Borings were completed using direct-push technology. Maximum depths of the borings were variable and was based on the observed depth of first groundwater. The deepest borings were drilled to 28 feet below ground surface (bgs). In most borings, soil samples were collected and used for geologic logging, field screening with a photoionization detector, and laboratory analysis. Borings where soil samples were not collected were at locations where soil samples were collected in the previous Phase II ESA performed by AEI. Soil samples were collected generally every four or five feet to the depth of first observed groundwater. Details of soil depths are summarized in **Tables 1 and 3**.

To collect grab groundwater samples, upon reaching the maximum depth of the boring, direct-push rods retrieved and a ¾-inch PVC screen and casing were inserted into the open borehole. Groundwater samples were then collected from the casing using an aboveground peristaltic pump with downhole tubing.

Upon completion of the sampling, the temporary well screen was removed and each borehole was backfilled with cement grout in accordance with Alameda County requirements.

Soil and groundwater samples were labeled, stored on ice and, transferred to a state-certified laboratory for chemical analysis under standard chain-of-custody protocol.

All samples were analyzed for volatile organic compounds (VOCs), and total petroleum hydrocarbons in the gasoline range (TPHg) by EPA Method 8260B, and total petroleum hydrocarbons in the diesel and oil range (TPHd and TPHo) by EPA Method 8015M.

Soil samples from B-1 through B-3, B-21 at 3 feet, and groundwater samples from borings B1 through B3 were also analyzed for CAM 17 metals using EPA Method 6010B (except for mercury, which was analyzed using EPA Method 7471A). Groundwater samples were laboratory filtered prior to metals analysis.

RESULTS

Site Specific Geology

Soils at these properties generally consist of silt, silty sand, silty clay, sandy clay, and clayey sand to the total depth explored of 28 feet bgs. The encountered soils were generally brown to dark brown in color. Clays are low to high plasticity and range from soft to very stiff. Coarser soils of silty sand and clayey sand are generally dense.

Groundwater was first encountered beneath the properties 15 feet bgs or deeper in a soft, loose, saturated layer. "Semi-confined" groundwater conditions may exist at the property as groundwater rises over a period of time to a higher elevation than the first encountered depth. Based on field observation and vertical contaminant distribution, ATC estimates the groundwater hydrostatic level is no higher than 12 feet bgs. Therefore, ATC considers the vadose zone to be the zone approximately from 0-12 feet bgs. Note that ground surface elevation of these properties varies.

The saturated layer is generally 1 to 2 feet thick but ranges up to 3 feet thick. The saturated layer generally consists of silty fine sand, silty clayey sand, sandy clay and others, or interbedded layers of silty sand and silty clay.

Soil boring logs are included in **Appendix C**.

Soil and Groundwater Analytical Results for 2855 and 2820 Broadway

A total of 43 soil samples, and 13 groundwater samples from 2855 and 2820 Broadway were submitted for laboratory analysis. Analytical results were tabulated and compared to the San Francisco Bay Regional Water Quality Control Board (RWQCB) Environmental Screening Levels (ESL) tables.

The analytical results for soil samples, and the ESLs for soil are presented in **Table 1** and **Table 3**. The analytical results for groundwater samples and the groundwater ESLs are presented in **Table 2** and **Table 4**. Laboratory reports are presented in **Appendix D**. The analytical results are discussed below.

SOIL

2855 Broadway

A total of 12 soil samples were collected from two soil borings (B15, and B16). Soil samples were analyzed for VOCs and TPH.

In soil sample B15-8', TPHg was reported at 12 mg/kg, TPHd was reported at 290 mg/kg, and TPHo was reported at 590 mg/kg. The concentrations of TPHd and TPHo exceeded the ESL for TPHd (100 mg/kg) and for TPHo (100 mg/kg). No other TPH detections were reported.

Several petroleum related VOCs were reported in two soil samples (B15-8', and B15-12') but all detected VOCs were below their respective ESLs.

2820 Broadway

A total of 29 soil samples were collected from seven soil borings (B1, B3, and B18 through B22). All soil samples were analyzed for TPH and VOCs. Additionally, selected soil samples were analyzed for metals. TPH exceeded the ESL in one soil sample (B21-3'), where TPHd was reported at 680 mg/kg (compared to an ESL of 100 mg/kg), and TPHo was reported at 3,100 mg/kg (compared to an ESL of 100 mg/kg). In that same soil sample, TPHg was reported at 40 mg/kg, below its ESL of 100 mg/kg. No other TPH detections were reported. Field personnel noted that shallow soils, to a depth of 3 feet bgs contained what appear to be metallic debris and soils we blackish in color.

VOCs were reported in two soil samples (B19-16', and B20-10'). All of the VOCs were below their respective ESLs. Only two VOCs were reported above the laboratory detection limit were TCE (B19-16'), and sec-butylbenzene (B20-10').

