Subject: Limited Phase II Subsurface Investigation
2800, 2820 and 2855 Broadway
Oakland, California
AEI Project No. 340166

This report was prepared to document the results of a Limited Phase II Subsurface Investigation (Phase II) performed by AEI Consultants (AEI) at the above referenced subject property (Figures 1 and 2). This investigation was completed in general accordance with the authorized scope of services outlined in our authorized proposal number 40422.

1.0 SITE DESCRIPTION

The subject property consists of three parcels in a commercial and residential area of Oakland, California. The parcels are occupied by an automotive dealership (Premier Hyundai of Oakland) with addresses of 2800, 2820, and 2855 Broadway. The parcels at 2800 and 2820 Broadway contain one building each along with associated parking and are located on the east side of Broadway near the intersection with 28th Street. The parcel at 2855 is located across Broadway (west side) and is occupied by a car lot (Figure 2).

The subject property is sloped slightly to the south and lies at an elevation of about 41 feet above mean sea level. Groundwater beneath the subject property is expected to flow to the south, towards Lake Merritt, located approximately 0.42 miles from the Site.

Based on a review of the United States Geological Survey (USGS) San Francisco Bay Quadrangle Geologic Map, the area surrounding the subject property is underlain by Pleistocene-aged alluvial deposits commonly characterized sandy clay loams and silty clay loams.

Refer to Section 4.1 below for additional information on the site geology and groundwater conditions.

2.0 BACKGROUND

According to information contained in a Phase I Environmental Site Assessment (ESA) performed by AEI, dated February 19, 2015 (AEI Project Number 339334), light industrial facilities, automotive repair, and car dealership operations have been associated with the property from approximately 1917 through the present. As a result, AEI recommended the performance of a Phase II investigation to assess the property for potential environmental impacts associated with the operational history.

3.0 INVESTIGATION EFFORTS

Phase II investigation activities included the collection and analysis of soil samples from eleven borings completed at the Site. All work was performed under the oversight of a licensed professional geologist.

3.1 Health and Safety Plan

A site-specific health and safety plan was prepared, reviewed by onsite personnel, and kept onsite for the duration of the fieldwork.

3.2 Permitting and Utility Clearance

Drilling permits for this investigation were obtained from Alameda County Public Works (ACPW) (Appendix A). The public underground utility locating service USA North was notified to identify public utilities of work in the area. In addition, the private utility locating firm 1st Call Utility Locating of Martinez, California, was contracted to clear proposed boring locations for the potential presence of underground utilities.

3.3 Drilling and Soil Sample Collection

On April 8, 2015, eleven soil borings (SB-1 through SB-11) were advanced on the subject property (Figure 2) by Environmental Control Associates of Aptos, California using both truck-mounted and portable direct-push drilling rigs. The borings were advanced to depths of 15 feet below ground surface (bgs). The location of the borings are listed below:

- Borings SB-1, SB-2 and SB-3 were advanced on the parcel at 2855 Broadway.
- Borings SB-4, SB-5 and SB-6 were advanced on the parcel at 2800 Broadway.
- Borings SB-7 through SB-11 were advanced on the parcel at 2820 Broadway.

The borings were completed using 2.25-inch outer diameter direct push drilling rods equipped with acetate sample liners for the collection of soil cores. After each interval, the core was retrieved and transferred to the onsite geologist for logging using the Unified Soil Classification System. A photo ionization detector (PID) was used to field-screen the soil cores for the potential presence of volatile constituents. PID readings were included on the boring logs (Appendix B). Samples selected for laboratory analysis were cut from the cores, sealed with Teflon tape and plastic end caps, labeled with unique sample identifiers, and placed in an iced cooler pending transfer to the analytical laboratory.

Down-hole equipment was decontaminated prior to use and between successive locations using a triple rinse system containing detergent.

3.4 Boring Destruction

Following completion of sample collection and removal of tooling, the borings were backfilled with neat cement grout as required by the permitting agency and completed at the surface with concrete to match the surrounding conditions.

3.5 Laboratory Analyses

The samples were transferred under appropriate chain-of-custody documentation to McCampbell Analytical, Inc. of Pittsburg, California. All eleven soil samples were analyzed for the following:

- Total petroleum hydrocarbons (TPH) as gasoline, diesel, and motor oil by EPA Method 8015M
- Volatile organic compounds (VOCs) by EPA Method 8260
- Polychlorinated biphenyls (PCBs) by EPA Method 8082

A copy of the laboratory reporting package is provided in Appendix C.

3.7 Investigation Derived Wastes

Investigation derived waste generated from this project was staged onsite in properly labeled and sealed drums pending receipt of the analytical data and determination of disposal requirements.

4.0 FINDINGS

To provide context to the data, the results of this investigation were compared to the San Francisco Bay Regional Water Quality Control Board's (RWQCB's) December, 2013 Environmental Screening Levels (ESLs) for Commercial/Industrial land use where groundwater is a current or potential drinking water resource. The ESLs are considered to be conservative and under most circumstances, and within the limitations described in the ESL guidance document, the presence of a chemical at concentrations below the corresponding ESL can generally be assumed to not pose a significant threat to human health and the environment. Additional evaluation may be appropriate where a chemical is present at concentrations above the corresponding ESL.

4.1 Geology and Hydrogeology

Sediment encountered in each of the borings generally consisted of silty clays with scattered angular gravels (Appendix B). Groundwater was not encountered in any of the borings to the depth explored (15 feet bgs).

4.2 Soil Sample Analytical Results

Soil sampling results are summarized in Table 1 and discussed briefly below.

- Trichloroethene (TCE) was detected in SB-5 and SB-6 at 0.015 and 0.0069 milligrams per kilogram (mg/kg), respectively. However, both concentrations are well below the ESL value of 0.7 mg/kg. TCE was below the laboratory reporting limit in the remaining samples.
- All other VOCs were below the analytical reporting limits in all of the soil samples collected as part of the Phase II investigation.
- All other PCBs were below the analytical reporting limits in all of the soil samples collected as part of the Phase II investigation.

- The concentrations of TPH as gasoline, diesel, and motor oil were either below the ESLs or below the laboratory reporting limits in all of the soil samples collected as part of the Phase II investigation conducted at the Site.

5.0 SUMMARY AND CONCLUSIONS

Phase II investigation activities included the collection and analysis of soil samples from eleven borings completed at the Site to assess potential environmental impacts associated with its historical use for light industrial facilities, automotive repair, and car dealership operations.

No VOCs, PCBs, or petroleum constituents were detected above their respective ESLs in the soil samples collected as part of the Phase II investigation activities conducted at the Site. Based on these results, AEI does not recommend any additional investigation or remediation activities at the Site at this time.

6.0 REPORT LIMITATIONS AND RELIANCE

This report presents a summary of work completed by AEI Consultants. The completed work includes observations and descriptions of site conditions encountered. Where appropriate, it includes analytical results for samples taken during the course of the work. The number and location of samples are chosen to provide the requested information, subject to scope of work for which AEI was retained and limitations inherent in this type of work, but it cannot be assumed that they are representative of areas not sampled. This report should not be regarded as a guarantee that no further contamination beyond that which could have been detected within the scope of this investigation is present beneath the subject property. Undocumented, unauthorized releases of hazardous material, the remains of which are not readily identifiable by visual inspection and are of different chemical constituents, are difficult and often impossible to detect within the scope of a chemical specific investigation.

Any conclusions and/or recommendations are based on these analyses and observations, and the governing regulations. Conclusions beyond those stated and reported herein should not be inferred from this document. These services were performed in accordance with generally accepted practices, in the environmental engineering and construction field, which existed at the time and location of the work. No other warranty, either expressed or implied, has been made.

This investigation was prepared for the sole use and benefit of Mr. Michael Murphy. All reports, both verbal and written, whether in draft or final, are for the benefit of Mr. Michael Murphy. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns. Reliance is provided in accordance with AEI's Proposal and Standard Terms & Conditions executed by Mr. Michael Murphy on February 23, 2015. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

If there are any questions regarding our investigation, please do not hesitate to contact AEI at (925) 746-6000.

Sincerely,
AEI Consultants

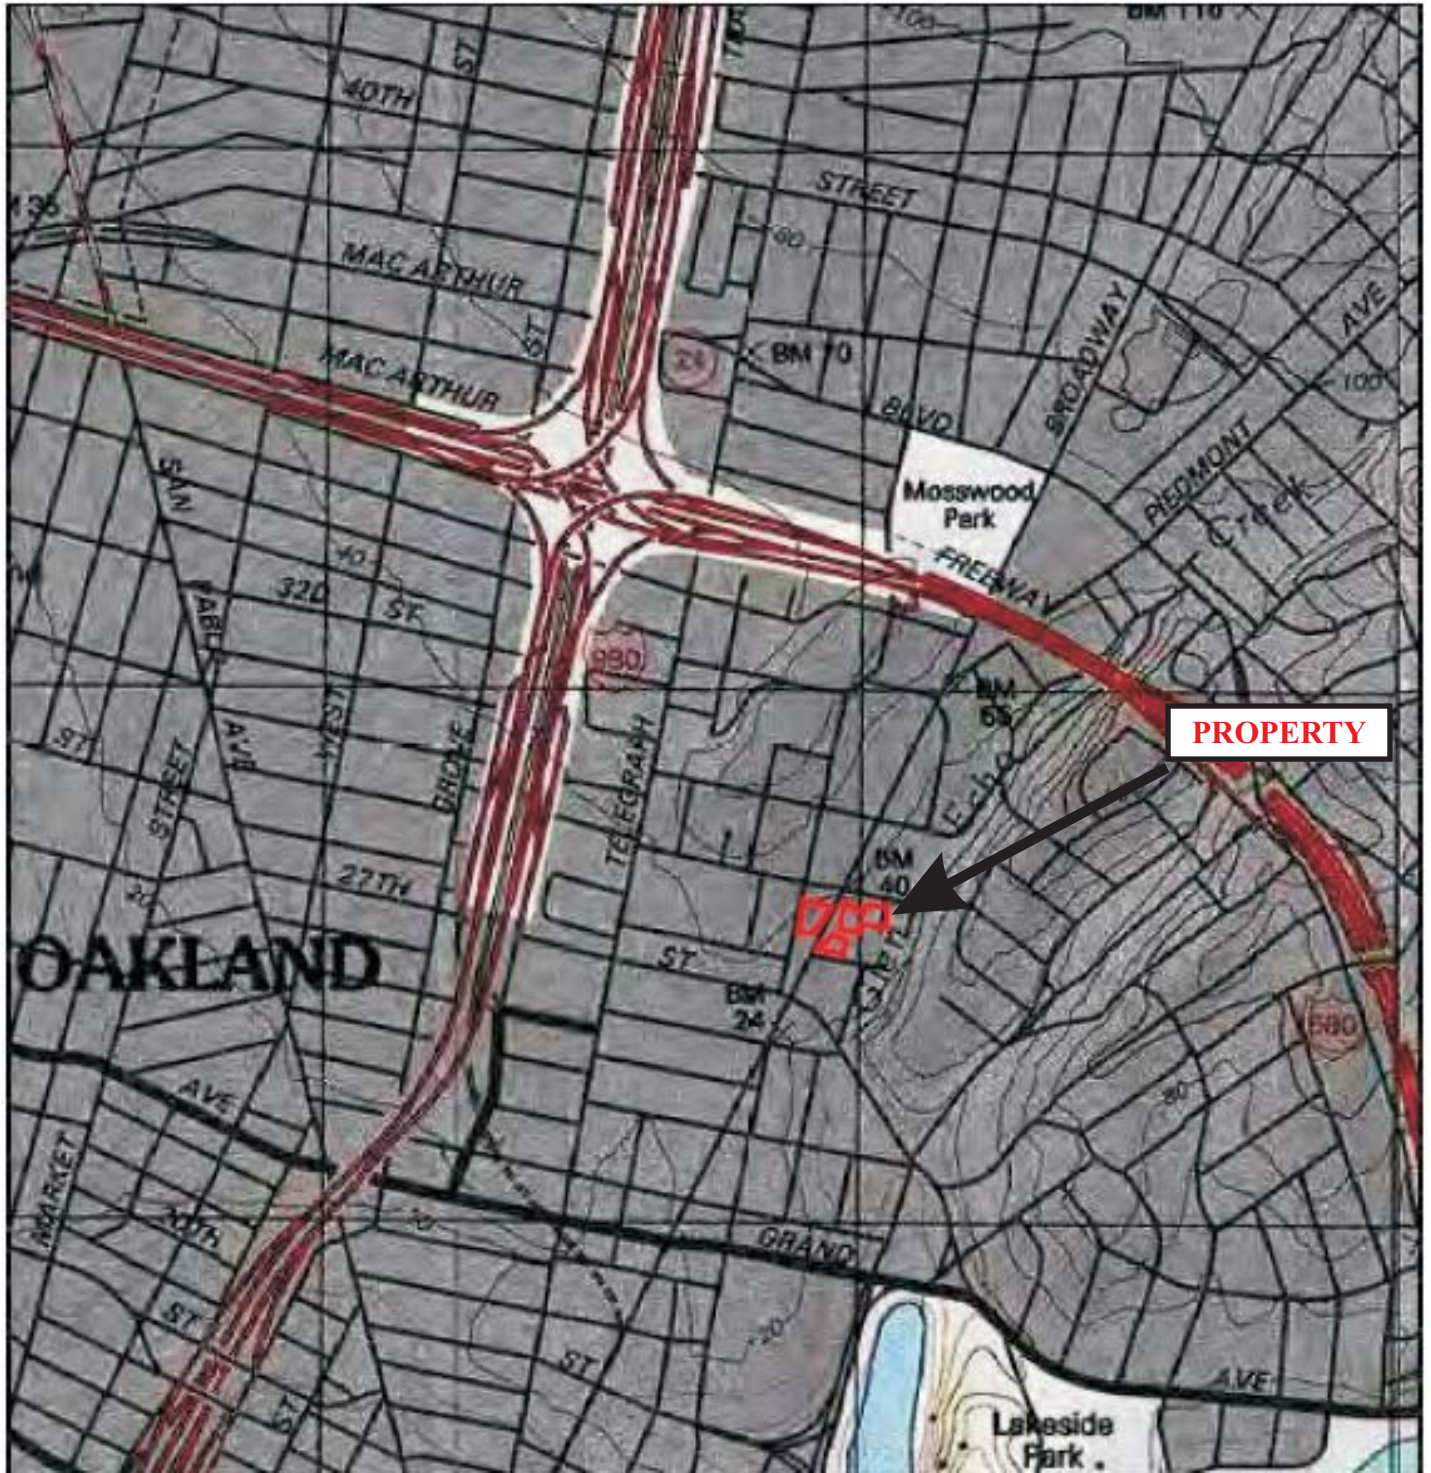

Mallory Zaunius
Environmental Staff Scientist

Works Requesting Permits:

Borehole(s) for Geo Probes-Sampling 24 to 72 hours only - 3 Boreholes
Driller: Environmental Control Associates - Lic #: 695970 - Method: DP

Work Total: \$265.00

Specifications

Permit Number	Issued Dt	Expire Dt	# Boreholes	Hole Diam	Max Depth
W2015-0160	03/05/2015	06/08/2015	3	2.25 in.	15.00 ft

Specific Work Permit Conditions

1. Backfill bore hole by tremie with cement grout or cement grout/sand mixture. Upper two-three feet replaced in kind or with compacted cuttings. All cuttings remaining or unused shall be containerized and hauled off site. The containers shall be clearly labeled to the ownership of the container and labeled hazardous or non-hazardous.
2. Boreholes shall not be left open for a period of more than 24 hours. All boreholes left open more than 24 hours will need approval from Alameda County Public Works Agency, Water Resources Section. All boreholes shall be backfilled according to permit destruction requirements and all concrete material and asphalt material shall be to Caltrans Spec or County/City Codes. No borehole(s) shall be left in a manner to act as a conduit at any time.
3. Permittee shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend and save the Alameda County Public Works Agency, its officers, agents, and employees free and harmless from any and all expense, cost, liability in connection with or resulting from the exercise of this Permit including, but not limited to, properly damage, personal injury and wrongful death.
4. Applicant shall contact assigned inspector listed on the top of the permit at least five (5) working days prior to starting, once the permit has been approved. Confirm the scheduled date(s) at least 24 hours prior to drilling.
5. Permittee, permittee's contractors, consultants or agents shall be responsible to assure that all material or waters generated during drilling, boring destruction, and/or other activities associated with this Permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials and/or waters be allowed to enter, or potentially enter, on or off-site storm sewers, dry wells, or

Alameda County Public Works Agency - Water Resources Well Permit

waterways or be allowed to move off the property where work is being completed.

6. Copy of approved drilling permit must be on site at all times. Failure to present or show proof of the approved permit application on site shall result in a fine of \$500.00.

7. NOTE:

Under California laws, the owner/operator are responsible for reporting the contamination to the governmental regulatory agencies under Section 25295(a). The owner/operator is liable for civil penalties under Section 25299(a)(4) and criminal penalties under Section 25299(d) for failure to report a leak. The owner/operator is liable for civil penalties under Section 25299(b)(4) for knowing failure to ensure compliance with the law by the operator. These penalty provisions do not apply to a potential buyer.

8. Prior to any drilling activities onto any public right-of-ways, it shall be the applicants responsibilities to contact and coordinate a Underground Service Alert (USA), obtain encroachment permit(s), excavation permit(s) or any other permits required for that City or to the County and follow all City or County Ordinances. It shall also be the applicants responsibilities to provide to the Cities or to Alameda County a Traffic Safety Plan for any lane closures or detours planned. No work shall begin until all the permits and requirements have been approved or obtained.

9. Permit is valid only for the purpose specified herein. No changes in construction procedures, as described on this permit application. Boreholes shall not be converted to monitoring wells, without a permit application process.

4. Applicant shall contact assigned inspector listed on the top of the permit at least five (5) working days prior to starting, once the permit has been approved. Confirm the scheduled date(s) at least 24 hours prior to drilling.
5. Permittee, permittee's contractors, consultants or agents shall be responsible to assure that all material or waters generated during drilling, boring destruction, and/or other activities associated with this Permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials and/or waters be allowed to enter, or potentially enter, on or off-site storm sewers, dry wells, or waterways or be allowed to move off the property where work is being completed.

Alameda County Public Works Agency - Water Resources Well Permit

6. Copy of approved drilling permit must be on site at all times. Failure to present or show proof of the approved permit application on site shall result in a fine of \$500.00.

7. NOTE:

Under California laws, the owner/operator are responsible for reporting the contamination to the governmental regulatory agencies under Section 25295(a). The owner/operator is liable for civil penalties under Section 25299(a)(4) and criminal penalties under Section 25299(d) for failure to report a leak. The owner/operator is liable for civil penalties under Section 25299(b)(4) for knowing failure to ensure compliance with the law by the operator. These penalty provisions do not apply to a potential buyer.

8. Prior to any drilling activities onto any public right-of-ways, it shall be the applicants responsibilities to contact and coordinate a Underground Service Alert (USA), obtain encroachment permit(s), excavation permit(s) or any other permits required for that City or to the County and follow all City or County Ordinances. It shall also be the applicants responsibilities to provide to the Cities or to Alameda County a Traffic Safety Plan for any lane closures or detours planned. No work shall begin until all the permits and requirements have been approved or obtained.

9. Permit is valid only for the purpose specified herein. No changes in construction procedures, as described on this permit application. Boreholes shall not be converted to monitoring wells, without a permit application process.

Alameda County Public Works Agency - Water Resources Well Permit

399 Elmhurst Street
Hayward, CA 94544-1395
Telephone: (510)670-6633 Fax:(510)782-1939

Application Approved on: 03/05/2015 By jamesy

Permit Numbers: W2015-0162
Permits Valid from 03/10/2015 to 03/10/2015

Application Id: 1424978229524
Site Location: 2855 Broadway
Project Start Date: 03/10/2015
Assigned Inspector: Contact Steve Miller at (510) 670-5517 or stevem@acpwa.org

City of Project Site:Oakland

Completion Date:03/10/2015

Applicant: AEI Consultants - Mallory Zaunius
2500 Camino Diablo, Walnut Creek, CA 94597

Phone: 925-746-6066

Property Owner: Michael Murphy

Client: ** same as Property Owner **

	Total Due:	\$265.00
Receipt Number: WR2015-0084	Total Amount Paid:	\$265.00
Payer Name :	Paid By: VISA	PAID IN FULL

Works Requesting Permits:

Borehole(s) for Geo Probes-Sampling 24 to 72 hours only - 3 Boreholes
 Driller: Environmental Control Associates - Lic #: 695970 - Method: DP

Work Total: \$265.00

Specifications

Permit Number	Issued Dt	Expire Dt	# Boreholes	Hole Diam	Max Depth
W2015-0162	03/05/2015	06/08/2015	3	2.25 in.	15.00 ft

Specific Work Permit Conditions

1. Backfill bore hole by tremie with cement grout or cement grout/sand mixture. Upper two-three feet replaced in kind or with compacted cuttings. All cuttings remaining or unused shall be containerized and hauled off site. The containers shall be clearly labeled to the ownership of the container and labeled hazardous or non-hazardous.

2. Boreholes shall not be left open for a period of more than 24 hours. All boreholes left open more than 24 hours will need approval from Alameda County Public Works Agency, Water Resources Section. All boreholes shall be backfilled according to permit destruction requirements and all concrete material and asphalt material shall be to Caltrans Spec or County/City Codes. No borehole(s) shall be left in a manner to act as a conduit at any time.

3. Permittee shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend and save the Alameda County Public Works Agency, its officers, agents, and employees free and harmless from any and all expense, cost, liability in connection with or resulting from the exercise of this Permit including, but not limited to, properly damage, personal injury and wrongful death.

4. Applicant shall contact assigned inspector listed on the top of the permit at least five (5) working days prior to starting, once the permit has been approved. Confirm the scheduled date(s) at least 24 hours prior to drilling.

5. Permittee, permittee's contractors, consultants or agents shall be responsible to assure that all material or waters generated during drilling, boring destruction, and/or other activities associated with this Permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials and/or waters be allowed to enter, or potentially enter, on or off-site storm sewers, dry wells, or waterways or be allowed to move off the property where work is being completed.

Alameda County Public Works Agency - Water Resources Well Permit

6. Copy of approved drilling permit must be on site at all times. Failure to present or show proof of the approved permit application on site shall result in a fine of \$500.00.

7. NOTE:

Under California laws, the owner/operator are responsible for reporting the contamination to the governmental regulatory agencies under Section 25295(a). The owner/operator is liable for civil penalties under Section 25299(a)(4) and criminal penalties under Section 25299(d) for failure to report a leak. The owner/operator is liable for civil penalties under Section 25299(b)(4) for knowing failure to ensure compliance with the law by the operator. These penalty provisions do not apply to a potential buyer.

8. Prior to any drilling activities onto any public right-of-ways, it shall be the applicants responsibilities to contact and coordinate a Underground Service Alert (USA), obtain encroachment permit(s), excavation permit(s) or any other permits required for that City or to the County and follow all City or County Ordinances. It shall also be the applicants responsibilities to provide to the Cities or to Alameda County a Traffic Safety Plan for any lane closures or detours planned. No work shall begin until all the permits and requirements have been approved or obtained.

9. Permit is valid only for the purpose specified herein. No changes in construction procedures, as described on this permit application. Boreholes shall not be converted to monitoring wells, without a permit application process.

APPENDIX C
LABORATORY ANALYTICAL REPORTS

McC Campbell Analytical, Inc.

"When Quality Counts"

Analytical Report

WorkOrder: 1504466

Report Created for: AEI Consultants

2500 Camino Diablo, Ste.#200
Walnut Creek, CA 94597

Project Contact: Mallory Zaunius

Project P.O.:

Project Name: #340166

Project Received: 04/09/2015

Analytical Report reviewed & approved for release on 04/14/2015 by:

Angela Rydelius,
Laboratory Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: AEI Consultants
Project: #340166
WorkOrder: 1504466

Glossary Abbreviation

95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DUP	Duplicate
EDL	Estimated Detection Limit
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Analytical Qualifiers

d7	strongly aged gasoline or diesel range compounds are significant in the TPH(g) chromatogram
d9	no recognizable pattern
e2	diesel range compounds are significant; no recognizable pattern
e6	one to a few isolated peaks present in the TPH(d/mo) chromatogram
e7	oil range compounds are significant

NOTES: - STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

NOTES: - STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

November 15, 2011
Project No. SCS422

Mr. Thomas C. Thatcher
Hamilton, Cohn, Thatcher & Associates
8393 Capwell Drive, Suite 100
Oakland, CA 94621

Reference: Vacant Commercial Property
2800 Broadway
Oakland, Alameda County, California

Subject: Executive Summary:

- **Phase I Environmental Site Assessment (ESA)**

Dear Mr. Thatcher:

SCHUTZE & Associates, Inc. has completed a Phase I ESA for the above-referenced property (subject site). The work was supervised by a California Professional Geologist (P.G.) and was completed in conformance with the scope and limitations of ASTM¹ Practice E 1527-05 and the AAI² Final Rule (2005) of the U.S. EPA³.

The subject site, located on the northeast corner of Broadway and 28th Street, is approximately one mile northeast of the downtown area of Oakland, California. The site is a trapezoidal parcel developed with a one-story and mezzanine building that occupies the entire property. The main customer entrance opens onto Broadway and rollup doors are located on the west and south sides of the building. The building was most recently occupied by an automotive upholstery company and is now vacant.

The subject site consists of the following property:

Address	APN ⁴	Approximate Parcel Size	Location
2800 Broadway, Oakland, Alameda County, California	09-0685-068	Lot = 13,200 ft ² Bldg. = 19,743 ft ²	Northeast corner of Broadway and 28 th Street.

The area in which the subject site is located is referred to as Oakland's "Auto Row", an

¹ American Society for Testing and Materials

² All Appropriate Inquiry

³ Environmental Protection Agency

⁴ Assessor's Parcel Number

area historically occupied with automobile sales and service facilities. The building adjacent to the north of the subject site, formerly a Nissan dealership, was vacant at the time of the site reconnaissance. Adjacent to the east is a smog check station. To the south of the site are 28th Street and a Volkswagen dealership. Broadway is adjacent to the west, and across Broadway is a vacant building, a parking lot and various small businesses.

Glen Echo Creek, flowing in southeasterly direction towards Lake Merritt, is approximately 375 ft east of the subject site. Lake Merritt is approximately 0.4-mile southeast of the subject site. The elevation of the subject site is approximately 34 ft above mean sea level and the property slopes to the south-southeast, towards Lake Merritt. The subject site is marked on FEMA⁵ maps as being outside of flood zones. Based on observations during the site reconnaissance and the FEMA maps, there is a low potential that the subject site would be affected by flooding.

As part of the historical review, SCHUTZE & Associates, Inc. reviewed available historical aerial photographs, topographic maps, Sanborn maps and city directories. The earliest historical record found for the area of the subject site was an 1895 topographic map. The subject site was depicted as urban land adjacent to the east of Broadway Street in the City of Oakland. A 1903 Sanborn fire insurance map depicted two residences at the site.

The currently existing subject building was constructed in approximately 1918. Various automotive repair and sales facilities operated on the subject site between 1918 and 1950. Sanborn maps from the 1950s depicted the subject building subdivided into three storefronts (2810, 2812 and 2816 Broadway) and a warehouse space (2800 Broadway). Historical city directory listings for 2800 Broadway show the site occupied by lighting supply companies from at least 1950 through 1991. However, listings from 1950 for 2810 Broadway (Organic Factors & Chemical Co.) and 2812 Broadway (Grant Piston Rings Service) indicate that that the property was used by other businesses besides the lighting companies. An automotive upholstery company was on the subject site from approximately 1996 to 2006.

SCHUTZE & Associates, Inc. conducted a site reconnaissance on Wednesday, September 27, 2011. The building was vacant at the time of the site reconnaissance. The building interior consists of: a showroom/customer service area at the southwest corner; warehouse areas that extend along the north and south sides; an upper mezzanine storage area built over the north-central and northeast portions of the warehouse; and a two-story office area east of the showroom.

The exterior walls of the building are cast-in-place concrete walls. The floor is a concrete slab that was constructed in terraced sections. The ceiling was framed with wooden beams supported by steel columns. Brick arches are above the doors on the west side. The mezzanine floor is constructed of wood and supported by wooden columns. In addition to the front showroom display windows, there are mullioned windows in the south wall, at both the warehouse and upper office levels.

⁵ Federal Emergency Management Agency

The main customer door is flanked on both sides by floor-to-ceiling display windows. Three rollup doors open from the north warehouse to Broadway and two open to 28th Street from the south warehouse. A sixth rollup door, leading to a loading dock, is located at the southeast corner of the building and is accessible from both warehouse areas.

The roof consists of two gabled truss structures with the ridges running in east-west direction. The trusses were framed out of rough redwood beams connected with redwood joists. The roofing membrane is rolled-on asphalt. The roof surface was reportedly replaced 4 or 5 years ago. Minor staining on ceilings suggests that the roof has leaked in the past. Potentially asbestos-containing insulation was not observed.

Interior support walls and partitions are made out of wood. In the offices, walls are finished with drywall or wood paneling and the ceilings are drywall or suspended ceiling tiles. Fluorescent light fixtures are in all areas of the building. While the building was constructed before asbestos was commonly used, it is possible that some finishing materials used for renovations (e.g., linoleum flooring/mastic, drywall mud) may contain asbestos. It is also likely that some of the older fluorescent light fixtures have PCB⁶-containing ballasts.

An area in the northeast corner of the building was apparently formerly used as a wash station. The floor is heavily stained in this area, near pipes/faucets on the east wall.

In the section of the north warehouse adjacent to the showroom is a rectangular patched area in the concrete floor. Patched areas of concrete may indicate the presence of a former underground storage tank (UST) pit. No other evidence for current or former USTs was observed.

There are public sidewalks along Broadway and 28th Street. No patches or fractures in the concrete pavement were observed to suggest the existence of underground structures, such as fuel tanks or product piping. No significant landscaping was observed. Storm water at the subject site drains from the roof of the building complex via interior downspouts into storm sewer laterals and into the storm sewer systems along Broadway and 28th Street.

No hazardous waste or illegal dumping of waste was observed. Aside from the former wash station area in the north warehouse, no evidence for major leaks or spills was observed.

Pits, ponds or lagoons were not observed on or adjacent to the subject properties. No visual evidence was found during the site reconnaissance for potential, former leach fields, septic tanks or clarifiers. Based on on-site observations by SCHUTZE & Associates, Inc., there was no evidence of wells, cisterns or sumps on the subject site. Based on the historical review, it is unlikely that wells formerly existed on the site.

As part of the Phase I ESA, SCHUTZE & Associates, Inc. conducted a reconnaissance of the surrounding area within a 0.25-mile radius of the subject site. The subject site is located in Oakland's "Auto Row" area, where auto repair facilities have existed for over 100 years.

⁶ Polychlorinated biphenyl(s)

Based on a review of GeoTracker files, Broadway Volkswagen (2740 Broadway), located adjacent to the south of the subject site, is listed as an open LUST⁷ cleanup site. Tanks were removed from the site in 1988 and groundwater contamination by gasoline and the solvent TCE⁸ was identified. TPH⁹ and benzene were detected in monitoring wells at concentrations of up to 32,000 and 9,600 parts per billion (ppb), respectively. Based on the adjacent location, there is a moderate to high potential that the subject site has been impacted by this property.

Other listed facilities with environmental concerns were at greater distances or cross-/down-gradient from the subject site. While it is likely that these facilities have contributed to poor water quality in the region, a direct impact to the subject site could not be demonstrated.

Harris Dry-Cleaners (2801 Martin Luther King Avenue), the nearest listed dry-cleaner site, is approximately 0.5-mile northwest of the subject site. PCE¹⁰ contamination has been reported in groundwater. Due to the distance from the subject site, there is a low potential that the subject site has been impacted.

SCHUTZE & Associates, Inc. has performed a Phase I ESA of the property at 2800 Broadway in conformance with the scope and limitations of ASTM Practice E 1527. This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the property, with the exception of the following:

- Due to the existence of automotive repair and sales facilities located on-site and surrounding the site, there is a moderate potential that the groundwater beneath the area of the subject site is environmentally impacted.
- The Volkswagen of Oakland property (listed as Broadway Volkswagen) is an open LUST cleanup site adjacent to the south of the subject site. TPH and benzene were detected in monitoring wells at concentrations of up to 32,000 and 9,600 ppb, respectively. Based on the adjacent location, there is a moderate to high potential that the subject site has been impacted.
- A patched area observed in the concrete floor of the north warehouse may suggest the potential existence of subsurface structures such as USTs. However, no direct evidence, such as product/vent pipes or pump islands, was observed.
- An area in the north warehouse, at the northeast corner of the building, was apparently formerly used as a wash station. The floor is heavily stained in this area, near pipes/faucets on the east wall.

It is the understanding of SCHUTZE & Associates, Inc. that the proposed land use for the subject site is an auto dealership. It is unlikely that the identified RECs would present a human health risk to employees in such an operation. Therefore, SCHUTZE & Associates, Inc. recommends no further work.

Inquiry No. 3172305, dated September 23, 2011

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Vacant Commercial Property 2800 Broadway Oakland, Alameda County, California

A. INTRODUCTION

This report presents the results of a Phase I Environmental Site Assessment (ESA), for the property at 2800 Broadway, Oakland, California (subject site). The work was supervised by a California Professional Geologist (P.G.) and was completed in conformance with the scope and limitations of ASTM¹¹ Practice E 1527-05 and the AAI¹² Final Rule (2005) of the U.S. EPA¹³.

The subject site is located on the northeast corner of Broadway and 28th Street in Oakland, California, approximately 0.4-mile northwest of Lake Merritt. The site is part of Oakland's "Auto Row", an area historically occupied with automobile sales and service facilities. The site is a trapezoidal parcel developed with a one-story and mezzanine building that occupies the entire property. The main customer entrance, near the southwest corner of the building, opens onto Broadway, and rollup doors are located on the west and south sides of the building. The building was most recently occupied by an automotive upholstery company and is now vacant.

The building adjacent to the north of the subject site is vacant (2820 Broadway, formerly a Nissan dealership). Adjacent to the east is a smog check station (Broadway Smog Station, 288 28th Street). To the south of the site are 28th Street and a Volkswagen dealership (Volkswagen of Oakland, 2740 Broadway). Broadway is adjacent to the west, and across Broadway are a vacant building (2801-2825 Broadway), a parking lot and various small businesses.

The subject site consists of the following parcel:

The subject property is shown on the Site Vicinity Map and Site Map (Figures 1 and 2) attached to this report.

B. PHASE I ESA

B.1. Purpose

The purpose of this Phase I ESA was to review past and present land use practices and site operations to evaluate the potential presence of recognized environmental conditions (RECs) at the subject property.

B.2. Phase I: Scope of Services

The Phase I scope of services included the following:

- A site reconnaissance;
- A drive-by survey of the subject site vicinity;
- Review of records available at local and regional public agencies through agency visits, telephone contact, and agency environmental database search;
- Historical research including aerial photo and map review;
- Review of previous environmental reports; and
- A review of a nation-wide radon survey.

These tasks were performed to evaluate past and current land use for indications of the manufacture, generation, use, storage, and/or disposal of hazardous materials at the subject property. This Phase I ESA includes a preliminary evaluation of the potential for soil and/or groundwater impacts resulting from past and present subject site land use activities and nearby offsite operations, based upon the scope of services described. The ESA was conducted in general conformance with ASTM Designation E 1527-05 and the AAI Final Rule (2005) of the U.S. EPA. SCHUTZE & Associates, Inc. did not conduct an asbestos survey or collect asbestos samples as part of this ESA, and did not collect radon samples.

B.3. Credentials

This Phase I ESA report has been prepared by Mr. Jan Schutze, a Professional Geologist (P.G.) registered in the State of California. The information contained in this report has received appropriate technical review and approval. The conclusions represent professional judgments and are founded upon the findings of the investigations identified in the report and the interpretation of such data based on our experience and expertise, according to the existing standard of care for work of this kind.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professionals as defined in 40 CFR¹⁵ Part 312.10. We have

¹⁵ Code of Federal Regulations

the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject site. We have developed and performed the All Appropriate Inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.10.

Phase I ESAs are limited in their scopes and adverse conditions may exist that could not be discovered by such investigations. SCHUTZE & Associates, Inc. has made every reasonable effort to discover and interpret the information and current conditions regarding the site. This ESA includes the review of agency lists and reports prepared by others. SCHUTZE & Associates, Inc. believes that the information contained herein is reliable, but cannot guarantee the accuracy of information provided by others.

