan Area as presenting a potential hazard, due to the possibility of shrink-swell behavior and soil compression.

Development proposed under the BVDSP would avoid and minimize potential geologic impacts through compliance with local and state regulations governing design and construction practices, such as the Seismic Hazards Mapping Act (in liquefaction hazard zones) and the California Building Code. Implementation of SCAs that require the preparation of soils and geotechnical reports specifying generally accepted and appropriate engineering techniques would reduce potential impacts to less-than-significant levels.

The BVDSP EIR identified no impacts related to substantial soil erosion or loss of topsoil, because the Plan Area is in a developed urban area that is paved or landscaped, and served by a storm drain system. In addition, SCAs would minimize erosion and sedimentation.

Project Analysis and Conclusion

The proposed project would require excavation of up to 27,000 cubic yards of soil. Because more than 500 cubic yards of soil would be excavated, a grading permit would be required. The grading permit would comply with local and state construction requirements, including the California Building Code, in the design and building of the proposed project.

The project site appears to be underlain by clays and varying amounts of sand and silt, with the upper soils generally underlain by heterogeneous mixtures of sand, silt, and clay. This geology is classified as basin and alluvial fan deposits, comprised of generally stiff to very stiff clay with sand lenses, according to the preliminary geotechnical exploration prepared for the project site (Attachment G).¹⁰ The groundwater level was estimated to be 15.5 and 12 feet below ground surface at two separate cone penetration tests.

The project site is not located within a currently designated Alquist-Priolo Earthquake Fault Zone, and no known surface expression of active faults is believed to exist within the site.¹¹ Therefore, fault rupture is not anticipated at the project site. In addition, the BVDSP EIR identifies that because the Plan Area is located in a gently sloping area, landslides are not expected to pose a hazard.¹² The 2003 California Geologic Survey Map of Seismic Hazard Zones for the Oakland West Quadrangle indicates that the eastern edge of the site is mapped as a Liquefaction Hazard Zone. The U.S. Geological Survey Maps of Quaternary Deposits and Liquefaction Susceptibility in the Central San Francisco Bay Region, California, dated 2006, indicates that the majority of the site is mapped as a “moderate” liquefaction risk area. This area of potential liquefaction was delineated as being near a former creek that was buried during the development in this part of Oakland. Based on the findings of the preliminary geotechnical report prepared on behalf of the proposed project, the potentially liquefiable material underlying the site will necessitate a site-specific evaluation in order to develop the appropriate seismic design values for the project and address liquefaction risks. These design values will be approved by the city and incorporated into the project design to mitigate any risks related to liquefaction for the building structure and its occupants. The proposed project would be required to comply with the requirements of the California Building Code, Seismic Hazards Mapping Act, and Oakland SCAs which ensure the implementation of recommendations from an approved soil report to prevent exposure of people or structures to substantial risk of loss, injury, or death during a large regional earthquake.

Based on an examination of the analysis, findings, and conclusions in the BVDSP EIR, implementation of the proposed project would not substantially increase the severity of the significant impacts identified in that report, nor would it result in new significant impacts related to geology, soils, and geohazards that were not identified in the BVDSP EIR. The BVDSP EIR did not identify any mitigation measures related to geology, soils, and geohazards, and none would be needed for the proposed project. SCAs related to construction-related permits, a soils report, and earthquake fault zone would apply, as identified in Attachment A at the end of the CEQA Checklist (for reference, these are SCA-GEO-1: *Construction-Related Permit(s)* and SCA-GEO-2: *Seismic Hazards Zone [Landslide/Liquefaction]*).

6. Greenhouse Gas and Climate Change Would the project:	Equal or Less Severity of Impact Previously Identified in BVDSP EIR	Substantial Increase in Severity of Previously Identified Significant Impact in EIR	New Significant Impact
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment, specifically: <ul style="list-style-type: none"> • For a project involving a land use development, produce total emissions of more than 1,100 metric tons of CO₂e annually AND more than 4.6 metric tons of CO₂e per service population annually. The service population includes both the residents and the employees of the project. The project’s impact would be considered significant if the emissions exceed BOTH the 1,100 metric tons threshold and the 4.6 metric tons threshold. Accordingly, the impact would be considered less than significant if the project’s emissions are below EITHER of these thresholds. 	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Fundamentally conflict with an applicable plan, policy, or regulation adopted for the purposes of reducing greenhouse gas emissions.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Greenhouse Gas Emissions (Criterion 6a)

The BVDSP EIR evaluated impacts related to GHG emissions from construction and operation anticipated under the BVDSP. The EIR identified motor vehicle use, water, gas, electrical use, loss of vegetation, and construction activities as contributing to generation of GHG emissions under the implementation of the BVDSP. Future projects and development implemented under the BVDSP would be required to be consistent with the City of Oakland Energy and Climate Action Plan, and with SCAs that would reduce GHG emissions during construction and operation of projects. Even with implementation of SCAs, the BVDSP EIR determined that GHG impacts would conservatively remain significant and unavoidable.

Consistency with Applicable GHG Plans (Criterion 6b)

The BVDSP EIR determined that development under the Specific Plan would not conflict with any applicable plan, policy or regulation adopted with the intent to reduce GHG emissions. Therefore, the BVDSP EIR determined that the impact related to consistency with applicable plans, policies or regulations to reduce GHG emissions would be less than significant.

Project Analysis and Conclusion

The City’s GHG reduction plan applies to projects of a certain size that produce GHG emissions that exceed one or both of the BAAQMD CEQA thresholds, potentially resulting in a significant impact. A GHG screening analysis was prepared for the proposed project to determine whether a GHG reduction plan under the City’s SCA was required. As shown in Table 3, the total proposed project annual GHG emissions of 1,065.4 metric tons of CO₂e per year would not exceed the BAAQMD threshold of 1,100

metric tons of CO₂e per year. The proposed project's GHG efficiency metric of 1.71 metric tons of CO₂e per service population per year would not exceed the BAAQMD threshold of 4.6 metric tons of CO₂e per service population per year. The screening analysis determined that the proposed project does not meet the threshold requirements to prepare a GHG reduction plan under SCA-GHG-1: *Greenhouse Gas Reduction Plan* (see Attachment H) and, therefore, SCA-GHG-1 does not apply to the proposed project. Based on the analysis conducted, because the proposed project does not meet the threshold requirements for a GHG reduction plan, it would be consistent with the City of Oakland's Energy and Climate Action Plan as well as the BVDSP EIR.

Table 3
Project Construction and Operational GHG Emissions

Category	CO₂e Emissions (metric tons)
Construction GHG Emissions	
Phase 1	522.3
Phase 2	113.1
<i>Total Construction GHG Emissions</i>	635.4
<i>Amortized Construction GHG Emissions (metric tons/year)</i>	15.9
Operational GHG Emissions	
Phase 1 Annual Emissions (metric tons/year)	771.3
Phase 2 Annual Emissions (metric tons/year)	278.3
<i>Total Annual Operational Emissions (metric tons/year)</i>	1,049.5
Total Project GHG Emissions	
Total Annual GHG Emissions (metric tons/year)	1,065.4
Total Service Population (residents + employees)	623
Total Project GHG Emissions by Service Population (metric tons/SP/yr)	1.71
Notes:	
a. Amortized construction GHG emissions were calculated assuming a 40 year Project lifetime.	
b. Total annual GHG emissions were calculated as the sum of operational annual emissions (Phase 1 and Phase 2) and amortized construction GHG emissions.	
c. Total service population shown only includes residents, as employee estimates were not available.	

An examination of the analysis, findings, and conclusions of the BVDSP EIR finds that implementation of the proposed project would not substantially increase the severity of the significant impacts that were identified in the BVDSP EIR, nor would it result in new significant impacts related to GHG and climate change that were not identified in the BVDSP EIR. The BVDSP EIR did not identify any mitigation measures related to GHGs, and none are required for the proposed project.

7. Hazards and Hazardous Materials Would the project:	Equal or Less Severity of Impact Previously Identified in BVDSP EIR	Substantial Increase in Severity of Previously Identified Significant Impact in EIR	New Significant Impact
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials; Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment; Create a significant hazard to the public through the storage or use of acutely hazardous materials near sensitive receptors; Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 (i.e., the "Cortese List") and, as a result, would create a significant hazard to the public or the environment;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c. Result in less than two emergency access routes for streets exceeding 600 feet in length unless otherwise determined to be acceptable by the Fire Chief, or his/her designee, in specific instances due to climatic, geographic, topographic, or other conditions; or Fundamentally impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Exposure to Hazards, Hazardous Materials Use, Storage and Disposal (Criterion 7a)

The BVDSP EIR determined that development under the BVDSP could result in construction activities that use hazardous materials, as well as ongoing commercial activities that involve the use of chemicals that are considered hazardous materials. Adoption and development under the BVDSP could therefore require the transportation, use, and storage of additional quantities of hazardous materials to new businesses and entities. In addition, the EIR determined that demolition under the BVDSP could result in disturbance of hazardous building materials, such as lead-based paint, asbestos, and polychlorinated biphenyls (PCBs). The transportation, use, and storage of all hazardous materials would be required to follow the applicable laws and regulations adopted to safeguard workers and the general public. In addition, development under the BVDSP would be subject to the City of Oakland’s SCAs pertaining to best management practices for hazardous materials; removal of asbestos and lead-based paint; and other

hazardous materials and wastes, including those found in the soil and groundwater, which would reduce impacts to less-than-significant levels.

Exposure to Hazardous Materials in the Subsurface (Criterion 7a)

The BVDSP EIR determined that development under the BVDSP could require excavation for installation of building foundations and underground utilities and that some of the development sites could have had past documented releases of hazardous materials that have contaminated subsurface soils and groundwater or previously unknown releases that may be discovered during excavation activities. Disturbed contaminated soils could expose construction workers and the public to contaminants potentially causing significant adverse health effects. The BVDSP EIR also indicated that a proposed land use change, such as changing a commercial building to a residential building, could require more stringent clean up levels would apply even if the site had been considered remediated or closed based on complying with standards for its current land use. Development under the BVDSP would be subject to the City of Oakland's SCAs pertaining to hazardous materials in the subsurface, including conducting a Phase I Environmental Site Assessment (ESA) and a Phase II ESA, if warranted based on the results of the Phase I ESA; procedures for managing suspected contamination that is encountered unexpectedly during construction activities; preparation of a construction worker health and safety plan; and implementation of best management practices related to hazardous materials management. The BVDSP EIR determined that compliance with these SCA would reduce the potential impacts related to hazardous materials in the subsurface to a less-than-significant level.

Hazardous Materials within a Quarter Mile of a School (Criterion 7b)

There are no schools in the Plan Area; however, there are five schools or daycare facilities within 0.25 mile of the Plan Area. Development under the BVDSP would be required to comply with the City of Oakland's Ordinances and General Plan Policies, which require hazardous material handlers within 1,000 feet of a school or other sensitive receptor to prepare a Hazardous Materials Assessment Report and Remediation Plan. Additionally, those handling or storing hazardous materials would be required to prepare a Hazardous Materials Management Plan and Hazardous Materials Business Plan, as required by Alameda County and a City of Oakland SCA; preparation of these plans would reduce impacts to less-than-significant levels.

Emergency Access Routes (Criteria 7c)

The EIR determined that construction under the BVDSP that would result in temporary road closures, which would require traffic control plans to ensure at least two emergency access routes are available for streets exceeding 600 feet in length, per City of Oakland's Ordinances and General Plan Policies. Compliance with all applicable requirements would reduce potential impacts to a less-than-significant level.

Project Analysis and Conclusion

A review of available environmental databases was conducted for the proposed project and is included in the Phase I Environmental Site Assessment (ESA) completed for the proposed project (Attachment I).¹³ The review indicated that the project site is included in the following databases: Federal RCRA NonGen/NLR (Non-Generator/No Longer Regulated), Facility Index System/Facility Registry System

¹³ ATC. 2015. *Phase I Environmental Site Assessment, Premier Hyundai of Oakland 2800, 2820 and 855 Broadway, Oakland, California*. September 4.

(FINDS) and Hazardous Waste Information System (HAZNET). The site was not listed on the Cortese List at the time of the Phase I investigation; however, due to a Voluntary Remedial Action Agreement signed for the project, as discussed below, the site was listed in the State Water Resource Control Board's GeoTracker site, resulting in inclusion on the Cortese List.

The Phase I ESA prepared for the project site referenced documentation regarding or physical evidence of soil or groundwater impairments associated with current or past use of the site. Based on previous investigations, potential residual impacts exist on the project site. These are related to onsite Underground Storage Tanks (UST) on an adjacent site, Volkswagen of Oakland, which released gasoline and impacted soil and groundwater. Additionally, a chlorinated solvent plume originating up-gradient of the Volkswagen site was identified. The Volkswagen of Oakland site was granted closure in May 2015 and no site management requirements appeared necessary. Based on the year of construction of the properties, lead based paint (LBP) and asbestos-containing material (ACM) are also contaminants of concern on the project site.

During a subsequent Phase II ESA, soils on the project site were sampled (see Attachment J).¹⁴ Total Petroleum Hydrocarbons for diesel (TPHd) and TPH for motor oil (TPHmo) were detected above the Regional Water Quality Control Board's (RWQCB) residential Environmental Screening Levels (ESLs). All volatile organic compounds (VOCs) were detected below their respective ESLs. Antimony, copper, zinc and lead were detected above the ESLs. Arsenic was detected above the ESLs, however, the range of results were close to the average background concentration in California soil. Groundwater was also sampled during the Phase II assessment. TPH for gasoline (TPHg), TPHd and TPHmo were detected above the residential ESLs and two VOCs, carbon tetrachloride and chloroform, were also detected above the ESLs. Contaminant of concern (COC) include VOCs that were detected above the ESLs include benzene, toluene, ethylbenzene, total xylenes (BTEX) and trichloroethylene (TCE). Cobalt and nickel were the only metals detected in the groundwater samples above the ESLs; however, these values could potentially be related to background levels in metals in the sediment.

Based on the results reported in the Phase II ESA, The Alameda County Environmental Health Department (ACEH) was notified and as a result, a Voluntary Remedial Action Agreement for the project site has been signed. The proposed remedial plan is currently under review by the ACEH and was submitted to the ACEH in an Interim Remedial Action Plan (IRAP) dated February 8, 2016, prepared by Cook Environmental Services, Inc. The IRAP identified the remediation measures that will be implemented to address the contamination of soil and groundwater on the site. In-situ air sparging and ozone sparging will be conducted for a three-month pilot period. This method of remediation has been proven to break down the petroleum hydrocarbon compounds (TPH and BTEX) and chlorinated solvent compounds (TCE) in the soil and groundwater. The COCs are broken down to their daughter components, which are not considered a human health risk. Groundwater wells and air sparging wells will be constructed inside and outside of the existing building at locations representative of the limits of the contamination plume. A rigorous groundwater monitoring program will be implemented during the first month of the pilot study and then at regular intervals thereafter. The IRAP remediation plan is intended to address the contaminated soil and groundwater at the site, and because construction cannot commence under SCA-HAZ-2: *Site Contamination*, until after ACEH acts on the IRAP and the remediation pilot program is complete, the impact from subsurface hazardous materials would be reduced to a less-than-significant level. Based on the presence of shallow groundwater and proposed excavation of up to

¹⁴ ATC. 2015. *Limited Phase II Environmental Assessment Report 2800, 2820, and 2855 Broadway Oakland, California.*. December 29.

27,000 cubic yards of soil on the West Building to accommodate the proposed underground parking level, it is likely that construction-period dewatering will be required. However, dewatering during construction would be temporary and have only a localized and short-term effect on groundwater levels. Post-construction dewatering would not be required because the foundation and wall systems below the groundwater table would be waterproofed to prevent infiltration.

As described in the BVDSP EIR, any groundwater dewatering would be limited in duration and would be subject to permits from East Bay Municipal Utility District (EBMUD) or the Regional Water Quality Control Board (RWQCB), depending if the discharge were to the sanitary or storm sewer system. If the water is not suitable for discharge to the storm drain (receiving water), dewatering effluent may be discharged to EBMUD's sanitary sewer system if special discharge criteria are met. These include, but are not limited to, application of treatment technologies or Best Management Practices (BMPs) which will result in achieving compliance with the wastewater discharge limits. Discharges to EBMUD's facilities must occur under a Special Discharge Permit. In addition, per the EBMUD Wastewater Ordinance, "all dischargers, other than residential, whose wastewater requires special regulation or contains industrial wastes requiring source control shall secure a wastewater discharge permit" (Title IV, Section 1). EBMUD also operates its wastewater treatment facilities in accordance with Waste Discharge Requirements issued by the RWQCB, which require rigorous monitoring of effluent to ensure discharges do not adversely impact receiving water quality. Since proper management of dewatering effluent is covered by existing State and local regulations, and implementation of these regulations would protect receiving water quality, the project would be consistent with the BVDSP EIR.

During construction and excavation at the site, workers may be exposed to the soil at the East Site through grading and scraping as well as at the West Site during grading and excavating activities. Workers may be exposed to the groundwater during dewatering operations at the West Site; however there is no indication that the groundwater or soil is contaminated by the plume found at the East Site. The contaminated soil and groundwater were only identified at the East Site, therefore workers will not be at risk of exposure during excavation activities. Nearby receptors could potentially be exposed to the contaminated media at the East Site; however direct contact would be necessary or airborne exposure through dust from the construction. The construction area would be secured from the general public and only authorized persons would have access to the site.

Developments under the BVDSP including the proposed project, would be required to follow the applicable laws and regulations related to transportation, use, and storage of all hazardous materials and to safeguard workers and the general public. Development under the BVDSP would be subject to the City of Oakland's SCA-AIR-5: *Asbestos in Structures* and SCA-HAZ-1: *Hazardous Materials Related to Construction*, pertaining to the removal of asbestos-containing materials from structures and implementation of best management practices for hazardous materials during construction, respectively.

SCA-HAZ-2: *Site Contamination* also applies to the project. The project sponsor is required to prepare and implement a Health and Safety Plan to protect project construction workers from risks associated with exposure to hazardous materials if encountered. The Health and Safety Plan would include, but is not limited to, measures related to personal protective equipment, exposure monitoring, emergency response plan, and a training program. In addition, SCA-HAZ-2 requires the implementation of best management practices for the handling of contaminated soil and groundwater discovered during construction activities to ensure their proper storage, treatment, transport, and disposal. Specifically, SCA-HAZ-2 would require that all suspect soil be stockpiled on-site in a secure and safe manner and adequately profiled (sampled) prior to acceptable reuse or disposal at an appropriate off-site facility.

Additionally, this SCA would require implementation of specific sampling and handling and transport procedures for reuse or disposal in accordance with applicable local, state, and federal requirements. The exact method employed or plan to be implemented will be identified in a Site Management Plan, which will be prepared by the project sponsor and will require compliance with identified federal, state or local regulations or requirements and specific performance criteria and the project sponsor has committed to developing measures that comply with the requirements and criteria identified. Implementation of SCA-HAZ-2 will be reviewed, approved, and overseen by the City, and any applicable regulatory agency, as required by law.

Consistent with the requirements of CEQA, a determination of whether the project would have a significant impact has occurred prior to the approval of the proposed project and, where applicable, standard conditions of approval and/or mitigation measures in the BVDSP EIR have been identified that will mitigate them. In some instances, exactly how the measures/conditions identified will be achieved awaits completion of future studies, an approach that is legally permissible where measures/conditions are known to be feasible for the impact identified, where subsequent compliance with identified federal, state or local regulations or requirements apply, where specific performance criteria is specified and required, and where the proposed project commits to developing measures that comply with the requirements and criteria identified.

The project site is located within 0.25 mile of Westlake Middle School; no other schools are within 0.25 mile of the project site. The proposed project would not change surrounding streets or roadways or limit emergency access or plans. Any temporary roadway closures required during construction of the proposed project would be subject to City of Oakland review and approval to ensure consistency with City requirements.

Based on an examination of the analysis, findings, and conclusions in the BVDSP EIR, implementation of the proposed project would not substantially increase the severity of significant impacts identified in the BVDSP EIR, nor would it result in new significant impacts related to hazards and hazardous materials that were not identified in the BVDSP EIR. The BVDSP EIR did not identify any mitigation measures related to hazards and hazardous materials, and none would be needed for the proposed project. SCAs related to construction, site contamination, and hazardous materials business plans would apply to the proposed project, as identified in Attachment A at the end of the CEQA Checklist (for reference, these are SCA-HAZ-1: *Hazardous Materials Related to Construction*; SCA-HAZ-2: *Site Contamination*; and SCA-HAZ-3: *Hazardous Materials Business Plan*).

<p>8. Hydrology and Water Quality Would the project:</p>	<p>Equal or Less Severity of Impact Previously Identified in BVDSP EIR</p>	<p>Substantial Increase in Severity of Previously Identified Significant Impact in EIR</p>	<p>New Significant Impact</p>
<p>a. Violate any water quality standards or waste discharge requirements; Result in substantial erosion or siltation on or off site that would affect the quality of receiving waters; Create or contribute substantial runoff which would be an additional source of polluted runoff; Otherwise substantially degrade water quality; Fundamentally conflict with the City of Oakland Creek Protection Ordinance (OMC Chapter 13.16) intended to protect hydrologic resources.</p>	<p style="text-align: center;"><input checked="" type="checkbox"/></p>	<p style="text-align: center;"><input type="checkbox"/></p>	<p style="text-align: center;"><input type="checkbox"/></p>
<p>b. Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or proposed uses for which permits have been granted);</p>	<p style="text-align: center;"><input checked="" type="checkbox"/></p>	<p style="text-align: center;"><input type="checkbox"/></p>	<p style="text-align: center;"><input type="checkbox"/></p>
<p>c. Create or contribute substantial runoff which would exceed the capacity of existing or planned stormwater drainage systems; Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course, or increasing the rate or amount of flow, of a creek, river, or stream in a manner that would result in substantial erosion, siltation, or flooding, both on or off site</p>	<p style="text-align: center;"><input checked="" type="checkbox"/></p>	<p style="text-align: center;"><input type="checkbox"/></p>	<p style="text-align: center;"><input type="checkbox"/></p>
<p>d. Result in substantial flooding on or off site; Place housing within a 100-year flood hazard area, as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map, that would impede or redirect flood flows; Place within a 100-year flood hazard area structures which would impede or redirect flood flows; or Expose people or structures to a substantial risk of loss, injury, or death involving flooding.</p>	<p style="text-align: center;"><input checked="" type="checkbox"/></p>	<p style="text-align: center;"><input type="checkbox"/></p>	<p style="text-align: center;"><input type="checkbox"/></p>

Water Quality, Stormwater, and Drainages and Drainage Patterns (Criteria 8a and 8c)

The BVDSP EIR determined that development in the Plan Area would result in construction activities that would require ground disturbance, resulting in impacts to hydrology and water quality. The EIR identified several SCAs that would reduce impacts to a less-than-significant level by minimizing runoff and erosion, as well as sedimentation and contamination to stormwater and surface water during construction activities.

Use of Groundwater (Criterion 8b)

Potable water is supplied to the Plan Area through imported surface water by the East Bay Municipal Utility District (EBMUD), and groundwater is generally not used in the Plan Area. The Plan Area is primarily developed and covered in impervious surfaces, and the amount of water able to infiltrate the aquifer in the East Bay Plain groundwater basin would not substantially decrease with development under the BVDSP. Additionally, compliance with the C.3 provisions of the National Pollutant Discharge Elimination System (NPDES) Municipal Stormwater Permit for the Alameda County Clean Water Program would require that recharge rates at a project site be equivalent to the recharge rate at the site prior to development.

Flooding and Substantial Risks from Flooding (Criteria 8d)

The BVDSP EIR identified the easternmost part of the Plan Area along Glen Echo Creek as being situated in the 100-year flood zone, with the rest of the Plan Area lying outside of the 100-year flood zone. SCAs that require regulatory permits prior to construction in a floodway or floodplain, along with preparation of hydrological calculations that ensure that structures will not interfere with the flow of water or increase flooding, would reduce impacts to less-than-significant levels.

Project Analysis and Conclusion

The approximate 1.38-acre project site is located in an urban setting that includes a surface parking lot, auto-service land uses, and an existing auto service building. Vegetation is limited to ruderal weeds that grow between the cracked pavement and one street tree. The project site is entirely covered with impervious surfaces. Implementation of the proposed project would result in a similar amount of impervious surfaces. The proposed project would remove one on-site street tree on the West Site of the project. The one tree slated for removal has not been identified as a heritage tree. Landscaping would be provided in the courtyard. Stormwater would be treated through landscaping features in the courtyards, using both mechanical treatment features and planters, in compliance with the C.3 provisions of the National Pollutant Discharge Elimination System (NPDES) Municipal Stormwater Permit.

As shown on Figure 4.8-1 of the BVDSP EIR, a small portion of the project site on the eastern end of the East Building would be inside the 100-year flood zone; the BVDSP EIR identified impacts from flooding as being less than significant. Compliance with the City of Oakland Grading Ordinance, the Creek Protection and Stormwater Management Ordinances and SCAs would minimize flooding impacts, including SCA 89: *Regulatory Permits and Authorizations* and SCA 90: *Structures within a Floodplain* and no additional mitigation would be required. The East Site would be within an area that could experience flooding if two EBMUD reservoirs experience dam failure. The Safety Element of the general plan states that the City will “minimize further the relatively low risks from non-storm-related forms of flooding” by requesting a timeline from the State Division of Safety of Dams (DSOD) for maintenance inspections for all operating dams in the City and reviewing procedures adopted by the City pursuant to the Dam Safety Act for emergency evacuation of areas located below major water-storage facilities. DSOD requires all dam operators to comply with annual inspections and seismic standards, which minimize the potential for a catastrophic failure of the dam. Because of DSOD regulatory oversight, monitoring, and design review,

the potential for catastrophic failure of a properly designed and constructed dam is minimal, whether caused by a seismic event, flood event, unstable slope conditions, or damage from corrosive or expansive soils. Continued compliance with City General Plan policies would reduce potential flooding risks related to dam failure to a less-than-significant level.

The project site is underlain by soils mainly consisting of clays with varying amounts of silt and sand. Groundwater, which generally flows to the south, was encountered between approximately 12 to 15.5 feet below ground surface.¹⁵ Based on the presence of shallow groundwater and proposed excavation of up to 27,000 cubic yards of soil to accommodate the West Site Phase 1 construction, it is likely that construction-period dewatering will be required. However, dewatering during construction would be temporary and have only a localized and short-term effect on groundwater levels. Post-construction dewatering would not be required because the foundation and wall systems below the groundwater table would be waterproofed to prevent infiltration.

As described in the BVDSP EIR, any groundwater dewatering would be limited in duration and would be subject to permits from East Bay Municipal Utility District (EBMUD) or the Regional Water Quality Control Board (RWQCB), depending if the discharge were to the sanitary or storm sewer system. If the water is not suitable for discharge to the storm drain (receiving water), dewatering effluent may be discharged to EBMUD's sanitary sewer system if special discharge criteria are met. These include, but are not limited to, application of treatment technologies or Best Management Practices (BMPs) which will result in achieving compliance with the wastewater discharge limits. Discharges to EBMUD's facilities must occur under a Special Discharge Permit. In addition, per the EBMUD Wastewater Ordinance, "all dischargers, other than residential, whose wastewater requires special regulation or contains industrial wastes requiring source control shall secure a wastewater discharge permit" (Title IV, Section 1). EBMUD also operates its wastewater treatment facilities in accordance with Waste Discharge Requirements issued by the RWQCB, which require rigorous monitoring of effluent to ensure discharges do not adversely impact receiving water quality. Since proper management of dewatering effluent is covered by existing State and local regulations, and implementation of these regulations would protect receiving water quality, the project would be consistent with the BVDSP EIR.

Based on an examination of the analysis, findings, and conclusions in the BVDSP EIR, implementation of the proposed project would not substantially increase the severity of the significant impacts identified in that report, nor would it result in new significant impacts related to hydrology and water quality that were not identified in the BVDSP EIR. The BVDSP EIR identified no mitigation measures related to hydrology and water quality, and none would be required for the proposed project. The proposed project would be required to implement SCAs related to storm water, drainages and drainage patterns, and water quality and an Erosion and Sedimentation Control Plan for construction, the State Construction General Permit, and NPDES C.3 stormwater requirements for regulated projects, as identified in Attachment A at the end of the CEQA Checklist (for reference, these are SCA-HYD-1: *Erosion and Sedimentation Control Plan for Construction*, SCA-HYD-2: *State Construction General Permit*, and SCA-HYD-3: *NPDES C.3 Stormwater Requirements for Regulated Projects*).

9. Land Use, Plans, and Policies Would the project:	Equal or Less Severity of Impact Previously Identified in BVDSP EIR	Substantial Increase in Severity of Previously Identified Significant Impact in EIR	New Significant Impact
a. Physically divide an established community;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Result in a fundamental conflict between adjacent or nearby land uses; or	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c. Fundamentally conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect and actually result in a physical change in the environment.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Division of Existing Community, Conflict with Land Uses, or Land Use Plans (Criteria 9a through 9c)

The BVDSP EIR determined that adoption and implementation of the BVDSP would have less-than-significant land use impacts related to the division of an established community, potential conflicts with nearby land uses, or applicable land use plans, policies, and regulations. The Plan Area is in Oakland’s Downtown Showcase District, an area intended to promote a mixture of vibrant and unique uses with around-the-clock activity, continued expansion of job opportunities, and growing residential population.

Project Analysis and Conclusion

The project site is zoned Broadway Valdez District Mixed Use Boulevard Commercial Zone (D-BV-3) throughout the majority of the site, and zoned Broadway Valdez District Mixed Use Commercial Zone (D-BV-4) in the eastern part of the East Site, which does not face Broadway. The proposed project areas zoned as D-BV-3 would be consistent with the regulatory framework of its zoning, the intent of which is to “create, maintain, and enhance areas with direct frontage and access along Broadway for a wide range of ground-floor office and other commercial activities with upper story space intended to be available for a broad range of residential, office, or commercial activities.” The eastern portion of the project site zoned as D-BV-4 would also be consistent with the intent of D-BV-4 zone, which is to “create, maintain, and enhance areas that do not front Broadway while allowing the widest range of uses on the ground and upper floors” (City of Oakland 2014).¹⁶ The proposed project will be used for ground-floor commercial uses and residential uses in the upper stories, which is consistent with both the D-BV-3 and D-BV-4 zoning regulations.

¹⁶ City of Oakland Municipal Code. Ord. No. 13241, § 5(Exh. C),7-1-2014. Retrieved from https://www2.municode.com/library/ca/oakland/codes/planning_code?nodeId=TIT17PL_CH17.101CBRVADICOZORE_17.101C.030PECOPEAC#!.

The project site is located within the 85-foot Height Area, which limits building heights to 85 feet and eight stories. The project height would be 74 feet and 11 inches for both the East Site and West Site project segments. Based on the above, the proposed project would be consistent with the land use regulations in the BVDSP.

Based on an examination of the analysis, findings, and conclusions in the BVDSP EIR, implementation of the proposed project would not increase the severity of the significant impacts identified in that report, nor would it result in new significant impacts related to land uses, plans, or policies that were not identified in the BVDSP EIR. The BVDSP EIR did not identify any SCAs or mitigation measures related to land use, and none are necessary for the proposed project.

<p>10. Noise Would the project:</p>	<p>Equal or Less Severity of Impact Previously Identified in BVDSP EIR</p>	<p>Substantial Increase in Severity of Previously Identified Significant Impact in EIR</p>	<p>New Significant Impact</p>
<p>a. Generate noise in violation of the City of Oakland Noise Ordinance (Oakland Planning Code Section 17.120.050) regarding construction noise, except if an acoustical analysis is performed that identifies recommend measures to reduce potential impacts. During the hours of 7 PM to 7 AM on weekdays and 8 PM to 9 AM on weekends and federal holidays, noise levels received by any land use from construction or demolition shall not exceed the applicable nighttime operational noise level standard; Generate noise in violation of the City of Oakland nuisance standards (Oakland Municipal Code Section 8.18.020) regarding persistent construction-related noise;</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>b. Generate noise in violation of the City of Oakland Noise Ordinance (Oakland Planning Code Section 17.120.050) regarding operational noise;</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>c. Generate noise resulting in a 5 dBA permanent increase in ambient noise levels in the project vicinity above levels existing without the project; or, if under a cumulative scenario where the cumulative increase results in a 5 dBA permanent increase in ambient noise levels in the project vicinity without the project (i.e., the cumulative condition including the project compared to the existing conditions) and a 3-dBA permanent increase is attributable to the project (i.e., the cumulative condition including the project compared to the cumulative baseline condition without the project);</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>d. Expose persons to interior L_{dn} or CNEL greater than 45 dBA for multi-family dwellings, hotels, motels, dormitories and long-term care facilities (and may be extended by local legislative action to include single-family dwellings) per California Noise Insulation Standards (CCR Part 2, Title 24); Expose the project to community noise in conflict with the land use compatibility guidelines of the Oakland General Plan after incorporation of all applicable Standard Conditions of Approval (see Figure 1); Expose persons to or generate noise levels in excess of applicable standards established by a regulatory agency (e.g., occupational noise standards of the Occupational Safety and Health Administration [OSHA]); or</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

10. Noise Would the project:	Equal or Less Severity of Impact Previously Identified in BVDSP EIR	Substantial Increase in Severity of Previously Identified Significant Impact in EIR	New Significant Impact
e. During either project construction or project operation expose persons to or generate ground-borne vibration that exceeds the criteria established by the Federal Transit Administration (FTA).	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Construction and Operational Noise and Vibration, Exposure of Receptors to Noise (Criteria 10a, 10b, 10d, and 10e)

Overall, the BVDSP EIR determined that impacts related to construction and operations of development under the BVDSP would be less than significant. Construction-related activities associated with development under the BVDSP would temporarily increase ambient noise levels and vibration. Implementation of SCAs would minimize construction noise impacts by limiting hours of construction activities; require best available noise control technology; require vibration monitoring for activities adjacent to historic structures; and require a project applicant and/or its contractors to notify any local residents of construction activities, and to track and respond to noise complaints.

During operations, mechanical equipment used in projects developed under the BVDSP would generate noise; however, equipment would be standardized and would be required to comply with the City of Oakland Noise Ordinance. Potential impacts would be reduced with implementation of SCAs that would require project design to achieve acceptable interior noise levels for buildings; limit ground-borne vibration at the project site; and require mechanical equipment to comply with applicable noise performance standards.

As described in the BVDSP EIR, noise measurements taken at various locations in the Plan Area indicate that the ambient noise environment in the Plan Area would be in the conditionally acceptable category for residential uses, and in the normally acceptable category for commercial uses—except for 24th Street, 25th Street, and Brooks Street in the Plan Area. At these three locations, the noise environment would be in the normally acceptable category for residential uses. The BVDSP EIR identified an SCA that would ensure that project components are appropriately sound-rated to meet land use compatibility requirements throughout the Plan Area.

Traffic Noise (Criterion 10c)

The BVDSP EIR determined that development under the Specific Plan would increase noise levels adjacent to nearby roads due to additional vehicles traveling throughout the Plan Area. The increase in traffic noise from the Existing Plus Project scenario as compared to existing conditions would increase peak-hour noise levels by less than 5 A-weighted decibels (dBA) at all studied roadway segments, with the exception of 24th Street east of Broadway and 26th Street east of Broadway, where the increase in roadside noise would be 6.4 and 5.1 dBA, respectively. In addition, the increase in traffic noise between the Cumulative No Project (2035) and Cumulative Plus Project (2035) scenarios would be 5.3 dBA along 24th Street east of Broadway, and 4.9 dBA along 26th Street east of Broadway. The cumulative increases in traffic-generated noise could also combine with stationary noise sources, such as rooftop mechanical equipment and back-up generators, to result in significant cumulative impacts. The EIR determined that no feasible mitigation measures are available, and that these impacts would remain significant and unavoidable.

Project Analysis and Conclusion

Project construction would begin with demolition of the existing building on the West Site of the project site. Demolition would include abating any hazards that might be present within the building, demolishing and removing the existing structure, and removing the existing foundation slabs and underground utilities. Project construction is estimated to take about 36 months. The project would be constructed in the following phases: demolition of existing buildings and excavation, construction of the mixed-use building, site improvements, and commissioning, testing, and final inspection. Construction of the proposed project would result in a temporary increase in ambient noise levels and vibration, similar to other projects developed under the BVDSP. Implementation of Oakland SCAs applicable to the project would ensure that potential vibration impacts on historic structures adjacent to the project site would be minimized.

During operation, the proposed project would use mechanical equipment and result in an increase in traffic on nearby roadways. The proposed project would be located along Broadway where the impact from increased traffic noise and cumulative noise associated with traffic noise in the Plan area was identified as significant and unavoidable in the BVDSP EIR. The proposed project would not be anticipated to substantially increase the severity of significant impacts identified in the BVDSP EIR or result in new significant impacts. The proposed project is consistent with the Plan Area development anticipated and would be required to implement Oakland SCAs. The Oakland SCAs will ensure that project components (e.g., window, wall, and door assemblies) are appropriately sound-rated so interior noise levels of the proposed project meet City standards and operational noise generated is in compliance with City standards.

Based on an examination of the analysis, findings, and conclusions in the BVDSP EIR, implementation of the proposed project would not substantially increase the severity of the significant impacts identified in that report, nor would it result in new significant impacts related to noise that were not identified in the BVDSP EIR. The BVDSP EIR did not identify any mitigation measures related to noise, and none would be necessary for the proposed project. The proposed project would be required to implement SCAs related to construction days/hours, construction noise, extreme construction noise, construction noise complaints, operational noise, and exposure to vibration, as identified in Attachment A at the end of the CEQA Checklist (for reference, these are SCA-NOI-1: *Construction Days/Hours*, SCA-NOI-2: *Construction Noise*, SCA-NOI-3: *Extreme Construction Noise*, SCA-NOI-4: *Construction Noise Complaints*, SCA-NOI-5: *Exposure to Community Noise*, SCA-NOI-6: *Operational Noise*, and SCA-NOI-7: *Vibration Impacts on Adjacent Historic Structures or Vibration-Sensitive Activities*).

11. Population and Housing Would the project:	Equal or Less Severity of Impact Previously Identified in BVDSP EIR	Substantial Increase in Severity of Previously Identified Significant Impact in EIR	New Significant Impact
a. Induce substantial population growth in a manner not contemplated in the General Plan, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extensions of roads or other infrastructure), such that additional infrastructure is required but the impacts of such were not previously considered or analyzed;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere in excess of that contained in the City’s Housing Element; or Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere in excess of that contained in the City’s Housing Element.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Population Growth and Displacement of Housing and People (Criteria 11a and 11b)

The BVDSP EIR determined that impacts related to population growth and displacement of housing and people would be less than significant. Development under the BVDSP would add up to 1,800 housing units and 3,230 residents to the Plan Area. This would represent approximately 2 percent of the total population growth projected for Oakland through 2035, and would not be considered substantial. Although adoption and development under the BVDSP could require the demolition of existing housing units, existing regulations such as Housing Element policies, the Ellis Act (Government Code Sections 7060 through 7060.7), and the City of Oakland’s Ellis Act Ordinance (Oakland Municipal Code Sections 8.22.400 through 8.22.480) would prevent significant impacts.

Project Analysis and Conclusion

The proposed project would not demolish or displace any existing housing units. The proposed project would demolish an existing building and surface parking lot and construct new mixed-use buildings with up to 218 residential units and up to 18,000 gsf of retail space. Impacts associated with this increase in the number of residential units were addressed in the BVDSP EIR. It should also be noted that the BVDSP EIR assumed 1,797 residential units for the Specific Plan area. With the proposed project, the total number of constructed, under construction, approved and proposed residential units is now 2,573. However, because the non-residential units are much less than that assumed in the EIR, the trip generation for the Specific Plan area continues to be less than what was evaluated in the EIR.

Based on an examination of the analysis, findings, and conclusions in the BVDSP EIR, implementation of the proposed project would not substantially increase the severity of the significant impacts identified in that report, nor would it result in new significant impacts related to population and housing that were not identified in the BVDSP EIR. The BVDSP EIR did not identify any mitigation measures or SCAs related to population and housing, and none would be required for the proposed project.

12. Public Services, Parks and Recreation Facilities Would the project:	Equal or Less Severity of Impact Previously Identified in BVDSP EIR	Substantial Increase in Severity of Previously Identified Significant Impact in EIR	New Significant Impact
a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the following public services: <ul style="list-style-type: none"> • Fire protection; • Police protection; • Schools; or • Other public facilities. 	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Increase the use of existing neighborhood or regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated; or Include recreational facilities or require the construction or expansion of recreational facilities which might have a substantial adverse physical effect on the environment.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Public Services and Parks and Recreation (Criteria 12a and 12b)

The BVDSP EIR determined that impacts related to fire and police protection, schools, and other public facilities would be less than significant. Although development under the BVDSP would increase density and population in the Plan Area, any corresponding increase in crime and need for police protection would likely be counteracted by the revitalization of the area, as envisioned by the BVDSP. The EIR identified SCAs that would reduce the potential impacts related to the increased need for fire protection by requiring all projects to implement safety features, and to comply with all applicable codes and regulations. Adherence to the General Plan’s Open Space, Conservation and Recreation Element policies 3.1, 3.3, and 3.10 would reduce potential impacts to recreational facilities. In addition, any increases in need for police protection, fire protection, schools, or other public facilities would be mitigated by adherence to General Plan policies N.12.1, N.12.2, N.12.5, FI-1, and FI-2. No additions or expansions of parks or recreational facilities are proposed under the BVDSP, and no new parks or recreational facilities, or expansion of existing parks or recreational facilities, were determined to be required under the BVDSP.

Project Analysis and Conclusion

The proposed project's associated increase in demand for public services is consistent with what was addressed in the BVDSP EIR. The EIR concluded that there would be less-than-significant impacts to fire and police service based on the City's adherence to General Plan Policies related to sequencing, timing, and assessment of its emergency response facilities and staffing. The proposed project would be consistent with these findings addressed in the EIR, as conformance with General Plan policies would continue following construction of the proposed project.

