TTD (510) 238-3254

NOTICE OF PREPARATION (NOP) OF A DRAFT ENVIRONMENTAL IMPACT REPORT (DEIR) FOR THE PROPOSED OAKLAND COLISEUM AREA SPECIFIC PLAN

The City of Oakland's Department of Planning and Building is preparing a Draft Environmental Impact Report (DEIR) for the proposed Oakland Coliseum Area Specific Plan (the Project), and is requesting comments on the scope and content of the DEIR. A detailed Project Description is attached. The DEIR will address the potential physical environmental effects that the Project may have on each of the environmental topics outlined in the California Environmental Quality Act (CEQA). The City has **not** prepared an Initial Study, and all CEQA topics will be addressed in the DEIR. The City of Oakland is the Lead Agency for the Project and is the public agency with the greatest responsibility for approving the Project and carrying it out.

This notice is being sent to Responsible Agencies and other interested parties. Responsible Agencies are those public agencies, besides the City of Oakland, that also have a role in approving or carrying out the Project. When the DEIR is published, it will be sent to all Responsible Agencies and to others who respond to this NOP or who otherwise indicate that they would like to receive a copy. Responses to this NOP and any questions or comments should be directed in writing or via email to:

Devan Reiff, AICP
City of Oakland
Department of Planning and Building - Strategic Planning Division
250 Frank Ogawa Plaza, Suite 3315
Oakland, CA, 94612
Phone: (510) 238-3550 or the Strategic Planning hotline, (510) 238-7299
Fax: (510) 238-6538
E-mail: dreiff@oaklandnet.com
Project website: www.oaklandnet.com/coliseumcity

Comments on the NOP must be received at the above mailing or e-mail address by **4:00 p.m. Monday, May 20, 2013.** Please reference **Case Numbers ER13-0004** and **ZS13-103** in all correspondence. In addition, comments may be provided at EIR Scoping meetings to be held before the Oakland City Planning Commission and the Landmarks Preservation Advisory Board:

CITY PLANNING COMMISSION	LANDMARKS PRESERVATION and ADVISORY BOARD
EIR SCOPING MEETING	**EIR SCOPING MEETING**
May 1, 2013, 6:00 p.m.	**May 13, 2013, 6:00 p.m.**
Oakland City Hall, Hearing Room 1	**Oakland City Hall, Hearing Room 1**
One Frank H. Ogawa Plaza	**One Frank H. Ogawa Plaza**
Oakland, CA 94612	**Oakland, CA 94612**

Comments should focus on discussing possible impacts on the physical environment, ways in which potential adverse effects might be minimized, and alternatives to the Project in light of the EIR's purpose to provide useful and accurate information about such factors. There will be numerous other opportunities to comment on the Project itself at noticed public meetings regarding the Oakland Coliseum Area Specific Plan.

PROJECT TITLE: Oakland Coliseum Area Specific Plan

PROJECT LOCATION: The Specific Plan area is located in East Oakland, and covers an area of approximately 800 acres bounded by 66th Avenue to the north, San Leandro Street on the east, Hegenberger Road on the south, and San Leandro Bay and the Oakland International Airport to the west. The Plan area includes the Oakland Alameda County Coliseum and Arena and the Oakland Airport Edgewater Business Park.

PROJECT SPONSOR: The City of Oakland

EXISTING CONDITIONS: See attached Project Description.

PROJECT PURPOSE: See attached Project Description.

PROJECT DESCRIPTION: See attached Project Description.

PROBABLE ENVIRONMENTAL EFFECTS: The Oakland Coliseum Area Specific Plan is expected to include, but is not limited to development plans and actions identified in the attached Project Description. The City has determined that environmental review for this Project will require preparation of an EIR pursuant to Public Resources Code Section 21090(a) and CEQA Guidelines Section 15180. The City is requesting public and public agency comments on the topics of analysis that should be studied in the EIR, and is seeking feedback on the potential environmental effects that could result from implementation of the Project. It is anticipated that the proposed Project may have environmental impacts on the following environmental topics, derived from a list of environmental factors contained in the City's list of CEQA Thresholds of Significance. All of the following topics will be evaluated in the EIR:

- Aesthetics, shadow and wind
- Air quality
- Biological resources
- Cultural and historic resources

- Geology and soils
- Greenhouse gas emissions/climate change
- Hazards and hazardous materials
- Hydrology and water quality
- Land use and planning
- Noise
- Population, housing and employment
- Public services and recreation
- Transportation
- Utilities and service systems

It is not anticipated that the Project will have significant environmental impacts on agriculture and forest resources, or mineral resources. Nevertheless, these environmental factors will also be analyzed in the EIR.

The Draft EIR will also examine a reasonable range of alternatives to the Project, including the CEQA-mandated No Project Alternative, a three sports venue alternative, a two sports venue alternative, a one sports venue alternative, a no sports venue alternative, and other potential alternatives that may be capable of reducing or avoiding potential environmental effects.

Environmental Review Officer

Attachment: Project Description

OAKLAND COLISEUM AREA SPECIFIC PLAN, PROJECT DESCRIPTION

Project Location

The planning area for the Oakland Coliseum Area Specific Plan ("Plan Area") is located in East Oakland and covers approximately 800 acres. The Plan Area is bounded by 66th Avenue to the north, San Leandro Street on the east, Hegenberger Road on the south, and San Leandro Bay and the Oakland International Airport to the west. The Plan Area includes the Oakland Alameda County Coliseum and Arena and the Oakland Airport Edgewater Business Park. The Plan Area is uniquely served by transit, including the Coliseum BART station and two I-880 freeway interchanges.

Background/Summary

In March of 2012, the Oakland City Council entered into an Exclusive Negotiating Agreement (ENA) with a team of urban designers, architects and developers led by the Oakland-based firm of JRDV Urban International. Pursuant to this Agreement, this design team was to perform certain pre-development work at the Coliseum site and its surroundings, ultimately developing a Master Plan for near-term development of the Coliseum site and a long-term development plan for the surrounding area. After substantial technical work, consultation with the City and numerous other public agencies, and detailed design development, a Master Plan has now been prepared. The Master Plan represents the City's preferred development 'vision' for the area, accommodating up to three new venues for the City's professional sports teams, significant transportation and transit enhancements to the area, and development of new retail, housing and employment space at the Coliseum site and within the immediately surrounding area.

This Master Plan will provide the basis upon which the City will now begin preparation of a draft Specific Plan. The Specific Plan effort will include an exploration of land use regulatory changes, infrastructure improvements and financial feasibility and financing options needed to realize this Master Plan vision. The Specific Plan will also identify alternatives to the Master Plan, considering different development scenarios associated with three sports teams, a two sports team alternative, a one sports team alternative, and an alternative under which no sports teams are able to be retained. Pursuant to the California Environmental Quality Act (CEQA), the City will be preparing an Environmental Impact Report (EIR) to address the potential physical environmental effects of the Specific Plan.

Existing Conditions

The Specific Plan area will be subdivided into several distinct Sub-Areas. The existing land uses within each of these Sub-Areas include the following:

<u>Sub-Area A</u>

The approximately 230-acre Sub-Area A consists primarily of the 120-acre Coliseum site, principally owned by the City of Oakland and Alameda County Joint Powers Authority, and which currently holds the existing Arena and Coliseum sports venues and their associated surface parking lots. Sub-Area A also includes City-owned land, and additional private properties to the east along both sides of San Leandro Street, and the existing Coliseum BART Station. In addition to the existing Arena and Coliseum sports venues, Sub-Area A currently contains approximately 348,000 square feet of primarily light industrial, office and government/utility building space.

<u>Sub-Area B</u>

This Sub-Area is approximately 120 acres in size and contains the northerly portion of the Oakland Airport Edgewater Business Park, northerly of Elmhurst Slough and south of Damon Slough. Currently this Sub-Area contains approximately 1.45 million square feet of primarily light industrial and office space, as well as the City of Oakland Public Works Department's corporation yard.

Sub-Area C

This Sub-Area is approximately 190 acres in size and contains the southerly portion of the Oakland Airport Edgewater Business Park, southerly of Elmhurst Slough and north of Hegenberger Road. Currently this Sub-Area contains more than 2.25 million square feet of building space, more than half of which are office uses, interspersed with light industrial and auto-oriented building space, as well as the existing Wal-Mart store and adjacent retail shopping center off Hegenberger Road at Edgewater Drive.

Sub-Area D

This Sub-Area is approximately 140 acres in size and includes the most westerly portion the Oakland Airport Edgewater Business Park nearest to the Oakland International Airport. This Sub-Area contains approximately 1.13 million square feet of building space including large logistics and distribution businesses and activities, as well as light industrial, hotel, and retail and restaurant uses along Hegenberger Road.

Sub-Area E

This Sub-Area is approximately 120-acres in size, and consists of largely undeveloped open space north of the Oakland Airport Edgewater Business Park, on the westerly or water-side of I-880. A little more than half of this Sub-Area is owned and used by the East Bay Municipal Utility District, with an operating water treatment facility, open storage and a corporation yard; the City of Oakland owns the remaining parcels in this Sub-Area, currently use is primarily as a soccer facility

A summary of the existing land uses within the Plan Area is shown in the following **Table 1**. Maps of the Plan Area are shown on the last pages as **Figures 1 & 2.**

Table 1: Existing Building Space by Land Use Type (building square feet [sf])						
Land Use Type:	**Sub-Area A**	**Sub-Area B**	**Sub-Area C**	**Sub-Area D**	**Sub-Area E**	**Total**

*****for the upcoming 2013 NFL Season, the capacity has been temporarily reduced to 53,200 seats

Project Purpose

The Specific Plan is intended to provide both a short-term development plan for the accommodation of up to three new venues for the City's professional sports teams, and a longer term, 25-year planning document providing a roadmap for land use policy, regulatory requirements and public and private investment that coordinates future development in the Coliseum Area to create significant long-term value for Oakland and Alameda County. The Coliseum Area Specific Plan is intended as a comprehensive plan to transform what is currently one of the largest under-developed, inner-urban, transit-served redevelopment opportunities in California. Implementation of the Plan is seen as a critical opportunity to revitalize some of Oakland's most important physical assets, and transform these assets into a center for long-term economic growth.

The Coliseum Area is envisioned to become a transformative, long-term development district for Oakland which will bring in a new job base, increase critical new tax revenue, and establish significant new community value for the residents of the city. The transformation of this area into a thriving, sustainable, healthy and equitable urban showcase for the region is dependent upon a strong vision for the area, linked

to a comprehensive public-private development approach to redevelopment. The following are key objectives around which the Specific Plan will be developed:

1: Retain the existing sports teams, and maximize the economic value for Oakland and Alameda County from these sports facilities.

2: Create a regionally significant Science and Technology District that can act as a catalyst to expand Oakland's ability to attract new businesses and to participate in the Bay Area's dynamic 'innovation economy'.

3: Leverage and enhance the existing transit and transportation infrastructure in the Coliseum Area, and create a model transit-oriented development (TOD) which is consistent with regional growth policies and state law as provided for under SB 375 and AB 32. Such transit-oriented development will increase Oakland's ability to leverage its central position in the Bay Area to capture a bigger share of regional housing growth, job growth and economic investment.

4: Create a vibrant urban mixed-use district in the Coliseum Area which will attract a significant community of new residential and commercial uses. This district will generate activated streets, public spaces that provide an enhanced pedestrian experience, site security and high quality development.

5: Create new open space, Bay access, and natural habitat enhancement, providing public educational and Bay accessibility opportunities for Oakland and Bay Area residents.

The Coliseum Area Specific Plan is intended to foster increased opportunities for new development and economic investment in the area through a land value enhancement strategy, overcoming the existing barriers and realizing the area's full potential. The Plan area is located in the center of the Bay Area and has some of the Bay Area's most valuable core development assets, particularly its regional transit infrastructure. The Plan area also has freeway connectivity, an international airport, water front property and contiguous development opportunity. Leveraging these core assets to their maximizing potential is critical to Oakland's ability to create a viable, long-term center for economic development. The proposed Specific Plan is designed to leverage these existing assets in the Coliseum Area into a comprehensively design mixed-use district that will retain the existing sports franchises and attract sustainable new jobs and economic development.

The Specific Plan also will guide future development of the Plan Area if one or more of the sports teams were to relocate out of the Coliseum Area. The EIR will study the environmental effects of a three team, two-team, a one-team, and a no-team project alternative.

Project Description

As indicated in the background discussion above, a design team led by JRDV Urban International has prepared a Master Plan which envisions near-term redevelopment at the Coliseum site and long-term development plans for the surrounding area. The Master Plan represents the City's preferred 'vision' for redevelopment and economic revitalization of the area, but is only one potential future scenario. Realization of this Master Plan vision is dependent upon many as-yet unresolved factors - including the interest and willing participation of each the privately-owned professional sports franchises, additional investigation into the feasibility of both public and private financing options for various components of the Master Plan, and an assessment of the potential environmental effects associated with this vision, together with identification of mitigation strategies capable of reducing or avoiding any such effects. Current financing strategies assume private financing of each of the new sports venues, with possible public financing assistance to ensure adequate public infrastructure needed to support the ultimate development. The current Master Plan does not represent any commitments of either private or public finances.

With these caveats, City staff has concluded that the Master Plan's vision provides a suitable basis upon which the City will now begin preparation of a Specific Plan. As of the date of this Notice of Preparation, a draft Specific Plan has not yet been prepared. Ultimately, the Coliseum Area Specific Plan will provide a comprehensive, consistent and multi-faceted strategy for development and redevelopment of the Coliseum site and its surroundings, establishing a land use and development framework, identifying needed transportation and infrastructure improvements, and recommending an implementation strategy. As subsequent work on the City's Specific Plan progresses, it is anticipated that the planning and design concepts of the Master Plan will become more detailed and refined, and certain elements of the Master Plan may change. Additionally, per City Council direction established at the beginning of this planning process, the Specific Plan and its associated EIR will carefully consider other possible scenarios for the area under which the City is able to retain only one or two sports franchises, or possibly none. With or without professional sports venues, the Coliseum site and its surroundings remain significant redevelopment opportunities, and options for revitalizing this area and capitalizing on its important physical assets are to be considered, independent of the retention of each or any of the City's sports franchises.

The Specific Plan will provide separate development concepts for each of the Specific Plan Sub-Areas, as described below. Each of these development concepts require further, more detailed planning and analysis, as well as investigation into financing strategies necessary for implementation. None of these Specific Plan concepts currently represent a definitive end-state, or an obligation on the part of either the City or the sports franchises, but are instead a statement of the area's potential.

Sub-Area A

The development concept for Sub-Area A (the Coliseum site), assumes that some, or all of the existing uses within this Sub-Area, including one or both of the existing sports facilities (the Arena and the Coliseum), could be removed and replaced with new development. This new development is envisioned to include the following:

New Sports Venue District: The Specific Plan anticipates construction of new sports venues that will bring a world-class sports experience to the Bay Area. The proposed approach is to create a 21st century "sports district" that is carefully integrated into a dynamic and active urban setting with retail, entertainment, arts, culture, live and work uses - creating sports venues that become part of an authentic urban place. The Plan will accommodate up to three new sports venues, including:

- A new NFL Stadium and multi-purpose Event Center with a seating capacity of approximately 68,000 to 72,000 people. The new Stadium would have a building area of approximately 1.8 to 2.2 million square feet, covering approximately 550,000 square feet of surface area (over 12.5 acres). The stadium is envisioned as an environmentally sustainable building achieving at a minimum a LEED Silver Certification rating.

- A new MLB Ballpark with a capacity of approximately 35,000 to 39,000 seats within a building area of approximately 1.0 to 1.2 million square feet, on a site area of approximately 535,000 square feet (over 12 acres in size). The new ballpark is also envisioned as an environmentally sustainable building, also achieving a minimum LEED Silver Certification rating.

- A new NBA Arena and multi-purpose Events Center with a seating capacity of approximately 18,000 to 20,000 people. The new Arena would be approximately 800,000 to 850,000 square feet in size, located on a site of approximately 210,000 to 250,000 square feet (approximately 5 acres). The preferred site for the new Arena is on the western (water) side of I-880, integrally linked with a pedestrian and transit accessible concourse connection over the freeway connecting to the new Stadium and Ballpark venues. The new basketball arena is also envisioned as an environmentally sustainable building, achieving a minimum LEED Silver Certification rating.

Sports and Entertainment Retail District: The Specific Plan's land use concept will include the creation of a new retail and entertainment district contiguous to the new stadium and ballpark. New retail uses would become "gateway elements" to the new stadium and ballpark, providing a centralized public activity core area, and serving as a catalyst for the project as a whole. This retail and entertainment district is envisioned as a unique regional destination that would be active and publically accessible seven days a week, serving local residents, event participants and the broader City and region's population.

Ball Park Mixed-use District: The area between the new sports venues is envisioned to become a new high density mixed-use neighborhood containing housing, hotel and office uses. Ground floor uses would be regional and neighborhood-serving retail. The area would be designed to integrate into the Sports and Entertainment Retail District and to establish an active urban place that could provide retail, entertainment, arts, and cultural uses, forming an authentic urban place that supports opportunities to live, work and play.

BART Transit-Oriented Development District: The area surrounding the Coliseum BART Station is envisioned to become a moderate- to high-density residential community. The Plan will be focused on creating safe and active public streets with neighborhood-serving ground floor retail uses establishing a high quality sense of place and creating a positive neighborhood identity.

Intermodal Transit Hub: Regional transit connectivity is one of the key elements envisioned to enable and accommodate the planned increase in use of the area. The Specific Plan will recommend ways to increase capacity and improve the passenger experience at the Coliseum BART station. An intermodal transit hub is envisioned that could integrate BART, the Oakland Airport Connector, Capitol Corridor Amtrak, AC Transit and a future local-serving transit system into a single transit hub location. The proposed transit hub is envisioned to connect to the Coliseum site via a new elevated transit and pedestrian connection relocated along the 73rd Avenue right-of-way. This new elevated transit and pedestrian connection could be used as a concourse connection to the new Stadium, Ballpark and Arena through the Sports and Entertainment Retail District. The transit and pedestrian connector may also become a bridge extending over I-880.

Open Space, Parks and Habitat: The Specific Plan will evaluate the feasibility of a significant restoration and rehabilitation of the existing Damon Slough, transforming this drainage facility into functional tidal habitat that helps revive the natural health of the Bay. It is envisioned that an existing parking lot along the south side of 66th Avenue and within the Coliseum Zone could also be removed, and the site restored as part of a created habitat linked to the Damon Slough restoration. This restored open space and habitat area has the potential to become a unique educational resource focused on natural Bay ecology, accessible to the approximately 10 million visitors expected to come to this regional destination every year.