Metals analysis (California Assessment Metals, CAM 17) was conducted on nine soil samples collected from three soil borings (B1, B3 and B21). Metals concentrations were within typical background concentration ranges, and below the ESLs, except for one: soil sample (B21-3') contained concentrations of some metals that were above their respective ESLs, as set forth in the following bullets points:

- Antimony was reported at a concentration of 45 mg/kg, above the ESL of 40 mg/kg.
- Copper was reported at a concentration of 870 mg/kg, above the ESL of 230 mg/kg.
- Zinc was reported at a concentration of 960 mg/kg, above the ESL of 600 mg/kg.
- Lead was reported at a concentration of 1,500 mg/kg, above the ESL of 320 mg/kg.
- Arsenic was also detected above the ESL of 1.6 mg/kg, ranging from 2.8 mg/kg in B1-10' to 9.6 mg/kg in B3-24'. However, the average concentration of background arsenic in California soil has been reported to average 3.5 mg/kg and range up to 11 mg/kg (Kearney, 1996). Accordingly, arsenic appears to be within the range of normal background concentrations.

GROUNDWATER

2855 Broadway

Three groundwater samples (B11, B15, and B16) were collected and were analyzed for TPH and VOCs.

TPHd was reported at 480 µg/L in B-11, and 120 µg/L in B15, above the ESL of 100 µg/L. TPHo was reported at 460 µg/L in B11, also above the ESL of 100 µg/L. No other concentration of TPH in groundwater were reported.

Two VOCs were reported. Carbon tetrachloride was reported at 34 µg/L in B-11, and 4.8 µg/L in B16, above the ESL of 0.5 µg/L. Chloroform was also reported in the two samples but was below the ESL.

No other VOCs were reported above detection limits.

2820 Broadway

Nine groundwater samples (B1-W, B3-W, and B17 through B-23) were collected analyzed for TPH and VOCs. Two samples (B1-W and B3-W) were also analyzed for metals.

TPHg was reported in two groundwater samples (B-21 and B-23) in concentrations that exceed the groundwater ESL (100 µg/L). Concentrations were 800 µg/L in B-23 and 5,500 µg/L in B-21. TPHg was also reported at 75 µg/L in B-22.

TPHd was reported in nine groundwater samples in concentrations ranging from 95 µg/L in B-17 to 1,100 µg/L in B-21. TPHd was reported in six groundwater samples (B3-W, B-18, B-20, B-21, B-22 and B-23) in concentrations that exceed the groundwater ESL (100 µg/L).

TPHo was reported in six groundwater samples (B3-W, B-17, B-18, B-20, B-21 and B-22) in concentrations that exceed the groundwater ESL (100 µg/L). Concentrations ranged from 310 µg/L in B-17 to 3,400 µg/L in B-22.

VOCs were reported in 8 of the 9 groundwater samples. Seven samples (B3-W, B-17, B-18, B-19, B-20, B-21, and B-23) contained VOCs above the ESL. Not all of the VOCs are listed in the ESL table; however, VOCs that are listed in the ESL table, and were reported above their ESL, are discussed below.

- Benzene was reported in two samples: 16 µg/L in B-23 and 120 µg/L in B-21, above the ESL of 1 µg/L.
- Toluene was reported in two samples: 3.2 µg/L in B-23 and 42 µg/L in B-21, the latter of which was above the ESL for toluene of 40 µg/L.
- Ethylbenzene reported in two samples: 3.1 µg/L in B-23 and 83 µg/L in B-21, the latter of which was above the ESL for ethylbenzene of 30 µg/L.
- Total xylenes was reported in sample B-21 at a concentration of 210 µg/L, above the ESL for total xylenes of 20 µg/L.
- TCE was reported in 6 samples and ranged from 7.9 µg/L in B19 to 79 µg/L in B-23, all of which were above the ESL for TCE of 5 µg/L.
- Naphthalene was reported in sample B-21 at a concentration of 13 µg/L, above the ESL for naphthalene of 6.1 µg/L.
- Carbon tetrachloride was reported in two samples: 1.9 µg/L in B-17 and 0.8 µg/L in B-18, above the ESL of 0.5 µg/L.
- Additional VOCs were detected in some of the groundwater samples. They are listed on **Table 2**.

Metals analysis was conducted on groundwater samples B1-W and B3-W. All the metals were within below the ESLs, except for cobalt and nickel. The samples contained concentrations of cobalt and nickel above their respective ESLs:

- Cobalt was reported in two samples: 8.2 µg/L in BW-1, and 1.2 µg/L in B3-W, above the ESL of 3 µg/L.
- Nickel was reported in sample B1-W at a concentration of 18 µg/L, above the ESL of 8.2 µg/L.

Although the concentrations of cobalt and nickel exceeded ESLs, may be related to background levels of metals in sediments.

Laboratory analytical data is summarized in **Tables 1** through **Table 4**. Select data has been posted on **Figures 3** through **6**. Soil data posted on figures is from surface to 12 feet bgs. In ATC's opinion based on field observations and vertical chemical impact that the vadose zone extends to 12 feet bgs and below 12 feet bgs, the soil represents the saturated zone of the groundwater interface.

Soil and Groundwater Analytical Results for 2800 Broadway

While 2800 Broadway is not part of the current potential property transaction, a review of data collected from 2800 Broadway is important for understanding the impacts on 2820 Broadway. A total of 37 soil samples, and 11 groundwater samples were submitted for laboratory analysis from 2800 Broadway. Analytical results were tabulated and compared to the San Francisco Bay Regional Water Quality Control Board (RWQCB) Environmental Screening Levels (ESL) tables. The results are included in Tables 2 through 4.

