EXECUTIVE SUMMARY

The Hanover Company (project applicant) is proposing to redevelop one parcel within the Broadway Valdez District Specific Plan (BVDSP, or Plan) area into a mixed-use development. The Broadway and 27th Project (proposed project) would include construction of a residential and retail building with a total of approximately 423,577 gross square feet (gsf). The proposed project would include a terraced, seven-story building (maximum height of 85 feet) above 2.5 levels of subterranean parking. Approximately 255 multi-family units (approximately 253,714 gsf) would be provided, with a mix of studio, one-, two-bedroom units and community function spaces, including management/leasing offices and lobbies. Residential amenities would include a clubhouse, fitness room, garden, roof deck, and bicycle storage. Residential parking for approximately 217 vehicles would be included in Basement Levels B2 and B3. The proposed project would provide up to 37,710 gsf of retail space, including the potential for approximately 9,400 gsf of mezzanine retail depending on tenant demand. Approximately 82 parking spaces would be provided for retail uses in Basement Level B1. The structure that housed the former Biff's Coffee Shop, which closed in 1996, is a historic resource under the California Environmental Quality Act (CEQA), as stated in the BVDSP Environmental Impact Report (EIR), and is located on the project site and would be demolished as part of the Project.

The BVDSP EIR¹ analyzed the environmental impacts associated with adoption and implementation of the BVDSP and, where the level of detail available was adequate for analyzing potential environmental effects, provided a project-level CEQA review for reasonably foreseeable development. Project-level analysis allows the use of CEQA streamlining and/or tiering provisions for projects that are developed under the BVDSP.

Applicable CEQA streamlining and/or tiering code sections are described below, each of which, separately and independently, provides a basis for CEQA compliance.

- 1. Community Plan Exemption.** Public Resources Code Section 21083.3 and State CEQA Guidelines Section 15183 allow streamlined environmental review for projects that are “consistent with the development density established by existing zoning, community plan, or general plan policies for which an EIR was certified, except as might be necessary to examine whether there are project-specific significant effects that are peculiar to the project or its site.” Section 15183(c) specifies that “if an impact is not peculiar to the parcel or to the proposed project, has been addressed as a significant effect in the prior EIR, or can be substantially mitigated by the imposition of uniformly applied development policies or standards..., then an EIR need not be prepared for the project solely on the basis of that impact.”
- 2. Qualified Infill Exemption.** Public Resources Code Section 21094.5 and State CEQA Guidelines Section 15183.3 allow streamlining for certain qualified infill projects by limiting the topics that are subject to review at the project level, provided the effects of infill development have been addressed in a planning-level decision or by uniformly applicable development policies. Infill projects are eligible if they are located in an urban area and on a site that either has been previously developed or adjoins existing qualified urban uses on at least 75 percent of the site’s perimeter, able to satisfy the performance standards provided in State CEQA Guidelines Appendix M, and consistent with the general use designation, density, building intensity, and applicable policies specified for the project area in either a sustainable communities strategy or an alternative planning strategy. No additional environmental review is required if the infill project would not cause any new specific effects or more significant effects or if uniformly applicable development policies or standards would substantially mitigate such effects.
- 3. Addendum.** Public Resources Code Section 21166 and State CEQA Guidelines Section 15164 state that an addendum to a certified EIR is allowed when minor changes or additions are necessary and none of the conditions for preparation of a subsequent EIR or negative declaration, per Section 15162, are satisfied.

The CEQA Checklist provided below evaluates the potential project-specific environmental effects of the proposed project and whether such impacts were adequately covered by the BVDSP EIR to allow the above-listed streamlining and/or tiering provisions of CEQA to apply. The analysis conducted incorporates by reference the information contained in the BVDSP EIR. Mitigation measures and

¹ ESA (Environmental Science Associates). 2013. *Broadway Valdez District Specific Plan, Draft Environmental Impact Report*. SCH No. 2012052008. September.

ESA (Environmental Science Associates). 2014. *Broadway Valdez District Specific Plan, Responses to Comments and Final*. May.

(These documents can be obtained at the Bureau of Planning at 250 Frank Ogawa Plaza, #3115, or online at <http://www2.oakland.net.com/Government/o/PBN/OurServices/Plans/DOWD008194>.)

Standard Conditions of Approval (SCAs) identified in the BVDSP EIR that would apply to the proposed project are listed at the end of the CEQA Checklist. The proposed project is legally required to incorporate and/or comply with the applicable requirements of the mitigation measures identified in the BVDSP EIR as well as applicable City of Oakland (City) SCAs; therefore, the measures and SCAs are herein assumed to be included as part of the proposed project (see Attachment A).

The proposed project satisfies each of the foregoing CEQA provisions, as summarized below.

- **Community Plan Exemption.** As stated in Section 1.2.2 of the BVDSP, when development proposals in the BVDSP area are brought before the City, the staff and decision-makers use the BVDSP as a guide for project review. Projects are evaluated for consistency with the intent of BVDSP policies and conformance with development regulations. The environmental review of the BVDSP was intended to expedite the processing of future projects that are consistent with the BVDSP. Therefore, consistent with Section 1.2.3 of the BVDSP and State CEQA Guidelines Section 15183, this CEQA analysis satisfies, based on the analysis conducted in this document, the requirements for a community plan exemption. The proposed project is permitted in the zoning district where the project site is located and consistent with the bulk, density, and land use standards envisioned in the BVDSP. The CEQA Checklist below concludes that the proposed project would not result in significant impacts that (1) would be peculiar to the project or project site; (2) were not identified as significant project-level, cumulative, or off-site effects in the BVDSP EIR; or (3) were previously identified as significant but later found to have a more severe adverse impact than that discussed in the EIR. Findings regarding the proposed project's consistency with the BVDSP are included as Attachment B to this document.
- **Qualified Infill Exemption.** The analysis conducted indicates that the proposed project is eligible for a qualified infill exemption, pursuant to State CEQA Guidelines Section 15183.3. The infill eligibility criteria are evaluated in Attachment C and supported by the CEQA Checklist included below.
- **Addendum.** The analysis conducted, as described in this document, demonstrates that preparation of an addendum to the BVDSP EIR is allowed for the proposed project. Therefore, this CEQA analysis is considered to be the addendum. The BVDSP EIR analyzed the Broadway Valdez Development Program (Development Program), which represents the maximum level of feasible development that can reasonably be expected to occur in the Plan Area over a 25-year planning period, according to City of Oakland projections. In total, the Development Program includes approximately 3.7 million square feet of development, including approximately 695,000 square feet of office space, 1,114,000 square feet of restaurant/retail space, 1,800 residential units, a new 180-room hotel, 6,500 parking spaces, and 4,500 new jobs. The BVDSP allows for flexibility with respect to the quantity and profile of future development within each subarea, and between subareas, as long as such development conforms to the general traffic generation parameters established by the Plan. The Development Program is not intended to be a cap that would restrict development.

The Illustrative Development Program Map in Appendix D of the BVDSP depicts a possible development scenario that contemplates the redevelopment of Biff's with additional retail up to three stories. The proposed project would provide more dwelling units for the site than contemplated in Appendix D, as shown in Table 1 (up to 255 units, instead of 0 units), and less gsf for commercial uses (up to 37,710 gsf, instead of 82,689 square feet). This difference, however, represents minor net changes from the Development Program in terms of environmental impacts because the proposed project conforms to the traffic generation parameters analyzed in the BVDSP EIR. As described below in Section 13, Transportation and Circulation, the proposed project would generate 94 AM and 170 PM peak-hour vehicle trips. Together with trips generated by other projects that are currently

under construction, approved, or proposed for development in the Plan Area, this would represent approximately 34 percent of the AM and 38 percent of the PM peak-hour trips anticipated in the BVDSP EIR, 57 percent of the AM and 54 percent of the PM peak-hour trips anticipated in the BVDSP EIR for the Valdez Triangle subarea, and 45 percent of the AM and 35 percent of the PM peak-hour trips anticipated in the BVDSP EIR for Subdistrict 3. Because trip generation from the proposed project combined with that of other projects that are currently being developed under the BVDSP would be within the scope of the program analyzed under the BVDSP EIR for the Plan Area, the Valdez Triangle, and Subdistrict 3, the traffic impact analysis in the EIR remains valid. Therefore, the proposed project meets the requirements for preparation of an addendum, as evidenced in Attachment D to this document.

Table 1. Comparison of BVDSP Development Program, Illustrative Development Program Map, and Proposed Project

Development Characteristics	Development Program¹	Illustrative Development Program Map	Proposed Project
Height	Varied	Five stories (65 feet) ^{2,3}	Seven stories (85 feet)
Residential Units	1,800	0 ⁴	255
Retail Square Footage (net)	695,000 square feet of office space 1,114,000 square feet of restaurant/retail space	82,689 square feet ⁴	up to 37,710 gsf

Notes:

- ¹ Development Program Grand Total, listed in Appendix D, Table D.1: Illustrative Development Plan Program Map by Subdistrict.
- ² Broadway Valdez Development Program Physical Height Model, Figure 3-11 of the Broadway Valdez District Specific Plan EIR.
- ³ The BVDSP EIR considered five stories at the project site; the BVDSP considered three stories at the project site.
- ⁴ Development Program for Project Site #13 in Subdistrict 3, listed in Appendix D, Table D.1: Illustrative Development Plan Program Map by Subdistrict.

Sources:

City of Oakland. 2014. *Broadway Valdez District Specific Plan*. Adopted: June.
 The Hanover Company 2015. *Broadway & 27th Project, Oakland, California*. Planning submittal. July 21.

Examination of the analysis, findings, and conclusions of the BVDSP EIR, as summarized in the CEQA Checklist below, indicates that the BVDSP EIR adequately analyzed and covered the potential environmental impacts associated with the proposed project. The streamlining and/or tiering provisions of CEQA apply to the proposed project. Therefore, no further review or analysis, under CEQA, is required.

PROJECT DESCRIPTION

Project Location

Project Site Setting. As shown in Figure 1, the project site is in the western portion of the City of Oakland and generally bounded by 27th Street immediately to the north, 26th Street to the east and south, and Broadway to the west. Regional access includes Interstate (I) 980, approximately 0.36 mile to the west, and I-580, approximately 0.55 mile to the northeast. In addition, the 19th Street-Oakland Bay Area Rapid Transit (BART) station is less than 0.56 mile southwest of the project site on Broadway, providing daily service between San Francisco, Fremont, Millbrae, and Richmond. The area also benefits from Alameda-Contra Costa (AC) Transit bus service along Broadway.

Although a church occupies a lot west of the project site (west of Broadway), the dominant land use in the Plan area is auto-oriented retail, including auto-service providers, car dealerships, and surface parking lots. Surface parking lots, some of which are used by auto dealers as display and storage areas, occupy approximately 11 percent of the developable land in the BVDSP area. Together, auto-related sales, service, and parking account for approximately 60 percent of the land uses in the Plan area. The majority of buildings in the Plan area are older one- to two-story structures that were originally designed for utilitarian purposes. However, medium- to high-rise buildings exist in the southern portion of the Plan area and south of Grand Avenue.

Consistent with the dominant uses in the area, the 1.1-acre (47,615-square-foot) project site includes a surface parking lot and auto-service land uses. The surface parking lot, which is used for automotive sales, is owned by Steve and Cecilia Simi, trustees of the TDK trust. A vacant 5,288-square-foot building at the project site, the former Biff's Coffee House structure, was constructed between 1962 and 1964. That building is located in the eastern portion of the project site along 27th Street. The structure that housed Biff's is considered a Heritage Property and, therefore, a Designated Historic Property according to the citywide Oakland Cultural Heritage Survey (OCHS).²

The project site encompasses assessor's parcel number (APN) 009-0685-018-06.

Project Site Land Use and Zoning. The project site is within the Plan area of the BVDSP, as depicted in Figure 2. The BVDSP, which was adopted in July 2014, provides a comprehensive vision for the Plan area, along with goals, policies, and development regulations to guide future development in the Plan area. The Plan area is divided into two distinct subareas, the Valdez Triangle and the North End. The project site is within the Valdez Triangle. It is also a Retail Priority Site, meaning that there are restrictions on residential development that favor retail development. The BVDSP EIR analysis considered the following land use maximums within the Valdez Triangle subarea: 1,030 residential units, 794,000 square feet of retail, 116,000 square feet of office space, 180 hotel rooms, and more than 1 million square feet of non-residential development.

² Biff's Coffee House is rated *b+3 in the OCHS. A building is given two individual property ratings, an "existing rating" (*) and a "contingency rating" (b) if it is believed that future conditions or circumstances could significantly change. Biff's existing rating (*) indicates that it is not rated because it was built after 1945. Biff's potential rating (b) indicates it could be considered a building of Major Importance when it is older, in which case it would be eligible for the National Register of Historical Places.

The majority of the Valdez Triangle subarea, including the project site, is within the Central Business District land use designation, which supports the destination retail district envisioned for the area. In time, this will result in larger structures being built. The intent of the Central Business District is to encourage a high-density, mixed-use urban center of regional importance that can act as a primary hub for business, communications, office, government, high-tech, retail, entertainment, and transportation uses.

The project site is zoned Broadway Valdez District Retail Priority Sites Commercial Zone 1 (D-BV-1), Retail Priority Site 3A, which is the most restrictive zoning for general and ground-floor uses in the Plan area. The regulatory framework of D-BV-1 ensures that larger sites and opportunity areas are reserved primarily for new, large-scale retail development that is oriented toward consumer goods, at least on the ground floor. A property that is zoned as D-BV-1 Retail Priority Sites would be allowed to include residential uses only if a project were to include a retail component of a certain size and type. Special height regulations apply to this zoning district as well.

Project Characteristics

The project would demolish the existing building and surface parking lot and construct a new mixed use building of approximately 423,577 gsf. The proposed project would include approximately 255 residential units and up to 37,710 gsf of retail, including the potential for 9,441 gsf of mezzanine retail depending on tenant demand.

Table 2. Proposed Development

Land Use	Area
Building Area	
Retail along Broadway	24,296 gsf
Restaurants facing proposed plaza	3,973 gsf
Potential Mezzanine Retail Space	9,441 gsf
Residential Units	202,400 gsf (up to 255 units)
<i>Total Building Area</i> ¹	423,577 gsf
Open Space	
Clubhouse ²	1,056 gsf
Fitness Room ²	1,259 gsf
Balconies	7,420 gsf
Courtyard	5,643 gsf
Roof Deck	3,609 gsf
<i>Total Open Space</i>	18,987 gsf

Note:

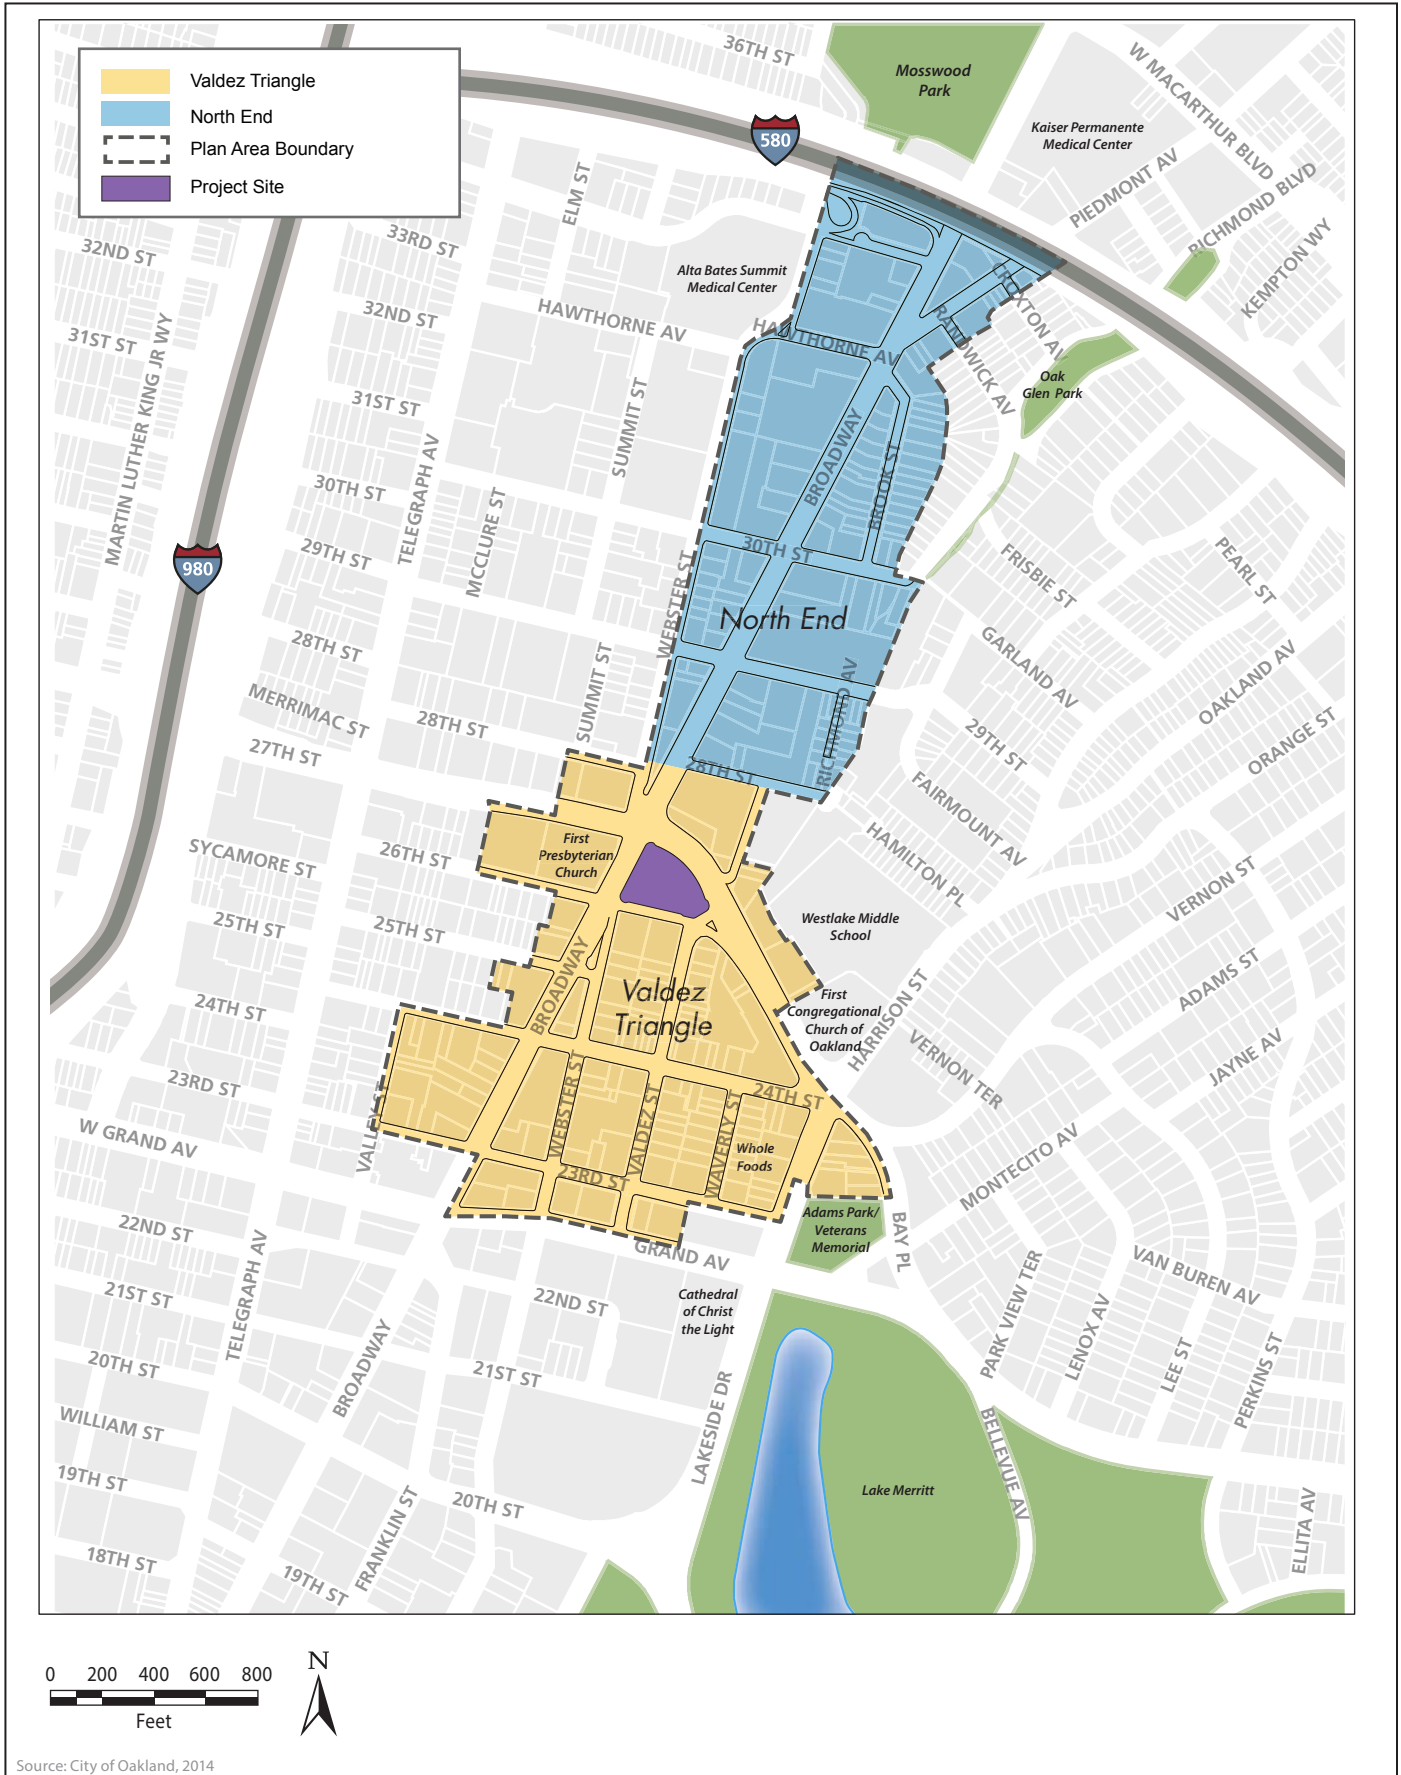

¹ The Total Building Area includes the parking areas, clubhouse, fitness room, garden, circulation, mail, leasing, lobby, service, and bicycle storage areas.

² The clubhouse and fitness room are also accounted for in the calculation of total building area above.

Figure 2
Broadway Valdez District Specific Plan Area
 Broadway and 27th Project

In total, the building would have a footprint of approximately 47,615 square feet (100 percent of the parcel on which Biff's Coffee Shop is located). The terraced building would be seven stories but would not exceed 85 feet in height (i.e., to the top of the roof structure) as measured by the Building Department. Parapets, stairs, elevator penthouses, and mechanical structures (including emergency generators) would exceed this height but would be subject to the building standards of the BVDSP.

The building mass would be distributed evenly throughout the project site and front primarily Broadway, 27th Street, and the plaza along Valdez Street. Site plans and elevations are provided in Figures 3 through 8.

Valdez Street is approximately 12 feet lower in elevation than Broadway. Consequently, the site would be graded to provide below-grade parking in Basement Level B1 in the western portion of the site, which would be reserved for retail customers and employees only. This parking level would include approximately 82 parking spaces, a utility room, trash enclosures, stairwells, and elevators. Because of the topography of the project site, Basement Level B1 would also include approximately 4,000 gsf of at-grade retail uses that would front a proposed plaza at Valdez Street and 27th Street in the eastern portion of the site. The retail uses would be designed to allow for two separate storefronts, with multiple entries off of Valdez Street. These retail uses would be open to the public and not restricted to on-site users.

Basement Levels B2 and B3 would contain parking that would primarily be reserved for residents only. Basement Level B2 would include approximately 105 parking spaces, bicycle storage, a utility room, stairwells, elevators, and vehicle ramps to access the other levels. Basement Level B3 would include approximately 112 parking spaces, bicycle storage, a service area, stairwells, elevators, and vehicle ramps to access Basement Level B2.

Level 1 would include approximately 24,300 gsf of retail uses that would front Broadway. Level 1 would also include a clubhouse, fitness room, garden, mailroom, utility rooms, trash rooms, stairwells, elevators, and a lobby that would front 27th Street, as well as the potential for approximately 9,400 gsf of mezzanine retail depending on tenant demand. A stairwell and exit corridor for the residential uses would be located in the southern portion of the building and connect to 26th Street.

Approximately 21 residential units would be provided on Level 2, along with associated private balconies, a courtyard, elevators, stairwells, and interior circulation features. Level 3 would include approximately 42 residential units, along with associated private balconies, a courtyard, elevators, stairwells, and interior circulation features. Levels 4 through 7 would include approximately 42 residential units, along with associated private balconies, elevators, stairwells, and interior circulation features that would have the same floor plan. Level 8 would include approximately 24 residential units, along with associated private balconies, a roof deck, mechanical equipment, elevators, stairwells, and interior circulation features.

As shown in Table 3, residential units would be provided on all aboveground levels, except for the first level. The proposed project would consist of a mix of residential unit types that could provide 77 studios, 106 one-bedroom units, and 72 two-bedroom units. The units would average approximately 794 square feet.

Table 3. Residential Units by Level

	Studio (519–681 sf)	1-Bedroom (632–1,216 sf)	2-Bedroom (874–1,166 sf)	Total
Level 2	8	11	2	21
Level 3	13	17	12	42
Level 4	12	18	12	42
Level 5	12	18	12	42
Level 6	12	18	12	42
Level 7	12	18	12	42
Level 8	8	6	10	24
<i>Total</i>	77	106	72	255
<i>Percent of Total</i>	30%	42%	28%	100%

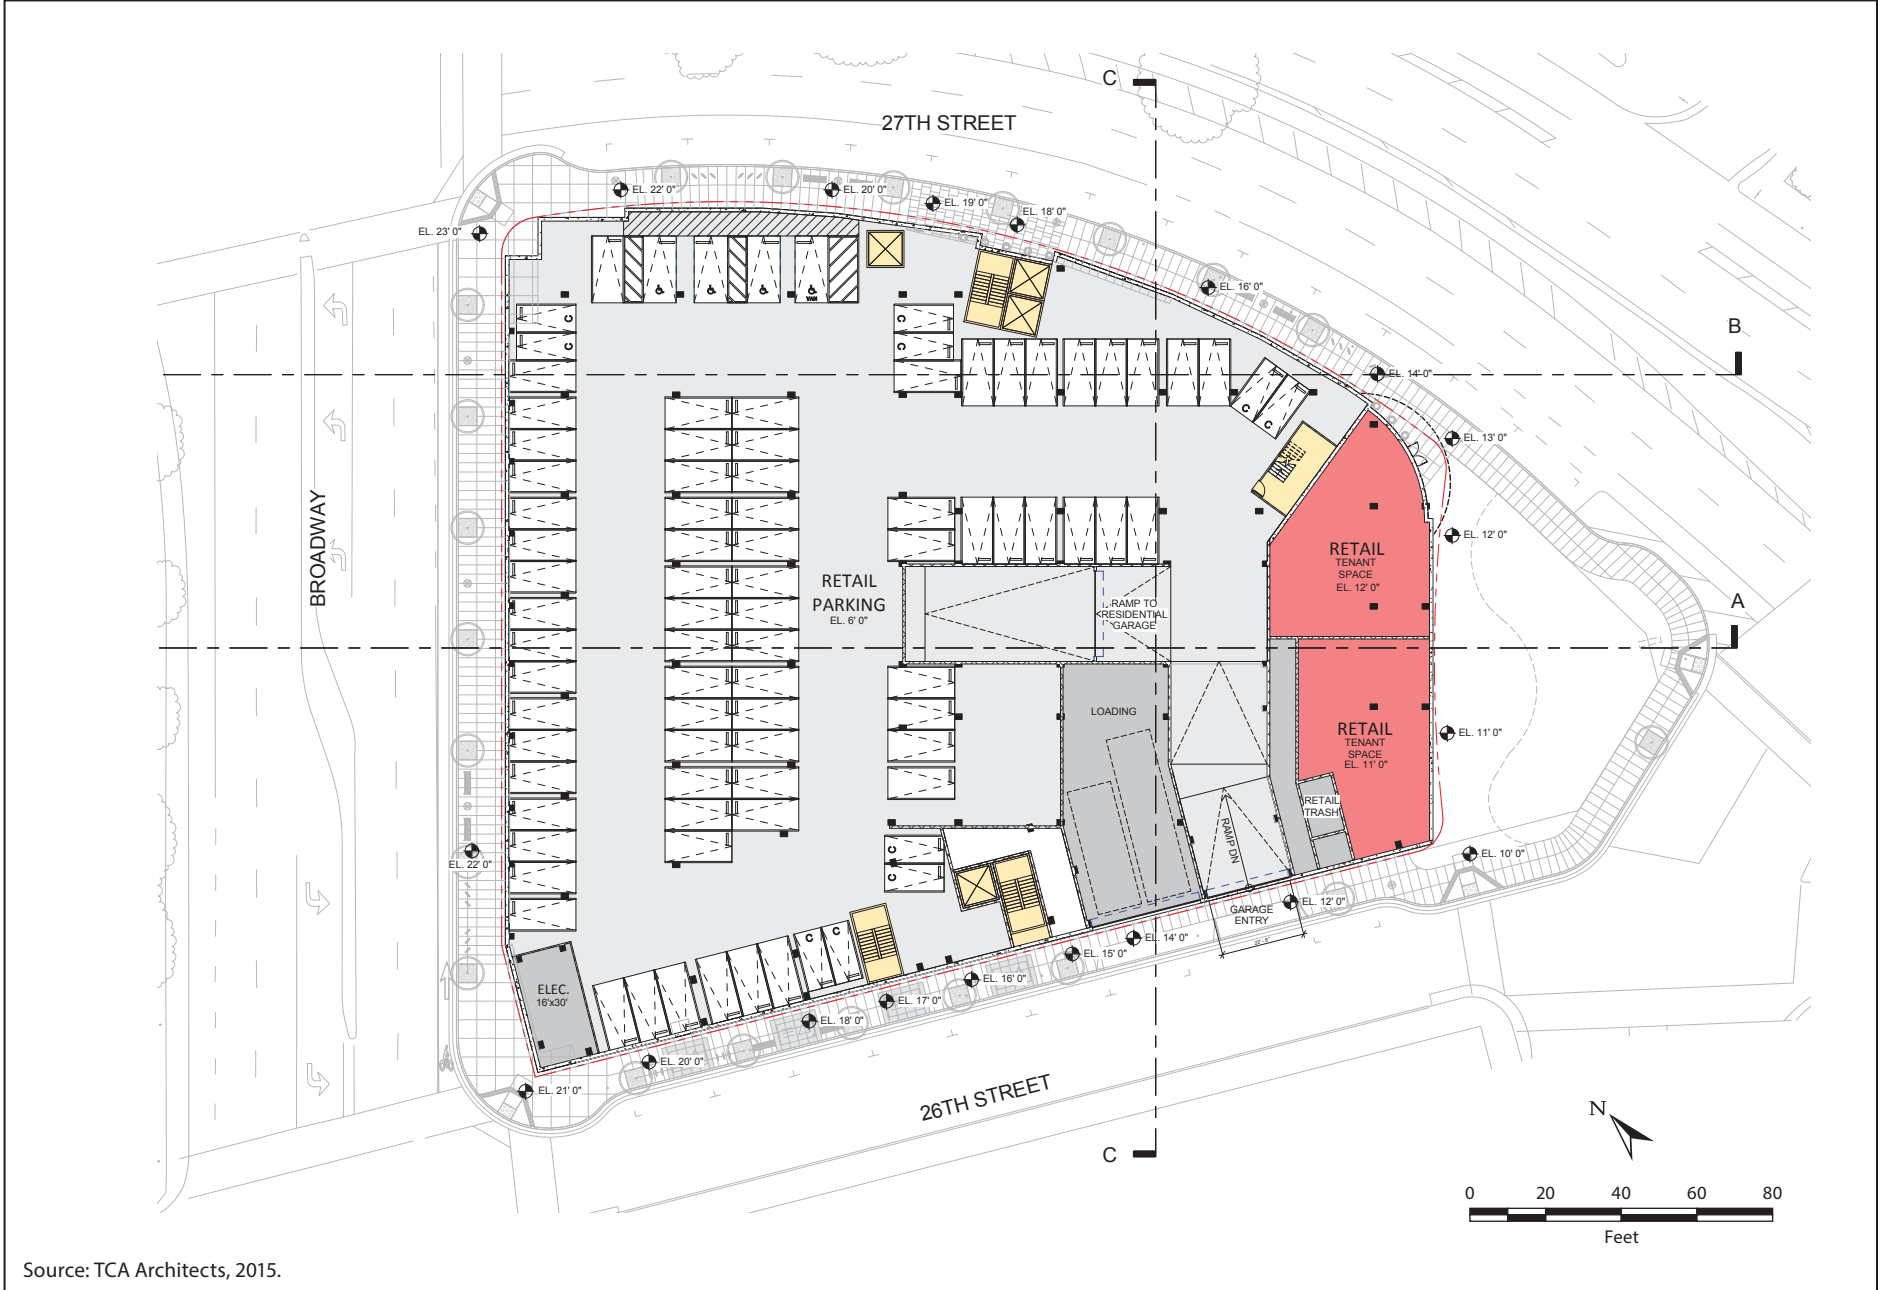

Source: The Hanover Company 2015.

Vehicular Access and Circulation. Basement Level B1 would be accessible from a driveway on 26th Street. Access to residential parking on Basement Level B2 from the retail parking on Basement Level B1 would be provided from a ramp near the retail plaza. Access to residential parking on Basement Level B3 from Basement Level B2 would be provided from a ramp near the center of the level. Public access to Basement Levels B2 and B3 would be restricted by an automated gate. For both residential and retail parking, egress and ingress would be from the driveway on 26th Street. Basement Levels B2 and B3 would be reserved for residents only.

Bicycle and Pedestrian Circulation. Pedestrian linkages would be included within the parking garages to connect these areas to the rest of the building. On Basement Level B1, pedestrian garage access from 26th Street would be located in the lobby between the trash area and the loading area. On Level 1, pedestrian garage access from 27th Street would be located in the lobby near the retail space and the leasing office. The sidewalk along Broadway would be widened by 3 to 4 feet, using space from both the public right-of-way and within the property. In addition, the sidewalk along Broadway would be improved with new paving, street trees, and streetlights. Residential pedestrian circulation would also be provided in the courtyard and on the roof deck.

Bicycle parking for residents would be included in Basement Levels B2 and B3 as well as on the street. Approximately 128 bicycles could be accommodated long term and 15 bicycles could be accommodated short term for the residential uses. This would exceed the requirement of 127 long-term spaces for the proposed residential uses, but would not meet the requirement for 17 short term-spaces for the proposed residential uses. In addition, five bicycles could be accommodated long term in Basement Level B1, and 13 bicycles could be accommodated short term for the retail uses. This would meet the requirement for five long-term spaces and the requirement for 12 short-term spaces (but not the requirement for 19 short-term spaces) for retail customers and employees, depending on the specific retail uses. In addition, bicycle parking spaces would be provided along Broadway and in the proposed plaza.

Emergency Access. Fire department connections would be provided on each street frontage, including 27th Street, 26th Street, and Broadway. The fire department connections would be located within 10 feet of the corner of Broadway and 26th Street, Broadway and 27th Street, and 26th Street and Valdez Street. The proposed project would include sprinklers, in compliance with National Fire Protection Association 13.

Parking and Loading. As discussed above and summarized in Table 4, below, residential parking for approximately 217 vehicles would be included in Basement Levels B2 and B3. This would exceed the parking requirement of 127 spaces for residential uses.³ Approximately 82 parking spaces would be provided for the retail uses in Basement Level B1. This would exceed the parking requirement of 74 spaces for retail uses.⁴ A 26-foot loading area for the residential and retail uses would be located off of 26th Street, adjacent to the residential entry to the proposed building. Any excess parking spaces could be leased on an automotive fee parking basis, which includes the parking and storage of motor vehicles on a fee basis.

Table 4. Parking

	Retail (Basement Level B1)	Residential (Basement Level B2)	Residential (Basement Level B3)
Standard Space	68	92	100
Compact Space	10	10	10
Accessible Space	4	3	2
<i>Total</i>	82	105	112

Source: The Hanover Company 2015.

Landscape and Design. The project site is located in an urban setting and currently includes a surface parking lot and a building. Vegetation is limited to ruderal weeds that grow between the cracked pavement, small shrubs along the perimeter of the building, and five trees (including two Coast live oaks, a queen palm, an Italian cypress, and a European white birch).⁵ The project site has approximately 48,822 square feet of impervious surfaces and 3,284 square feet of pervious surfaces (6.3 percent of the project site). Implementation of the proposed project would result in a similar amount of impervious surfaces. The proposed project would remove the limited vegetation, the five on-site trees, and two street trees (a big-leaved linden and a water gum).⁶ All trees slated for removal are protected trees.⁷ Landscaping would be provided in the courtyard and, potentially, on the roof deck and plaza. The stormwater will be treated by way of features, including both mechanical treatment and planters, in the courtyard.

The proposed project would be subject to the *Design Guidelines for the Broadway Valdez Specific Plan Area* (Design Guidelines), which includes guidelines and standards related to urban form and visual quality. Pursuant to the Design Guidelines, the Valdez Triangle (including Valdez Street) would be required to support a walkable, pedestrian-oriented shopping district with appropriately scaled and designed streets. The proposed project achieves this goal by widening sidewalks and adding amenities, such as planters, lighting, seating, and a public plaza. In addition, a public art dedication may be commissioned for the plaza.

³ The total required number of residential parking spaces is based on the requirement of 0.5 space per unit.

⁴ The total required number of retail parking spaces is based on the requirement of one space per 500 square feet.

⁵ HortScience. 2015. *Arborist Report, 2630 Broadway, Oakland, CA*. August 10. (See Attachment F)

⁶ HortScience. 2015. *Arborist Report, 2630 Broadway, Oakland, CA*. August 10.

⁷ HortScience. 2015. *Arborist Report, 2630 Broadway, Oakland, CA*. August 10.

The proposed project would undergo the required design review process, pursuant to Section 17.101C.020 of the City's Planning Code, which would ensure consistency with the Design Guidelines. The proposed project would also be designed to meet CALGreen, Title 24, and any amendments required by the City. The proposed project would be contemporary in design, utilizing a variety of materials, including, but not limited to, stone, brick, glass, cementitious wall panels, and cement plaster. The proposed project would include changes of plane, shadow lines, balconies, and other projections; subtle color and material changes; and other architectural elements. The proposed project would be GreenPoint rated in compliance with the City's Green Building Ordinance.

Activity/Employment. The proposed project would include a mix of residential and retail uses and approximately 255 multi-family residential units. Using the generation rate established for the BVDSP area of 1.87 persons per household, the proposed project could generate up to 477 new residents. In addition, the up to 37,710 gsf of retail uses could generate jobs for up to 75⁸ employees.

Utilities. On-site utilities would encompass energy, domestic water, wastewater, and storm drainage. All on-site utilities would be designed in accordance with applicable codes and current engineering practices. The proposed project would not require any water infrastructure improvements. However, the proposed project would pay a sewer mitigation fee, which would either contribute to the cost of replacing pipes to the local collection system to increase capacity or be used to perform inflow and infiltration rehabilitation projects outside of the Plan area, as described in the BVDSP EIR.

Project Construction

Schedule. Project construction would begin with the demolition of the existing building on the project site. Demolition would involve abating any hazards present within the building, demolishing and removing the existing structure, and removing the existing foundation slabs and underground utilities. Project construction is estimated to take about 26 months, beginning as soon as mid-2016, with the earliest building occupancy in late 2018. The project would be constructed in the following phases:

- Demolition of existing buildings and mass excavation: approximately 120 calendar days
- Construction of the mixed-use building: approximately 670 calendar days
- Site improvements: approximately 90 calendar days (this phase would run concurrently within the construction of the mixed-use building phase)
- Commissioning, testing, and final inspection: approximately 90 calendar days (this phase would run concurrently within the construction of the mixed-use building phase)

Depending on the construction phase, the number of onsite construction workers could range from approximately 35 to 200 workers per day. The maximum number of workers (200 workers per day) would occur during framing, rough-in, and interior finishes phase as well as the exterior phase (both during the building construction phase). The minimum number of workers (35 workers per day) would occur during the grading and excavation phase as well as the site preparation phase.

⁸ Using a standard generation rate of 500 square feet per employee.

Equipment and Staging. The equipment that would be used during construction would include an extendable forklift, generators, excavator, loader, dump trucks, tower crane, elevator man/material lift, and extendable lifts. In addition, a drilling rig would be required for shoring and caissons. All construction equipment, employees' vehicles, and import material would be staged on-site or nearby.

Spoils, Debris, and Materials. Construction would require demolition and removal of the existing building and paved features at the project site. Approximately 1,000 cubic yards (cy) of demolition material would be disposed off-site. Approximately 1.1 acres of land would be graded during project construction. The proposed project would involve excavation to a depth of up to 35 feet below grade. Approximately 54,000 cy of excavated material would be exported off-site during project construction.

Project Approvals

The proposed project would require a number of discretionary actions and approvals, including, without limitation:

Actions by the City of Oakland

- Landmarks Preservation Advisory Board—Provide advice to the Planning Commission on design review and demolition findings; review proposed compliance with BVDSP mitigation measures.
- Planning Commission—Regular design review, CEQA determination, major conditional use permit (CUP), minor variance for loading berths, vesting tentative parcel map for condominium purposes, and approval of demolition findings.
- Building Department—Grading permit and other related on-site and off-site work permits (e.g. public right-of-way improvements, tie backs, and public plaza improvements), as well as encroachment permits.

Actions by Other Agencies

- Alameda County Department of Environmental Health (ACDEH)—Site Cleanup Program
- Bay Area Air Quality Management District (BAAQMD)—Issuance of permits for installation and operation of the emergency generator. Permitting of asbestos abatement activities, if any.
- Regional Water Quality Control Board, San Francisco Bay Region (RWQCB)—Acceptance of a Notice of Intent to obtain coverage under the General Construction Activity Stormwater Permit and a Notice of Termination after construction is complete. Granting of required clearances to confirm that all applicable standards, regulations, and conditions for all previous contamination at the site have been met.
- East Bay Municipal Utility District (EBMUD)—Approval of new service requests and new water meter installations.

BVDSP AND EIR

The BVDSP provides a framework for future growth and development in an approximately 95.5-acre area along Oakland's Broadway corridor between Grand Avenue and I-580. Although it does not propose specific private developments, the BVDSP establishes a Development Program to project the maximum level of feasible development that can reasonably be expected during the 25-year planning period (i.e., approximately 3.7 million square feet, including approximately 695,000 square feet of office space, 1,114,000 square feet of restaurant/retail space, 1,800 residential units, a new 180-room hotel, approximately 6,500 parking spaces, and approximately 4,500 new jobs). As described above, the BVDSP EIR analyzed the environmental impacts of adoption and implementation of the BVDSP, and where the level of detail available was adequate for analyzing potential environmental effects, the EIR provided project-level CEQA review for foreseeable and anticipated development.

On September 20, 2013, the City of Oakland released for public review the draft EIR for the BVDSP. The public review and comment period extended from September 20, 2013, through November 12, 2013. The Landmarks Preservation Advisory Board (LPAB) and the City of Oakland Planning Commission held hearings on the draft EIR, and comments received during the public review and comment period were addressed in the final EIR for the BVDSP. Prior to adoption of the final EIR, additional public hearings were held by both the LPAB and the Planning Commission. The final EIR was certified by the Planning Commission on May 21, 2014, and confirmed by the City Council on June 17, 2014.

The final EIR determined that impacts on the following resources would be less than significant, or would be reduced to a less-than-significant level with implementation of mitigation measures or compliance with City of Oakland SCAs: aesthetics; biology; geology, soils, and geohazards; hazardous materials; hydrology and water quality; land use, plans, and policies; population, housing, and employment; public services and recreational facilities; and utilities and service systems. The final EIR determined that implementation of the BVDSP would have significant unavoidable impacts related to the following environmental resources: wind and shadow, air quality, cultural resources, greenhouse gases (GHGs) and climate change, noise, and transportation. Because of the potential for significant unavoidable impacts, a Statement of Overriding Considerations with findings was adopted as part of BVDSP approval on May 21, 2014, and confirmed by the City Council on June 17, 2014. The City Council found that, for the significant and unavoidable impacts listed above, the BVDSP EIR provided the best balance between the City's goals and objectives and the BVDSP's benefits. In addition, the City Council made the following determinations:

- The BVDSP updates the goals and policies of the general plan and provides more detailed guidance for specific areas within the Broadway Valdez District;
- The BVDSP builds upon two retail enhancement studies, the Citywide Retail Enhancement Strategy and the companion Upper Broadway Strategy – A Component of the Oakland Retail Enhancement Strategy, which identified the City's need to reestablish major destination retail in Oakland as being critical to stemming the retail leakage and associated loss of tax revenue that the City suffers from annually. These reports also identified the Broadway Valdez District as the City's best opportunity to reestablish a retail core with the type of comparison shopping that once served Oakland and nearby communities and that the City currently lacks;

- The BVDSP provides a policy and regulatory framework to achieve one of the primary objectives: to transform the Plan Area into an attractive regional destination for retailers, shoppers, employers and visitors that serves, in part, the region's shopping needs and captures sales tax revenue for reinvestment in Oakland;
- The BVDSP could create employment opportunities (both short-term construction jobs as well as permanent jobs), increase revenues (sales, property, and other taxes), and promote spin-off activities (as Plan workers spend some of their income on goods in the Plan Area);
- The BVDSP Development Program promotes increased housing densities in proximity to employment-generating land uses that support City and regional objectives for achieving a jobs/housing balance and transit-oriented development;
- The BVDSP design guidelines will ensure that future development contributes to the creation of an attractive pedestrian-oriented district characterized by high-quality design and a distinctive sense of place; and
- The BVDSP identifies a series of needed and desired improvements related to transportation, affordable housing, historic resource preservation and enhancement, streetscape, plaza, parking, and utility infrastructure and regulatory tools, policies, and potential funding mechanisms to realize those improvements.

The Notice of Determination (NOD) for the BVDSP EIR was filed with the State Clearinghouse on June 18, 2014, and was not challenged. Therefore, the BVDSP EIR remains valid.

SUMMARY OF FINDINGS

An evaluation of the proposed project is provided in the CEQA Checklist below. This evaluation concludes that the proposed project qualifies for an exemption/addendum from additional environmental review. It is consistent with the development density and land use characteristics established by the City of Oakland in the BVDSP, and any potential environmental impacts associated with its development were adequately analyzed and covered by the analysis in the BVDSP EIR. The proposed project would be required to comply with the applicable mitigation measures identified in the BVDSP EIR as well as any applicable City of Oakland SCAs (see Attachment A, at the end of the CEQA Checklist). With implementation of the applicable mitigation measures and SCAs, the proposed project would not result in a substantial increase in the severity of significant impacts that were previously identified in the BVDSP EIR or any new significant impacts that were not previously identified in the BVDSP EIR.

In accordance with Public Resources Code Sections 21083.3, 21094.5, and 21166 and State CEQA Guidelines Sections 15183, 15183.3, and 15164, and as set forth in the CEQA Checklist below, the proposed project qualifies for an exemption/addendum because the following findings can be made:

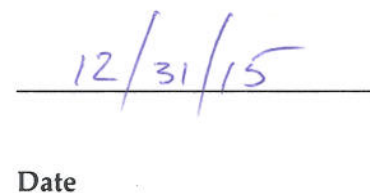

- The proposed project would not result in significant impacts that (1) would be peculiar to the project or project site; (2) were not previously identified as significant project-level, cumulative, or off-site effects in the BVDSP EIR; or (3) were previously identified as significant but—as a result of substantial new information that was not known at the time the BVDSP EIR was certified—would increase in severity above the level described in the EIR. Therefore, the proposed project is exempt from further environmental review in accordance with Public Resources Code Section 21083.3 and CEQA Guidelines Section 15183.
- The proposed project would not cause any new significant impacts on the environment that were not already analyzed in the BVDSP EIR or result in more significant impacts than those that were previously analyzed in the BVDSP EIR. The effects of the proposed project have been addressed in the BVDSP EIR, and no further environmental documents are required, in accordance with Public Resources Code Section 21094.5 and State CEQA Guidelines Section 15183.3.
- The analyses conducted and the conclusions reached in the BVDSP EIR that was certified by the Planning Commission on May 21, 2014, and confirmed by the City Council on June 17, 2014, remain valid, and no supplemental environmental review is required for the proposed project modifications. The proposed project would not cause new significant impacts that were not previously identified in the EIR or result in a substantial increase in the severity of previously identified significant impacts. No new mitigation measures would be necessary to reduce significant impacts. No changes have occurred with respect to the circumstances surrounding the original project that would cause significant environmental impacts to which the proposed project would contribute considerably, and no new information has been put forward that shows that the proposed project would cause significant environmental impacts. Therefore, no supplemental environmental review is required beyond this addendum, in accordance with Public Resources Code Section 21166 and State CEQA Guidelines Section 15164.

Each of the above findings provides a separate and independent basis for CEQA compliance.

 Darin Ranelletti

Environmental Review Officer

 Date

CEQA CHECKLIST

Overview

This CEQA Checklist provides a summary of the potential environmental impacts that may result from adoption and implementation of the BVDSP, as evaluated in the BVDSP EIR. Potential environmental impacts of development under the BVDSP were analyzed and covered by the BVDSP EIR, and the EIR identified mitigation measures and Standard Conditions of Approval (SCAs)⁹ to address these potential environmental impacts.

This CEQA Checklist hereby incorporates by reference the BVDSP EIR discussion and analysis of all potential environmental impact topics; only those environmental topics that could have a potential project-level environmental impact are included. The EIR significance criteria have been consolidated and abbreviated in this CEQA Checklist for administrative purposes; a complete list of the significance criteria can be found in the BVDSP EIR.

This CEQA Checklist provides a determination of whether the proposed project would result in:

- Equal or Less Severity of Impact Previously Identified in BVDSP EIR;
- Substantial Increase in Severity of Previously Identified Significant Impact in BVDSP EIR; or
- New Significant Impact.

Where the severity of the impacts of the proposed project would be the same as or less than the severity of the impacts described in the BVDSP EIR, the checkbox for Equal or Less Severity of Impact Previously Identified in BVDSP EIR is checked. Where the checkbox for Substantial Increase in Severity of Previously Identified Significant Impact in BVDSP EIR or New Significant Impact is checked, there are significant impacts that are:

- Peculiar to project or project site (per CEQA Guidelines Sections 15183 or 15183.3);
- Not identified in the previous EIR (BVDSP EIR) (per CEQA Guidelines Sections 15183 or 15183.3), including offsite and cumulative impacts (per CEQA Guidelines Section 15183);
- Due to substantial changes in the project (per CEQA Guidelines Section 15162);
- Due to substantial changes in circumstances under which the project will be undertaken (per CEQA Guidelines Section 15162); or
- Due to substantial new information not known at the time the BVDSP EIR was certified (per CEQA Guidelines Sections 15162, 15183, or 15183.3).

⁹ These are Development Standards that are incorporated into projects as SCAs, regardless of a project's environmental determination, pursuant, in part, to CEQA Guidelines Section 15183. As applicable, the SCAs are adopted as requirements of an individual project when it is approved by the City, and are designed to, and will, substantially mitigate environmental effects. In reviewing project applications, the City determines which of the SCAs are applied, based on the zoning district, community plan, and the type(s) of permit(s)/approvals(s) required for the project. Depending on the specific characteristics of the project type and/or project site, the City will determine which SCA applies to each project.

The proposed project is required to comply with applicable mitigation measures identified in the BVDSP EIR, and with City of Oakland SCAs. The project sponsor has agreed to incorporate and/or implement the required mitigation measures and SCAs as part of the proposed project. This CEQA Checklist includes references to the applicable mitigation measures and SCAs.

A list of the mitigation measures and SCAs is included in Attachment A, and is incorporated by reference into the CEQA Checklist analysis. If the CEQA Checklist (including Attachment A) inaccurately identifies or fails to list a mitigation measure or SCA, the applicability of that mitigation measure or SCA to the proposed project is not affected. If the language describing a mitigation measure or SCA included in the CEQA Checklist (including Attachment A) is inaccurately transcribed, the language of the mitigation measure as set forth in the BVDSP EIR or City of Oakland SCAs shall control.

Attachments

The following attachments are included at the end of this CEQA Checklist:

- A. Standard Conditions of Approval and Mitigation Monitoring and Reporting Program;
 - B. Project Consistency with Community Plans or Zoning, per CEQA Guidelines Section 15183;
 - C. Infill Performance Standards, per CEQA Guidelines Section 15183.3;
 - D. Criteria for Use of Addendum, per CEQA Guidelines Sections 15164 and 15162;
 - E. Air Quality Screening Analysis for Broadway & 27th Project, per the Broadway Valdez District Specific Plan Environmental Impact Report;
 - F. Arborist Report for Broadway & 27th Project;
 - G. Historical Architectural Resources Mitigation Compliance Memorandum for Broadway & 27th Project, per the Broadway Valdez District Specific Plan Environmental Impact Report;
 - H. Preliminary Geotechnical Exploration Memorandum for Broadway & 27th Project;
 - I. Greenhouse Gases and Climate Change Screening Analysis for Broadway & 27th Project, per the Broadway Valdez District Specific Plan Environmental Impact Report;
 - J. Environmental Data Resources Radius Map Report with GeoCheck for 2630 Broadway, Oakland, California, 94612;
 - K. Phase I Environmental Site Assessment for 2630 Broadway, Oakland, California;
 - L. Phase II Environmental Site Assessment, 2630 Broadway, Oakland, California;
 - M. Transportation Assessment for Broadway & 27th Project.

<p>1. Aesthetics, Shadow, and Wind Would the project:</p>	<p>Equal or Less Severity of Impact Previously Identified in BVDSP EIR</p>	<p>Substantial Increase in Severity of Previously Identified Significant Impact in EIR</p>	<p>New Significant Impact</p>
<p>a. Have a substantial adverse effect on a public scenic vista; substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings, located within a state or locally designated scenic highway; substantially degrade the existing visual character or quality of the site and its surroundings; or create a new source of substantial light or glare which would substantially and adversely affect day or nighttime views in the area;</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>b. Introduce landscape that would now or in the future cast substantial shadows on existing solar collectors (in conflict with California Public Resource Code Sections 25980 through 25986); or cast shadow that substantially impairs the function of a building using passive solar heat collection, solar collectors for hot water heating, or photovoltaic solar collectors;</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>c. Cast shadow that substantially impairs the beneficial use of any public or quasi-public park, lawn, garden, or open space; or, cast shadow on an historical resource, as defined by CEQA Guidelines Section 15064.5(a), such that the shadow would materially impair the resource’s historic significance;</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>d. Require an exception (variance) to the policies and regulations in the General Plan, Planning Code, or Uniform Building Code, and the exception causes a fundamental conflict with policies and regulations in the General Plan, Planning Code, and Uniform Building Code addressing the provision of adequate light related to appropriate uses; or</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>e. Create winds that exceed 36 mph for more than one hour during daylight hours during the year. The wind analysis only needs to be done if the project’s height is 100 feet or greater (measured to the roof) and one of the following conditions exist: (a) the project is located adjacent to a substantial water body (i.e., Oakland Estuary, Lake Merritt or San Francisco Bay); or (b) the project is located in Downtown.</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Scenic Vistas, Scenic Resources, and Visual Character (Criterion 1a)

The BVDSP EIR determined that potential impacts to scenic vistas and resources, visual character, and lighting and glare from development under the BVDSP would be less than significant with implementation of SCAs, and that no mitigation measures were necessary. The Physical Height Model analyzed in the BVDSP EIR¹⁰ represents the conceptual massing for projects to be developed under the BVDSP, and served as the basis for massing, view corridor, shadow, and wind analysis performed in the EIR. The Physical Height Model accounted for 200-foot building heights at the project site (18 stories). The EIR found that new structures would partially obstruct views of the sky, but that such changes would not represent a substantial adverse effect on views, because no views considered scenic or unique (as defined by CEQA) and no visual access to protected scenic resources (as defined by the General Plan) would be obstructed. Changes anticipated under the BVDSP would generally create a more pedestrian-oriented aesthetic in the Plan Area, and the Design Guidelines would ensure that development under the BVDSP would be compatible with the existing built form and architectural character of the Plan Area as a whole, and compatible with the distinctive visual character of individual areas. Development in the Plan Area will be required to comply with SCAs related to landscaping, street frontages, landscape maintenance, utility undergrounding, public right-of-way improvements, and lighting plans.

Shadow (Criteria 1b through 1d)

The EIR determined that development under the BVDSP would result in less-than-significant impacts from shading, with the exception of potential shading on Temple Sinai, which is considered a historical resource. Temple Sinai is at 356 28th Street near the intersection with Webster Street. Under the BVDSP EIR, Mitigation Measure AES-4: Shadow Analysis, applies to the area bounded by Webster Street, 29th Street, Broadway, and 28th Street to reduce shadow impacts. Even with implementation of Mitigation Measure AES-4, impacts would conservatively remain significant and unavoidable. Development outside this area under the BVDSP was determined to result in less-than-significant shadow impacts. To address potential cumulative impacts, under the BVDSP EIR, Mitigation Measure AES-6, which requires implementation of Mitigation Measures AES-4 and AES-5 (described below), applies to projects bounded by the streets listed above to address significant cumulative aesthetics and wind impacts. The EIR concluded that, even with implementation of Mitigation Measure AES-6, cumulative impacts would conservatively remain significant and unavoidable.

Wind (Criterion 1e)

The BVDSP EIR determined that development under the BVDSP that has a height of 100 feet or greater, and is in the portion of the Plan Area designated as Central Business District (which extends north from downtown to 27th Street), could result in adverse wind conditions. Under the BVDSP EIR, Mitigation Measure AES-5: Wind Analysis, applies to those projects in the Central Business District portion of the Plan Area that are over 100 feet in height. Even with implementation of Mitigation Measure AES-5, impacts would conservatively remain significant and unavoidable. To address potential cumulative impacts, under the BVDSP EIR, Mitigation Measure AES-6, which requires implementation of Mitigation

¹⁰ The Broadway Valdez Development Program represents the maximum feasible development that the City has projected can reasonably be expected to occur in the Plan Area over the next 25 years, and is therefore the level of development envisioned by the Specific Plan and analyzed in the BVDSP EIR. The Broadway Valdez Development Program, together with the Specific Plan height limits, maximum base heights, and step-back requirements inform the Physical Height Model, which provides the basis for analysis in the BVDSP EIR.

Measures AES-4 and AES-5, applies to those same projects and addresses significant cumulative wind and aesthetics impacts. Even with implementation of Mitigation Measure AES-6, cumulative impacts would conservatively remain significant and unavoidable.

Project Analysis and Conclusion

The proposed project's massing would be in accordance with the building envelope modeled in the BVDSP EIR. Pursuant to the Design Guidelines, development within the Valdez Triangle would be required to support a walkable, pedestrian-oriented shopping district with appropriately scaled and designed streets. The proposed project meets this requirement by widening sidewalks and adding amenities such as planters, lighting, seating, and a public plaza. In addition, public art may be commissioned for the plaza. The proposed project would undergo the required design review process, pursuant to Section 17.101C.020 of the City's Planning Code. This would ensure consistency with the Design Guidelines. The proposed project would be contemporary in design, utilizing a variety of materials, including, but not limited to, stone, brick, glass, cementitious wall panels, and cement plaster. The proposed project would include changes in plane, shadow lines, balconies, and other projections; subtle color and material changes; and other architectural elements. Even though the proposed project's height (i.e., up to 85 feet) would be above the 65-foot height analyzed in the Physical Height Model for the project area, the proposed project would be outside the area identified in the BVDSP EIR as having potential shading impacts on Temple Sinai. Therefore, although the proposed project would be in the Central Business District, it would not be more than 100 feet tall and would not contribute to potential wind impacts. For these reasons, Mitigation Measures AES-4, AES-5, and AES-6, as identified in the BVDSP EIR, would **not** apply.

Based on an examination of the analysis, findings, and conclusions in the BVDSP EIR, implementation of the proposed project would not substantially increase the severity of the significant impacts identified in that report, nor would it result in new significant impacts related to aesthetics, shadows, or wind that were not identified in the BVDSP EIR. In addition, no mitigation measures from the BVDSP EIR related to aesthetics, shadows, or wind are applicable to the proposed project. The proposed project would be required to implement SCAs related to landscaping, street frontages, landscape maintenance, utility undergrounding, public right-of-way improvements, and lighting plans, as identified in Attachment A (for reference, these are SCA-AES-1 through SCA-AES-3).

<p>2. Air Quality Would the project:</p>	<p>Equal or Less Severity of Impact Previously Identified in BVDSP EIR</p>	<p>Substantial Increase in Severity of Previously Identified Significant Impact in EIR</p>	<p>New Significant Impact</p>
<p>a. During project construction result in average daily emissions of 54 pounds per day of ROG, NO_x, or PM_{2.5} or 82 pounds per day of PM₁₀; during project operation result in average daily emissions of 54 pounds per day of ROG, NO_x, or PM_{2.5}, or 82 pounds per day of PM₁₀; result in maximum annual emissions of 10 tons per year of ROG, NO_x, or PM_{2.5}, or 15 tons per year of PM₁₀; or</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>b. For new sources of Toxic Air Contaminants (TACs), during either project construction or project operation expose sensitive receptors to substantial levels of TACs under project conditions resulting in (a) an increase in cancer risk level greater than 10 in one million, (b) a noncancer risk (chronic or acute) hazard index greater than 1.0, or (c) an increase of annual average PM_{2.5} of greater than 0.3 microgram per cubic meter; or, under cumulative conditions, resulting in (a) a cancer risk level greater than 100 in a million, (b) a noncancer risk (chronic or acute) hazard index greater than 10.0, or (c) annual average PM_{2.5} of greater than 0.8 microgram per cubic meter; or expose new sensitive receptors to substantial ambient levels of Toxic Air Contaminants (TACs) resulting in (a) a cancer risk level greater than 100 in a million, (b) a noncancer risk (chronic or acute) hazard index greater than 10.0, or (c) annual average PM_{2.5} of greater than 0.8 microgram per cubic meter.</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Construction and Operational Emissions (Criterion 2a)

The BVDSP EIR determined that construction activities associated with development of projects under the BVDSP would generate air emissions from the use of heavy construction equipment, vehicle trips, hauling materials, construction workers traveling to and from the project sites, and the application of architectural coatings, such as paints, which would result in significant impacts. An SCA related to construction air pollution controls, along with Recommended Measure AIR-1, would reduce emissions from construction equipment, control fugitive dust, and reduce emissions from architectural coatings. Even with implementation of the SCA and Recommended Measure AIR-1, regional emissions were conservatively estimated to exceed the BAAQMD daily significance thresholds for reactive organic gases (ROG), resulting in a significant and unavoidable impact.

The BVDSP EIR also determined operational activities associated with development in the Plan Area would result in an increase in criteria air pollutant and precursor emissions from mobile on-road sources and onsite area sources, such as natural gas combustion for space and water heating and landscape maintenance, which would have a significant impact. Operational emissions of ROG, oxides of nitrogen (NO_x), and particulate matter less than or equal to 10 microns in diameter (PM₁₀) would exceed significance thresholds. An SCA that requires the implementation of Parking and Transportation Demand Management (TDM) would reduce vehicular trips and operational emissions. Even with implementation of the SCA, this impact would conservatively remain significant and unavoidable for emissions of ROG, NO_x, and PM₁₀.