Sub-Area B

The development concept for Sub-Area B (the northerly portion of the Oakland Airport Edgewater Business Park) proposes privately initiated redevelopment of properties throughout the Business Park. This development concept includes the following:

Science and Technology District: The Specific Plan envisions that this northerly portion of the Oakland Airport Edgewater Business Park could be redeveloped as a Center for Science and Technology serving the entire inner-Bay Area. This new Science and Technology Center could offer large floor-plate buildings, within a campus-like setting that is uniquely served by transit. The potential scale of the Science and Technology District could also allow larger corporate and institutional users the opportunity to co-locate and network with smaller partner businesses in a comprehensively planned, high amenity, urban campus location. This new Science and Technology District is envisioned to become a world-class institutional research center for local and international research entities who want locational access to the Bay Area's 'innovation economy'. Potential business sectors that may locate in this District include life sciences and bio-sciences, clean technology and energy research, digital media, and information and

software research. The Specific Plan proposes to create a waterfront-centered, urban technology district with access to the shoreline, parks and recreational facilities, housing and other amenities critical for 'innovation-economy' tenants. The goal will be to integrate this Science and Technology District with a world-class sports and entertainment destination.

Waterfront Community: Oakland's San Leandro Bay waterfront is proposed as a location for the creation of a new residential and mixed-use community that complements the new Science and Technology District. This area would be designed to connect Oakland residents to the Bay. It is proposed that this new Waterfront Community could support a range of residential types and densities, with streets and public spaces activated by retail uses.

Transit Connectivity: The Specific Plan will explore the feasibility of an elevated transit connection continued from Sub-Area A, across I-880. This transit connector should accommodate pedestrian, bike, and transit modes, enabling transit connectivity from the waterfront to BART, and to the potential Intermodal Transit Hub. Such an elevated connection would require permitting from Caltrans, and possibly other jurisdictions.

Shoreline Access and Bay Inlet: The Specific Plan will evaluate the feasibility of creating a more publically accessible waterfront as a catalyst element for remaking the entire Coliseum Area. The waterfront could become both an amenity to the Coliseum Area uses and to the City as a whole. Pedestrian paths, actively used park spaces, and potentially, a new Bay inlet, could all become integrated into a comprehensive waterfront shoreline. One potential scenario of the Specific Plan involves the exchange of the current East Bay Regional Parks mitigation parcels (known as the "Edgewater Seasonal Wetland") adjacent to where Damon Slough enters San Leandro Bay, for a new mitigation wetland site or sites in the area.

Sub-Area C

The Specific Plan will seek to transition Sub-Area C, which is currently a market-challenged business park that includes a mix of light industrial, small office, and some non-profit and government uses, into an extension of the mixed Science and Technology and Business Park. Over time, as the Sub-Area B Science and Technology District becomes established, this adjacent Sub-Area C area is anticipated to transition to similarly related uses which could include advanced technology and other manufacturing, R&D and test-product design and development activities, sales, marketing, professional service and finance uses supporting technology businesses. Smaller science, technology and "green"/"clean" companies seeking less costly space could also locate in Sub-Area C, given its proximity to Sub-Area B. Changes over time in this Sub-Area are anticipated to include new development, most likely lower cost, lower density and more flexible development that would add to the mix of building product types envisioned in Sub-Area B.

Sub-Area D

The Specific Plan will seek to encourage increased Airport-related economic development in Sub-Area D. This area is envisioned to continue to provide locations for businesses that value proximity to the Airport and the I-880 freeway, including large logistics and distribution businesses and activities, as well as hotel, retail, and eating and drinking uses along Hegenberger Road. Adjacency to the development in Sub-Areas A, B and C would have a long-term positive impact on the quality of tenants that want to locate along the Hegenberger corridor. Many of the area's current uses are anticipated to remain. This area has few key development sites, and these sites are anticipated to be used for similar types of uses in the future as exist today.

Sub-Area E

The Specific Plan envisions this area would retain its EBMUD facilities, and that there would be a restoration of existing open space and wildlife habitat.

Summary

A summary of the proposed Specific Plan build-out includes up to three new sports venues totaling nearly 1.7 million square feet of building space or 131,000 seats; just over 14 million square feet of Science & Technology, office, light industrial, logistics and retail space; and 6,370 residential units, as shown in the following **Table 2**. This represents an increase of approximately 8.3 million square feet of new building space within the Plan area. The proposed Specific Plan build-out also includes up to approximately 15,000 parking spaces on the Coliseum site. There are proposed to be nearly 39 acres of new, publically-accessible open space within Sub-Areas A and B, and additional restored open space in Sub-Area E.

Table 2: Specific Plan Build-out Potential of the Planning Area (building square feet [sf])						
Land Use Type:	**Sub-Area A**	**Sub-Area B**	**Sub-Area C**	**Sub-Area D**	**Sub-Area E**	**Total**

Mr. Devan Reiff
City of Oakland
250 Frank H. Ogawa Plaza, Suite 3315
Oakland, CA 94612

Dear Mr. Reiff:

Oakland Coliseum Area Specific Plan – Notice of Preparation

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the Oakland Coliseum Area Specific Plan. The following comments are based on the Notice of Preparation.

Community Planning
The proposed plan will intensify the Coliseum area and will leverage its existing BART station to reduce vehicular traffic. Since this will increase the use of non-vehicular modes, please provide any pedestrian, bicycling and transit performance or level/quality of service measures and modeling pedestrian, bicycle and transit trips that your project will generate for our review. Mitigation measures resulting from the analysis could improve pedestrian and bicycle access to transit facilities, thereby reducing traffic impacts on state highways.

Traffic Impact Study
The environmental document should include an analysis of the impacts of the proposed project on State highway facilities in the vicinity of the project site. Please ensure that a Traffic Impact Study (TIS) is prepared providing the information detailed below:

1. Information on the plan's traffic impacts in terms of trip generation, distribution, and assignment. The assumptions and methodologies used in compiling this information should be addressed. The plan will add significant number of vehicles onto an already saturated Interstate 880. In the trip generation table, any reductions used must clearly be justified through studies.

2. Current Average Daily Traffic (ADT) and AM, PM, Saturday, Sunday and Game Day peak hour volumes on all significantly affected streets, highway segments and intersections.

3. Schematic illustration and level of service (LOS) analysis for the following scenarios: 1) existing, 2) existing plus project, 3) cumulative and 4) cumulative plus project for the roadways and intersections in the project area.

4. Calculation of cumulative traffic volumes should consider all traffic-generating developments, both existing and future, that would affect the State highway facilities being evaluated. Under this analysis, please include, AM, Mid-Day, PM, Saturday, Sunday and Game Day peak hour for our review.

5. The procedures contained in the 2010 update of the Highway Capacity Manual should be used as a guide for the analysis. We also recommend using Caltrans' *Guide for the Preparation of Traffic Impact Studies;* it is available on the following web site:
http://www.dot.ca.gov/hq/tpp/offices/ocp/igr_ceqa_files/tisguide.pdf

6. Include transportation demand management strategies for future developments to reduce singular vehicular use. The Draft Environmental Impact Report should include citywide policies to encourage alternative modes of transportation. We recommend coordinating with BART and AC Transit to provide greater service to the targeted areas, providing subsidized transit passes to workers and residents, restructuring parking structures by reducing the parking requirement such as unbundling parking, share parking, provide bicycle parking and necessary infrastructures, and other transportation demand management strategies. The City of Oakland (City) may refer to, "Reforming Parking Policies to Support Smart Growth," an MTC study funded by Caltrans for sample parking ratios and strategies that support compact growth and Transit Oriented Development. Doing so will encourage alternate forms of transportation, reduce regional vehicle miles traveled and lessen future traffic impacts on the state highways.

7. Mitigation measures should be identified where plan implementation is expected to have a significant impact. Mitigation measures proposed should be fully discussed, including financing, scheduling, implementation responsibilities, and lead agency monitoring.

8. We encourage the City to coordinate preparation of the study with our office, and when available, please provide Caltrans with the administrative draft of the transportation study for our review to ensure our comments are adequately addressed.

Improvements to State Facilities

The increase in the number of commercial and office square footage which will significantly impact adjacent state facilities that are already operating at poor levels of service. To ensure the safety of the traveling public, improvements to local and state facilities to accommodate the increase in vehicular traffic should be addressed in the DEIR. Please include how the City will finance improvements on State facilities from impacts generated by the proposed plan. Although facility expansion is limited within the city's boundaries, Caltrans currently has a number of unfunded projects that would improve highway and safety operations. We look forward to coordinating with the City to develop and fund these improvement projects.

We look forward to continuing to coordinate with the City. Should you have any questions regarding this letter, please call Yatman Kwan, AICP of my staff at (510) 622-1670.

Sincerely,

ERIK ALM, AICP
District Branch Chief
Local Development - Intergovernmental Review

PORT OF OAKLAND

May 20, 2013

Mr. Devan Reiff, AICP
Planner III
City of Oakland
Department of Planning and Building
250 Frank Ogawa Plaza, Suite 3315
Oakland, CA 94612

Subject: Notice of Preparation (NOP) of a Draft Environmental Impact Report (DEIR) for the Proposed Oakland Coliseum Area Specific Plan (Specific Plan)

Dear Mr. Reiff:

The Port of Oakland (Port) appreciates the opportunity to provide comments on the City of Oakland's (City) NOP of a DEIR for the proposed 815 acre Specific Plan. As stated in the project description in the NOP, the City has subdivided the Specific Plan area into Sub-Areas A through E: Sub-Area A includes 4,000 new residential units, and Sub-Area B includes 2,370 new residential units. The purpose of the Specific Plan is to provide a short-term plan for up to three new venues for the City's professional sports teams, and to provide a 25-year planning document for land use policy, regulatory requirements and public and private investment that coordinates future development. The City has identified the Coliseum Area as one of the largest under-developed, inner-urban, transit-served opportunities in California.

The Port understands that the City plans to distribute a DEIR for public review in Fall 2013, and to certify the EIR in Spring 2014. Port staff shares the City's interest in retaining and attracting sports teams in Oakland and increasing the economic vitality of the City, and offers these comments as a property owner in the 400-acre Airport Business Park (ABP), the owner and operator of the Oakland International Airport (OAK), and as a Responsible Agency for this project given the Port's planning and permitting authority in the ABP.

1. The majority of the Specific Plan area is within the Airport Influence Area defined by the Alameda County Airport Land Use Commission (ALUC) based on political boundaries, noise contours and flight tracks. As specified in ALUC's *Oakland International Airport Land Use Compatibility Plan (December 2010),* the ALUC is authorized to review the City's Plan for noise and safety compatibility, airspace protection and aircraft over-flights. Please include an analysis of noise and safety compatibility, airspace protection and aircraft over-flights, and provide to the ALUC for their review.

2. Airport operations regularly result in over-flights in residential areas proposed in the Specific Plan, especially over the proposed Waterfront District. Consideration should be given to sound insulation and avigation easements in these areas, and the need to disclose the potential for low-flying aircraft during property sale disclosures. A noise analysis is recommended for the following four flight procedures:

- Downwind arrivals to North Field Runways 27L/R
- Visual Flight Rules departures from North Field Runways 27L/R
- OAK "Salad One" departures during North Field Quiet Hours (10:00 p.m. to 6:00 a.m.)
- "Pattern work" (training flights) performed on Runways 27R and Runway 33.

3. Port staff understands that another goal of the project is to create new natural habitat. In compliance with the Federal Aviation Administration's Advisory Circular 150/5200-33B *Hazardous Wildlife Attractants on or Near Airports*, the Port has developed a comprehensive wildlife hazard management program for OAK. Port staff requests that the City consider the impacts additional wildlife habitat may have to aircraft, and implement measures to discourage attracting species like vultures and geese that pose a serious threat to aircraft.

4. Consistent with the Port's *Land Use and Development Code (LUDC*) dated June 2011, the City's Proposed Land Use Plan shows Logistics and Warehouse use in the ABP interior between Doolittle Drive and San Leandro Creek, and Science and Technology use in the much larger ABP interior between San Leandro Creek and I-880. Note that in addition to 10 million passengers annually, OAK provides for the movement of 555,000 tons of air cargo. The logistics of air cargo are changing as air cargo providers increasingly adopt a multi-modal approach necessitating increased reliance on truck distribution facilities and even ocean-going vessels, such as those calling the Port's seaport. The DEIR should analyze the adequacy of the Logistics and Warehouse acreage to support OAK.

5. OAK is known for its reliability and convenient access. The DEIR should analyze the potential impacts of the proposed Specific Plan on OAK's four main access roads: Hegenberger Road, 98th Avenue, Ron Cowan Parkway and Doolittle Drive.

6. At its inception, OAK was situated far from populated areas to avoid safety and noise conflicts. Over decades, adjacent municipalities have approved residential development in close proximity to OAK. The Specific Plan proposes residential land use in the ABP. Analyze whether the proposed residential land use would result in a conflict with the City's *General Plan* and the Port's *LUDC*. If such conflicts would occur, discuss whether these conflicts would result in significant or potentially significant impacts and any appropriate mitigation that would reduce the impact to a level of insignificance.

7. Property in the ABP is property subject to Tidelands Trust restrictions. Under the Tidelands Trust provisions, residential uses are generally not found to be Trust-compliant. Analyze the relationship of the proposed residential uses to the Tidelands Trust, and any impacts that might arise.

8. The Port has planning jurisdiction in the ABP, and issues development permits for proposed private property development and uses. The Port has received a development permit application to allow General Education land use (schools) in the ABP.. The Port, as Lead Agency under CEQA, is currently administering the preparation of a Draft IS/MND for proposed General Education use in the ABP. Analyze whether the Specific Plan would

conflict with General Education in the ABP, particularly in the proposed Science and Technology Industrial Support area.

9. The Specific Plan proposes development adjacent to San Leandro Bay. Given that projected sea-level rise caused by climate change may impact the Specific Plan area and adaptation measures may be needed, discuss sea-level rise impacts and appropriate mitigation measures.

Thank you for the opportunity to comment on the scope of the Specific Plan DEIR**.**

MEMORANDUM

TO: **Planning Commission**

FROM: **Landmarks Preservation Advisory Board**

SUBJECT: **LPAB Comments – Coliseum Area Specific Plan DEIR Scoping Session**

DATE: **May 13, 2013**

At a regular meeting on May 13, 2013 the Landmarks Preservation Advisory Board (LPAB) received public comments and commented on the scope of the Draft Environmental Impact Report (DEIR) for the Coliseum Area Specific Plan. The LPAB is advisory to the Planning Commission, which held its own review on May 1, 2013.

At the May 13, 2013 meeting, the LPAB voted unanimously to direct staff to prepare a summary of their comments/recommendations and to forward the summary to the Planning Commission.

Summary of LPAB Comments/Recommendations

1) **Document the historical and cultural significance of the Coliseum and Arena buildings.** Tonight's report covers little of their significance. The original buildings are an amazing piece of mid-century architecture. They are iconic buildings and exceptional examples of structural modernism. They are spectacular at night when lighted. They are noted on many online architectural sites, such as World Architecture. There's a duality between the two buildings and the site as a whole. The buildings as an ensemble are important to study.[1]
2) **Address the potential for retaining both buildings, which the current plans do not consider.** This needs to be rethought. So far, we've only seen options of keeping the Arena. These are two great buildings that could find a new purpose or reuse. The economic viability issues and the sports teams' requirements do not preclude an alternative for reuse of the iconic buildings. There is a way to reach both goals of providing new sports venues, and keeping some of the existing historic buildings that have a long life ahead. This approach would be consistent with economic and sustainable/green issues and would draw people to the City.
3) **Study the following alternatives:**
    a. **Restoration of both the Coliseum and Arena.**
    Restoration of the Coliseum (removal of the Mount Davis addition and

1 Note that the OCHS rating is a Potentially Designated Historic District, an Area of Primary Importance (API). API's appear eligible for the National Register.

restoration of the original design), along with restoration of the Arena (removal of the Oracle signage and entries).

b. **Reuse of both the Coliseum and Arena for the sports, two-venue proposal.**
Reuse as sports venues, with renovation upgrades that meet the current sports teams' standards, if feasible. Study retaining the facade and changing the interior.

c. **Adaptive Reuse of both the Coliseum and Arena.**
Other uses of the buildings should be explored. Proposed activities in the specific plan around the area of the building ensemble may lead to new patterns that suggest new uses. Uses suggested at the LPAB meeting include an Olympic size swimming pool, a sports venue for women's sports, or a sports venue for minor league baseball. Other economically viable uses should be explored.

4) **Analysis should include the existing alterations to the Coliseum and Arena buildings and their impact on the historic status of both the individual buildings and the building ensemble.**
5) **Analysis should include impacts to the Area of Primary Importance if only the Arena is retained.** If only the Arena is retained, the wholeness of the design is gone.
6) **Study the visual and/or structural impacts to the ensemble, should both buildings remain, and to the Arena, if it remains alone, due to proposed development of the Plan.**
7) **Study revision of the proposed plans so that the ensemble can be retained.**
8) **Require that all surface parking lots use permeable pavement.** This is a stormwater management issue with respect to runoff, especially since this is at a low elevation and close to the Bay.
9) **Study the potential competition with the West Oakland Specific Area Plan which proposes similar uses, science and technology.**
10) **Study a Phased Approach.** The current proposed plan appears to be overly ambitious, but perhaps more easily attainable over time.
11) **Archeological investigation and study should include an archeological field survey approach.** The archeological investigation should be in greater depth than a standard records research and consultation with Native American organizations. This is a very large, 800-acre plan. These environments are precisely where you would expect to find early prehistoric artifacts because the same thing that draws people here today, the Damon Slough and access to the Estuary, would have drawn people earlier. The Damon Slough has a higher probability of having cultural artifacts than other areas.
12) **Study the economic benefits/liabilities of sports teams on the City.**

Please contact Joann Pavlinec at (510)238-6344 or jpavilnec@oaklandnet.com for any questions.

Subject: nop comments from san leandro, case#ER13-0004 and ZS13-103

Devan,

Thanks for the opportunity to respond to your recent NOP for the DEIR for the proposed Oakland Coliseum Area Specific Plan (Case ER13-0004 and ZS13-103. Below are some comments/questions from the City of San Leandro regarding the proposal for relevant environmental factors to be addressed in the draft DEIR:

1) Aesthetics

a. Please identify if there will be zoning changes that will increase the height limit particularly in Sub-Area D and appropriate mitigation measures to avoid degrading any existing visual character or quality of the site. The Doolittle corridor represents an important gateway to San Leandro so any height changes that could impact this corridor are important to

2) Air Quality

a. Please identify and analyze impacts or potential impacts on the air quality during the construction phase and after implementation particularly for neighboring communities such as San Leandro.

3) Land Uses/Planning

a. Identify and analyze new land uses, particularly higher intensity ones, allowed in the proposed Specific Plan area particularly Sub-Area D

4) Noise

a. Identify and analyze any major sources of noise during and after construction and impacts on neighboring communities such as San Leandro.

5) Population, housing and employment

a. Identify and analyze any substantial increases to the number of jobs in the Specific Plan area particularly Sub-Area D.

6) Transportation/Traffic

a. Construction-related truck and equipment trips and related damage through City of San Leandro (i.e., Doolittle Drive) should be analyzed.

b. Analyze impacts of any substantial increase to existing vehicular traffic and its impacts on existing traffic and road capacity.

Thanks,

Tom Liao, Planning and Housing Manager

Re: Comments to Notice of Preparation of Draft Environmental Impact Report for Oakland Coliseum Area Specific Plan
Case Nos.: ER13-0004 and ZS13-103 ("Project")

Dear Mr. Reiff:

Thank you for allowing Union Pacific Railroad Company ("UP") the opportunity to submit the following comments in response to the City's Notice of Preparation of a Draft Environmental Impact Report ("DEIR") for the Oakland Coliseum Area Specific Plan.