Soil at 2800 Broadway

In soil sample B2-16' TPHg was reported at 89 mg/kg, and TPHd was reported at 94 mg/kg. Collectively, the concentrations exceed the ESL of 100 mg/kg. No other TPH detections above the ESL were reported.

Petroleum related VOCs were reported in soil samples B12-12', B12-15', B2-16', and B4-14'. All detected VOCs were below their respective ESLs, or no ESL was listed.

Metals analysis was conducted on five soil samples collected from soil boring B2. Metals concentrations were within typical background concentration ranges, and below the ESLs.

Groundwater at 2800 Broadway

TPH in the gasoline and diesel fuel range were reported in all 11 groundwater samples collected. The maximum concentrations were detected in B2-W at 880,000 µg/L TPHg, and 170,000 µg/L TPHd (above the respective ESLs of 100 µg/L).

VOCs were reported in 8 of the 11 groundwater samples. Six samples contained VOCs and were reported above their ESL. TCE was reported in 11 of the samples and ranged from 17 µg/L in B10 to 14,000 µg/L in B2-W and B5. All 11 samples were above the ESL for TCE of 5 µg/L.

Metals analysis was conducted on sample B2-W. Metals concentrations were within typical background concentration ranges, and below the ESLs.

CONCLUSIONS

Based on the results of this investigation, ATC concludes the following:

2855 Broadway

In soil, concentrations of TPH exceeded the ESL in one sample (B15-8') at 892 mg/kg.

In groundwater, concentrations of TPH exceeded the ESL in two samples at 120 µg/L in sample B15, and 940 µg/L in sample B11. Additionally, concentrations of carbon tetrachloride exceeded the ESL and were reported at concentrations of 34 µg/L in B11, and 4.8 µg/L in B-16.

In ATC's opinion, the impacts to soil and groundwater do not represent a significant risk to human health or the environment.

2820 Broadway

No soil samples identified exceedances of the ESLs except in sample B-21-3' TPH was identified at 3,820 mg/kg, and concentrations of antimony, copper, zinc, and lead that exceeded the ESL. The impacted soil appears to be related to buried debris observed beneath the pavement in this location.

No VOCs were detected at all in the vadose zone (the soil from the surface to 12 feet below surface).

In groundwater, concentrations of TPH, TCE, and some metals exceeded the ESLs. Concentrations of TPH were reported in seven out of nine samples and ranged from 405 µg/L in B-17, to 7,480 µg/L in B-21. Concentrations of TCE were reported in six out of nine groundwater samples and ranged from 7.9 µg/L in B-19, to 79 µg/L in B-23. Concentrations of TPH are distributed across the 2820 Broadway, while TCE appears to occur primarily in the southeast portion of the 2820 Broadway.

Because VOCs were not observed in the vadose zone, it is unlikely that the TCE in groundwater resulted from a TCE release at 2820 Broadway. The TCE in groundwater occurs primarily in the southeast portion of 2820 Broadway, directly adjacent to 2800 Broadway. It appears to be related to the concentrations of TCE (and similar compounds) at 2800 Broadway to the southwest. The concentrations of TCE (and similar compounds) at 2800 Broadway may be connected to or commingled with impacts related to a closed environmental case at 2740 Broadway, offsite to the south.

RECOMMENDATIONS

ATC has the following recommendations with respect to impacts identified at 2855 and 2820 Broadway.

Impacts reported at 2855 and 2820 Broadway do not appear to pose a current risk to human health or to the environment if left undisturbed. Prior to any redevelopment activity, a Soil and Groundwater Management Plan should be prepared and implemented. The Soil and Groundwater Management Plan will address the potential risks to construction workers, the proper handling of impacted soil or groundwater, and the proper disposal of soil and groundwater.

ATC understands that the property at 2800 Broadway is not included in the property transaction and therefore made no recommendations regarding the parcel.

Prior to the completion of this report, ATC recommended the impacts discovered during the Phase II ESA be reported to the Alameda County Environmental Health Agency (ACEH). The impacts were reported to the ACEH in a meeting on November 19, 2015 between the ACEH, representatives of the current property owner, Alliance, and ATC. Based on the outcome of that meeting, Alliance and the ACEH have entered into a Voluntary Remedial Action Agreement for 2820 and 2855 Broadway in anticipation of Alliance's possible purchase of those two properties. It is ATC's understanding that the current property in the process of entering a Voluntary Remedial Action Agreement with the ACEH for the 2800 Broadway property.

CLOSING

ATC appreciates the opportunity to assist Alliance on this project. If you have any questions or require additional information, please contact Gabe Stivala at (925) 223-7123.