Toxic Air Contaminants (Criterion 2b)

The BVDSP EIR determined that development under the BVDSP could generate substantial levels of Toxic Air Contaminants (TACs), resulting in significant impacts from construction activities and project operations. New operational sources, such as backup diesel generators, could result in significant impacts on new and existing receptors. SCAs would reduce potential air quality impacts related to TACs by reducing construction source impacts on new and existing receptors, and requiring a Health Risk Assessment of surrounding offsite sources on new onsite sensitive receptors. The EIR also identified Mitigation Measure AIR-4: Risk Reduction Plan, which would reduce the impacts associated with new operational sources on existing sensitive receptors. Even with the SCA and Mitigation Measure AIR-4, the EIR determined that these impacts conservatively would remain significant and unavoidable.

Project Analysis and Conclusion

Construction of the proposed project would occur over approximately 26 months and include excavation and off-haul of up to 54,000 cy of soil. The proposed project would include a new mixed-use building of approximately 423,577 gsf, consisting of up to 253,714 gsf of residential space (up to 255 residential units), and up to 37,710 gsf of retail, including the potential for 9,441 gsf of mezzanine retail depending on tenant demand. This differs from what was presented in the BVDSP EIR, which analyzed a development with 0 residential units but more square footage for retail than what is currently proposed (82,689 gsf compared with 37,710 gsf).

The proposed project would generate approximately 94 net new vehicle trips during the weekday AM peak hour (27 inbound and 67 outbound), approximately 170 net new vehicle trips during the weekday PM peak hour (97 inbound and 73 outbound), and 1,870 total new daily trips, as described in the Transportation and Circulation section of this CEQA Checklist. As described above in the Executive Summary and below in Section 13, Transportation and Circulation, the number of trips associated with the proposed project coincides with the number of trips analyzed in the BVDSP EIR for Subdistrict 3 and the Valdez Triangle subarea. Therefore, emissions associated with the proposed project's trips were accounted for in the BVDSP EIR. The proposed project would be required to comply with applicable SCAs related to parking demand and source emissions during construction and operation. Recommended Measure AIR-1 from the BVDSP EIR could also apply as a condition of approval, as described below.

The proposed project would introduce new sensitive receptors (i.e., residents) to the project site. In addition, it would be located within 1,000 feet of several roadways with significant traffic (at least 10,000 vehicles per day) and other sources of TACs. Therefore, a screening-level analysis was completed to assess impacts from nearby sources of TACs on the proposed project's new sensitive receptors, as well as impacts from the proposed project's emissions of TACs on adjacent sensitive receptors (see Attachment E).

Conservative assumptions indicate that the cumulative cancer risk to the project's sensitive receptors would be less than 100 in 1 million, and the risk to existing sensitive receptors from project sources, when combined with local cancer risks from cumulative sources within 1,000 feet, would also be less than 100 in 1 million. As a result, the SCA related to preparation of a Health Risk Assessment and Mitigation Measure AIR-4, development and adoption of further risk reduction strategies, are not required.

An examination of the analysis, findings, and conclusions of the BVDSP EIR finds that implementation of the proposed project would not substantially increase the severity of the significant impacts that were identified in the BVDSP EIR, nor would it result in new significant impacts related to air quality that were not identified in the BVDSP EIR. The proposed project would be required to implement SCAs to control construction emissions, as well as TDM, as identified in Attachment A at the end of the CEQA Checklist (for reference, these are SCA-AIR-1 and SCA-TRANS-4). In addition, Recommended Measure AIR-1 from the BVDSP EIR could apply to the proposed project.

Recommended Measure AIR-1: During construction, the project applicant shall require the construction contractor to use prefinished materials and colored stucco, as feasible.

<p>3. Biological Resources Would the project:</p>	<p>Equal or Less Severity of Impact Previously Identified in BVDSP EIR</p>	<p>Substantial Increase in Severity of Previously Identified Significant Impact in EIR</p>	<p>New Significant Impact</p>
<p>a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service;</p> <p>Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service;</p> <p>Have a substantial adverse effect on federally protected wetlands (as defined by Section 404 of the Clean Water Act) or state protected wetlands, through direct removal, filling, hydrological interruption, or other means;</p> <p>Substantially interfere with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites;</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>b. Fundamentally conflict with the City of Oakland Tree Protection Ordinance (Oakland Municipal Code [OMC] Chapter 12.36) by removal of protected trees under certain circumstances; or</p> <p>Fundamentally conflict with the City of Oakland Creek Protection Ordinance (OMC Chapter 13.16) intended to protect biological resources.</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Special-Status Species, Wildlife Corridors, Riparian and Sensitive Habitat, Wetlands, Tree and Creek Protection (Criteria 3a and 3b)

As described in the BVDSP EIR, the Plan Area is in and surrounded by a fully developed urban environment, and impacts of development on biological resources under the BVDSP would be less than significant. Few special-status animals are present in the Plan Area, and no aquatic habitats that could support migratory fish or birds are present. In addition, very little natural vegetation exists; and because this vegetation is not connected to other nearby natural habitats, it would not constitute a wildlife corridor. There are no natural sensitive communities in the Plan Area. The nearest riparian habitat is at

Glen Echo Creek near Adams Park, where the stream daylight for a short distance before flowing under Grand Avenue and into Lake Merritt. Potential increases in transmittal of hazardous materials from construction activities via runoff from the impermeable surfaces of the site could result in adverse impacts to Glen Echo Creek. The EIR identified landscape trees in the Plan Area as potential nursery sites for nesting birds. In addition, projects developed under the BVDSP could cause harm to birds by increasing bird collisions with buildings.

Development in the Plan Area will be required to comply with SCAs related to removal and replacement of trees, including trees on creekside properties; tree protection during construction; and protection of nesting birds during the breeding season, which would protect natural resources from potential degradation that could result from construction of development projects under the Plan Area. Additionally, certain development in the Plan Area will be required to comply with an SCA pertaining to reducing bird collisions with buildings, which will reduce potential impacts on birds by constructing features that are in compliance with Best Management Practice strategies to limit bird strikes. SCAs pertaining to landscaping and vegetation management on creekside properties, the protection of creeks from construction vibration and dewatering, hazardous materials management, stormwater and erosion control, and construction measures to reduce bird collisions will ensure that development under the BVDSP will be in compliance with all aspects of the Creek Protection Ordinance and reduce potential impacts on water quality, reduce the potential for bird collisions, and minimize potential indirect impacts from pollution in Glen Echo Creek.

Project Analysis and Conclusion

The approximate 1.1-acre project site is located in an urban setting that includes a surface parking lot, auto-service land uses, and a vacant building. Vegetation is limited to ruderal weeds that grow between the cracked pavement, small shrubs along the perimeter of a building, and five trees (including two Coast live oaks, a queen palm, an Italian cypress, and a European white birch).¹¹ The project site is covered with approximately 48,822 square feet of impervious surfaces and approximately 3,284 square feet of pervious surfaces (6.3 percent of the project site). Implementation of the proposed project would result in a similar amount of impervious surfaces. The proposed project would remove the limited amount of vegetation, the five on-site trees, and two street trees (a big-leaved linden and a water gum).¹² Trees slated for removal have been identified as protected trees. Landscaping would be provided in the courtyard and, potentially, on the roof deck and plaza. Stormwater would be treated through features in the courtyard, both mechanical treatment features and planters. Street trees would be planted as part of the project, consistent with the BVDSP Public Realm Design Guidelines for Streetscape Design.

Based on an examination of the analysis, findings, and conclusions in the BVDSP EIR, implementation of the proposed project would not substantially increase the severity of the significant impacts identified in that report, nor would it result in new significant impacts related to biological resources that were not identified in the BVDSP EIR. The BVDSP EIR did not identify any mitigation measures related to biological resources, and none would be needed for the proposed project. SCAs related to tree removal and tree permits, identified in Attachment A at the end of the CEQA Checklist, would apply to the project (for reference, these are SCA-BIO-1, and SCA-BIO-2).____

<p>c. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature; or</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>d. Disturb any human remains, including those interred outside of formal cemeteries.</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Historical Resources (Criterion 4a)

The BVDSP EIR found that development under the BVDSP could result in the physical demolition, destruction, relocation, or alteration of historical resources that are listed in or may be eligible for listing in the federal, state, or local registers of historical resources, which would be considered a significant impact. The Plan Area contains 20 individual properties, including two in an Area of Primary

Importance,¹³ that are considered historical resources for CEQA purposes. There are also many older buildings that possess architectural merit, either in Areas of Secondary Importance (ASIs)¹⁴ or standing alone, that contribute to the variety and texture of the Plan Area.

The EIR identified Mitigation Measure CUL-1 to reduce the impacts to historical resources throughout the Plan Area, as well as the site-specific impacts associated with the demolition of individual historical resources. In addition, the EIR concluded that incompatible new construction immediately adjacent to historical resources, as well as inappropriate reuse of such resources, could result in significant impacts in the Plan Area. Specifically, development on parcels across Webster Street to the northeast of Temple Sinai could extend shadows far enough south to shade the temple's stained-glass windows during the early morning hours, resulting in significant impacts. Even with implementation of Mitigation Measure AES-4, Shadow Analysis, described in Section 1 above, Aesthetics, Shadow and Wind, impacts would conservatively remain significant and unavoidable.

The BVDSP EIR determined that significant cumulative impacts to historical resources could result from development of projects under the BVDSP, and identified Mitigation Measure CUL-5, which would require implementation of Mitigation Measure CUL-1. However, even with implementation of Mitigation Measure CUL-5, the EIR determined that cumulative impacts would remain significant and unavoidable.

In addition to the mitigation measures described above, the BVDSP EIR identified Oakland Municipal Code Section 17.136.075, Regulations for Demolition or Removal of Designated Historic Properties and Potentially Designated Historic Properties, as well as SCAs related to property relocation instead of demolition, and protection of historic structures from vibration impacts during adjacent construction projects, which will also address impacts to historical resources.

Even with the above mitigation measures and SCAs, impacts to historical resources would remain significant and unavoidable. The BVDSP EIR found that adoption of and development under the BVDSP could result in physical demolition, or substantial alteration, of physical characteristics that convey the significance of historical architectural resources, which would be considered a significant environmental impact. The significant and unavoidable impacts on historical architectural resources were overridden as part of the BVDSP process. Nonetheless, projects within the Plan Area that could affect historical architectural resources are required to assess the feasibility of compliance with mitigation set forth in the BVDSP EIR, which is described below.

Archaeological and Paleontological Resources (Criteria 4b and 4c)

No known archaeological resources have been recorded in the Plan Area; however, the EIR revealed that the Plan Area is potentially sensitive for archaeological and buried sites that are not visible due to urban development. The EIR determined that implementation of an SCA, which would ensure that resources are recovered and that appropriate procedures are followed in the event of accidental discovery, would minimize potential risk of impact to archaeological resources to a less-than-significant level.

¹³ Area of Primary Importance is an area or district that appears eligible for the National Register of Historic Places, and is considered a historical resource under CEQA.

¹⁴ Area of Secondary Importance is an area or district that is of local interest, but is not eligible for the National Register of Historic Places and is not considered a historical resource under CEQA.

The Plan Area was also identified as having low to moderate paleontological sensitivity, and it is possible that fossils would be discovered during excavation in the Plan Area. Implementation of an SCA, which would require a qualified paleontologist to document a discovery, and monitor that appropriate procedures be followed in the event of a discovery, would ensure that the potential impact to fossils discovered in the rock units would be less than significant.

Human Remains (Criterion 4d)

Although the BVDSP EIR did not identify any locations of buried human remains in the Plan Area, the inadvertent discovery of human remains during ground-disturbing activities cannot be entirely discounted. In the event that human remains are discovered during excavation, implementation of an SCA, which would ensure that the appropriate procedures for handling and identifying the remains are followed, would reduce impacts to a less-than-significant level.

Project Analysis and Conclusion

Historical Architectural Resources. This section of the CEQA Checklist summarizes the findings of the historical architectural resources mitigation compliance analysis that was completed for the proposed project (see Attachment G). Biff's Coffee Shop is rated *b+3 in the OCHS. The structure that housed the former Biff's Coffee Shop, which closed in 1996, is considered a Heritage Property and, therefore, a Designated Historic Property, according to the OCHS.¹⁵ Constructed on the project site between 1962 and 1964, the structure is a historic resource under CEQA, as stated in the BVDSP EIR. However, it would be demolished as part of the project. Therefore, Mitigation Measures CUL-1 and CUL-5 from the BVDSP EIR, listed below, are applicable to the proposed project.

Mitigation Measure CUL-1(a), Avoidance, Adaptive Reuse, or Appropriate Relocation of Historically Significant Structures

- **Avoidance.** The City shall ensure, where feasible, that all future development activities allowable under the Specific Plan, including demolition, alteration, and new construction, shall avoid historical resources (i.e., those listed on federal, state, and local registers).
- **Adaptive Reuse.** If avoidance is not feasible, adaptive reuse and rehabilitation of historical resources shall occur in accordance with the Secretary of Interior's Standards for the Treatment of Historic Properties.
- **Appropriate Relocation.** If avoidance or adaptive reuse in situ is not feasible, SCA 56, Compliance with Policy 3.7 of the Historic Preservation Element (Property Relocation Rather than Demolition), shall be implemented, as required. Projects that relocate the affected historical property to a location consistent with its historic or architectural character could reduce the impact to less than significant (Historic Preservation Element Action 3.8.1), unless the property's location is an integral part of its significance (e.g., a contributor to a historic district).

¹⁵ Biff's Coffee House is rated *b+3 in the OCHS. A building is given two individual property ratings, an "existing rating" (*) and a "contingency rating" (b) if it is believed that future conditions or circumstances could significantly change. Biff's existing rating (*) indicates that it is not rated because it was built after 1945. Biff's contingency rating (b) indicates it could be considered a building of major importance when it is older, in which case it would be eligible for the National Register of Historical Places.

Mitigation Measure CUL-1(b), Future Site-Specific Surveys and Evaluations

Although the Plan Area has been surveyed by the City of Oakland's OCHS and as a part of the Broadway Valdez Specific Plan effort by ESA in 2009, evaluations and ratings may change with time and other conditions. There may be previously unidentified historical resources that would be affected by future development activities. For any future projects on or immediately adjacent to buildings 50 years old or older between 2013 and 2038, which is the build-out horizon for the Specific Plan (i.e., by the end of the Plan period, buildings constructed prior to 1988), the City shall require specific surveys and evaluations of such properties to determine their potential historical significance at the federal, state, and local levels. Intensive-level surveys and evaluations shall be completed by a qualified architectural historian who meets the Secretary of the Interior's Standards. For all historical resources identified as a result of site-specific surveys and evaluations, the City shall ensure that future development activities avoid, adaptively reuse, and/or appropriately relocate such historical resources in accordance with Mitigation Measure CUL-1(a) (Avoidance, Adaptive Reuse, or Appropriate Relocation of Historically Significant Structures), above. Site-specific surveys and evaluations that are more than 5 years old shall be updated to account for changes that may have occurred over time.

Mitigation Measure CUL-1(c), Recordation and Public Interpretation

If Mitigation Measure CUL-1(a) (Avoidance, Adaptive Reuse, or Appropriate Relocation of Historically Significant Structures) is determined infeasible as part of a future project, the City shall evaluate the feasibility and appropriateness of recordation and public interpretation of such resources prior to any construction activities that would directly affect them. Should the City decide that recordation and or public interpretation is required, the following activities will be performed:

- **Recordation.** Recordation shall follow the standards provided in the National Park Service's Historic American Building Survey (HABS) program, which requires photo-documentation of historic structures, a written report, and/or measured drawings (or photo reproduction of original plans if available). The photographs and report would be archived at the Oakland Planning Department and local repositories, such as public libraries, historical societies, and/or the Northwest Information Center at Sonoma State University. The recordation efforts shall occur prior to demolition, alteration, or relocation of any historic resources identified in the Plan Area, including those that are relocated pursuant to Mitigation Measure CUL-1(a) (Avoidance, Adaptive Reuse, or Appropriate Relocation of Historically Significant Structures). Additional recordation could include (as appropriate) oral history interviews or other documentation (e.g., video) of the resource.
- **Public Interpretation.** A public interpretation or art program would be developed by a qualified historic consultant or local artist in consultation with the Landmarks Preservation Advisory Board and the City, based on a City-approved scope of work, and submitted to the City for review and approval. The program could take the form of plaques, commemorative markers, or artistic or interpretive displays that explain the historical significance of the properties to the general public. Such displays would be incorporated into project plans as they are being developed and would typically be located in a publicly accessible location on or near the site of the former historical resource(s). Public interpretation displays shall be installed prior to completion of any construction projects in the Plan Area.

Photographic recordation and public interpretation of historically significant properties do not typically mitigate the loss of resources to a less-than-significant level (State CEQA Guidelines Section 15126.4(b)(2)).

Mitigation Measure CUL-1(d), Financial Contributions

If Mitigation Measure CUL-1(a) (Avoidance, Adaptive Reuse, or Appropriate Relocation of Historically Significant Structures) and Mitigation Measure CUL-1(b) (Future Site-Specific Surveys and Evaluations) are not satisfied, the project applicant shall make a financial contribution to the City of Oakland, which can be used to fund other historic preservation projects in the Plan Area or the immediate vicinity. Such programs include, without limitation, a Façade Improvement Program or a Property Relocation Assistance Program.

This mitigation would conform to Action 3.8.1(9) of the Historic Preservation Element of the City of Oakland General Plan. Contributions to the fund(s) shall be determined by staff members at the time of approval of site-specific project plans, based on a formula to be determined by the Landmarks Preservation Advisory Board. However, such financial contribution, even in conjunction with Mitigation Measure CUL-1(c) (Recordation and Public Interpretation), would not reduce the impacts to less-than-significant levels. Only avoidance of direct effects on historic resources, as would be achieved through Mitigation Measure CUL-1(a) (Avoidance, Adaptive Reuse, or Appropriate Relocation of Historically Significant Structures) and Mitigation Measure CUL-1(b) (Future Site-Specific Surveys and Evaluations), would reduce the impacts on historic resources to a less-than-significant level. Therefore, if demolition or substantial alteration of historically significant resources is identified by the City as the only feasible option for development in the Plan Area, even with implementation of Mitigation Measure CUL-1(c) (Recordation and Public Interpretation) and Mitigation Measure CUL-1(d) (Financial Contributions), the impact of adoption of, and development under, the Specific Plan would be considered significant and unavoidable.

Mitigation Measure CUL-5, Implement Mitigation Measure CUL-1

Implement Mitigation Measure CUL-1 to mitigate cumulative impacts.

The avoidance or adaptive reuse options discussed in the Historic Mitigation Compliance Analysis completed for the proposed project (see Attachment G) would somewhat reduce impacts, compared with the impacts that were analyzed in the BVDSP EIR by restoring it as a freestanding structure under Option 1 (Avoidance) or restoring its exteriors under Option 2 (Adaptive Reuse). However, overall, demolition of Biff's Coffee Shop, as envisioned by the proposed project, would be considered a significant impact on a historic resource, consistent with the assumption analyzed in the BVDSP EIR that was overridden by the City Council. As concluded in the Historic Mitigation Compliance Analysis, Option 1 (Avoidance) would rehabilitate the interior and exterior of Biff's Coffee Shop as a restaurant use, but would affect the building's integrity of setting, diminish the opportunity for large-format, destination retail as envisioned in the BVDSP for this retail priority site, and would not be economically feasible because the development costs for Option 1 exceed its value. Option 2 (Adaptive Reuse) would have a greater effect on the overall historic integrity of Biff's Coffee Shop and would result in similar challenges to the retail viability of the site, especially with respect to the lost opportunity for large-format retail. Option 2 also is financially infeasible because the value does not provide a sufficient return on investment. Option 3 (Relocation) is not considered to be a feasible option, particularly when considering the financial and physical challenges associated with the preservation of the building's integrity. Not only are options for

moving the building very limited, but relocation would almost certainly prevent the building from conveying its architectural significance in the future.

Archaeological and Paleontological Resources and Human Remains. The proposed project would entail excavation of up to approximately 35 feet below grade. The project site appears to be underlain by a fill layer, with significant differences in thickness throughout the site, according to the preliminary geotechnical exploration report that was prepared for the project site (Attachment H).¹⁶ As shown in Figure 4.4-1 of the BVDSP EIR, the geology at the project site includes Pleistocene bay terrace deposits, late Pleistocene to Holocene alluvial fan deposits, and Holocene alluvium. According to the BVDSP EIR, Pleistocene landforms do not have the potential to contain deeply buried archaeological resources. However, Holocene alluvium has high potential for buried surfaces that would have once been available for human use and occupation prior to being covered with sediment. Implementation of SCAs associated with archaeological and paleontological resources and human remains would reduce impacts to a less-than-significant level.

An examination of the analysis, findings, and conclusions of the BVDSP EIR finds that implementation of the proposed project would not substantially increase the severity of the significant impacts that were identified in the BVDSP EIR, nor would it result in new significant impacts related to cultural resources that were not identified in the BVDSP EIR. Mitigation Measures CUL-1 and CUL-5 from the BVDSP EIR are applicable to the proposed project. The project would be required to implement SCAs related to the discovery of archaeological and paleontological resources during construction, the discovery of human remains during construction, and property relocation, as identified in Attachment A at the end of the CEQA Checklist (for reference, these are SCA-CUL-1 through SCA-CUL-3).

¹⁶ ENGEO. 2015. *Preliminary Geotechnical Exploration, 2630 Broadway, Oakland, California*. Project No11982.000.000. May 27.

5. Geology, Soils, and Geohazards Would the project:	Equal or Less Severity of Impact Previously Identified in BVDSP EIR	Substantial Increase in Severity of Previously Identified Significant Impact in EIR	New Significant Impact
a. Expose people or structures to substantial risk of loss, injury, or death involving: <ul style="list-style-type: none"> • Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map or Seismic Hazards Map issued by the State Geologist for the area or based on other substantial evidence of a known fault; • Strong seismic ground shaking; • Seismic-related ground failure, including liquefaction, lateral spreading, subsidence, collapse; or • Landslides; 	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Be located on expansive soil, as defined in Section 1802.3.2 of the California Building Code (2007, as it may be revised), creating substantial risks to life or property; result in substantial soil erosion or loss of topsoil, creating substantial risks to life, property, or creeks/waterways.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Seismic Hazards, Expansive Soils, and Soil Erosion (Criterion 5a and 5b)

The BVDSP EIR determined that very strong ground shaking and associated liquefaction in certain soils could expose people to injury or harm during earthquakes. In addition, the soils in the Plan Area are largely composed of artificial fill material overlying natural deposits of Bay Mud. The northern half of the Plan Area is primarily underlain by streambed deposits. The BVDSP identified the artificial fills and expansive soils underlying the Plan Area as presenting a potential hazard, due to the possibility of shrink-swell behavior and soil compression.

Development proposed under the BVDSP would avoid and minimize potential geologic impacts through compliance with local and state regulations governing design and construction practices, such as the Seismic Hazards Mapping Act (in liquefaction hazard zones) and the California Building Code. Implementation of SCAs that require the preparation of soils and geotechnical reports specifying generally accepted and appropriate engineering techniques would reduce potential impacts to less-than-significant levels.

The BVDSP EIR identified no impacts related to substantial soil erosion or loss of topsoil, because the Plan Area is in a developed urban area that is paved or landscaped, and served by a storm drain system. In addition, SCAs would minimize erosion and sedimentation.

Project Analysis and Conclusion

The proposed project would require excavation of approximately 54,000 cubic yards of soil. Because more than 500 cubic yards of soil would be excavated, a grading permit would be required.

The design of the proposed project would comply with local and state construction requirements.

The project site appears to be underlain by a fill layer, with significant differences in thickness throughout the site, according to the preliminary geotechnical exploration prepared for the project site (Attachment H).¹⁷ The fill layer within the western half of the site, appears to extend to a depth of approximately 15 feet. The thickness of the fill on the eastern half of the site is approximately 11 feet, most likely associated with the construction of Biff's. Up to 3.5 feet of fill on the southwestern corner of the project site is most likely associated with original grading of the area and the streets. The fill material includes various types of soil at the different locations (e.g., clayey gravel, clayey and silty sand, gravelly clay). The groundwater level is reported to fluctuate between 2.5 and 10 feet below ground surface.

The project site is not located within a currently designated Alquist-Priolo Earthquake Fault Zone, and no known surface expression of active faults is believed to exist within the site.¹⁸ Therefore, fault rupture is not anticipated at the project site. The 2003 California Geologic Survey Map of Seismic Hazard Zones for the Oakland West Quadrangle indicates that the western portion of the site is mapped as a Liquefaction Hazard Zone. The U.S. Geological Survey Maps of Quaternary Deposits and Liquefaction Susceptibility in the Central San Francisco Bay Region, California, dated 2006, indicates that the eastern portion of the site is mapped as an area with "moderate" risk of liquefaction; the majority of the site is mapped as a low-risk area.

Based on an examination of the analysis, findings, and conclusions in the BVDSP EIR, implementation of the proposed project would not substantially increase the severity of the significant impacts identified in that report, nor would it result in new significant impacts related to geology, soils, and geohazards that were not identified in the BVDSP EIR. The BVDSP EIR did not identify any mitigation measures related to geology, soils, and geohazards, and none would be needed for the proposed project. SCAs related to construction-related permits, a soils report, and earthquake fault zone would apply, as identified in Attachment A at the end of the CEQA Checklist (for reference, these are SCA-GEO-1 and SCA-GEO-2).

¹⁷ ENGEO, 2015. Preliminary Geotechnical Exploration, 2630 Broadway, Oakland, California. Project No11982.000.000. May 27.

¹⁸ ENGEO, 2015. Preliminary Geotechnical Exploration, 2630 Broadway, Oakland, California. Project No11982.000.000. May 27.

6. Greenhouse Gas and Climate Change Would the project:	Equal or Less Severity of Impact Previously Identified in BVDSP EIR	Substantial Increase in Severity of Previously Identified Significant Impact in EIR	New Significant Impact
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment, specifically: <ul style="list-style-type: none"> • For a project involving a land use development, produce total emissions of more than 1,100 metric tons of CO₂e annually AND more than 4.6 metric tons of CO₂e per service population annually. The service population includes both the residents and the employees of the project. The project's impact would be considered significant if the emissions exceed BOTH the 1,100 metric tons threshold and the 4.6 metric tons threshold. Accordingly, the impact would be considered less than significant if the project's emissions are below EITHER of these thresholds. 	☒	☐	☐
b. Fundamentally conflict with an applicable plan, policy, or regulation adopted for the purposes of reducing greenhouse gas emissions.	☒	☐	☐

Greenhouse Gas Emissions (Criterion 6a)

The BVDSP EIR evaluated impacts related to GHG emissions from construction and operation anticipated under the BVDSP. The EIR identified motor vehicle use, water, gas, electrical use, loss of vegetation, and construction activities as contributing to generation of GHG emissions under the implementation of the BVDSP. Future projects and development implemented under the BVDSP would be required to be consistent with the City of Oakland Energy and Climate Action Plan, and with SCAs that would reduce GHG emissions during construction and operation of projects. Even with implementation of SCAs, the BVDSP EIR determined that GHG impacts would conservatively remain significant and avoidable.

Project Analysis and Conclusion

A GHG screening analysis was prepared for the proposed project to determine whether the SCA that requires a GHG reduction plan applies to the project. That SCA applies to projects of a certain size that produce GHG emissions that exceed one or both of the BAAQMD CEQA thresholds, potentially resulting in a significant impact. The screening analysis determined that the proposed project would not fall under any of the three scenarios that would require development of a GHG reduction plan under the SCA (see Attachment I). The proposed project would, therefore, be consistent with the City of Oakland's Energy and Climate Action Plan as well as the BVDSP; consequently, a GHG reduction plan is not required.

An examination of the analysis, findings, and conclusions of the BVDSP EIR finds that implementation of the proposed project would not substantially increase the severity of the significant impacts that were identified in the BVDSP EIR, nor would it result in new significant impacts related to GHG and climate change that were not identified in the BVDSP EIR. The BVDSP EIR did not identify any mitigation measures related to GHGs, and none are required for the proposed project.

7. Hazards and Hazardous Materials Would the project:	Equal or Less Severity of Impact Previously Identified in BVDSP EIR	Substantial Increase in Severity of Previously Identified Significant Impact in EIR	New Significant Impact
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials; Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment; Create a significant hazard to the public through the storage or use of acutely hazardous materials near sensitive receptors; Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 (i.e., the "Cortese List") and, as a result, would create a significant hazard to the public or the environment;	☒	☐	☐
b. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school;	☒	☐	☐
c. Result in less than two emergency access routes for streets exceeding 600 feet in length unless otherwise determined to be acceptable by the Fire Chief, or his/her designee, in specific instances due to climatic, geographic, topographic, or other conditions; or Fundamentally impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan.	☒	☐	☐

Exposure to Hazards, Hazardous Materials Use, Storage and Disposal (Criterion 7a)

The BVDSP EIR determined that development under the BVDSP could result in construction activities that use hazardous materials, as well as ongoing commercial activities that involve the use of chemicals that are considered hazardous materials. Adoption and development under the BVDSP could therefore require the transportation, use, and storage of additional quantities of hazardous materials to new businesses and entities. In addition, the EIR determined that demolition under the BVDSP could result in disturbance of hazardous building materials, such as lead-based paint, asbestos, and polychlorinated biphenyls (PCBs). The transportation, use, and storage of all hazardous materials would be required to follow the applicable laws and regulations adopted to safeguard workers and the general public. In addition, development under the BVDSP would be subject to the City of Oakland’s SCAs pertaining to

best management practices for hazardous materials; removal of asbestos and lead-based paint; and other hazardous materials and wastes, including those found in the soil and groundwater, which would reduce impacts to less-than-significant levels.

Hazardous Materials within a Quarter Mile of a School (Criterion 7b)

There are no schools in the Plan Area; however, there are five schools or daycare facilities within 0.25 mile of the Plan Area. Development under the BVDSP would be required to comply with the City of Oakland's Ordinances and General Plan Policies, which require hazardous material handlers within 1,000 feet of a school or other sensitive receptor to prepare a Hazardous Materials Assessment Report and Remediation Plan. Additionally, those handling or storing hazardous materials would be required to prepare a Hazardous Materials Management Plan and Hazardous Materials Business Plan, as required by Alameda County and a City of Oakland SCA; preparation of these plans would reduce impacts to less-than-significant levels.

Emergency Access Routes (Criteria 7c)

The EIR determined that construction under the BVDSP that would result in temporary road closures, which would require traffic control plans to ensure at least two emergency access routes are available for streets exceeding 600 feet in length, per City of Oakland's Ordinances and General Plan Policies. Compliance with all applicable requirements would reduce potential impacts to a less-than-significant level.

Project Analysis and Conclusion

A review of available environmental databases was conducted for the proposed project.¹⁹ The review indicated that the project site is included in the following databases: leaking underground storage tank (LUST) and Statewide Environmental Evaluation and Planning System Underground Storage Tank (SWEEPS UST) (Site: Chevron #2506); Historical Hazardous Waste & Substance Site List (HIST CORTESE) (Chevron); Recovered Government Archive (RGA) LUST (Site: Chevron #9-2506); LUST, Alameda County CS, HIST UST (Site: 92506), Hazardous Waste Information System (HAZNET) (Site: Broadway Chevron), and RGA LUST (Site: Broadway Chevron).

The Phase I Environmental Site Assessment (ESA) prepared for the project site referenced documentation regarding or physical evidence of soil or groundwater impairments associated with current or past use of the site.²⁰ Based on previous investigations, potential residual impacts exist on the project site. These are related to fill associated with the former Sisters of Providence Hospital. In addition, the Phase I ESA indicated that the project site was previously the site of a gasoline station. As noted above, the site (Chevron #9-2506) is listed in the San Francisco Regional Water Quality Control Board's (RWQCB's) GeoTracker online database as a closed LUST cleanup site. The site was granted closure in May 2014. Future land use is limited to the current commercial land use unless a new case is opened.

¹⁹ Environmental Data Resources, Inc. 2015. *The EDR Radius Map Report with GeoCheck*. July 10. (See Attachment J)

²⁰ ENGEO. 2015. *Phase I Environmental Site Assessment, 2630 Broadway, Oakland, California*. Prepared for Hanover R.S. Limited Partnership. May 21. (See Attachment K)

According to a subsequent Phase II ESA, several target analytes were detected in soil samples, including volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), gasoline (TPH-g), diesel (TPH-d), motor oil (TPH-mo), and metals.²¹ Methyl tert-butyl ether (MTBE), naphthalene, and TPH-g were amongst the VOCs that were detected at concentrations that exceeded the corresponding residential Environmental Screening Levels (ESLs). Both TPH-d and TPH-mo exceeded the corresponding residential ESLs in the composite soil sample that was collected from boring S-1. PCBs and asbestos were not detected in any of the composite soil samples that were collected on the project site. Amongst the SVOCs, benzo[k]fluoranthene and dibenz[a,h]anthracene were detected at concentrations that exceeded their corresponding ESLs in the composite soil sample that was collected from one boring in the northwest corner of the project site. Lead was detected in several borings at concentrations that exceeded the corresponding California Human Health Screening Level value. These borings appear to be within the fill material observed at the property. Laboratory testing of the groundwater samples at the property exhibited low detectable concentrations of TPH-g and other VOCs, SVOCs (benzoic acid), and dissolved metals. The Alameda County Health Department (ACEH) is expected to open a Site Cleanup Program case for residual contamination related to the former hospital at the project site in order to allow for residential uses on the site.²² A site management plan (SMP) would need to be prepared to manage impacted soil encountered during grading and construction activities. The SMP would include a brief description of the site background and description, including the past uses, the proposed developments, and the environmental investigations conducted to date. The SMP would also include a description of the procedures to manage affected soil encountered at the site as well as any other unknowns. In addition, the SMP would include procedures for construction dewatering, if needed, during construction activities and for containerization, treatment, and proper permitted disposal of any water generated during those activities. According to the Phase II ESA, no pretreatment would be required prior to discharging to the sanitary sewer if dewatering is required. In accordance with the Phase II ESA, if construction dewatering activities occur, the groundwater analytical results included in the Phase II ESA would be provided to the EBMUD prior to the completion of construction activities.

The project site is located within 0.25 mile of Westlake Middle School and the Oakland Emiliano Zapata Street Academy; no other schools are within 0.25 mile of the project site. The proposed project would include a plaza where Valdez Street currently runs through the eastern portion of the project site. Thus, the proposed project would require the removal of the portion of Valdez Street between 26th Street and 27th Street. Other than the removal of a small portion of Valdez Street, the proposed project would not change surrounding streets or roadways or limit emergency access or plans. Any temporary roadway closures required during construction of the proposed project would be subject to City of Oakland review and approval to ensure consistency with City requirements.

Based on an examination of the analysis, findings, and conclusions in the BVDSP EIR, implementation of the proposed project would not substantially increase the severity of significant impacts identified in the BVDSP EIR, nor would it result in new significant impacts related to hazards and hazardous materials that were not identified in the BVDSP EIR. The BVDSP EIR did not identify any mitigation measures related to hazards and hazardous materials. However, in accordance with the Phase II ESA, information would be disclosed to the EBMUD regarding potential dewatering activities. SCAs related to

construction, site contamination, and hazardous materials business plans would apply to the proposed project, as identified in Attachment A at the end of the CEQA Checklist (for reference, these are SCA-HAZ-1 through SCA-HAZ-3).

<p>8. Hydrology and Water Quality Would the project:</p>	<p>Equal or Less Severity of Impact Previously Identified in BVDSP EIR</p>	<p>Substantial Increase in Severity of Previously Identified Significant Impact in EIR</p>	<p>New Significant Impact</p>
<p>a. Violate any water quality standards or waste discharge requirements; Result in substantial erosion or siltation on or off site that would affect the quality of receiving waters; Create or contribute substantial runoff which would be an additional source of polluted runoff; Otherwise substantially degrade water quality; Fundamentally conflict with the City of Oakland Creek Protection Ordinance (OMC Chapter 13.16) intended to protect hydrologic resources.</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>b. Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or proposed uses for which permits have been granted);</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>c. Create or contribute substantial runoff which would exceed the capacity of existing or planned stormwater drainage systems; Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course, or increasing the rate or amount of flow, of a creek, river, or stream in a manner that would result in substantial erosion, siltation, or flooding, both on or off site</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>d. Result in substantial flooding on or off site; Place housing within a 100-year flood hazard area, as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map, that would impede or redirect flood flows; Place within a 100-year flood hazard area structures which would impede or redirect flood flows; or Expose people or structures to a substantial risk of loss, injury, or death involving flooding.</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Water Quality, Stormwater, and Drainages and Drainage Patterns (Criteria 8a and 8c)

The BVDSP EIR determined that development in the Plan Area would result in construction activities that would require ground disturbance, resulting in impacts to hydrology and water quality. The EIR identified several SCAs that would reduce impacts to a less-than-significant level by minimizing runoff and erosion, as well as sedimentation and contamination to stormwater and surface water during construction activities.

Use of Groundwater (Criterion 8b)

Potable water is supplied to the Plan Area through imported surface water by the EBMUD, and groundwater is generally not used in the Plan Area. The Plan Area is primarily developed and covered in impervious surfaces, and the amount of water able to infiltrate the aquifer in the East Bay Plain groundwater basin would not substantially decrease with development under the BVDSP. Additionally, compliance with the C.3 provisions of the National Pollutant Discharge Elimination System (NPDES) Municipal Stormwater Permit for the Alameda County Clean Water Program would require that recharge rates at a project site be equivalent to the recharge rate at the site prior to development.

Flooding and Substantial Risks from Flooding (Criteria 8d)

The BVDSP EIR identified the easternmost part of the Plan Area along Glen Echo Creek as being situated in the 100-year flood zone, with the rest of the Plan Area lying outside of the 100-year flood zone. SCAs that require regulatory permits prior to construction in a floodway or floodplain, along with preparation of hydrological calculations that ensure that structures will not interfere with the flow of water or increase flooding, would reduce impacts to less-than-significant levels.

Project Analysis and Conclusion

The 1.1-acre project site is located in an urban setting. It includes a surface parking lot, auto-service land uses, and a vacant building. Vegetation is limited to ruderal weeds that grow between the cracked pavement, small shrubs along the perimeter of a building, and three trees. The project site is covered with approximately 48,822 square feet of impervious surfaces and approximately 3,284 square feet of pervious surfaces (6.3 percent of the project site). Implementation of the proposed project would result in a similar amount of impervious surfaces. The proposed project would remove the limited amount of vegetation and the trees. Landscaping would be provided in the courtyard and, potentially, on the roof deck and plaza. Stormwater would be treated through features in the courtyard, both mechanical treatment features and planters, in compliance with the C.3 provisions of the National Pollutant Discharge Elimination System (NPDES) Municipal Stormwater Permit.

As shown in Figure 4.8-1 of the BVDSP EIR, the project site would be outside of the 100-year flood zone; therefore, no impacts would occur. However, the project site would be within an area that could experience flooding if two EBMUD reservoirs experience dam failure. The Safety Element of the general plan states that the City will “minimize further the relatively low risks from non-storm-related forms of flooding” by requesting a timeline from the State Division of Safety of Dams (DSOD) for maintenance inspections for all operating dams in the City and reviewing procedures adopted by the City pursuant to the Dam Safety Act for emergency evacuation of areas located below major water-storage facilities. DSOD requires all dam operators to comply with annual inspections and seismic standards, which minimize the potential for a catastrophic failure of the dam. Because of DSOD regulatory oversight, monitoring, and design review, the potential for catastrophic failure of a properly designed and constructed dam is

minimal, whether caused by a seismic event, flood event, unstable slope conditions, or damage from corrosive or expansive soils. Continued compliance with City General Plan policies would reduce potential flooding risks related to dam failure to a less-than-significant level.

Based on an examination of the analysis, findings, and conclusions in the BVDSP EIR, implementation of the proposed project would not substantially increase the severity of the significant impacts identified in that report, nor would it result in new significant impacts related to hydrology and water quality that were not identified in the BVDSP EIR. The BVDSP EIR identified no mitigation measures related to hydrology and water quality, and none would be required for the proposed project. The proposed project would be required to implement SCAs related to the Erosion and Sedimentation Control Plan for construction, State Construction General Permit, and NPDES C.3 stormwater requirements for regulated projects, as identified in Attachment A at the end of the CEQA Checklist (for reference, these are SCA-HYD-1 through SCA-HYD-3).

9. Land Use, Plans, and Policies Would the project:	Equal or Less Severity of Impact Previously Identified in BVDSP EIR	Substantial Increase in Severity of Previously Identified Significant Impact in EIR	New Significant Impact
a. Physically divide an established community;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Result in a fundamental conflict between adjacent or nearby land uses; or	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c. Fundamentally conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect and actually result in a physical change in the environment.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Division of Existing Community, Conflict with Land Uses, or Land Use Plans (Criteria 9a through 9c)

The BVDSP EIR determined that adoption and implementation of the BVDSP would have less-than-significant land use impacts related to the division of an established community, potential conflicts with nearby land uses, or applicable land use plans, policies, and regulations. The Plan Area is in Oakland’s Central Business District, an area intended to promote a mixture of vibrant and unique uses with around-the-clock activity, continued expansion of job opportunities, and growing residential population.

Project Analysis and Conclusion

The project site is zoned Broadway Valdez District Retail Priority Sites Commercial Zone 1 (D-BV-1), Retail Priority Site 3A, which is the most restrictive zoning for general and ground-floor uses in the Plan area. The proposed project would be consistent with the regulatory framework of D-BV-1, which ensures that larger sites and opportunity areas are reserved primarily for new, large-scale retail development that is oriented toward consumer goods, at least on the ground floor. A property that is zoned as D-BV-1 Retail Priority Sites is allowed to include residential uses only if a project were to include a retail component of a certain size and type. The project site is designated as Retail Priority Site 3A in the BVDSP, which does not allow for residential density without a residential facilities bonus by way of a CUP. As such, if the proposed project develops 60 percent of the site, it must provide a minimum of 27,293 square feet of retail before the proposed project can be entitled to a “residential facilities bonus.” The proposed project could provide up to 37,710 gsf of retail space, including the potential for approximately 9,441 gsf of mezzanine retail depending on tenant demand. Therefore, the proposed project would be consistent with the zoning.

The project site is located within the 45* Height Area, which generally limits building heights to 45 feet, but does allow increased building heights if applicable retail criteria are met. The base height for the project site would be 85 feet if the project provides 50 percent or 60 percent of the Retail Priority Site area with retail, with a maximum height of 200 feet. Because the proposed project would provide 60 percent of the Retail Priority Site area with retail, the project can be approximately 85 feet in height, in conformance

with the height limit on the site. The terraced building would be seven stories tall but would not exceed 85 feet (i.e., at the top of the roof structure), as measured by the Building Department. Based on the above, the proposed project would be consistent with the land use regulations in the BVDSP.

Although a CUP would be required for the residential uses, based on an examination of the analysis, findings, and conclusions in the BVDSP EIR, implementation of the proposed project would not substantially increase the severity of the significant impacts identified in that report, nor would it result in new significant impacts related to land uses, plans, or policies that were not identified in the BVDSP EIR. The BVDSP EIR did not identify any SCAs or mitigation measures related to land use, and none are necessary for the proposed project.

<p>10. Noise Would the project:</p>	<p>Equal or Less Severity of Impact Previously Identified in BVDSP EIR</p>	<p>Substantial Increase in Severity of Previously Identified Significant Impact in EIR</p>	<p>New Significant Impact</p>
<p>a. Generate noise in violation of the City of Oakland Noise Ordinance (Oakland Planning Code Section 17.120.050) regarding construction noise, except if an acoustical analysis is performed that identifies recommend measures to reduce potential impacts. During the hours of 7 p.m. to 7 a.m. on weekdays and 8 p.m. to 9 a.m. on weekends and federal holidays, noise levels received by any land use from construction or demolition shall not exceed the applicable nighttime operational noise level standard; Generate noise in violation of the City of Oakland nuisance standards (Oakland Municipal Code Section 8.18.020) regarding persistent construction-related noise;</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>b. Generate noise in violation of the City of Oakland Noise Ordinance (Oakland Planning Code Section 17.120.050) regarding operational noise;</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>c. Generate noise resulting in a 5 dBA permanent increase in ambient noise levels in the project vicinity above levels existing without the project; or, if under a cumulative scenario where the cumulative increase results in a 5 dBA permanent increase in ambient noise levels in the project vicinity without the project (i.e., the cumulative condition including the project compared to the existing conditions) and a 3-dBA permanent increase is attributable to the project (i.e., the cumulative condition including the project compared to the cumulative baseline condition without the project);</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>d. Expose persons to interior L_{dn} or CNEL greater than 45 dBA for multi-family dwellings, hotels, motels, dormitories and long-term care facilities (and may be extended by local legislative action to include single-family dwellings) per California Noise Insulation Standards (CCR Part 2, Title 24); Expose the project to community noise in conflict with the land use compatibility guidelines of the Oakland General Plan after incorporation of all applicable Standard Conditions of Approval (see Figure 1); Expose persons to or generate noise levels in excess of applicable standards established by a regulatory agency (e.g., occupational noise standards of the Occupational Safety and Health Administration [OSHA]); or</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

10. Noise Would the project:	Equal or Less Severity of Impact Previously Identified in BVDSP EIR	Substantial Increase in Severity of Previously Identified Significant Impact in EIR	New Significant Impact
e. During either project construction or project operation expose persons to or generate ground-borne vibration that exceeds the criteria established by the Federal Transit Administration (FTA).	☒	☐	☐

Construction and Operational Noise and Vibration, Exposure of Receptors to Noise (Criteria 10a, 10b, 10d, and 10e)

Overall, the BVDSP EIR determined that impacts related to construction and operations of development under the BVDSP would be less than significant. Construction-related activities associated with development under the BVDSP would temporarily increase ambient noise levels and vibration. Implementation of SCAs would minimize construction noise impacts by limiting hours of construction activities; require best available noise control technology; require vibration monitoring for activities adjacent to historic structures; and require a project applicant and/or its contractors to notify any local residents of construction activities, and to track and respond to noise complaints.

During operations, mechanical equipment used in projects developed under the BVDSP would generate noise; however, equipment would be standardized and would be required to comply with the City of Oakland Noise Ordinance. Potential impacts would be reduced with implementation of SCAs that would require project design to achieve acceptable interior noise levels for buildings; limit ground-borne vibration at the project site; and require mechanical equipment to comply with applicable noise performance standards.

As described in the BVDSP EIR, noise measurements taken at various locations in the Plan Area indicate that the ambient noise environment in the Plan Area would be in the conditionally acceptable category for residential uses, and in the normally acceptable category for commercial uses—except for 24th Street, 25th Street, and Brooks Street in the Plan Area. At these three locations, the noise environment would be in the normally acceptable category for residential uses. The BVDSP EIR identified an SCA that would ensure that project components are appropriately sound-rated to meet land use compatibility requirements throughout the Plan Area.

Traffic Noise (Criterion 10c)

The BVDSP EIR determined that development under the Specific Plan would increase noise levels adjacent to nearby roads because of additional vehicles traveling throughout the Plan Area. The increase in traffic noise from the existing plus-project scenario compared with existing conditions would increase peak-hour noise levels by less than 5 A-weighted decibels (dBA) at all studied roadway segments, with the exception of 24th Street east of Broadway and 26th Street east of Broadway where the increase in roadside noise would be 6.4 and 5.1 dBA, respectively. In addition, the increase in traffic noise between the cumulative no-project (2035) and cumulative plus-project (2035) scenarios would be 5.3 dBA along 24th Street east of Broadway and 4.9 dBA along 26th Street east of Broadway. The cumulative increases in traffic-generated noise could also combine with stationary noise sources, such as rooftop mechanical

equipment and back-up generators, to result in significant cumulative impacts. The EIR determined that no feasible mitigation measures are available and that these impacts would remain significant and unavoidable.

Project Analysis and Conclusion

Project construction would begin with demolition of the existing building on the project site. Demolition would include abating any hazards that might be present within the building, demolishing and removing the existing structure, and removing the existing foundation slabs and underground utilities. Project construction is estimated to take about 26 months. The project would be constructed in the following phases: demolition of existing buildings and mass excavation, construction of the mixed-use building, site improvements, and commissioning, testing, and final inspection. Construction of the proposed project would result in a temporary increase in ambient noise levels and vibration, similar to other projects developed under the BVDSP.

During operation, the proposed project would use mechanical equipment (e.g., emergency generators) and result in an increase in traffic on nearby roadways, including 26th Street. As stated above, development under the BVDSP would result in traffic noise along 26th Street east of Broadway, which would exceed the City of Oakland's CEQA threshold. The proposed project, on its own, would not cause an exceedance of this threshold but would contribute to the overall noise increases that are expected to occur with buildout of the BVDSP. Regardless, the noise increases associated with the proposed project were considered in the BVDSP EIR. The proposed project would not further increase the severity of the significant and unavoidable traffic noise impact along 26th Street, as analyzed in the BVDSP EIR.

Based on an examination of the analysis, findings, and conclusions in the BVDSP EIR, implementation of the proposed project would not substantially increase the severity of the significant impacts identified in that report, nor would it result in new significant impacts related to noise that were not identified in the BVDSP EIR. The BVDSP EIR did not identify any mitigation measures related to noise, and none would be necessary for the proposed project. The proposed project would be required to implement SCAs related to construction days/hours, construction noise, extreme construction noise, construction noise complaints, operational noise, and exposure to vibration, as identified in Attachment A at the end of the CEQA Checklist (for reference, these are SCA-NOI-1 through SCA-NOI-6).

11. Population and Housing Would the project:	Equal or Less Severity of Impact Previously Identified in BVDSP EIR	Substantial Increase in Severity of Previously Identified Significant Impact in EIR	New Significant Impact
a. Induce substantial population growth in a manner not contemplated in the General Plan, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extensions of roads or other infrastructure), such that additional infrastructure is required but the impacts of such were not previously considered or analyzed;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere in excess of that contained in the City’s Housing Element; or Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere in excess of that contained in the City’s Housing Element.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Population Growth and Displacement of Housing and People (Criteria 11a and 11b)

The BVDSP EIR determined that impacts related to population growth and displacement of housing and people would be less than significant. Development under the BVDSP would add up to 1,800 housing units and 3,230 residents to the Plan Area. This would represent approximately 2 percent of the total population growth projected for Oakland through 2035, and would not be considered substantial. Although adoption and development under the BVDSP could require the demolition of existing housing units, existing regulations, such as Housing Element policies, the Ellis Act (Government Code Sections 7060 through 7060.7), and the City of Oakland’s Ellis Act Ordinance (Oakland Municipal Code Sections 8.22.400 through 8.22.480) would prevent significant impacts.

Project Analysis and Conclusion

The proposed project would not demolish or displace any existing housing units. The proposed project would demolish an existing building and surface parking lot and construct a new mixed-use building with up to 255 residential units and up to 37,710 gsf of retail space, including the potential for 9,441 gsf of mezzanine retail space, depending on tenant demand. Impacts associated with this increase in the number of residential units were addressed in the BVDSP EIR.

Based on an examination of the analysis, findings, and conclusions in the BVDSP EIR, implementation of the proposed project would not substantially increase the severity of the significant impacts identified in that report, nor would it result in new significant impacts related to population and housing that were not identified in the BVDSP EIR. The BVDSP EIR did not identify any mitigation measures or SCAs related to population and housing, and none would be required for the proposed project.

12. Public Services, Parks and Recreation Facilities Would the project:	Equal or Less Severity of Impact Previously Identified in BVDSP EIR	Substantial Increase in Severity of Previously Identified Significant Impact in EIR	New Significant Impact
a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the following public services: <ul style="list-style-type: none"> • Fire protection; • Police protection; • Schools; or • Other public facilities. 	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Increase the use of existing neighborhood or regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated; or Include recreational facilities or require the construction or expansion of recreational facilities which might have a substantial adverse physical effect on the environment.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Public Services and Parks and Recreation (Criteria 12a and 12b)

The BVDSP EIR determined that impacts related to fire and police protection, schools, and other public facilities would be less than significant. Although development under the BVDSP would increase density and population in the Plan Area, any corresponding increase in crime and need for police protection would likely be counteracted by the revitalization of the area, as envisioned by the BVDSP. The EIR identified SCAs that would reduce the potential impacts related to the increased need for fire protection by requiring all projects to implement safety features, and to comply with all applicable codes and regulations. Adherence to the General Plan’s Open Space, Conservation and Recreation Element policies 3.1, 3.3, and 3.10 would reduce potential impacts to recreational facilities. In addition, any increases in need for police protection, fire protection, schools, or other public facilities would be mitigated by adherence to General Plan policies N.12.1, N.12.2, N.12.5, FI-1, and FI-2. No additions or expansions of parks or recreational facilities are proposed under the BVDSP, and no new parks or recreational facilities, or expansion of existing parks or recreational facilities, were determined to be required under the BVDSP.

Project Analysis and Conclusion

As shown in Table 1, the proposed project is within the envelope of the Development Program analyzed in the BVDSP EIR. As shown, the proposed project would provide more dwelling units on the site (i.e., up to 255 units instead of none) but less square footage for commercial uses (up to 37,710 gsf instead of 82,689 square feet). The increase in units and decrease in retail square footage proposed for the project site was captured in the BVDSP EIR analysis, and the proposed project's increase in demand for public services is consistent with that analysis. Specifically, the proposed project would most likely increase student enrollment at local schools. However, pursuant to Senate Bill 50, the project sponsor would be required to pay school impact fees, which are established to offset potential impacts from new development on school facilities. This would be deemed full and complete mitigation. In addition, the proposed project would provide approximately 18,987 gsf of private open space for the residential units, as described in the Project Description, above.

Based on an examination of the analysis, findings, and conclusions in the BVDSP EIR, implementation of the proposed project would not substantially increase the severity of the significant impacts identified in that report, nor would it result in new significant impacts related to the provision of public services or park and recreational facilities that were not identified in the BVDSP EIR. The BVDSP EIR did not identify any mitigation measures related to public services or park and recreational facilities, and none would be required for the proposed project.

13. Transportation and Circulation Would the project:	Equal or Less Severity of Impact Previously Identified in BVDSP EIR	Substantial Increase in Severity of Previously Identified Significant Impact in EIR	New Significant Impact
Conflict with an applicable plan, ordinance, or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to, intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit, specifically:			
Traffic Load and Capacity Thresholds	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
a. At a study, signalized intersection which is located outside the Downtown area and that does not provide direct access to Downtown , the project would cause the motor vehicle level of service (LOS) to degrade to worse than LOS D (i.e., LOS E or F) and cause the total intersection average vehicle delay to increase by four (4) or more seconds;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. At a study, signalized intersection which is located within the Downtown area or that provides direct access to Downtown , the project would cause the motor vehicle LOS to degrade to worse than LOS E (i.e., LOS F) and cause the total intersection average vehicle delay to increase by four (4) or more seconds;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c. At a study, signalized intersection outside the Downtown area and that does not provide direct access to Downtown where the motor vehicle level of service is LOS E, the project would cause the total intersection average vehicle delay to increase by four (4) or more seconds;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d. At a study, signalized intersection outside the Downtown area and that does not provide direct access to Downtown where the motor vehicle level of service is LOS E, the project would cause an increase in the average delay for any of the critical movements of six (6) seconds or more;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e. At a study, signalized intersection for all areas where the level of service is LOS F, the project would cause (a) the overall volume-to-capacity ("V/C") ratio to increase 0.03 or more or (b) the critical movement V/C ratio to increase 0.05 or more;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f. At a study, unsignalized intersection the project would add ten (10) or more vehicles to the critical movement and after project completion satisfy the California Manual on Uniform Traffic Control Devices (MUTCD) peak-hour volume traffic signal warrant;	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

13. Transportation and Circulation Would the project:	Equal or Less Severity of Impact Previously Identified in BVDSP EIR	Substantial Increase in Severity of Previously Identified Significant Impact in EIR	New Significant Impact
g. For a roadway segment of the Congestion Management Program (CMP) Network, the project would cause (a) the LOS to degrade from LOS E or better to LOS F or (b) the V/C ratio to increase 0.03 or more for a roadway segment that would operate at LOS F without the project; or	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
h. Cause congestion of regional significance on a roadway segment on the Metropolitan Transportation System (MTS) evaluated per the requirements of the Land Use Analysis Program of the CMP.	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Criteria 13a through 13h

This section of the CEQA Checklist summarizes the findings of the transportation analysis completed for the proposed project (see Attachment M). The analysis is provided in two parts below, as follows: the first part describes the BVDSP EIR analysis related to transportation and circulation impacts; the second part compares the proposed project’s impacts to those analyzed in the EIR, provides additional analysis of project study intersections to supplement the analysis in the EIR, and identifies EIR impacts and mitigation measures that would be triggered by the proposed project combined with other planned developments.

BVDSP EIR Analysis

The BVDSP EIR analyzed transportation and circulation conditions in and around the Plan Area under six different scenarios, which represent three time periods (existing conditions, Year 2020, and Year 2035) with and without the BVDSP Development Program and transportation improvements. For the purposes of this analysis, these scenarios are referred to as: 1) existing conditions; 2) existing conditions plus full Development Program (full buildout of the Broadway Valdez Development Program); 3) Year 2020 no project; 4) Year 2020 plus Phase 1 of Development Program (partial buildout of the Development Program); 5) Year 2035 no project; and 6) Year 2035 plus full Development Program (full buildout of the Development Program).

The BVDSP EIR determined that no significant impacts to transit, pedestrian, bicycle, and other related topics would occur under any of the scenarios; therefore, these topics are not further discussed herein. As noted in the EIR, the Development Program represents the reasonably foreseeable development expected to occur in the next 20 to 25 years in the Plan Area. The Specific Plan and the EIR intend to provide flexibility in the location, amount, and type of development. Therefore, the traffic impact analysis in the EIR does not assign land uses to individual parcels; rather, land uses are distributed to five subdistricts within the Plan Area. Thus, as long as the trip generation for each subdistrict and the overall Plan Area remain below the levels estimated in the EIR, the traffic impact analysis presented in the EIR continues to remain valid.

The EIR identified 28 significant impacts on level of service (LOS) at intersections serving the Plan Area. For each impact and associated mitigation measure(s), the EIR identified specific triggers based on the level of development in the entire Plan Area or specific subdistrict(s). As determined in the transportation assessment prepared for the proposed project, several of these impacts and mitigation measures would be triggered by the proposed project combined with other planned developments, and are further described in the Project Analysis and Conclusion.

The BVDSP EIR identified SCAs that require city review and approval of all improvements in the public right-of-way, reduction of vehicle traffic and parking demand generated by development projects, and construction traffic and parking management, which will also address transportation and circulation impacts.

Project Analysis

As described in the transportation analysis completed for the proposed project (see Attachment M) and shown in Table 5, the proposed project would generate approximately 94 net new vehicle trips during the weekday AM peak hour (27 inbound and 67 outbound) and approximately 170 net new vehicle trips during the weekday PM peak hour (97 inbound and 73 outbound).²³

**Table 5
Project Vehicle Trip Generation**

Land Use	ITE Code	Daily	Weekday AM Peak Hour			Weekday PM Peak Hour		
			In	Out	Total	In	Out	Total
Multi-Family Residential								
255 Units	220 ^a	1,670	26	103	129	103	55	158
Retail								
37,710 gsf	820 ^b	1,610	22	14	36	67	73	140
Subtotal		3,280	48	117	165	170	128	298
Non-Auto Reduction (-43%) ^c		-1,410	-21	-50	-71	-73	-55	-128
Net New Project Vehicle Trips		1,870	27	67	94	97	73	170

Notes:

- ^a Weekday daily rate = 6.06(X) + 123.56; AM peak rate = 0.49(X) + 3.73 (20 percent in, 80 percent out); PM peak rate = 0.55(X) + 17.65 (65 percent in, 35 percent out).
- ^b Weekday daily rate = 42.7(X); AM peak rate = 0.96(X) (88 percent in, 12 percent out); PM peak rate = 3.71(X) (17 percent in, 83 percent out).
- ^c Reduction of 43.0 percent assumed. Based on City of Oakland *Transportation Impact Study Guidelines* using BATS 2000 data for development in an urban environment within 0.5 mile of a BART station.

Source: Fehr & Peers, 2015.

²³ The number of net new vehicle trips generated by the proposed project is an estimate of the number of person/automobile trips, based on the proposed uses for the site. This number does not account for existing vehicle trips that enter and exit the parking lot because it is not standard transportation planning practice to account for trips associated with parking facilities when calculating net new trips.

Analysis of Proposed Project and Other Projects that Are in Development under the Development Program Analyzed in the BVDSP EIR

Table 6 lists the development projects within BVDSP Plan Area that are currently under construction, approved, and/or proposed, including the proposed project.

**Table 6
Developments in the Broadway Valdez District Specific Plan**

Development	BVDSP Subdistrict	Status	Amount of Development ^a	
			Residential (DU)	Commercial (ksf)
3001 Broadway (Sprouts)	Subdistrict 5	Under Construction	0	36.0
2345 Broadway (HIVE)	Subdistrict 1	Under Construction	105	94.3
2425 Valdez Street	Subdistrict 3	Approved	70	0
3093 Broadway	Subdistrict 5	Approved	435	24.0
2302 Valdez Street	Subdistrict 2	Approved	196	31.5
2270 Broadway	Subdistrict 1	Approved	223	5.0
2315 Valdez/2330 Webster Street	Subdistrict 1	Approved	265	18.0
2630 Broadway (proposed project)	Subdistrict 3	Proposed	255	37.7
3416 Piedmont Avenue	Subdistrict 5	Approved	6	1.5
2400 Valdez Street	Subdistrict 2	Proposed	224	23.5
Total			1,779	271.5

Notes:

^a DU = dwelling units, ksf = 1,000 square feet

Source: City of Oakland, July 2015.

The project site is in Subdistrict 3 of the Valdez Triangle subarea of the Plan Area. Comparisons of trip generation associated with the proposed project to trip generation in the Plan Area (Subdistricts 1 through 5), the Valdez Triangle subarea (Subdistricts 1 through 3), and Subdistrict 3 are provided below in Table 7.

Trips generated by the proposed project, together with trips generated by other projects that are currently under construction, approved, or proposed for development in the Plan Area, would represent approximately 34 percent of the AM and 38 percent of the PM peak-hour trips anticipated in the BVDSP EIR, 57 percent of the AM and 54 percent of the PM peak-hour trips anticipated in the BVDSP EIR for the Valdez Triangle subarea, and 45 percent of the AM and 35 percent of the PM peak-hour trips anticipated in the BVDSP EIR for Subdistrict 3.

The trip generation numbers are less than the BVDSP EIR estimates for the Development Program. Given that the BVDSP EIR analyzed the impacts of the Development Program at signalized intersections in the immediate vicinity of the project site, the project would not cause additional impacts beyond those analyzed in the BVDSP EIR, nor would it increase the magnitude of the impacts identified in the BVDSP EIR.

**Table 7
Trip Generation Comparison**

	Weekday AM Peak Hour			Weekday PM Peak Hour

Traffic Impacts at BVDSP EIR Intersections

The BVDSP EIR identifies 28 significant impacts at intersections that serve the Plan Area. It also identifies the specific level of development in the Plan Area and/or each subdistrict that would trigger each impact and its associated mitigation measure(s). Impacts are triggered when a certain percentage of overall project buildout is met. The impacts, the reason for triggering the impacts, and the mitigation measures are described below.

1. The proposed project, combined with other projects that are under construction, approved, or proposed for development in the Plan Area, would trigger **Impact TRANS-2** under existing plus-project conditions (and also **Impact TRANS-7** under 2020 plus-project conditions and **Impact TRANS-17** under 2035 plus-project conditions) at the Perry Place/I-580 eastbound ramps/Oakland Avenue intersection because these projects, when combined, would generate more than 15 percent of the total traffic generated by the Development Program.