C. SITE LOCATION

The subject site is located on the east side of Broadway approximately one mile north of the downtown area of Oakland, an area referred to as Oakland's "Auto Row". The site can be reached by traveling on Interstate 880, exiting onto Broadway and travelling 1.5 miles north on Broadway. The subject site is on the northeast corner of the 28th Street intersection. The subject site and vicinity are depicted on the attached Figures 1 and 2.

C.1. Topographic Map Review

The subject property was depicted on the 1980 Oakland West 7.5 Minute Series Topographic Quadrangle sheet produced by the U.S. Geologic Survey (USGS).¹⁶ The subject site was shown as developed urban land on the northeast corner of Broadway and 28th Street. No individual structures were depicted at the site. The subject site was approximately 300 ft northeast of the intersection of Broadway, Webster Street and 27th Street and approximately 0.5-mile southeast of the Interstate 980-Interstate 580 freeway interchange. To the west, past Broadway, was a triangular area bounded by Broadway, Webster Street and 29th Street. The Temple Sinai was depicted at the corner of Webster Street and 28th Street. The grounds of the Westlake Jr. High School were shown approximately 500 ft southeast of the site.

Glen Echo Creek, flowing in southeasterly direction towards Lake Merritt, was depicted approximately 375 ft east of the subject site. Lake Merritt was shown approximately 0.4-mile southeast of the subject site. The Lake Merritt-Oakland Estuary Channel, which connects the lake with the Oakland Estuary (Alameda Tidal Canal), was visible south of the lake.

The elevation of the subject site is approximately 34 ft above mean sea level (msl) and the property slopes to the south-southeast, towards Lake Merritt.

A review of topographic maps and a reconnaissance of the surrounding areas indicate that no oil wells are located within a 0.25-mile radius of the subject site.

¹⁶ USGS, Oakland West Topographic Quadrangle, California 7.5 Minute Series, 1980 (photo-revised 1959), scale 1:24,000

D. GEOLOGY AND HYDROLOGY

D.1. Geology

The subject site is located within the Coast Ranges geomorphic province, which is characterized by a series of parallel, northwesterly trending, folded and faulted mountain chains and valleys. In central California, these ranges are separated by a geologic depression that formed San Francisco Bay. The Peninsular Ranges on the west side of the Bay are formed mainly by Franciscan Formation rock series, consisting of Jurassic Franciscan mélanges. The East Bay ranges form the eastern boundary of the Bay and consist of Late Mesozoic shelf and slope sedimentary rocks. Situated between the East Bay ranges and San Francisco Bay is the East Bay Plain. This plain measures approximately 25 miles long and 2 to 7 miles wide. Prior to urban development, the plain consisted of tidal flats, estuaries and alluvial plains. The subject site is located within this area.

The subject site appears to be situated on a contact between Holocene-age alluvial fan and fluvial deposits (Qhaf) and Pleistocene-age alluvial fan and fluvial deposits (Qpaf).¹⁷

D.1. Soils

Based on the USDA's¹⁸ Soil Conservation Service (SCS) SSURGO¹⁹ data, the soil beneath the subject site is characterized as "urban land".²⁰

D.2. Surface Waters

A culverted section of Glen Echo Creek, flowing in southeasterly direction towards Lake Merritt, is approximately 375 ft east of the subject site. Lake Merritt, approximately 0.4-mile southeast of the subject site, is a fresh- and salt-water lake, the largest such lake located within an urban area. The Lake Merritt-Oakland Estuary Channel connects the lake with the Oakland Estuary (Alameda Tidal Canal). The Oakland Estuary, approximately 1.75 miles south of the site, is bounded by the shorelines of the City of Oakland and the Island of Alameda, on the eastern edge of San Francisco Bay.

D.3. Seismicity

According to the USGS, potentially active faults are those that have shown activity within the Quaternary period (the past 1.8 million years). According to the USGS Earthquake Hazards Program²¹, the nearest active fault is the Hayward fault system, located approximately 2.8 miles to the northeast of the site.

A common measure of earthquake intensity and effects due to ground shaking is the Modified Mercalli Intensity (MMI) Scale. The MMI values for intensity range from I to XII, with intensity descriptions ranging from an event not felt by most people (I) to nearly total damage (XII). Between these two extreme ranges, intensities that range from IV to

¹⁷ USGS, Geologic Map and Map Database of the Oakland Metropolitan Area, Miscellaneous Field Studies MF-2342, 2000

¹⁸ U.S. Department of Agriculture

¹⁹ Soil Survey Geographic

²⁰ EDR Radius Map Report, Inquiry No. 3172305, dated September 23, 2011

²¹ <http://earthquake.usgs.gov/hazards/qfaults/>

XI have the potential to cause moderate to significant structural damage.

According to the California Geological Survey Probabilistic Seismic Hazards Map, there is a 10 percent probability that the peak horizontal acceleration experienced at the site would exceed 0.675 times the acceleration of gravity (g) from a seismic event within the next 50 years.²² The ground-shaking probabilities have associated average peak acceleration rates that correspond to an MMI rating of IX. Earthquakes of this intensity are considered violent and could cause considerable damage even in specially designed structures.

The Alquist-Priolo (AP) Act was passed into law following the destructive February 9, 1971 Mw²³ 6.6 San Fernando earthquake. The AP Act provides a mechanism for reducing losses from surface fault rupture on a statewide basis. The intent of the AP Act is to insure public safety by prohibiting the construction of most structures for human occupancy across traces of active faults that constitute a potential hazard to structures from surface faulting or fault creep.

The Alquist-Priolo (AP) Act defines active faults as those that have shown seismic activity during the Holocene period, approximately the past 11,000 years, while potentially active faults are those that have shown activity within the Quaternary period, or the past 1.8 million years.

SCHUTZE & Associates, Inc. reviewed AP data provided by the California Geologic Survey (updated December 2010).²⁴ Based on the review, the subject site is not in an AP zone. The nearest AP zone is approximately 2.8 miles to the northeast and is associated with the Hayward fault system.

D.4. Groundwater

SCHUTZE & Associates, Inc. reviewed available groundwater data for 488 25th Street (located approximately 1,300 feet to the southwest), 2800 Telegraph Road (located approximately 1,100 feet to the west) and 2630 Broadway (located approximately 375 feet to the southwest).²⁵ Based on available data, groundwater in the vicinity of the subject site flows to the southwest. Groundwater bearing horizons exist between 10 and 30 feet below ground surface (ft bgs) and are likely to be confined. Groundwater conditions may vary at the subject site.

D.5. Climate

The Oakland area generally experiences a Mediterranean climate consisting of hot, dry summers and mild, rainy winters. The average temperature ranges from a low of 45 degrees Fahrenheit to a high of 75 degrees Fahrenheit, although summer days can get well into the 80s. The warmest month of the year is usually September. The annual average precipitation measures approximately 23 inches and occurs mostly between November and March.²⁶

D.6. Previous Environmental Investigations

SCHUTZE & Associates, Inc. did not review previously prepared environmental reports for the subject site.

E. HISTORICAL REVIEW

As part of the historical review, SCHUTZE & Associates, Inc. reviewed available historical aerial photographs, topographic maps, Sanborn fire insurance maps and city directories.

E.1. Review of Historical Aerial Photographs

Historical aerial photographs were provided by Environmental Data Resources, Inc. (EDR) for the years 1939, 1946, 1958, 1965, 1972, 1982, 1993, 1998, 2005 and 2006.²⁷

The 1939 photograph depicts the subject site developed with a commercial warehouse structure that filled the entire lot (the present-day building). A small rectangular building was shown adjacent to the east. Large commercial structures were adjacent to the north and south; similar structures lined both sides of Broadway in the area of the site (Oakland's historic Auto Row). To the east and southeast were residences along 28th Street, Valdez Street and Richmond Avenue. Further to the southeast were the grounds of a school (now Westlake Middle School). Lake Merritt was visible approximately 0.4-mile to the southeast.

The other aerial photographs reviewed (1946, 1958, 1965, 1972, 1982, 1993, 1998, 2005 and 2006) depict the subject site much as previously. By 1958, an open space was visible in the line of buildings along the western side of Broadway across from the subject site (a parking lot is there in the present-day). By 1982, it appeared that a row of residences east of the site, along 28th Street, had been replaced by a large building (the present-day Valdez Place apartment building). The car dealership adjacent to the south of the site (now Volkswagen of Oakland) expanded the parking lot surrounding its on-site buildings over time. Otherwise, the subject site, the adjacent buildings and the surrounding area are depicted in the 2006 photograph very similarly to how they appear in the 1939 photograph.

²⁷ EDR Aerial Photo Decade Package, Inquiry No. 3172305, dated September 23, 2011

E.2. Historic Topographic Maps

Historical topographic maps were provided by EDR. Maps dated 1895, 1915, 1948, 1949, 1959, 1968, 1973 and 1980 were reviewed (Table 2)²⁸.

TABLE 2
Review of Historical Topographic Maps
2800 Broadway, Oakland, California

Date of Topographic Map	Observations
1895	The subject site was depicted in urban Oakland, adjacent to the east of Broadway and just northeast of the intersection of (what are now) Broadway, Webster Street and 27 th Street. Two residences were depicted at the site, and another residence was adjacent to the south. 29 th Street existed, but other present-day streets in the vicinity of the site (28 th Street, Valdez Street, Richmond Avenue) were not depicted. The streets to the north, west and south of the site were developed with residences. An open area bisected by Glen Echo Creek was to the east. The creek flowed towards Lake Merritt, shown approximately 0.4-mile south of the site. Lake Merritt was shown at this time connecting directly with San Antonio Creek to the south.
1915	The site appeared to be still developed with residences. The triangular area of land west of the site, bounded by Webster Street and Broadway, was depicted as heavily developed. A section of 28 th Street (called Ruby Street at the time) was depicted adjacent to the south of the site, and Valdez Street and Richmond Avenue were now shown. The area east-southeast of the site was still largely vacant land. Lake Merritt was now depicted connected to San Antonio Creek by a narrow channel.
1948 / 1949	The subject site was shown as developed urban land. The 1948 map depicts a large structure at the site (no individual structures are depicted on the 1949 map). Temple Sinai was depicted west of the site, at the intersection of Webster Street and 28 th Avenue, and the Westlake Jr. High School was shown to the southeast. MacArthur Boulevard (Highway 50) was shown to the north.
1959 / 1968 / 1973	The subject site and the surrounding area were depicted as previously. By 1968, the MacArthur Freeway and the Interstate 980-Interstate 580 freeway interchange had been constructed.
1980	This map is reviewed in Section C.1.

E.3. Sanborn Fire Insurance Maps

Fire insurance maps were primarily used by insurance underwriters to determine the risk involved in insuring individual buildings in urban areas against loss due to fire. Historical fire insurance maps for the years 1889, 1902, 1903, 1911, 1912, 1950, 1951, 1952, 1954, 1959, 1962, 1967, and 1970 were reviewed (Table 3).²⁹

²⁸ EDR Historical Topographic Map Report, Inquiry No. 3172305, dated September 23, 2011

²⁹ EDR Certified Sanborn Map Report, Inquiry No. 3172305, dated September 23, 2011

TABLE 3
Review of Sanborn Fire Insurance Maps
2800 Broadway, Oakland, California

Year	Activities
1889 / 1902 / 1903	The 1889 and 1902 maps depicted the west side of Broadway as an area of residences and small businesses. The east side of Broadway, including the subject site, was not depicted. The subject site was shown on the 1903 map divided into two lots and developed with two residences (1912 and 1916 Broadway). At this time, Ruby Street (later 28 th Street) did not intersect with Broadway and was shown ending adjacent to the southeast corner of the subject property. Adjacent to the south was a building labeled "house movers storage". The lot to the north of the site was vacant. Further north were stores along Broadway. To the east were residences along Ruby Street.
1911 / 1912	The subject site was depicted developed with two residences. A vacant lot was still adjacent to the north; beyond were a garage and a carriage factory. The 1912 map depicted the west side of Broadway and showed the Merrick Baking Company located across Broadway from the subject site.
1950 / 1951 / 1952 / 1954	The subject site was now depicted developed with the current structure. The building was shown subdivided into four spaces: three storefronts (2810, 2812 and 2816 Broadway) were at the northwestern corner and a warehouse space labeled "wholesale electrical supplies" (2800 Broadway) was shown occupying the rest of the building. The property adjacent to the north was now labeled as a "service station" with a capacity of 70 cars. An automobile sales room was part of the facility. The property adjacent to the south, across 28 th Street, was also an automobile sales and service facility. The property adjacent to the east was a warehouse. To the west across Broadway were auto repair shops and used car lots.
1959 / 1962	The subject site was shown as previously. The property adjacent to the north was now labeled "glass warehouse". The property adjacent to the east was labeled "motor rebuilds shop and warehouse". The businesses depicted along both sides of Broadway were primarily automobile sales and service facilities. Residential areas were shown further to the east and west.
1967 / 1970	The subject site and the surrounding area were depicted as previously.

E.4. Historical City Directories

SCHUTZE & Associates, Inc. reviewed business directories including city, cross-reference and telephone directories for the addresses of the subject site and nearby properties. The time span for which records were reviewed was approximately 1920 through 2006. The main sources used were the Haines Company, Inc., R.L. Polk & Co. and Pacific Bell/Pacific Telephone & Telegraph Co.³⁰ A summary of the results is presented in Table 4.

Historical city directories from the 1930s list Auburn Authorized Factory Parts & Service at 2800 Broadway (Auburn was a brand of American automobiles manufactured from 1900-1936). In addition, 1920 and 1928 directory listings for 2802 and 2810 Broadway, respectively, show that other automobile dealers had previously occupied the subject property. In the 1940s, the site was listed as a used car dealership.

Sanborn maps from the 1950s (see Section E.3) depicted the subject building subdivided into three storefronts (2810, 2812 and 2816 Broadway) and a warehouse space (2800 Broadway). The directory listings for 2800 Broadway show the site occupied by lighting supply companies from at least 1950 to 1991. However, listings from 1950 for 2810 Broadway (Organic Factors & Chemical Co.) and 2812 Broadway (Grant Piston Rings Service) indicate that that the property was used by other businesses besides the lighting companies.

³⁰ EDR City Directory Abstract, Inquiry No. 3172305, dated September 23, 2011

TABLE 4
Review of City Directories
2800 Broadway, Oakland, California

Historical Listings for the Subject Site and Nearby Properties		
Address	Year	Listed Company
2800 Broadway (current subject site address)	1933-1938	Auburn Authorized Factory Parts & Service
	1943-1945	Heimlich Used Autos / Motor Car Exchange
	1950-1991	Incandescent Supply Co. / Galaxy Lighting, Inc.
	1996-2006	King Covers
2802 Broadway (historically part of subject site)	1920	Hudson Motor Car Agency / Republic Truck Agency / Dodge Bros. Motor Car Agency
2810 Broadway (historically part of subject site)	1928	Joseph Ashby Used Autos
	1950	Organic Factors & Chemical Co.
2812 Broadway (historically part of subject site)	1920-1928	U.S. Rubber Co. / J.H. Connolly Auto Tires
	1950	Grant Piston Rings Service
2814 Broadway (historically part of subject site)	1925-1933	Lightning Café / Henry M. Hansen Restaurant
2820 Broadway (adjacent to the north)	1920-1925	Ford Auto Agency
	1938-1950	Pontiac Motor Car Dealers / Wells Motor Co.
	1986	Four Wheel Parts Wholesalers
	1991	Oakland Volvo

	1962-	Automotive Exchange Service Inc. / Auto Exchange, Inc. Auto Repair
	2006	Broadway Smog Station

E.5. Oil and Gas Fields, Mining Operations

A review of the current topographic map indicates that the subject site is not located within a known oil or gas field and that mining operations did not exist on the subject site. No indications of oil wells or former mining operations were observed during the reconnaissance of adjacent properties.

E.6. Interview and Questionnaire

Mr. Thomas C. Thatcher, a realtor with Hamilton, Cohn, Thatcher & Associates, was interviewed briefly by SCHUTZE & Associates, Inc. at the time of the site reconnaissance. Mr. Thatcher stated that he believed the entire structure to have been constructed at the same time, and said that the building had been an automobile showroom in the 1920s/30s. Mr. Thatcher was unaware of any environmental liens against the property.

No questionnaire was completed for the purpose of this Phase I ESA.

E.7. Title Report

SCHUTZE & Associates, Inc. has not reviewed a title report for the subject site.

E.8. Oakland City Tax Assessment Block Books

SCHUTZE & Associates, Inc. reviewed Oakland City Tax Assessment Block Books for the area of the subject site at the Oakland Public Library's Oakland History Room (125 14th Street, 2nd floor, Oakland, CA). The block books reviewed were between the years 1915 and 1925.

The subject property was shown in 1915 as two lots owned by A.E. McDonald. The lots were assessed at \$1,500 and \$1,700. The property was probably still occupied by residences at this time (a 1911 Sanborn map depicts two residences on the property [see Section E.3]). The property was part of Block #685, which was within an area called the Cogswell Tract.

In the 1917 Block Book, the property was shown as one lot owned by the Savings Union Bank & Trust Company. The previous assessment amounts were crossed out but no new assessment amount was recorded. The books for 1918, 1921 and 1923 continue to show the bank as the owner of the property. The assessment amount for each of these years was given as \$9,500. In 1925, the name of the bank that owned the property was listed as Union Trust Company; the assessment amount remained the same.

Based on the change in the assessment amount for the property, it appears that the on-site structure was constructed in approximately 1917/18. The assessment amounts given in 1915 for the two lots at the property are consistent with those assessed at the time for other residential properties within Block #685. The much higher assessment given to the property in 1918 is consistent with the amounts assessed for other developed commercial properties in the area (e.g., the property adjacent to the north along Broadway was assessed at \$12,000 in 1918).

E.9. Data Gaps

No significant data gaps were noted in the historical records for the area of the subject site.

E.10. Historical Summary

As part of the historical review, SCHUTZE & Associates, Inc. reviewed available historical aerial photographs, topographic maps, Sanborn maps and city directories. The earliest historical record found for the area of the subject site was an 1895 topographic map. The subject site was depicted as urban land adjacent to the east of Broadway Street in the City of Oakland. A 1903 Sanborn fire insurance map depicted two residences at the site.

According to Oakland City Tax Assessment Block Books, the subject property was assessed in 1915 as two residential lots. By 1917, the property was one lot owned by the Savings Union Bank & Trust Company. The 1918 assessment amount of \$9,500 is consistent with the amounts assessed for other developed commercial properties in the area at that time, indicating that the subject property was by now developed with a commercial structure (the current building). Historical city directory listings for the site from the 1920s through the 1940s show the property occupied during this period by various automobile dealerships.

Sanborn maps from the 1950s depicted the subject building subdivided into three storefronts (2810, 2812 and 2816 Broadway) and a warehouse space (2800 Broadway). The directory listings for 2800 Broadway show the site occupied by lighting supply companies from at least 1950 through 1991. However, listings from 1950 for 2810 Broadway (Organic Factors & Chemical Co.) and 2812 Broadway (Grant Piston Rings Service) indicate that that the property was used by other businesses besides the lighting companies. The most recent business to occupy the site was King Kovers, an automotive upholstery company. The building is currently vacant.

F. SITE RECONNAISSANCE

SCHUTZE & Associates, Inc. conducted a site reconnaissance on Wednesday, September 27, 2011. Mr. Thomas C. Thatcher, a realtor with Hamilton, Cohn, Thatcher & Associates, led Mr. Jan Schutze, Geologist, over the entire property and through all parts of the building. The purpose of the site reconnaissance was to observe existing subject property conditions and to evaluate evidence for recognized environmental conditions (RECs), including hazardous materials and/or wastes. Observations noted during the site reconnaissance are summarized below. All observations and conclusions are based on the condition of the subject property at the time of the site reconnaissance by SCHUTZE & Associates, Inc. The building was vacant at the time of the site reconnaissance.

F.1. General Site Condition

The site is a trapezoidal parcel developed with a one-story and mezzanine building that occupies the entire property. The main customer entrance, near the southwest corner

of the building, opens onto Broadway, and rollup doors are located on the west and south sides of the building. The building was most recently occupied by an upholstery company and is now vacant.

The building interior consists of: a showroom/customer service area at the southwest corner; warehouse areas that extend along the north and south sides; an upper mezzanine storage area built over the north-central and northeast portions of the warehouse; and a two-story office area east of the showroom (Figure 2).

F.1. Warehouse Structure

Structure and Exterior: The exterior walls of the building are cast-in-place concrete walls. The interior and exterior concrete walls are painted. The floor is a concrete slab that was constructed in terraced sections (the north warehouse area is higher than the showroom and the south warehouse area is the lowest section). The ceiling is framed with wooden beams supported by steel columns. Brick arches are above the doors on the west side. The mezzanine floor is constructed of wood and supported by wooden columns. In addition to the front showroom display windows, there are mullioned windows in the south wall, at both the warehouse and upper office levels.

The main customer door, located near the southwest corner of the building, opens from Broadway into the showroom area. The door is flanked on both sides by floor-to-ceiling display windows. Across the showroom floor to the east are two offices with a ramp in between that leads to the south warehouse area. North of the customer entrance is another ramp, leading to the north warehouse. Three rollup doors open from the north warehouse to Broadway. Two more rollup doors open to 28th Street from the south warehouse. A sixth rollup door, leading to a loading dock, is located at the southeast corner of the building and is accessible from both warehouse areas. Stairs lead from the warehouse areas and from one of the first floor offices to the mezzanine and upper office areas.

Roof: The roof consists of two gabled truss structures with the ridges running in east-west direction, supported by a wall which divides the north and south warehouse areas. The trusses are framed out of rough redwood beams connected with redwood joists. The joists are overlain by 1 x 6s and 1 x 8s which form the base of the composite roof. The roofing membrane is rolled-on asphalt. The roof surface was reportedly replaced 4 or 5 years ago. Potentially asbestos-containing insulation was not observed.

Stained ceiling tiles that were observed in one of the upper offices above a window may indicate a leak in that area. Water damage was also observed underneath a window in the first floor office on the south side.

Building Interior (Showroom, Offices and Upper Mezzanine): The floors on the ground level are concrete slabs; the mezzanine floors are wood-framed. Floor finishes in the showroom area are sheet linoleum. Some parts of the upper offices and the mezzanine storage area are also finished with linoleum.

The peripheral interior walls are painted concrete structures. Interior support walls and partitions are made out of wood. In the offices, walls are finished with drywall or wood paneling and the ceilings are drywall or suspended ceiling tiles. Fluorescent light fixtures are in all areas of the building. There are a large number of wooden shelving

units in the upper mezzanine storage area.

While the building was constructed before asbestos was commonly used, it is possible that some finishing materials used for renovations (e.g., linoleum flooring/mastic, drywall mud) may contain asbestos. It is also likely that some of the older fluorescent light fixtures have PCB³¹-containing ballasts.

Building Interior (North and South Warehouse Areas): The north warehouse area has partitioned storage rooms along the southern side of the space, next to the wall dividing the two warehouse portions of the building. The south warehouse area has an opening in the east wall which allows access to the loading dock at the southeast corner of the building. The ramp leading to the loading dock runs from the north warehouse and is currently partitioned off from the rest of the space.

An area in the north warehouse, at the northeast corner of the building, was apparently formerly used as a wash station. The floor is heavily stained in this area, near pipes/faucets on the east wall.

No floor drains were observed in the warehouse areas. No evidence of former hydraulic lifts was observed.

In the section of the north warehouse adjacent to the showroom is a rectangular patched area in the concrete floor. Pipes were observed in the floor next to this area. It is likely that a bathroom was formerly installed at this location. However, patched areas of concrete can also indicate the presence of a former UST³² pit. No other evidence for current or former USTs was observed; no vent pipes were observed in the building or in the adjacent sidewalks along Broadway and 28th Street.

F.2. Mechanical Systems

Heating and air conditioning for the two-story office portion of the building is provided by a packaged HVAC unit on the roof. The warehouse areas have ceiling-mounted, gas-powered heating units.

F.3. Parking, Walkways, Landscaping and Grading

Parking: The footprint of the on-site building occupies the entire property; there are no on-site exterior parking lots.

Walkways: There are public sidewalks along Broadway and 28th Street. No patches or fractures in the concrete pavement were observed to suggest the existence of underground structures, such as fuel tanks or product piping. No issues of environmental concern were observed along the sidewalks.

Landscaping: No significant landscaping was observed.

Site Grading and Drainage: Storm water at the subject site drains from the roof of the building complex via interior downspouts into storm sewer laterals and into the storm sewer systems along Broadway and 28th Street. The regional slope in the area is towards the southeast, towards Lake Merritt.

³¹ Polychlorinated biphenyl(s)

³² Underground storage tank

F.4. Waste Disposal

At the time of the site reconnaissance, there were no tenants in the building and no trash dumpsters were observed at the site. A few empty garbage cans and plastic containers were observed in the warehouse areas and small amounts of miscellaneous debris were present in various areas of the building. No hazardous waste or illegal dumping of waste was observed. Aside from the former wash station area in the north warehouse, no evidence for major leaks or spills was observed.

F.5. Pits, Ponds and Lagoons

Pits, ponds and lagoons are often associated with the disposal of solid and liquid wastes, which may include hazardous materials. Pits, ponds or lagoons were not observed on or adjacent to the subject properties.

F.6. Septic Tanks, Cesspools and Clarifiers

Septic tanks and cesspools are often associated with the disposal of wastewater from structures that are not served by public sewer systems. Septic tanks and cesspools may be associated with hazardous materials, if such materials have been inappropriately disposed of in the past via sinks.

No visual evidence was found during the site reconnaissance for potential, former leach fields or septic tanks.

F.7. Wells, Cisterns and Sumps

Based on on-site observations by SCHUTZE & Associates, Inc., there was no evidence of wells, cisterns or sumps on the subject site. Based on the historical review, it is unlikely that wells formerly existed on the site.

F.8. On-Site Fuel Storage Tanks

There is a rectangular patched area in the concrete floor of the section of the north warehouse adjacent to the front showroom. Pipes were observed in the floor next to this area. It is likely that a bathroom was formerly installed at this location. However, patched areas of concrete can also indicate the presence of a former UST pit. No other evidence for current or former USTs was observed; no vent pipes were observed in the building or in the adjacent sidewalks along Broadway and 28th Street.

F.9. Polychlorinated Biphenyls (PCBs)

Pole-mounted or underground transformers were not observed on or adjacent to the subject site. It appears that the electricity runs already stepped down on the power lines. Interior transformers were also not observed.

Fluorescent light fixtures are located throughout the warehouse and office areas of the building. Due to the age of the building, SCHUTZE & Associates, Inc. recommends that these fixtures be checked for potential PCB ballasts and/or mercury-containing fluorescent tubes prior to renovation or demolition of the structure.

SCHUTZE & Associates, Inc. did not observe other equipment on-site likely to contain PCBs.

F.10. Utilities

The electrical power is provided to the building by PG&E. Electricity is provided directly from a power pole along 28th Street and is directed into the exterior wall of the subject building. The entrance point of the electrical conduit is protected by a metal weatherhead. The main power shutoff is on the inside of the building directly below the entrance point. From the shutoff switch, the electricity is directed to the main panel in the warehouse interior. Issues of environmental concern were not observed.

Natural gas is provided by PG&E through a meter on the southern corner of the building. Issues of environmental concern were not observed.

Sanitary sewer and water services are provided by the East Bay Municipal Utility District (EBMUD). Storm sewer services are provided by the City of Oakland.

F.11. Adjacent and Nearby Land Use

As part of the Phase I ESA, SCHUTZE & Associates, Inc. conducted a reconnaissance of the surrounding area within a 0.25-mile radius of the subject site. The subject site is a commercial warehouse property located on the northeast corner of Broadway and 28th Street in Oakland, California.

At the time of the site reconnaissance, the building adjacent to the north of the subject site was vacant (2820 Broadway, formerly a Nissan dealership). Further to the north along Broadway are Autotrends Bodyshop (2840 Broadway) and Mark Morris Tires (2850 Broadway).

Adjacent to the east is a smog check station (Broadway Smog Station, 288 28th Street). Further to the east is an apartment building (Valdez Plaza, 280 28th Street). To the south of the site are 28th Street and a Volkswagen dealership (Volkswagen of Oakland, 2740 Broadway).

Broadway is adjacent to the west, and across Broadway are a vacant building (2801-2825 Broadway), a parking lot and various small businesses, including 4 Less Smog Check (2857 Broadway) and Kids in Motion Gymnastics (2863 Broadway).

Based on observations made during the 0.25-mile drive-by reconnaissance, there is a low to moderate potential that the subject site has been environmentally impacted by nearby or adjacent sites.

F.12. Wetlands and Flood Plains

During the site reconnaissance and drive-by survey of the surrounding area, SCHUTZE & Associates, Inc. observed no indications of wetlands in the immediate vicinity of the subject site. According to the National Wetland Inventory, the nearest wetland areas are along the shores of Lake Merritt, approximately 0.4-mile to the southeast.

A culverted section of Glen Echo Creek, flowing in southeasterly direction towards Lake Merritt, is approximately 375 ft east of the subject site. SCHUTZE & Associates, Inc.

reviewed FEMA³³ Flood Insurance Rate Maps for the subject site and its vicinity.³⁴ The FEMA maps show 100- and 500-year flood zones adjacent to the creek and Lake Merritt. The subject site is marked on the FEMA maps as “Zone X”³⁵ and is depicted outside of the flood zones.

Based on observations during the site reconnaissance and the FEMA maps, there is a low potential that the subject site would be affected by flooding.

G. RADON GAS SURVEY

The EPA Map of Radon Zones assigns each of the 3,141 counties in the United States to one of three zones. The zone designations were determined by assessing five factors that are known to be important indicators of radon potential: indoor radon measurements; geology; aerial radioactivity; soil permeability; and foundation type. Based on the results of the EPA survey, the subject site fell within the designation of Zone 2. Zone 2 counties have a predicted average indoor radon screening level of between 2 and 4 picocuries per liter (pCi/L) of air. The recommended EPA Action Level is four pCi/L. Zone 2 counties are considered to have a “moderate potential” for elevated indoor radon levels.

In California, the Department of Public Health (CDPH) Radon Program has collected radon test data for buildings throughout the state. The data are maintained in a digital database. The database is used to help the CDPH determine areas with excessive indoor radon levels, determine areas that may need testing and inform the public of the results.³⁶ The database is a summary of over 48,000 radon tests conducted in California.³⁷ The radon test information is sorted by zip code. Under the zip code of the subject site (94611), the number of radon tests performed was listed as 66, with 3 radon tests resulting in a level greater than 4 pCi/L.

It is the opinion of SCHUTZE & Associates, Inc. that the controlled air exchange in the building via the HVAC system, along with the open building design, provides an adequate protection against radon intrusion. No radon testing was conducted for the purposes of this Phase I ESA.

H. AGENCY FILE REVIEW

SCHUTZE & Associates, Inc. reviewed the following agency files:

H.1. EnviroStor

Maintained by the Department of Toxic Substances Control (DTSC), the EnviroStor database is an on-line search and Geographic Information System (GIS) tool for

³³ Federal Emergency Management Agency

³⁴ FEMA Flood Insurance Rate Map, Map No. 06001C0059G, dated August 3, 2009

³⁵ Areas determined to be outside the 0.2% annual chance floodplain.

³⁶ http://www.consrv.ca.gov/cgs/minerals/hazardous_minerals/radon/Pages/index.aspx, last updated May 4, 2010

³⁷ The number of tests does not necessarily represent the number of houses tested; a single house may have had several tests conducted. Also, the database contains both long-term and short-term indoor radon measurements.

identifying sites that have known contamination or sites for which there may be reasons to investigate further. It also identifies facilities that are authorized to treat, store, dispose or transfer hazardous waste.³⁸

Based on a review of the EnviroStor database by SCHUTZE & Associates, Inc., no DTSC-regulated properties exist within a 1,000 ft radius of the subject site. The nearest DTSC-regulated property is the 'Harris Dry Cleaners' property located approximately 2,300 feet northwest of the site (2801 Martin Luther King Jr. Way).

SCHUTZE & Associates, Inc. has reviewed an environmental report for this Harris Dry Cleaner site and it appears that groundwater contamination by PCE³⁹ has not migrated far beyond Martin Luther King Jr. Way⁴⁰. Therefore, there is a low potential that the subject site has been impacted.

H.2. GeoTracker

Maintained by the California State Water Resources Control Board, GeoTracker is a database and GIS that provides online access to environmental data. It tracks regulatory data about leaking underground fuel tank (LUFT), Department of Defense (DoD), Spills-Leaks-Investigations-Cleanups (SLIC) and Landfill sites. The database also contains information about public drinking water wells.⁴¹

Based on a review of GeoTracker by SCHUTZE & Associates, Inc., the following sites were listed within an approximately 1,000 ft radius of the subject site:

Broadway Volkswagen, 2740 Broadway: Located adjacent to the south of the subject site, this property was listed as an open LUST⁴² cleanup site. Groundwater and soil vapor at the site were impacted by gasoline and the solvent TCE⁴³. Four USTs were removed in 1988. At that time, benzene was detected in groundwater at 21,000 parts per billion (ppb).

During 1989, three monitoring wells were installed at this property. TPH⁴⁴ and benzene were detected in the wells at concentrations of up to 32,000 and 9,600 ppb, respectively (the TPH range was not listed).

In 1991, two wells were installed off-site. The locations of the wells were not specified and no site maps have been uploaded to GeoTracker. Groundwater in the areas of these wells contained hydrocarbons and solvents, but no specific concentrations or compounds were listed. No groundwater monitoring reports or additional environmental data were listed. Based on the adjacent location, there is a moderate to high potential that the subject site has been impacted by this property.

Oakland Dodge, 2735 Broadway: Located approximately 225 ft southwest and down-gradient from the subject site, this property was listed as a LUST site with case closure (1995). Groundwater was impacted by gasoline. No additional environmental data

³⁸ <http://www.envirostor.dtsc.ca.gov/public/EnviroStor%20FAQ.pdf>

³⁹ Tetrachloroethene

⁴⁰ URS, *Remedial Investigation Report, 2801 Martin Luther King Jr. Way*, March 25, 2010

⁴¹ http://www.waterboards.ca.gov/ust/electronic_submittal/about.shtml

⁴² Leaking underground storage tank(s)

⁴³ Trichloroethene

⁴⁴ Total petroleum hydrocarbons

were listed. Based on the down-gradient location, there is a low potential that the subject site has been impacted by this property.

Glen Echo Creek Culvert, 29th Street and Broadway: Located approximately 300 ft north and up-gradient from the subject site, this site was listed as an open “other cleanup site”. Groundwater at this location was impacted by unlisted contaminants. The property was listed as “Category 1”, meaning that the contamination does not extend off the site and adjacent public right-of-ways. Based on the “Category 1” listing, there is a low potential that the subject site has been impacted by this property.

Chevron #9-2506, 2630 Broadway: Located approximately 375 ft southwest and down-gradient from the subject site, this property was listed as an open LUST cleanup site. Groundwater was impacted by gasoline and lead.

Twelve groundwater monitoring wells were installed, including two near the northeast intersection of 27th Avenue and Broadway (approximately 300 ft south of the subject site). Since 2008, MBTEX⁴⁵ has not been detected in these two wells with a detection level of 0.5 micrograms per liter (µg/L) for each MBTEX compound. During the most recent sampling event (1Q2011), TPH-g⁴⁶ was detected in these two wells at concentrations of up to 63 µg/L.

The groundwater flow direction appears to be generally to the southwest, although anomalous variations have been recorded. Available groundwater data for this property suggest that TPH-g and MBTEX are not migrating northward towards the subject site. Based on available groundwater data and the down-gradient location, there is a low potential that the subject site has been impacted by this property.

European Motors LTD, 2915 Broadway: Located approximately 625 ft northeast and up-gradient from the subject site, this property was listed as a LUST site with case closure (1992). Soil at the property was impacted by petroleum hydrocarbons. No additional environmental data were listed. Based on the lack of documented groundwater impacts, there is a low potential that the subject site has been impacted by this property.

Broadway Motors, 2560 Webster Street: Located approximately 650 ft southwest and down-gradient from the subject site, this property was listed as a LUST site with case closure (1997). Groundwater at the site was impacted by gasoline. No additional environmental data were listed. Based on the distance and down-gradient location, there is a low potential that the subject site has been impacted by this property.

Label Art of California, 290 27th Street: Located approximately 700 ft southeast and cross-gradient from the subject site, this property was listed as a LUST site with case closure (1996). Soil at the site was impacted by petroleum hydrocarbons (waste/ motor/ hydraulic/ lubricating oil). No additional environmental data were listed. Based on lack of documented groundwater impacts, the distance and the down-gradient location, there is low potential that the subject site has been impacted by this property.