In addition, the proposed project would provide approximately 16,350 sf of common open space for residents. This would include a courtyard on the third floor of the West Building, a roof deck on each building, and private balconies. Common space amenities may include a pool, outdoor food preparation areas, and courtyards with artificial turf, as described in the Project Description above. This open space area would satisfy the minimum 75 sf of usable open space per dwelling unit set forth by the Oakland Planning Code 17.101C.050.B.

The proposed project would increase student enrollment at local schools. Pursuant to Senate Bill 50, the project sponsor would be required to pay school impact fees, which are established to offset potential impacts from new development on school facilities. This would be deemed full and complete mitigation.

Based on an examination of the analysis, findings, and conclusions in the BVDSP EIR, implementation of the proposed project would not substantially increase the severity of the significant impacts identified in that report, nor would it result in new significant impacts related to the provision of public services or park and recreational facilities that were not identified in the BVDSP EIR. The BVDSP EIR did not identify any mitigation measures or SCAs related to public services or park and recreational facilities, and none would be required for the proposed project.

13. Transportation and Circulation Would the project:	Equal or Less Severity of Impact Previously Identified in BVDSP EIR	Substantial Increase in Severity of Previously Identified Significant Impact in EIR	New Significant Impact
Conflict with an applicable plan, ordinance, or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to, intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit, specifically:			
Traffic Load and Capacity Thresholds a. At a study, signalized intersection which is located outside the Downtown area and that does not provide direct access to Downtown , the project would cause the motor vehicle level of service (LOS) to degrade to worse than LOS D (i.e., LOS E or F) and cause the total intersection average vehicle delay to increase by four (4) or more seconds;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. At a study, signalized intersection which is located within the Downtown area or that provides direct access to Downtown , the project would cause the motor vehicle LOS to degrade to worse than LOS E (i.e., LOS F) and cause the total intersection average vehicle delay to increase by four (4) or more seconds;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c. At a study, signalized intersection outside the Downtown area and that does not provide direct access to Downtown where the motor vehicle level of service is LOS E, the project would cause the total intersection average vehicle delay to increase by four (4) or more seconds;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d. At a study, signalized intersection outside the Downtown area and that does not provide direct access to Downtown where the motor vehicle level of service is LOS E, the project would cause an increase in the average delay for any of the critical movements of six (6) seconds or more;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e. At a study, signalized intersection for all areas where the level of service is LOS F, the project would cause (a) the overall volume-to-capacity ("V/C") ratio to increase 0.03 or more or (b) the critical movement V/C ratio to increase 0.05 or more;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f. At a study, unsignalized intersection the project would add ten (10) or more vehicles to the critical movement and after project completion satisfy the California Manual on Uniform Traffic Control Devices (MUTCD) peak-hour volume traffic signal warrant;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

13. Transportation and Circulation Would the project:	Equal or Less Severity of Impact Previously Identified in BVDSP EIR	Substantial Increase in Severity of Previously Identified Significant Impact in EIR	New Significant Impact
g. For a roadway segment of the Congestion Management Program (CMP) Network, the project would cause (a) the LOS to degrade from LOS E or better to LOS F or (b) the V/C ratio to increase 0.03 or more for a roadway segment that would operate at LOS F without the project; or	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
h. Cause congestion of regional significance on a roadway segment on the Metropolitan Transportation System (MTS) evaluated per the requirements of the Land Use Analysis Program of the CMP.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Criteria 13a through 13h

This section of the CEQA Checklist summarizes the findings of the transportation analysis completed for the proposed project. The analysis is provided in two parts below, as follows: the first part describes the BVDSP EIR analysis related to transportation and circulation impacts; the second part compares the proposed project’s impacts to those analyzed in the EIR, discusses additional analysis of project study intersections to supplement the analysis in the EIR, and identifies EIR impacts and mitigation measures that would be triggered by the proposed project combined with other planned developments.

BVDSP EIR Analysis

The BVDSP EIR analyzed transportation and circulation conditions in and around the Plan Area under six different scenarios, which represent three time periods (existing conditions, Year 2020, and Year 2035) with and without the BVDSP Development Program and transportation improvements. For the purposes of this analysis, these scenarios are referred to as: 1) existing conditions; 2) existing conditions plus full Development Program (full buildout of the Broadway Valdez Development Program); 3) Year 2020 no project; 4) Year 2020 plus Phase 1 of Development Program (partial buildout of the Development Program); 5) Year 2035 no project; and 6) Year 2035 plus full Development Program (full buildout of the Development Program).

The BVDSP EIR determined that no significant impacts to transit, pedestrian, bicycle, and other related topics would occur under any of the scenarios; therefore, these topics are not further discussed herein. As noted in the EIR, the Development Program represents the reasonably foreseeable development expected to occur in the next 20 to 25 years in the Plan Area. The Specific Plan and the EIR intend to provide flexibility in the location, amount, and type of development. Therefore, the traffic impact analysis in the EIR does not assign land uses to individual parcels; rather, land uses are distributed to five subdistricts within the Plan Area. Thus, as long as the trip generation for each subdistrict and the overall Plan Area remain below the levels estimated in the EIR, the traffic impact analysis presented in the EIR continues to remain valid.

The EIR identified 28 significant impacts on level of service (LOS) at intersections serving the Plan Area. For each impact and associated mitigation measure(s), the EIR identified specific triggers based on the level of development in the entire Plan Area or specific subdistrict(s). As determined in the transportation assessment prepared for the proposed project, several of these impacts and mitigation measures would be triggered by the proposed project combined with other planned developments. These mitigation measures are further described in the Project Analysis and Conclusion.

The BVDSP EIR identified SCAs that require city review and approval of all improvements in the public right-of-way, reduction of vehicle traffic and parking demand generated by development projects, and construction traffic and parking management, which will also address transportation and circulation impacts.

Project Analysis

As shown in Table 4, accounting for trips generated by the existing uses that the proposed project would eliminate, the proposed project would generate approximately 37 net new vehicle trips during the weekday AM peak hour (22 fewer inbound and 59 outbound) and approximately 79 net new vehicle trips during the weekday PM peak hour (63 inbound and 16 outbound).

Table 4
Project Vehicle Trip Generation

Land Use	ITE Code	Daily	Weekday AM Peak Hour			Weekday PM Peak Hour		
			In	Out	Total	In	Out	Total

Analysis of Proposed Project and Other Projects that are in Development under the Development Program Analyzed in the BVDSP EIR

Table 5 (on the following page) lists the development projects within BVDSP Plan Area that have been constructed, are currently under construction, approved, and/or proposed, including the proposed project. Table 5 also accounts for the active existing uses on each site that would be demolished.

Table 6 compares the total amount of development constructed, currently under construction, approved, and/or proposed with the Development Program Buildout assumptions used in the BVDSP EIR for the Plan Area (Subdistricts 1 through 5), the North end subarea (Subdistricts 4 and 5) and Subdistrict 4. The project site is in Subdistrict 4 of the North End subarea of the Plan Area. In sum, the amount of development constructed, currently under construction, approved, and proposed for the North End and Subdistrict 4 are below the Development Program Buildout assumptions. However, the total residential units constructed, under construction, approved, and proposed for the Plan Area exceeds the Development Program Buildout assumptions used in the BVDSP EIR.

Table 6
Development Comparison within the Plan Area, North End, and Subdistrict 4

Notes:									
a DU = dwelling units, ksf = 1,000 square feet									
b consists of active uses at the time the BVDSP EIR was prepared.									
c Retail and non-retail uses (such as auto repair and warehouses) are presented separately because the non-retail uses generate fewer trips than typical retail uses.									
Source: City of Oakland, April 2016.									

Comparisons of trip generation associated with the proposed project to trip generation in the Plan Area (Subdistricts 1 through 5), the North End subarea (Subdistricts 4 and 5), and Subdistrict 4 are provided below in Table 7. As shown, trips generated by the proposed project, together with trips generated by other projects that are constructed, currently under construction, approved, or proposed for development in the Plan Area, would represent approximately 39 percent of the AM and 44 percent of the PM peak-hour trips anticipated in the BVDSP EIR; 30 percent of the AM and 34 percent of the PM peak-hour trips anticipated in the BVDSP EIR for the North End subarea; and 18 percent of the AM and 21 percent of the PM peak-hour trips anticipated in the BVDSP EIR for Subdistrict 4.

Notes:						
¹ Based on application of the BVDSP trip generation model with the developments shown in Table 5, and accounts for the trips generated by existing uses that would be eliminated.						
² Based on Table 4.13-10 on page 4.13-43 of the BVDSP EIR.						
Source: Fehr & Peers, 2015.						

The trip generation numbers are less than the BVDSP EIR estimates for the Development Program. Although the amount of residential development in the Plan Area is currently more than what was assumed under the Development Program Buildout in the BVDSP EIR, the trip generation for the Plan Area is below the trip generation estimated in the BVDSP EIR because the amount of retail and office uses currently proposed are well below the BVDSP EIR assumptions. Given that the BVDSP EIR analyzed the impacts of the Development Program at signalized intersections in the immediate vicinity of the project site, the proposed project would not cause additional impacts beyond those analyzed in the BVDSP EIR, nor would it increase the magnitude of the impacts identified in the BVDSP EIR.

Traffic Impacts at BVDSP EIR Intersections

The BVDSP EIR identified 28 significant impacts at intersections that serve the Plan Area. It also identified the specific level of development in the Plan Area and/or each subdistrict that would trigger

each significant impact and its associated mitigation measure(s). Impacts are triggered when a certain percentage of overall project buildout is met. The impacts, the reason for triggering the impacts, and the mitigation measures are described below.

1. The proposed project, combined with other projects that are under construction, approved, or proposed for development in the Plan Area, would trigger Impact TRANS-2 under existing plus-project conditions (and also Impact TRANS-7 under 2020 plus-project conditions and Impact TRANS-17 under 2035 plus-project conditions) at the Perry Place/I-580 eastbound ramps/Oakland Avenue intersection because these projects, when combined, would generate more than 15 percent of the total traffic generated by the Development Program.

Mitigation Measure TRANS-2 in the BVDSP EIR includes the following improvements at this intersection:

- Optimize signal timing (i.e., change the amount of green time assigned to each lane of traffic) for the PM peak hour, and
- Coordinate signal timing changes at this intersection with adjacent intersections that are in the same signal coordination group. This intersection is under the jurisdiction of the California Department of Transportation (Caltrans), so any equipment or facility upgrades must be approved by Caltrans prior to installation.

The BVDSP EIR determined that, if implemented, the mitigation measure would mitigate the significant impact at this intersection. However, it is not certain whether this mitigation measure could be implemented because the intersection is under the jurisdiction of Caltrans. The City of Oakland, as lead agency, does not have jurisdiction at this intersection; the mitigation would need to be approved and implemented by Caltrans. Therefore, the BVDSP EIR considered the impact significant and unavoidable.

2. The proposed project, combined with other projects that are under construction, approved, or proposed for development in the Plan Area, would trigger Impact TRANS-10 under 2020 plus-project conditions (and also Impact TRANS-24 under 2035 plus-project conditions) at the 27th Street/24th Street/Bay Place/Harrison Street intersection because these projects, when combined, would generate more than 10 percent of the total traffic generated by the Development Program.

Mitigation Measure TRANS-10 in the BVDSP EIR includes the following improvements at this intersection:

- Reconfigure the 24th Street approach at the intersection to restrict access (i.e., right turns only from 27th Street to 24th Street) and create a pedestrian plaza at the intersection approach;
- Convert 24th Street between Valdez and Harrison Streets to two-way circulation and allow right turns from 24th Street to southbound Harrison Street south of the intersection, which would require acquisition of private property in the southwest corner of the intersection;
- Modify the eastbound 27th Street approach from the current configuration (i.e., one right-turn lane, two through lanes, and one left-turn lane) to provide one right-turn lane, one through lane, and two left-turn lanes;
- Realign pedestrian crosswalks to shorten pedestrian crossing distances;

- Reduce the length of the signal cycle from 160 to 120 seconds and optimize signal timing (i.e., change the amount of green time assigned to each lane of traffic); and
- Coordinate signal timing changes at this intersection with adjacent intersections that are in the same signal coordination group.

The BVDSP EIR determined that, if implemented, the mitigation measure would reduce the magnitude of the impact but would not mitigate the impact to a less-than-significant level. Therefore, the BVDSP EIR considered the impact significant and unavoidable.

3. The proposed project, combined with other projects that are under construction, approved, or proposed for development in the Plan Area, would trigger Impact TRANS-22 under 2035 plus-project conditions at the 27th Street/Broadway intersection because these projects, when combined, would generate more than 30 percent of the total traffic generated by the Development Program.

Mitigation Measure TRANS-22 in the BVDSP EIR includes the following improvements at this intersection:

- Upgrade traffic signal operations at the intersection to actuated coordinated;
- Reconfigure the westbound 27th Street approach to provide a 150-foot left-turn pocket, one through lane, and one shared through/right-turn lane;
- Provide protected left-turn phases for the northbound and southbound approaches;
- Optimize signal timing (i.e., change the amount of green time assigned to each lane of traffic); and
- Coordinate signal timing changes at this intersection with adjacent intersections that are in the same signal coordination group.

The BVDSP EIR determined that, if implemented, the mitigation measure would reduce the magnitude of the impact but would not mitigate the impact to a less-than-significant level. Therefore, the BVDSP EIR considered the impact significant and unavoidable.

According to the BVDSP EIR, the project sponsor would fund the cost of preparing and funding these mitigation measures. Alternatively, if the City of Oakland adopted the BVDSP or the citywide Transportation Impact Fee (TIF) program, the applicant could pay the applicable TIF to mitigate project impacts, as identified above. On May 3, 2016, the City of Oakland adopted a Citywide TIF program. It goes into effect on September 1, 2016. The applicant may elect to pay the applicable TIF to mitigate project impacts.

Additional Study Intersections

The *City of Oakland Transportation Impact Study Guidelines* requires analysis of project impacts at intersections adjacent to the project site, signalized and all-way stop-controlled intersections where the project would add 50 or more peak hour trips, and side-street stop-controlled intersections where the project would add ten or more trips to the stop-controlled approach. The BVDSP EIR did not evaluate the three intersections adjacent to the project site: the signalized 29th Street/Webster Street and 28th Street/Broadway intersections, and the uncontrolled 28th Street/Valdez Street intersection. The proposed project would not cause a significant impact at these intersections because:

- 29th Street/Webster Street intersection – based on the *Alta Bates Summit Medical Center, Summit Campus Seismic Upgrade and Master Plan Draft EIR* (December 2009), this signalized intersection would operate at LOS B or better during both AM and PM peak hours under cumulative conditions.
- 28th Street/Broadway intersection – based on the *Broadway Valdez Specific Plan Access Plan* (February 2010), this signalized intersection operates at LOS A during both AM and PM peak hours under existing conditions. Since 28th Street is a short cul-de-sac that only serves the adjacent uses, and considering current and expected uses on the street, the intersection would continue to operate at an acceptable LOS under cumulative conditions.
- 28th Street/Valdez Street intersection – Although no formal traffic operations analysis was conducted at this uncontrolled intersection, the proposed project would not cause a significant impact at the intersection because 28th Street is a short cul-de-sac that only serves the adjacent uses, Valdez Street is a one-way southbound street that only serves the local uses, and based on current observations, and considering current traffic volumes and expected developments on both streets, the intersection would continue to operate at an acceptable LOS under cumulative conditions and would not satisfy the peak hour signal warrant after the completion of the proposed project.

Based on the above, the proposed project would not cause a significant impact at these intersections.

Beyond the intersections discussed above, the proposed project is not expected to add 50 or more peak hour trips to signalized or all-way stop-controlled intersections, or add ten or more peak hour trips to the stop-controlled approach of side-street stop-controlled intersections in the vicinity that were not analyzed in BVDSP EIR. Therefore, analysis of additional intersections beyond the ones analyzed in the BVDSP EIR is not needed. Overall, the proposed project would not result in impacts on traffic operations at the intersections beyond the ones identified in the BVDSP EIR. The proposed project also would not increase the magnitude of the impacts identified in the BVDSP EIR.

Conclusion

With the proposed project, the total number of constructed, under construction, approved and proposed residential units would be over the number assumed in the BVDSP EIR. However, the project trip generation for projects that are currently approved, proposed, or under construction in the Plan Area, the North End, and Subdistrict 4, including the proposed project, remains lower than the estimated trip generation in the BVDSP EIR under the Development Program for those areas. Additionally, the proposed project would not result in significant impacts to the unsignalized project study intersection not analyzed in the BVDSP EIR. Therefore, the project would not cause additional impacts beyond the locations analyzed in the EIR; nor would the project increase the magnitude of the impacts identified in the EIR. In addition, the transportation analysis completed for the proposed project determined that the project would not result in any significant impacts to vehicle access and circulation, bicycle access and bicycle parking, pedestrian access and circulation, and transit access, consistent with the findings of the BVDSP EIR.

Based on an examination of the analysis, findings, and conclusions of the BVDSP EIR, implementation of the proposed project would not substantially increase the severity of significant impacts identified in the BVDSP EIR, nor would it result in new significant impacts related to transportation and circulation that were not identified in the BVDSP EIR. The proposed project combined with other projects under construction, approved, and proposed for development in the Plan Area, would trigger and be required to implement Mitigation Measures TRANS-2, TRANS-10, and TRANS-22, as described in the EIR. The

proposed project would also be required to implement SCAs related to city review and approval of all improvements proposed in the public right-of-way, reduction of vehicle traffic and parking demand generated by development projects, and construction traffic and parking management, as identified in Attachment A at the end of the CEQA Checklist (for reference, these are SCA-TRANS-1: *Construction Activity in the Public Right-of-Way*, SCA-TRANS-2: *Bicycle Parking*, SCA-TRANS-3: *Transportation Improvements*, and SCA-TRANS-4: *Transportation and Parking Demand Management*).

Although not required to address CEQA impacts, the proposed project would implement the following recommended improvement measure related to vehicle, bicycle, pedestrian, and bus rider access and circulation and bicycle parking.

Recommended Improvement #1: Although not required to address a CEQA impact, the following should be considered as part of the final design of the project:

- Ensure that the project driveways on Webster Street and 28th Street would provide adequate sight distance¹⁷ between motorists exiting the driveway and pedestrians on the adjacent sidewalks. This may require redesigning and/or widening the driveway. If adequate sight distance cannot be provided, consider providing audio/visual warning devices at the driveway.
- To ensure adequate sight distance for motorists entering and exiting the project driveways, prohibit on-street parking within 20 feet on either side of the garage driveways on Webster Street and 28th Street.
- If approved by Oakland Public Work's Transportation Services Division (TSD), install a curb-extension at the northeast corner of the 28th Street/Broadway intersection to shorten the pedestrian crossing on the north approach of Broadway and accommodate a minimum 60-foot-long in-line bus top on northbound Broadway just north of 28th Street. To the extent feasible, the curb-extension should accommodate directional curb-ramps and bus stop amenities, such as shelter and bench.

¹⁷ Sight distance is dependent on each specific location; typically, adequate sight distance is defined as a clear line-of-sight between a motorist ten feet back from the sidewalk and a pedestrian ten feet away on each sides of the driveway.

14. Utilities and Service Systems Would the project:	Equal or Less Severity of Impact Previously Identified in BVDSP EIR	Substantial Increase in Severity of Previously Identified Significant Impact in EIR	New Significant Impact
a. Exceed wastewater treatment requirements of the San Francisco Bay Regional Water Quality Control Board; Require or result in construction of new storm water drainage facilities or expansion of existing facilities, construction of which could cause significant environmental effects; Result in a determination by the wastewater treatment provider which serves or may serve the project that it does not have adequate capacity to serve the project's projected demand in addition to the providers' existing commitments and require or result in construction of new wastewater treatment facilities or expansion of existing facilities, construction of which could cause significant environmental effects;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Exceed water supplies available to serve the project from existing entitlements and resources, and require or result in construction of water facilities or expansion of existing facilities, construction of which could cause significant environmental effects;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c. Be served by a landfill with insufficient permitted capacity to accommodate the project's solid waste disposal needs and require or result in construction of landfill facilities or expansion of existing facilities, construction of which could cause significant environmental effects; Violate applicable federal, state, and local statutes and regulations related to solid waste;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d. Violate applicable federal, state and local statutes and regulations relating to energy standards; or Result in a determination by the energy provider which serves or may serve the project that it does not have adequate capacity to serve the project's projected demand in addition to the providers' existing commitments and require or result in construction of new energy facilities or expansion of existing facilities, construction of which could cause significant environmental effects.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Water, Wastewater, and Stormwater (Criteria 14a and 14b)

As described in the BVDSP EIR, EBMUD has accounted for the water demand projections associated with development under the BVDSP; and the BVDSP EIR determined that development under the BVDSP would not require new water supply entitlements, resources, facilities, or expansion of existing facilities beyond those already planned, and that impacts related to water supplies would be less than significant.

The BVDSP EIR also determined that development under the BVDSP would have less-than-significant impacts related to stormwater and wastewater facilities. Much of the Plan Area is composed of impervious surfaces, and new development would likely decrease storm-drain runoff, because proposed projects would be required to incorporate additional pervious areas through landscaping, in compliance with City of Oakland requirements.

On the other hand, development projects may increase sewer capacity demand. Implementation of SCAs requiring stormwater control during and after construction would address potential impacts on stormwater treatment and sanitary sewer infrastructure.

Solid Waste Services (Criterion 14c)

As described in the BVDSP EIR, impacts associated with solid waste would be less than significant. Nonhazardous solid waste in the Plan Area is ultimately hauled to the Altamont Landfill and Resource Facility. The Altamont Landfill would have sufficient capacity to accept waste generated by development under the BVDSP. In addition, implementation of an SCA pertaining to waste reduction and recycling would reduce waste through compliance with the City of Oakland's Recycling Space Allocation Ordinance (Oakland Municipal Code, Chapter 17.118).

Energy (Criterion 14d)

Development under the BVDSP would result in less-than-significant impacts related to energy standards and use. Developments would be required to comply with the standards of Title 24 of the California Code of Regulations. SCAs pertaining to compliance with the green building ordinance would require construction projects to incorporate energy-conserving design measures.

Project Analysis and Conclusion

The BVDSP allows for flexibility with respect to the quantity and profile of future development within each subarea and between subareas as long as such development conforms to the general traffic generation parameters established by the Plan. The Development Program is not intended to be a cap that restricts development. The proposed project conforms to the traffic generation parameters analyzed in the BVDSP EIR, as described above in Section 13, Transportation and Circulation. As such, the proposed project is within the envelope of the Development Program analyzed in the BVDSP EIR, and the water and sanitary sewer demand and stormwater facilities, as well as solid waste and energy associated with the proposed project, are consistent with that analysis. The project would not require any water infrastructure improvements, and all on-site utilities would be designed in accordance with applicable codes and current engineering practices. However, the proposed project would pay a sewer mitigation fee, which would either contribute to the cost of replacing pipes for the local collection system to increase capacity or be used to perform inflow and infiltration rehabilitation projects outside of the Plan Area, as described in the BVDSP EIR.

Based on an examination of the analysis, findings, and conclusions in the BVDSP EIR, implementation of the proposed project would not substantially increase the severity of the significant impacts identified in that report, nor would it result in new significant impacts related to utilities and service systems that were not identified in the BVDSP EIR. The BVDSP EIR did not identify any mitigation measures related to utilities and service systems, and none would be required for the proposed project. The proposed project would be required to implement SCAs related to construction and demolition waste reductions and recycling, underground utilities, recycling collection and storage space, “green” building requirements, a sanitary sewer system, and the storm drain system, as identified in Attachment A at the end of the CEQA Checklist (for reference, these are SCA-UTIL-1: Construction and Demolition Waste Reduction and Recycling, SCA-UTIL-2: *Underground Utilities*, SCA-UTIL-3: *Recycling Collection and Storage Space*, SCA-UTIL-4: *Green Building Requirement*, SCA-UTIL-5: *Sanitary Sewer System*, and SCA-UTIL-6: *Storm Drain System*).

ATTACHMENT A: STANDARD CONDITIONS OF APPROVAL AND MITIGATION MONITORING AND REPORTING PROGRAM

This Standard Conditions of Approval and Mitigation Monitoring and Reporting Program (SCAMMRP) is based on the CEQA Analysis prepared for the Broadstone on Broadway mixed-use residential development.

This SCAMMRP is in compliance with Section 15097 of the CEQA Guidelines, which requires that the Lead Agency “adopt a program for monitoring or reporting on the revisions which it has required in the project and the measures it has imposed to mitigate or avoid significant environmental effects.” The SCAMMRP lists mitigation measures (“MM”) recommended in the EIR and identifies mitigation monitoring requirements, as well as the City’s Standard Conditions of Approval (“SCA”) identified in the EIR as measures that would minimize potential adverse effects that could result from implementation of the project, to ensure the conditions are implemented and monitored.

All MMs and SCAs identified in the CEQA Analysis, which is consistent with the measures and conditions presented in the Broadway Valdez District Specific Plan Environmental Impact Report (EIR), are included herein. To the extent that there is any inconsistency between the SCA and MM, the more restrictive conditions shall govern; to the extent any MM and/or SCA identified in the CEQA Analysis were inadvertently omitted, they are automatically incorporated herein by reference.

- The first column identifies the SCA and MM applicable to that topic in the CEQA Analysis.
- The second column identifies the monitoring schedule or timing applicable to the Project.
- The third column names the party responsible for monitoring the required action for the Project.

The project sponsor is responsible for compliance with any recommendations in approved technical reports, all applicable mitigation measures adopted and with all conditions of approval set forth herein at its sole cost and expense, unless otherwise expressly provided in a specific mitigation measure or condition of approval, and subject to the review and approval of the City of Oakland. Overall monitoring and compliance with the mitigation measures will be the responsibility of the Planning and Zoning Division. Prior to the issuance of a demolition, grading, and/or construction permit, the project sponsor shall pay the applicable mitigation and monitoring fee to the City in accordance with the City’s Master Fee Schedule.

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/ Inspection
Aesthetics, Shadow and Wind			
<p>SCA-AES-1 (Standard Condition of Approval 16): Graffiti Control.</p> <p>a. During construction and operation of the project, the project applicant shall incorporate best management practices reasonably related to the control of graffiti and/or the mitigation of the impacts of graffiti. Such best management practices may include, without limitation:</p> <ul style="list-style-type: none"> i. Installation and maintenance of landscaping to discourage defacement of and/or protect likely graffiti-attracting surfaces. ii. Installation and maintenance of lighting to protect likely graffiti-attracting surfaces. iii. Use of paint with anti-graffiti coating. iv. Incorporation of architectural or design elements or features to discourage graffiti defacement in accordance with the principles of Crime Prevention Through Environmental Design (CPTED). v. Other practices approved by the City to deter, protect, or reduce the potential for graffiti defacement. <p>b. The project applicant shall remove graffiti by appropriate means within seventy-two (72) hours. Appropriate means include:</p> <ul style="list-style-type: none"> i. Removal through scrubbing, washing, sanding, and/or scraping (or similar method) without damaging the surface and without discharging wash water or cleaning detergents into the City storm drain system. ii. Covering with new paint to match the color of the surrounding surface. iii. Replacing with new surfacing (with City permits if required). 	Ongoing	N/A	Bureau of Building
<p>SCA-AES-2 (Standard Condition of Approval 17): Landscape Plan.</p> <p>a. <i>Landscape Plan Required</i></p> <p>The project applicant shall submit a final Landscape Plan for City review and approval that is consistent with the approved Landscape Plan. The Landscape Plan shall be included with the set of drawings submitted for the construction-related permit and shall comply with the landscape requirements of chapter 17.124 of the Planning Code.</p> <p>b. <i>Landscape Installation</i></p> <p>The project applicant shall implement the approved Landscape Plan unless a bond, cash deposit, letter of credit, or other equivalent instrument acceptable to the Director of City Planning, is provided. The financial instrument shall equal the greater of \$2,500 or the estimated cost of implementing the Landscape Plan based on a licensed contractor's bid.</p>	Prior to approval of construction-related permit Prior to building permit final Ongoing	Bureau of Planning Bureau of Planning N/A	N/A Bureau of Building Bureau of Building

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/ Inspection
<p>c. <i>Landscape Maintenance</i></p> <p>All required planting shall be permanently maintained in good growing condition and, whenever necessary, replaced with new plant materials to ensure continued compliance with applicable landscaping requirements. The property owner shall be responsible for maintaining planting in adjacent public rights-of-way. All required fences, walls, and irrigation systems shall be permanently maintained in good condition and, whenever necessary, repaired or replaced.</p>			
<p>SCA-AES-3 (Standard Condition of Approval 18): <i>Lighting.</i></p> <p>Proposed new exterior lighting fixtures shall be adequately shielded to a point below the light bulb and reflector to prevent unnecessary glare onto adjacent properties.</p>	Prior to building permit final	N/A	Bureau of Building
Air Quality			
<p>SCA-AIR-1 (Standard Condition of Approval 19): <i>Construction-Related Air Pollution Controls (Dust and Equipment Emissions).</i> The project applicant shall implement all of the following applicable air pollution control measures during construction of the project:</p> <p>a. Water all exposed surfaces of active construction areas at least twice daily. Watering should be sufficient to prevent airborne dust from leaving the site. Increased watering frequency may be necessary whenever wind speeds exceed 15 miles per hour. Reclaimed water should be used whenever feasible.</p> <p>b. Cover all trucks hauling soil, sand, and other loose materials or require all trucks to maintain at least two feet of freeboard (i.e., the minimum required space between the top of the load and the top of the trailer).</p> <p>c. All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.</p> <p>d. Pave all roadways, driveways, sidewalks, etc. within one month of site grading or as soon as feasible. In addition, building pads should be laid within one month of grading or as soon as feasible unless seeding or soil binders are used.</p> <p>e. Enclose, cover, water twice daily, or apply (non-toxic) soil stabilizers to exposed stockpiles (dirt, sand, etc.).</p> <p>f. Limit vehicle speeds on unpaved roads to 15 miles per hour.</p> <p>g. Idling times on all diesel-fueled commercial vehicles over 10,000 lbs. shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes (as required by the California airborne toxics control measure Title 13, Section 2485, of the California Code of Regulations). Clear signage to this effect shall be provided</p>	During construction	N/A	Bureau of Building

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/ Inspection
<p>for construction workers at all access points.</p> <p>h. Idling times on all diesel-fueled off-road vehicles over 25 horsepower shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes and fleet operators must develop a written policy as required by Title 23, Section 2449, of the California Code of Regulations (“California Air Resources Board Off-Road Diesel Regulations”).</p> <p>i. All construction equipment shall be maintained and properly tuned in accordance with the manufacturer’s specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.</p> <p>j. Portable equipment shall be powered by electricity if available. If electricity is not available, propane or natural gas shall be used if feasible. Diesel engines shall only be used if electricity is not available and it is not feasible to use propane or natural gas.</p> <p>k. All exposed surfaces shall be watered at a frequency adequate to maintain minimum soil moisture of 12 percent. Moisture content can be verified by lab samples or moisture probe.</p> <p>l. All excavation, grading, and demolition activities shall be suspended when average wind speeds exceed 20 mph.</p> <p>m. Install sandbags or other erosion control measures to prevent silt runoff to public roadways.</p> <p>n. Hydroseed or apply (non-toxic) soil stabilizers to inactive construction areas (previously graded areas inactive for one month or more).</p> <p>o. Designate a person or persons to monitor the dust control program and to order increased watering, as necessary, to prevent transport of dust offsite. Their duties shall include holidays and weekend periods when work may not be in progress.</p> <p>p. Install appropriate wind breaks (e.g., trees, fences) on the windward side(s) of actively disturbed areas of the construction site to minimize wind blown dust. Wind breaks must have a maximum 50 percent air porosity.</p> <p>q. Vegetative ground cover (e.g., fast-germinating native grass seed) shall be planted in disturbed areas as soon as possible and watered appropriately until vegetation is established.</p> <p>r. Activities such as excavation, grading, and other ground-disturbing construction activities shall be phased to minimize the amount of disturbed surface area at any one time.</p> <p>s. All trucks and equipment, including tires, shall be washed off</p>			

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/ Inspection
<p>prior to leaving the site.</p> <p>t. Site accesses to a distance of 100 feet from the paved road shall be treated with a 6 to 12 inch compacted layer of wood chips, mulch, or gravel.</p> <p>u. All equipment to be used on the construction site and subject to the requirements of Title 13, Section 2449, of the California Code of Regulations (“California Air Resources Board Off-Road Diesel Regulations”) must meet emissions and performance requirements one year in advance of any fleet deadlines. Upon request by the City, the project applicant shall provide written documentation that fleet requirements have been met.</p> <p>v. Use low VOC (i.e., ROG) coatings beyond the local requirements (i.e., BAAQMD Regulation 8, Rule 3: Architectural Coatings).</p> <p>w. All construction equipment, diesel trucks, and generators shall be equipped with Best Available Control Technology for emission reductions of NOx and PM.</p> <p>x. Off-road heavy diesel engines shall meet the California Air Resources Board’s most recent certification standard.</p> <p>y. Post a publicly-visible large on-site sign that includes the contact name and phone number for the project complaint manager responsible for responding to dust complaints and the telephone numbers of the City’s Code Enforcement unit and the Bay Area Air Quality Management District. When contacted, the project complaint manager shall respond and take corrective action within 48 hours.</p>			
<p>Note: Screening analysis demonstrated that the proposed project would be below the applicable threshold. No further action is required under this SCA.</p> <p>SCA-AIR-2 (Standard Condition of Approval 20): Exposure to Air Pollution (Toxic Air Contaminants).</p> <p>a. Health Risk Reduction Measures</p> <p>The project applicant shall incorporate appropriate measures into the project design in order to reduce the potential health risk due to exposure to toxic air contaminants.</p> <p>b. Maintenance of Health Risk Reduction Measures</p> <p>The project applicant shall maintain, repair, and/or replace installed health risk reduction measures, including but not limited to the HVAC system (if applicable), on an ongoing and as-needed basis. Prior to occupancy, the project applicant shall prepare and then distribute to the building manager/operator an operation and maintenance manual for the HVAC system and filter including the maintenance and replacement schedule for the filter.</p>	Ongoing	N/A	Bureau of Building

Biological Resources			
<p>SCA-BIO-1 (Standard Condition of Approval 26): <i>Tree Removal During Bird Breeding Season.</i> To the extent feasible, removal of any tree and/or other vegetation suitable for nesting of birds shall not occur during the bird breeding season of February 1 to August 15 (or during December 15 to August 15 for trees located in or near marsh, wetland, or aquatic habitats). If tree removal must occur during the bird breeding season, all trees to be removed shall be surveyed by a qualified biologist to verify the presence or absence of nesting raptors or other birds. Pre-removal surveys shall be conducted within 15 days prior to the start of work and shall be submitted to the City for review and approval. If the survey indicates the potential presence of nesting raptors or other birds, the biologist shall determine an appropriately sized buffer around the nest in which no work will be allowed until the young have successfully fledged. The size of the nest buffer will be determined by the biologist in consultation with the California Department of Fish and Wildlife, and will be based to a large extent on the nesting species and its sensitivity to disturbance. In general, buffer sizes of 200 feet for raptors and 50 feet for other birds should suffice to prevent disturbance to birds nesting in the urban environment, but these buffers may be increased or decreased, as appropriate, depending on the bird species and the level of disturbance anticipated near the nest.</p>	Prior to removal of trees	Bureau of Building.	Bureau of Building.
<p>SCA-BIO-2 (Standard Condition of Approval 27): <i>Tree Permit.</i></p> <p>a. <i>Tree Permit Required</i></p>	Prior to approval of construction-	Permit approval by Public Works	Bureau of Building

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/ Inspection
<p>Pursuant to the City’s Tree Protection Ordinance (OMC chapter 12.36), the project applicant shall obtain a tree permit and abide by the conditions of that permit.</p> <p><i>b. Tree Protection During Construction</i></p> <p>Adequate protection shall be provided during the construction period for any trees which are to remain standing, including the following, plus any recommendations of an arborist:</p> <ul style="list-style-type: none"> i. Before the start of any clearing, excavation, construction, or other work on the site, every protected tree deemed to be potentially endangered by said site work shall be securely fenced off at a distance from the base of the tree to be determined by the project’s consulting arborist. Such fences shall remain in place for duration of all such work. All trees to be removed shall be clearly marked. A scheme shall be established for the removal and disposal of logs, brush, earth and other debris which will avoid injury to any protected tree. ii. Where proposed development or other site work is to encroach upon the protected perimeter of any protected tree, special measures shall be incorporated to allow the roots to breathe and obtain water and nutrients. Any excavation, cutting, filing, or compaction of the existing ground surface within the protected perimeter shall be minimized. No change in existing ground level shall occur within a distance to be determined by the project’s consulting arborist from the base of any protected tree at any time. No burning or use of equipment with an open flame shall occur near or within the protected perimeter of any protected tree. iii. No storage or dumping of oil, gas, chemicals, or other substances that may be harmful to trees shall occur within the distance to be determined by the project’s consulting arborist from the base of any protected trees, or any other location on the site from which such substances might enter the protected perimeter. No heavy construction equipment or construction materials shall be operated or stored within a distance from the base of any protected trees to be determined by the project’s consulting arborist. Wires, ropes, or other devices shall not be attached to any protected tree, except as needed for support of the tree. No sign, other than a tag showing the botanical classification, shall be attached to any protected tree. iv. Periodically during construction, the leaves of protected trees shall be thoroughly sprayed with water to prevent buildup of dust and other pollution that would inhibit leaf transpiration. v. If any damage to a protected tree should occur during or as a result of work on the site, the project applicant shall immediately notify the Public Works Department and the project’s consulting arborist shall make a recommendation to 	<p>related permit</p> <p>During construction</p> <p>Prior to building permit final</p>	<p>Department, Tree Division;</p> <p>evidence of approval submitted to Bureau of Building</p> <p>Public Works Department, Tree Division</p> <p>Public Works Department, Tree Division</p>	<p>Bureau of Building</p> <p>Bureau of Building</p>

	When Required	Initial Approval	Monitoring/ Inspection
<p>required replacement plantings, with all such revenues applied toward tree planting in city parks, streets and medians.</p> <p>vi. The project applicant shall install the plantings and maintain the plantings until established. The Tree Reviewer of the Tree Division of the Public Works Department may require a landscape plan showing the replacement plantings and the method of irrigation. Any replacement plantings which fail to become established within one year of planting shall be replanted at the project applicant's expense.</p>			

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/ Inspection
Cultural Resources			
<p>SCA-CUL-1 (Standard Condition of Approval 29): <i>Archaeological and Paleontological Resources – Discovery During Construction.</i> Pursuant to CEQA Guidelines section 15064.5(f), in the event that any historic or prehistoric subsurface cultural resources are discovered during ground disturbing activities, all work within 50 feet of the resources shall be halted and the project applicant shall notify the City and consult with a qualified archaeologist or paleontologist, as applicable, to assess the significance of the find. In the case of discovery of paleontological resources, the assessment shall be done in accordance with the Society of Vertebrate Paleontology standards. If any find is determined to be significant, appropriate avoidance measures recommended by the consultant and approved by the City must be followed unless avoidance is determined unnecessary or infeasible by the City. Feasibility of avoidance shall be determined with consideration of factors such as the nature of the find, project design, costs, and other considerations. If avoidance is unnecessary or infeasible, other appropriate measures (e.g., data recovery, excavation) shall be instituted. Work may proceed on other parts of the project site while measures for the cultural resources are implemented.</p> <p>In the event of data recovery of archaeological resources, the project applicant shall submit an Archaeological Research Design and Treatment Plan (ARDTP) prepared by a qualified archaeologist for review and approval by the City. The ARDTP is required to identify how the proposed data recovery program would preserve the significant information the archaeological resource is expected to contain. The ARDTP shall identify the scientific/historic research questions applicable to the expected resource, the data classes the resource is expected to possess, and how the expected data classes would address the applicable research questions. The ARDTP shall include the analysis and specify the curation and storage methods. Data recovery, in general, shall be limited to the portions of the archaeological resource that could be impacted by the proposed project. Destructive data recovery methods shall not be applied to portions of the archaeological resources if nondestructive methods are practicable. Because the intent of the ARDTP is to save as much of the archaeological resource as possible, including moving the resource, if feasible, preparation and implementation of the ARDTP would reduce the potential adverse impact to less than significant. The project applicant shall implement the ARDTP at his/her expense.</p> <p>In the event of excavation of paleontological resources, the project applicant shall submit an excavation plan prepared by a qualified paleontologist to the City for review and approval. All significant</p>	During construction	N/A	Bureau of Building

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/ Inspection
cultural materials recovered shall be subject to scientific analysis, professional museum curation, and/or a report prepared by a qualified paleontologist, as appropriate, according to current professional standards and at the expense of the project applicant.			
SCA-CUL-2 (Standard Condition of Approval 31): <i>Human Remains – Discovery During Construction.</i> Pursuant to CEQA Guidelines section 15064.5(e) (1), in the event that human skeletal remains are uncovered at the project site during construction activities, all work shall immediately halt and the project applicant shall notify the City and the Alameda County Coroner. If the County Coroner determines that an investigation of the cause of death is required or that the remains are Native American, all work shall cease within 50 feet of the remains until appropriate arrangements are made. In the event that the remains are Native American, the City shall contact the California Native American Heritage Commission (NAHC), pursuant to subdivision (c) of section 7050.5 of the California Health and Safety Code. If the agencies determine that avoidance is not feasible, then an alternative plan shall be prepared with specific steps and timeframe required to resume construction activities. Monitoring, data recovery, determination of significance, and avoidance measures (if applicable) shall be completed expeditiously and at the expense of the project applicant.	During construction	N/A	Bureau of Building
SCA-CUL-3 (Standard Condition of Approval 32): <i>Property Relocation.</i> Pursuant to Policy 3.7 of the Historic Preservation Element of the Oakland General Plan, the project applicant shall make a good faith effort to relocate the historic resource to a site acceptable to the City. A good faith effort includes, at a minimum, all of the following: a. Advertising the availability of the building by: (1) posting of large visible signs (such as banners, at a minimum of 3’ x 6’ size or larger) at the site; (2) placement of advertisements in Bay Area news media acceptable to the City; and (3) contacting neighborhood associations and for-profit and not-for-profit housing and preservation organizations; b. Maintaining a log of all the good faith efforts and submitting that along with photos of the subject building showing the large signs (banners) to the City; c. Maintaining the signs and advertising in place for a minimum of 90 days; and d. Making the building available at no or nominal cost (the amount to be reviewed by the Oakland Cultural Heritage Survey) until removal is necessary for construction of a replacement project, but in no case for less than a period of 90 days after such advertisement.	Prior to approval of construction-related permit	Bureau of Planning (including Oakland Cultural Resource Survey)	N/A