UP is a Delaware corporation that owns and operates a common carrier railroad network in the western half of the United States, including the State of California. Specifically, UP owns and operates rail main lines connecting the San Francisco Bay Area to Sacramento and points east and north, and to Los Angeles and points east and southeast. UP is the largest rail carrier in California in terms of both mileage and train operations. UP's rail network in the Bay Area is vital to the economic health of California and the nation as a whole and its rail service to customers in the Bay Area is crucial to the future success and growth of those customers.

Sub-Area A of the Project surrounds UP's main line tracks. The current train traffic includes freight trains, as well as daily Capitol Corridor and Amtrak Starlight passenger

trains. Nearby at-grade rail crossings near the Project include High Street, 50th Avenue, 66th Avenue, 85th Avenue, and 98th Avenue. UP anticipates that the train volume near the Project area may increase in the near future. UP requests that the City and the Project developers keep in mind that this is a vital and growing rail corridor and must be protected for future growth by not creating uses that limit continued rail use.

Zoning

UP believes that maintaining industrial use areas along existing rail corridors reflects good land use planning. During the preparation of the DEIR, UP requests that a study be performed to examine the Project's risks associated with any proposed residential zoning, commercial zoning, or zoning other than industrial, if any, near railroad property. For example, zoning that allows residential or retail uses near the rail corridor could result in increased pedestrian traffic, vehicular traffic and the likelihood of trespassing on the railroad right-of-way.

Increased Traffic Impact

Rail crossing safety is critical to the public and to UP. Any increase in traffic from the Project may render inadequate the current safety devices in place on the nearby crossings. Additionally, an increase of pedestrian and vehicular traffic may conflict with train operations causing trains to proceed more slowly through the City, and/or make more frequent emergency stops, which would make rail service less effective and efficient. Additionally, train cars may be forced to block at-grade roadway intersections, causing traffic disruptions.

UP requests that the DEIR examine any increase in pedestrian and vehicular traffic and the impacts on the adjacent at-grade road crossings to see if any mitigation measures should be included in the Project. UP suggests that the City assess whether any grade-separations or crossings closures can be incorporated into the Project's development plans.

Noise and Vibration Impact

UP's 24-hour rail operations generate the noise and vibration one would expect from an active railway. UP requests that, as a mitigation measure, the City should require future developers to disclose to the general public the daytime and nighttime noise levels naturally occurring with UP's long-standing freight rail service, as well as the pre-existing and predictably-occurring vibration. These disclosures should note UP's anticipation that train volume will increase in the future. The Project's development plans should also include appropriate mitigation measures, such as construction of sound barrier walls or landscape buffers, and/or use of sound-proofing materials and techniques.

UP appreciates the City giving due consideration to the above concerns, as this proposed Project may result in significant impacts to land use and public safety.

City of Oakland
May 20, 2013

Please give notice to UP of all future hearings and other matters with respect to the Project as follows:

Austin Fearnow
Assistant Manager, Real Estate
Union Pacific Railroad Company
1400 Douglas Street - STOP 1690
Omaha, NE 68179

Please do not hesitate to contact the undersigned if you have any questions or concerns.

Sincerely,

Patrick R. McGill
Senior Counsel – Real Estate
Union Pacific Railroad Company

Re: Comments on NOP of Oakland Coliseum Area Specific Plan DEIR

Dear Mr. Reiff,

Thank you for soliciting community input on the NOP of the DEIR for the proposed Oakland Coliseum Area Specific Plan. We are excited to see a vision beginning to come together for the area and are eager to help make the project as successful as it can be for local residents, investors, and the entire region. Thanks also for welcoming TransForm's comments on the NOP. Our purpose as an organization is to help develop the best transportation and land use plans, policies and programs that promote solutions maximizing the three E's of sustainability including Equity, the Economy and the Environment.

There is much to consider in this area and we appreciate that City staff trying to balance the voices that represent all aspects of the community. Ultimately you are helping the community articulate a shared vision for a better future, getting everyone on the same page and charting a concrete plan for future improvements to improve quality of life for existing residents, making the area attractive to future investors, and harnessing the latent economic power of the unique TOD site.

This letter primarily addresses transportation related aspects of the plan that should be taken into consideration within the NOP. This comment letter is organized into two main sections;

1) What TransForm heartily applauds and commends for inclusion in the NOP,

2) What TransForm thinks is missing from the current NOP and should be included.

I. We applaud the following components of the Oakland Coliseum Plan NOP

1) **Prioritizing the area as a TOD Sports / Jobs Center:** We are excited to see the vision call for a TOD project that builds off of the rich transit infrastructure of the area. We also appreciate the strong desire to accommodate current and or future sports teams as an economic generator, a continuation of sentimental traditions that bring priceless value to a community and the community cohesion that can be developed around sports teams. We hope that this vision is maintained as pressures for traditional auto-oriented development

come forward as the area becomes more attractive to investors. Building off of the tremendous transit infrastructure provided by AC Transit and BART will make for a much more walkable community for residents, visitors and future businesses in the area. This will not only reduce Oakland's carbon footprint, but will create a much safer, more livable type of community that will allow for future residents and workers to be less dependent on cars and the expensive, unhealthy , economically draining parking lots and road space needed to support car-oriented development.

2) **Prioritizing Space for Pedestrians**. We are thrilled to see a focus on enhancing the pedestrian experience in the area, and hope to be able to offer input in how the plan can maximize pedestrian safety while creating an attractive area to walk in. It should be noted that some of the most successful business districts in Oakland are places that offer a rich pedestrian experience (the Fruitvale, College Ave., Oakland Chinatown, Old Oakland, etc.).

3) **6,370 Units of New Housing.** Oakland and the Bay Area as a whole continue to grow. The Association of Bay Area Governments have made projections (based on our previous growth over past years) that Oakland can and should accommodate it's "fair share" of growth over the next 25 years. Even without the proposed transit hub, the area is rich with local, regional, and even International transit that will connect future residents in the new housing to an unlimited amount of jobs. Additionally, housing that is built in this transit rich area is less housing that will be needed to be built in the region's precious open space and farmland.

II. This section inventories what we think is missing from the NOP

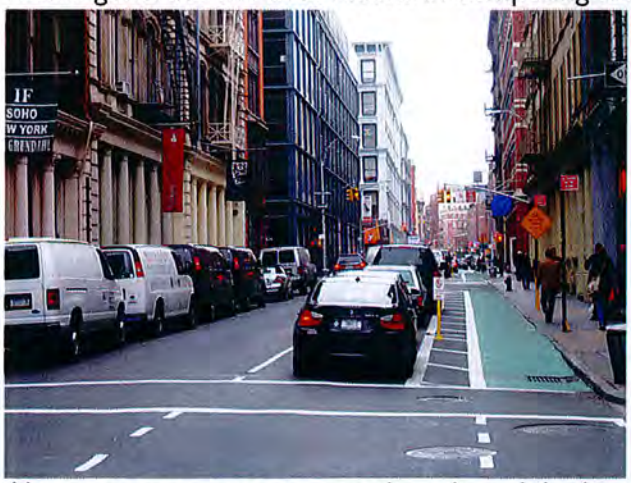
1. Call for the creation of a Parking Benefit District: While there is clearly an effort to minimize the creation of non-stadium related parking, efforts should be spelled out directly to create a Parking Benefits District (PBD) within the planning area. Creating a PBD will result in the best planned and best regulated parking to facilitate a revenue stream for the planning area while always ensuring parking availability. Creation of a PBD should be coupled with creating a parking management plan (see below) and creating "parking maximums" for future projects in the area, requiring the provision of progressive transportation demand management strategies that could include requiring future development to provide transit passes to future tenants in-lieu of constructing costly new parking facilities. The construction of a new parking space can be quite expensive, and alternatives should be allowed, freeing up resources for other community benefits (such as affordable housing). Additionally, revenue streams created from metered street parking within the district could be used to fund infrastructure improvements called for within the plan, or other projects decided upon by local stakeholders. Find more information here; http://www.sonomatlc.org/Parking/PBDs/BusinessPBD/SmallChange-1.htm, and here: Redwood City Example http://shoup.bol.ucla.edu/RedwoodCity.pdf

2. Call for a "Park Once" Parking Management Plan. Identify which places need to include new parking spaces to enable parking availability within a 10 min walk of any location within the plan area. This would result in designating locations where parking should be concentrated and for which resources could be pooled in order to build that parking, the same way that locations are designated and resources pooled for affordable housing.

3. Call for a policy referring to the 85/15 rule of parking management as an Economic Development Policy. 85/15 demand to availability ratio is managing parking (usually through varied pricing) so that one in every seven spaces is always available. This policy is beneficial

because it allows staff to implement the strategy that works best for the community and customizes strategies for performance outcomes. Ultimately this creates parking availability and predictable parking supply. This strategy has to be paired with a parking management plan (see above) that includes maximum parking flexibility, ease of payment and establishing location of free lots or free times. We hope any Specific Plan will include a goal of managing for the 85/15 rule, and will mention cities that have already adopted market pricing for on-street metered parking and coordinate lower priced off-street parking garages, including Pasadena, Santa Monica, Ventura, Redwood City, Walnut Creek, and San Francisco.

4. Include a Bicycle Component in the Plan: We are very concerned that there is no mention of bicycles in the proposed plan or NOP. Bicycles are a key component of facilitating non-motorized local travel, and often a critical tool in breaching that "last mile" between people, transit, and their jobs. Additionally, future pots of funding to pay for street infrastructure will be allotted to "Complete Streets" projects that include good bicycling and pedestrian infrastructure (see images below). Planning ahead for streets to be "complete" would generate the best results in competing for and winning funding for them.



Above are two recent examples where bike lanes are provided with extra safety protection of parked cars. Bike lanes like these should be called for on designated streets early on in the planning process.

We also wanted to reiterate that if parking spaces per unit will be minimized for projects in the planning area, a call should be made for projects to accommodate secure bicycle parking in their design, and increased bicycle use should be expected. It should be anticipated that workers in future jobs located within the site will greatly benefit from being able to quickly, safely, and easily bike between their places of business and any retail that will be within a short bicycling distance. 20 minute walks to a destination are quickly shunned while a safe, 5 minute bicycle ride is a very attractive way to get to a local restaurant for one's lunch hour.

We mention this now because bicycles always seem to be an "afterthought" in TOD projects (such as within the Fruitvale Transit Village and Walnut Creek BART Station TOD's) which results in cities having to redirect future transit and transportation infrastructure funding to pay for them long after they were needed.

6. If any increases in height or density is called for, create a plan that "re-captures" some of the wealth created by any added height or density. "Air rights" are some of the most precious resources the City of Oakland has to address community needs and infrastructure improvements. A "Developer Incentive Program" is currently under development that we hope would allow for greater heights and or FAR densities of projects in exchange for the provision of additional community benefits or infrastructure improvements. Whereas the Coliseum Station Area is likely to attract development in the near future (in addition to the Lake Merritt BART Station Area, West Oakland BART Station Area, Uptown / Broadway Valdez, etc.), it would be inequitable not to require the provision of community benefits in exchange for additional height or density allowances than for what is currently zoned. A plan should be created now for when such a case arises.

Thanks again for your efforts. I would be happy to meet with you to discuss questions or provide additional information as needed to develop the NOP or any other phase of this process. We look forward to seeing this terrific redevelopment opportunity become a reality, and further unlocking the tremendous potential Oakland has as a World Class City.

Sincerely,

Joël Ramos
Senior Community Planner

EBHO

EAST BAY HOUSING ORGANIZATIONS

May 20, 2013

Devan Reiff, AICP
City of Oakland
Department of Plannign and Building
250 Frank Ogawa Plaza, Suite 3315
Oakland, CA 94612

Dear Devan Reiff,

RE: East Bay Housing Organizations (EBHO) response to NOP on DEIR for Oakland Coliseum Area Specific Plan

This letter offers EBHO's response to the Notice of Preparation of a Draft Environmental Impact Report for the proposed Oakland Coliseum Area Specific Plan.

East Bay Housing Organizations (EBHO), a 29-year old non-profit membership organization, is the leading affordable housing advocacy coalition working throughout Alameda and Contra Costa Counties, and is based in Oakland. EBHO's mission is to preserve, protect and expand affordable housing opportunities for the lowest income communities. EBHO's membership includes more than 300 organizations and community leaders including non-profit affordable housing developers, architects, planners, contractors, homeless and housing advocates, residents, service providers, fair housing agencies, tenant advocates, community and interfaith organizations and activists, clergy and congregations, labor unions, environmental organizations, lending institutions, intermediaries and policy organizations, and city and county agencies and staff.

EBHO's recommendations for what to include and study:

At least 25% of the residential units should be affordable to very low income people -- working families, seniors, and people with special needs -- and incorporated into the plan. This should be studied in the EIR to assess how this mitigates for potential air pollution, greenhouse gases, and population, housing, and employment impacts.

Additionally, an analysis of the projected income mix of future jobs created should be conducted to ensure that there us a jobs/housing fit -- meaning that workers at all income levels can live and work in the plan area. A jobs/housing fit will mitigate against increases of greenhouse gases since workers will be able to walk, bike, use transit, or commute short distances to get to work. Moreover, affordable housing should be planned near the BART station since affordable housing residents generally own less cars and use transit more. Increasing transit ridership will reduce greenhouse gases that would otherwise be generated.

Finally, schools, grocery stores, locally serving residential shopping areas, and community facilities should be incorporated into the plan to ensure that the over 6,000 units of housing are adequately served by amenities, and residents will not have to drive to them. A network of walking and bike paths should be incorporated in the plan and studied to ensure that residents can have access to their jobs, amenities and services without needing to drive, and mitigating against traffic, GHGs and air pollution.

538–9TH STREET, SUITE 200, OAKLAND, CA 94607 / (510) 663-3830 (P) / (510) 663-3833 (F) / www.EBHO.org

We support these components of the plan:

- 6370 residential units
- Embracing its role as a Priority Development Area
- Mixed-use vision

We are concerned about the following components:

- Waterfront community: creating a residential & mixed-used community that complements the new Science & Technology District. How is "complementary" defined? Employment for this district would largely depend on highly specialized labor and high wages. What does this mean for employees making median income (janitors, maintenance, etc)? We need to ensure that these employees are housed in the nearby waterfront community.
- Ball Park Mixed-use district: How many of those homes will be affordable? Can we ensure that affordable housing production standards under Redevelopment law apply to the areas that are being considered for residential development? How can we ensure that the retail/ restaurant development that occurs caters to all Oakland residents who will enjoy the space? How can the plan prioritize not only high end shops or formula retail for the sports fans/hotel visitors, but also services that cater to the residents who will live in the (hopefully) affordable homes that will be created?
- In this TOD plan, the City should prioritize creating affordable homes adjacent to transit centers in addition to developing market-rate homes. We need to ensure that low and extremely low-income households can partake in the advantages offered by TOD.

Thank you for your consideration. Please feel free to contact me at 510-663-3830 x 323 or amie@ebho.org.

Sincerely,

Amie Fishman
Executive Director

Re: Comments on NOP of Coliseum Area Specific Plan DEIR, ZS13-103 and ER13-0004

Dear Mr. Reiff,

Causa Justa :: Just Cause (CJJC) is a housing and immigrants rights organization that builds grassroots power and leadership to create strong, equitable communities. We have a membership base and provide tenant-counseling services to East Oakland residents.

Given the decades of disinvestment in East Oakland, we are hopeful about investment in the area. We'd like to take this opportunity to share a couple of suggestions we have for the plan towards the goal of making sure that the Coliseum Area Specific Plan benefits existing residents and will not lead to further displacement of long-term east Oakland residents.

1. Build low income housing and protect housing in the surrounding area

The plan states that 6,370 units of residential housing is projected to be built in sub areas A and B. A majority, specifically 68.8% of the residents who currently live in the 94621 zip code (where the Coliseum is located) have incomes at $50,000.00 per year, or much less.[1] For an Oakland household to afford the fair market rent on a two-bedroom apartment, the household must make at least $54,440.00 per year[2]. This means that out of the housing developed in the plan, at least two-thirds of it should be low income.

2. Prioritize East Oakland residents for employment opportunities in the area plan

The Coliseum Area specific plan will bring number of different business and job opportunities. Given that approximately 54.5% of the residents in this zip code alone are either not in the labor force, or unemployed[3], it will be critical that 94621 residents be the first trained and hired for stable jobs with living wages.

To benefit the current residents of East Oakland must the suggestions above must be a priority and the impacts of the disinvestment must be taken into consideration to address the needs of the families who have lived there for generations.

Again we thank you for the opportunity to comment early on in the plan and are looking forward to when this same opportunity is afforded to the broader community of East Oakland residents.

Sincerely,
/s Robbie Clark Housing Rights Campaign Lead Organizer, on behalf of Causa Justa :: Just Cause

Re: Comments on Coliseum Area Specific Plan EIR Scoping, Case Number ER-13-0004 and ZS 13-103

Dear Strategic Planning Manager Ed Manasse and Project Manager Devan Rieff:

HOPE Collaborative (Heath for Oakland's People and Environment) is pleased to submit a public comment on the Coliseum Area Specific Plan EIR Scoping. HOPE is a community collaborative initiated by the W.K. Kellogg Foundation working to transform the food and fitness environment in the flatlands of Oakland, CA. We are comprised of public agencies, community-based organizations, and community residents working together on policy and systems change efforts in the areas of food systems, built environment, and local sustainable economic development with the goal of improving the health of Oakland's most vulnerable communities through sustainable environmental changes.

We applaud the EIR's inclusion of public health impacts in the scoping including air quality, seismic safety, storm water management, flooding, and groundwater contamination. Land use and planning decisions have the potential to improve and promote health as well as harm it. As such, we recommend the City consider health impacts in vital infrastructure and land use decisions. It is in this spirit that HOPE Collaborative proposes additional elements to be addressed by the EIR that we believe are critical to the development of a plan that is environmentally sound, healthy, and that will contribute to more equitable outcomes for Oakland residents.

(1) **Land Use Plans and Policies**

a. **Alignment with Oakland's Energy and Climate Action Plan**: Include Oakland's Energy and Climate Action Plan (ECAP) goals in the evaluation of proposed land use changes in light of adopted policy documents. Ensure that the plan's projected greenhouse gas emissions align with ECAP goals for emissions reduction. Also, as outlined in Oakland's Energy and Climate Action Plan, "new development in Oakland, including Transit-Oriented Development, has the potential to benefit communities (via economic revitalization, and reduced VMT's), and has the potential to adversely impact communities (via displacement or local environmental impacts). The City will make efforts to plan for new development with consideration of these issues."

b. **Protect Open Space and Urban Agriculture**: Determine the potential impacts of proposed land uses to parcels zoned for agricultural use or open space, specifically in sub-areas A and E which have sites owned by the City, the County, and EBMUD. These sites should be preserved as open space uses. Determine possibilities for public use and/or ownership of these sites, including protection of these sites for urban agriculture.