Sincerely,

ATC Group Services LLC

Definitions/Abbreviations:						Notes:								
EPA -- Environmental Protection Agency						ESL, Summary Table A (<9.8 feet):								
TPHg -- Gasoline Range Organics ((GRO) C5-C12) by EPA 8015 Gas chromatograph (GC)						San Francisco Bay, Regional Water quality Control Board, <i>Environmental Screening Levels (ESL's)</i> , Summary Table A .								
TPHd -- Extractable fuel hydrocarbons ((EFC) C10 - C28) by EPA 8015 GC						Environmental Screening Levels (ESLs), <i>Shallow Soils (<3m bgs)</i> , Groundwater is Current or Potential Source of Drinking Water, Residential Land Use. December 2013.								
TPHo -- Extractable fuel hydrocarbons ((EFC) C24 - C36) by EPA 8015 GC						Source: http://www.waterboards.ca.gov/sanfranciscobay/water_issues/programs/esl.shtml . Viewed December 9, 2015.								
mg/kg -- Milligrams per kilogram (equivalent to parts per million [ppm])						ESL, Summary Table C (>9.8 feet):								
µg/kg -- Micrograms per kilogram (equivalent to parts per billion [ppb])						San Francisco Bay, Regional Water quality Control Board, <i>Environmental Screening Levels (ESL's)</i> , Summary Table C .								
Total Xylenes -- Meta-, ortho-, and para-xylenes by EPA Method 8260B						Environmental Screening Levels (ESLs), <i>Deep Soils (>3m bgs)</i> , Groundwater is a Current or Potential Source of Drinking Water, Residential Land Use. December 2013.								
MTBE -- Methyl tertiary-butyl ether by EPA Test Method 8260B						Source: http://www.waterboards.ca.gov/sanfranciscobay/water_issues/programs/esl.shtml . Viewed December 9, 2015.								
Ethanol -- Analyzed by EPA Test Method by 8260B														
bgs -- Below Ground Surface														
ft -- feet														
< -- Less than the laboratory reporting limit indicated.														
ND -- not detected above laboratory method detection limits														
J -- Estimated value between method detection limit and reporting limit.														
* -- "Other VOCs" ESLs are not listed in this table because they are not listed in the ESL table														
Results reported above the laboratory reporting limit (RL) are presented in bold font.														
Results reported above the ESL are highlighted in yellow

Subject: Limited Phase II Subsurface Investigation
2800, 2820 and 2855 Broadway
Oakland, California
AEI Project No. 340166

This report was prepared to document the results of a Limited Phase II Subsurface Investigation (Phase II) performed by AEI Consultants (AEI) at the above referenced subject property (Figures 1 and 2). This investigation was completed in general accordance with the authorized scope of services outlined in our authorized proposal number 40422.

1.0 SITE DESCRIPTION

The subject property consists of three parcels in a commercial and residential area of Oakland, California. The parcels are occupied by an automotive dealership (Premier Hyundai of Oakland) with addresses of 2800, 2820, and 2855 Broadway. The parcels at 2800 and 2820 Broadway contain one building each along with associated parking and are located on the east side of Broadway near the intersection with 28th Street. The parcel at 2855 is located across Broadway (west side) and is occupied by a car lot (Figure 2).

The subject property is sloped slightly to the south and lies at an elevation of about 41 feet above mean sea level. Groundwater beneath the subject property is expected to flow to the south, towards Lake Merritt, located approximately 0.42 miles from the Site.

Based on a review of the United States Geological Survey (USGS) San Francisco Bay Quadrangle Geologic Map, the area surrounding the subject property is underlain by Pleistocene-aged alluvial deposits commonly characterized sandy clay loams and silty clay loams.

Refer to Section 4.1 below for additional information on the site geology and groundwater conditions.

2.0 BACKGROUND

According to information contained in a Phase I Environmental Site Assessment (ESA) performed by AEI, dated February 19, 2015 (AEI Project Number 339334), light industrial facilities, automotive repair, and car dealership operations have been associated with the property from approximately 1917 through the present. As a result, AEI recommended the performance of a Phase II investigation to assess the property for potential environmental impacts associated with the operational history.

3.0 INVESTIGATION EFFORTS

Phase II investigation activities included the collection and analysis of soil samples from eleven borings completed at the Site. All work was performed under the oversight of a licensed professional geologist.

3.1 Health and Safety Plan

A site-specific health and safety plan was prepared, reviewed by onsite personnel, and kept onsite for the duration of the fieldwork.

3.2 Permitting and Utility Clearance

Drilling permits for this investigation were obtained from Alameda County Public Works (ACPW) (Appendix A). The public underground utility locating service USA North was notified to identify public utilities of work in the area. In addition, the private utility locating firm 1st Call Utility Locating of Martinez, California, was contracted to clear proposed boring locations for the potential presence of underground utilities.

3.3 Drilling and Soil Sample Collection

On April 8, 2015, eleven soil borings (SB-1 through SB-11) were advanced on the subject property (Figure 2) by Environmental Control Associates of Aptos, California using both truck-mounted and portable direct-push drilling rigs. The borings were advanced to depths of 15 feet below ground surface (bgs). The location of the borings are listed below:

- Borings SB-1, SB-2 and SB-3 were advanced on the parcel at 2855 Broadway.
- Borings SB-4, SB-5 and SB-6 were advanced on the parcel at 2800 Broadway.
- Borings SB-7 through SB-11 were advanced on the parcel at 2820 Broadway.

The borings were completed using 2.25-inch outer diameter direct push drilling rods equipped with acetate sample liners for the collection of soil cores. After each interval, the core was retrieved and transferred to the onsite geologist for logging using the Unified Soil Classification System. A photo ionization detector (PID) was used to field-screen the soil cores for the potential presence of volatile constituents. PID readings were included on the boring logs (Appendix B). Samples selected for laboratory analysis were cut from the cores, sealed with Teflon tape and plastic end caps, labeled with unique sample identifiers, and placed in an iced cooler pending transfer to the analytical laboratory.

