# Fire Station Site Study | Estudio Sobre el Sitio de la Estación de Bomberos

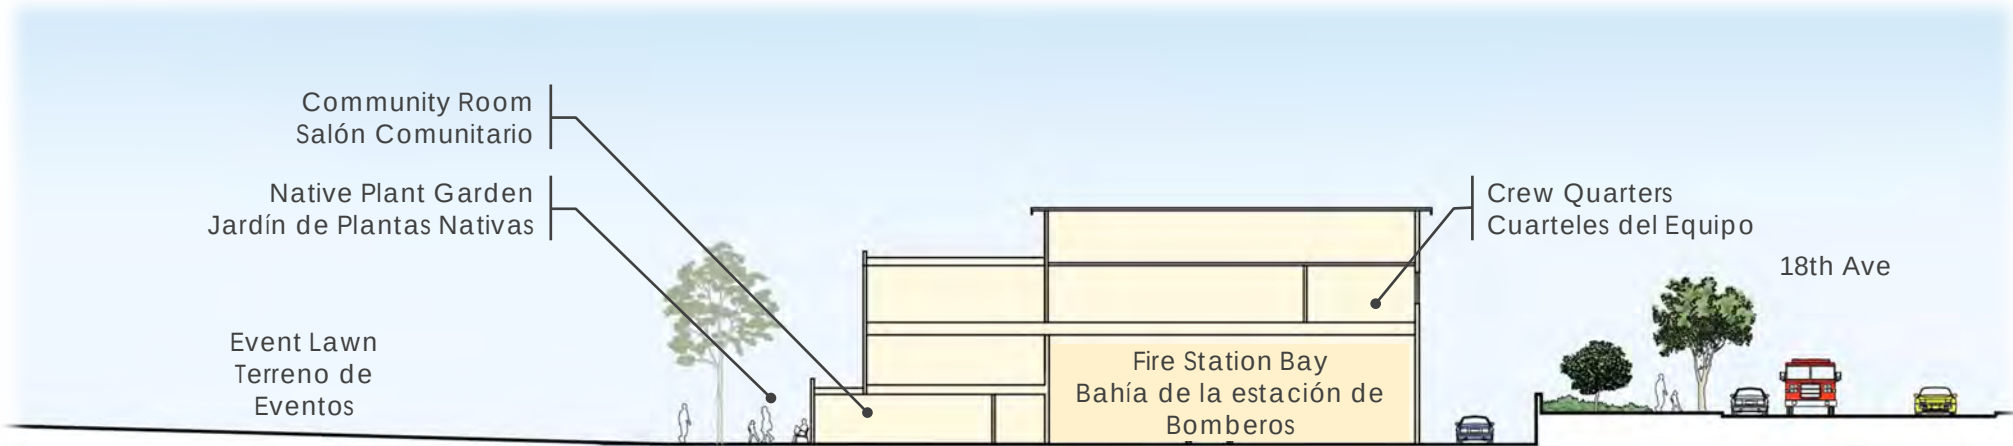

- The City's Real Estate staff have researched potential properties within the service area of Fire Station 4 and have found most them unsuitable or owners unresponsive.
- A modern drive-through fire station requires a lot size approximately **140-ft wide and 240-ft deep** in order to safely accommodate the required turning radius of the fire trucks.
- While not optimal, in order to reduce the footprint, the Oakland Fire Department is opting for a "back-in" station at San Antonio Park, thereby reducing the site requirement to **135-ft wide and 180-ft deep**.
- El personal inmobiliario de la ciudad ha investigado las posibles propiedades dentro del área de servicio de la estación n.º 4 de bomberos y ha encontrado que la mayoría de ellas no son adecuadas o los propietarios no responden.
- Una estación de bomberos moderna requiere un tamaño de terreno de aproximadamente **140 pies de ancho y 240 pies de profundidad** para poder acomodar con seguridad el radio de giro requerido de los camiones de bomberos.
- Aunque no es lo óptimo, para reducir la huella, el Departamento de Bomberos de Oakland está optando por una estación "back-in" en San Antonio Park, reduciendo así el requisito del sitio a **135 pies de ancho y 180 pies de profundidad**.

A large flock of geese is gathered on a grassy field. In the background, there is a soccer field with a goal, and a line of trees. The scene is brightly lit, with a strong sun flare in the upper right corner. The geese are scattered across the field, some standing and some near a small puddle of water.