Hagstrom Property, 265 30th Street: Located approximately 800 ft northeast and up-gradient from the subject site, this property was listed as a LUST site with case closure

⁴⁵ Methyl tert-butyl ether, benzene, toluene, ethylbenzene and xylenes

⁴⁶ Total petroleum hydrocarbons as gasoline

(2007). Groundwater at the site was impacted by gasoline. At the time that case closure was granted, residual TPH-g and MTBE⁴⁷ concentrations in groundwater were up to 2,900 and 7.1 µg/L, respectively. No monitoring wells were installed at the site.

Based on the residual TPH concentrations detected, and the lack of monitoring well data, there is a moderate potential that contaminants could have migrated off-site. Based on the distance, however, there is a low potential that significant concentrations of contaminants have migrated as far as the subject site.

Robert & Ruth Burrows Trust, 260 30th Street: Located approximately 800 ft northeast and up-gradient from the subject site, this property was listed as an open LUST site. Potential contaminants of concern are waste/motor/lubricating/hydraulic oil. The impacted environmental media are still under investigation. A 1,000-gallon heating oil or fuel UST was closed in place. Soil samples collected from the area of the UST contained TPH-g, TPH-d⁴⁸ and 'total oil & grease' at respective concentrations of 9,600, 4,500 and 18,000 milligrams per kilogram (mg/kg), respectively. Despite agency requests, groundwater has not yet been investigated at this property.

Based on the up-gradient location, there is a moderate potential that contaminated groundwater has migrated towards the subject site; however, based on the distance, there is a low potential that significant concentrations of contamination have impacted the subject site.

Private Residence (no address listed): Located approximately 800 ft west and cross/down-gradient from the subject site, this property was listed as an open "other cleanup site". Soil at this property was impacted by unlisted contaminants. The property was listed as "Category 1", meaning that the contamination does not extend off the site and adjacent public right-of-ways. Based on the data provided, there is a low potential that the subject site has been impacted by this property.

Powlan Property, 2939 Summit Street: Located approximately 850 ft northwest and cross-gradient from the subject site, this property was listed as a LUST site with case closure (1997). Unspecified media were impacted by heating/fuel oil. Fifty-six cubic yards of soil were excavated and disposed of off-site. It appears that the impacted area was over-excavated. No additional environmental data were listed. Based on the distance and cross-gradient location, there is a low potential that the subject site has been impacted by this property.

Oakland Acura, 255 27th Street: Located approximately 1,000 feet southeast and cross-gradient from the subject site, this property was listed as a LUST site with case closure (1995). Groundwater at the site was impacted by diesel. No additional environmental data were listed. Based on the distance and cross-gradient location, there is a low potential that the subject site has been impacted by this property.

I. GOVERNMENT LIST SEARCH (EDR REPORT)

Regulatory compliance is a primary element of a Phase I ESA. The presence of

⁴⁷ Methyl tert-butyl ether

⁴⁸ Total petroleum hydrocarbons as diesel

hazardous wastes or hazardous materials, on-site or at nearby sites, may present certain liabilities. EDR provided a map-based report identifying sites with real or potential environmental issues⁴⁹. At the request of SCHUTZE & Associates, Inc., the regulatory agency environmental databases, maintained by EDR, were searched within a one-mile radius around the subject site, as defined by ASTM E 1527-05 and by the AAI Final Rule (November 1, 2005) of the U.S. EPA. The environmental databases list sites that have registered with the appropriate regulatory agencies. The databases typically include sites that have recorded environmental violations and have handled or disposed of hazardous materials, chemicals and wastes. A detailed list of the individual database searches is provided with the EDR report in Appendix A. Table 5 is a summary of listed nearby sites of specific concern.

I.1. Subject Property

The subject site was not listed.

I.1. Off-Site Properties

National Priority List (NPL) Sites: Harris Dry Cleaners (2801 Martin Luther King Avenue) is approximately 0.5-mile northwest of the subject site. PCE contamination has been reported in groundwater (see Section H.1). Due to the distance from the subject site, there is a low potential that the subject site has been impacted.

LUST Sites: Forty-four LUST sites are listed within a 0.5-mile search radius of the subject site and thirteen of these are within 0.25-mile. The LUST site closest to the subject site is Broadway Volkswagen (2740 Broadway), adjacent to the south across 28th Street. Groundwater and soil vapor at the site have been impacted by gasoline and TCE. This site is currently listed as an open LUST cleanup site. Four tanks were removed from the property in 1988 and benzene was detected in groundwater at 21,000 ppb. According to the GeoTracker database, six monitoring wells have been installed; however, no groundwater monitoring reports have been uploaded to GeoTracker. Based on the proximity of this site to the subject property, there is a moderate potential that the subject site has been impacted. This site and other LUST sites in the vicinity of the subject site are discussed further in Section H.2.

USTs: Three UST sites are listed within approximately 700 ft of the subject site: Connell Jeep Chrysler Plymouth (2735 Broadway), European Motors (2915 Broadway) and Rogers Autoworks (3022 Broadway). No leaks, spills or violations were listed in connection with Connell Jeep Chrysler Plymouth and Rogers Autoworks. European Motors is listed as a LUST site with “Case Closed” status.

Dry-Cleaners: No dry-cleaning facilities were observed in the vicinity of the subject property during the site reconnaissance.

Based on the EDR report, no dry-cleaning facilities are listed within a 0.25-mile radius of the subject site. The nearest listed dry-cleaner site is Harris Dry Cleaners, discussed in Section H.1.

Historical Listings: Forty-eight historical auto station sites (facilities such as gasoline

⁴⁹ EDR Radius Map Report, Inquiry No. 3172305, dated September 23, 2011

service stations, automobile repair shops and auto sales and service businesses) are listed within 0.25-mile of the subject site. The closest of these historical sites is Auto Exchange, Inc. (288 28th Street), adjacent to the east. This property, currently a smog check station, has apparently been an automobile service facility since at least 1933. The site is also listed in connection with hazardous waste handling and disposal, and received a Notice of Violations in 1986. Based on the long-term use of this adjacent property as an auto repair facility, there is a moderate potential that the subject site has been impacted.

Five other historical auto station sites are listed within the direct vicinity of the subject site. These sites are Tracy Buick Inc. (2735 Broadway), European Motors (2915 Broadway), Chevron #9-2506 (2630 Broadway), Bauer Porsche (375 26th Street) and Broadway Ford (2560 Webster Street). Due to the long-term existence of automotive-type operations in the vicinity of the subject site, it is likely that groundwater beneath the area of the subject site has been regionally impacted.

Listed sites of concern in the vicinity of the subject site are also summarized in Table 5.

I.2. Orphan Sites

SCHUTZE & Associates, Inc. reviewed a list of facilities with uncertain addresses (orphan sites). Thirty-nine orphan sites were found. Based on the information provided, none of these orphan sites are in the direct vicinity of the subject site.

I.3. EDR Database Summary

**TABLE 5
EDR Database Summary
2800 Broadway, Oakland, California**

Sites	Federal Records			State and Local Records (incl. Tribal Records)										Threat to Site	Comments			
	NPL / RESPONSE	WDS / NPDES	CERC-NFRAP	DEED	RCRA-SQG	HIST Cal-Sites	Hist. Cortese	LUST / SLIC	UST/Hist. UST/AST	Landfills / SWRCY	SWEEPS UST	CA FID UST	DRYCLEANERS			HAZNET	Alameda Co CS	FINDS / EMI
Subject Site																		No listing.
Broadway Volkswagen 2740 Broadway					X		X	X						X	X	X	Moderate To High	Adjacent to the south. Groundwater impacted by gasoline and TCE. Four USTs removed 1988. Three monitoring wells installed 1989. TPH and benzene at up to 32,000 and 9,600 ppb, respectively. Based on the adjacent location, there is a moderate to high potential that the subject site has been impacted.
Oakland Dodge 2735 Broadway											X	X		X		X	Low	225 ft southwest and down-gradient. Listed as LUST site with case closure (1995). Groundwater impacted by gasoline. Based on the down-gradient location, there is a low potential that the subject site has been impacted.
Chevron #9-2506 2630 Broadway							X	X	X		X					X	Low	375 ft southwest and down-gradient. Listed as open LUST case. Groundwater impacted by gasoline and lead. Twelve monitoring wells installed. Groundwater data suggest that TPH-g and MBTEX are not migrating to the north towards the subject site. Based on available groundwater data and the down-gradient location, there is a low potential that the subject site has been impacted by this property.
European Motors LTD 2915 Broadway					X			X		X	X			X	X	X	Low	625 ft northeast and up-gradient. Listed as LUST site with case closure (1992). Soil impacted by petroleum hydrocarbons. Based on the lack of documented groundwater impacts, there is a low potential that the subject site has been impacted.
Harris Dry-Cleaners 2801 Martin Luther King Jr. Way						X	X					X	X			X	Low	2,300 ft west. Groundwater contamination by PCE has not migrated far beyond Martin Luther King Jr. Way. Therefore, there is a low potential that the subject site has been impacted.

J. CONCLUSIONS

SCHUTZE & Associates, Inc. has completed a Phase I ESA for the above-referenced property (subject site). The work was supervised by a California Professional Geologist (P.G.) and was completed in conformance with the scope and limitations of ASTM Practice E 1527-05 and the AAI Final Rule (2005) of the U.S. EPA.

The subject site, located on the northeast corner of Broadway and 28th Street, is approximately one mile northeast of the downtown area of Oakland, California. The site is a trapezoidal parcel developed with a one-story and mezzanine building that occupies the entire property. The main customer entrance opens onto Broadway and rollup doors are located on the west and south sides of the building. The building was most recently occupied by an automotive upholstery company and is now vacant.

The subject site consists of the following property:

Address	APN	Approximate Parcel Size	Location
2800 Broadway, Oakland, Alameda County, California	09-0685-068	Lot = 13,200 ft ² Bldg. = 19,743 ft ²	Northeast corner of Broadway and 28 th Street.

The area in which the subject site is located is referred to as Oakland's "Auto Row", an area historically occupied with automobile sales and service facilities. The building adjacent to the north of the subject site, formerly a Nissan dealership, was vacant at the time of the site reconnaissance. Adjacent to the east is a smog check station. To the south of the site are 28th Street and a Volkswagen dealership. Broadway is adjacent to the west, and across Broadway is a vacant building, a parking lot and various small businesses.

Glen Echo Creek, flowing in southeasterly direction towards Lake Merritt, is approximately 375 ft east of the subject site. Lake Merritt is approximately 0.4-mile southeast of the subject site. The elevation of the subject site is approximately 34 ft above mean sea level and the property slopes to the south-southeast, towards Lake Merritt. The subject site is marked on FEMA maps as being outside of flood zones. Based on observations during the site reconnaissance and the FEMA maps, there is a low potential that the subject site would be affected by flooding.

As part of the historical review, SCHUTZE & Associates, Inc. reviewed available historical aerial photographs, topographic maps, Sanborn maps and city directories. The earliest historical record found for the area of the subject site was an 1895 topographic map. The subject site was depicted as urban land adjacent to the east of Broadway Street in the City of Oakland. A 1903 Sanborn fire insurance map depicted two residences at the site.

The currently existing subject building was constructed in approximately 1918. Various automotive repair and sales facilities operated on the subject site between 1918 and 1950. Sanborn maps from the 1950s depicted the subject building subdivided into three storefronts (2810, 2812 and 2816 Broadway) and a warehouse space (2800 Broadway). Historical city directory listings for 2800 Broadway show the site occupied by lighting

supply companies from at least 1950 through 1991. However, listings from 1950 for 2810 Broadway (Organic Factors & Chemical Co.) and 2812 Broadway (Grant Piston Rings Service) indicate that the property was used by other businesses besides the lighting companies. An automotive upholstery company was on the subject site from approximately 1996 to 2006.

SCHUTZE & Associates, Inc. conducted a site reconnaissance on Wednesday, September 27, 2011. The building was vacant at the time of the site reconnaissance. The building interior consists of: a showroom/customer service area at the southwest corner; warehouse areas that extend along the north and south sides; an upper mezzanine storage area built over the north-central and northeast portions of the warehouse; and a two-story office area east of the showroom.

The exterior walls of the building are cast-in-place concrete walls. The floor is a concrete slab that was constructed in terraced sections. The ceiling was framed with wooden beams supported by steel columns. Brick arches are above the doors on the west side. The mezzanine floor is constructed of wood and supported by wooden columns. In addition to the front showroom display windows, there are mullioned windows in the south wall, at both the warehouse and upper office levels.

The main customer door is flanked on both sides by floor-to-ceiling display windows. Three rollup doors open from the north warehouse to Broadway and two open to 28th Street from the south warehouse. A sixth rollup door, leading to a loading dock, is located at the southeast corner of the building and is accessible from both warehouse areas.

The roof consists of two gabled truss structures with the ridges running in east-west direction. The trusses were framed out of rough redwood beams connected with redwood joists. The roofing membrane is rolled-on asphalt. The roof surface was reportedly replaced 4 or 5 years ago. Minor staining on ceilings suggests that the roof has leaked in the past. Potentially asbestos-containing insulation was not observed.

Interior support walls and partitions are made out of wood. In the offices, walls are finished with drywall or wood paneling and the ceilings are drywall or suspended ceiling tiles. Fluorescent light fixtures are in all areas of the building. While the building was constructed before asbestos was commonly used, it is possible that some finishing materials used for renovations (e.g., linoleum flooring/mastic, drywall mud) may contain asbestos. It is also likely that some of the older fluorescent light fixtures have PCB-containing ballasts.

An area in the northeast corner of the building was apparently formerly used as a wash station. The floor is heavily stained in this area, near pipes/faucets on the east wall.

In the section of the north warehouse adjacent to the showroom is a rectangular patched area in the concrete floor. Patched areas of concrete may indicate the presence of a former UST pit. No other evidence for current or former USTs was observed.

There are public sidewalks along Broadway and 28th Street. No patches or fractures in the concrete pavement were observed to suggest the existence of underground structures, such as fuel tanks or product piping. No significant landscaping was

observed. Storm water at the subject site drains from the roof of the building complex via interior downspouts into storm sewer laterals and into the storm sewer systems along Broadway and 28th Street.

No hazardous waste or illegal dumping of waste was observed. Aside from the former wash station area in the north warehouse, no evidence for major leaks or spills was observed.

Pits, ponds or lagoons were not observed on or adjacent to the subject properties. No visual evidence was found during the site reconnaissance for potential, former leach fields, septic tanks or clarifiers. Based on on-site observations by SCHUTZE & Associates, Inc., there was no evidence of wells, cisterns or sumps on the subject site. Based on the historical review, it is unlikely that wells formerly existed on the site.

As part of the Phase I ESA, SCHUTZE & Associates, Inc. conducted a reconnaissance of the surrounding area within a 0.25-mile radius of the subject site. The subject site is located in Oakland's "Auto Row" area, where auto repair facilities have existed for over 100 years.

Based on a review of GeoTracker files, Broadway Volkswagen (2740 Broadway), located adjacent to the south of the subject site, is listed as an open LUST cleanup site. Tanks were removed from the site in 1988 and groundwater contamination by gasoline and the solvent TCE was identified. TPH and benzene were detected in monitoring wells at concentrations of up to 32,000 and 9,600 ppb, respectively. Based on the adjacent location, there is a moderate to high potential that the subject site has been impacted by this property.

Other listed facilities with environmental concerns were at greater distances or cross-/down-gradient from the subject site. While it is likely that these facilities have contributed to poor water quality in the region, a direct impact to the subject site could not be demonstrated.

Harris Dry-Cleaners (2801 Martin Luther King Avenue), the nearest listed dry-cleaner site, is approximately 0.5-mile northwest of the subject site. PCE contamination has been reported in groundwater. Due to the distance from the subject site, there is a low potential that the subject site has been impacted.

SCHUTZE & Associates, Inc. has performed a Phase I ESA of the property at 2800 Broadway in conformance with the scope and limitations of ASTM Practice E 1527. This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the property, with the exception of the following:

- Due to the existence of automotive repair and sales facilities located on-site and surrounding the site, there is a moderate potential that the groundwater beneath the area of the subject site is environmentally impacted.
- The Volkswagen of Oakland property (listed as Broadway Volkswagen) is an open LUST cleanup site adjacent to the south of the subject site. TPH and benzene were detected in monitoring wells at concentrations of up to 32,000 and 9,600 ppb, respectively. Based on the adjacent location, there is a moderate to high potential that the subject site has been impacted.

- A patched area observed in the concrete floor of the north warehouse may suggest the potential existence of subsurface structures such as USTs. However, no direct evidence, such as product/vent pipes or pump islands, was observed.
- An area in the north warehouse, at the northeast corner of the building, was apparently formerly used as a wash station. The floor is heavily stained in this area, near pipes/faucets on the east wall.

It is the understanding of SCHUTZE & Associates, Inc. that the proposed land use for the subject site is an auto dealership. It is unlikely that the identified RECs would present a human health risk to employees in such an operation. Therefore, SCHUTZE & Associates, Inc. recommends no further work.

We have enjoyed working on this project and appreciate the opportunity to be of service. Please call SCHUTZE & Associates, Inc. at (510) 226-9944 with questions or comments about this report.

Respectfully submitted:
SCHUTZE & ASSOCIATES, INC.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either

EXECUTIVE SUMMARY

proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 02/25/2011 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
HARRIS DRY CLEANERS	2801 MARTIN LUTHER KING	WNW 1/4 - 1/2 (0.466 mi.)	AI148	221

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/15/2011 has revealed that there are 22 RCRA-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State- and tribal - equivalent NPL

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, and dated 08/09/2011 has revealed that there are 3 RESPONSE sites within approximately 1 mile of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/09/2011 has revealed that there are 7 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 08/09/2011 has revealed that there are 44 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 08/09/2011 has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 10 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 06/15/2011 has revealed that there

EDR PROPRIETARY RECORDS

EDR Proprietary Records

EXECUTIVE SUMMARY

EDR Historical Auto Stations: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

A review of the EDR Historical Auto Stations list, as provided by EDR, has revealed that there are 48 EDR Historical Auto Stations sites within approximately 0.25 miles of the target property.

 RB Case Number: 01-1959
 LOC Case Number: RO0000146
 File Location: Stored electronically as an E-file
 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Lead, Gasoline
 Site History: In early 1982 a leak was detected in the UST system at the site, and

CHEVRON #9-2506 (Continued) S105030427

existing USTs were replaced with fiberglass USTs. In March 1982 eight wells (B-1 to B-8) were installed. Between 1982 and 1983 free-phase hydrocarbons were removed from well B-4 on a weekly basis. In September 1993 a leak was detected during a product line upgrade. The leak was estimated to have been approximately 20 gallons. In September 1993 all wells and two tank backfill wells were resampled and concentrations of concern were encountered. In July 1994 wells B-9 to B-12 were installed. In March 1998 all USTs, including a waste oil UST, and associated piping, were removed from the site. In November 1998, 160 yards of impacted soil in the vicinity of the former dispenser islands and waste oil UST was overexcavated. In September 1999 ORC was injected into wells B-1, B-3, B-6, B-7, and B-9. In June 2007 bores B-14 to B-21 were installed at the site and site vicinity. Additional bores are currently proposed. High lead and zinc are also a concern; these may in part be related to a significant amount of demolition debris from the former Sisters of Providence Hospital that occupied the site between at least 1903 and 1911.

 RB Case Number: 01-2411
 LOC Case Number: RO0000247
 File Location: Stored electronically as an E-file
 Potential Media Affect: Under Investigation
 Potential Contaminants of Concern: Waste Oil / Motor / Hydraulic / Lubricating
 Site History: On March 11, 1997, an investigation was performed to investigate the 1,000-gallon heating oil or fuel UST located in the sidewalk. Four borings were advanced on each side of the tank to maximum depths of

ROBERT & RUTH BURROWS TRUST (Continued) S103472289

20 feet bgs. The maximum concentrations in soil were 9,600 mg/kg TPHs, 4,500 mg/kg TPHd, and 18,000 mg/kg Oil and Grease. No benzene or MTBE were detected. After the investigation was performed, the UST was closed in place. Groundwater was not collected at this time. Additional work was requested to evaluate groundwater; however, no work was performed.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
 Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
 Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

 Status Date: 08/07/1995
 Lead Agency: ALAMEDA COUNTY LOP
 Case Worker: BJJ
 Local Agency: ALAMEDA COUNTY LOP
 RB Case Number: 01-2416
 LOC Case Number: R00000166
 File Location: Stored electronically as an E-file
 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Benzene, Gasoline, Waste Oil / Motor / Hydraulic / Lubricating
 Site History: On July 28, 1994, one 295-gallon waste-oil UST, one 575-gallon gasoline UST and two hydraulic lifts were removed from the site. Holes were observed in the gasoline UST upon removal. Maximum concentrations of 1,500 ppm TPHg, 1,800 ppm TPHd and 7.4 ppm benzene were detected in soil. Subsequently, a work plan was submitted but has not been implemented.

 LQC Case Number: R00000009
 File Location: Stored electronically as an E-file
 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Gasoline
 Site History: The site is at the intersection of 28th Street and Telegraph Avenue in Oakland, CA and is currently occupied by a Kentucky Fried Chicken restaurant. The surrounding area is a mixed residential and commercial area. Shell demolished the former gasoline service station between 1988 and 1992. The former service station consisted of a first generation underground storage tank (UST) in the northeast corner of the property, three second-generation gasoline USTs in the southwestern portion of the site, a waste oil tank, four dispensers, an oil/water separator, three hydraulic lifts, and a station building. Sometime in 1987, five soil borings were drilling and sampled in the vicinity of the three second generation USTs. TPHg and benzene were detected in soil at concentrations up to 4,400 and 26 ppm, respectively. TPHd and TPHmo were not detected in soil. Three on-site groundwater monitoring wells (S-1, S-2, and S-3) were installed and sampled by Woodward-Clyde Consultants in April of 1988. At that time, the service station was no longer in use and the single first generation UST had been removed from the northeastern

SHELL #12-9450 (Continued) S101624460

corner of the site. Maximum concentrations of TPHg and benzene in soil were reported at 4,800 and 38 ppm, respectively. Maximum concentrations of TPHg and benzene in the initial groundwater samples were 46,000 ppb and 2,700 ppb, respectively, reported in source area well S-3. In November 1988, four off-site groundwater monitoring wells (S-4, S-5, S-6, and S-7) were installed. TPHg and benzene were detected in groundwater from well S-6, which is located on the south side of 28th Street downgradient from the three gasoline USTs, at concentrations of 5,500 and 1,700 ppb, respectively. In December 1988, the three gasoline, USTs, waste oil tank, dispensers, and product piping were removed. The four tanks were made of fiberglass and no apparent holes or cracks were observed. Soil samples collected from the sidewalls of the excavation contained TPHg and benzene at concentrations up to 2,800 and 0.85 ppm, respectively. One soil sample collected below the waste oil UST did not contain reportable concentrations of TPHd and BTEX. Overexcavation of the tank pit was performed on January 29, 1989. The excavation was extended vertically to a depth of approximately 9.5 feet below grade where groundwater was encountered. Approximately 500 cubic yards of soil was excavated from the area around the tank pit in the southwestern portion of the site. In July 1989, three additional off-site monitoring wells (S-8, S-9, and S-10) were installed south of the site. Off-site monitoring well S-11 and on-site product recovery well SR-1 were installed in October and November 1990. On-site soil vapor extraction wells SV-1 and SV-2 were installed on September 11, 1991. GeoStrategies, Inc. conducted a soil vapor extraction pilot test using wells SV-1 and SV-2 on September 24, 1991. The vapor extraction test results indicated minimal vacuum influence and low vapor recovery concentrations. GeoStrategies, Inc. concluded that soil vapor extraction was not a feasible remedial alternative for the site. Between 1991 and June 1992, the former service station building, the dispenser island, and dispenser canopy were removed. From June through August 1992, GeoStrategies, Inc. observed the removal of the oil water separator and three hydraulic lifts formerly located within the service station building and collected soil samples beneath the former OWS, hydraulic lifts, and former dispensers. TPHg and BTEX were not reported in any of the four soil samples collected beneath the product piping at each dispenser. One soil sample collected below the OWS contained oil and grease at a concentration of 68 ppm and did not contain reportable concentrations of TPHg, TPHd, or BTEX. The excavation was expanded laterally and vertically in the area of the former OWS. After the second stage of excavation, a confirmation soil sample co

 File Location: Stored electronically as an E-file
 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Waste Oil / Motor / Hydraulic / Lubricating
 Site History: May 10, 1993, one 350-gallon waste-oil UST was removed from the site. Petroleum hydrocarbons were detected in soil at the time. Subsequently one monitoring well was installed and sampled once. No petroleum hydrocarbons were detected in the two soil samples collected from the boring at 21 and 26 feet. However, petroleum hydrocarbons were detected in groundwater. Only one sampling event was reported.

 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Gasoline
 Site History: Two USTs were removed in 1988 and a third was removed in 1994. Several subsurface investigations, including in-situ remediation were conducted at the site between 1993 and 2004. In 2005, a remedial excavation was conducted at the site and the property was redeveloped. Replacement monitoring wells have been installed and post-remedial monitoring is currently underway.

LOC Case Number: R0000480
File Location: Stored electronically as an E-file
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Waste Oil / Motor / Hydraulic / Lubricating
Site History: In September 1990, five 1,000-gallon motor oil, one 2,000-gallon motor oil, one 1,000-gallon used oil, and two 10,000 gallon USTs were removed from the site. Soil borings and groundwater monitoring wells were installed at the site between February 1991 and December 1992. Elevated concentrations of petroleum hydrocarbons were detected in soil and free product was present in monitoring well MW-3. In June 1996, an SVE bioventing pilot test was performed at the site. Installation of Soakasee absorbent socks and periodic vacuum extraction events were terminated in July 2000. In 2004, additional borings were installed to evaluate remedial effectiveness. Elevated concentrations of petroleum hydrocarbons were detected in soil. In December 2008, two additional borings were installed in the vicinity of MW-3 to verify whether free product was present.

Local Agency: ALAMEDA COUNTY LOP
RB Case Number: 01-1313
LOC Case Number: R00002600
File Location: Stored electronically as an E-file
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: On April 7, 1998, five soil borings were installed at the site. Soil and groundwater samples detected diesel and bunker oil range hydrocarbons indicating that a release had occurred. In October 1998, one 10,000-gallon UST was closed in place at the site. Following UST closure activities, an additional Site Investigation verified soil and groundwater contamination at the site. Free product has been observed in groundwater monitoring well FOMW-1.

 Environmental Interests/Information System
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:
 U.S. importer of hazardous waste: No
 Mixed waste (haz. and radioactive): No
 Recycler of hazardous waste: No
 Transporter of hazardous waste: No
 Treater, storer or disposer of HW: No
 Underground injection activity: No
 On-site burner exemption: No
 Furnace exemption: No
 Used oil fuel burner: No
 Used oil processor: No
 Used oil refiner: No
 Used oil fuel marketer to burner: No
 Used oil Specification marketer: No
 Used oil transfer facility: No
 Used oil transporter: No

Hazardous Waste Summary:
 Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

NEGHERBON AUTO CENTER (Continued)

1000595611

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

FINDS:

Registry ID: 110002853430

Environmental Interest/Information System
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Lead Agency: ALAMEDA COUNTY LOP
 Case Worker: JTW
 Local Agency: ALAMEDA COUNTY LOP
 RB Case Number: 01-2428
 LOC Case Number: R0000505
 File Location: Stored electronically as an E-file
 Potential Media Affect: Other Groundwater (uses other than drinking water), Soil Vapor
 Potential Contaminants of Concern: Waste Oil / Motor / Hydraulic / Lubricating
 Site History: The site is a former retail gasoline service station and is currently a convenience store. Samples collected during light pole installation in November 1992 contained lube oil. Site investigation activities were initiated in June 2008 and continue to date.

 Threat to Water Quality: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Sub Chapter 15: True
 Regional Board Project Officer: CTS
 Number of WMUDS at Facility: 0

 Treat To Water: Major Threat to Water Quality. A violation could render unusable a ground water or surface water resource used as a significant drink water supply, require closure of an area used for contact recreation, result in long-term deleterious effects on shell fish spawning or growth areas of aquatic resources, or directly expose the public to toxic substances.
 Complexity: Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.

 RB Case Number: 01-1776
 LOC Case Number: R00000134
 File Location: Stored electronically as an E-file
 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Gasoline
 Site History: In March 1992 two USTs (one-gasoline and one waste-oil) were removed from beneath the sidewalk. The associated fuel dispenser which was located in the building was also removed at this time. Elevated hydrocarbon and oxygenate concentrations were observed in soil and groundwater in the source area and the groundwater monitoring program began in 1993 with the installation of the first three monitoring wells.

 RB Case Number: 01-0341
 LOC Case Number: R00000137
 File Location: Stored electronically as an E-file
 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Gasoline
 Site History: In July 1988 an ATT manhole 300 feet west of the site was found to have gasoline leaking into it, and a request to test the USTs was made. In February 1989 a soil vapor survey (VP-1 to VP-19) was conducted at the site; concentrations indicated a release. In March 1989 wells MW-1 to MW-5 were installed. In June 1990 wells MW-6 to

CHEVRON #9-0019 (Continued) S101624464

MW-9 were installed offsite. In June 1990 the station was demolished and three 10,000-gallon gasoline USTs and one 1,000-gallon waste oil UST were removed. Well MW-2 was destroyed in the process of overexcavating impacted soil in 1990 and 1991; approximately 1,500 cubic yards were excavated. Of that total approximately 800 cubic yards were serated and reused onsite. In December 1992 the City of Oakland purchased the property. A parking lot and landscaping was constructed over the western portion of the site and Bay Place was expanded over the eastern portion. In January 1993 a groundwater extraction system was installed in well MW-5. The system was shut down in January 1995 due to low production rates. On December 1, 1995 wells MW-1 and MW-3 were decommissioned. In November 1996 an additional 200 cubic yards of soil was excavated due to the installation of a new storm drain on Montecito Avenue. A one week long two-phase extraction pilot test was conducted on well MW-5 in September 2005. In August 2008 periodic injection of oxygen into well MW-5 was proposed; work was implemented in February 2009.

 Case Type: LUST Cleanup Site
 Status: Open - Site Assessment
 Status Date: 05/11/2000
 Lead Agency: ALAMEDA COUNTY LOP
 Case Worker: BJJ
 Local Agency: ALAMEDA COUNTY LOP
 RB Case Number: 01-1466
 LOC Case Number: R00000358
 File Location: Stored electronically as an E-file
 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Benzene, Diesel, Fuel Oxygenates, Gasoline
 Site History: A site assessment conducted in 1989 detected 11,000 mg/kg TPHg and 40 mg/kg benzene in soil; 9,500 [g/L TPHg in groundwater; and 6,100 [g/L TPHg and 10 [g/L benzene in soil vapor indicating that a release from the underground storage tanks had occurred. Two gasoline USTs, one diesel UST and one waste-oil UST were replaced in November and December 1991. Soil samples reported up to 10,000 mg/kg TPHg and 130 mg/kg benzene. Groundwater remediation occurred from 1990 to 1993. A 1,000-gallon waste-oil UST was removed on September 22, 1997. Soil samples collected beneath the waste-oil tank were below the detection limits for many constituents with TEPH at 32 mg/kg, TRPH at 120 mg/kg and TTLC lead at 7.2 mg/kg. A dual-phase extraction pilot test was performed 19/11/2001 and found that DPE would be an effective remediation method for the site. Remediation occurred at the site from 1991 until 1996. Groundwater monitoring continues to date and future site assessment is planned to assess lateral and vertical extent of hydrocarbons before a CAP is prepared

Status Date: 05/05/1994
Lead Agency: ALAMEDA COUNTY LOP
Case Worker: BJJ
Local Agency: ALAMEDA COUNTY LOP
RB Case Number: 01-0475
LOC Case Number: RO0000359
File Location: Stored electronically as an E-file
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: In August 1990, two gasoline USTs, one waste-oil UST and four dispensers were removed. Maximum soil concentrations detected were 310 mg/kg TPHs, 100 mg/kg TPHd and 0.820 mg/kg benzene from the the gasoline USTs and dispensers. However, free product was observed in groundwater in the waste-oil UST excavation. Subsequent excavation in the waste-oil tank area could not remove the contaminated soil from beneath the building so this was left in place. Monitoring wells were installed in 1994 and were monitored sporadically until 2005 when semi-annual monitoring began. The recent investigation in 2009 indicated groundwater concentrations up to 41,000 lg/L TPHg, 240,000 lg/L TPHd, 110,000 lg/L TPHmo, and 2,800 lg/L benzene.

Environmental Interest/Information System
 California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

HARRIS DRY CLEANERS (Continued)

100085627

Completed Document Type: Remedial Investigation Workplan
 Completed Date: 01/28/2009
 Comments: Workplan to conduct soil, soil gas and groundwater investigation approved.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Remedial Investigation Report
 Completed Date: 04/06/2010
 Comments: Soil, groundwater and soil gas at the Site are contaminated with tetrachloroethene (PCE), TPH Stoddard Solvent, TPH gas.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Screening
 Completed Date: 08/30/2002
 Comments: Site Screening approved 8/30/08. Removal action recommended.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Characterization Report
 Completed Date: 08/04/1993
 Comments: Investigation conducted by Penn Environmental. Limited soil sampling detected tetrachloroethylene (PCE) at concentrations up to 4.6 milligrams per kilogram (mg/kg). Report recommended further investigation of soil and groundwater. DTSC did not oversee this investigation.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Characterization Report
 Completed Date: 09/10/1993
 Comments: Investigation conducted by Penn Environmental. Soil samples had tetrachloroethylene (PCE) up to 0.14 milligrams per kilogram (mg/kg) and trichloroethylene (TCE) up to 0.19 mg/kg. Groundwater had PCE up to 8100 micrograms per liter (ug/L) and chloroform up to 2.3 ug/L. The report concluded that there had been an on-site release of PCE impacting groundwater, with evidence of off-site migration. DTSC did not oversee the investigation.

 Completed Date: 07/29/2010
 Comments: Indoor air sampling completed.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Technical Report
 Completed Date: 09/29/2010
 Comments: Investigation didn't find the Harris Site contaminants of concerns, PCE, TCE or cis-DCE, in the indoor air or crawl space. However, low level concentration of vinyl chloride (VC) was detected in on residential unit. Due to the absence of VC in the crawl space or at the site soil, soil gas or groundwater, VC inside house is considered consistent with a household source.

HARRIS DRY CLEANERS (Continued)

100085627

Completed Document Type: Site Characterization Report
 Completed Date: 08/04/1993
 Comments: Investigation conducted by Penn Environmental. Limited soil sampling detected tetrachloroethylene (PCE) at concentrations up to 4.6 milligrams per kilogram (mg/kg). Report recommended further investigation of soil and groundwater. DTSC did not oversee this investigation.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Characterization Report
 Completed Date: 09/10/1993
 Comments: Investigation conducted by Penn Environmental. Soil samples had tetrachloroethylene (PCE) up to 0.14 milligrams per kilogram (mg/kg) and trichloroethylene (TCE) up to 0.19 mg/kg. Groundwater had PCE up to 8100 micrograms per liter (ug/L) and chloroform up to 2.3 ug/L. The report concluded that there had been an on-site release of PCE impacting groundwater, with evidence of off-site migration. DTSC did not oversee the investigation.

 LOC Case Number: R00000145
 File Location: Stored electronically as an E-file
 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Gasoline
 Site History: The site is a former service station located on teh corner of Martin Luther King Jr. Way and 27th Street in Oakland. During removal of a 2,000-gallon UST in 1994, soil contamination was detected. Site investigation activities were conducted at the site beginning in 1995. Soil removal was conducted in 1996. A dual-phase extraction test was conducted in 2006. Excavation and bio-sparging is currently planned for the site. Removal of shallow soil containing lead and TPH will also be required.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Lead Agency: ALAMEDA COUNTY LOP
 Case Worker: MD
 Local Agency: ALAMEDA COUNTY LOP
 RB Case Number: NA
 LOC Case Number: R00002435
 File Location: Stored electronically as an E-file
 Other Groundwater Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Gasoline
 Site History: In 1986 tank basin soil and a groundwater sample were collected during the replacement of USTs in a pre-existing tank basin; hydrocarbon concentrations were encountered. Sixteen soil vapor wells are reported to have been installed in 1986 and 1987 over the BART tube, located directly below the site; however, no data has been submitted. In 1992 a groundwater sample was collected from a former vadose zone well (VW-2) and concentrations of concern were encountered; however, the location of VW-2-1 is unknown. In July 1994 product lines were removed and upgraded and low hydrocarbon concentrations were encountered. In March 2000 eight hand-augered bores were installed at the site; most bore depths were limited to 10 feet by the presence of the BART tube. In March 2002 wells MW-1 to MW-3 were installed on either side of the BART tube and right-of-way. Additional work is proposed.