(2) Public Services and Recreation

a. **Healthy Food Access:** Determine the extent to which proposed land use changes will affect availability of healthy, fresh, affordable food in Districts 6 and 7 which are areas underserved by quality food retail. Explore opportunities for investments that incentivize a diversity of healthy, local and independently owned, food businesses that contribute positively to food access and Oakland's bourgeoning food economy

(3) Transportation/Traffic:

a. **Complete Streets**: Evaluate the potential for land uses to incorporate sustainable design practices that serve residents' daily needs, attract pedestrian and bicycle travel and transit, and discourage use of motorized vehicles.

(4) Additional Issue to address in EIR:

a. **Community Engagement in Plan Development**: The Coliseum Area Specific Plan should prioritize a high level of participation by environmental justice communities and existing residents of District 6 and 7. The EIR should include indicators for public participation and input of existing residents which are predominantly low-income communities and communities of color.

Together, these modifications will ensure an adequate scope for review of environmental impacts. We ask that you strongly consider these proposed additions in the EIR. We are available and happy to partner with you and other City staff to adapt the EIR to include these elements and to support community engagement in the development of the Coliseum Area Specific Plan. Please feel free to contact us with any questions or if we can assist in any way.

Sincerely,

Sabrina Wu, Project Director
HOPE Collaborative

dreiff@oaklandnet.com

Dear Mr. Reiff:

PUEBLO would like to focus on the issue of public safety as we consider the proposed plans for Coliseum City. As the letter from EOBHC indicated, one of the concerns of East Oakland residents is safety – not just from criminal offenders but also from the police. East Oakland is one of the areas from which many complaints of police abuse originate, and youth, in particular, have accepted police abuse as 'normal.'

We believe a fundamental component of building a safe and healthy project must include appropriate neighborhood involvement and the promotion of restorative justice practices that offer support to high risk youth that encourages them to stay in school, obtain a diploma or GED and acquire vocational skills.

Open spaces and recreational facilities are of little value if residents don't feel safe being out in the open. Residents will need training in how to protect open spaces and work together to deter those who try to appropriate these spaces for illegal activities. They must also learn how to hold police accountable for racial profiling and how to make use of complaint procedures when police act unprofessionally and unconstitutionally. Resources to support these activities will be essential to ensure that Coliseum City will be a healthy and health-promoting community.

Very truly,

Rashidah Grinage

Re: Case ZS13-103 and ER13-0004

Dear Mr. Reiff:

Thank you for taking the time to meet with member organizations of East Oakland Building Healthy Communities (EOBHC) during this comment period on the Coliseum City environmental impact report scope, and fore requesting our input.

EOBHC's Workgroup 4 is focused on improving health of residents through systems change in our built environment. Our organizations advocate for neighborhood-level progress in transit, housing, food justice, and land use policy with specific attention to East Oakland.

This spring, more than 50 East Oakland residents came together in our Leadership Academy to share their experiences and learn about policy initiatives in Oakland. They articulated the enclosed Community Planner Principles, which represent their aspirations for their community and a high standard for planners to meet.

Specifically, Leadership Academy participants generated this aggregate vision statement:

> *The dignity of individuals and of our community collectively must be respected in all planning decisions. Help our community provide a safer and healthier place to raise our children, regardless of the challenges we face, and work to keep families off the street by providing cheaper, cleaner and improved housing.*
>
> *All East Oakland residents deserve housing that protects our health rather than compromising it. Protect homeowners. Safer environments. Protection from police.*
>
> *Have fair food in East Oakland. Grow our own food to feed our children, and teach them healthy habits. Ensure stores are clean and the food is fresh to eat. Bring back major grocery chains and healthy options like farmer's markets. Make public gardens free and accessible. Educate people about healthy food and meals, how food affects children. Whenever we go into a restaurant, enjoy the food. People need to feel satisfied by the food.*

All East Oakland residents deserve to have a safe, affordable and clean transit system with appropriate supervision. People must be respected without regard to race, gender and finances. Provide riders with respect and fair treatment, especially those with disabilities. Improve streets so buses can travel smoothly, and be more dependable. Use green energy for transportation, accessible transportation, and help people benefit from the transportation provided to them.

One group should not benefit at the expense of another. We should share benefits and burdens equally.

We call your attention to the last line about share benefits and burdens equally. Oakland's Coliseum Area suffers the worst impacts of pollution and has the lowest income to address the health burdens it is carrying as a result of the region's pollution.

City leaders must pay specific attention to addressing health and equity impacts as this important process begins. Coliseum City joins a list of major development opportunities in Oakland – Brooklyn Basin, Army Base, Lake Merritt – where community residents have engaged to protect neighborhoods and prevent displacement, offer opportunity and make Oakland a better place to live for its current residents.

Setting clear expectations for improved health and equity through transit, housing and food justice policies from the initial project planning stages is critical to the success of this venture. It is critically important that community residents like the participants in our Leadership Academy are consulted and engaged in this process. East Oakland residents are exposed to more toxics than other Alameda County residents and suffer harsher health impacts. The Coliseum City project you are beginning to plan must improve health outcomes, not further burden this community.

However, East Oakland residents do not expect a successful plan to arrive without careful attention and community engagement. Progressive, pro-active policies need to be developed well in advance of any development proposals that will set the table for the best projects to come, and allow the community to see health-producing equitable benefits.

"Status quo" development can harm out communities more than benefits. Plans that maintain status-quo levels of parking, recreate streets that give cars priority over people, create poor-quality jobs, and build housing that directly or indirectly displaces current residents is detrimental and simply unacceptable.

East Oakland is a recognized food desert, underserved by quality food retail offering of healthy, fresh, affordable food. This project offers opportunities for investments that incentivize a diversity of healthy, local and independently owned, food businesses that contribute positively to food access and Oakland's

growing food economy. In addition, the plan for preserve open space on parcels zoned for agricultural use or open space, specifically in sub-areas A and E which have sites owned by the City, the County, and EBMUD. The plan should determine possibilities for public use and/or ownership of these sites, including protection of these sites for urban agriculture.

East Oakland residents have borne the brunt of the housing crisis in foreclosure, displacement, and excessive rent increases. This plan must preserve and increase housing affordability for current residents and specifically prevent displacement. We commend the potential for 6370 new homes, and Oakland's vision to embrace its fair share as a Priority Development Area, provided that displacement risk and affordability issues are effectively addressed. In this transit-oriented development, the City must prioritize affordable homes adjacent to transit centers in addition to market-rate homes. We need to ensure that low and extremely low-income households can share in TOD's advantages.

In defining the waterfront neighborhood while creating a residential and mixed-used community that complements the new Science & Technology District, we ask how "complementary" will be defined? Employment for this district will include highly specialized labor and high wages. Will making median income employees (janitors, maintenance, service) also find housing here? Residents will need more than high end boutiques or formula retail for sports fans, so plan for services that cater to families who will live in these affordable homes.

At least 25% of the residential units must be affordable to very low income people – working families, seniors, and people with special needs. This should be studied in the EIR to assess how this mitigates for potential air pollution, greenhouse gases, and population, housing, and employment impacts.

Additionally, an analysis of the projected income mix of future jobs created should be conducted to ensure that there is a jobs/housing fit – meaning that workers at all income levels can live and work in the plan area. A jobs/housing fit will mitigate against increases of greenhouse gases since workers will be able to walk, bike, use transit, or commute short distances to get to work. Moreover, affordable housing should be planned near the BART station since affordable housing residents generally own fewer cars and use transit more. Increasing transit ridership will reduce greenhouse gases that would otherwise be generated.

Finally, schools, grocery stores, locally serving residential shopping areas, and community facilities should be incorporated into the plan to ensure that the over 6,000 units of housing are adequately served by amenities, and residents will not have to drive to them. A network of walking and bike paths should be incorporated in the plan and studied to ensure that residents can have access to their jobs, amenities and services without needing to drive, and mitigating against traffic, GHGs and air pollution.

The Coliseum City Redevelopment Plan presents a tremendous opportunity to make the area around the Coliseum BART station far healthier for our economy, environment, and community.

We are eager to work with City staff in creating a plan that will lead to prosperity and healthy well-being for all, especially the current residents of East Oakland. We look forward to working with City of Oakland Planning staff to shape a plan that creates good jobs, new housing opportunities for all, reduced air pollution, safer streets, and keeps our sports teams here while attracting new investment.

In summary, we ask that your efforts:

1. protect neighborhoods, offer opportunity and make Oakland a better place to live for our current residents
2. improve health outcomes, not further burden this community
3. develop pro-active policies well in advance of any development proposals that will set the table for the best projects to come, and allow the community to see health-producing equitable benefits
4. determine possibilities for public use and/or ownership of these sites, including protection of these sites for urban agriculture
5. preserve and increase housing affordability for current residents and specifically prevent displacement.

Enclosed please find specific letters from many individual organizations that expand on these topics.

We look forward to your response and meeting with you again as the process moves forward.

Sincerely,

MEMORANDUM

Re: Detailed Air Quality and Human Health Risk Assessment for the Coliseum Site and Plan Buildout

---

The purpose of this memorandum is to summarize the methodology used to assess the air quality and human health impact of the Coliseum Site and Plan Buildout as described in the Coliseum Area Specific Plan. Air dispersion modeling and health risk assessment procedures, as well as analyses results, are described below.

1 Coliseum Site Air Dispersion Model

1.1 Modeled Pollutants and Averaging Periods

The only pollutants modeled for human health impact from construction were diesel particulate matter (DPM) and $PM_{2.5}$. The pollutants modeled for human health impact from operational roadways include DPM, $PM_{2.5}$ and other air toxics speciated from exhaust and evaporative total organic gases (TOGs) for the gasoline-fueled vehicles. The pollutants modeled for cumulative health impact analysis for AMTRAK and freight locomotive are DPM and $PM_{2.5}$, while for the AB&I foundry pollutants modeled are all the air toxics whose emissions were provided by the Bay Area Air Quality Management District ("BAAQM" or "the District").[1] Calculation of chemical concentrations for use in exposure analysis requires the selection of appropriate concentration averaging times. The annual average DPM concentration over the span of the construction was calculated for use in estimating cancer and chronic non-cancer risk from construction. The DPM and gasoline TOG emissions for years 2013 (for baseline) and 2035 (for future Coliseum Site), together with a scaling factor that takes into account the cleaner fleet within the corresponding 70-year period were used in estimating cancer and chronic non-cancer risk from the roadway impact. The annual average DPM concentration based on the existing locomotive activity was calculated for use in estimating cancer and chronic non-cancer risk. The annual average air toxics concentration for the AB&I foundry was calculated for use in estimating cancer and chronic non-cancer risk. Maximum short-term DPM concentrations (one-hour averages) were not estimated as an acute toxicity criteria for DPM has not been developed by the Cal/EPA, as indicated in Table 2-5-1 of BAAQMD Regulation 2 Rule 5 where there is no acute REL listed. Maximum short-term concentrations (one-hour averages) were calculated for gasoline TOGs to evaluate the acute HI from the roadways. Maximum short-term concentrations were not calculated for the cumulative sources including the locomotives and the foundry. The maximum annual $PM_{2.5}$ concentrations were calculated for both construction and roadway analyses. The annual average $PM_{2.5}$ concentration were calculated for both locomotive and foundry analyses.

[1] Emissions data and emissions calculator provided by the District via email on December 10, 2013. Information was requested by ENVIRON using the Risk & Hazard Stationary Source Inquiry form available online at: http://www.baaqmd.gov/Divisions/Planning-and-Research/CEQA-GUIDELINES/Tools-and-Methodology.aspx

1.2 Modeling Sources

Construction Sources

AERMOD model version 12345 was used for the construction modeling. Emissions from on-site construction equipment were modeled using a grid of 20 meter by 20 meter adjacent volume sources distributed over the site. For use in AERMOD, recommended default source parameters including release height and initial vertical dimension (IVD) in the South Coast Air Quality Management District (SCAQMD) Localized Significant Thresholds (LST) Methodology[2] were used. The initial lateral dimension (ILD) was calculated by dividing the length of the side of the volume source by 4.3, based on the AERMOD guidance for a single volume source.[3] Construction emissions from off-site roadways were quantified based on on-road trip distances traveled within one mile of the Coliseum Site boundary. These emissions were distributed evenly amongst the on-site volume sources. See **Figure 4.6B-1** for modeled construction sources.

Operational Sources

Roadway

Cal3QHCR model version 13196 was used for the roadway modeling. Surface roadway segments within 1,000 ft of the Coliseum Site boundary roadways with traffic volume greater than 10,000 vehicles per day together with Highway I-880 within one-mile of the Coliseum Site boundary were included for the analysis. See **Figure 4.6B-2** for modeled roadway sources.

Locomotive

AERMOD model version 12345 was used for the locomotive modeling. Running emissions within one-mile of the Coliseum Site boundary were modeled using adjacent volume sources distributed on the AMTRAK line to the west of the BART station and the freight train line to the east of the BART station. The widths of the volume sources vary depending on the number of tracks the sources represent. Idling emissions of the AMTRAK line at its Coliseum station were modeled using adjacent volume sources distributed on a 143-m stretch at the station. See **Figure 4.6B-3** for modeled locomotive sources.

AB&I Foundry

AERMOD model version 12345 was used for modeling of emissions from the AB&I foundry. Because various sources including furnaces, tanks, and fugitives etc., an area source that encompasses the entire facility except for the parking area with a release height of six meters and an initial vertical dimension of two meters was used. These source parameters were estimated based on a visual inspection of the facility and were intended to represent emissions from both the exhaust tasks and the ground-based fugitives. See **Figure 4.6B-4** for modeled foundry source.

[2] **According to the LST methodology, dimension of the volume source was determined based on the size of the construction zone.**

[3] USEPA. 2004. User's Guide for the AMS/EPA Regulatory Model – AERMOD. EPA-454/B-03/001.September.

1.3 Terrain

Terrain elevations were incorporated into the model using version 11103 of AERMAP, AERMOD's terrain preprocessor, as per USEPA guidance.[4] Terrain elevation data for the entire modeling domain was extracted from 1/3-arc second National Elevation Dataset (NED) files with resolution of approximately 10 meters, obtained from the United States Geological Survey.[5]

1.4 Meteorological Data

AERMOD requires a meteorological input file to characterize the transport and dispersion of pollutants in the atmosphere. Surface and upper air meteorological data inputs as well as surface parameter data describing the land use and surface characteristics near the Site are first processed using AERMET, the meteorological preprocessor to AERMOD. Meteorological data from Oakland Airport (KOAK) was used, processed for AERMOD using AERSURFACE version 13016 and AERMET version 12345 for the years 2007 to 2011. The KOAK meteorological station is about 2.5 miles southwest of the Facility.

Cal3QHCR requires a meteorological dataset used in the USEPA ISCST3 model. The ISCST3-ready data for KOAK for year 1983 received from the BAAQMD was used for the dispersion modeling.

1.5 Land Use Analysis

AERMOD can evaluate heat island effects from urban areas to atmospheric transport and dispersion using an urban boundary layer option. Consistent with BAAQMD guidance, the urban setting was used in this analysis. For AERMOD modeling, the City of Oakland population of 395,817 based on the Census data[6] together with a default surface roughness of 100 centimeters were used. For Cal3QHCR modeling, the urban mixing height together with the surface roughness of 100 centimeters were used.

1.6 Receptor Locations

The air dispersion analysis used gridded receptor points on-site and off-site. The on-site receptor points represent the general residential population within the residential areas of the Project. The off-site gridded receptor points represent the general population in the vicinity of the Project, which includes residential populations. However, these receptors do not necessarily represent the specific locations of the residential populations in the vicinity of the Project. ENVIRON used discrete Cartesian receptor grid points in the residential areas surrounding the site in the air dispersion modeling. The Cartesian receptors comprise a receptor grid with spacing of 50 meters extending out to a distance of approximately 1 mile from the Coliseum boundary. A flagpole height of 1.8 meters was used for the off-site receptors. The locations of the off-site receptor grid points are shown in **Figure 4.6B-5**. The on-site receptors are spaced 20 meters apart. They are located in four clusters on the land use parcels designated "residential" or "mixed-use". Three flagpole heights were used, reflecting the possibility of

[4] USEPA. 2009. Addendum to User's Guide for the AMS/EPA Regulatory Model - AERMOD. Office of Air Quality Planning and Standards. Air Quality Assessment Division. Research Triangle Park, North Carolina. October

[5] United States Geological Survey (USGS). 2001. National Elevation Dataset. Available online at: http://viewer.nationalmap.gov/viewer/. Accessed November 2013

[6] United States Census Bureau. 2011. 2011 estimated population for City of Oakland. http://quickfacts.census.gov/qfd/states/06/0653000.html

multiple stories of residential development: 1.8 m, 4.8 m and 7.8 m. While more than three stories of development may be possible, these flagpole heights are designed to cover the height at which maximum concentrations are likely to occur. The locations of the on-site receptor grid points are shown in **Figure 4.6B-5.**

Sensitive receptors other than the residential receptors as defined in the City of Oakland CEQA Thresholds of Significance Guidance were identified within 1,000 ft of the Plan Buildout boundary, as shown in **Figure 4.2-2**. These sensitive populations were not evaluated explicitly in this analysis. Instead the off-site residential receptor grid which covers these sensitive receptor locations were evaluated as a conservative estimate of the human health risks at these locations.

1.7 Modeling Adjustment Factors

Cal/EPA recommends applying an adjustment factor to the annual average concentration modeled assuming continuous emissions (*i.e.*, 24 hours per day, 7 days per week), when the actual emissions are less than 24 hours per day and exposures are concurrent with activities occurring at the Project. The modeling adjustment factors are discussed below.

Residents are assumed to be exposed to emissions 24 hours per day, seven days per week. This assumption is consistent with the modeled annual average air concentration (24 hours per day, 7 days per week). Thus, the annual average concentration need not be adjusted and modeling adjustment factors are not needed.

1.8 Hour-of-Day Temporal Profile

An hour-of-day temporal profile was used for the construction modeling based on the City of Oakland Standard Conditions of Approval (SCA) 27, which limits the construction activities to 7:00 AM – 7:00 PM. No temporal profiles were used for the locomotive sources and the foundry sources. Even though no specific temporal profile was used for the roadway segments, the hour-of-day traffic volume used by the model reflects the fluctuation of daily traffic.

1.9 Dispersion Modeling Setup

For the AERMOD models, the simulated dispersion sources were given a unit emissions rate (1 gram per second [g/s]). Chemical air concentrations were estimated using the annual average dispersion factors using the five years of the meteorological data calculated from the model and multiplying them by their respective emissions from each source. For estimation purposes, the annual emissions were averaged over 365 days a year and 24 hours a day.

The following equation was used to estimate these values:

$$\text{Annual Average Concentration} = \left(Q_{annual} \times \left(\frac{\chi}{Q} \right)_{annual} \right)_i$$

Where:

Q = emission rate of DPM (g/s)

$\left(\frac{\chi}{Q}\right)$ = dispersion factor ($\mu g/m^3$)/(g/s)

i = volume source

For the Cal3QHCR model of roadway segments, real hour-of-day emission rate and traffic volume were used to calculate concentrations at on-site and off-site receptors.