Mitigation Measure TRANS-2 in the BVDSP EIR includes the following improvements at this intersection:

- Optimize signal timing (i.e., change the amount of green time assigned to each lane of traffic) for the PM peak hour, and

- Coordinate signal timing changes at this intersection with adjacent intersections that are in the same signal coordination group. This intersection is under the jurisdiction of the California Department of Transportation (Caltrans), so any equipment or facility upgrades must be approved by Caltrans prior to installation.

The BVDSP EIR determined that, if implemented, the mitigation measure would mitigate the significant impact at this intersection. However, it is not certain whether this mitigation measure could be implemented because the intersection is under the jurisdiction of Caltrans. The City of Oakland, as lead agency, does not have jurisdiction at this intersection; the mitigation would need to be approved and implemented by Caltrans. Therefore, the BVDSP EIR considered the impact significant and unavoidable.

2. The proposed project, combined with other projects that are under construction, approved, or proposed for development in the Plan Area, would trigger **Impact TRANS-10** under 2020 plus-project conditions (and also **Impact TRANS-24** under 2035 plus-project conditions) at the 27th Street/24th Street/Bay Place/Harrison Street intersection because these projects, when combined, would generate more than 10 percent of the total traffic generated by the Development Program.

Mitigation Measure TRANS-10 in the BVDSP EIR includes the following improvements at this intersection:

- Reconfigure the 24th Street approach at the intersection to restrict access (i.e., right turns only from 27th Street to 24th Street) and create a pedestrian plaza at the intersection approach;
- Convert 24th Street between Valdez and Harrison Streets to two-way circulation and allow right turns from 24th Street to southbound Harrison Street south of the intersection, which would require acquisition of private property in the southwest corner of the intersection;
- Modify the eastbound 27th Street approach from the current configuration (i.e., one right-turn lane, two through lanes, and one left-turn lane) to provide one right-turn lane, one through lane, and two left-turn lanes;
- Realign pedestrian crosswalks to shorten pedestrian crossing distances;
- Reduce the length of the signal cycle from 160 to 120 seconds and optimize signal timing (i.e., change the amount of green time assigned to each lane of traffic); and
- Coordinate signal timing changes at this intersection with adjacent intersections that are in the same signal coordination group.

The BVDSP EIR determined that, if implemented, the mitigation measure would reduce the magnitude of the impact but would not mitigate the impact to a less-than-significant level. Therefore, the BVDSP EIR considered the impact significant and unavoidable.

3. The proposed project, combined with other projects that are under construction, approved, or proposed for development in the Plan Area, would trigger **Impact TRANS-22** under 2035 plus-project conditions at the 27th Street/Broadway intersection because these projects, when combined, would generate more than 30 percent of the total traffic generated by the Development Program.

Mitigation Measure TRANS-22 in the BVDSP EIR includes the following improvements at this intersection:

- Upgrade traffic signal operations at the intersection to actuated coordinated;
- Reconfigure the westbound 27th Street approach to provide a 150-foot left-turn pocket, one through lane, and one shared through/right-turn lane;
- Provide protected left-turn phases for the northbound and southbound approaches;
- Optimize signal timing (i.e., change the amount of green time assigned to each lane of traffic); and
- Coordinate signal timing changes at this intersection with adjacent intersections that are in the same signal coordination group.

The BVDSP EIR determined that, if implemented, the mitigation measure would reduce the magnitude of the impact but would not mitigate the impact to a less-than-significant level. Therefore, the BVDSP EIR considered the impact significant and unavoidable.

According to the BVDSP EIR, the project sponsor would fund the cost of preparing and funding these mitigation measures. Alternatively, if the City of Oakland adopts the BVDSP Transportation Impact Fee (TIF) program, the applicant may pay the TIF to mitigate project impacts, as identified above.

Additional Study Intersections

The *City of Oakland Transportation Impact Study Guidelines* requires analysis of project impacts at intersections adjacent to the project, signalized and all-way stop-controlled intersections where the project would add 50 or more peak hour trips, and side-street stop-controlled intersections where project would add ten or more trips to the stop-controlled approach. The BVDSP EIR evaluated the three intersections adjacent to the project site: the 27th Street/Broadway, 26th Street/Broadway, and 26th Street/27th Street/Valdez Street intersections. As described above, the BVDSP EIR also analyzed the signalized and all-way stop controlled intersections where the proposed project would add 50 or more peak hour trips, and the proposed project is not expected to add ten or more peak hour trips to the stop-controlled approach of side-street stop-controlled intersections in the vicinity of the project site. Therefore, analysis of additional intersections beyond the ones analyzed in the BVDSP EIR is not needed. Overall, the proposed project would not result in impacts on traffic operations at the intersections beyond the intersections identified in the BVDSP EIR. The proposed project also would not increase the magnitude of the impacts identified in the BVDSP EIR.

Conclusion

Trip generation associated with projects that are currently approved, proposed, or under construction in the Plan Area, the Valdez Triangle, and Subdistrict 3, including the proposed project, remains lower than estimated trip generation, as identified in the BVDSP EIR, under the Development Program for those areas. Therefore, the project would not cause additional impacts in areas beyond the locations analyzed in the EIR, nor would it increase the magnitude of impacts that were identified in the EIR. The transportation analysis completed for the proposed project determined that the project would not result in any significant impacts related to vehicle queuing at the parking garages or transit, pedestrian, bicycle, or loading facilities, consistent with the findings of the BVDSP EIR.

An examination of the analysis, findings, and conclusions of the BVDSP EIR finds that implementation of the proposed project would not substantially increase the severity of the significant impacts that were identified in the BVDSP EIR, nor would it result in new significant impacts related to transportation and circulation that were not identified in the BVDSP EIR. The proposed project, combined with other projects that are under construction, approved, or proposed for development in the Plan Area, would trigger and be required to implement **Mitigation Measures TRANS-2, TRANS-10, and TRANS-22**, as described in the EIR. The proposed project would also be required to implement SCAs related to city review and approval of all improvements proposed in the public right-of-way, reduce vehicle traffic and parking demand, and manage construction traffic and parking, as identified in Attachment A, located at the end of the CEQA Checklist (for reference, these are SCA-TRANS-1 through SCA-TRANS-4).

Although not required to address CEQA impacts, the proposed project would implement recommendations identified in the transportation analysis (Attachment M) related to vehicle access and circulation, bicycle access and bicycle parking, pedestrian access and circulation, transit access, and transportation demand management, as listed below.

Recommended Improvement #1: Although not required to address a CEQA impact, the following should be considered as part of the final design of the project:

- Ensure that the project driveway on 26th Street provides adequate sight distance²⁴ between motorists who are exiting at the driveway and pedestrians on adjacent sidewalks. This may require redesigning and/or widening the driveway. If adequate sight distance cannot be provided, provide audio/visual warning devices at the driveway.

Recommended Improvement #2: Although not required to address a CEQA impact, the following should be considered as part of the final design for the project:

- Provide one to eight short-term bicycle parking spaces (depending on the specific commercial uses proposed), consistent with the City of Oakland Bicycle Parking Ordinance, and ensure that sidewalks continue to provide adequate width for pedestrians when bicycle racks are installed.
- If feasible, consider relocating long-term bicycle parking for building residents from Levels B2 and B3 to a more convenient location, such as a ground-level location. Ideally, long-term bicycle parking would be directly accessible from the adjacent streets.
- If necessary, consolidate the long-term bicycle storage areas of the commercial and residential uses in the building.

Recommended Improvement #3: Although not required to address a CEQA impact, the following should be considered as part of the final design for the project:

- At the southwest corner of the 27th Street/Valdez Street intersection, extend the proposed bulbout to the edge of the bike lane on 27th Street and ensure that a future crosswalk (i.e., crossing eastbound 27th Street) can be installed (see Specific Plan, Figure 6.17).
- Ensure that the sidewalks along the project frontage provide the minimum pedestrian clear zone, as described in Appendix C, Design Guidelines, of the Specific Plan (pedestrian clear zones

²⁴ Sight distance is dependent on each specific location; typically, adequate sight distance is defined as a clear line of sight between a motorist who is 10 feet back from a sidewalk and a pedestrian who is 10 feet away on either side of a driveway.

should be at least 50 percent of the sidewalk width but not less than 5.5 feet), and that landscaping, bicycle parking, and pedestrian amenities on the sidewalks are consistent with the Design Guidelines.

Recommended Improvement #4: Although not required to address a CEQA impact, the following should be considered as part of the final design for the project:

- Coordinate with AC Transit and the City of Oakland to consolidate at one location the separate bus stops for AC Transit and the Free Broadway Shuttle along the project frontage on Broadway.
- Explore providing amenities, such as shelters, seating, trash receptacles, and/or nighttime lighting, at the bus stop(s) along the project frontage on Broadway.

Recommended Improvement #5: Consistent with the BVDSP, consider implementing the following strategies as part of the TDM program for the proposed project:

- Designate dedicated on-site parking spaces for car-sharing.
 - Provide long-term and short-term bicycle parking beyond the minimum required by the City of Oakland Planning Code.
 - Designate a TDM coordinator for the project.
 - Provide all new residents and retail employees with information on the various transportation options that are available.
 - Explore option of AC Transit EasyPass for residents and/or funding towards the Free B Broadway Shuttle.
-

<p>14. Utilities and Service Systems Would the project:</p>	<p>Equal or Less Severity of Impact Previously Identified in BVDSP EIR</p>	<p>Substantial Increase in Severity of Previously Identified Significant Impact in EIR</p>	<p>New Significant Impact</p>
<p>a. Exceed wastewater treatment requirements of the San Francisco Bay Regional Water Quality Control Board; Require or result in construction of new storm water drainage facilities or expansion of existing facilities, construction of which could cause significant environmental effects; Result in a determination by the wastewater treatment provider which serves or may serve the project that it does not have adequate capacity to serve the project's projected demand in addition to the providers' existing commitments and require or result in construction of new wastewater treatment facilities or expansion of existing facilities, construction of which could cause significant environmental effects;</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>b. Exceed water supplies available to serve the project from existing entitlements and resources, and require or result in construction of water facilities or expansion of existing facilities, construction of which could cause significant environmental effects;</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>c. Be served by a landfill with insufficient permitted capacity to accommodate the project's solid waste disposal needs and require or result in construction of landfill facilities or expansion of existing facilities, construction of which could cause significant environmental effects; Violate applicable federal, state, and local statutes and regulations related to solid waste;</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>d. Violate applicable federal, state and local statutes and regulations relating to energy standards; or Result in a determination by the energy provider which serves or may serve the project that it does not have adequate capacity to serve the project's projected demand in addition to the providers' existing commitments and require or result in construction of new energy facilities or expansion of existing facilities, construction of which could cause significant environmental effects.</p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Water, Wastewater, and Stormwater (Criteria 14a and 14b)

As described in the BVDSP EIR, EBMUD has accounted for the water demand projections associated with development under the BVDSP; and the BVDSP EIR determined that development under the BVDSP would not require new water supply entitlements, resources, facilities, or expansion of existing facilities beyond those already planned, and that impacts related to water supplies would be less than significant.

The BVDSP EIR also determined that development under the BVDSP would have less-than-significant impacts related to stormwater and wastewater facilities. Much of the Plan Area is composed of impervious surfaces, and new development would likely decrease storm-drain runoff, because proposed projects would be required to incorporate additional pervious areas through landscaping, in compliance with City of Oakland requirements.

On the other hand, development projects may increase sewer capacity demand. Implementation of SCAs requiring stormwater control during and after construction would address potential impacts on stormwater treatment and sanitary sewer infrastructure.

Solid Waste Services (Criterion 14c)

As described in the BVDSP EIR, impacts associated with solid waste would be less than significant. Nonhazardous solid waste in the Plan Area is ultimately hauled to the Altamont Landfill and Resource Facility. The Altamont Landfill would have sufficient capacity to accept waste generated by development under the BVDSP. In addition, implementation of an SCA pertaining to waste reduction and recycling would reduce waste through compliance with the City of Oakland's Recycling Space Allocation Ordinance (Oakland Municipal Code, Chapter 17.118).

Energy (Criterion 14d)

Development under the BVDSP would result in less-than-significant impacts related to energy standards and use. Developments would be required to comply with the standards of Title 24 of the California Code of Regulations. SCAs pertaining to compliance with the green building ordinance would require construction projects to incorporate energy-conserving design measures.

Project Analysis and Conclusion

The BVDSP allows for flexibility with respect to the quantity and profile of future development within each subarea and between subareas as long as such development conforms to the general traffic generation parameters established by the Plan. The Development Program is not intended to be a cap that restricts development. The Illustrative Development Program Map in Appendix D of the BVDSP depicts a possible development scenario that contemplates redevelopment of Biff's with up to three stories of additional retail space. As seen in Table 1 of Appendix D, the proposed project would provide more dwelling units on the site (i.e., up to 255 units instead of none) but less square footage for commercial uses (up to 37,710 gsf instead of 82,689 square feet). This difference, however, represents minor net changes in the Development Program in terms of environmental impacts because the proposed project conforms to the traffic generation parameters analyzed in the BVDSP EIR, as described above in Section 13, Transportation and Circulation. As such, the proposed project is within the envelope of the Development Program analyzed in the BVDSP EIR, and the water and sanitary sewer demand and stormwater facilities, as well as solid waste and energy associated with the proposed project, are consistent with that analysis. The project would not require any water infrastructure improvements, and all on-site utilities would be designed in accordance with applicable codes and current engineering

practices. However, the proposed project would pay a sewer mitigation fee, which would either contribute to the cost of replacing pipes for the local collection system to increase capacity or be used to perform inflow and infiltration rehabilitation projects outside of the Plan Area, as described in the BVDSP EIR.

Based on an examination of the analysis, findings, and conclusions in the BVDSP EIR, implementation of the proposed project would not substantially increase the severity of the significant impacts identified in that report, nor would it result in new significant impacts related to utilities and service systems that were not identified in the BVDSP EIR. The BVDSP EIR did not identify any mitigation measures related to utilities and service systems, and none would be required for the proposed project. The proposed project would be required to implement SCAs related to construction and demolition waste reductions and recycling, underground utilities, recycling collection and storage space, “green” building requirements, a sanitary sewer system, and the storm drain system, as identified in Attachment A at the end of the CEQA Checklist (for reference, these are SCA-UTIL-1 through SCA-UTIL-6).

ATTACHMENT A: STANDARD CONDITIONS OF APPROVAL AND MITIGATION MONITORING AND REPORTING PROGRAM

This Standard Conditions of Approval and Mitigation Monitoring and Reporting Program (SCAMMRP) is based on the CEQA Analysis prepared for the Broadway and 27th mixed-use residential development.

This SCAMMRP is in compliance with Section 15097 of the CEQA Guidelines, which requires that the Lead Agency “adopt a program for monitoring or reporting on the revisions which it has required in the project and the measures it has imposed to mitigate or avoid significant environmental effects.” The SCAMMRP lists mitigation measures (“MM”) recommended in the EIR and identifies mitigation monitoring requirements, as well as the City’s Standard Conditions of Approval (“SCA”) identified in the EIR as measures that would minimize potential adverse effects that could result from implementation of the project, to ensure the conditions are implemented and monitored.

All MMs and SCAs identified in the CEQA Analysis, which is consistent with the measures and conditions presented in the BVDSP EIR, are included herein.

To the extent that there is any inconsistency between the SCA and MM, the more restrictive conditions shall govern; to the extent any MM and/or SCA identified in the CEQA Analysis were inadvertently omitted, they are automatically incorporated herein by reference.

- The first column identifies the SCA and MM applicable to that topic in the CEQA Analysis.
- The second column identifies the monitoring schedule or timing applicable to the Project.
- The third column names the party responsible for monitoring the required action for the Project.

The project sponsor is responsible for compliance with any recommendations in approved technical reports, all applicable mitigation measures adopted and with all conditions of approval set forth herein at its sole cost and expense, unless otherwise expressly provided in a specific mitigation measure or condition of approval, and subject to the review and approval of the City of Oakland. Overall monitoring and compliance with the mitigation measures will be the responsibility of the Planning and Zoning Division. Prior to the issuance of a demolition, grading, and/or construction permit, the project sponsor shall pay the applicable mitigation and monitoring fee to the City in accordance with the City’s Master Fee Schedule.

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/Inspection
Aesthetics, Shadow and Wind			
<p>SCA-AES-1 (Standard Condition of Approval 16): Graffiti Control.</p> <p>a. During construction and operation of the project, the project applicant shall incorporate best management practices reasonably related to the control of graffiti and/or the mitigation of the impacts of graffiti. Such best management practices may include, without limitation:</p> <ul style="list-style-type: none"> i. Installation and maintenance of landscaping to discourage defacement of and/or protect likely graffiti-attracting surfaces. ii. Installation and maintenance of lighting to protect likely graffiti-attracting surfaces. iii. Use of paint with anti-graffiti coating. iv. Incorporation of architectural or design elements or features to discourage graffiti defacement in accordance with the principles of Crime Prevention Through Environmental Design (CPTED). v. Other practices approved by the City to deter, protect, or reduce the potential for graffiti defacement. <p>b. The project applicant shall remove graffiti by appropriate means within seventy-two (72) hours. Appropriate means include:</p> <ul style="list-style-type: none"> i. Removal through scrubbing, washing, sanding, and/or scraping (or similar method) without damaging the surface and without discharging wash water or cleaning detergents into the City storm drain system. ii. Covering with new paint to match the color of the surrounding surface. iii. Replacing with new surfacing (with City permits if required). 	Ongoing	N/A	Bureau of Building
<p>SCA-AES-2 (Standard Condition of Approval 17): Landscape Plan.</p> <p>a. <i>Landscape Plan Required</i></p> <p>The project applicant shall submit a final Landscape Plan for City review and approval that is consistent with the approved Landscape Plan. The Landscape Plan shall be included with the set of drawings submitted for the construction-related permit and shall comply with the landscape requirements of chapter 17.124 of the Planning Code.</p> <p>b. <i>Landscape Installation</i></p> <p>The project applicant shall implement the approved Landscape Plan unless a bond, cash deposit, letter of credit, or other equivalent instrument acceptable to the Director of City Planning, is provided. The financial instrument shall equal the greater of \$2,500 or the estimated cost of implementing the Landscape Plan based on a licensed contractor's bid.</p>	Prior to approval of construction-related permit Prior to building permit final Ongoing	Bureau of Planning Bureau of Planning N/A	N/A Bureau of Building Bureau of Building

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/Inspection
<p>c. <i>Landscape Maintenance</i></p> <p>All required planting shall be permanently maintained in good growing condition and, whenever necessary, replaced with new plant materials to ensure continued compliance with applicable landscaping requirements. The property owner shall be responsible for maintaining planting in adjacent public rights-of-way. All required fences, walls, and irrigation systems shall be permanently maintained in good condition and, whenever necessary, repaired or replaced.</p>			
<p>SCA-AES-3 (Standard Condition of Approval 18): <i>Lighting.</i></p> <p>Proposed new exterior lighting fixtures shall be adequately shielded to a point below the light bulb and reflector to prevent unnecessary glare onto adjacent properties.</p>	Prior to building permit final	N/A	Bureau of Building
Air Quality			
<p>SCA-AIR-1 (Standard Condition of Approval 19): <i>Construction-Related Air Pollution Controls (Dust and Equipment Emissions).</i> The project applicant shall implement all of the following applicable air pollution control measures during construction of the project:</p> <p>a. Water all exposed surfaces of active construction areas at least twice daily. Watering should be sufficient to prevent airborne dust from leaving the site. Increased watering frequency may be necessary whenever wind speeds exceed 15 miles per hour. Reclaimed water should be used whenever feasible.</p> <p>b. Cover all trucks hauling soil, sand, and other loose materials or require all trucks to maintain at least two feet of freeboard (i.e., the minimum required space between the top of the load and the top of the trailer).</p> <p>c. All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.</p> <p>d. Pave all roadways, driveways, sidewalks, etc. within one month of site grading or as soon as feasible. In addition, building pads should be laid within one month of grading or as soon as feasible unless seeding or soil binders are used.</p> <p>e. Enclose, cover, water twice daily, or apply (non-toxic) soil stabilizers to exposed stockpiles (dirt, sand, etc.).</p> <p>f. Limit vehicle speeds on unpaved roads to 15 miles per hour.</p> <p>g. Idling times on all diesel-fueled commercial vehicles over 10,000 lbs. shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes (as required by the California airborne toxics control measure Title 13, Section 2485, of the California Code of Regulations). Clear signage to this effect shall be provided for construction workers at all access points.</p>	During construction	N/A	Bureau of Building

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/Inspection
<p>h. Idling times on all diesel-fueled off-road vehicles over 25 horsepower shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes and fleet operators must develop a written policy as required by Title 23, Section 2449, of the California Code of Regulations (“California Air Resources Board Off-Road Diesel Regulations”).</p> <p>i. All construction equipment shall be maintained and properly tuned in accordance with the manufacturer’s specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.</p> <p>j. Portable equipment shall be powered by electricity if available. If electricity is not available, propane or natural gas shall be used if feasible. Diesel engines shall only be used if electricity is not available and it is not feasible to use propane or natural gas.</p> <p>k. All exposed surfaces shall be watered at a frequency adequate to maintain minimum soil moisture of 12 percent. Moisture content can be verified by lab samples or moisture probe.</p> <p>l. All excavation, grading, and demolition activities shall be suspended when average wind speeds exceed 20 mph.</p> <p>m. Install sandbags or other erosion control measures to prevent silt runoff to public roadways.</p> <p>n. Hydroseed or apply (non-toxic) soil stabilizers to inactive construction areas (previously graded areas inactive for one month or more).</p> <p>o. Designate a person or persons to monitor the dust control program and to order increased watering, as necessary, to prevent transport of dust offsite. Their duties shall include holidays and weekend periods when work may not be in progress.</p> <p>p. Install appropriate wind breaks (e.g., trees, fences) on the windward side(s) of actively disturbed areas of the construction site to minimize wind blown dust. Wind breaks must have a maximum 50 percent air porosity.</p> <p>q. Vegetative ground cover (e.g., fast-germinating native grass seed) shall be planted in disturbed areas as soon as possible and watered appropriately until vegetation is established.</p> <p>r. Activities such as excavation, grading, and other ground-disturbing construction activities shall be phased to minimize the amount of disturbed surface area at any one time.</p> <p>s. All trucks and equipment, including tires, shall be washed off prior to leaving the site.</p>			

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/ Inspection
t. Site accesses to a distance of 100 feet from the paved road shall be treated with a 6 to 12 inch compacted layer of wood chips, mulch, or gravel. u. All equipment to be used on the construction site and subject to the requirements of Title 13, Section 2449, of the California Code of Regulations (“California Air Resources Board Off-Road Diesel Regulations”) must meet emissions and performance requirements one year in advance of any fleet deadlines. Upon request by the City, the project applicant shall provide written documentation that fleet requirements have been met. v. Use low VOC (i.e., ROG) coatings beyond the local requirements (i.e., BAAQMD Regulation 8, Rule 3: Architectural Coatings). w. All construction equipment, diesel trucks, and generators shall be equipped with Best Available Control Technology for emission reductions of NOx and PM. x. Off-road heavy diesel engines shall meet the California Air Resources Board’s most recent certification standard. y. Post a publicly-visible large on-site sign that includes the contact name and phone number for the project complaint manager responsible for responding to dust complaints and the telephone numbers of the City’s Code Enforcement unit and the Bay Area Air Quality Management District. When contacted, the project complaint manager shall respond and take corrective action within 48 hours.			
SCA-TRANS-4 (Standard Condition of Approval 71): <i>Parking and Transportation Demand Management (TDM) Plan Required.</i> Refer to SCA-TRANS-4 under Transportation.	See below.	See below.	See below.
Biological Resources			
SCA-BIO-1 (Standard Condition of Approval 26): <i>Tree Removal During Breeding Season.</i> To the extent feasible, removal of any tree and/or other vegetation suitable for nesting of birds shall not occur during the bird breeding season of February 1 to August 15 (or during December 15 to August 15 for trees located in or near marsh, wetland, or aquatic habitats). If tree removal must occur during the bird breeding season, all trees to be removed shall be surveyed by a qualified biologist to verify the presence or absence of nesting raptors or other birds. Pre-removal surveys shall be conducted within 15 days prior to the start of work and shall be submitted to the City for review and approval. If the survey indicates the potential presence of nesting raptors or other birds, the biologist shall determine an appropriately sized buffer around the nest in which no work will be allowed until the young have successfully fledged. The size of the nest buffer will be determined	Prior to removal of trees	Bureau of Building.	Bureau of Building.

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/ Inspection
by the biologist in consultation with the California Department of Fish and Wildlife, and will be based to a large extent on the nesting species and its sensitivity to disturbance. In general, buffer sizes of 200 feet for raptors and 50 feet for other birds should suffice to prevent disturbance to birds nesting in the urban environment, but these buffers may be increased or decreased, as appropriate, depending on the bird species and the level of disturbance anticipated near the nest.			
<p>SCA-BIO-2 (Standard Condition of Approval 27): Tree Permit.</p> <p><i>a. Tree Removal Permit</i></p> <p>Pursuant to the City’s Tree Protection Ordinance (OMC chapter 12.36), the project applicant shall obtain a tree permit and abide by the conditions of that permit.</p> <p><i>b. Tree Protection During Construction</i></p> <p>Adequate protection shall be provided during the construction period for any trees which are to remain standing, including the following, plus any recommendations of an arborist:</p> <ol style="list-style-type: none"> i. Before the start of any clearing, excavation, construction, or other work on the site, every protected tree deemed to be potentially endangered by said site work shall be securely fenced off at a distance from the base of the tree to be determined by the project’s consulting arborist. Such fences shall remain in place for duration of all such work. All trees to be removed shall be clearly marked. A scheme shall be established for the removal and disposal of logs, brush, earth and other debris which will avoid injury to any protected tree. ii. Where proposed development or other site work is to encroach upon the protected perimeter of any protected tree, special measures shall be incorporated to allow the roots to breathe and obtain water and nutrients. Any excavation, cutting, filing, or compaction of the existing ground surface within the protected perimeter shall be minimized. No change in existing ground level shall occur within a distance to be determined by the project’s consulting arborist from the base of any protected tree at any time. No burning or use of equipment with an open flame shall occur near or within the protected perimeter of any protected tree. iii. No storage or dumping of oil, gas, chemicals, or other substances that may be harmful to trees shall occur within the distance to be determined by the project’s consulting arborist from the base of any protected trees, or any other location on the site from which such substances might enter the protected perimeter. No 	<p>Prior to approval of construction-related permit</p> <p>During construction</p> <p>Prior to building permit final</p>	<p>Permit approval by Public Works Department, Tree Division; evidence of approval submitted to Bureau of Building</p> <p>Public Works Department, Tree Division</p> <p>Public Works Department, Tree Division</p>	<p>Bureau of Building</p> <p>Bureau of Building</p> <p>Bureau of Building</p>

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/ Inspection
<p>heavy construction equipment or construction materials shall be operated or stored within a distance from the base of any protected trees to be determined by the project’s consulting arborist. Wires, ropes, or other devices shall not be attached to any protected tree, except as needed for support of the tree. No sign, other than a tag showing the botanical classification, shall be attached to any protected tree.</p> <p>iv. Periodically during construction, the leaves of protected trees shall be thoroughly sprayed with water to prevent buildup of dust and other pollution that would inhibit leaf transpiration.</p> <p>v. If any damage to a protected tree should occur during or as a result of work on the site, the project applicant shall immediately notify the Public Works Department and the project’s consulting arborist shall make a recommendation to the City Tree Reviewer as to whether the damaged tree can be preserved. If, in the professional opinion of the Tree Reviewer, such tree cannot be preserved in a healthy state, the Tree Reviewer shall require replacement of any tree removed with another tree or trees on the same site deemed adequate by the Tree Reviewer to compensate for the loss of the tree that is removed.</p> <p>vi. All debris created as a result of any tree removal work shall be removed by the project applicant from the property within two weeks of debris creation, and such debris shall be properly disposed of by the project applicant in accordance with all applicable laws, ordinances, and regulations.</p> <p>When Required: During construction Initial Approval: Public Works Department, Tree Division Monitoring/Inspection: Bureau of Building</p> <p>c. <i>Tree Replacement Plantings</i> Requirement: Replacement plantings shall be required for tree removals for the purposes of erosion control, groundwater replenishment, visual screening, wildlife habitat, and preventing excessive loss of shade, in accordance with the following criteria:</p> <p>i. No tree replacement shall be required for the removal of nonnative species, for the removal of trees which is required for the benefit of remaining trees, or where insufficient planting area exists for a mature tree of the species being considered.</p> <p>ii. Replacement tree species shall consist of Sequoia</p>			

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/Inspection
<p>sempervirens (Coast Redwood), Quercus agrifolia (Coast Live Oak), Arbutus menziesii (Madrone), Aesculus californica (California Buckeye), Umbellularia californica (California Bay Laurel), or other tree species acceptable to the Tree Division.</p> <p>iii. Replacement trees shall be at least twenty-four (24) inch box size, unless a smaller size is recommended by the arborist, except that three fifteen (15) gallon size trees may be substituted for each twenty-four (24) inch box size tree where appropriate.</p> <p>iv. Minimum planting areas must be available on site as follows:</p> <ul style="list-style-type: none"> • For Sequoia sempervirens, three hundred fifteen (315) square feet per tree; • For other species listed, seven hundred (700) square feet per tree. <p>v. In the event that replacement trees are required but cannot be planted due to site constraints, an in lieu fee in accordance with the City’s Master Fee Schedule may be substituted for required replacement plantings, with all such revenues applied toward tree planting in city parks, streets and medians.</p> <p>vi. The project applicant shall install the plantings and maintain the plantings until established. The Tree Reviewer of the Tree Division of the Public Works Department may require a landscape plan showing the replacement plantings and the method of irrigation. Any replacement plantings which fail to become established within one year of planting shall be replanted at the project applicant’s expense.</p>			

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/Inspection
Cultural Resources			
<p>SCA-CUL-1 (Standard Condition of Approval 29): <i>Archaeological and Paleontological Resources – Discovery During Construction.</i> Pursuant to CEQA Guidelines section 15064.5(f), in the event that any historic or prehistoric subsurface cultural resources are discovered during ground disturbing activities, all work within 50 feet of the resources shall be halted and the project applicant shall notify the City and consult with a qualified archaeologist or paleontologist, as applicable, to assess the significance of the find. In the case of discovery of paleontological resources, the assessment shall be done in accordance with the Society of Vertebrate Paleontology standards. If any find is determined to be significant, appropriate avoidance measures recommended by the consultant and approved by the City must be followed unless avoidance is determined unnecessary or infeasible by the City. Feasibility of avoidance shall be determined with consideration of factors such as the nature of the find, project design, costs, and other considerations. If avoidance is unnecessary or infeasible, other appropriate measures (e.g., data recovery, excavation) shall be instituted. Work may proceed on other parts of the project site while measures for the cultural resources are implemented.</p> <p>In the event of data recovery of archaeological resources, the project applicant shall submit an Archaeological Research Design and Treatment Plan (ARDTP) prepared by a qualified archaeologist for review and approval by the City. The ARDTP is required to identify how the proposed data recovery program would preserve the significant information the archaeological resource is expected to contain. The ARDTP shall identify the scientific/historic research questions applicable to the expected resource, the data classes the resource is expected to possess, and how the expected data classes would address the applicable research questions. The ARDTP shall include the analysis and specify the curation and storage methods. Data recovery, in general, shall be limited to the portions of the archaeological resource that could be impacted by the proposed project. Destructive data recovery methods shall not be applied to portions of the archaeological resources if nondestructive methods are practicable. Because the intent of the ARDTP is to save as much of the archaeological resource as possible, including moving the resource, if feasible, preparation and implementation of the ARDTP would reduce the potential adverse impact to less than significant. The project applicant shall implement the ARDTP at his/her expense.</p> <p>In the event of excavation of paleontological resources, the project applicant shall submit an excavation plan prepared by a qualified paleontologist to the City for review and approval. All significant</p>	During construction	N/A	Bureau of Building

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/Inspection
cultural materials recovered shall be subject to scientific analysis, professional museum curation, and/or a report prepared by a qualified paleontologist, as appropriate, according to current professional standards and at the expense of the project applicant.			
SCA-CUL-2 (Standard Condition of Approval 31): <i>Human Remains – Discovery During Construction.</i> Pursuant to CEQA Guidelines section 15064.5(e)(1), in the event that human skeletal remains are uncovered at the project site during construction activities, all work shall immediately halt and the project applicant shall notify the City and the Alameda County Coroner. If the County Coroner determines that an investigation of the cause of death is required or that the remains are Native American, all work shall cease within 50 feet of the remains until appropriate arrangements are made. In the event that the remains are Native American, the City shall contact the California Native American Heritage Commission (NAHC), pursuant to subdivision (c) of section 7050.5 of the California Health and Safety Code. If the agencies determine that avoidance is not feasible, then an alternative plan shall be prepared with specific steps and timeframe required to resume construction activities. Monitoring, data recovery, determination of significance, and avoidance measures (if applicable) shall be completed expeditiously and at the expense of the project applicant.	During construction	N/A	Bureau of Building
SCA-CUL-3 (Standard Condition of Approval 32): <i>Property Relocation.</i> Pursuant to Policy 3.7 of the Historic Preservation Element of the Oakland General Plan, the project applicant shall make a good faith effort to relocate the historic resource to a site acceptable to the City. A good faith effort includes, at a minimum, all of the following: a. Advertising the availability of the building by: (1) posting of large visible signs (such as banners, at a minimum of 3' x 6' size or larger) at the site; (2) placement of advertisements in Bay Area news media acceptable to the City; and (3) contacting neighborhood associations and for-profit and not-for-profit housing and preservation organizations; b. Maintaining a log of all the good faith efforts and submitting that along with photos of the subject building showing the large signs (banners) to the City; c. Maintaining the signs and advertising in place for a minimum of 90 days; and d. Making the building available at no or nominal cost (the amount to be reviewed by the Oakland Cultural Heritage Survey) until removal is necessary for construction of a replacement project, but in no case for less than a period of 90 days after such advertisement.	Prior to approval of construction-related permit	Bureau of Planning (including Oakland Cultural Resource Survey)	N/A

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/ Inspection
<p>Mitigation Measure CUL-1: Only avoidance of direct effects on historic resources, as would be achieved through Mitigation Measure CUL-1(a) (Avoidance, Adaptive Reuse, or Appropriate Relocation of Historically Significant Structures) and Mitigation Measure CUL-1(b) (Future Site-specific Surveys and Evaluations), would reduce impacts on historic resources to a less-than-significant level. Therefore, if demolition or substantial alteration of historically significant resources is identified by the City as the only feasibly option for development in the Plan Area, even with implementation of Mitigation Measure CUL-1(c) (Recordation and Public Interpretation) and Mitigation Measure CUL-1(d) (Financial Contributions), the impact of adoption of and development under the Plan would be considered significant and unavoidable.</p> <p>Mitigation Measure CUL-1(a), Avoidance, Adaptive Reuse, or Appropriate Relocation of Historically Significant Structures</p> <ul style="list-style-type: none"> • Avoidance. The City shall ensure, where feasible, that all future development activities allowable under the Specific Plan, including demolition, alteration, and new construction, would avoid historical resources (i.e., those listed on federal, state, and local registers). • Adaptive Reuse. If avoidance is not feasible, adaptive reuse and rehabilitation of historical resources shall occur in accordance with the Secretary of Interior’s Standards for the Treatment of Historic Properties. • Appropriate Relocation. If avoidance or adaptive reuse in situ is not feasible, SCA 56, Compliance with Policy 3.7 of the Historic Preservation Element (Property Relocation Rather than Demolition), shall be implemented, as required. Projects that relocate the affected historical property to a location consistent with its historic or architectural character could reduce the impact to less than significant (Historic Preservation Element Action 3.8.1), unless the property’s location is an integral part of its significance (e.g., a contributor to a historic district). <p>Mitigation Measure CUL-1(b), Future Site-specific Surveys and Evaluations</p> <p>Although the Plan Area has been surveyed by the City of Oakland’s OCHS and as a part of the Broadway Valdez Specific Plan effort by ESA in 2009, evaluations and ratings may change with time and other conditions. There may be previously unidentified historical resources that would be affected by future development activities. For any future projects on or immediately adjacent to buildings 50 years old or older between 2013 and 2038, which is the build-out horizon for the Specific Plan (i.e., by the end of the Plan period, buildings constructed prior to 1988), the City shall require specific surveys and evaluations of such properties to</p>	<p>Prior to issuance of a demolition permit. Note: A “Mitigation Compliance Report” was prepared for this project that demonstrated that Mitigation Measure CUL-1(a) was infeasible & CUL-1(b) was not necessary. Please see the “Mitigation Compliance Report” in Attachment G to the CEQA Analysis document.</p>		<p>City of Oakland - Building Services Division, Zoning Inspection</p>

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/ Inspection
<p>determine their potential historical significance at the federal, state, and local levels. Intensive-level surveys and evaluations shall be completed by a qualified architectural historian who meets the Secretary of the Interior’s Standards. For all historical resources identified as a result of site-specific surveys and evaluations, the City shall ensure that future development activities avoid, adaptively reuse, and/or appropriately relocate such historical resources in accordance with Mitigation Measure CUL-1(a) (Avoidance, Adaptive Reuse, or Appropriate Relocation of Historically Significant Structures), above. Site-specific surveys and evaluations that are more than 5 years old shall be updated to account for changes that may have occurred over time.</p> <p>Mitigation Measure CUL-1 (c), Recordation and Public Interpretation</p> <p>If Mitigation Measure CUL-1(a) (Avoidance, Adaptive Reuse, or Appropriate Relocation of Historically Significant Structures) is determined infeasible as part of a future project, the City shall evaluate the feasibility and appropriateness of recordation and public interpretation of such resources prior to any construction activities that would directly affect them. Should the City decide that recordation and or public interpretation is required, the following activities will be performed:</p> <ul style="list-style-type: none"> • Recordation. Recordation shall follow the standards provided in the National Park Service’s Historic American Building Survey (HABS) program, which requires photo-documentation of historic structures, a written report, and/or measured drawings (or photo reproduction of original plans if available). The photographs and report would be archived at the Oakland Planning Department and local repositories, such as public libraries, historical societies, and/or the Northwest Information Center at Sonoma State University. The recordation efforts shall occur prior to demolition, alteration, or relocation of any historic resources identified in the Plan Area, including those that are relocated pursuant to Mitigation Measure CUL-1(a) (Avoidance, Adaptive Reuse, or Appropriate Relocation of Historically Significant Structures). Additional recordation could include (as appropriate) oral history interviews or other documentation (e.g., video) of the resource. • Public Interpretation. A public interpretation or art program would be developed by a qualified historic consultant or local artist in consultation with the Landmarks Preservation Advisory Board and the City, based on a City-approved scope of work, and submitted to the City for review and approval. The program could take the form of plaques, commemorative markers, or artistic or interpretive displays that explain the historical significance of the properties to the general public. 			

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/Inspection
<p>Such displays would be incorporated into project plans as they are being developed and would typically be located in a publicly accessible location on or near the site of the former historical resource(s). Public interpretation displays shall be installed prior to completion of any construction projects in the Plan Area.</p> <p>Photographic recordation and public interpretation of historically significant properties do not typically mitigate the loss of resources to a less-than-significant level (State CEQA Guidelines Section 15126.4(b)(2)).</p> <p>Mitigation Measure CUL-1(d), Financial Contributions If Mitigation Measure CUL-1(a) (Avoidance, Adaptive Reuse, or Appropriate Relocation of Historically Significant Structures) and Mitigation Measure CUL-1(b) (Future Site-specific Surveys and Evaluations) are not satisfied, the project applicant shall make a financial contribution to the City of Oakland, which can be used to fund other historic preservation projects within the Plan Area or in the immediate vicinity. Such programs include, without limitation, a Façade Improvement Program or a Property Relocation Assistance Program.</p> <p>This mitigation would conform to Action 3.8.1(9) of the Historic Preservation Element of the City of Oakland General Plan. Contributions to the fund(s) shall be determined by staff members at the time of approval of site-specific project plans, based on a formula to be determined by the Landmarks Preservation Advisory Board. However, such financial contribution, even in conjunction with Mitigation Measure CUL-1(c) (Recordation and Public Interpretation), would not reduce the impacts to less-than-significant levels.</p>			
Mitigation Measure CUL-5: Implement Mitigation Measure CUL-1.	See above		See above
Geology, Soils and Geohazards			
SCA-GEO-1 (Standard Condition of Approval 33): Construction-Related Permit(s). The project applicant shall obtain all required construction-related permits/approvals from the City. The project shall comply with all standards, requirements and conditions contained in construction-related codes, including but not limited to the Oakland Building Code and the Oakland Grading Regulations, to ensure structural integrity and safe construction.	Prior to approval of construction-related permit	Bureau of Building	Bureau of Building
SCA-GEO-2 (Standard Condition of Approval 36): Seismic Hazards Zone (Landslide/Liquefaction). The project applicant shall submit a site-specific geotechnical report, consistent with California Geological Survey Special Publication 117 (as amended), prepared by a registered geotechnical engineer for City review and approval containing at a minimum a description of the geological and geotechnical conditions at the site, an evaluation of site-specific	Prior to approval of construction-related permit	Bureau of Building	Bureau of Building

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/ Inspection
seismic hazards based on geological and geotechnical conditions, and recommended measures to reduce potential impacts related to liquefaction and/or slope stability hazards. The project applicant shall implement the recommendations contained in the approved report during project design and construction.			
Hazards and Hazardous Materials			
<p>SCA-HAZ-1 (Standard Condition of Approval 39): Hazardous Materials Related to Construction. The project applicant shall ensure that Best Management Practices (BMPs) are implemented by the contractor during construction to minimize potential negative effects on groundwater, soils, and human health. These shall include, at a minimum, the following:</p> <ul style="list-style-type: none"> a. Follow manufacture’s recommendations for use, storage, and disposal of chemical products used in construction; b. Avoid overtopping construction equipment fuel gas tanks; c. During routine maintenance of construction equipment, properly contain and remove grease and oils; d. Properly dispose of discarded containers of fuels and other chemicals; e. Implement lead-safe work practices and comply with all local, regional, state, and federal requirements concerning lead (for more information refer to the Alameda County Lead Poisoning Prevention Program); and f. If soil, groundwater, or other environmental medium with suspected contamination is encountered unexpectedly during construction activities (e.g., identified by odor or visual staining, or if any underground storage tanks, abandoned drums or other hazardous materials or wastes are encountered), the project applicant shall cease work in the vicinity of the suspect material, the area shall be secured as necessary, and the applicant shall take all appropriate measures to protect human health and the environment. Appropriate measures shall include notifying the City and applicable regulatory agency(ies) and implementation of the actions described in the City’s Standard Conditions of Approval, as necessary, to identify the nature and extent of contamination. Work shall not resume in the area(s) affected until the measures have been implemented under the oversight of the City or regulatory agency, as appropriate. 	During construction	N/A	Bureau of Building
<p>SCA-HAZ-2 (Standard Condition of Approval 40): Site Contamination.</p> <ul style="list-style-type: none"> a. <i>Environmental Site Assessment Required</i> The project applicant shall submit a Phase I Environmental Site Assessment report, and Phase II Environmental Site Assessment report if warranted by the Phase I report, for the 	Prior to approval of construction-related permit Prior to approval of construction-related permit	Oakland Fire Department Bureau of Building N/A	Oakland Fire Department Bureau of Building

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/Inspection
<p>project site for review and approval by the City. The report(s) shall be prepared by a qualified environmental assessment professional and include recommendations for remedial action, as appropriate, for hazardous materials. The project applicant shall implement the approved recommendations and submit to the City evidence of approval for any proposed remedial action and required clearances by the applicable local, state, or federal regulatory agency.</p> <p>b. <i>Health and Safety Plan Required</i> The project applicant shall submit a Health and Safety Plan for review and approval by the City to protect project construction workers from risks associated with hazardous materials. The project applicant shall implement the approved Plan.</p> <p>c. <i>Best Management Practices Required for Contaminated Sites</i> The project applicant shall ensure that Best Management Practices (BMPs) are implemented by the contractor during construction to minimize potential soil and groundwater hazards. These shall include the following:</p> <ul style="list-style-type: none"> i. Soil generated by construction activities shall be stockpiled on-site in a secure and safe manner. All contaminated soils determined to be hazardous or non-hazardous waste must be adequately profiled (sampled) prior to acceptable reuse or disposal at an appropriate off-site facility. Specific sampling and handling and transport procedures for reuse or disposal shall be in accordance with applicable local, state, and federal requirements. ii. Groundwater pumped from the subsurface shall be contained on-site in a secure and safe manner, prior to treatment and disposal, to ensure environmental and health issues are resolved pursuant to applicable laws and policies. Engineering controls shall be utilized, which include impermeable barriers to prohibit groundwater and vapor intrusion into the building. 	During construction		
<p>SCA-HAZ-3 (Standard Condition of Approval 41): <i>Hazardous Materials Business Plan.</i> The project applicant shall submit a Hazardous Materials Business Plan for review and approval by the City, and shall implement the approved Plan. The approved Plan shall be kept on file with the City and the project applicant shall update the Plan as applicable. The purpose of the Hazardous Materials Business Plan is to ensure that employees are adequately trained to handle hazardous materials and provides information to the Fire Department should emergency response be required. Hazardous materials shall be handled in accordance with all applicable local, state, and federal requirements. The Hazardous Materials Business Plan shall include the following:</p>	Prior to building permit final	Oakland Fire Department	Oakland Fire Department

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/Inspection
a. The types of hazardous materials or chemicals stored and/or used on-site, such as petroleum fuel products, lubricants, solvents, and cleaning fluids. b. The location of such hazardous materials. c. An emergency response plan including employee training information. d. A plan that describes the manner in which these materials are handled, transported, and disposed.			
Hydrology and Water Quality			
SCA-HYD-1 (Standard Condition of Approval 45): <i>Erosion and Sedimentation Control Plan for Construction.</i> a. <i>Erosion and Sedimentation Control Plan Required</i> The project applicant shall submit an Erosion and Sedimentation Control Plan to the City for review and approval. The Erosion and Sedimentation Control Plan shall include all necessary measures to be taken to prevent excessive stormwater runoff or carrying by stormwater runoff of solid materials on to lands of adjacent property owners, public streets, or to creeks as a result of conditions created by grading and/or construction operations. The Plan shall include, but not be limited to, such measures as short-term erosion control planting, waterproof slope covering, check dams, interceptor ditches, benches, storm drains, dissipation structures, diversion dikes, retarding berms and barriers, devices to trap, store and filter out sediment, and stormwater retention basins. Off-site work by the project applicant may be necessary. The project applicant shall obtain permission or easements necessary for off-site work. There shall be a clear notation that the plan is subject to changes as changing conditions occur. Calculations of anticipated stormwater runoff and sediment volumes shall be included, if required by the City. The Plan shall specify that, after construction is complete, the project applicant shall ensure that the storm drain system shall be inspected and that the project applicant shall clear the system of any debris or sediment. b. <i>Erosion and Sedimentation Control During Construction</i> The project applicant shall implement the approved Erosion and Sedimentation Control Plan. No grading shall occur during the wet weather season (October 15 through April 15) unless specifically authorized in writing by the Bureau of Building.	Prior to approval of construction-related permit During construction	Bureau of Building N/A	N/A Bureau of Building
SCA-HYD-2 (Standard Condition of Approval 46): <i>State Construction General Permit.</i> The project applicant shall comply with the requirements of the Construction General Permit issued by the State Water Resources Control Board (SWRCB). The project applicant shall submit a Notice of Intent (NOI), Stormwater	Prior to approval of construction-related permit	State Water Resources Control Board; evidence of	State Water Resources Control Board

	When Required	Initial Approval	Monitoring/Inspection
Pollution Prevention Plan (SWPPP), and other required Permit Registration Documents to SWRCB. The project applicant shall submit evidence of compliance with Permit requirements to the City.		compliance submitted to Bureau of Building	
<p>SCA-HYD-3 (Standard Condition of Approval 50): NPDES C.3 Stormwater Requirements for Regulated Projects.</p> <p><i>a. Post-Construction Stormwater Management Plan Required</i></p> <p>The project applicant shall comply with the requirements of Provision C.3 of the Municipal Regional Stormwater Permit issued under the National Pollutant Discharge Elimination System (NPDES). The project applicant shall submit a Post-Construction Stormwater Management Plan to the City for review and approval with the project drawings submitted for site improvements, and shall implement the approved Plan during construction. The Post-Construction Stormwater Management Plan shall include and identify the following:</p> <ol style="list-style-type: none"> i. Location and size of new and replaced impervious surface; ii. Directional surface flow of stormwater runoff; iii. Location of proposed on-site storm drain lines; iv. Site design measures to reduce the amount of impervious surface area; v. Source control measures to limit stormwater pollution; vi. Stormwater treatment measures to remove pollutants from stormwater runoff, including the method used to hydraulically size the treatment measures; and vii. Hydromodification management measures, if required by Provision C.3, so that post-project stormwater runoff flow and duration match pre-project runoff. <p><i>b. Maintenance Agreement Required</i></p> <p>The project applicant shall enter into a maintenance agreement with the City, based on the Standard City of Oakland Stormwater Treatment Measures Maintenance Agreement, in accordance with Provision C.3, which provides, in part, for the following:</p> <ol style="list-style-type: none"> i. The project applicant accepting responsibility for the adequate installation/construction, operation, maintenance, inspection, and reporting of any on-site stormwater treatment measures being incorporated into the project until the responsibility is legally transferred to another entity; and ii. Legal access to the on-site stormwater treatment measures for representatives of the City, the local vector control district, and staff of the Regional Water Quality Control Board, San Francisco Region, for the purpose of verifying the implementation, operation, and 	<p>Prior to approval of construction-related permit</p> <p>Prior to building permit final</p>	<p>Bureau of Planning; Bureau of Building Bureau of Building</p>	<p>Bureau of Building Bureau of Building</p>

	When Required	Initial Approval	Monitoring/Inspection
<p>maintenance of the on-site stormwater treatment measures and to take corrective action if necessary. The maintenance agreement shall be recorded at the County Recorder's Office at the applicant's expense.</p>			
Noise			
<p>SCA-NOI-1 (Standard Condition of Approval 58): <i>Construction Days/Hours.</i> The project applicant shall comply with the following restrictions concerning construction days and hours:</p> <ul style="list-style-type: none"> a. Construction activities are limited to between 7:00 a.m. and 7:00 p.m. Monday through Friday, except that pier drilling and/or other extreme noise generating activities greater than 90 dBA shall be limited to between 8:00 a.m. and 4:00 p.m. b. Construction activities are limited to between 9:00 a.m. and 5:00 p.m. on Saturday. In residential zones and within 300 feet of a residential zone, construction activities are allowed from 9:00 a.m. to 5:00 p.m. only within the interior of the building with the doors and windows closed. No pier drilling or other extreme noise generating activities greater than 90 dBA are allowed on Saturday. c. No construction is allowed on Sunday or federal holidays. Construction activities include, but are not limited to, truck idling, moving equipment (including trucks, elevators, etc.) or materials, deliveries, and construction meetings held on-site in a non-enclosed area. <p>Any construction activity proposed outside of the above days and hours for special activities (such as concrete pouring which may require more continuous amounts of time) shall be evaluated on a case-by-case basis by the City, with criteria including the urgency/emergency nature of the work, the proximity of residential or other sensitive uses, and a consideration of nearby residents'/occupants' preferences. The project applicant shall notify property owners and occupants located within 300 feet at least 14 calendar days prior to construction activity proposed outside of the above days/hours. When submitting a request to the City to allow construction activity outside of the above days/hours, the project applicant shall submit information concerning the type and duration of proposed construction activity and the draft public notice for City review and approval prior to distribution of the public notice.</p>	During construction	N/A	Bureau of Building
<p>SCA-NOI-2 (Standard Condition of Approval 59): <i>Construction Noise.</i> The project applicant shall implement noise reduction measures to reduce noise impacts due to construction. Noise reduction measures include, but are not limited to, the following:</p>	During construction	N/A	Bureau of Building

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring		
	When Required	Initial Approval	Monitoring/ Inspection
<p>a. Equipment and trucks used for project construction shall utilize the best available noise control techniques (e.g., improved mufflers, equipment redesign, use of intake silencers, ducts, engine enclosures and acoustically-attenuating shields or shrouds) wherever feasible.</p> <p>b. Except as provided herein, impact tools (e.g., jack hammers, pavement breakers, and rock drills) used for project construction shall be hydraulically or electrically powered to avoid noise associated with compressed air exhaust from pneumatically powered tools. However, where use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used; this muffler can lower noise levels from the exhaust by up to about 10 dBA. External jackets on the tools themselves shall be used, if such jackets are commercially available, and this could achieve a reduction of 5 dBA. Quieter procedures shall be used, such as drills rather than impact equipment, whenever such procedures are available and consistent with construction procedures.</p> <p>c. Applicant shall use temporary power poles instead of generators where feasible.</p> <p>d. Stationary noise sources shall be located as far from adjacent properties as possible, and they shall be muffled and enclosed within temporary sheds, incorporate insulation barriers, or use other measures as determined by the City to provide equivalent noise reduction.</p> <p>e. The noisiest phases of construction shall be limited to less than 10 days at a time. Exceptions may be allowed if the City determines an extension is necessary and all available noise reduction controls are implemented.</p>			
<p>SCA-NOI-3 (Standard Condition of Approval 60): <i>Extreme Construction Noise.</i></p> <p>a. <i>Construction Noise Management Plan Required</i></p> <p>Prior to any extreme noise generating construction activities (e.g., pier drilling, pile driving and other activities generating greater than 90dBA), the project applicant shall submit a Construction Noise Management Plan prepared by a qualified acoustical consultant for City review and approval that contains a set of site-specific noise attenuation measures to further reduce construction impacts associated with extreme noise generating activities. The project applicant shall implement the approved Plan during construction. Potential attenuation measures include, but are not limited to, the following:</p> <p>i. Erect temporary plywood noise barriers around the</p>	<p>Prior to approval of construction-related permit</p> <p>During construction</p>	<p>Bureau of Building</p> <p>Bureau of Building</p>	<p>Bureau of Building</p> <p>Bureau of Building</p>

Standard Conditions of Approval/Mitigation Measures	Mitigation Implementation/Monitoring

<p>construction site, particularly along on sites adjacent to residential buildings;</p> <p>ii. Implement “quiet” pile driving technology (such as pre-drilling of piles, the use of more than one pile driver to shorten the total pile driving duration), where feasible, in consideration of geotechnical and structural requirements and conditions;</p> <p>iii. Utilize noise control blankets on the building structure as the building is erected to reduce noise emission from the site;</p> <p>iv. Evaluate the feasibility of noise control at the receivers by temporarily improving the noise reduction capability of adjacent buildings by the use of sound blankets for example and implement such measure if such measures are feasible and would noticeably reduce noise impacts; and</p> <p>v. Monitor the effectiveness of noise attenuation measures by taking noise measurements.</p> <p>b. <i>Public Notification Required</i></p> <p>The project applicant shall notify property owners and occupants located within 300 feet of the construction activities at least 14 calendar days prior to commencing extreme noise generating activities. Prior to providing the notice, the project applicant shall submit to the City for review and approval the proposed type and duration of extreme noise generating activities and the proposed public notice. The public notice shall provide the estimated start and end dates of the extreme noise generating activities and describe noise attenuation measures to be implemented.</p>			
<p>SCA-NOI-4 (Standard Condition of Approval 62): <i>Construction Noise Complaints.</i> The project applicant shall submit to the City for review and approval a set of procedures for responding to and tracking complaints received pertaining to construction noise, and shall implement the procedures during construction. At a minimum, the procedures shall include:</p> <p>a. Designation of an on-site construction complaint and enforcement manager for the project;</p> <p>b. A large on-site sign near the public right-of-way containing permitted construction days/hours, complaint procedures, and phone numbers for the project complaint manager and City Code Enforcement unit;</p> <p>c. Protocols for receiving, responding to, and tracking received complaints; and</p> <p>d. Maintenance of a complaint log that records received complaints and how complaints were addressed, which shall be submitted to the City for review upon the City’s request.</p>	Prior to approval of construction-related permit	Bureau of Building	Bureau of Building

	When Required	Initial Approval	Monitoring/ Inspection
<p>SCA-NOI-5 (Standard Condition of Approval 64): <i>Operational Noise.</i> Noise levels from the project site after completion of the project (i.e., during project operation) shall comply with the performance standards of chapter 17.120 of the Oakland Planning Code and chapter 8.18 of the Oakland Municipal Code. If noise levels exceed these standards, the activity causing the noise shall be abated until appropriate noise reduction measures have been installed and compliance verified by the City.</p>	Ongoing	N/A	Bureau of Building
<p>SCA-NOI-6 (Standard Condition of Approval 65): <i>Exposure to Vibration.</i> The project applicant shall submit a Vibration Reduction Plan prepared by a qualified acoustical consultant for City review and approval that contains vibration reduction measures to reduce ground-borne vibration to acceptable levels per Federal Transit Administration (FTA) standards. The applicant shall implement the approved Plan during construction. Potential vibration reduction measures include, but are not limited to, the following:</p> <ul style="list-style-type: none"> a. Isolation of foundation and footings using resilient elements such as rubber bearing pads or springs, such as a "spring isolation" system that consists of resilient spring supports that can support the podium or residential foundations. The specific system shall be selected so that it can properly support the structural loads, and provide adequate filtering of ground-borne vibration to the residences above. b. Trenching, which involves excavating soil between the railway and the project so that the vibration path is interrupted, thereby reducing the vibration levels before they enter the project's structures. Since the reduction in vibration level is based on a ratio between trench depth and vibration wavelength, additional measurements shall be conducted to determine the vibration wavelengths affecting the project. Based on the resulting measurement findings, an adequate trench depth and, if required, suitable fill shall be identified (such as foamed styrene packing pellets [i.e., Styrofoam] or low-density polyethylene). wastewater flow in the sanitary sewer system, the project applicant shall pay the Sanitary Sewer Impact Fee in accordance with the City's Master Fee Schedule for funding improvements to the sanitary sewer system.			
SCA-UTIL-6 (Standard Condition of Approval 80): Storm Drain System. The project storm drainage system shall be designed in accordance with the City of Oakland's Storm Drainage Design Guidelines. To the maximum extent practicable, peak stormwater runoff from the project site shall be reduced by at least 25 percent compared to the pre-project condition.	Prior to approval of construction-related permit	Bureau of Building	Bureau of Building

ATTACHMENT B: PROJECT CONSISTENCY WITH COMMUNITY PLANS OR ZONING, PER CEQA GUIDELINES SECTION 15183

Section 15183(a) of the California Environmental Quality Act (CEQA) Guidelines states that "...projects which are consistent with the development density established by the existing zoning, community plan, or general plan policies for which an Environmental Impact Report (EIR) was certified shall not require additional environmental review, except as may be necessary to examine whether there are project-specific significant effects which are peculiar to the project or its site."

Proposed Project. The proposed project would be located in the Broadway Valdez District Specific Plan (BVDSP)²⁵ area (Plan Area). It would demolish the existing building and surface parking lot and construct a new mixed-use building of approximately 423,577 gsf, with seven stories and up to 85 feet in height. The project would include up to 253,714 gsf of residential space (up to 255 residential units), and up to 37,710 gsf of retail, including the potential for 9,400 gsf of mezzanine retail depending on tenant demand.

Project Consistency. The BVDSP EIR was prepared for the BVDSP; it was certified by the Planning Commission on May 21, 2014, and confirmed by the City Council on June 17, 2014. As determined by the City of Oakland Bureau of Planning, the proposed project is permitted in the zoning district in which it is located, and is consistent with the bulk, density, and land uses envisioned in the Plan Area, as outlined below.

- The land use designation for the site is Central Business District; this classification is intended to encourage, support, and enhance the downtown area as a high-density mixed-use urban center of regional importance, and a primary hub for business, communications, office, government, high technology, retail, entertainment, and transportation. The proposed mixed-use project would be consistent with this designation.
- The project site is zoned Broadway Valdez District Retail Priority Sites Commercial Zone 1 (D-BV-1), Retail Priority Site 3A, which is the most restrictive zoning for general and ground-floor uses in the Plan area. The proposed project would be consistent with the regulatory framework of D-BV-1, which ensures that larger sites and opportunity areas are reserved primarily for new, large-scale retail development that is oriented toward consumer goods, at least on the ground floor. A property that is zoned as D-BV-1 Retail Priority Sites is allowed to include residential uses only if a project were to include a retail component of a certain size and type.
- The project site is located within the 45* Height Area, which generally limits building heights to 45 feet, but does allow increased building heights if applicable retail criteria are met. The base height for the project site would be 85 feet if the project provides 50 percent or 60 percent of the Retail Priority Site area with retail, with a maximum height of 200 feet. Because the proposed project would provide 60 percent of the Retail Priority Site area with retail, the project can be approximately 85 feet in height, in conformance with the height limit on the site. It is worth noting that the height model analyzed in the BVDSP EIR assumed 65 feet at the project site, instead of the proposed 85-foot height. Nevertheless, this analysis concludes that the development density of the proposed project is substantially similar to what was considered in the BVDSP. As such, the slight increase in building height would not lead to new physical impacts not previously considered in the BVDSP EIR. Consequently, in accordance with Section 15183.3 of the CEQA Guidelines, the proposed project is consistent with the BVDSP.

²⁵ City of Oakland, 2014. Broadway Valdez District Specific Plan. Adopted June.

- The project site is designated as Retail Priority Site 3A in the BVDSP, which does not allow for residential density without a residential facilities bonus by way of a CUP. As such, if the proposed project develops 60 percent of the site, it must provide a minimum of 27,293 square feet of retail before the proposed project can be entitled to a “residential facilities bonus.” The proposed project could provide up to 37,710 gsf of retail space, including the potential for approximately 9,400 gsf of mezzanine retail depending on tenant demand. Therefore, the proposed project would be consistent with the zoning. Moreover, the BVDSP assumed a retail density of approximately 82,689 square feet, which is more than proposed under the project. Therefore, in accordance with Section 15183.3 of the CEQA Guidelines, the proposed project is consistent with the BVDSP EIR.
- With respect to residential density, the 45* Height Area allows for 1 dwelling unit per 100 square feet of retail use with the proposed CUP.²⁶ As noted above, the proposed project could provide up to 28,269 gsf of retail space, with the potential for an additional 9,400 gsf of mezzanine retail depending on tenant demand, for a total of 37,710 gsf of retail. If 28,269 gsf of retail space (consisting of retail along Broadway and the restaurants facing the proposed plaza) is constructed under the proposed project, the maximum residential density on the project site would be 283 dwelling units. If 37,710 gsf of retail space (consisting of retail along Broadway, the restaurants facing the proposed plaza, and the potential for mezzanine retail depending on tenant demand) is constructed under the proposed project, the maximum residential density on the project site would be 377 dwelling units. The proposed project’s 255 dwelling units are well below the maximum residential density of either 283 dwelling units or 377 dwelling units, depending on how much retail space is constructed on the project site. Therefore, the proposed project would comply with the amount of residential density allowed under the Planning Code and fits within the residential assumptions of the BVDSP EIR.²⁷ Consequently, in accordance with Section 15183.3 of the CEQA Guidelines, the proposed project is consistent with the BVDSP EIR.

Therefore, the proposed project is eligible for consideration of an exemption under California Public Resources Code Section 21083.3, and Section 15183 of the CEQA Guidelines.

²⁶ Per Table 17.101C.05 of the Oakland Planning Code.