Down-hole equipment was decontaminated prior to use and between successive locations using a triple rinse system containing detergent.

3.4 Boring Destruction

Following completion of sample collection and removal of tooling, the borings were backfilled with neat cement grout as required by the permitting agency and completed at the surface with concrete to match the surrounding conditions.

3.5 Laboratory Analyses

The samples were transferred under appropriate chain-of-custody documentation to McCampbell Analytical, Inc. of Pittsburg, California. All eleven soil samples were analyzed for the following:

- Total petroleum hydrocarbons (TPH) as gasoline, diesel, and motor oil by EPA Method 8015M
- Volatile organic compounds (VOCs) by EPA Method 8260
- Polychlorinated biphenyls (PCBs) by EPA Method 8082

A copy of the laboratory reporting package is provided in Appendix C.

3.7 Investigation Derived Wastes

Investigation derived waste generated from this project was staged onsite in properly labeled and sealed drums pending receipt of the analytical data and determination of disposal requirements.

4.0 FINDINGS

To provide context to the data, the results of this investigation were compared to the San Francisco Bay Regional Water Quality Control Board's (RWQCB's) December, 2013 Environmental Screening Levels (ESLs) for Commercial/Industrial land use where groundwater is a current or potential drinking water resource. The ESLs are considered to be conservative and under most circumstances, and within the limitations described in the ESL guidance document, the presence of a chemical at concentrations below the corresponding ESL can generally be assumed to not pose a significant threat to human health and the environment. Additional evaluation may be appropriate where a chemical is present at concentrations above the corresponding ESL.

4.1 Geology and Hydrogeology

Sediment encountered in each of the borings generally consisted of silty clays with scattered angular gravels (Appendix B). Groundwater was not encountered in any of the borings to the depth explored (15 feet bgs).

4.2 Soil Sample Analytical Results

Soil sampling results are summarized in Table 1 and discussed briefly below.

- Trichloroethene (TCE) was detected in SB-5 and SB-6 at 0.015 and 0.0069 milligrams per kilogram (mg/kg), respectively. However, both concentrations are well below the ESL value of 0.7 mg/kg. TCE was below the laboratory reporting limit in the remaining samples.
- All other VOCs were below the analytical reporting limits in all of the soil samples collected as part of the Phase II investigation.
- All other PCBs were below the analytical reporting limits in all of the soil samples collected as part of the Phase II investigation.

- The concentrations of TPH as gasoline, diesel, and motor oil were either below the ESLs or below the laboratory reporting limits in all of the soil samples collected as part of the Phase II investigation conducted at the Site.

5.0 SUMMARY AND CONCLUSIONS

Phase II investigation activities included the collection and analysis of soil samples from eleven borings completed at the Site to assess potential environmental impacts associated with its historical use for light industrial facilities, automotive repair, and car dealership operations.

No VOCs, PCBs, or petroleum constituents were detected above their respective ESLs in the soil samples collected as part of the Phase II investigation activities conducted at the Site. Based on these results, AEI does not recommend any additional investigation or remediation activities at the Site at this time.

6.0 REPORT LIMITATIONS AND RELIANCE

This report presents a summary of work completed by AEI Consultants. The completed work includes observations and descriptions of site conditions encountered. Where appropriate, it includes analytical results for samples taken during the course of the work. The number and location of samples are chosen to provide the requested information, subject to scope of work for which AEI was retained and limitations inherent in this type of work, but it cannot be assumed that they are representative of areas not sampled. This report should not be regarded as a guarantee that no further contamination beyond that which could have been detected within the scope of this investigation is present beneath the subject property. Undocumented, unauthorized releases of hazardous material, the remains of which are not readily identifiable by visual inspection and are of different chemical constituents, are difficult and often impossible to detect within the scope of a chemical specific investigation.

Any conclusions and/or recommendations are based on these analyses and observations, and the governing regulations. Conclusions beyond those stated and reported herein should not be inferred from this document. These services were performed in accordance with generally accepted practices, in the environmental engineering and construction field, which existed at the time and location of the work. No other warranty, either expressed or implied, has been made.

This investigation was prepared for the sole use and benefit of Mr. Michael Murphy. All reports, both verbal and written, whether in draft or final, are for the benefit of Mr. Michael Murphy. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns. Reliance is provided in accordance with AEI's Proposal and Standard Terms & Conditions executed by Mr. Michael Murphy on February 23, 2015. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

If there are any questions regarding our investigation, please do not hesitate to contact AEI at (925) 746-6000.