1.10 Buffer Analysis for Onsite Residential Areas

Distance based buffers were created in order to analyze the impacts on on-site residents in a scenario in which residential areas would be occupied prior to the completion of project construction. Sources within the buffers were excluded from the model and emissions redistributed among the remaining sources. This methodology models the impacts on on-site residents in scenarios in which a buffer is created around each residential area from which construction equipment is excluded. Buffer distances of 50 meters, 100 meters, and 200 meters were modeled.

2 Risk Characterization Methods

2.1 Exposure Assessment

Potentially Exposed Populations: The off-site receptor populations with the potential for sensitive receptors covered by the CEQA guidelines included in this evaluation are listed as below:

- Residents
- Other Sensitive Populations

The nearest residential populations are next to the northwest boundary of the Coliseum site, as most of the area around the site is commercial. Additional sensitive populations as defined in the City's were identified within the receptor grid defined for this analysis using a map based internet search of businesses in the surrounding area. **Figure 4.2-2** shows the sensitive receptors identified. For purposes of the health impact analysis, only residential receptors were evaluated because the residential receptor grid used in the analysis already covers the locations of the identified sensitive receptors. The Maximally Exposed Individual Sensitive Receptor (MEISR) was then defined as the sensitive receptor (in this case, a residential receptor) with the highest estimated cancer or chronic non-cancer health impacts.

Future on-site residents were also evaluated for the risk assessment.

Exposure Assumptions: The exposure parameters used to estimate excess lifetime cancer risks and non-cancer hazard quotients (HQs) for the on-site and off-site residents were obtained using risk assessment guidelines from Cal/EPA and BAAQMD, unless otherwise noted, and are presented in **Table 4.2B-1**.[7,8]

[7] California Environmental Protection Agency (Cal/EPA). 2003. The Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments. Office of Environmental Health Hazard Assessment. August

Calculation of Intake: The dose estimated for each exposure pathway is a function of the concentration of a chemical and the intake of that chemical. The equations used to calculate the intake factor for inhalation, IF_{inh}, are presented on **Table 4.2B-1**.

The chemical intake or dose is estimated by multiplying the inhalation intake factor, IF_{inh}, by the chemical concentration in air, C_i. When coupled with the chemical concentration, this calculation is mathematically equivalent to the dose algorithm given in Office of Environmental Health Hazard Assessment (OEHHA) Hot Spots guidance.

2.2 Toxicity Assessment

The toxicity assessment characterizes the relationship between the magnitude of exposure and the nature and magnitude of adverse health effects that may result from such exposure. For purposes of calculating exposure criteria to be used in risk assessments, adverse health effects are classified into two broad categories – cancer and non-cancer endpoints. Toxicity values used to estimate the likelihood of adverse effects occurring in humans at different exposure levels are identified as part of the toxicity assessment component of a risk assessment. The carcinogenic and chronic non-cancer toxicity values for the involved air toxics are summarized in **Table 4.2B-2**.

2.3 Cancer Risk Adjustment Factors

In order to compare the project with the thresholds specified in the BAAQMD Guidance, the estimated excess lifetime cancer risks for a lifetime resident were adjusted using the cancer risk adjustment factor (CRAF) calculated based on the age sensitivity factors (ASF) recommended in the Cal/EPA OEHHA Technical Support Document (TSD) and the 2010 BAAQMD Health and Safety Risk Analysis Guidelines.[9,10] This approach accounts for an "anticipated special sensitivity to carcinogens" of infants and children. Cancer risk estimates are weighted by a factor of 10 for exposures that occur from the third trimester of pregnancy to two years of age and by a factor of three for exposures that occur from two years through 15 years of age. No weighting factor (*i.e.*, a CRAF of one, which is equivalent to no adjustment) is applied to ages 16 to 70 years. **Table 4.2B-3** shows the CRAF used for lifetime residents for roadway, locomotive, and foundry sources, and the CRAF used for resident child for construction sources.

2.4 Risk Characterization

2.4.1 Estimation of Cancer Risks

Excess lifetime cancer risks are estimated as the upper-bound incremental probability that an individual will develop cancer over a lifetime as a direct result of exposure to potential carcinogens. The estimated risk is expressed as a unitless probability. The cancer risk attributed to a chemical is calculated by multiplying the chemical intake or dose at the human exchange boundaries (*e.g.,* lungs) by the chemical-specific cancer potency factor (CPF).

[8] BAAQMD. 2010. Air Toxics NSR Program Health Risk Screening Analysis (HRSA) Guidelines. January

[9] Cal/EPA. 2009. Technical Support Document for Cancer Potency Factors: Methodologies for derivation, listing of available values, and adjustments to allow for early life stage exposures. Office of Environmental Health Hazard Assessment. May

[10] BAAQMD. 2010b. Air Toxics NSR Program Health Risk Screening Analysis (HRSA) Guidelines. January

The equation used to calculate the potential excess lifetime cancer risk for the inhalation pathway is as follows:

$$Risk_{inh} = C_i \times CF \times IF_{inh} \times CPF \times CRAF$$

Where:

$Risk_{inh}$	=	Cancer Risk; the incremental probability of an individual developing cancer as a result of inhalation exposure to a particular potential carcinogen (unitless)
C_i	=	Annual Average Air Concentration for $Chemical_i$ ($\mu g/m^3$)
CF	=	Conversion Factor (mg/µg)
IF_{inh}	=	Intake Factor for Inhalation (m^3/kg-day)
CPF_I	=	Cancer Potency Factor for $Chemical_i$ $(mg\ chemical/kg\ body\ weight\text{-}day)^{-1}$
CRAF	=	Cancer Risk Adjustment Factor (unitless)

2.4.2 Estimation of Chronic Non-cancer Hazard Quotients/Indices

The potential for exposure to result in chronic non-cancer effects is evaluated by comparing the estimated annual average air concentration (which is equivalent to the average daily air concentration) to the chemical-specific non-cancer chronic reference exposure levels (RELs). When calculated for a single chemical, the comparison yields a ratio termed a HQ. To evaluate the potential for adverse chronic non-cancer health effects from simultaneous exposure to multiple chemicals, the HQs for all chemicals are summed, yielding a hazard index or HI.

The equations used to calculate the chemical-specific HQs and the overall HI are:

$$\text{Chronic } HQ_i = C_i / cREL_i$$

$$\text{Chronic HI} = \Sigma HQ_i$$

Where:

Chronic HQ_i	=	Chronic Hazard Quotient for $Chemical_i$ (unitless)
Chronic HI	=	Hazard Index (unitless)
C_i	=	Annual Average Air Concentration for $Chemical_i$ ($\mu g/m^3$)
$cREL_i$	=	Chronic Non-cancer Reference Exposure Level for $Chemical_i$ ($\mu g/m^3$)

2.4.3 Estimation of Acute Non-cancer Hazard Quotients/Indices

The potential for exposure to result in adverse acute effects is evaluated by comparing the estimated one-hour maximum air concentration of chemical to the acute reference exposure level (aREL) for each chemical evaluated in ths analysis. When calculated for a single chemical, the comparison yields an HQ. To evaluate the potential for adverse acute health effects from

simultaneous exposure to multiple chemicals, the HQs for all chemicals are summed, yielding a HI.

$$\text{Acute } HQ_i = C_i / aREL_i$$

$$\text{Acute HI} = \Sigma HQ_i$$

Where:

Acute HQ_i	=	Acute Hazard Quotient for $Chemical_i$ (unitless)
Acute HI	=	Hazard Index (unitless)
C_i	=	One-hour Maximum Air Concentration for $Chemical_i$ ($\mu g/m^3$)
$aREL_i$	=	Acute Non-cancer Reference Exposure Level for $Chemical_i$ ($\mu g/m^3$)

3 Uncertainties

In accordance with risk assessment guidance, the uncertainties associated with this analysis, including emissions estimation, air dispersion modeling, and risk estimation, have been evaluated. The following sections summarize the critical uncertainties associated with the emissions estimation, air dispersion modeling, and risk estimation components of the risk assessment. This analysis was performed using the best data and methodologies available at the time, notwithstanding the fact that there are the uncertainties outlined below.

Estimation of Emissions: There are uncertainties associated with the estimation of emissions from construction and operation of the Project. Where project-specific data, such as construction equipment lists, are not available, default assumptions in CalEEMod™ were used. CalEEMod™ default equipment lists are based on a survey of construction sites up to 34 acres in area. The area of this Coliseum Site is approximately 200 acres. Consequently, the default equipment list may not be representative of project equipment.

Estimation of Exposure Concentrations: There is also uncertainty associated with the estimated exposure concentrations. The limitations of the air dispersion model provide a source of uncertainty in the estimation of exposure concentrations. According to USEPA, errors due to the limitation of the algorithms implemented in the air dispersion model in the highest estimated concentrations of +/- 10 percent to 40 percent are typical.[11]

Source Representation: The source parameters used to model emission sources add uncertainty. For all emission sources, the selected source parameters were either project-specific, recommended as defaults, or expected to produce more conservative results.

[11] USEPA. 2005. Guideline on Air Quality Models (Revised). 40 Code of Federal Regulations, Part 51, Appendix W. Office of Air Quality Planning and Standards. November.

Discrepancies might exist in actual emissions characteristics of a source and its representation in the model; exposure concentrations used in this assessment represent approximate exposure concentrations.

Exposure Assumptions: For the assessment of cumulative health risk impacts, numerous assumptions must be made in order to estimate human exposure to chemicals. These assumptions include parameters such as breathing rates, exposure time and frequency, exposure duration, and human activity patterns. While a mean value derived from scientifically defensible studies is the best estimate of central tendency, most of the exposure variables used in this analysis are high-end estimates. For example, it is assumed that residential receptor exposure to the Project and existing emissions occurs during the entire operational duration and exposure to the cumulative emissions sources occur 24 hours per day for 350 days per year, a highly conservative assumption since most residents do not remain in their homes for this period of time. The combination of several high-end estimates used as exposure parameters may substantially overestimate chemical intake. The excess lifetime cancer risks calculated in this assessment are therefore likely to be higher than may be required to be protective of public health.

Toxicity Assessment: The Cal/EPA CPF for DPM was used to estimate cancer risks associated with exposure to DPM from the Project and off-site emissions. However, the CPF derived by Cal/EPA for DPM is highly uncertain in both the estimation of response and dose. In the past, due to inadequate animal test data and epidemiology data on diesel exhaust, the International Agency for Research on Cancer (IARC), a branch of the World Health Organization (WHO), had classified DPM as Probably Carcinogenic to Humans (Group 2); the USEPA had also concluded that the existing data did not provide an adequate basis for quantitative risk assessment.[12] However, based on two recent scientific studies,[13,14] IARC recently re-classified DPM as Carcinogenic to Humans to Group 1, which means that the agency has determined that there is "sufficient evidence of carcinogenicity" of a substance in humans and represents the strongest weight-of-evidence rating in IARC's carcinogen classification scheme.[15]

Risk Calculations: The USEPA notes that the conservative assumptions used in a risk assessment are intended to assure that the estimated risks do not underestimate the actual risks posed by a site and that the estimated risks do not necessarily represent actual risks experienced by populations at or near a site.[16]

[16] United States Environmental Protection Agency (USEPA). 1989. Risk Assessment Guidance for Superfund Human Health Risk Assessment: U.S. EPA Region IX Recommendations (Interim Final). San Francisco, CA. December

The estimated risks in this analysis are based primarily on a series of conservative assumptions related to predicted environmental concentrations, exposure, and chemical toxicity. The use of conservative assumptions tends to produce upper-bound estimates of risk. Although it is difficult to quantify the uncertainties associated with all the assumptions made in this risk assessment, the use of conservative assumptions is likely to result in substantial overestimates of exposure, and hence, risk. BAAQMD acknowledges this uncertainty by stating: "the methods used [to estimate risk] are conservative, meaning that the real risks from the source may be lower than the calculations, but it is unlikely that they will be higher."[17]

APPENDIX 4.3

List of Potential Plant and Wildlife Species Occurring or Known to Occur in the Project Area

APPENDIX 4.3A

Table 4.3A-1: Wildlife Listed Species, Proposed Species, and Critical Habitat Potentially Occurring or Known to Occur in the Project Area

Common Name	Status	Source	General Habitat Description	Habitat Code (Source)	Occurrence Potential
Fish					
Chinook salmon Central Valley spring run ESU; *Oncorhynchus tshawytscha*	FT, ST	USFWS	Anadromous; migrates through San Francisco Bay and Delta; spawns in upper Sacramento River and tributaries. Adults need access to natal streams; eggs; fry need cool water with adequate dissolved oxygen; clean gravel; juveniles migrate out to the ocean after only a few months in the river.	HP	Low. This run of chinook salmon migrates through the Central and North Bay to reach spawning grounds in the Central Valley. However there is some potential for this fish to use any part of the Bay for foraging. There is no CNDDB record within 5 miles of the planning area and the planning area is located outside of the designated critical habitat.
Chinook salmon Sacramento River Winter run ESU; *Oncorhynchus tshawytscha*	FE, SE	USFWS	Anadromous; migrates through SF Bay and Delta; spawns in upper Sacramento River and its tributaries. Adults need access to natal streams; eggs and fry need cool water with adequate dissolved oxygen; clean gravel; juveniles migrate out to the ocean after only a few months in the river.	HP	**Low.** This run of chinook salmon migrates through the Central and North Bay to reach spawning grounds in the Central Valley However there is some potential for this fish to use any part of the Bay for foraging. There is no CNDDB record within 5 miles of the planning area and the planning area is located outside of the designated critical habitat.

Table 4.3A-1: Wildlife Listed Species, Proposed Species, and Critical Habitat Potentially Occurring or Known to Occur in the Project Area

Common Name	Status	Source	General Habitat Description	Habitat Code (Source)	Occurrence Potential
Coho salmon-central California coast ESU; *Oncorhynchus kisutch*	FE, SE	USFWS	Anadromous; Migrates through and spawns in coastal rivers and streams from Santa Cruz to Mendocino County. Needs cool clear water and gravel beds free of excessive silt required for spawning.	HP	**None.** Coho salmon were last documented from the San Francisco Bay estuary stream in the early-to-mid 1980s.The latest documentation from the vicinity of the planning area is from San Lorenzo Creek pre-1960's (Leidy et al., 2005). There is no CNDDB record within 5 miles of the planning area and the planning area is located outside of the designated critical habitat.
Delta smelt; *Hypomesus transpacificus*	FT S	USFWS	Endemic to California; occurs only in the brackish and freshwaters of the Sacramento-San Joaquin River Delta. Exhibits seasonal migration within the estuary, moving upstream before spawning.	A	**None.** This species is included due to the expanse of the USFWS quadrangle search. However, this species is known to use the Sacramento-San Joaquin Delta, which is designated as critical habitat for this species. There is no CNDDB record within 5 miles of the planning area.
Longfin smelt; *Hypomesus transpacificus*	ST	CNDDB	Anadromous; found throughout San Francisco Estuary, occupying different regions of the Estuary throughout the year.	HP	**Low.** Longfin smelt are known to inhabit the entire Bay Delta, including the south bay at various times of the year. However they are thought to prefer deeper waters and channels and are not expected in large numbers in the vicinity of the planning area.

Table 4.3A-1: Wildlife Listed Species, Proposed Species, and Critical Habitat Potentially Occurring or Known to Occur in the Project Area

Common Name	Status	Source	General Habitat Description	Habitat Code (Source)	Occurrence Potential
Pacific Herring, *Clupea pallasii*	Managed State Fishery	CDFW	In California, Pacific herring are in the open ocean during spring and summer. Beginning in October, schools of adult herring migrate into bays and estuaries to spawn on substrate such as marine vegetation, rocky intertidal areas, and man-made structures such as pier pilings and riprap.	HP	**Moderate.** This species may be present in the plan waters during fall and spring. No anecdotal evidence was found that the area supports large spawning, however, rip rap lining along the shore may provide opportunity to spawn. Nearest CNDDB record is from South Bay sampling in 1995.
North American green sturgeon, southern DPS; *Acipenser medirostris*	FT	USFWS	Anadromous; Pacific-southern DPS includes coastal spawning populations from the Russian river south to the Sacramento river Found in nearshore oceanic waters; bays; and estuaries. Prefers to spawn in lower reaches of large rivers with swift currents and large cobble.	CH	**Moderate.** This species is known to live and feed in San Francisco Bay as it migrates between the ocean and the Sacramento River. They are expected to use the Central and North Bay more than the South Bay due to the location of the Sacramento River delta. There is no CNDDB record within 5 miles of the planning area. All of San Francisco Bay is designated as Critical Habitat for this species.
Steelhead Central California Coast DPS; *Oncorhynchus mykiss irideus*	FT	USFWS, CNDDB	Anadromous; from the Russian River to Aptos Creek, and the drainages of San Francisco; San Pablo; and Suisun Bays eastward to Chipps Island at the confluence of the Sacramento and San Joaquin Rivers. Tributary streams to Suisun Marsh including Suisun Creek; Green Valley Creek; and an unnamed tributary to Cordelia Slough	CH	**High.** This DPS is known to spawn in San Leandro Creek and travel through San Leandro Bay during migration within the vicinity of the planning area. There is no CNDDB record within 5 miles of the planning area. All of San Francisco Bay is designated as Critical Habitat for this species.

Table 4.3A-1: Wildlife Listed Species, Proposed Species, and Critical Habitat Potentially Occurring or Known to Occur in the Project Area

Common Name	Status	Source	General Habitat Description	Habitat Code (Source)	Occurrence Potential
Steelhead Central Valley DPS; *Oncorhynchus mykiss irideus*	FT	USFWS	Anadromous; Sacramento and San Joaquin Rivers and their tributaries; does not include steelhead from San Francisco Bay drainages; but it migrates through the San Francisco Bay and Sacramento-San Joaquin delta.	HP	**Low.** This DPS migrates through the Central and North Bay to reach spawning grounds in the Central Valley. However there is some potential for this fish to use any part of the Bay for foraging. There is no CNDDB record within 5 miles of the planning area and the planning area is located outside of the designated critical habitat.
Tidewater Goby; *Eucyclogobius newberryi*	FE, SSC	USFWS, CNDDB	Endemic to California; found primarily in waters of coastal lagoons, estuaries, and marshes often in sandy shallows with low salinity levels.	HP	**None**. This species is extirpated from San Francisco Bay in San Francisco and Alameda counties (USFWS, 2013)
Marine Mammals					
California Sea Lion; *Zalophus californianus*	MMPA		Found year-round in the San Francisco Bay Estuary, and breed in southern California. They spend time in the pelagic zones of the open ocean, near shore waters and also land. They haul out on offshore rocks, sandy beaches, and floating docks, wharfs and other man-made structures.	HP	**Moderate.** This species is known to forage throughout San Francisco Bay and may forage in the waters adjacent to the planning area.