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/ Inspection
Geology, Soils and Geohazards			
SCA-GEO-1 (Standard Condition of Approval 33): <i>Construction-Related Permit(s)</i> . The project applicant shall obtain all required construction-related permits/approvals from the City. The project shall comply with all standards, requirements and conditions contained in construction-related codes, including but not limited to the Oakland Building Code and the Oakland Grading Regulations, to ensure structural integrity and safe construction.	Prior to approval of construction-related permit	Bureau of Building	Bureau of Building
SCA-GEO-2 (Standard Condition of Approval 36): <i>Seismic Hazards Zone (Landslide/Liquefaction)</i> . The project applicant shall submit a site-specific geotechnical report, consistent with California Geological Survey Special Publication 117 (as amended), prepared by a registered geotechnical engineer for City review and approval containing at a minimum a description of the geological and geotechnical conditions at the site, an evaluation of site-specific seismic hazards based on geological and geotechnical conditions, and recommended measures to reduce potential impacts related to liquefaction and/or slope stability hazards. The project applicant shall implement the recommendations contained in the approved report during project design and construction.	Prior to approval of construction-related permit	Bureau of Building	Bureau of Building
Hazards and Hazardous Materials			
SCA-HAZ-1 (Standard Condition of Approval 39): <i>Hazardous Materials Related to Construction</i> . The project applicant shall ensure that Best Management Practices (BMPs) are implemented by the contractor during construction to minimize potential negative effects on groundwater, soils, and human health. These shall include, at a minimum, the following: a. Follow manufacture’s recommendations for use, storage, and disposal of chemical products used in construction; b. Avoid overtopping construction equipment fuel gas tanks; c. During routine maintenance of construction equipment, properly contain and remove grease and oils; d. Properly dispose of discarded containers of fuels and other chemicals; e. Implement lead-safe work practices and comply with all local, regional, state, and federal requirements concerning lead (for more information refer to the Alameda County Lead Poisoning Prevention Program); and f. If soil, groundwater, or other environmental medium with suspected contamination is encountered unexpectedly during construction activities (e.g., identified by odor or visual staining, or if any underground storage tanks, abandoned drums or other hazardous materials or wastes are encountered), the project applicant shall cease work in the	During construction	N/A	Bureau of Building

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/ Inspection
vicinity of the suspect material, the area shall be secured as necessary, and the applicant shall take all appropriate measures to protect human health and the environment. Appropriate measures shall include notifying the City and applicable regulatory agency(ies) and implementation of the actions described in the City’s Standard Conditions of Approval, as necessary, to identify the nature and extent of contamination. Work shall not resume in the area(s) affected until the measures have been implemented under the oversight of the City or regulatory agency, as appropriate.			
<p>SCA-HAZ-2 (Standard Condition of Approval 40): Site Contamination.</p> <p><i>a. Environmental Site Assessment Required</i></p> <p>The project applicant shall submit a Phase I Environmental Site Assessment report, and Phase II Environmental Site Assessment report if warranted by the Phase I report, for the project site for review and approval by the City. The report(s) shall be prepared by a qualified environmental assessment professional and include recommendations for remedial action, as appropriate, for hazardous materials. The project applicant shall implement the approved recommendations and submit to the City evidence of approval for any proposed remedial action and required clearances by the applicable local, state, or federal regulatory agency.</p> <p><i>b. Health and Safety Plan Required</i></p> <p>The project applicant shall submit a Health and Safety Plan for the review and approval by the City in order to protect project construction workers from risks associated with hazardous materials. The project applicant shall implement the approved Plan.</p> <p><i>c. Best Management Practices (BMPs) Required for Contaminated Sites</i></p> <p>The project applicant shall ensure that Best Management Practices (BMPs) are implemented by the contractor during construction to minimize potential soil and groundwater hazards. These shall include the following:</p> <ul style="list-style-type: none"> i. Soil generated by construction activities shall be stockpiled on-site in a secure and safe manner. All contaminated soils determined to be hazardous or non-hazardous waste must be adequately profiled (sampled) prior to acceptable reuse or disposal at an appropriate off-site facility. Specific sampling and handling and transport procedures for reuse or disposal shall be in accordance with applicable local, state, and federal requirements. ii. Groundwater pumped from the subsurface shall be contained on-site in a secure and safe manner, prior to 	<p>Prior to approval of construction-related permit</p> <p>Prior to approval of construction-related permit</p> <p>During construction</p>	<p>Oakland Fire Department</p> <p>Bureau of Building</p> <p>N/A</p>	<p>Oakland Fire Department</p> <p>Bureau of Building</p>

	When Required	Initial Approval	Monitoring/ Inspection
<p><i>b. Maintenance Agreement Required</i></p> <p>The project applicant shall enter into a maintenance agreement with the City, based on the Standard City of Oakland Stormwater Treatment Measures Maintenance Agreement, in accordance with Provision C.3, which provides, in part, for the following:</p> <ul style="list-style-type: none"> i. The project applicant accepting responsibility for the adequate installation/construction, operation, maintenance, inspection, and reporting of any on-site stormwater treatment measures being incorporated into the project until the responsibility is legally transferred to another entity; and ii. Legal access to the on-site stormwater treatment measures for representatives of the City, the local vector control district, and staff of the Regional Water Quality Control Board, San Francisco Region, for the purpose of verifying the implementation, operation, and maintenance of the on-site stormwater treatment measures and to take corrective action if necessary. <p>The maintenance agreement shall be recorded at the County Recorder's Office at the applicant's expense.</p>			
Noise			
<p>SCA-NOI-1 (Standard Condition of Approval 58): <i>Construction Days/Hours.</i></p> <p>The project applicant shall comply with the following restrictions concerning construction days and hours:</p> <ul style="list-style-type: none"> a. Construction activities are limited to between 7:00 AM and 7:00 PM Monday through Friday, except that pier drilling and/or other extreme noise generating activities greater than 90 dBA shall be limited to between 8:00 AM and 4:00 PM b. Construction activities are limited to between 9:00 AM and 5:00 PM on Saturday. In residential zones and within 300 feet of a residential zone, construction activities are allowed from 9:00 AM to 5:00 PM only within the interior of the building with the doors and windows closed. No pier drilling or other extreme noise generating activities greater than 90 dBA are allowed on Saturday. c. No construction is allowed on Sunday or federal holidays. <p>Construction activities include, but are not limited to, truck idling, moving equipment (including trucks, elevators, etc.) or materials, deliveries, and construction meetings held on-site in a non-enclosed area.</p> <p>Any construction activity proposed outside of the above days and hours for special activities (such as concrete pouring which may require more continuous amounts of time) shall be evaluated on a case-by-case basis by the City, with criteria including the</p>	During construction	N/A	Bureau of Building

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/ Inspection
urgency/emergency nature of the work, the proximity of residential or other sensitive uses, and a consideration of nearby residents'/occupants' preferences. The project applicant shall notify property owners and occupants located within 300 feet at least 14 calendar days prior to construction activity proposed outside of the above days/hours. When submitting a request to the City to allow construction activity outside of the above days/hours, the project applicant shall submit information concerning the type and duration of proposed construction activity and the draft public notice for City review and approval prior to distribution of the public notice.			
<p>SCA-NOI-2 (Standard Condition of Approval 59): <i>Construction Noise.</i> The project applicant shall implement noise reduction measures to reduce noise impacts due to construction. Noise reduction measures include, but are not limited to, the following:</p> <ul style="list-style-type: none"> a. Equipment and trucks used for project construction shall utilize the best available noise control techniques (e.g., improved mufflers, equipment redesign, use of intake silencers, ducts, engine enclosures and acoustically-attenuating shields or shrouds) wherever feasible. b. Except as provided herein, impact tools (e.g., jack hammers, pavement breakers, and rock drills) used for project construction shall be hydraulically or electrically powered to avoid noise associated with compressed air exhaust from pneumatically powered tools. However, where use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used; this muffler can lower noise levels from the exhaust by up to about 10 dBA. External jackets on the tools themselves shall be used, if such jackets are commercially available, and this could achieve a reduction of 5 dBA. Quieter procedures shall be used, such as drills rather than impact equipment, whenever such procedures are available and consistent with construction procedures. c. Applicant shall use temporary power poles instead of generators where feasible. d. Stationary noise sources shall be located as far from adjacent properties as possible, and they shall be muffled and enclosed within temporary sheds, incorporate insulation barriers, or use other measures as determined by the City to provide equivalent noise reduction. e. The noisiest phases of construction shall be limited to less than 10 days at a time. Exceptions may be allowed if the City determines an extension is necessary and all available noise reduction controls are implemented. 	During construction	N/A	Bureau of Building

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/ Inspection
<p>SCA-NOI-3 (Standard Condition of Approval 60): <i>Extreme Construction Noise.</i></p> <p><i>a. Construction Noise Management Plan Required</i></p> <p>Prior to any extreme noise generating construction activities (e.g., pier drilling, pile driving and other activities generating greater than 90dBA), the project applicant shall submit a Construction Noise Management Plan prepared by a qualified acoustical consultant for City review and approval that contains a set of site-specific noise attenuation measures to further reduce construction impacts associated with extreme noise generating activities. The project applicant shall implement the approved Plan during construction. Potential attenuation measures include, but are not limited to, the following:</p> <ol style="list-style-type: none"> i. Erect temporary plywood noise barriers around the construction site, particularly along on sites adjacent to residential buildings; ii. Implement “quiet” pile driving technology (such as pre-drilling of piles, the use of more than one pile driver to shorten the total pile driving duration), where feasible, in consideration of geotechnical and structural requirements and conditions; iii. Utilize noise control blankets on the building structure as the building is erected to reduce noise emission from the site; iv. Evaluate the feasibility of noise control at the receivers by temporarily improving the noise reduction capability of adjacent buildings by the use of sound blankets for example and implement such measure if such measures are feasible and would noticeably reduce noise impacts; and v. Monitor the effectiveness of noise attenuation measures by taking noise measurements. <p><i>b. Public Notification Required</i></p> <p>The project applicant shall notify property owners and occupants located within 300 feet of the construction activities at least 14 calendar days prior to commencing extreme noise generating activities. Prior to providing the notice, the project applicant shall submit to the City for review and approval the proposed type and duration of extreme noise generating activities and the proposed public notice. The public notice shall provide the estimated start and end dates of the extreme noise generating activities and describe noise attenuation measures to be implemented.</p>	<p>Prior to approval of construction-related permit</p> <p>During construction</p>	<p>Bureau of Building</p> <p>Bureau of Building</p>	<p>Bureau of Building</p> <p>Bureau of Building</p>
<p>SCA-NOI-4 (Standard Condition of Approval 62): <i>Construction Noise Complaints.</i> The project applicant shall submit to the City for review and approval a set of procedures for responding to and</p>	<p>Prior to approval of construction-related permit</p>	<p>Bureau of Building</p>	<p>Bureau of Building</p>

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/ Inspection
tracking complaints received pertaining to construction noise, and shall implement the procedures during construction. At a minimum, the procedures shall include: <ol style="list-style-type: none"> Designation of an on-site construction complaint and enforcement manager for the project; A large on-site sign near the public right-of-way containing permitted construction days/hours, complaint procedures, and phone numbers for the project complaint manager and City Code Enforcement unit; Protocols for receiving, responding to, and tracking received complaints; and Maintenance of a complaint log that records received complaints and how complaints were addressed, which shall be submitted to the City for review upon the City’s request. 			
<p>SCA-NOI-5 (Standard Condition of Approval 63): <i>Exposure to Community Noise</i></p> <p><u>Requirement:</u> The project applicant shall submit a Noise Reduction Plan prepared by a qualified acoustical engineer for City review and approval that contains noise reduction measures (e.g., sound-rated window, wall, and door assemblies) to achieve an acceptable interior noise level in accordance with the land use compatibility guidelines of the Noise Element of the Oakland General Plan. The applicant shall implement the approved Plan during construction. To the maximum extent practicable, interior noise levels shall not exceed the following:</p> <ol style="list-style-type: none"> 45 dBA: Residential activities, civic activities, hotels 50 dBA: Administrative offices; group assembly activities 55 dBA: Commercial activities 65 dBA: Industrial activities 	Prior to construction	Bureau of Building	Bureau of Building
<p>SCA-NOI-6 (Standard Condition of Approval 64): <i>Operational Noise.</i> Noise levels from the project site after completion of the project (i.e., during project operation) shall comply with the performance standards of chapter 17.120 of the Oakland Planning Code and chapter 8.18 of the Oakland Municipal Code. If noise levels exceed these standards, the activity causing the noise shall be abated until appropriate noise reduction measures have been installed and compliance verified by the City.</p>	Ongoing	N/A	Bureau of Building
<p>SCA-NOI-7 (Standard Condition of Approval 66): <i>Vibration Impacts on Adjacent Historic Structures or Vibration-Sensitive Activities</i></p> <p><u>Requirement:</u> The project applicant shall submit a Vibration Analysis prepared by an acoustical and/or structural engineer or other appropriate qualified professional for City review and approval that establishes pre-construction baseline conditions and threshold levels of vibration that could damage the structure and/or substantially interfere with activities located at 2863-69 Broadway. The Vibration</p>	Prior to construction	Bureau of Building	Bureau of Building

attain the minimum required certification/point level. Within one year of the final inspection of the building permit for the project, the applicant shall submit to the Bureau of Planning the Certificate from the organization listed above demonstrating certification and compliance with the minimum point/certification level noted above.			
SCA-UTIL-5 (Standard Condition of Approval 79): Sanitary Sewer System. The project applicant shall prepare and submit a Sanitary Sewer Impact Analysis to the City for review and approval in accordance with the City of Oakland Sanitary Sewer Design Guidelines. The Impact Analysis shall include an estimate of pre-project and post-project wastewater flow from the project site. In the event that the Impact Analysis indicates that the net increase in project wastewater flow exceeds City-projected increases in wastewater flow in the sanitary sewer system, the project applicant shall pay the Sanitary Sewer Impact Fee in accordance with the City’s Master Fee Schedule for funding improvements to the sanitary sewer system.	Prior to approval of construction-related permit	Public Works Department, Department of Engineering and Construction	N/A
SCA-UTIL-6 (Standard Condition of Approval 80): Storm Drain System. The project storm drainage system shall be designed in accordance with the City of Oakland’s Storm Drainage Design Guidelines. To the maximum extent practicable, peak stormwater runoff from the project site shall be reduced by at least 25 percent compared to the pre-project condition.	Prior to approval of construction-related permit	Bureau of Building	Bureau of Building

ATTACHMENT B: PROJECT CONSISTENCY WITH COMMUNITY PLANS OR ZONING, PER CEQA GUIDELINES SECTION 15183

Section 15183(a) of the California Environmental Quality Act (CEQA) Guidelines states that "...projects which are consistent with the development density established by the existing zoning, community plan, or general plan policies for which an Environmental Impact Report (EIR) was certified shall not require additional environmental review, except as may be necessary to examine whether there are project-specific significant effects which are peculiar to the project or its site."

Proposed Project. The proposed project would be located in the Broadway Valdez District Specific Plan (BVDSP)¹⁸ area (Plan area). It would demolish an existing building and surface parking lot and construct a new mixed-use building of approximately 332,800 gsf, with seven stories and up to 74 feet, 11 inches in height. The project would include up to 217,000 sf of residential space (up to 218 residential units), up to 18,000 sf of ground-floor commercial retail, and 91,300 sf of parking.

Project Consistency. The BVDSP EIR was prepared for the BVDSP; it was certified by the Planning Commission on May 21, 2014, and confirmed by the City Council on June 17, 2014. As determined by the City of Oakland Bureau of Planning, the proposed project is permitted in the zoning district in which it is located, and is consistent with the bulk, density, and land uses envisioned in the Plan Area, as outlined below.

- The land use designation for the site is Central Business District; this classification is intended to encourage, support, and enhance the downtown area as a high-density mixed-use urban center of regional importance, and a primary hub for business, communications, office, government, high technology, retail, entertainment, and transportation. The proposed mixed-use project would be consistent with this designation.
- The project site is zoned Broadway Valdez District Mixed Use Boulevard Commercial Zone 3 (D-BV-3), and Broadway Valdez District Mixed Use Commercial Zone 4 (D-BV-4). The proposed project would be consistent with the regulatory framework of D-BV-3, which is intended to create, maintain, and enhance areas with direct frontage and access along Broadway, and allows for a wide range of ground-floor commercial uses and a broad range of residential, office, or other uses in the upper floors. The proposed project would also be consistent with the regulatory framework of D-BV-4, which is intended to create, maintain, and enhance areas that do not front Broadway, and allows for the widest range of uses on the ground floor, and residential and commercial activities on the upper stories.
- The project site is located within the 85 Height Area, which limits building heights to 85 feet. The proposed project height for each building on the project site would be 74 feet 11 inches, and would have seven stories. As such, the proposed project would therefore be compliant with the 85-foot height limit on the site as measured at grade. Therefore, this analysis concludes that the development density of the proposed project is substantially similar to what was considered in the BVDSP. Consequently, in accordance with Section 15183.3 of the CEQA Guidelines, the proposed project is consistent with the BVDSP.

¹⁸ City of Oakland, 2014. *Broadway Valdez District Specific Plan*. Adopted June.

- With respect to residential density, the 85 Height Area allows for 1 dwelling unit per 275 sf of lot area.¹⁹ As noted in the project description, the project site is 1.38 acres, or 60,113 sf. As such, the maximum residential density on the project site would be 219 dwelling units. The proposed project would construct up to 218 dwelling units. Therefore, the proposed project would comply with the amount of residential density allowed under the Planning Code and fits within the residential assumptions of the BVDSP EIR. Consequently, in accordance with Section 15183.3 of the CEQA Guidelines, the proposed project is consistent with the BVDSP EIR.

Therefore, the proposed project is eligible for consideration of an exemption under California Public Resources Code Section 21083.3, and Section 15183 of the CEQA Guidelines.

¹⁹ Per Table 17.101C.04 of the Oakland Planning Code.

ATTACHMENT C: INFILL PERFORMANCE STANDARDS, PER CEQA GUIDELINES SECTION 15183.3

California Environmental Quality Act (CEQA) Guidelines Section 15183.3(b) and CEQA Guidelines Appendix M establish eligibility requirements for projects to qualify as infill projects. Table C-1, on the pages following, shows how the proposed project satisfies each of the applicable requirements.

**Table C-1
Project Infill Eligibility**

CEQA Eligibility Criteria	Eligible?/Notes for Proposed Project
<p>1. Be located in an urban area on a site that either has been previously developed or that adjoins existing qualified urban uses on at least 75 percent of the site's perimeter. For the purpose of this subdivision, "adjoin" means the infill project is immediately adjacent to qualified urban uses, or is only separated from such uses by an improved right-of-way. (CEQA Guidelines Section 15183.3[b][1])</p>	<p>Yes</p> <p>The project site has been previously developed as surface parking lots, and adjoins existing urban uses, as described in the Project Description, above.</p>
<p>2. Satisfy the performance Standards provided in Appendix M (CEQA Guidelines Section 15183.3[b][2]) as presented in 2a and 2b below:</p>	<p>—</p>
<p>2a. <i>Performance Standards Related to Project Design.</i> All projects must implement all of the following:</p>	<p>—</p>
<p>Renewable Energy. <i>Non-Residential Projects.</i> All nonresidential projects shall include onsite renewable power generation, such as solar photovoltaic, solar thermal, and wind power generation, or clean back-up power supplies, where feasible. <i>Residential Projects.</i> Residential projects are also encouraged to include such onsite renewable power generation.</p>	<p>Not Applicable</p> <p>According to Section IV (G) of CEQA Appendix M, for mixed-use projects "...the performance standards in this section that apply to the predominant use shall govern the entire project." Because the predominant use is residential, the proposed project is not required to include onsite renewable power generation.</p>
<p>Soil and Water Remediation. If the project site is included on any list compiled pursuant to Section 65962.5 of the Government Code, the project shall document how it has remediated the site, if remediation is completed. Alternatively, the project shall implement the recommendations provided in a preliminary endangerment assessment or comparable document that identifies remediation appropriate for the site.</p>	<p>Yes</p> <p>As stated in Section 7, Hazards and Hazardous Materials, of the CEQA Checklist, a review of available environmental databases was conducted for the proposed project. The review indicated that the project site is included in the following databases: Federal RCRA NonGen/NLR (Non-Generator/No Longer Regulated), Facility Index System/Facility Registry System (FINDS) and Hazardous Waste Information System (HAZNET). A Phase I ESA and a Phase II were prepared for the project site included results of soil samples, the characterization of the soil for off-haul purposes, groundwater sampling. Based on results from the Phase II, a Voluntary Remedial Action agreement has been signed with the Alameda County Environmental Health Department (ACEH). An Interim Remedial Action Plan has been submitted to the</p>

CEQA Eligibility Criteria	Eligible?/Notes for Proposed Project
	ACEH for review and approval. See Section 7 for additional information.
<p>Residential Units Near High-Volume Roadways and Stationary Sources.</p> <p>If a project includes residential units located within 500 feet, or other distance determined to be appropriate by the local agency or air district based on local conditions, of a high volume roadway or other significant sources of air pollution, the project shall comply with any policies and standards identified in the local general plan, specific plan, zoning code, or community risk reduction plan for the protection of public health from such sources of air pollution.</p> <p>If the local government has not adopted such plans or policies, the project shall include measures, such as enhanced air filtration and project design, that the lead agency finds, based on substantial evidence, will promote the protection of public health from sources of air pollution. Those measures may include, among others, the recommendations of the California Air Resources Board, air districts, and the California Air Pollution Control Officers Association.</p>	<p>Yes</p> <p>Per the findings of the Broadway Valdez District Specific Plan Environmental Impact Report, an air quality screening was prepared for the proposed project.²⁰ As described therein, no “high-volume roadways” with 100,000 vehicles per day, as defined by Section II of CEQA Appendix M, are located within 1,000 feet of the proposed project.</p> <p>As summarized in the air quality screening prepared for the proposed project, no air pollution standards are required to be implemented for the proposed project.</p>
<p>2b. <i>Additional Performance Standards by Project Type.</i> In addition to implementing all the features described in criterion 2a above, the project must meet eligibility requirements provided below by project type.^a</p>	<p>—</p>

²⁰ AECOM Technical Services, 2016. *Air Quality Health Risk Assessment Screening Memorandum – Broadstone on Broadway.* May.

CEQA Eligibility Criteria	Eligible?/Notes for Proposed Project
<p>Residential. A residential project must meet one of the following:</p> <p>A. <i>Projects achieving below average regional per capita vehicle miles traveled.</i> A residential project is eligible if it is located in a “low vehicle travel area” within the region;</p> <p>B. <i>Projects located within ½ mile of an Existing Major Transit Stop or High Quality Transit Corridor.</i> A residential project is eligible if it is located within ½ mile of an existing major transit stop or an existing stop along a high quality transit corridor; or</p> <p>C. <i>Low – Income Housing.</i> A residential or mixed-use project consisting of 300 or fewer residential units all of which are affordable to low income households is eligible if the developer of the development project provides sufficient legal commitments to the lead agency to ensure the continued availability and use of the housing units for lower income households, as defined in Section 50079.5 of the Health and Safety Code, for a period of at least 30 years, at monthly housing costs, as determined pursuant to Section 50053 of the Health and Safety Code.</p>	<p>Yes</p> <p>The proposed project is eligible under Section (B). The project site is well-served by multiple transit providers, including numerous Alameda-Contra Costa County Transit District (AC Transit) routes. The project site is also approximately 0.50 mile north of the 19th Street Oakland Bay Area Rapid Transit (BART) station. Broadway qualifies as a “High Quality Transit Corridor,” as defined by Section II of CEQA, with fixed route bus service at intervals no longer than 15 minutes during peak commute hours. The AC Transit Line 51A runs along Broadway near the project site, and has service intervals no longer than 15 minutes during peak commute hours. Other bus routes in the project vicinity further satisfy this criterion.</p>
<p>Commercial/Retail. A commercial/retail project must meet one of the following:</p> <p>A. <i>Regional Location.</i> A commercial project with no single-building floor-plate greater than 50,000 square feet is eligible if it locates in a “low vehicle travel area”; or</p> <p>B. <i>Proximity to Households.</i> A project with no single-building floor-plate greater than 50,000 square feet located within ½ mile of 1,800 households is eligible.</p>	<p>Not Applicable</p> <p>According to Section IV (G) of CEQA Appendix M, for mixed-use projects “...the performance standards in this Section that apply to the predominant use shall govern the entire project.” Because the predominant use is residential, the requirements for commercial/retail projects do not apply.</p>
<p>Office Building. An office building project must meeting one of the following:</p> <p>A. <i>Regional Location.</i> Office buildings, both commercial and public, are eligible if they locate in a low vehicle travel area; or</p> <p>B. <i>Proximity to a Major Transit Stop.</i> Office buildings, both commercial and public, within ½ mile of an existing major transit stop, or ¼ mile of an existing stop along a high quality transit corridor, are eligible.</p>	<p>Not Applicable</p>
<p>Schools. Elementary schools within 1 mile of 50 percent of the projected student population are eligible.</p>	<p>Not Applicable</p>

CEQA Eligibility Criteria	Eligible?/Notes for Proposed Project
<p>Middle schools and high schools within 2 miles of 50 percent of the projected student population are eligible. Alternatively, any school within ½ mile of an existing major transit stop or an existing stop along a high quality transit corridor is eligible. Additionally, to be eligible, all schools shall provide parking and storage for bicycles and scooters, and shall comply with the requirements of Sections 17213, 17213.1, and 17213.2 of the California Education Code.</p>	
<p>Transit. Transit stations, as defined in Section 15183.3(e)(1), are eligible.</p>	<p>Not Applicable</p>
<p>Small Walkable Community Projects. Small walkable community projects, as defined in Section 15183.3, subdivision (e)(6), that implement the project features in 2a above are eligible.</p>	<p>Not Applicable</p>
<p>3. Be consistent with the general use designation, density, building intensity, and applicable policies specified for the project area in either a sustainable communities strategy or an alternative planning strategy, except as provided in CEQA Guidelines Sections 15183.3(b)(3)(A) or (b)(3)(B) below: (b)(3)(A). Only where an infill project is proposed within the boundaries of a metropolitan planning organization for which a sustainable communities strategy or an alternative planning strategy will be, but is not yet in effect, a residential infill project must have a density of at least 20 units per acre, and a retail or commercial infill project must have a floor area ratio of at least 0.75; or (b)(3)(B). Where an infill project is proposed outside of the boundaries of a metropolitan planning organization, the infill project must meet the definition of a “small walkable community project” in CEQA Guidelines §15183.3(f)(5). (CEQA Guidelines Section 15183.3[b][3])</p>	<p>Yes (see explanation below table)</p>
<p>Note: a. Where a project includes some combination of residential, commercial and retail, office building, transit station, and/or schools, the performance standards in this section that apply to the predominant use shall govern the entire project.</p>	

Explanation for Eligibility Criteria 3 – The adopted Plan Bay Area (2013)²¹ serves as the sustainable communities strategy for the Bay Area, per Senate Bill 375. As defined by the Plan, Priority Development Areas (PDAs) are areas where new development will support the needs of residents and workers in a pedestrian-friendly environment served by transit. As stated in the BVDSP, the Broadway Valdez District is considered a PDA. The proposed project is consistent with the general land use designation, density, building intensity, and applicable policies specified in the BVDSP and described further below.

The General Plan land use designation for the site is Central Business District; this classification is intended to encourage, support, and enhance the downtown area as a high-density mixed-use urban center of regional importance, and a primary hub for business, communications, office, government, high technology, retail, entertainment, and transportation. The proposed mixed-use project would be consistent with this designation.

Under the adopted BVDSP, the project site is zoned Broadway Valdez District Mixed Use Boulevard Commercial Zone 3 (D-BV-3) and Mixed Use Commercial Zone 4 (D-BV-4) The proposed project would be consistent with the regulatory framework of D-BV-3 and D-BV-4, which is intended to create, maintain and enhance areas with direct frontage and access along Broadway, 27th Street, Piedmont Avenue and Harrison Street as well as areas that do not front those streets. The D-BV-3 and D-BV-4 areas allow the widest range of uses on the ground floor and broad range of uses on the upper story space, including Residential or Commercial Activities.

The project site is located within the 85 Height Area, which generally limits building heights to 85 feet and 8 stories in height, The proposed building would be seven stories tall and would not exceed 85 feet , as measured by the Building Department. The proposed project would be up to 74 feet, 11 inches in height, and would be compliant with the 85-foot height limit on the site as measured at grade.

Under the adopted BVDSP, the maximum residential density (i.e., sf of lot area required per dwelling unit) is based on the zoning height area. The 85 Height Area allows for 1 dwelling unit per 275 sf of lot area. As such, the maximum residential density on the project site would be 219 dwelling units based on the lot size of 60,113 sf. The proposed project would construct up to 218 dwelling units and therefore be compliant with the residential density requirements of the 85 Height Area.

For mixed use projects, the maximum nonresidential Floor Area Ratio (FAR) is based on the total lot area, and any square footage allotted or occupied by residential uses is included in the lot area calculation. The permitted FAR is 4.5 for the non-residential areas of the project site. The project site is approximately 60,113 sf, and therefore the maximum nonresidential FAR allowed would be 270,508 sf. The proposed project could provide approximately 18,000 sf of retail space. Therefore, the proposed project would comply with the amount of nonresidential FAR allowed under the Planning Code.

²¹ Metropolitan Transportation Commission and Association of Bay Area Governments, 2013. Plan Bay Area, Strategy for a Sustainable Region. Adopted July 18, 2013.

ATTACHMENT D: CRITERIA FOR USE OF ADDENDUM, PER CEQA GUIDELINES SECTIONS 15164 AND 15162

Section 15164(a) of the California Environmental Quality Act (CEQA) Guidelines states that “a lead agency or responsible agency shall prepare an addendum to a previously certified EIR [Environmental Impact Report] if some changes or additions are necessary but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred.” Section 15164(e) states that “a brief explanation of the decision not to prepare a subsequent EIR pursuant to Section 15162 should be included in an addendum to an EIR.”

Project Modifications. The Broadway Valdez District Specific Plan (BVDSP) EIR analyzed the Broadway Valdez Development Program (Development Program), which represents the maximum feasible development that the City of Oakland has projected can reasonably be expected to occur in the BVDSP area (Plan area) over a 25-year planning period.²² Appendix D of the BVDSP identified the Illustrative Development Program Map at Subdistrict 4, which included 237 residential units and 111,086 sf of retail. The proposed project is consistent with the Illustrative Development Program Map for Subdistrict 4, and would construct up to 218 residential units and up to 18,000 sf of retail space.

The EIR indicates that the CEQA analysis was based on the development quantities set forth in the Development Program, and that the intent of the BVDSP is to provide as much flexibility as is feasible in terms of precise mix of newly developed land uses and their location in the Plan area, while conforming to the CEQA analysis and thresholds. Traffic capacity was identified in the BVDSP EIR as the key environmental factor constraining development. The City of Oakland is tracking and measuring vehicle trip generation created by projects proposed under the BVDSP, not land uses, to monitor when thresholds established have been met. Thus, it is traffic capacity that caps development under the BVDSP, not uses, which were contemplated to evolve and, as long as impacts fall within the maximum development analyzed in the BVDSP EIR, additional CEQA analysis is unnecessary.

As described in Section 13, Transportation and Circulation, of this CEQA Checklist, the proposed project would generate 37 AM and 79 PM peak-hour vehicle trips. Trips generated by the proposed project, together with the trips generated by other projects that are currently under construction, approved, and proposed for development in the Plan Area, would represent approximately 39 percent of the AM peak-hour trips and 44 percent of the PM peak-hour trips anticipated in the BVDSP EIR for the entire Plan Area. The combined trip generation for the projects under construction, approved, and proposed within the North End Subarea would represent approximately 29 percent of the AM peak-hour trips and 35 percent of the PM peak-hour trips anticipated in the BVDSP EIR for the North End Subarea. Trips generated by the proposed project, together with the trips generated by other projects that are currently under construction, approved, and proposed for development in the Plan Area, would represent approximately 18 percent of the AM peak-hour trips and 21 percent of the PM peak-hour trips anticipated in the BVDSP EIR for Subdistrict 4. Therefore, the traffic impact analysis presented in the EIR continues to remain valid, and the trip generation from the proposed project combined with other

²² In total, the Broadway Valdez Development Program includes approximately 3.7 million square feet of development, including approximately 695,000 square feet of office space, 1,114,000 square feet of restaurant/retail space, 1,800 residential units, a new 180-room hotel, approximately 6,500 parking spaces provided by the development program, and approximately 4,500 new jobs.

projects currently being developed under the BVDSP would be within the program analyzed under the BVDSP EIR for the Plan area, the North End subarea, and Subdistrict 4.

Therefore, the proposed project would represent a minor change in the Development Program, and such changes are anticipated in the EIR.

Conditions for Addendum. None of the following conditions for preparation of a subsequent EIR per Section 15162(a) apply to the proposed project:

- (1) Substantial changes are proposed in the project, which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;
- (2) Substantial changes occur with respect to the circumstances under which the project is undertaken, which will require major revisions of the previous EIR or Negative Declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or
- (3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the Negative Declaration was adopted, shows any of the following:
 - (A) The project will have one or more significant effects not discussed in the previous EIR or negative declaration;
 - (B) Significant effects previously examined will be substantially more severe than shown in the previous EIR;
 - (C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or
 - (D) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

Project Consistency with Section 15162 of the CEQA Guidelines. Since certification of the Final EIR, no changes have occurred in the circumstances under which the revised project would be implemented, that would change the severity of the proposed project's physical impacts as explained in the CEQA Checklist above, and no new information has emerged that would materially change the analyses or conclusions set forth in the Final EIR.

Furthermore, as demonstrated in the CEQA Checklist, the proposed modifications to the Development Program would not result in any new significant environmental impacts, result in any substantial increases in the significance of previously identified effects, or necessitate implementation of additional or considerably different mitigation measures than those identified in the EIR, nor render any mitigation measures or alternatives found not to be feasible, feasible. The effects of the proposed project would be substantially the same as those reported for the Development Program in the EIR.

The analysis presented in this CEQA Checklist, combined with the prior EIR analysis, demonstrates that the proposed project would not result in significant impacts that were not previously identified in the EIR. The proposed project would not result in a substantial increase in the significance of impacts, nor would the proposed project contribute considerably to cumulative effects that were not already accounted for in the certified EIR. Overall, the proposed project's impacts are similar to those identified and discussed in the EIR, as described in the CEQA Checklist, and the findings reached in the EIR are applicable.

ATTACHMENT J: LIMITED PHASE II ENVIRONMENTAL ASSESSMENT REPORT 2800, 2820, AND
2855 BROADWAY OAKLAND, CALIFORNIA

PreVision Design has completed an analysis of the potential new shading impacts that would be caused by the proposed construction of a three-building development to be located at 2800, 2820 and 2855 Broadway in Oakland, CA (the "Project") on the stained glass windows of Temple Sinai, located at 2808 Summit St, directly across Broadway and due west of the Project.

The analysis was conducted to determine whether or not the new project would result in new shadow that would fall on the windows between 7:15am through 12:30pm at any time throughout year and, if present, how much shadow would be generated and when would it occur. The analysis times were chosen as they correspond to times of day where active uses occur within Temple Sinai which could potentially be adversely impacted by a reduction in sunlight on the stained glass windows.

In order to perform this study, the project architect (BAR Architects) provided a 3D CAD model of the proposed project as well as an accurately located model of the Temple Sinai and the windows in question (derived by a survey "point cloud"). PreVision Design additionally gathered existing building and topographical data for the urban environment surrounding the proposed project which contributes to the existing shading conditions on the windows. This data was aggregated and used to build a virtual 3D full area model which was used to simulate shading and calculate the shading impacts Project.

PreVision Design's analysis evaluated the area of shading over time (sf/hr) currently present on the stained glass windows vs. what *additional* shading would be cast by the Project, and presented both as both a total sf/hr of shadow as well as a percentage of the Theoretical Available Sunlight (TAS) that could fall on the windows (presuming no shadows from any source). Shading calculations were taken every seven days throughout the Solar Year (Summer Solstice through Winter Solstice) at 5-minute intervals with intermediate dates and times extrapolated to establish the full range of shading conditions on the windows between 7:15AM and 12:30PM daily throughout the year. The results of this analysis indicated that the Project would not result in any new shading on the stained glass windows of Temple Sinai between the hours of 7:15AM and 12:30PM daily throughout the year.

TEMPLE SINAI STAINED GLASS WINDOWS

Quantitative Shading Calculations for 2820 Broadway

THEORETICAL AVAILABLE SUNLIGHT (TAS) - ANNUAL BASIS TAKEN DAILY FROM 7:15AM -12:30PM	
Area of Temple Sinai Stained Glass Windows	155 sf
Hours of annual available sunlight	1642.5 hrs
TAS for Temple Sinai Stained Glass Windows	254,062 sfh

EXISTING (CURRENT) LEVELS OF SHADING ON TEMPLE SINAI STAINED GLASS WINDOWS	
Existing annual total shading on park (sfh)	122,522 sfh
Existing shading as percentage of TAS	48.23%

NEW SHADOW CAST BY THE PROPOSED 2820 BROADWAY PROJECT	TEMPLE SINAI STAINED GLASS WINDOWS
Total new annual shading on Temple Sinai Stained Glass Windows from Project	0 sfh
New shading from Project as percentage of TAAS	0.00%
Total annual shading existing + Project (sfh)	122,522 sfh
Shading from existing + Project as percentage of TAAS	48.2254%
Number of days when new Project shading occurs	0 days annually
Dates when new Project shadow is cast on Temple Sinai Stained Glass Windows	Never
Annual range in duration of new Project shadows	None
Range in size of new shadow (sf)	N/A
Average daily duration of new shadow (when present)	None

Subject	Air Quality Health Risk Assessment Screening Memorandum – Broadstone on Broadway Project		
From	Michael Kay, Project Manager		
Date	July 18, 2016		

This memorandum contains the air quality assessment of the Broadstone on Broadway Project (Project) based on the requirements of the Broadway Valdez District Specific Plan (BVDSP) Area Environmental Impact Report (EIR). AECOM assessed the project in accordance with the requirements of the mitigation measures and Standard Conditions of Approval (SCAs) identified for air quality impacts in the BVDSP EIR. These measures are described below.

Health Risk Assessment of Project Impacts on Sensitive Receptors and Risk Reduction Plan (SCA 21 Stationary Sources of Air Pollution [Toxic Air Contaminants] and BVDSP EIR Mitigation Measure AIR-4)

BVDSP EIR Mitigation Measure AIR-4 (SCA 21) states that applicants for projects that would include a backup generator shall prepare and submit to the City a Risk Reduction Plan for City review and approval. The applicant shall implement the approved plan. This Plan shall reduce cumulative localized cancer risks to the maximum feasible extent. The Risk Reduction Plan may contain, but is not limited to the following strategies:

- Demonstration using screening analysis or a health risk assessment that project sources, when combined with local cancer risks from cumulative sources with 1,000 feet would be less than 100 in one million.
- Installation of non-diesel fueled generators.
- Installation of diesel generators with an EPA-certified Tier 4 engine or Engines that are retrofitted with an ARB Level 3 Verified Diesel Emissions Control Strategy.

Rather than a backup generator, the Project would use inverters for emergency power supplies. The inverters would not be a source of localized toxic air contaminant emissions. Therefore, BVDSP EIR Mitigation Measure AIR-4 is not applicable to the Project, and a Risk Reduction Plan is not required.

**Health Risk Assessment of Offsite Sources on Project-Sensitive Receptors
(SCA 20: Exposure to Air Pollution [Toxic Air Contaminants])¹**

Standard Condition of Approval 20 applies to projects that meet all of the following criteria:

- a. The project involves either of the following sensitive land uses:
 - i. New residential facilities or new dwelling units; or
 - ii. New or expanded schools, daycare centers, parks, nursing homes, or medical facilities; and

- b. The project is located within 1,000 feet of one or more of the following sources of air pollution:
 - i. Freeway
 - ii. Roadway with significant traffic (at least 10,000 vehicles per day);
 - iii. Rail line (except BART) with over 30 trains per day;
 - iv. Distribution center that accommodated more than 100 trucks per day, more than 40 trucks with operating Transportation Refrigeration Units (TRU) per day, or where the TRU unit operations exceed 300 hours per week;
 - v. Major rail or truck yard (such as the Union Pacific rail yard adjacent to the Port of Oakland);
 - vi. Ferry terminal;
 - vii. Stationary pollutant source requiring a permit from BAAQMD (such as a diesel generator);
 - viii. Within 0.5 miles of the Port of Oakland or Oakland Airport;
 - ix. Within 300 feet of a gas station; or
 - x. Within 300 feet of a dry cleaner with a machine using PERC (or within 500 feet of a dry cleaner with two or more machines using PERC); and

- c. The project exceeds the health risk screening criteria after a screening analysis is conducted in accordance with the Bay Area Air Quality Management District (BAAQMD) CEQA Guidelines.

If the Project meets these criteria, the Health Risk Reduction Measures listed in the BVDSP EIR would be required.

AECOM compared the Project to the SCA 20 criteria to assess the applicability of the condition. The Project would involve the construction of new residential dwelling units (SCA 20 Criteria a-i), and would be located within 1,000 feet of stationary sources and roadways with at least 10,000 vehicles per day (including Broadway, 27th Street, and Harrison Street) (SCA 20 Criteria b-vii and Criteria b-ii). Therefore, a screening analysis in accordance with BAAQMD CEQA Guidelines was conducted to determine if the project exceeds the health risk screening criteria (SCA 20 Criteria c). The results of the health risk screening analysis are discussed below.

¹ SCA 20 is equivalent to SCA B referenced in the BVDSP EIR.