²⁷ While the Illustrative Development Program Map analyzed in the BVDSP shows assumed 0 dwelling units at the project site, the proposed project’s 255 dwelling units were included in the residential density assumptions of the BVDSP EIR.

ATTACHMENT C: INFILL PERFORMANCE STANDARDS, PER CEQA GUIDELINES SECTION 15183.3

California Environmental Quality Act (CEQA) Guidelines Section 15183.3(b) and CEQA Guidelines Appendix M establish eligibility requirements for projects to qualify as infill projects. Table C-1, on the pages following, shows how the proposed project satisfies each of the applicable requirements.

**Table C-1
Project Infill Eligibility**

CEQA Eligibility Criteria	Eligible?/Notes for Proposed Project
<p>1. Be located in an urban area on a site that either has been previously developed or that adjoins existing qualified urban uses on at least 75 percent of the site's perimeter. For the purpose of this subdivision, "adjoin" means the infill project is immediately adjacent to qualified urban uses, or is only separated from such uses by an improved right-of-way. (CEQA Guidelines Section 15183.3[b][1])</p>	<p>Yes The project site has been previously developed as a surface parking lot with auto-service land uses, and adjoins existing urban uses, as described in the Project Description, above.</p>
<p>2. Satisfy the performance Standards provided in Appendix M (CEQA Guidelines Section 15183.3[b][2]) as presented in 2a and 2b below:</p>	<p>—</p>
<p>2a. <i>Performance Standards Related to Project Design.</i> All projects must implement all of the following:</p>	<p>—</p>
<p>Renewable Energy. <i>Non-Residential Projects.</i> All nonresidential projects shall include onsite renewable power generation, such as solar photovoltaic, solar thermal, and wind power generation, or clean back-up power supplies, where feasible. <i>Residential Projects.</i> Residential projects are also encouraged to include such onsite renewable power generation.</p>	<p>Not Applicable According to Section IV (G) of CEQA Appendix M, for mixed-use projects "...the performance standards in this section that apply to the predominant use shall govern the entire project." Because the predominant use is residential, the proposed project is not required to include onsite renewable power generation.</p>
<p>Soil and Water Remediation. If the project site is included on any list compiled pursuant to Section 65962.5 of the Government Code, the project shall document how it has remediated the site, if remediation is completed. Alternatively, the project shall implement the recommendations provided in a preliminary endangerment assessment or comparable document that identifies remediation appropriate for the site.</p>	<p>Yes According to the Phase I ESA prepared for the project site, the site was formerly occupied by a gasoline station and hospital. The project site (Chevron #9-2506) is listed on the San Francisco Regional Water Control Board's (RWQCB) GeoTracker online database as a closed leaking underground storage tank (LUST) cleanup site. The site was granted closure in May 2014. Future land use is limited to the current commercial land use unless a new case is opened. ACEH is expected to open a Site Cleanup Program case for residual contamination related to the former hospital at the project site. A SMP would need to be prepared to manage impacted soil encountered during grading and construction activities. The SMP would include a brief description of the site background and description, including the past uses, the proposed developments, and the environmental investigations</p>

CEQA Eligibility Criteria	Eligible?/Notes for Proposed Project
	<p>conducted to date. The SMP would also include a description of the procedures to manage impacted soil encountered at the site, as well as any other unknowns. In addition, the SMP would include procedures for construction dewatering, if needed, during construction activities. See Section 7, Hazards and Hazardous Materials, of the CEQA Checklist for additional information.</p>
<p>Residential Units Near High-Volume Roadways and Stationary Sources.</p> <p>If a project includes residential units located within 500 feet, or other distance determined to be appropriate by the local agency or air district based on local conditions, of a high volume roadway or other significant sources of air pollution, the project shall comply with any policies and standards identified in the local general plan, specific plan, zoning code, or community risk reduction plan for the protection of public health from such sources of air pollution.</p> <p>If the local government has not adopted such plans or policies, the project shall include measures, such as enhanced air filtration and project design, that the lead agency finds, based on substantial evidence, will promote the protection of public health from sources of air pollution. Those measures may include, among others, the recommendations of the California Air Resources Board, air districts, and the California Air Pollution Control Officers Association.</p>	<p>Yes</p> <p>Per the findings of the BVDSP EIR, an air quality screening was prepared for the proposed project.²⁸ No “high-volume roadways” with 100,000 vehicles per day, as defined by Section II of CEQA Appendix M, are located within 1,000 feet of the proposed project.</p> <p>As summarized in the air quality screening prepared for the proposed project, no air pollution standards are required to be implemented for the proposed project.</p>
<p>2b. <i>Additional Performance Standards by Project Type.</i> In addition to implementing all the features described in criterion 2a above, the project must meet eligibility requirements provided below by project type.^a</p>	<p>—</p>

²⁸ ICF International, 2015. Broadway & 27th Street Project – Draft Air Quality Screening Analysis per the Broadway Valdez District Specific Plan Environmental Impact Report Technical Memorandum. August.

CEQA Eligibility Criteria	Eligible?/Notes for Proposed Project
<p>Residential. A residential project must meet <u>one</u> of the following:</p> <p>A. <i>Projects achieving below average regional per capita vehicle miles traveled.</i> A residential project is eligible if it is located in a “low vehicle travel area” within the region;</p> <p>B. <i>Projects located within ½ mile of an Existing Major Transit Stop or High Quality Transit Corridor.</i> A residential project is eligible if it is located within ½ mile of an existing major transit stop or an existing stop along a high quality transit corridor; or</p> <p>C. <i>Low – Income Housing.</i> A residential or mixed-use project consisting of 300 or fewer residential units all of which are affordable to low income households is eligible if the developer of the development project provides sufficient legal commitments to the lead agency to ensure the continued availability and use of the housing units for lower income households, as defined in Section 50079.5 of the Health and Safety Code, for a period of at least 30 years, at monthly housing costs, as determined pursuant to Section 50053 of the Health and Safety Code.</p>	<p>Yes</p> <p>The proposed project is eligible under Section (B). The project site is well-served by multiple transit providers, including numerous Alameda-Contra Costa County Transit District (AC Transit) routes. The project site is also approximately 0.56 mile north of the 19th Street Oakland Bay Area Rapid Transit (BART) station. Broadway qualifies as a “High Quality Transit Corridor,” as defined by Section II of CEQA, with fixed route bus service at intervals no longer than 15 minutes during peak commute hours. The AC Transit Line 51A runs along Broadway adjacent to the project site, and has service intervals no longer than 15 minutes during peak commute hours. Other bus routes in the project vicinity further satisfy this criterion.</p>
<p>Commercial/Retail. A commercial/retail project must meet <u>one</u> of the following:</p> <p>A. <i>Regional Location.</i> A commercial project with no single-building floor-plate greater than 50,000 square feet is eligible if it locates in a “low vehicle travel area”; or</p> <p>B. <i>Proximity to Households.</i> A project with no single-building floor-plate greater than 50,000 square feet located within ½ mile of 1,800 households is eligible.</p>	<p>Not Applicable</p> <p>According to Section IV (G) of CEQA Appendix M, for mixed-use projects “...the performance standards in this Section that apply to the predominant use shall govern the entire project.” Because the predominant use is residential, the requirements for commercial/retail projects do not apply.</p>
<p>Office Building. An office building project must meeting <u>one</u> of the following:</p> <p>A. <i>Regional Location.</i> Office buildings, both commercial and public, are eligible if they locate in a low vehicle travel area; or</p> <p>B. <i>Proximity to a Major Transit Stop.</i> Office buildings, both commercial and public, within ½ mile of an existing major transit stop, or ¼ mile of an existing stop along a high quality transit corridor, are eligible.</p>	<p>Not Applicable</p>
<p>Schools. Elementary schools within 1 mile of 50 percent of the projected student population are eligible. Middle schools and high schools within 2 miles of</p>	<p>Not Applicable</p>

CEQA Eligibility Criteria	Eligible?/Notes for Proposed Project
<p>50 percent of the projected student population are eligible. Alternatively, any school within ½ mile of an existing major transit stop or an existing stop along a high quality transit corridor is eligible. Additionally, to be eligible, all schools shall provide parking and storage for bicycles and scooters, and shall comply with the requirements of Sections 17213, 17213.1, and 17213.2 of the California Education Code.</p>	
<p>Transit. Transit stations, as defined in Section 15183.3(e)(1), are eligible.</p>	<p>Not Applicable</p>
<p>Small Walkable Community Projects. Small walkable community projects, as defined in Section 15183.3, subdivision (e)(6), that implement the project features in 2a above are eligible.</p>	<p>Not Applicable</p>
<p>3. Be consistent with the general use designation, density, building intensity, and applicable policies specified for the project area in either a sustainable communities strategy or an alternative planning strategy, except as provided in CEQA Guidelines Sections 15183.3(b)(3)(A) or (b)(3)(B) below: (b)(3)(A). Only where an infill project is proposed within the boundaries of a metropolitan planning organization for which a sustainable communities strategy or an alternative planning strategy will be, but is not yet in effect, a residential infill project must have a density of at least 20 units per acre, and a retail or commercial infill project must have a floor area ratio of at least 0.75; or (b)(3)(B). Where an infill project is proposed outside of the boundaries of a metropolitan planning organization, the infill project must meet the definition of a “small walkable community project” in CEQA Guidelines §15183.3(f)(5). (CEQA Guidelines Section 15183.3[b][3])</p>	<p>Yes (see explanation below table)</p>
<p>Note: a. Where a project includes some combination of residential, commercial and retail, office building, transit station, and/or schools, the performance standards in this section that apply to the predominant use shall govern the entire project.</p>	

Explanation for Eligibility Criteria 3 – The adopted Plan Bay Area (2013)²⁹ serves as the sustainable communities strategy for the Bay Area, per Senate Bill 375. As defined by the Plan, Priority Development Areas (PDAs) are areas where new development will support the needs of residents and workers in a pedestrian-friendly environment served by transit. As stated in the BVDSP, the Broadway Valdez District is considered a PDA. The proposed project is consistent with the general land use designation, density, building intensity, and applicable policies specified in the BVDSP and described further below.

The General Plan land use designation for the site is Central Business District; this classification is intended to encourage, support, and enhance the downtown area as a high-density mixed-use urban center of regional importance, and a primary hub for business, communications, office, government, high technology, retail, entertainment, and transportation. The proposed mixed-use project would be consistent with this designation.

Under the adopted BVDSP, the project site is zoned Broadway Valdez District Retail Priority Sites Commercial Zone 1 (D-BV-1), Retail Priority Site 3A, which is the most restrictive zoning for general and ground-floor uses in the Plan area. The proposed project would be consistent with the regulatory framework of D-BV-1, which ensures that larger sites and opportunity areas are reserved primarily for new, large-scale retail development that is oriented toward consumer goods, at least on the ground floor. A property that is zoned as D-BV-1 Retail Priority Sites is allowed to include residential uses only if a project were to include a retail component of a certain size and type.

The project site is located within the 45* Height Area, which generally limits building heights to 45 feet, but does allow increased building heights if applicable retail criteria are met. The base height for the project site would be 85 feet if the project provides 50 percent or 60 percent of the Retail Priority Site area with retail, with a maximum height of 200 feet. Because the proposed project would provide 60 percent of the Retail Priority Site area with retail, the project can be approximately 85 feet in height, in conformance with the height limit on the site.

Under the adopted BVDSP, the maximum residential density (i.e., square feet of lot area required per dwelling unit) is based on the zoning height area. The 45* Height Area allows for 1 dwelling unit per 100 square feet of retail use with the proposed CUP. The proposed project could provide approximately 28,269 gsf of retail space, with the potential for an additional 9,400 gsf of mezzanine retail depending on tenant demand, for a total of 37,710 gsf of retail. If 28,269 gsf of retail space (consisting of retail along Broadway and the restaurants facing the proposed plaza) is constructed under the proposed project, the maximum residential density on the project site would be 283 dwelling units. If 37,710 gsf of retail space (consisting of retail along Broadway, the restaurants facing the proposed plaza, and the potential for mezzanine retail depending on tenant demand) is constructed under the proposed project, the maximum residential density on the project site would be 377 dwelling units. The proposed project's 255 dwelling units are well below the maximum number of units allowed for the site (either 283 dwelling units or 377 dwelling units, depending on how much retail space is constructed on the project site).

²⁹ Metropolitan Transportation Commission and Association of Bay Area Governments, 2013. Plan Bay Area, Strategy for a Sustainable Region. Adopted July 18, 2013.

For mixed use projects, the maximum nonresidential Floor Area Ratio (FAR) is based on the total lot area, and any square footage allotted or occupied by residential uses is included in the lot area calculation. The permitted FAR is 8.0 for the non-residential areas of the project site. The project site is approximately 52,106 square feet, and therefore the maximum nonresidential FAR allowed would be 416,850 square feet. The proposed project could provide approximately 28,269 gsf of retail space, with the potential for an additional 9,441 gsf of mezzanine retail depending on tenant demand, for a total of 37,710 gsf of retail. Therefore, the proposed project would comply with the amount of nonresidential FAR allowed under the Planning Code.

ATTACHMENT D: CRITERIA FOR USE OF ADDENDUM, PER CEQA GUIDELINES SECTIONS 15164 AND 15162

Section 15164(a) of the California Environmental Quality Act (CEQA) Guidelines states that “a lead agency or responsible agency shall prepare an addendum to a previously certified EIR [Environmental Impact Report] if some changes or additions are necessary but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred.” Section 15164(e) states that “a brief explanation of the decision not to prepare a subsequent EIR pursuant to Section 15162 should be included in an addendum to an EIR.”

Project Modifications. The Broadway Valdez District Specific Plan (BVDSP) EIR analyzed the Broadway Valdez Development Program (Development Program), which represents the maximum feasible development that the City of Oakland has projected can reasonably be expected to occur in the BVDSP area (Plan Area) over a 25-year planning period.³⁰ Appendix D of the BVDSP identified the Illustrative Development Program Map at the project site (designated Project Site #13 in the BVDSP), which included 0 residential units and 82,689 square feet of retail. The proposed project differs from the Illustrative Development Program Map for the project site, and would construct up to 255 residential units and up to 37,710 gsf of retail space.

The EIR indicates that the CEQA analysis was based on the development quantities set forth in the Development Program, and that the intent of the BVDSP is to provide as much flexibility as is feasible in terms of precise mix of newly developed land uses and their location in the Plan Area, while conforming to the CEQA analysis and thresholds. The EIR identified traffic capacity as the key environmental factor constraining development, and stated that the City of Oakland would track and measure vehicle trip generation by projects proposed under the BVDSP rather than the amount of specific land uses.

As described in Section 13, Transportation and Circulation, of this CEQA Checklist, the proposed project would generate 94 AM and 170 PM peak-hour vehicle trips. Together with the trips generated by other projects currently under construction, approved, and proposed for development in the Plan Area, this would represent approximately 34 percent of the AM peak-hour trips and 38 percent of the PM peak-hour trips anticipated in the BVDSP EIR; 57 percent of the AM peak-hour trips and 54 percent of the PM peak-hour trips anticipated in the BVDSP EIR for the Valdez Triangle subarea; and 45 percent of the AM peak-hour trips and 35 percent of the PM peak-hour trips anticipated in the BVDSP EIR for Subdistrict 3. Therefore, the traffic impact analysis presented in the EIR continues to remain valid, and the trip generation from the proposed project combined with other projects currently being developed under the BVDSP would be within the program analyzed under the BVDSP EIR for the Plan Area, the Valdez Triangle, and Subdistrict 3.

As described in Section 4, Cultural Resources, of this CEQA Checklist, Biff’s Coffee Shop would be demolished as part of the project. However, overall, demolition of Biff’s Coffee Shop, as envisioned by the proposed project, would be considered a significant impact on a historic resource, consistent with the assumption analyzed in the BVDSP EIR that was overridden by the City Council.

³⁰ In total, the Broadway Valdez Development Program includes approximately 3.7 million square feet of development, including approximately 695,000 square feet of office space, 1,114,000 square feet of restaurant/retail space, 1,800 residential units, a new 180-room hotel, approximately 6,500 parking spaces provided by the development program, and approximately 4,500 new jobs.

Therefore, the proposed project would represent a minor change in the Development Program, and such changes are anticipated in the EIR.

Conditions for Addendum. None of the following conditions for preparation of a subsequent EIR per Section 15162(a) apply to the proposed project:

- (1) Substantial changes are proposed in the project, which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;
- (2) Substantial changes occur with respect to the circumstances under which the project is undertaken, which will require major revisions of the previous EIR or Negative Declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or
- (3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the Negative Declaration was adopted, shows any of the following:
 - (A) The project will have one or more significant effects not discussed in the previous EIR or negative declaration;
 - (B) Significant effects previously examined will be substantially more severe than shown in the previous EIR;
 - (C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or
 - (D) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

Project Consistency with Section 15162 of the CEQA Guidelines. Since certification of the Final EIR, no changes have occurred in the circumstances under which the revised project would be implemented, that would change the severity of the proposed project's physical impacts as explained in the CEQA Checklist above, and no new information has emerged that would materially change the analyses or conclusions set forth in the Final EIR.

Furthermore, as demonstrated in the CEQA Checklist, the proposed modifications to the Development Program would not result in any new significant environmental impacts, result in any substantial increases in the significance of previously identified effects, or necessitate implementation of additional or considerably different mitigation measures than those identified in the EIR, nor render any mitigation measures or alternatives found not to be feasible, feasible. The effects of the proposed project would be substantially the same as those reported for the Development Program in the EIR.

The analysis presented in this CEQA Checklist, combined with the prior EIR analysis, demonstrates that the proposed project would not result in significant impacts that were not previously identified in the EIR. The proposed project would not result in a substantial increase in the significance of impacts, nor

would the proposed project contribute considerably to cumulative effects that were not already accounted for in the certified EIR. Overall, the proposed project's impacts are similar to those identified and discussed in the EIR, as described in the CEQA Checklist, and the findings reached in the EIR are applicable.

**ATTACHMENT E: AIR QUALITY SCREENING ANALYSIS FOR BROADWAY & 27TH PROJECT, PER
THE BROADWAY VALDEZ DISTRICT SPECIFIC PLAN ENVIRONMENTAL IMPACT REPORT**

Technical Memorandum

Date:	August 27, 2015
To:	Peterson Vollmann, Planner III City of Oakland, Bureau of Planning 250 Frank H. Ogawa, Suite 2114 Oakland, CA 94612
From:	Shannon Hatcher
Subject:	Broadway & 27th Project – Air Quality Health Risk Screening Analysis per the Broadway Valdez District Specific Plan Environmental Impact Report

Based on the findings of the Broadway Valdez District Specific Plan (BVDSP) Environmental Impact Report (EIR), the proposed Broadway & 27th Project (proposed project) is required to undergo a screening analysis to determine:

- a) the potential impacts of the project's emissions of Toxic Air Contaminants (TACs) on adjacent sensitive receptors; and
- b) the impacts of nearby sources on the sensitive receptors introduced to the site by the project. This memorandum summarizes the screening analysis completed for the proposed project.

Evaluation Screening Criteria

Health Risk Assessment of Project Impacts on Sensitive Receptors (per BVDSP EIR Mitigation Measure AIR-4: Risk Reduction Plan)

Mitigation Measure AIR-4: Risk Reduction Plan states:

Applicants for projects that would include backup generators shall prepare and submit to the City, a Risk Reduction Plan for City review and approval. The applicant shall implement the approved plan. This Plan shall reduce cumulative localized cancer risks to the maximum feasible extent. The Risk Reduction Plan may contain, but is not limited to the following strategies:

- Demonstration using screening analysis or a health risk assessment that project sources, when combined with local cancer risks from cumulative sources within 1,000 feet would be less than 100 in one million.
- Installation of non-diesel fueled generators.

- Installation of diesel generators with an EPA-certified Tier 4 engine or Engines that are retrofitted with an ARB Level 3 Verified Diesel Emissions Control Strategy.

This screening analysis of the cumulative health risk provides an assessment, per the first bullet above. The project site is within 1,000 feet of existing sensitive land uses, which includes residential land uses, as indicated on Figure E-1. The proposed project's contribution to cumulative impacts to these receptors is described below. The proposed project is assumed to include installation of an emergency diesel generator. Because the Bay Area Air Quality Monitoring District (BAAQMD) does not issue operation permits for equipment that contributes to a risk of greater than 10 in one million, this screening analysis conservatively assumes that the proposed generator would contribute a maximum cancer risk of 10 in one million.

The BAAQMD's health risk assessment (HRA) guidance, Recommended Methods for Screening and Modeling Local Risks and Hazards, recommends that for new sources, the location of the maximally impacted receptor (MIR) be identified and evaluated (Bay Area Air Quality Management District 2012). The location of maximum risk from the Broadway & 27th Project was determined based upon the proximity of residences to the project location. The nearest sensitive receptors are located at the Broadway Early Head Start, on First Presbyterian Church premises, 2619 Broadway, located approximately 160 feet from the project site. This receptor is assumed to be the MIR for the project source based on their proximity to the project site.

Methodology

The BAAQMD's HRA guidance document further recommends that when assessing cumulative impacts to the MIR, the risk from existing sources within 1,000 feet of Broadway & 27th should be assessed. Consistent with BAAQMD requirements, existing sources located within 1,000 feet evaluated in this analysis included stationary sources and roadway sources. The BAAQMD's Stationary Source Screening Analysis Tool for Alameda County was used to evaluate health risks from stationary sources within 1,000 feet of the project area, while the BAAQMD's Roadway Screening Analysis Tables for Alameda were used to evaluate health risks from roadways within 1,000 feet of the project area (See Attachment E-1). The CEHTP Roadway Traffic Analysis Tool was utilized to identify which nearby roadways have AADT (annual average daily traffic) of greater than 10,000 vehicles per day (see Attachment E-2). Per the BAAQMD's HRA guidance, the BAAQMD's Diesel Internal Combustion (IC) Engine Distance Multiplier Tool was used to adjust the conservative values for health risks from stationary sources within 1,000 feet of the project area to include the effect of dispersion (see Attachment B-3). The BAAQMD was contacted to obtain data that was not available from their Stationary Source Screening Analysis Tool, via the BAAQMD Stationary Source Inquiry Form (see Attachment E-4) (Kirk pers. comm.).

Existing sources of TACs within a 1,000-foot radius of the project site are summarized in Table E-1 (stationary sources) and Table E-2 (roadways).

Consistent with BAAQMD’s HRA guidance, the raw cancer risk values associated with stationary sources summarized in Table E-3 were adjusted using the BAAQMD’s IC Engine Distance Multiplier Tool to account for the dispersion of emissions from the diesel stationary sources to the MIR. These adjusted values for the stationary sources are presented in Table E-4.

As Table E-4 indicates, the screening analysis, which is based on conservative assumptions, shows that the risk from the project source, when combined with local cancer risks from cumulative sources within 1,000 feet, would be below the BAAQMD’s cumulative cancer risk threshold of 100 in one million. Therefore, the project would not be required to implement Standard Condition of Approval B: Exposure to Air Pollution.

Table E-4. Adjusted Cancer Risks from Existing and Project Stationary Sources and Roadways within 1,000 feet of the MIR

Source	BAAQMD Plant Number	Distance (feet)	Adjusted Cancer ^a Risk	Type of Source

Evaluation Screening Criteria

Health Risk Assessment of Offsite Sources on the Project-Sensitive Receptors (SCA 20: Exposure to Air Pollution [Toxic Air Contaminants])

SCA 20: 20. Exposure to Air Pollution (Toxic Air Contaminants)

1. The project involves any of the following sensitive land uses:
 - i. Residential uses (new dwelling units); or
 - ii. New or expanded schools, daycare centers, parks, nursing homes, or medical facilities; and

2. The project is located within 1,000 feet (or other distance as specified below) of one or more of the following sources of air pollution:
 - i. Freeway;
 - ii. Roadway with significant traffic (at least 10,000 vehicles per day);
 - iii. Rail line (except BART) with over 30 trains per day;
 - iv. Distribution center that accommodated more than 100 trucks per day, more than 40 trucks with operating Transportation Refrigeration Units (TRU) per day, or where the TRU unit operations exceed 300 hours per week;
 - v. Major rail or truck yard (such as the Union Pacific rail yard adjacent to the Port of Oakland);
 - vi. Ferry terminal;
 - vii. Stationary pollutant source requiring a permit from BAAQMD (such as a diesel generator);
 - viii. Within 0.5 miles of the Port of Oakland or Oakland Airport;
 - ix. Within 300 feet of a gas station; or
 - x. Within 300 feet of a dry cleaner with a machine using PERC (or within 500 feet of a dry cleaner with two or more machines using PERC); and
3. The project exceeds the health risk screening criteria after a screening analysis is conducted in accordance with the BAAQMD California Environmental Quality Act (CEQA) Guidelines.

Because the proposed project would meet item 1i (new dwelling units), and item 2ii (local roadways with traffic in excess of 10,000 vehicles per day), ICF performed a screening analysis to determine if the project exceeds the health risk screening criteria (local cancer risks from cumulative sources within 1,000 feet would be less than 100 in one million, hazard indices would be less than 10, and PM_{2.5} concentrations would be less than 0.8 µg/m³) per item 3 above.

Table E-5 presents the raw cancer risk values to the project receptors from existing and project stationary sources located within 1,000 feet of the project receptors, as obtained from the BAAQMD's Stationary Source Screening Analysis Tool. The raw cancer risk values presented in Table E-5 are conservative and have not been adjusted using the BAAQMD's Diesel Internal Combustion (IC) Engine Distance Multiplier Tool to account for lower risk values at the project receptors due to the dispersion of emissions from the diesel stationary sources to the project receptors.

Table E-5. Raw Cancer Risks from Existing and Project Stationary Sources within 1,000 feet of the Project Residential Receptors

Source	BAAQMD Plant Number	Distance (feet)	Raw Cancer Risk (per million)	Raw Hazard Index	Raw PM2.5 Concentrations ($\mu\text{g}/\text{m}^3$)	Type of Source
Oakland Acura	12498	112	0	0	0	N/A
West Lake Christian Terrace	19269	279	12.92	0.005	0.013	Generator
Whole Foods Market California	18861	923	0	0	0.001	Generator
Label Art	7476	351	0	0	0	N/A
VIP Auto Collision Repair	19344	357	0	0	0	N/A

Autotrends	15483	584	0	0	0	N/A

Consistent with BAAQMD’s HRA guidance, the raw risk values associated with stationary sources summarized in Table E-5 were adjusted using the BAAQMD’s IC Engine Distance Multiplier Tool to account for the dispersion of emissions from the diesel stationary sources to the project receptors. These adjusted values for the stationary sources are presented in Table E-6.

Table E-6. Adjusted Cancer Risks from Existing Stationary Sources within 1,000 feet of the Project Residential Receptors

Source	BAAQMD Plant Number	Distance (feet)	Adjusted Cancer Risk (per million)	Adjusted Hazard Index	Adjusted PM2.5 Concentrations ($\mu\text{g}/\text{m}^3$)	Type of Source
Stationary Sources						
Oakland Acura	12498	112	0	0	0	N/A
West Lake Christian Terrace	19269	279	3.61	0.0014	0.004	Generator
Whole Foods Market California	18861	923	0	0	0.00004	Generator
Label Art	7476	351	0	0	0	N/A

Autotrends	15482	560	0	0	0	N/A
Q & S Automotive	12434	772	0	0	0	N/A
Oakland Fleet Fueling Facility	G9464	347	4.24	0	0	Benzene
Collision Service Center of Oakland	15919	654	0	0	0	N/A
Autotrends	15483	584	0	0	0	N/A
Local Roadways						
Roadway Name	Volume (AADT)	Distance (feet)	Adjusted Cancer Risk (per million)	Adjusted Hazard Index	Adjusted PM2.5 Concentrations ($\mu\text{g}/\text{m}^3$)	Type of Source
Broadway	30,200	24	6.56	N/A	0.278	Roadway
27th St. EB	11,700	23	5.47	N/A	0.223	Roadway
27th St. WB	11,700	60	4.63	N/A	0.191	Roadway
Harrison St.	22,800	848	1.12	N/A	0.045	Roadway
<i>Cumulative impact to project and existing sources</i>			25.64	0.0014	0.740	
BAAQMD Cumulative Threshold			100	10.0	0.8	
Exceed threshold?			No	No	No	

The results in Table E-6 indicate that the cumulative risk to the project receptors, based on conservative assumptions, would be below the BAAQMD's cumulative cancer risk threshold of 100 in one million, hazard index threshold of 10, and PM2.5 concentrations threshold of $0.8\mu\text{g}/\text{m}^3$. Therefore, the project would not be required to implement Standard Condition of Approval B: Exposure to Air Pollution.

Alameda County PM2.5 Concentrations and Cancer Risks Generated from Surface Streets

How to use the screening tables:

- Distance is from the edge of the nearest travel lane of a street to the facility or development
- When two or more streets are within the influence area, sum the contribution from each street

- Screening tables based on meteorological data collected from Pleasanton in 2005.
- The maximum acute and chronic hazard index for the distances and AADT shown in the table will be less than 0.03.
- Cancer risk were estimated based on exposure from 2014 through 2084. PM2.5 concentrations were based on emissions in 2014.

How to Use the Distance Adjustment Multiplier Tool for Diesel Internal Combustion (IC) Engines

This distance multiplier tool refines the screening values for cancer risk and PM2.5 concentrations found in the District's Stationary Source Screening Analysis Tool for permitted facilities which contain only diesel IC engines, to represent adjusted risk and hazard impacts that can be expected with farther distances from the source of emissions.

1. Obtain the facility diesel IC engine(s) cancer risk and/or PM2.5 concentration from the District's Stationary Source Screening Analysis tool only for facilities where the source is listed as "generator." If the distance to the nearest receptor is less than 25 meters, the distance adjustment multiplier table cannot be used and an air dispersion modeling analysis using site-specific information is needed to refine the cancer risk, chronic hazard index or PM2.5 estimates.
2. Determine the shortest distance from each diesel IC engine to the nearest receptor. Select the shortest distance to receptor found.
3. In the table below, enter the cancer risk and/or PM2.5 concentration found in step 1 for the diesel IC engine in the row which aligns with the shortest distance from each diesel IC engine to the nearest receptor (found in step 2). If the shortest distance to the receptor falls between two distance values, select the multiplier corresponding to the smaller distance. For distances beyond 280 meters, use the multiplier 0.04. The resulting product is the adjusted cancer risk in a million or the adjusted PM2.5 concentration for the diesel IC engine

Note: This distance adjustment multiplier may be used only for the screening level health risk values indicated in the District's Stationary Source Screening Analysis tool for diesel IC engines. This distance multiplier tool may not be used to adjust values from an HRA if an HRA for the facility was conducted.

Note: This distance adjustment multiplier may also be used to adjust the screening values for chronic hazard index found in the District's Stationary Source Screening Analysis Tool for facilities with only diesel IC engines.

**Bay Area Air Quality Management District
Risk & Hazard Stationary Source Inquiry Form**

This form is required when users request stationary source data from BAAQMD. This form is to be used with the BAAQMD's Google Earth stationary source screening tables.

For guidance on conducting a risk & hazard screening, including for roadways & freeways, refer to the District's Risk & Hazard Analysis flow chart.

Also see the District's Recommended Methods for Screening and Modeling Local Risks and Hazards document.

Table A: Requestor Contact Information	
Contact Name:	David Ernst
Affiliation:	ICF International
Phone:	617-250-4248
Email:	david.ernst@icf.com
Date of Request:	7/28/2015
Project Name:	Broadway & 27th Project
Address:	2610 Broadway
City:	Oakland
County:	Alameda
Type (residential, commercial, mixed use, industrial, etc.):	Mixed use residential-commercial
Project size (# of units, or building square feet):	253 residential units and up to approximately 35,500 square feet of retail/restaurant space
Comments:	I would appreciate your providing the screening level cancer risk, hazard index, and PM2.5 values for the sources listed below. Thank you.

For Air District assistance, the following steps must be completed:

1. Complete all the contact and project information requested in Table A. Incomplete forms will not be processed. Please include a project site map.
2. Download and install the free program Google Earth, <http://www.google.com/earth/download/ge/>, and then download the county specific Google Earth stationary source application files from the District's website, <http://www.baaqmd.gov/Divisions/Planning-and-Research/CEQA-GUIDELINES/Tools-and-Methodology.aspx>. The small points on the map represent stationary sources permitted by the District (Map A on right). These permitted sources include diesel back-up generators, gas stations, dry cleaners, boilers, printers, auto spray booths, etc. Click on a point to view the source's Information Table, including the name, location, and preliminary estimated cancer risk, hazard index, and PM2.5 concentration.
3. Find the project site in Google Earth by inputting the site's address in the Google Earth search box.
4. Identify stationary sources near the project. Verify that the location of the source on the map matches with the source's address in the Information Table, by using the Google Earth address search box to confirm the source's address location. Please report any mapping errors to the District.
5. List the stationary source information in Table B Section 1 below.
6. Note that a small percentage of the stationary sources have Health Risk Screening Assessment (HRSA) data INSTEAD of screening level data. These sources will be noted by an asterisk next to the Plant Name (Map B on right). If HRSA values are presented, these values have already been modeled and cannot be adjusted further.
7. Email this completed form to District staff. District staff will provide the most recent risk, hazard, and PM2.5 data that are available for the source(s). If this information or data are not available, source emissions data will be provided. Staff will respond to inquiries within three weeks.

Note that a public records request received for the same stationary source information will cancel the processing of your SSIF request.

Submit forms, maps, and questions to Alison Kirk at 415-749-5169, or akirk@baaqmd.gov.

Footnotes:
1. These Cancer Risk, Hazard Index, and PM2.5 columns represent the values in the Google Earth Plant Information Table.
2. Each plant may have multiple permits and sources.
3. Fuel codes: 98 - diesel, 189 - Natural Gas.
4. Permitted sources include diesel back-up generators, gas stations, dry cleaners, boilers, printers, auto spray booths, etc.
5. If a Health Risk Screening Assessment (HRSA) was completed for the source, the application number will be listed here.
6. The date that the HRSA was completed.
7. Engineer who completed the HRSA. For District purposes only.
8. All HRSA completed before 1/5/2010 need to be multiplied by an age sensitivity factor of 1.7.
9. The HRSA "Chronic Health" number represents the Hazard Index.
10. Further information about common sources:
a. Sources that only include diesel internal combustion engines can be adjusted using the BAAQMD's Diesel Multiplier worksheet.
b. The risk from natural gas boilers used for space heating when <25 MM BTU/hr would have an estimated cancer risk of one in a million or less, and a chronic hazard index of 0.003 or less. To be conservative, requestor should assume the cancer risk is 1 in a million and the hazard index is 0.003 for these sources.
c. BAAQMD Reg 11 Rule 16 required that all co-residential (sharing a wall, floor, ceiling or is in the same building as a residential unit) dry cleaners cease use of perc on July 1, 2010. Therefore, there is no cancer risk, hazard or PM2.5 concentrations from co-residential dry cleaning businesses in the BAAQMD.
d. Non co-residential dry cleaners must phase out use of perc by Jan. 1, 2023. Therefore, the risk from these dry cleaners does not need to be factored in over a 70-year period, but instead should reflect the number of years perc use will continue after the project's residents or other sensitive receptors (such as students, patients, etc) take occupancy.
e. Gas stations can be adjusted using BAAQMD's Gas Station Distance Multiplier worksheet.
f. Unless otherwise noted, exempt sources are considered insignificant. See BAAQMD Reg 2 Rule 1 for a list of exempt sources.
g. This spray booth is considered to be insignificant.

Arborist Report 2630 Broadway Oakland, CA

Introduction and Overview

The Hanover Company is proposing to redevelop the property located at 2630 Broadway in Oakland, CA. The site is currently an overflow parking lot for a car dealership. HortScience, Inc. was asked to prepare an **Arborist Report** for the site for submission to the City of Oakland.

This report provides the following information:

1. A survey of trees within and adjacent to the proposed project area.
2. An assessment of each tree's health, structure, suitability for preservation and protected status (Municipal Code Chapter 12.36).
3. Impacts to trees based on construction plans.

Survey Methods

Trees were surveyed on July 23, 2015. All trees owned by the city, oaks 4" and greater in diameter and other trees 9" and greater in diameter were included in the survey, as required by the City of Oakland. The survey procedure consisted of the following steps:

1. Identifying the tree as to species;
2. Tagging each tree with an identifying number and recording its location on a map;
3. Measuring the trunk diameter at a point 54" above grade;
4. Evaluating the health and structural condition using a scale of 1 – 5:
 - 5** - A healthy, vigorous tree, reasonably free of signs and symptoms of disease, with good structure and form typical of the species.
 - 4** - Tree with slight decline in vigor, small amount of twig dieback, minor structural defects that could be corrected.
 - 3** - Tree with moderate vigor, moderate twig and small branch dieback, thinning of crown, poor leaf color, moderate structural defects that might be mitigated with regular care.
 - 2** - Tree in decline, epicormic growth, extensive dieback of medium to large branches, significant structural defects that cannot be abated.
 - 1** - Tree in severe decline, dieback of scaffold branches and/or trunk; most of foliage from epicormics; extensive structural defects that cannot be abated.
5. Rating the suitability for preservation as "high", "moderate" or "low". Suitability for preservation considers the health, age and structural condition of the tree, and its potential to remain an asset to the site for years to come.

High: Trees with good health and structural stability that have the potential for longevity at the site.

Moderate: Trees with somewhat declining health and/or structural defects than can be abated with treatment. The tree will require more intense management and monitoring, and may have shorter life span than those in 'high' category.

Low: Trees in poor health or with significant structural defects that cannot be mitigated. Tree is expected to continue to decline, regardless of treatment. The species or individual may have characteristics that are undesirable for landscapes, and generally are unsuited for use areas.

Description of Trees

Seven (7) trees were assessed, representing 6 species (Table 1). Two street trees (#184 and 185) and two trees on City property (#189 and 190) were assessed. The trees varied from poor condition (2 trees) to good condition (2 trees) with three trees in fair condition. Descriptions of each tree are found in the **Tree Assessment Form** and approximate locations are shown on the **Tree Assessment Map** (see attachments).

**Table 1: Tree condition and frequency of occurrence
2630 Broadway, Oakland, CA**

Common Name	Scientific Name	Condition			Total
		Poor (1-2)	Fair (3)	Good (4-5)	
European white birch	<i>Betula pendula</i>	1	-	-	1
Italian cypress	<i>Cupressus sempervirens</i>	1	-	-	1
Coast live oak	<i>Quercus agrifolia</i>	-	2	-	2
Queen palm	<i>Syagrus romanzoffianum</i>	-	1	-	1
Big-leafed linden	<i>Tilia platyphyllos</i>	-	-	1	1
Water gum	<i>Tristaniopsis laurina</i>	-	-	1	1
Total		2	3	2	7

Two coast live oaks were growing on either side of road separating the main property from a small property owned by the City of Oakland. Both oaks were in fair condition with poorly attached stems. Coast live oak #190 had three trunks growing from its base pushing against each other, and creating weak attachments (Photo 1). Coast live oak #187 had good vigor but included bark in its stem attachments (Photo 2).

Photo 1 – Coast live oak #190 had three trunks with weak attachments at the base.

Photo 2 – Coast live oak #187 had good vigor but included bark in the attachments and a dead main stem.

Two street trees were growing along Broadway, big-leaved linden (#184) and a water gum (#185). The linden was sprouting vigorously from the base and was a young, healthy tree (Photo 3). The water gum was larger (11" DBH), in good condition and lifting the sidewalk around the small cutout (Photo 4).

Photo 3 – Big-leaved linden #184 was sprouting vigorously from the base and was a young, healthy street tree.

Photo 4 – Water gum #185 was a healthy street tree lifting the sidewalk around its small cutout.

A queen palm (#186) and an Italian cypress (#188) were growing one foot away from a circular structure on the property. The queen palm had recently lost several fronds two of which were hanging from the tree (Photo 5). The Italian cypress had been pruned harshly leaving a small live crown ratio (Photo 6).

Photo 5 – Queen palm #186 was growing 1 foot away from the building and had two dead fronds hanging.

Photo 6 – Italian cypress #188 was growing 1 foot from the building and (along with its 7" neighbor) had been pruned harshly.

A declining European white birch (#189) was growing on City property along with coast live oak #190. This tree was small and in poor condition (Photo 7).

Photo 7 – European white birch #189 was in poor condition with trunk decay and twig dieback.

The City of Oakland Ordinance Chapter 12.36 defines oaks with a trunk diameter 4" and greater, all trees with a trunk diameter of 9" or greater and City property trees as *Protected*. Based on this definition, all seven trees qualified as *Protected* and cannot be removed without a permit.

Suitability for Preservation

Before evaluating the impacts that will occur during development, it is important to consider the quality of the tree resource itself, and the potential for individual trees to function well over an extended length of time. Trees that are preserved on development sites must be carefully selected to make sure that they may survive development impacts, adapt to a new environment and perform well in the landscape.

Our goal is to identify trees that have the potential for long-term health, structural stability and longevity. For trees growing in open fields, away from areas where people and property are present, structural defects and/or poor health presents a low risk of damage or injury if they fail. However, we must be concerned about safety in use areas. Therefore, where development encroaches into existing plantings, we must consider their structural stability as well as their potential to grow and thrive in a new environment. Where development will not occur, the normal life cycles of decline, structural failure and death should be allowed to continue.

Evaluation of suitability for preservation considers several factors:

- **Tree health**
Healthy, vigorous trees are better able to tolerate impacts such as root injury, demolition of existing structures, changes in soil grade and moisture, and soil compaction than are non-vigorous trees. For example, Italian cypress #188 was mostly defoliated after heavy pruning and likely would not recover from construction impacts as well as a healthier cypress tree.
- **Structural integrity**
Trees with significant amounts of wood decay and other structural defects that cannot be corrected are likely to fail. Such trees should not be preserved in areas where damage to people or property is likely; European white birch #189 is an example of such a tree.
- **Species response**
There is a wide variation in the response of individual species to construction impacts and changes in the environment. In our experience, for example, coast live oaks and palms are generally tolerant of construction impacts.
- **Tree age and longevity**
Old trees, while having significant emotional and aesthetic appeal, have limited physiological capacity to adjust to an altered environment. Young trees are better able to generate new tissue and respond to change.
- **Invasiveness**
Species which spread across a site and displace desired vegetation are not always appropriate for retention. This is particularly true when indigenous species are displaced. The California Invasive Plant Inventory Database (<http://www.cal-ipc.org/paf/>) lists species identified as being invasive. Oakland is part of the Central West Floristic Province. No trees are identified as invasive.

Each tree was rated for suitability for preservation based upon its age, health, structural condition and ability to safely coexist within a development environment (Table 2). We consider trees with high suitability for preservation to be the best candidates for preservation.

We do not recommend retention of trees with low suitability for preservation in areas where people or property will be present. Retention of trees with moderate suitability for preservation depends upon the intensity of proposed site changes.

**Table 2: Tree suitability for preservation
2630 Broadway, Oakland, CA**

High	These are trees with good health and structural stability that have the potential for longevity at the site. Big-leafed linden #184 was the only tree with a high suitability for preservation.
Moderate	Trees in this category have fair health and/or structural defects that may be abated with treatment. Trees in this category require more intense management and monitoring, and may have shorter life-spans than those in the "high" category. Three trees were of moderate suitability for preservation: coast live oaks #187 and 190 and water gum #185.
Low	Trees in this category are in poor health or have significant defects in structure that cannot be abated with treatment. These trees can be expected to decline regardless of management. The species or individual tree may possess either characteristics that are undesirable in landscape settings or be unsuited for use areas. Three trees were of low suitability of preservation: queen palm #186, Italian cypress #188 and European white birch #189.

Evaluation of Impacts and Recommendations

Appropriate tree retention develops a practical match between the location and intensity of construction activities and the quality and health of trees. The tree assessment was the reference points for tree condition and quality. Impacts from the proposed project were assessed using the Preliminary Landscape Plan, Conceptual Site Plan (June 30, 2015, BKF) and conversations with the client.

Re-development of the site will require demolition of the existing pavement, excavation of a basement and entirely new landscapes. The plan is to remove all existing trees and replace them with new street trees and a new plaza area. Street trees #184-185 will be removed to replace the existing sidewalk. Trees #186-188 are within the building envelope. Trees #189 and 190 will be removed to landscape a new plaza area (Table 3).

**Table 3: Trees recommended for removal.
2630 Broadway, Oakland, CA**

Tag #	Species	Heritage	Disposition	Comments
184	Big-leafed linden	Yes	Remove	Sidewalk
185	Water gum	Yes	Remove	Sidewalk
186	Queen palm	Yes	Remove	Within building footprint
187	Coast live oak	Yes	Remove	Within building footprint
188	Italian cypress	Yes	Remove	Within building footprint
189	European white birch	Yes	Remove	Plaza
190	Coast live oak	Yes	Remove	Plaza

1.0 EXECUTIVE SUMMARY

This Historic Mitigation Compliance Analysis assesses the feasibility of compliance with mitigation as set forth in the Broadway Valdez District Specific Plan (BVDSP, or Plan) Environmental Impact Report (EIR)¹ for the development of the proposed Broadway & 27th Project (proposed project) in Oakland, California (City). The proposed project would include construction of a mixed-use residential and retail building with an area of approximately 423,577 gross square feet (gsf). The terraced seven-story building (maximum height of 85 feet) would be built above 2.5 levels of subterranean parking. The proposed project would include demolition of the structure that housed the former Biff's Coffee Shop (Biff's Coffee Shop), which is a historic resource under the California Environmental Quality Act (CEQA) and located on the project site.

The project site is in the western portion of Oakland and generally bounded by 27th Street immediately to the north, 26th Street to the east and south, and Broadway to the west. The site is within the area of the BVDSP and the Valdez Triangle. It is also a Retail Priority Site, meaning that there are restrictions on residential development that favor retail development.

Constructed between 1962 and 1964, Biff's Coffee Shop at 315 27th Street is eligible to be a City landmark by virtue of a Landmarks Preservation Advisory Board determination of eligibility on January 13, 1997, which is equivalent to Heritage Property status. The structure is rated *b+3 in the BVDSP Historic Resource Inventory.²

This analysis briefly describes the proposed project and summarizes information pertaining to Biff's Coffee Shop from the BVDSP, the BVDSP EIR, and additional sources, including the *Updated Historic Assessment of Biff's Coffee Shop*³ included in Appendix A. Furthermore, it assesses the economic feasibility of the avoidance and adaptive reuse options using the *Economic Assessment of Biff's Coffee Shop Development Alternatives*⁴ included in Appendix B.

The demolition of Biff's Coffee Shop was analyzed in the BVDSP EIR and identified as a significant impact. The EIR identified mitigation measures to reduce impacts to historic architectural resources; however, even with implementation of these measures, the demolition of Biff's Coffee Shop was determined to remain significant and unavoidable. A Statement of Overriding Considerations with findings was adopted as part of the BVDSP approval on May 21, 2014, for this and other significant unavoidable impacts identified in the EIR. This analysis finds that the following mitigation measures from the EIR would apply to the proposed project: Mitigation Measure CUL-1(a), Avoidance, Adaptive

¹ ESA (Environmental Science Associates). 2013. *Broadway Valdez District Specific Plan, Draft Environmental Impact Report*. SCH No. 2012052008. September.

ESA (Environmental Science Associates). 2014. *Broadway Valdez District Specific Plan, Responses to Comments and Final*. May. (These documents can be obtained at the Bureau of Planning at 250 Frank Ogawa Plaza, #3115, or online at <http://www2.oaklandnet.com/Government/o/PBN/OurServices/Plans/DOWD008194>.)

² The b+3 rating is from the City's Oakland Cultural Heritage Survey ratings for individual properties. A "*" indicates that the resource was not rated as a National Historic Resource. A "b" rating is for a resource that would qualify as a resource of major importance under some condition. A "3" indicates that the resource is not within an identified Area of Secondary Importance (ASI).

³ Page & Turnbull. 2015. *Updated Historic Assessment of Biff's Coffee Shop*. August 16.

⁴ Berkson Associates. 2015. *Economic Assessment of Biff's Coffee Shop Development Alternatives, 315 27th Street, Oakland, CA*. September 30.

Reuse, or Appropriate Relocation of Historically Significant Structures; Mitigation Measure CUL-1(c), Recordation and Public Interpretation; Mitigation Measure CUL-1(d), Financial Contributions; and Mitigation Measure CUL-5, Implement Mitigation Measure CUL-1 (to address cumulative impacts). Even though the proposed project's impacts to historical architectural resources were adequately addressed in the BVDSP EIR (since demolition of Biff's Coffee Shop was identified as an historical resource, its demolition anticipated, and its impact overridden as part of the BVDSP EIR process), this analysis addresses the proposed project's ability to comply with the aforementioned BVDSP EIR mitigation measures.

The scenarios contemplated under Mitigation Measure CUL-1(a), Option 1 (Avoidance), Option 2 (Adaptive Reuse), and Option 3 (Relocation) would involve development of a mixed-use building on the block where the Biff's Coffee Shop structure is currently located. Neither Option 1, Option 2, nor Option 3 are considered to be feasible, as summarized below.

- Option 1 (Avoidance) would construct a new mixed-use building consisting of 181 residential units and 12,244 square feet (sf) of new retail space next to a rehabilitated Biff's Coffee Shop, which would operate as a restaurant. This Option is considered economically infeasible, and would affect the integrity of setting for the Biff's structure. Compared to the proposed project, Option 1 would compromise the retail goals of the BVDSP, which calls for viable large format, destination retail.
- Option 2 (Adaptive Reuse) would construct a new mixed-use building consisting of 255 units and 16,720 sf of new retail space that would connect to the former Biff's Coffee Shop structure, which would be folded into an alternate retail use. While this option incorporates more residential units than Option 1, Option 2 is also economically infeasible and it would affect the historical integrity of the Biff's structure to a greater degree than Option 1. Due the grade separation between the Broadway frontage and Biff's Coffee Shop, Option 2 would also compromise the project site's ability to incorporate viable large format, destination retail.
- Option 3 (Relocation) would relocate the Biff's Coffee Shop structure to an alternative site (location to be determined) where it could be rehabilitated, so that the proposed project could be constructed at the project site. Due to the size, shape, and structural design of Biff's Coffee Shop, relocation is considered infeasible. Despite the infeasibility of relocation, the Biff's Coffee Shop structure will be made available for relocation in accordance with Standard Condition of Approval (SCA) 32.⁵ Even after implementation of Mitigation Measures CUL-1(a), CUL-1(c), and CUL-1(d), the proposed project would result in significant and unavoidable impacts.

⁵ Subsequent to the preparation of the BVDSP EIR, the SCAs were reorganized and renumbered. SCA 32 corresponds with SCA 56 in the BVDSP EIR.

2.0 BIFF'S COFFEE SHOP BUILDING DESCRIPTION

2.1 HISTORY AND STREET IMPROVEMENTS

According to information collected by the Oakland Cultural Heritage Survey (OCHS), Biff's Coffee Shop was designed by Armet & Davis, a Los Angeles-based architecture firm that was already well known for modern automobile-age restaurants. The building was constructed between 1962 and 1964 at a cost of \$100,000 for owner Standard Oil of California simultaneous to construction of a service station on the same irregularly shaped block, which is bounded by Broadway, 27th Street, Valdez Street, and 26th Street and shown in Figure 1. The two-day grand opening celebration for the combination restaurant and service station started on Friday, May 31, 1963. Although the entire property was owned by Standard Oil, the restaurant was to be operated by Biff's, a Los Angeles-based chain.

The parcel on which both Biff's Coffee Shop and the Standard Oil station were located was formed in the 1950s from modifications that were made to the existing street grid as part of regional transportation improvements. These included construction of the Grove Shafter Freeway (State Route 24) and the Bay Area Rapid Transit (BART) system, which was planned in the late 1950s and constructed in the early 1960s. The freeway project and related local street modifications attempted to improve vehicular congestion on Oakland streets by creating connections between the older urban core and the rapidly developing suburbs to the east. As part of these improvements, local streets were modified to become intermediate feeders from freeway on- and off-ramps to the existing street grid. Affected streets in the vicinity of Biff's Coffee Shop included 27th Street, which was widened from a four-lane street to a divided boulevard from Bay Street to San Pablo Avenue, and Valdez Street, which was widened and reconfigured from Grand Avenue to 27th Street.

2.2 ARCHITECTURAL NARRATIVE

Biff's Coffee Shop is a circular reinforced concrete block structure with large plate glass windows that cover slightly more than half of the exterior. The one-story building has a 38.5-foot radius, according to the original building permit. The building is ringed by a concrete walkway with embossed diamond shapes. Original renderings show that the building, landscaping, and large sign with crossed poles were part of a carefully integrated site composition.

The interior arrangement of the coffee shop originally included a main dining room northeast of the circular building and service areas toward the southwest. A smaller banquet room (noted as Dining Room #2 on the original plans) was located in the western portion of the building, adjacent to a small vestibule that housed payphone recesses and the entrance to the restrooms.

Original custom detailing included a zigzag canopy that followed the half-circle counter, terrazzo floors, geometric wood paneling, and a central "exhibition cooking" area, which was innovative for its time. The interior was lit by recessed downlights, originally with elongated period-type pendant fixtures, throughout the dining area. The building has undergone numerous alterations as summarized in Table 1. The 1972 and 1975 alterations diminished the original character of the building. Despite the 1972 and 1975 alterations and the removal of various architectural elements, the northern portion of the exterior

Project Location
Broadway and 27th Project

perimeter of the building is still relatively intact. However, the general condition of the building is not good.

The interior of the building was in very poor condition at the time of the 2015 site visit. The interior of the building has been heavily gutted since the time when the restaurant closed. All salvageable metals, including restaurant fixtures, wiring, and other systems, have been removed or damaged or have suffered from a lack of maintenance. In addition, large holes exist in the concrete/terrazzo flooring. Because of leaks in the roofing system, interior water damage and evidence of mold are present. However, remnants of some original interior materials remain, including dark burlap-type wall coverings, acoustic ceiling tiles, wood-grained linoleum trim on the aluminum windows, a single built-in booth, a wood-paneled wall in the banquet room, and heavily damaged terrazzo flooring. Of the remaining interior finishes, the wood-paneled wall in the banquet room is the most intact.

Although a thorough assessment of the exterior was not possible during the site visit because of the protective plywood coverings, the exterior aluminum and glass walls, as well as concrete block outer walls, appear to be in good condition. The visible interior portions of the wood structure that supports the battered exterior walls show signs of extreme dry rot. Portions of the underside of the roof structure that are visible where areas of original ceiling have been removed appear to be in good condition.

Table 1 provides a chronology for Biff’s Coffee Shop and notes building permits that are on file with the City of Oakland as well as selected events.

Table 1. Chronology of Biff’s Coffee Shop

Date	Permit Number	Description

2.3 RECORDED HISTORIC STATUS

Oakland Cultural Heritage Survey

Biff's Coffee Shop received a rating of *b+3⁶ from the OCHS. The Historic Preservation element of City of Oakland General Plan Policy 1.2 states that any property that receives an "existing" or "contingency rating" of A, B, or C and is not already designated as a Landmark, Preservation District, or Heritage Property, will be designated a Potential Designated Historic Property.

On January 13, 1997, the City of Oakland Landmarks Preservation Advisory Board determined from the findings of the OCHS that Biff's Coffee Shop was eligible to be a City Landmark, although the board decided not to put forward its nomination to the Planning Commission.

According to the 1996 OCHS form, Biff's Coffee Shop is significant,

... for its design quality and materials and type/style and designer. It is not located in a district (3). Its survey rating makes it a historic property under Oakland's Historic Preservation element. At present, it does not appear eligible for individual listing on the National Register.

The California Historical Resources Information System

The California Historical Resources Information System (CHRIS) is a statewide system for managing information on the full range of historical resources in California. CHRIS is a cooperative partnership between the citizens of California, historic preservation professionals, 12 information centers, the CHRIS Hub, and various agencies. The system is under the authority and direction of the Office of Historic Preservation (OHP), the State Historic Preservation Officer (SHPO), and the State Historical Resources Commission (SHRC). The 12 information centers provide archeological and historical resources information to local governments and individuals with responsibilities under the National Environmental Policy Act (NEPA), the National Historic Preservation Act (NHPA), and the California Environmental Quality Act (CEQA).

Biff's Coffee Shop is listed in the CHRIS database as having a status code of 7R, which indicates that the property is "Identified in Reconnaissance-Level Survey: Not Evaluated."

Oakland Heritage Property Status

According to the Historic Preservation element of the City of Oakland General Plan (Appendix A: Definitions, page A-3), Heritage Property status pertains to properties that appear to be potentially eligible for Landmark of Preservation District designation because they received an existing or contingency rating of A, B, or C from an intensive survey or an existing or contingency rating of A or B

⁶ The "*" is the existing individual property rating for the building, indicating that it was not rated because of age ineligibility. The "b+" is the individual property contingency rating for the building, which is given when it is believed that future conditions or circumstances could significantly change (e.g., "if restored" or "when older" or "with more information"); in this case, the contingency rating indicates that the building could be assigned and given a rating of "B+," which is a rating of "major importance." The "3" is the multiple property rating for the building, indicating that it is not located within a historic district.

from a reconnaissance survey or contribute or potentially contribute to an area that is potentially eligible for Preservation District designation. Heritage Properties are designated by the Landmarks Preservation Advisory Board or the City Planning Commission (or provisionally by the Planning Director). Demolition or removal of Heritage Properties and specified major alterations may be postponed for up to 60 days, with a possible 60-day extension, at the discretion of the Planning Director.

Biff's Coffee Shop has Heritage Property status because of a Landmarks Preservation Advisory Board determination of local register eligibility on January 13, 1997. Following guidance provided in Appendix A, *Guidance on Historical Resources*, of the *City of Oakland CEQA Thresholds of Significance Guidelines*, dated October 28, 2013, the building is considered a "historic resource" under CEQA.

2.4 EVALUATION

Evaluation of Historic Significance

Biff's Coffee Shop appears individually eligible for the California Register of Historical Resources (California Register) under Criterion 3 (Architecture) as a building that embodies the distinctive characteristics of a type and as a representative work of a master architect. Biff's Coffee Shop is an unusual example of a late Googie-style coffee shop in the San Francisco Bay Area. The building exhibits a number of design features that are characteristic of the Googie style, including the circular shape, "floating" appearance, orientation to the automobile, cantilevered roof, lack of traditional ornament, and use of modern materials such as concrete block and plate glass. Biff's Coffee Shop is a rare example of a circular Googie-style coffee shop in Northern California.

Biff's Coffee Shop was designed by Los Angeles firm Armet & Davis, a leader in 1950s–1960s modern coffee shop architecture. According to architectural historian Alan Hess, author of *Googie: Fifties Coffee Shop Architecture*, Armet & Davis helped establish "Coffee Shop Modern" as a major popular style and created the "major physical memory" for this type. Armet & Davis was known for selecting materials that flaunted new shapes and textures. The extremely prolific firm designed more than 2,000 diners throughout California. Biff's Coffee Shop is a representative example of the work of this influential firm.

Evaluation of Integrity

In addition to qualifying for listing under at least one of the California Register criteria, a property must be shown to have sufficient historic integrity to convey its historic significance. The concept of integrity is essential to identifying the important physical characteristics of historical resources and, hence, evaluating adverse changes to them. Integrity is defined as the authenticity of a historical resource's physical identity, as evidenced by the survival of characteristics that existed during the resource's period of significance. Seven variables or aspects that define integrity (i.e., location, design, setting, materials, workmanship, feeling, association) are used to evaluate a resource's eligibility for listing in both the California Register and the National Register of Historic Places (National Register). According to the

National Register Bulletin: How to Apply the National Register Criteria for Evaluation, these seven characteristics are defined as follows:

- *Location* is the place where the historic property was constructed.
- *Design* is the combination of elements that create the form, plans, space, structure, and style of the property.
- *Setting* addresses the physical environment of the historic property, inclusive of the landscape and spatial relationships of the building(s).
- *Materials* are the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form the historic property.
- *Workmanship* is the physical evidence of the crafts of a particular culture or people during any given period in history.
- *Feeling* is the property's expression of the aesthetic or historic sense of a particular period of time.
- *Association* is the direct link between an important historic event or person and a historic property.

There is a critical distinction between the two registers: the degree of integrity that a property can retain to still be considered eligible for listing. According to the California Office of Historic Preservation:

It is possible that historical resources may not retain sufficient integrity to meet the criteria for listing in the National Register, but they may still be eligible for listing in the California Register. A resource that has lost its historic character or appearance may still have sufficient integrity for the California Register if it maintains the potential to yield significant or historical information or specific data.

Thus, the California Register may include buildings that have suffered a greater degree of damage compared with buildings that are included in the National Register. Additionally, the different aspects of integrity vary in importance, depending on the criteria or criterion under which a building was determined to be significant. Buildings that are significant for their association with patterns, events, and persons (Criterion 1 or 2) generally must retain strong integrity of location, setting, feeling, and association to be able to continue to convey their historic significance. Buildings that are significant for their architecture (Criterion 3) generally must retain strong integrity of design, materials, and workmanship.

Biff's Coffee Shop retains integrity of location because it remains at the site where it was constructed.

The integrity of design of Biff's Coffee Shop has been negatively affected by certain aspects of the 1972 and 1975 alterations, including the removal of the original roof material and replacement with roof shingles, the addition of an opaque entrance enclosure, and the addition of an exterior wall. However, important character-defining features of the building's original design remain, including the circular footprint, floating appearance, orientation to the automobile, cantilevered roof, lack of traditional ornament, and use of modern materials. **Overall, the building retains fairly strong integrity of design.**

Biff's Coffee Shop does not retain integrity of materials and workmanship because of the heavily damaged terrazzo flooring and the removal of a significant amount of original material, including the

majority of the interior finishes, the booths (which are in storage), pendant fixtures, roof material, and exterior signage. Although Biff's Coffee Shop does retain some of its original materials and workmanship, the overwhelming majority of the character-defining materials and workmanship, which enabled the building to convey its historic appearance and significance, are no longer extant at the building.

Therefore, Biff's Coffee Shop does not retain integrity of materials or workmanship.

Because of the loss of integrity of materials and workmanship, as well as reduced integrity of design and setting (detailed in the following section), the integrity of feeling and association of Biff's Coffee Shop are both low. Although the building's shape and siting are generally able to convey its era of construction and its use as a restaurant, changes to some of the building's design elements, the loss of original materials and workmanship, and changes to the setting all combine to prevent the building from accurately conveying the aesthetic sense of its era of construction.

In summary, Biff's Coffee Shop retains moderate integrity of design, feeling, association, and setting (detailed below). It does not retain integrity of materials or workmanship because of the severe loss of original materials. At this time, the building's integrity is insufficient for listing in the National Register or California Register. If the building were to be restored to its 1964 appearance, it could be re-evaluated for state and national listing.

Surrounding Setting

The integrity of the immediate setting for Biff's Coffee Shop has been significantly lowered. Although Biff's Coffee Shop is situated in Oakland's Broadway Auto Row, the building is set well back from Broadway on the east portion of its site. The building is viewed primarily from 27th Street where the circular sweep of the building touches the sidewalk on the site's northeasterly side. When Biff's Coffee Shop was constructed, the west portion of the lot included a Standard service station, which faced onto Broadway. The site also included two tall light-box signs atop crossed poles, extensive playful landscaping, and a circular outdoor eating area; parking was arranged so that cars radiated out from the edge of the circular footprint of Biff's Coffee Shop. Of these original site features, the service station and light-box signs have been removed. The radial parking arrangement and the outdoor eating area have been altered. The landscaping has either been removed or become overgrown through neglect. The majority of the lot is currently paved and used as a surface parking lot.