Table 4.3A-1: Wildlife Listed Species, Proposed Species, and Critical Habitat Potentially Occurring or Known to Occur in the Project Area

Common Name	Status	Source	General Habitat Description	Habitat Code (Source)	Occurrence Potential
Harbor Seal; *Phoca vitulina*	MMPA		Found year-round in the San Francisco Bay Estuary. They feed in the deeper waters of San Francisco Bay near the Golden Gate Bridge and along the deeper channels extending into the North and South Bay. March to June, Pacific harbor seals pup at multiple sites along the shores of San Francisco Bay.	HP	**High.** This species is known to haul out at nearby Breakwater Island in Alameda Island, and is expected to forage in waters adjacent to planning area.
Mammals					
Alameda Island Mole; *Scapacus latimanus parvus*	FC	USFWS, CNDDB	Scapanus latimanus parvus is known only from Alameda Island, Alameda with the last known specimen collected in 1958. It may also occupy salt marsh areas around the eastern and southern margins of San Francisco Bay.	P	**None.** No observational records confirm the existence of an extant population of the Alameda Island mole. CDFW reports that despite intensive trapping programs for the saltmarsh harvest mouse and the Salt-marsh wandering shrew no salt-marsh inhabiting mole populations have been reported from salt marshes around the margins of the San Francisco Bay.
American Badger; *Taxidea taxus*	SSC	CNDDB	Found throughout most of the state in open areas; plains and prairies; farmland and woodland edges. Prefers friable soils for constructing deep burrows.	A	**None.** The grasslands in the vicinity of the planning area are small and fragmented. The home ranges required vary from 338 to 1,326 acres (CDFW, 2013). The last CNDDB record of an American Badger within 5 miles of the plan area is from 1930.

Table 4.3A-1: Wildlife Listed Species, Proposed Species, and Critical Habitat Potentially Occurring or Known to Occur in the Project Area

Common Name	Status	Source	General Habitat Description	Habitat Code (Source)	Occurrence Potential
Hoary bat; *Lasiurus cinereus*		CNDDB	Prefers woodlands; mainly coniferous forests; roosts in dense foliage of medium to large trees along forest borders; hunts over open areas or lakes.	A	**None.** There are no woodlands in the planning area vicinity, and trees that are present are not in dense groupings. The most recent CNDDB record is from 1951 found in an unspecified part of Oakland.
Pallid bat; *Antrozous pallidus*	SSC	CNDDB	Found throughout the state. Roosts include crevices in rocky outcrops and cliffs, caves, mines, trees and various human structures such as bridges, bat boxes, and buildings. Forage over open shrub-steppe grasslands, oak savannah grasslands, open Ponderosa pine forests, talus slopes, gravel roads, lava flows, fruit orchards, and vineyards.	HP	**Low.** Compromised habitat for this species exists in the vicinity of the planning area. The most recent CNDDB record is from 1943 found 3 miles east of Oakland
Salt-marsh harvest mouse; *Reithrodontomys raviventris*	FE, SE	CNDDB	Endemic to salt and brackish marshes of the San Francisco; San Pablo; and Suisun Bays. Pickleweed is primary habitat. Requires upland areas for flood escape.	HP	**High.** The most recent CNDDB record is from 2003 in marshlands just north of San Mateo Bridge, and this species is assumed to be present in Arrowhead Marsh .
Salt-marsh wandering shrew; *Sorex vagrans halicoetes*		CNDDB	Endemic to south San Francisco bay in stands of salt marsh in San Mateo, Santa Clara, Alameda and Contra Costa counties. Elevation range approximately 6 to 9 feet in tidal *Salicornia* marsh with dense cover and continuous ground moisture.	HP	**Moderate.** Habitat for this species exists, and it is thought to occur in small remnant stands of salt marsh found around in San Mateo, Santa Clara, Alameda and Contra Costa counties. The most recent CNDDB record is from 1957 near the Oakland Airport.

Table 4.3A-1: Wildlife Listed Species, Proposed Species, and Critical Habitat Potentially Occurring or Known to Occur in the Project Area

Common Name	Status	Source	General Habitat Description	Habitat Code (Source)	Occurrence Potential
Silver-haired bat; *Lasionycteris noctivagans*		CNDDB	Temperate; northern hardwoods with ponds or streams nearby. Typical day roost is behind loose tree bark; hollow snags; and bird nests; prefers willow; maple and ash trees.	HP	**Low.** Compromised habitat for this species exists in the vicinity of the planning area. The most recent CNDDB record is from 1984 found in an unspecified part of Alameda County.
Townsend's big-eared bat *Corynorhinus townsendii*	SSC	Alameda Point Draft EIR, 2013	Caves and buildings in the vicinity of Douglas fir woodlands	HP	**Low.** Compromised habitat for this species exists in the vicinity of the planning area. There is no recent CNDDB record for this species; however, the 2013 Alameda Point Draft EIR refers to reports of this species in buildings along the northern Alameda Island shoreline.
Reptiles					
Alameda whipsnake; *Masticophis lateralis euryxanthus*	FT, ST	USFWS	Chaparral; northern coastal sage scrub; coastal sage; grassland; and oak woodland communities of the East Bay in Contra Costa, Alameda, and parts of San Joaquin and Santa Clara Counties	A	**None.** This species is relative well documented, and known populations of this species occur higher up in the Oakland hills, and the planning area is located outside of the designated critical habitat (USFWS, 2006).
Amphibians					
California red-legged frog; *Rana draytonii*	FT	USFWS	Requires slow moving or still water for juvenile development. Occurs in freshwater marshes; stock ponds; and riparian habitats. May aestivate in rodent burrows or cracks during dry periods.	A	**None**. This species would have to pass through unsuitable urban or saltwater habitat to reach any pockets of freshwater marsh in the planning area. The planning area is located outside of the designated critical habitat (USFWS, 2010).

Table 4.3A-1: Wildlife Listed Species, Proposed Species, and Critical Habitat Potentially Occurring or Known to Occur in the Project Area

Common Name	Status	Source	General Habitat Description	Habitat Code (Source)	Occurrence Potential
California tiger salamander; *Ambystoma californiense*	FT, ST	USFWS	Ponds and vernal pools in grasslands; and oak woodlands	A	**None.** This species would have to pass through unsuitable urban or saltwater habitat to reach any pockets of freshwater marsh in the planning area. The planning area is located outside of the designated critical habitat (USFWS, 2011).
Birds					
Alameda song sparrow; *Melospiza melodia pusillula*	SSC	CNDDB	Tidal salt marshes in south San Francisco Bay. Requires exposed ground for foraging and upper marsh vegetation for nesting.	P	**High.** According to CNDDB, species is present within planning area.
American kestrel; *Falco sparverius*	Section 3503.5 CFGC	Alameda Point Draft EIR	American Kestrels occupy habitats ranging from deserts and grasslands to alpine meadows. Most often seen perching on telephone wires along roadsides, in open country with short vegetation and few trees.	P	**High.** Suitable roosting and foraging habitat present in the planning area. Individuals observed within planning area (ISP 2008), though there is no CNDDB record within 5 miles of the planning area.
Burrowing owl; *Athene cunicularia*	SSC	CNDDB, GGAS, personal observations	Open arid and semiarid habitats with short emergent vegetation; including grasslands; deserts; agricultural fields; ruderal areas and open landscaped areas throughout much of the State. Diet primarily includes insects and mice.	P	**High**. The planning area includes open habitat with short emergent vegetation. CNDDB lists historic nest sites within planning area from 1983, and a breeding colony currently exists year-round at Arrowhead Marsh, adjacent to the planning area.

Table 4.3A-1: Wildlife Listed Species, Proposed Species, and Critical Habitat Potentially Occurring or Known to Occur in the Project Area

Common Name	Status	Source	General Habitat Description	Habitat Code (Source)	Occurrence Potential
California black rail; *Laterallus jamaicensis coturniculus*	ST; State fully protected	CNDDB	Tidal salt marshes of northern San Francisco Bay; primarily in San Pablo and Suisun Bays. Prefers muted or fully tidal marshes; prefers upper marsh away from urban areas with a high proportion of Salicornia, Scripus maritime, Juncus, and Typha.	HP	**Low.** Suitable habitat present in the planning area. Species has not been detected in San Leandro Bay during recent yearly surveys performed by ISP. The most recent CNDDB record is from 1995 in adjacent Arrowhead Marsh.
California brown pelican; *Pelecanus occidentalis californicus*	Delisted in 2009; State Fully Protected	USFWS	Coastal; range from the Gulf of California to southern British Columbia. Nest on islands in the Gulf of California and along the coast to West Anacapa and Santa Barbara Islands. Important habitat during nonbreeding season includes offshore rocks, islands, sandbars, breakwaters, and pilings.	P	**High.** Suitable roosting and foraging habitat present in the planning area. Has been observed within planning area (ISP 2010), though there is no CNDDB record within 5 miles of the planning area.
California clapper rail; *Rallus longirostris obsoletus*	FE, SE	USFWS, CNDDB	Salt marshes and brackish marshes traversed by tidal sloughs in the vicinity of the San Francisco Bay. Associated with Salicornia native Spartina spp. dominated salt marshes.	P	**High.** Suitable habitat exists on planning area and, according to CNDDB (2006) and ISP, species is present within planning area along MLK Jr. Regional Shoreline. The most recent CNDDB record is from 2010 in adjacent Arrowhead Marsh.
California gull; *Larus californicus*	CDFW Watchlist	Alameda point	Breeds primarily at lakes and marshes in interior western North America from Canada south to eastern California and Colorado. Forage in flight or pick up objects while swimming, walking or wading and the primarily eat insects, fish, and eggs.	P	**High.** Planning area provides several suitable foraging areas. Observed within planning area (ISP 2008), though there is no CNDDB record within 5 miles of the planning area.

Table 4.3A-1: Wildlife Listed Species, Proposed Species, and Critical Habitat Potentially Occurring or Known to Occur in the Project Area

Common Name	Status	Source	General Habitat Description	Habitat Code (Source)	Occurrence Potential
California least tern; *Sternula antillarum browni*	FE, SE	USFWS, CNDDB, DFG 2010	Abandoned salt ponds and along estuarine shores in San Francisco Bay. Feeds primarily in shallow estuaries or lagoons where small fish are abundant. Nests on barren to sparsely vegetated site near water; usually on sandy or gravelly substrate.	HP	**Moderate.** MLK Regional Shoreline provides suitable foraging habitat within planning area. Historic breeding grounds at Alameda Naval Air Station (5 mi NW from planning area). The most recent CNDDB record is from 1992 on Bay Farm Island.
Cooper's hawk; *Accipiter cooperii*	CDFW Watchlist; Section 3503.5 CFGC	CNDDB	Wooded habitats throughout the State. Ranging from deep forests to leafy subdivisions and backyards. Typically nests in pines; oaks; Douglas firs; beeches; spruces; and other tree species; often on flat ground rather than hillsides; and in dense woods. Known to nest locally in Bay Area urban neighborhoods.	HP	**High.** Planning area contains suitable foraging and roosting habitat, and potential nesting habitat near soccer field. The most recent CNDDB record is from 2006 along Urban Chimes creek between Delmont Ave and I-580 in Oakland, about 3 miles from the planning area.
Double-crested cormorant; *Phalacrocorax auritus*	Former SSC	Alameda Point Draft EIR	Brackish and freshwater habitats on lakes, rivers, swamps, bays, and coasts.	P	**High.** Suitable foraging habitat exists within planning area. There is no CNDDB record within 5 miles of the planning area, though there is a large nesting colony on the nearby Bay Bridge.
Great blue heron; *Ardea herodias*	Not listed	CNDDB, ISP 2008	Found along calm freshwater and seacoasts. Usually nests in trees near water; but colonies can be found away from water.	P	**High.** MLK Jr. Regional Shoreline provides suitable foraging habitat within planning area. The most recent CNDDB record is from 1990 at Lake Chabot in the San Leandro hills.

Table 4.3A-1: Wildlife Listed Species, Proposed Species, and Critical Habitat Potentially Occurring or Known to Occur in the Project Area

Common Name	Status	Source	General Habitat Description	Habitat Code (Source)	Occurrence Potential
Great egret; *Ardea alba*	Protected rookeries	ISP	Salt and freshwater marshes; marshy ponds and tidal flats.	P	**High.** Suitable foraging habitat within planning area along MLK Jr. Regional Shoreline. Observed within planning area (ISP 2008). Known rookeries at Lake Merritt in Oakland and Bay Farm Island, though CNDDB does not have a record within 5 miles of the planning area.
Northern harrier; *Circus cyaneus*	SSC	Alameda Point Draft EIR	Sloughs; wet meadows; marshlands; swamps; prairies; plains; grasslands; and shrublands; large forest openings; open; low woody or herbaceous vegetation for nesting and hunting; nest on ground.	HP	**High.** Lack of suitable nesting habitat, but foraging habitat present. There is no CNDDB record within 5 miles of the planning area.
Osprey; *Pandion haliaetus*	SSC; CDFW watchlist; Section 3503.5 CFGC	Alameda point Draft EIR	Nests near lakes, reservoirs, and streams along riparian forest edges	HP	**Moderate.** Potential nesting habitat; foraging habitat present. There is no CNDDB record within 5 miles of the planning area, but nesting has occurred on Alameda Island.
Peregrine falcon; *Falco peregrinus anatum*	Fully protected	Alameda Point Draft EIR	Frequently nests near water on ledges of rocky cliffs or buildings; also found along rivers and coastlines or in cities.	P	**High.** Though there is no CNDDB record within 5 miles of the planning area, there is a known nest and territory on Fruitvale Bridge, 0.9 miles from planning area. Suitable foraging habitat with abundant prey species present within planning area.

Table 4.3A-1: Wildlife Listed Species, Proposed Species, and Critical Habitat Potentially Occurring or Known to Occur in the Project Area

Common Name	Status	Source	General Habitat Description	Habitat Code (Source)	Occurrence Potential
Red-tailed hawk; *Buteo jamaicensis*	Section 3503.5 CFGC	ISP	Inhabits open habitat, including desert, scrublands, grasslands, roadsides, fields and pastures, parks, and broken woodland. Nest in the crowns of tall trees on cliff ledges, or on artificial structures such as transmission towers.	P	**High.** Suitable nesting habitat within planning area. Have been observed foraging within planning area (ISP 2010) (E. Jepsen, pers. obs.), though there is no CNDDB record within 5 miles of the planning area
Readhead; *Aythya Americana*	SSC	ISP 2010	Occur year round in California. Nest in freshwater emergent wetlands. During nonbreeding season, forage and rest on large deep bodies of water and may form rafts far from shore. Food is mostly obtained by diving >1 m in depth. Mostly feed on pond weeds.	HP	**Low.** Have been observed within planning area (ISP 2010); however, no suitable habitat for breeding exists within planning area and foraging habitat is limited. There is no CNDDB record within 5 miles of the planning area
San Francisco saltmarsh common yellowthroat; *Geothlypis trichas sinuosa*	SSC	CNDDB; ISP 2008	Endemic to the greater San Francisco Bay region. Associated with emergent wetlands. Typically inhabits low; dense vegetation near water. Nests near the ground in grasses, herbaceous vegetation	P	**High.** Suitable nesting and foraging habitat within planning area. Most recent CNDDB record is from 1995 at Arrowhead Marsh and MLK Jr. Regional Shoreline.
Snowy egret; *Egretta thula*	California Special Animals List	ISP 2008	Most common along the coast, though they do breed patchily in inland wetlands. Nest colonially, usually on protected islands, and often with other small herons. They concentrate on mudflats, beaches, and wetlands, but also forage in wet agricultural fields and along the edges of rivers and lakes.	P	**High.** Suitable foraging habitat within planning area along MLK Jr. Regional Shoreline. Observed within planning area (ISP 2008). Known rookeries at Lake Merritt in Oakland and Bay Farm Island, though there is no CNDDB record within 5 miles of the planning area

Table 4.3A-1: Wildlife Listed Species, Proposed Species, and Critical Habitat Potentially Occurring or Known to Occur in the Project Area

Common Name	Status	Source	General Habitat Description	Habitat Code (Source)	Occurrence Potential
Western snowy plover; *Charadrius alexandrinus nivosus*	FT	CNDDB, USFWS	Coastal and interior populations found distributed through State and includes sandy beaches; large alkali lake shorelines; and salt pond levees; dunes. Require sandy; gravelly or friable soils for nesting.	P	**Moderate.** Suitable habitat exists within planning area. CNDDB shows presence of species within planning area in 1979.
White-tailed kite; *Elanus leucurus*	SSC	Alameda Point Draft EIR	Open grasslands, meadows, or marshes for foraging close to isolated, dense topped trees for nesting and perching.	HP	**High.** Suitable foraging habitat. There is no CNDDB record within 5 miles of the planning area; however, they have successfully nested in a light industrial neighborhood near Arrowhead Marsh ((M. Lowe, pers. obs.) Alameda Point EIR).

Common Name Acronyms: Distinct Population Segment (DPS); Evolutionarily Significant Unit (ESU)

Status Codes: Federal Endangered [FE]; Federal Threatened [FT]; Federal Species of Concern [FSC]; Federal Candidate [FC], State Endangered [SE]; State Threatened [ST]; State Species of Special Concern [SSC]; California Rare Plant Rank (CRPR) Plants Rare, Threatened, or Endangered in California and Elsewhere and Seriously Threatened in California [CRPR 1B.1]; CRPR Plants Rare, Threatened, or Endangered in California and Elsewhere and Fairly Threatened in California [CRPR 1B.2]; CRPR Plants Rare, Threatened, or Endangered in California and Elsewhere and Not Very Threatened in California [CRPR 1B.3]; CRPR Plants Fairly Rare, Threatened, or Endangered in California, But More Common Elsewhere (CRPR 2.2); and CRPR Plants Not Very Rare, Threatened, or Endangered in California, But More Common Elsewhere [CRPR 2.3].

Habitat Codes: Absent - no habitat present and no further work needed [A]; Habitat Present - habitat is, or may be present, species may be present [HP]; Present - the species is present [P]; and Critical Habitat - planning area footprint is located within a designated critical habitat unit, but does not necessarily mean that appropriate habitat is present [CH].

APPENDIX 4.3B

Table 4.3B-1: Special-Status Plant Species with Potential to occur within the Project Area

Scientific name[1] / Common name	Listing Status[2] Federal	State	RPR*	Source[3]	Flowering Period	Habitat Preferences and Elevation Range[4]	NOTES - Potential to Occur at the Project Area[5]
Amsinckia lunaris Bent-flowered fiddleneck			1B.2	CNPS CNDDB	Mar-June	Coastal bluff scrub, cismontane woodland, and valley and foothill grassland. 10-1,640 feet	**None.** No suitable habitat within the plan area. Currently in Alameda County, the species is only known from the Berkeley Hills 5.5 miles northeast of the plan area on EBMUD land.
Arctostaphylos pallida Pallid manzanita	FT	SE	1B.1	USFWS CNPS CNDDB	Dec-Mar	Siliceous shale, sandy or gravelly. Broadleafed upland forest, closed-cone coniferous forest, chaparral, cismontane woodland, and coastal scrub. 607-1,525 feet	**None.** No suitable habitat in the plan area. Below known elevation range. Known from fewer than 10 occurrences in the Contra Costa Hills of the Diablo Range.
Astragalus tener var. tener Alkali milk-vetch			1B.2	CNPS CNDDB	Mar-June	Alkaline. Playas, valley and foothill grassland (adobe clay), and vernal pools. 3-200 feet	**None.** No suitable alkaline habitat in the plan. All recorded Alameda County occurrences are historic (pre-1938).
Atriplex joaquinana San Joaquin spearscale			1B.2	CNPS CNDDB	Apr-Oct	Alkaline. Chenopod scrub, meadows and seeps, playas, and valley and foothill grassland. 5-2,740 feet	**None.** No suitable alkaline habitat in the plan area.