Health Risk Screening

A screening analysis was conducted in accordance with BAAQMD guidelines to evaluate the potential for siting new sensitive receptors that would result in exposures to (a) a cumulative cancer risk level greater than 100 in a million, (b) a cumulative non-cancer risk hazard index greater than 10.0, or (c) an increase of annual average PM_{2.5} concentrations greater than 0.8 micrograms per cubic meter (µg/m³). The health risk screening was conducted to review risks from nearby stationary sources, roadways, and freeways, as described below.

Stationary Sources

The Project would be located in the BVDSP North End subarea. The BVDSP EIR identified two stationary sources within this subarea (Plant 7780 and Plant 7781), and included a refined modeling analysis to characterize the cancer risk within the North End subarea from these two sources. The modeled health risks from these sources are listed in Table 1.

The BVDSP EIR also identified three future or foreseeable projects within 1,000 feet of the BVDSP area that could contribute to potential health risks: Alta Bates Medical Center, Kaiser Permanente Hospital at Broadway and MacArthur Boulevard, and Kaiser Center at 300 Lakeside Drive. Of these three sources, only the project at the Alta Bates Medical Center is located within 1,000 feet of the Project. The health risk from this source is also listed in Table 1.

Additional projects that are planned or under construction in the vicinity of the Project site were identified using the City of Oakland's list and map of major development projects (City of Oakland 2016). These projects include Broadway & 27th, 3000 Broadway, Shops at Broadway, 2425 Valdez Street, 2400 Valdez Street, and 265 27th Street. For the purposes of this analysis, each of these projects is conservatively assumed to include a backup diesel generator, except for the Shops at Broadway, which would not include a backup generator or other toxic air contaminant source (ESA 2013b). Because the BAAQMD does not issue stationary source permits for equipment that contributes a cancer risk greater than 10 in a million, this screening analysis conservatively assumes that each source would contribute a maximum cancer risk of 10 in a million to the Project receptors. These conservatively assumed health risks are listed in Table 1. In addition to these sources, the most recent version of the BAAQMD Stationary Source Screening Tool (May 2012) was used to identify other stationary sources within 1,000 feet of the Project site. Plant 19269 was found to be located within 1,000 feet of the Project site, and health risks from this source are listed in Table 1. Note that Plants 15483, 15919, 3676, G9464, and 12498 were also found to be located within 1,000 feet of the Project; however, the health risks for these sources were listed as "0" or "na" in the BAAQMD Stationary Source Screening Tool, and were therefore not included in Table 1.

Roadways and Freeways

The Project site is not located within 1,000 feet of any freeways, but is located within 1,000 feet of high volume roadways, including Broadway, 27th Street, and Harrison Street. The BAAQMD Roadway Screening Analysis Calculator was used to calculate health risks from traffic sources on these roadways based on average daily traffic volumes. The BAAQMD recommended tool for obtaining traffic volumes (California Environmental Health Tracking Program [CEHTP] traffic volume linkage tool) has been retired as of the date of this analysis, and a new tool is planned to be launched in late 2016 (CEHTP 2016). Average daily traffic volumes on the roadways were therefore estimated

from peak hour traffic counts collected in February 2016 by Fehr & Peers (email communication, April 21, 2016). Potential health risks from these roadway sources are listed in Table 1.

Table 1: Health Risks from Sources in the Project Vicinity

Source	Cancer Risk (in a million)	Hazard Index	Annual PM _{2.5} (µg/m ³)
Stationary Sources^(a)			
Plants 7780 and 7781 ⁽¹⁾⁽²⁾	12.1 ^(b)	0.16 ^(c)	0.0025 ^(d)
Plant 19269 ⁽²⁾	12.92	0.005	0.0134
Planned Source at Alta Bates Medical Center ⁽¹⁾⁽³⁾	4.0	0.0156 ^(e)	0.078 ^(e)
Planned Project: Broadway & 27 th (g)	10	0.004	0.02
Planned Project: 3000 Broadway ^(g)	10	0.004	0.02
Planned Project: 2425 Valdez Street ^(g)	10	0.004	0.02
Planned Project: 2400 Valdez Street ^(g)	10	0.004	0.02
Planned Project: 265 27th Street ^(g)	10	0.004	0.02
Roadways^(f)			
Broadway ⁽⁴⁾	15.04	0.059	0.295
Harrison Street ⁽⁴⁾	0.75	0.0026	0.013
27th Street ⁽⁴⁾	2.75	0.0102	0.051
Total	97.56	0.272	0.553
Cumulative Threshold	100	10.0	0.8
Notes:			
<p>a. Plants 15483, 15919, 3676, G9464, and 12498 were also found to be located within 1,000 feet of the Project; however, the health risks for these sources were listed as "0" or "na" in the BAAQMD Stationary Source Screening Tool, and were therefore not included here.</p> <p>b. The cancer risk from Plants 7780 and 7781 is the total estimated risk for these sources as presented in the BVDSP EIR and includes both DPM (diesel particulate matter) and non-DPM cancer risk.</p> <p>c. The hazard index from Plants 7780 and 7781 is conservatively assumed to be equal to the total Hazard Index from all pollutants as listed in the BAAQMD Screening Tool for these sources.</p> <p>d. The annual PM_{2.5} concentration from Plants 7780 and 7781 is assumed to be the total DPM concentration estimated from refined modeling analysis of these sources as presented in the BVDSP EIR.</p> <p>e. The annual PM_{2.5} concentration from the Planned Alta Bates Medical Center project includes PM_{2.5} from modeled diesel generators and vehicle traffic including diesel trucks. The hazard index from these sources was calculated from the modeled annual PM_{2.5} concentration using the DPM Chronic Reference Exposure Level (REL) of 5 µg/m³ and assuming that all PM_{2.5} is DPM.</p> <p>f. The hazard index for roadway sources was calculated from the BAAQMD Roadway Screening Analysis Calculator annual PM_{2.5} concentration using the DPM Chronic REL of 5 µg/m³.</p> <p>g. These planned projects were conservatively assumed to each contribute the BAAQMD stationary source permit limit cancer risk of 10 in a million to the Project receptors. Annual PM_{2.5} concentrations were estimated based on the 10 in a million cancer risk level and BAAQMD Health Risk Screening Analysis Guidelines (BAAQMD 2010). The hazard index from these sources was calculated from the modeled annual PM_{2.5} concentration using the DPM Chronic REL of 5 µg/m³ and assuming that all PM_{2.5} is DPM.</p>			
Sources:			
<p>¹ BVDSP EIR (ESA 2013a)</p> <p>² BAAQMD Stationary Source Screening Tool (BAAQMD 2012)</p> <p>³ ABSMC Summit Campus Seismic Upgrade and Master Plan Project EIR (ESA 2009)</p> <p>⁴ BAAQMD Roadway Screening Analysis Calculator (BAAQMD 2015)</p>			

As shown in Table 1, the cumulative thresholds for cancer risk, Hazard Index, and annual $PM_{2.5}$ concentration would not be exceeded.

Because the screening analysis shows that the Project would not exceed the health risk screening criteria, SCA 20 does not apply to the Project and the additional Health Risk Reduction Measures listed in SCA 20 would not be required.

Bay Area Air Quality Management District

Roadway Screening Analysis Calculator

County specific tables containing estimates of risk and hazard impacts from roadways in the Bay Area.

INSTRUCTIONS:

Input the site-specific characteristics of your project by using the drop down menu in the "Search Parameter" box. We recommend that this analysis be used for roadways with 10,000 AADT and above.

- **County:** Select the County where the project is located. The calculator is only applicable for projects within the nine Bay Area counties.
- **Roadway Direction:** Select the orientation that best matches the roadway. If the roadway orientation is neither clearly north-south nor east-west, use the highest values predicted from either orientation.
- **Side of the Roadway:** Identify on which side of the roadway the project is located.
- **Distance from Roadway:** Enter the distance in feet from the nearest edge of the roadway to the project site. The calculator estimates values for distances greater than 10 feet and less than 1000 feet. For distances greater than 1000 feet, the user can choose to extrapolate values using a distribution curve or apply 1000 feet values for greater distances.
- **Annual Average Daily Traffic (ADT):** Enter the annual average daily traffic on the roadway. These data may be collected from the city or the county (if the area is unincorporated).

When the user has completed the data entries, the screening level PM2.5 annual average concentration and the cancer risk results will appear in the Results Box on the right. Please note that the roadway tool is not applicable for California State Highways and the District refers the user to the Highway Screening Analysis Tool at: <http://www.baaqmd.gov/Divisions/Planning-and-Research/CEQA-GUIDELINES/Tools-and-Methodology.aspx>.

10 September 2015

Mr. Peter Solar
Alliance Realty Partners, LLC
477 Pacific Avenue, Suite One
San Francisco, California 94133

**Subject: Preliminary Geotechnical Evaluation
Broadway & 28th Street
Oakland, California
Langan Project No.: 750631701**

Dear Mr. Solar:

This letter report presents the results of our preliminary geotechnical evaluation for the proposed development at Broadway & 28th Street in Oakland, California. Our services were performed in general accordance with our proposal dated 7 August 2015. Our preliminary conclusions and recommendations may be used for preliminary design and pricing exercises. The intent of this letter is to inform you regarding the geotechnical conditions at the site for use in your due diligence. During final design, we should perform a geotechnical investigation which will allow us to evaluate the conditions across the site and develop final geotechnical and foundation conclusions and recommendations for the project.

As shown on Figure 1, the proposed development is planned for two blocks, one on the west and the other on the east side of Broadway. The eastern development area includes the properties at 2800 and 2820 Broadway and is bound by several one-story buildings on the north, Broadway on the west, 28th Street and an 11-story residential building on the South, and Valdez Street on the East. This parcel is currently occupied by several one- and two-story buildings on the western portion of the development area and a parking lot associated with a Hyundai Dealership. At this time we do not have information regarding basements or foundations of the existing buildings.

The western development area is at 2855 Broadway and is bound by Broadway on the east, a one story building on the north, Webster Street to the west, and a one story building on the south. This parcel is currently an asphalt paved parking lot used as a Hyundai car lot. The approximate location of the proposed development areas are shown on the attached Site Plan, Figure 2.

PROPOSED DEVELOPMENT

Based on our correspondence with you and a review of site concept plans by BAR architects, we understand that the proposed development on the two parcels will include seven-story buildings, consisting of a two-level concrete podium and five-levels of wood framing. The western building will be constructed over one below-grade parking level and the eastern building will have one below-grade parking level which will include parking stackers.

SCOPE OF SERVICES

Our scope of services included using the available geologic information as well as performing a preliminary subsurface exploration on each of the two parcels. This information was used to develop preliminary geotechnical and foundation conclusions and recommendations regarding:

- soil and groundwater conditions at the site
- site seismicity and seismic hazards, including liquefaction and lateral spreading
- anticipated depth to suitable bearing strata
- probable foundation type(s) for the proposed buildings
- preliminary design criteria for foundations, including appropriate depth and bearing pressures
- estimated settlement behavior for the proposed foundation types
- probable shoring and underpinning types
- 2013 California Building Code (CBC) seismic design criteria.

Field Exploration

To evaluate the subsurface in some portions of the site, we performed three cone penetration tests (CPTs) for this preliminary investigation. The approximate locations of the CPTs are shown on the Site Plan, Figure 2. Prior to performing our field investigation, we obtained a soil boring permit from the Water Resources Wells Section of the Alameda County Department of Public Works Agency (ACDPWA), notified Underground Service Alert (USA), and retained a private underground utility locating service to check that locations of exploratory points were clear of existing utilities.

On 28 August 2015, Middle Earth Geotesting, Inc. of Fremont, California, advanced three CPTs at the site, designated CPT-1, CPT-2, and CPT-3, to depths of 68, 75, 68 feet bgs, respectively. The CPTs were performed by hydraulically pushing a 1.4-inch-diameter, cone-tipped probe, with a projected area of 10 square centimeters, into the ground. The cone tip measures tip resistance, and the friction sleeve behind the cone tip measures frictional resistance. Electrical strain gauges or load cells within the cone continuously measured the cone tip resistance and frictional resistance during the entire depth of each probing. Accumulated data is processed by

computer to provide engineering information, such as the types and approximate strength characteristics of the soil encountered. The CPT logs, showing tip resistance, side friction, friction ratio, interpreted SPT N-values, and interpreted soil classification, are presented in Appendix A. Shear wave velocities were measured at CPT-2 and pore water dissipation tests were performed in CPT-1 and CPT-3, results are presented in Appendix A.

Soil cuttings were not generated during the CPTs. Upon completion of the CPT holes were backfilled with cement grout in accordance with the requirements of ACDPWA.

SITE AND SUBSURFACE CONDITION

Data from our preliminary exploration indicates that the near-surface soils consist of clays with varying amounts of sand and silt. The upper soils are generally underlain by heterogeneous mixtures of sand, silt, and clay. Regional geology maps (Graymer, 1987) indicated this material is referred to as basin and alluvial fan deposits comprised of generally stiff to very stiff clay with sand lenses.

The eastern edge of the site is mapped within a liquefaction hazard zone, as designated by the California Geological Survey (*State of California Seismic Hazard Zones, Oakland West Quadrangle*, 2003 (Figure 3)). This area of potential liquefaction was delineated as being near a former creek that was buried during the development in this part of Oakland.

The groundwater level was estimated from pore pressure dissipation tests in CPT-1 and CPT-3. The groundwater level is estimated to be 15½ and 12 feet bgs in CPT-1 and CPT-3, respectively. The varying levels measured at the time of our investigation are likely not representative of stabilized groundwater levels. Seasonal fluctuations in rainfall influence groundwater levels and may cause several feet of variation.

SEISMICITY

The major active faults in the area are the Hayward, Mount Diablo Thrust, Calaveras and San Andreas faults. These and other faults of the region are shown on Figure 4. For each of the active faults within about 55 kilometers of the site, the distance from the site and estimated mean characteristic Moment magnitude¹ [Working Group on California Earthquake Probabilities (WGCEP) (2008) and Cao et al. (2003)] are summarized in Table 1.

¹ Moment magnitude is an energy-based scale and provides a physically meaningful measure of the size of a faulting event. Moment magnitude is directly related to average slip and fault rupture area.

TABLE 1
Regional Faults and Seismicity

Fault Name	Approximate Distance from Fault (kilometers)	Direction from Site	Mean Characteristic Moment Magnitude, M_w
Total Hayward	4.3	East	7.00
Total Hayward-Rodgers Creek	4	East	7.33
Mount Diablo Thrust	21	East	6.70
Total Calaveras	22	East	7.03
N. San Andreas - Peninsula	25	West	7.23
N. San Andreas (1906 event)	25	West	8.05
Green Valley Connected	26	East	6.80
N. San Andreas - North Coast	28	West	7.51
San Gregorio Connected	31	West	7.50
Rodgers Creek	34	Northwest	7.07
Greenville Connected	39	East	7.00
West Napa	39	North	6.70
Monte Vista-Shannon	42	South	6.50
Great Valley 5, Pittsburg Kirby Hills	43	East	6.70

Figure 4 also shows the earthquake epicenters for events with magnitude greater than 5.0 from January 1800 through August 2014. In 1868 an earthquake with an estimated maximum intensity of X on the MM scale occurred on the southern segment (between San Leandro and Fremont) of the Hayward Fault. The estimated M_w for the earthquake is 7.0. In 1861, an earthquake of unknown magnitude (probably an M_w of about 6.5) was reported on the Calaveras Fault. The most recent significant earthquake on this fault was the 1984 Morgan Hill earthquake ($M_w = 6.2$).

Since 1800, four major earthquakes have been recorded on the San Andreas Fault. In 1836 an earthquake with an estimated maximum intensity of VII on the Modified Mercalli (MM) scale (Figure 5) occurred east of Monterey Bay on the San Andreas Fault (Toppozada and Borchardt 1998). The estimated Moment magnitude, M_w , for this earthquake is about 6.25. In 1838, an earthquake occurred with an estimated intensity of about VIII-IX (MM), corresponding to an M_w of about 7.5. The San Francisco Earthquake of 1906 caused the most significant damage in the history of the Bay Area in terms of loss of lives and property damage. This earthquake created a surface rupture along the San Andreas Fault from Shelter Cove to San Juan Bautista approximately 470 kilometers in length. It had a maximum intensity of XI (MM), an M_w of about

7.9, and was felt 560 kilometers away in Oregon, Nevada, and Los Angeles. The most recent earthquake on the San Andreas Fault was the Loma Prieta Earthquake of 17 October 1989, in the Santa Cruz Mountains with an M_w of 6.9, approximately 93 km from the site.

The most recent earthquake felt in the Bay Area occurred on 24 August 2014 and was located on the West Napa fault with a M_w of 6.0.

The WGCEP at the U.S. Geologic Survey (USGS) predicted a 63 percent chance of a magnitude 6.7 or greater earthquake occurring in the San Francisco Bay Area in 30 years. More specific estimates of the probabilities for different faults in the Bay Area are presented in Table 2.

TABLE 2
WGCEP (2008) Estimates of 30-Year Probability
of a Magnitude 6.7 or Greater Earthquake

Fault	Probability (percent)
Hayward-Rodgers Creek	31
N. San Andreas	21
Calaveras	7
San Gregorio	6
Concord-Green Valley	3
Greenville	3
Mount Diablo Thrust	1

SEISMIC HAZARDS

The site is in a seismically active area and will be subject to strong shaking during a major earthquake on a nearby fault. Strong shaking during an earthquake can result in ground failure such as that associated with soil liquefaction² and lateral spreading³. Each of these conditions has been evaluated based on our literature review, field investigation, and studies, and is discussed in this section.

² Liquefaction is a transformation of soil from a solid to a liquefied state during which saturated soil temporarily loses strength resulting from the buildup of excess pore water pressure, especially during earthquake-induced cyclic loading. Soil susceptible to liquefaction includes loose to medium dense sand and gravel, low-plasticity silt, and some low-plasticity clay deposits.

³ Lateral spreading is a phenomenon in which surficial soil displaces along a shear zone that has formed within an underlying liquefied layer. Upon reaching mobilization, the surficial blocks are transported downslope or in the direction of a free face by earthquake and gravitational forces.

Liquefaction and Lateral Spreading

If a soil liquefies during an earthquake, it experiences a significant temporary loss of strength. Flow failure, lateral spreading, differential settlement, loss of bearing, ground fissures, and sand boils are evidence of excess pore pressure generation and liquefaction. The eastern portion site is on the site is partially in a liquefaction hazard zone as shown on Figure 3.

Following the 1989 Loma Prieta Earthquake and 1906 San Francisco Earthquake studies of the bay area were conducted to quantify and record damages caused by liquefaction. Reports by Holzer in 1998 and Youd & Hoose in 1978 do not indicate liquefaction was recorded at the site.

CGS has recommended the content for site investigation reports within seismic hazard zones in Special Publication 117A titled "Guidelines for Evaluating and Mitigating Seismic Hazards in California", published in 2008. Our evaluation of site seismic hazards was performed in general accordance with these guidelines. We used the results of the three CPTs to evaluate subsurface characteristics and liquefaction potential of the subsurface soils. The CPTs encountered several interbedded layers of potentially liquefiable material in layers that were classified with the behavior description of clayey silt to silty clay and silty sand to sandy silt below the water table. These materials are typically considered marginally liquefiable materials based on their likely plasticity. Clay material could experience some material softening during large ground motions caused by a significant earthquake, but don't typically exhibit complete strength loss associated with classic liquefaction.

The procedures presented in the Summary Report from the 1996 NCEER and 1998 NCEER/NSF Workshops on the Evaluation of Liquefaction Resistance of Soils and developed by Tokimatsu and Seed (1984) were used to estimate the volumetric strain of the potentially liquefiable soil layers during a large earthquake. Per the building code (2013 California Building Code) liquefaction analyses are based on a peak ground acceleration based on the geometric mean maximum considered earthquake (MCEg) of 0.72g. The majority of the potentially liquefiable soils encountered were between the depths of about 12 to 30 feet bgs. The bottom of the potentially liquefiable material or material that may experience softening during an earthquake was encountered at depths of 53 to 62 feet in the CPTs. The results of our analysis indicated ground surface settlement could be on the order of 2 to 4 inches resulting from liquefaction of the soils.

Lateral Spreading

Lateral spreading is a phenomenon in which a surficial soil displaces along a shear zone that has formed within an underlying liquefied layer. The surficial blocks are transported downslope or in the direction of a free face, such as a channel, by earthquake and gravitational forces. Lateral spreading is generally the most pervasive and damaging type of liquefaction-induced ground failure generated by earthquakes.

According to Youd, Hansen, and Bartlett (1999), for significant lateral spreading displacements to occur, the soils should consist of saturated cohesionless sandy sediments with $(N_1)_{60}$ less than 15, where liquefaction of the soils is likely to occur based on standard liquefaction

analysis. The potentially liquefiable fills underlying the site were determined to consist of clayey silt to silty clay and silty sand to sandy silt below the water table with $(N_1)_{60}$ greater than 15. Because the potentially liquefiable soils beneath the site have sufficient density and/or strength to resist lateral spreading, we conclude the potential of lateral spreading at the site is low.

PRELIMINARY CONCLUSIONS AND RECOMMENDATIONS

On the basis of our preliminary investigation, we conclude that from a geotechnical standpoint, the site can be developed as planned. The primary geotechnical concerns are: 1) the support of the sides of the excavation, including adjacent buildings, during construction of the basements, 2) foundation support for the proposed buildings, and 3) building settlement during an earthquake.

Foundations and Settlement

The primary factor influencing the selection of a safe, economical foundation system for the proposed structures is the potentially liquefiable material beneath the proposed structures. This material may settle or soften significantly during a major earthquake on a nearby fault. Therefore, we preliminarily conclude the proposed structures should be supported on a deep foundations gaining support below the potentially liquefiable materials. The bottom of the potentially liquefiable material or material that may experience softening during an earthquake is at about a depth of 52 to 62 feet in the CPTs. Foundations can gain support in dense to very dense sand or very stiff clay below the potentially liquefiable materials.

Feasible deep foundation options include auger-cast piles, drilled-in-place steel pipe and tube piles, and drilled piers. Our preliminary recommendation is that auger-cast piles be used to support the proposed buildings. Auger-cast piles are typically the most economical pile for projects of this size in the Bay Area. Auger-cast piles are designed and installed by specialty and often-times design-build contractors. However, they should be designed and detailed in accordance with the 2013 California Building Code (2013 CBC) requirements.

Use of auger-cast piles will require installation of indicator piles and pile load tests to evaluate production pile lengths and confirm pile capacities. Total and differential settlement for a foundation supported on deep foundations gaining support in dense to very dense sand or very stiff clay should be on the order of 1 inch and ½ inch between adjacent columns, respectively.

Auger-Cast Piles

Auger-cast piles can be installed by drilling to the required depth with a drill mandrel, often with an auger displacement tool at the bottom. When the tip reaches the required depth or refusal, as indicated by pre-determined refusal criteria, grout is injected through the ports in the displacement tool. Grout is injected under pressure as the auger is slowly withdrawn. While the grout is still fluid, a steel reinforcing cage or steel beam is inserted into the shaft. Auger-cast piles can range in diameter; 16-inch- and 18-inch-diameter auger-cast piles are typical.

Pile design capacities and lengths should be determined by the pile installation contractor and their engineers following completion of the final geotechnical investigation, and load tests should be performed to confirm their capacities. All piles should be spaced at least three pile diameters center-to-center, to avoid vertical capacity reductions due to pile interaction effects.

On the basis of our discussions with pile contractors we anticipate typical auger-cast piles extending 70 to 85 feet below the ground surface into competent clay and sand below the potentially liquefiable or softening material. Piles to these depths can develop an allowable axial capacity of about 150 to 250 kips. We anticipate sixteen-inch to eighteen-inch diameter, auger pressure grouted piles embedded 10 to 20 feet below the potentially liquefiable or softening material can achieve these allowable axial capacities. The contractor's designer should determine pile capacities, required lengths and evaluate pile settlements. Once designed, an indicator pile program should be established and piles load tested to confirm the design parameters used.

Pile load tests should be performed on the indicator piles to confirm the axial compressive capacity. The number of load tests will depend on the proposed number of piles. For the selected pile type, we recommend a minimum of two compression load tests be performed for each proposed production pile installation methodology (i.e. rig type, predrilling depth and diameter, pile length, etc.). If piles are required to resist tension, at least one tension test should be performed. The test piles should be selected by the Geotechnical Engineer and approved by the Structural Engineer. The load tests should be performed in accordance with latest version of ASTM D1143 (Test Methods for Deep Foundations Under Static Axial Compressive Load) or ASTM D3689 (Test Method for Deep Foundations Under Static Axial Tensile Load). Equipment used for the test (load frame, jacks, and reaction piles) should be capable of applying at least 2 times the allowable dead plus live design load, and 2 times the allowable total load.

Shoring and Underpinning

The proposed one level of basement will require excavations on the order of 12 to 22 feet below the existing ground surface. We anticipate the deeper excavation will be in areas of car stacker parking pits. Considering the depth of the excavation, the excavation will need to be shored to protect the surrounding improvements. There are several key considerations in selecting a suitable shoring system. Those we consider of primary concern are:

- protection of surrounding improvements, including roadways, utilities, and nearby structures
- control of groundwater inflow
- the ability of the shoring system to reduce potential for ground movement
- the presence of existing foundations or other obstructions
- cost.

On the basis of our understanding of the subsurface conditions and our experience with similar projects, we conclude a soldier-pile-and-lagging system is a viable shoring system for the project. This system consists of steel beams that are placed in predrilled holes; the annulus between the beams and sides of the hole are backfilled with concrete. Wood lagging is placed between the soldier beams as excavation proceeds. For excavation deeper than about 15 feet, tiebacks or internal bracing will likely be required to provide additional lateral resistance and limit shoring deflections. If tiebacks are installed in the City of Oakland's or neighbor's properties, encroachment permits/permission from the neighbor will be required.

We do not have information regarding the type of foundation and embedment depth of the adjacent buildings around the proposed development areas. However, considering the age and height of the adjacent buildings, it is likely these adjacent buildings are supported on shallow footings. This should be confirmed by test pits and/or review of existing foundation drawings. If the excavation for the below-grade level extends below these foundations, then these buildings should be underpinned during construction. Underpinning may consist of hand-excavated, end-bearing piers or slant drilled soldier piles that extended into competent material beneath the planned excavation depth. A monitoring program should be established to evaluate the effects of the construction, if any, on the adjacent buildings.

The proposed bottom of excavation will likely be below the groundwater level; therefore, we expect dewatering will be required.

Seismic Design

We preliminarily conclude that the site is underlain by potentially liquefiable soils, thus is classified as Site Class F in accordance with the 2013 CBC/ASCE 7-10. According to the 2013 CBC, Site Class F sites require a site-specific ground response evaluation be performed to develop the appropriate seismic design values for the project. However, the building code allows for an exception to this rule if the fundamental period of the planned buildings are less than 0.5 seconds. Accordingly, if the proposed buildings have a fundamental period of less than 0.5 seconds, the buildings can be designed in accordance with the criteria for a Site Class D.

For a site class D, the following seismic design parameters may be used in preliminary design:

- Risk Targeted Maximum Considered Earthquake (MCE_R) S_S and S_1 of 1.874g and 0.754g, respectively.
- Site Modification Factors, F_a and F_v of 1.0 and 1.5.
- Risk Targeted MCE_R spectral response acceleration parameters at short periods, S_{MS} , and at one-second period, S_{M1} , of 1.874g and 1.130g, respectively.
- Design Earthquake (DE) spectral response acceleration parameters at short period, S_{DS} , and at one-second period, S_{D1} , of 1.249g and 0.754g, respectively.

Construction Considerations

During excavation debris and concrete rubble may be encountered and should be removed. Hoe-rams, jack-hammers and other similar equipment will likely be needed to remove some of the larger obstacles, if encountered. The soil to be excavated consists predominantly of clay and sand that can likely be excavated with conventional excavation equipment.

A monitoring program should be established to evaluate the effects of the construction on the nearby buildings and improvements. The contractor should install surveying points to monitor the movement of shoring and settlement of nearby structures and the ground surface during excavation. The monitoring should provide timely data which can be used to modify the shoring system if needed. In addition, geotechnical instrumentation including inclinometers should be installed to monitor movement of the shoring system during excavation and construction.

Design Level Investigation and Future Services

If your purchase of the property moves forward, during final design we should perform a geotechnical investigation that would include additional field exploration, collection of soil samples, and laboratory testing, as outlined in our 7 August 2015 proposal. Additionally we should consult with the design team as geotechnical questions arise.

Recognizing that construction observation is the final stage of geotechnical design, quality assurance observation during construction by Langan Treadwell Rollo will be necessary to confirm the design assumptions and design elements, to maintain our continuity of responsibility on this project, and allow us to make changes to our recommendations, as necessary.

LIMITATIONS

The conclusions and recommendations provided in this preliminary geotechnical report result from our interpretation of the geotechnical conditions from our preliminary investigation. Actual subsurface conditions may vary.

Environmental issues (such as permitting or potentially contaminated soil and groundwater) are outside the scope of this study and should be addressed in a separate evaluation.

We trust the foregoing provides the information needed at this time. Should you have any questions, please call.

Sincerely,
Langan Treadwell Rollo

---------------	-----------------------	----------

- I **Not felt by people, except under especially favorable circumstances. However, dizziness or nausea may be experienced.**
Sometimes birds and animals are uneasy or disturbed. Trees, structures, liquids, bodies of water may sway gently, and doors may swing very slowly.
- II **Felt indoors by a few people, especially on upper floors of multi-story buildings, and by sensitive or nervous persons.**
As in Grade I, birds and animals are disturbed, and trees, structures, liquids and bodies of water may sway. Hanging objects swing, especially if they are delicately suspended.
- III **Felt indoors by several people, usually as a rapid vibration that may not be recognized as an earthquake at first. Vibration is similar to that of a light, or lightly loaded trucks, or heavy trucks some distance away. Duration may be estimated in some cases.**
Movements may be appreciable on upper levels of tall structures. Standing motor cars may rock slightly.
- IV **Felt indoors by many, outdoors by a few. Awakens a few individuals, particularly light sleepers, but frightens no one except those apprehensive from previous experience. Vibration like that due to passing of heavy, or heavily loaded trucks. Sensation like a heavy body striking building, or the falling of heavy objects inside.**
Dishes, windows and doors rattle; glassware and crockery clink and clash. Walls and house frames creak, especially if intensity is in the upper range of this grade. Hanging objects often swing. Liquids in open vessels are disturbed slightly. Stationary automobiles rock noticeably.
- V **Felt indoors by practically everyone, outdoors by most people. Direction can often be estimated by those outdoors. Awakens many, or most sleepers. Frightens a few people, with slight excitement; some persons run outdoors.**
Buildings tremble throughout. Dishes and glassware break to some extent. Windows crack in some cases, but not generally. Vases and small or unstable objects overturn in many instances, and a few fall. Hanging objects and doors swing generally or considerably. Pictures knock against walls, or swing out of place. Doors and shutters open or close abruptly. Pendulum clocks stop, or run fast or slow. Small objects move, and furnishings may shift to a slight extent. Small amounts of liquids spill from well-filled open containers. Trees and bushes shake slightly.
- VI **Felt by everyone, indoors and outdoors. Awakens all sleepers. Frightens many people; general excitement, and some persons run outdoors.**
Persons move unsteadily. Trees and bushes shake slightly to moderately. Liquids are set in strong motion. Small bells in churches and schools ring. Poorly built buildings may be damaged. Plaster falls in small amounts. Other plaster cracks somewhat. Many dishes and glasses, and a few windows break. Knickknacks, books and pictures fall. Furniture overturns in many instances. Heavy furnishings move.
- VII **Frightens everyone. General alarm, and everyone runs outdoors.**
People find it difficult to stand. Persons driving cars notice shaking. Trees and bushes shake moderately to strongly. Waves form on ponds, lakes and streams. Water is muddied. Gravel or sand stream banks cave in. Large church bells ring. Suspended objects quiver. Damage is negligible in buildings of good design and construction; slight to moderate in well-built ordinary buildings; considerable in poorly built or badly designed buildings, adobe houses, old walls (especially where laid up without mortar), spires, etc. Plaster and some stucco fall. Many windows and some furniture break. Loosened brickwork and tiles shake down. Weak chimneys break at the roofline. Cornices fall from towers and high buildings. Bricks and stones are dislodged. Heavy furniture overturns. Concrete irrigation ditches are considerably damaged.
- VIII **General fright, and alarm approaches panic.**
Persons driving cars are disturbed. Trees shake strongly, and branches and trunks break off (especially palm trees). Sand and mud erupts in small amounts. Flow of springs and wells is temporarily and sometimes permanently changed. Dry wells renew flow. Temperatures of spring and well waters varies. Damage slight in brick structures built especially to withstand earthquakes; considerable in ordinary substantial buildings, with some partial collapse; heavy in some wooden houses, with some tumbling down. Panel walls break away in frame structures. Decayed pilings break off. Walls fall. Solid stone walls crack and break seriously. Wet grounds and steep slopes crack to some extent. Chimneys, columns, monuments and factory stacks and towers twist and fall. Very heavy furniture moves conspicuously or overturns.
- IX **Panic is general.**
Ground cracks conspicuously. Damage is considerable in masonry structures built especially to withstand earthquakes; great in other masonry buildings - some collapse in large part. Some wood frame houses built especially to withstand earthquakes are thrown out of plumb, others are shifted wholly off foundations. Reservoirs are seriously damaged and underground pipes sometimes break.
- X **Panic is general.**
Ground, especially when loose and wet, cracks up to widths of several inches; fissures up to a yard in width run parallel to canal and stream banks. Landsliding is considerable from river banks and steep coasts. Sand and mud shifts horizontally on beaches and flat land. Water level changes in wells. Water is thrown on banks of canals, lakes, rivers, etc. Dams, dikes, embankments are seriously damaged. Well-built wooden structures and bridges are severely damaged, and some collapse. Dangerous cracks develop in excellent brick walls. Most masonry and frame structures, and their foundations are destroyed. Railroad rails bend slightly. Pipe lines buried in earth tear apart or are crushed endwise. Open cracks and broad wavy folds open in cement pavements and asphalt road surfaces.
- XI **Panic is general.**
Disturbances in ground are many and widespread, varying with the ground material. Broad fissures, earth slumps, and land slips develop in soft, wet ground. Water charged with sand and mud is ejected in large amounts. Sea waves of significant magnitude may develop. Damage is severe to wood frame structures, especially near shock centers, great to dams, dikes and embankments, even at long distances. Few if any masonry structures remain standing. Supporting piers or pillars of large, well-built bridges are wrecked. Wooden bridges that "give" are less affected. Railroad rails bend greatly and some thrust endwise. Pipe lines buried in earth are put completely out of service.
- XII **Panic is general.**
Damage is total, and practically all works of construction are damaged greatly or destroyed. Disturbances in the ground are great and varied, and numerous shearing cracks develop. Landslides, rock falls, and slumps in river banks are numerous and extensive. Large rock masses are wrenched loose and torn off. Fault slips develop in firm rock, and horizontal and vertical offset displacements are notable. Water channels, both surface and underground, are disturbed and modified greatly. Lakes are dammed, new waterfalls are produced, rivers are deflected, etc. Surface waves are seen on ground surfaces. Lines of sight and level are distorted. Objects are thrown upward into the air.

Memorandum

To	Peterson Z. Vollmann, Planner III	Page	1
Subject	Greenhouse Gases and Climate Change Screening Analysis – Broadstone on Broadway Project		
From	Michael Kay, Project Manager		
Date	May 8, 2016		

This memorandum contains the greenhouse gas (GHG) emissions analysis for the Broadstone on Broadway Project (Project) to determine the applicability of the requirements under Broadway Valdez District Specific Plan (BVDSP) Area Environmental Impact Report (EIR). AECOM assessed the applicability of Standard Condition of Approval (SCA) 38 (equivalent to SCA F referenced in the BVDSP EIR).

SCA 38 – GHG Reduction Plan

SCA 38 requires project applicants develop a GHG Reduction Plan for City Approval, and requires implementation of the approved GHG Reduction Plan. SCA 38 applies under any of the following scenarios for projects which result in a net increase in GHG emissions:

- a. Scenario A: Projects which (a) involve a land use development (i.e., a project that does not require a permit from the Bay Area Air Quality Management District [BAAQMD] to operate), (b) exceed the GHG emissions screening criteria contained in the BAAQMD CEQA Guidelines, and (c) after a GHG analysis is prepared would produce total GHG emissions of more than 1,100 metric tons of CO₂e annually and more than 4.6 metric tons of CO₂e per service population annually (with “service population” defined as the total number of employees and residents of the project).
- b. Scenario B: Projects which (a) involve a land use development, (b) exceed the GHG emissions screening criteria contained in the BAAQMD CEQA Guidelines, (c) after a GHG analysis is prepared would exceed at least one of the BAAQMD Thresholds of Significance (more than 1,100 metric tons of CO₂e annually OR more than 4.6 metric tons of CO₂e per service population annually), and (d) are considered to be “Very Large Projects.”
- c. Scenario C: Projects which (a) involve a stationary source of GHG (i.e., a project that requires a permit from BAAQMD to operate) and (b) after a GHG analysis is prepared would produce total GHG emissions of more than 10,000 metric tons of CO₂e annually.

The Project would not involve a stationary source of GHG emissions, and therefore, Scenario C does not apply. Scenarios A and B may be applicable to the Project, as the Project involves a land use development. The Project includes the development of 218 residential dwelling units and

18,000 square feet of retail space. The residential land use of the Project exceeds the BAAQMD GHG emissions screening size of 87 dwelling units for mid-rise apartments¹. To further evaluate the applicability of Scenarios A and B, a GHG analysis was prepared to determine if the Project would meet the criteria of Scenario A condition (c) or Scenario B condition (c). The GHG analysis evaluated the Project against the BAAQMD annual threshold of significance of 1,100 metric tons of CO₂e² per year, and the BAAQMD GHG efficiency metric threshold of 4.6 metric tons of CO₂e per service population per year.

GHG Emissions Analysis

GHG emissions from Project construction and operation were estimated using the most recent version of the CalEEMod emissions modeling software (CalEEMod 2013.2.2).

Project construction would generate GHG emissions from the use of off-road construction equipment, hauling truck activity, and construction worker vehicle trips. Emissions from the construction of Phase 1 and Phase 2 of the Project were estimated. Phase 1 construction was assumed to begin in January 2017 ; Phase 2 construction was assumed to begin in January 2018. Project specific information, such as number of units, building square footage, site acreage, and land use type, was used where available. CalEEMod default construction phasing and schedules were used in the analysis, as Project specific-construction equipment schedules were not available. Further modeling details and assumptions can be found in the CalEEMod outputs included in Attachment A.

Project operations would generate GHG emissions from on-road vehicle activity, area sources (such as on-site fuel combustion), energy usage, waste disposal, and water usage. Phase 1 operational emissions were calculated for an assumed opening year of 2019; Phase 2 operational emissions were calculated for an assumed opening year of 2020. Project-specific trip generation rates were used in the analysis (Fehr & Peers 2016). These trip generation rates account for the trip reductions from the removal of the existing auto dealership, and therefore represent the net new Project trips. GHG intensity factors for PG&E electricity were updated to the latest available emissions data (The Climate Registry 2013). This is consistent with the calculation methods used in the GHG analysis of the BVDSP EIR. CalEEMod defaults for area sources and energy usage were used in the analysis, as Project-specific data for these inputs were not available. Further modeling details and assumptions can be found in the CalEEMod outputs included in Attachment A.

Project construction and operational GHG emissions are shown in Table 1. For comparison with the BAAQMD annual threshold of 1,100 metric tons of CO₂e per year, annual operational emissions from Phase 1 and Phase 2 were totaled. Construction emissions were amortized over the lifetime of the Project (assumed to be 40 years based on the GHG analysis assumptions contained in the BVDSP EIR), and the amortized emissions were added to the operational emissions to develop an annual GHG emission rate for the total Project.

¹ Note that the City's Housing Element EIR also contains screening criteria for residential development projects of 172 units. The project's residential component exceeds the City's screening criteria as well as the BAAQMD screening size.

² To account for the warming potential of different GHGs, emissions are often quantified and reported as CO₂ equivalents (CO₂e). With the warming potential of CO₂ set at a reference value of 1, CH₄ has a warming potential of 25 (i.e., one ton of methane has the same warming potential as 25 tons of CO₂ [IPCC 2007]), while N₂O has a warming potential of 298.

For comparison with the BAAQMD service population threshold of 4.6 metric tons of CO₂e per service population per year, the annual GHG emission rate for the total Project was divided by the service population of the Project. The service population used in this analysis was conservatively based on the number of residents, estimated by CalEEMod to be 623 residents for the total Project. This service population value does not include the number of employees, as an employee estimate was not available. This provides a more conservative estimate because if employees were included in the service population, the Project’s emissions per service population per year would be lower than the value shown in Table 1.

Table 1: Project Construction and Operational GHG Emissions

Category	CO₂e Emissions (metric tons)
Construction GHG Emissions	
Phase 1	522.3
Phase 2	113.1
<i>Total Construction GHG Emissions</i>	635.4
<i>Amortized Construction GHG Emissions (metric tons/year)</i>	15.9
Operational GHG Emissions	
Phase 1 Annual Emissions (metric tons/year)	771.3
Phase 2 Annual Emissions (metric tons/year)	278.3
<i>Total Annual Operational Emissions (metric tons/year)</i>	1,049.5
Total Project GHG Emissions	
Total Annual GHG Emissions (metric tons/year)	1,065.4
Total Service Population (residents + employees)	623
Total Project GHG Emissions by Service Population (metric tons/SP/yr)	1.71
Notes:	
a. Amortized construction GHG emissions were calculated assuming a 40-year Project lifetime.	
b. Total annual GHG emissions were calculated as the sum of operational annual emissions (Phase 1 and Phase 2) and amortized construction GHG emissions.	
c. Total service population shown only includes residents, as employee estimates were not available.	

As shown in Table 1, the total Project annual GHG emissions of 1,065.4 metric tons of CO₂e per year would not exceed the BAAQMD threshold of 1,100 metric tons of CO₂e per year. The Project’s GHG efficiency metric of 1.71 metric tons of CO₂e per service population per year would not exceed the BAAQMD threshold of 4.6 metric tons of CO₂e per service population per year.

Because the Project would not exceed either of the BAAQMD thresholds, Scenario A condition (c) and Scenario B condition (c) do not apply. Therefore, SCA 38 does not apply, and a GHG Reduction Plan is not required.