 Project Mgr: JUANITA (NINA) BACEY
 Project Code: 200882
 Date Satisfied: Not reported
 Site Status: ACT
 Site Type: CSITES
 Completed: 2011-06-01
 Description: Lane Metal Finishers and Cal-Tech Metal Finishers (Cal-Tech) operated at the Site from 1947 to 2000. Cal-Tech operations included polishing, electroplating, anodizing and plating of metal parts. Chemicals historically used at the Site include caustic liquids, sodium hydroxide, hydrochloric acid, nitric acid, sulfuric acid, chromic acid, chromic trioxide, sodium cyanide, cadmium, copper cyanide, potassium cyanide, silver cyanide and plating solutions containing variety of metals. The waste generated at the Site included aqueous waste containing hexavalent chromium and sludges containing metals.

CAL TECH METALS (Continued)

S110326384

Completed Document Type: Removal Action Workplan
 Completed Date: 07/01/2008
 Comments: Expedited removal action workplan approved to install a soil vapor extraction and treatment system.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Remedial Investigation Report
 Completed Date: 01/31/2008
 Comments: Soil, groundwater and soil gas was investigated within the site boundary and on several locations along 30th and 31st Streets. Trichloroethene (TCE) concentrations up to 39,000 ppm were found in the soil down to 20 feet below ground surface (bgs) in the courtyard area in the eastern part of the site, and to 10 feet bgs in the western part of the site. Lead concentrations up to 2,470 ppm and nickel up to 5,180 ppm were found under the buildings. There is no indication that metal contamination has moved outside the Site boundaries. TCE, cis 1,2 DCE and vinyl chloride were detected in groundwater in the courtyard up to 61 ppm, 23 ppm and 0.67 ppm, respectively. The highest concentrations VOCs, in the soil, soil gas and groundwater were found in the courtyard. TCE or any other VOCs were not detected above screening levels in any of the other off-site soil gas borings on 30th Street, 31st Street or on the adjacent residential property east of the Site. Soil gas results suggest that the risk of soil gas intrusion is isolated to the courtyard area.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Characterization Report
 Completed Date: 07/01/2005
 Comments: The soil and groundwater samples were analyzed for volatile organic compounds (VOCs) and nickel. The results showed TCE up to 20 mg/kg and nickel up to 83 mg/kg in soil. The groundwater analytical results showed TCE up to 61 milligrams per liter (mg/l).

 Completed Sub Area Name: Not reported
 Completed Document Type: Remedial Action Implementation Workplan
 Completed Date: 07/03/2008
 Comments: Workplan for the soil vapor extraction system installation in the courtyard area of the site is approved.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Remedial Investigation Workplan
 Completed Date: 06/21/2007
 Comments: In February and March 2007, DTSC conducted soil, groundwater, and soil gas testing on the property and along 31st and 30th Streets to determine the extent of the contamination. Based on the preliminary results, DTSC needs to collect additional soil gas samples in the area near the north east corner of the property to better understand extent of the contamination in that area.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Remedial Investigation Report
 Completed Date: 08/21/2008
 Comments: Trichloroethylene (TCE) related to the Caltech Site was found in indoor air at very low concentration (2 micrograms/cubic meter (ug/m3)). The State of California Human Health Screening Level (CHHSL) for TCE is 1.2 ug/m3. This is effectively the no action level for a lifetime exposure in a residence, below which DTSC would not undertake any measures to reduce exposure. DTSC believes that even these very low concentrations will be eliminated when we implement the expedited cleanup at the Caltech Site later this year.

 Completed Date: 07/01/2008
 Comments: Expedited removal action workplan approved to install a soil vapor extraction and treatment system.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Remedial Investigation Report
 Completed Date: 01/31/2008
 Comments: Soil, groundwater and soil gas was investigated within the site boundary and on several locations along 30th and 31st Streets. Trichloroethene (TCE) concentrations up to 39,000 ppm were found in the soil down to 20 feet below ground surface (bgs) in the courtyard area in the eastern part of the site, and to 10 feet bgs in the western part of the site. Lead concentrations up to 2,470 ppm and nickel up to 5,180 ppm were found under the buildings. There is no indication that metal contamination has moved outside the Site boundaries. TCE, cis 1,2 DCE and vinyl chloride were detected in groundwater in the courtyard up to 61 ppm, 23 ppm and 0.67 ppm, respectively. The highest concentrations VOCs, in the soil, soil gas and groundwater were found in the courtyard. TCE or any other VOCs were not detected above screening levels in any of the other off-site soil gas borings on 30th Street, 31st Street or on the adjacent residential property east of the Site. Soil gas results suggest that the risk of soil gas intrusion is isolated to the courtyard area.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Characterization Report
 Completed Date: 07/01/2005
 Comments: The soil and groundwater samples were analyzed for volatile organic compounds (VOCs) and nickel. The results showed TCE up to 20 mg/kg and nickel up to 83 mg/kg in soil. The groundwater analytical results showed TCE up to 61 milligrams per liter (mg/l).

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxic Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

MAP FINDINGS

CALTECH METAL FINISHERS (Continued)

1000133512

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Completed Document Type: Site Characterization Report
 Completed Date: 12/13/2006
 Comments: Cadmium, chromium, lead and nickel were detected in the soil up to 48 mg/kg, 2400 mg/kg, 360 mg/kg and 18,000 mg/kg, respectively. TCE and TPH-g were detected in groundwater up to 9,100 ug/l and 6,800 ug/l, respectively in monitoring wells. TCE, cis-DCE and vinyl chloride were detected in the soil gas up to 16 microgram per liter (ug/l), 44 ug/l and 7.7 ug/l, respectively.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Characterization Report
 Completed Date: 05/19/2003
 Comments: Trichloroethene (TCE), chromium and cadmium were detected in soil up to 0.54 mg/kg, 63.6 mg/kg and 5.4 mg/kg, respectively. TPH as gasoline (TPH-g), benzene and ethylbenzene were detected in groundwater up to 5,310 microgram per liter (ug/l), 37 ug/l, and 351

FORMER LANE METAL FINISHERS (Continued) **S108484765**

ug/l, respectively. TCE, cis-1,2-dichloroethene (cis-DCE), and 1,2-dichloroethane (1,2-DCA) were detected in groundwater at 3,780 ug/l, 193 ug/l, and 10 ug/l respectively.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Characterization Report
 Completed Date: 09/09/2003
 Comments: Chromium and cadmium were detected in soil up to 63.6 mg/kg and 5.4 mg/kg, respectively. TPH as gasoline (TPH-g), TPH as standard solvent (TPH-ss), were detected in groundwater up to 4,900 ug/l and 650 ug/l respectively. TCE was detected in groundwater at 240,000 ug/l.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Characterization Report
 Completed Date: 10/03/2003
 Comments: TCE was detected up to 0.54 mg/kg in soil.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Monitoring Report
 Completed Date: 11/30/2004
 Comments: 3 monitoring wells were sampled TCE ranged from 11.6 ug/l to 5,610 ug/l.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Monitoring Report
 Completed Date: 03/01/2005
 Comments: 3 monitoring wells were sampled and TCE concentrations ranged from 12.5 ug/l to 7,130 ug/l.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Monitoring Report
 Completed Date: 06/30/2005
 Comments: 3 monitoring wells were sampled and TCE concentrations ranged from 16.2 ug/l to 19,000 ug/l.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Remedial Investigation Workplan
 Completed Date: 02/14/2008
 Comments: Soil, soil gas and groundwater sampling for volatile organic compounds and metals approved.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Remedial Investigation Report
 Completed Date: 08/01/2004
 Comments: TCE was detected in soil up to 92 mg/kg. TPH-g, benzene, TCE, cis-DCE, tetrachloroethylene (PCE), carbon tetrachloride, 1,1,2-trichloroethane (1,1,2-TCA), DCE and methylene chloride were detected in groundwater up to 5,310 ug/l, 6.7 ug/l, 412,000 ug/l, 10,800 ug/l, 177 ug/l, 180 ug/l, 19 ug/l, 39 ug/l and 34 ug/l, respectively. Three monitoring wells were installed and TPH-g and TCE

FORMER LANE METAL FINISHERS (Continued)

S108484765

were detected up to 2,280 ug/l and 5,670 ug/l, respectively.

Completed Area Name: PROJECT WIDE

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Characterization Report
 Completed Date: 12/13/2006
 Comments: Cadmium, chromium, lead and nickel were detected in the soil up to 48 mg/kg, 2400 mg/kg, 380 mg/kg and 18,000 mg/kg, respectively. TCE and TPH-g were detected in groundwater up to 9,100 ug/l and 6,800 ug/l, respectively in monitoring wells. TCE, cis-DCE and vinyl chloride were detected in the soil gas up to 16 microgram per liter (ug/l), 44 ug/l and 7.7 ug/l, respectively.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Characterization Report
 Completed Date: 05/19/2003
 Comments: Trichloroethene (TCE), chromium and cadmium were detected in soil up to 0.54 mg/kg, 63.6 mg/kg and 5.4 mg/kg, respectively. TPH as gasoline (TPH-g), benzene and ethylbenzene were detected in groundwater up to 5,310 microgram per liter (ug/l), 37 ug/l, and 351 ug/l, respectively. TCE, cis-1,2-dichloroethene (cis-DCE), and 1,2-dichloroethane (1,2-DCA) were detected in groundwater at 3,780 ug/l, 193 ug/l, and 10 ug/l respectively.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Characterization Report
 Completed Date: 09/09/2003
 Comments: Chromium and cadmium were detected in soil up to 63.6 mg/kg and 5.4 mg/kg, respectively. TPH as gasoline (TPH-g), TPH as standard solvent (TPH-ss), were detected in groundwater up to 4,900 ug/l and 650 ug/l respectively. TCE was detected in groundwater at 240,000 ug/l.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Characterization Report
 Completed Date: 10/03/2003
 Comments: TCE was detected up to 0.54 mg/kg in soil.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Monitoring Report
 Completed Date: 11/30/2004
 Comments: 3 monitoring wells were sampled TCE ranged from 11.6 ug/l to 5,610 ug/l.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Monitoring Report
 Completed Date: 03/01/2005
 Comments: 3 monitoring wells were sampled and TCE concentrations ranged from 12.5 ug/l to 7,130 ug/l.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Remedial Investigation Workplan
 Completed Date: 12/09/2009
 Comments: Remedial investigation of groundwater and soil vapor in the vicinity of the site and soil sampling of the adjacent property.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Fieldwork
 Completed Date: 01/22/2010
 Comments: Not reported

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Remedial Investigation Report
 Completed Date: 01/28/2011
 Comments: Soil, groundwater and soil gas were investigated within the site boundary. Groundwater investigations were also conducted on several locations along San Pablo Avenue and Market Street. Primary contaminants found include trichloroethene (TCE) and its breakdown products, cis-1,2-dichloroethene (cis-DCE), trans-1,2-Dichloroethene (trans-DCE) and vinyl chloride.

FORMER LANE METAL FINISHERS (Continued)

S108484765

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Fieldwork
 Completed Date: 07/26/2008
 Comments: Indoor air sampling at the Lane Metals site conducted with 23 Summa canisters placed in 8 residences, one day care facility, one business, two crawl spaces under homes and four outdoor locations. Seven of these locations had duplicate canisters.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Remedial Action Workplan
 Completed Date: 10/08/2009
 Comments: Interim Removal Action Plan selected soil vapor extraction as the preferred alternative.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Fact Sheets
 Completed Date: 08/17/2009
 Comments: Fact sheet for interim removal action workplan completed.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Remedial Action Implementation Workplan
 Completed Date: 04/13/2009
 Comments: Workplan for soil vapor extraction at the site approved.

Completed Area Name: PROJECT WIDE

Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Gasoline
 Site History: In August 1989 two 10,000-gallon gasoline, one 280-gallon waste oil UST and product piping were replaced at the site. Monitoring wells subsequently installed at the site and free product was observed. Subsequent recovery efforts and further delineation have been conducted to date.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date Made Active in Reports: 06/14/2011 Last EDR Contact: 07/12/2011
Number of Days to Update: 62 Next Scheduled EDR Contact: 10/24/2011
Data Release Frequency: Quarterly

NPL Liens: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425 (e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/31/2011 Source: EPA
Date Data Arrived at EDR: 04/13/2011 Telephone: N/A
Date Made Active in Reports: 06/14/2011 Last EDR Contact: 07/12/2011

Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/25/2011 Source: EPA
Date Data Arrived at EDR: 03/01/2011 Telephone: 703-412-9810

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPAa7's Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 12/10/2010 Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/11/2011 Telephone: 703-603-8704
Date Made Active in Reports: 02/16/2011 Last EDR Contact: 07/15/2011
Number of Days to Update: 36 Next Scheduled EDR Contact: 10/24/2011
Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA CORRACTS facilities list

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSD's treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
 Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities—especially those without EPA Brownfields Assessment Demonstration Pilots—minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients—States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMRPR) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006 Source: Environmental Protection Agency

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used shale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oilly waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2007
Date Data Arrived at EDR: 08/26/2009
Date Made Active in Reports: 09/11/2009

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

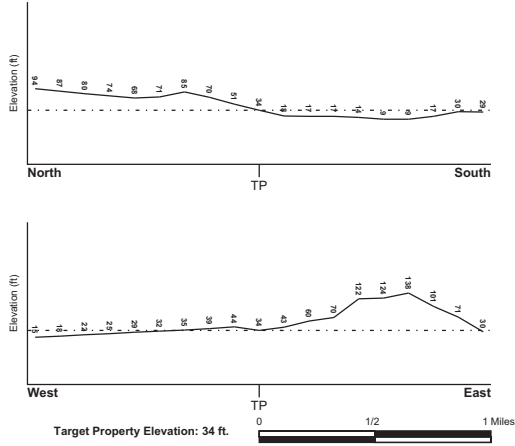

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County: ALAMEDA, CA
FEMA Flood Electronic Data: YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06001C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property: OAKLAND WEST
NWI Electronic Data Coverage: YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land
 Soil Surface Texture: Not reported
 Hydrologic Group: Not reported
 Soil Drainage Class: Partially hydric
 Hydric Status: Partially hydric
 Corrosion Potential - Uncoated Steel: Not Reported
 Depth to Bedrock Min: > 0 inches
 Depth to Watertable Min: > 0 inches
 No Layer Information available.

Soil Map ID: 2

Soil Component Name: Tierra
 Soil Surface Texture: loam
 Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.
 Soil Drainage Class: Moderately well drained
 Hydric Status: Not hydric
 Corrosion Potential - Uncoated Steel: High
 Depth to Bedrock Min: > 0 inches
 Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 1.4 Min: 0.42	Max: 8.4 Min: 5.6
2	11 inches	31 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 1.4 Min: 0.42	Max: 8.4 Min: 5.6
3	31 inches	59 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 1.4 Min: 0.42	Max: 8.4 Min: 5.6

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW[®] Information System

Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Re: **PHASE I ENVIRONMENTAL SITE ASSESSMENT**
2820 Broadway, Oakland, California
ERAS Project Number 11178

Dear Mr. Cruz:

ERAS Environmental (ERAS) is pleased to provide you with the attached Phase I Environmental Site Assessment (ESA) for the above referenced Property. The assessment included a visual reconnaissance of the Property, a review of environmental databases and agency records for nearby sites, a review of historical maps and aerial photographs and a review of available files regarding the Property with the Oakland Building Department and Hazardous Waste Disposal Tracking Systems and a review of a previous Phase I Environmental Site Assessment. Conclusions and recommendations presented in our report were based upon the completion of these activities. The Property was newly remodeled auto sales and service (Nissan) which had not yet begun operation at the time of the site visit.

If you have any questions regarding the information in this report, please don't hesitate to call us. It has been a pleasure working with you on this project.

Sincerely,
ERAS Environmental, Inc.

William K. McIntosh, R.E.A 08279
Senior Staff Geologist

David Siegel, R.E.A. II 20200

- F Text of ACC 2000 Phase I Environmental Site Assessment

1.0 INTRODUCTION

1.1 Purpose and Scope

This Phase I Environmental Site Assessment (ESA) was performed to identify, to the extent feasible, recognized environmental conditions in connection with the subject site (cited hereinafter as the "Property").

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of this part.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. This protocol utilized for this assessment is in general accordance with the requirements of ASTM Standard E 1527-05. The current ASTM standard meets the purpose and scope of the Environmental Protection Agency All Appropriate Inquiry (AAI).

The environmental professional's resumes and certifications are included in **Appendix A**.

The assessment included four main components: Records Review, Historical Use Information Review, Visual Reconnaissance of the Property and Interviews, and Report Preparation. The purpose of the records review is to obtain and review records that will help identify recognized environmental conditions in connection with the Property. The objective of the visual reconnaissance is to obtain information indicating the likelihood of identifying recognized environmental conditions in connection with the Property. The objective of the interviews is to obtain additional information indicating recognized environmental conditions in connection with the Property. The report includes documentation to support the analysis, opinions and conclusions as presented.

1.2 Authorization

Authorization to perform this assessment was provided by Mr. Jeff Cruz of Oakland Volkswagen on September 28, 2011 in response to ERAS proposal dated September 14, 2011.

1.3 Limitations and Exceptions

ERAS has performed the services for this project in accordance with our proposal, and in accordance with current standards of the American Society for Testing and Materials (ASTM) for Phase I Environmental Site Assessments (ASTM standard E1527-05). No guarantees are either expressed or implied.

The investigation was limited to a search for *recognized environmental conditions*. The term *recognized environmental condition* means the presence or likely presence of any hazardous substances or petroleum products on the Property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the Property or into the ground, groundwater, or surface water of the Property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not

be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

There is no investigation, which is thorough enough to preclude the presence of hazardous materials, which presently, or in the future, may be considered hazardous at the Property. Because regulatory evaluation criteria are constantly changing, concentrations of constituents presently considered low may, in the future, fall under more stringent regulatory standards that require remediation.

The visual reconnaissance was limited to observation of surface conditions at the Property. *Reasonably ascertainable* information was obtained. This information is publicly available and obtainable from its source within reasonable time and cost constraints, and is reasonably reviewable. This approach reflects current ASTM standards unless the information obtained as part of this work suggests the need for further investigation. No warranty or guarantee of Property conditions is intended.

The investigation addressed recognized environmental conditions at the Property. However, certain conditions, such as those listed below, may not be revealed:

- 1) naturally occurring toxic materials in the subsurface soils, rocks, water or toxicity of on site-flora;
- 2) toxicity of substances common in current habitable environments, such as stored household products, building materials, and consumables;
- 3) biological pathogens;
- 4) contaminant plumes below sampled or observed surface levels, originating from a remote source;
- 5) constituents or constituent concentrations that do not violate present regulatory standards, but may violate future standards;
- 6) unknown impact to the Property, such as "midnight" dumping and/or accidental spillage which may occur following the visual reconnaissance of the Property by ERAS.

Opinions and judgments expressed herein, which are based upon our understanding and interpretation of current regulatory standards, should not be construed as legal opinions.

2.0 PROPERTY DESCRIPTION

2.1 Location and Jurisdiction

The subject property (hereinafter the "Property") is located at 2820 Broadway between the intersections with 28th and 29th Streets. The Alameda County Assessors office lists the Property with a parcel number of 9-685-69-1. The 1 Mile Radius Map included as a site location map in **Appendix B** shows the location of the Property. Current photographs showing important details of the Property are included in **Appendix C**.

2.2 Property Description

An ERAS representative visited the Property on September 30, 2011. The Property contains a reinforced concrete, concrete block and brick building with a paved parking area at the rear (on Valdez Street). The Property was extensively remodeled and was being prepared for occupancy by Nissan of Oakland, an auto dealership and service center, at the time of the site visit.

To the north of the Property was Autotrends, a body shop at 2840 Broadway. To the south was a vacant building at 2810-2814 Broadway, Broadway Smog Station at 288 28th Street, and a high rise residential building at 280 28th Street. To the west was Broadway, across which was a vacant lot at 2855 Broadway. To the east was a portion of the 280 28th Street residential complex including an entry, parking lot and landscaped areas.

The Property contains a concrete and asphalt paved parking area with a compressor shed, an empty steel AST and an empty plastic AST labeled for coolant, fencing, lights and gates, a forklift with LP fuel tank, a stack of wooden pallets, new cars and one plastic 5-gallon bucket of debris apparently removed from an adjacent drain. Minor, surficial oil staining was noted on the concrete pad of the compressor shed. The compressor itself looked new and recently installed. Presumably, a former compressor was located in this area. A former compressor would likely have caused the surficial staining. No other indications of leaks or spills were noted in this rear area of the Property. A small portion of the east side of the parking area was landscaped and unpaved.

The building contained a display room with sales area facing Broadway, with a two story office area, restrooms, storage areas and parts room. The display floor was covered with rubber matting, offices were carpeted and the restrooms had sheet vinyl flooring. Walls were brick, reinforced concrete or textured sheetrock, ceilings were wood or sheetrock. New furniture and appliances were installed, but finish work and utilities were still being unpacked or installed. To the north side of the display area, was a wall behind which was a driveway from a roll up door facing Broadway to a service area in the rear of the building.

The service area included a storage mezzanine, offices, AST area with a new, empty steel AST, above ground lifts and new, empty portable oil drainage tanks. Two roll up doors were available for access to the rear parking area. Floors in this area were concrete, carpeted or wood. Walls were brick, concrete block or sheetrock, ceilings were wood or sheetrock. The storage mezzanine contained approximately 60 gallons of paint in 1 and 5-gallon capacity buckets.

No indication of the current or former presence underground storage tanks (UST) was observed on the Property by ERAS. Three ASTs located on the site were new and had not yet been used. No indication or leaks or spills were noted in these areas.

Photographs illustrating important features of the Property is included in **Appendix C**. Observations made by ERAS at the time of the site visit are shown on the site reconnaissance checklist in **Appendix E**.

2.3 Property Use

The property was occupied by Nissan of Oakland an auto sales and service business at the time of the site visit. Since the building was constructed in 1916, the occupants have included several different auto service and sales businesses, a glass and window store and warehouse and retail (including auto parts). At times several additional buildings were located on the eastern portion of the Property.

2.4 Suspect ACM/PCBs/Lead Paint/Lead in Drinking Water

Asbestos

Based on the approximate construction date of the buildings (1916 and later), it is possible that asbestos containing materials (ACM) are present. Typical materials observed that are considered suspect ACM included but are not limited to sheet rock, joint and taping compound, surfacing materials, vinyl flooring, mastic, and roofing material. The extensive remodel of the interior, recently completed, would likely have reduced the quantity of suspect ACM within the building.

ACM may become a hazard if the materials are disturbed during demolition, renovation or remodeling activities. All materials suspected to contain asbestos should be sampled and analyzed prior to activities that could damage them.

PCBs

No transformers were noted on the Property. There was no indication that PCB containing equipment is currently used on the Property.

Lead Paint

Based on the age of the building, it is possible that lead-based paint would have been used in this structure. Painted surfaces observed at the Property were noted to be in good condition at the time of the site visit.

Lead in Drinking Water

A survey of the building for lead in drinking water was not requested in the Scope of Work for this assessment.

2.5 Physical Setting

The subject property is in the northern part of the City of Oakland in the San Francisco Bay area. The San Francisco Bay area occupies a broad alluvial valley that slopes gently northward toward San Francisco Bay and is flanked by alluvial fans deposited at the foot of the Diablo Range to the east and the Santa Cruz Mountains to the west.

The Property is located approximately 2 miles east of the San Francisco Bay and 2 miles north of Lake Merritt, a tidally influenced lake. Surface topography in the immediate vicinity of the Property slopes gently down to the southeast. Upland surfaces of the Coast Ranges begin less than 1/2 mile to the east. Elevation of the Property is approximately 40 feet above Mean Sea Level (MSL)

according to the United States Geological Survey (USGS) Oakland West Quadrangle Topographic Map. The topography in the vicinity of the Property slopes moderately down to the southeast toward Glen Echo Creek.

2.6 Geologic and Soil Conditions

Materials underlying the site area are Quaternary-age alluvial sediments consisting of unconsolidated gravels, sands and silts with interbeds of coarse-grained sandy sediments deposited by erosion and alluvial deposition from the nearby upland surfaces. Bedrock at estimated depths of less than 100 feet beneath the sediments consists of Jurassic-aged sedimentary rocks of the Franciscan Formation.

2.7 Groundwater Conditions

The subject site is located on the San Francisco Bay Plain in the northernmost part of the Santa Clara Valley Groundwater Basin, (RWQCB, 1986), the surface of which slopes down toward San Francisco Bay. The regional groundwater flow follows the topography, moving from areas of higher elevation to areas of lower elevation. In the area of the Property, the regional groundwater flow direction in the area of the Property is estimated to be toward the southeast toward Glen Echo Creek and Lake Merritt.

3.0 REGULATORY AGENCY RECORDS REVIEW

3.1 Standard Federal and State Environmental Record Sources

Groundwater provides the primary migration route for subsurface contamination from off-site sources to the Property. In the immediate vicinity of the Property the groundwater flow direction is estimated to be to the southeast.

Only the sites that are directly up-gradient or in close proximity (adjacent) are usually considered to pose a threat to subsurface environmental conditions under the Property. The potential impact of off-site contaminants to the Property are based on the type of chemical released, the severity of the release, status of remediation or cleanup, and nature of the groundwater in the area of impact and area of the Property.

Sites where groundwater is known to be impacted are listed on a variety of Federal and State databases and are the cases most likely to affect other nearby parcels. These databases include the National Priority List (NPL), Superfund (CERCLIS) and State-Sites lists. Sites that have caused groundwater contamination from fuel (petroleum) leaks and solvent leaks are reported on the Leaking Underground Storage Tank List (LUST).

Fuel hydrocarbons generally do not migrate as readily as other chemicals such as certain solvents; consequently, reported fuel leak sites at distances greater than ½ mile from the Property are not considered imminent threats and are not plotted on database maps. Leaks from underground storage tank sites are the most common source of local contamination. Leaks of this type generally do not extend down-gradient more than approximately 500 feet (approximately 1/10 mile) except under unusual conditions. All toxic sites within a 1 mile radius are plotted and reviewed to determine potential threats to the Property.

Databases searched for specified radii around the Property also include listed facilities that treat, store, transfer or dispose of hazardous waste (RCRATSD), large (RCRA-GEN) generators of hazardous waste, reported spills of hazardous materials (ERNS, State Spills) sites containing registered underground storage tanks (REG UST).

Information from standard Federal and State environmental databases was provided to ERAS by Environmental FirstSearch Technology Corporation (FSTC) of California. Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. This integrated database also contains postal service data in order to enhance matching of street addresses. Records from one government source are compared to records from another to clarify any address ambiguities. The demographic and geographic information available provides assistance in identifying and managing risk. The accuracy of the geo-coded locations is +/- 300 feet.

Maps in the FSTC report show the locations of all sites identified relative to the location of the Property. The Property is indicated as TP (Target Property) on the database. The database is included as **Appendix D**.

Federal List Type

Approximate Search Distance in Miles

NPL	1.0
CERCLIS	0.5
NFRAP	0.5
RCRA COR	1.0
RCRA TSD	0.5
RCRA GEN	0.25
RCRA NLR	0.12
ERNS	0.12

State

<u>List Type</u>	<u>Approximate Search Distance in Miles</u>
State Sites	1.0
Spills-1990	0.12
SWL	0.5
Leaking UST	0.5
REG UST/AST	0.25
VCP	0.5
PERMITS	0.25
Other	0.25
HW Manifest	0.12

3.2 Findings From Database Review

The Property was listed on the environmental databases as a RCRA NLR and as a HW Manifest site.

Based on the listings, agency records were reviewed for these sites. Results of the file reviews are discussed in **Section 4.4**.

Three adjacent sites were listed on RCRA Gen and HW Manifest databases. Based on these listings, agency records were reviewed for these sites. Results of the file reviews are discussed in **Section 3.3**.

A summary of the findings from the FSTC environmental database search is provided on the following pages. The summary is presented in the order of the database listing on **Page #1** of the FSTC report.

The locations of the other identified sites, relative to the Property, are shown on the **1 Mile Radius, .5 Mile Radius and .25 Mile Radius** maps in the FSTC Report in **Appendix D**.

Federal Lists

Federal NPL The National Priorities (Superfund) List is the federal EPA database of uncontrolled or abandoned hazardous waste sites identified, or proposed, for priority remedial actions under the Superfund Program.

No NPL or proposed NPL sites were identified within 1 mile of the Property.

CERCLIS Listing

The EPA maintains a database of potentially hazardous waste sites that have been reported to the

US EPA by states, municipalities, private companies and private persons. CERCLIS contains sites, which are either proposed, or on the NPL list and sites which are in the screening and assessment phase for possible inclusion on the NPL.

One CERCLIS site was identified within ½ mile of the Property. This site, Harris Dry Cleaners at 801 Martin Luther King, is located nearly ½ mile northwest from the Property in a cross-gradient direction. Based on the distance and direction, this site is not considered likely to pose a threat to subsurface environmental conditions beneath the Property.

NFRAP Listing

This list is a compilation of sites, which the EPA has investigated or is currently investigating for a release or threatened release of hazardous substances. Sites in the NFRAP database may be locations where, following initial investigations, contamination was removed or determined to be not serious enough to require Superfund consideration.

No NFRAP sites were identified within ½ mile of the Property.

RCRA COR ACT Listing

The EPA maintains this database of sites that have been subject to a Corrective Action order under the Resource Conservation and Recovery Act (RCRA).

No RCRA COR ACT sites were identified within 1 mile of the Property.

RCRA TSD Facilities Listing

The federal RCRA Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA TSD database is a compilation of reporting facilities that transport, treat, store and dispose of hazardous waste.

No RCRA TSD sites were identified within 1 mile of the Property.

RCRA Generators Listing

The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Generators database is a compilation by the EPA of reporting facilities that generate hazardous waste. The database is separated into large generators (RCRIS-LG) and small generators (RCRIS-SG).

Twenty-one (21) RCRA GEN generator sites were identified on this list within a ¼ mile radius of the Property. The nearest site, Automotive Exchange Service at 288 28th Street, is located adjacent to the south side of the Property, in a down-gradient direction. Based on the proximity, ERAS reviewed agency files for the site. Results of the file review are discussed in **Section 3.3**.

Another site, Coopers Auto Body and Frame at 295 29th Street, is located adjacent to the northeast side of the Property. Based on the proximity, ERAS reviewed agency files for the site. Results of the file review are discussed in **Section 3.3**.

None of the other identified sites were located in close proximity and in a direction up-gradient from the Property. None of the other identified sites are considered likely to pose a threat to subsurface

environmental conditions beneath the Property.

RCRA NLR listing

The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Generators includes NLR (No Longer Listed) sites, which generate less than 100Kg of hazardous waste per month and do not meet other RCRA requirements.

One RCRA NLR site was identified on this list within a 1/8 mile radius of the Property. This site is the Property, listed as Saturn of Oakland. Based on this listing, ERAS reviewed agency files for the Property. Results of the file review are discussed in **Section 4.4**.

Emergency Response Notification System (ERNS)

The Emergency Response Notification System (ERNS) is a national database used to collect information on reported releases of oil or hazardous substances.

No ERNS spills listings were identified within 1/8 mile of the Property.

State/Tribal Lists

State Sites, California CERCLIS-Equivalent SCL Listing

The California Environmental Protection Agency, Department of Toxic Substances Control (CalEPA DTSC), maintains an inventory of facilities that are subject to investigations concerning likely or threatened releases of hazardous substances. Sites that were formerly listed in Abandoned Sites Project Information System (ASPIS), and Bond Expenditure Plan (BEP) Cal-Sites and CORTESE sites are now included in the **State Sites** database report. Approximately 1% of these sites are known to be significantly contaminated at the current time. Remedial cleanup work has been completed at the majority of these sites, which are identified as requiring no further action. Currently, only about 300 of these cases are identified as active hazardous substance release sites.

Seven State Sites were identified within 1 mile of the Property. The nearest site, Harris Dry Cleaners at 801 Martin Luther King, was discussed above.

None of the other identified sites were located in close proximity and in a direction up-gradient from the Property. None of the other identified sites are considered likely to pose a threat to subsurface environmental conditions beneath the Property.

State Spills-1990, California Hazardous Materials Incident Report System

The California Office of Emergency Services listing contains information on reported hazardous materials incidents (accidental releases or spills).

No State Spills-1990 sites were identified within 1/8 mile of the Property.

State/Tribal SWL, Solid Waste Information System and Waste Management Unit Database

The Integrated Waste Management Board and the State Water Resource Control Board maintain databases of active, closed and inactive landfills, waste management information, SWAT Program information, Chapter 15 Information, TPCA and RCRA Program information.

No SWL sites were identified within ½ mile of the Property.

State/Tribal Leaking LUST Listing

The California EPA and Regional Water Quality Control Board (RWQCB) generate and maintain lists of reported leaking underground storage tank (LUST) sites. Fuel leak sites rarely affect an area more than 1/8 mile from its source except under unusual conditions. Most contamination from these sites is confined to areas within 500-700 feet of the leak source.

Fifty three (53) LUST sites were identified within ½ mile of the Property. Of these, **four** were listed within 1/8 mile of the Property. The nearest site, Broadway Volkswagen at 2740 Broadway, is located approximately 250 feet south from the Property, in a down-gradient direction. Based on the distance and direction, this site is not considered likely to pose a threat to subsurface environmental conditions beneath the Property.

None of the other identified sites were located in close proximity and in a direction up-gradient from the Property. None of the other identified sites are considered likely to pose a threat to subsurface environmental conditions beneath the Property.

State/Tribal UST/AST, Regulated Underground Storage Tank and Above Ground Storage Tanks

The State Water Resource Control Board maintains a list of active UST/AST Facilities.

Seventeen (17) sites were listed on this database within ¼ mile of the Property. The nearest listing, Providence Hospital at 3100 Summit Street, is located approximately 400 feet north from the Property, in a cross-gradient direction. Based on the distance and direction, this site is not considered likely to pose a threat to subsurface environmental conditions beneath the Property.

None of the other identified sites were located in close proximity and in a direction up-gradient from the Property. None of the other identified sites are considered likely to pose a threat to subsurface environmental conditions beneath the Property.

VCP, Voluntary Cleanup SMBRPD / CAL SITES- The California Department of Toxic Substances Control (DTSC) has developed an electronic database system with information about sites that are known to be contaminated with hazardous substances as well as information on uncharacterized properties where further studies may reveal problems.

No VCP sites were listed on the database within ½ mile.

Permits, City or County permits database maintained for hazardous materials storage, usage and disposal permits within their jurisdiction.

No Permits sites were listed in this database within ¼ mile of the Property.

Other, database of sites not falling into other categories in this database.

No Other sites were listed in this database within ¼ mile of the Property.

HW Manifest, Database of all shipments of hazardous waste within, into or from California. The data includes date of shipment, transporter and TSD info, and material shipped and quantity. This data is appended to the details of existing generator records.

Ten (10) HW Manifest sites were listed in this database within 1/4 mile of the Property. The Property, was listed as Bay Bridge Nissan of Oakland. There was no information indicating a leak or spill in the database information for the site. The next nearest site, Firestone at 2850 Broadway, located approximately 150 feet northeast from the Property, in a cross-gradient direction. There was no indication of leaks or spills in the database information or at the county health department for this site. Based on the distance and direction, this site is not considered likely to pose a threat to subsurface environmental conditions beneath the Property.

3.3 Off-site Sources and Agency File Reviews

Three adjacent sites were identified on the environmental databases as generating (RCRA GEN) or disposing of hazardous wastes (HW Manifest). The Oakland Fire Department did not respond to a request to review permit or inspection records for these sites. ERAS reviewed state agency records (Hazardous Waste Tracking System) for these sites.

Auto Trend at 2840 Broadway was listed as a HW Manifest site, located at the north side of the Property. Coopers Auto Body and Frame and San Leandro Body Shop were listed as a RCRA GEN and as a HW Manifest site at 295 29th Street, located adjacent to the northeast side of the Property. Automotive Exchange Service, Inc at 288 28th Street, is listed as a RCRA GEN site, located at the south side of the Property.

2840 Broadway

Auto Trend at 2840 Broadway was listed as a HW Manifest site. ERAS reviewed state hazardous waste tracking system records for the site. Hazardous waste disposal manifests were found for 1997 and 2006 through 2011. Small quantities of hazardous materials were disposed during these years. No records of leaks or spills were found.

295 29th Street

San Leandro Body Shop dba Collision Service Center was listed from 1993 through 2011. During this time multiple yearly shipments of hazardous wastes were shipped from the Property in small quantities. No records of leaks or spills were found.