The integrity of the broader setting for Biff's Coffee Shop remains generally strong and generally mirrors conditions as they existed when the building was completed in 1964. Biff's Coffee Shop can be distinguished from the majority of Auto Row buildings along Broadway by its use, unique style, and comparatively late date of construction. Circular in form, it stands on an "island" block amongst predominantly rectangular façades and is not so solidly grounded as the other buildings. Instead of a decorated cornice, it has a dominant projecting fascia that, unlike the showrooms, appears to be floating.

Despite these differences, the scale of the building is comparable to other buildings along Broadway's Auto Row and does not seem out of place amongst the variety of styles and building types. Furthermore, the building's Googie-style architecture ties it to an era of veneration of the automobile industry and thus

the surrounding buildings. The building partially retains its setting because it contributes to the variety of automobile-related buildings along Oakland's Broadway Auto Row.

3.0 PROJECT DESCRIPTION

The proposed project would demolish an existing building and surface parking lot and construct a new mixed-use building with an area of approximately 423,577 gsf. The proposed project would create approximately 255 residential units and up to 37,710 gsf of retail space, including 9,400 gsf of mezzanine retail space, depending on tenant demand.

In total, the terraced building would have a footprint of approximately 47,615 sf (i.e., 100 percent of the parcel on which Biff's Coffee Shop is located). It would be seven stories tall but would not exceed 85 feet in height (i.e., at the top of the roof structure), as measured by the Building Department. Parapets, stairs, elevator penthouses, and mechanical structures (including emergency generators) would exceed this height but would be subject to the building standards of the BVDSP. Elevations are provided in Figures 2 and 3.

The building mass would be distributed evenly throughout the project site and front primarily Broadway, 27th Street, and the future plaza along Valdez Street.

Valdez Street is approximately 12 feet lower in elevation than Broadway. Consequently, the site would be graded to provide below-grade parking in Basement Level B1, which would be in the western portion of the site. This area, which would be reserved for retail customers and employees only, would include approximately 82 parking spaces, a utility room, trash enclosures, stairwells, and elevators. Because of the topography of the project site, Basement Level B1 would also include approximately 4,000 gsf of at-grade retail uses that would front a proposed plaza at Valdez Street and 27th Street in the eastern portion of the site. The retail uses would be designed to allow for two separate storefronts, with multiple entries off of Valdez Street. These retail uses would be open to the public and not restricted to on-site users.

Parking in Basement Levels B2 and B3 would be reserved primarily for residents. Basement Level B2 would include approximately 105 parking spaces, bicycle storage, a utility room, stairwells, elevators, and vehicle ramps to access the other levels. Basement Level B3 would include approximately 112 parking spaces, bicycle storage, a service area, stairwells, elevators, and vehicle ramps to Basement Level B2.

Level 1 would provide approximately 24,400 gsf of retail uses that would front Broadway. It would include a clubhouse, fitness room, garden, mailroom, utility rooms, trash rooms, stairwells, elevators, and a lobby that would front 27th Street. Level 1 would also have the potential for approximately 8,700 gsf of mezzanine retail uses, depending on tenant demand. A stairwell and exit corridor for the residential units, located in the southern portion of the building, would connect to 26th Street.

Approximately 21 residential units would be provided on Level 2, along with associated private balconies, a courtyard, elevators, stairwells, and interior circulation features. Level 3 would include approximately 42 residential units, along with associated private balconies, a courtyard, elevators, stairwells, and interior circulation features. Levels 4 through 7 would include approximately 42 residential units, along with associated private balconies, elevators, stairwells, and interior circulation features that would have the same floor plan. Level 8 would include approximately 24 residential units,

 Broadway and 27th Project

along with associated private balconies, a roof deck, mechanical equipment, elevators, stairwells, and interior circulation features.

The proposed project adheres to the *Design Guidelines for the Broadway Valdez Specific Plan Area* (Design Guidelines). These guidelines and standards are related to urban form and visual quality. Pursuant to the Design Guidelines, development within the Valdez Triangle (including along Valdez Street) would be required to support a walkable, pedestrian-oriented shopping district with appropriately scaled and designed streets. The proposed project would meet this requirement by widening sidewalks and adding amenities such as planters, lighting, seating, and a public plaza. In addition, public art may be commissioned for the plaza.

The proposed project would undergo the required design review process, pursuant to Section 17.101C.020 of the City's Planning Code. This would ensure consistency with the Design Guidelines. The proposed project would be designed to meet the California Green Building Standards Code (CALGreen), Title 24, and any amendments required by the City. It would be contemporary in design, utilizing a variety of materials, including, but not limited to, stone, brick, glass, cementitious wall panels, and cement plaster. The proposed project would include changes in plane, shadow lines, balconies, and other projections; subtle color and material changes; and other architectural elements. In addition, it would be GreenPoint rated in compliance with the City's Green Building Ordinance.

4.0 IMPACTS ON HISTORIC ARCHITECTURAL RESOURCES

This analysis provides an overview of impacts on historic architectural resources, as well as the feasibility of compliance with the mitigation measures set forth in the BVDSP EIR. In accordance with State CEQA Guidelines Section 15064.5(b), a substantial adverse change in the significance of a historic resource is defined as follows:

Physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historical resource would be materially impaired. Material impairment is further defined as demolishing or materially altering in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the CRHR [California Register of Historical Resources] or a local register of historical resources.

The BVDSP EIR assessed the impacts of implementation of the BVDSP. It found that adoption of and development under the BVDSP could result in physical demolition, or substantial alteration, of physical characteristics that convey the significance of historic resources, which would be considered a significant environmental impact (Environmental Science Associates [ESA] 2013). The EIR specifically addresses potential significant impacts on the former Biff's Coffee Shop property, by stating:

The Specific Plan identifies the block containing Biff's II Coffee Shop, a Heritage Property, as a Retail Priority Site (see Figure 3-9 in Chapter 3, Project Description). Further, the Physical Height Model assumes mixed-use up to 65 feet in height within this block (see Figure 3-11 in Chapter 3, Project Description). Demolition or substantial alteration of this property resulting from adoption of and development under the Specific Plan would be considered a significant impact under CEQA.

Demolition or substantial alteration of Biff's Coffee Shop would be considered a significant impact under CEQA, according to the BVDSP EIR. The avoidance or adaptive reuse options discussed below could somewhat reduce impacts to Biff's Coffee Shop, compared with the impacts that were analyzed in the EIR, by restoring it as a freestanding structure under Option 1 (Avoidance) or restoring its exteriors under Option 2 (Adaptive Reuse). Nevertheless, demolition of Biff's Coffee Shop, as envisioned by the proposed project, would be considered a significant impact on a historic resource, consistent with the analysis provided in the BVDSP EIR.

Significant cumulative impacts on historic resources, resulting from development of projects under the BVDSP, also were identified in the BVDSP EIR. Importantly, the structure that housed Biff's Coffee Shop is not one of the CEQA historic resources identified in the overall BVDSP area in the BVDSP EIR. However, as discussed above, Biff's Coffee Shop has Heritage Property status because of a Landmarks Preservation Advisory Board determination of local register eligibility on January 13, 1997. Consequently, the building is considered a historic resource under CEQA. Based on the foregoing, because the proposed project would result in the demolition of Biff's Coffee Shop, which is located in the BVDSP area, it would result in a cumulatively considerable contribution to cumulative historic architectural resource impacts.

5.0 APPLICABLE BVDSP MITIGATION MEASURES AND STANDARD CONDITIONS OF APPROVAL

To mitigate for potentially significant impacts resulting from implementation of the BVDSP and ensuing projects, the BVDSP EIR identified Mitigation Measure CUL-1 and Mitigation Measure CUL-5, as well as SCA 32 and SCA 66.⁷ These mitigation measures and SCAs are listed below in italics, followed by analysis of each mitigation measure/SCA's applicability to the proposed project.

5.1 MITIGATION MEASURE CUL-1

Only avoidance of direct effects on historic resources, as would be achieved through Mitigation Measure CUL-1(a) (Avoidance, Adaptive Reuse, or Appropriate Relocation of Historically Significant Structures) and Mitigation Measure CUL-1(b) (Future Site-Specific Surveys and Evaluations), would reduce impacts on historic resources to a less-than-significant level. Therefore, even though demolition or substantial alteration of historically significant resources has been identified by the City as the only feasible option for development in the Plan Area, even with implementation of Mitigation Measure CUL-1(c) (Recordation and Public Interpretation) and Mitigation Measure CUL-1(d) (Financial Contributions), the impact of adoption of and development under the Plan would be considered significant and unavoidable.

⁷ Subsequent to the preparation of the BVDSP EIR, the SCAs were reorganized and renumbered. SCA 32 corresponds with SCA 56 in the BVDSP EIR. SCA 66 corresponds with SCA 57 in the BVDSP EIR.

Mitigation Measure CUL-1(a), Avoidance, Adaptive Reuse, or Appropriate Relocation of Historically Significant Structures

- ***Avoidance.*** The City shall ensure, where feasible, that all future development activities allowable under the Specific Plan, including demolition, alteration, and new construction, would avoid historical resources (i.e., those listed on federal, state, and local registers).
- ***Adaptive Reuse.*** If avoidance is not feasible, adaptive reuse and rehabilitation of historical resources shall occur in accordance with the Secretary of Interior's Standards for the Treatment of Historic Properties.
- ***Appropriate Relocation.*** If avoidance or adaptive reuse in situ is not feasible, SCA 56, Compliance with Policy 3.7 of the Historic Preservation Element (Property Relocation Rather than Demolition), shall be implemented, as required. Projects that relocate the affected historical property to a location consistent with its historic or architectural character could reduce the impact to less than significant (Historic Preservation Element Action 3.8.1), unless the property's location is an integral part of its significance (e.g., a contributor to a historic district).

Applicability of Mitigation Measure CUL-1(a) to the Proposed Project

Mitigation Measure CUL-1(a), Avoidance (Option 1)

Three development scenarios were studied for the mixed-use, multi-story building, all of which would be required under the BVDSP to deliver at least 12,169 sf of retail space on the ground floor in order to allow for the construction of residential units by way of the BVDSP's residential facilities bonus.⁸ Scenario 1 consisted of a seven-story building, the same height and construction type as the proposed project, but on a reduced footprint, including 114 units over 12,244 sf of retail. Scenario 2, which seeks to maximize the number of units allowed by meeting the minimum retail threshold, consisted of a 10-story building featuring 181 units over 12,224 sf of retail. Floor plans and illustrations for Scenario 2 are provided in Figures 4 and 5. Scenario 3, which seeks to replicate the 255 units in the proposed project, consisted of a 15 story building featuring 255 units over 16,720 sf of retail.

Of these three avoidance scenarios, Scenario 2 is the most reasonable from an economic and entitlement standpoint. Scenario 1 was eliminated from further consideration because, even though it would be built in a similar Type III wood configuration as the proposed project, at 114 units, it does not include enough residential units to feasibly allocate the fixed costs of the land, soft costs, and required retail space and parking. Therefore, Scenario 2 offers a lower cost per unit basis than Scenario 1 because, with a 59 percent increase in unit count, it can allocate the additional construction costs that are typically 20 percent higher for a Type 1 10-story structure. Scenario 3, which requires an additional 4,500 sf of retail on a very limited ground floor plate,⁹ is infeasible due to its inability to place leasable retail around required ground floor utilities, the residential lobby, and required elevators/fire exits for the residential units above. Therefore,

⁸ The project site is identified as Site 3A in the BVDSP, which requires 22,745sf (50 percent lot coverage) of retail in order to receive a residential unit bonus of 1 unit per 125 sf of retail. A restored Biff's consisting of 5,288 sf would receive "double credit" towards the bonus, therefore leaving 12,169 sf to be constructed in the mixed-use building.

⁹ In order to build over 218 units on Site 3A, the BVDSP requires 27,293 sf (60 percent lot coverage) of retail to receive a residential unit bonus of 1 unit per 100 sf of retail. This leaves a requirement of 16,720 sf of retail in the mixed-use building.

Source: TCA Architects, 2015.

Figure 5
Option 1 (Avoidance) – Illustration
Broadway and 27th Project

for the purposes of Option 1 (Avoidance), only Scenario 2 (a ten-story building featuring 181 units above retail) is analyzed further. Scenario 3 is discussed under Option 2 (Adaptive Reuse).

Under Option 1 (Avoidance), a new multi-story mixed-use building would be built to the west of Biff's Coffee Shop. The existing Biff's Coffee Shop building would remain and be restored as a freestanding structure on a separate parcel. The freestanding building would have independent utilities and building systems. As part of development of the mixed-use project, a new parcel line (property line) would be created, with the new property line drawn more than 20 feet from the western wall of Biff's Coffee Shop to allow for unlimited openings, per California Building Code Table 705.8, which allows sprinkler-protected openings that are setback by a distance of more than 20 feet to be of unlimited area.

The restored building would reestablish the original restaurant use. The original construction drawings by Armet & Davis (1962) would be used as the basis of design for restoration of the exterior and interior. Site elements would be restored using period photos as a guide. Under Option 1, the restored building exterior, interior, and site remnants would be designed and implemented in accordance with the Secretary's Standards to the extent feasible.

By minimizing the size of the available footprint for the new mixed-use project, Option 1 would reduce retail to a level that would be inconsistent with the BVDSP's vision for the Valdez Triangle area. Even with the assumption that the square footage of Biff's Coffee Shop would be given "double credit" toward retail square footage, as allowed by the BVDSP, Option 1 would only deliver 12,224 sf of new retail on a much smaller footprint, with less frontage on Broadway because of the need to locate the lobby on Broadway as well. Consequently, this significant decrease in retail runs afoul of the BVDSP's stated emphasis on large-format, destination retail for retail priority sites. The loss of retail square footage, coupled with the loss of Broadway frontage, would impair Option 1's overall viability and fail to optimize the site's retail potential in accordance with the BVDSP.

Moreover, Option 1 would increase the development cost of the mixed-use project by increasing the overall building height and requiring a more expensive construction type (i.e., a Type I concrete structure) to provide the minimum number of residential units and retail square footage, in accordance with the BVDSP. According to the *Economic Assessment of Biff's Coffee Shop Development Alternatives* included in Appendix B, the inclusion of Biff's Coffee Shop as a freestanding restaurant operation in the mixed-use project reduces the number of potential new residential units and retail space, which significantly increases the total development costs. Therefore, in addition to the subsidy required by Biff's,¹⁰ Option 1 does not provide the necessary return on investment to make for a financially feasible proposal. Specifically, the total value of Option 1 (\$91.8 million) does not cover development costs (\$108.8 million) and the shortfall is approximately \$17 million. Although the restoration of Biff's Coffee Shop concurrent with a larger project on the site could benefit from certain cost efficiencies, the restoration of

¹⁰ Sources of subsidies could include historic tax credits provided by the federal government to encourage the preservation and adaptive reuse of certified historic and older buildings as well as Mills Act Property Tax Reductions, which provide for reduced property tax in return for historic rehabilitation for buildings in the City.

Biff's Coffee Shop would still require a subsidy. Therefore, overall, Option 1 would not be financially feasible.

Retail parking for Biff's Coffee Shop would need to be located in a subterranean area beneath the new residential building, thereby potentially making the parking for Biff's Coffee Shop inconvenient for retail customers. Option 1 would satisfy only the minimum retail area requirement of the BVDSP for a mixed-use project on the site.

Compared to the proposed project, Option 1 would reduce proposed residential density by 74 units and retail square footage by 20,198 sf. Consequently, Option 1 does not satisfy the spirit and intent of the BVDSP and would not deliver a viable, transformative mixed-use project on a Retail Priority Site in the BVDSP area that provides the opportunity for large-format, destination retail.

If rehabilitated for use as a restaurant using the original drawings, Option 1 could restore the exterior, interior, and landscaping of Biff's Coffee Shop in compliance with the majority of the Secretary's Standards, but it would not be in compliance with Standard 9. As shown in Figure 5, the new mixed-use project would visually and physically dominate the Biff's Coffee Shop structure and, therefore, would not comply with the Secretary's Standard 9: New Additions, Exterior Alterations, or Related New Construction Will Not Destroy Historic Materials, Features, and Spatial Relationships that Characterize the Property. Although Biff's Coffee Shop would still be highly visible from the east side of the site, the proposed mixed-use project would block all views from the west and south, severing the building's visual relationship to Broadway Auto Row, which defines its historic character. The loss of the surrounding parking lot would further compromise the building's integrity of setting. The historic resources impacts associated with Option 1 would be less severe than the historic resources impacts associated with Option 2 (Adaptive Reuse), as described below. Overall, the historic resources impacts associated with Option 1 would be less than significant because it would substantially comply with the Secretary's Standards. Nevertheless, even though avoidance would preempt demolition of Biff's Coffee Shop, it still would fail to meet the objectives of the BVDSP and would not be financially feasible since the value created by Option 1 would not cover development costs.

Mitigation Measure CUL-1(a), Adaptive Reuse (Option 2)

Under Option 2 (Adaptive Reuse) a new multi-story mixed-use building would be built to the west and south of Biff's Coffee Shop. Only the exterior shell of Biff's Coffee Shop would remain. The restored building shell would be structurally connected to the new mixed-use structure and on the same parcel. Because the connection between Biff's Coffee Shop and the mixed-use building allows for more ground floor retail space, Scenario 3, which requires 60 percent retail lot coverage in order to construct the same number of units as the Proposed Project, is analyzed for Option 2 (Adaptive Reuse). The Biff's Coffee Shop portion of the parcel would share utilities and building systems with the mixed-use building. The restored building would have a retail use, with the future tenant providing new interior finishes. Option 2 assumes that no historic interior finishes would remain. The exterior shell of Biff's Coffee Shop would be restored using the original construction drawings by Armet & Davis (1962). Site elements north and east of Biff's Coffee Shop would be restored using period photos as a guide. The

restored building exterior in Option 2 (Adaptive Reuse) would be designed and implemented in accordance with the Secretary's Standards, to the extent feasible. Floor plans and illustrations of Option 2 are provided in Figures 6 and 7.

By minimizing the size of the available Broadway footprint for the new mixed-use project, Option 2 also would diminish the opportunity for large-format, destination retail, as envisioned in the BVDSP. Although Option 2 would eliminate the 20-foot setback in Option 1 and allow the former Biff's structure to be "connected" to the new mixed-use building, the topography of the site would require that any retail use within the Biff's structure be located a story below the retail fronting Broadway, making a single "large format" use impractical. As with Option 1, Option 2 would deliver a smaller percentage of new retail fronting Broadway contemplated in the proposed project. This reduced frontage on Broadway would impair the opportunity for the kind of retail envisioned for the corridor in the BVDSP, which consists of larger-scale suppliers of consumer goods. Moreover, the reuse of Biff's Coffee Shop as a circular retail site would be less likely to attract national retail tenants who demand certain format specifications in order to meet customer expectations. The circular shape of Biff's Coffee Shop would require deviations from these typical specifications and that could impair the site's ability to attract the kind of retailers anticipated in the BVDSP. The decrease in the available footprint for the new mixed-use project also increases the development cost by increasing the overall building height and requiring a more expensive construction type (i.e., a Type I concrete structure) to provide the minimum number of residential and retail units, in accordance with the BVDSP. Option 2 would satisfy only the 60 percent retail area requirement of the BVDSP for a mixed-use project on the site. Compared to the proposed project, Option 2 would reduce retail square footage by 15,702 sf. Consequently, Option 2 does not satisfy the spirit and intent of the BVDSP and would not deliver a viable, transformative mixed-use project on a Retail Priority Site in the BVDSP area that provides the opportunity for large-format, destination retail.

Although Option 2 would partially restore the exterior and landscaping of Biff's Coffee Shop, the new mixed-use project would visually dominate Biff's Coffee Shop as shown in Figure 7, thereby negatively affecting its integrity of setting. As discussed above under Option 1, the proposed mixed-use building would fill much of the adjacent block between Biff's Coffee Shop and Broadway, creating an imposing visual barrier that would dwarf Biff's Coffee Shop and conspicuously change the building's immediate setting. Option 2 poses additional potential impacts on the historic character of Biff's Coffee Shop, including its incorporation into the mixed-use building through a ground-level rear addition, and the likelihood of a new retail tenant removing components of its interior historic fabric. Therefore, Option 2 may not comply with several of the Secretary's Standards, including:

- **Standard 1:** A property will be used as it was historically or be given a new use that requires minimal change to its distinctive materials, features, spaces, and spatial relationships;
- **Standard 2:** The historic character of a property will be retained and preserved. The removal of distinctive materials or alteration of features, spaces, and spatial relationships that characterize a property will be avoided;
- **Standard 5:** Distinctive materials, features, finishes, and construction techniques or examples of

Broadway and 27th Project

craftsmanship that characterize a property will be preserved;

- **Standard 9:** Explained above; and
- **Standard 10:** New additions and adjacent or related new construction will be undertaken in such a manner that, if removed in the future, the essential form and integrity of the historic property and its environment will be unimpaired.

Although the joining of the two buildings alone would not destroy the essential historic massing and design of Biff's Coffee Shop, Option 2 has the potential to create impacts on the building's integrity of design, materials, and workmanship, in addition to the impact on setting, as previously described.

According to the *Economic Assessment of Biff's Coffee Shop Development Alternatives* included in Appendix B, the integration of Biff's into Option 2 would enable the development of 255 units, but would reduce the amount of retail to half of that provided by the proposed project. Moreover, Option 2 only produces a total value of \$134.9 million, which is insufficient to cover its development costs of \$141.1 million. This shortfall of approximately \$6.2 million makes Option 2 financially infeasible.

Mitigation Measure CUL-1(a), Relocation (Option 3)

In Option 3 (Relocation), Biff's Coffee Shop would be relocated to an alternative site (location to be determined in the future) so that a multi-story mixed-use building could be constructed where Biff's Coffee Shop is currently located. The relocated Biff's Coffee Shop would be rehabilitated to its original configuration for use as a restaurant.

Relocation is most feasible when configuration of a structure allows it to maintain its structural integrity when lifted from the existing location and its size allows it to be easily moved to the alternative location without dismantling or providing custom shoring to stabilize the structure. Also, a nearby site must be available, with a path of travel for the structure that does not require lifting aerial utility lines or removing light standards and traffic signals.

When considering the foregoing and based on discussions with Howard Kelly of Kelly Brothers House Movers, Biff's Coffee Shop would be a difficult structure to move.¹¹ The overall size of the building is too large to fit on adjacent streets without separating it into segments. The overall diameter of the building is approximately 90 feet (including the overhanging fascia element). Streets in the immediate project area range in width from approximately 18-20 feet (assumes two lanes in one direction along Broadway and 27th Street) to approximately 9-10 feet (assumes one lane in one direction along Valdez or 26th Streets). Due to the relative width of the building compared to the width of nearby streets, the building would need to be temporarily shored and cut into two separate halves to move the building within the confines of the widths of the nearby streets. As the building is constructed of a slab on grade with connected spread footings, the superstructure (portions of the building above the floor slab) would need to be separated from the slab and the superstructure would need to be shored in both the vertical and lateral

¹¹ The relocation of the building was discussed during an in-person meeting with Howard Kelly of Kelly Brothers House Movers based in San Jose on July 22, 2015 and a subsequent telephone call with Howard Kelly on August 6, 2015.

directions. Adding to the difficulty is the circular shape of Biff's Coffee Shop. The structural system involves two radial full-height concrete masonry unit load-bearing walls that approach the core of the building. Five steel pipe columns are located near center in the rear half of the building. The front half of the building has no internal supports, and the roof load is distributed to posts integrated into the glazing at the front façade. Given its radial structure (which consists of a complex and irregular structural system), it would be challenging to separate the building into smaller parts to travel on adjacent streets and shoring would be required if the building is separated into halves. In addition, as discussed above, a nearby site that could accommodate a building the size of Biff's must be available. Due to the height of the structure, it would not be feasible to move Biff's under the nearby Interstate (I) 980 crossing to the west or under the I-580 to the north, which limits the path of travel for the structure. A cost estimate for moving Biff's Coffee Shop provided by Kelly Brothers House Movers for a two-part move in the metropolitan Bay Area, including the cost of traffic re-routing and temporary relocation of overhead wires and street fixtures, is estimated at \$148,000 for a move of approximately 0.5 mile.¹² In summary, relocation of Biff's Coffee Shop, although technically feasible, would be extremely challenging both physically and financially and would result in the loss of much of the building's original materials. Despite the infeasibility of relocation, the Biff's Coffee Shop structure will be made available for relocation in accordance with SCA 32.¹³

Although Option 3 contemplates the eventual restoration of the exterior and interior of Biff's Coffee Shop, which would comply with the majority of the Secretary's Standards by maintaining the building's integrity of design, materials, and workmanship, the relocation still would have a negative impact on the building's integrity of location. Even if rehabilitated for use as a restaurant using the original drawings as the basis, the building would most likely no longer be able to convey its significance as a cultural resource in a new location, per guidance provided by the National Park Service.¹⁴ It appears that the building would be able to retain its overall integrity only if a new relocation site were selected that is compatible with the current location of Biff's Coffee Shop (i.e., on a corner parcel in downtown Oakland, maintaining a visual relationship to a nearby automobile corridor). As described above, at the current time, no such parcel is known to be available. Moreover, the loss of materials caused by dismantling, relocating, and reinstalling the building would be detrimental, most likely requiring reconstruction measures that would not be considered favorable as a preservation approach.

Conclusion

All three options involve development of a mixed-use building on the block where Biff's Coffee Shop currently exists. Option 1 (Avoidance) would rehabilitate the interior and exterior of Biff's Coffee Shop as a restaurant use, but would affect the building's integrity of setting, diminish the opportunity for large-format, destination retail as envisioned in the BVDSP for this retail priority site, and would not be economically feasible because the development costs for Option 1 exceed its value, as described in

¹² This estimate is based on comparisons with a building relocation performed in Livermore, California.

¹³ Subsequent to the preparation of the BVDSP EIR, the SCAs were reorganized and renumbered. SCA 32 corresponds with SCA 56 in the BVDSP EIR.

¹⁴ As explained in *National Register Bulletin: How to Apply the National Register Criteria for Evaluation*, moved properties constitute a category for which historic register eligibility is in most cases not possible.

Appendix B. Option 2 (Adaptive Reuse) would have a greater effect on the overall historic integrity of Biff's Coffee Shop and would result in similar challenges to the retail viability of the site, especially with respect to the lost opportunity for large-format retail. Option 2 also is financially infeasible because the value does not provide a sufficient return on investment. Option 3 (Relocation) is not considered to be a feasible option, particularly when considering the financial and physical challenges associated with the preservation of the building's integrity. Not only are options for moving the building very limited, but relocation would almost certainly prevent the building from conveying its architectural significance in the future.

Mitigation Measure CUL-1(b), Future Site-Specific Surveys and Evaluations

Although the Plan Area has been surveyed by the City of Oakland's OCHS and as a part of the Broadway Valdez Specific Plan effort by ESA in 2009, evaluations and ratings may change with time and other conditions. There may be previously unidentified historical resources that would be affected by future development activities. For any future projects on or immediately adjacent to buildings 50 years old or older between 2013 and 2038, which is the build-out horizon for the Specific Plan (i.e., by the end of the Plan period, buildings constructed prior to 1988), the City shall require specific surveys and evaluations of such properties to determine their potential historical significance at the federal, state, and local levels. Intensive-level surveys and evaluations shall be completed by a qualified architectural historian who meets the Secretary of the Interior's Standards. For all historical resources identified as a result of site-specific surveys and evaluations, the City shall ensure that future development activities avoid, adaptively reuse, and/or appropriately relocate such historical resources in accordance with Mitigation Measure CUL-1(a) (Avoidance, Adaptive Reuse, or Appropriate Relocation of Historically Significant Structures), above. Site-specific surveys and evaluations that are more than 5 years old shall be updated to account for changes that may have occurred over time.

Applicability of Mitigation Measure CUL-1(b) to the Proposed Project

Mitigation Measure CUL-1(b), Future Site-Specific Surveys and Evaluations, would not be applicable to the proposed project because a survey and evaluation of the property was completed in 2007 and updated in 2015. The survey and evaluation remain valid.¹⁵

Mitigation Measure CUL-1 (c), Recordation and Public Interpretation

If Mitigation Measure CUL-1(a) (Avoidance, Adaptive Reuse, or Appropriate Relocation of Historically Significant Structures) is determined infeasible as part of a future project, the City shall evaluate the feasibility and appropriateness of recordation and public interpretation of such resources prior to any construction activities that would directly affect them. Should the City decide that recordation and or public interpretation is required, the following activities will be performed:

- ***Recordation.*** Recordation shall follow the standards provided in the National Park Service's Historic American Building Survey (HABS) program, which requires photo-documentation of historic structures, a written report, and/or measured drawings (or photo reproduction of original plans if available). The photographs and report would be archived at the Oakland Planning Department and local repositories, such as public libraries, historical societies, and/or the Northwest Information Center at Sonoma State University. The recordation efforts shall occur prior to demolition, alteration, or relocation of any historic resources identified in the Plan Area, including those that are relocated pursuant to Mitigation Measure CUL-1(a) (Avoidance,

¹⁵ Page & Turnbull. 2015. *Updated Historic Assessment of Biff's Coffee Shop*. August 16.

Adaptive Reuse, or Appropriate Relocation of Historically Significant Structures). Additional recordation could include (as appropriate) oral history interviews or other documentation (e.g., video) of the resource.

- **Public Interpretation.** *A public interpretation or art program would be developed by a qualified historic consultant or local artist in consultation with the Landmarks Preservation Advisory Board and the City, based on a City-approved scope of work, and submitted to the City for review and approval. The program could take the form of plaques, commemorative markers, or artistic or interpretive displays that explain the historical significance of the properties to the general public. Such displays would be incorporated into project plans as they are being developed and would typically be located in a publicly accessible location on or near the site of the former historical resource(s). Public interpretation displays shall be installed prior to completion of any construction projects in the Plan Area.*

Photographic recordation and public interpretation of historically significant properties do not typically mitigate the loss of resources to a less-than-significant level (State CEQA Guidelines Section 15126.4(b)(2)).

Applicability of Mitigation Measure CUL-1(c) to the Proposed Project

Mitigation Measure CUL-1(c), Recordation and Public Interpretation, would be applicable to the proposed project. Although Mitigation Measure CUL-1(a), Adaptive Reuse, is partially feasible, significant impacts to Biff's Coffee Shop would result. If the proposed project is implemented, which assumes demolition of Biff's Coffee Shop, impacts would similarly be significant and unavoidable. Recordation and public interpretation are feasible and appropriate.

This measure would reduce impacts to historic resources by recording the historic building through HABS Level II recordation (photographic documentation, a written report, and/or measured drawings or photographic reproduction of original plans, if available) and through public interpretation or art program. The photographs and report would be archived at the Oakland Planning Department and local repositories, such as public libraries, historical societies, and/or the Northwest Information Center at Sonoma State University. The recordation efforts would occur prior to demolition of Biff's Coffee Shop. The proposed public interpretation or art program could take the form of a commemorative plaque or interpretive display boards containing historic photographs and narrative text describing the significant past use of the project site, to be placed in a publicly accessible exterior or interior (lobby) location. Furthermore, the proposed project could commission public art in the proposed plaza on Valdez Street, and could utilize the Biff's building, Google architecture, or similar motifs as inspiration for the public art itself. However, even with the implementation of Mitigation Measure CUL-1(c), impacts to Biff's Coffee Shop would remain significant and unavoidable.

Mitigation Measure CUL-1(d), Financial Contributions

If Mitigation Measure CUL-1(a) (Avoidance, Adaptive Reuse, or Appropriate Relocation of Historically Significant Structures) and Mitigation Measure CUL-1(b) (Future Site-Specific Surveys and Evaluations) are not satisfied, the project applicant shall make a financial contribution to the City of Oakland, which can be used to fund other historic preservation projects within the Plan Area or in the immediate vicinity. Such programs include, without limitation, a Façade Improvement Program or a Property Relocation Assistance Program.

This mitigation would conform to Action 3.8.1(9) of the Historic Preservation Element of the City of Oakland General Plan. Contributions to the fund(s) shall be determined by staff members at the time of approval of site-

specific project plans, based on a formula to be determined by the Landmarks Preservation Advisory Board. However, such financial contribution, even in conjunction with Mitigation Measure CUL-1(c) (Recordation and Public Interpretation), would not reduce the impacts to less-than-significant levels.

Only avoidance of direct effects on historic resources, as would be achieved through Mitigation Measure CUL-1(a) (Avoidance, Adaptive Reuse, or Appropriate Relocation of Historically Significant Structures) and Mitigation Measure CUL-1(b) (Future Site-Specific Surveys and Evaluations), would reduce the impacts on historic resources to a less-than-significant level. Therefore, if demolition or substantial alteration of historically significant resources is identified by the City as the only feasible option for development in the Plan Area, even with implementation of Mitigation Measure CUL-1(c) (Recordation and Public Interpretation) and Mitigation Measure CUL-1(d) (Financial Contributions), the impact of adoption of and development under the Specific Plan would be considered significant and unavoidable.

Applicability of Mitigation Measure CUL-1(d) to the Proposed Project

Mitigation Measure CUL-1(d), Financial Contributions, would be required if both Mitigation Measure CUL-1(a), Avoidance, Adaptive Reuse, or Appropriate Relocation of Historically Significant Structures, and Mitigation Measure CUL-1(b), Future Site-Specific Surveys and Evaluations, are not satisfied. As discussed above, Mitigation Measure CUL-1(a) would not be satisfied. As such, Mitigation Measure CUL-1(d) would be required and the project applicant would contribute \$82,500 to the City’s façade improvement fund.¹⁶

5.2 MITIGATION MEASURE CUL-5

Mitigation Measure CUL-5, Implement Mitigation Measure CUL-1

Implement Mitigation Measure CUL-1 to mitigate for cumulative impacts.

Applicability of Mitigation Measure CUL-5 to the Proposed Project

Even with implementation of the mitigation measures described above, because the proposed project would demolish Biff’s Coffee Shop, its impacts on that building would remain significant and unavoidable. Therefore, the proposed project would make a cumulatively considerable contribution to significant cumulative impacts on historic resources in the BVDSP area, and Mitigation Measure CUL-5 would apply to the project. As noted in the BVDSP EIR, Mitigation Measure CUL-5 would require implementation of Mitigation Measure CUL-1. As discussed above, Mitigation Measure CUL-1(a) would not be satisfied; therefore, Mitigation Measures CUL-1(c) and CUL-1(d) would apply to the proposed project. Even after implementation of Mitigation Measures CUL-1(c) and CUL-1(d), the project’s contribution to significant cumulative impacts would remain cumulatively considerable (significant and unavoidable).

¹⁶ The fee calculation is based on a building’s perimeter. The typical building perimeter calculation is for two facades (often a corner property or two visible elevations). However, the fee calculation for the proposed project uses the perimeter of Biff’s Coffee House, which is 260 feet, because the building is round and has frontage on all four streets. The calculation is as follows: \$10,000 for the first 25 feet of linear building façade and \$2,500 per each additional 10 linear feet (235 feet), which equates to 23.5 x 2,500 = 58,750 + 10,000 = 68,750 + 13,750 (additional 20 percent for loss of CEQA resource)= \$82,500.

5.3 STANDARD CONDITION OF APPROVAL 32 (STANDARD CONDITION OF APPROVAL 56 IN THE BVDSP EIR)

SCA 32: Property Relocation

Pursuant to Policy 3.7 of the Historic Preservation Element of the Oakland General Plan, the project applicant shall make a good faith effort to relocate the historic resource to a site acceptable to the City. A good faith effort includes, at a minimum, all of the following:

- a. Advertising the availability of the building by (1) posting large, visible signs (such as banners, at a minimum of 3 by 6 feet or larger) at the site; (2) placing advertisements in Bay Area news media outlets that are acceptable to the City; and (3) contacting neighborhood associations and for-profit and not-for-profit housing and preservation organizations;*
- b. Maintaining a log of all the good faith efforts and submitting the log, along with photos of the subject building that show the large signs (banners), to the City;*
- c. Maintaining the signs and advertising in place for a minimum of 90 days; and*
- d. Making the building available at no or nominal cost (the amount to be reviewed by the Oakland Cultural Heritage Survey) until removal is necessary for construction of a replacement project but in no case for less than a period of 90 days after such advertisement.*

Applicability of SCA 32 to the Proposed Project

As discussed above, Option 3 (Relocation), under Mitigation Measure CUL-1(a), is not considered to be a feasible option because this type of intervention would cause significant impacts to the resource, integrity of materials and setting, and would not appreciably reduce the level of impact. Nonetheless, the proposed project would comply with SCA 32.

5.4 STANDARD CONDITION OF APPROVAL 66 (STANDARD CONDITION OF APPROVAL 57 IN THE BVDSP EIR)

SCA 66: Vibration Impacts on Adjacent Historic Structures or Vibration-Sensitive Activities

The project applicant shall submit a Vibration Analysis prepared by an acoustical and/or structural engineer or other appropriate qualified professional for City review and approval that establishes pre-construction baseline conditions and threshold levels of vibration that could damage the structure and/or substantially interfere with activities located at 315 27th Street. The Vibration Analysis shall identify design means and methods of construction that shall be utilized in order to not exceed the thresholds. The applicant shall implement the recommendations during construction.

Applicability of SCA 66 to the Proposed Project

Vibration created during construction of the proposed project would not damage the structure because the proposed project would demolish Biff's Coffee Shop. As such, SCA 66 is not applicable to the proposed project.

APPENDIX A: UPDATED HISTORIC ASSESSMENT OF BIFF'S COFFEE SHOP

MEMORANDUM

DATE August 11, 2015 PROJECT NO. 15149
TO Scott Youdall PROJECT Biff's Coffee Shop
The Hanover Company 315 27th Street, Oakland, CA
OF 2010 Crow Canyon FROM Stacy Farr
Place, Suite 100
San Ramon, CA 94583
CC VIA email

REGARDING: Updated Historic Assessment of Biff's Coffee Shop

The following is an update to Page & Turnbull's 2007 Preliminary Assessment of Biff's Coffee Shop at 315 27th Street in Oakland. In May 2015, representatives of Page & Turnbull and representatives of Structural Engineers, SDE-DSI Engineers visited the building, which has been vacant since the late 1990's. The building is boarded up with plywood at the perimeter of the glazed areas, and existing doors are padlocked with chains. It appears that the electrical service to the building is still operational and a main panel board is in place. However, there is no interior lighting and it does not appear that there are any working utilities in the building.

This updated memo uses the 2007 memorandum as its base, with updated descriptive and historic status information integrated into the text. Refer to Appendix 1 for a structural assessment prepared by SDE-DSI Engineers. Since the date of the original memo, the City of Oakland has prepared an environmental impact report for this portion of Oakland (Broadway Valdez District Specific Plan Environmental Impact Report [BVDSP EIR]). The BVDSP EIR indicates that Biff's Coffee Shop at 315 27th Street has Heritage Property status due to a Landmark Board determination of local register eligibility on January 13, 1997. The building is therefore considered a "historic resource" under the California Environmental Quality Act (CEQA).

Page & Turnbull surveyed the exterior and interior of 315 27th Street and conducted site-specific research using the Oakland Cultural Heritage Survey (OCHS), as well as our own in-house library, to determine the recorded historic status of the building. In 2015, another site visit was made, and additional research was done at the Oakland History Room at the Oakland Public Library, and using additional online sources.

Brief History and Description

According to information collected by the OCHS, Biff's Coffee Shop was designed by Armet & Davis, a Los Angeles-based architecture firm that was already well-known for modern, automobile-age restaurants. The building was constructed between 1962 and 1964 at a cost of \$100,000 for owners Standard Oil of California, simultaneous to the construction of a service station on the same

irregularly-shaped block, bounded by Broadway, 27th Street, Valdez Street, and 26th Street. The two-day grand opening celebration for the combination restaurant and service station started on Friday, May 31, 1963 (**Figure 1, 2**). Although the entire property was owned by Standard Oil, the restaurant was to be operated by Biff's, a Los Angeles-based chain.

The parcel on which both Biff's Coffee Shop and the Standard Oil Station were located was formed in the 1950s, part of modifications made to the existing street grid as part of regional transportation improvements which included the construction of the Grove Shafter Freeway system and the Bay Area Rapid Transit system (BART), which was planned in the late 1950's and constructed in the early 1960's. The freeway project and related local street modifications were done in an attempt to improve regional vehicular congestion on Oakland streets by creating connections between the older urban core and the rapidly developing suburbs to the east. As part of these improvements, local streets were modified to become intermediate feeders from the freeway on- and off-ramps to the existing street grid. Affected streets in the vicinity of Biff's included 27th Street, which was widened from a four-lane street into a divided boulevard from Bay Street to San Pablo Avenue, and Valdez Street, which was widened and reconfigured from Grand Avenue to 27th Street (**Figure3**).

Biff's Coffee Shop is a one story reinforced concrete block structure with large plate glass windows around slightly more than half of the exterior. It is circular (38'-6" in radius according to the original building permit), with entry and utility projections. Wall construction is a combination of load bearing concrete block and wood stud framing with masonry veneer and stucco finishes. The projecting, cantilevered roof structure is supported by a combination of steel girders and wood beams which are supported on thin pipe columns concealed within the window wall and within the interior concrete masonry walls. The roofing is composition, obscured by a broad, encircling plaster fascia. The building has an original conical "roof fence" of wood slats surrounding the mechanical penthouse at the center; the roof fence is visible only from a distance. The site slopes downward from west to east, creating an approximately four foot change in elevation from one side of the building to the other. The building has a perimeter concrete spread footing with integrated floor slab; the concrete slab cantilevers over the foundation on the north, northeast, and east elevations.

The building is ringed by a concrete walkway with diamond shaped embossments. Original renderings show that the building, landscaping, and large tall sign with crossed poles were part of a carefully integrated site composition (**Figure 4**).

The building's primary entrances generally face north towards 27th Street, adjacent to a battered buttress of split-face concrete block. The windows are also generally oriented north and east. The interior arrangement of the building originally included the main dining room at the northeast of the circular building, and service areas towards the southwest. A second smaller banquet room (noted as Dining Room # 2 on the original plans) was located at the western portion of the building, adjacent to a small vestibule housing payphone recesses and the entrance to the toilet rooms.

Original custom detailing included a zig-zag canopy that followed the half-circle counter, terrazzo floors, geometric wood paneling, and a central "exhibition cooking" area which was innovative for its time. The ceiling of the zig-zag canopy was made of a vinyl cover on plaster. It was divided into radiating bays by hard-wood "fins" which enclosed and supported it. The underside of the entry

canopy was of textured plaster inside, and of painted, textured, stucco outside. Elsewhere, the ceiling finish was acoustic tile. The interior was lit by recessed downlights, originally with elongated period-type pendant fixtures throughout the dining area (**Figure 5,6**).

The interior of the building was in very poor condition at the time of the 2015 site visit (**Figures 7-11**). The majority of interior finishes and the original pendant fixtures have been removed, damaged, or have suffered from a lack of maintenance. Remnants of the original interior materials remain, including dark burlap-type wall covering, acoustic ceiling tiles, wood grained linoleum trim at the aluminum window system, a single built-in booth, a wood-paneled wall in the “banquette room,” and heavily damaged terrazzo floor system. Of the remaining interior finishes, the wood paneled wall in the “banquette room” is the most intact.

While a thorough assessment of the exterior was not possible during a site visit due to plywood protection, the exterior aluminum and glass wall system and concrete block outer walls appear to be in good condition. Visible interior portions of the wood structure supporting the battered exterior walls show signs of extreme dry rot. Portions of the underside of the roof structure that are visible through the removed areas of original ceiling look to be in good condition.

Several interior walls project out through the window-wall to the exterior. Although originally intended to be constructed in a stone veneer (according to renderings), they were actually covered with brick. The booths were green naugahyde, each booth was designed to have a telephone, as well as an outlet and counter for a toaster. The restaurant was designed to seat 125 people and cater to families.

The building has had numerous alterations. In 1972, additions were made to the exterior walls at the rear (south) side, of the building, including a new rear wall of curved concrete block with a garage door, which partially extended beyond the overhanging roof. Additional alterations were made in 1975, when the roof fascia was covered in wood shingles creating a mansard-like appearance. At this time, the exterior metal and plexi-glass light fixtures, placed at regular intervals around the roof fascia, were replaced with curved wood-slatted ones. The main entry, which was originally a glassed vestibule recess beneath the curved glass façade, was enclosed with opaque materials and extended outward.

When Chevron closed the building in November 1996, they removed the exterior signage, removed many of the interior fixtures, erected a wire fence around the building, and boarded the windows (**Figure 12,13**). Despite the 1972 and 1975 alterations and the recent removal of various architectural elements, the northern portion of the exterior perimeter of the building is still relatively intact.

However, the general condition of the building is not good. The 1972 and 1975 alterations—including the addition of roof shingles, removal of exterior light fixtures, addition of opaque entrance enclosure, rear addition, interior alterations to the back of house spaces, and removal of original pendant fixtures—have diminished the original character of the building. The building windows are boarded up and covered with layers of graffiti and covering paint, and exterior landscaping has been

allowed to die or overgrow. While the crossed structural supports for the original sign partially remain, the upper portions of the supports and the signboxes no longer exist.

The interior of the building has been heavily gutted since the closing of the restaurant. All salvageable metals including restaurant fixtures, wiring and other systems have been removed, and large holes exist in the concrete/terrazzo floor system. Due to leaks in the roofing system, there is interior water damage and evidence of mold.

The below table includes a chronology of Biff's Coffee Shop, including building permits on file with the City of Oakland, as well as selected other events.

Date	Permit Number	Description
10/24/1962	C5123	Diner built at 26th Street/27th Street and Broadway. Architects: Armet and Davis
5/31/1963		Biff's Coffee Shop and Restaurant and Standard Oil Station open
1/3/1972	C63755	Addition of block in like construction to enclose service pad
10/19/1973	C63755	Fire regulations
12/20/1975	C86175	Shake Shingle exterior roof, remodel bathrooms, new booth dividers, new entrance
4/1/1998		Proposed McChevron plans proposed, but never executed.

Recorded Historic Status

Oakland Cultural Heritage Survey

Biff's Coffee Shop received a rating from the Oakland Cultural Heritage Survey of ***b+3**:

- The “*” is the existing individual property rating of the building, which indicates that the building was not rated due to age-ineligibility.
- The “b+” is the contingency individual property rating of the building, which is given when it is considered that future conditions or circumstances could significantly change, such as "if restored" or "when older" or "with more information." In this case, the contingency rating indicates that the building could potentially be assigned the rating of B+, which is a rating of “major importance.”
- The “3” is the multiple property rating of the building, and indicates that the building is not located within a historic district.

The historic preservation element of the Oakland General Plan Policy 1.2 states that any property which receives an “existing” or “contingency rating” of A, B, or C, and is not already designated as a Landmark, Preservation District, or Heritage property, will be termed a “Potential Designated Historic Property”.

From the findings of the Survey, the City of Oakland Landmarks Preservation Advisory Board determined on January 13, 1997 that Biff's Coffee Shop was eligible to be a City Landmark, although they decided not to put forward its nomination to the Planning Commission.

According to the 1996 OCHS survey form, Biff's is significant,

“particularly for its design quality and materials and type/style and designer. It is not located in a district (3). Its survey rating makes it a historic property under Oakland's Historic Preservation Element. At present it does not appear eligible for individual listing on the National Register.

The California Historical Resources Information System (CHRIS)

The California Historical Resources Information System (CHRIS) is a statewide system for managing information on the full range of historical resources identified in California. CHRIS is a cooperative partnership between the citizens of California, historic preservation professionals, twelve information centers, the CHRIS Hub, and various agencies. This system is under the authority and direction of the Office of Historic Preservation (OHP), the State Historic Preservation Officer (SHPO), and the State Historical Resources Commission (SHRC). The twelve information centers provide archeological and historical resources information to local governments and individuals with responsibilities under the National Environmental Policy Act (NEPA), the National Historic Preservation Act (NHPA), and the California Environmental Quality Act (CEQA).

Biff's II Coffee Shop is listed in the CHRIS database with a status code of 7R, which indicates that the property “Identified in Reconnaissance Level Survey: Not Evaluated.”

Oakland Heritage Property Status

According to the Historic Preservation Element of the Oakland General Plan (Appendix A: Definitions, page A-3), Heritage Property status pertains to properties which appear potentially eligible for Landmark or Preservation District designation because they have either received an existing or contingency rating of A, B, or C from an intensive survey, or have an existing or contingency rating of A or B from the reconnaissance survey, or contribute or potentially contribute to any area potentially eligible for Preservation District designation.

Heritage Properties are designated either by the Landmarks Preservation Advisory Board or City Planning Commission, or provisionally by the Planning Director.

Demolition or removal of Heritage Properties and specified major alterations may be postponed for up to 60 days at the discretion of the Planning Director, with a possible 60-day extension.

Biff's Coffee Shop has Heritage Property status due to a Landmark Board determination of local register eligibility on January 13, 1997. Following guidance provided in Appendix A: Guidance on Historical Resources of the *City of Oakland CEQA* [California Environmental Quality Act] *Thresholds of Significance Guidelines*, dated October 28, 2013, the building is therefore considered a "historic resource" under CEQA

Conclusions

Evaluation of Historic Significance

Biff's Coffee Shop appears individually eligible for the California Register under Criterion 3 (Architecture) as a building that embodies the distinctive characteristics of a type, and as a representative work of a master architect. Biff's is an unusual example of a late Googie-style coffee shop in the San Francisco Bay Area. The building exhibits a number of design features characteristic of the Googie style, including the building's circular shape, "floating" appearance, orientation to the automobile, cantilevered roof, lack of traditional ornament, and use of modern materials such as concrete block and plate glass. Biff's is a rare example of a circular, Googie-style coffee shop in Northern California.

Biff's was designed by Los Angeles firm Armet & Davis, leaders of the 1950s-1960s modern coffee shop architecture. According to architectural historian Alan Hess, author of *Googie: Fifties Coffee Shop Architecture*, Armet & Davis helped establish "Coffee Shop Modern" as a major popular modern style, and their work created the "major physical memory" of this type. Armet & Davis were known for selecting materials that flaunted new shapes and textures. They were an extremely prolific firm, and designed more than 2,000 diners throughout California. Of the many coffee shops they designed, relatively few have survived. Biff's is a representative example of the work of this prolific and influential firm (**Figure 14**).

Evaluation of Integrity

In addition to qualifying for listing under at least one of the California Register criteria, a property must be shown to have sufficient historic integrity to convey its historic significance. The concept of integrity is essential to identifying the important physical characteristics of historical resources and hence, in evaluating adverse changes to them. Integrity is defined as "the authenticity of an historical resource's physical identity evidenced by the survival of characteristics that existed during the resource's period of significance. Seven variables or aspects that define integrity—location, design, setting, materials, workmanship, feeling and association—are used to evaluate a resource's eligibility for listing in both the California Register and the National Register. According to the

National Register Bulletin: *How to Apply the National Register Criteria for Evaluation*, these seven characteristics are defined as follows:

- Location is the place where the historic property was constructed.
- Design is the combination of elements that create the form, plans, space, structure and style of the property.
- Setting addresses the physical environment of the historic property inclusive of the landscape and spatial relationships of the building(s).
- Materials refer to the physical elements that were combined or deposited during a particular period of time and in a particular pattern of configuration to form the historic property.
- Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history.
- Feeling is the property's expression of the aesthetic or historic sense of a particular period of time.
- Association is the direct link between an important historic event or person and a historic property.

There is a critical distinction between the two registers, however, and that is the degree of integrity that a property can retain and still be considered eligible for listing. According to the California Office of Historic Preservation:

It is possible that historical resources may not retain sufficient integrity to meet the criteria for listing in the National Register, but they may still be eligible for listing in the California Register. A resource that has lost its historic character or appearance may still have sufficient integrity for the California Register if it maintains the potential to yield significant or historical information or specific data.

Thus, the California Register may include properties that have suffered a greater degree of damage to their integrity than would be acceptable for listing in the National Register.

Additionally, different aspects of integrity vary in importance depending on under which criteria or criterion a building has been found significant. Buildings significant for association with patterns, events, and persons (Criterion 1 and 2) generally must retain strong integrity of location, setting, feeling and association in order to be able to continue to convey their historic significance. Buildings significant for their architecture (Criterion 3) generally must retain strong integrity of design, materials, and workmanship.

Biff's retains integrity of location because it remains at the site where it was constructed.

Biff's integrity of design is negatively impacted by certain aspects of the 1972 and 1975 alterations, including the removal of the original roof material and replacement with roof shingles, the addition of an opaque entrance enclosure, and the addition of an exterior wall. However, important character-defining features of the building's original design remain, including the circular footprint, "floating"

appearance, orientation to the automobile, cantilevered roof, lack of traditional ornament, and use of modern materials. Overall, the building retains fairly strong integrity of design.

Biff's does not retain integrity of materials and workmanship due to the removal of a significant amount of original material, including the majority of interior finishes, booths (which are in storage), original pendant fixtures, heavily damaged terrazzo floor system, original roof material, and original exterior signage. Although Biff's does retain some of its original materials and workmanship, the overwhelming majority of the character-defining materials and workmanship which enable the building to convey its historic appearance and significance are no longer extant at the building, and therefore Biff's does not retain integrity of materials or workmanship.

Due to the loss of integrity of materials and workmanship, as well as reduced integrity of design and setting (detailed in the following section), Biff's integrity of feeling and association are both low. While the building's shape and siting are generally able to convey its era of construction and its use as a restaurant, changes to some of the building's design elements, the loss of original materials and workmanship, and changes to the setting all combine to disable the building from accurately conveying the aesthetic sense of its era of construction.

In sum, Biff's Coffee Shop retains moderate integrity of design, feeling, association, and setting (detailed below), and does not retain integrity of materials or workmanship due to severe loss of original materials. At this time, the building's integrity is insufficient for listing on the National or California Registers. If the building were rehabilitated to its 1964 appearance, it could be re-evaluated for state and national register listing.

Setting

The integrity of immediate setting of Biff's Coffee Shop is significantly lowered. Although Biff's is situated in Oakland's Broadway Auto Row, the building is set well back from Broadway, at the east portion of its site. The building is viewed primarily from 27th Street, where the circular sweep of the building touches the sidewalk on the site's north-easterly side. When Biff's was constructed, the west portion of the lot included a Standard service station, which faced onto Broadway. The site also included two tall light-box signs atop crossed poles, extensive playful landscaping, a circular outdoor eating area, and parking was arranged so that cars radiated out from the edge of Biff's circular footprint. Of these original site features, the service station and light-box sign have been removed. The radial parking arrangement and the outdoor eating area have been altered. And, the landscaping has either been removed or overgrown through neglect. The majority of the lot is currently paved and used as a surface parking lot.

The integrity of the broader setting of Biff's Coffee Shop remains generally strong, and generally mirrors conditions as they existed when the building was completed in 1964. Biff's can be distinguished from the majority of Auto Row buildings along Broadway by its use, unique style and comparatively late date of construction. Circular in form, it stands on an "island" block amongst the predominantly rectangular façades, and is not so solidly "grounded" as other buildings. Instead of a decorated cornice it has a projecting dominant fascia, and unlike the showrooms, it gives the appearance of "floating".

Despite these differences, the building has a comparative scale with other buildings along Broadway's Auto Row, and does not seem out of place amongst the variety of styles and building types. Furthermore, the building's googie-style architecture ties it to an era of veneration the automobile industry, and thus references the other surrounding automobile-related buildings. The building partially retains its setting because it contributes to the variety of auto-related buildings along Oakland's Broadway Auto Row.

Today and tomorrow you are invited to the
GRAND OPENING

BIFF'S COFFEE SHOP AND OUR NEWEST STANDARD STATION AT 27TH & BROADWAY, OAKLAND

BIFF'S RESTAURANT IN THE ROUND... a handsome circular structure, seating 125 persons and providing ample free parking facilities, will offer twenty-four hour service. Friendly family-style atmosphere for breakfast, luncheon and dinner at popular prices. Banquet room available for business groups. Here's the ideal spot to bring the family for Sunday brunch or a delightful dinner any day of the week.

STANDARD'S NEWEST STATION is open for your inspection. There's a warm welcome awaiting you... and we'll take better care of your car, with the most modern station facilities, a complete line of quality products, and bumper-to-bumper service, too. We'll be open twenty-four hours a day, seven days a week for your motoring convenience. You will appreciate the care your car gets at the sign of the Chevron.

COMPLIMENTARY GIFTS!

When you visit Biff's and our new station during this opening celebration, we'll have free gifts: gardenia-rose corsages... ball-point pens... handy car sponges... Color-Guard auto polish... pinwheels and Orbiters for the children. We'll be looking forward to seeing you.

**APPENDIX B: ECONOMIC ASSESSMENT OF BIFF'S COFFEE SHOP DEVELOPMENT
ALTERNATIVES**

MEMORANDUM

To: Scott Youdall
The Hanover Company

From: Richard Berkson, Berkson Associates

Subject: Economic Assessment of Biff's Coffee Shop Development Alternatives,
315 27th Street, Oakland, CA

Date: September 30, 2015

As you requested, Berkson Associates (BA) has prepared an independent assessment of the financial viability of the existing Biff's Restaurant at 315 27th Street in Oakland as required by the City of Oakland for demolition of historic properties. This analysis is necessary in order for The Hanover Company (the "Developer") to build its Proposed Project on the site.

First, the City requires that the Proposed Project, which would replace Biff's, be shown to generate a reasonable economic return. Second, the applicant must demonstrate whether a project (the "Avoidance Option" and "Adaptive Reuse") that includes the historic property would generate reasonable returns. The City also requests that estimates of public benefits be provided to support the City's required findings.

In preparing the analysis, BA has reviewed, and revised where appropriate, cost estimates prepared by the Developer and its consultants, potential lease rates for residential and commercial uses, and measures of return based on prevailing market rates and industry standards. BA utilized City budget documents and information from similar projects to estimate public benefits. The analysis generally assumes current lease rates, and does not reflect potential inflation or appreciation.

The primary measure of feasibility is whether the value created by development exceeds the cost of development by a profit margin of at least 15 percent. A 15 percent measure (the “Return on Investment”, or “ROI”) is the minimum that would be necessary to attract investment capital given the potential risks, timing, and returns of a development project of this nature, therefore, any ROI below 15%, including a negative ROI, is considered infeasible. ROI is calculated by dividing the margin by the development costs. “Margin” is the value of the project minus the development costs; a negative margin is called a “shortfall”. Any development in which the costs exceed the value, and hence a shortfall exists, would have a negative ROI, which is considered infeasible. “Value” is calculated by dividing the Net Operating Income (NOI) of the development by a “cap rate”.

Cap rates reflect the NOI expected by purchasers of income-producing property as a percent of the purchase price. In other words, capitalizing the NOI yields the maximum price a buyer would pay for the development in order to obtain annual returns at least equal to the cap rate; a higher price would mean lower returns for a given NOI.

The current analysis assumes a residential cap rate of 4.75 percent. Nationally, cap rates for infill multi-family average 4.75 percent for Class A properties, and 3.5-4.0 percent in San Francisco;¹ while the Oakland market is strengthening, it has not achieved the same level of demand exhibited by the San Francisco market, thus a slightly higher cap rate is assumed. Neighborhood/Community Retail cap rates in San Francisco vary from 4.5 to 7.0 depending on class; a conservative cap rate of 6.5 percent is assumed, considering that Uptown Oakland, while it presents strong growth prospects, currently does not have a base of national retail, and its historically weak retail environment presents risks that support a cap rate towards the upper end of the range. A liberal 6.5 percent cap rate is applied to Biff’s, although as a standalone restaurant at the upper end of the Uptown area, a higher rate of 7 percent could be justified.

The analysis helps answer questions raised by the City’s requirements for demolition of historic properties; it is not intended to represent an investment recommendation. Actual financial outcomes of development options will vary from those shown depending on refined project and tenanting programs, and future investment, market, and economic conditions that will influence costs and revenues at the time of development and operation.

Summary of Findings

1. A rehabilitated Biff’s cannot generate a reasonable economic return. The costs to rehabilitate Biff’s for operation as a restaurant, and to restore its historical integrity, exceed the potential revenues and value of a freestanding restaurant operation, with a

¹ CBRE North America Cap Rate Survey First Half 2015.

shortfall of nearly \$1.5 million, which amounts to a negative ROI; therefore, this option is infeasible. Development of the site for a restaurant use, notwithstanding the inability for revenues to cover costs, would generate a land value that is less than the value to be gained by using the site for leased parking, which further reduces economic motivations to restore Biff's. Potential historic tax credits and Mills Act property tax reductions have been included in the analysis, but these reductions do not contribute enough to make this scenario feasible.

2. The Proposed Development, which replaces the current use, can generate a reasonable economic return. As described in this memorandum, development of the site for a mixed-use project as proposed by the Developer is likely to generate reasonable economic returns. The value created by the Proposed Project exceeds development costs and produces an ROI of 16.1 percent; therefore, this option is feasible.

3. The Avoidance Option cannot generate a reasonable economic return. Inclusion of Biff's as a freestanding restaurant operation with a mixed-use project reduces the number of potential new residential units and retail space compared to the Proposed Project, and significantly increases total development costs in addition to the subsidy required by Biff's. The value created does not cover development costs, with a shortfall of \$17 million, and a negative ROI. The development of Biff's concurrent with a larger project on the site could benefit from certain cost efficiencies, however Biff's would still require a substantial subsidy. The shortfall and negative ROI render this option infeasible.

4. An Adaptive Reuse Option with the same number of residential units as the Proposed Project does not generate reasonable economic returns. The amount of retail space is significantly less than the Proposed Project due to a smaller footprint. The taller structure is assumed to cost the same per residential unit as the Avoidance Option, but reduced retail revenues result in a value of \$134.9 million, significantly below development costs of \$141.1 million, resulting in a shortfall of \$6.2 million and a negative ROI. Consequently, this option is infeasible.

5. The Proposed Development generates significantly greater public economic benefits by comparison to Biff's. A restored Biff's will produce additional tax revenues and economic activity; however, those benefits are minimal relative to the Proposed Project.

Financial Review of Biff's Restoration

The City's Demolition Findings require a finding that the demolished use cannot generate a reasonable economic return.² The current analysis compares development costs to the potential revenues and value of a restored building operating as a

² City of Oakland Demolition Findings for Category I Historic Properties, Finding 1.

restaurant to assess its financial feasibility and ability to generate reasonable economic returns to a developer. As described below, rehabilitation of Biff's is not financially feasible.

Biff's Coffee Shop formerly occupied the 5,288 gross square feet (gsf) circular building located at 315 27th Street in Oakland. 27th Street, 26th Street, and Broadway bound the 1.1-acre site. Built in the early 1960's, the building has been vacant since 1996. According to an assessment of the building's condition and historic status, the general condition of the building is "not good" and the interior was observed by the assessment to be "in very poor condition" at the time of a 2015 site visit.³ Consequently, significant expenditures would be required to restore the building.

Feasibility of Development

As shown in **Table 1**, Biff's \$2.5 million capitalized value, post-renovation, is significantly less than the \$4 million cost of development (net of potential tax credits). With a shortfall of approximately \$1.5 million and a negative ROI, investment capital will not flow to the project because it would not produce value sufficient to fund its costs and generate reasonable returns to the investor. Therefore, the renovation of Biff's as a restaurant would not be financially feasible.

Another factor working against the site's potential development is the land value produced to the owner of the property. The return and corresponding land value of a 5,000 square foot operating restaurant, even if financially viable, is going to be less than the annual revenues and land value that is and can continue to be derived from leasing the majority of the site for vehicle parking. This parking option requires no further investment, improvements or risk; consequently, the landowner has no incentive to undertake a renovation even if a restaurant renovation could be financially viable.⁴

The following sections describe estimated development costs and revenues that provide the basis for the feasibility conclusions herein.

³ Updated Historic Assessment of Biff's Coffee Shop, Page & Turnbull, August 11, 2015.