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Consistent with BVDSP EIR GHG analysis, updated PG&E CO2 intensity factor has been used. Latest available data from The Climate Registry has been used (year 2013).

Land Use - Total Phase 1 lot acreage included in Residential land use. Residential land use includes residential, circulation, and amenity square footage.

Construction Phase - Construction anticipated to start in January 2017. Default CalEEMod construction schedule and activity used.

Demolition - Demolition amount distributed between phases based on site acreage.

Grading - Soil off-haul amount distributed between phases based on site acreage.

Architectural Coating -

Vehicle Trips - Project specific trip generation used. Trips from existing uses have been removed from the residential trips to represent the net increase in trips.

Woodstoves - Assumed no woodstoves. Assumed all fireplaces would be natural gas fired, no wood fireplaces.

Energy Use -

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Enclosed Parking with Elevator	56.00	Space	0.00	12,861.00	0
Apartments Mid Rise	47.00	Dwelling Unit	0.30	46,000.00	134
Regional Shopping Center	6.41	1000sqft	0.00	6,412.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	63
Climate Zone	5	Operational Year	2020		
Utility Company	User Defined				
CO2 Intensity (lb/MW hr)	427.27	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Consistent with BVDSP EIR GHG analysis, updated PG&E CO2 intensity factor has been used. Latest available data from The Climate Registry has been used (year 2013).

Land Use - Total Phase 2 lot acreage included in Residential land use. Residential land use includes residential and circulation square footage.

Construction Phase - Construction anticipated to start in January 2018. Default CalEEMod construction schedule and activity used.

Demolition - Demolition amount distributed between phases based on site acreage.

Grading - Soil off-haul amount distributed between phases based on site acreage.

Architectural Coating -

Vehicle Trips - Project specific trip generation used. Trips from existing uses have been removed from the residential trips to represent the net increase in trips.

Woodstoves - Assumed no woodstoves. Assumed all fireplaces would be natural gas fired, no wood fireplaces.

Energy Use -

Subject: **Phase I Environmental Site Assessment Report**
2800, 2820, and 2855 Broadway, Oakland, CA
Alameda County LOP No. RO 3198

Dear Mr. Stivala:

I have reviewed and approved the subject report. Please submit it to the regulatory agencies listed in the distribution section of the report. Should any of the agencies require it, I am prepared to declare, under penalty of perjury, that to the best of my knowledge, the information contained in the report is true and correct.

Sincerely,

A handwritten signature in black ink, appearing to be "PS", is written above a horizontal line.

1.0 EXECUTIVE SUMMARY

1.1 General Information

Project Information:

Premier Hyundai of Oakland
ATC Project No. 118EM01075

Consultant Information:

ATC Group Services LLC
2400 Camino Ramon, Suite 360
San Ramon, California 94583

Telephone: (925) 460-5300

Fax: (925) 328-1090

Reconnaissance Date: August 6, 2015

Site Assessor: Kim Thai

Senior Reviewer: Gabriel Stivala

Environmental Professional: Gabriel Stivala

Site Information:

Premier Hyundai of Oakland
2800, 2820, and 2855 Broadway
Oakland, California 94611
Alameda County

Site Access Contact:

Mr. Samir Rohayem
General Manager, Volkswagen of Oakland

Client Information:

Alliance Realty Partners, LLC
Peter Solar, Managing Director
477 Pacific Avenue, Suite One
San Francisco, California 94133
P: (415) 773-6150 ext. 105
C: (925) 570-0815

Environmental Professional Statement:

We declare that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in § 312.10 part of 40 CFR 312. We have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Kim Thai, Staff Scientist
Site Assessor

Audrey Lundin, Due Diligence Services Manager
Project Manager / Environmental Professional

Senior Reviewer / Environmental Professional

Andrew Stuart
National Program Manager

PHASE I ENVIRONMENTAL SITE ASSESSMENT
Premier Hyundai of Oakland
2800, 2820, and 2855 Broadway
Oakland, California 94611

1.2 Findings and Conclusions Summary

ATC has performed this Phase I Environmental Site Assessment (ESA) of the property in conformance with the scope and limitations of ASTM Standard Practice E1527-13. Any exceptions to, or deletions from, this practice are described in Section 2.0 of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the property, except as noted in the summary of report findings and conclusions below:

FINDINGS AND CONCLUSIONS SUMMARY						
Report Section	Further Action?	De minimis Condition	REC and/or CREC	Historical REC	ASTM Non-Scope Condition	Description
4.0	User Provided Information	Yes	X			See Note (1).
5.1.1	Federal Database Findings	Yes	X			See Notes (1) and (2).
5.1.2	State and Tribal Database Findings	No				
5.1.3	Local Environmental Record Sources	No				
5.3	Historical Records Sources	No				
6.2	Hazardous Substance Use, Storage and Disposal	Yes	X			See Note (1).
6.3	Underground Storage Tanks	No				
6.4	Aboveground Storage Tanks	No				
6.5	Other Petroleum Products	No				
6.6	Polychlorinated Biphenyls (PCBs)	No				
6.7	Unidentified Substance Containers	No				
6.8	Nonhazardous Solid Waste	No				
6.9	Wastewater	No				
6.10	Waste Pits, Ponds and Lagoons	No				
6.11	Drains and Sumps	No				
6.12	Septic Systems	No				
6.13	Stormwater Management System	No				
6.14	Wells	No				
7.0	Subsurface Vapor Migration	No	X			See Note (3).
8.0	Interviews	No				
9.1	Asbestos-Containing Material (ACM)	No			X	See Note (4).
9.2	Radon	No				
9.3	Lead in Drinking Water	No				
9.4	Lead-Based Paint (LBP)	No			X	See Note (4).
9.5	Mold Screening	No				
9.6	Additional User Requested Services	No				

Note (1): The User provided a prior limited Phase II report prepared by AEI Consultants, which indicated soil investigation was conducted; however, ATC notes that the absence of groundwater investigation warrants additional soil and groundwater assessment at the property based on the current and former automobile use and disposal of various wastes, which are considered to represent a *recognized environmental condition* to the property. Please see Section 5.3.9 for further discussion.

Note (2): The federal database listings indicate that the south-adjacent site, Volkswagen of Oakland, had onsite USTs that released gasoline and impacted soil and groundwater. Additionally, a chlorinated solvent plume originating upgradient of the Volkswagen facility was identified. The listing received regulatory case closure in May 2015, and no site management requirements appear necessary. According to the case closure report, trichloroethene (TCE) was detected in groundwater at concentrations up to 2,100 micrograms per liter (µg/l) in one of the groundwater monitoring wells measured in 1993. TCE was measured at a concentration of 960 µg/l in April 2013 from one of the groundwater samples. The case closure letter indicated that the groundwater plume has not fully delineated to the north, but is stable and decreasing. Although subsurface investigation on the subject property did not identify impacts in the locations near the Volkswagen facility, it is possible that some impacts may be identified at the property associated with these releases, and therefore this facility's listings are considered a *recognized environmental concern* to the property. Please see Section 5.1.1 for further discussion.

Note (3): The current and former automotive uses of the property, and the remaining contaminants at the south-adjointing site of 2740 Broadway, suggest that vapor issues should be considered. ATC understands that there will be no slab-on-grade residential units at the property. The potential for vapor encroachment conditions (VECs) at the property is considered to represent a *recognized environmental condition*.

Note (4): Based on the construction date of the property buildings at 2800 and 2820 Broadway (circa 1916), there is potential for LBP and ACM to be present at the property. Building materials and painted surfaces were observed to be in generally fair to good condition at the time of the site visit. All suspect ACMs and LBP should be properly assessed prior to disturbance.

1.3 Significant Data Gap Summary

Data gaps may have been encountered during the performance of this Phase I ESA and are discussed within the section of the report where they were encountered. However, according to ASTM Standard Practice E1527-13, data gaps are only significant if "other information and/or professional experience raise reasonable concerns involving the data gap." The following is a summary of *significant data gaps* identified in this report.

SIGNIFICANT DATA GAP SUMMARY		
Report Section		Description
3.5	Current Uses of Adjoining Properties	No <i>significant data gap</i> identified.
4.2	Environmental Liens or Activity and Use Limitations (AULs)	No <i>significant data gap</i> identified.
5.1	Standard Environmental Records	No <i>significant data gap</i> identified.
5.2	Physical Setting Sources	No <i>significant data gap</i> identified.
5.3	Historical Records Sources	No <i>significant data gap</i> identified.
6.1	Methodology and Limiting Conditions	No <i>significant data gap</i> identified.
8.0	Interviews	No <i>significant data gap</i> identified.

1.4 Recommendations

Based on information collected from the Phase I ESA, ATC offers the following recommendations:

- ATC recommends a soil and groundwater investigation at the site to determine potential residual impacts to the property.
- ATC recommends appropriate management, assessment and/or abatement of suspect ACM and LBP prior to and in connection with the demolition of the property structures.

2.0 INTRODUCTION

2.1 Purpose

The purpose of this Phase I ESA was to identify recognized environmental conditions in connection with the property at the time of the site reconnaissance. The scope of work for this Phase I ESA may also include certain potential environmental conditions beyond the scope of ASTM Standard Practice E1527-13 as listed below. This report documents the findings, opinions and conclusions of the Phase I ESA.

2.2 Scope

This Phase I ESA was conducted in general accordance with the ASTM Standard Practice E1527-13, consistent with a level of care and skill ordinarily practiced by the environmental consulting profession currently providing similar services under similar circumstances. Significant additions, deletions or exceptions to ASTM Standard Practice E1527-13 are noted below or in the corresponding sections of this report. The scope of this assessment included an evaluation of the following:

- Physical setting characteristics of the property through a review of referenced sources such as topographic maps and geologic, soils and hydrologic reports.
- Usage of the property, adjoining properties and surrounding area through a review of referenced historical sources such as land title records, fire insurance maps, city directories, aerial photographs, prior reports and interviews.
- Observations and interviews regarding current property usage and conditions including: the use, treatment, storage, disposal or generation of hazardous substances, petroleum products, hazardous wastes, nonhazardous solid wastes and wastewater.
- Usage of adjoining and surrounding area properties and the likely impact of known or suspected releases of hazardous substances or petroleum products from those properties in, on or at the property.
- Information in referenced environmental agency databases and local environmental records, within the specified approximate minimum search distance from the property.
- Potential for subsurface vapor migration in, on or at the property as described in Section 7.0.

The scope of the assessment also included consideration of the following potential environmental issues or conditions that are beyond the scope of ASTM Standard Practice E1527-13:

- The scope of work for the Mold Screening was intended to be consistent with ASTM E 2418-06: Standard Guide for Readily Observable Mold and Conditions Conducive to Mold in Commercial Buildings: Baseline Survey Process. The scope of work, including potential deviations from the Standard Guide, is described as follows. The interview was limited to at least one knowledgeable person from property management or engineering staff. The document review was limited to only those relevant documents made readily available to ATC in a timely manner. The physical observations were limited to certain Heating, Ventilation and Air Conditioning (HVAC) system areas and other readily accessible building areas likely to become subject to water damage, plumbing leaks, and flooding. Unless noted otherwise herein, ATC observed the HVAC equipment room(s) and accessible mechanical rooms and, in buildings with package units in the ceiling, at least one unit per floor. Also, unless noted otherwise, ATC observed accessible areas of the basement (or lowest level), the top floor, the roof (including any penthouse areas) and at least one mid-level floor (if applicable). For multi-story buildings, the total number of floors observed (inclusive of those

already mentioned) was intended to be up to 10% of the total number of floors (if readily accessible). For hotel and multi-family buildings, ATC targeted the lowest and highest levels and roof as described above and up to 10% of units, including one per floor if readily accessible. The Mold Screening did not include destructive methods of observation. No sampling or laboratory analyses were conducted. The Mold Screening service as described herein was limited in scope and by the time and cost considerations typically associated with performing a Phase I ESA. No method can guarantee that a hazard will be discovered if evidence of the hazard is not encountered within the performance of the Mold Screening as authorized and that opinions and conclusions must, out of necessity, be extrapolated from limited information and discrete, non-continuous data points. Unidentified mold or other microbial conditions may exist on the property.

- Visual observation of suspect asbestos-containing materials (ACM), consisting of providing an opinion on the condition of suspect ACM on the property based upon visual observation during the site reconnaissance. No sampling of suspect ACM was conducted.
- Radon document review, consisting of the review of published radon data with regard to the potential for elevated levels of radon gas in the surrounding area of the property. No radon sampling was conducted.
- Lead in Drinking Water Data review, consisting of contacting the water supplier for information regarding whether or not the potable water provided to the property meets the drinking water standards for lead.
- Visual observation of Lead-based paint (LBP), consisting of providing an opinion on the potential for suspect LBP based on the construction date of buildings on the property and visual observation of the condition of suspect LBP.
- Wetlands document review, consisting of a review of a current National Wetlands Inventory map of the surrounding area to note if the property is identified as having a wetland.
- Flood plain document review, consisting of a review of a reasonably ascertainable flood plain map of the surrounding area to note if the property is identified as being located within a flood plain.
- Regulatory Agency File and Records Review, consisting of conducting a file review (i.e., via Freedom of Information Act (FOIA) request or alternative method/source) for the property and/or one adjoining property at one regulatory agency, as warranted by the findings of the ESA.

2.3 Significant Assumption

The assumptions in this report were not considered as having significant impact on the determination of *recognized environmental conditions* associated with the property.

2.4 Limitations and Exceptions

ATC has prepared this Phase I ESA report using reasonable efforts to identify *recognized environmental conditions* associated with hazardous substances or petroleum products in, on or at the property. Findings contained within this report are based on information collected from observations made on the day(s) of the site reconnaissance and from reasonably ascertainable information obtained from certain public agencies and other referenced sources.

The ASTM Standard Practice E1527-13 recognizes inherent limitations for Phase I ESAs, including, but not limited to:

- *Uncertainty Not Eliminated* – A Phase I ESA cannot completely eliminate uncertainty regarding the potential for *recognized environmental conditions* in connection with any property.
- *Not Exhaustive* – A Phase I ESA is not an exhaustive investigation of the property and environmental conditions on such property.
- *Past Uses of the Property* – Phase I requirements only require review of standard historical sources at five year intervals. Therefore, past uses of property at less than five year intervals may not be discovered.

Users of this report may refer to ASTM Standard Practice E1527-13 for further information regarding these and other limitations. This report is not definitive and should not be assumed to be a complete and/or specific definition of all conditions above or below grade. Current subsurface conditions may differ from the conditions determined by surface observations, interviews and reviews of historical sources. The most reliable method of evaluating subsurface conditions is through intrusive techniques, which are beyond the scope of this report. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, or other property construction purposes. Any use of this report by any party, beyond the scope and intent of the original parties, shall be at the sole risk and expense of such user.

ATC makes no representation or warranty that the past or current operations at the property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes. This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated. Regardless of the findings stated in this report, ATC is not responsible for consequences or conditions arising from facts not fully disclosed to ATC during the assessment.

An independent data research company provided the government agency database referenced in this report. Information on surrounding area properties was requested for approximate minimum search distances and is assumed to be correct and complete unless obviously contradicted by ATC's observations or other credible referenced sources reviewed during the assessment. ATC shall not be liable for any such database firm's failure to make relevant files or documents properly available, to properly index files, or otherwise to fail to maintain or produce accurate or complete records.

ATC makes no warranty, guarantee or certification regarding the quality, accuracy or reliability of any prior report provided to ATC and discussed in this Phase I ESA report. ATC expressly disclaims any and all liability for any errors or omissions contained in any prior reports provided to ATC and discussed in this Phase I ESA report.

ATC used reasonable efforts to identify evidence of aboveground and underground storage tanks and ancillary equipment on the property during the assessment. "Reasonable efforts" were limited to observation of accessible areas, review of referenced public records and interviews. These reasonable efforts may not identify subsurface equipment or evidence hidden from view by things including, but not limited to, snow cover, paving, construction activities, stored materials and landscaping.

Any estimates of costs or quantities in this report are approximations for commercial real estate transaction due diligence purposes and are based on the findings, opinions and conclusions of this assessment, which are limited by the scope of the assessment, schedule demands, cost constraints, accessibility limitations and other factors associated with performing the Phase I ESA. Subsequent determinations of costs or quantities may vary from the estimates in this report. The estimated costs or quantities in this report are not intended to be used for financial disclosure related to the Financial Accounting Standards Board (FASB) Statement No. 143, FASB Interpretation No. 47, Sarbanes/Oxley Act or any United States Securities and Exchange Commission reporting obligations, and may not be used for such purposes in any form without the express written permission of ATC.

ATC is not a professional title insurance or land surveyor firm and makes no guarantee, express or implied, that any land title records acquired or reviewed in this report, or any physical descriptions or depictions of the property in this report, represent a comprehensive definition or precise delineation of property ownership or boundaries.

The Environmental Professional Statement in Section 1.1 of this report does not “certify” the findings contained in this report and is not a legal opinion of such *Environmental Professional*. The statement is intended to document ATC’s opinion that an individual meeting the qualifications of an Environmental Professional was involved in the performance of the assessment and that the activities performed by, or under the supervision of, the *Environmental Professional* were performed in conformance with the standards and practices set forth in 40 CFR Part 312 per the methodology in ASTM Standard Practice E1527-13 and the scope of work for this assessment.

Per ASTM Standard Practice E1527-13, Section 6, User Responsibilities, the User of this assessment has specific obligations for performing tasks during this assessment that will help identify the possibility of *recognized environmental conditions* in connection with the property. Failure by the User to fully comply with the requirements may impact their ability to use this report to help qualify for *Landowner Liability Protections* (LLPs) under Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). ATC makes no representations or warranties regarding a User’s qualification for protection under any federal, state or local laws, rules or regulations.

In accordance with the ASTM Standard Practice E1527-13, this report is presumed to be valid for a six month period. If the report is older than six months, the following information must be updated in order for the report to be valid: (1) regulatory review, (2) site visit, (3) interviews, (4) specialized knowledge and (5) environmental liens search. Reports older than one year may not meet the ASTM Standard Practice E1527-13 and therefore, the entire report must be updated to reflect current conditions and property-specific information.

Other limitations and exceptions that are specific to the scope of this report may be found in corresponding sections. If there are any conflicts between any Limitations and Exceptions in this Report and the Master Environmental Consulting Agreement between Alliance and ATC, dated January 26, 2015, the Master Agreement shall control.

2.5 Special Terms and Conditions (User Reliance)

This report is for the use and benefit of, and may be relied upon by, Alliance Realty Partners, LLC, Alliance Residential Company, the Alliance-affiliated entity that acquires ownership of the property, and any of their affiliates, and third parties authorized in writing by Alliance Realty Partners, LLC, Alliance Residential Company and ATC, including the lender(s) in connection with a secured financing of the Property, and their respective successors and assigns. Any third party agrees by accepting this report that any use or reliance on this report shall be limited by the exceptions and limitations in this report, and with the acknowledgment that actual site conditions may change with time, and that hidden conditions may exist at the Property that were not discovered within the authorized scope of the assessment.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The property consists of three irregularly-shaped parcels, comprising approximately 1.42 acres in area, and is located at 2800, 2820, and 2855 Broadway, Oakland, Alameda County, California, 94611. According to information obtained from the Alameda County Assessor's Office, the property is identified as Assessor's Parcel Number (APN) 09-685-68 (2800 Broadway), 09-685-69-1 (2820 Broadway), and 09-686-03 (2855 Broadway). The Site Vicinity Map is located in Appendix A. The Site Plan is located in Appendix B. Site Photographs are provided in Appendix C.

3.2 Surrounding Area General Characteristics

The property is located within Alameda County in an area characterized by commercial and residential uses. Surface topography across the property and in the surrounding area generally slopes toward the south. Specific adjacent and abutting properties are summarized in Section 3.5.

3.3 Current Use of the Property

The property consists of three parcels developed with a one-story and mezzanine commercial building at 2820 Broadway constructed circa 1916, a one-story and mezzanine commercial building used for storage at 2800 Broadway constructed circa 1916, and a parking lot for used automobiles at 2855 Broadway, situated on approximately 1.42 acres of land. Premier Hyundai of Oakland, an automobile dealership and service shop, occupies each of the property buildings. A showroom, offices, and a service shop with an asphalt-paved parking lot in the back are located on the property at 2820 Broadway. Storage for automobiles is located within the property building at 2800 Broadway.

3.4 Description of Property Improvements

The following table provides general descriptions of the property improvements.

PROPERTY IMPROVEMENTS	
Size of Property (approximate)	1.42 acres
General Topography of Property	The topography in the property vicinity is sloped generally to the south.
Adjoining and/or Access/Egress Roads	2800 Broadway: the property is accessed via Broadway to the west. 2820 Broadway: the property is accessed via Broadway to the west and Valdez Street to the northeast. 2855 Broadway: the property is accessed via Broadway to the east and Webster Street to the west.
Paved or Concrete Areas (including parking)	Concrete-paved and asphalt-paved parking and driveway areas.
Unimproved Areas	None
Landscaped Areas	Pockets of landscaping along perimeter of 2820 Broadway parking.
Surface Water	None
Potable Water Source	East Bay Municipal Utility District (EBMUD)
Sanitary Sewer Utility	EBMUD
Storm Sewer Utility	EBMUD
Electrical Utility	Pacific Gas and Electric Company (PG&E)
Natural Gas Utility	PG&E
Current Occupancy Status	Fully occupied
Unoccupied Buildings/Spaces/Structures	None (Building at 2800 Broadway is used as storage only)
Number of Occupied Buildings	Two (one used as a showroom and service shop, and one used as storage only)

PHASE I ENVIRONMENTAL SITE ASSESSMENT
Premier Hyundai of Oakland
2800, 2820, and 2855 Broadway
Oakland, California 94611

PROPERTY IMPROVEMENTS	
Building Name or General Building Description	Premier Hyundai of Oakland (2820 Broadway is a showroom and service shop, 2800 Broadway is an automobile storage, and 2855 Broadway is a used automobile lot).
Number of Floors	2800 Broadway: One with mezzanine 2820 Broadway: One with mezzanine
Total Square Feet of Space (approximate)	2800 Broadway: 13,207 2820 Broadway: 30,916 2855 Broadway: 17,543
Construction Completion Date (year)	Circa 1916
Construction Type	2800 Broadway: Reinforced concrete, steel and wood framed 2820 Broadway: Reinforced concrete, concrete masonry unit, steel and wood frame, and brick
Interior Finishes Description	2800 Broadway: Concrete, wallboard/joint compound 2820 Broadway: Concrete, wallboard/joint compound, vinyl floor tiles, ceramic floor tiles, and carpet
Exterior Finishes Description	2800 Broadway: Painted concrete 2820 Broadway: Painted concrete
Cooling System Type	None
Heating System Type	2800 Broadway: none 2820 Broadway: standalone heaters
Emergency Power	No

3.5 Current Uses of Adjoining Properties

Current uses of the adjoining properties were observed to be as follows:

Direction from Property	Address	Occupant(s) Name	Current Use	Potential Environmental Conditions
Northwest, beyond Webster Street	2849 Webster Street	Medical Hill Building	Medical offices	None identified.
North	2857 Broadway	4 Less Smog Check	Automobile service station	Refer to Section 5.1.2.
	2840 Broadway	Autotrends Body Shop	Automobile body shop	Refer to Section 5.1.2.
	2850 Broadway	Mark Morris Tires	Tire shop	Refer to Section 5.1.2.
Northeast	299 29 th Street	Frank Tires & Brakes	Automobile repair shop	Refer to Section 5.1.2.
	295 29 th Street	Collision Repair by Brooks	Automobile repair shop	Refer to Section 5.1.1.
East	280 28 th Street	Valdez Plaza	Senior living center	None identified.
Southeast	288 28 th Street	Broadway Smog Station	Automobile service station	Refer to Section 5.1.1.
South	2740 Broadway	Volkswagen of Oakland	Automobile dealership	Refer to Section 5.1.1.
Southwest	2801 Broadway	Infiniti of Broadway	Automobile dealership	None identified.
West	2808 Summit Street	Temple Sinai	House of worship	None identified.

The adjacent properties noted above having a potential environmental impact to the property are discussed in Sections 5.1.1 and 5.1.2.

4.0 USER PROVIDED INFORMATION

The following section summarizes information (if any) provided by Alliance Realty Partners, LLC (User) with regard to the Phase I ESA. Documentation may be found in Appendix D or where referenced in this report.

4.1 Title Records

The User provided no title records information.

4.2 Environmental Liens or Activity and Use Limitations (AULs)

The User provided no information regarding property environmental liens or activity and use limitations (AULs). ATC contracted Environmental Data Resources, Inc. (EDR) to perform an environmental lien search for the property. No existing environmental liens or AULs were identified in connection with the property parcels. A copy of the lien search report is provided in Appendix L. The review of the environmental lien and AUL search did not identify past uses indicating *recognized environmental conditions* in connection with the property.

4.3 Specialized Knowledge or Experience of the User

The User provided no specialized knowledge regarding *recognized environmental conditions* associated with the property.

4.4 Significant Valuation Reduction for Environmental Issues

The User provided no information regarding a significant valuation reduction for environmental issues associated with the property.

4.5 Owner, Property Manager and Occupant Information

The property owner and property manager is identified as M & M Property Co LLC. Premier Hyundai of Oakland is reportedly the occupant of the property.

4.6 Reason for Performing Phase I ESA

According to information provided by the User, this Phase I ESA will be used in connection with a commercial real estate transaction to identify *recognized environmental conditions* associated with the property.

4.7 Other User Provided Documents

Per the ASTM Standard Practice E1527-13 ATC obtained the documents listed below from User. Further discussion may be found in Section 5.3.9 and other relevant sections of this report.

OTHER USER PROVIDED DOCUMENTS		
Title	Date (if known)	Author
Client Questionnaire	August 3, 2015	Peter Solar
Limited Phase II Subsurface Investigation	April 27, 2015	AEI Consultants
Phase I Environmental Site Assessment, Vacant Commercial Property, 2800 Broadway, Oakland, Alameda County, California	November 15, 2011	SCHUTZE & Associates, Inc.
Phase I Environmental Site Assessment, 2820 Broadway, Oakland, California	October 17, 2011	ERAS Environmental, Inc.

5.0 RECORDS REVIEW

5.1 Standard Environmental Records

The regulatory agency database report discussed in this section, provided by EDR of Shelton, Connecticut, was reviewed for information regarding reported use or release of hazardous substances and petroleum products on or near the property. Unless otherwise noted, the information provided by the regulatory agency database report and other sources referenced in this report, were considered sufficient for *recognized environmental condition (REC)*, *controlled recognized environmental condition (CREC)*, *historical recognized environmental condition (HREC)* or *de minimis condition* determinations without conducting supplemental agency file reviews. ATC also reviewed the "unmappable" (also referred to as "orphan") listings within the database report, cross-referencing available address information and facility names. Unmappable sites are listings that could not be plotted with confidence, but are potentially in the general area of the property, based on the partial street address, city, or zip code. Any unmappable site that was identified by ATC as being within the approximate minimum search distance from the property, based on the site reconnaissance and/or cross-referencing to mapped listings, is included in the discussion within this section. The complete regulatory agency database report may be found in Appendix E.

The following is a summary of the findings of the database review.

SUMMARY OF FEDERAL, STATE AND TRIBAL DATABASE FINDINGS			
Regulatory Database	Approx. Minimum Search Distance	Property Listed?	# Sites Listed
Federal National Priority List (NPL)	1 mile	No	0
Federal Delisted NPL	½ mile	No	0
Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) list	½ mile	No	1
Federal CERCLIS No Further Remedial Action Planned (NFRAP)	½ mile	No	0
Federal Resource Conservation and Recovery Act (RCRA), Corrective Action facilities (CORRACTS)	1 mile	No	0
Federal RCRIS non- CORRACTS Treatment, Storage, and Disposal Facilities (TSD)	½ mile	No	0
Federal RCRA Generators (RCRA-LQG, RCRA-SQG, and RCRA-CESQG)	Property & Adjoining	No	3
Federal Institutional Control/Engineering Control Registry (US ENG CONTROLS)	Property	No	0
Federal Emergency Response Notification System (ERNS) list	Property	No	0
State and Tribal NPL (RESPONSE)	1 mile	No	3
State and Tribal CERCLIS (ENVIROSTOR)	½ mile	No	2
State and Tribal Landfill or Solid Waste Disposal Sites (SWF/LF)	½ mile	No	0
State and Tribal Leaking Underground Storage Tanks (LUST)	½ mile	No	58
State Spills, Leaks, Investigation and Cleanup (SLIC)	½ mile	No	14

5.1.1 Federal Agency Database Findings

The property was listed within the following federal databases. State database listings, corresponding to the property, are also discussed below.

Premier Hyundai of Oakland / Daewoo of Oakland / Bay Bridge Nissan / Oakland Volvo
2820 Broadway

Database: RCRA NonGen / NLR, FINDS, and HAZNET

Approximate Distance from the Property: N/A (Property)

Assumed Groundwater Gradient: N/A (Property)

Regulatory Data Summary: The Resource Conservation and Recovery Act Non-generator (RCRA NonGen/NLR) listing indicates that the facility named Saturn of Oakland does not presently generate hazardous waste, as dated in August 1997. The Facility Index System (FINDS) listing, associated with other listings, indicates that the property tenant was tracked by the RCRA database. According to the HAZNET listing, the tenant Premier Hyundai of Oakland disposed of various amounts of unspecified organic liquid mixture, unspecified solvent mixture, and aqueous solution with total organic residues less than 10 percent from 1994 to 1997. The HAZNET listing indicates that the former property tenant Daewoo of Oakland disposed of various amounts of aqueous solution with total organic residues less than 10 percent from 2000 to 2003. The HAZNET listing indicates that the former property tenant Bay Bridge Nissan disposed of 0.06 tons of hydrocarbon solvents in 2007. The HAZNET listing indicates that the former property tenant Oakland Volvo disposed of various amounts of unspecified oil-containing waste in 2000 and 2001. No violations were reported.

Discussion: The current and historical automobile repair usage and disposal of various wastes at the property are considered to represent a *recognized environmental condition*.

The following listings with a known or significant potential for release and impact in, on, or at the property were identified in the federal agency databases searched. State database listings, corresponding with identified facilities, are also discussed below.

City Garage Collision Repair / Collision Service Center of Oakland
295 29th Street

Databases: RCRA-SQG, FINDS, HAZNET, and EDR US Hist Auto Stat

Approximate Distance from the Property: Adjacent to the northeast

Assumed Groundwater Gradient: Upgradient/Cross-gradient

Regulatory Data Summary: The RCRA-SQG listing indicates that the facility was classified as a small quantity generator in 1996 under the name Coopers Auto Body & Frame with no violations found. The FINDS listing, associated with other listings, indicates the facility was tracked by the RCRA database. The HAZNET listing indicates the facility disposed of 0.01 tons of oxygenated solvents in 1993. No violations were found. The EDR US Hist Auto Stat database identifies the facility as a potential gas station, filling station, or service station establishment in the years 2002 to 2012 as City Garage Collision Repair / Collision Service Center of Oakland. No violations or releases were reported. ATC notes that the EDR US Hist Auto Stat database identifies the facility as a potential gas station or service station based on the EDR City Directory listing, but the facility is not included in any other database listings.

Discussion: Based on the absence of reported violations and releases, and the absence of other database listings, this listing is not considered to represent a *recognized environmental condition*.

Automotive Exchange Inc
288 28th Street

Databases: RCRA-SQG, FINDS, and EDR US Hist Auto Stat

Approximate Distance from the Property: Adjacent to the southeast

Assumed Groundwater Gradient: Downgradient/Cross-gradient

Regulatory Data Summary: The RCRA-SQG listing indicates that the facility was classified as a small quantity generator in 1996 under the name Automotive Exchange Service Inc. A violation pertaining to a generator was determined in August 1986. Compliance was achieved in January 1993. The FINDS listing, associated with other listings, indicates the facility was tracked by the RCRA database. The HAZNET listing indicates the facility disposed of 0.01 tons of oxygenated solvents in 1993. No violations were found. The EDR US Hist Auto Stat database lists the facility as a potential gas station, filling station, or service station establishment as Babb A L in 1933, Auto Exchange Inc in 1967, Broadway Full Auto Service & Smog in 2003, Auto Lab in 2004, 2005, and 2009, and as Broadway Smog Station from 2010 to 2012. No violations or releases were reported.

ATC reviewed available information from the RWQCB Geotracker website. No records were available for the facility.

Discussion: Based on the achieved compliance for the violation in 1993 for the RCRA-SQG listing, this listing does not represent a *recognized environmental condition*.

Broadway Volkswagen / M&M Automotive Group Inc / Smog Check Stations Oakland
2740 Broadway

Databases: LUST, HIST CORTESE, RCRA-SQG, FINDS, HAZNET, Alameda County CS, and EDR US Hist Auto Stat

Approximate Distance from the Property: Adjacent to the south

Assumed Groundwater Gradient: Upgradient (according to files on Geotracker)

Regulatory Data Summary: The EDR US Hist Auto Stat listing indicates that the facility was listed as a gas station/filling station/service station in 1943 as Cooper Nash Motor Co., in 1999 and 2000 as Smog Check Stations Oakland, and in 2001 and 2002 as M&M Automotive Group Inc. with no violations reported. The RCRA-SQG and FINDS listings indicate the facility is a small quantity generator in 1996 with no violations reported. The HAZNET listing indicates the facility disposed of various amounts of unspecified waste from 1993 through 2013 with no violations reported. The remaining listings pertain to a release of gasoline and TCE to the groundwater and soil during removal of four underground storage tanks (USTs) due to structure failure in August 1988. The four USTs include one 1,000-gallon waste oil UST near the garage at 27th Street, one 300-gallon waste oil gasoline UST beneath the sidewalk along Broadway, one 550-gallon gasoline UST beneath the sidewalk along 28th Street, and one 1,500-gallon gasoline UST beneath the sidewalk along 28th Street. Visual contamination was observed and detected in soil samples in the tank pits for the 550-gallon gasoline UST and the 1,500-gallon gasoline UST. A soil vapor and groundwater extraction system operated at the site from February 1996 through March 1998. Soil vapor

sampling was completed at the site in February 2014. The site was evaluated for case closure under the State Water Resources Control Board Low-Threat Underground Storage Tank Closure Policy and received case closure with no further investigation or cleanup for the fuel leak case on May 5, 2015.

ATC reviewed available information from the RWQCB Geotracker website. Available records indicate that although the groundwater flow direction for the region is to the general south, a Soil and Groundwater Investigation Report prepared by ARCADIS determined that the groundwater flow direction at the 2470 Broadway site was toward the west-northwest, indicating a hydrologic upgradient direction with respect to the property.

According to the case closure report, TCE was detected in groundwater at concentrations up to 2,100 micrograms per liter ($\mu\text{g/l}$) in one of the groundwater monitoring wells measured in 1993. The highest concentrations were detected in groundwater samples from three monitoring wells that were screened across the deeper, semi-confined aquifer. TCE was detected at significantly lower concentrations (typically less than 100 micrograms per liter) in groundwater samples collected from the shallower perched groundwater zone. Groundwater in the semi-confined aquifer appears to have cross-contaminated the shallow groundwater zone by migrating upwards through the monitoring wells that are completed in both zones. The TCE is suspected to be from an off-site source. Data from the ARCADIS report also indicated that concentrations of TPHg up to 12,000 $\mu\text{g/l}$ and of benzene up to 500 $\mu\text{g/l}$ were detected in shallow groundwater in the center of 28th Street, directly south of the subject property.

Monitoring wells MW-4, MW-5, and MW-6, which is the monitoring well located on 28th Street adjacent to the subject property, were destroyed in March 1994 to prevent further migration of TCE into shallow groundwater. The ARCADIS report indicated that the groundwater plume appeared to be stable and undergoing natural attenuation. The site was granted case closure consistent with low-threat UST closure policy, and no site management requirements were necessary; however, the case closure letter also indicates that the plume has not been fully delineated to the north.

Discussion: Based on the remaining contaminant levels in place at the facility and the upgradient hydrologic flow as indicated in groundwater investigation reports, the listings are considered to represent a *recognized environmental concern*.

European Motors, Limited
2915 Broadway

Databases: HIST CORTESE, LUST, CA FID UST, HIST UST, SWEEPS UST, Alameda County CS, RCRA-SQG, FINDS, and Notify 65

Approximate Distance from the Property: 438 feet to the north

Assumed Groundwater Gradient: Upgradient

Regulatory Data Summary: The RCRA-SQG listing indicates that the facility was classified as a small quantity generator in 1996 with no violations found. The FINDS listing, associated with other listings, indicates the facility was tracked by the RCRA database. The remaining listings pertain to a release of waste oil that impacted soil due to structure failure during a UST removal in 1989. Remediation occurred in 1990, and case closure was granted in 1992. According to the HIST UST listing, a 1,000-gallon unleaded product UST, a 500-gallon regular product UST, a 500-gallon waste oil UST, and a 4,000-gallon diesel UST were installed at the site in 1974 with stock inventor leak detection.

ATC reviewed available files on the RWQCB Geotracker website. Records indicate that remediation consisted of excavation of soil. RWQCB granted case closure in September 1992.

ATC reviewed available files on the ACDEH Local Oversight Program website. Available records indicate that low levels of petroleum hydrocarbon contamination were detected in soil samples following the removal of a 1,000-gallon diesel UST, the 500-gallon gasoline UST, and the 4,000-

gallon gasoline UST in November 1989. ATC notes that the reported contents of each UST are different from that reported through the EDR Radius Map Report. The highest amount detected was 60 milligrams per kilogram (mg/kg) of total petroleum hydrocarbons as waste oil (TPH waste oil). However, a water sample collected from the lower tank pit contained 1,500 mg/L of TPH as waste oil and 590 mg/L of Total Petroleum Hydrocarbons as diesel (TPHd). Approximately 23 cubic yards of contaminated soil was removed. Three groundwater monitoring wells were installed. Groundwater flow direction was to the southeast. Results of laboratory analyses of soil samples collected from the well borings indicated no detectable hydrocarbon contaminant to be present in the soil. Results of the laboratory analyses of water samples were non-detectable with the exception of 0.06 mg/L of TPHd detected in one well. The ACDEH granted case closure to the site in May 1992.

Discussion: Based on the closed LUST case and distance from the property, this listing does not represent a *recognized environmental condition*.

Oakland Dodge / Tracy Buick Inc. / Jack Tracy Buick / Dahl Chevrolet Co
2735 Broadway

Databases: HIST CORTESE, LUST, HIST UST, Alameda County CS, EDR US Hist Auto Stat, RCRA-SQG, FINDS, and HAZNET

Approximate Distance from the Property: 217 feet to the south

Assumed Groundwater Gradient: Downgradient

Regulatory Data Summary: The RCRA-SQG listing indicates that the facility was classified as a small quantity generator in 1986 with no violations found. The FINDS listing, associated with other listings, indicates the facility was tracked by the RCRA database. The EDR US Hist Auto Stat database lists the facility as a potential gas station, filling station, or service station establishment in 1943 as Dahl Chevrolet Co. No violations or releases were reported. According to the HAZNET listing, the facility disposed of various amounts of unspecified oil-containing waste and aqueous solution with total organic residues less than 10 percent in 1993. No violations were reported. The remaining listings pertain to a release of gasoline that impacted groundwater in 1991. The CA FID UST, SWEEPS UST, and HIST UST listings indicate that a 250-gallon waste oil UST, a 500-gallon waste oil UST, and a 1,000-gallon gasoline UST installed in 1985 and removed in 1989. The leak was discovered during UST removal and the cause was attributed to structure failure. Case closure was granted in 1995.

ATC reviewed available records from the RWQCB Geotracker database and the ACDEH LOP website. A tank removal reported dated October 1991 indicated that soil samples were collected and analyzed following the removal of the USTs and showed that concentrations of up to 2900 parts per million (ppm) of motor oil was detected at one soil boring. Groundwater sampled exhibited concentrations up to 510 parts per billion (ppb) of gasoline and 1200 ppb of motor oil. Records indicate that the 250-gallon waste oil UST was removed in 1989, and the 500-gallon waste oil UST was removed in 1991. Groundwater analysis after remediation indicated that concentrations of Total Petroleum Hydrocarbons as motor oil (TPHmo) and Total Petroleum Hydrocarbons as gasoline (TPHg) were non-detect. Soil sampling after remediation indicated up to 3300 mg/kg of TPHg and 5.3 mg/kg of benzene. According to the ACDEH, latent contamination of TPHg and benzene in soil remains in place at depth below 28th Street, but that based on four quarters of groundwater sampling and an evaluation of plausible exposure scenarios, such does not appear to pose a significant risk in terms of either potential future GW impact, or human exposure. The ACDEH granted case closure with no further action required on August 1995.

Discussion: Based on the regulatory case closure and downward hydrologic gradient with respect to the property, this listing does not represent a *recognized environmental condition*.

Chevron / Chevron #2506 / 92506
2630 Broadway

Databases: HIST CORTESE, LUST, SWEEPS UST, HIST UST, and Alameda County CS

Approximate Distance from the Property: 550 feet to the south

Assumed Groundwater Gradient: Downgradient

Regulatory Data Summary: The database listings indicate that the site was occupied by a used car sales/service facility in the 1950s. Two 7,500-gallon gasoline steel USTs, one 4,000-gallon gasoline steel UST, and one 1,000-gallon gasoline steel UST were installed at the property in 1962, 1971, 1974, and 1981, respectively. In 1982, these tanks were removed and replaced with a 1,000-gallon waste oil fiberglass UST and three 10,000-gallon gasoline fiberglass USTs in the western portion of the site. In 1983, a release of approximately 20 gallons of gasoline was detected east of the USTs and impacted soil and groundwater. Groundwater monitoring indicated that TPHg and benzene were detected in groundwater at concentrations up to 111,000 ppb and 3,200 ppb, respectively. Soil samples collected contained up to 90 ppm TPHg and no detectable concentrations of benzene. In 1998, the fuel service station was demolished, the three 10,000-gallon gasoline and one 1,000-gallon waste oil USTs were removed, and the site was paved. The paved lot has remained to the present day and the site is now occupied by Audi of Oakland car sales facility. Remediation involving the installation of oxygen reducing compound socks occurred in 1999. While groundwater monitoring results indicated a decrease in TPHg, an increase of methyl tert-butyl ether (MTBE) concentrations was observed. Additional soil borings were installed in 2007. Neither the soil samples nor the groundwater samples contained detectable concentrations of TPHg or benzene. MTBE was detected in grab groundwater samples at concentrations of 1 to 2 ppb. No further groundwater monitoring occurred between 1983 and 1992. Groundwater monitoring then restarted and occurred semi-annually from 1993 to the present. Concentrations up to 2,700 ppb TPHg and 7 ppb benzene were documented in the most recent groundwater monitoring event in September 2012. The groundwater monitoring wells were destroyed in 2013. The ACDEH granted case closure under the Low Threat Closure Policy in May 2014, with limited future land use to the current commercial land use without further investigation due to residual contamination related to a former presence at the site.