Table 4.3B-1: Special-Status Plant Species with Potential to occur within the Project Area

Scientific name[1] / Common name	Listing Status[2] Federal	State	RPR*	Source[3]	Flowering Period	Habitat Preferences and Elevation Range[4]	NOTES - Potential to Occur at the Project Area[5]
Balsamorhiza macrolepis var. macrolepis Big-scale balsamroot			1B.2	CNPS CNDDB	Mar-June	Sometimes serpentinite. Chaparral, cismontane woodland, and valley and foothill grassland. 295-5,100 feet	**None.** No suitable habitat in the plan area. Below known elevation range. Nearest CNDDB occurrences approximately 4 miles east of the plan area in the Oakland Hills on Fairmont Ridge.
California macrophylla Round-leaved filaree			1B.1	CNPS CNDDB	Mar-May	Clay. Cismontane woodland and valley and foothill grassland. 50-660 feet	**None.** No clay habitat in the plan area. Below known elevation range. Nearest current CNDDB occurrence is approximately 26 miles east of the area in the Los Vaqueros watershed.
Calystegia purpurata ssp. *saxicola* Coastal bluff morning-glory			1B.2	CNPS	Apr-Sept	Coastal bluff scrub, coastal dunes, coastal scrub, and North Coast coniferous forest. 33-342 feet	**None.** No suitable habitat in the plan area.
Centromadia parryi ssp. *congdonii* Congdon's tarplant			1B.1	CNPS CNDDB	May-Nov	Valley and foothill grassland (alkaline). 0-755 feet	**None.** No suitable alkaline habitat in the plan area. Nearest current CNDDB occurrences approximately 12 miles northeast of the plan area in San Ramon.
Chloropyron maritimum ssp. *palustre* Point Reyes bird's-beak			1B.2	CNPS CNDDB	June-Oct	Marshes and swamps (coastal salt). 0-35 feet	**None.** Limited coastal salt marsh habitat in the plan area. All known occurrences in Alameda County are historic (pre-1917). In 1991 the marshes and sloughs in the area were searched for this species and none were found. Presumed extirpated in Alameda County. Nearest current known populations exist on Pt. Reyes approximately 40 miles northwest of the plan area.

Table 4.3B-1: Special-Status Plant Species with Potential to occur within the Project Area

Scientific name[1]	Listing Status[2]			Source[3]	Flowering Period	Habitat Preferences and Elevation Range[4]	NOTES - Potential to Occur at the Project Area[5]
Common name	**Federal**	**State**	**RPR***				
Chorizanthe cuspidata var. *cuspidata* San Francisco Bay spineflower			1B.2	CNPS CNDDB	Apr-Jul	Sandy. Coastal bluff scrub, coastal dunes, coastal prairie, and coastal scrub. 10-700 feet	**None.** No suitable habitat in the plan area. Presumed extirpated in Alameda County.
Chorizanthe robusta var. *robusta* Robust spineflower	FE		1B.1	USFWS CNPS CNDDB	Apr-Sept	Sandy or gravelly. Chaparral (maritime), cismontane woodland (openings), coastal dunes, and coastal scrub. 10-980 feet	**None.** No suitable habitat in the plan area. Presumed extirpated in Alameda County. Now known from only six extant occurrences.
Clarkia franciscana Presidio clarkia	FE	SE	1B.1	USFWS CNPS CNDDB	May-July	Mesic, sometimes serpentinite. Broadleafed upland forest, coastal bluff scrub, coastal prairie, and coastal scrub. 80-1,100 feet.	**None.** No suitable serpentine habitat in the plan area. Below known elevation range. Known from fewer than 5 occurrences. Restricted to serpentine grasslands in San Francisco and Alameda Counties. The populations in Alameda County are only from the Oakland Hills.
Dirca occidentalis western leatherwood			1B.2	CNPS CNDDB	Jan-Mar	Mesic. Broadleafed upland forest, closed-cone coniferous forest, chaparral, cismontane woodland, North Coast coniferous forest, riparian forest, and riparian woodland. 80-1,295 feet	**None.** No suitable habitat in the plan area. Below known elevation range.

Table 4.3B-1: Special-Status Plant Species with Potential to occur within the Project Area

Scientific name[1] / Common name	Listing Status[2] Federal	State	RPR*	Source[3]	Flowering Period	Habitat Preferences and Elevation Range[4]	NOTES - Potential to Occur at the Project Area[5]
Eriogonum luteolum var. caninum Tiburon buckwheat			1B.2	CNPS CNDDB	May-Sept	Serpentinite, sandy to gravelly. Chaparral, Cismontane woodland, Coastal prairie, and valley and foothill grassland. 0-2,300 feet	**None.** No suitable serpentine habitat in the plan area.
Fritillaria liliacea Fragrant fritillary			1B.2	CNPS CNDDB	Feb-Apr	Often serpentinite. Cismontane woodland, coastal prairie, coastal scrub, and valley and foothill grassland. Adobe or clay-rich soils in coastal prairie or native bunchgrass grasslands. 10-1,345 feet	**None.** No serpentine soils and no suitable habitat in the plan area. Nearest CNDDB occurrence in Anthony Chabot Regional Park approximately 4 miles southeast of the plan area. This is the only currently known population in Alameda County.
Gilia capitata ssp. chamissonis Blue coast gilia			1B.1	CNPS	Apr-Jul	Coastal dunes and coastal scrub. 7-652 feet	**None.** No suitable habitat in the plan area. Only known to occur in San Francisco, Marin, and Sonoma Counties.
Helianthella castanea Diablo helianthella			1B.2	CNPS CNDDB	Mar-June	Broadleafed upland forest, chaparral, cismontane woodland, coastal scrub, riparian woodland, and valley and foothill grassland. 200-4,265 feet	**None.** No suitable habitat in the plan area. Below known elevation range. Nearest CNDDB occurrence in Anthony Chabot Regional Park approximately 4.5 miles southeast of the plan area.

Table 4.3B-1: Special-Status Plant Species with Potential to occur within the Project Area

Scientific name[1]	Listing Status[2]			Source[3]	Flowering Period	Habitat Preferences and Elevation Range[4]	NOTES - Potential to Occur at the Project Area[5]
Common name	**Federal**	**State**	**RPR***				
Hoita strobilina Loma Prieta hoita			1B.1	CNPS CNDDB	May-Jul	Usually serpentinite, mesic. Chaparral, cismontane woodland, and riparian woodland. 100-2820 feet	**None.** No suitable habitat in the plan area. Below known elevation range. Presumed extirpated in Alameda County.
Holocarpha macradenia Santa Cruz tarplant	FT	SE	1B.1	USFWS CNPS CNDDB	Jun-Oct	Often clay, sandy. Coastal prairie, coastal scrub, and valley and foothill grassland. 35-720 feet	**None.** No suitable habitat in the plan area. Natural populations are restricted to coastal terrace prairie habitat in Santa Cruz and Monterey Counties. All Alameda County occurrences are historic (pre-1915). Considered extirpated in Alameda County.
Horkelia cuneata var. sericea Kellogg's horkelia			1B.1	CNPS CNDDB	Apr-Sept	Sandy or gravelly, openings. Closed-cone coniferous forest, chaparral (maritime), coastal dunes, and coastal scrub. 30-660 feet	**None.** No suitable habitat in the plan area. Occurrence from the Crocker Hills probably last remaining location in S.F. Bay area.
Lasthenia conjugens Contra Costa goldfields	FE		1B.1	CNPS USFWS	Mar-June	Mesic. Cismontane woodland, playas (alkaline), valley and foothill grassland, and vernal pools. 0-1,540 feet	**None**. No suitable habitat in the plan area. Nearest current CNDDB occurrence is approximately 20 miles southeast at Don Edwards NWR.
Layia carnosa Beach layia	FE	SE	1B.1	USFWS	Mar-Jul	Coastal dunes and coastal scrub (sandy). 0-195 feet	**None.** No suitable habitat in the plan area.

Table 4.3B-1: Special-Status Plant Species with Potential to occur within the Project Area

Scientific name[1] / Common name	Listing Status[2] Federal	State	RPR*	Source[3]	Flowering Period	Habitat Preferences and Elevation Range[4]	NOTES - Potential to Occur at the Project Area[5]
Meconella oregano Oregon meconella			1B.1	CNPS	Mar-Apr	Coastal prairie and coastal scrub. 820-2,035 feet	**None.** No suitable habitat in the plan area. Below known elevation range. Known in CA only from five occurrences.
Micropus amphibolus Mt. Diablo cottonweed			3.2	CNPS	Mar-May	Rocky. Broadleafed upland forest, chaparral, cismontane woodland, and valley and foothill grassland. 150-2,710 feet	**None.** No suitable habitat in the plan area. Below known elevation range. All occurrence records are historic (pre-1961) in Alameda County.
Monolopia gracilens woodland woolythreads			1B.2	CNPS CNDDB	Mar-Jul	Serpentine. Broadleafed upland forest (openings), chaparral (openings), cismontane woodland, North Coast coniferous forest (openings), and valley and foothill grassland. 330-3,940 feet	**None.** No serpentine in the plan area. Below known elevation range. One historic occurrence record for Alameda County.
Plagiobothrys chorisianus var. chorisianus Choris' popcorn-flower			1B.2	CNPS CNDDB	Mar-June	Mesic. Chaparral, coastal prairie, and coastal scrub. 49-522 feet	**None.** No suitable habitat in the plan area. Below known elevation range. Occurrence in Alameda County is historic (1890) and considered extirpated in Alameda County.
Plagiobothrys diffuses San Francisco popcorn-flower		SE	1B.1	CNPS CNDDB	Mar-June	Coastal prairie and valley and foothill grassland. 50-590 feet	**None.** No suitable habitat in the plan area. Below known elevation range. Known from approximately 10 occurrences. Only East Bay and Alameda County occurrence in the Oakland Hills.

Table 4.3B-1: Special-Status Plant Species with Potential to occur within the Project Area

Scientific name[1] / **Common name**	**Listing Status**[2] **Federal**	**State**	**RPR***	**Source**[3]	**Flowering Period**	**Habitat Preferences and Elevation Range**[4]	**NOTES - Potential to Occur at the Project Area**[5]
Polygonum marinense Marin knotweed			3.1	CNPS CNDDB	April-October	Marshes and swamps (coastal salt or brackish). 3-30 feet.	**Low.** Limited suitable coastal salt marsh habitat in the plan area. The CNDDB record for Alameda County is historic (1863). Known from fewer than 20 occurrences.
Sanicula maritima Adobe sanicle		SR	1B.1	CNPS CNDDB	Feb-May	Clay, serpentinite. Chaparral, Coastal prairie, meadows and seeps, and valley and foothill grassland. 100-790 feet	**None.** No serpentine or clay soils in the plan area. Below known elevation range. Known from fewer than twenty occurrences.
Streptanthus albidus ssp. peramoenus Most beautiful jewel-flower			1B.2	CNPS CNDDB	Mar-Oct	Serpentinite. Chaparral, cismontane woodland, and valley and foothill grassland. 310-3,280 feet	**None.** No serpentine soils in the plan area. Below known elevation range.
Stuckenia filiformis ssp. alpina Slender-leaved pondweed			2B.2	CNPS	May-July	Marshes and swamps (assorted shallow freshwater). 985-7,050 feet	**None. F**reshwater marsh at the recently created Edgewood Marsh is below known elevation range. This species is only known from one location in Alameda County, 6.5 miles north in Sibley Regional Park.
Suaeda californica California seablite	FE		1B.1	USFWS CNPS CNDDB	Jul-Oct	Marshes and swamps (coastal salt). 0-50 feet	**None.** All occurrences in Alameda County are historic (pre-1958) and presumed extirpated in Alameda County. Limited suitable coastal salt marsh habitat in the plan area. Now extant only in Morro Bay and near Cayucos Pt., San Luis Obispo County.

Table 4.3B-1: Special-Status Plant Species with Potential to occur within the Project Area

Trifolium hydrophilum Saline clover	SOC		1B.2	CNPS CNDDB	Apr-June	Marshes and swamps, valley and foothill grassland (mesic, alkaline), and vernal pools. 0-100 feet	**Low.** Limited salt marsh habitat in the plan area and no alkaline habitat. This species is only known from 2 locations in Alameda County, Newark and Livermore Valley. Nearest current CNPS occurrences approximately 18 miles southeast of the plan area in Dublin, Livermore Valley.

1. Jepson eFlora (Baldwin et al. 2012a); CNPS Online Inventory (CNPS 2013); CalFlora (CalFlora 2013) and other sources.
2. Conservation status definitions are as follows:

U.S. Fish and Wildlife Service designations:
FE: Endangered: Any species in danger of extinction throughout all or a significant portion of its range.
FT: Threatened: Any species likely to become endangered within the foreseeable future.

California Department of Fish and Wildlife designations:
SE: Endangered: Any species at risk of becoming extinct in all or a significant portion of its range.
SR: Rare: Any species not currently threatened with extinction, but in such small numbers throughout its range that it may become endangered if its present environment worsen

California Rare Plant Ranks:
1A: Presumed extirpated in California and either rare or extinct elsewhere.
1B: Plants rare, threatened or endangered in California and elsewhere.
1B.1: Plants rare, threatened or endangered in California and elsewhere; seriously threatened in California.
1B.2: Plants rare, threatened or endangered in California and elsewhere; moderately threatened in California.
2B.2: Plants rare, threatened, or endangered in California, but more common elsewhere.
2B.3: Plants rare, threatened, or endangered in California, but more common elsewhere; not very threatened in California.
3:1: Plants which more information is needed; seriously threatened in California.
3:2: Plants which more information is needed; moderately threatened in California.

*As of September 2010 CDFW changed the name of "CNPS List" to "California Rare Plant Rank" (or Rare Plant Rank, RPR) (CDFG 2010).

3. Source Information from CNDDB (CDFW 2013), USFWS (USFWS 2013a), and CNPS *Online Inventory* (CNPS 2013).

4. Habitat and elevation range information from CNDDB (CDFW 2013) and CNPS *Online Inventory* (CNPS 2013).

5. Information on known locations in the vicinity of the project limits was compiled from CNDDB (CDFW 2013), CNPS *Online Inventory* (CNPS 2013), CalFlora (CalFlora 2013), Lake (2010), and USFWS (2013b, c, d). **Low:** Habitat within the project limits and/or project vicinity satisfies very few of the species' requirements and/or range of the species overlaps with the vicinity of the project limits, but not the project limits itself. The species' presence within the project limits is unlikely.

APPENDIX 4.7

H90 H103 H118 H119	T0600100859	Malibu Grand Prix Malibu Fun Center Castle	8000 S Coliseum Way 8010 S Coliseum Way	Southeast Corner	LUST Id: 01-0934	HIST CORTESE LUST SLIC Alameda County CS CA FID UST SWEEPS UST HIST UST Notify 65	**GW:** TPH-G & Benzene **Soil:** TPH-G, BTEX, PCBs, phenanthrene, lead, naphthalene	Open	Site investigation activities have identified two environmental concerns for the site: Fuel leaks from two former underground storage tanks (USTs) located in the southern portion of the site. Prior to 1989, the Malibu Grand Prix facility maintained two 6,000-gallon underground storage tanks (USTs) containing marine mix gasoline. The two USTs were removed on March 29, 1989 and February 1, 1990, respectively. Free-phase fuel was observed floating on water in the tank excavations during both tank removals. During the tank removal on March 29, 1989, soil samples collected from the tank excavation contained benzene at concentrations ranging from 7.3 to 33 milligrams per kilogram (mg/kg) and total petroleum hydrocarbons as gasoline (TPHg) at concentrations ranging from 50 to 150 mg/kg. During the tank removal on February 1, 1990, soil samples collected from the tank excavation contained benzene at concentrations ranging from 0.07 to 0.31 mg/kg and TPHg at concentrations ranging from 26 to 79 mg/kg. Subsequent site investigations from 1990 to 1996 that included soil and groundwater sampling detected fuel hydrocarbons and oxygenates in soil and groundwater over a wide area beneath the site. Benzene and TPHg were detected in groundwater samples collected from monitoring wells at the site at concentrations up to 2,700 and 20,000 micrograms per liter (a g/L), respectively. Imported fill material was observed that contained a tar-like substance. The fill material is present throughout the site and appears to have been placed between 1955 and 1975. Known chemicals of concern in the imported fill include polychlorinated biphenyls, phenanthrene, napthalene, pyrene, and lead. ACEH has requested but not recieved additional information to evaluate these environmental concerns.
L135 L136 L135 L137	T0600100990	Vacant Lot Diversified Investments Quality Tune-Up #29 625 - 659 Hegenberger Rd Oakland International Trade Center	625 Hegenberger Rd 625 - 659 Hegenberger Rd	Eastern Portion	LUST Id: 01-1073	HIST CORTESE LUST Alameda County CS CA FID UST SWEEPS UST HAZNET US Brownfields FINDS	**GW:** TPH-G, BTEX, MTBE **Soil:** TPH-G, TPH-D, TPH-MO	Closed	HAZNET: Oil/water separation sludge; Aqueous solution with total organic residues less than 10 percent According to the Envirostor website, the property contained an active gasoline service station between the mid 1960s and the mid 1970s. In 1988 and 1990 a site investigation was conducted which indicated the presence of TPH-G, TPH-D, and TPH-Mo in Site soils. In 1993 the fuel system and tanks were removed and site investigation, groundwater monitoring, and remedial action began. In 1996 soil was excavated and treated onsite and from 2000 to 2002 in situ bio-remediation conducted. Benzene, TPH-G, and MTBE concentrations in site groundwater ranged from ND<0.3 to 16,000 µg/L; ND<50 to 72,000 µg/L; and ND<5.0 to 2,100 µg/L, respectively. In 2009 the Site was granted closure; however a Land Use Limitation appears to be in place at the property. Depth to groundwater beneath the site ranges from 4 to 8 fbg. Groundwater flow direction is listed as ranging from the southwest to the northwest.

In 1988 one UST was removed from the site. Soil samples collected from the tank cavity contained concentrations of TPH-G (11 mg/kg), TPH-D (370 mg/kg), and TPH-MO (4,800 mg/kg). Subsequent site investigations detected elevated concentrations of TPH-G, TPH-D, TPH-MO, and BTEX over a wide area of the site. Groundwater monitoring was conducted at the site from 1989 to 1996 and then again from 2000 to 2007. Concentrations of TPH-G ranged from ND<50 to 78,000 µg/L. Concentrations of benzene ranged from ND<0.5 to 2,900 µg/L. Concentrations of MTBE ranged from 1.8 to 18,800 µg/L. In 2009, the Alameda County Department of Health Services granted closure to the site. According to EnviroStor, residual pollution remaining in soil beneath the Site included concentrations of TPH-G, TPH-D, and Benzene of up to 33 mg/kg, 36 mg/kg, and 1.3 mg/kg respectively. Maximum concentrations of up to 1.8 µg/L of MTBE remain in groundwater.