Sincerely,
AEI Consultants

Mallory Zaunius
Environmental Staff Scientist

David Provance
Senior Project Manager

Works Requesting Permits:

Borehole(s) for Geo Probes-Sampling 24 to 72 hours only - 3 Boreholes
Driller: Environmental Control Associates - Lic #: 695970 - Method: DP

Work Total: \$265.00

Specifications

Permit Number	Issued Dt	Expire Dt	# Boreholes	Hole Diam	Max Depth
W2015-0160	03/05/2015	06/08/2015	3	2.25 in.	15.00 ft

Specific Work Permit Conditions

1. Backfill bore hole by tremie with cement grout or cement grout/sand mixture. Upper two-three feet replaced in kind or with compacted cuttings. All cuttings remaining or unused shall be containerized and hauled off site. The containers shall be clearly labeled to the ownership of the container and labeled hazardous or non-hazardous.
2. Boreholes shall not be left open for a period of more than 24 hours. All boreholes left open more than 24 hours will need approval from Alameda County Public Works Agency, Water Resources Section. All boreholes shall be backfilled according to permit destruction requirements and all concrete material and asphalt material shall be to Caltrans Spec or County/City Codes. No borehole(s) shall be left in a manner to act as a conduit at any time.
3. Permittee shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend and save the Alameda County Public Works Agency, its officers, agents, and employees free and harmless from any and all expense, cost, liability in connection with or resulting from the exercise of this Permit including, but not limited to, properly damage, personal injury and wrongful death.
4. Applicant shall contact assigned inspector listed on the top of the permit at least five (5) working days prior to starting, once the permit has been approved. Confirm the scheduled date(s) at least 24 hours prior to drilling.
5. Permittee, permittee's contractors, consultants or agents shall be responsible to assure that all material or waters generated during drilling, boring destruction, and/or other activities associated with this Permit will be safely handled, properly managed, and disposed of according to all applicable federal, state, and local statutes regulating such. In no case shall these materials and/or waters be allowed to enter, or potentially enter, on or off-site storm sewers, dry wells, or

Alameda County Public Works Agency - Water Resources Well Permit

waterways or be allowed to move off the property where work is being completed.

6. Copy of approved drilling permit must be on site at all times. Failure to present or show proof of the approved permit application on site shall result in a fine of \$500.00.

7. NOTE:

Under California laws, the owner/operator are responsible for reporting the contamination to the governmental regulatory agencies under Section 25295(a). The owner/operator is liable for civil penalties under Section 25299(a)(4) and criminal penalties under Section 25299(d) for failure to report a leak. The owner/operator is liable for civil penalties under Section 25299(b)(4) for knowing failure to ensure compliance with the law by the operator. These penalty provisions do not apply to a potential buyer.

8. Prior to any drilling activities onto any public right-of-ways, it shall be the applicants responsibilities to contact and coordinate a Underground Service Alert (USA), obtain encroachment permit(s), excavation permit(s) or any other permits required for that City or to the County and follow all City or County Ordinances. It shall also be the applicants responsibilities to provide to the Cities or to Alameda County a Traffic Safety Plan for any lane closures or detours planned. No work shall begin until all the permits and requirements have been approved or obtained.

9. Permit is valid only for the purpose specified herein. No changes in construction procedures, as described on this permit application. Boreholes shall not be converted to monitoring wells, without a permit application process.

BORING NUMBER SB-11

PAGE 1 OF 1

CLIENT Michael Murphy
 PROJECT NUMBER 340166
 DATE STARTED 4/8/15 COMPLETED 7/8/15
 DRILLING CONTRACTOR ECA
 DRILLING METHOD Direct Push
 LOGGED BY M. Zanius CHECKED BY David Provance
 NOTES In back corner of 2820 parking area.

PROJECT NAME _____
 PROJECT LOCATION 2800, 2820 and 2855 Broadway, Oakland, CA
 GROUND ELEVATION _____ HOLE SIZE 2.25 inches
 GROUND WATER LEVELS:
 AT TIME OF DRILLING ---
 AT END OF DRILLING --- No groundwater encountered
 AFTER DRILLING ---

APPENDIX C
LABORATORY ANALYTICAL REPORTS

McC Campbell Analytical, Inc.

"When Quality Counts"

Analytical Report

WorkOrder: 1504466

Report Created for: AEI Consultants

2500 Camino Diablo, Ste.#200
Walnut Creek, CA 94597

Project Contact: Mallory Zaunius

Project P.O.:

Project Name: #340166

Project Received: 04/09/2015

Analytical Report reviewed & approved for release on 04/14/2015 by:

Angela Rydelius,
Laboratory Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: AEI Consultants

Project: #340166

WorkOrder: 1504466

Glossary Abbreviation

95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DUP	Duplicate
EDL	Estimated Detection Limit
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Analytical Qualifiers

d7	strongly aged gasoline or diesel range compounds are significant in the TPH(g) chromatogram
d9	no recognizable pattern
e2	diesel range compounds are significant; no recognizable pattern
e6	one to a few isolated peaks present in the TPH(d/mo) chromatogram
e7	oil range compounds are significant

Analytical Report

Client: AEI Consultants
Project: #340166
Date Received: 4/9/15 14:30
Date Prepared: 4/10/15

WorkOrder: 1504466
Extraction Method: SW3550B
Analytical Method: SW8082
Unit: mg/kg

Chain of Custody (COC) Information

Chain of custody present? Yes No
 Chain of custody signed when relinquished and received? Yes No
 Chain of custody agrees with sample labels? Yes No
 Sample IDs noted by Client on COC? Yes No
 Date and Time of collection noted by Client on COC? Yes No
 Sampler's name noted on COC? Yes No

Sample Receipt Information

Custody seals intact on shipping container/cooler? Yes No NA
 Shipping container/cooler in good condition? Yes No
 Samples in proper containers/bottles? Yes No
 Sample containers intact? Yes No
 Sufficient sample volume for indicated test? Yes No