288 28th Street

Automotive Exchange Service, Inc at 288 28th Street, is listed as a RCRA GEN site, in addition records were found for Auto Lab. Hazardous waste shipments were made between 1993 and 2009, Few shipments were made of small quantities of hazardous waste materials during this time. No records of leaks or spills were found.

Based on the limited quantity of hazardous materials, properly disposed from these sites and the lack of any indication of leaks or spills, these sites are not considered likely to pose a risk to subsurface conditions beneath the Property.

4.0 HISTORICAL USE INFORMATION

Available historical data were researched to obtain information regarding the past uses of the Property and adjacent sites, especially as the information may pertain to environmental conditions or concerns.

4.1 Historical Map and Photograph Review

The United States Geological Survey Oakland West, California 7.5 Minute Series Topographic Map, 1980 shows the Property elevation at approximately 40 feet with a local topographic slope down to the southeast.

Historical USGS Topographic Maps

The United States Geological Survey Palo Alto, California, 15 Minute Series Topographic Maps dated 1915, 1942, 1946 and 1948 and Oakland 7.5 Minute Series Topographic maps dated 1949, 1959, 1968, 1973, 1980 and 1993 were reviewed online at <http://sunsite.berkeley.edu/histopo>.

On the map dated in 1915, the Property was shown to be occupied by a small building. In 1942, 1946 and 1948 a larger building is indicated to be on the Property. In 1949 and on later maps, the area of the Property was indicated to be an area of urban development with no individual building detail given.

Historical Aerial Photographs

ERAS reviewed historical aerial photographs, which included the Property available on line at <http://www.msrmmaps.com> and at http://www.library.ucsb.edu/mil/ap_indexes. Photographs dated in 1931, 1946, 1958, 1968, 1980, 1988, 2000, 2002 and 2005 were reviewed.

In 1931, 1946, 1958, 1968 and 1980, two buildings were located on the Property, one near the west side and one near the east side of the Property.

In 1987, 1988, 2000, 2002 and 2005, only the current building, located near the western side of the Property and a parking lot were on the Property.

Historical Sanborn Fire Insurance Maps

ERAS reviewed historical Sanborn Fire Insurance maps which included the Property, available at the University of California, Berkeley Earth Resources library. Maps dated in 1911-12, 1951, 1952, 1954, 1959, 19623, 1967 and 1970 were reviewed.

In 1911-12, the Property was vacant and undeveloped. In 1951, 1952 and 1954, the Property was developed with the current building (2820) and two smaller separate buildings (2820 ½ and 2820 1/3), used for an auto service and sales building, an auto body and paint and an auto washing building. In 1959, 1962, 1967 and 1970 the main building (2820) was used for glass warehouse and three smaller buildings (2820 ½, 2820 1/3 and 2810 ¼) were used for a glass warehouse, a glass and metal window warehouse and a small auxiliary building.

Historical City Directories

Haines City Directories were reviewed at the Berkeley Public Library. Directories dated in 1981, 1985, 1990, 1995, 2000 and 2005 were reviewed for the multiple addresses associated with the

Property based on the Sanborn Fire Insurance maps and building department records. No listing was found for the addresses other than 2820 Broadway.

In 1981 and 1985, the Property was listed as Four Wheel Parts. In 1990, Oakland Volvo was listed at the Property. In 1995, Saturn Oakland Sales and Service was listed. In 2000, Daewoo of Oakland was listed. In 2005, Connell Auto Center was listed.

4.2 Interview

ERAS reviewed an ASTM Screen and Environmental Site Assessment Questionnaire completed by the occupant Mr. Mike Murphy, on October 17, 2011. Mr. Murphy had leased the Property for six months and was familiar with the Property from 2000. The Property had previously been an auto dealership with auto service facilities.

Mr. Murphy had no information about: 1) the existence of environmental liens on the Property; 2) any notifications by government of violations of current or historic environmental laws; 3) any existing or historic violations by occupants of environmental laws, or 4) the current presence of underground or aboveground storage tanks on the Property.

Mr. Murphy's responses were compiled on ERAS Environmental Questionnaire along with observations made by ERAS at the time of the site visit included as **Appendix E**. Mr. Murphy provided ERAS with a copy of a previous Phase I Environmental Site Assessment which is reviewed in **Section 4.4**.

Observations made by ERAS at the time of the site visit are compiled on the Environmental Questionnaire is included as **Appendix F**.

4.3 Building and Fire Department File Review

City of Oakland Building Department

ERAS reviewed the available records for the Property at the Oakland Building Department on January 7, 2011. Records were found for 2816 Broadway (based on a Sanborn Fire Insurance map address) and for 2820 Broadway. No records were found for 2822 Broadway or the historical, fractional addresses (2820 ½, 2820 1/3, 2820 ¼), which were formerly identified on Sanborn Fire Insurance maps as part of the Property.

2816 Broadway

The only record found for 2816 Broadway was a permit for a mandatory seismic retrofit.

2820 Broadway

The earliest record for 2820 Broadway was a permit to construct a single story concrete building for a garage, dated in 1916. In 1932, a building permit was obtained to erect a 20 foot by 30 foot steel service building with a corrugated iron roof, for serving lubricants and auto supplies and incidental auto servicing. In 1935, A building permit application was filed for an auto repair building. In 1937, a permit was obtained for storefront alterations to a garage.

In 1947, a building permit was recorded for alterations to a "Parts Department Building". In 1953, a permit was obtained for a concrete wash rack located at the Valdez Street side of the Property. In 1954, correspondence noted that an inspection of two buildings noted structural defects in a

body and paint shop building at a Pontiac Dealership.

In 1958, a building permit was obtained by Saunders Glass company for alterations. In 1966, a fire inspection noted damage to the roof and skylight at Saunders Glass.

In 1974, building permits were obtained for an awning for a sales building and for a partition in a store-warehouse. In 1975, a building permit was obtained for two story retail store offices. In 1977, a sign permit was obtained for "Classic Motor Cars". In 1978, a permit was obtained to re-roof a building.

In 1988, a sign permit was recorded for a sign for Oakland Volvo. In 1992, a sign permit was recorded. In 1995, a permit was obtained to install five new heaters and a new gas line. In 1998, a flag mounted sign permit was obtained. In 1999, an electrical permit for a free standing sign was obtained.

In 2001, a permit was obtained to remove an existing canopy sign. In 2003, a permit was obtained for a Suzuki sign. In 2004, a permit was recorded for an auto dealership. In 2007, a permit was obtained to install three wall signs and zoning clearance was obtained for new auto sales. In 2009, a sign permit was obtained. In 2011, zoning clearance was recorded for an auto sales/auto repair business.

City of Oakland Fire Department

ERAS requested a review of any permits, inspections or hazardous materials records for the known addresses associated with the Property on October 3 and 4, 2011. The Oakland Fire Department did not respond to repeated requests for a review of records.

4.4 Synopsis of Previous Environmental Investigations

ERAS was provided with a previous Phase I Environmental Site Assessment for the Property (ACC Environmental Consultants, 2000). At the time of this previous assessment, the occupants were Daewoo of Oakland, an automobile sales and service business. ASTs for oil and coolants, typical of auto service operations were noted. One minor superficial spill on paved surface was noted. ACC recommended that a proper Hazardous Materials Business Plan be filed with the fire department.

ERAS reviewed Department of Toxic Substances Control hazardous waste tracking system records that listed the Property as Oakland Volvo, Saturn of Oakland, Daewoo of Oakland, Broadway Daewoo, Connell Nissan, Bay Bridge Nissan of Oakland and Nissan of Oakland. Hazardous waste manifests were recorded between 1994 and 2007. Based on this manifest information, auto service businesses formerly located on the Property had EPA waste disposal permits but regularly disposed of only small quantities of hazardous waste. No records of leaks or spills were found.

The ACC Environmental Consultants (2000) report reviews a previous subsurface investigation on the eastern portion of the Property to follow up on a possible UST in the area. Bamer Construction is reported to have completed a magnetometer and ground penetrating radar survey of the area in 1998. Bamer Construction is reported to have determined that identified no USTs but did identify two suspect areas. Suspect areas were excavated to 5.5 feet below grade. No USTs were found in the excavations and Bamer Construction concluded that no USTs were located at the subject Property. A copy of the pertinent portions of the ACC Environmental Consultants report is included

in **Appendix F**.

ACC Environmental Consultants did not note any indication of USTs on the Property during their site visit and historical research. Based on the subsurface investigation conducted in 1998, no USTs were located in the suspect areas of the Property (eastern portion of the Property).

4.5 Environmental Liens

A search for environmental liens is not in the scope of work for this assessment. No evidence of subsurface environmental investigations for contamination was found for the Property. Based on the lack of indicated leaks, spills or subsurface investigations for contamination, it is unlikely that environmental liens would be found.

5.0 RECONNAISSANCE

Photographs were taken during the reconnaissance to document the features observed and any environmental conditions of concern. Photographs are included in **Appendix C**.

5.1 Visual Reconnaissance of the Property

ERAS conducted a visual reconnaissance of the Property on September 30, 2011 to identify potential indications of environmental concern.

Drums, Containers, and Storage Tanks

The on-site reconnaissance addressed containers, drums, above ground storage tanks, and other storage units containing materials, which may pose an environmental threat at the Property. Three new, empty and unused ASTs of which, two steel oil type ASTs and one plastic coolant type AST were located on the Property. Two were located near the outside compressor shed, and one was located within the auto service area. No sign of leaks or spills were noted in these areas.

Evidence of Waste Disposal

The on-site reconnaissance addressed dumps, pits, ponds, landfills, borrow pits and lagoons, which may have been used for disposal purposes at the Property. No such items were observed on the Property. A small quantity of non-hazardous debris was located in the eastern parking area of the Property.

Surface Fill

The on-site reconnaissance did not reveal any evidence of surface fill.

Surface Staining and Stressed Vegetation

No stressed vegetation or evidence of chemical spillage was observed on the Property during the on-site reconnaissance.

Transformers

No transformers were noted on the Property. There was no indication of leaks or spills in the vicinity of these transformers. There was no indication that PCB containing equipment was used on the Property.

Air Stacks, Vents, and Odors

The on-site reconnaissance addressed air stacks, vents, and strong, pungent or noxious odors at the Property. No such items were noted on the Property.

Evidence of Underground or Aboveground Storage Tanks

Three new, empty and unused ASTs, two steel oil type ASTs and one plastic coolant type AST were located on the Property. No indication of the current or former presence of underground storage tanks was noted.

Conduits to Groundwater

Groundwater production wells or dry wells were not discovered on the Property.

Evidence of Improper Waste Discharge

Pipes and/or vents, indicating improper discharge of wastes, were not found on the Property. Two vertical metal pipes in the concrete pavement appeared to be electrical utility conduits.

On-Site Environmental Management Practices

The on-site reconnaissance addressed the following environmental management practices.

Solid Waste

At the time of the site visit a few cardboard boxes, wooden pallets and a single 5-gallon plastic bucket of what appeared to be mud and plant debris from a parking lot drain were located outside of waste bins.

Hazardous Materials and Waste

No hazardous materials were noted on the Property.

Treatment Facilities

No such items were noted.

Application of Pesticides, Herbicides or Fertilizers

No evidence of the application of pesticides, herbicides, or fertilizers was indicated during the on-site reconnaissance.

General Environmental Practices

No indications of adverse environmental practices were observed on the Property during the on-site reconnaissance.

5.2 Adjacent and Nearby Site Uses

The following observations were made of parcels adjacent to the Property:

- | | |
|--------------|---|
| North | 2840 Broadway, Autotrends Body Shop and 295 29 th Street, Collision Service Center, another auto body shop. |
| South | 2810-2814 Broadway, a vacant building, 288 28 th Street, Broadway Smog Station and 280 28 th Street, a high rise residential complex. |
| East | Valdez Street and part of 280 28 th Street, a high rise residential complex. |
| West | Broadway, across which was a paved parking lot at 2855 Broadway. |

6.0 CONCLUSIONS AND RECOMMENDATIONS

6.1 Conclusions

ERAS has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-05 for the Property. The current ASTM standard meets the purpose and scope of the Environmental Protection Agency All Appropriate Inquiry (AAI). Any exceptions to, or deletions from this Practice are described in the report.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of this part. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

A data failure occurred for the time period 1916 to 1931. Historical maps indicate that a building on the Property was constructed for a garage in 1916 and was still used for auto sales and service in the 1950's. Based on the consistent uses of the Property, this data failure is not considered likely to affect the conclusions of this assessment.

Site Visit

An ERAS representative visited the Property on September 30, 2011. The Property contains a reinforced concrete, concrete block and brick building with a paved a parking area at the rear (on Valdez Street). The Property had been recently extensively remodeled inside and was being prepared for occupancy by Nissan of Oakland, an auto dealership and service center, at the time of the site visit.

To the north of the Property was Autotrends, a body shop at 2840 Broadway. To the south was a vacant building at 2810-2814 Broadway, Broadway Smog Station at 288 28th Street, and a high rise residential building at 280 28th Street. To the west was Broadway, across which was a vacant lot at 2855 Broadway. To the east was a portion of the 280 28th Street residential complex including an entry, parking lot and landscaped areas.

The Property contains a concrete and asphalt paved parking area with a compressor shed, an empty steel AST and an empty plastic AST labeled for coolant, fencing, lights and gates, a forklift with LP fuel tank, a stack of wooden pallets, new cars and one plastic 5-gallon bucket of debris apparently removed from an adjacent drain. Minor, surficial oil staining was noted on the concrete pad of the compressor shed. The compressor itself looked new and recently installed. Presumably, a former compressor was located in this area. A former compressor would likely have caused the surficial staining. No other indications of leaks or spills were noted in this rear area of the Property. A small portion of the east side of the parking area was landscaped and unpaved.

The building contained a display room with sales area facing Broadway, with a two story office area, restrooms, storage areas and parts room. The display floor was covered with rubber matting, offices were carpeted and the restrooms had sheet vinyl flooring. Walls were brick, reinforced concrete or textured sheetrock, ceilings were wood or sheetrock. New furniture and appliances were installed, but finish work equipment and utilities were still being unpacked or installed. To the north side of the display area, was a wall behind which was a driveway from a roll up door

facing Broadway for a driveway to a service area in the rear of the building.

The service area included a storage mezzanine, offices, AST area with a new, empty steel AST, above ground lifts and new, empty portable oil drainage tanks. Two roll up doors were available for access to the rear parking area. Floors in this area were concrete, carpeted or wood. Walls were brick, concrete block or sheetrock, ceilings were wood or sheetrock. The storage mezzanine contained approximately 60 gallons of paint in 1 and 5-gallon capacity buckets.

No indication of the current or former presence underground storage tanks (UST) was observed on the Property by ERAS. Three ASTs located on the site were new and had not yet been used. No indication or leaks or spills were noted in these areas.

Historical Summary

Historical information indicates that the Property was developed with the current building for a garage in 1916. Several additional buildings formerly occupied the current parking lot area and were used for an auto body shop and warehouse prior to approximately 1987. The Property was used for a glass and window warehouse (Saunders Glass) from at least 1949 through at least 1970. The Property was an auto parts shop and warehouse in the 1980's and auto dealerships with auto service departments in the 1990's through the time of the site visit.

Database Review

The Property was listed on the environmental databases as a result of the generation and proper disposal of small quantities of hazardous waste materials by occupants. There was no indication of leaks or spills found in the database or historical records for the Property.

Adjacent sites were listed on the HW Manifest and RCRA GEN databases as a result of auto service and auto body repair businesses. No indication of leaks, spills or unauthorized releases of hazardous materials were found for these sites.

None of the sites identified on the environmental databases are located in close proximity and in an up-gradient direction. None of the identified sites are considered likely to pose a risk to subsurface environmental conditions beneath the Property.

A search for environmental liens for the Property did not identify any liens under the names of the businesses identified on the Property.

Previous Environmental Investigations

ERAS was provided with a previous Phase I Environmental Site Assessment for the Property (ACC Environmental Consultants, 2000). At the time of this previous assessment, the occupants were Daewoo of Oakland, an automobile sales and service business. ASTs for oil and coolants, typical of auto service operations were noted. One minor superficial spill on paved surface was noted. ACC recommended that a proper Hazardous Materials Business Plan be filed with the fire department.

The ACC Environmental Consultants (2000) report reviews a previous subsurface investigation on the eastern portion of the Property to follow up on a possible UST in the area. Bamer Construction is reported to have completed a magnetometer and ground penetrating radar survey of the area in 1998. Bamer Construction is reported to have determined that identified no USTs but did identify

two suspect areas. Suspect areas were excavated to 5.5 feet below grade. No USTs were found in the excavations and Bamer Construction concluded that no USTs were located at the subject Property.

6.2 Recommendations

No evidence was discovered during this assessment to indicate that activities currently or historically conducted on or near the Property have contributed contamination to soil or groundwater in the surrounding area. Historic recognized environmental conditions on the Property were the former use of the Property for auto service. No leaks, spills or unauthorized releases of hazardous materials are associated with the former uses. No USTs were discovered in the suspect areas of the eastern portion of the Property during previous environmental assessments and a subsurface investigation.

ERAS concludes that the risk of contamination at the Property is minimal and no further investigation is warranted for the Property.

With regard to asbestos and lead paint, the extensive, recent remodel of the interior of the building is likely to have reduced the potential for asbestos or lead paint remaining in the building.

ERAS recommends no further actions pertaining to environmental conditions at the Property at 2820 Broadway in Oakland, California.

APPENDIX A

ENVIRONMENTAL PROFESSIONALS RESUME AND CERTIFICATION

David Siegel

David Siegel is president of ERAS Environmental, Inc., an environmental consulting company formed in October 1998. Prior to that, Mr. Siegel was operator of Siegel Environmental Consulting Services, formed in February 1994, a full service environmental consulting company providing due diligence services, geological and hydrogeological research, Phase 2 field services such as groundwater well installation and sampling, waste disposal, project management and remediation planning and permitting. Before involvement with operations management of these environmental consulting firms, Mr. Siegel was a Project Hydrogeologist, Project Geologist, and Staff Geologist with three San Francisco Bay Area environmental consulting companies. Mr. Siegel holds a masters degree in geology from California State University in Hayward and has been licensed as a California Registered Environmental Assessor (REA) since 1990, an Class II REA since 2001 and as a California Certified Asbestos Consultant since 1995.

QUALIFICATIONS

Experience in hazardous materials consulting including due diligence projects, soil and groundwater investigations and remediation, and asbestos surveying since 1987. Strong organizational background in project management including budget development and management and client contact and service. Strong technical background in groundwater well design and installation, soil and groundwater chemical data evaluation and hydrogeological assessment. Inspection experience of hundreds of commercial sites including retail, office, industrial, and residential. Since 1998 experience providing management, business development, technical oversight and client and regulatory contact for self-owned and operated environmental consulting companies.

WORK HISTORY

1994-Present: *President of ERAS Environmental, Inc. and Principal of Siegel Environmental*
Management and completion of due diligence projects for a wide variety of commercial properties throughout California. Management and completion of Phase 2 soil and groundwater and asbestos sampling projects at former and operating gasoline stations and industrial facilities. Responsible for project initiation, planning, report preparation and technical oversight. Responsible for business development, client contact and local and state regulatory agency compliance for ongoing investigation, cost recovery and case closures.

1987-1994: *Project Hydrogeologist (McCulley, Frick & Gilman, San Francisco; 1992-1994), Project Manager (Converse Environmental, San Francisco; 1989-1992), Project Manager (Exceltech, Inc., Fremont; 1987-1989)*

Management and completion of environmental and geotechnical investigations involving soil and groundwater contamination. Responsible for project planning, budgeting and operation, professional staff supervision and report completion. Interface with engineers for site remediation planning.

EDUCATION AND LICENCES

- 1995 - Present California Certified Asbestos Inspector
- 1992 Lead Based Paint Building Inspector Certification
- 1990 - Present California Registered Environmental Assessor Class II
- 1990 Groundwater Modeling for Remedial Actions
- 1988 M.S. Geological Sciences, California State University, Hayward

State of California

Notice of Disclaimer

Due to the limitations, constraints, and inaccuracies and incompleteness of government information and computer mapping data currently available to FirstSearch Technology Corp., certain conventions have been utilized in preparing the locations of all federal, state and local agency sites residing in FirstSearch Technology Corp.'s databases. All EPA NPL and state landfill sites are depicted by a rectangle approximating their location and size. The boundaries of the rectangles represent the eastern and western most longitudes; the northern and southern most latitudes. As such, the mapped areas may exceed the actual areas and do not represent the actual boundaries of these properties. All other sites are depicted by a point representing their approximate address location and make no attempt to represent the actual areas of the associated property. Actual boundaries and locations of individual properties can be found in the files residing at the agency responsible for such information.

Waiver of Liability

Although FirstSearch Technology Corp. uses its best efforts to research the actual location of each site, FirstSearch Technology Corp. does not and can not warrant the accuracy of these sites with regard to exact location and size. All authorized users of FirstSearch Technology Corp.'s services proceeding are signifying an understanding of FirstSearch Technology Corp.'s searching and mapping conventions, and agree to waive any and all liability claims associated with search and map results showing incomplete and or inaccurate site locations.

UST HISTORICAL DATA

This site was listed in the FIDS Zip Code List as a UST site. The Office of Hazardous Data Management produced the FIDS list. The FIDS list is an index of names & locations of sites recorded in various California State environmental agency databases. It is sorted by zip code and as an index, details regarding the sites were never included.

The UST information included in FIDS as provided by the Office of Hazardous Data Management was originally collected from the SWEEPS database. The SWEEPS database recorded Underground Storage Tanks and was maintained by the State Water Resources Control Board (SWRCB). That agency no longer maintains the SWEEPS database and last updated it in 1994. The last release of that 1994 database was in 1997.

Oversight of Underground Storage Tanks within California is now conducted by Certified Unified Program Agencies referred to as CUPA s. There are approximately 102 CUPA s and Local Oversight Programs (LOP s) in the State of California. Most are city or county government agencies. As of 1998, all sites or facilities with underground storage tanks were required by Federal mandate to obtain certification by designated UST oversight agencies (in this case, CUPA s) that the UST/s at their location were upgraded or removed in adherence with the 1998 RCRA standards.

Information from the FIDS/SWEEPS lists were included in this report search to help identify where underground storage tanks may have existed that were not recorded in CUPA databases or lists collected by us. This may occur if a tank was removed prior to development of recent CUPA UST lists or never registered with a CUPA.

RELEASE DATA FROM THE CALIFORNIA STATE WATER RESOURCES CONTROL BOARD LUSTIS DATABASE

Please note that some data previously provided by the State Water Resources Control Board in the LUSTIS database is not currently being provided by the agency in the most recent edition. Incidents that occurred after the year 2000 may not have much information. Field headers with blank information following after should be interpreted as unreported by the agency.

LEAD AGENCY: ALAMEDA COUNTY LOP
REGIONAL BOARD CASE NUMBER: 01-0241
LOCAL AGENCY: ALAMEDA COUNTY LOP
LOCAL CASE NUMBER: RO0000400

CASE TYPE: LUST Cleanup Site

POTENTIAL CONTAMINANTS OF CONCERN: Trichloroethylene (TCE), Gasoline
POTENTIAL MEDIA AFFECTED: Other Groundwater (uses other than drinking water), Soil Vapor
STATUS: Open - Site Assessment

STATUS DATE: 1989-02-10 00:00:00

SITE HISTORY (blank if not reported): Four tanks (3,000g gasoline, 1,000 g waste-oil, 550 gallon waste-oil and 1,500 unknown UST) removed 8/15/88. Tanks reported to have leaked and a sheen was observed on groundwater from Tank C and Tank D. 21,000 ppb benzene was present in water. Investigations began on 1/20/89 and wells MW-1 through MW-3 were installed. Max concentrations in MW-3 at 32,000 ppb TPH, 9,600 ppb benzene. 1991 Off-site wells MW-5 and MW-6 installed. Water contained hydrocarbons and solvents.

RELEASE DATA FROM THE CALIFORNIA STATE WATER RESOURCES CONTROL BOARD LUSTIS DATABASE

Please note that some data previously provided by the State Water Resources Control Board in the LUSTIS database is not currently being provided by the agency in the most recent edition. Incidents that occurred after the year 2000 may not have much information. Field headers with blank information following after should be interpreted as unreported by the agency.

LEAD AGENCY: ALAMEDA COUNTY LOP
REGIONAL BOARD CASE NUMBER: 01-1959
LOCAL AGENCY: ALAMEDA COUNTY LOP
LOCAL CASE NUMBER: RO0000146

CASE TYPE: LUST Cleanup Site
POTENTIAL CONTAMINANTS OF CONCERN: Lead, Gasoline
POTENTIAL MEDIA AFFECTED: Other Groundwater (uses other than drinking water)
STATUS: Open - Site Assessment
STATUS DATE: 1994-07-15 00:00:00

SITE HISTORY (blank if not reported): In early 1982 a leak was detected in the UST system at the site, and existing USTs were replaced with fiberglass USTs. In March 1982 eight wells (B-1 to B-8) were installed. Between 1982 and 1983 free-phase hydrocarbons were removed from well B-4 on a weekly basis. In September 1993 a leak was detected during a product line upgrade. The leak was estimated to have been approximately 20 gallons. In September 1993 all wells and two tank backfill wells were resampled and concentrations of concern were encountered. In July 1994 wells B-9 to B-12 were installed. In March 1998 all USTs, including a waste oil UST, and associated piping, were removed from the site. In November 1998, 160 yards of impacted soil in the vicinity of the former dispenser islands and waste oil UST was overexcavated. In September 1999 ORC was injected into wells B-1, B-3, B-6, B-7, and B-9. In June 2007 bores B-14 to B-21 were installed at the site and site vicinity. Additional bores are currently proposed. High lead and zinc are also a concern; these may in part be related to a significant amount of demolition debris from the former Sisters of Providence Hospital that occupied the site between at least 1903 and 1911.

RELEASE DATA FROM THE CALIFORNIA STATE WATER RESOURCES CONTROL BOARD LUSTIS DATABASE

Please note that some data previously provided by the State Water Resources Control Board in the LUSTIS database is not currently being provided by the agency in the most recent edition. Incidents that occurred after the year 2000 may not have much information. Field headers with blank information following after should be interpreted as unreported by the agency.

LEAD AGENCY: ALAMEDA COUNTY LOP
REGIONAL BOARD CASE NUMBER: 01-2411
LOCAL AGENCY: ALAMEDA COUNTY LOP
LOCAL CASE NUMBER: RO0000247

CASE TYPE: LUST Cleanup Site
POTENTIAL CONTAMINANTS OF CONCERN: Waste Oil / Motor / Hydraulic / Lubricating
POTENTIAL MEDIA AFFECTED: Under Investigation
STATUS: Open - Site Assessment
STATUS DATE: 1999-08-26 00:00:00
SITE HISTORY (blank if not reported): On March 11, 1997, an investigation was performed to investigate the 1,000-gallon heating oil or fuel UST located in the sidewalk. Four borings were advanced on each side of the tank to maximum depths of 20 feet bgs. The maximum concentrations in soil were 9,600 mg/kg TPHg, 4,500 mg/kg TPHd, and 18,000 mg/kg Oil and Grease. No benzene or MTBE were detected. After the investigation was performed, the UST was closed in place. Groundwater was not collected at this time. Additional work was requested to evaluate groundwater; however, no work was performed.

UST HISTORICAL DATA

This site was listed in the FIDS Zip Code List as a UST site. The Office of Hazardous Data Management produced the FIDS list. The FIDS list is an index of names & locations of sites recorded in various California State environmental agency databases. It is sorted by zip code and as an index, details regarding the sites were never included.

The UST information included in FIDS as provided by the Office of Hazardous Data Management was originally collected from the SWEEPS database. The SWEEPS database recorded Underground Storage Tanks and was maintained by the State Water Resources Control Board (SWRCB). That agency no longer maintains the SWEEPS database and last updated it in 1994. The last release of that 1994 database was in 1997.

Oversight of Underground Storage Tanks within California is now conducted by Certified Unified Program Agencies referred to as CUPA s. There are approximately 102 CUPA s and Local Oversight Programs (LOP s) in the State of California. Most are city or county government agencies. As of 1998, all sites or facilities with underground storage tanks were required by Federal mandate to obtain certification by designated UST oversight agencies (in this case, CUPA s) that the UST/s at their location were upgraded or removed in adherence with the 1998 RCRA standards.

Information from the FIDS/SWEEPS lists were included in this report search to help identify where underground storage tanks may have existed that were not recorded in CUPA databases or lists collected by us. This may occur if a tank was removed prior to development of recent CUPA UST lists or never registered with a CUPA.

UST HISTORICAL DATA

This site was listed in the FIDS Zip Code List as a UST site. The Office of Hazardous Data Management produced the FIDS list. The FIDS list is an index of names & locations of sites recorded in various California State environmental agency databases. It is sorted by zip code and as an index, details regarding the sites were never included.

The UST information included in FIDS as provided by the Office of Hazardous Data Management was originally collected from the SWEEPS database. The SWEEPS database recorded Underground Storage Tanks and was maintained by the State Water Resources Control Board (SWRCB). That agency no longer maintains the SWEEPS database and last updated it in 1994. The last release of that 1994 database was in 1997.

Oversight of Underground Storage Tanks within California is now conducted by Certified Unified Program Agencies referred to as CUPA s. There are approximately 102 CUPA s and Local Oversight Programs (LOP s) in the State of California. Most are city or county government agencies. As of 1998, all sites or facilities with underground storage tanks were required by Federal mandate to obtain certification by designated UST oversight agencies (in this case, CUPA s) that the UST/s at their location were upgraded or removed in adherence with the 1998 RCRA standards.

Information from the FIDS/SWEEPS lists were included in this report search to help identify where underground storage tanks may have existed that were not recorded in CUPA databases or lists collected by us. This may occur if a tank was removed prior to development of recent CUPA UST lists or never registered with a CUPA.

POTENTIAL MEDIA AFFECTED: Other Groundwater (uses other than drinking water)

STATUS: Open - Site Assessment

STATUS DATE: 1995-08-07 00:00:00

SITE HISTORY (blank if not reported): On July 28, 1994, one 295-gallon waste-oil UST, one 575-gallon gasoline UST and two hydraulic lifts were removed from the site. Holes were observed in the gasoline UST upon removal. Maximum concentrations of 1,500 ppm TPHg, 1,800 ppm TPHd and 7.4 ppm benzene were detected in soil. Subsequently, a work plan was submitted but has not been implemented.

UST HISTORICAL DATA

This site was listed in the FIDS Zip Code List as a UST site. The Office of Hazardous Data Management produced the FIDS list. The FIDS list is an index of names & locations of sites recorded in various California State environmental agency databases. It is sorted by zip code and as an index, details regarding the sites were never included.

The UST information included in FIDS as provided by the Office of Hazardous Data Management was originally collected from the SWEEPS database. The SWEEPS database recorded Underground Storage Tanks and was maintained by the State Water Resources Control Board (SWRCB). That agency no longer maintains the SWEEPS database and last updated it in 1994. The last release of that 1994 database was in 1997.

Oversight of Underground Storage Tanks within California is now conducted by Certified Unified Program Agencies referred to as CUPA s. There are approximately 102 CUPA s and Local Oversight Programs (LOP s) in the State of California. Most are city or county government agencies. As of 1998, all sites or facilities with underground storage tanks were required by Federal mandate to obtain certification by designated UST oversight agencies (in this case, CUPA s) that the UST/s at their location were upgraded or removed in adherence with the 1998 RCRA standards.

Information from the FIDS/SWEEPS lists were included in this report search to help identify where underground storage tanks may have existed that were not recorded in CUPA databases or lists collected by us. This may occur if a tank was removed prior to development of recent CUPA UST lists or never registered with a CUPA.

RELEASE DATA FROM THE CALIFORNIA STATE WATER RESOURCES CONTROL BOARD LUSTIS DATABASE

Please note that some data previously provided by the State Water Resources Control Board in the LUSTIS database is not currently being provided by the agency in the most recent edition. Incidents that occurred after the year 2000 may not have much information. Field headers with blank information following after should be interpreted as unreported by the agency.

LEAD AGENCY: ALAMEDA COUNTY LOP
REGIONAL BOARD CASE NUMBER: 01-1349
LOCAL AGENCY: ALAMEDA COUNTY LOP
LOCAL CASE NUMBER: RO0000009

CASE TYPE: LUST Cleanup Site
POTENTIAL CONTAMINANTS OF CONCERN: Gasoline
POTENTIAL MEDIA AFFECTED: Other Groundwater (uses other than drinking water)
STATUS: Completed - Case Closed
STATUS DATE: 2010-02-18 00:00:00

SITE HISTORY (blank if not reported): The site is at the intersection of 28th Street and Telegraph Avenue in Oakland, CA and is currently occupied by a Kentucky Fried Chicken restaurant. The surrounding area is a mixed residential and commercial area. Shell demolished the former gasoline service station between 1988 and 1992. The former service station consisted of a first generation underground storage tank (UST) in the northeast corner of the property, three second-generation gasoline USTs in the southwestern portion of the site, a waste oil tank, four dispensers, an oil/water separator, three hydraulic lifts, and a station building. Sometime in 1987, five soil borings were drilling and sampled in the vicinity of the three second generation USTs. TPHg and benzene were detected in soil at concentrations up to 4,400 and 26 ppm, respectively. TPHd and TPHmo were not detected in soil. Three on-site groundwater monitoring wells (S-1, S-2, and S-3) were installed and sampled by Woodward-Clyde Consultants in April of 1988. At that time, the service station was no longer in use and the single first generation UST had been removed from the northeastern corner of the site. Maximum concentrations of TPHg and benzene in soil were reported at 4,800 and 38 ppm, respectively. Maximum concentrations of TPHg and benzene in the initial groundwater samples were 46,000 ppb and 2,700 ppb, respectively, reported in source area well S-3. In November 1988, four off-site groundwater monitoring wells (S-4, S-5, S-6, and S-7) were installed. TPHg and benzene were detected in groundwater from well S-6, which is located on the south side of 28th Street downgradient from the three gasoline USTs, at concentrations of 5,500 and 1,700 ppb, respectively. In December 1988, the three gasoline, USTs, waste oil tank, dispensers, and product piping were removed. The four tanks were made of fiberglass and no apparent holes or cracks were observed. Soil samples collected from the sidewalls of the excavation contained TPHg and benzene at concentrations up to 2,800 and 0.85 ppm, respectively. One soil sample collected below the waste oil UST did not contain reportable concentrations of TPHd and BTEX. Overexcavation of the tank pit was performed on January 29, 1989. The excavation was extended vertically to a depth of approximately 9.5 feet below grade where groundwater was encountered. Approximately 500 cubic yards of soil was excavated from the area around the tank pit in the southwestern portion of the site. In July 1989, three additional off-site monitoring wells (S-8, S-9, and S-10) were installed south of the site. Off-site monitoring well S-11 and on-site product recovery well SR-1 were installed in October and November 1990. On-site soil vapor extraction wells SV-1 and SV-2 were installed on September 11, 1991. GeoStrategies, Inc. conducted a soil vapor extraction pilot test using wells SV-1 and SV-2 on September 24, 1991. The vapor extraction test results indicated minimal vacuum influence and low vapor recovery concentrations. GeoStrategies, Inc. concluded that soil vapor extraction was not a feasible remedial alternative for the site. Between 1991 and June 1992, the former service station building, the dispenser island, and dispenser canopy were removed. From June through August 1992, GeoStrategies, Inc. observed the removal of the oil water separator and three hydraulic lifts formerly located within the service station building and collected soil samples beneath the former OWS, hydraulic lifts, and former dispensers. TPHg and BTEX were not reported in any of the four soil samples collected beneath the product piping at each dispenser. One soil sample collected below the OWS contained oil and grease at a concentration of 68 ppm and did not contain reportable concentrations of TPHg, TPHd, or BTEX. The excavation was expanded laterally and vertically in the area of the former OWS. After the second stage of excavation, a confirmation soil sample co

POTENTIAL MEDIA AFFECTED: Other Groundwater (uses other than drinking water)
STATUS: Open - Site Assessment
STATUS DATE: 1990-12-07 00:00:00
SITE HISTORY (blank if not reported): Three USTs removed in December 1989. Following UST removals, borings, which detected free product, were installed at the site. Additional site investigations were conducted in 1992. An SVE system operated from October 1996 to March 1998. In November 2004, DPE was proposed at the site, which was approved in March 2006. Corrective action is pending, but not yet implemented.