⁴ For example, land value for the restaurant operation could be approximately \$500,000, assuming a standard land value of 20% of total value; applied to the approximate half acre required for Biff's building and parking results in a value of \$1 million per acre. This value is less than the value of sites leased for parking in the area that can yield \$150,000 to \$200,000 per year per acre in net lease revenue, and more than \$2 million per acre in land value (7% cap rate).

Table 1
Feasibility of Restoration of Biff's Restaurant (No Project)

Item	Factor	Amount
PROJECT DESCRIPTION		
Restaurant space (Biff's)	5,288 sq.ft. (gross leasable)	
Total Site Area	1.1 acres	
Parking	surface	
REVENUES		
Gross Effective Income (1)	\$2.50 sq.ft./month	\$158,600
Mills Act Property Tax Benefit (2)		10,500
(less) Operating Expenses (1)	5.0%	<u>(7,900)</u>

DEVELOPMENT COSTS (3)		
Federal Historic Tax Credits (4)		<u>(437,500)</u>
Net Development Cost		\$3,994,200
Capitalized Value (5)	6.5%	\$2,480,000
Margin or (shortfall)		(\$1,514,200)
Return on Investment		-37.9%

Source: Berkson Associates; The Hanover Company.

(1) Assumes NNN rents; landlord expenses include capital reserves, legal, accounting.

(2) Assumes that tenant tax benefit translates to increased lease revenue.

See Table A-2 for additional detail.

(3) See Table A-1 for more detail. Costs exclude potential land cost.

Note: costs shown for stand-alone Biff's (no other development on the site) are greater than Biff's costs shown in "Avoidance Option" due to smaller project.

Additionally, some of the costs shown in this table are factored in the pro forma for the "Avoidance Option" project.

(4) If Biff's qualifies for historic tax credits, the estimate assume 20% credit for hard costs (exc. equipment, soft costs). Sale of credits assumed at 90% of value.

(5) The Capitalized Value is the NOI divided by the cap rate. Biff's is capitalized at 6.5%.

Development Costs

Estimates of development costs total approximately \$4.4 million, which would be partially offset by historic tax credits. These costs assume building rehabilitation to its 1964 appearance, sufficient to be considered for state and national historic register listing. The construction would also meet all modern seismic and green building

standards, and the building restored for use as a restaurant. Costs are generally described below, and further detailed in the attached **Table A-1**.

The costs include all development costs likely to be incurred not only for building restoration, but also for site improvements, construction, and build-out necessary for restaurant operation, including an allowance for tenant improvements. As a stand-alone project, costs are likely to be greater than if the project were part of a larger development, as described below for the “Avoidance Option,” due to the additional risk and reduced economies of scale for a project of this size. Land costs are included, assuming a standard of 20 percent of value attributable to land.

Cost estimates are based on a structural assessment prepared by DCI+SDE Engineers for a retrofit scheme utilizing the original architectural plans for the building.⁵ Soft costs are included for design, project management and overhead. Certain factors, for example contingencies at 7 percent and developer fees at 6 percent, are higher for the stand-alone Biff’s relative to a larger project, such as the “Avoidance Option”. Other costs, such as finance and interest charges, are included in the cost estimates. With the “Avoidance Option” and “Adaptive Reuse Option”, those costs are part of the overall project pro forma estimates and are separate from the Biff’s-specific cost estimates.

Potential Funding Sources for Historical Improvements

The restoration of Biff’s potentially could qualify for and benefit from various programs intended to improve the financial feasibility of historical renovations. Programs include tax credits and Mills Act property tax reductions, which have been considered in the feasibility analysis.

Federal Tax Credits – Historic tax credits are provided by the federal government to encourage the preservation and adaptive reuse of certified historic and older buildings (built before 1936). This analysis assumes Biff’s qualifies for the Federal Historic Register and qualifies for 20% credits. The credits are applied to hard costs, and reduced by 10 percent to reflect the sale of the tax credits. The actual amount of credits will depend on eligible costs that may vary from those shown.

Mills Act Property Tax Reductions – The Mills Act provides 10 years of reduced property tax in return for historic rehabilitation for buildings in the City of Oakland. Eligible buildings require a historic designation by the City of Oakland. This analysis assumes the Biff’s building would meet the requirements to qualify for the reductions. The Mills Act allows for the assessment of property based on the “income approach”; in some cases, particularly residential property, the resulting value may be less than the market value or sales price; however, there generally is minimal benefit to commercial properties which are typically valued and assessed based on potential income in any case. The

⁵ Preliminary Structural Evaluation Report for the 2630 Broadway Street Building, DCI+SDE Project No. 15081-0072, June 19, 2015.

Mills Act calculation (see **Table A-2**, attached) generally uses a higher cap rate to determine value than most market transactions, resulting in a lower assessed value. The financial review assumes that the benefits of the property tax reduction, although received by the tenant through the triple-net lease, will pass-through to higher lease revenues that can be paid to the building owner.

This analysis assumes that the renovation will qualify for the financial benefits of these programs, however, there will be some additional costs to apply for the programs, and risks that the project will not benefit at the assumed levels.

Potential Value

A review of asking lease rates and discussions with retail brokers familiar with the market indicate a range of \$2.25 to \$3.00 per square foot per month (NNN)⁶ for restaurant space in the Uptown area. It is possible that a tenant may be willing and able to pay a net rent slightly greater than \$3.00, however, this would not change the feasibility findings unless net rents exceeded \$5.00 per square foot, which is unlikely.

The analysis assumes a midrange rent, given the site's location at the northernmost end of what is generally considered "Uptown", and its relative distance from the concentration of other retail, residential and commercial activity in the Uptown area. Given the location, configuration and character of the building and its restoration as a 1960's style diner, it is less likely to attract a high-end restaurant willing and able to pay higher rents. Actual rents ultimately will depend on negotiations with specific tenants, and depend on the nature and type of restaurant, as well as future restaurant demand.

The potential value of the property, for example the value that a developer/owner could obtain through a sale is estimated by calculating a "capitalized value". This is the value derived by dividing potential annual net operating income (NOI) by a "cap rate". The cap rate generally represents the ratio between sales prices and NOI as indicated by sales, and is influenced by returns expected by the purchasers. For the purpose of this analysis, a liberal 6.5 percent cap rate is applied to projected NOI to estimate a value for the property as a retail use. However, it should be noted that a stand-alone restaurant is likely to represent a greater level of risk than typical retail uses; therefore a higher cap rate, e.g., 7 percent or greater, would likely apply, which would reduce the property's total value.

Financial Review of Proposed Project

The City's Demolition Findings require a finding that the development replacing a demolished use will generate a reasonable return.⁷ The current analysis compares

⁶ "NNN" refers to a triple-net lease whereby the tenant is responsible for the majority of expenses including utilities, property taxes, insurance and maintenance.

⁷ City of Oakland Demolition Findings for Category I Historic Properties, Finding 1.

development costs to the potential revenues and value of the Proposed Project to assess its financial feasibility and ability to generate reasonable returns to a developer. Based on conservative estimates of development costs and revenues described below, the Proposed Project is financially feasible.

As described in the Draft Historical Mitigation Compliance Analysis,⁸ the Proposed Project would demolish the existing Biff's building and surface parking lot and construct a new 7-story mixed-use building with an area of approximately 423,577 gross square feet (gsf). The Proposed Project would create approximately 255 residential units and up to 37,710 gsf of retail space, including 9,400 gsf of mezzanine retail space. Parking would be provided by three below-grade levels, which would accommodate 299 parking spaces.

Feasibility of Development

As shown in **Table 2**, the Proposed Project generates \$147.1 million in value that exceeds its \$126.7 million development costs by a margin of \$20.4 million, which is an ROI of 16.1 percent, supporting a finding of financial feasibility. Based on industry-wide feasibility standards, ROIs for a mixed-use development project of this scale, cost and risk should be at least 15 percent or more to attract capital investment.

Development Costs

Estimated development costs total approximately \$126.7 million, which falls within an expected range of \$450,000 to \$500,000 per unit, including land cost, based on a review of other similar developments. The range varies depending on unit sizes, amount of retail space, building design and configuration.

In addition to "hard" construction costs for site development, utilities, development costs include finance costs, developer fees, design and engineering, and soft cost contingencies. The costs fall within industry norms.

Potential Value

Residential lease rates estimated for the Proposed Project, which average \$2,938 per month,⁹ fall within a reasonable range for the current Oakland market for Class A apartment properties. Continued growth in residential demand, increased occupancy of buildings in Uptown Oakland by tech firms, and new development in the area supports strong prospects for unit occupancies and lease rate growth.

Source: Berkson Associates; The Hanover Company.

(1) Based on review of rents projected by Developer; (does not include rent inflation).

(2) Avg. effective rent \$3.70/sq.ft., 794 sq.ft./unit.

(3) Other Income includes parking, storage, other misc. fees.

(4) Assumes NNN rents; landlord expenses include capital reserves,

Rents vary between \$2.90 and \$3.00/sq.ft., depending on size and amenities.

(5) Vacancy rates vary from 5% (residential and other) to 10% (retail).

(6) Expenses include salaries, utilities, marketing, management, taxes and insurance.

(7) Assumes residential cap rate of 4.75, retail cap rate of 6.5, or a weighted avg. of 4.9%.

The Capitalized Value is the NOI divided by the cap rate.

Prevailing retail rents and prospects for continued growth in the Uptown area also support the Developer's anticipated retail lease rates. The Developer anticipates retail leases in the \$2.90 to \$3.00 range¹⁰ for its new space, including large format retail space with Broadway frontage that could appeal to a national retailer. The Developer anticipates growth in future lease rates, however these increases have not been factored into the current analysis to provide a conservative estimate of revenues.

The total capitalized value of the Proposed Project is estimated at \$147.1 million. This value is derived by applying cap rates of 4.5% and 6.5% to the residential NOI and retail NOI, respectively, which is approximately a 4.9% blended average. As noted above in the discussion of the feasibility of the proposed project, this value produces a margin in excess of development costs, with a resulting ROI of 16.1 percent, which is considered feasible.

Financial Review of Avoidance Option

The City's Demolition Findings require a finding that it would be "economically ... infeasible to incorporate the historic building into the proposed development".¹¹ The current analysis compares development costs to the potential revenues and value of the Avoidance Option, which includes a restored Biff's, to assess its financial feasibility and ability to generate reasonable returns to a developer or investor. For the reasons described below, the Avoidance Option is not financially feasible.

The Draft Historic Mitigation Compliance Analysis describes an Option 1 (Avoidance) to mitigate impacts of the Proposed Project on historical resources (Biff's). Under the Avoidance Option, a new multi-story mixed-use building would be built to the west of Biff's Coffee Shop. The existing Biff's Coffee Shop building would remain and be restored as a freestanding structure on a separate parcel. The restored building would re-establish the original restaurant use. The original construction drawings by Armet & Davis (1962) would be used as the basis of design for restoration of the exterior and interior.

The mixed-use 10-story building would include 181 residential units, a reduction of 74 units compared to the Proposed Project. Retail square footage onsite would be reduced by 24,846 gsf to a total of 12,224 gsf (plus Biff's 5,288 gsf on a separate parcel). 166 parking spaces would be provided in three basement levels.

Feasibility of Development

As shown in **Table 3**, the \$91.8 million capitalized value of the Avoidance Option is significantly less than the \$108.8 million costs of development (net of potential tax

¹⁰ Retail lease rates are per leasable square foot per month, NNN.

¹¹ City of Oakland Demolition Findings for Category I Historic Properties, Finding 4.

credits and including property tax reductions potentially attributable to the restoration of Biff's), a shortfall of \$17 million and a negative ROI. This negative result is due to a reduction in units and retail space, coupled with a corresponding significant increase in costs per square foot as a result of a taller and narrower building requiring a more expensive type of construction. The shortfall and negative ROI indicate an infeasible project.

Development Costs

Estimated development costs total approximately \$108.8 million (after tax credits). Although these total development costs are lower than the Proposed Project, the cost per unit increases by roughly \$100,000, or over 20%, due to the fixed costs such as land and design being allocated among less units, and construction costs increasing as the building height increases to 10 stories, requiring a more costly type of structure.¹² Depending on specific design considerations, it is possible that construction costs can increase by as much as one-third. Certain major structural costs won't decline in direct proportion to reduced floor area. For example, significant costs will still be required for three basement levels, and elevator and utility shafts are still needed, which are spread amongst fewer total units.

In addition to "hard" construction costs for site development and utilities, development costs include finance costs, developer fees, design and engineering, and soft cost contingencies. The soft costs are within industry norms.

Potential Value

Residential lease rates for the Avoidance Option are assumed to be comparable to those expected for the Proposed Project, which average \$2,938 per month.¹³ Similarly, retail lease rents are assumed comparable to the Proposed Project at \$3.00 per square foot, although there will be significantly less retail space and reduced frontage along Broadway, reducing the viability and attractiveness of the space for a national retailer.

Biff's revenues are included in the total value of the project, as well as the benefit from Mills Act property tax reductions and potential historical tax credits. Lease revenues of \$2.50 per square foot are assumed.

The total capitalized value of the Avoidance Option is estimated at \$96.7 million. This value is derived by applying cap rates of 4.5% and 6.5% to the residential NOI and retail NOI, respectively, which is a 4.9% blended average. Biff's NOI is capitalized at a 6.5 percent rate. As noted above, this value is less than development costs, resulting in a shortfall of \$17 million and a negative ROI.

¹² The BA analysis increases construction costs by approximately \$75 per square foot for residential units, or about a 20% increase compared to the Proposed Project.

¹³ Unit sizes average 794 square feet.

Table 3
Feasibility of Avoidance Option

Item	Factor	Amount
PROJECT DESCRIPTION		
Residential Units	181 units	
Retail Space	12,224 sq.ft.	
Restored Biff's	5,288 sq.ft.	
Total Site Area	1.1 acres	
Parking	166 garage spaces	
REVENUES		
Residential Income (1)	\$2,938 /unit/month	\$6,381,300
Other Income (2)		328,200
Retail (3)	\$3.00 sq.ft./month	440,100
Biff's	\$2.50 sq.ft./month	<u>158,600</u>
Subtotal		7,308,200
Mills Act Property Tax Benefit		7,200
(less) Vacancy (4)		-379,500
(less) Operating Expenses (5)		<u>-2,407,200</u>
Subtotal		-2,779,500
		\$4,528,700
ANNUAL NOI		
DEVELOPMENT COSTS		
Biff's Restoration (6)		\$3,523,400
Other Development Costs		<u>105,735,500</u>
Subtotal		109,258,900
(less) Federal Historic Tax Credits		<u>(437,500)</u>
Net Development Cost		\$108,821,400
Capitalized Value (7)	4.9%	\$91,813,000
Margin or (shortfall)		(\$17,008,400)
Return on Investment		-15.6%

Source: Berkson Associates; The Hanover Company.

(1) Avg. effective rent \$3.70/sq.ft., 794 sq.ft./unit.

(2) Other Income includes parking, storage, other misc. fees.

(3) Assumes NNN rents; landlord expenses include capital reserves,
Rents vary between \$2.90 and \$3.00/sq.ft., depending on size and amenities.

(4) Vacancy rates vary from 5% (residential and other) to 10% (retail).

(5) Expenses include salaries, utilities, marketing, management, taxes and insurance.

(6) Biff's restoration assumes development occurs as part of Avoidance Project,
certain overhead and soft costs are included in the Avoidance Project development.

(7) Assumes residential cap rate of 4.75, retail cap rate of 6.5, or a weighted avg. of 4.9%.

The Capitalized Value is the NOI divided by the cap rate. Biff's is capitalized at 6.5%.

Financial Review of Adaptive Reuse Option

The Draft Historic Mitigation Compliance Analysis evaluates a second option, the “Adaptive Reuse” Option, which would connect Biff’s to a new multi-story mixed-use building that would be built to the west and south of Biff’s Coffee Shop.

This option¹⁴ has been refined to increase heights above those of the Avoidance Option in order to achieve the 255 residential units of the Proposed Project. However, site limitations constrain the amount of retail space to a total of 16,700 gsf, which is less than half of the 37,710 gsf of the Proposed Project.

Feasibility of Development

Table 4 shows that this option produces \$134.9 million of capitalized value, which is insufficient to cover its \$141.1 million development costs; this option produces a shortfall of \$6.2 million and a negative ROI.

Development Costs

Total development costs (net of potential tax credits) are estimated to be \$141.1 million. Residential costs per unit and retail costs per square foot are approximately the same as for the Avoidance Option. The cost of Biff’s restoration is estimated to be less than a stand-alone restaurant because it would share utilities with the mixed-use building, and would be developed without the interior historic finishes. It is assumed that the tenant’s lease would include an allowance for tenant improvements.

Potential Value

Residential lease rates for the Adaptive Reuse Option are similar to those for the Proposed Project and Avoidance Option, at \$2,938 per month. Retail lease rates are assumed to be \$2.50 to \$3.00 per square foot,¹⁵ and Biff’s is assumed to be \$2.50 per square foot due to its unconventional configuration, although lease rates may differ depending on its ultimate tenant.

The total capitalized value of the Adaptive Reuse Option is estimated at \$134.9 million. This value is based on the same cap rates as for the other options, which are 4.5% and 6.5% applied to the residential and retail NOIs, respectively. As noted above, this value is less than development costs and produces a shortfall of \$6.2 million and a negative ROI, therefore this option is infeasible.

¹⁴ Adaptive Reuse Option 2, Scenario 3, Draft Historic Mitigation Compliance Analysis.

¹⁵ 4,476 sf of Lower level retail is assumed to lease at \$2.50/sf.

Table 4
Feasibility of Adaptive Reuse Option

Item	Factor	Amount

(1) Avg. effective rent \$3.70/sq.ft., 794 sq.ft./unit.

(2) Other Income includes parking, storage, other misc. fees.

(3) Assumes NNN rents; landlord expenses include capital reserves,
Rents vary between \$2.50 and \$3.00/sq.ft., depending on size and amenities.

(4) Vacancy rates vary from 5% (residential and other) to 10% (retail).

(5) Expenses include salaries, utilities, marketing, management, taxes and insurance.

(6) Biff's restoration assumes development occurs as part of Adaptive Reuse Project,
resulting in cost reductions, efficiencies, and cost transfer to Adaptive Reuse pro forma.

(7) Assumes residential cap rate of 4.75, retail cap rate of 6.5, or a weighted avg. of 4.9%.

The Capitalized Value is the NOI divided by the cap rate. Biff's is capitalized at 6.5%.

Economic Benefits

The City's Demolition Findings require an analysis of public benefits for the existing use and the replacement development.¹⁶ As shown in **Table 5**, potential economic and fiscal benefits to the City of Oakland, including new tax revenues, are significantly greater for the Proposed Project compared to those that could be generated by a restored Biff's.

Other than the benefits shown, a restored Biff's is unlikely to have a significant impact on economic value or activity in the area. Biff's does not contribute to a historic district, and as noted in the Draft Historic Mitigation Compliance Analysis, "... integrity of the immediate setting for Biff's Coffee Shop has been significantly lowered. Although Biff's Coffee Shop is situated in Oakland's Broadway Auto Row, the building is set well back from Broadway on the east portion of its site. The building is viewed primarily from 27th Street where the circular sweep of the building touches the sidewalk on the site's northeasterly side."¹⁷ The integrity of the broader setting "remains generally strong",¹⁸ however, no significant impacts on local tourism, spending or property values of other properties is likely to occur with renovation of Biff's.

Following are specific discussion points raised by the City's Demolition Findings:

a. Benefits to the tourism industry – As noted above, the current use, if rehabilitated and operated as a restaurant, is unlikely to provide benefits to the City's tourism industry; the site is relatively isolated from other Uptown area retail uses, and it would not contribute to a historic district that would draw tourists. As determined in this memorandum, a restored Biff's is not financially feasible, and therefore the site, in the absence of the Proposed Project, is likely to remain in a blighted, dilapidated state that detracts from the image and visitor experience intended by the Broadway Valdez District Specific Plan (BVDSP) for the area.

b. Benefits to other property owners and renters in the area – As stated in the preceding paragraph, a rehabilitated Biff's is not likely to provide a significant benefit to other property owners or renters due to its relative isolation from other Uptown retail area, as well as the small size of the building and use. Because of the lack of feasibility, the current use is likely to remain a blighting influence upon the area.

The Proposed Project would contribute approximately \$82,500 to the City's Façade Improvement Program that would benefit other businesses in the area and the City, and upgrade the urban environment for renters and residents. The addition of new

¹⁶ City of Oakland Demolition Findings for Category I Historic Properties, Finding 1, submittal item #5.

¹⁷ Draft Historic Mitigation Compliance Analysis.

¹⁸ Draft Historic Mitigation Compliance Analysis.

residents by the Proposed Project would increase expenditures at local businesses, and improve the retail environment consistent with objectives of the BVDSP.

c. Services provided to the community, including social services – The current Biff’s, if rehabilitated, would generate minimal new tax revenues (approximately \$26,000 annually) to help fund public services in the City. As shown in **Table 5**, the Proposed Project would generate over \$800,000 annually that could contribute to the funding of social and other services to the area and to the City.

d. Housing and jobs opportunities – The rehabilitation of Biff’s provides no new housing opportunities, and may add up to 18 annual, ongoing restaurant jobs, as shown in **Table 5**. The Proposed Project would add 255 residential units and create over 140 jobs primarily related to new retail.

In addition to the economic considerations described above, the Proposed Project would contribute in a variety of ways to improving land use conditions, including helping to achieve objectives of the BVDSP. Proposed Project mitigations requiring recordation and public interpretation of Biff’s historical structure would contribute to increased understanding of its significance.

Table 5
Summary of Estimated Economic and Fiscal Benefits

Item	Alternative	
	Biff's (No Project)	Proposed Project
Development Value		
Total Value (1)	\$2,480,000	\$165,122,000

Business License Tax (11)	\$6,100	\$48,100
Utility Consumption Tax (12)	\$900	\$58,150
	\$26,600	\$862,650
One-Time Revenues		
Property Transfer Tax (upon sale) (13)	\$37,200	\$2,476,800

Notes to Table 5

- (1) Values based on capitalized value of Net Operating Income.
 Inflation of rents and costs not included.
 Biff's includes estimated property tax benefits of Mill's Act.
- (2) Development costs include all hard and soft costs.
- (3) Household income based on minimum income required, given anticipated prices (assumes rent is 35% of average income).
- (4) Assumes 30% of income spent on retail.
- (5) Retail/restaurant sales assume \$300/sq.ft.
- (6) Residential jobs include landscape maintenance, domestic services, etc.
 Retail jobs assume 300 sq.ft./job.
- (7) Construction jobs assume 25% of costs are wages, and avg. wage (BLS) is \$61,490.
- (8) Property tax represents the City General Fund share, post-ERAF, net of existing tax.
- (9) City General Fund 1% sales tax.
- (10) Property Tax in lieu of Vehicle License Fees (PTVLF) based on increase in City a.v. (\$45bill., FY14) and its proportionate increase on City PTVLF (\$33 mill., FY14).
- (11) Business License Tax of \$336/employee based on FY14 revenue/total jobs in the City.
- (12) Utility consumption tax based on \$100/service population, which is equal to residents and 50% of employees, times the service population of each alternative.
- (13) Property transfer tax collected upon sale of building, at \$15/\$1,000 of value.

PRELIMINARY GEOTECHNICAL EXPLORATION

Dear Ms. Gates:

With your authorization, we performed a preliminary geotechnical assessment for the property located at 2630 Broadway in Oakland, California. This report presents our geotechnical observations, as well as our preliminary conclusions and recommendations for the project. We also provide preliminary site grading, drainage, and foundation recommendations for use during land planning.

Based upon our initial assessment, it is our opinion that the proposed mixed-use development is feasible from a geotechnical standpoint. A design-level exploration should be conducted prior to site development once more detailed land plans have been prepared.

We are pleased to have been of service on this project and are prepared to consult further with you and your design team as the project progresses. If you have any questions regarding the contents of this report, please do not hesitate to contact us.

Sincerely,

ENGEO Incorporated

1.0 INTRODUCTION

1.1 PURPOSE AND SCOPE

The purpose of this preliminary geotechnical assessment, as described in our proposal dated January 19, 2015, is to provide an assessment of the potential geotechnical concerns associated with the use of the site for the proposed mixed-use development. The scope of our services included a site visit, review of published geologic maps, review of readily available geotechnical and/or environmental reports for the site, advancing three cone penetration tests (CPTs) up to 42 feet deep and preparation of this report identifying potential geotechnical hazards.

This report was prepared for the exclusive use of our client and their consultants for evaluation of this project. In the event that any changes are made in the character, design or layout of the development, we must be contacted to review the preliminary conclusions and recommendations contained in this report to determine whether modifications are necessary.

1.2 PROJECT LOCATION

The project site is located at 2630 Broadway in Oakland, California as shown on Figures 1 and 2. The project site is bordered to the north by 27th Street, to the west by Broadway, to the south by 26th Street, and to the east by a short driveway between 26th and 27th streets. A vacant one-story circular commercial building (restaurant) is located on the northeast corner of the site and the site is currently being used as a parking lot for a car dealership. A temporary structure near the center of the site is currently used as a sales office. The existing development in the vicinity generally consists of retail and commercial structures.

1.3 PROJECT DESCRIPTION

Preliminary architectural plans by TCA Architects dated April 27, 2015, show that the proposed improvements consist of a podium-type structure with utility and commercial spaces on a 20-foot-high first story below 6 stories of residential units. The building includes 5 levels of wood-frame structure, 2 levels of concrete podium structure, and 3 levels of concrete subterranean parking structure. The ground surface elevation on the east side of the site is shown to be 12 feet lower than the ground surface elevation on the west side (Broadway side). Three parking levels to an approximate depth of 32 feet below ground surface (bgs) on the Broadway side and two parking levels to an approximate depth of 20 feet bgs are also shown. Based on the feedback from the Structural Engineer, we understand that building loads are relatively large (between 900 kilo-pounds to 1,250 kilo-pounds maximum column service load).

2.0 FINDINGS

2.1 FIELD EXPLORATION

Our preliminary field exploration included advancing three Cone Penetration Tests (CPTs) at the locations shown on Figure 2. We performed our field exploration on April 29, 2015. In addition,

we partially observed the explorations performed for environmental sampling along with our environmental engineering team on May 5, 2015.

The locations of our explorations are approximate and were estimated by pacing from features shown on the site plan; they should be considered accurate only to the degree implied by the method used.

We retained a CPT rig to perform the cone penetrometer testing to a maximum depth of approximately 42 feet. The CPTs were performed in general accordance with ASTM D-3441. Measurements collected during testing include the tip resistance to penetration of the cone (Qc), the resistance of the surface sleeve (Fs), and pore pressure (U) (Robertson and Campanella, 1988). CPT logs are presented in Appendix A.

2.2 GEOLOGY AND SEISMICITY

2.2.1 Geology

According to Graymer's "Geologic Map and Map Database of the Oakland Metropolitan Area, Alameda, Contra Costa, and San Francisco Counties, California" dated 2000, the majority of the site is underlain by Holocene age Alluvial and Fluvial fan deposits (Qhaf) as shown on Figure 3.

2.2.2 Seismicity

The site is not located within a State of California Earthquake Fault Zone. Numerous small earthquakes occur every year in the San Francisco Bay Region and larger earthquakes have been recorded and can be expected to occur in the future. Figure 3 shows the approximate locations of these faults and significant historic earthquakes recorded within the Greater Bay Area Region. The most common nearby active faults within 25 miles of the site and their estimated maximum earthquake magnitudes based on the USGS fault database are provided in the following table. An active fault is defined by the State Mining and Geology Board as one that has had surface displacement within Holocene time (about the last 11,000 years) (Hart and Bryant, 1997). Figure 4 shows the approximate location of active and potentially active faults and significant historic earthquakes mapped within the San Francisco Bay Region.

TABLE 2.2.2-1
Regional Faults

Fault Name	Approximate Distance (miles)	Estimate of Maximum Magnitude
Hayward	2.7	7.1
Calaveras	14	6.8
San Andreas	15	7.9
Concord - Green Valley	16	6.9
San Gregorio	19.0	7.3

Fault Name	Approximate Distance (miles)	Estimate of Maximum Magnitude
Rodger's Creek	19.4	7
Greenville	20.9	6.9
West Napa	24.3	6.5
Great Valley	24.7	6.7

The site is not located within a currently designated Alquist-Priolo Earthquake Fault Zone and no known surface expression of active faults is believed to exist within the site. Fault rupture through the site, therefore, is not anticipated.

The 2003 State of California, California Geologic Survey's Map of Seismic Hazard Zones for the Oakland West Quadrangle indicates that the western portion of the site is mapped within a Liquefaction Hazard Zone (Figure 4). The US Geological Survey "Maps of Quaternary Deposits and Liquefaction Susceptibility in the Central San Francisco Bay Region, California," dated 2006 indicates that the eastern portion of the site is mapped in an area with "Moderate" risk of liquefaction while the majority of the site is mapped in a "Low" risk area (Figure 5).

2.3 SITE HISTORY

We reviewed individual aerial photographs of the site dated 1931, 1946, 1958, 1968, 1980, 1987, 1988, 1993, 2000, 2002 and 2005 that were available online at <http://www.historicaerials.com> and through Google Earth. Also, we reviewed the environmental documents provided by you and on *Geotracker*. Based on our review, the property was previously occupied by the Sisters of Providence Hospital between 1903 and the 1940s. From the 1940s to 1962, the site was used as car dealership and service. From the 1960s to 1999, a Chevron gas station occupied the western portion of the site. The locations of these structures are shown on Figure 2. The existing circular restaurant building was constructed in 1962 and was in use up to 1999. The site is currently being used as a parking lot for the Volkswagen dealership of Oakland. Three Underground Storage Tanks (USTs) were removed from the northwest corner of the property in the 1990s after the Chevron gas station stopped operations at this location.

2.4 SURFACE CONDITIONS

As previously stated, the site is currently being used as a car dealership parking lot. The surface is flat on the west side bordering Broadway and mildly slopes downward to the southeast corner of the site. Preliminary architectural plans by TCA Architects dated April 27, 2015, show the ground surface elevation at the west side to be 12 feet higher than the east side.

2.5 SUBSURFACE CONDITIONS

Based on the historical use of the site, our observation of environmental borings performed at the same time as this exploration, and our preliminary exploration, the site appears to be underlain by a fill layer with significant difference in thickness depending on location. The fill layer within

the western half of the site (roughly the footprint of the former hospital), appears to extend to approximately 15 feet of depth. We estimate the thickness of the fill to be approximately 11 feet at the eastern half of the site likely associated with the construction of the existing restaurant building. We observed up to 3½ feet of fill at the southwestern corner of the site most likely associated with original grading of the area and the streets.

The fill material included various types of soil at different locations, and included clayey gravel, clayey and silty sand, and gravelly clay. Based on the “Phase II Environmental Site Assessment” by Versar (2008), the fill layer associated with demolition of the hospital is potentially 20 feet thick. Two of the CPT soundings, 1-CPT1 and 1-CPT3, encountered shallow refusal at 15 feet and 7 feet, respectively. Based on the existing environmental reports, we understand that some USTs and associated features were removed from the site and the excavation was backfilled. The typical depth of USTs are roughly 12 feet and we anticipate the thickness of fill to be approximately 12 feet at the location of the former gas station on the northwest corner of the site.

Our subsurface data based on the CPT soundings extends beyond the fill layer only at the location of 1-CPT2 shown on Figure 2 (approximately 42 feet below ground surface, bgs) due to shallow refusal at the other CPT soundings. At this location, between approximately 20 feet to 42 feet of depth, our CPT encountered stiff to hard clay layers with pockets of medium dense to dense gravel. We observed similar native subsurface stratigraphy in the environmental borings (up to 25 feet of depth) at the northern and eastern sides of the site.

We include the CPT logs in Appendix A. The logs graphically depict the subsurface conditions encountered at the time of the exploration.

2.6 GROUNDWATER CONDITIONS

Perched water was observed during environmental sampling at approximately 7 feet below the ground surface. Historical high groundwater level in the area is mapped by the California Geological survey at a depth of approximately less than 10 feet.

The groundwater level is reported to fluctuate between 2½ feet to 10 feet bgs in the 2008 report by Versar. This report indicates that migration of soil contaminants away from the site to the south is readily apparent. Other reports have indicated various directions of groundwater flow through the site.

We recommend that the design groundwater level for the project be assumed to be at about 5 feet below existing grade. If permanent dewatering is not planned, the concrete slabs and walls to be constructed below the design groundwater elevation should be waterproofed and designed to resist hydrostatic and/or uplift pressures. The waterproofing should be designed by a consultant that specializes in permanent waterproofing construction.

Fluctuations in the level of groundwater may occur due to variations in rainfall, irrigation practice, and other factors not evident at the time measurements were made.

3.0 DISCUSSION AND PRELIMINARY CONCLUSIONS

Based on this preliminary study, it is our opinion that the project site is feasible for the proposed development from a geotechnical standpoint provided the preliminary recommendations contained in this report and future design-level geotechnical studies are incorporated into the development plans. A site-specific geotechnical exploration should be performed as part of the design process. The exploration would include borings and laboratory soil testing to provide data for preparation of specific recommendations regarding grading, foundation design, and drainage for the proposed development. The exploration will also allow for more detailed evaluations of the geotechnical issues discussed below and afford the opportunity to provide recommendations regarding techniques and procedures to be implemented during construction to mitigate potential geotechnical/geological hazards.

Based upon our field exploration and review of readily available published maps and reports for the site, the main geotechnical concerns for the proposed site development include:

- The presence of undocumented fill.
- The presence of shallow groundwater and its influence on below-grade construction.
- The need for shoring systems to protect the excavation walls, adjacent streets and improvements, and to limit the flow of groundwater into the site.
- The selection of appropriate foundation system.

These items and other geotechnical issues are discussed in the following sections of this report.

3.1 EXISTING FILL

As stated previously, based on our CPT data and observation of environmental borings, the site is underlain by existing fill up to 15 feet in thickness. Some existing environmental reports, including the 2008 report by Versar report up to 20 feet of existing fill.

Because no record exists regarding the placement of the fill, it should be considered non-engineered. Non-engineered fills can undergo excessive settlement, especially under new fill or building loads. Based on the preliminary architectural plans, it appears that up to an estimated 35 feet of excavation is required for construction of the underground parking levels. Therefore, the existing fill will be removed during the excavation for the underground levels.

However, it should be noted that fill likely extends laterally beyond the borders of the site. Considering the type of soil encountered in the fill layer as discussed in Section 2.5, without proper shoring techniques, the remaining portion of the fill outside of the site borders could potentially collapse into the building excavation. We provide our preliminary shoring recommendations in Section 4.3.

In case the development plans change and the excavation depth is less than the thickness of the existing fill, we should be contacted to discuss alternatives for site preparation. We present fill removal recommendations in Section 4.2.

3.2 SEISMIC HAZARDS

Potential seismic hazards resulting from a nearby moderate to major earthquake can generally be classified as primary and secondary. The primary effect is ground rupture, also called surface faulting. The common secondary seismic hazards include ground shaking, liquefaction, and ground lurching. The following sections present a discussion of these hazards as they apply to the site. Based on topographic and lithologic data, the risk of regional subsidence or uplift, lateral spreading, landslides, tsunamis, or seiches is considered low to negligible at the site.

3.2.1 Ground Rupture

Since there are no known active faults crossing the property and the site is not located within an Earthquake Fault Special Study Zone, it is our opinion that ground rupture is unlikely at the subject property.

3.2.2 Ground Shaking

An earthquake of moderate to high magnitude generated within the San Francisco Bay Region could cause considerable ground shaking at the site, similar to that which has occurred in the past. To mitigate the shaking effects, all structures should be designed using sound engineering judgment and the current California Building Code (CBC) requirements, as a minimum.

3.2.3 Liquefaction/Clay Soil Softening

Soil liquefaction results from loss of strength during cyclic loading, such as imposed by earthquakes. Soils most susceptible to liquefaction are clean, loose, saturated, uniformly graded, fine-grained sands. Empirical evidence indicates that loose to medium dense gravels, silty sands, low-plasticity silts, and some low-plasticity clays are also potentially liquefiable.

Based on our limited subsurface data, we did not encounter loose sands or soft silts below the fill layer. The groundwater level was assumed at 5 feet below the ground surface which corresponds to an average high groundwater reported in the existing environmental reports.

We performed a detailed liquefaction potential analysis of the CPT soundings to estimate liquefaction potential using the computer software CLiq Version 1.7 developed by GeoLogismiki. The procedure used in the software is based on the procedure introduced by the 1996 National Center for Earthquake Engineering Research (NCEER) workshop and the 1998 NCEER/National Science Foundation (NSF) workshop. The workshops are summarized by Youd et al. (2001) and updated by Robertson (2009). The Cyclic Stress Ratio (CSR) was estimated for a Peak Ground Acceleration (PGA_M) value of 0.71g as outlined in the ASCE 7-10 with an earthquake magnitude of 6.8.

The analysis indicates that layers within the existing fill at the site are potentially liquefiable. Since the current development plan includes removal of the fill to construct the below-grade parking, liquefaction potential of existing fill is not anticipated to affect the project.

Based on the analysis CPT data below the fill and based upon engineering judgment, it is our opinion that the potential for liquefaction at the site is low during seismic shaking. However, we recommend obtaining subsurface geotechnical data below the proposed foundation levels during the design-level study. We have included our liquefaction analysis results in Appendix B.

3.2.4 Dynamic Densification Settlement

Densification of loose granular soils above the groundwater surface can cause settlement of the ground surface due to earthquake-induced vibrations. Because the excavation for the below-grade parking will extend below the groundwater surface, dynamic densification is expected to be negligible at the site.

3.2.5 Ground Lurching

Ground lurching is a result of the rolling motion imparted to the ground surface during energy released by an earthquake. Such rolling motion can cause ground cracks to form in weaker soils. The potential for the formation of these cracks is considered greater at contacts between deep alluvium and bedrock. Such an occurrence is possible at the site as in other locations in the Bay Area Region, but based on the site location, it is our opinion that the offset is expected to be minor.

3.2.6 Flooding

Based on site elevation and distance from water sources, flooding is not expected at the subject site; however, the Civil Engineer should review pertinent information relating to possible flood levels for the subject site based on final pad elevations and provide appropriate design measures for development of the project, if necessary.

3.3 STATIC AND PERCHED GROUNDWATER

Based on the location of the site, the existing ground elevations, proximity to Lake Merritt, historic maps of the area, geologic units indicated in the area (Figure 3), and the soil type encountered in the fill layer, it is our opinion that the groundwater flow to the site could be significant. Since deep excavations are proposed below groundwater, a groundwater cutoff system might be appropriate to limit the inflow of groundwater.

Based on the historic high groundwater levels reported by the California Geological survey, it appears that shallow groundwater beneath the site could affect the proposed development. Shallow groundwater can:

1. Delay grading activities, especially compacting soil below basement elevations.
2. Require construction dewatering.
3. Cause moisture damage to sensitive floor coverings.
4. Transmit moisture vapor through slabs causing excessive mold/mildew build-up, fogging of windows, and damage to computers and other sensitive equipment.
5. Require waterproofing for the proposed basement structures.

3.4 SOIL AND GROUNDWATER CONTAMINATION

Soil and groundwater contamination may be a significant consideration for excavations. Excavation spoils will require environmental characterization and may require removal to designated disposal facilities. In addition, groundwater generated from construction dewatering may require onsite treatment prior to disposal.

3.5 CBC SEISMIC DESIGN PARAMETERS

We provide the 2013 California Building Code (CBC) seismic parameters in Table 3.5-1 below. Based on the subsurface conditions encountered, we characterized the site as Site Class D in accordance with the 2013 CBC.

TABLE 3.5-1
2013 CBC Seismic Design Parameters
Latitude: 37.815091 Longitude: -122.263944

Parameter	Value
Site Class	D
Mapped MCE_R Spectral Response Acceleration at Short Periods, S_S (g)	1.85
Mapped MCE_R Spectral Response Acceleration at 1-second Period, S_1 (g)	0.74
Site Coefficient, F_A	1.00
Site Coefficient, F_V	1.50
MCE_R Spectral Response Acceleration at Short Periods, S_{MS} (g)	1.85
MCE_R Spectral Response Acceleration at 1-second Period, S_{M1} (g)	1.12
Design Spectral Response Acceleration at Short Periods, S_{DS} (g)	1.24
Design Spectral Response Acceleration at 1-second Period, S_{D1} (g)	0.74
Mapped MCE Geometric Mean Peak Ground Acceleration, PGA (g)	0.71
Site Coefficient, F_{PGA}	1.00
MCE Geometric Mean Peak Ground Acceleration, PGA_M (g)	0.71
Long period transition-period, T_L	8 sec

4.0 PRELIMINARY RECOMMENDATIONS

The following preliminary recommendations are for initial land planning and preliminary estimating purposes. Final recommendations regarding site grading and foundation construction will be provided after design-level exploration has been undertaken.

4.1 DEMOLITION AND STRIPPING

Site development will commence with the removal of buried structures, including abandoned utilities. All debris should be removed from any location to be graded and from areas to receive fill or structures. The depth of removal of such materials should be determined by the Geotechnical Engineer in the field at the time of grading.

The existing pavement section (asphalt concrete/concrete and underlying aggregate base) should be removed from areas to receive fill, or structures, or those areas to serve for borrow.

4.2 DEWATERING

Dewatering will be required for excavations extending below the groundwater table, to allow for construction under dry conditions. However, extensive dewatering could cause adjacent streets and other improvements to experience unacceptable settlement during construction. The amount of dewatering required could be reduced significantly by using a relatively impervious shoring system and dewatering from inside the excavation. Ultimately, the selection and design of the dewatering system should be the responsibility of the contractor.

There are a number of variables that will influence the effectiveness of a dewatering system including the number, depth, screened interval, and pumping rate of wells. The local sewer agency may prohibit the discharge of groundwater into the system or may charge a fee to do so.

4.3 SHORING

Excavation shoring will be required to protect adjacent improvements and streets during excavation for the below-grade parking. The design of the shoring should be sufficiently rigid to prevent detrimental movement of the temporary shoring and possible damage of adjacent streets, facilities or other improvements.

Given the proposed excavation depth, it will likely be necessary to restrain the shoring by using a single-level or multi-level system of tie-back anchors or to provide internal bracing. Prior to tie-back design and construction, permission from the City of Oakland or other jurisdictions will have to be obtained if tie-backs are to encroach into those adjacent properties. Tie-back anchors should be designed to avoid adjacent underground utilities. Permanent or temporary tie-backs may be installed through the selected shoring system with 15 to 20 degree inclinations.

Excavation, dewatering and shoring are temporary works that are typically the responsibility of the contractor to design, install, maintain and monitor. An experienced shoring and dewatering

system designer should be retained to select and design these systems. The following sections provide some general considerations that should be incorporated into shoring and dewatering system design. Geotechnical shoring design recommendations are dependent on performance criteria, the type of system selected and construction sequencing.

For preliminary design purposes, the following shoring systems may be considered suitable for the subject site: sheet piles, soldier pile and lagging, secant piles, diaphragm wall, and deep soil mixing (DSM). It should be noted that potential construction debris may inhibit installation of sheet piles at the subject site. In addition, sheet piles and soldier pile and lagging systems are not waterproof systems and flow of groundwater into the excavation should be anticipated. During the design-level study, we can provide design-level recommendations and assist with the process of selection of shoring system and lateral support. Examples of the potential shoring systems are illustrated in Exhibits 1 through 7.

(source: www.haywardbaker.com)

Exhibit 7

Installation of tiebacks

(source: www.haywardbaker.com)

Where possible, temporary construction slopes may be used above the groundwater level. The soils at the site are considered to be “Type C” soils according to OSHA criteria and as such, temporary slopes should be no steeper than 1:1½ (horizontal:vertical). The contractor should establish appropriate setback distances from the top of the slope for vehicles, equipment and spoil piles, and should establish appropriate protective measures for exposed slope faces.

4.4 PRE-CONSTRUCTION SURVEY AND CONSTRUCTION MONITORING

Excavation dewatering and construction will take place adjacent to existing streets, improvements, and underground utilities. We recommend that a pre-construction survey (e.g. crack survey) and monitoring program for the surrounding culverts, buildings, roadways, utilities, etc. which may be affected by construction activities be performed before and during construction. This survey will form a basis for any damage claims and also assist the contractor in assessing the performance of the shoring or excavation slopes. The pre-construction survey should record the elevation and horizontal position of all existing installations within 50 feet minimum and may consist of photographs, video tapes, topographic survey, etc.

We also recommend that a system of construction monitoring be installed. This may consist of inclinometers and groundwater monitoring wells that are installed within a distance of 5 to 15 feet from the excavation towards the existing buildings. Vibration monitoring should be

considered during operations of heavy equipment such as pile driving, demolition, etc. In addition, a settlement survey should initially be performed on a weekly basis during excavation and on a monthly basis, approximately one month after the excavation has been completed, at a minimum.

4.5 FILL PLACEMENT

For land planning and cost estimating purposes, the following compaction control requirements should be anticipated for general fill areas:

Test Procedures:	ASTM D-1557.
Required Moisture Content:	Not less than optimum moisture content.
Minimum Relative Compaction:	Not less than 90 percent relative compaction.

Relative compaction refers to the in-place dry density of soil expressed as a percentage of the maximum dry density of the same material.

5.0 PRELIMINARY FOUNDATION RECOMMENDATIONS

Based on the available soil data and anticipated structure type, it is our opinion that the proposed structure can be supported on a mat foundations. The major considerations in foundation design at the site are the building loads, hydrostatic pressures, and potential uplift forces. Due to the subsurface conditions, groundwater level and constructability, it is our opinion that the structure should be supported utilizing a mat foundation. Generally, a mat foundation will help bridge areas of localized settlement. Due to shallow groundwater and depth of excavation, the mat foundation should be designed for uplift forces.

5.1 MAT FOUNDATIONS

The structure may be supported on a rigid mat foundation. The thickness of the mat will be driven by the structural design. Similar buildings with similar constraints may have mat foundations of approximately 24 inches or thicker. Mat foundations should be thick enough to resist hydrostatic uplift pressures.

The structural mat should be designed to impose an average allowable bearing pressure of at most 2,000 pounds per square foot (psf) for dead-plus-live loads. The allowable bearing capacity may be increased to 2,500 psf in areas of loading concentration. These values may be increased by one-third when considering transient loads, such as wind or seismic. If a spring constant is needed for design, a modulus of subgrade reaction (k_s) of 125 pounds per square inch per inch of deflection (psi/in) can be used.

Resistance to lateral loads may be provided by frictional resistance between the foundation concrete and the subgrade soils and by passive earth pressure acting against the side of the

foundation. A coefficient of friction of 0.40 can be used between concrete and the subgrade. An assessment of load-induced settlement will be performed as part of the design-level geotechnical exploration.

5.2 UPLIFT FORCES

We anticipate that the basement level garage will be below the groundwater level and will have to be designed for hydrostatic uplift loads. Uplift resistance can be provided by the weight of the foundation elements and structural loads. Additional resistance to uplift may be provided by installing hold-down piers or anchors, if necessary. The pier/anchor capacity should be evaluated using an allowable skin friction of 500 psf. This value may be increased by 30 percent for wind and seismic loading. The piers/anchors should be spaced no closer than 3 times the shaft diameter and have a minimum embedment length of 10 feet. If piers are used, a combination of dewatering, casing, and placement of concrete utilizing tremie methods may be required to facilitate construction. Hold-down anchors should be prestressed to 120 percent of the design capacity and then locked off at 75 percent of the design load.

6.0 PRELIMINARY BASEMENT WALL RECOMMENDATIONS

We understand that up to 3 levels of underground parking levels are planned for this site. For undrained, restrained building walls (basements), an equivalent fluid weight of 90 pounds per cubic foot (pcf) for a level backfill condition (including the weight of water) should be incorporated in the preliminary structural design. Because the site is in a seismically active area, the design should be checked for a seismic load condition, in which the wall pressure is determined by adding the earth pressure due to earthquake shaking to the static lateral earth pressure. The incremental seismic force is approximated by a triangular pressure, with the force acting at one third of the height of the wall. This force is calculated as $11H^2$, in which H is the height of the wall..

The Geotechnical Engineer should be consulted on wall design values where surcharge loads, such as from permanent structures and automobiles, are expected or where slopes exist above or below a proposed wall. A specialty consultant should be consulted regarding retaining wall waterproofing. Consideration should be given to incorporating temporary shoring into the final structural basement walls at this site. Some efficiency may be gained by installing construction shoring as a permanent wall which is discussed in further detail later in this report.

7.0 FUTURE STUDIES

As previously discussed, a site-specific design-level geotechnical exploration should be performed as part of the design process. The exploration would include borings and laboratory soil testing to provide data for preparation of specific recommendations regarding grading, foundation design, and drainage for the proposed development. The exploration will also allow for more detailed evaluations of the geotechnical issues discussed in this report and afford the opportunity to provide recommendations regarding techniques and procedures to be implemented during construction to mitigate potential geotechnical/geological hazards.

8.0 LIMITATIONS AND UNIFORMITY OF CONDITIONS

This report presents geotechnical recommendations for design of the improvements discussed in Section 1.3 for the 2630 Broadway Project. If changes occur in the nature or design of the project, we should be allowed to review this report and provide additional recommendations, if any. It is the responsibility of the owner to transmit the information and recommendations of this report to the appropriate organizations or people involved in design of the project, including but not limited to developers, owners, buyers, architects, engineers, and designers. The conclusions and recommendations contained in this report are solely professional opinions and are valid for a period of no more than 2 years from the date of report issuance.

We strived to perform our professional services in accordance with generally accepted geotechnical engineering principles and practices currently employed in the area; no warranty is expressed or implied. There are risks of earth movement and property damages inherent in building on or with earth materials. We are unable to eliminate all risks or provide insurance; therefore, we are unable to guarantee or warrant the results of our services.

This report is based upon field and other conditions discovered at the time of report preparation. We developed this report with limited subsurface exploration data. We assumed that our subsurface exploration data is representative of the actual subsurface conditions across the site. Considering possible underground variability of soil, rock, stockpiled material, and groundwater, additional costs may be required to complete the project. We recommend that the owner establish a contingency fund to cover such costs. If unexpected conditions are encountered, notify us immediately to review these conditions and provide additional and/or modified recommendations, as necessary.

Our services did not include excavation sloping or shoring, soil volume change factors, flood potential, or a geohazard exploration. In addition, our geotechnical exploration did not include work to determine the existence of possible hazardous materials. If any hazardous materials are encountered during construction, then notify the proper regulatory officials immediately.

This document must not be subject to unauthorized reuse, that is, reusing without our written authorization. Such authorization is essential because it requires us to evaluate the document's applicability given new circumstances, not the least of which is passage of time.

Actual field or other conditions will necessitate clarifications, adjustments, modifications or other changes to our documents. Therefore, we must be engaged to prepare the necessary clarifications, adjustments, modifications or other changes before construction activities commence or further activity proceeds. If our scope of services does not include onsite construction observation, or if other persons or entities are retained to provide such services, we cannot be held responsible for any or all claims arising from or resulting from the performance of such services by other persons or entities, and from any or all claims arising from or resulting from clarifications, adjustments, modifications, discrepancies or other changes necessary to reflect changed field or other conditions.

APPENDIX A
Cone Penetration Test Logs

Cone penetration testing and soil sampling methods description.

Rig Description

Our services are based on the state-of-the-art, Geoprobe Model 6625CPT rig, a limited-access, self-anchoring, 20-ton push capacity, track-mounted push platform for dedicated Geotechnical CPT applications with the unique and valuable added ability to quickly perform intermittent or continuous soil sampling.

Weight = ~ 9,500 pounds

Surface load = ~ 4.5 psi

Push capacity = ~ 20 tons; self-anchoring achieved using 10- or 15-inch diameter helical soil anchors driven 4- to 10-feet into the soil

Sampling hammer percussion rate = 32 Hz & 20,000 lbs force/blow

Length = ~ 12 feet; Width = ~ 7 feet

Height (folded) = 7 feet; Height (unfolded) = 14 feet

CPT Description

Our Geoprobe 6625CPT incorporates the Swedish-made Geotech AB Cone Penetration Testing tools which meet the ASTM D-5778 Standard Test Method for Performing Electronic Friction Cone and Piezocone Penetration Testing of Soils. Cones have 10 cm² tips and 150 cm² friction sleeves, and include a porous filter and pressure sensor located in the u₂ position directly behind the cone. The cone and porous filter are saturated under vacuum with glycerin to promote rapid equilibration with in-situ pore pressures. Cones are advanced at the ASTM standard rate of 2 cm/second. Baseline readings are performed both before and after each push to check for load cell drift. The cone measures bearing (max load = 100 MPa ~ 1044 TSF), friction sleeve (max load = 1.0 MPa ~ 10.4 TSF), and dynamic pore pressure (max load = 2.5 MPa ~ 363 psi) at 2 cm or 4 cm intervals (client's choice) and this data is plotted in real-time and recorded on a laptop computer adjacent to the push platform. Holes are grouted upon completion of each push, or at the end of each day, as site conditions and regulations warrant.

The basic equation to determine the depth to the free water surface from the pore pressure dissipation test is;

Depth to phreatic surface = [Dissipation depth] – [equilibrium pore pressure / unit weight of H₂O x unit conversion factor]

...where;

- 1) Surface elevation is always assumed to be 0 feet
- 2) Dissipation depth = the depth (feet) below surface elevation where the cone advancement was paused while waiting for equilibrium pore pressure to be achieved
- 3) Equilibrium pore pressure = the pore pressure after an elapsed time where no increase or decrease in pore pressure is occurring, in pounds per square inch (psi)
- 4) Unit weight of water = 62.3 pounds per cubic foot (lb/ft³)
- 5) Unit conversion factor (for dimensional analysis): 1 psi = 144 lb/ft²

From the dissipation plots, simply read the dissipation depth and dissipated pressure for the values to plug into the equation above. On the plots, pore pressure (psi) is on the abscissa and log time (seconds) is on the ordinate.

Sampling Description

Geoprobe® brand Dual Tube Sampling Systems are efficient methods of collecting continuous soil cores with the added benefit of a cased hole. Dual tube sampling uses two sets of probe rods to collect continuous soil cores. One set of rods is driven into the ground as an outer casing (2.2 or 3.25 inches in diameter). These rods receive the driving force from the hammer and provide a sealed hole from which soil samples may be recovered without the threat of cross contamination. The second, smaller set of rods are placed inside the outer casing. The smaller rods hold a sample liner in place as the outer casing is driven one sampling interval. The small rods are then retracted to retrieve the filled liner. Soil samples are collected in 1.85-inch diameter or 1.125-inch diameter clear PVC sample sheaths.

Interpretations

Soil behavior type (SBT), SPT N60 energy ratio, undrained shear strength, OCR, and unit weights are calculated and/or are interpretations generated by the CPT-Pro software based on empirical relationships derived in the following references;

P.K. Robertson, R.G. Campanella, D. Gillespie, and J. Greig, 1986, Use of Piezometer Cone Data, Proceedings of the ASCE Specialty Conference In Situ '86: Use of In Situ Tests in Geotechnical Engineering; pp. 1263-1280.

P.K. Roberston, 1990, Soil Classification Using the Cone Penetration Test, Canadian Geotechnical Journal, 27(1), pp. 151-158.

T. Lunne, P.K. Robertson, and J.J.M. Powell, 1997, Cone Penetration in Geotechnical Practice, Taylor and Francis Publishing.

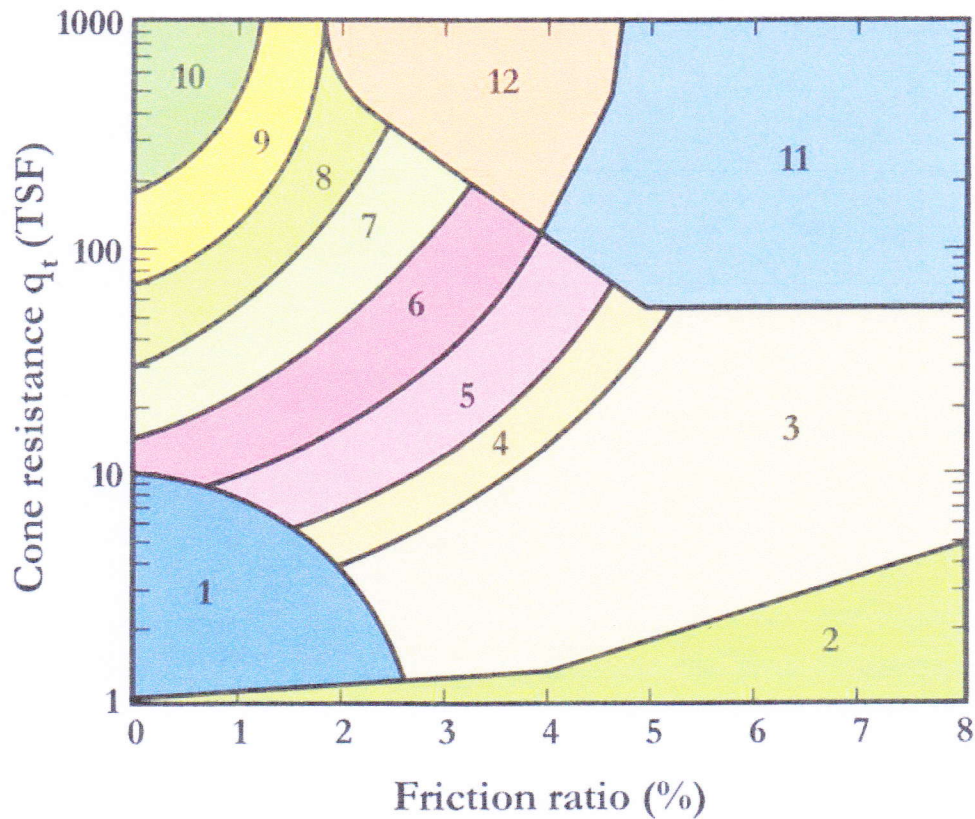

CPT Inc. makes no recommendation on which soil behavior type analysis is “most-correct”. The engineer should be aware of the limitations of using CPT data to derive soil behavior type and other engineering parameters and is encouraged to review the above references to better understand the applicability and limitations of CPT data. It is sometimes not possible to determine soil type based solely on tip resistance, sleeve friction, and dynamic pore pressure response, and confirmatory samples may be required.

Please do not hesitate to contact CPT Inc. if you have questions.

Sincerely,
John Rogie

President
California Push Technologies, Inc.

**ATTACHMENT I: GREENHOUSE GASES AND CLIMATE CHANGE SCREENING ANALYSIS FOR
BROADWAY & 27TH PROJECT, PER THE BROADWAY VALDEZ DISTRICT SPECIFIC PLAN
ENVIRONMENTAL IMPACT REPORT**

Technical Memorandum

Date:	November 20, 2015
To:	Peterson Vollmann, Planner III City of Oakland, Bureau of Planning 250 Frank H. Ogawa, Suite 2114 Oakland, CA 94612
From:	Shannon Hatcher
Subject:	Broadway & 27th Project – Greenhouse Gases and Climate Change Screening Analysis per the Broadway Valdez District Specific Plan Environmental Impact Report

Based on the findings of the Broadway Valdez District Specific Plan EIR (BVDSP EIR), the proposed Broadway & 27th Project (proposed project) is required to quantify the greenhouse gas (GHG) emissions from project construction and operation to determine whether a GHG Reduction Plan is required per the City of Oakland's Standard Conditions of Approval (SCA) 38, GHG Reduction Plan.

SCA 38 applies to projects of a certain minimum size that produce total GHG emissions that exceed one or both of the Bay Area Air Quality Management District's (BAAQMD) CEQA Thresholds of Significance, which are 1,100 metric tons of carbon dioxide (CO₂) equivalent (CO₂e) per year, or 4.6 metric tons of CO₂e per service population¹ per year and would result in a significant impact requiring mitigation (Bay Area Air Quality Management District 2011).

SCA 38 applies to projects developed under the BVDSP under any of the following three scenarios for projects which result in a net increase in GHG emissions:

- **Scenario A:** Projects which
 - a) Involve a land use development (i.e., a project that does not require a BAAQMD permit to operate);
 - b) Exceed the GHG emissions Screening Criteria contained in the BAAQMD CEQA Guidelines²; AND

¹ Service population is the sum of the number of jobs and the number of residents provided by a project.

² For residential development projects, refer to the City's Housing Element EIR screening criteria. The Housing Element EIR's analysis showed that residential development projects of less than 172 units would not result in a significant climate change impact and, therefore, no project-specific GHG analysis is required for such projects. Under an alternative approach in the Housing Element EIR, the analysis found that **ANY** residential development project (including those containing 172 or more units) would not result in a significant climate change impact and that no project-specific GHG analysis would be required. For residential projects containing 172 or more units, please consult with City Planning staff and the City Attorney's office on the appropriate GHG review. For nonresidential development projects and mixed-use development projects, the nonresidential component of the project must be compared to the BAAQMD screening criteria and the applicable threshold if the screening criteria are exceeded, independently from any residential component the project.

- c) After a GHG analysis is prepared would produce total GHG emissions of more than 1,100 metric tons of CO₂e annually and more than 4.6 metric tons of CO₂e per service population annually (with “service population” defined as the total number of employees and residents of the project).
- **Scenario B:** Projects which
 - a) Involve a land use development;
 - b) Exceed the GHG emissions Screening Criteria contained in the BAAQMD CEQA Guidelines;³
 - c) After a GHG analysis is prepared would exceed at least one of the BAAQMD Thresholds of Significance (more than 1,100 metric tons of CO₂e annually OR more than 4.6 metric tons of CO₂e per service population annually); AND
 - d) Are considered to be “Very Large Projects.”
- **Scenario C:** Projects which
 - a) Involve a stationary source of GHG (i.e., a project that requires a permit from BAAQMD to operate); AND
 - b) After a GHG analysis is prepared would produce total GHG emissions in excess of the BAAQMD’s stationary source threshold of 10,000 metric tons of CO₂e per year.

SCA 38 requires a project applicant to prepare a GHG Reduction Plan to increase energy efficiency and reduce GHG emissions to the greatest extent feasible below the BAAQMD CEQA Thresholds. The GHG Reduction Plan would include a comprehensive set of quantified GHG emissions reduction measures, in addition to energy efficiencies included as part of the project (including the City’s SCAs, proposed mitigation measures, project design features, and other City requirements).

BAAQMD Screening Criteria are found in Table 3-1 from the 2011 CEQA Air Quality Guidelines, Table 3-1 (Bay Area Air Quality Management District 2011). The Screening Criteria developed by the BAAQMD are screening tables that indicate which projects, based on land use and size, would have impacts that would be considered less than significant without a quantitative analysis of project emissions. A review of the BAAQMD’s Screening Criteria Table indicates that a land use development project of 87 dwelling units or less of mid-rise apartments, or 19,000 square feet or less area of strip malls or regional shopping center, would have GHG emission levels that would be considered less than significant.

The City of Oakland defines a “Very Large Project” as meeting any of the following conditions:

- a) Residential development of more than 500 dwelling units;
- b) Shopping center or business establishment employing more than 1,000 persons or encompassing more than 500,000 square feet of floor space;
- c) Commercial office building employing more than 1,000 persons or encompassing more than 250,000 square feet of floor space;
- d) Hotel/motel development of more than 500 rooms;

³ See footnote 2, above.

- e) Industrial, manufacturing, processing plant, or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or encompassing more than 650,000 square feet of floor area; or
- f) Any combination of smaller versions of the above that when combined result in equivalent annual GHG emissions as the above.

The City of Oakland has adopted the BAAQMD’s CEQA thresholds of 1,100 metric tons CO₂e per year, or 4.6 metric tons CO₂e per service population per year, described above; these thresholds are used in the analysis below.