Sample Preservation and Hold Time (HT) Information

All samples received within holding time? Yes No
 Sample/Temp Blank temperature Temp: 5.4°C NA
 Water - VOA vials have zero headspace / no bubbles? Yes No NA
 Sample labels checked for correct preservation? Yes No
 pH acceptable upon receipt (Metal: <2; 522: <4; 218.7: >8)? Yes No NA
 Samples Received on Ice? Yes No

(Ice Type: WET ICE)

UCMR3 Samples:

Total Chlorine tested and acceptable upon receipt for EPA 522? Yes No NA
 Free Chlorine tested and acceptable upon receipt for EPA 218.7, 300.1, 537, 539? Yes No NA

Client: Cardno ATC
Project/Site: Alliance Realty - Broadway

TestAmerica Job ID: 720-67494-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

No additional comments.

Receipt

The samples were received on 9/19/2015 3:25 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 16.4° C.

GC/MS VOA

Method 8260B: The continuing calibration verification (CCV) associated with batch 720-189327 recovered above the upper control limit for Vinyl Acetate. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: B1-10' (720-67494-2), B1-15' (720-67494-3) and B2-5' (720-67494-4).

Method 8260B: The continuing calibration verification (CCV) associated with batch 720-189424 recovered above the upper control limit for 2,2-dichloropropane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: B3-5' (720-67494-9), (720-67494-A-9-F MS) and (720-67494-A-9-G MSD).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA

Method 8015B: The Diesel Range Organics (DRO) concentration reported for the following samples is due to the presence of discrete peaks: B1-15' (720-67494-3), B3-10' (720-67494-10) and B3-24' (720-67494-13).

Method 8015B: The Diesel Range Organics (DRO) concentration reported for the following sample is due to the presence of discrete peaks: B2-5' (720-67494-4).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method 6010B: The following samples was diluted due to the abundance of non-target analyte: B2-10' (720-67494-5), B2-12' (720-67494-6), B3-10' (720-67494-10), B3-15' (720-67494-11) and B3-24' (720-67494-13). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Creator: Mullen, Joan

List Source: TestAmerica Pleasanton

Question	Answer	Comment
Radioactivity wasn't checked or is <=/ background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Definitions/Glossary

Client: Cardno ATC
Project/Site: Alliance Realty - Broadway

TestAmerica Job ID: 720-67495-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.

GC Semi VOA

Qualifier	Qualifier Description
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
X	Surrogate is outside control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

Job Narrative 720-67495-1

Comments

No additional comments.

Receipt

The samples were received on 9/19/2015 3:25 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 16.4° C.

GC/MS VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA

Method 8015B: The following sample required a dilution due to the nature of the sample matrix: B2-W (720-67495-2). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method 3005A/7470A: The following samples requested dissolved metals and were not filtered in the field: B1-W (720-67495-1), B2-W (720-67495-2), B3-W (720-67495-3). These samples were filtered and preserved upon receipt to the laboratory; ref #: 189328

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

Method 3510C: Because more than 2" of sediment was present in the sample bottle, the liquid fraction was transferred to a separatory funnel before adding surrogate and/or spike solutions. In addition, the sample bottle was not rinsed with solvent.

B1-W (720-67495-1), B2-W (720-67495-2) and B3-W (720-67495-3)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is $<6\text{mm}$ (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

TestAmerica Job ID: 720-67781-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

Job Narrative 720-67781-1

Comments

No additional comments.

Receipt

The samples were received on 10/5/2015 11:33 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 5 coolers at receipt time were 0.2° C, 0.3° C, 0.4° C, 0.4° C and 3.9° C.

GC/MS VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

Method 3510C: Because more than half an inch of sediment was present in the sample bottle, the liquid fraction was transferred to a separatory funnel before adding surrogate and/or spike solutions. The sample bottle was not rinsed with solvent.

B6 (720-67781-3)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is <=/ background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Definitions/Glossary

Client: Cardno ATC
Project/Site: 2800 Broadway

TestAmerica Job ID: 720-67782-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
F2	MS/MSD RPD exceeds control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Comments

No additional comments.

Receipt

The samples were received on 10/5/2015 11:33 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 5 coolers at receipt time were 0.2° C, 0.3° C, 0.4° C, 0.4° C and 3.9° C.

GC/MS VOA

Method 8260B: Internal standard (ISTD) response for the following samples were outside control limits: (720-67695-A-1-F), (720-67695-A-1-D MS) and (720-67695-A-1-E MSD). The sample was confirmed by the MS/SD analysis and the data has been reported. of data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA

Method 8015B: The Diesel Range Organics (DRO) concentration reported for the following samples is due to the presence of discrete peaks: B5-10' (720-67782-6), B5-15' (720-67782-7) and B9-15' (720-67782-18).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

RE: Project: ALLIANCE
Pace Project No.: 1255126

Dear Gabe Stivala:

Enclosed are the analytical results for sample(s) received by the laboratory on October 12, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Troy G Turpen
troy.turpen@pacelabs.com
Project Manager

QUALIFIERS

Project: ALLIANCE
Pace Project No.: 1255126

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.
ND - Not Detected at or above adjusted reporting limit.
J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.
MDL - Adjusted Method Detection Limit.
PQL - Practical Quantitation Limit.
RL - Reporting Limit.
S - Surrogate
1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.
Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.
LCS(D) - Laboratory Control Sample (Duplicate)
MS(D) - Matrix Spike (Duplicate)
DUP - Sample Duplicate
RPD - Relative Percent Difference
NC - Not Calculable.
SG - Silica Gel - Clean-Up
U - Indicates the compound was analyzed for, but not detected.
N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.
Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.
TNI - The NELAC Institute.