CASE TYPE: LUST Cleanup Site
POTENTIAL CONTAMINANTS OF CONCERN: Waste Oil / Motor / Hydraulic / Lubricating
POTENTIAL MEDIA AFFECTED: Other Groundwater (uses other than drinking water)
STATUS: Open - Site Assessment
STATUS DATE: 1994-01-28 00:00:00

SITE HISTORY (blank if not reported): May 10, 1993, one 350-gallon waste-oil UST was removed from the site. Petroleum hydrocarbons were detected in soil at the time. Subsequently one monitoring well was installed and sampled once. No petroleum hydrocarbons were detected in the two soil samples collected from the boring at 21 and 26 feet. However, petroleum hydrocarbons were detected in groundwater. Only one sampling event was reported.

LOCAL CASE NUMBER: RO0000480

CASE TYPE: LUST Cleanup Site
POTENTIAL CONTAMINANTS OF CONCERN: Waste Oil / Motor / Hydraulic / Lubricating
POTENTIAL MEDIA AFFECTED: Other Groundwater (uses other than drinking water)
STATUS: Open - Site Assessment
STATUS DATE: 2006-05-10 00:00:00

SITE HISTORY (blank if not reported): In September 1990, five 1,000-gallon motor oil, one 2,000-gallon motor oil, one 1,000-gallon used oil, and two 10,000 gallon USTs were removed from the site. Soil borings and groundwater monitoring wells were installed at the site between February 1991 and December 1992. Elevated concentrations of petroleum hydrocarbons were detected in soil and free product was present in monitoring well MW-3. In June 1996, an SVE bioventing pilot test was performed at the site. Installation of Soakease absorbent socks and periodic vacuum extraction events were terminated in July 2000. In 2004, additional borings were installed to evaluate remedial effectiveness. Elevated concentrations of petroleum hydrocarbons were detected in soil. In December 2008, two additional borings were installed in the vicinity of MW-3 to verify whether free product was present.

RELEASE DATA FROM THE CALIFORNIA STATE WATER RESOURCES CONTROL BOARD LUSTIS DATABASE

Please note that some data previously provided by the State Water Resources Control Board in the LUSTIS database is not currently being provided by the agency in the most recent edition. Incidents that occurred after the year 2000 may not have much information. Field headers with blank information following after should be interpreted as unreported by the agency.

LEAD AGENCY: ALAMEDA COUNTY LOP
REGIONAL BOARD CASE NUMBER: 01-0207
LOCAL AGENCY: ALAMEDA COUNTY LOP
LOCAL CASE NUMBER: RO0000148

CASE TYPE: LUST Cleanup Site
POTENTIAL CONTAMINANTS OF CONCERN: Gasoline
POTENTIAL MEDIA AFFECTED: Other Groundwater (uses other than drinking water)
STATUS: Open - Site Assessment
STATUS DATE: 1993-12-23 00:00:00
SITE HISTORY (blank if not reported): Two USTs were removed in 1988 and a third was removed in 1994. Several subsurface investigations, including in-situ remediation were conducted at the site between 1993 and 2004. In 2005, a remedial excavation was conducted at the site and the property was redeveloped. Replacement monitoring wells have been installed and post-remedial monitoring is currently underway.

LOCAL AGENCY: ALAMEDA COUNTY LOP
LOCAL CASE NUMBER: RO0002600

CASE TYPE: LUST Cleanup Site
POTENTIAL CONTAMINANTS OF CONCERN: Gasoline
POTENTIAL MEDIA AFFECTED: Other Groundwater (uses other than drinking water)
STATUS: Open - Site Assessment
STATUS DATE: 1998-07-06 00:00:00
SITE HISTORY (blank if not reported): On April 7, 1998, five soil borings were installed at the site. Soil and groundwater samples detected diesel and bunker oil range hydrocarbons indicating that a release had occurred. In October 1998, one 10,000-gallon UST was closed in place at the site. Following UST closure activities, an additional Site Investigation verified soil and groundwater contamination at the site. Free product has been observed in groundwater monitoring well FOMW-1.

RELEASE DATA FROM THE CALIFORNIA STATE WATER RESOURCES CONTROL BOARD LUSTIS DATABASE

Please note that some data previously provided by the State Water Resources Control Board in the LUSTIS database is not currently being provided by the agency in the most recent edition. Incidents that occurred after the year 2000 may not have much information. Field headers with blank information following after should be interpreted as unreported by the agency.

LEAD AGENCY: ALAMEDA COUNTY LOP
REGIONAL BOARD CASE NUMBER: 01-1776
LOCAL AGENCY: ALAMEDA COUNTY LOP
LOCAL CASE NUMBER: RO0000134

CASE TYPE: LUST Cleanup Site
POTENTIAL CONTAMINANTS OF CONCERN: Gasoline
POTENTIAL MEDIA AFFECTED: Other Groundwater (uses other than drinking water)
STATUS: Open - Remediation
STATUS DATE: 2008-08-01 00:00:00
SITE HISTORY (blank if not reported): In March 1992 two USTs (one-gasoline and one waste-oil) were removed from beneath the sidewalk. The associated fuel dispenser which was located in the building was also removed at this time. Elevated hydrocarbon and oxygenate concentrations were observed in soil and groundwater in the source area and the groundwater monitoring program began in 1993 with the installation of the first three monitoring wells.

RELEASE DATA FROM THE CALIFORNIA STATE WATER RESOURCES CONTROL BOARD LUSTIS DATABASE

Please note that some data previously provided by the State Water Resources Control Board in the LUSTIS database is not currently being provided by the agency in the most recent edition. Incidents that occurred after the year 2000 may not have much information. Field headers with blank information following after should be interpreted as unreported by the agency.

LEAD AGENCY: ALAMEDA COUNTY LOP
REGIONAL BOARD CASE NUMBER: 01-0341
LOCAL AGENCY: ALAMEDA COUNTY LOP
LOCAL CASE NUMBER: RO0000137

CASE TYPE: LUST Cleanup Site
POTENTIAL CONTAMINANTS OF CONCERN: Gasoline
POTENTIAL MEDIA AFFECTED: Other Groundwater (uses other than drinking water)
STATUS: Open - Site Assessment
STATUS DATE: 1989-03-14 00:00:00

SITE HISTORY (blank if not reported): In July 1988 an ATT manhole 300 feet west of the site was found to have gasoline leaking into it, and a request to test the USTs was made. In February 1989 a soil vapor survey (VP-1 to VP-19) was conducted at the site; concentrations indicated a release. In March 1989 wells MW-1 to MW-5 were installed. In June 1990 wells MW-6 to MW-9 were installed offsite. In June 1990 the station was demolished and three 10,000-gallon gasoline USTs and one 1,000-gallon waste oil UST were removed. Well MW-2 was destroyed in the process of overexcavating impacted soil in 1990 and 1991; approximately 1,500 cubic yards were excavated. Of that total approximately 800 cubic yards were aerated and reused onsite. In December 1992 the City of Oakland purchased the property. A parking lot and landscaping was constructed over the western portion of the site and Bay Place was expanded over the eastern portion. In January 1993 a groundwater extraction system was installed in well MW-5. The system was shut down in January 1995 due to low production rates. On December 1, 1995 wells MW-1 and MW-3 were decommissioned. In November 1996 an additional 200 cubic yards of soil was excavated due to the installation of a new storm drain on Montecito Avenue. A one week long two-phase extraction pilot test was conducted on well MW-5 in September 2005. In August 2008 periodic injection of oxygen into well MW-5 was proposed; work was implemented in February 2009.

LEAD AGENCY: ALAMEDA COUNTY LOP
REGIONAL BOARD CASE NUMBER: NA
LOCAL AGENCY: ALAMEDA COUNTY LOP
LOCAL CASE NUMBER: RO0002921

CASE TYPE: LUST Cleanup Site
POTENTIAL CONTAMINANTS OF CONCERN: Heating Oil / Fuel Oil
POTENTIAL MEDIA AFFECTED: Other Groundwater (uses other than drinking water)
STATUS: Completed - Case Closed
STATUS DATE: 2010-08-24 00:00:00
SITE HISTORY (blank if not reported): In February 2006, prior to the removal of the UST, a preliminary site assessment was completed and soil borings installed around the former tank location detected significantly elevated levels of hydrocarbon contamination in soil. In August 2007 one UST was removed and confirmation soil samples detected elevated levels of contamination beneath the tank. Remedial action was implemented in October 2008 and verification monitoring is currently in progress at the site.

RELEASE DATA FROM THE CALIFORNIA STATE WATER RESOURCES CONTROL BOARD LUSTIS DATABASE

Please note that some data previously provided by the State Water Resources Control Board in the LUSTIS database is not currently being provided by the agency in the most recent edition. Incidents that occurred after the year 2000 may not have much information. Field headers with blank information following after should be interpreted as unreported by the agency.

LEAD AGENCY: ALAMEDA COUNTY LOP
REGIONAL BOARD CASE NUMBER: 01-0475
LOCAL AGENCY: ALAMEDA COUNTY LOP
LOCAL CASE NUMBER: RO0000359

CASE TYPE: LUST Cleanup Site
POTENTIAL CONTAMINANTS OF CONCERN: Gasoline
POTENTIAL MEDIA AFFECTED: Other Groundwater (uses other than drinking water)
STATUS: Open - Site Assessment
STATUS DATE: 1994-05-05 00:00:00

SITE HISTORY (blank if not reported): In August 1990, two gasoline USTs, one waste-oil UST and four dispensers were removed. Maximum soil concentrations detected were 310 mg/kg TPHg, 100 mg/kg TPHd and 0.820 mg/kg benzene from the the gasoline USTs and dispensers. However, free product was observed in groundwater in the waste-oil UST excavation. Subsequent excavation in the waste-oil tank area could not remove the contaminated soil from beneath the building so this was left in place. Monitoring wells were installed in 1994 and were monitored sporadically until 2005 when semi-annual monitoring began. The recent investigation in 2009 indicated groundwater concentrations up to 41,000 g/L TPHg, 240,000 g/L TPHd, 110,000 g/L TPHmo, and 2,800 g/L benzene.

COMPLETED ACTIVITIES AND DTSC COMMENTS REGARDING THIS SITE (blank below = not reported by agency)

Area Name: PROJECT WIDE

Sub- Area Name:

Document Type: Site Characterization Report

Completion Date: 2007-02-01 00:00:00

Comments: Investigation conducted by City of Oakland. Tetrachloroethylene (PCE) was detected om groundwater off-site above screening levels. DTSC did not oversee this investigation.

Area Name: PROJECT WIDE

Sub- Area Name:

Document Type: Remedial Investigation Workplan

Completion Date: 2009-08-13 00:00:00

Comments: Tetrachloroethene (PCE) was detected in soil up to 330 milligrams per kilograms, in groundwater up to 53,000 microgram per liter and in soil gas up to 120,000 microgram per cubic meter inside the building. Additional sampling is proposed in the technical memorandum to close the data gaps.

Completion Date: 2010-09-29 00:00:00

Comments: Investigation didn't find the Harris Site contaminants of concerns, PCE, TCE or cis-DCE, in the indoor air or crawl space. However, low level concentration of vinyl chloride (VC) was detected in on residential unit. Due to the absence of VC in the crawl space or at the site soil, soil gas or groundwater, VC inside house is considered consistent with a household source.

RELEASE DATA FROM THE CALIFORNIA STATE WATER RESOURCES CONTROL BOARD LUSTIS DATABASE

Please note that some data previously provided by the State Water Resources Control Board in the LUSTIS database is not currently being provided by the agency in the most recent edition. Incidents that occurred after the year 2000 may not have much information. Field headers with blank information following after should be interpreted as unreported by the agency.

LEAD AGENCY: ALAMEDA COUNTY LOP
REGIONAL BOARD CASE NUMBER: NA
LOCAL AGENCY: ALAMEDA COUNTY LOP
LOCAL CASE NUMBER: RO0002435

CASE TYPE: LUST Cleanup Site
POTENTIAL CONTAMINANTS OF CONCERN: Gasoline
POTENTIAL MEDIA AFFECTED: Other Groundwater (uses other than drinking water)
STATUS: Open - Site Assessment
STATUS DATE: 2002-01-30 00:00:00

SITE HISTORY (blank if not reported): In 1986 tank basin soil and a groundwater sample were collected during the replacement of USTs in a pre-existing tank basin; hydrocarbon concentrations were encountered. Sixteen soil vapor wells are reported to have been installed in 1986 and 1987 over the BART tube, located directly below the site; however, no data has been submitted. In 1992 a groundwater sample was collected from a former vadose zone well (VW-2) and concentrations of concern were encountered; however, the location of VW-2-1 is unknown. In July 1994 product lines were removed and upgraded and low hydrocarbon concentrations were encountered. In March 2000 eight hand-augered bores were installed at the site; most bore depths were limited to 10 feet by the presence of the BART tube. In March 2002 wells MW-1 to MW-3 were installed on either side of the BART tube and right-of-way. Additional work is proposed.

LOCAL AGENCY: ALAMEDA COUNTY LOP
LOCAL CASE NUMBER: RO0002984

CASE TYPE: LUST Cleanup Site
POTENTIAL CONTAMINANTS OF CONCERN: Heating Oil / Fuel Oil, Lead
POTENTIAL MEDIA AFFECTED: Other Groundwater (uses other than drinking water)
STATUS: Open - Site Assessment
STATUS DATE: 2008-07-12 00:00:00
SITE HISTORY (blank if not reported): In 2006, the site was being redeveloped with a multi-story office building. During construction activities, an UST was discovered and subsequently removed. Elevated concentrations of petroleum hydrocarbons were detected at the site. Several borings were installed to delineate the extent of the groundwater contaminant plume.

POTENTIAL CONTAMINANTS OF CONCERN: Gasoline
POTENTIAL MEDIA AFFECTED: Other Groundwater (uses other than drinking water)
STATUS: Open - Site Assessment
STATUS DATE: 1995-06-28 00:00:00
SITE HISTORY (blank if not reported): The site is a former service station located on teh corner of Martin Luther King Jr. Way and 27th Street in Oakland. During removal of a 2,000-gallon UST in 1994, soil contamination was detected. Site investigation activities were condcuted at the site beginnning in 1995. Soil removal was conducted in 1996. A dual-phase extraction test was conducted in 2006. Excavation and bio-sparging is currently planned for the site. Removal of shallow soil containing lead and TPH will also be required.

RELEASE DATA FROM THE CALIFORNIA STATE WATER RESOURCES CONTROL BOARD LUSTIS DATABASE

Please note that some data previously provided by the State Water Resources Control Board in the LUSTIS database is not currently being provided by the agency in the most recent edition. Incidents that occurred after the year 2000 may not have much information. Field headers with blank information following after should be interpreted as unreported by the agency.

LEAD AGENCY: ALAMEDA COUNTY LOP
REGIONAL BOARD CASE NUMBER: 01-1466
LOCAL AGENCY: ALAMEDA COUNTY LOP
LOCAL CASE NUMBER: RO0000358

CASE TYPE: LUST Cleanup Site
POTENTIAL CONTAMINANTS OF CONCERN: Benzene, Diesel, Fuel Oxygenates, Gasoline
POTENTIAL MEDIA AFFECTED: Other Groundwater (uses other than drinking water)
STATUS: Open - Site Assessment
STATUS DATE: 2000-05-11 00:00:00

SITE HISTORY (blank if not reported): A site assessment conducted in 1989 detected 11,000 mg/kg TPHg and 40 mg/kg benzene in soil; 9,500 g/L TPHg in groundwater; and 6,100 g/L TPHg and 10 g/L benzene in soil vapor indicating that a release from the underground storage tanks had occurred. Two gasoline USTs, one diesel UST and one waste-oil UST were replaced in November and December 1991. Soil samples reported up to 10,000 mg/kg TPHg and 130 mg/kg benzene. Groundwater remediation occurred from 1990 to 1993. A 1,000-gallon waste-oil UST was removed on September 22, 1997. Soil samples collected beneath the waste-oil tank were below the detection limits for many constituents with TEPH at 32 mg/kg, TRPH at 120 mg/kg and TTLC lead at 7.2 mg/kg. A dual-phase extraction pilot test was performed 19/11/2001 and found that DPE would be an effective remediation method for the site. Remediation occurred at the site from 1991 until 1996. Groundwater monitoring continues to date and future site assessment is planned to assess lateral and vertical extent of hydrocarbons before a CAP is prepared

COMPLETED ACTIVITIES AND DTSC COMMENTS REGARDING THIS SITE (blank below = not reported by agency)

Area Name: PROJECT WIDE
Sub- Area Name:
Document Type: Site Characterization Report
Completion Date: 2006-12-13 00:00:00
Comments: Cadmium, chromium, lead and nickel were detected in the soil up to 48 mg/kg, 2400 mg/kg, 360 mg/kg and 18,000 mg/kg, respectively. TCE and TPH-g were detected in groundwater up to 9,100 ug/l and 6,800 ug/l, respectively in monitoring wells. TCE, cis-DCE and vinyl chloride were detected in the soil gas up to 16 microgram per liter (ug/l), 44 ug/l and 7.7 ug/l, respectively.

Area Name: PROJECT WIDE
Sub- Area Name:
Document Type: Site Characterization Report
Completion Date: 2003-05-19 00:00:00
Comments: Trichloroethene (TCE), chromium and cadmium were detected in soil up to 0.54 mg/kg, 63.6 mg/kg and 5.4 mg/kg, respectively. TPH as gasoline (TPH-g), benzene and ethylbenzene were detected in groundwater up to 5,310 microgram per liter (ug/l), 37 ug/l, and 351 ug/l, respectively. TCE, cis-1,2-dichloroethene (cis-DCE), and 1,2-dichloroethane (1,2-DCA) were detected in groundwater at 3,780 ug/l, 193 ug/l, and 10 ug/l respectively.

Area Name: PROJECT WIDE
Sub- Area Name:
Document Type: Site Characterization Report
Completion Date: 2003-09-09 00:00:00
Comments: Chromium and cadmium were detected in soil up to 63.6 mg/kg and 5.4 mg/kg, respectively. TPH as gasoline (TPH-g), TPH as stoddard solvent (TPH-ss), were detected in groundwater up to 4,900 ug/l and 650 ug/l respectively. TCE was detected in groundwater at 240,000 ug/l.

Area Name: PROJECT WIDE
Sub- Area Name:
Document Type: Site Characterization Report
Completion Date: 2003-10-03 00:00:00
Comments: TCE was detected up to 0.54 mg/kg in soil.

COMPLETED ACTIVITIES AND DTSC COMMENTS REGARDING THIS SITE (blank below = not reported by agency)

Area Name: PROJECT WIDE
Sub- Area Name:
Document Type: Supplemental Site Investigation Report
Completion Date: 2004-10-01 00:00:00
Comments: DTSC approved an Environmental Investigation Report using USEPA grant funding. Results of the investigation detected petroleum hydrocarbons. The project has been referred to the City of Oakland for follow-up.

Area Name: PROJECT WIDE
Sub- Area Name:
Document Type: Site Characterization Report
Completion Date: 2002-07-17 00:00:00
Comments: Phase 1 Environmental Site Assessment for MacArthur Transit Village (including Lucky s Auto Body), documenting potential contamination issues.

Area Name: PROJECT WIDE
Sub- Area Name:
Document Type: Preliminary Assessment Work Plan
Completion Date: 2004-03-19 00:00:00
Comments: Field Sampling Plan for Targeted Site Investigation accepted by US EPA. Sampling included soil and groundwater sampling.

Environmental FirstSearch Descriptions

NPL: EPA NATIONAL PRIORITY LIST - The National Priorities List is a list of the worst hazardous waste sites that have been identified by Superfund. Sites are only put on the list after they have been scored using the Hazard Ranking System (HRS), and have been subjected to public comment. Any site on the NPL is eligible for cleanup using Superfund Trust money. A Superfund site is any land in the United States that has been contaminated by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.**FINAL** - Currently on the Final NPL**PROPOSED** - Proposed for NPL

NPL DELISTED: EPA NATIONAL PRIORITY LIST Subset - Database of delisted NPL sites. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.**DELISTED** - Deleted from the Final NPL

CERCLIS: EPA COMPREHENSIVE ENVIRONMENTAL RESPONSE COMPENSATION AND LIABILITY INFORMATION SYSTEM (CERCLIS)- CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL.**PART OF NPL**- Site is part of NPL site**DELETED** - Deleted from the Final NPL**FINAL** - Currently on the Final NPL**NOT PROPOSED** - Not on the NPL**NOT VALID** - Not Valid Site or Incident**PROPOSED** - Proposed for NPL**REMOVED** - Removed from Proposed NPL**SCAN PLAN** - Pre-proposal Site**WITHDRAWN** - Withdrawn

NFRAP: EPA COMPREHENSIVE ENVIRONMENTAL RESPONSE COMPENSATION AND LIABILITY INFORMATION SYSTEM ARCHIVED SITES - database of Archive designated CERCLA sites that, to the best of EPA's knowledge, assessment has been completed and has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.**NFRAP** – No Further Remedial Action Plan**P** - Site is part of NPL site**D** - Deleted from the Final NPL**F** - Currently on the Final NPL**N** - Not on the NPL**O** - Not Valid Site or Incident**P** - Proposed for NPL**R** - Removed from Proposed NPL**S** - Pre-proposal Site**W** – Withdrawn

RCRA COR ACT: EPA RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM SITES - Database of hazardous waste information contained in the Resource Conservation and Recovery Act Information (RCRAInfo), a national program management and inventory system about hazardous waste handlers. In general, all generators, transporters, treaters, storers, and disposers of hazardous waste are required to provide information about their activities to state environmental agencies. These agencies, in turn pass on the information to regional and national EPA offices. This regulation is governed by the Resource Conservation and Recovery Act (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984.**RCRAInfo** facilities that have reported violations and subject to corrective actions.

RCRA TSD: EPA RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM TREATMENT, STORAGE, and DISPOSAL FACILITIES. - Database of hazardous waste information contained in the Resource Conservation and Recovery Act Information (RCRAInfo), a national program management and inventory system about hazardous waste handlers. In general, all generators, transporters, treaters, storers, and disposers of hazardous waste are

required to provide information about their activities to state environmental agencies. These agencies, in turn pass on the information to regional and national EPA offices. This regulation is governed by the Resource Conservation and Recovery Act (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984. Facilities that treat, store, dispose, or incinerate hazardous waste.

RCRA GEN: EPA/MA DEP/CT DEP RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM GENERATORS - Database of hazardous waste information contained in the Resource Conservation and Recovery Act Information (RCRAInfo), a national program management and inventory system about hazardous waste handlers. In general, all generators, transporters, treaters, storers, and disposers of hazardous waste are required to provide information about their activities to state environmental agencies. These agencies, in turn pass on the information to regional and national EPA offices. This regulation is governed by the Resource Conservation and Recovery Act (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984. Facilities that generate or transport hazardous waste or meet other RCRA requirements. **LGN** - Large Quantity Generators **SGN** - Small Quantity Generators **VGN** – Conditionally Exempt Generator. Included are **RAATS** (RCRA Administrative Action Tracking System) and **CMEL** (Compliance Monitoring & Enforcement List) facilities. **CONNECTICUT HAZARDOUS WASTE MANIFEST** – Database of all shipments of hazardous waste within, into or from Connecticut. The data includes date of shipment, transporter and TSD info, and material shipped and quantity. This data is appended to the details of existing generator records. **MASSACHUSETTES HAZARDOUS WASTE GENERATOR** – database of generators that are regulated under the MA DEP. **VQN-MA** = generates less than 220 pounds or 27 gallons per month of hazardous waste or waste oil. **SQN-MA** = generates 220 to 2,200 pounds or 27 to 270 gallons per month of waste oil. **LQG-MA** = generates greater than 2,200 lbs of hazardous waste or waste oil per month.

RCRA NLR: EPA RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM SITES - Database of hazardous waste information contained in the Resource Conservation and Recovery Act Information (RCRAInfo), a national program management and inventory system about hazardous waste handlers. In general, all generators, transporters, treaters, storers, and disposers of hazardous waste are required to provide information about their activities to state environmental agencies. These agencies, in turn pass on the information to regional and national EPA offices. This regulation is governed by the Resource Conservation and Recovery Act (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984. not currently classified by the EPA but are still included in the RCRAInfo database. Reasons for non classification: Failure to report in a timely matter. No longer in business. No longer in business at the listed address. No longer generating hazardous waste materials in quantities which require reporting.

Fed Brownfield: EPA BROWNFIELD MANAGEMENT SYSTEM (BMS) - database designed to assist EPA in collecting, tracking, and updating information, as well as reporting on the major activities and accomplishments of the various Brownfield grant Programs. **CLEANUPS IN MY COMMUNITY** (subset) - Sites, facilities and properties that have been contaminated by hazardous materials and are being, or have been, cleaned up under EPA's brownfield's program.

ERNS: EPA/NRC EMERGENCY RESPONSE NOTIFICATION SYSTEM (ERNS) - Database of incidents reported to the National Response Center. These incidents include chemical spills, accidents involving chemicals (such as fires or explosions), oil spills, transportation accidents that involve oil or chemicals, releases of radioactive materials, sightings of oil sheens on bodies of water, terrorist incidents involving chemicals, incidents where illegally dumped chemicals have been found, and drills intended to prepare responders to handle these kinds of incidents. Data since January 2001 has been received from the National Response System database as the EPA no longer maintains this data.

Tribal Lands: DOI/BIA INDIAN LANDS OF THE UNITED STATES - Database of areas with boundaries established by treaty, statute, and (or) executive or court order, recognized by the Federal Government as territory in which American Indian tribes have primary governmental authority. The Indian Lands of the United States map layer shows areas of 640 acres or more, administered by the Bureau of Indian Affairs. Included are Federally-administered lands within a reservation which may or may not be considered part of the reservation. BUREAU OF INDIAN AFFIARS CONTACT - Regional contact information for the Bureau of Indian Affairs offices.

State/Tribal Sites: CA EPA SMBRPD / CAL SITES- The California Department of Toxic Substances Control (DTSC) has developed an electronic database system called Envirostor with information about sites that are known to be contaminated with hazardous substances as well as information on uncharacterized properties where further studies may reveal problems. The Site Mitigation and Brownfields Reuse Program Database (SMBRPD), formerly known as CalSites, is used primarily by DTSC's staff as an informational tool to evaluate and track activities at properties that may have been affected by the release of hazardous substances. The SMBRPD displays information in six categories, two of which are found in ST. The categories listed under ST are: 1. State Response Sites. 2. School Property Evaluation Program Properties (SCH) Please Note: Our reports list the above sites as DB Type (STATE). Other categories found in the SMBRPD are listed in our reports in the DB Types OT and VC. Each Category contains information on properties based upon the type of work taking place at the site. State Response Sites contains only known and potential hazardous substance release sites considered as posing the greatest threat to the public. School sites included in ST will be found within the SMBRPD's School Property Evaluation Program. CORTESE LIST-Pursuant to Government Code Section 65962.5, the Hazardous Waste and Substances Sites List has been compiled by Cal/EPA, Hazardous Materials Data Management Program to provide information about the location of hazardous materials release sites. Cortese List sites that fall under DTSC's guidelines for State Response sites are included in our reports in the ST category as are qualifying sites from the Annual Work Plan (formerly Bond Expenditure Plan) and the historic ASPIS databases.

State Spills 90: CA EPA SLIC REGIONS 1 - 9- The California Regional Water Quality Control Boards maintain report of sites that have records of spills, leaks, investigation, and cleanups.

State/Tribal SWL: CA IWMB/SWRCB/COUNTY SWIS SOLID WASTE INFORMATION SYSTEM-The California Integrated Waste Management Board maintains a database on solid waste facilities, operations, and disposal sites throughout the state of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites. For more information on individual sites call the number listed in the source field.. Please Note: This database contains poor site location information for many sites in our reports; therefore, it may not be possible to locate or plot some sites in our reports. WMUDS-The State Water Resources Control Board maintained the Waste Management Unit Database System (WMUDS). It is no longer updated. It tracked management units for several regulatory programs related to waste management and its potential impact on groundwater. Two of these programs (SWAT & TPCA) are no longer on-going regulatory programs as described below. Chapter 15 (SC15) is still an on-going regulatory program and information is updated periodically but not to the WMUDS database. The WMUDS System contains information from the following agency databases: Facility, Waste Management Unit (WMU), Waste Discharger System (WDS), SWAT, Chapter 15, TPCA, RCRA, Inspections, Violations, and Enforcement's. Note: This database contains poor site location information for many sites in our reports; therefore, it may not be possible to locate or plot some sites in reports. ORANGE COUNTY LANDFILLS LIST- A list maintained by the Orange County Health Department.

State/Tribal LUST: CA SWRCB/COUNTY LUSTIS- The State Water Resources Control Board maintains a database of sites with confirmed or unconfirmed leaking underground storage tanks. Information for this database is collected from the states regional boards quarterly and integrated with this database. SAN DIEGO COUNTY LEAKING TANKS- The San Diego County Department of Environmental Health maintains a database of sites with confirmed or unconfirmed leaking underground storage tanks within its HE17/58 database. For more information on a specific file call the HazMat Duty Specialist at phone number listed in the source information field.

State/Tribal UST/AST: CA EPA/COUNTY/CITY ABOVEGROUND STORAGE TANKS LISTING-The Above Ground Petroleum Storage Act became State Law effective January 1, 1990. In general, the law requires owners or operators of AST's with petroleum products to file a storage statement and pay a fee by July 1, 1990 and every two years thereafter, take specific action to prevent spills, and in certain instances implement a groundwater monitoring program. This law does not apply to that portion of a tank facility associated with the production oil and regulated by the State Division of Oil and Gas of the Dept. of Conservation. SWEEPS / FIDS STATE REGISTERED UNDEGROUND STORAGE TANKS- Until 1994 the State Water Resources Control Board maintained a database of registered underground storage tanks statewide referred to as the SWEEPS System. The SWEEPS UST information was integrated with the CAL EPA's Facility Index System database (FIDS) which is a master index of information from numerous California agency environmental databases. That was last updated in 1994. We have included the UST information from the FIDS database in our reports for historical purposes to help our clients identify where tanks may possibly have existed. For more information on specific sites from individual paper files archived at the State Water Resources Control Board call the number listed with the source information. INDIAN LANDS UNDERGROUND STORAGE TANKS LIST- A listing of underground storage tanks currently on Indian Lands under federal jurisdiction. California Indian Land USTS are administered by US EPA Region 9.CUPA DATABASES & SOURCES- Definition of a CUPA: A Certified Unified Program Agency (CUPA) is a local agency that has been certified by the CAL EPA to implement six state environmental programs within the local agency's jurisdiction. These can be a county, city, or JPA (Joint Powers Authority). This program was established under the amendments to the California Health and Safety Code made by SB 1082 in 1994. A Participating Agency (PA) is a local agency that has been designated by the local CUPA to administer one or more Unified Programs within their jurisdiction on behalf of the CUPA. A Designated Agency (DA) is an agency that has not been certified by the CUPA but is the responsible local agency that would implement the six unified programs until they are certified. Please Note: We collect and maintains information regarding Underground Storage Tanks from the majority of the CUPAS and Participating Agencies in the State of California. These agencies typically do not maintain nor release such information on a uniform or consistent schedule; therefore, currency of the data may vary. Please look at the details on a specific site with a UST record in the First Search Report to determine the actual currency date of the record as provided by the relevant agency. Numerous efforts are made on a regular basis to obtain updated records.

State/Tribal IC: CA EPA DEED-RESTRICTED SITES LISTING- The California EPA's Department of Toxic Substances Control Board maintains a list of deed-restricted sites, properties where the DTSC has placed limits or requirements on the future use of the property due to varying levels of cleanup possible, practical or necessary at the site.

State/Tribal VCP: CA EPA SMBRPD / CAL SITES- The California Department of Toxic Substances Control (DTSC) has developed an electronic database system called Envirostor with information about sites that are known to be contaminated with hazardous substances as well as information on uncharacterized properties where further studies may reveal problems. The Site Mitigation and Brownfields Reuse Program Database (SMBRPD), formerly known as CalSites, is used primarily by DTSC's staff as an informational tool to evaluate and track activities at properties that may have been affected by the release of hazardous substances. The Voluntary Cleanup Program (VCP) category contains only those

properties undergoing voluntary investigation and/or cleanup and which are listed in the Voluntary Cleanup Program. Please Note: Our reports list the above sites as DB Type VC.

State Permits: CA EPA/COUNTY SAN DIEGO COUNTY HE17 PERMITS- The HE17/58 database tracks establishments issued permits and the status of their permits in relation to compliance with federal, state, and local regulations that the County oversees. It tracks if a site is a hazardous waste generator, TSD, gas station, has underground tanks, violations, or unauthorized releases. For more information on a specific file call the HazMat Duty Specialist at the phone number listed in the source information field. SAN BERNARDINO COUNTY HAZARDOUS MATERIALS PERMITS- Handlers and Generators Permit Information Maintained by the Hazardous Materials Division.

State Other: CA EPA/COUNTY SMBRPD / CAL SITES- The California Department of Toxic Substances Control (DTSC) has developed an electronic database system called Envirostor with information about sites that are known to be contaminated with hazardous substances as well as information on uncharacterized properties where further studies may reveal problems. The Site Mitigation and Brownfields Reuse Program Database (SMBRPD), formerly known as CalSites, is used primarily by DTSC's staff as an informational tool to evaluate and track activities at properties that may have been affected by the release of hazardous substances. The SMBRPD displays information in six categories, two of which are found in ST. The categories listed under OT are: 1. Unconfirmed Properties Referred to Another Local or State Agency (REF) 2. Properties where a No Further Action Determination has been made (NFA) Please Note: Our reports list the above sites as DB Type (OTHER). Other categories found in the SMBRPD are listed in our reports in the DB Types ST and VC. LA COUNTY SITE MITIGATION COMPLAINT CONTROL LOG- The County of Los Angeles Public Health Investigation Compliant Control Log. ORANGE COUNTY INDUSTRIAL SITE CLEANUPS- List maintained by the Orange County Environmental Health Agency. RIVERSIDE COUNTY WASTE GENERATORS-A list of facilities in Riverside County which generate hazardous waste. SACRAMENTO COUNTY MASTER HAZMAT LIST-Master list of facilities within Sacramento County with potentially hazardous materials. SACRAMENTO COUNTY TOXIC SITE CLEANUPS-A list of sites where unauthorized releases of potentially hazardous materials have occurred.

Federal IC / EC: EPA FEDERAL ENGINEERING AND INSTITUTIONAL CONTROLS- Superfund sites that have either engineering or an institutional control. The data includes the control and the media contaminated. RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM SITES (RCRA) – RCRA site that have institutional controls.

State/Tribal HW: CA EPA DEPARTMENT OF TOXIC SUBSTANCES CONTROL HAZARDOUS WASTE MANIFEST INVENTORY-Records maintained by the CA DTSC of Hazardous Waste Manifests used to track and document the transport of hazardous waste from a generator's site to the site of its final disposition.

EXECUTIVE SUMMARY

Consultant: ACC Environmental Consultants, Inc. (ACC)

Subject Property: 2820 Broadway, Oakland, California

Client: Peter Sullivan Associates

Location: The subject property is located on Broadway between 28th and 29th Streets at 2820 Broadway, Oakland, California (Figure 1).

Current Use: The subject property is occupied by Daewoo of Oakland, an automobile sales and service business.

Current Owner: Harvey J. and Donna J. Clar Trustees

Site

Characteristics: The subject property is occupied by a one-story plus mezzanine building and parking lot. The one-story building is occupied by a sales and service area and built-out offices. The asphalt-paved parking lot located to the rear of the building is occupied by new automobiles for sale and a concrete-lined car wash area that is no longer used.

Vicinity

Characteristics: The subject property and surrounding areas are zoned C-40, Community Thoroughfare Commercial Zone, by the City of Oakland Planning Department. A mixture of commercial and service businesses and residential buildings occupy the surrounding area.

Purpose: This Phase I Environmental Site Assessment (Phase I ESA) was performed to provide a record of the site conditions, and to evaluate what, if any, environmental issues exist on this site.

Recognized Environmental Conditions:

This assessment revealed evidence of the following Recognized Environmental Conditions at the subject property:

During the site reconnaissance, ACC observed a 360-gallon double-walled container of waste oil, a 360-gallon double-walled container of new oil, a 110-gallon container of used antifreeze, one 55-gallon drum of used oil filters, one 55-gallon drum of motor oil, five 16-gallon containers of lubricant, and a solvent parts washer. ACC did not observe any leaks or spills associated with any of the materials observed at the subject property with the exception of a fresh oil spill located adjacent to the waste oil container. The materials and wastes stored at the subject property is above the State of California Health and Safety Code (HSC) 25506(b) threshold levels for reporting (an amount equal to or greater than 500 pounds, 55 gallons, or 200 cubic feet at standard temperature

or pressure). ACC requested information regarding Daewoo of Oakland from the City of Oakland Fire Department Office of Emergency Services (COFD/OES), but no file was available for review. Based on the quantities of materials stored at the subject property, a Hazardous Materials Business Plan (HMBP) is required. It is ACC's opinion that the presence of these materials and wastes poses a low potential to impact the environment. ACC recommends that an HMBP be filed with COFD/OES.