1.0 Identification of Project Scenario

Table I-1 presents a comparison of the proposed project to the criteria associated with each of the City of Oakland’s three SCA 38 scenarios. In the event the proposed project meets all of the criteria for any of the three SCA 38 scenarios, a GHG Reduction Plan would be required per SCA 38 to increase energy efficiency and reduce GHG emissions to the greatest extent feasible below the BAAQMD CEQA Thresholds.

Table I-1. Comparison of Proposed Project with Scenarios of SCA 38

Scenario	Criterion (a)	Criterion (b)	Criterion (c)	Criterion (d)
<i>Scenario A</i>	Involve a land use development	Exceed the GHG emissions screening criteria contained in the BAAQMD’s CEQA Guidelines	Exceed <i>both</i> applicable numeric City of Oakland CEQA Thresholds ¹	—
<i>Project</i>	Yes – the proposed project entails development of land uses	Yes – the proposed project land use components exceed the BAAQMD screening size Levels ²	No – see Section 2.0 below	—
<i>Scenario B</i>	Involve a land use development	Exceed the GHG emissions screening criteria contained in the BAAQMD’s CEQA Guidelines	Exceed <i>one</i> of the applicable numeric City of Oakland CEQA Thresholds ¹	Very Large Project
<i>Project</i>	Yes – the proposed project entails development of land uses	Yes – the proposed project land use components exceed the BAAQMD screening size levels ²	Yes – see Section 2.0 below	No – see Section 3.0 below
<i>Scenario C</i>	Involve a stationary source of GHG	Exceed 10,000 metric tons CO ₂ e per year	—	—
<i>Project</i>	No – the proposed project does not include an emergency generator	—	—	—

Notes:

¹ The City of Oakland’s CEQA thresholds are 1,100 metric tons CO₂e per year and or 4.6 metric tons CO₂e per service population per year.

² The GHG screening-level sizes for mid-rise apartments are 87 dwelling units or less and 19,000 square feet or less for strip malls/regional shopping centers, per Table 3-1 from the BAAQMD's CEQA Guidelines.

As indicated above in Table I-1, the proposed project does not fall under any of the three scenarios of the SCA 38. The following sections include a quantitative analysis of the project GHG emissions, and comparison of these emissions with applicable thresholds.

2.0 Project GHG Emissions

The GHG emissions from project construction and operation were estimated using the CalEEMod model. The key input information is listed below; this information was provided by the project sponsor.

- Approximate construction schedule: 26 months (May 2016 through June 2018).
- Construction phasing and equipment lists: See Attachment I-1.
- Number of residential units: 255 multi-family units (approximately 253,714 square feet).
 - Area of commercial use (retail – regional shopping center): 37,710 square feet.
 - Parking structure area: Retail Parking – 82 parking spaces (32,800 square feet); Residential Parking – 217 spaces (86,800 square feet).
- Daily trip generation rates were provided by Fehr & Peers: See Attachment N to the CEQA Analysis document.⁴
- Other CalEEMod modeling parameters and results are provided in the CalEEMod output files found in Attachment I-2.

Construction duration per CalEEMod default was approximately 26 months (beginning in mid-2016, with building occupancy planned for late 2018); however, for estimating GHG emissions, the total construction emissions, not annual emissions, were amortized over 40 years, consistent with BVDSP, to determine construction emissions contribution to the project's total annual GHG emissions. This analysis is based on conservative assumptions, and does not account for project features that could further reduce the estimated emissions—such as the project's proximity to transit, or energy-saving features recommended in the City's standard requirements such as Green Building standards. The results of the CalEEMod modeling are summarized in Table I-2.

⁴ Table 1 of Attachment M to the CEQA Analysis document indicates a reduction in 1,400 project trips due to a 43% non-auto trip reduction factor, consistent with City of Oakland *Transportation Impact Study Guidelines*. Conversation with Fehr & Peers indicates these trip reductions should be applied proportionally to each land use, resulting in 950 and 900 total daily trips for residential and retail land uses, respectively (Tabibnia pers. comm.).

Table I-2. Estimates of GHG Emissions from Project and Comparison to Thresholds

Emission Source	CO₂e (Metric Tons/Year)
Project Emissions¹	
Construction	4,205
Construction, amortized over 40 years²	105
Operations	
Area	14
Energy (natural gas and grid electricity)	757
Motor vehicle trips	1,597
Waste	71
Water	67
Operations Total	2,339
Annual GHG Emissions (Construction and Operation)	2,444
Service Population ³	552
Annual GHG Emissions per Service Population ³	4.4
Comparison to Thresholds	
BAAQMD and City of Oakland's Threshold (Annual Emissions)	1,100
Project Exceeds Annual Threshold?	Yes
BAAQMD and City of Oakland's Threshold (per Service Population)	4.6
Project Exceeds Threshold?	No
Notes:	
1. Emission data estimated using CalEEMod version CalEEMod.2013.2.2.	
2. Construction emissions were amortized over 40 years, consistent with BVDSF, to be considered for estimating the project total annual GHG emissions.	
3. Service population of 552 is based on 447 new residents and 75 new retail employees.	

As shown in Table I-2, the project's GHG emissions would be below 4.6 tons per year per service population, but would exceed the emissions threshold of 1,100 metric tons per year.

3.0 Comparison of Project with Very Large Project Criteria

As outlined in Scenario B of SCA 38, because the proposed project would exceed one of the applicable numeric City of Oakland CEQA Thresholds—the emissions threshold of 1,100 metric tons per year (Table I-2)—the next step is to assess whether the project is considered a Very Large Project.

As previously indicated, the BVDSP EIR defines a “Very Large Project” as any of the following:

- a) A residential development of more than 500 dwelling units;
- b) A shopping center or business establishment employing more than 1,000 persons, or encompassing more than 500,000 square feet of floor space;
- c) A commercial office building employing more than 1,000 persons, or encompassing more than 250,000 square feet of floor space;
- d) A hotel/motel development of more than 500 rooms;
- e) An industrial, manufacturing, processing plant, or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or encompassing more than 650,000 square feet of floor area; or
- f) Any combination of smaller versions of the above that, when combined, results in annual GHG emissions equivalent to the above.

The proposed project does not meet Criteria A through E. The proposed 255 residential units are below the City’s “Very Large Project” 500-dwelling-unit threshold. The retail component of the project would not employ 1,000 persons, and would have less than 500,000 square feet of floor space (37,710 square feet of retail). The proposed project does not include commercial office uses, hotel/motel uses, or industrial/manufacturing uses.

Criterion F is assessed in Table I-3, which shows the combined residential and retail uses and evaluates the percentage of each component of the project to the criteria for large projects. If the sum of these percentages adds up to 100 or greater, then the project would constitute a Very Large Project. As shown in Table I-3, the combined project components do not result in equivalent GHG emissions from a Very Large Project. Therefore, the proposed project would not be considered a Very Large Project, and Scenario B does not apply to the proposed project.

Table I-3. Comparison of Proposed Project with a Very Large Project

Land Use	Unit Metric	Proposed Project	Very Large Project	Project Component’s Percentage of Very Large Project
Residential	Dwelling Units	255	500	51%
Commercial	Square Feet	37,710	500,000	8%
Total (Combined Land Use Components)				59%

Note:

Criteria for a “Very Large Project” are from the BVDSP EIR, and are based on SCA 38.

4.0 Conclusion

The analysis above indicates that the proposed project would not fall under any of the three scenarios that would require development of a GHG reduction plan under SCA 38. Therefore, the

proposed project would be consistent with the City of Oakland’s Energy and Climate Action Plan, as well as the BVDSP, and a GHG reduction plan is not required.

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - From PD. Assumed 0 lot acreage for parking structure since is within building footprint. Added total parking for B1, B2, and B3 levels

Construction Phase - Days/week adjusted to match data request responses. Broke up provided demolition/excavation phases into separate phases, with demo occurring for 1 month and excavation remainder of provided construction duration.

Off-road Equipment - Zeroed out default equipment and added equipment from responses to data request.

Off-road Equipment - Zeroed out default equipment and added equipment from responses to data request. Assigned backhoe from provided demolition/excavation phase to demolition phase.

Off-road Equipment - Zeroed out default equipment and added equipment from responses to data request. Assigned excavator from provided demolition/excavation phase to excavation phase.

Off-road Equipment - Zeroed out default equipment and added equipment from responses to data request.

Off-road Equipment - Zeroed out default equipment since no off-road equipment

Trips and VMT - Workers based on PD

Demolition -

Grading - Zeroed out default acreage disturbed for site prep and testing, as no ground disturbance associated with these phases. Total acres disturbed from PD.

Vehicle Trips - Trip rates calculated from 950 daily residential trips and 900 daily retail trips per traffic engineer. Primary, diverted, and passby trips adjusted based on 34% passby trips per traffic memo and ratio of original primary and diverted trips.

Energy Use -

Energy Mitigation -

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
HARRIS DRY CLEANERS	2801 MARTIN LUTHER K	WNW 1/4 - 1/2 (0.431 mi.)	AM252	335

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/10/2015 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
WHOLE FOODS CONSTRUC	230 BAY PLACE	SE 1/8 - 1/4 (0.213 mi.)	U165	195

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 28 RCRA-SQG sites within approximately 0.25 miles of the target property.

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, and dated 05/04/2015 has revealed that there are 4 RESPONSE sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 05/04/2015 has revealed that there are 11 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 03/13/2015 has revealed that there are 53 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 06/15/2015 has revealed that there are 2 UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/10/2015 has revealed that there are 4 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not

EXECUTIVE SUMMARY

limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 108 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 29 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

 Lead Agency: ALAMEDA COUNTY LOP
 Case Worker: MD
 Local Agency: ALAMEDA COUNTY LOP
 RB Case Number: 01-1959
 LOC Case Number: RO0000146
 File Location: Stored electronically as an E-file
 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Lead, Gasoline
 Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A complete case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>. Land use surrounding the site is mixed commercial and residential. Known use of the site dates back to at least 1903, when the property was used the site of the Sisters of Providence Hospital. Beginning sometime in 1950, the site was occupied by a used car sales/service facility. Underground storage tanks (USTs) were reportedly installed in the western portion of the site in 1962, when the site was first occupied by a fuel service station. A restaurant was also constructed on the eastern portion of the property sometime between 1958 and 1968. In 1998, the fuel service station was demolished, the USTs were removed, and the site was paved. The paved lot has remained to the present day and the site is now occupied by Audi of Oakland car sales facility and a vacant, circular building (the former restaurant). Residual impacted fill material appears to remain from the demolition of the former hospital. The nature and extent of contamination from the former hospital is currently uncharacterized. A new case will be created for contamination related to the former hospital. Lead and SVOC contamination from the former hospital is not considered a part of this UST closure. On March 18, 1982, eight soil borings were advanced to 20 feet below ground surface (bgs) and completed as monitoring wells (B-1 through B-8). No soil samples were collected from the well borings for laboratory analysis. Groundwater was first encountered between 8 and 25 feet bgs. Groundwater was then observed to raise within four to eight feet bgs. A trace odor of gasoline was observed on the drill cuttings from borings B-2 and B-5. The concentrations of combustible gases and percentage of the lower explosive limit (LEL) were also measured in each well. On April 21, 1982, two 7,500-gallon gasoline, one 4,000-gallon gasoline, one 1,000-gallon waste oil UST, and associated piping are reported to have been replaced with new fiberglass tanks (three 10,000-gallon gasoline and one 1,000-gallon

U001599396

used-oil) and piping at the site. The steel tanks are reported to have been installed in 1962, 1971, 1974, and 1981. No other information is available. Approximately 20 cubic yards of soil and 2,000 gallons of groundwater are reported to have been removed and disposed at an offsite location. Observation wells TP-1 and TP-2 were installed in the new tanks backfill. In May 1982, approximately 2.5 feet of light non-aqueous phase liquid (LNAPL) was observed in well B-4. LNAPL was then bailed from well B-4 on a weekly basis from August 1982 to February 1983, when LNAPL was no longer observed in the well. On August 7, 1983, slow pumping was reported in the mid-grade gasoline product line. The line was tested, found to be leaking just east of the gasoline USTs, and replaced on August 9th. According to inventory records, up to 20 gallons of product was lost. A follow-up groundwater monitoring event was conducted on September 9, 1993. TPHg and benzene were detected in groundwater at concentrations up to 110,000 ppb and 3,200 ppb, respectively. The greatest TPHg and benzene concentrations were detected in wells B-4 and B-5, located east of the USTs. On July 26 and 27, 1994, four exploratory borings were advanced onsite (B-9) and offsite (B-10 through B-12) to approximately 20 feet bgs. The borings were completed as monitoring wells and sampled on August 4, 1994. Soil samples were collected from the borings between five and eleven feet bgs. Groundwater was first encountered in the wells at approximately 17 to 18 feet bgs. Static groundwater was measured in the new wells between 6.5 and 11.5 feet bgs. Soil samples collected during the event contained up to 90 ppm TPHg and no detectable concentrations of benzene. The only detectable petroleum hydrocarbons in groundwater in new wells were from well B-9 at concentrations of 650 ppb TPHg and 4.4 ppb benzene. On March 10, 1998, three 10,000-gallon gasoline USTs, one 1,000-gallon waste oil UST, two semi-hydraulic hoists, and all associated piping were removed from the site. No holes were observed in any of the USTs or associated piping. Groundwater was encountered in the gasoline UST excavation at a depth of approximately 11 feet bgs. Approximately 4,000 gallons of groundwater was pumped from the excavation and disposed offsite. Soil samples were collected from the gasoline UST excavation (TX1 through TX8), waste oil excavation (UO1 and UO2), piping trench (P1 through P11), hydraulic hoist excavation (H1 and H2), and stockpiled soil (SP-1(a-d), SP-2(a-d), and UOSP-1(a-d)). Soil waste generated during this event was analyzed and deemed appropriate to be used as backfill. Although it is not documented, the observation wells previously installed in the tank pit (TP-1 and TP-2) and well B-2 were apparently destroyed during this event. Analysis of soil samples collected from the gasoline UST excavation detected up to 340 ppm TPHg, with highest concentrations along the eastern sidewall. The product dispenser soil samples collected from the southernmost dispenser contained the highest concentration of TPHg, with 1,200 ppm detected. Total Oil and Grease (TOG) was detected in the hydraulic hoist and waste oil UST excavation samples at concentrations up to 310 ppm and 110 ppm, respectively. Lead was also detected in the product trench and waste oil UST excavation bottom confirmation soil samples at concentrations of 5,000 ppm and 6,800 ppm, respectively. On November 19, 1998, soil was excavated from former locations of the used oil UST and from each dispenser island. Test pits were also excavated to investigate lead contamination in soil. Soil samples were collected from the bottom of the excavations (PX2, PX5, and PX7 through PX10), from fill material in the former waste oil excavation

(UOSP-2(a & b)), and from the stockpiled soil (SP-3(a-d)). Additional excavation of the former waste oil UST location was not conducted. Similar to the previous excavation event, product dispenser soil samples collected from the southernmost dispenser contained the highest concentration of TPHg (1,190 ppm). Lead was detected in stockpiled soil from the former waste oil UST excavation at a concentration of 1,790 ppm. Confirmation samples collected at the bottom of the additional product line excavation contained < 7.5 ppm (non detectable) concentrations of lead. Approximately 160 cubic yards of contaminated soil was removed from the former dispenser areas and disposed offsite. During this investigation, old fill material consisting of burnt wood, bricks, ashes, and concrete was encountered in the northern excavation areas. Concrete footings and basement floor slabs were also discovered. The fill material and foundation appear to be associated with the former Sisters of Providence Hospital that existed at the site. Field observations indicated that the lead contamination (up to 6,800 ppm) detected in the former used-oil tank excavation and in the northern dispenser island excavation (up to 5,000 ppm); and likely the detections of semi-VOCs (up to 2.3 ppm bis(2-ethylhexyl)phthalate and other SVOCs), appeared to be associated with the fill material observed in these areas and unrelated to the former service station activities. The impacted fill material appears to remain from the demolition of the former hospital. The nature and extent of contamination from the former hospital is currently uncharacterized. A new case will be created for contamination related to the former hospital. Lead and SVOC contamination from the former hospital is not considered a part of this UST closure. On July 29, 1999, Oxygen Reducing Compound (ORC) socks were installed in wells B-1, B-3, B-5 through B-7, and B-9. Nine to sixteen socks were installed in each well. Subsequent groundwater monitoring results showed a decrease of TPHg concentrations in groundwater. Concentrations of TPHg in wells B-1, B-3, and B-9 rebounded to concentrations at or above post-ORC sock installations within approximately one year. In wells B-1, B-3, and B-5, an increase of methyl tert-butyl ether (MTBE) concentrations was observed in groundwater subsequent to the ORC sock installations. On June 6 and 7, 2007, three onsite borings (B-13, B-14, and B-21) and six offsite borings (B-15 through B-20) were installed. Borings B-13, B-15, and B-16 were not completed due to obstruction by a concrete slab encountered between four and six feet bgs, and apparently associated with the former hospital. Soil samples were collected from each completed boring at five-foot intervals. Grab groundwater samples were also collected from each completed boring except boring B-21. Neither the soil samples nor the groundwater samples contained detectable concentrations of TPHg or benzene. MTBE was detected in grab groundwater samples from borings B-14 and B-17 at concentrations of 1 ppb and 2 ppb, respectively. Groundwater monitoring was conducted at the site quarterly in 1982; however, no further monitoring occurred between 1983 and 1992. Groundwater monitoring then restarted and occurred semi-annually from 1993 to the present. Concentrations up to 2,700 ppb TPHg and 7 ppb benzene were documented in the most recent groundwater monitoring event in September 2012.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Local Agency: ALAMEDA COUNTY LOP
 RB Case Number: 01-0241
 LOC Case Number: RO0000400
 File Location: Stored electronically as an E-file
 Potential Media Affect: Other Groundwater (uses other than drinking water), Soil Vapor
 Potential Contaminants of Concern: Trichloroethylene (TCE), Gasoline
 Site History: The site is a automobile dealership. Site investigation activities have taken place since 1988. Four underground storage tanks (one 1,000-gallon waste oil near the garage at 27th Street (Tank A), one 300-gallon waste oil gasoline (Tank B) beneath sidewalk along Broadway, one 550-gallon gasoline (Tank C) beneath sidewalk along 28th Street, and one 1,500-gallon gasoline (Tank D) beneath sidewalk along 28th Street were removed in August 1988. Visual contamination was observed and detected in soil samples in the tank pits for Tanks C and D. A soil vapor and groundwater extraction system operated at the site from February 1996 through March 1998. Soil vapor sampling was completed at the site in February 2014. The site was evaluated

for case closure under the State Water Resources Control Board Low-Threat Underground Storage Tank Closure Policy and is eligible for case closure. Based upon the information available in our files to date, no further investigation or cleanup for the fuel leak case is necessary at this time. Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at: <http://www.acgov.org/aceh/lop/ust.htm>.

 RB Case Number: Not reported
 LOC Case Number: RO0003125
 File Location: Stored electronically as an E-file
 Potential Media Affect: Soil, Soil Vapor, Under Investigation
 Potential Contaminants of Concern: Heating Oil / Fuel Oil
 Site History: A 1,200-gallon UST was discovered at the site by Paoli Construction, Inc. during grading activities at the site on February 13, 2013. Cook Environmental Services (CES) was hired by the property owner, the Kyle Milligan and Susan Casentini Trust, to inspect the UST on February 14, 2013. CES discovered a buried redwood tank approximately 12 feet in diameter that contained an unknown volume of heating oil. The structural integrity of the redwood tank had been severely compromised and a large volume of heating oil had impacted surrounding soils. The UST was connected to a 4-inch diameter cast iron pipe that was probably connected to a fill spout behind the sidewalk on 26th Street. The location of the UST and the cast iron pipe are shown on Figure 2. The City of Oakland Fire Department was notified and Cook Environmental Services, Inc (CES) filed an UST removal permit with the Fire Department on March 4, 2013. CES retained Fremouw Environmental Services, Inc (FES) to empty the UST. Since the redwood tank was badly decayed, no triple rinse or decontamination procedures could be performed. FES removed approximately 80 gallons of heating oil from the excavation on March 11, 2013. The receiving facility for the waste heating oil required

MAP FINDINGS

TIM COOK (Continued)

S113887337

that the liquid be sampled for PCBs prior to acceptance of the waste. A sample of the heating oil was collected on March 11, 2013 and analyzed for PCBs. PCBs were not detected. Two drums of heating oil were disposed of as non-RCRA hazardous waste. CES excavated the UST and contaminated soil from March 11 to 13, 2013. Leroy Griffin of the City of Oakland Fire Prevention Bureau was onsite. Since the redwood tank was badly decomposed, it could not be removed intact and was taken out in pieces and placed in six 10-cubic yard roll-off bins along with contaminated soil. Three bins (36.5 tons) were profiled as non-hazardous and disposed at the Potrero Hills landfill in Suisun, California. The lab report from two soil samples collected from the UST excavation was used to profile the waste. The non-hazardous waste was disposed of at the Potrero Hills Landfill near Suisun, California. Soil in two of the bins was classified as non-RCRA hazardous waste and was disposed at the U.S. Ecology landfill in Beatty, Nevada. The UST excavation extended to a depth of approximately 12 feet bgl. After excavation activities were complete, CES collected two soil samples from the base of the excavation. Sample S1 was collected from the south end of the excavation at depth of approximately 10 feet below grade. Sample S2 was collected from the north end of the excavation (closest to 26th Street) at a depth of approximately 10 feet below grade. Soil samples were collected from the bucket of the excavator and placed in stainless steel sample tubes, labeled and placed on ice in a cooler. Samples were handled using chain-of-custody procedures. Samples were transported to McCampbell Analytical, Inc. in Pittsburg, California that same day and analyzed for the standard suite of analytes required of a UST containing heating oil. Analyses included total petroleum hydrocarbons as diesel (TPH-d) using EPA method 8015B modified; benzene, toluene, ethylbenzene and xylenes (BTEX) using EPA method 8021B; and naphthalene and MtBE using EPA method 8260B. The samples appeared to be contaminated due to staining and hydrocarbon odor. BTEX and MtBE constituents were not detected in soil samples above laboratory detection limits. TPH-d concentrations range from 6,500 to 11,000 milligrams per kilogram (mg/kg). Naphthalene concentrations range from 10 to 14 mg/kg. The UST excavation was backfilled with clean recycle baserock from Marin Resource Recovery in San Rafael, California. A Data Gap Investigation Work Plan and Site Conceptual Model has been submitted to ACEH, dated March 25, 2014. ACEH requests a Work Plan Addendum and Data Gap Investigation Work Plan Addendum and Site Conceptual Model to address comments in ACEH's response letter, dated May 23, 2014.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

S103472330

LOC Case Number: Not reported
 File Location: Stored electronically as an E-file
 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Benzene, Gasoline, Waste Oil / Motor / Hydraulic / Lubricating
 Site History: On July 28, 1994, one 295-gallon waste-oil UST, one 575-gallon gasoline UST and two hydraulic lifts were removed from the site. Holes were observed in the gasoline UST upon removal. Maximum concentrations of 1,500 ppm TPHg, 1,800 ppm TPHd and 7.4 ppm benzene were detected in soil. Subsequently, a work plan was submitted but has not been implemented. Soil vapor and groundwater sampling must occur to evaluate the elevated benzene and extent of contamination in groundwater. On the Project Information screen, add this phrase to the Staff Notes and Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historical case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>.

 Case Type: Cleanup Program Site
 Case Worker: KLD
 Local Agency: ALAMEDA COUNTY LOP
 RB Case Number: NA
 File Location: Stored electronically as an E-file
 Potential Media Affected: Soil
 Potential Contaminants of Concern: Not reported
 Site History: In April 1993, 4 test borings were advanced to evaluate lead concentrations. Up to 650 ppb lead was detected in soil samples. In October 1993, thirteen borings were advanced. A work plan was developed for removal of the lead contaminated soil in 1994 and remediation of the site began in August 1994. Over 600 tons of soil were disposed at an off-site facility with confirmation sampling being performed on soil. Groundwater samples have not been obtained.

Facility Status: Open - Site Assessment
Status Date: 06/16/2000
Global Id: T06019757795
Lead Agency: ALAMEDA COUNTY LOP
Lead Agency Case Number: RO0002471
Latitude: 37.817349
Longitude: -122.260946
Case Type: Cleanup Program Site
Case Worker: MD
Local Agency: ALAMEDA COUNTY LOP
RB Case Number: NA
File Location: Stored electronically as an E-file
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Arsenic, Chromium, Diesel, Gasoline, Waste Oil / Motor / Hydraulic / Lubricating

Site History: During work for the reconstruction of a portion of the Glen Echo Creek concrete arch culvert a geotechnical drilling program encountered a dark oily substance on groundwater in one soil bore. Concentrations up to 1,400 ug/l TPHg, 63,000 ug/l TPHd, 180,000 ug/l TPHmo, non-detectable BTEX, and various concentrations of metals were documented in groundwater, and 1,300 mg/kg TPHd and 2,100 mg/kg TPHmo was documented in soil. A risk management plan for construction was developed. Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>.

Case Type: Cleanup Program Site
Case Worker: Not reported
Local Agency: DEPARTMENT OF TOXIC SUBSTANCES CONTROL
RB Case Number: Not reported
File Location: Stored electronically as an E-file
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), Dichloroethane (DCA), Dichloroethene (DCE), Other Chlorinated Hydrocarbons, Other Solvent or Non-Petroleum Hydrocarbon, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Arsenic, Lead, Diesel, Gasoline, MTBE / TBA / Other Fuel Oxygenates, Waste Oil / Motor / Hydraulic / Lubricating

Site History: Project is city block bounded by Broadway, 23rd, 24th & Valley Streets. Includes 2301-2345 Broadway; 421-455 24th St.; 444 23rd St.; and 2320-2354 Valley St. The site includes 5 parcels (APN 8-739-2, 8-739-4, 8-739-5, 8-739-7) that have historically been used as commercial facilities including auto dealerships/repair facilities. Associated potential chemical uses, storage, and handling included bulk waste oil in an above ground tanks, hydraulic oil related to lifts, and use of various types of cleaners and lubricants. The site is being redeveloped by Signature Redevelopment Group and will include commercial and residential land uses. Phase I and II Environmental Site Assessments have been conducted on different parcels within the redevelopment site since 2001. Soil and groundwater impacts have been identified on four of the five parcels located within the boundaries of the redevelopment project. Chlorinated and non-chlorinated volatile organic compounds (VOCs) and petroleum hydrocarbons as gasoline, diesel and motor oil have been detected in groundwater. Data indicates that a 1,1-dichloroethane plume exists under the majority of the site. Lead has been detected in shallow soil and at depths up to 13 feet below ground surface. Parcel 8-739-7 is listed as a closed underground storage tank (UST) site (ACEH Fuel Leak Case No. RO0001190 and Geotracker Global ID T06001000957). Two USTs (one 1,000 gallon leaded gasoline UST and one 550 gallon waste oil UST) were removed from the northern portion of the parcel in 1991. Petroleum hydrocarbons and VOCs were detected in confirmation soil samples collected from the UST pit. One groundwater monitoring well (MW-1) was installed in the tank pit and groundwater monitoring was conducted from 1992 until 1993. The case was closed after four consecutive quarters of non-detects for petroleum hydrocarbons. At the time of closure, low levels of chlorinated VOCs were detected in groundwater. Limiting conditions at the site at the time of the UST removals prevented the over excavation of all impacted soil and thus there may be areas of contaminated soil remaining beneath the building and the sidewalk in the vicinity of the former tanks. Data collected during field investigations conducted in 2006 and 2011 indicate that another source of petroleum hydrocarbons likely exists at the site on parcel 8-739-7. Additional investigation is required to characterize the site including determination of groundwater flow direction, vertical and lateral delineation of contaminants of

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Local Agency: ALAMEDA COUNTY LOP
RB Case Number: NA
LOC Case Number: RO0000480
File Location: Stored electronically as an E-file
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Waste Oil / Motor / Hydraulic / Lubricating
Site History: In September 1990, five 1,000-gallon motor oil, one 2,000-gallon motor oil, one 1,000-gallon used oil, and two 10,000 gallon USTs were removed from the site. Soil borings and groundwater monitoring wells were installed at the site between February 1991 and December 1992. Elevated concentrations of petroleum hydrocarbons were detected in soil and free product was present in monitoring well MW-3. In June 1996, an SVE bioventing pilot test was performed at the site. Installation of Soakease absorbent socks and periodic vacuum extraction events were terminated in July 2000. In 2004, additional borings were installed to evaluate remedial effectiveness. Elevated concentrations of petroleum hydrocarbons were detected in soil. In December 2008, two additional borings were installed in the vicinity of MW-3 to verify whether free product was present.

MAP FINDINGS

PRIVATE RESIDENCE (Continued)

S110653939

Potential Contaminants of Concern: Heating Oil / Fuel Oil
Site History: An approximately 350-gallon underground storage tank (USST) was removed from the site on December 16, 2013. The tank was found to be in poor condition with at least one visible hole. Soil discoloration and petroleum hydrocarbon odors were observed in the stockpiled soil and soil underlying the tank. Soil samples collected from the tank pit contained up to 9,290 ppm of total petroleum hydrocarbons (C10-C28). The tank pit was overexcavated to a depth of approximately 12 feet bgs to remove petroleum hydrocarbon contaminated soils. Following the overexcavation, two soil samples were collected from the bottom of the excavation at a depth of approximately 12 feet bgs. The soil sample from the western end of the tank pit contained 3,960 ppm of TPH (C10-C28).

 Local Agency: ALAMEDA COUNTY LOP
 RB Case Number: 01-2428
 LOC Case Number: RO0000505
 File Location: Stored electronically as an E-file
 Potential Media Affect: Other Groundwater (uses other than drinking water), Soil Vapor
 Potential Contaminants of Concern: Gasoline, Waste Oil / Motor / Hydraulic / Lubricating
 Site History: The site is a small triangular commercial property located at the intersection of Harrison Street and Bay Place in Oakland, CA. The site was previously a Shell gas station and auto repair facility equipped with three underground storage tanks (USTs), one 550-gallon waste oil tank UST, three dispenser islands, a drive-on hoist, and a station building. The USTs were removed from the center of the property in March 1977, but no records are available that document their removal. Three dispenser islands existed to the west, north, and east of the former USTs. Currently, the site is occupied by a 7-Eleven convenience store and the surrounding area is predominantly a mix of commercial and residential use. During a light pole installation at the site, petroleum impacted soil was observed. Composite stockpile soil samples were collected on November 2, 1992 from the soil generated during the light pole removal and analyzed

for Total Petroleum Hydrocarbons as gasoline (TPHg), Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX), lubricating oil, and other heavier petroleum hydrocarbons. The soil sample collected from Soil Pile 1 contained the highest concentrations of 3,200 parts per million (ppm) lubricating oil and 35 ppm Oil and grease (O&G). On March 4, 1993, four soil borings (#1 through #4) were advanced at locations across the site. One soil sample from each boring was analyzed for TPHg, TPHd, BTEX, O&G, Total Petroleum Hydrocarbons as kerosene (TPHk), Total Petroleum Hydrocarbons as mineral spirits (TPHms), and lubricating oil. The maximum concentrations of 7,900 ppm TPHmo and 620 ppm TPHg were detected in the soil sample from boring #4, in the east portion of the site. Six monitoring wells (S-1 through S-6) were installed throughout the site on June 2 through 5, 2008. Soil samples were collected from each boring between 5.5 and 15.5 fbs, along with one groundwater sample. Groundwater was first encountered at the site between 8.2 and 19 fbs. The soil samples indicated that the highest concentration of petroleum hydrocarbons occurred in shallow soils between 7 and 10 fbs. Shallow soils in the southeast portion of the site contained up to 2,300 ppm TPHg, 22,000 ppm TPHd, and 8,600 ppm O&G. Shallow soils near the western-most dispenser contained up to 2,700 ppm TPHg and 270 ppm TPHd. Groundwater samples collected from the former UST area and southeast corner of the site contained TPHg concentrations of 6,500 parts per billion (ppb) and 1,300 ppb, respectively. To investigate the potential for the petroleum plume to extend off-site, two grab groundwater samples (HP-1 and HP-2) were collected down gradient along Harrison Street on May 19 through 21, 2009. The grab groundwater sample collected furthest from the site (HP-2) contained 715,000 ppb O & G, 14,000 ppb TPHg, and 58,000 ppb TPHd, while the closer groundwater sample (HP-1) contained 111,000 ppb O&G, 11,000 ppb TPHg and 36,000 ppb TPHd. The grab groundwater samples indicated the potential for an offsite plume of heavier hydrocarbons. In addition to the off-site samples, four soil borings (B-1 through B-4) were advanced in the former waste oil tank area. The shallow soil sample collected from boring B-1 at 5.5 fbs contained the highest concentration of O&G at 3,000 ppm. TPHg and TPHd were detected in all borings at maximum concentrations of 920 ppm and 700 ppm, respectively. Three soil vapor probes (SVP-1 through SVP-3) were also installed near the former USTs and waste oil UST and sampled on May 28, 2009. The vapor probes contained up to 530,000 micrograms per cubic meter (g/m3) benzene. On February 27, 2010, one soil vapor probe (SVP-2a) and two near sub-slab vapor probes (SVP-4 and SVP-5) were installed. Sampling of the vapor probes on occurred on March 23, 2010. TPHg and benzene were detected in soil vapor near the former USTs at concentrations up to 75,000,000 g/m3 and 160,000 g/m3, respectively. Soil vapor samples from the two near sub-slab probes did not contain TPHg, benzene, toluene, ethylbenzene, or xylenes (BTEX) at concentrations above the reporting limit. On June 25, 2010, six soil borings (B-5 through B-10) were advanced off-site to investigate contamination south of the site. The investigation revealed a large plume of petroleum hydrocarbons south of the site consisting of O&G, TPHd, and TPHg at maximum groundwater concentrations of 715,000 ppb, 58,000 ppb, and 14,000 ppb, respectively. The highest concentrations were detected along Harrison Street approximately 175 feet southwest of the site. The plume does not contain BTEX or other VOCs at concentrations above reporting limits. Since the maximum concentrations within the plume were

detected approximately 175 feet downgradient from the site and the types of petroleum hydrocarbons are not consistent with the dissolved phase hydrocarbons detected on site, the plume is most likely from an off-site source. In 2011, a review of historical aerial photos and Sanborn maps identified five potential sources for the off-site heavy petroleum hydrocarbon plume. On March 30, 2011, soil vapor probes SVP-3 through SVP-5 were sampled. Soil vapor probes SVP-1, SVP-2, and SVP-2a could not be sampled due to water in the sampling tubing. Due to anomalous results of up to 190,000 g/m³ TPHg in near sub-slab vapor probes SVP-4 and SVP-5, the probes were re-sampled on June 8, 2011. The re-sampling of probes SVP-4 and SVP-5 indicated non-detectable concentrations of TPHg and 2.2 g/m³ benzene were present in the near sub-slab wells. Probe SVP-3, located less than five feet north of near sub-slab probe SVP-5, contained 26,000,000 g/m³ TPHg, 1,400 g/m³ benzene, and 1,700 g/m³ xylenes. An air exchange rate test was performed on the existing convenience store building on December 19, 2011. The initial measurements of the air exchange rate indicated an overall average of 3.11 exchanges per hour. Due to a relatively low air exchange rate, the test was followed by system maintenance which increased the HVAC performance to an air exchange rate of 11.49 exchanges per hour. The minimum required air exchange rate was calculated to determine the potential for intrusion of benzene from soil vapor to indoor air to exceed the commercial indoor air Environmental Screening Level (ESL). Using site data and assumptions from EPA and RWQCB documents, the calculated necessary air exchange rate to prevent benzene vapor intrusion at concentrations exceeding the indoor air ESL is 2.3 exchanges per hour. The current air exchange rate is greater than the calculated minimum air exchange rate by a factor of 5.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Lead Agency: ALAMEDA COUNTY LOP
Case Worker: KLD
Local Agency: ALAMEDA COUNTY LOP
RB Case Number: 01-1313
LOC Case Number: RO0002600
File Location: Stored electronically as an E-file
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: On April 7, 1998, five soil borings were installed at the site. Soil and groundwater samples detected diesel and bunker oil range hydrocarbons indicating that a release had occurred. In October 1998, one 10,000-gallon UST was closed in place at the site. Following UST closure activities, an additional Site Investigation verified soil and groundwater contamination at the site. Free product has been observed in groundwater monitoring well FOMW-1.

File Location: Stored electronically as an E-file
 Potential Media Affected: Under Investigation
 Potential Contaminants of Concern: Not reported
 Site History: Phase I performed in 1998 discovered 3 on-site groundwater monitoring wells from the immediately upgradient and to the north Shell gasoline station (RO0000009) indicated that groundwater contamination is present at concentrations of 610 ppb TPPH, 50 ppb benzene, and 3.9 ppb MTBE. From Enviro September 15, 1997 QMR. A review of the site shows that well S-11 contained concentrations of up to 1,210 ppb TPPH, and 39 ppb benzene in 1999 which may indicate that an uninvestigated onsite source is present adjacent to this well. The 3 on-site wells were destroyed in 1999.

 File Location: Stored electronically as an E-file
 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Gasoline
 Site History: The site was redeveloped in 2007 and is currently the site of a Whole Foods Market at the intersections of Bay Place, Harrison Street, and Vernon Street in Oakland, California. The site is approximately 1,000 feet north of Lake Merritt. Surrounding land use is mixed commercial and residential. Two underground storage tanks (USTs) were present at the Site as part of the automobile service facility. The two USTs consisted of a 3,000-gallon waste oil tank, which was removed in

December 1988, and a 10,000-gallon gasoline UST, which was removed in January 1994. During the excavation and removal of the 10,000-gallon gasoline UST in January 1994, a hole was observed in the product piping that lead from the UST to the fuel dispenser. Free-phase product was observed on the groundwater surface in the gasoline UST excavation. In June 1994, approximately 100 cubic yards of total petroleum hydrocarbon (TPH) affected soil adjacent to the former gasoline UST and along the western portion of the former product piping route, was excavated and removed. Several soil and groundwater investigations have been conducted at the Site since 1992. The investigations found petroleum contamination in soil and groundwater within the areas of the former USTs and former hydraulic lifts and tanks. Two areas with elevated concentrations of lead were also identified beneath the building. A total of eleven hydraulic lifts along with nine floor drains and associated piping were excavated and removed between June 2005 and November 2005. Approximately 1,010 tons of soil adjacent to the hydraulic lifts was excavated and transported to Waste Managements Altamont Landfill in Livermore, CA for disposal. A total of approximately 285 tons of lead-affected soil was transported to Clean Harbors Class I landfill in Button Willow, CA for disposal. During the period from September 16 to December 16, 2005, a total of approximately 5,000 tons of TPH-affected soil was excavated from the area of the former USTs and transported to Allied Wastes Forward Landfill located in Manteca, CA for disposal. Quarterly and later semiannual groundwater monitoring was conducted at the site between March 1993 and April 2010. The groundwater monitoring data indicate that a plume containing dissolved petroleum hydrocarbons is present in the area of the former USTs and extends beneath Bay Place. The highest concentration of MTBE detected during the most recent sampling event in April 2010 was 1,400 parts per billion. No water supply wells or other potential receptors are expected to be affected by the plume. Site investigation and cleanup activities have been completed and it does not appear that the fuel release presents a risk to human health for nearby residents or site workers. Therefore, Alameda County Environmental Health is considering potential closure of the fuel leak case.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

<p>Status: Status Date: Lead Agency: Case Worker: Local Agency: RB Case Number: LOC Case Number: File Location: Potential Media Affect: Potential Contaminants of Concern: Site History:</p>	<p>Completed - Case Closed 02/18/2010 ALAMEDA COUNTY LOP JTW ALAMEDA COUNTY LOP 01-1349 RO0000009 Stored electronically as an E-file Other Groundwater (uses other than drinking water) Gasoline The site is at the intersection of 28th Street and Telegraph Avenue in Oakland, CA and is currently occupied by a Kentucky Fried Chicken restaurant. The surrounding area is a mixed residential and commercial area. Shell demolished the former gasoline service station between 1988 and 1992. The former service station consisted of a first generation underground storage tank (UST) in the northeast corner of the property, three second-generation gasoline USTs in the southwestern portion of the site, a waste oil tank, four dispensers, an oil/water separator, three hydraulic lifts, and a station building. Sometime in 1987, five soil borings were drilled and sampled in the vicinity of the three second generation USTs. TPHg and benzene were detected in soil at concentrations up to 4,400 and 26 ppm, respectively. TPHd and TPHmo were not detected in soil. Three on-site groundwater monitoring wells (S-1, S-2, and S-3) were installed and sampled by Woodward-Clyde Consultants in April of 1988. At that time, the service station was no longer in use and the single first generation UST had been removed from the northeastern corner of the site. Maximum concentrations of TPHg and benzene in soil were reported at 4,800 and 38 ppm, respectively. Maximum concentrations of TPHg and benzene in the initial groundwater samples were 46,000 ppb and 2,700 ppb, respectively, reported in source area well S-3. In November 1988, four off-site groundwater monitoring wells (S-4, S-5, S-6, and S-7) were installed. TPHg and benzene were detected in groundwater from well S-6, which is located on the south side of 28th Street downgradient from the three gasoline USTs, at concentrations of 5,500 and 1,700 ppb, respectively. In December 1988, the three gasoline, USTs, waste oil tank, dispensers, and product piping were removed. The four tanks were made of fiberglass and no apparent holes or cracks were observed. Soil samples collected from the sidewalls of the excavation contained TPHg and benzene at concentrations up to 2,800 and 0.85 ppm, respectively. One soil sample collected below the waste oil UST did not contain reportable concentrations of TPHd and BTEX. Overexcavation of the tank pit was performed on January 29, 1989. The excavation was extended vertically to a depth of approximately 9.5 feet below grade where groundwater was encountered. Approximately 500 cubic yards of soil was excavated from the area around the tank pit in the southwestern portion of the site. In July 1989, three additional off-site monitoring wells (S-8, S-9, and S-10) were installed south of the site. Off-site monitoring well S-11 and on-site product recovery well SR-1 were installed in October and November 1990. On-site soil vapor extraction wells SV-1 and SV-2 were installed on September 11, 1991. GeoStrategies, Inc. conducted a soil vapor extraction pilot test using wells SV-1 and SV-2 on September 24, 1991. The vapor extraction test results indicated minimal vacuum influence and low vapor recovery concentrations. GeoStrategies, Inc. concluded that soil vapor extraction was not a feasible remedial alternative for the site. Between 1991 and June 1992, the former</p>

S101624460

service station building, the dispenser island, and dispenser canopy were removed. From June through August 1992, GeoStrategies, Inc. observed the removal of the oil water separator and three hydraulic lifts formerly located within the service station building and collected soil samples beneath the former OWS, hydraulic lifts, and former dispensers. TPHg and BTEX were not reported in any of the four soil samples collected beneath the product piping at each dispenser. One soil sample collected below the OWS contained oil and grease at a concentration of 68 ppm and did not contain reportable concentrations of TPHg, TPHd, or BTEX. The excavation was expanded laterally and vertically in the area of the former OWS. After the second stage of excavation, a confirmation soil sample collected from the bottom of the excavation at a depth of approximately 10.5 to 11 feet bgs did not contain TPHg, TPHd, oil and grease, or BTEX at concentrations above reporting limits. Three soil samples were collected beneath each of the former hydraulic lifts at 7.5 to 8 feet bgs. TPHd and TPHmo were detected at concentrations of 40 and 580 ppm, respectively, in one of the three soil samples (SL-1) but were below detection limits in the other two soil samples. Two phases of additional soil excavation were conducted in the area of sample SL-1. The confirmation sample collected from the bottom of the excavation at a depth of approximately 10.5 to 11 feet bgs did not contain detectable concentrations of TPHd or TPHmo. The overexcavation performed in the vicinity of the former OWS and hydraulic lifts removed approximately 90 cubic yards of soil. Off-site monitoring wells S-7, S-9, and S-11 were decommissioned on November 19, 1999 to accommodate development of the off-site parcel. A sensitive receptor survey, utility conduit survey, and request for case closure were submitted on June 4, 2001. In response to an ACEH request, three on-site borings were proposed in the vicinity of former downgradient well S-3 and five offsite borings were proposed along the Telegraph Avenue to determine whether petroleum hydrocarbons were migrating along the utility corridors. Due to numerous utilities beneath Telegraph Avenue, Cambria was unable to find locations for the five proposed offsite borings. Onsite borings were advanced in May 2004 in the source area near former well S-3. TPHg was detected in soil samples from the borings at concentrations up to 4,900 ppm. Benzene, MTBE, EDB, and EDC were not detected in the soil samples. Grab groundwater samples collected from each of the three borings contained TPHg at concentrations up to 86,000 ppb. Benzene, MTBE, EDB, EDC, and other fuel oxygenates were not detected in the grab groundwater samples. Onsite wells S-1 and SR-1 and off-site wells S-4, S-5, and S-10 were decommissioned on November 11, 2005. A geophysical survey was used to find missing well S-3, which was located in a planter along 28th Street. Well S-3 was filled with debris and was properly decommissioned in March 2006. Replacement well S-3R was installed downgradient from the former USTs in March 2006. Groundwater monitoring has been conducted at the site since May 1988. Free product was historically observed and measured in onsite well S-3 between October 1990 and July 1991. Maximum historical concentrations of TPHg, benzene, and MTBE in groundwater were 47,000 ppb (S-3), 3,700 ppb (offsite well S-6), and 229 ppb (offsite well S-8). During recent groundwater monitoring events, only source well S-3R, and downgradient wells S-6, and S-8 are monitored quarterly. During the most recent Second Quarter 2008 groundwater sampling event on May 28, 2008, groundwater from wells S-3R, S-6, and S-8 contained 450, 1,400, and 1,200 ppb of TPHg, respectively. Benzene was reported

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Major Threat to Water Quality. A violation could render unusable a ground water or surface water resource used as a significant drink water supply, require closure of an area used for contact recreation, result in long-term deleterious effects on shell fish spawning or growth areas of aquatic resources, or directly expose the public to toxic substances.

Complexity: Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.

Status: Open - Site Assessment
Status Date: 08/26/1999
Lead Agency: ALAMEDA COUNTY LOP
Case Worker: KEN
Local Agency: ALAMEDA COUNTY LOP
RB Case Number: 01-2411
LOC Case Number: RO0000247
File Location: Stored electronically as an E-file
Potential Media Affect: Under Investigation
Potential Contaminants of Concern: Waste Oil / Motor / Hydraulic / Lubricating
Site History: On March 11, 1997, an investigation was performed to investigate the 1,000-gallon heating oil or fuel UST located in the sidewalk. Four borings were advanced on each side of the tank to maximum depths of 20 feet bgs. The maximum concentrations in soil were 9,600 mg/kg TPHg, 4,500 mg/kg TPHd, and 18,000 mg/kg Oil and Grease. No benzene or MTBE were detected. After the investigation was performed, the UST was closed in place. Groundwater was not collected at this time. Additional work was requested to evaluate groundwater; however, no work was performed as of 6/26/2014.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

The site has had the previous addresses: 554 27th Street and 550 27th Street. The site was opened as RO2948 when proposed land use changed to residential. The proposed building is to be commercial use on the first floor along 27th Street and subgrade parking along Merrimac Street with a car ramp on the south side of the building for access to the parking. Residential units will be on the second floor. A Preliminary Site Assessment was performed in February 2007. One soil boring was advanced near former well MW-3 which had previously contained the maximum benzene concentration in groundwater at the site. TPHg was detected at 20 ppm in soil at 10.3 feet, but no hydrocarbons were detected in the 11.5 foot sample. Up to 2,300 ppb TPHd, 11,000 ppb TPHmo were detected in groundwater. No TPHg or BTEX was detected in the groundwater sample. Eight soil borings were advanced between February 14 and 18, 2008. Maximum concentrations were 220 ppb TPHg and 196 ppb TPHd and no benzene was detected. Four soil vapor samples were also collected during this investigation. Benzene was detected in only one sample at a concentration of 12 a%g/m3 and is below the residential ESL for benzene. Gasoline was detected in two samples at a maximum concentration of 1,900 a%g/m3. All other TO-15 analytes were either below the detection limits or at least 2 orders of magnitude below the respective ESL for each constituent. Site Management Requirements: Case closure for this site is granted for the currently proposed construction configuration (as of 4/1/08) of a multistory residential building with the first floor comprised of commercial space and a subgrade parking garage. If the currently proposed construction configuration changes or any construction/excavation activities encounter contamination that is indicative of higher residual concentrations than reported in this closure summary's after columns of the Maximum Documented Contaminant Concentrations table, then ACEH must be immediately notified.</p>

Status: Open - Assessment & Interim Remedial Action
Status Date: 08/20/2001
Lead Agency: ALAMEDA COUNTY LOP
Case Worker: KEN
Local Agency: ALAMEDA COUNTY LOP
RB Case Number: 01-1466
LOC Case Number: RO0000358
File Location: Stored electronically as an E-file
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Benzene, Diesel, MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History: A site assessment conducted in 1989 detected 11,000 mg/kg TPHg and 40 mg/kg benzene in soil; 9,500 g/L TPHg in groundwater; and 6,100 g/L TPHg and 10 g/L benzene in soil vapor indicating that a release from the underground storage tanks had occurred. Two gasoline USTs, one diesel UST and one waste-oil UST were replaced in November and December 1991. Soil samples reported up to 10,000 mg/kg TPHg and 130 mg/kg benzene. Groundwater remediation occurred from 1990 to 1993. A 1,000-gallon waste-oil UST was removed on September 22, 1997. Soil samples collected beneath the waste-oil tank were below the detection limits for many constituents with TEPH at 32 mg/kg, TRPH at 120 mg/kg and TTLC lead at 7.2 mg/kg. A dual-phase extraction pilot test was

MAP FINDINGS

S101580163

performed 19/11/2001 and found that DPE would be an effective remediation method for the site. Remediation occurred at the site from 1991 until 1996. Groundwater monitoring continues to date and future site assessment is planned to assess lateral and vertical extent of hydrocarbons before a CAP is prepared

LUST:

Region: STATE
Global Id: T0600100431
Latitude: 37.8120474343716
Longitude: -122.268684377979
Case Type: LUST Cleanup Site
Status: Open - Remediation
Status Date: 11/08/2012
Lead Agency: ALAMEDA COUNTY LOP
Case Worker: KEN
Local Agency: ALAMEDA COUNTY LOP
RB Case Number: 01-0475
LOC Case Number: RO0000359
File Location: Stored electronically as an E-file
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: In August 1990, two gasoline USTs, one waste-oil UST and four dispensers were removed. Maximum soil concentrations detected were 310 mg/kg TPHg, 100 mg/kg TPHd and 0.820 mg/kg benzene from the the gasoline USTs and dispensers. However, free product was observed in groundwater in the waste-oil UST excavation. Subsequent excavation in the waste-oil tank area could not remove the contaminated soil from beneath the building so this was left in place. Monitoring wells were installed in 1994 and were monitored sporadically until 2005 when semi-annual monitoring began. The recent investigation in 2009 indicated groundwater concentrations up to 41,000 g/L TPHg, 240,000 g/L TPHd, 110,000 g/L TPHmo, and 2,800 g/L benzene.

Local Agency: ALAMEDA COUNTY LOP
RB Case Number: 01-0341
LOC Case Number: RO0000137
File Location: Stored electronically as an E-file
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: In July 1988 an ATT manhole 300 feet west of the site was found to have gasoline leaking into it, and a request to test the USTs was made. In February 1989 a soil vapor survey (VP-1 to VP-19) was conducted at the site; concentrations indicated a release. In March 1989 wells MW-1 to MW-5 were installed. In June 1990 wells MW-6 to MW-9 were installed offsite. In June 1990 the station was demolished and three 10,000-gallon gasoline USTs and one 1,000-gallon waste oil UST were removed. Well MW-2 was destroyed in the process of overexcavating impacted soil in 1990 and 1991; approximately 1,500 cubic yards were excavated. Of that total approximately 800 cubic yards were aerated and reused onsite. In December 1992 the City of Oakland purchased the property. A parking lot and landscaping was constructed over the western portion of the site and Bay Place was expanded over the eastern portion. In January 1993 a groundwater extraction system was installed in well MW-5. The system was shut down in January 1995 due to low production rates. On December 1, 1995 wells MW-1 and MW-3 were decommissioned. In November 1996 an additional 200 cubic yards of soil was excavated due to the installation of a new storm drain on Montecito Avenue. A one week long two-phase extraction pilot test was conducted on well MW-5 in September 2005. In August 2008 periodic injection of oxygen into well MW-5 was proposed; work was implemented in February 2009.

Local Agency: ALAMEDA COUNTY LOP
RB Case Number: 01-1752
LOC Case Number: RO0000140
File Location: Stored electronically as an E-file
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Waste Oil / Motor / Hydraulic / Lubricating
Site History: May 10, 1993, one 350-gallon waste-oil UST was removed from the site. Petroleum hydrocarbons were detected in soil at the time. Subsequently one monitoring well was installed and sampled once. No petroleum hydrocarbons were detected in the two soil samples collected from the boring at 21 and 26 feet. However, petroleum hydrocarbons were detected in groundwater. Only one sampling event was reported.

Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Heating Oil / Fuel Oil, Lead
Site History: In 2006, the site was being redeveloped with a multi-story office building. During construction activities, an UST was discovered and subsequently removed. Elevated concentrations of petroleum hydrocarbons were detected at the site. Several borings were installed to delineate the extent of the groundwater contaminant plume.

Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A complete case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>. In 1986 tank basin soil and a groundwater sample were collected during the replacement of USTs in a pre-existing tank basin; hydrocarbon concentrations were encountered. Sixteen soil vapor wells are reported to have been installed in 1986 and 1987 over the BART tube, located directly below the site; however, no data has been submitted. In 1992 a groundwater sample was collected from a former vadose zone well (VW-2) and concentrations of concern were encountered; however, the location of VW-2-1 is unknown. In July 1994 product lines were removed and upgraded and low hydrocarbon concentrations were encountered. In

March 2000 eight hand-augered bores were installed at the site; most bore depths were limited to 10 feet by the presence of the BART tube. In March 2002 wells MW-1 to MW-3 were installed on either side of the BART tube and right-of-way. In April 2012 soil bores B-9 to B-12 were installed to define the downgradient extent of the dissolved-phase groundwater plume. Groundwater was collected; however, appeared to define a deeper non-impacted groundwater zone. The groundwater plume was defined using the LTCP groundwater technical justification paper 90th percentile plume length, and conducting a downgradient sensitive receptor survey for water supply wells and potential basements that might encounter the impacted groundwater.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LOC Case Number: RO0000199
File Location: Stored electronically as an E-file
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Three USTs removed in December 1989. Following UST removals, borings, which detected free product, were installed at the site. Additional site investigations were conducted in 1992. An SVE system operated from October 1996 to March 1998. In November 2004, DPE was proposed at the site, which was approved in March 2006. Corrective action implemented April 2011 & is in current operation.

Site History: In November 2009, one 1,500-gallon underground storage tank (UST) was removed from the site. At the time of removal free product was observed in soil. The maximum soil samples collected from the tank pit were 7,200 milligrams per kilogram (mg/kg) total petroleum hydrocarbons as diesel (TPHd), 2,500 mg/kg TPH as motor oil (TPHmo), 8,800 mg/kg oil and Grease. After overexcavation, green soil staining and odor were still observed. Maximum concentrations were 720 mg/kg TPHd, 300 mg/kg TPHmo, and 900 mg/kg oil and grease.

Facility Status: Open - Site Assessment
Status Date: 06/06/2007
Global Id: T10000001070
Lead Agency: ALAMEDA COUNTY LOP
Lead Agency Case Number: RO0002960
Latitude: 37.7777025903742
Longitude: -122.230163812638
Case Type: Cleanup Program Site
Case Worker: KLD
Local Agency: ALAMEDA COUNTY LOP
RB Case Number: NA
File Location: Stored electronically as an E-file
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Polychlorinated biphenyls (PCBs), Nickel, Other Metal
Site History: A limited subsurface investigation was performed on June 6, 2007. Five soil borings were drilled. Two soil borings were placed on the property located at 3001-3007 E. 12th Street (APN 25-6936-4) and three boring were placed on the neighboring property at 0 29th Street.(APN 25-693-8). Elevated concentrations of metals and PCBs were detected in soil samples from APN 25-693-8. The address has been changed in Geotracker to reflect the correct location of the project case.

Local Agency: ALAMEDA COUNTY LOP
RB Case Number: 01-2031
LOC Case Number: RO0000145
File Location: Stored electronically as an E-file
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: The site is a former service station located on teh corner of Martin Luther King Jr. Way and 27th Street in Oakland. During removal of a 2,000-gallon UST in 1994, soil contamination was detected. Site investigation activities were condcuted at the site beginning in 1995. Soil removal was conducted in 1996. A dual-phase extraction test was conducted in 2006. Excavation and bio-sparging is currently planned for the site. A shallow excavtion to remove TPH as motor oil and lead is planned for the northern portion of the site. urther investigation of the off-site extent and source of lead and PAHs is ongoing. Additonal delineation of the extent of groundwater contamination is pending access by nearby property owners.

 Site Type: STATE RESPONSE OR NPL
 Completed: 12/11/2013
 Lien Amount: \$467,718.11
 Description:

This site is currently occupied by two buildings and a garage. One building, a two-story fourplex, was used as apartments. The other building is three-stories, with three commercial units on the ground floor and apartments on the upper floors. Harris Dry Cleaners and later Telegraph Dry Cleaners operated in a ground floor commercial unit. Dates of operation and site occupancy for the dry cleaning operations are unknown, but all dry cleaning operations on-site ceased in 1996.

RB Case Number: 01-1776
LOC Case Number: RO0000134
File Location: Stored electronically as an E-file
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: In March 1992 two USTs (one-gasoline and one waste-oil) were removed from beneath the sidewalk. The associated fuel dispenser which was located in the building was also removed at this time. Elevated hydrocarbon and oxygenate concentrations were observed in soil and groundwater in the source area and the groundwater monitoring program began in 1993 with the installation of the first three monitoring wells.

 Status: Open - Eligible for Closure
 Status Date: 12/23/2014
 Lead Agency: ALAMEDA COUNTY LOP
 Case Worker: KEN
 Local Agency: ALAMEDA COUNTY LOP
 RB Case Number: 01-1597
 LOC Case Number: RO0000251
 File Location: Stored electronically as an E-file
 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Gasoline
 Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at <https://ehgis.acgov.org/dehpublic/dehpublic.jsp>. In July 1989 one 10,000-gallon and one 12,000-gallon gasoline UST and one 550-gallon waste-oil UST were removed. The gasoline tanks were replaced. Soil samples were collected from 450 yd3 of stockpiled soil that were present at the site. September 6 and 7, 1989 four monitoring wells were installed on-site. In September 1998, two 12,000-gallon gasoline USTs and associated dispensers and product piping were removed from

the site. Soil samples collected indicated petroleum hydrocarbon impact. Groundwater was not encountered during the tank removal. Groundwater samples collected from the March 2006 borings had maximum detected concentrations of 13,000 ppb TPHg, 510 ppb benzene and 340 ppb MTBE. Grab groundwater samples reported up to 9,500 ug/L TPHg in a 2011 SWI. Sensitive receptor survey did not identify any receptors within 2,000 feet of the site. Based on this finding and the SWRCBs LTCP Technical Justification for Groundwater Plume Length, Indicator Constituents, Concentrations, Buffer Distances (Separation Distances) to Receptors (LTCP Guidance; SWRCB 2012), the site meets LTCP Media Specific Criteria for Groundwater scenario 4, without having defined the plume boundary.

S110326384

Longitude: -122.27446
Project Mgr: HENRY WONG
Project Code: 200882
If Satisfied: NO
Date Satisfied: Not reported
Site Status: ACTIVE
Site Type: STATE RESPONSE OR NPL
Completed: 06/01/2011
Lien Amount: \$1,710,822
Description: Lane Metal Finishers and Cal-Tech Metal Finishers (Cal-Tech) operated at the Site from 1947 to 2000. Cal-Tech operations included polishing, electroplating, anodizing and plating of metal parts. Chemicals historically used at the Site include caustic liquids, sodium, hydroxide, hydrochloric acid, nitric acid, sulfuric acid, chromic acid, chromic trioxide, sodium cyanide, cadmium, copper cyanide, potassium cyanide, silver cyanide and plating solutions containing variety of metals. The waste generated at the Site included aqueous waste containing hexavalent chromium and sludges containing metals.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

HAZARDOUS WASTE BIENNIAL REPORTER

CRITERIA AND HAZARDOUS AIR POLLUTANT INVENTORY

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Document Type: Remedial Action Implementation Workplan
Completed Date: 04/13/2009
Comments: Workplan for soil vapor extraction at the site approved.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 04/30/2010
Comments: SVE installation completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 07/28/2008
Comments: USEPA conducted indoor air sampling at several residential units and a day care center near the Site. Day Care Center did not have detections of any contaminants. Some of the samples had low levels of TCE. These levels did not require immediate action and will be reduced when DTSC implements the cleanup remedy.

Completed Date: 01/22/2010
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 01/28/2011
Comments: Soil, groundwater and soil gas were investigated within the site boundary. Groundwater investigations were also conducted on several locations along San Pablo Avenue and Market Street. Primary contaminants found include trichloroethene (TCE) and its breakdown products; cis-1,2-dichloroethene (cis-DCE), trans-1,2-Dichloroethene (trans-DCE) and vinyl chloride.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 07/26/2008
Comments: Indoor air sampling at the Lane Metals site conducted with 23 Summa canisters placed in 8 residences, one day care facility, one business, two crawl spaces under homes and four outdoor locations. Seven of these locations had duplicate canisters.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 10/06/2009
Comments: Interim Removal Action Plan selected soil vapor extraction as the preferred alternative.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 08/17/2009
Comments: Fact sheet for interim removal action workplan completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Implementation Workplan
Completed Date: 04/13/2009
Comments: Workplan for soil vapor extraction at the site approved.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 04/30/2010
Comments: SVE installation completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 07/28/2008
Comments: USEPA conducted indoor air sampling at several residential units and a day care center near the Site. Day Care Center did not have detections of any contaminants. Some of the samples had low levels of TCE. These levels did not require immediate action and will be reduced when DTSC implements the cleanup remedy.

to 0.54 mg/kg, 63.6 mg/kg and 5.4 mg/kg, respectively. TPH as gasoline (TPH-g), benzene and ethylbenzene were detected in groundwater up to 5,310 microgram per liter (ug/l), 37 ug/l, and 351 ug/l, respectively. TCE, cis-1,2-dichloroethene (cis-DCE), and 1,2-dichloroethane (1,2-DCA) were detected in groundwater at 3,780 ug/l, 193 ug/l, and 10 ug/l respectively.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 09/09/2003
Comments: Chromium and cadmium were detected in soil up to 63.6 mg/kg and 5.4 mg/kg, respectively. TPH as gasoline (TPH-g), TPH as stoddard solvent (TPH-ss), were detected in groundwater up to 4,900 ug/l and 650 ug/l respectively. TCE was detected in groundwater at 240,000 ug/l.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 10/03/2003
Comments: TCE was detected up to 0.54 mg/kg in soil.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 08/31/2004
Comments: TCE was detected in soil up to 92 mg/kg. TPH-g, benzene, TCE, cis-DCE, tetrachloroethylene (PCE), carbon tetra chloride, 1,1,2-trichloroethane (1,1,2-TCA), DCE and methylene chloride were detected in groundwater up to 5,310 ug/l, 6.7 ug/l, 412,000 ug/l, 10,800 ug/l, 177 ug/l, 180 ug/l, 19 ug/l, 39 ug/l and 34 ug/l, respectively. Three monitoring wells were installed and TPH-g and TCE were detected up to 2,280 ug/l and 5,670 ug/l, respectively.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 11/30/2004
Comments: 3 monitoring wells were sampled TCE ranged from 11.6 ug/l to 5,610 ug/l.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 03/01/2005
Comments: 3 monitoring wells were sampled and TCE concentrations ranged from 12.5 ug/l to 7,130 ug/l.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 06/30/2005
Comments: 3 monitoring wells were sampled and TCE concentrations ranged from 16.2 ug/l to 19,000 ug/l.