LABORATORIES

PASI-DAV Pace Analytical Services - Davis

ANALYTE QUALIFIERS

DQ Primarily compounds not found in typical Gasoline.
L0 Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
L2 Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results may be biased low.
M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

McC Campbell Analytical, Inc.

"When Quality Counts"

Analytical Report

WorkOrder: 1511341

Report Created for: Cardno ATC

701 University Avenue, Ste. 200
Sacramento, CA 95825

Project Contact: Gabe Stivala

Project P.O.:

Project Name: 118EM01075; Alliance-Premium Hyundai

Project Received: 11/09/2015

Analytical Report reviewed & approved for release on 11/10/2015 by:

Angela Rydelius,
Laboratory Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: Cardno ATC
Project: 118EM01075; Alliance-Premium Hyundai
WorkOrder: 1511341

Glossary Abbreviation

95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test
DUP	Duplicate
EDL	Estimated Detection Limit
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Analytical Qualifiers

e2	diesel range compounds are significant; no recognizable pattern
e3	aged diesel is significant
e7	oil range compounds are significant
e8	kerosene/kerosene range/jet fuel range

Analytical Report

"When Quality Counts"

Analytical Report

WorkOrder: 1511342

Report Created for: Cardno ATC

701 University Avenue, Ste. 200
Sacramento, CA 95825

Project Contact: Gabe Stivala

Project P.O.:

Project Name: 118EM01075; Alliance-Premium Hyundai

Project Received: 11/09/2015

Analytical Report reviewed & approved for release on 11/10/2015 by:

Angela Rydelius,
Laboratory Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: Cardno ATC
Project: 118EM01075; Alliance-Premium Hyundai
WorkOrder: 1511342

Glossary Abbreviation

95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test
DUP	Duplicate
EDL	Estimated Detection Limit
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Glossary of Terms & Qualifier Definitions

Client: Cardno ATC
Project: 118EM01075; Alliance-Premium Hyundai
WorkOrder: 1511342

Analytical Qualifiers

S	spike recovery outside accepted recovery limits
a3	sample diluted due to high organic content.
c2	surrogate recovery outside of the control limits due to matrix interference.
e2	diesel range compounds are significant; no recognizable pattern
e7	oil range compounds are significant
e11	stoddard solvent/mineral spirit (?)

Chain of Custody (COC) Information

Chain of custody present? Yes No
 Chain of custody signed when relinquished and received? Yes No
 Chain of custody agrees with sample labels? Yes No
 Sample IDs noted by Client on COC? Yes No
 Date and Time of collection noted by Client on COC? Yes No
 Sampler's name noted on COC? Yes No

Sample Receipt Information

Custody seals intact on shipping container/cooler? Yes No NA
 Shipping container/cooler in good condition? Yes No
 Samples in proper containers/bottles? Yes No
 Sample containers intact? Yes No
 Sufficient sample volume for indicated test? Yes No

Sample Preservation and Hold Time (HT) Information

All samples received within holding time? Yes No
 Sample/Temp Blank temperature Temp: 7.9°C NA
 Water - VOA vials have zero headspace / no bubbles? Yes No NA
 Sample labels checked for correct preservation? Yes No
 pH acceptable upon receipt (Metal: <2; 522: <4; 218.7: >8)? Yes No NA
 Samples Received on Ice? Yes No
 (Ice Type: WET ICE)

UCMR3 Samples:

Total Chlorine tested and acceptable upon receipt for EPA 522? Yes No NA
 Free Chlorine tested and acceptable upon receipt for EPA 218.7, 300.1, 537, 539? Yes No NA

"When Quality Counts"

Analytical Report

WorkOrder: 1511343

Report Created for: Cardno ATC

701 University Avenue, Ste. 200
Sacramento, CA 95825

Project Contact: Gabe Stivala

Project P.O.:

Project Name: 118EM01075; Alliance-Premium Hyundai

Project Received: 11/09/2015

Analytical Report reviewed & approved for release on 11/10/2015 by:

Angela Rydelius,
Laboratory Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: Cardno ATC
Project: 118EM01075; Alliance-Premium Hyundai
WorkOrder: 1511343

Glossary Abbreviation

95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test
DUP	Duplicate
EDL	Estimated Detection Limit
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Glossary of Terms & Qualifier Definitions

Client: Cardno ATC
Project: 118EM01075; Alliance-Premium Hyundai
WorkOrder: 1511343

Analytical Qualifiers

a3 sample diluted due to high organic content.
b1 aqueous sample that contains greater than ~1 vol. % sediment
e2 diesel range compounds are significant; no recognizable pattern
e4 gasoline range compounds are significant.
e7 oil range compounds are significant
e11/e8 stoddard solvent/mineral spirit (?); and/or kerosene/kerosene range/jet fuel range