Additional Observations:

The following observations were made during this assessment:

A Phase I Environmental Site Assessment (ESA) was conducted for the subject property by Dames and Moore, Inc., and dated September 4, 1997. According to that ESA, Dames and Moore was informed that a gasoline underground storage tank (UST) was present on the eastern portion of the property and that soil sampling and analysis had been performed; however, no information regarding the UST or the sampling was available for Dames and Moore's review. In January 1998, Bamer Construction determined that there were no USTs at the subject property by using ground penetrating radar and a magnetometer. Two suspect areas were identified and excavated to 5.5 feet, but no USTs were located. Based on this investigation, Bamer Construction concluded that no USTs are present at the subject property. ACC did not observe any evidence indicating the presence of a UST at the subject property. In addition, based on a review of historical Sanborn Fire Insurance Maps, agency records, and building permits, no information was obtained indicating the presence of a UST at the subject property.

ACC performed an asbestos survey on the subject property. The results will be submitted under separate cover.

During the site reconnaissance, ACC did not observe the presence of any chipped and/or peeling paint within the interior or exterior of the building. The subject property contains a structure constructed prior to 1978, which may have painted surfaces that meet the definition of lead-based paint. Lead was used in most paints until the 1950's. In 1978, the Consumer Product Safety Commission banned paints containing lead in excess of 0.06% by weight for most non-industrial paints. There are state and federal occupational safety and health (OSHA) regulations and Housing and Urban Development (HUD) guidelines that are designed to protect residents and workers who disturb lead based paint. A lead-based paint survey performed by a California Certified Lead Inspector is recommended if construction work is performed that disturbs the painted surfaces by such means as manual demolition, sanding, or scraping.

Within 1.0 mile of the subject property, there are several sites with documented releases of hazardous substances and/or petroleum products. In accordance with ASTM Standards, this report addresses sites that, based on their locations, have the potential to impact the subject property. There is no documented evidence that constituent plumes originating from any of these sites have migrated to the subject property.

1.0 INTRODUCTION

On behalf of Peter Sullivan Associates (hereinafter referred to as Client), ACC Environmental Consultants, Inc., (ACC), performed a Phase I Environmental Site Assessment (Phase I ESA) for the property identified as 2820 Broadway, Oakland, California (hereinafter referred to as the "subject property"). This Phase I ESA is performed to provide a record of the site conditions at the subject property.

1.1 Purpose and Scope of Services

The purpose of this Phase I ESA is to assess the potential for adverse environmental impact from current and historical practices on the subject property and surrounding area.

The following tasks were performed in accordance with the Scope of Services (Appendix A).

- Site reconnaissance of the subject property to investigate for recognized environmental conditions.
- A historical review of the use and improvements made to the subject property.
- A review of available geologic and hydrogeologic literature concerning the property and surrounding area.
- Interviews of persons familiar with the history of the subject property.
- Review of appropriate federal, state, and local regulatory agencies to reveal known hazardous wastes sites or significant leaks or spills of hazardous materials which may have occurred at the subject property and immediate vicinity.

No radon survey was conducted as there is no documented evidence suggesting excessive radon levels in the Oakland area (*State of California-Department of Health Services, "California Statewide Radon Survey - Interim Results," March 1990*).

1.2 Limitations and Exceptions to Agreement

ACC has performed the services for this project in accordance with our proposal, and within current standards of the American Society for Testing and Materials (ASTM) for Phase I Environmental Site Assessments. No guarantees are either expressed or implied. The records search was limited to reasonably ascertainable information and a site reconnaissance.

The investigation was limited to a search for recognized environmental conditions at the subject property. The term recognized environmental condition means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that

generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

There is no investigation that is thorough enough to preclude the presence of hazardous materials that presently, or in the future, may be considered hazardous at the site. Because regulatory evaluation criteria are constantly changing, concentrations of constituents presently considered low may, in the future, fall under more stringent regulatory standards that require remediation.

The site reconnaissance was limited to visual observation of surface conditions at the site. Interviews with public agency personnel were conducted. Reasonably ascertainable information was reviewed. This approach reflects current ASTM standards unless the information obtained as part of this work suggests the need for further investigation. No warranty or guarantee of site conditions is intended.

Where there is a conflict between the environmental database and ACC's actual knowledge with regard to the distance and direction from the subject property of sites listed on the database, information obtained by ACC from the site reconnaissance will be used. Whenever feasible, ACC will note such conflict within the text of the report.

The investigation addresses recognized environmental conditions at the subject site. However, certain conditions, such as those listed below may not be revealed:

- 1) naturally occurring toxic materials in the subsurface soils, rocks, water or toxicity of onsite flora;
- 2) toxicity of substances common in current habitable environments, such as stored household products, building materials, and consumables;
- 3) biological pathogens;
- 4) constituent plume below sampled or observed surface from remote source;
- 5) constituents or constituent concentrations that do not violate present regulatory standards, but may violate future standards; and
- 6) unknown site contamination, such as "midnight" dumping and/or accidental spillage which may occur following the site visit by ACC.

Opinions and judgments expressed herein, which are based on our understanding and interpretation of current regulatory standards, should not be construed as legal opinions. This document and the information contained herein have been prepared solely for the Client and any reliance on this report by third parties not authorized by the Client shall be at such party's sole risk.

1.3 Limiting Conditions

ACC was unable to visually inspect the roof.

2.0 SITE DESCRIPTION

2.1 Location and Legal Description

The subject property is located on Broadway between 28th and 29th Streets at 2820 Broadway in Oakland, California (Figure 1). The subject property is identified as assessor parcel number (APN) 9-685-69-1 by the Alameda County Assessor's Office (Figure 5).

2.2 Site and Vicinity Characteristics

The subject property consists of a one-story plus mezzanine building located on the western portion of the property and an asphalt-paved parking lot on the remainder of the property. The subject property is approximately 0.367 acres in size. The subject property and surrounding area is zoned C-40, Community Thoroughfare Commercial Zone, by the City of Oakland Planning Department. A mixture of commercial and service businesses and residential buildings occupy the surrounding area.

2.3 Descriptions of Structures and Improvements

The subject property consists of a one-story plus mezzanine building that is approximately 16,000 square feet, a small shed located to the rear of the building, a concrete-lined wash area, and an asphalt-paved parking lot used to store new cars. The front portion of the building consists of a showroom and office space. The mezzanine level in this area also consists of office space. The rear portion of the building is used to service cars and store automobile parts and materials. This portion of the property also contains a mezzanine level, which is used to store automobile parts.

2.4 Environmental Liens or Specialized Knowledge

ACC was not informed of any environmental liens associated with the subject property.

2.5 Current Uses of the Property

The subject property is occupied by Daewoo of Oakland, an automobile sales and service business.

2.5.1 Proposed Use of the Property

ACC was not informed of the proposed use of the subject property.

2.6 Past Uses of the Subject Property

ACC reconstructed a brief history of the subject property through a review of Sanborn Fire Insurance Maps, historic records on file at the City of Oakland Building Department (COBD), Polk and Haines City Directories, and aerial photographs available at Pacific Aerial Surveys. A listing of Sanborn Fire Insurance Maps, Polk and Haines City Directories, and aerial photographs reviewed can be found in section 7.0 of this report.

- Circa 1903 -
Circa 1911: According to Sanborn Fire Insurance Maps, the subject property was vacant.
- Circa 1916: According to information available at COBD, a permit to construct a one-story garage building was issued.
- Circa 1933: According to information available at COBD, a permit to construct a steel service station building was issued.
- Circa 1935: According to information available at COBD, the building was used as a garage.
- Circa 1945: According to information available at COBD, the building was used as an auto show room and offices.
- Circa 1950 -
Circa 1954: According to Sanborn Fire Insurance Maps, the subject property was occupied an auto sales room and car servicing.
- Circa 1958 -
Circa 1973: According to Sanborn Fire Insurance Maps and information available at COBD, the subject property was occupied by Glass Company Sales and Service business.
- Circa 1977: According to information available at COBD, the subject property was occupied by Classic Motor Cars.
- Circa 1981 -
Circa 1985: According to Haines City Directories, the subject property was occupied by 4 Wheel Parts Wholesaler.
- Circa 1987 -
Present: According to the Haines City Directories, information available at COBD, and based on visual observations, the subject property was and continues to be occupied by a car dealership and car servicing businesses.

2.7 Current and Past Uses of Adjacent Properties

2840 Broadway, Adjacent Property to the Northeast

- Circa 1903: According to Sanborn Fire Insurance Maps, this property was vacant.
- Circa 1911: According to Sanborn Fire Insurance Maps, this property was occupied by a garage.
- Circa 1930: Based on a review of aerial photographs, this property was occupied by a building. ACC was unable to determine the nature of the business occupying this business.
- Circa 1950: According to Sanborn Fire Insurance Maps, this property was occupied by a new and used automobile show room.
- Circa 1952 –
Circa 1962: According to Sanborn Fire Insurance Maps, this property was occupied by an auto top shop.
- Circa 1967 –
Circa 1994: According to Polk and Haines City Directories, this property was occupied by King Kovers Inc., automobile seat covers.
- Circa 1996: Based on a review of aerial photographs, this property continued to be occupied by the same building. ACC was unable to determine the nature of the business occupying this building.
- Present: Based on visual observations, this property was and continues to be occupied by King Kover's Classic Cars.

2800 Broadway, Adjacent Property to the Southwest

- Circa 1903 –
Circa 1911: According to Sanborn Fire Insurance Maps, this property was occupied by two dwellings.
- Circa 1930: Based on a review of aerial photographs, this property was occupied by a building. ACC was unable to determine the nature of the business occupying this business.
- Circa 1950 –
Circa 1962: According to Sanborn Fire Insurance Maps, this property was occupied by a wholesale electrical supply business and three retail stores.

Circa 1967 -
Circa 1990: According to Polk and Haines City Directories, this property was occupied by Galaxy Lighting Company.

Circa 1997 -
Present: According to Haines City Directories and based on visual observations, this property was and continues to be occupied by King Kover's Auto Seat Covers.

288 28th Street, Adjacent Property South

Circa 1902 -
Circa 1911: According to Sanborn Fire Insurance Maps, this property was occupied by a dwelling.

Circa 1930: Based on a review of aerial photographs, this property was occupied by a building. ACC was unable to determine the nature of the business occupying this business.

Circa 1950 -
Circa 1954: According to Sanborn Fire Insurance Maps, this property was occupied by a warehouse.

Circa 1959 -
Circa 1962: According to Sanborn Fire Insurance Maps, this property was occupied by a motor rebuilding shop and warehouse.

Circa 1967 -
Present: According to Polk and Haines City Directories and based on visual observations, this property was continues to be occupied by Automotive Exchange Inc., an auto repair facility.

295 29th Street, Adjacent Property to the Northeast

Circa 1903 -
Circa 1911: According to Sanborn Fire Insurance Maps, a portion of this property was occupied by a dwelling. The remainder of the property appeared to be vacant.

Circa 1930: Based on a review of aerial photographs, this property was occupied by a building. ACC was unable to determine the nature of the business occupying this business.

Circa 1950 -
Circa 1959: According to Sanborn Fire Insurance Maps, this property was occupied by a warehouse, carpentry shop, and a storage yard.

- Circa 1962 –
Circa 1973: According to Sanborn Fire Insurance Maps and Polk and Haines City Directories, this property was occupied by an automobile service business and an automobile storage yard.
- Circa 1977 –
Circa 1983: Based on a review of aerial photographs, this property was occupied by a building and an adjoining storage yard. ACC was unable to determine the nature of the business occupying this business.
- Circa 1985 –
Present: According to Haines City Directories and based on visual observations, this property was and continues to be occupied by an auto body shop.

2835 Broadway, Adjacent Property to the Northwest

Sanborn Fire Insurance Maps provided by VISTA did not cover this property.

- Circa 1930 –
Circa 1959: Based on a review of aerial photographs, this property was occupied by a building and an adjoining parking lot. ACC was unable to determine the nature of the business occupying this business.
- Circa 1967 –
Circa 1976: According to Polk and Haines City Directories, this property was occupied by American Auto Upholstery Seat Covers.
- Circa 1977 –
Circa 1996: Based on a review of aerial photographs, this property was occupied by a building and an adjoining parking lot. ACC was unable to determine the nature of the business occupying this business.
- Present: Based on visual observations, this property no longer contains a building and is used to store Daewoo automobiles.

280 28th Street, Adjacent Property to the South

- Circa 1903 –
Circa 1977: According to Sanborn Fire Insurance Maps and based on a review of aerial photographs, this property was occupied by numerous residential buildings.
- Circa 1983 –
Present: Based on a review of aerial photographs and visual observations, this property was and continues to be occupied by Valdez Plaza, senior citizen housing.

3.0 RECORDS REVIEW

3.1 Physical Setting

The subject property is at 2820 Broadway between 28th and 29th Streets in Oakland, California. The soils beneath the property consist of Quaternary Alluvium overlying Franciscan bedrock that comprised the Piedmont Hills to the northeast of the site. Bedrock is likely to occur at a depth of greater than 50 feet beneath the property. The soils beneath the site can be expected to consist primarily of fine grain soils (silts and clays), with the majority of the shallow groundwater movement occurring in thin sand and gravel layers.

According to subsurface investigations performed in the vicinity of the subject property, groundwater is encountered between 6.8 and 9.7 feet below ground surface (bgs) and groundwater flow direction was determined to be to the west/northwest.

3.2 Government Environmental Agency Record Review

"Table 1: Records Review" lists the government environmental agency databases ACC reviewed. Shaded cells indicate that, in accordance with ASTM guidelines, the Environmental Database was not searched to the corresponding distance. The site assessment report obtained from VISTA is included as Appendix B. When locations and distances reported by VISTA were observed to be incorrect, ACC amended the information to provide a more accurate assessment.

TABLE 1: RECORDS REVIEW						
<i>Environmental Database</i>	<i>Subject Site</i>	<i>Within 1/8 mile</i>	<i>1/8 - 1/4 mile</i>	<i>1/4 - 1/2 mile</i>	<i>1/2 - 1 mile</i>	<i>Total</i>
National Priority List	No	0	0	0	0	0
Resource Conservation and Recovery Act (RCRA) Corrective Action Sites	No	0	0	0	0	0
State Priority List	No	0	0	0	0	0
State Contaminant List	No	0	0	2		2
CERCLIS Sites/No Further Remedial Action Planned (NFRAP) Sites	No	0	0	1		1
RCRIS Treatment, Storage and Disposal Facilities	No	0	0	0		0
Leaking Underground Storage Tank (LUST) Database	No	13	13	23		49
California Solid Waste Landfills (SWLF), Incinerators, or Transfer Stations Database	No	0	0	0		0
Underground Storage Tank Database	No	9	6			15
Aboveground Storage Tank Database	No	0	0			0
Emergency Response Notification System (ERNS) Database	No	3				3
RCRA Large Quantity Generators	No	1				1
RCRA Small Quantity Generators	Yes	10				11
SLIC	No	0				0

3.2.1 Subject Property

The subject property appears on the RCRA Small Quantity Generator database. A detailed description can be found in Section 3.2.8 of this report.

3.2.2 State Contaminant List (SCL)

The SCL, also known as the California Calsites database, includes both known and potential hazardous waste sites. Two-thirds of these sites have been classified, based on available information, as needing "No Further Action" by the Cal-EPA, DTSC. The remaining sites are in various stages of review and remediation to determine if a problem exists at the site. Several hundred sites have been remediated and are considered certified. Some of these sites may be in long term operation and maintenance. This database is maintained by the Cal-EPA, DTSC. There are two sites listed on the SCL that are located within 0.5-mile of the subject property. Neither of the two sites are located within 0.125-mile of the subject property. Based on the distance and the downgradient location of these sites relative to the subject property, the potential to impact the subject property is considered to be low. In addition, because the responsible parties have been identified, should constituents originating at these sites have an impact on the subject property, it is unlikely that the owner of the subject property would be held responsible.

3.2.3 CERCLIS NFRAP Sites

NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. This database is maintained by the US-EPA. There is one site listed on the NFRAP database that is located within 0.5-mile of the subject property. This site is not located within 0.125-mile of the subject property. Based on the distance and the downgradient location of this site relative to the subject property, the potential to impact the subject property is considered to be low. In addition, because the responsible parties have been identified, should constituents originating at these sites have an impact on the subject property, it is unlikely that the owner of the subject property would be held responsible.

3.2.4 LUST Database

The LUST database contains sites that have had unauthorized releases of hazardous materials from underground storage tanks (USTs). This database is maintained by the California Regional Water Quality Control Board (RWQCB). Based on findings of the Lawrence Livermore Study, performed for the California State Water Resources Control Board to improve and streamline its Leaking Underground Storage Tank Guidelines, ACC does not consider petroleum hydrocarbon sites further than 0.125-mile (660 feet) from the subject property to be significant when assessing potential offsite impacts. Specifically, the Lawrence Livermore Study found that 90 percent of benzene (a carcinogenic and highly mobile constituent of gasoline) plumes extend no further than 250 feet from

the source. Thus, it is ACC's practice to review only LUST sites located within 0.125 mile of the subject property. There are 49 sites listed on the LUST database that are located within 1.0-mile of the subject property. Thirteen of these 49 sites are located within 0.125-mile of the subject property. Six of these 13 sites have been granted case closure by Alameda County Health Care Services Agency (ACHCSA) and are thus not considered to have had an impact on the subject property. The following is a discussion of the seven remaining sites:

Site Name: Broadway Volkswagon
Site Address: 2740 Broadway
Gradient Direction: Up/Crossgradient
Distance Direction: Approximately 0.01 mile to the South
Radius Map: Figure 6, Mapped Site #1

Discussion: According to information available at ACHCSA, four USTs from three different areas of the property were removed in August 1988. In January 1989, three monitoring wells were installed and groundwater flow direction was determined to be predominantly to the northwest. In May 1991, five soil borings were advanced at the site, and one of the borings was converted into a monitoring well. During this investigation, samples analyzed revealed the presence of volatile organic compounds (VOCs) in the groundwater. In October 1991, two additional monitoring wells were installed and groundwater flow direction was determined to be to the east/northeast. Again, VOCs were detected at elevated concentrations in the groundwater. In 1996, a dual-phase extraction system was installed to address the petroleum constituent contamination. In June of 1999, ACHCSA requested the responsible party to conduct an investigation for the VOCs in conjunction with the UST related investigations to determine whether the VOC contamination is a result of an offsite source. In December 1999, a letter was submitted to ACHCSA indicating that the VOC contamination is a result of offsite contamination because no VOCs were found in any of the soil samples collected from the hoist removal sampling and the VOC contamination exists at a level below the impervious clay barrier. No additional information was available for review. ACC did not review any information indicating that the plume from this property has impacted the subject property. Because this site is located up/crossgradient to the subject property, the potential to impact the subject property is considered to be moderate. ACC recommends that the file on this property be periodically reviewed to determine if this site may be impacting the subject property.

Site Name: Chevron
Site Address: 2630 Broadway
Gradient Direction: Downgradient
Distance Direction: Approximately 0.05 mile to the Southwest
Radius Map: Figure 6, Mapped Site #2

Discussion: According to information available at ACHCSA, four USTs were removed from the property in 1998. Prior to this, USTs had been removed in 1982 and replaced with fiberglass USTs. In March 1982, eight monitoring wells had been installed as a result of a tank leak. According to a

Soil Overexcavation Remediation Report dated April 3, 1999, hydrocarbon impacted soil was removed in the area of the former pump island. Based on this and the fact that the source of contamination has been removed, the report concluded that it would be expected that the concentration of hydrocarbon constituents detected in the monitoring wells would decline over time. According to the most current groundwater monitoring report, elevated concentrations of total petroleum hydrocarbons as gasoline (TPHg), benzene, and methyl tertiary butyl ether (MTBE) is present in the groundwater. Based on the downgradient location of this site relative to the subject property, the potential to impact the subject property is considered to be low to moderate. In addition, because the responsible party has been identified, should constituents originating at this site have an impact on the subject property, it is unlikely that the owner of the subject property would be held responsible.

Site Name: Broadway Motors
Site Address: 2560 Webster Street
Gradient Direction: Downgradient
Distance Direction: Approximately 0.11-mile to the Southwest of the subject property
Radius Map: Figure 6, Mapped Site #3

Discussion: ACC requested information regarding this site from ACHCSA but no file was available for review. According to information available at the City of Oakland Fire Department Office of Emergency Services (COFD/OES), three gasoline USTs and one waste oil UST were removed from the property in December 1995. Subsequent soil and groundwater investigations have been ongoing since 1996. According to a Cambria Groundwater Monitoring Report dated March 30, 2000, chlorinated solvents are present in the groundwater beneath this site and elevated levels of TPHg, benzene, and MTBE is present in the groundwater. Based on the distance and downgradient location of this site, the potential to impact the subject property is considered to be low. In addition, because the responsible party has been identified, should constituents originating at this site have an impact on the subject property, it is unlikely that the owner of the subject property would be held responsible.

Site Name: Hagstrom Property
Site Address: 265 30th Street
Gradient Direction: Downgradient
Distance Direction: Approximately 0.10-mile to the Northeast of the subject property
Radius Map: Figure 6, Mapped Site #4

Discussion: According to information available at ACHCSA, two USTs were removed from this site in 1995 and another UST was removed from the property in 1997. Grab groundwater samples collected from two borings advanced in 1992 revealed TPHg at 2,900 parts per billion (ppb). In January 2000, ACHCSA wrote a letter indicating that this property was under review for regulatory agency closure. Based on this information, the distance, and the downgradient location of this site, the potential to impact the subject property is considered to be low. In addition, because the responsible party has been identified, should constituents originating at this site have an impact

on the subject property, it is unlikely that the owner of the subject property would be held responsible.

Site Name: Robert Ruth Burrows Trust
Site Address: 260 30th Street
Gradient Direction: Downgradient
Distance/Direction: Approximately 0.12 mile to the Northeast of the subject property
Radius Map: Figure 6, Mapped Site #5

Discussion: According to information available at ACHCSA, a 1,000-gallon waste oil UST was closed in place. Soil samples collected from beneath the UST indicated elevated concentrations of TPHg, TPH as diesel (TPHd), and TPH as oil and grease. No groundwater samples were collected. ACHCSA requested in August 1999 that a workplan be submitted to determine if the groundwater has been impacted by the fuel release. No recent information was available for review. Based on the distance and the downgradient location of this site relative to the subject property, the potential to impact the subject property is considered to be low.

Site Name: Roy Anderson Paints
Site Address: 3080 Broadway
Gradient Direction: Downgradient
Distance/Direction: Approximately 0.12 mile to the Northeast of the subject property
Radius Map: Figure 6, Mapped Site #6

Discussion: According to information available at ACHCSA, a 350-gallon waste oil UST was removed in 1993. As a result of soil sample concentrations, one monitoring wells was installed in 1994. According to a May 2000 letter prepared by ACHCSA, additional groundwater sampling is required before case closure can be considered. No additional information was available for review. Based on the distance and the downgradient location of this site relative to the subject property, the potential to impact the subject property is considered to be low.

Site Name: Grant School
Site Address: 417 29th Street
Gradient Direction: Downgradeint
Distance/Direction: Approximately 0.08 mile to the Northwest of the subject property
Radius Map: Figure 6, Mapped Site #7

Discussion: ACC requested information from ACHCSA and COFD/OES, but no information was available for review. According to the VISTA database, an unauthorized release form was submitted in 1992 indicating that diesel fuel had impacted the soil. No other information was available. Based on the distance and the downgradient location of this site relative to the subject property, the potential to impact the subject property is considered to be low.

3.2.5 Underground Storage Tanks (USTs)

The UST database contains sites that have registered UST(s). This database is maintained by the RWQCB. In accordance with ASTM Standards (ASTM Standard Practice E 1527-97), ACC reviews the UST database for only the subject property and adjoining properties. There are 15 sites listed on the UST database that are located within 0.25-mile of the subject property. None of these sites includes the subject property or any adjoining properties.

3.2.6 ERNS Database

The ERNS database contains records of reported releases of oil and hazardous substances. The database contains information from spill reports made to federal authorities including the EPA, US Coast Guard, the National Response Center and the Department of Transformation. In accordance with ASTM Standards (ASTM Standard Practice E 1527-97), ACC reviews the ERNS database for only the subject property. There are three sites listed on the ERNS database that are located within 0.125-mile of the subject property. These sites do not include the subject property.

3.2.7 RCRA Large Quantity Generator Database

RCRA large quantity generators are facilities that generate more than 1000 kilograms of hazardous wastes per month. The generator database is maintained by the USEPA. There is one site listed on the database that is located within 0.25 mile of the subject property. In accordance with ASTM Standards (ASTM Standard Practice E 1527-97), only the subject property and adjoining properties are required to be reviewed. Neither the subject property nor any adjoining properties are identified on this database.

3.2.8 RCRA Small Quantity Generator Database

The RCRA Small Quantity Generator Database contains sites that generate less than 1,000 kilograms of hazardous waste per month. This database is maintained by the US-EPA. In accordance with ASTM Standards (ASTM Standard Practice E 1527-97), ACC reviews the Small Quantity Generator database for only the subject property and adjoining properties. There are 11 sites listed on the Small Quantity Generator database that are located within 0.25-mile of the subject property. This database includes the subject property. The following is a discussion of the subject property:

Site Name:	Saturn of Oakland
Site Address:	2820 Broadway
Gradient Direction:	Subject Property
Distance/Direction:	Subject Property
Radius Map:	Figure 6, Mapped Site Subject Property

Discussion: According to information provided by the US-EPA, Saturn of Oakland generated hazardous waste in the form of waste oil, waste antifreeze, and asbestos residue. No other

information was provided to ACC. Based on the fact that this business no longer occupies the subject property, this business no longer poses a potential to impact the subject property.

3.2.9 Other Sites of Potential Environmental Concern

ACC did not identify any others sites of potential environmental concern.

3.3 Historical Use Information

For a history of the subject property see Section 2.6, Past Uses of the Property.

3.4 Additional Record Sources

ACC reviewed the City of Oakland Building, Planning and Fire Department records. All relevant information from these sources is discussed elsewhere in this report.

4.0 INFORMATION FROM SITE RECONNAISSANCE AND INTERVIEWS

On Thursday, June 1, 2000, Ms. Jyotika Patel (ACC Environmental Assessor) conducted a site reconnaissance at the subject property. No evidence of the following items was found at the property during the reconnaissance:

- aboveground high power transmission lines
- aboveground storage tanks (ASTs)
- active or inactive underground storage tanks (USTs)
 - fill ports
 - vent pipes
- electrical transformers
- monitoring well(s)
- paint booths
- oil burners
- oil/water separators
- pipes of unknown use
- ponds, pits, culverts, lagoons
- railroad spur
- stained surfaces
- stressed vegetation
- storm drain
- sump
- wastewater other than ordinary domestic sewage

4.1 Recognized Environmental Concerns

- regulated quantities of hazardous materials
- regulated quantities of hazardous wastes
- suspect asbestos containing building materials (ACBM)
- suspect lead-based paint

4.1.1 Regulated Quantities of Hazardous Materials and Wastes

During the site reconnaissance, ACC observed a 360-gallon double-walled container of waste oil, a 360-gallon double-walled container of new oil, a 110-gallon container of used antifreeze, one 55-gallon drum of used oil filters, one 55-gallon drum of motor oil, five 16-gallon containers of lubricant, and a solvent parts washer. ACC did not observe any leaks or spills associated with any of the materials observed at the subject property with the exception of a fresh oil spill located adjacent to the waste oil container. The materials and wastes stored at the subject property is above the State of California Health and Safety Code (HSC) 25506(b) threshold levels for reporting (an amount equal to or greater than 500 pounds, 55 gallons, or 200 cubic feet at standard temperature or pressure). ACC requested information regarding Daewoo of Oakland from the City of Oakland Fire Department Office of Emergency Services (COFD/OES), but no file was available for review. Based on the quantities of materials stored at the subject property, a Hazardous Materials Business Plan (HMBP) is required. It is ACC's opinion that the presence of these materials and wastes poses a low potential to impact the environment. ACC recommends that an HMBP be filed with COFD/OES.

4.1.2 Suspect ACBM

ACC performed an asbestos survey on the subject property. The results will be submitted under separate cover.

4.1.3 Suspect Lead-Based Paint

During the site reconnaissance, ACC did not observe the presence of any chipped and/or peeling paint within the interior or exterior of the building. The subject property contains a structure constructed prior to 1978, which may have painted surfaces that meet the definition of lead-based paint. Lead was used in most paints until the 1950's. In 1978, the Consumer Product Safety Commission banned paints containing lead in excess of 0.06% by weight for most non-industrial paints. There are state and federal occupational safety and health (OSHA) regulations and Housing and Urban Development (HUD) guidelines that are designed to protect residents and workers who disturb lead based paint. A lead-based paint survey performed by a California Certified Lead Inspector is recommended if construction work is performed that disturbs the painted surfaces by such means as manual demolition, sanding, or scraping.

4.2 Physical Setting Analysis

Within 0.5 mile of the subject property, there are several sites with documented releases of hazardous substances and/or petroleum products. Because regional groundwater flow direction is northwest in the vicinity of the subject property, constituents originating at sites to the southeast would be more likely to migrate to the subject property than would constituents originating at sites in other positions relative to the subject property. There is no documented evidence that constituent plumes originating from any sites have migrated to the subject property.

4.3 Other Conditions of Concern

A Phase I Environmental Site Assessment (ESA) was conducted for the subject property by Dames and Moore, Inc., and dated September 4, 1997. According to that ESA, Dames and Moore was informed that a gasoline underground storage tank (UST) was present on the eastern portion of the property and that soil sampling and analysis had been performed; however, no information regarding the UST or the sampling was available for Dames and Moore's review. In January 1998, Bamer Construction determined that there were no USTs at the subject property by using ground penetrating radar and a magnetometer. Two suspect areas were identified and excavated to 5.5 feet, but no USTs were located. Based on this investigation, Bamer Construction concluded that no USTs are present at the subject property. ACC did not observe any evidence indicating the presence of a UST at the subject property. In addition, based on a review of historical Sanborn Fire Insurance Maps, agency records, and building permits, no information was obtained indicating the presence of a UST at the subject property.

5.0 CONCLUSIONS

ACC has performed a Phase I ESA in conformance with the scope of services and within the scope and limitations of ASTM Standard Practice E 1527-97, of the property identified as 2820 Broadway, Oakland, California. Exceptions to, or deletions from, the Standard Practice are described within the report.

This assessment revealed evidence of the following Recognized Environmental Conditions at the subject property:

During the site reconnaissance, ACC observed a 360-gallon double-walled container of waste oil, a 360-gallon double-walled container of new oil, a 110-gallon container of used antifreeze, one 55-gallon drum of used oil filters, one 55-gallon drum of motor oil, five 16-gallon containers of lubricant, and a solvent parts washer. ACC did not observe any leaks or spills associated with any of the materials observed at the subject property with the exception of a fresh oil spill located adjacent to the waste oil container. The materials and wastes stored at the subject property is above the State of California Health and Safety Code (HSC) 25506(b) threshold levels for reporting (an amount equal to or greater than 500 pounds, 55 gallons, or 200 cubic feet at standard temperature or pressure). ACC requested information regarding Daewoo of Oakland from the City of Oakland Fire Department Office of Emergency Services (COFD/OES), but no file was available for review.

Based on the quantities of materials stored at the subject property, a Hazardous Materials Business Plan (HMBP) is required. It is ACC's opinion that the presence of these materials and wastes poses a low potential to impact the environment. ACC recommends that an HMBP be filed with COFD/OES.

The following observations were made during this assessment:

A Phase I Environmental Site Assessment (ESA) was conducted for the subject property by Dames and Moore, Inc., and dated September 4, 1997. According to that ESA, Dames and Moore was informed that a gasoline underground storage tank (UST) was present on the eastern portion of the property and that soil sampling and analysis had been performed; however, no information regarding the UST or the sampling was available for Dames and Moore's review. In January 1998, Bamer Construction determined that there were no USTs at the subject property by using ground penetrating radar and a magnetometer. Two suspect areas were identified and excavated to 5.5 feet, but no USTs were located. Based on this investigation, Bamer Construction concluded that no USTs are present at the subject property. ACC did not observe any evidence indicating the presence of a UST at the subject property. In addition, based on a review of historical Sanborn Fire Insurance Maps, agency records, and building permits, no information was obtained indicating the presence of a UST at the subject property.

ACC performed an asbestos survey on the subject property. The results will be submitted under separate cover.

During the site reconnaissance, ACC did not observe the presence of any chipped and/or peeling paint within the interior or exterior of the building. The subject property contains a structure constructed prior to 1978, which may have painted surfaces that meet the definition of lead-based paint. Lead was used in most paints until the 1950's. In 1978, the Consumer Product Safety Commission banned paints containing lead in excess of 0.06% by weight for most non-industrial paints. There are state and federal occupational safety and health (OSHA) regulations and Housing and Urban Development (HUD) guidelines that are designed to protect residents and workers who disturb lead based paint. A lead-based paint survey performed by a California Certified Lead Inspector is recommended if construction work is performed that disturbs the painted surfaces by such means as manual demolition, sanding, or scraping.

Based on the site reconnaissance, the history search performed on the subject property, and a review of government agency files, ACC does not believe that there are any remaining negative impacts on the subject property and does not believe that any further action is necessary.

6.0 AGENCY REVIEW

The following governmental agencies were contacted to obtain the information in this report:

Jurisdiction	Agency
Federal	U.S. Environmental Protection Agency, Region IX, San Francisco
State and Regional	Regional Water Quality Control Board, Oakland State of California Environmental Protection Agency, Department of Toxic Substances Control, San Francisco
County and Local	Alameda County Assessor's Office Alameda County Health Care Services Agency, Environmental Health Division City of Oakland Office of Emergency Services City of Oakland Planning Department City of Oakland Building Department

8.0 INTERVIEWS

Daewoo Service Manager

APPENDIX I
RESUMES

PROFESSIONAL SUMMARY

Mr. Stivala has over 23 years of environmental program and project management. He manages environmental assessments, remedial alternative testing, and environmental support for construction and demolition projects. He is adept at negotiating environmental solutions with regulators, attorneys and clients. In his capacity as a senior environmental professional, he has managed environmental programs in the oil & gas and aviation industries and manages environmental risks for variety of other clients. Mr. Stivala's regional experience spans California, Oregon, Washington, Florida, and Georgia.

Mr. Stivala is well-versed in the management and preparation of a range of technical reports including site investigation work plans, corrective action plans, remedial action plans, feasibility studies, site conceptual models, groundwater monitoring reports, soil management plans, and Phase I & II ESAs. Mr. Stivala's experience with environmental assessment techniques includes various drilling methods - hollow-stem auger, direct-push, sonic, mud rotary, air rotary, and cone penetrometer testing. He also has significant experience with high resolution in situ assessment techniques including Membrane Interface Probe (MIP), Laser Induced Fluorescence (LIF/UVOST), Rapid Optical Sensing Technology (ROST), Ultraviolet Induced Fluorescence (UVIF), Hydraulic Profiling Tool (HPT), Cone Penetrometer Technology (CPT). He is also knowledgeable various subsurface media sampling and testing protocols, analytical methods, and forensic data interpretation. Mr. Stivala has managed and implemented several remedial alternatives including multi-phase extraction, air sparging, bioventing, pump & treat, in situ chemical oxidation, surfactant application, permeable reactive barriers, and excavation. Mr. Stivala is familiar with that assessment and remediation of a variety of contaminants including petroleum hydrocarbons, chlorinated solvents, PCBs, and metals.

Mr. Stivala is dedicated to protecting workers' well-being by fostering a strong culture of health and safety in the workplace. Mr. Stivala has extensive experience with behaviour-based health & safety philosophies such as the Loss Prevention System. He has led safety-related near-miss/loss investigations, performed field safety observations and feedback sessions, as well as tracked company's regional use of health & safety documentation tools.