Description: The 4.259-acre site is located in Alameda County, CA within the city of Oakland. The Hotel Oakland (former Army Hospital building) has been renovated several times since Department of Defense (DoD) activity was terminated. Current owners of the associated parcels include Hotel Oakland Associates, ICH Associates, and four private owners.

History: In 1943, the U.S. acquired 12 leases for a total of 4.259 acres. The site was used as a station hospital by the U.S. Army Medical Corps. In 1946, 1.377 acres were transferred to the Veterans Administration (VA). In 1947, the remaining acres were transferred to the VA. No potential hazards have been identified at this site.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/26/2015	Source: EPA
Date Data Arrived at EDR: 04/08/2015	Telephone: N/A
Date Made Active in Reports: 06/22/2015	Last EDR Contact: 07/09/2015
Number of Days to Update: 75	Next Scheduled EDR Contact: 10/19/2015
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/26/2015	Source: EPA
Date Data Arrived at EDR: 04/08/2015	Telephone: N/A

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810

	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/10/2015
Date Data Arrived at EDR: 03/31/2015

	Data Release Frequency: Varies

Federal ERNS list

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 03/30/2015	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 03/31/2015	Telephone: 202-267-2180
Date Made Active in Reports: 06/02/2015	Last EDR Contact: 06/26/2015
Number of Days to Update: 63	Next Scheduled EDR Contact: 10/12/2015
	Data Release Frequency: Annually

State- and tribal - equivalent NPL

RESPONSE: State Response Sites

Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

Date of Government Version: 05/04/2015	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 05/05/2015	Telephone: 916-323-3400
Date Made Active in Reports: 05/14/2015	Last EDR Contact: 05/05/2015
Number of Days to Update: 9	Next Scheduled EDR Contact: 08/17/2015
	Data Release Frequency: Quarterly

State- and tribal - equivalent CERCLIS

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 05/04/2015	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 05/05/2015	Telephone: 916-323-3400
Date Made Active in Reports: 05/14/2015	Last EDR Contact: 05/05/2015
Number of Days to Update: 9	Next Scheduled EDR Contact: 08/17/2015

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 02/25/2015	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 03/10/2015	Telephone: 202-307-1000

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Date of Government Version: 04/22/2013	Source: Environmental Protection Agency

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u> ALAMEDA, CA	FEMA Flood <u>Electronic Data</u> YES - refer to the Overview Map and Detail Map
Flood Plain Panel at Target Property:	06001C - FEMA DFIRM Flood data
Additional Panels in search area:	Not Reported

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u> OAKLAND WEST	NWI Electronic <u>Data Coverage</u> YES - refer to the Overview Map and Detail Map
--	--

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Tierra

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 14 Min: 4	Max: 6.5 Min: 5.1
2	11 inches	31 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 0.42 Min: 0.01	Max: 7.3 Min: 5.6
3	31 inches	59 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 5.6

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Dear Ms. Gates:

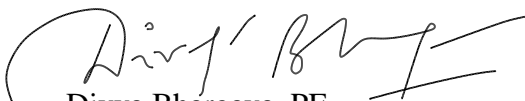

ENGEO is pleased to present our phase I environmental site assessment of the subject property (Property), located in Oakland, California. The attached report includes a description of the site assessment activities, along with ENGEO's findings, opinions, and conclusions regarding the Property.

ENGEO has the specific qualifications based on education, training, and experience to assess the nature, history, and setting of the Property, and has developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. We declare that, to the best of our professional knowledge and belief, the responsible charge for this study meets the definition of Environmental Professional as defined in Section 312.10 of 40 CFR Part 312 and ASTM 1527-13.

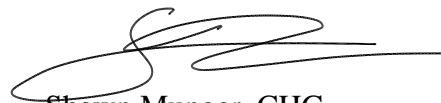

We are pleased to be of service to you on this project. If you have any questions concerning the contents of our report, please contact us.

Sincerely,

ENGEO Incorporated

Divya Bhargava, PE

Shawn Munger, CHG

EXECUTIVE SUMMARY

ENGEO conducted a phase I environmental site assessment for the parcel located at 2630 Broadway (Property) in Oakland, California (Figures 1 and 2). The Property is approximately 1.1-acres in area, and is identified by Assessor's Parcel Number (APN) 9-685-18-6 (Figure 3). The Property is currently occupied by one large vacant circular structure, along with parking used by an auto dealership.

We understand that the proposed development consists of multi-unit residential podium structures, with up to three levels of underground parking.

This assessment included a review of local, state and federal environmental record sources, standard historical sources, aerial photographs, fire insurance maps and physical setting sources; a reconnaissance of the Property to review site use and current conditions to check for the storage, use, production or disposal of hazardous or potentially hazardous materials; and interview with persons knowledgeable about current and past site use.

The reconnaissance and records research did find documentation or physical evidence of soil and groundwater impairments associated with the current or past use of the Property. A review of regulatory databases maintained by county, state and federal agencies did find documentation of hazardous materials violations or discharge on the Property. In addition, a review of regulatory agency records and available databases identified contaminated facilities within the appropriate ASTM search distances that could potentially impact the Property.

Based on the findings of this assessment, the following REC was identified for the Property:

- Based on previous investigations, potential residual impacts exist on the Property related to fill associated with the former hospital.

In addition, the following Historic Recognized Environmental Condition (HREC) was identified for the Property:

- The Property was formerly occupied by a hospital and a gasoline station. The Property (Chevron #9-2506) is listed on the San Francisco Regional Water Control Board's (RWQCB) GeoTracker online database as a closed leaking underground storage tank (LUST) cleanup site. The site was granted closure in May 2014.

ENGEO has performed a phase I environmental site assessment in general conformance with the scope and limitations of ASTM E1527-13 of the Property. Based on the findings of this assessment, ENGEO recommends the following:

- Conducting a soil characterization study to evaluate potential impacts due to the fill material at the Property.

- A soil management plan (SMP) should be developed as a contingency if unknown environmental issues are encountered during construction.
- Groundwater sampling should be considered to address potential developmental constraints and construction dewatering issues.
- Given the age of the commercial building existing on the northern portion of the Property, it is possible that asbestos-containing materials or lead-based paint materials were used in its construction. If the structure is to be demolished, an environmental professional should be retained to determine if asbestos-containing materials and/or lead-based paint are present.

1.0 INTRODUCTION

ENGEO conducted a phase I environmental site assessment for the parcel located at 2630 Broadway (Property) in Oakland, California (Figures 1 and 2). The Property is approximately 1.1-acres in area, and is identified by Assessor's Parcel Number (APN) 9-685-18-6 (Figure 3). The Property is currently occupied by one large vacant circular structure, along with parking used by an auto dealership.

We understand that the proposed development consists of multi-unit podium structures with up to three levels of underground parking.

1.1 SITE LOCATION

The Property is located at 2630 Broadway, Oakland (Figures 1 and 2). The Property is approximately 1.1-acres in area, and is identified by APN 9-685-18-6.

1.2 SITE AND VICINITY CHARACTERISTICS

According to published topographic maps, the elevation at the Property is approximately between 18 to 25 feet above mean sea level (msl). A review of the 1997 Graymer et al. Geologic Map (Graymer 1997) found that the Property is primarily underlain by basin deposits (Qhd; basin deposits). We also understand that fill material has been placed across the Property.

Geocheck – Physical Setting Source Summary of the Environmental Resources Data report (Appendix A) indicated that no Federal United States Geological Survey (USGS) wells and no State wells are located within 1 mile of the Property. However, one federal public water supply system (East Bay Municipal Utility District) is located within 1 mile of the Property.

We reviewed the Department of Water Resources On-line Water Data Library for depth to water in the vicinity of the site. The website identified one water quality station approximately 0.7 miles south of the Property. No groundwater measurements were recorded.

Previous investigations conducted at the Property indicate that direction of groundwater flow in the vicinity of the Property has been found to be variable, and groundwater was observed approximately between 8 to 28 feet below the ground surface. Fluctuations in groundwater levels may occur seasonally and over a period of years due to variations in precipitation, temperature, irrigation and other factors.

We reviewed the Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR) website and map database to determine if any historic oil and/or gas wells were located within the Property. No wells were mapped within 1 mile of the Property.

1.3 CURRENT USE OF PROPERTY/DESCRIPTION OF SITE IMPROVEMENTS

The Property is currently occupied by a vacant one large circular structure (formerly used as a restaurant), along with parking space used by an auto dealership.

Based on a review of historic records, the Property had the following past uses:

- Former Sisters of Providence Hospital: Approximately 1903 to 1940s
- Car dealership (Circa): 1950-1962
- Gas station - Chevron (western portion of Property): 1960s until 1999
- Biff's coffee and JJ's Diner (eastern portion of Property): 1962 to 1997

The historic addresses associated with the Property are 2600-2630 Broadway and 315 27th Street.

1.4 CURRENT USE OF ADJOINING PROPERTIES

The Property is located in a mixed commercial/industrial and residential area of Oakland. The Property is bounded by Broadway to the west, 27th Street to the north/northeast, and 26th Street to the south.

1.5 PURPOSE OF PHASE I ENVIRONMENTAL SITE ASSESSMENT

This assessment was performed at the request of Hanover R.S. Limited Partnership, for the purpose of environmental due diligence during property acquisition. The objective of this phase I environmental site assessment is to identify Recognized Environmental Conditions (RECs) associated with the Property. As defined in the ASTM Standard Practice E 1527-13, an REC is “the presence or likely presence of any hazardous substances or petroleum products in, on, or at on a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.”

1.6 DETAILED SCOPE OF SERVICES

The scope of services performed included the following:

- A review of the previous environmental reports provided to us.
- A review of publicly available and practically reviewable standard local, state, tribal, and federal environmental record sources.
- A review of publicly available and practically reviewable standard historical sources, aerial photographs, fire insurance maps and physical setting sources.

- A reconnaissance of the Property to review site use and current conditions. The reconnaissance was conducted to check for the storage, use, production or disposal of hazardous or potentially hazardous materials.
- Interviews with owners/occupants and public sector officials.
- Preparation of this report with our findings, opinions, and conclusions.

1.7 SIGNIFICANT ASSUMPTIONS OR DEVIATIONS FROM ASTM STANDARD PRACTICE

There were no significant deviations from the ASTM Standard Practice.

1.8 LIMITATIONS AND EXCEPTIONS OF ASSESSMENT

The professional staff at ENGEO strives to perform its services in a proper and professional manner with reasonable care and competence, but is not infallible. The recommendations and conclusions presented in this report were based on the findings of our study, which were developed solely from the contracted services. The findings of the report are based in part on contracted database research, out-of-house reports and personal communications. The opinions formed by ENGEO are based on the assumed accuracy of the relied upon data in conjunction with our relevant professional experience related to such data interpretation. ENGEO assumes no liability for the validity of the materials relied upon in the preparation of this report.

This document must not be subject to unauthorized reuse; that is, reuse without written authorization of ENGEO. Such authorization is essential because it requires ENGEO to evaluate the document's applicability given new circumstances, not the least of which is passage of time. The findings from a phase I environmental site assessment are valid for one year after completion of the report. Updates of portions of the assessment may be necessary after a period of 180 days after completion.

This phase I environmental site assessment is not intended to represent a complete soil or groundwater characterization, nor define the depth or extent of soil or groundwater contamination. It is intended to provide an evaluation of potential environmental concerns associated with the use of the Property. A more extensive assessment that would include a subsurface exploration with laboratory testing of soil and groundwater samples could provide more definitive information concerning site-specific conditions. If additional assessment activities are considered for the Property and if other entities are retained to provide such services, ENGEO cannot be held responsible for any and all claims arising from or resulting from the performance of such services by other persons or entities. ENGEO can also not be held responsible from any and all claims arising or resulting from clarifications, adjustments, modifications, discrepancies or other changes necessary to reflect changed field or other conditions.

1.9 SPECIAL TERMS AND CONDITIONS

ENGEO has prepared this report for the exclusive use of our client, Hanover R.S. Limited Partnership. It is recognized and agreed that ENGEO has assumed responsibility only for undertaking the study for the client. The responsibility for disclosures or reports to a third party and for remedial or mitigative action shall be solely that of the Client.

Laboratory testing of soil or groundwater samples was not within the scope of the contracted services. The assessment did not include an asbestos survey, an evaluation of lead-based paint, an inspection of light ballasts for polychlorinated biphenyls (PCBs), a radon evaluation, or a mold survey.

This report is based upon field and other conditions discovered at the time of preparation of ENGEO's assessment. Visual observations referenced in this report are intended only to represent conditions at the time of the reconnaissance. ENGEO would not be aware of site contamination, such as dumping and/or accidental spillage, that occurred subsequent to the reconnaissance conducted by ENGEO personnel.

2.0 USER-PROVIDED INFORMATION

2.1 PROPERTY RECORDS

2.1.1 Title Report/Ownership

The Title Report lists recorded land title detail, ownership fees, leases, land contracts, easements, liens, deficiencies, and other encumbrances attached to or recorded against a subject property. Laws and regulations pertaining to land trusts vary from state to state and the detail of information presented in a Title Report can vary greatly by jurisdiction. As a result, ENGEO utilizes a Title Report, when provided to us, as a supplement to other historical record sources.

A Commitment for Title Insurance for the Property, prepared by First American Title Insurance Company and dated November 29, 2014, was provided for our review. The Property title is vested in:

Steve Simi and Cecilia Simi, or either of them or the survivor of them, as trustees of The TDK Trust dated January 23, 1995.

No references to environmental liens, deed restrictions or other potential environmental issues were noted. This report is included in Appendix D.

2.1.2 Chain of Title

We received a chain of title guarantee for the Property, dated February 17, 2015, prepared by the First American Title Insurance Company. A summary of information from the chain of title is provided in Appendix K.

2.1.3 Environmental Liens and Activity Use Limitations

Environmental Data Resources, Inc. (EDR) provided an Environmental Lien Search Report for the Property. The report, which is included in Appendix G, listed no environmental liens associated with the Property APN. In addition, a questionnaire completed by Ms. Kristen Gates of The Hanover Company indicated that they are not aware of any environmental cleanup liens recorded against the Property.

2.2 USER KNOWLEDGE OF PROPERTY

Ms. Kristen Gates, of The Hanover Company, completed an environmental site assessment questionnaire pertaining to user-related applicable environmental information regarding the Property. In the questionnaire, Ms. Gates did not note the presence of recognized environmental concerns at the Property. The questionnaire is presented in its entirety in Appendix J. Ms. Gates indicated that the purchase price of the Property is reflective of fair market value of the Property.

3.0 RECORDS REVIEW

3.1 PREVIOUS ENVIRONMENTAL REPORTS

Touchstone Developments Environmental Management, UST and Product Piping Removal and Sampling Report, Former Chevron Station, 2630 Broadway, Oakland, California, June 12, 1998

This report described activities associated with the removal of the four underground storage tanks (USTs) on the Property, as well as the associated piping and hoists. The four 10,000-gallon gasoline USTs and the 1,000-gallon used oil tank were removed in March 1998 and soil samples were collected from the base of the excavation. Total petroleum hydrocarbons as gasoline (TPH-g), benzene, toluene, ethylbenzene, and xylenes (BTEX), and methyl tert-butyl ether (MTBE) were detected. The location of the former USTs and the used oil tank are presented on Figure 2.

ALLCAL Environmental, Results of Groundwater Sampling, Former Chevron Service Station Number 9-2506, 2630 Broadway, Oakland, California, December 22, 1999

ALLCAL sampled eight groundwater monitoring wells on the Property in 1999. The wells had been installed by J.H. Kleinelder and Associates in 1982 to assess whether soil and groundwater had been impacted by petroleum hydrocarbons. Groundwater samples were analyzed for TPH-g, BTEX and MTBE. TPH-g and MTBE were detected at maximum concentrations of 1,500 and 12,000 parts per billion (ppb), respectively. BTEX compounds were detected at low concentrations in the groundwater samples.

EMG, Phase I Environmental Site Assessment of 27th and Broadway Site, 2600-2630 Broadway, Oakland, California, July 16, 2007

EMG conducted a phase I ESA for the Property in 2007. At that time, the Property was occupied by a vacant restaurant facility and a car dealership. EMG reported that the previous uses of the

Property included a former hospital, a car dealership, a gas station, and a restaurant. Based on this assessment, EMG identified the following Recognized Environmental Concern (REC) for the Property:

- A gasoline station was located in the western portion of the Property from the 1960s until 1999, and one 1,000-gallon UST and three 10,000-gallon USTs had been removed. TPH-g, BTEX, and MTBE were detected at elevated concentrations in the groundwater samples collected at the Property.

Shaw Environmental, Inc., Due Diligence Services for 2630 Broadway, Oakland, California, August 2, 2007

Shaw Environmental, Inc. (Shaw) provided due diligence services for the Property in 2007, which included a review of Agency records for the Property. According to this letter, the Alameda County Health Care Services Agency (ACHCSA) required more work to be conducted at the Property prior to considering it for case closure, which included a delineation of the contamination, understanding the true groundwater flow direction, and delineation of the extent of the MTBE plume.

CRA, Subsurface Investigation Report, Chevron Service Station Number 9-2506, 2630 Broadway, Oakland, California, September 11, 2007

CRA prepared a subsurface investigation for the Property in 2007, on behalf of Chevron. This report presented the following previous investigations at the Property:

- A leak was detected in the UST system located on the northwest corner of the Property. In response to this leak, the UST system was replaced with new fiberglass tanks.
- Eight groundwater monitoring wells were installed on the Property in 1982 to assess whether soil and groundwater were impacted by petroleum hydrocarbons. Separate-phase hydrocarbons were removed from the Property between 1982 to 1983.
- The eight monitoring wells were sampled again in 1993 and elevated concentrations of BTEX and TPH-g were detected.
- Four additional groundwater monitoring wells were installed on the Property in 1994.
- In 1998, three gasoline USTs and one used oil tank were removed from the Property. Elevated concentrations of lead were observed in soil during the UST excavation, which was believed to be associated with the fill material used during the demolition of the former hospital on the Property.
- An interim remedial action was conducted in 2000, which included injections of oxygen releasing compounds into the monitoring wells.

As a part of the investigation in 2007, CRA installed three onsite and six offsite borings to depths of 21 to 36 feet below ground surface. Soil and grab groundwater samples were collected from the borings. Low concentrations of MTBE and toluene were detected in the soil samples. CRA concluded that the onsite monitoring wells would continue to be sampled.

Shaw Environmental, Inc., Proposed Site Remediation Plan with Order of Magnitude Cost Projection for Property located at 2630 Broadway, Oakland, California, December 14 2007

The following remediation options were proposed to remediate soil and groundwater at the Property:

- Soil vapor extraction (SVE) and groundwater extraction
- Excavation of impacted soil at the time of redevelopment

Versar, Inc., Phase 2 Environmental Site Assessment, 26th and Broadway, Oakland, California, January 31, 2008

Versar conducted a phase II ESA for the Property in 2008, which included sampling of the three existing groundwater monitoring wells on the Property, collecting 13 soil gas samples from the former service station area, and advancement of nine borings for the collection of soil and groundwater samples. Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), RCRA eight heavy metals, asbestos, TPH-g, TPH-d, and TPH-mo. Additionally, a few soil and groundwater samples were also analyzed for polychlorinated biphenyls (PCBs).

PCBs and asbestos were not detected in any of the soil samples collected from the Property. In the soil samples, benzene, MTBE, TPH-g, TPH-d, TPH-mo, and barium were detected at elevated concentrations exceeding the applicable residential screening levels. Benzene, xylenes, MTBE, 1,2-dichloroethane, TPH-g, and TPH-d were detected at elevated concentrations in the groundwater samples collected from the Property. MTBE and TPH-g were detected at concentrations exceeding the applicable residential screening levels in the soil gas samples collected from the Property.

Versar concluded that site redevelopment would require vapor intrusion mitigation, as well as cleanup of impacted soil and groundwater in the southwest portion of the Property.

CRA, Additional Investigation Work plan, Former Chevron Service Station Number 9-2506, 2630 Broadway, Oakland, California, April 27, 2009

As a part of this investigation, CRA proposed to advance two additional borings at the Property to further evaluate the extent of impacted soil and groundwater at the Property, as required by the Alameda County Environmental Health (ACEH).

CRA, Semi-annual Groundwater Monitoring Reports, Former Chevron Service Station Number 9-2506, 2630 Broadway, Oakland, California

Semi-annual groundwater monitoring was conducted at the Property between 1993 to 2012. As part of this, seven onsite and three offsite wells were sampled. TPH-g, BTEX, and MTBE were detected in the groundwater samples. The reports indicated that the residual concentrations were low and have been decreasing since the start of monitoring. CRA concluded that the plume was stable and was adequately characterized; therefore, the site could be considered for low-risk case closure.

CRA, Low-threat Closure Request, Former Chevron Service Station Number 9-2506, 2630 Broadway, Oakland, California, December 12, 2012

CRA prepared a low-threat closure request for the Property in 2012, and concluded that the site meets the *Low-Threat Underground Storage Tank Closure Policy* established by the San Francisco Regional Water Quality Control Board. This report described the previous investigations and remediation activities at the Property, including overexcavation of the impacted soil, groundwater extraction, groundwater oxygenation, and light non-aqueous phase liquid removal from a well. A summary of environmental investigations and remediations associated with the former Chevron gasoline stations are presented in Appendix I.

CRA, Well Destruction Report, Former Chevron Service Station Number 9-2506, 2630 Broadway, Oakland, California, March 28, 2014

The existing 10 onsite and offsite groundwater monitoring wells on the Property were destroyed under County permit.

ACHCSA, Case Closure for Fuel Leak Case No. RO0000146, Chevron #9-2506, 2630 Broadway, Oakland, California, May 29, 2014

ACHCSA issued a case closure letter for the Property in May 2014. According to the letter, future land use was limited to commercial land use, with no further investigation or remedial work required. The letter also stated that concentrations of TPH-g up to 2,700 parts per billion (ppb) and concentrations of benzene up to 7 ppb were documented in the most recent groundwater monitoring event in September 2012.

The letter also stated that there is residual contamination at the Property due to the fill material associated with the former Sisters of Providence Hospital at the Property, which is unrelated to the UST system. Contamination from lead and semi-volatile organic compounds (SVOCs) was not considered a part of the UST closure. This letter is provided in Appendix I.

3.2 HISTORICAL RECORD SOURCES

The purpose of the historical record review is to develop a history of the previous uses or occupancies of the Property and surrounding area in order to identify those uses or occupancies that are likely to have led to recognized environmental conditions on the Property.

3.2.1 Historical Topographic Maps

Historical USGS topographic maps were reviewed to determine if discernible changes in topography or improvements pertaining to the Property had been recorded. The following maps were provided to us through an EDR Historical Topographic Map Report, presented in Appendix C.

TABLE 3.2.1-1
Historical Topographic Maps

Quad	Year	Series	Scale
San Francisco	1895	15	1:62500
San Francisco	1915	15	1:62500
San Francisco	1948	15	1:50000
Oakland West	1949	7.5	1:24000
Oakland West	1959	7.5	1:24000
Oakland West	1968	7.5	1:24000
Oakland West	1973	7.5	1:24000
Oakland West	1980	7.5	1:24000
Oakland West	1993	7.5	1:24000

1895 and 1915 Maps – The Property is developed and mapped north of Lake Merritt. The San Antonio Creek, as well as the Oakland Harbor, is mapped south of the Property. The City of Oakland, Emeryville, and Berkeley are labeled northwest of the Property.

1948 and 1949 Maps – A few small structures exist on the Property. Broadway is mapped along the western boundary. A church is mapped on the adjacent parcel. Westlake Junior High School is mapped to the east. Providence Hospital and Merritt Hospital are mapped north of the Property. The Glen Echo Creek is mapped to the west of the Property.

1959 and 1968 Maps – 27th Street is now mapped north and northwest of the Property and 26th Street is mapped to the south.

1973, 1980, and 1993 Maps – Property conditions remain similar to the previous maps as the surrounding parcels of land continue to develop.

3.2.2 Aerial Photographs

The following aerial photographs, provided by EDR, were reviewed for information regarding past conditions and land use at the Property and in the immediate vicinity. These photographs are presented in Appendix E.

USDA/NAIP	2010	1"=500'
USDA/NAIP	2012	1"=500'

1939 and 1946 Photographs – A few small structures exist on the Property. Broadway and 26th Street exist along the western and southern boundary of the Property, respectively. Other commercial development is visible in the vicinity of the Property. A paved parking lot is visible to the north.

1958 Photograph – 27th Street has not been constructed along the northern and northwestern boundary of the Property. A large structure is visible in the western portion of the Property, with the remainder used as a parking lot.

1968 Photograph – The previous structure shown on the 1958 Photograph has been demolished and an L-shaped structure is now visible in the western portion of the Property. A large circular structure is also visible in the northeastern corner of the Property.

1974 through 1998 Photographs - Property conditions remain unchanged. Further development is visible on adjacent parcels.

2005 Photograph – The L-shaped structure shown on the previous photographs has been demolished. The Property appears similar to its current configuration and only the circular structure exists in the northeast portion of the Property. A small temporary trailer is visible in the central portion of the Property, and the remainder appears to be used as a parking lot.

2009 through 2012 Photographs – Property conditions remain unchanged.

3.2.3 Fire Insurance Maps

EDR prepared a Sanborn Fire insurance map search for the Property and surrounding properties. EDR reported maps for the Property are summarized below.

1889 and 1902 Maps - There is no coverage for the Property. Broadway is mapped in its current location west of the Property. 26th Street is labeled as Bay Place.

1903 Map – The Property, along with the parcel to the north is labeled as “Foundation for Sisters of Providence Hospital to be 3 Stories”. 26th Street is labeled as Bay Place, along the southern boundary of the Property.

1911 Map - The Property, along with the property to the north is labeled as “Sisters of Providence Hospital”. A system laundry (steam from hospital) is mapped to the northeast. Valdez is mapped east of the Property. A few wagon sheds and Piedmont Livery is mapped south of the Property.

1912 Map – There is no coverage for the Property. The parcel to the west is labeled as “Site for new Presbyn Church”.

1950 Map - The hospital building shown on the 1903 and 1911 maps has been demolished, and The Property parcel is shaped similar to its current shape. A few structures exist in the western portion of the Property, labeled as Office and Auto Service. “Used Cars” is mapped in the western portion of the Property. The Street to the south is now labeled as 26th Street (Bay Place). Additional auto sales and service buildings are mapped north and south of the Property.

1951 Map - There is no coverage for the Property. The parcel to the west is labeled as “1st Presbyn Church”.

1952, 1954, and 1959 Maps – The Property appears similar to the 1950 map, with the exception of a new office structure addition along the northern portion. 27th Street (26th Street) is mapped along the northern boundary of the Property. The area in the vicinity of the Property has been further developed.

1962 Map - The previous structures shown on the Property have been demolished and the western portion of the Property now appears to be used as a gas station. “Gas & Oil” is labeled in the northwest portion of the Property and the remaining portion of the Property appears vacant.

1967 and 1970 Maps – A large circular structure labeled as restaurant is mapped in the northeastern corner of the Property, while the western portion remains as a gas station.

The Sanborn Map Report is presented in Appendix B.

3.2.4 City Directory

City Directories, published since the 18th century for major towns and cities, lists the name of the resident or business associated with each address. A city directory search conducted by EDR is located in Appendix F.

The historic addresses associated with the Property are 2600-2630 Broadway and 315 27th Street.

The following listings were provided for 315 27th Street: JJ's Diner (1996, 1992), Biff's Coffee Shop (1970, 1967).

The following listings were provided for 2600 Broadway: Kaiser Henry J Chevron Service (1950), Gas Stations (1943), Standard Stations, Inc. PJ Sullivan MGR (1933).

The following listings were provided for 2630 Broadway: Betts Ken Service Centers (1996, 1992), Broadway Chevron (1991), Chevron Station (1986), Edward Childress Chevron Station (1986, 1980), Standard Station, Inc. (1967).

Other listings in the vicinity of the Property are associated with commercial, industrial, and residential uses.

3.3 ENVIRONMENTAL RECORD SOURCES

EDR performed a search of federal, tribal, state, and local databases regarding the Property and nearby properties. Details regarding the databases searched by EDR are provided in Appendix A. A list of the facilities documented by EDR within the approximate minimum search distance of the Property is provided below.

3.3.1 Standard Environmental Records

3.3.1.1 Subject Property

The Property is listed on the following Standard Environmental Records source:

TABLE 3.3.1.1-1

Facility	Street	Databases
Chevron #9-250	2630 Broadway	LUST, ALAMEDA COUNTY CS

3.3.1.2 Other Properties

The following database includes facilities listed within the appropriate ASTM search distances of the Property on the Standard Environmental Records sources.

The LUST, Alameda County CS, HIST UST, SWEEPS UST, and HIST CORTESE listings for the Property are associated with the former USTs at the former Chevron gas station. This is discussed further in Sections 3.1 and 3.4. The HAZNET listing for the Property is associated with the disposal of household waste (1998), hydrocarbon solvents (benzene, hexane, stoddard, etc.) (1998), aqueous solution with organic residues (1994 to 1998), waste oil and mixed oil (1993).

The following summarizes other listings in the vicinity of the Property:

- Oakland Dodge, located at 2735 Broadway (approximately 0.1 mile north of the Property) is listed as a closed leaking underground storage tank (LUST) site. Groundwater is listed as the potential media affected and gasoline is listed as the potential contaminant of concern. The site has been closed since August 15, 1995.
- Broadway Volkswagen, located at 2740 Broadway (adjacent north of the Property) is also listed as a closed LUST site. Other groundwater (uses other than drinking water) and soil vapor are listed as the potential media affected and gasoline/TCE are listed as the potential contaminants of concern. The site is an automobile dealership. Site investigation activities have taken place since 1988. Four USTs were removed in 1998. A soil vapor and groundwater extraction system was operated at the site between 1996 to 1998. A gasoline and benzene plume exists at the site, which is reportedly stable and likely undergoing natural attenuation. The site was evaluated for case closure under the State Water Resources Control Board Low-Threat Underground Storage Tank Closure Policy and was eligible for case closure. The site was closed on May 5, 2015.
- Broadway Motors, located at 2560 Webster (approximately 0.1 mile southwest of the Property) is also listed as a closed LUST site. Other groundwater (uses other than drinking water) is listed as the potential media affected and gasoline is listed as the potential contaminant of concern. The site has been closed since May 15, 2001.
- Catering by Andre, located at 434 25th Street (approximately 0.1 mile southwest of the Property) is also listed as a closed LUST site. Other groundwater (uses other than drinking water) is listed as the potential media affected and diesel is listed as the potential contaminant of concern. The site has been closed since October 11, 2000.
- Chrysler Dealership, located at 2417 Broadway (approximately 0.2 mile southwest of the Property) is listed as an open site assessment LUST site. Other groundwater (uses other than drinking water) is listed as the potential media affected and benzene, gasoline, waste oil and motor/lubricating oil are listed as the potential contaminants of concern. In 1994, several USTs and hydraulic lifts were removed from the site. The site was referred by the ACHCSA to the Water Board in 2012, and has been an open assessment site since August 7, 1995.
- Label Art of California, located at 290 27th Street (approximately 0.15 mile southeast of the Property) is also listed as a closed LUST site. Soil is listed as the potential media affected and waste oil/motor-oil is listed as the potential contaminant of concern. The site has been closed since April 2, 1996.
- Oakland Acura, located at 255 27th Street (approximately 0.15 mile southeast of the Property) is also listed as a closed LUST site. Groundwater is listed as the potential media affected, and diesel is listed as the potential contaminant of concern. The site has been closed since May 12, 1995.

Based on the distances to the identified database sites, regional topographic gradient, the EDR findings, and/or the closed regulatory status of the sites, there is a potential that the above-stated sites pose an environmental risk to the Property, specifically the comingled gasoline plume in the vicinity of the Property. Properties that are on the “Orphan Summary” list appear to be located beyond the ASTM recommended radius search criteria.

3.4 REGULATORY AGENCY FILES AND RECORDS

The following agencies were contacted pertaining to possible past development and/or activity at the Property.

- City of Oakland Building and Planning Departments
- City of Oakland Fire Department
- Alameda County Department of Environmental Health
- Alameda County Assessor’s Office
- California Regional Water Quality Control Board
- Department of Toxic Substance Control

City of Oakland Building and Planning Departments – The Building Department was contacted regarding files for the Property. The following records were reviewed for the Property:

- Certificate of Occupancy for a gas station (1962)
- Building permit for the addition of an automobile sales room (1962)
- Permit to remodel existing service station (1969)
- Permit to construct new restrooms and refreshment area (1970)
- Electrical permit (1983, 1985, 1988)
- Permit for installation of self service (1983)
- Permit for new Chevron station and McDonalds combined in one building (1996)
- Permit for demolition of gas station (1999)
- Permit for new mobile sales office for auto sales (2001)
- Electrical permit (2001)
- Permit for soil borings on Broadway off 26th (2007)
- Violation notice for overgrown vegetation, trash, debris, and graffiti on vacant building (2009 and 2011)
- Permit to abandon monitoring wells (2014)

In addition, a building permit report prepared by EDR is presented in Appendix H.

City of Oakland Fire Department – The Oakland Fire Department was contacted regarding files relating to the Property. The following records were reviewed for the Property:

- Permit to operate four USTs (1988 and 1991)
- Certificate of tightness for 1,000-gallon waste oil UST (1996)
- Letter to Chevron regarding financial responsibility for USTs (1997)

- Hazardous materials inspection report for removing USTs and sampling excavations (1998)
- Soil overexcavation/remediation report (1999)
- UST and product piping removal and sampling report (1998)

Alameda County Department of Environmental Health – The Alameda County Department of Environmental Health (ACDEH) was contacted to determine if files exist for the Property. A representative of the ACDEH informed us on March 11, 2015, that ACDEH’s designation as the CUPA for the City of Oakland is still in transition and they did not have any records. Additionally, we reviewed the ACDEH’s online database for any records for the Property. The following records were found:

- Groundwater Sampling Reports, Chevron Service Station, 1993 to 2012
- ACHCSA, Notification of potential fuel case closure, May 22, 2013
- ACHCSA, Closure Letter dated May 29, 2014 (Appendix I)

Other documents discussed in Section 3.1 were also reviewed.

Alameda County Assessor’s Office – The Alameda County Assessor’s Office website was viewed for information regarding the Property. Information on the website confirmed that the Property is approximately 1.1 acres in area and identified by APN 9-685-18-6.

California Regional Water Quality Control Board – The California Regional Water Quality Control Board’s online database, GeoTracker, was reviewed for files relating to the Property. The Property – Chevron #9-2506 is listed as a closed LUST site.

According to GeoTracker, the known use of the site dates back to at least 1903, when the Property was used for the site of the Sisters of Providence Hospital. Beginning sometime in 1950, the Property was occupied by a used car sales/service facility. USTs were reportedly installed in the western portion of the site in 1962, when the site was first occupied by a fuel service station. A restaurant was also constructed on the eastern portion of the property sometime between 1958 and 1968. In 1998, the fuel service station was demolished, the USTs were removed, and the site was paved. The former features are presented on Figure 2. The paved lot has remained to the present day and the site is now occupied by a car sales facility and a vacant circular building (former restaurant).

During the excavation of USTs in 1998, fill material consisting of burnt wood, bricks, ashes, and concrete was encountered in the northern excavation areas. Concrete footings and basement floor slabs were also discovered. The fill material and foundation appear to be associated with the former Sisters of Providence Hospital that existed at the site. Residual impacted fill material appears to remain from the demolition of the former hospital. Lead and SVOC contamination from the former hospital was not considered a part of the UST closure. We were informed by ACEH that a new case will need to be created for contamination related to the former hospital. A site management plan would need to be prepared to manage any impacted soil encountered during grading and construction activities.

Department of Toxic Substances Control – We reviewed the EnviroStor Database maintained by the Department of Toxic Substances Control (DTSC) to identify ongoing environmental site assessment and remedial activities at the Property. There were no listings for the Property in the EnviroStor database.

4.0 SITE RECONNAISSANCE

4.1 METHODOLOGY

ENGEO conducted a reconnaissance of the Property on April 30, 2015. The reconnaissance was performed by Divya Bhargava, Project Engineer of ENGEO. A reconnaissance of the interior of the circular structure was conducted by Robert Peck, Environmental Scientist, on May 20, 2015. The Property was viewed for hazardous materials storage, superficial staining or discoloration, debris, stressed vegetation, or other conditions that may be indicative of potential sources of soil or groundwater contamination. The site was also checked for evidence of fill/ventilation pipes, ground subsidence, or other evidence of existing or preexisting underground storage tanks. Photographs taken during the site reconnaissance are presented in Figure 4.

4.2 GENERAL SITE SETTING

The Property is currently occupied by a vacant one large circular structure (former restaurant), along with parking space used by an auto dealership.

4.3 EXTERIOR OBSERVATIONS

Structures. One large circular building currently exists in the northeast portion of the Property. A small temporary shed is located in the center of the Property.

Hazardous Substances and Petroleum Products in Connection with Identified Uses. No hazardous substances were observed within the Property at the time of our reconnaissance.

Storage Tanks. No storage tanks were observed on the Property at the time of reconnaissance. However, as discussed in Sections 3.1 and 3.4, four USTs have been removed from the Property.

Odors. No odors indicative of hazardous materials or petroleum material impacts were noted at the time of the reconnaissance.

Pools of Potentially Hazardous Liquid. No pools of potentially hazardous liquid were observed within the Property at the time of our reconnaissance.

Drums. No drums were observed within the Property at the time of our reconnaissance.

Hazardous Substance and Petroleum Product Containers. No hazardous substance or petroleum product containers were observed on the Property at the time of our reconnaissance. However, a gas station formerly existed in the northwestern portion of the Property.

Polychlorinated Biphenyls (PCBs). Pole-mounted transformers were observed on the Property during the reconnaissance. No signs of leaks were observed.

Pits, Ponds and Lagoons. No pits, ponds or lagoons were observed within the Property at the time of our reconnaissance.

Stained Soil/Pavement. No stained soil or pavement was observed within the Property at the time of our reconnaissance.

Stressed Vegetation. No signs of stressed vegetation were observed on the Property at the time of our reconnaissance.

Solid Waste/Debris. No disposal of solid waste was observed at the subject property, except for a few dumpsters along the eastern boundary.

Wastewater. No wastewater conveyance systems were observed at the Property during the reconnaissance.

Wells. No wells were observed on the Property during our site reconnaissance. However, groundwater monitoring wells previously existed on the Property, as discussed in Section 3.1.

Septic Systems. No septic systems were found within the Property during our site reconnaissance.

4.4 INTERIOR OBSERVATIONS

Solid waste/debris was observed throughout the former restaurant structure. Numerous containers of paint and varnish were evident. The containers were stored improperly and evidence of spills and leaks were observed. Electrical panels were observed throughout the structure. The interior of the structure appeared to be partially demolished or dilapidated. Numerous neon signs related to nearby car dealerships were stored within the structure. Photographs taken during the site reconnaissance are presented in Figure 4.

4.5 ASBESTOS-CONTAINING MATERIALS AND LEAD-BASED PAINT

An asbestos and lead-based paint survey was not conducted as part of this assessment. Given the age of the existing structures, it is conceivable that asbestos-containing materials and lead-based paint materials may exist within the structures.

4.6 INDOOR AIR QUALITY

An evaluation of indoor air quality, mold, or radon was not included as part of the contracted scope of services. The California Department of Health Services has conducted studies of radon risks throughout the state, sorted by zip code. Results of the studies indicate that 42 tests were

conducted within the Property zip code, with none of the tests exceeding the current EPA action level of 4 picocuries per liter [pCi/L]¹).

As previously discussed, a gas station formerly existed on the Property. In accordance with ASTM E2600-10 (Tier 1) (*Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*); there are potential petroleum hydrocarbon sources for vapor intrusion within 1/10 mile of the Property, as well as potential volatile organic compound (VOCs) sources within 1/3 mile of the Property. However, potential vapor intrusion is not a significant risk, considering the proposed development at the Property. No residential units will be on-grade and the building will overlie three levels of underground parking.

5.0 INTERVIEWS

Ms. Kristen Gates, of The Hanover Company, completed an environmental site assessment questionnaire pertaining to user-related applicable environmental information regarding the Property. In the questionnaire, Ms. Gates did not note the presence of recognized environmental concerns at the Property. The questionnaire is presented in its entirety in Appendix J.

Mr. Steve Simi completed a key-site managed based environmental questionnaire for the Property. In the questionnaire, Mr. Simi indicated that a former Chevron gas station existed on the Property. He also noted that an unknown quantity of soil has been brought onto the Property. Groundwater monitoring wells had existed on the Property, which were monitored by Chevron. The questionnaire is presented in its entirety in Appendix J.

6.0 EVALUATION

6.1 FINDINGS

The reconnaissance and records research did find documentation or physical evidence of past soil and groundwater impairments associated with the current or past use of the Property. A review of regulatory databases maintained by county, state and federal agencies did find documentation of hazardous materials violations or discharge on the Property. In addition, a review of regulatory agency records and available databases did identify contaminated facilities within the appropriate ASTM search distances that could potentially impact the Property.

Based on the findings of this assessment, the following REC was identified for the Property:

- Based on previous investigation, potential residual impacts exist on the Property related to fill associated with the former hospital.

¹ California Department of Health Services – Division of Drinking Water and Environmental Management – Radon (<http://www.cdph.ca.gov/HealthInfo/environhealth/Documents/Radon/CaliforniaRadonDatabase.pdf>).

In addition, the following Historic Recognized Environmental Condition (HEC) was identified for the Property:

- The Property was previously occupied by a former Chevron gasoline station. USTs were removed from the Property in 1998. The Property is listed on the RWQCB's GeoTracker database as a closed leaking underground storage tank site. The site was granted closure under commercial land use designation in May 2014.

6.2 OPINIONS AND DATA GAPS

It is our opinion that the findings of this study are based on a sufficient level of information obtained during our contracted scope of services to render a conclusion as to whether additional appropriate investigation is required to identify the presence or likely presence of a REC. No data gaps were identified during this assessment.

6.3 CONCLUSIONS

The study included a review of local, state and federal environmental record sources, standard historical sources, aerial photographs, fire insurance maps and physical setting sources; a reconnaissance of the Property to review site use and current conditions to check for the storage, use, production or disposal of hazardous or potentially hazardous materials; and interview with persons knowledgeable about current and past site use.

The reconnaissance and records research did find documentation or physical evidence of soil or groundwater impairments associated with the current or past use of the Property. A review of regulatory databases maintained by county, state and federal agencies did find documentation of hazardous materials violations or discharge on the Property. In addition, a review of regulatory agency records and available databases identified contaminated facilities within the appropriate ASTM search distances that could potentially impact the Property.

Based on the findings of this assessment, the following REC was identified for the Property:

- Based on previous investigations, potential residual impacts exist on the Property related to fill associated with the former hospital.

Based on the findings of this assessment, the following Historic Recognized Environmental Condition (HREC) was identified for the Property:

- The Property was formerly occupied by a gasoline station. The Property (Chevron #9-2506) is listed on the San Francisco Regional Water Control Board's (RWQCB) GeoTracker online database as a closed leaking underground storage tank (LUST) cleanup site. The site was granted closure in May 2014.

ENGEO has performed a phase I environmental site assessment in general conformance with the scope and limitations of ASTM E1527-13 of the Property. Based on the findings of this assessment, ENGEO recommends the following:

- Conducting a soil characterization study to evaluate potential impacts due to the fill material at the Property.
- A soil management plan (SMP) should be developed as a contingency if unknown environmental issues are encountered during construction.
- Groundwater sampling should be considered to address potential developmental constraints and construction dewatering issues.
- Given the age of the commercial building existing on the northern portion of the Property, it is possible that asbestos-containing materials or lead-based paint materials were used in its construction. If the structure is to be demolished, an environmental professional should be retained to determine if asbestos-containing materials and/or lead-based paint are present.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/09/2014 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
WHOLE FOODS CONSTRUCTION SITE	230 BAY PLACE	SE 1/8 - 1/4 (0.225 mi.)	T167	191

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/09/2014 has revealed that there are 27 RCRA-SQG sites within approximately 0.25 miles of the target property.

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, and dated 02/02/2015 has revealed that there are 4

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 02/02/2015 has revealed that there are 11 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 01/20/2015 has revealed that there are 52 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 01/20/2015 has revealed that there are 2 UST sites within approximately 0.25 miles of the target property.

State and tribal voluntary cleanup sites

VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the VCP list, as provided by EDR, and dated 02/02/2015 has revealed that there is 1 VCP site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/09/2014 has revealed that there are 4 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 104 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 27 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Lead Agency: ALAMEDA COUNTY LOP

Case Worker: MD

Local Agency: ALAMEDA COUNTY LOP

RB Case Number: 01-1959

LOC Case Number: RO0000146

File Location: Stored electronically as an E-file

Potential Media Affect: Other Groundwater (uses other than drinking water)

Potential Contaminants of Concern: Lead, Gasoline

Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A complete case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>. Land use surrounding the site is mixed commercial and residential. Known use of the site dates back to at least 1903, when the property was used the site of the Sisters of Providence Hospital. Beginning sometime in 1950, the site was occupied by a used car sales/service facility. Underground storage tanks (USTs) were reportedly installed in the western portion of the site in 1962, when the site was first occupied by a fuel service station. A restaurant was also constructed on the eastern portion of the property sometime between 1958 and 1968. In 1998, the fuel service station was demolished, the USTs were removed, and the site was paved. The paved lot has remained to the present day and the site is now occupied by Audi of Oakland car sales facility and a vacant, circular building (the former restaurant). On March 18, 1982, eight soil borings were advanced to 20 feet below ground surface (bgs) and completed as monitoring wells (B-1 through B-8). No soil samples were collected from the well borings for laboratory analysis.

Groundwater was first encountered between 8 and 25 feet bgs. Groundwater was then observed to raise within four to eight feet bgs. A trace odor of gasoline was observed on the drill cuttings from borings B-2 and B-5. The concentrations of combustible gases and percentage of the lower explosive limit (LEL) were also measured in each well. On April 21, 1982, two 7,500-gallon gasoline, one 4,000-gallon gasoline, one 1,000-gallon waste oil UST, and associated piping are reported to have been replaced with new fiberglass tanks (three 10,000-gallon gasoline and one 1,000-gallon used-oil) and piping at the site. The steel tanks are reported to have been installed in 1962, 1971, 1974, and 1981. No other information is available. Approximately 20 cubic yards of soil and 2,000 gallons of groundwater are reported to have been removed and disposed at an offsite location. Observation wells TP-1 and TP-2 were installed in the new tanks backfill. In May 1982, approximately 2.5 feet of light non-aqueous phase liquid (LNAPL) was observed in well B-4. LNAPL was then bailed from well B-4 on a weekly basis from August 1982 to February 1983, when LNAPL was no longer observed in the well. On August 7, 1983, slow pumping was reported in the mid-grade gasoline product line. The line was tested, found to be leaking just east of the gasoline USTs, and replaced on August 9th. According to inventory records, up to 20 gallons of product was lost. A follow-up groundwater monitoring event was conducted on September 9, 1993. TPHg and benzene were detected in groundwater at concentrations up to 110,000 ppb and 3,200 ppb, respectively. The greatest TPHg and benzene concentrations were detected in wells B-4 and B-5, located east of the USTs. On July 26 and 27, 1994, four exploratory borings were advanced onsite (B-9) and offsite (B-10 through B-12) to approximately 20 feet bgs. The borings were completed as monitoring wells and sampled on August 4, 1994. Soil samples were collected from the borings between five and eleven feet bgs. Groundwater was first encountered in the wells at approximately 17 to 18 feet bgs. Static groundwater was measured in the new wells between 6.5 and 11.5 feet bgs. Soil samples collected during the event contained up to 90 ppm TPHg and no detectable concentrations of benzene. The only detectable petroleum hydrocarbons in groundwater in new wells were from well B-9 at concentrations of 650 ppb TPHg and 4.4 ppb benzene. On March 10, 1998, three 10,000-gallon gasoline USTs, one 1,000-gallon waste oil UST, two semi-hydraulic hoists, and all associated piping were removed from the site. No holes were observed in any of the USTs or associated piping. Groundwater was encountered in the gasoline UST excavation at a depth of approximately 11 feet bgs. Approximately 4,000 gallons of groundwater was pumped from the excavation and disposed offsite. Soil samples were collected from the gasoline UST excavation (TX1 through TX8), waste oil excavation (UO1 and UO2), piping trench (P1 through P11), hydraulic hoist excavation (H1 and H2), and stockpiled soil (SP-1(a-d), SP-2(a-d), and UOSP-1(a-d)). Soil waste generated during this event was analyzed and deemed appropriate to be used as backfill. Although it is not documented, the observation wells previously installed in the tank pit (TP-1 and TP-2) and well B-2 were apparently destroyed during this event. Analysis of soil samples collected from the gasoline UST excavation detected up to 340 ppm TPHg, with highest concentrations along the eastern sidewall. The product dispenser soil samples collected from the southernmost dispenser contained the highest concentration of TPHg, with 1,200 ppm detected. Total Oil and Grease (TOG) was detected in the hydraulic hoist and waste oil UST excavation samples

at concentrations up to 310 ppm and 110 ppm, respectively. Lead was also detected in the product trench and waste oil UST excavation bottom confirmation soil samples at concentrations of 5,000 ppm and 6,800 ppm, respectively. On November 19, 1998, soil was excavated from former locations of the used oil UST and from each dispenser island. Test pits were also excavated to investigate lead contamination in soil. Soil samples were collected from the bottom of the excavations (PX2, PX5, and PX7 through PX10), from fill material in the former waste oil excavation (UOSP-2(a & b)), and from the stockpiled soil (SP-3(a-d)). Additional excavation of the former waste oil UST location was not conducted. Similar to the previous excavation event, product dispenser soil samples collected from the southernmost dispenser contained the highest concentration of TPHg (1,190 ppm). Lead was detected in stockpiled soil from the former waste oil UST excavation at a concentration of 1,790 ppm. Confirmation samples collected at the bottom of the additional product line excavation contained < 7.5 ppm (non detectable) concentrations of lead. Approximately 160 cubic yards of contaminated soil was removed from the former dispenser areas and disposed offsite. During this investigation, old fill material consisting of burnt wood, bricks, ashes, and concrete was encountered in the northern excavation areas. Concrete footings and basement floor slabs were also discovered. The fill material and foundation appear to be associated with the former Sisters of Providence Hospital that existed at the site. Field observations indicated that the lead contamination (up to 6,800 ppm) detected in the former used-oil tank excavation and in the northern dispenser island excavation (up to 5,000 ppm); and likely the detections of semi-VOCs (up to 2.3 ppm bis(2-ethylhexyl)phthalate and other SVOCs), appeared to be associated with the fill material observed in these areas and unrelated to the former service station activities. The impacted fill material appears to remain from the demolition of the former hospital. The nature and extent of contamination from the former hospital is currently uncharacterized. A new case (RO0003119) has been created for contamination related to the former hospital. Lead and SVOC contamination from the former hospital is not considered a part of this UST closure. On July 29, 1999, Oxygen Reducing Compound (ORC) socks were installed in wells B-1, B-3, B-5 through B-7, and B-9. Nine to sixteen socks were installed in each well. Subsequent groundwater monitoring results showed a decrease of TPHg concentrations in groundwater. Concentrations of TPHg in wells B-1, B-3, and B-9 rebounded to concentrations at or above post-ORC sock installations within approximately one year. In wells B-1, B-3, and B-5, an increase of methyltert-butyl ether (MTBE) concentrations was observed in groundwater subsequent to the ORC sock installations. On June 6 and 7, 2007, three onsite borings (B-13, B-14, and B-21) and six offsite borings (B-15 through B-20) were installed. Borings B-13, B-15, and B-16 were not completed due to obstruction by a concrete slab encountered between four and six feet bgs, and apparently associated with the former hospital. Soil samples were collected from each completed boring at five-foot intervals. Grab groundwater samples were also collected from each completed boring except boring B-21. Neither the soil samples nor the groundwater samples contained detectable concentrations of TPHg or benzene. MTBE was detected in grab groundwater samples from borings B-14 and B-17 at concentrations of 1 ppb and 2 ppb, respectively. Groundwater monitoring was conducted at the site quarterly in 1982; however, no further

monitoring occurred between 1983 and 1992. Groundwater monitoring then restarted and occurred semi-annually from 1993 to the present. Concentrations up to 2,700 ppb TPHg and 7 ppb benzene were documented in the most recent groundwater monitoring event in September 2012.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RB Case Number: 01-0241
LOC Case Number: RO0000400
File Location: Stored electronically as an E-file
Potential Media Affect: Other Groundwater (uses other than drinking water), Soil Vapor
Potential Contaminants of Concern: Trichloroethylene (TCE), Gasoline
Site History: The site is a automobile dealership. Site investigation activities have taken place since 1988. Four underground storage tanks (one 1,000-gallon waste oil near the garage at 27th Street (Tank A), one 300-gallon waste oil gasoline (Tank B) beneath sidewalk along Broadway, one 550-gallon gasoline (Tank C) beneath sidewalk along 28th Street, and one 1,500-gallon gasoline (Tank D) beneath sidewalk along 28th Street were removed in August 1988. Visual contamination was observed and detected in soil samples in the tank pits for Tanks C and D. A soil vapor and groundwater extraction system operated at the site from February 1996 through March 1998. Soil vapor sampling was completed at the site in February 2014. The site was evaluated for case closure under the State Water Resources Control Board Low-Threat Underground Storage Tank Closure Policy and is eligible for case closure. Based upon the information available in our files to date, no further investigation or cleanup for the fuel leak case is necessary at this time. Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at: <http://www.acgov.org/aceh/lop/ust.htm>.

Lead Agency: Case Worker: Local Agency: RB Case Number: LOC Case Number: File Location: Potential Media Affect: Potential Contaminants of Concern: Site History:	ALAMEDA COUNTY LOP KLD ALAMEDA COUNTY LOP Not reported RO0003125 Stored electronically as an E-file Soil, Soil Vapor, Under Investigation Heating Oil / Fuel Oil <p>A 1,200-gallon UST was discovered at the site by Paoli Construction, Inc. during grading activities at the site on February 13, 2013. Cook Environmental Services (CES) was hired by the property owner, the Kyle Milligan and Susan Casentini Trust, to inspect the UST on February 14, 2013. CES discovered a buried redwood tank approximately 12 feet in diameter that contained an unknown volume of heating oil. The structural integrity of the redwood tank had been severely compromised and a large volume of heating oil had impacted surrounding soils. The UST was connected to a 4-inch diameter cast iron pipe that was probably connected to a fill spout behind the sidewalk on 26th Street. The location of the UST and the cast iron pipe are shown on Figure 2. The City of Oakland Fire Department was notified and Cook Environmental Services, Inc (CES) filed an UST removal permit with the Fire Department on March 4, 2013. CES retained Fremouw Environmental Services, Inc (FES) to empty the UST. Since the redwood tank was badly decayed, no triple rinse or decontamination procedures could be performed. FES removed approximately 80 gallons of heating oil from the excavation on March 11, 2013. The receiving facility for the waste heating oil required that the liquid be sampled for PCBs prior to acceptance of the waste. A sample of the heating oil was collected on March 11, 2013 and analyzed for PCBs. PCBs were not detected. Two drums of heating oil were disposed of as non-RCRA hazardous waste. CES excavated the UST and contaminated soil from March 11 to 13, 2013. Leroy Griffin of the City of Oakland Fire Prevention Bureau was onsite. Since the redwood tank was badly decomposed, it could not be removed intact and was taken out in pieces and placed in six 10-cubic yard roll-off bins along with contaminated soil. Three bins (36.5 tons) were profiled as non-hazardous and disposed at the Potrero Hills landfill in Suisun, California. The lab report from two soil samples collected from the UST excavation was used to profile the waste. The non-hazardous waste was disposed of at the Potrero Hills Landfill near Suisun, California. Soil in two of the bins was classified as non-RCRA hazardous waste and was disposed at the U.S. Ecology landfill in Beatty, Nevada. The UST excavation extended to a depth of approximately 12 feet bgl. After excavation activities were complete, CES collected two soil samples from the base of the excavation. Sample S1 was collected from the south end of the excavation at depth of approximately 10 feet below grade. Sample S2 was collected from the north end of the excavation (closest to 26th Street) at a depth of approximately 10 feet below grade. Soil samples were collected from the bucket of the excavator and placed in stainless steel sample tubes, labeled and placed on ice in a cooler. Samples were handled using chain-of-custody procedures. Samples were transported to McCampbell Analytical, Inc. in Pittsburg, California that same day and analyzed for the standard suite of analytes required of a UST containing heating oil. Analyses included total petroleum hydrocarbons as diesel (TPH-d) using EPA method 8015B modified; benzene, toluene, ethylbenzene and xylenes (BTEX) using EPA method 8021B; and</p>

naphthalene and MtBE using EPA method 8260B. The samples appeared to be contaminated due to staining and hydrocarbon odor. BTEX and MtBE constituents were not detected in soil samples above laboratory detection limits. TPH-d concentrations range from 6,500 to 11,000 milligrams per kilogram (mg/kg). Naphthalene concentrations range from 10 to 14 mg/kg. The UST excavation was backfilled with clean recycle baserock from Marin Resource Recovery in San Rafael, California. A Data Gap Investigation Work Plan and Site Conceptual Model has been submitted to ACEH, dated March 25, 2014. ACEH requests a Work Plan Addendum and Data Gap Investigation Work Plan Addendum and Site Conceptual Model to address comments in ACEH's response letter. dated May 23, 2014.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 LOC Case Number: Not reported
 File Location: Stored electronically as an E-file
 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Benzene, Gasoline, Waste Oil / Motor / Hydraulic / Lubricating
 Site History: On July 28, 1994, one 295-gallon waste-oil UST, one 575-gallon gasoline UST and two hydraulic lifts were removed from the site. Holes were observed in the gasoline UST upon removal. Maximum concentrations of 1,500 ppm TPHg, 1,800 ppm TPHd and 7.4 ppm benzene were detected in soil. Subsequently, a work plan was submitted but has not been implemented. Soil vapor and groundwater sampling must occur to evaluate the elevate benzene and extent of contamination in groundwater. On the Project Information screen, add this phrase to the Staff Notes and Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historical case file for this site is located on the Alameda County Environmental Health website at:
<http://ehgis.acgov.org/dehpublic/dehpublic.jsp>.

Case Type: Cleanup Program Site
Case Worker: KLD
Local Agency: ALAMEDA COUNTY LOP
RB Case Number: NA
File Location: Stored electronically as an E-file
Potential Media Affected: Soil
Potential Contaminants of Concern: Not reported
Site History: In April 1993, 4 test borings were advanced to evaluate lead concentrations. Up to 650 ppb lead was detected in soil samples. In October 1993, thirteen borings were advanced. A work plan was developed for removal of the lead contaminated soil in 1994 and remediation of the site began in August 1994. Over 600 tons of soil were disposed at an off-site facility with confirmation sampling being performed on soil. Groundwater samples have not been obtained.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

GLEN ECHO CREEK CULVERT (Continued)

S106784887

RB Case Number: NA
 File Location: Stored electronically as an E-file
 Potential Media Affected: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Arsenic, Chromium, Diesel, Gasoline, Waste Oil / Motor / Hydraulic / Lubricating
 Site History: During work for the reconstruction of a portion of the Glen Echo Creek concrete arch culvert a geotechnical drilling program encountered a dark oily substance on groundwater in one soil bore. Concentrations up to 1,400 ug/l TPHg, 63,000 ug/l TPHd, 180,000 ug/l TPHmo, non-detectable BTEX, and various concentrations of metals were documented in groundwater, and 1,300 mg/kg TPHd and 2,100 mg/kg TPHmo was documented in soil. A risk management plan for construction was developed. Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RB Case Number: Not reported
File Location: Stored electronically as an E-file
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), Dichloroethane (DCA), Dichloroethene (DCE), Other Chlorinated Hydrocarbons, Other Solvent or Non-Petroleum Hydrocarbon, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Arsenic, Lead, Diesel, Gasoline, MTBE / TBA / Other Fuel Oxygenates, Waste Oil / Motor / Hydraulic / Lubricating

Site History: Project is city block bounded by Broadway, 23rd, 24th & Valley Streets. Includes 2301-2345 Broadway; 421-455 24th St.; 444 23rd St.; and 2320-2354 Valley St. The site includes 5 parcels (APN 8-739-2, 8-739-4, 8-739-5, 8-739-7) that have historically been used as commercial facilities including auto dealerships/repair facilities. Associated potential chemical uses, storage, and handling included bulk waste oil in an above ground tanks, hydraulic oil related to lifts, and use of various types of cleaners and lubricants. The site is being redeveloped by Signature Redevelopment Group and will include commercial and residential land uses. Phase I and II Environmental Site Assessments have been conducted on different parcels within the redevelopment site since 2001. Soil and groundwater impacts have been identified on four of the five parcels located within the boundaries of the redevelopment project. Chlorinated and non-chlorinated volatile organic compounds (VOCs) and petroleum hydrocarbons as gasoline, diesel and motor oil have been detected in groundwater. Data indicates that a 1,1-dichloroethane plume exists under the majority of the site. Lead has been detected in shallow soil and at depths up to 13 feet below ground surface. Parcel 8-739-7 is listed as a closed underground storage tank (UST) site (ACEH Fuel Leak Case No. R00001190 and Geotracker Global ID T06001000957). Two USTs (one 1,000 gallon leaded gasoline UST and one 550 gallon waste oil UST) were removed from the northern portion of the parcel in 1991. Petroleum hydrocarbons and VOCs were detected in confirmation soil samples collected from the UST pit. One groundwater monitoring well (MW-1) was installed in the tank pit and groundwater monitoring was conducted from 1992 until 1993. The case was closed after four consecutive quarters of non-detects for petroleum hydrocarbons. At the time of closure, low levels of chlorinated VOCs were detected in groundwater. Limiting conditions at the site at the time of the UST removals prevented the over excavation of all impacted soil and thus

there may be areas of contaminated soil remaining beneath the building and the sidewalk in the vicinity of the former tanks. Data collected during field investigations conducted in 2006 and 2011 indicate that another source of petroleum hydrocarbons likely exists at the site on parcel 8-739-7. Additional investigation is required to characterize the site including determination of groundwater flow direction, vertical and lateral delineation of contaminants of concern in soil and groundwater, plume stability, and identification of sources of petroleum hydrocarbons and chlorinated VOCs. Electronic submittal of data and documents requested for completeness of database.

Local Agency: ALAMEDA COUNTY LOP
RB Case Number: Not reported
LOC Case Number: RO0003143
File Location: Stored electronically as an E-file
Potential Media Affect: Soil
Potential Contaminants of Concern: Heating Oil / Fuel Oil
Site History: An approximately 350-gallon underground storage tank (USST) was removed from the site on December 16, 2013. The tank was found to be in poor condition with at least one visible hole. Soil discoloration and petroleum hydrocarbon odors were observed in the stockpiled soil and soil underlying the tank. Soil samples collected from the tank pit contained up to 9,290 ppm of total petroleum hydrocarbons (C10-C28). The tank pit was overexcavated to a depth of approximately 12 feet bgs to remove petroleum hydrocarbon contaminated soils.