ATC reviewed available files on the RWQCB Geotracker website. Records indicate that old fill material consisting of burnt wood, bricks, ashes, and concrete was encountered during excavation of the USTs in 1998. Concrete footings and basement floor slabs were also discovered. The fill material and foundation appear to be associated with the former Sisters of Providence Hospital that existed at the site. Lead contamination was detected in the excavation at concentrations up to 6,800 ppm. The lead contamination is considered unrelated to the UST closure case, and a new case has been created for contamination related to the former hospital. According to the case closure letter, the groundwater plume is greater than 100 feet in length and Glen Echo Creek is 420 feet to the southeast from the edge of the hydrocarbon plume. However, the ACDEH granted case closure based on the stable and decreasing nature of the plume, the plume is less than 250 feet in length, there is no free product, the dissolved concentration of benzene is less than 1,000 ppb, the dissolved concentration of MTBE is less than 1,000 ppb, and no water supply wells are within 1,000 feet of the plume boundary.

Discussion: Based on the regulatory case closure, stable and declining groundwater plume, downward hydrologic gradient with respect to the property, and distance from the property, this listing does not represent a *recognized environmental condition*.

Glen Echo Creek Culvert
0 29th Street and Broadway

Databases: SLIC and Alameda County CS

Approximate Distance from the Property: 540 feet to the northeast

Assumed Groundwater Gradient: Upgradient/Cross-gradient

Regulatory Data Summary: According to the SLIC case, a dark oily substance was encountered in one soil bore during work for the reconstruction of a portion of the Glen Echo Creek concrete arch culvert. Concentrations up to 1,400 µg/L TPHg, 63,000 µg/L TPHd, 180,000 µg/L TPH as motor oil (TPHmo), non-detectable benzene, toluene, ethylbenzene, and xylenes (BTEX), and various concentrations of metals were documented in groundwater, and 1,300 mg/kg TPHd and

2,100 mg/kg TPHmo was documented in soil. A risk management plan for construction was developed.

ATC reviewed readily available records from the RWQCB Geotracker website. Records indicate that the Glen Echo Creek culvert was constructed to contain the flow along Glen Echo Creek. Hydrocarbon-impacted soil and groundwater were encountered below the arch culvert invert. According to a Construction Risk Management Plan prepared by URS dated March 2001, groundwater was anticipated to be removed during construction and discharged to the storm sewer under the provisions of a National Pollutant Discharge Elimination System (NPDES) permit.

Discussion: Based on the distance, plans for construction and discharge to storm sewer under a NPDES permit, and a construction risk management plan in place to handle petroleum impacted soil and groundwater, this listing does not represent a *recognized environmental condition*.

Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the sites listed in the federal agency databases are considered to represent a likely past, present or material threat of release in, on, or at the property. Given the physical setting characteristics of the property and surrounding area, supplemental agency file reviews were not warranted to verify the database report information.

5.1.2 State and Tribal Database Findings

State database listings associated with the property were previously discussed above in Section 5.1.1 along with corresponding federal database listings.

The following sites were identified in the state and tribal databases reviewed. State database listings associated with select nearby offsite facilities were previously discussed above in Section 5.1.1 along with corresponding federal database listings.

Performance Auto Works / Kohles & Thursby
2857 Broadway

Database: EDR US Hist Auto Stat

Approximate Distance from the Property: Adjacent to the north

Assumed Groundwater Gradient: Upgradient

Regulatory Data Summary: The EDR US Hist Auto Stat database lists the facility as a potential gas station, filling station, or service station establishment in 1925 as Kohles & Thursby and in 2001 as Performance Auto Works. No violations or releases were reported. ATC notes that the EDR US Hist Auto Stat database identifies the facility as a potential gas station or service station based on the EDR City Directory listing, but the facility is not included in any other database listings.

Discussion: Based on the absence of reported violations and releases, and the absence of other database listings, this listing is not considered to represent a *recognized environmental condition*.

Brown & Martick / Modern Auto Repair Service / Autotrends
2840 Broadway

Database: EDR UST Hist Auto Stat

Approximate Distance from the Property: Adjacent to the north

Assumed Groundwater Gradient: Upgradient

Regulatory Data Summary: The EDR US Hist Auto Stat database lists the facility as a potential gas station, filling station, or service station establishment in 1925 as Brown & Martick, in 1928 as Modern Auto Repair Service, and from 2009 to 2011 as Autotrends. No violations or releases were reported. ATC notes that the EDR US Hist Auto Stat database identifies the facility as a potential gas station or service station based on the EDR City Directory listing, but the facility is not included in any other database listings.

Discussion: Based on the absence of reported violations and releases, and the absence of other database listings, this listing is not considered to represent a *recognized environmental condition*.

Firestone Tire & Service Centers
2850 Broadway

Database: EDR US Hist Auto Stat

Approximate Distance from the Property: Adjacent to the north

Assumed Groundwater Gradient: Upgradient

Regulatory Data Summary: The EDR US Hist Auto Stat database lists the facility as a potential gas station, filling station, or service station establishment in 2009 as Firestone Tire & Service Centers. No violations or releases were reported. ATC notes that the EDR US Hist Auto Stat database identifies the facility as a potential gas station or service station based on the EDR City Directory listing, but the facility is not included in any other database listings.

Discussion: Based on the absence of reported violations and releases, and the absence of other database listings, this listing is not considered to represent a *recognized environmental condition*.

Kampt R C / Auto Care Shop
299 29th Street

Database: EDR US Hist Auto Stat

Approximate Distance from the Property: Adjacent to the northeast

Assumed Groundwater Gradient: Upgradient/Cross-gradient

Regulatory Data Summary: The EDR US Hist Auto Stat database lists the facility as a potential gas station, filling station, or service station establishment in 1933 as Kampt R C and in 2004 as Auto Care Shop. No violations or releases were reported. ATC notes that the EDR US Hist Auto Stat database identifies the facility as a potential gas station or service station based on the EDR City Directory listing, but the facility is not included in any other database listings.

Discussion: Based on the absence of reported violations and releases, and the absence of other database listings, this listing is not considered to represent a *recognized environmental condition*.

Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the sites listed in the state and tribal databases are considered to represent a likely past, present or material threat of release in, on, or at the property. Given the physical setting characteristics of the property and surrounding area, supplemental agency file reviews were not warranted to verify the database report information.

5.1.3 Local Environmental Records Sources

Local Health Department

ATC reviewed readily available files at the Alameda County Department of Environmental Health (ACDEH). Records were available for the property at 2820 Broadway. No records were available for the property at 2800 and 2855 Broadway. Records indicate that Oakland Volvo, an automobile dealership and service shop, occupied the property at 2820 Broadway from approximately 1989 to October 1991. Records indicate that Saturn of Oakland, an automobile dealership and service shop, occupied the property from January 1991 to approximately 1995. Inspection reports indicate that Saturn of Oakland generated waste oil, oil filters, transmission fluid, anti-freeze, parts cleaning, solvents, batteries, and wiping rags in their operation, and violations included lack of hazardous waste labels for waste oil tank, not properly closing hazardous waste storage containers, not maintaining a copy of hazardous waste disposal receipts, not maintaining a hazardous waste management training program for employees, and not documenting the proper disposal of used batteries. Records also indicate that Connell Nissan occupied the property from January 2006 to August 2007, generated hazardous waste on site, and had a total aboveground storage capacity of 960 gallons of automotive motor oil and used motor oil located in a shed in the back parking lot. Records indicate that Premier Hyundai of Oakland, the current property occupants, operated at the property as a new site on January 2014.

The previous and current automotive uses are considered a *recognized environmental condition* to the property. Please refer to Section 5.1.1 for a discussion of the current and former property tenants.

Regional Water Quality Control Board (RWQCB)

ATC requested files pertaining to the property from the RWQCB. According to Ms. Melinda Wong from the RWQCB (August 7, 2015 telephone conversation), no files are available for the property.

ATC also reviewed the RWQCB GeoTracker database for readily available files pertaining to the property. No listings were available for the property.

Bay Area Air Quality Management District (BAAQMD)

ATC requested files pertaining to the property from the BAAQMD. According to Ms. Rochelle Reed from the BAAQMD (August 10, 2015 written correspondence), no files are available for the property.

Department of Toxic Substances Control (DTSC)

ATC requested files pertaining to the property from the DTSC. According to Mr. Andre Alexander from the DTSC (August 12, 2015 written correspondence), no files are available for the property.

Furthermore, according to the DTSC EnviroStor database, the DTSC has no records pertaining to the property.

City of Oakland Fire Department (COFD)

ATC requested files pertaining to the property from the COFD. According to a staff member at the COFD, (August 7, 2015 telephone conversation), any available files for the property can be obtained through the local Certified Unified Program Agency (CUPA) agency, which is the ACDEH.

City of Oakland Planning Department (COPD)

According to the COPD website, the property is currently zoned as the Broadway-Valdez Commercial District (D-BV-3).

City of Oakland Building Department (COBD)

ATC reviewed available building department records maintained at the COBD. COBD records are discussed in Section 5.3.7.

Electrical Utility Company

According to the COPD, PG&E provides electric utilities to the property. Please refer to Section 6.6 for further information on the potential presence of PCB-containing electrical equipment on the property.

Water Utility

According to the COPD, East Bay Municipal Utility District (EBMUD) provides potable water utilities to the property. ATC reviewed the 2014 Water Quality Report produced by EBMUD. Approximately 90 percent of the EBMUD's water comes from the 578-square mile watershed of the Mokelumne River, which collects Sierra Nevada snow melt and flows into Pardee Reservoir in the Sierra foothills near the town of Valley Springs. The water travels to the East Bay in aqueducts protected from pesticides, agricultural and urban runoff, municipal sewage, and industrial discharges. In 2014, the EBMUD met or surpassed all water quality regulations set by the California Department of Health Services and the United States Environmental Protection Agency. No concerns were noted during the review of the EBMUD data. The 2014 Annual Quality Report is included in Appendix L.

Sewer Utility

According to the COPD, the City of Oakland provides municipal storm sewage utilities and sanitary sewage utilities to the property.

Other Local Environmental Records Sources

No additional local environmental records sources were reviewed.

5.2 Physical Setting Sources

5.2.1 Topography

Based on a review of the USGS 7.5-Minute Series, *Oakland West, California* Quadrangle topographic map dated 1993, the property topography generally slopes to the south. The elevation of the property is approximately 35 feet above mean sea level.

A copy of the topographic map is included in Appendix A.

5.2.2 Geology

Based on the California Department of Conservation, California Geological Survey, Generalized Geologic Map of California Note 17, dated April 2002, the property is primarily underlain by Quaternary sedimentary deposits. Sedimentary rocks form as accumulations of mineral material in oceans (marine) or on continents (continental). Quaternary sedimentary rocks include gravel, sand, silt, and clay deposited mostly in valleys and lowlands onshore.

5.2.3 Soils

According to ATC's review of the United States Department of Agriculture Soil Conservation Service Web-Based Soil Survey, the property is underlain by Urban land – Danville complex, 0 to 9 percent slope. The series consists of very deep, well drained soils that formed in alluvium. Slopes range from 0 to 9 percent. A copy of the soil map is included in Appendix L.

5.2.4 Hydrology

According to available files from the RWQCB Geotracker database, groundwater monitoring data from a south-adjacent site indicated that groundwater elevation data measured approximately 13 feet below ground surface (bgs). Groundwater flow direction in the vicinity varies, with data from the south-adjacent site indicating a northern and western flow direction, while available records for sites to the northwest of the property indicating a southern groundwater flow direction. Groundwater flow direction for the surrounding region is expected to flow to the south. Therefore, in assessing potential off-site environmental impacts, facilities located in all directions were considered.

Estimated groundwater levels and/or flow direction(s) may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or dewatering operations.

5.2.5 Other Physical Setting Sources

Flood Plain Map

According to the Federal Emergency Management Agency (FEMA), the property appears to be predominantly located in Flood Zone X, which is identified by FEMA as "areas determined to be outside the 0.2% annual chance floodplain." The parking lot for 2820 Broadway appears to be located in Flood Zone X (shaded), which is identified by FEMA as "areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood." (Flood Insurance Rate Map [FIRM] Map Number 06001C0059G, dated August 3, 2009).

A copy of the flood plain map is included in Appendix L.

Wetlands Map

Based on a review of the United States Department of the Interior, National Wetlands Inventory (NWI) Map (undated, online Wetlands Mapper at <http://www.nwi.fws.gov/>), there are no potential wetlands on the property. Furthermore, ATC did not observe any areas suggestive of wetlands at the property.

5.3 Historical Records Sources

The following table summarizes the findings of the research presented below pertaining to historical property and surrounding area uses.

HISTORICAL USE SUMMARY				
Period	Identified Historical Uses		Source(s)	Intervals/Comments
	Property	Surrounding Area		
Prior to 1940	Residential Commercial Industrial	Residential Commercial Industrial	Aerial Photographs City Directories Insurance Maps Topographic Maps	An 1895 topographic map was the earliest record found. <i>No significant data gaps identified.</i>

5.3.1 Aerial Photographs

ATC reviewed available aerial photographs of the property and surrounding area provided by EDR. Available aerial photographs ranged from 1939 to 2012. The following are descriptions and interpretations from the aerial photograph review.

AERIAL PHOTOGRAPH SUMMARY		
Year	Scale	Comments
1939, 1946, 1958	1 inch = 500 feet	Property: The property is depicted with a commercial and/or industrial building at the 2800 Broadway property, a commercial and/or industrial building at the 2820 Broadway property with residential units on the eastern portion of the property, and a commercial and/or industrial building at the 2855 Broadway property. Surrounding Area: The surrounding area is depicted as developed with residential structures and commercial and/or industrial buildings along Broadway.
1968 and 1974	1 inch = 500 feet	Property: The property is same as above. Surrounding Area: The surrounding area is depicted in its current configuration.
1982	1 inch = 500 feet	Property: The property is same as above. The property at 2820 Broadway appears to have new roofing. Surrounding Area: The surrounding area is same as above.
1993 and 1998	1 inch = 500 feet	Property: The property is same as above, with the exception of a parking lot on the eastern portion of the property at 2820 Broadway. Surrounding Area: The surrounding area is same as above.
2005	1 inch = 500 feet	Property: The property is depicted in its current configuration. The 2855 Broadway property is used as a car lot. Surrounding Area: The surrounding area is same as above.

PHASE I ENVIRONMENTAL SITE ASSESSMENT
Premier Hyundai of Oakland
2800, 2820, and 2855 Broadway
Oakland, California 94611

AERIAL PHOTOGRAPH SUMMARY		
Year	Scale	Comments
2009 and 2010	1 inch = 500 feet	Property: The property is depicted in its current configuration. The 2855 Broadway property is depicted as a vacant lot. Surrounding Area: The surrounding area is same as above.
2012	1 inch = 500 feet	Property: The property is depicted in its current configuration. The 2855 Broadway property is used as a car lot. Surrounding Area: The surrounding area is same as above.

The review of aerial photographs identified commercial and industrial usage of the property and surrounding area. For a discussion of the database listings for the property and surrounding area, please refer to Sections 5.1.1.

The review of aerial photographs did not identify past uses indicating *recognized environmental conditions* in, on, or at the property. Copies of reproducible aerial photographs are included in Appendix F.

5.3.2 Fire Insurance Maps

ATC reviewed copies of historical Sanborn Fire Insurance Maps (Sanborn Maps) depicting the property and surrounding area provided by EDR. Sanborn Maps were reviewed for the years 1889, 1902, 1903, 1911, 1912, 1950, 1951, 1952, 1954, 1959, 1962, 1967, and 1970. ATC's findings by year are as follows:

FIRE INSURANCE MAP SUMMARY	
Year	Comments
1889	Property: The property is not depicted on the 1889 map. Surrounding Area: The surrounding area to the west depicts a plumber's shop, followed by Webster Street.
1902	Property: The property at 2800 and 2820 Broadway are not depicted on the 1902 map. The property at 2855 Broadway is depicted as vacant. Surrounding Area: The surrounding area is depicted with unspecified stores to the north of the property at 2855 Broadway, followed by an unspecified street and dwelling units.
1903	Property: The property at 2855 Broadway is not depicted on the 1903 map. The property at 2800 Broadway depicts a dwelling unit, and the property at 2820 Broadway is a vacant lot. Surrounding Area: The surrounding area is depicted with several stores to the north of the property at 2820 Broadway, followed by 29 th Street and Grant Public School. Several dwelling units are depicted to the east and south of the property. Broadway is to the west of the property at 2800 and 2820 Broadway.
1911	Property: The property at 2855 Broadway is not depicted on the 1903 map. The property at 2800 Broadway depicts two dwelling units and is identified as 1912 and 1916 Broadway. The property at 2820 Broadway is identified as 1920 and 1922 Broadway and is depicted with a garage and carriage painting factory. Surrounding Area: The surrounding area depicts a Japanese laundry to the north of the property at 2820 Broadway, followed by several stores. Several dwelling units are to the east and south of the property. Broadway is to the west of the property at 2800 and 2820 Broadway.
1912	Property: The property at 2800 and 2820 Broadway are not depicted on the 1902 map. The property at 2855 Broadway is depicted as vacant. Surrounding Area: The surrounding area is depicted with a Coal and Wood store to the north of the property at 2855 Broadway, followed by other stores. To the south of the property is the Merrick Baking Company. Broadway is to the east of the property at 2855 Broadway. To the west of the property at 2855 Broadway is Webster Street, followed by several dwelling units.

FIRE INSURANCE MAP SUMMARY	
Year	Comments
1950	<p>Property: The property at 2855 Broadway is not depicted on the 1903 map. The property at 2800 Broadway depicts wholesale electrical supply stores, and is identified as 2800, 2810, 2812, and 2814. The property at 2820 Broadway is identified as 2816, 2820, and 2838-40 Broadway and is depicted with a service station, an auto sales room and stock room, a new and used auto sales room, and a parking lot on the eastern portion of the property at 2820 Broadway.</p> <p>Surrounding Area: The surrounding area is depicted with a lubrication equipment sales and service to the north, followed by an auto parts store. To the northeast of the property are a warehouse and car dealer shop and auto painting and body shop. To the east and south are dwelling units. An auto sales and service shop is depicted to the south of the property beyond 28th Street (formerly Ruby Street).</p>
1951	<p>Property: The property at 2800 and 2820 Broadway are not depicted on the 1902 map. The property at 2855 Broadway is depicted as a Tires and Battery shop, an auto top shop, a store, and a used cars building with concrete floors and trussed roof.</p> <p>Surrounding Area: The surrounding area is depicted with an auto washing and polishing shop to the north of the property at 2855 Broadway, followed by a restaurant and shop. Webster Street is to the west, followed by dwelling units. Several shops and used car lot are to the south of the property.</p>
1952 and 1954	<p>Property: The property at 2800 Broadway is depicted with a wholesale electric supply stores. The property at 2820 Broadway is depicted with an auto sales room and stock room, and a service station and parking lot in the eastern portion of the property. The property at 2855 Broadway is depicted as a, auto top shop, a store, and a used car lot.</p> <p>Surrounding Area: The surrounding area is depicted with an auto washing and polishing shop, and auto top shop, and used car shop to the north. To the east are a warehouse and car dealer shop, auto painting and body shop, and several dwelling units. To the south is 28th Street, followed by an auto sales and service shop and several dwelling units. To the west beyond Broadway are shops and used car shops, followed by Webster Street, Temple Sinai, and dwelling units.</p>
1959	<p>Property: The property is same as the previous map, with the exception of a glass warehouse at the property at 2820 Broadway.</p> <p>Surrounding Area: The surrounding area is same as the previous map, with the exception of a muffler repair to the north of the property at 2820 Broadway, beyond an auto top shop.</p>
1962	<p>Property: The property is same as the previous map.</p> <p>Surrounding Area: The surrounding area is same as the previous map, with the exception of a vacant lot to the north of the property beyond 29th Street.</p>
1967 and 1970	<p>Property: The property is same as the previous map.</p> <p>Surrounding Area: The surrounding area is same as the previous map, with the exception of a motor rebuild shop and warehouse to the east of the property at 2800 Broadway, and a parking lot to the west of the property at 2855 Broadway, beyond Webster Street.</p>

The review of fire insurance maps identified past uses of the property and surrounding area as automobile dealerships, body shops, and service stations from 1950 to 1970. The REC determinations for these past uses is discussed in Section 5.1.1 and 5.1.2. A copy of the fire insurance maps is included in Appendix G.

5.3.3 Property Tax Files

ATC reviewed reasonably ascertainable tax files obtained from the Alameda County Assessor-Recorder's Office for historical ownership information pertaining to the property. The table below presents the results of the historical ownership information. Documentation is included in Appendix G.

TAX RECORDS OWNERSHIP SUMMARY		
Parcel	Owner	Date
09-685-68 (2800 Broadway)	M & M Property Company LLC c/o Michael Murphy	January 26, 2012 to present
	King Christine L & Beritzhoff Michael Trs	April 4, 2011 to January 26, 2012
	Wells Fargo Bank N A Tr	Prior to April 4, 2011
09-685-69-1 (2820 Broadway)	M & M Property Company LLC	February 23, 2012 to present
	Honardoost Jahan & Faran S et al	July 18, 2007 to February 23, 2012
	Psai Properties I LLC	September 7, 2000 to July 18, 2007
	Clar Harvey J & Donna J Trs c/o Wells Fargo AU	May 31, 1978 to September 7, 2000
	Bank of America	October 7, 1975 to May 31, 1978
	Scanlon Beatrice M	Prior to October 7, 1975
09-686-03 (2855 Broadway)	M & M Properties LLC	March 9, 2011 to present
	Souza Catherine F Tr c/o Janet Henriques	July 23, 2007 to March 9, 2011
	Souza Leonard E & Catherine F Trs	July 1, 2003 to July 23, 2007
	Souza LE & CF Trs & Perata Gloria	April 20, 2002 to July 1, 2003
	Souza LE & CF Trs & Perata Richard and Gloria	September 2, 1976 to April 20, 2002
	Koford James K	Prior to September 2, 1976

The review of tax files did not identify past uses indicating *recognized environmental conditions* in, on, or at the property, beyond the current and historical automotive uses already discussed.

5.3.4 Recorded Land Title Records

The acquisition of recorded land title records was not required by the scope of work for the Phase I ESA.

5.3.5 Historical USGS Topographic Maps

ATC reviewed historical topographic maps obtained from EDR dated 1895, 1915, 1948, 1949, 1959, 1968, 1973, 1980 and 1993. The historical topographic maps were reviewed with the intent to evaluate changes in land use and areas of potential environmental concern visible at the property.

In 1895, the property is located to the northwest of Lake Merritt. A creek runs to the east of the property. The surrounding area is depicted as developed with roads for residential and commercial use, with unspecified building structures depicted in the surrounding areas. In 1915, an unspecified building structure is located at the 2855 Broadway property. The topographic maps beginning from 1948 depicted the property as shaded pink or grey, indicating a developed urban area. An unspecified building structure is depicted on the 2820 Broadway property in 1948. In 1949, 1959, several houses of worship are depicted in the surrounding area to the west and southwest of the property, and several hospitals are depicted to the northwest of the property. A high school is depicted to the southeast of the property. In 1968, the Macarthur Freeway is depicted further to the north of the property. The Grove Shafter Freeway and the Bay Area Rapid Transit (BART) are depicted further to the west of the property. The 1973 and 1980 topographic maps do not depict any specific building structures on the property. The 1993 topographic map depicts the

PHASE I ENVIRONMENTAL SITE ASSESSMENT
Premier Hyundai of Oakland
2800, 2820, and 2855 Broadway
Oakland, California 94611

property and property vicinity as developed, with unspecified development. The review of historical USGS Topographic Quadrangles did not identify past uses indicating *recognized environmental conditions* at the property, beyond those already discussed. Copies of topographic maps are included in Appendix G.

5.3.6 City Directories

Research regarding the availability of historical city directories was conducted by EDR. The following are descriptions and interpretations from the historical city directory review.

CITY DIRECTORY SUMMARY	
Year	Comments
1920	Property: Veitch Ford Auto Agency (2820 Broadway) Surrounding Area: Scripps Booth (2857 Broadway), private residences (280 28 th Street), Tate Motor Sales Company and Nash Motor Car Agency (2740 Broadway), Chevrolet Motor Company (2801 Broadway), and private residence (2808 Summit Street)
1925	Property: Veitch Ford Auto Agency (2820 Broadway) Surrounding Area: Thursby Auto Rep (2857 Broadway), private residences (280 28 th Street), Nash Motor Car Agency (2740 Broadway), Field and Lee Auto Dealers (2801 Broadway), and private residence (2808 Summit Street)
1926	Property: No listings Surrounding Area: No listings
1928	Property: No listings Surrounding Area: Webster Auto Repair Service (2840 Broadway), and private residences (280 28 th Street)

The review of the city directories identified past uses of the property and surrounding area as automobile dealerships, body shops, and service stations. A discussion and assessment of the impact of these past uses in, on, or at the property is included in Sections 5.1.1 and 5.1.2. The EDR city directory abstract is included in Appendix G.

5.3.7 Building Department Records

ATC reviewed available historical building department records maintained at the COBD for information regarding past uses of the property.

Available records for the property at 2800 Broadway include various permits for signs, electrical work, and zoning clearances for use as an automobile and other light vehicle sales and rental, car dealership for the continuation of non-conforming uses. A permit issued in 1993 indicated the removal of interior wall, old plaster ceiling, and wood floor, and to build three concrete ramps on new sheetrock. Installation for two toilets and two sinks was permitted in 1993. A mandatory seismic upgrade was issued in 1998.

PHASE I ENVIRONMENTAL SITE ASSESSMENT
Premier Hyundai of Oakland
2800, 2820, and 2855 Broadway
Oakland, California 94611

Available records for the property at 2820 Broadway include a building permit issued in 1916 for the construction of a one-story garage building and various permits for the installation of signs, electrical work, and zoning clearances for use as an automobile and other light vehicle sales and rental, car dealership for the continuation of non-conforming uses. A permit was issued in 1994 for the installation of unit heaters with new gas line.

Available records for the property at 2855 Broadway include a permit issued in 1997 to demolish and remove a partially collapsed building to slab on grade, and permits for sign installation in 2011.

The review of building department records did not identify past uses indicating *recognized environmental conditions* in, on, or at the property. Documentation is included in Appendix G.

5.3.8 Zoning/Land Use Records

ATC confirmed with the COPD that the current zoning for the property is Broadway-Valdez Commercial District (D-BV-3). Historical zoning information for the property was not readily available.

5.3.9 Prior Reports

The following provides a summary of information from prior reports made available to ATC for review. Documentation is included in Appendix H.

PRIOR REPORT SUMMARY			
Consultant/ Report Title	Date	Environmental Conditions	Conclusions & Recommendations
AEI Consultants / Limited Phase II Subsurface Investigation	April 27, 2015	<ul style="list-style-type: none"> - Eleven soil borings were advanced to 15 feet below ground surface (bgs) on the property on April 8, 2015. -Results revealed concentrations of TPH as gasoline (TPHg), diesel (TPHd), and motor oil (TPHmo) were either below the ESLs or below the laboratory reporting limits in all 11 soil samples. -Trichloroethene (TCE) was detected in borings SB-5 and SB-6 at concentrations of 0.015 and 0.0069 milligrams per kilogram (mg/kg), respectively, which are below the ESL value of 0.7 mg/kg. -No TCE was found in the remaining nine soil samples. All other VOCs were below their respective analytical reporting limits in all soil samples. 	- No further additional investigation or remediation activities were recommended at the property.
SCHUTZE & Associates, Inc. / Phase I Environmental Site Assessment, Vacant Commercial Property, 2800 Broadway, Oakland, Alameda County, California	November 15, 2011	<ul style="list-style-type: none"> - Moderate potential of impact to groundwater due to existence of automotive repair and sales facility. - Open LUST case at south-adjacent site at 2740 Broadway is an environmental concern. - Patched areas of concrete may indicate presence of former UST pit; however, no product/vent pipes or pump islands observed. - Area in north warehouse at northeast corner of building was formerly used as wash station. Floor is heavily stained. 	- No further work was recommended based on continued use of property as an automobile dealership.
ERAS Environmental, Inc. / Phase I Environmental Site Assessment, 2820 Broadway, Oakland, California	October 17, 2011	- Review of a prior Phase I report prepared by ACC Environmental Consultants in 2000 indicated that excavation in 1998 for a suspect UST in the area determined that no USTs were located at the property.	- No further actions pertaining to environmental conditions at the property.

The review of prior reports identified past uses indicating *recognized environmental conditions* at the property. ATC notes that the open LUST case at the south-adjacent site at 2740 Broadway mentioned in the prior Phase I report by Schutze & Associates is the current south-adjacent facility Volkswagen of Oakland, which is now listed as a closed LUST case with remaining contaminants in place. Please refer to Section 5.1.1 for further discussion of the south-adjacent site. Schutze & Associates also noted that a patched area of concrete may indicate presence of former UST pit; however, no product/vent pipes or pump islands observed.

The April 27, 2015 Limited Phase II Subsurface Investigation report prepared by AEI Consultants (AEI) indicated that eleven soil borings (SB-1 through SB-11) were advanced on the facility on April 8, 2015. Each boring was advanced to depth a 15 feet below ground surface (bgs). The locations of the various borings are as follows:

- Borings SB-1, SB-2 and SB-3 were advanced on the 2855 Broadway parcel;
- Borings SB-4, SB-5 and SB-6 were advanced on the 2800 Broadway parcel; and
- Borings SB-7 through SB-11 were advanced on the 2820 Broadway parcel.

Please refer to Figure 2 – Site Map of the AEI report (included in Appendix H) for the locations of the various borings. It should be noted that soil borings SB-4 and SB-5 were located on the southern portion of the 2800 Broadway parcel, closest to the Broadway Volkswagen facility.

Soil samples were collected at a depth of 12 feet bgs at each boring location with the exception of borings SB-9 and SB-10 which were collected at a depth of four (4) feet bgs. The analytical results revealed concentrations of TPH as gasoline (TPHg), diesel (TPHd), and motor oil (TPHmo) were either below the ESLs or below the laboratory reporting limits in all 11 soil samples. With respect to VOCs, trichloroethene (TCE) was detected in borings SB-5 and SB-6 at concentrations of 0.015 and 0.0069 milligrams per kilogram (mg/kg), respectively. Both of the reported TCE concentrations are below the ESL value of 0.7 mg/kg. No TCE was found in the remaining nine soil samples collected by AEI. All other VOCs were below their respective analytical reporting limits in all of the soil samples collected by AEI. Based on the above noted results, AEI did not recommend any additional investigation or remediation activities at the property; however, due to the absence of groundwater assessment conducted during the prior Phase II investigation, it is ATC's opinion that additional soil and groundwater sampling is warranted.

ATC makes no warranty, guaranty or certification regarding the quality, accuracy or reliability of any prior report provided to ATC and discussed in this Phase I ESA report. ATC expressly disclaims any and all liability for any errors or omissions contained in any prior reports provided to ATC and discussed in this Phase I ESA report.

5.3.10 Other Historical Sources

No other historical sources were reviewed.

6.0 SITE RECONNAISSANCE

The following is a summary of visual and/or physical observations of the property on the day of the site visit. Photographs can be found in Appendix C.

6.1 Methodology and Limiting Conditions

Ms. Kim Thai of ATC conducted the site reconnaissance on August 6, 2015 and was escorted by Mr. Samir Rohayem, General Manager of Volkswagen of Oakland. The site reconnaissance consisted of visual and/or physical observations of: the property and improvements; adjoining sites as viewed from the property; and, the surrounding area based on visual observations made during the trip to and from the property. Building exteriors were observed along the perimeter from the ground, unless described otherwise. Building interiors were observed as they were made safely accessible, unless described otherwise. Weather conditions at the time of the site reconnaissance were warm and sunny with no visibility limitations.

6.2 Hazardous Substance Use, Storage, and Disposal

ATC observed the use, storage or disposal of hazardous substances on the property as summarized below.

ATC observed small quantities (less than five gallons, each) of automobile maintenance products such as one-gallon containers of motor oil that were properly stored in original containers. Stacks of new car tires and old car tires were observed within the service shop at the 2820 Broadway property. Used car oil filters were stored in two 55-gallon steel drums to be disposed of on a monthly basis. Labeling on the drums indicate that the last accumulation date was July 7, 2015, and Asbury Environmental Services was contracted to remove the filters. No leaks, spills, or stains were observed or reported.

ATC observed a wooden shed on the eastern portion of the building at 2820 Broadway. The shed contained one 250-gallon steel double-contained AST containing waste oil, one 250-gallon steel double-contained AST containing new fuel, and one 110-gallon plastic AST containing waste anti-freeze. The three ASTs were likely brought on to the property in 2011. No leaks, spills, or stains were observed or reported. One air compressor was also in the shed. Very minor oil stains were observed beneath the air compressor on intact concrete. Various isolated spills and stains, generally on intact concrete materials, were observed at the property.

ATC observed the use and storage of these materials at the property to be generally in good condition with some observed isolated spills and stains on intact concrete materials. The use, storage, and disposal of these hazardous substances at the property, alongside the current and historical automobile usage, are considered to represent a *recognized environmental condition*.

6.3 Underground Storage Tanks (USTs)

ATC did not observe evidence of USTs on the property. A prior report prepared by ERAS Environmental dated October 2011 noted that subsurface investigation was conducted in 1998 to follow up on a possible UST at the 2820 Broadway property building. The investigation determined that no USTs were found in the excavations and concluded that no USTs were located at the property at 2820 Broadway.

A prior report prepared by Schutze & Associates dated November 2011 noted that patched areas of concrete located at the 2800 Broadway property building may indicate the presence of a former UST pit, but that there were no product/vent pipes or pump islands observed.

6.4 Aboveground Storage Tanks (ASTs)

ATC observed evidence of ASTs on the property as summarized below.

AST SUMMARY TABLE							
Location	Year Installed	Construction Materials	Contents	Capacity (gallons)	Use Status	Registration	Leak Detection & Prevention
Wooden shed in eastern portion of 2820 Broadway	Circa 2011	Steel	New fuel	250	Active	Yes	Unknown
	Circa 2011	Steel	Waste oil	250	Active	Yes	Unknown
	Circa 2011	Polyethylene	Waste anti-freeze	110	Active	Yes	Unknown

The presence of the listed ASTs does not represent a *recognized environmental condition* based on observed conditions and absence of reported releases.

6.5 Other Petroleum Products

ATC observed evidence of the use, storage or disposal of other petroleum products in, on or at the property as summarized below.

OTHER PETROLEUM PRODUCTS				
Type of Material	Quantity & Container Type	Location	Use	Condition of Containers & Area
Hydraulic fluid	Within seven aboveground hydraulic lifts	Service shop at 2820 Broadway	Hydraulic lift operation	Good, no leaks or spills

The presence of the listed petroleum containing aboveground hydraulic lifts does not represent a *recognized environmental condition* based on observed conditions, the aboveground nature of the lifts and absence of an underground oil reserve, and absence of reported leaks or spills.

6.6 Polychlorinated Biphenyls (PCBs)

ATC observed evidence of the use, storage or disposal of PCB-containing electrical or hydraulic equipment in, on or at the property as summarized below.

ATC observed one pole-mounted transformer located to the south of the property at 2800 Broadway along 28th Street and one pole-mounted transformer located to the west of the property at 2855 Broadway along Webster Street. No evidence of staining or leaking was observed. The transformer units are owned and operated by PG&E, which is responsible for the maintenance of the transformer units. Given the utility ownership and observed conditions, the pole-mounted electrical transformers are not considered to represent an environmental concern to the property at this time.

ATC observed seven aboveground hydraulic lifts in the service shop portion of the building at 2820 Broadway. As discussed in Section 6.5, no leaks or spills were observed or reported. Based on the installation of the lifts circa 2011, the lifts are not considered to be suspect PCB containing.

ATC observed fluorescent light fixtures inside the property buildings at 2800 and 2820 Broadway. Fluorescent light ballasts manufactured prior to 1979 may contain small quantities of PCBs. Given the age of the property improvements (circa 1916), it is possible that the ballasts contain PCBs. Due to access limitations, the light ballasts were not examined for labels identifying their PCB-content. No indications of staining or leaking associated with the fluorescent light fixtures were noted during the property visit. Based on visual observations, the ballasts associated with the light fixtures do not appear to represent an environmental concern to the property. As a best management practice, ATC recommends that leaking or

a large number of ballasts whose PCB content cannot be determined without testing should be disposed of in accordance with applicable waste handling requirements for PCB units.

No other suspect PCB-containing equipment was observed at the property at the time of the site reconnaissance.

ATC also reviewed the Limited Phase II report prepared by AEI Consultants, which conducted soil sampling at the property for PCB. According to the report, no PCBs were detected above their ESLs in the soil samples collected. The results from this prior Phase II report indicate that PCBs are not an environmental concern to the property at this time.

6.7 Unidentified Substance Containers

ATC did not observe the presence of unidentified substance containers on the property.

6.8 Nonhazardous Solid Waste

ATC observed one 55-gallon steel drum located on the northern portion of the building at 2800 Broadway marked as non-hazardous waste. The drum was properly closed with a tight-fitting lid. Mr. Rohayem, the site contact, was not aware of what the drum contained, or when it was brought on to the property. No leaks, spills, or stains were observed or reported.

One municipal solid waste dumpster is observed on the eastern portion of the 2820 Broadway building next to the shed, and one recycling bin is observed within the service room of the 2820 Broadway building. According to the site contact, Mr. Samir Rohayem, trash and recycling are picked up on a weekly basis. No leaks, spills, or stains were observed or reported.

The presence of the listed nonhazardous solid waste does not represent a *recognized environmental condition* based on observed conditions.

6.9 Wastewater

ATC observed evidence of wastewater generated, treated or discharged (including sanitary sewage and stormwater) in, on or at the property or to adjoining properties as summarized below.

WASTEWATER SUMMARY TABLE			
Type of Wastewater	Generation Process	Treatment System?	Discharged To?
Commercial Sanitary Sewage	Restrooms	No	Sanitary Sewer
Stormwater	Stormwater runoff	No	Storm sewer

The generation and discharge of wastewater at the property is not considered to represent a *recognized environmental condition*.

6.10 Waste Pits, Ponds and Lagoons

ATC did not observe evidence of waste pits, ponds or lagoons in, on or at the property.

6.11 Drains and Sumps

ATC observed evidence of a grated trench drain located to the east of the automobile shop area at the 2820 Broadway property, in the asphalt-paved parking area. The age and discharge location of the drain were not specified. ATC notes that the drain was observed to be active and can collect stormwater and potential oil from parked vehicles in the parking area. No cracks or leaks were observed, and no spills, stains or odors were observed or reported.

ATC did not observe evidence of oil/water separators, and Mr. Samir Rohayem, the site contact, was not aware of any oil/water separators at the property.

6.12 Septic Systems

ATC did not observe evidence of a septic system in, on or at the property.

6.13 Stormwater Management System

Stormwater at the property flows over building rooftops, paved parking lots, roadways and landscaped areas, and travels towards the roadways adjacent to the property to drain into curb-inlets, which discharge into the municipal stormwater system. Stormwater can also drain into the trench drain located in the asphalt-paved parking area at the 2820 Broadway property. The property is a mix of landscaped areas and developed land with covered areas consisting of building footprints and parking lots. The observed vegetation did not exhibit signs of biological stress. The parking/driveway areas are paved and in good condition with some areas of oil staining from parked cars. No strong odors or stressed vegetation was observed.

6.14 Wells

ATC did not observe evidence of wells in, on or at the property.

7.0 SUBSURFACE VAPOR MIGRATION

ATC conducted a limited screening for potential vapor encroachment conditions (VECs) that may affect the Property. The VEC screening focused on the current and historical usage of the Property and also utilized the aforementioned regulatory agency database report provided by EDR and an EDR Vapor Encroachment Screen (VES) Report to evaluate identified Chemicals of Concern (COCs), including petroleum hydrocarbons. To identify the area of concern (AOC) for contaminated sites with non-petroleum hydrocarbon COCs, ATC utilized the approximate minimum search distance defined by ASTM E 2600-10 of 1,760 feet (1/3 mile) from the Property boundary for COC-contaminated sites. For sites contaminated with petroleum hydrocarbon COCs, ATC utilized the AOC approximate minimum search distance of 528 feet (1/10 mile). The AOC was adjusted accordingly based on review of physical setting characteristics, known release information, Property and land features, groundwater flow direction, and soil type, et al.

ASTM's Vapor Encroachment guidance indicates that when groundwater flow direction can be estimated or determined, the cross-gradient or downgradient radius distances can be significantly reduced by using the Buonicore Methodology: (non-petroleum hydrocarbon COCs) 1,760 feet in the upgradient direction; 365 feet in the cross-gradient direction; and 100 feet in the downgradient direction and (petroleum hydrocarbon COCs) 528 feet in the upgradient direction; 165 feet in the cross-gradient direction if Light, Non-Aqueous Phase Liquid, (LNAPL i.e. floating product) is suspected; 95 feet in the cross-gradient direction if no LNAPL is suspected; 100 feet in the downgradient direction (LNAPL suspected); and 30 feet in the downgradient position (LNAPL not suspected).

The screening was further refined by evaluating the Critical Distance (CD) factor. The CD is the upper distance a vapor may migrate through soil in the vadose zone assuming the path of least resistance is directly from the closest boundary of the contaminated media (i.e. groundwater or soil) to the nearest Property boundary. For non-petroleum hydrocarbon COCs, the CD is 100 feet. For LNAPL petroleum hydrocarbon COCs, the CD is also 100 feet. For dissolved petroleum hydrocarbon COCs, the CD is 30 feet.