PROJECT EXPERIENCE

Environmental Management

- **Retail Petroleum Portfolio Management / Western U.S. From 2005 to present.** Program and project management of retail petroleum portfolios for Chevron Environmental Management Company, Phillips 66 Company, ConocoPhillips, and ExxonMobil, and sites. Responsible for stewarding teams of project managers and scientists in the assessment and remediation of petroleum-impacted sites of varying sizes. Personally managed portfolios of over 40 projects at a time with annual revenue of over \$2.5 million. Sites consist of bulk fuel terminals and service stations. Implemented assessment technologies, such as Membrane Interface Probe, Rapid Optical Screening Tool, and Ultraviolet Induced Fluorescence. Managed implementation of remedial alternatives including multi-phase extraction, air sparging, ozone sparging, bio sparging, in situ chemical oxidation, Trap & Treat (inoculated- activated carbon injection) and surfactant enhanced aquifer remediation. Presented remedial action plans to Chevron's in-house remediation
- **Airport Facility Site Assessment & Remediation / Nationwide. Managed large-scale contamination assessment and remediation projects at San Francisco, Oakland, Sacramento and Miami Airports from 1991 to 2008.** Contaminants included petroleum, chlorinated solvents, and metals. Performed jet fuel bulk storage facilities assessments at San Francisco, Oakland and Sacramento International Airports. Major clients include United Airlines, SFO Fuel, PS Trading, Chevron, and Dade County Aviation Department. Interfaced with airport and regulatory agency officials. Coordinated "air-side" activities under expedited schedules. Performed fuel-hydrant line closures and provided environmental support for airport facilities modification projects.

- **Fractured Bedrock Investigation / San Francisco International Airport.** Field manager for bedrock drilling project. Supervised drilling of multilevel monitoring wells up to 500 feet deep into fractured bedrock as part of a chlorinated solvent assessment. Down-hole geophysical logging was performed to identify fracture zones. Logging included caliper, resistivity, gamma, and video logging. Wells were drilled using a mud and air rotary rig.
- **Aviation Fuel Storage Facilities Demolitions / San Francisco, Oakland Airports and Sacramento.** Program manager for the decommissioning of aviation fuel distribution facilities. Orchestrated demolition of bulk jet fuel storage tank facilities and subsequent assessment and remediation. Negotiated with regulatory authorities and outside consultants. Post-demolition remediation included excavation and in situ chemical oxidation.
- **San Francisco Bay Area Landfill Monitoring, Assessment and Redevelopment Projects - implemented storm water and groundwater monitoring programs for landfills in Brisbane, Santa Clara, and Lincoln, California.** Oversaw drilling for geotechnical and environmental assessment for landfills undergoing redevelopment. Provided oversight of landfill excavation for of a major subsurface electrical installation.
- **Former Solvent Packaging Facility Remediation, Union City, CA.** Maintained a large groundwater/soil remediation system located at a former solvent packaging facility. Chlorinated solvent contamination from the facility extended a quarter mile offsite and was captured using 22 groundwater extraction wells pumping from two separate aquifers. Air treatment was performed using a resin absorption unit.
- **Railroad Facilities Assessment and remediation/ Western United States.** Managed environmental site assessment projects at Union Pacific Railroad sites in California and Oregon. Projects consisted of assessments of petroleum, solvents, metals, and pesticides contamination.

PROFESSIONAL REGISTRATIONS

- Registered Professional Geologist (CA #7780)

EDUCATION

- B.S., Geological Sciences, University of Miami, Coral Gables, FL

TRAINING AND CERTIFICATIONS

- OSHA 40-Hour Hazardous Waste Operations Training
- OSHA 8-Hour Hazardous Waste Operations Supervisor Training
- Loss Prevention System (LPS) Training
- BATC Refinery Safety Training

PROFESSIONAL SUMMARY

Ms. Lundin has experience performing and managing Phase I Environmental Site Assessments (ESAs), Transaction Screen Assessments (TSAs), Property Condition Assessments (PCAs), and industrial hygiene investigations. She develops report templates in support of due diligence and industrial hygiene service lines. Ms. Lundin is responsible for leading staff scientists, industrial hygienists, project managers, field technicians, and subcontractors, as well as coordinating large-scale microbial remediation oversight contracts.

PROJECT EXPERIENCE

Market Sector

- **Modified Environmental Site Assessments and FCC-Required Environmental Compliance Studies / Telecommunications Sector / California and Nevada.** Performed and managed over 200 Modified Phase I ESAs or FCC-required environmental compliance studies in support of telecommunication service expansion and antenna placement.
- **Environmental Site Assessments / Agricultural, Residential, Commercial, Industrial, and Government Sectors / Northern California.** Performed and managed ASTM-compliant ESAs in support of pending real estate transactions. Completed a Phase I ESA for a 12.9-acre site in San Rafael that was previously utilized as a manufactured gas plant, corporation yard, and gasoline service station; each of the prior uses had contributed to onsite contamination which required further action. Performed a Phase I ESA of a 123-acre site in Salinas which was previously utilized as a tire-manufacturing plant and was delisted from the National Priority List.
- **Transaction Screen Assessments / Education, Residential, Commercial, and Industrial Sectors / Northern California.** Performed and managed ASTM-compliant TSAs and developed a report template that complies with the revised ASTM standard and current SBA guidelines.
- **Property Condition Assessments / Residential, Commercial, and Industrial Sectors / Northern California.** Performed PCAs to include observation and report of the physical condition and maintenance of a property and its improvements. PCA reports addressed items significant for the continued operation of a facility in its current usage and occupancy, consistent with comparable properties of similar age. One PCA included an assessment of a 44-acre marina in Alameda which contained 10 piers, 530 berths, and approximately 37 buildings constructed between the early 1900's and 1984.
- **Combustible Materials Assessment / Data Center / San Jose, CA.** Developed a scope of work/report template and completed the combustible materials assessment. The report was well-received by City of San Jose Fire Department staff who commented on its thoroughness and accuracy.
- **Indoor Air Quality, Odor, and Microbial Investigations / Education, Residential, Commercial Industrial, and Government Sectors / Northern California.** Performed indoor air quality, odor, and microbial investigations at numerous site buildings and campuses throughout the San Francisco Bay Area. Investigations included visual inspections, HVAC inspections, collection of indoor air quality measurements, bulk and/or air sample collection, interpretation of findings and analytical results, report preparation, and site-specific remediation strategies.
- **Asbestos, Lead, and Dust Air Monitoring / Construction, Education, Residential, Commercial, and Industrial Sectors / Northern California.** Conducted air monitoring and oversight of construction, emergency spill/release cleanup, or abatement activities. Directed subcontractors and responded to emergency situations in adherence with the established scope of work. Recommended scope

modifications in response to tenant concerns. Represented the environmental consulting company at regularly scheduled board meetings regarding abatement status.

- **Limited, Comprehensive, and Demolition ACM Surveys / Education, Residential, Commercial, and Industrial Sectors / Northern California and Oregon.** Identified, quantified and sampled suspect asbestos-containing materials (ACMs). Interpreted laboratory analytical data and provided recommendations to the client, in report format, for ACM management procedures.
- **AHERA Surveys / Education Sector / Northern California.** Re-inspected asbestos-containing building materials within multiple district campuses according to AHERA protocol. Photographed areas of concern and provided recommendations to clients, in report format, for ACM management procedures.
- **Spill Prevention, Control, and Countermeasure (SPCC) Plan / Data Center / San Francisco, CA.** Completed an SPCC plan for a light industrial data center with several backup generators and aboveground storage tanks.
- **Groundwater Monitoring / Commercial and Industrial Sectors / Northern California.** Performed groundwater monitoring activities in accordance with scheduled monitoring events designed to evaluate groundwater contamination at petroleum service stations and industrial facilities.

EDUCATION

- > B.S., Environmental Science with a Biological Emphasis, University of California, Berkeley, CA, 2004

TRAINING AND CERTIFICATIONS

- > OSHA 40-Hour Hazardous Waste Operations Training and Refresher (CA, 2010)
- > 16-Hour Microbial Investigations, Assessments and Remediation in the Indoor Environmental Training
- > Course conducted by ATC (CA, 2008)
- > Certified Asbestos Consultant, State of California, Division of Occupational Safety and Health (CA, #09-4483, 2009)
- > Medic First Aid and CPR Training (CA, 2009)

PROFESSIONAL AFFILIATIONS

- > Commercial Real Estate Women, East Bay Chapter – Membership Committee Co-Chair
- > The Environmental Information Association, Member

PROFESSIONAL SUMMARY

Ms. Thai has been involved in the environmental field since 2012. She has been active in the environmental consulting field as a staff scientist with Cardno ATC's San Ramon, California office since 2014. Ms. Thai is responsible for the completion of Phase 1 Environmental Site Assessments (ESAs), Transaction Screen Procedures (TSPs), soil and groundwater data interpretation, and report preparation under the oversight of an Environmental Professional (EP). Tasks include, but are not limited to, site reconnaissance, public record searches, aerial photograph reviews, and personal interviews. Ms. Thai has strong experience with identifying areas of environmental concern as well as a good working knowledge of government regulations relating to environmental issues.

PROJECT EXPERIENCE

Environmental Due Diligence

- **Environmental Site Assessments / Agricultural, Education, Residential, Commercial, Industrial, and Government Sectors / Northern CA.** Performed ASTM-compliant Phase I and Phase II ESAs for confidential clients throughout Northern California. Target sites include vacant properties, commercial/retail, multi-family housing, and former service station facilities. Project duties included conducting interviews, gathering current and historical site information, observing the physical aspects of the site, and report preparation.
- **Transaction Screen Procedures / Various Clients / Northern CA.** Performed TSPs for confidential clients throughout Northern California. Target sites include commercial offices, event facilities, single-family housing, and Project duties included conducting interviews, gathering current and historical site information, observing the physical aspects of the site, completing a Prior Use Report (PUR), and completing a Site Inspection Questionnaire.
- **Environmental Health and Safety Trainings / Government Sectors / Northern CA.** Conducted OSHA and EPA-approved environmental health and safety trainings and workplace safety trainings to commercial employees in contact with various chemicals. Training topics included chemical safety, infectious diseases, implementing an OSHA-approved Injury and Illness Prevention Program, and developing green workplace practices.

EDUCATION

- M.U.P., Urban and Regional Planning, San Jose State University, CA, 2014.
- B.S., Environmental Economics and Policy, University of California, Berkeley, CA, 2011
- B.S., Development Studies, University of California, Berkeley, 2011

TRAINING AND CERTIFICATIONS

- OSHA 40-Hour Hazardous Waste Operations Training (29 CFR 1910.120, #HW-52708, 2015)
- Certified Asbestos Inspector, State of California, Division of Occupational Safety and Health (CA, #37-6131, 2015)

APPENDIX J
RECORDS OF COMMUNICATION

From: [Foott, Alicia, Env. Health](#) on behalf of [dehcupafilereview, Env. Health](#)
To: [Kim Thai](#)
Subject: RE: File review for 2800, 2820, and 2855 Broadway, Oakland
Date: Thursday, August 13, 2015 9:08:21 AM
Importance: High

Thank you for contacting Alameda County Department of Environmental Health (ACDEH) Certified Unified Program Agency (CUPA) File Review Request:

We received your request and we do show hazmat records for the following address:

ADDRESS: 2820 BROADWAY, OAKLAND

I have availability FRIDAY AUGUST 21ST @ 9:00 AM.

Our office makes files available by appointment only for review on Thursdays and Fridays from **9:00 AM until 12:00 noon.**

I WILL NOT SCHEDULE YOU UNTIL YOU ACCEPT THIS MEETING REQUEST.

You also have a couple of options:

1. You have the option to bring your own scanning or copy device to reproduce the files in the format you need, at no cost from us.
Or we can make a black and white copy for \$0.10 per page.
2. Also, you can hire a copy service to come and make the copies for you.

Please reply if this time and what method works best for you.

Thank you,

See the address below and click the link for directions.

<https://maps.google.com/maps?q=1131+Harbor+Bay+Parkway,+Alameda,+CA&ie=UTF-8&hl=en>

Our office makes files available by appointment only for review on Thursdays and Fridays from 9:00 AM until 12:00 noon.

If you have any other questions please call 510-567-6809

Best regards,

Alicia Foott
File Review Administrator, Hazmat CUPA

Subject: Public Records Request No. 2015-08-0069
Date: Monday, August 10, 2015 2:22:21 PM

Dear Kim Thai,

Thank you for your request. We have searched our records and have no records that respond to your below request for:

Premier Hyundai of Oakland
2820, 2800, and 2850 Broadway
Oakland

If you have any questions or concerns, please call or e-mail me.

Sincerely,

Rochelle Reed

Dear Mr. Thai:

We have received your Public Records Act Request for records from the Department of Toxic Substances Control.

After a thorough review of our files we have found that no such records exist at this office pertaining to the site/facility referenced above.

We would like to inform you about Envirostor, a database that provides information and documents on over 5,000 DTSC cleanup sites. EnviroStor can be accessed at: <http://www.envirostor.dtsc.ca.gov/public>. Also, a computer is available in the Central Files of each DTSC Regional Office for use by community members to view EnviroStor.

If you have any questions, would like further information regarding your request or would like an appointment to visit Berkeley's Central Files, please contact me at (510) 540-3800.

Sincerely,

André J. Alexander

LABORATORY REPORTS

THIS SECTION NOT USED

APPENDIX L
OTHER SUPPORTING DOCUMENTATION

GENERALIZED GEOLOGIC
MAP OF CALIFORNIA

Geologic maps show the distribution of rocks exposed at the surface of the earth as well as other geologic information. Rocks are grouped according to age and origin on the map. Age of the rocks is considered to be the geologic time at which the rock formed (see Geologic Time Scale on back page). Rocks are classified according to their origin:

1) sedimentary rocks form as accumulations of mineral material in oceans (marine) or on continents (continental); 2) igneous rocks form by crystallization of minerals from molten rock. Molten rock beneath the earth's surface is called magma. Magma cools slowly to form coarse-grained igneous rocks such as granite. Molten rock erupted on the earth's surface from volcanoes is called lava and forms volcanic rocks; 3) metamorphic rocks form from preexisting rocks by mineralogical, chemical, and/or structural changes. Other geologic information shown on geologic maps includes structural features such as faults. Faults are fractures in the earth's crust where rocks have moved relative to each other.

The map shown here is generalized from more detailed, larger scale maps. On this map, rocks exposed in California are placed in one of seven units:

Quaternary sedimentary rocks. Gravel, sand, silt, and clay deposited mostly in valleys and lowlands onshore. There are some marine sedimentary rocks of this age in California.

Tertiary sedimentary rocks. Sandstone, shale, and conglomerate usually deposited in relatively shallow marine water near the continental margin. These rocks are exposed mostly in the coastal regions of California.

Tertiary and Quaternary volcanic rocks. Lava flows erupted from volcanoes. These rocks make up much of the Cascade Range and the Modoc Plateau, and are widespread in eastern California. They also occur in coastal regions.

Mesozoic sedimentary rocks. Sandstone and shale that were deposited mostly in the ocean. The rocks make up the bulk of the Coast Ranges. They also occur in coastal southern California.

Mesozoic granitic rocks. A wide variety of coarse-grained igneous rocks formed when magma that intruded the earth's crust cooled and was later exposed by erosion. Granitic rocks occur throughout the state, but are most common in the mountainous areas such as the Klamath Mountains, the Sierra Nevada, and the Peninsular Ranges. Some granitic rocks are Cenozoic, Paleozoic, and Precambrian.

Mesozoic and Paleozoic metamorphic rocks. Metasedimentary and metavolcanic rocks that make up much of the Klamath Mountains and the Sierran foothills. They are also common in the Basin and Range, the Mojave Desert, the Transverse Ranges, and the Peninsular Ranges.

Serpentinized ultramafic rocks. A special type of rock that does not fit into the three common categories of rocks. The most common rock is serpentine, the California state rock (see CGS Note 14).

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
 Web Soil Survey URL: <http://websoilsurvey.nrcs.usda.gov>
 Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Alameda County, California, Western Part
 Survey Area Data: Version 10, Sep 25, 2014

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Oct 7, 2013—Nov 1, 2013

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquiries (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of Cardno ATC #75 on Aug 05, 2015.

TARGET PROPERTY

2820 Broadway
Oakland, CA 94611

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeyman:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000

Permit Type: Bldg -

New Permit Number: 101000000405

Status: Valuation: \$1,000,000.00

Contractor Company: OWNER-BUILDER

Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

Hazardous Materials

Does your facility have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or is regulated under more restrictive inventory local reporting requirements (shown below if present); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?

Yes

Underground Storage Tank(s) (UST)

Does your facility own or operate underground storage tanks?

No

Hazardous Waste

Is your facility a Hazardous Waste Generator?

Yes

Does your facility treat hazardous waste on-site?

No

Is your facility's treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?

No

Does your facility consolidate hazardous waste generated at a remote site?

No

Does your facility need to report the closure/removal of a tank that was classified as hazardous waste and cleaned on-site?

No

Does your facility generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month, or accumulate at any time, 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate or accumulate at any time more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste.

No

Is your facility a Household Hazardous Waste (HHW) Collection site?

No

Excluded and/or Exempted Materials

Does your facility recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?

No

Does your facility own or operate ASTs above these thresholds? Store greater than 1,320 gallons of petroleum products (new or used) in aboveground tanks or containers.

No

Does your facility have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release prevention Program (CalARP)?

No

Additional Information

No additional comments provided.

OAKLAND FIRE DEPARTMENT

CLOSURE APPLICATION HAZARDOUS MATERIALS STORAGE FACILITIES

Please complete and submit this form prior to the closure of any hazardous materials storage system or facility. Based on the information submitted below, and the complexity of the closure, a written Closure Plan may be required (see guidelines).

1. Facility Information: *(Note: Print or type all information.)*

Facility Name:	(Previously) Connell Nissan	Facility Phone:	(510) 588-2100

Comments:

Volvo Dealer and service facility that opened recently. Double-wall tanks (345 gal.) used for storage of both waste oil and new oil.

needs:

- ① Apply for EPA ID # by calling (916) 324-1781. You will need this number to dispose of waste antifreeze. (Antifreeze Environmental Service, 325-2666)
- ② Waste oil tank and drum of waste antifreeze must be clearly labeled as hazardous waste.
- ③ Waste oil must be disposed of at least every 90 days; antifreeze must be disposed of 90 days after you have 30 gal., or once a year, whichever comes sooner.
- ④ Keep receipts for waste disposal in a file on facility, for previous 3 years.

HAZARDOUS WASTE GENERATOR INSPECTION REPORT

STID #: 2709 FACILITY NAME: SATURN OF OAKLAND PG. 2 OF 2

SUPPLEMENTAL FORM

1. Provide hazardous waste label for waste oil tank - one was issued during inspection - also fill out labels on used oil filter drums.
2. Keep all hazardous waste storage containers closed when not adding to them.
3. Keep copies of all hazardous waste disposal receipts and manifests on site for 3 years.
4. Provide an approved hazardous waste management training program for the employees and document it on form provided during the inspection.
5. Provide a hazardous waste generator contingency and preparedness plan and submit a copy to this office within 30 days.
6. The used batteries are recycled by Howard Jones Battery Co. of Belmont (415) 349-3820. This must be properly documented with bill of lading receipts as indicated on DTSC handout issued during inspection.

Note: The waste oil and oil filters are recycled by Evergreen Env. Services Co. of Newark (800) 972-5284 about once a month or as needed. The waste antifreeze tank is pumped out by Antifreeze Environmental Co. of Palo Alto (415) 325-2666 about every 2 months. There is a small parts washer that is serviced about every month by Safety Kleen Corp. of Oakland (832-7942). The wiping rags are serviced weekly by Cintas Corp. of San Leandro (800) 933-0789.

EAST BAY MUNICIPAL UTILITY DISTRICT

2014 ANNUAL WATER QUALITY REPORT

DROUGHT ALERT

Our water supply is critically low for 2015.

The drought continues. Tougher measures and more emergency supplies are needed. Please visit ebmud.com/drought for the latest information on water supplies and tips to conserve.

EBMUD is proud to report that in 2014, your drinking water surpassed every state and federal public health requirement.

YOUR WATER

In the East Bay, 1.3 million customers rely on high-quality EBMUD water. Almost all of EBMUD's water comes from the 577-square mile watershed of the Mokelumne River on the western slope of the Sierra Nevada. This area is mostly national forest, EBMUD-owned lands and other undeveloped lands little affected by human activity.

The Mokelumne watershed collects snowmelt from Alpine, Amador and Calaveras counties, which flows into Pardee Reservoir near the town of Valley Springs. During times of high water demand, system maintenance or for operational needs, EBMUD may draw water from local watersheds. During drought emergencies, EBMUD may use water from the Sacramento River to meet customer needs.

Three large aqueducts carry water 90 miles from Pardee Reservoir to the East Bay. EBMUD's network of reservoirs, pipelines, pumps and water treatment plants are put to work to provide great water quality every day, as reflected in this report.

Dismal precipitation in 2014 meant EBMUD reservoirs did not refill back to normal levels. EBMUD used supplemental water supplies from the Sacramento River for the first time.

In early summer, 23,000 acre-feet of Sacramento River water was diverted into Upper San Leandro and San Pablo reservoirs in the East Bay — about a month's supply. A half-billion dollar investment by ratepayers for dry-year infrastructure combined with solid efforts by customers to conserve precious water helped us weather one of the driest years in California history. Drought conditions have worsened. Visit ebmud.com/drought for the latest news.

HOW WE MANAGE WATER QUALITY

Regardless of source, all water is treated at an EBMUD water treatment plant before it reaches your tap.

EBMUD takes many steps to ensure high water quality including managing watershed lands and reservoirs, treating the water, operating a complex distribution system, maintaining facilities and addressing customer concerns.

In laboratories and in the field, EBMUD samples and tests your water extensively to ensure it is safe to drink. We look for more than 100 substances including microorganisms, pesticides, herbicides, asbestos, lead, copper, petroleum products and by-products of industrial and water treatment processes. More than 20,000 laboratory tests each year ensure the safety of your drinking water.

WHERE YOUR WATER IS TREATED

Most of the year, your drinking water comes from Pardee Reservoir in the Sierra Nevada mountains. Before reaching your tap, most water is treated at a facility in Walnut Creek, Orinda or Lafayette.

Some parts of EBMUD's service area draw water year-round from EBMUD's Sierra Nevada supply. During times of high water

demand, system maintenance or for operational needs, drinking water may come from local watersheds and may be treated at a different facility. Some customers receive water from multiple sources at different times of the year.

WHAT WAS DETECTED AND REPORTED

In 2014, EBMUD treated raw water from multiple sources, including Sacramento River water, and consistently provided high-quality drinking water, surpassing every public health requirement set by the State Water Resources Control Board (State Board) and the U.S. Environmental Protection Agency.

Drinking water requirements were formerly set by the California Department of Public Health. On July 1, 2014, the Drinking Water Program was transferred to the State Board.

The tables on the following pages show the measured amounts of contaminants detected in 2014 or in the most recent year sampling was required. Water is sampled in EBMUD's source waters, at water treatment plants, in the distribution system or at customers' taps.

Although EBMUD tests for more than 100 substances, this report only lists those detected at or above the state or federal level required for reporting. In this case, no news is good news!

Table 1 – Regulated for public health

These contaminants are regulated to protect your health. They have maximum contaminant levels, known as primary MCLs, set by the State Board or U.S. Environmental Protection Agency. These levels are set as close to the established public health goals as is economically and technologically feasible.

Table 2 – Regulated for drinking water aesthetics

These contaminants are regulated to maintain aesthetic standards to maintain the odor, taste and appearance of drinking water. They have maximum contaminant levels, also known as secondary MCLs, set by the State Board.

Table 3 – Unregulated with no established maximum contaminant level

Water agencies are required to report these contaminants if detected, but no maximum contaminant levels have been established by the State Board or U.S. Environmental Protection Agency.

Table 4 – Other parameters of interest to customers

These water measurements, such as pH, hardness and alkalinity, may be of interest to customers.

ARE YOU READY FOR A WATER EMERGENCY?

Natural disasters or other emergencies can temporarily cut off the East Bay's water supply or affect water quality. Be prepared with your own supplies until water is restored. This will be your water supply while emergency management agencies set up temporary water distribution in your community.

You need one to two gallons per day per person for at least 3-7 days. Store extra water for pets and frequent visitors. Store water in clean, airtight, food-grade plastic containers and keep in a dark, cool place.

In case of a water quality emergency, be prepared to disinfect your tap water. In your emergency kit include a heat source, such as a camping stove, plus a clean pot to boil water for two minutes before consuming. If power supplies are disrupted or boiling water is not possible, disinfect your water with 1/4 teaspoon (16 drops) of liquid bleach per gallon of water and then let stand for 30 minutes. Add measuring spoons, a clean medicine dropper and a sealed bottle of regular, unscented liquid bleach to your emergency supplies.

HOW TO READ THE WATER QUALITY TABLE

Find your location on the map on page 2. Note which water treatment plant(s) serve that area.

- Go to the table on page 4 to find the contaminant you are interested in.
- Column two notes the unit of measurement.
- Column three lists the most recent year the contaminant was tested.
- Column four lists the state or federal goal. At that amount or lower, there is no known or expected risk to health from its presence in drinking water. Not all listed contaminants have goals set by the California or US Environmental Protection Agency.
- Column five notes the highest amount the State Board or U.S. Environmental Protection Agency allows. This amount is usually not as low as the public health goal in column four.
- Column six lists the average amount detected across the EBMUD service area or at designated locations.
- Find the column that corresponds to the water treatment plant(s) that serve you. This is the amount of the contaminant detected in your area's water. All reported contaminants were detected at amounts lower than the highest amount allowed (column 5) by the State Board and U.S. Environmental Protection Agency.
- The last column lists how the contaminant typically gets into your drinking water.

EBMUD 2014 ANNUAL WATER QUALITY REPORT

In 2014, your drinking water was consistently the highest quality, surpassing every public health requirement set by the State Water Resources Control Board (State Board), Division of Drinking Water and the U.S. Environmental Protection Agency.

KEY TERMS

- AL** Regulatory action level. The concentration which, if exceeded, triggers treatment or other requirements that a water system must follow.
- DBP** Disinfection by-products. These are formed when chlorine and/or ozone reacts with natural constituents in water. Trihalomethanes (THMs), haloacetic acids (HAAs), chlorate, and bromate are disinfection by-products.
- MCL** Maximum contaminant level. The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs or MCLGs as is economically and technologically feasible. Secondary MCLs address odor, taste and appearance of drinking water.
- MCLG** Maximum contaminant level goal. The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency.
- MRDL** Maximum residual disinfectant level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial pathogens.
- MRDLG** Maximum residual disinfectant level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial pathogens.
- Notification level** A health-based advisory level established by the State Board for chemicals in drinking water that lack MCLs.
- Primary drinking water standard** These standards regulate contaminants that affect health by setting MCLs and MRDLs along with their monitoring, reporting and water treatment requirements.
- PHG** Public health goal. The level of a contaminant in drinking water below which there is no known or expected risk to health. Public health goals are set by the California Environmental Protection Agency.
- TOC** Total organic carbon. A measure of organic compounds that are present in the water.
- Turbidity** A measure of the cloudiness of water. Turbidity is monitored because it is a good indication of the effectiveness of our filtration systems.
- TT** Treatment technique. A required process intended to reduce the level of a contaminant in drinking water.
- 90th percentile** A measure that indicates 90 percent of the samples had a lower result.

ABBREVIATIONS

- gpg** grains per gallon
- NA** not applicable
- NL** notification level
- NTU** nephelometric turbidity unit, a measure of the cloudiness of water.
- pCi/L** picocuries per liter, a measure of radioactivity.
- ppm** parts per million. One ppm is like 32 seconds in one year.
- ppb** parts per billion. One ppb is like 3 seconds in 100 years.
- ppt** parts per trillion. One ppt is like 3 seconds in 100,000 years.
- TON** threshold odor number, a measure of odor in water.
- µS/cm** microsiemens per centimeter, a measure of electrical conductance.

NOTES

- a)** Chloramine residuals in the distribution system are measured as an equivalent quantity of chlorine. When the chloramine residual cannot be detected, the sample is further analyzed to ensure that microbiological water quality is in compliance with the regulations. **b)** Highest running annual average. **c)** EBMUD is required by state law to add fluoride to drinking water to help prevent dental decay in consumers. Current regulations require that fluoride levels in the treated water be maintained between 0.7 to 1.4 ppm with an optimum dose of 0.8 ppm. Our monitoring showed that the fluoride levels in the treated water distribution system ranged from 0.05 to 1.0 ppm with an average of 0.8 ppm. Information about fluoridation, oral health and current issues is available at www.waterboards.ca.gov/drinking_water/certlic/drinkingwater/Fluoridation.shtml. **d)** See page 7 for additional information about lead and chromium in drinking water. **e)** Highest locational running annual average. **f)** Sampling locations are chosen to represent worst-case scenarios. **g)** All hexavalent chromium samples are in compliance with the new California MCL of 10 ppb. **h)** Sobrante water treatment plant was not in service when *Cryptosporidium* was detected.

* Grains per gallon (gpg) is a measure of water hardness. Knowing the amount can help improve the function of dishwashers, cooling equipment and other industrial processes. Refer to your appliance manufacturer's instruction manual for the optimum grains per gallon level.

WATER QUALITY REGULATIONS

In order to ensure that tap water is safe to drink, the U.S. Environmental Protection Agency and the State Water Resources Control Board (State Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Board regulations also establish limits for contaminants in bottled water.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

Microbial contaminants, such as viruses, bacteria and protozoa, such as *Cryptosporidium*, that may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.

Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.

Synthetic organic contaminants, such as pesticides and herbicides that may come from a variety of sources, including agriculture, urban storm water and residential uses.

Volatile organic chemical contaminants from industrial processes and petroleum production, and from gas stations, urban storm water runoff, agricultural application and septic systems.

Radioactive contaminants that can be naturally occurring or be the result of oil and gas production and mining activities.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants

and potential health effects is available from the U.S. Environmental Protection Agency's Safe Drinking Water Hotline at 800-426-4791 or online at www.epa.gov/safewater. Contact your healthcare provider or visit the Centers for Disease Control and Prevention website for guidelines on using tap water for health or medical purposes.

Cryptosporidium

Cryptosporidium is a microbial contaminant found in surface water throughout the United States. Although filtration is highly effective in removing *Cryptosporidium*, the most commonly used filtration methods cannot guarantee 100 percent removal.

Our monitoring indicates the presence of these organisms in one of our source waters. Current test methods cannot determine if the organisms are dead or are capable of causing disease. Ingestion of *Cryptosporidium* may cause abdominal infection with symptoms including nausea, diarrhea and abdominal cramps.

Cryptosporidium must be ingested to cause disease, and it may be spread through means other than drinking water. Most healthy individuals can overcome the disease within a few weeks. However, immuno-compromised people, infants and small children, and the elderly are at greater risk of developing life-threatening illness. We encourage these individuals to consult their physician regarding appropriate precautions to take to avoid infection.

Populations with low resistance

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, and some elderly and some infants can be particularly at risk to infections.

These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the USEPA Safe Drinking Water Hotline at 800-426-4791 or www.epa.gov/safewater.

REPORT A WATER QUALITY CONCERN

Do you have a question or concern about your water quality? If so call 866-403-2683. EBMUD inspectors respond to calls within one day regarding water which appears dirty, colored, or has foreign particles or unusual taste or odor.

Lead in drinking water

If present, elevated levels of lead can cause serious health problems. Pregnant women, infants and young children are typically more vulnerable to lead in drinking water than the general population.

Lead in drinking water is primarily from materials and components associated with lead service lines and home plumbing. EBMUD has replaced all lead water lines in its service area, but you may have lead in your home plumbing. It is possible that lead levels at your home may be higher than at other homes in the community as a result of materials used in your home's plumbing.

If you are concerned about elevated lead levels in your home's water, you may wish to have your water tested. If your water has been sitting for several hours, you can minimize the potential for lead exposure by running your faucet for 30 seconds to 2 minutes before using water for drinking or cooking. Capture and reuse this water for other uses such as watering ornamental plants.

Information on lead in drinking water, testing methods and steps you can take to minimize exposure is available from the U.S. Environmental Protection Agency Safe Drinking Water Hotline at 800-426-4791 or online at www.epa.gov/safewater/lead.

Fluoride and infant formula

Water fluoridation is a widely accepted practice and mandated by state law. It is proven to be safe and effective for preventing and controlling tooth decay. According to the American Dental Association and Centers for Disease Control and Prevention (CDC), it is safe to use optimally fluoridated water for preparing infant formula. If an infant is primarily fed infant formula prepared with fluoridated water, there may be an increased chance for mild enamel fluorosis, but enamel fluorosis does not affect the health of the infant or the health of the infant's teeth. To lessen this chance, deionized, purified, distilled or demineralized bottled water can be used some of the time to prepare infant formula.

If you have additional questions about fluoride, contact your health provider. Additional information can be found at the State Board www.waterboards.ca.gov/drinking_water/certlic/drinkingwater/Fluoridation.shtml or the CDC www.cdc.gov/fluoridation websites.

Chromium

Chromium is found naturally in the environment, in two forms: trivalent and hexavalent chromium. Both forms of chromium find their way into bodies of water through mineral deposits. Hexavalent chromium is also a byproduct of industrial manufacturing. Trivalent chromium is an essential human dietary element. When ingested, hexavalent chromium is a suspected carcinogen.

Currently, trivalent and hexavalent chromium are regulated together by the federal and state agencies. As of July 1, 2014, there is also a California maximum contaminant level (MCL) for hexavalent chromium of 10 parts per billion. EBMUD monitors for total chromium at our five treatment plants. Beginning in October 2013, EBMUD began collecting samples for hexavalent chromium. EBMUD is in compliance with the California MCL and will continue to meet all regulatory requirements.

**Subject: Limited Phase II Environmental Assessment Report
2800, 2820, and 2855 Broadway
Oakland, California
ATC Project 118EM01150407**

Dear Mr. Solar:

On behalf of Alliance Residential Company (Alliance), ATC Group Services (ATC) (formerly Cardno ATC), has prepared this Limited Phase II Environmental Site Assessment (Phase II ESA) Report for two properties at 2820 and 2855 Broadway in Oakland, California. The Phase II ESA was performed to assess subsurface environmental conditions at the properties prior to a potential property transaction.

A third property located at 2800 Broadway was included in the site assessment but is no longer part of the potential property transaction. Site assessment activities were performed at the property by ATC and by AEI Consultants (**Appendix A**). While the property at 2800 Broadway is no longer part of the property transaction, this report will provide limited discussion of the data for 2800 Broadway for context regarding 2820 and 2855 Broadway. The full data for all three properties are included on the figures, tables and appendices.

PROPERTY DESCRIPTION

The area investigated consisted of three irregularly-shaped parcels located at 2800, 2820, and 2855 Broadway, Oakland, Alameda County, California, 94611. According to information obtained from the Alameda County Assessor's Office, the property is identified as Assessor's Parcel Number (APN) 09-685-68 (2800 Broadway), 09-685-69-1 (2820 Broadway), and 09-686-03 (2855 Broadway). A site vicinity map is included as **Figure 1**. A site plan has been included as **Figure 2**.

The three properties are located within Alameda County in an area characterized by commercial and residential uses. Surface topography across the property and in the surrounding area generally slopes toward the south.

Premier Hyundai of Oakland, an automobile dealership and service shop occupies the properties. The property at 2820 Broadway is developed with a one story commercial building with a mezzanine, and was constructed circa 1916. The building occupies the west half of the property and contains a showroom, offices, and a service shop. The east half of the property is an asphalt-paved parking lot. The property at 2855 Broadway is an asphalt-paved parking area for used automobiles. The property at 2800 Broadway, which is not a part of the potential property transaction, is a one-story and mezzanine commercial building used for storage used for storage for automobiles.

PURPOSE OF THE ASSESSMENT

Cardno ATC performed the assessment to investigate the current and former automotive uses on the three properties, and the potential impact of a former leaking underground storage tank case at 2740 Broadway, which is located upgradient and adjacent to the south of 2800 Broadway.

PRE-ASSESSMENT ACTIVITIES

Prior to initiating field activities, ATC prepared a site specific Health and Safety Plan (HASP) for the site. The HASP complied with Title 29 of the Code of Federal Regulations (CFR) Section 1920.120(j), the California General Industry Safety Order (GISO) and Title 8, California Code of Regulations (CCR) Section 5192. A copy of the HASP was on-site during all field activities.

Prior to each drilling event, ATC marked proposed borings locations with white paint and notified Underground Service Alert (USA) to determine the locations of any subsurface utilities. Additionally, ATC subcontracted a private underground utility locator to identify potential subsurface utility conflicts with proposed boring locations.

ATC applied for and was granted permits for all soil borings prior to drilling activities. Copies of drilling permits are included in **Appendix B**.

SOIL AND GROUNDWATER ASSESSMENT

ATC's Phase II ESA consisted of collecting soil and groundwater samples for the purpose of further assessing the subsurface environmental conditions at these properties. The assessment consisted of drilling 22 direct-push borings, B-1 through B-22, throughout the three parcels. The work was performed between September 19 and November 6, 2015.