The current and former automotive uses of the property, and the remaining contaminants at the south-adjointing site of 2740 Broadway, suggest that vapor issues should be considered. ATC understands that there will be no slab-on-grade residential units at the property. The potential for VECs at the property is considered to represent a *recognized environmental condition*.

8.0 INTERVIEWS

The following persons were interviewed to obtain information regarding *recognized environmental conditions* in connection with the property:

INTERVIEW SUMMARY				
Role	Name	Title/Company	Years Assoc. With Property	Interview Type
Site Contact / Escort	Samir Rohayem	General Manager / Volkswagen of Oakland	2	In person

Not included in this listing are those governmental employees that were contacted solely for the purpose of retrieving public information pertaining to the property and who would not be expected to have first-hand knowledge of *recognized environmental conditions* at the property.

Pertinent information from the interviews is discussed in applicable sections of this report with details (including failed attempts to interview) documented on Record of Communication forms in Appendix J.

9.0 OTHER ENVIRONMENTAL CONDITIONS

9.1 Asbestos-Containing Materials (ACM)

Based on the scope of work for this ESA, sampling and analysis for ACM was not conducted. All suspect ACM should be properly assessed prior to disturbance from construction or maintenance activities. Most observed building materials and finishes were noted to be in fair to good condition at the time of the site visit. Suspect ACMs observed at the property generally included wallboard/joint compound, ceramic floor tiles and flooring mastic, and baseboard and mastic. Based on the date of construction (circa 1916) of the property buildings at 2800 and 2820 Broadway, there is potential for ACM to be present at the property. All suspect ACMs should be properly assessed prior to disturbance.

9.2 Radon

Radon is a naturally occurring colorless, odorless gas that is a by-product of the decay of radioactive materials potentially present in bedrock and soil. The EPA guidance action level for annual residential exposure to radon is 4.0 picoCuries per liter of air (pCi/L). The guidance action level is not a regulatory requirement for private owners of commercial real estate, but is commonly used for comparison purposes to suggest whether further action at a building may be prudent.

ATC's review of published radon data indicates that the property is located in a county designated by the EPA as Zone 2. Zone 2 areas have a predicted radon concentration of greater than or equal to 2.0 pCi/L and less than or equal to 4.0 pCi/L. According to statistical data provided by EDR, a state survey of 66 sites located within the same zip code as the property identified three (3) sites with radon concentrations in excess of 4.0 pCi/L. Based on these statistics and the commercial usage of the property improvements, radon is not considered to represent an environmental concern at the property and no additional investigations are recommended at this time.

9.3 Lead in Drinking Water

ATC confirmed with EBMUD that the municipally-supplied water meets all drinking water standards, including those for lead. Lead in drinking water testing was not conducted for this Phase I ESA. A copy of the water quality report is included in Appendix L.

9.4 Lead-Based Paint (LBP)

Based on the age of the property improvements (circa 1916), it is possible that LBP has been used on the property. All suspect LBP should be properly assessed prior to disturbance. All painted surfaces appeared to be in fair to good condition.

9.5 Mold Screening

ATC conducted a general screening survey for suspect visible mold growth and conditions conducive to water damaged/mold impacted building materials at the property. The general screening consisted of interviews with property management or tenant representatives, document review, and limited visual inspections within accessible spaces.

ATC conducted a screening survey for readily observable mold and conditions conducive to mold within the property building. Based on the results of the physical observation, ATC did not note any areas of water damage, water staining on ceiling tiles, walls and or around exterior doors or windows. ATC interviewed Mr. Samir Rohayem, the site contact for the property, regarding mold and/or conditions conducive to mold at the property. Mr. Rohayem was unaware of any past or current incidents of mold at the property.

ATC requested documentation regarding current or historical mold conditions at the property. No documentation was available for the current property building.

Based on the results of the interview, document review, and physical observation, ATC found no other evidence of moisture intrusion indicating potential mold impact at the property.

9.6 Additional User Requested Conditions

In accordance with the Alliance Realty Partners, LLC Phase I Scope of Work, the following additional Business Environmental Risks were evaluated:

Environmentally Sensitive Areas

ATC obtained a NEPACheck® report from EDR to further evaluate potential environmentally sensitive areas. The results of the search are summarized in the table below. A summary of the database information is presented in the following section. A copy of the NEPACheck® report is provided in Appendix E.

NEPACheck®			
Database Searched	Search Radius	Property Listed in Database	Number of Sites/Areas Within Search Radius
<i>Natural Areas</i>			
US Federal Lands	1 mile	No	0
CA Natural Diversity	1 mile	No	4
County Endangered Species	County	No	0
<i>Historic Sites</i>			
National Register of Historic Places	1 mile	No	15
CA Historic Sites	1 mile	No	9
Indian Reservation	1 mile	No	0
<i>Floodplains</i>			
Floodplain	1 mile	No	1
<i>Wetlands</i>			
National Wetlands Inventory	1 mile	No	2

Natural Areas

The EPA Endangered Protection Program Database listed nine endangered species (plants) for Alameda County: the *Santa Clara Valley Dudleya*, the *Few-Flowered Navarretia*, the *Presidio Clarkia*, the *Lake County Stonecrop*, the *Contra Costa Goldfields*, the *Large-flowered Fiddleneck*, the *Palmate-Bracted Bird's-Beak*, the *Pallid Manzanita*, and the *Many-Flowered Navarretia*. The database also listed seventeen endangered species (animals) for Alameda County: the *Mountain Plover*, the *California Least Tern*, the *Western Snowy Plover*, the *California Clapper Rail*, the *Brown Pelican*, the *Vernal Pool Fairy Shrimp*, the *Longhorn Fairy Shrimp*, the *Tidewater Goby*, the *Central California Population Steelhead*, the *Sacramento Splittail*, the *California Central Valley Pop Steelhead*, the *Chinook Salmon*, the *Bay Checkerspot Butterfly*, the *Callippe Silverspot Butterfly*, the *Salt Marsh Harvest Mouse*, the *San Joaquin Kit Fox*, and the *Alameda Whipsnake*.

According to this database, four mapped suitable habitat sites were identified within one-mile of the property. However, since none of the listed species were identified on the property, these listings are not considered concerns to the property.

The Natural Areas Map included information from the Federal Lands database, the Officially Designated Wilderness Areas database (updated 12/31/2005), the Officially Designated Wildlife Preserves, Sanctuaries, and Refuges database (updated 12/31/2005), the Wild and Scenic Rivers database (updated

12/31/2005), and the Endangered Species database (update not indicated). Neither the property nor areas within a one-mile radius of the property were listed in the Federal Lands database. The property was not listed in the Officially Designated Wilderness Areas, the Officially Designated Wildlife Preserves, Sanctuaries, and Refuges database, or the Wild and Scenic Rivers database.

Historic Sites

The Historic Sites Map included information from National Register of Historic Places (NRHP, updated 3/23/2006); CA Historic Landmarks; and Indian Religious Sites (updated 12/31/2005). These lists would include archaeological, cultural, and historical resources.

The property was not listed in the NRHP. The map indicated twenty-four (24) area/historic site within a one-mile radius of the property.

Floodplains

ATC reviewed the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRM) for the property. According to the Alameda County, California map number 06001C0059G, dated August 3, 2009, the property is located in Flood Zone X, which is identified by FEMA as "areas determined to be outside the 0.2% annual chance floodplain." The parking lot for 2820 Broadway appears to be located in Flood Zone X (shaded), which is identified by FEMA as "areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood." A copy of the flood plain map is included in Appendix J.

Wetlands

ATC reviewed the Wetlands Map information, as provided in the NEPA report, as well as the United States Fish and Wildlife Service (USFWS) on-line National Wetlands Inventory (NWI) Map for recorded wetland environments on the property and surrounding area. No wetlands were identified on the property during this assessment. A copy of the NWI map is included in Appendix L.

11.0 TERMINOLOGY

The following provides definitions and descriptions of certain terms that may be used in this report. Italics indicate terms that are defined by ASTM Standard Practice E1527-13. The Standard Practice should be referenced for further detail (such as the precise wording), related definitions or additional explanation regarding the meaning of terms.

recognized environmental condition(s) (REC) - the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

material threat - a physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional (EP), is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a hazardous substance and which shows evidence of damage such that it may cause or contribute to tank integrity failure with a release of contents to the environment.

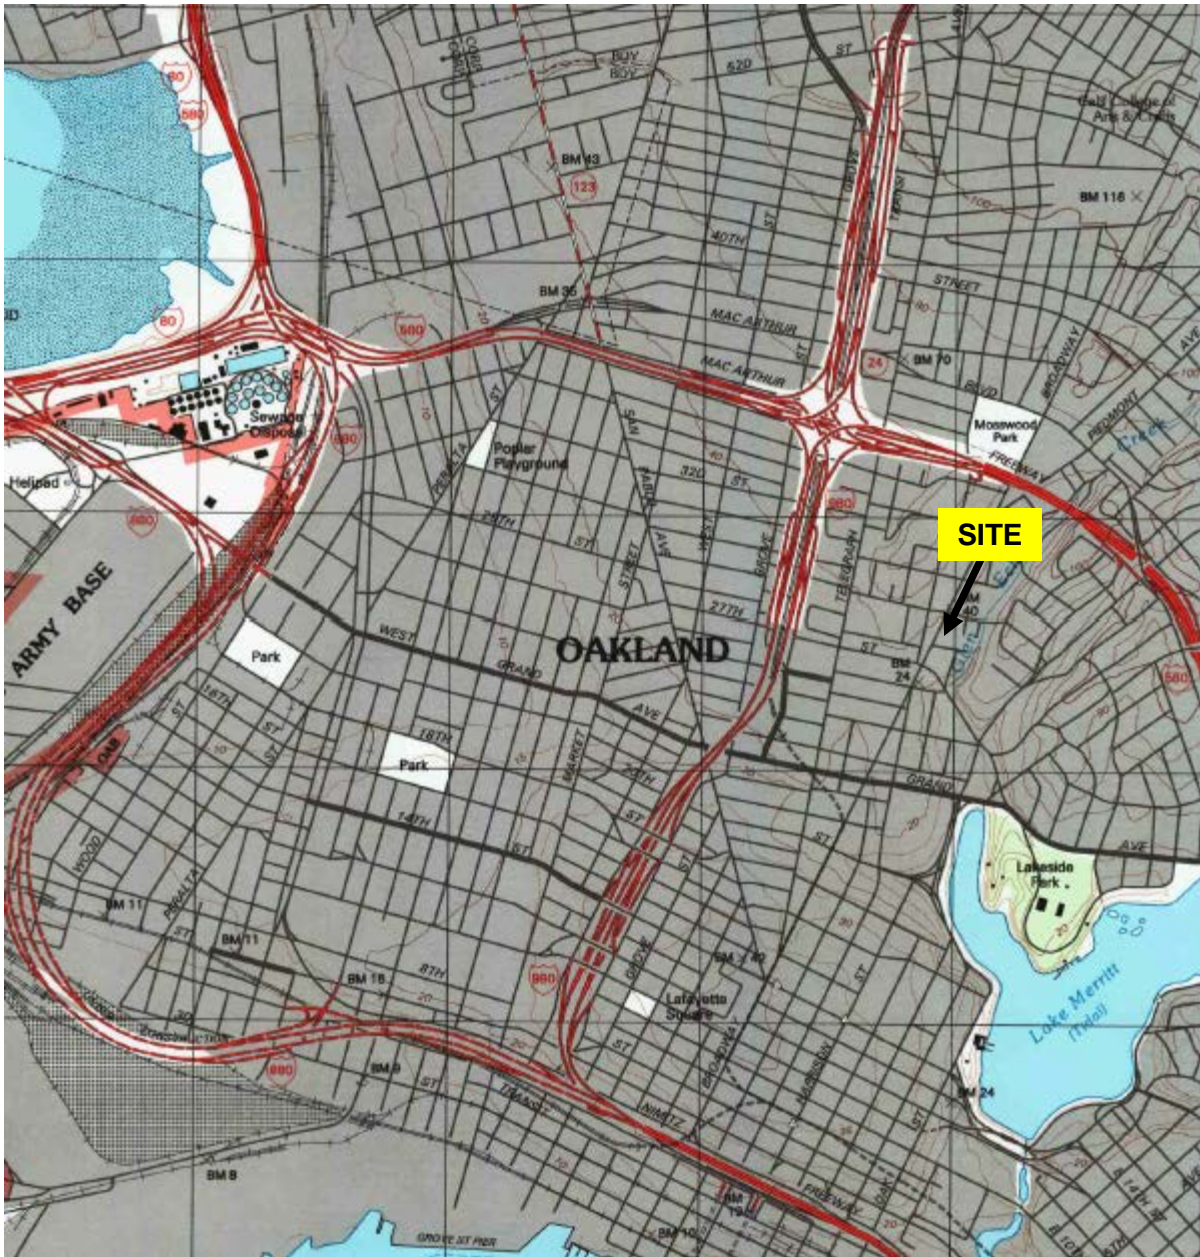

de minimis condition – is a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of the appropriate governmental agencies. An example might include a release of *hazardous substances* or *petroleum products* that could reasonably and foreseeably result in a concentration exceeding the applicable regulatory agency risk-based residential standards or substantial damage to natural resources. The risk of that exposure or damage would represent a threat to human health or the environment. If an enforcement action would be less likely than not, then the condition is considered to be generally not likely the subject of an enforcement action. A condition determined to be *de minimis* is not a *REC* or *controlled recognized environmental condition (CREC)*.

historical recognized environmental condition(s) (HREC) - a past release of any *hazardous substances* or *petroleum products* that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a *HREC*, the EP must determine whether the past release is a *REC* at the time the assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a *REC* at the time the Phase I ESA is conducted, the condition will be reported in Section 1.2 the Findings and Conclusions Summary table as a *REC*.

controlled recognized environmental condition (CREC) - a *recognized environmental condition* resulting from a past release of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitation, institutional controls, or engineering controls). Per E1527-13, a *CREC* will be reported in the Section 1.2 Findings and Conclusions Summary table as a *CREC* and a *REC*.

migrate/migration - refers to the movement of *hazardous substances* or *petroleum products* in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.

APPENDIX D
USER PROVIDED DOCUMENTATION

**ATTACHMENT
CLIENT QUESTIONNAIRE**

Per ASTM Standard Practice E1527-13, Section 6, User Responsibilities, the User of an ESA has specific obligations for performing tasks during the ESA that will help identify the possibility of *recognized environmental conditions* in connection with the property. Failure by the User to fully comply with the requirements may result in a *data gap* being identified in the report and may impact their ability to use the report to help qualify for *Landowner Liability Protections* (LLPs) under Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). If this questionnaire is not returned to Cardno ATC prior to issuance of the draft report, then Cardno ATC assumes that the User does not have any information or actual knowledge pursuant to ASTM Standard Practice E1527-13, Section 6, User Responsibilities. Cardno ATC makes no representations or warranties regarding a User's qualification for protection under any federal, state or local laws, rules or regulations.

Please complete the following and return immediately via email or fax to the attention of:
Audrey Lundin; Fax: (925) 328-1090; Email: audrey.lundin@cardno.com
If other parties are intending to be the Users of the ESA report, then please forward a copy of this questionnaire for them to complete and return to Cardno ATC.

Site Name: Premier Hyundai of Oakland

Site Address: 2800, 2820, and 2855 Broadway, Oakland California

Project Number: TBD

Please provide the following information (if available) per the requirements of ASTM E1527-13.

1. Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25)

Are you aware of any environmental cleanup liens against the site that are filed or recorded under federal, tribal, state or local law? Yes or No

If yes, please provide a description of the lien(s).

2. Activity and land use limitations (AULs) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26)

Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law? Yes or No If yes, please provide.

3. Specialized knowledge or experience of the person seeking to qualify for the Landowner Liability Protections (40 CFR 312.28)

As the user of this ESA do you have any specialized knowledge or experience related to the site or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes or No If yes, please explain.

4. Relationship of the purchase price to the fair market value of the site if it were not contaminated (40 CFR 312.29)

a. Does the purchase price being paid for this site reasonably reflect the fair market value of the site? Yes or No

b. If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the site? Yes or No If yes, please explain.

we will need to determine impact all costs
before making any reduction.

5. Commonly known or reasonably ascertainable information about the site (40 CFR 312.30)

Are you aware of commonly known or reasonably ascertainable information about the site that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

a. Do you know the past uses of the site? Yes or No If yes, please state.

I've been provided the seller's phase I
and II

b. Do you know of specific chemicals that are present or once were present at the site?
Yes or No If yes, please state.

c. Do you know of spills or other chemical releases that have taken place at the site?
Yes or No If yes, please state.

d. Do you know of any environmental cleanups that have taken place at the site?
Yes or No If yes, please state.

6. The degree of obviousness of the presence or likely presence of contamination at the site, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31)

As the user of this ESA, based on your knowledge and experience related to the site are there any obvious indicators that point to the presence or likely presence of contamination at the site?
Yes or No If yes, please explain.

This questionnaire was completed by:

Name Peter Solin
Title Managing Director
Signature PS
Company of User Allwin Resinators
Address of User 477 Pacific
St, CA
Date 9/1/33

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
HARRIS DRY CLEANERS	2801 MARTIN LUTHER K	W 1/4 - 1/2 (0.420 mi.)	AI214	293

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/10/2015 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
SAMUEL MERRITT HOSPI	350 HAWTHORNE AVE.	N 1/8 - 1/4 (0.246 mi.)	X173	201

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 26 RCRA-SQG sites within approximately 0.25 miles of the target property.

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, and dated 05/04/2015 has revealed that there are 3 RESPONSE sites within approximately 1 mile of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which

EXECUTIVE SUMMARY

there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 05/04/2015 has revealed that there are 11 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 06/15/2015 has revealed that there are 58 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 06/15/2015 has revealed that there are 3 UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 13 SWEEPS UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/10/2015 has revealed that there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 91 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Lead Agency: ALAMEDA COUNTY LOP
Lead Agency Case Number: RO0002471
Latitude: 37.817349
Longitude: -122.260946
Case Type: Cleanup Program Site
Case Worker: MD
Local Agency: ALAMEDA COUNTY LOP
RB Case Number: NA
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Arsenic, Chromium, Diesel, Gasoline, Waste Oil / Motor / Hydraulic / Lubricating

Site History: During work for the reconstruction of a portion of the Glen Echo Creek concrete arch culvert a geotechnical drilling program encountered a dark oily substance on groundwater in one soil bore. Concentrations up to 1,400 ug/l TPHg, 63,000 ug/l TPHd, 180,000 ug/l TPHmo, non-detectable BTEX, and various concentrations of metals were documented in groundwater, and 1,300 mg/kg TPHd and 2,100 mg/kg TPHmo was documented in soil. A risk management plan for construction was developed. Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>.

File Location: All Files are on GeoTracker or in the Local Agency Database
 Potential Media Affect: Other Groundwater (uses other than drinking water), Soil Vapor
 Potential Contaminants of Concern: Trichloroethylene (TCE), Gasoline
 Site History: The site is a automobile dealership. Site investigation activities have taken place since 1988. Four underground storage tanks (one 1,000-gallon waste oil near the garage at 27th Street (Tank A), one 300-gallon waste oil gasoline (Tank B) beneath sidewalk along Broadway, one 550-gallon gasoline (Tank C) beneath sidewalk along 28th Street, and one 1,500-gallon gasoline (Tank D) beneath sidewalk along 28th Street were removed in August 1988. Visual contamination was observed and detected in soil samples in the tank pits for Tanks C and D. A soil vapor and groundwater extraction system operated at the site from February 1996 through March 1998. Soil vapor sampling was completed at the site in February 2014. The site was evaluated

 Potential Contaminants of Concern: Lead, Gasoline
 Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A complete case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>. Land use surrounding the site is mixed commercial and residential. Known use of the site dates back to at least 1903, when the property was used the site of the Sisters of Providence Hospital. Beginning sometime in 1950, the site was occupied by a used car sales/service facility. Underground storage tanks (USTs) were reportedly installed in the western portion of the site in 1962, when the site was first occupied by a fuel service station. A restaurant was also constructed on the eastern portion of the property sometime between 1958 and 1968. In 1998, the

fuel service station was demolished, the USTs were removed, and the site was paved. The paved lot has remained to the present day and the site is now occupied by Audi of Oakland car sales facility and a vacant, circular building (the former restaurant). Residual impacted fill material appears to remain from the demolition of the former hospital. The nature and extent of contamination from the former hospital is currently uncharacterized. A new case will be created for contamination related to the former hospital. Lead and SVOC contamination from the former hospital is not considered a part of this UST closure. On March 18, 1982, eight soil borings were advanced to 20 feet below ground surface (bgs) and completed as monitoring wells (B-1 through B-8). No soil samples were collected from the well borings for laboratory analysis. Groundwater was first encountered between 8 and 25 feet bgs. Groundwater was then observed to raise within four to eight feet bgs. A trace odor of gasoline was observed on the drill cuttings from borings B-2 and B-5. The concentrations of combustible gases and percentage of the lower explosive limit (LEL) were also measured in each well. On April 21, 1982, two 7,500-gallon gasoline, one 4,000-gallon gasoline, one 1,000-gallon waste oil UST, and associated piping are reported to have been replaced with new fiberglass tanks (three 10,000-gallon gasoline and one 1,000-gallon used-oil) and piping at the site. The steel tanks are reported to have been installed in 1962, 1971, 1974, and 1981. No other information is available. Approximately 20 cubic yards of soil and 2,000 gallons of groundwater are reported to have been removed and disposed at an offsite location. Observation wells TP-1 and TP-2 were installed in the new tanks backfill. In May 1982, approximately 2.5 feet of light non-aqueous phase liquid (LNAPL) was observed in well B-4. LNAPL was then bailed from well B-4 on a weekly basis from August 1982 to February 1983, when LNAPL was no longer observed in the well. On August 7, 1983, slow pumping was reported in the mid-grade gasoline product line. The line was tested, found to be leaking just east of the gasoline USTs, and replaced on August 9th. According to inventory records, up to 20 gallons of product was lost. A follow-up groundwater monitoring event was conducted on September 9, 1993. TPHg and benzene were detected in groundwater at concentrations up to 110,000 ppb and 3,200 ppb, respectively. The greatest TPHg and benzene concentrations were detected in wells B-4 and B-5, located east of the USTs. On July 26 and 27, 1994, four exploratory borings were advanced onsite (B-9) and offsite (B-10 through B-12) to approximately 20 feet bgs. The borings were completed as monitoring wells and sampled on August 4, 1994. Soil samples were collected from the borings between five and eleven feet bgs. Groundwater was first encountered in the wells at approximately 17 to 18 feet bgs. Static groundwater was measured in the new wells between 6.5 and 11.5 feet bgs. Soil samples collected during the event contained up to 90 ppm TPHg and no detectable concentrations of benzene. The only detectable petroleum hydrocarbons in groundwater in new wells were from well B-9 at concentrations of 650 ppb TPHg and 4.4 ppb benzene. On March 10, 1998, three 10,000-gallon gasoline USTs, one 1,000-gallon waste oil UST, two semi-hydraulic hoists, and all associated piping were removed from the site. No holes were observed in any of the USTs or associated piping. Groundwater was encountered in the gasoline UST excavation at a depth of approximately 11 feet bgs. Approximately 4,000 gallons of groundwater was pumped from the excavation and disposed offsite. Soil samples were collected from the gasoline UST excavation (TX1 through TX8),

waste oil excavation (UO1 and UO2), piping trench (P1 through P11), hydraulic hoist excavation (H1 and H2), and stockpiled soil (SP-1(a-d), SP-2(a-d), and UOSP-1(a-d)). Soil waste generated during this event was analyzed and deemed appropriate to be used as backfill. Although it is not documented, the observation wells previously installed in the tank pit (TP-1 and TP-2) and well B-2 were apparently destroyed during this event. Analysis of soil samples collected from the gasoline UST excavation detected up to 340 ppm TPHg, with highest concentrations along the eastern sidewall. The product dispenser soil samples collected from the southernmost dispenser contained the highest concentration of TPHg, with 1,200 ppm detected. Total Oil and Grease (TOG) was detected in the hydraulic hoist and waste oil UST excavation samples at concentrations up to 310 ppm and 110 ppm, respectively. Lead was also detected in the product trench and waste oil UST excavation bottom confirmation soil samples at concentrations of 5,000 ppm and 6,800 ppm, respectively. On November 19, 1998, soil was excavated from former locations of the used oil UST and from each dispenser island. Test pits were also excavated to investigate lead contamination in soil. Soil samples were collected from the bottom of the excavations (PX2, PX5, and PX7 through PX10), from fill material in the former waste oil excavation (UOSP-2(a & b)), and from the stockpiled soil (SP-3(a-d)). Additional excavation of the former waste oil UST location was not conducted. Similar to the previous excavation event, product dispenser soil samples collected from the southernmost dispenser contained the highest concentration of TPHg (1,190 ppm). Lead was detected in stockpiled soil from the former waste oil UST excavation at a concentration of 1,790 ppm. Confirmation samples collected at the bottom of the additional product line excavation contained < 7.5 ppm (non detectable) concentrations of lead. Approximately 160 cubic yards of contaminated soil was removed from the former dispenser areas and disposed offsite. During this investigation, old fill material consisting of burnt wood, bricks, ashes, and concrete was encountered in the northern excavation areas. Concrete footings and basement floor slabs were also discovered. The fill material and foundation appear to be associated with the former Sisters of Providence Hospital that existed at the site. Field observations indicated that the lead contamination (up to 6,800 ppm) detected in the former used-oil tank excavation and in the northern dispenser island excavation (up to 5,000 ppm); and likely the detections of semi-VOCs (up to 2.3 ppm bis(2-ethylhexyl)phthalate and other SVOCs), appeared to be associated with the fill material observed in these areas and unrelated to the former service station activities. The impacted fill material appears to remain from the demolition of the former hospital. The nature and extent of contamination from the former hospital is currently uncharacterized. A new case will be created for contamination related to the former hospital. Lead and SVOC contamination from the former hospital is not considered a part of this UST closure. On July 29, 1999, Oxygen Reducing Compound (ORC) socks were installed in wells B-1, B-3, B-5 through B-7, and B-9. Nine to sixteen socks were installed in each well. Subsequent groundwater monitoring results showed a decrease of TPHg concentrations in groundwater. Concentrations of TPHg in wells B-1, B-3, and B-9 rebounded to concentrations at or above post-ORC sock installations within approximately one year. In wells B-1, B-3, and B-5, an increase of methyl tert-butyl ether (MTBE) concentrations was observed in groundwater subsequent to the ORC sock installations. On

June 6 and 7, 2007, three onsite borings (B-13, B-14, and B-21) and six offsite borings (B-15 through B-20) were installed. Borings B-13, B-15, and B-16 were not completed due to obstruction by a concrete slab encountered between four and six feet bgs, and apparently associated with the former hospital. Soil samples were collected from each completed boring at five-foot intervals. Grab groundwater samples were also collected from each completed boring except boring B-21. Neither the soil samples nor the groundwater samples contained detectable concentrations of TPHg or benzene. MTBE was detected in grab groundwater samples from borings B-14 and B-17 at concentrations of 1 ppb and 2 ppb, respectively. Groundwater monitoring was conducted at the site quarterly in 1982; however, no further monitoring occurred between 1983 and 1992. Groundwater monitoring then restarted and occurred semi-annually from 1993 to the present. Concentrations up to 2,700 ppb TPHg and 7 ppb benzene were documented in the most recent groundwater monitoring event in September 2012.

 Local Agency: ALAMEDA COUNTY LOP
 RB Case Number: NA
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Potential Media Affected: Soil
 Potential Contaminants of Concern: Not reported
 Site History: In April 1993, 4 test borings were advanced to evaluate lead concentrations. Up to 650 ppb lead was detected in soil samples. In October 1993, thirteen borings were advanced. A work plan was developed for removal of the lead contaminated soil in 1994 and remediation of the site began in August 1994. Over 600 tons of soil were disposed at an off-site facility with confirmation sampling being performed on soil. Groundwater samples have not been obtained.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affect: Under Investigation
Potential Contaminants of Concern: Waste Oil / Motor / Hydraulic / Lubricating
Site History: On March 11, 1997, an investigation was performed to investigate the 1,000-gallon heating oil or fuel UST located in the sidewalk. Four borings were advanced on each side of the tank to maximum depths of 20 feet bgs. The maximum concentrations in soil were 9,600 mg/kg TPHg, 4,500 mg/kg TPHd, and 18,000 mg/kg Oil and Grease. No benzene or MTBE were detected. After the investigation was performed, the UST was closed in place. Groundwater was not collected at this time. An SWI conducted in 2014 reported TPHg up to 640 mg/kg, 19 mg/kg TPHd, and 38 mg/kg TPHmo. Benzene, toluene, and MTBE were ND, Max ethyl benzene, xylenes and naphthalene concentrations were reported at 0.16, 0.65, and 0.12 mg/kg, respectively. Max GGW concentrations were

 RB Case Number: Not reported
 LOC Case Number: Not reported
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Potential Media Affect: Soil, Soil Vapor, Under Investigation
 Potential Contaminants of Concern: Heating Oil / Fuel Oil
 Site History: A 1,200-gallon UST was discovered at the site by Paoli Construction, Inc. during grading activities at the site on February 13, 2013. Cook Environmental Services (CES) was hired by the property owner, the Kyle Milligan and Susan Casentini Trust, to inspect the UST on February 14, 2013. CES discovered a buried redwood tank approximately 12 feet in diameter that contained an unknown volume of heating oil. The structural integrity of the redwood tank had been severely compromised and a large volume of heating oil had impacted surrounding soils. The UST was connected to a 4-inch diameter cast iron pipe that was probably connected to a fill spout behind the sidewalk on 26th Street. The location of the UST and the cast iron pipe are shown on Figure 2. The City of Oakland Fire Department was notified and Cook Environmental Services, Inc (CES) filed an UST

removal permit with the Fire Department on March 4, 2013. CES retained Fremouw Environmental Services, Inc (FES) to empty the UST. Since the redwood tank was badly decayed, no triple rinse or decontamination procedures could be performed. FES removed approximately 80 gallons of heating oil from the excavation on March 11, 2013. The receiving facility for the waste heating oil required that the liquid be sampled for PCBs prior to acceptance of the waste. A sample of the heating oil was collected on March 11, 2013 and analyzed for PCBs. PCBs were not detected. Two drums of heating oil were disposed of as non-RCRA hazardous waste. CES excavated the UST and contaminated soil from March 11 to 13, 2013. Leroy Griffin of the City of Oakland Fire Prevention Bureau was onsite. Since the redwood tank was badly decomposed, it could not be removed intact and was taken out in pieces and placed in six 10-cubic yard roll-off bins along with contaminated soil. Three bins (36.5 tons) were profiled as non-hazardous and disposed at the Potrero Hills landfill in Suisun, California. The lab report from two soil samples collected from the UST excavation was used to profile the waste. The non-hazardous waste was disposed of at the Potrero Hills Landfill near Suisun, California. Soil in two of the bins was classified as non-RCRA hazardous waste and was disposed at the U.S. Ecology landfill in Beatty, Nevada. The UST excavation extended to a depth of approximately 12 feet bgl. After excavation activities were complete, CES collected two soil samples from the base of the excavation. Sample S1 was collected from the south end of the excavation at depth of approximately 10 feet below grade. Sample S2 was collected from the north end of the excavation (closest to 26th Street) at a depth of approximately 10 feet below grade. Soil samples were collected from the bucket of the excavator and placed in stainless steel sample tubes, labeled and placed on ice in a cooler. Samples were handled using chain-of-custody procedures. Samples were transported to McCampbell Analytical, Inc. in Pittsburg, California that same day and analyzed for the standard suite of analytes required of a UST containing heating oil. Analyses included total petroleum hydrocarbons as diesel (TPH-d) using EPA method 8015B modified; benzene, toluene, ethylbenzene and xylenes (BTEX) using EPA method 8021B; and naphthalene and MtBE using EPA method 8260B. The samples appeared to be contaminated due to staining and hydrocarbon odor. BTEX and MtBE constituents were not detected in soil samples above laboratory detection limits. TPH-d concentrations range from 6,500 to 11,000 milligrams per kilogram (mg/kg). Naphthalene concentrations range from 10 to 14 mg/kg. The UST excavation was backfilled with clean recycle baserock from Marin Resource Recovery in San Rafael, California. A Data Gap Investigation Work Plan and Site Conceptual Model has been submitted to ACEH, dated March 25, 2014. ACEH requests a Work Plan Addendum and Data Gap Investigation Work Plan Addendum and Site Conceptual Model to address comments in ACEH's response letter. dated May 23, 2014. ACEH assessed RFC with the LTCP and determined that although the case meets the LTCP for fuel petroleum hydrocarbon (TPH), to complete ACEHs review, the following Technical Comments must be addressed: 1. Please provide rationale why soil gas is not an explosive risk in the vicinity of SB-3 where the soil vapor sample detected elevated methane concentrations and the highest TPH diesel soil concentrations were found. 2. Please show that a vapor intrusion risk does not exist in the vicinity of SB-6 where chlorinated hydrocarbons concentrations exceeding their respective ESLs were found in groundwater, using the San Francisco Bay Regions

Regional Water Quality Control Boards draft Final July 31, 2009 Assessment Tool for Closure of Low-Threat Chlorinated Solvent Sites. ACEH has reviewed the submitted May 15, 2015 Request for Closure Addendum, we agree that the fuel leak case is ready for closure, and will start the closure process next week. However, please note, ACEH will open a Site Cleanup Case (SCP) to address remaining data gaps at the site associated with volatile organic compounds (VOCs) detected in groundwater in the southern portion of the site.

facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 File Location: All Files are on GeoTracker or in the Local Agency Database
 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Gasoline
 Site History:

The site is at the intersection of 28th Street and Telegraph Avenue in Oakland, CA and is currently occupied by a Kentucky Fried Chicken restaurant. The surrounding area is a mixed residential and commercial area. Shell demolished the former gasoline service station between 1988 and 1992. The former service station consisted of a first generation underground storage tank (UST) in the northeast corner of the property, three second-generation gasoline USTs in the southwestern portion of the site, a waste oil tank, four dispensers, an oil/water separator, three hydraulic lifts, and a station building. Sometime in 1987, five soil borings were drilled and sampled in the vicinity of the three second generation USTs. TPHg and benzene were detected in soil at concentrations up to 4,400 and 26 ppm, respectively. TPHd and TPHmo were not detected in soil. Three on-site groundwater monitoring wells (S-1, S-2, and S-3) were installed and sampled by Woodward-Clyde Consultants in April of 1988. At that time, the service station was no longer in use and the single first generation UST had been removed from the northeastern corner of the site. Maximum concentrations of TPHg and benzene in soil were reported at 4,800 and 38 ppm, respectively. Maximum concentrations of TPHg and benzene in the initial groundwater samples were 46,000 ppb and 2,700 ppb, respectively, reported in source area well S-3. In November 1988, four off-site groundwater monitoring wells (S-4, S-5, S-6, and S-7) were installed. TPHg and benzene were detected in groundwater from well S-6, which is located on the south side of 28th Street downgradient from the three gasoline USTs, at concentrations of 5,500 and 1,700 ppb, respectively. In December 1988, the three gasoline, USTs, waste oil tank, dispensers, and product piping were removed. The four tanks were made of fiberglass and no apparent holes or cracks were observed. Soil samples collected from the sidewalls of the excavation contained TPHg and benzene at concentrations up to 2,800 and 0.85 ppm, respectively. One soil sample collected below the

S101624460

waste oil UST did not contain reportable concentrations of TPHd and BTEX. Overexcavation of the tank pit was performed on January 29, 1989. The excavation was extended vertically to a depth of approximately 9.5 feet below grade where groundwater was encountered. Approximately 500 cubic yards of soil was excavated from the area around the tank pit in the southwestern portion of the site. In July 1989, three additional off-site monitoring wells (S-8, S-9, and S-10) were installed south of the site. Off-site monitoring well S-11 and on-site product recovery well SR-1 were installed in October and November 1990. On-site soil vapor extraction wells SV-1 and SV-2 were installed on September 11, 1991. GeoStrategies, Inc. conducted a soil vapor extraction pilot test using wells SV-1 and SV-2 on September 24, 1991. The vapor extraction test results indicated minimal vacuum influence and low vapor recovery concentrations. GeoStrategies, Inc. concluded that soil vapor extraction was not a feasible remedial alternative for the site. Between 1991 and June 1992, the former service station building, the dispenser island, and dispenser canopy were removed. From June through August 1992, GeoStrategies, Inc. observed the removal of the oil water separator and three hydraulic lifts formerly located within the service station building and collected soil samples beneath the former OWS, hydraulic lifts, and former dispensers. TPHg and BTEX were not reported in any of the four soil samples collected beneath the product piping at each dispenser. One soil sample collected below the OWS contained oil and grease at a concentration of 68 ppm and did not contain reportable concentrations of TPHg, TPHd, or BTEX. The excavation was expanded laterally and vertically in the area of the former OWS. After the second stage of excavation, a confirmation soil sample collected from the bottom of the excavation at a depth of approximately 10.5 to 11 feet bgs did not contain TPHg, TPHd, oil and grease, or BTEX at concentrations above reporting limits. Three soil samples were collected beneath each of the former hydraulic lifts at 7.5 to 8 feet bgs. TPHd and TPHmo were detected at concentrations of 40 and 580 ppm, respectively, in one of the three soil samples (SL-1) but were below detection limits in the other two soil samples. Two phases of additional soil excavation were conducted in the area of sample SL-1. The confirmation sample collected from the bottom of the excavation at a depth of approximately 10.5 to 11 feet bgs did not contain detectable concentrations of TPHd or TPHmo. The overexcavation performed in the vicinity of the former OWS and hydraulic lifts removed approximately 90 cubic yards of soil. Off-site monitoring wells S-7, S-9, and S-11 were decommissioned on November 19, 1999 to accommodate development of the off-site parcel. A sensitive receptor survey, utility conduit survey, and request for case closure were submitted on June 4, 2001. In response to an ACEH request, three on-site borings were proposed in the vicinity of former downgradient well S-3 and five offsite borings were proposed along the Telegraph Avenue to determine whether petroleum hydrocarbons were migrating along the utility corridors. Due to numerous utilities beneath Telegraph Avenue, Cambria was unable to find locations for the five proposed offsite borings. Onsite borings were advanced in May 2004 in the source area near former well S-3. TPHg was detected in soil samples from the borings at concentrations up to 4,900 ppm. Benzene, MTBE, EDB, and EDC were not detected in the soil samples. Grab groundwater samples collected from each of the three borings contained TPHg at concentrations up to 86,000 ppb. Benzene, MTBE, EDB, EDC, and other fuel oxygenates were not detected in the grab

S101624460

groundwater samples. Onsite wells S-1 and SR-1 and off-site wells S-4, S-5, and S-10 were decommissioned on November 11, 2005. A geophysical survey was used to find missing well S-3, which was located in a planter along 28th Street. Well S-3 was filled with debris and was properly decommissioned in March 2006. Replacement well S-3R was installed downgradient from the former USTs in March 2006. Groundwater monitoring has been conducted at the site since May 1988. Free product was historically observed and measured in onsite well S-3 between October 1990 and July 1991. Maximum historical concentrations of TPHg, benzene, and MTBE in groundwater were 47,000 ppb (S-3), 3,700 ppb (offsite well S-6), and 229 ppb (offsite well S-8). During recent groundwater monitoring events, only source well S-3R, and downgradient wells S-6, and S-8 are monitored quarterly. During the most recent Second Quarter 2008 groundwater sampling event on May 28, 2008, groundwater from wells S-3R, S-6, and S-8 contained 450, 1,400, and 1,200 ppb of TPHg, respectively. Benzene was reported in groundwater only from well S-6 at a concentration of 2 ppb and MTBE was below detection limits in all three wells.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Lead Agency: Not reported
Case Worker: KLD
Local Agency: Not reported
RB Case Number: NA
LOC Case Number: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Waste Oil / Motor / Hydraulic / Lubricating
Site History: In September 1990, five 1,000-gallon motor oil, one 2,000-gallon motor oil, one 1,000-gallon used oil, and two 10,000 gallon USTs were removed from the site. Soil borings and groundwater monitoring wells were installed at the site between February 1991 and December 1992. Elevated concentrations of petroleum hydrocarbons were detected in soil and free product was present in monitoring well MW-3. In June 1996, an SVE bioventing pilot test was performed at the site. Installation of Soakease absorbent socks and periodic vacuum extraction events were terminated in July 2000. In 2004, additional borings were installed to evaluate remedial effectiveness. Elevated concentrations of petroleum hydrocarbons were detected in soil. In December 2008, two additional borings were installed in the vicinity of MW-3 to verify whether free product was present.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Global Id: T06019792927
 Lead Agency: ALAMEDA COUNTY LOP
 Lead Agency Case Number: RO0002668
 Latitude: 37.816493
 Longitude: -122.267436
 Case Type: Cleanup Program Site
 Case Worker: KLD
 Local Agency: ALAMEDA COUNTY LOP
 RB Case Number: NA
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Potential Media Affected: Under Investigation
 Potential Contaminants of Concern: Not reported
 Site History: Phase I performed in 1998 discovered 3 on-site groundwater monitoring wells from the immediately upgradient and to the north Shell gasoline station (RO0000009) indicated that groundwater contamination is present at concentrations of 610 ppb TPPH, 50 ppb benzene, and 3.9 ppb MTBE. From Enviro September 15, 1997 QMR. A review of the site shows that well S-11 contained concentrations of up to 1,210 ppb TPPH, and 39 ppb benzene in 1999 which may indicate that an uninvestigated onsite source is present adjacent to this well. The 3 on-site wells were destroyed in 1999.

Holes were observed in the gasoline UST upon removal. Maximum concentrations of 1,500 ppm TPHg, 1,800 ppm TPHd and 7.4 ppm benzene were detected in soil. Subsequently, a work plan was submitted but has not been implemented. Soil vapor and groundwater sampling must occur to evaluate the elevated benzene and extent of contamination in groundwater. On the Project Information screen, add this phrase to the Staff Notes and Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historical case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>.

Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Waste Oil / Motor / Hydraulic / Lubricating
Site History: May 10, 1993, one 350-gallon waste-oil UST was removed from the site. Petroleum hydrocarbons were detected in soil at the time. Subsequently one monitoring well was installed and sampled once. No petroleum hydrocarbons were detected in the two soil samples collected from the boring at 21 and 26 feet. However, petroleum hydrocarbons were detected in groundwater. Only one sampling event was reported.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Three USTs removed in December 1989. Following UST removals, borings, which detected free product, were installed at the site. Additional site investigations were conducted in 1992. An SVE system operated from October 1996 to March 1998. In November 2004, DPE was proposed at the site, which was approved in March 2006. Corrective action implemented April 2011 & is in current operation.

RB Case Number: 01-1313
LOC Case Number: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: On April 7, 1998, five soil borings were installed at the site. Soil and groundwater samples detected diesel and bunker oil range hydrocarbons indicating that a release had occurred. In October 1998, one 10,000-gallon UST was closed in place at the site. Following UST closure activities, an additional Site Investigation verified soil and groundwater contamination at the site. Free product has been observed in groundwater monitoring well FOMW-1.

LOC Case Number: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affect: Soil
Potential Contaminants of Concern: Heating Oil / Fuel Oil
Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A complete case file for this site is located on the Alameda County Environmental Health website at: <http://www.acgov.org/MAPS/DEH/InspectionResults/>. An approximately 350-gallon underground storage tank (USST) was removed from the site on December 16, 2013. The tank was found to be in poor condition with at least one visible hole. Soil discoloration and petroleum hydrocarbon odors were observed in the stockpiled soil and soil underlying the tank. Soil samples collected from the tank pit contained up to 9,290 ppm of total petroleum hydrocarbons (C10-C28). The tank pit was overexcavated to a depth of approximately 12 feet bgs to remove petroleum hydrocarbon contaminated soils. Following the overexcavation, two soil samples were collected from the bottom of the excavation at a depth of approximately 12 feet bgs. The soil sample from the western end of the tank pit contained 3,960 ppm of TPH (C10-C28).

Local Agency: Not reported
RB Case Number: 01-2428
LOC Case Number: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affect: Other Groundwater (uses other than drinking water), Soil Vapor
Potential Contaminants of Concern: Gasoline, Waste Oil / Motor / Hydraulic / Lubricating
Site History: The site is a small triangular commercial property located at the intersection of Harrison Street and Bay Place in Oakland, CA. The site was previously a Shell gas station and auto repair facility equipped with three underground storage tanks (USTs), one 550-gallon waste oil tank UST, three dispenser islands, a drive-on hoist, and a station building. The USTs were removed from the center of the property in March 1977, but no records are available that document their removal. Three dispenser islands existed to the west, north, and east of the former USTs. Currently, the site is occupied by a 7-Eleven convenience store and the surrounding area is predominantly a mix of commercial and residential use. During a light pole installation at the site, petroleum impacted soil was observed. Composite stockpile soil samples were collected on November 2, 1992 from the soil generated during the light pole removal and analyzed for Total Petroleum Hydrocarbons as gasoline (TPHg), Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX), lubricating oil, and other heavier petroleum hydrocarbons. The soil sample collected from Soil Pile 1 contained the highest concentrations of 3,200 parts per million (ppm) lubricating oil and 35 ppm Oil and grease (O&G). On March 4, 1993, four soil borings (#1 through #4) were advanced at locations across the site. One soil sample from each boring was analyzed for TPHg, TPHd, BTEX, O&G, Total Petroleum Hydrocarbons as kerosene (TPHk), Total Petroleum Hydrocarbons as mineral spirits (TPHms), and lubricating oil. The maximum concentrations of 7,900 ppm TPHmo and 620 ppm TPHg were detected in the soil sample from boring #4, in the east portion of the site. Six monitoring wells (S-1 through S-6) were installed throughout the site on June 2 through 5, 2008. Soil samples were collected from each boring between 5.5 and 15.5 fbgs, along with one groundwater sample. Groundwater was first encountered at the site between 8.2 and 19 fbgs. The soil samples indicated that the highest concentration of petroleum hydrocarbons occurred in shallow soils between 7 and 10 fbgs. Shallow soils in the southeast portion of the site contained up to 2,300 ppm TPHg, 22,000 ppm TPHd, and 8,600 ppm O&G. Shallow soils near the western-most dispenser contained up to 2,700 ppm TPHg and 270 ppm TPHd. Groundwater samples collected from the former UST area and southeast corner of the site contained TPHg concentrations of 6,500 parts per billion (ppb) and 1,300 ppb, respectively. To investigate the potential for the petroleum plume to extend off-site, two grab groundwater samples (HP-1 and HP-2) were collected down gradient along Harrison Street on May 19 through 21, 2009. The grab groundwater sample collected furthest from the site (HP-2) contained 715,000 ppb O & G, 14,000 ppb TPHg, and 58,000 ppb TPHd, while the closer groundwater sample (HP-1) contained 111,000 ppb O&G. 11,000

S102423476

ppb TPHg and 36,000 ppb TPHd. The grab groundwater samples indicated the potential for an offsite plume of heavier hydrocarbons. In addition to the off-site samples, four soil borings (B-1 through B-4) were advanced in the former waste oil tank area. The shallow soil sample collected from boring B-1 at 5.5 fbg contained the highest concentration of O&G at 3,000 ppm. TPHg and TPHd were detected in all borings at maximum concentrations of 920 ppm and 700 ppm, respectively. Three soil vapor probes (SVP-1 through SVP-3) were also installed near the former USTs and waste oil UST and sampled on May 28, 2009. The vapor probes contained up to 530,000 micrograms per cubic meter (a%/m³) benzene. On February 27, 2010, one soil vapor probe (SVP-2a) and two near sub-slab vapor probes (SVP-4 and SVP-5) were installed. Sampling of the vapor probes occurred on March 23, 2010. TPHg and benzene were detected in soil vapor near the former USTs at concentrations up to 75,000,000 a%/m³ and 160,000 a%/m³, respectively. Soil vapor samples from the two near sub-slab probes did not contain TPHg, benzene, toluene, ethylbenzene, or xylenes (BTEX) at concentrations above the reporting limit. On June 25, 2010, six soil borings (B-5 through B-10) were advanced off-site to investigate contamination south of the site. The investigation revealed a large plume of petroleum hydrocarbons south of the site consisting of O&G, TPHd, and TPHg at maximum groundwater concentrations of 715,000 ppb, 58,000 ppb, and 14,000 ppb, respectively. The highest concentrations were detected along Harrison Street approximately 175 feet southwest of the site. The plume does not contain BTEX or other VOCs at concentrations above reporting limits. Since the maximum concentrations within the plume were detected approximately 175 feet downgradient from the site and the types of petroleum hydrocarbons are not consistent with the dissolved phase hydrocarbons detected on site, the plume is most likely from an off-site source. In 2011, a review of historical aerial photos and Sanborn maps identified five potential sources for the off-site heavy petroleum hydrocarbon plume. On March 30, 2011, soil vapor probes SVP-3 through SVP-5 were sampled. Soil vapor probes SVP-1, SVP-2, and SVP-2a could not be sampled due to water in the sampling tubing. Due to anomalous results of up to 190,000 a%/m³ TPHg in near sub-slab vapor probes SVP-4 and SVP-5, the probes were re-sampled on June 8, 2011. The re-sampling of probes SVP-4 and SVP-5 indicated non-detectable concentrations of TPHg and 2.2 a%/m³ benzene were present in the near sub-slab wells. Probe SVP-3, located less than five feet north of near sub-slab probe SVP-5, contained 26,000,000 a%/m³ TPHg, 1,400 a%/m³ benzene, and 1,700 a%/m³ xylenes. An air exchange rate test was performed on the existing convenience store building on December 19, 2011. The initial measurements of the air exchange rate indicated an overall average of 3.11 exchanges per hour. Due to a relatively low air exchange rate, the test was followed by system maintenance which increased the HVAC performance to an air exchange rate of 11.49 exchanges per hour. The minimum required air exchange rate was calculated to determine the potential for intrusion of benzene from soil vapor to indoor air to exceed the commercial indoor air Environmental Screening Level (ESL). Using site data and assumptions from EPA and RWQCB documents, the calculated necessary air exchange rate to prevent benzene vapor intrusion at concentrations exceeding the indoor air ESL is 2.3 exchanges per hour. The current air exchange rate is greater than the calculated minimum air exchange rate by a factor of 5.

Potential Media Affected: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), Dichloroethane (DCA), Dichloroethene (DCE), Other Chlorinated Hydrocarbons, Other Solvent or Non-Petroleum Hydrocarbon, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Arsenic, Lead, Diesel, Gasoline, MTBE / TBA / Other Fuel Oxygenates, Waste Oil / Motor / Hydraulic / Lubricating

Site History:

Project is city block bounded by Broadway, 23rd, 24th & Valley Streets. Includes 2301-2345 Broadway; 421-455 24th St.; 444 23rd St.; and 2320-2354 Valley St. The site includes 5 parcels (APN 8-739-2, 8-739-4, 8-739-5, 8-739-7) that have historically been used as commercial facilities including auto dealerships/repair facilities. Associated potential chemical uses, storage, and handling included bulk waste oil in an above ground tanks, hydraulic oil related to lifts, and use of various types of cleaners and lubricants. The site is being redeveloped by Signature Redevelopment Group and will include commercial and residential land uses. Phase I and II Environmental Site Assessments have been conducted on different parcels within the redevelopment site since 2001. Soil and groundwater impacts have been identified on four of the five parcels located within the boundaries of the redevelopment project. Chlorinated and non-chlorinated volatile organic compounds (VOCs) and petroleum hydrocarbons as gasoline, diesel and motor oil have been detected in groundwater. Data indicates that a 1,1-dichloroethane plume exists under the majority of the site. Lead has been detected in shallow soil and at depths up to 13 feet below ground surface. Parcel 8-739-7 is listed as a closed underground storage tank (UST) site (ACEH Fuel Leak Case

No. RO0001190 and Geotracker Global ID T06001000957). Two USTs (one 1,000 gallon leaded gasoline UST and one 550 gallon waste oil UST) were removed from the northern portion of the parcel in 1991. Petroleum hydrocarbons and VOCs were detected in confirmation soil samples collected from the UST pit. One groundwater monitoring well (MW-1) was installed in the tank pit and groundwater monitoring was conducted from 1992 until 1993. The case was closed after four consecutive quarters of non-detects for petroleum hydrocarbons. At the time of closure, low levels of chlorinated VOCs were detected in groundwater. Limiting conditions at the site at the time of the UST removals prevented the over excavation of all impacted soil and thus there may be areas of contaminated soil remaining beneath the building and the sidewalk in the vicinity of the former tanks. Data collected during field investigations conducted in 2006 and 2011 indicate that another source of petroleum hydrocarbons likely exists at the site on parcel 8-739-7. Additional investigation is required to characterize the site including determination of groundwater flow direction, vertical and lateral delineation of contaminants of concern in soil and groundwater, plume stability, and identification of sources of petroleum hydrocarbons and chlorinated VOCs. Electronic submittal of data and documents requested for completeness of database.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

YI PROPERTY / GAS STATION (Continued)

S108724715

RB Case Number: File Location: Potential Media Affected: Potential Contaminants of Concern: Site History:	NA All Files are on GeoTracker or in the Local Agency Database Other Groundwater (uses other than drinking water) Diesel, Waste Oil / Motor / Hydraulic / Lubricating, Gasoline Site was operated as a gasoline station and was formerly an open case (RO0000891) from 1995 to January 29, 1997 when it was closed by ACEH for commercial use only. The site has had the previous addresses: 554 27th Street and 550 27th Street. The site was opened as RO2948 when proposed land use changed to residential. The proposed building is to be commercial use on the first floor along 27th Street and subgrade parking along Merrimac Street with a car ramp on the south side of the building for access to the parking. Residential units will be on the second floor. A Preliminary Site Assessment was performed in February 2007. One soil boring was advanced near former well MW-3 which had previously contained the maximum benzene concentration in groundwater at the site. TPHg was detected at 20 ppm in soil at 10.3 feet, but no hydrocarbons were detected in the 11.5 foot sample. Up to 2,300 ppb TPHd, 11,000 ppb TPHmo were detected in groundwater. No TPHg or BTEX was detected in the groundwater sample. Eight soil borings were advanced between February 14 and 18, 2008. Maximum concentrations were 220 ppb TPHg and 196 ppb TPHd and no benzene was detected. Four soil vapor samples were also collected during this investigation. Benzene was detected in only one sample at a concentration of 12 a%g/m3 and is below the residential ESL for benzene. Gasoline was detected in two samples at a maximum concentration of 1,900 a%g/m3. All other TO-15 analytes were either below the detection limits or at least 2 orders of magnitude below the respective ESL for each constituent. Site Management Requirements: Case closure for this site is granted for the currently proposed construction configuration (as of 4/1/08) of a multistory residential building with the first floor comprised of commercial space and a subgrade parking garage. If the currently proposed construction configuration changes or any construction/excavation activities encounter contamination that is indicative of higher residual concentrations than reported in this closure summary's after columns of the Maximum Documented Contaminant Concentrations table, then ACEH must be immediately notified.

Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: The site was redeveloped in 2007 and is currently the site of a Whole Foods Market at the intersections of Bay Place, Harrison Street, and Vernon Street in Oakland, California. The site is approximately 1,000 feet north of Lake Merritt. Surrounding land use is mixed commercial and residential. Two underground storage tanks (USTs) were present at the Site as part of the automobile service facility. The two USTs consisted of a 3,000-gallon waste oil tank, which was removed in December 1988, and a 10,000-gallon gasoline UST, which was removed in January 1994. During the excavation and removal of the 10,000-gallon gasoline UST in January 1994, a hole was observed in the product piping that lead from the UST to the fuel dispenser. Free-phase product was observed on the groundwater surface in the gasoline UST excavation. In June 1994, approximately 100 cubic yards of total petroleum hydrocarbon (TPH) affected soil adjacent to the former gasoline UST and along the western portion of the former product piping route, was excavated and removed. Several soil and groundwater investigations have been conducted at the Site since 1992. The investigations found petroleum contamination in soil and groundwater within the areas of the former USTs and former hydraulic lifts and tanks. Two areas with elevated concentrations of lead were also identified beneath the building. A total of eleven hydraulic lifts along with nine floor drains and associated piping were excavated and removed between June 2005 and November 2005. Approximately 1,010 tons of soil adjacent to the hydraulic lifts was excavated and transported to Waste Managements Altamont Landfill in Livermore, CA for disposal. A total of approximately 285 tons of lead-affected soil was transported to Clean Harbors Class I landfill in Button Willow, CA for disposal. During the period from September 16 to December 16, 2005, a total of approximately 5,000 tons of TPH-affected soil was excavated from the area of the former USTs and transported to Allied Wastes Forward Landfill located in Manteca, CA for disposal. Quarterly and later semiannual groundwater monitoring was conducted at the site between March 1993 and April 2010. The groundwater monitoring data indicate that a plume containing dissolved petroleum hydrocarbons is present in the area of the former USTs and extends beneath Bay Place. The highest concentration of MTBE detected during the most recent sampling event in April 2010 was 1,400 parts per billion. No water supply wells or other potential receptors are expected to be affected by the plume. Site investigation and cleanup activities have been completed and it does not appear that the fuel release presents a risk to human health for nearby residents or site

 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Gasoline
 Site History: In March 1992 two USTs (one-gasoline and one waste-oil) were removed from beneath the sidewalk. The associated fuel dispenser which was located in the building was also removed at this time. Elevated hydrocarbon and oxygenate concentrations were observed in soil and groundwater in the source area and the groundwater monitoring program began in 1993 with the installation of the first three monitoring wells.

Potential Media Affect: Not reported
Potential Contaminants of Concern: Diesel
Site History: In November 2009, one 1,500-gallon underground storage tank (UST) was removed from the site. At the time of removal free product was observed in soil. The maximum soil samples collected from the tank pit were 7,200 milligrams per kilogram (mg/kg) total petroleum hydrocarbons as diesel (TPHd), 2,500 mg/kg TPH as motor oil (TPHmo), 8,800 mg/kg oil and Grease. After overexcavation, green soil staining and odor were still observed. Maximum concentrations were 720 mg/kg TPHd, 300 mg/kg TPHmo, and 900 mg/kg oil and grease.

Case Type: Cleanup Program Site
Case Worker: KLD
Local Agency: ALAMEDA COUNTY LOP
RB Case Number: NA
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Polychlorinated biphenyls (PCBs), Nickel, Other Metal
Site History: A limited subsurface investigation was performed on June 6, 2007. Five soil borings were drilled. Two soil borings were placed on the property located at 3001-3007 E. 12th Street (APN 25-6936-4) and three boring were placed on the neighboring property at 0 29th Street.(APN 25-693-8). Elevated concentrations of metals and PCBs were detected in soil samples from APN 25-693-8. The address has been changed in Geotracker to reflect the correct location of the project case.

 Treat To Water: Major Threat to Water Quality. A violation could render unusable a ground water or surface water resource used as a significant drink water supply, require closure of an area used for contact recreation, result in long-term deleterious effects on shell fish spawning or growth areas of aquatic resources, or directly expose the public to toxic substances.
 Complexity: Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.

Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: In July 1988 an ATT manhole 300 feet west of the site was found to have gasoline leaking into it, and a request to test the USTs was made. In February 1989 a soil vapor survey (VP-1 to VP-19) was conducted at the site; concentrations indicated a release. In March 1989 wells MW-1 to MW-5 were installed. In June 1990 wells MW-6 to

MW-9 were installed offsite. In June 1990 the station was demolished and three 10,000-gallon gasoline USTs and one 1,000-gallon waste oil UST were removed. Well MW-2 was destroyed in the process of overexcavating impacted soil in 1990 and 1991; approximately 1,500 cubic yards were excavated. Of that total approximately 800 cubic yards were aerated and reused onsite. In December 1992 the City of Oakland purchased the property. A parking lot and landscaping was constructed over the western portion of the site and Bay Place was expanded over the eastern portion. In January 1993 a groundwater extraction system was installed in well MW-5. The system was shut down in January 1995 due to low production rates. On December 1, 1995 wells MW-1 and MW-3 were decommissioned. In November 1996 an additional 200 cubic yards of soil was excavated due to the installation of a new storm drain on Montecito Avenue. A one week long two-phase extraction pilot test was conducted on well MW-5 in September 2005. In August 2008 periodic injection of oxygen into well MW-5 was proposed; work was implemented in February 2009.

 Amount Remaining: Not reported
 Description: This site is currently occupied by two buildings and a garage. One building, a two-story fourplex, was used as apartments. The other building is three-stories, with three commercial units on the ground floor and apartments on the upper floors. Harris Dry Cleaners and later Telegraph Dry Cleaners operated in a ground floor commercial unit. Dates of operation and site occupancy for the dry cleaning operations are unknown, but all dry cleaning operations on-site ceased in 1996.

Actual:
35 ft.

Case Type: Not reported
Status: Open - Assessment & Interim Remedial Action
Status Date: 08/20/2001
Lead Agency: Not reported
Case Worker: KEN
Local Agency: Not reported
RB Case Number: 01-1466
LOC Case Number: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Benzene, Diesel, MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History: A site assessment conducted in 1989 detected 11,000 mg/kg TPHg and 40 mg/kg benzene in soil; 9,500 a%/L TPHg in groundwater; and 6,100 a%/L TPHg and 10 a%/L benzene in soil vapor indicating that a release from the underground storage tanks had occurred. Two gasoline USTs, one diesel UST and one waste-oil UST were replaced in November and December 1991. Soil samples reported up to 10,000 mg/kg TPHg and 130 mg/kg benzene. Groundwater remediation occurred from 1990 to 1993. A 1,000-gallon waste-oil UST was removed on September 22, 1997. Soil samples collected beneath the waste-oil tank were below the detection limits for many constituents with TEPH at 32 mg/kg, TRPH at 120 mg/kg and TTLC lead at 7.2 mg/kg. A P&T groundwater remediation system operated at the site from 1991 until 1996. A dual-phase extraction pilot test was performed 19/11/2001 and found that DPE would be an effective remediation method for the site. An AS/DPE feasibility test was performed in January 2014. The test results indicates focused DPE and/or AS/DPE may be an effective remedial option. Groundwater monitoring continues to date.

Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: The site is a former service station located on teh corner of Martin Luther King Jr. Way and 27th Street in Oakland. During removal of a 2,000-gallon UST in 1994, soil contamination was detected. Site investigation activities were condcuted at the site beginning in 1995. Soil removal was conducted in 1996. A dual-phase extraction test was conducted in 2006. Excavation and bio-sparging is currently planned for the site. A shallow excavtion to remove TPH as motor oil and lead is planned for the northern portion of the site. urther investigation of the off-site extent and source of lead and PAHs is ongoing. Additonal delineation of the extent of groundwater contamination is pending access by nearby property owners.

Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: In August 1990, two gasoline USTs, one waste-oil UST and four dispensers were removed. Maximum soil concentrations detected were 310 mg/kg TPHg, 100 mg/kg TPHd and 0.820 mg/kg benzene from the the gasoline USTs and dispensers. However, free product was observed in groundwater in the waste-oil UST excavation. Subsequent excavation in the waste-oil tank area could not remove the contaminated soil from beneath the building so this was left in place. Monitoring wells were

RB Case Number: NA
LOC Case Number: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Heating Oil / Fuel Oil, Lead
Site History: In 2006, the site was being redeveloped with a multi-story office building. During construction activities, an UST was discovered and subsequently removed. Elevated concentrations of petroleum hydrocarbons were detected at the site. Several borings were installed to delineate the extent of the groundwater contaminant plume.

 Local Agency: Not reported
 RB Case Number: NA
 LOC Case Number: Not reported
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Gasoline
 Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A complete case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>. In 1986 tank basin soil and a groundwater sample were collected during the replacement of USTs in a pre-existing tank basin; hydrocarbon concentrations were encountered. Sixteen soil vapor wells are reported to have been installed in 1986 and 1987 over the BART tube, located directly below the site; however, no data has been submitted. In 1992 a groundwater sample was collected from a former vadose zone well (VW-2) and concentrations of concern were encountered; however, the location of VW-2-1 is unknown. In July 1994 product lines were removed and upgraded and low hydrocarbon concentrations were encountered. In March 2000 eight hand-augered bores were installed at the site; most bore depths were limited to 10 feet by the presence of the BART tube. In Mach 2002 wells MW-1 to MW-3 were installed on either side of the BART tube and right-of-way. In April 2012 soil bores B-9 to B-12 were installed to define the downgradient extent of the dissolved-phase groundwater plume. Groundwater was collected; however, appeared to define a deeper non-impacted groundwater zone. The groundwater plume was defined using the LTCP groundwater technical justification paper 90th percentile plume length, and conducting a downgradient sensitive receptor survey for water supply wells and potential basements that might encounter the impacted groundwater.

dispensers and product piping were modified. Subsequent to the discovery of petroleum hydrocarbons, three monitoring wells were installed in October 1992. In August 1994 a 280-gallon waste-oil UST was removed and replaced with a 500-gallon WOT. In May 1998 two 12,000-gallon gasoline USTs, one 550-gallon WOT, two hydraulic lifts, two dispenser islands, associated product piping and the station building were removed from the site. 1,252.78 tons of soil were reported removed for off-site disposal at the time of station removal. Additional investigation work proposed to delineate the off-site extent of MTBE. Two of the four proposed (2011) down gradient borings not performed. A ozone sparge system has been in operation since April 8, 2002.

 LOC Case Number: Not reported
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Waste Oil / Motor / Hydraulic / Lubricating
 Site History: Closure Status: The SWRCB issued a Notice of Opportunity for Public Comment dated 7/15/2013 on the proposed underground storage tank case closure as recommended in the SWRCB UST Case Closure Review Summary Report dated 7/16/2013. ACEH is not in agreement with the SWRCB's recommendation for closure as documented in an email correspondence dated 5/14/2012. Subsequent to the end of the Public Comment Period on 9/13/2013, the SWQCB issued ORDER WQ 2013-097-UST dated 9/30/2013 ordering closure of the case after completion of monitoring well destruction and waste removal activities. The Order requires the following: 1) RP submittal of well destruction and waste removal documentation to the Alameda County Environmental Health's Local Oversight Agency within six month from the date of the Order (March 30, 2014). 2) ACEH notification to the SWRCB within 30 days of receipt of well destruction and waste removal documentation that the tasks have been satisfactorily completed. 3) SWRCB issuance of a closure letter within 30 days of notification from ACEH of completion of the well destruction and waste removal activities. Site History Summary: In September 1988, one 550-gallon steel waste oil UST was removed from the site by Kaprealian Engineering. In October 1989, Alton Geoscience oversaw the installation of three GW monitoring wells (MW-1 through MW-3) to verify potential impacts to GW following the removal the WO UST. In 1990, new USTs, dispenser islands, and canopy were installed at the site. In November 1994, EMCON conducted a site assessment that consisted of collecting two discrete soil samples (TD-1 and TD-3). In May 1999, Cambria performed a well recovery test. In July 2005, five borings (SB-4 through SB-8) were

installed by URS to further characterize the subsurface hydrocarbon contamination at the site. In October 2007, URS advanced three off-site borings (SB-1, SB-2, and SB-3) between the site and the storm drain under MacArthur Boulevard, and one on-site soil boring (SB-4A). In September 2010 ARCADIS installed one downgradient monitoring well (MW-4). Currently, downgradient extent of contamination has not been assessed.

<https://ehgis.acgov.org/dehpublic/dehpublic.jsp>. In July 1989 one 10,000-gallon and one 12,000-gallon gasoline UST and one 550-gallon waste-oil UST were removed. The gasoline tanks were replaced. Soil samples were collected from 450 yd³ of stockpiled soil that were present at the site. September 6 and 7, 1989 four monitoring wells were installed on-site. In September 1998, two 12,000-gallon gasoline USTs and associated dispensers and product piping were removed from the site. Soil samples collected indicated petroleum hydrocarbon impact. Groundwater was not encountered during the tank removal. Groundwater samples collected from the March 2006 borings had maximum detected concentrations of 13,000 ppb TPHg, 510 ppb benzene and 340 ppb MTBE. Grab groundwater samples reported up to 9,500 ug/L TPHg in a 2011 SWI. Sensitive receptor survey did not identify any receptors within 2,000 feet of the site. Based on this finding and the SWRCBs LTCP Technical Justification for Groundwater Plume Length, Indicator Constituents, Concentrations, Buffer Distances (Separation Distances) to Receptors (LTCP Guidance; SWRCB 2012), the site meets LTCP Media Specific Criteria for Groundwater scenario 4, without having defined the plume boundary.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

HAZARDOUS WASTE BIENNIAL REPORTER

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or

 Description:

Lane Metal Finishers and Cal-Tech Metal Finishers (Cal-Tech) operated at the Site from 1947 to 2000. Cal-Tech operations included polishing, electroplating, anodizing and plating of metal parts. Chemicals historically used at the Site include caustic liquids, sodium, hydroxide, hydrochloric acid, nitric acid, sulfuric acid, chromic acid, chromic trioxide, sodium cyanide, cadmium, copper cyanide, potassium cyanide, silver cyanide and plating solutions containing variety of metals. The waste generated at the Site

Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 12/13/2006
Comments: Cadmium, chromium, lead and nickel were detected in the soil up to 48 mg/kg, 2400 mg/kg, 360 mg/kg and 18,000 mg/kg, respectively. TCE and TPH-g were detected in groundwater up to 9,100 ug/l and 6,800 ug/l, respectively in monitoring wells. TCE, cis-DCE and vinyl chloride were detected in the soil gas up to 16 microgram per liter (ug/l), 44 ug/l and 7.7 ug/l, respectively.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 05/19/2003
Comments: Trichloroethene (TCE), chromium and cadmium were detected in soil up to 0.54 mg/kg, 63.6 mg/kg and 5.4 mg/kg, respectively. TPH as gasoline (TPH-g), benzene and ethylbenzene were detected in groundwater up to 5,310 microgram per liter (ug/l), 37 ug/l, and 351 ug/l, respectively. TCE, cis-1,2-dichloroethene (cis-DCE), and 1,2-dichloroethane (1,2-DCA) were detected in groundwater at 3,780 ug/l, 193 ug/l, and 10 ug/l respectively.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 09/09/2003
Comments: Chromium and cadmium were detected in soil up to 63.6 mg/kg and 5.4 mg/kg, respectively. TPH as gasoline (TPH-g), TPH as stoddard solvent (TPH-ss), were detected in groundwater up to 4,900 ug/l and 650 ug/l respectively. TCE was detected in groundwater at 240,000 ug/l.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 01/28/2011
Comments: Soil, groundwater and soil gas were investigated within the site boundary. Groundwater investigations were also conducted on several locations along San Pablo Avenue and Market Street. Primary contaminants found include trichloroethene (TCE) and its breakdown products; cis-1,2-dichloroethene (cis-DCE), trans-1,2-Dichloroethene (trans-DCE) and vinyl chloride.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 07/26/2008
Comments: Indoor air sampling at the Lane Metals site conducted with 23 Summa canisters placed in 8 residences, one day care facility, one business, two crawl spaces under homes and four outdoor locations. Seven of these locations had duplicate canisters.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 10/06/2009
Comments: Interim Removal Action Plan selected soil vapor extraction as the preferred alternative.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 08/17/2009
Comments: Fact sheet for interim removal action workplan completed.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 06/28/2012
Comments: The investigation characterized soil, groundwater, and soil gas at the site for dry cleaning solvent (perchloroethylene). Based on the findings of the investigation the consultant recommended additional downgradient delineation of shallow groundwater (approximately 20 feet below ground surface or less) and additional soil gas sampling inside the on-site building. The consultant recommended that a workplan for the additional investigation should be prepared.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1
Completed Date: 04/14/2008
Comments: The report recommended additional investigation since the property was used as a dry cleaning facility. This report included as background information, but was not prepared under DTSC oversight.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 10/26/2009
Comments: Low levels of perchloroethylene (PCE) was detected in shallow soil. PCE, trichloroethene (TCE), and dichloroethenes (DCEs) were detected in shallow groundwater at a depth of approximately 20 feet below ground surface. Groundwater samples contained detectable concentrations of diesel, kerosene, and motor oil. This report was not prepared under DTSC oversight, but is uploaded as background information.

Completed Date: 06/28/2012
Comments: The investigation characterized soil, groundwater, and soil gas at the site for dry cleaning solvent (perchloroethylene). Based on the findings of the investigation the consultant recommended additional downgradient delineation of shallow groundwater (approximately 20 feet below ground surface or less) and additional soil gas sampling inside the on-site building. The consultant recommended that a workplan for the additional investigation should be prepared.

Completed Document Type: Phase 1

Completed Date: 04/14/2008

Comments: The report recommended additional investigation since the property was used as a dry cleaning facility. This report included as background information, but was not prepared under DTSC oversight.

Completed Area Name: PROJECT WIDE

Completed Sub Area Name: Not reported

Completed Document Type: Site Characterization Report

Completed Date: 10/26/2009

Comments: Low levels of perchloroethylene (PCE) was detected in shallow soil. PCE, trichloroethene (TCE), and dichloroethenes (DCEs) were detected in shallow groundwater at a depth of approximately 20 feet below ground surface. Groundwater samples contained detectable concentrations of diesel, kerosene, and motor oil. This report was not prepared under DTSC oversight, but is uploaded as background information.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/26/2015	Source: EPA
Date Data Arrived at EDR: 04/08/2015	Telephone: N/A
Date Made Active in Reports: 06/22/2015	Last EDR Contact: 07/09/2015
Number of Days to Update: 75	Next Scheduled EDR Contact: 10/19/2015
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810

	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

	Data Release Frequency: Quarterly

State- and tribal - equivalent CERCLIS

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 05/04/2015	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 05/05/2015	Telephone: 916-323-3400
Date Made Active in Reports: 05/14/2015	Last EDR Contact: 08/04/2015
Number of Days to Update: 9	Next Scheduled EDR Contact: 11/16/2015

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Number of Days to Update: 8	Next Scheduled EDR Contact: 10/28/2015
	Data Release Frequency: Varies

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

East Map:	5641110 OAKLAND EAST, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u>	FEMA Flood
ALAMEDA, CA	<u>Electronic Data</u>
	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06001C - FEMA DFIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	NWI Electronic
OAKLAND WEST	<u>Data Coverage</u>
	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Tierra

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 14 Min: 4	Max: 6.5 Min: 5.1
2	11 inches	31 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 0.42 Min: 0.01	Max: 7.3 Min: 5.6
3	31 inches	59 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 5.6

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations

Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

RADON

State Database: CA Radon

Source: Department of Health Services

Telephone: 916-324-2208

Radon Database for California

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR NEPACheck® DESCRIPTION

The National Environmental Policy Act of 1969 (NEPA) requires that Federal agencies include in their decision-making processes appropriate and careful consideration of all environmental effects and actions, analyze potential environmental effects of proposed actions and their alternatives for public understanding and scrutiny, avoid or minimize adverse effects of proposed actions, and restore and enhance environmental quality as much as possible.

The EDR NEPACheck provides information which may be used, in conjunction with additional research, to determine whether a proposed site or action will have significant environmental effect.

The report provides maps and data for the following items (where available). Search results are provided in the Map Findings Summary on page 2 of this report.

Database

Unmappable
CA2008000000008
CA Historic Sites

County: Alameda
Name: NO. 1036 Coast Guard Lightship WLV 605 ? Relief (decommissioned)
Descr: Lightships were floating lighthouses anchored in areas where it was too deep, expensive, or impractical to construct a lighthouse. Lightship WLV 605 was built by the Rice Brothers Shipyard in Boothbay, Maine, and was one of six lightships constructed by the Coast Guard. She was commissioned in 1951 and served at Overfalls lightship station off Delaware coast. In 1959 she was transferred to the Blunts Reef station off Cape Mendocino, where she served until 1969. In 1969 she was assigned as ?Relief? for all West Coast lightship stations. She was retired from duty in 1975, and decommissioned the following year. The WLV 605 is one of a small number of only 22 surviving American lightships in the United States and she is the last lightship in California. It was designated a National Historic Landmark in 1990.

CA2008000000026
CA Historic Sites

County: Alameda
Name: NO. 107 JOAQUIN MILLER HOME
Descr: Joaquin Miller, 'Poet of the Sierras,' resided on these acres, which he called 'The Hights,' from 1886 to 1913. In this building, The Abby, he wrote Columbus and other poems. He planted the surrounding trees and he personally built, on the eminence to the north, the funeral pyre and the monuments dedicated to Moses, General John C. Fremont, and Robert Browning. 'The Hights' was purchased by the City of Oakland in 1919.

WETLANDS CLASSIFICATION SYSTEM

National Wetland Inventory Maps are produced by the U.S. Fish and Wildlife Service, a sub-department of the U.S. Department of the Interior. In 1974, the U.S. Fish and Wildlife Service developed a criteria for wetland classification with four long range objectives:

- to describe ecological units that have certain homogeneous natural attributes,
- to arrange these units in a system that will aid decisions about resource management,
- to furnish units for inventory and mapping, and
- to provide uniformity in concepts and terminology throughout the U.S.

High altitude infrared photographs, soil maps, topographic maps and site visits are the methods used to gather data for the productions of these maps. In the infrared photos, wetlands appear as different colors and these wetlands are then classified by type. Using a hierarchical classification, the maps identify wetland and deepwater habitats according to:

- system
- subsystem
- class
- subclass
- modifiers

(as defined by Cowardin, et al. U.S. Fish and Wildlife Service FWS/OBS 79/31. 1979.)

The classification system consists of five systems:

1. marine
2. estuarine
3. riverine
4. lacustrine
5. palustrine

The marine system consists of deep water tidal habitats and adjacent tidal wetlands. The riverine system consists of all wetlands contained within a channel. The lacustrine systems includes all nontidal wetlands related to swamps, bogs & marshes. The estuarine system consists of deepwater tidal habitats and where ocean water is diluted by fresh water. The palustrine system includes nontidal wetlands dominated by trees and shrubs and where salinity is below .5% in tidal areas. All of these systems are divided in subsystems and then further divided into class.

National Wetland Inventory Maps are produced by transferring gathered data on a standard 7.5 minute U.S.G.S. topographic map. Approximately 52 square miles are covered on a National Wetland Inventory map at a scale of 1:24,000. Electronic data is compiled by digitizing these National Wetland Inventory Maps.

KEY CONTACTS & GOVERNMENT RECORDS SEARCHED

Various Federal laws and executive orders address specific environmental concerns. NEPA requires the responsible offices to integrate to the greatest practical extent the applicable procedures required by these laws and executive orders. EDR provides key contacts at agencies charged with implementing these laws and executive orders to supplement the information contained in this report.

Historic Places

Government Records Searched in This Report

National Register of Historic Places:

The National Register of Historic Places is the official federal list of districts, sites, buildings, structures, and objects significant in American history, architecture, archeology, engineering, and culture. These contribute to an understanding of the historical and cultural foundations of the nation.

The National Register includes:

- All prehistoric and historic units of the National Park System;
- National Historic Landmarks, which are properties recognized by the Secretary of the Interior as possessing national significance; and
- Properties significant in American, state, or local prehistory and history that have been nominated by State Historic Preservation Officers, federal agencies, and others, and have been approved for listing by the National Park Service.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

The EDR Property Tax Map Report

EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Cardno ATC #75 were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Environmental Lien and AUL Search

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

EXHIBIT "A"

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF OAKLAND, COUNTY OF ALAMEDA, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

PARCEL ONE:

Beginning at the intersection of the Eastern line of Broadway with the Northern line of 28th Street, as said line is described in that certain Deed from G.A. Botsford to the City of Oakland, dated May 4, 1909 and recorded in Liber 1646 of Deeds, Page 121, said point being at the Southwestern corner of Lot No. 2, as said lot is shown on that certain map entitled "Map of Cogswell Tract", hereinafter referred to; and running thence Northerly along said Easterly line of Broadway 109.04 feet; thence South 63 degrees 45' East 129.30 feet, more or less, to a point on the Eastern line of Lot 1, as said lot is shown on that certain map entitled, "Map of Cogswell Tract", hereinafter referred to, distant thereon Southerly 23.29 feet from the Northern corner of said Lot 1; thence South 11 degrees 54' West along the Eastern line of Lots 1 and 2 as shown on said map 76.71 feet, more or less, to the Northern line of 28th Street, as said street is shown on that certain map entitled, "Map showing land to be taken for opening of 28th Street", etc., filed May 21, 1909 in Liber 24 of Maps, Page 72; thence Westerly following the Northern line of said street, as shown on said map, 140.02 feet; thence Northwesterly in a direct line and along the Northeastern line of land described in Deed from G.A. Botsford to the City of Oakland above referred to, 12.80 feet to the point of beginning.

Being a portion of Lots Nos. 1 and 2, as said lots are delineated and so designated on that certain Map entitled "Map of Cogswell Tract", filed January 19, 1878 in Liber 3 of Maps at Page 23; and being also a portion of the property shown on that certain map entitled "Map of the property of the Oakland Homestead Association", filed August 3, 1866 in Liber 7 of Maps, Page 4, Alameda County Records.

APN: 009-0685-068

PARCEL TWO:

A portion of Lots 35, 37, 39, 41 and 43, as shown on the map of the Property of the Oakland Homestead Association, filed August 3, 1866 in Map Book 7 at Page 4, Alameda County Records, and a portion of Lot 1 as shown on the map of the Cogswell Tract, filed January 19, 1878 in Map Book 3 at Page 23, Alameda County Records, described as follows:

Beginning at a point on the eastern line of Broadway, distant thereon south 26°15' west 177 feet from the southern line of 29th, formerly Prospect, Street; thence along said line of Broadway, southwesterly 98 feet; thence south 63°45' east 129.30 feet; thence north 11°54' east 23.29 feet, more or less, to the southern line of said Oakland Homestead Association; thence along the last named line easterly 207 feet to a point distant thereon westerly 9 feet from the eastern line of said Lot 43; thence at right angles northerly 100 feet; thence at right angles westerly 135 feet to the western line of said Lot 41; thence along the last named line southerly 40.45 feet to a point distant thereon southerly 215.45 feet from the said line of 29th Street; thence northwesterly in a direct line to the point of beginning.

APN: 009-0685-069-01

PARCEL THREE:

A perpetual right of way over the eastern 9 feet of Lot 43, as an appurtenance to the western 63 feet of the southern 100 feet of said Lot 43, as shown on the map of the Property of the Oakland Homestead Association, filed August 3, 1866 in Map Book 7 at Page 4, Alameda County Records.

PARCEL FOUR:

An easement for access purposes over and across a portion of Lot 45, as shown on the map of the Property of the Oakland Homestead Association, filed August 3, 1866 in Map Book 7 at Page 4, Alameda County Records, described as follows:

Beginning at the most northerly corner of the non-exclusive easement and right of way for ingress and egress and for sewers described in the Agreement by Ann C. Johanson, et al., recorded October 22, 1942 in Book 4303 at Page 196, Official Records, said corner also being the intersection of the western line of said Lot 45 with the southern line of 29th Street, formerly Prospect Avenue, as said lot and street are shown on said map; thence along said southern line of 29th Street south $78^{\circ}31'$ east 12.00 feet; thence along the eastern line of the aforementioned right of way, south $11^{\circ}29'$ west 198.00 feet; thence south $20^{\circ}57'$ west 38.35 feet; thence north $78^{\circ}23'$ west 5.69 feet to the western line of the aforementioned right of way and the western line of said Lot 45; thence along said line north $11^{\circ}29'$ east 235.81 feet to the point of beginning.

PARCEL FIVE:

Portion of Lots 29, 31 and 33, "Map of the Property of the Oakland Homestead Association, Alameda County, California," filed August 3, 1866, Map Book 7, Page 4, Alameda County Records, described as follows:

Beginning at a point on the Eastern line of Webster Street, distant thereon South $11^{\circ} 53'$ West 79.917 feet from the point of intersection thereof with the Southern line of 29th Street, formerly Prospect Avenue; running thence South $11^{\circ} 53'$ West along said line of Webster Street 195.083 feet; thence South $78^{\circ} 06'$ East 62.63 feet to the Western line of Broadway; thence North $26^{\circ} 15'$ East along the last named line 201.525 feet to a line drawn South $78^{\circ} 06'$ East from the point of beginning; thence North $78^{\circ} 06'$ West 112.61 feet to the point of beginning.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.