PLAN	**GW:** PCE, TCE, and cis-1,2-DCE **Soil:** PCE, TCE, and cis-1,2-DCE	Open	DTSC conducted environmental investigations and removed aboveground tanks and shallow soil between 1987 and 1989. Subsequent groundwater monitoring conducted or overseen by DTSC indicated that shallow groundwater had been impacted by VOCs. A removal action work plan (RAW) for the site was prepared under DTSC oversight in 2008 . In 2009, in accordance with the RAW, shallow groundwater remediation began with the injection of a substrate mixture into the subsurface through temporary borings. In accordance with the O&M Plan, the effectiveness of the groundwater remedy is being evaluated by semiannual groundwater monitoring. The hydraulic gradient in shallow groundwater is relatively flat and, based on historical data, has trended to the south/southwest since at least 1994. The hydraulic gradient in the deeper aquifer has trended primarily to the west toward San Leandro Bay.
A3 A4 I100 I105	1400015	Union Pacific Oakland Coliseum Site City of Oakland Otto's Foreign Auto Salvage	700 73rd Ave	Western Portion	1400015	HIST CAL SITES RESPONSE CORTESE Envirostor FINDS HAZNET CERC-NFRAP	**GW:** PCBs, TPH-G, TPH-D, PCBs, VOCs **Soil:** TPH-G, TPH-D, PCBs, PCE, Addtl. VOCs	Open	The land was acquired by Central Pacific Railroad in March 1895. Melrose Station occupied the southwest comer of the Site. This depot building was retired in 1933 and removed. From September 1959 to March 1992, the Site was operated as an auto salvage yard (Otto's Foreign Auto Salvage) under two successive tenants. A small building was located onsite (along the eastern boundary in the southern portion of the Site) during operation as Otto's Foreign Auto Salvage. The Site has been unoccupied since 1992. Site Investigation activities were conducted between 1998 and 2004, and concluded that the site soils and shallow groundwater beneath the Site had been impacted with PCBs, VOCs, and petroleum hydrocarbons. Maximum groundwater concentrations of benzene, Aroclor 1254, TPH-D, and TPH-G have been detected at 49 µg/L, 140 µg/L, 390,000 µg/L, and 14,000 µg/L, respectively. In 2006 a soil removal action was initiated. Due to the presence of PCE in the soil beyond the excavation limits and concentrations in the excavated soil above the anticipated waste disposal criteria, the excavated soils were backfilled into the excavation. The remaining soil was graded over the Site. Currently, a Remedial Action Work Plan is being prepared for the site. The depth to groundwater beneath the Site ranges from six to nine fbg. The groundwater flow direction of the upper water-bearing zone is toward the south.

G173 G174 G175 G176 G177	T0600102118	Omega Termite 12062 Alameda County Environmental Health Omega Termite Control Inc Allen Kanady	807 75th Ave	Approximately 550 feet southeast of Parcel A7	LUST Id: 01-2302	HAZNET FINDS LUST HIST CORTESE Alameda County CS RCRA SQG	**GW:** TPH-G, BTEX, MTBE **Soil:** TPH-G, BTEX, MTBE	Closed	In 1996, three gasoline USTs were removed from the subject property. Analysis of soil and groundwater samples collected during the tank removal activities revealed that a release had occurred from the tank system. TPH-G, benzene, and MTBE were reported in the soil samples at concentrations up to 4,300 mg/kg, 13 mg/kg, and 25 mg/kg, respectively. TPH-G, Benzene, and MTBE were reported in the tank cavity water sample at concentrations up to 48,000 µg/L, 4,100 µg/L, and ND<130 µg/L, respectively. In 2000 an additional excavation action was initiated. During the excavation activities, a 500-gallon waste oil UST was discovered at the eastern end of the excavation. A total of 7,400 gallons of hydrocarbon-impacted groundwater were pumped from the excavation, treated on-site, and discharged to the sanitary sewer system under an East Bay Municipal Utility District permit. Between 2007 and 2009 an ozone micro-sparge system was operated on site. In 2010 the Alameda County Environmental Health (ACEH) issued a no further action letter however a Land Use Limitation appears to be in place at the property. Historical depth to groundwater beneath the site ranges from 3.5 to 10 fbg. Groundwater flow direction is generally to the northwest.

C43 C45 C59 C77 C78 C81	T0600100878	796 66th Ave Cruise America Inc. Cruise America Inc/ McGuire Hester	796 66th Ave	Northeast Portion	T0600100878	US BROWNFIELDS FINDS HAZNET CA FIDS UST HIST CORTESE LUST Alameda County CS SWEEPS UST UST	**GW:** TPH-G, TPH-D, MTBE **Soil:** TPH-G, TPH-D, MTBE	Closed	HAZNET: Waste oil and mixed oil From 1957 to 1988 the site was occupied by McGuire Hester, a construction company. Prior to 1956 the site was reportedly a slaughter and meat packing facility. In 1987, three USTs were removed from three separate tank pits. TPH-G and TPH-D was detected in soil samples collected from the tank cavities at concentrations up to 758 and 492 mg/kg, respectively. According to the EnviroStor website, groundwater observed in the excavations had visible a hydrocarbon sheen. A waste oil tank remains on site. Between 1987 and 2001 several site investigations and remedial actions were conducted on site; including the additional excavation of contaminated soils in the vicinity of one of the former USTs. During this time period, concentrations of TPH-D, TPH-G, and TPH-MO were detected at concentrations up to 1,750, 270, and 32,000 mg/kg, respectively. Groundwater samples collected contained TPH-MO, TPH-D, and MTBE at concentrations up to 60,000, 2,300, and 13,000 µg/L, respectively. Furthermore, during excavation activities buried timbers with creosote were uncovered. In 2001 an additional UST was removed from the site. Soil samples collected from the tank cavity dispenser area contained TPH-G concentrations up to 280 mg/kg. Benzene and MTBE were detected at concentrations up 53 and 13 mg/kg, respectively. TPH-G and MTBE were detected in groundwater collected from the tank pit excavation at 44,000 and 42,000 µg/L, respectively. In 2004 a twelve point ozone sparging system was installed on site. The system was operated through 2006. In 2008 additional soil borings were advanced on site to determine the effectiveness of the system. Groundwater and soil sampling results indicated significant TPH-G, MTBE, and TBA was still present. Due to the presence of contaminants, additional excavation was performed. During excavation activities a debris layer consisting of black stained soil, trash, wood, and cardboard was observed at approximately 6.5 fbg. According to the EnviroStor website, the debris and stained soil appears to have been placed with the fill material that was used to fill in low lying wetlands at the site prior to 1956. In 2009 the Alameda County Environmental Health (ACEH) issued a no further action letter however a Land Use Limitation appears to be in place at the property. Based on review of available documents on the EnviroStor website, depth to groundwater ranges from 3.5 to 8 feet below grade. Historical data indicates the groundwater flow direction trends to the southeast.

During UST removal activities iimpacted soils surrounding the USTs were excavated and disposed of off-site. Several site investigations were conducted between 1993 and 1997. Maximum soil concentrations of TPH-D, TPH-G, TPH-MO, and benzene were detected at 7,000, 8,400, 3,900, and 310,000 mg/kg, respectively. Maximum groundwater concentrations of TPH-G, TPH-D, TPH-MO, TPH as mineral spirits, and MTBE were detected at 780, 110,000, 170,000, 520,000, and 21 µg/L, respectively. In 2011, the Alameda County Environmental Health (ACEH) issued a letter stating that "your case is currently not in compliance with Alameda County Environmental Health's (ACEH) April 18, 2000 Final Notice of Violation" and that "the site appears uncharacterized, and reports documenting groundwater sampling have not been received." Recent groundwater sampling data, conducted between 2010 and 2011, indicates the site is still impacted with TPH-D (maximum concentration 7,500 µg/L), TPH-MO (maximum concentration 3,600 µg/L), and MTBE (maximum concentration 18 µg/L). Based on review of available documents, depth to groundwater ranges from 4 to 8.5 feet below grade. Historical data indicates the groundwater flow direction trends to the north.
H106 H107	T0600101696	CALTRANS Oakland Maintenance Station CALTRANS Materials Lab Dist 4	555 Hegenberger Rd	Eastern Portion	LUST Id: 01-1830	HIST CORTESE LUST Alameda County CS RCRA SQG FINDS	**GW:** TPH-G, TPH-D, TPH-MO, benzene **Soil:** TPH-G, TPH-D, TPH-MO, benzene	Open	In 1994, the four USTs and associated product piping were excavated and removed from the Site. Limited over-excavation was conducted of the tank pits due to obvious signs of contamination. Soil samples collected from the tank excavation were reported to have concentrations of TPH-G as high as 480 mg/kg, TPH-D at 380 mg/kg, O&G at 2,200 mg/kg, and benzene at 1.8 mg/kg. In 1995 five monitoring wells were installed on site. Groundwater monitoring was conducted between 1995 and 1996 and a single event in 1998. Annual groundwater monitoring resumed on Site between March 2001 and May 2005. No groundwater sampling events were conducted between 2005 and September 2011. Groundwater sampling has resumed and is currently conducted on a semi-annual basis. Maximum concentrations of TPH-G, TPH-D, benzene, and MTBE from the most recent sampling event (3/21/13) were detected at 4,900, 1,000, 930, and ND<0.26 µg/L. The depth to groundwater beneath the Site ranges from 3 to 6.5 fbg. The groundwater flow direction is generally toward the southwest.

Grab groundwater samples collected at the Site contained cis-1,2-dichloroethene at a concentration of 11 µg/L.
E38 E39 E40 E41 E42	1390004	Western Colloid Western Colloid Prod Inc Western Colloid Products Western Colloid NC Inc WCNC Corp DBA Werstern Colloid Products	700 71st Ave	Parcel AA1	NA	CERC-NFRAP NPDES EMI Envirostor WDS FINDS HAZNET	**Soil:** carbazole and benzo(a)anthracene **GW:** unknown		Since 1980, Western Colloid has manufactured roofing and paving materials at this site. Prior to that, Challenge Cook manufactured concrete trucks onsite. Both the Oakland Office of Emergency Services and the Alameda County Department of Environmental Health, Hazardous Materials Division conduct site inspections because of the hazardous substances and materials which are stored on site. Historic inspections have note that the following chemicals have been stored on site in 55-gallon steel drums: texanol ester alcohol, ethylene glycol, 1,1,1-trichloroethane, methyl ethyl ketone, xylene, waste oil, and troysanpolyphase AF1. A Preliminary Assessment was completed in January 2001 for the Site under an EPA Preliminary Assessment / Site Investigation (PASI) grant. The report noted that raw hazardous materials were stored on-site in 55-gallon drums. Environmental contaminants detected above EPA industrial soil Preliminary Remediation Goals (PRGs) at the Western Colloid site include carbazole up to 240 mg/kg, and benzo(a) anthracene as high as 15 mg/kg. The assessment recommended No Further Action under CERCLA but that DTSC's Hazardous Waste Management Program continue oversight as a generator.

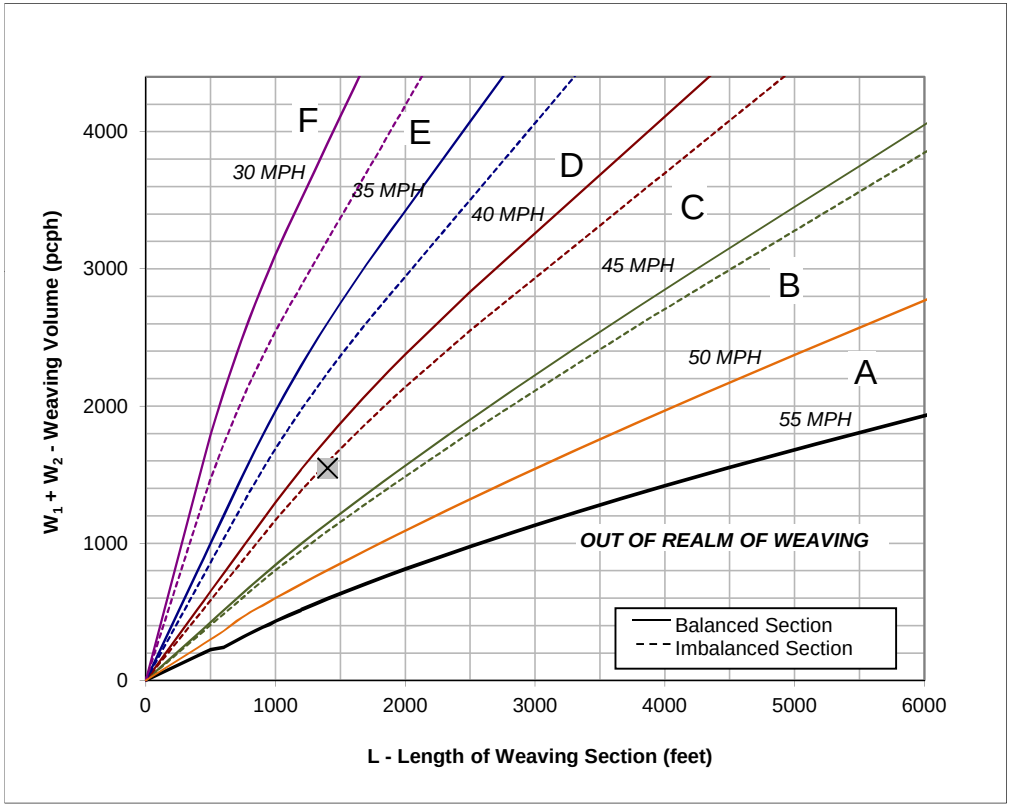
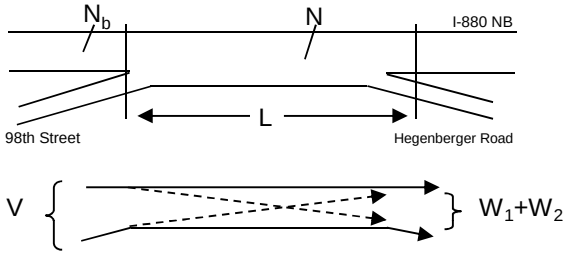
Truck Percentage	4%	Truck Percentage	2%	Truck Percentage	2%
PCE for Trucks	1.5	PCE for Trucks	1.5	PCE for Trucks	1.5
Volume (pcph)	7,276	Volume (pcph)	783	Volume (pcph)	767

Project Information

Project	Coliseum City SP/EIR
Scenario	Existing Conditions - AM Peak
Freeway	I-880 NB
On-ramp	98th Street
Off-ramp	Hegenberger Road



Figure



Capacity Analysis

1. Is the weaving section balanced (Y / N)? **N**
   [If optional exit lane, then "Y". Otherwise "N".]
2. In the Weaving Speed Chart to the left, which two speed curves is the black "x" between?
   40 MPH and **45 MPH**
   If below the 55 MPH curve, out of the realm of weaving.
   If left of the 30 MPH curve, LOS is F.
3. Interpolated Weaving Speed (S_w, mph) **40.4**
4. Weaving Intensity Factor (k) **2.50**
5. Service Volume (SV, pcph)
   $SV = (1/N)*[V + (k - 1)*\min(W_1, W_2)]$ **1,685**
6. Level of Service (LOS) **E**

The LOS in the chart above refers to the capacity of weaving traffic only; through and ramp to ramp traffic is not included.

* Note: **Do not adjust by a Peak Hour Factor (PHF).** The methodology incorporates the PHF in the Service Volume tables.

Freeway	I-880 NB
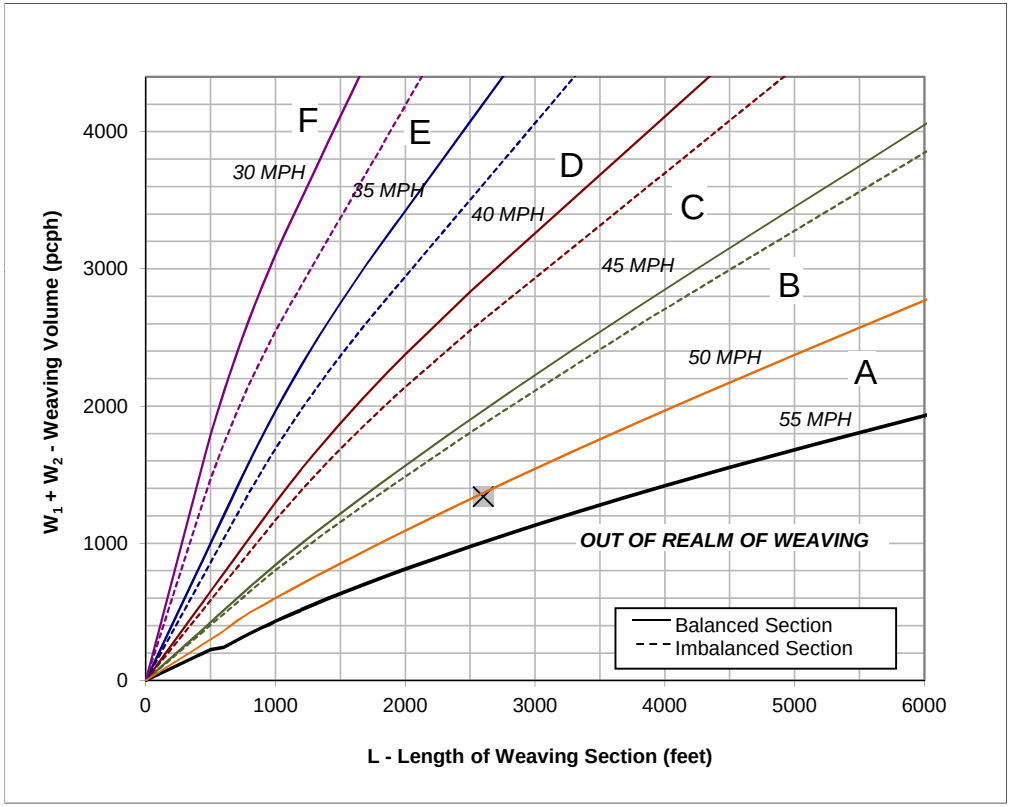
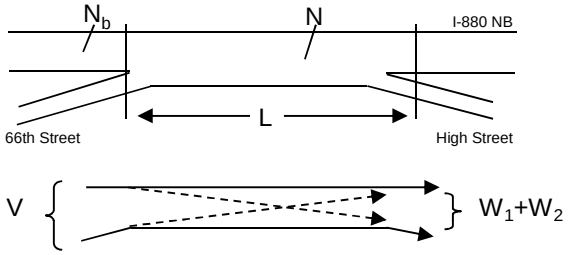
On-ramp	66th Street
Off-ramp	High Street



Figure



Capacity Analysis

1. Is the weaving section balanced (Y / N)? **N**
   [If optional exit lane, then "Y". Otherwise "N".]
2. In the Weaving Speed Chart to the left, which two speed curves is the black "x" between?
   50 MPH and **55 MPH**
   If below the 55 MPH curve, out of the realm of weaving.
   If left of the 30 MPH curve, LOS is F.
3. Interpolated Weaving Speed (S_w, mph) **50.3**
4. Weaving Intensity Factor (k) **1.00**
5. Service Volume (SV, pcph)
   $SV = (1/N)*[V + (k - 1)*\min(W_1, W_2)]$ **1,443**
6. Level of Service (LOS) **C**

The LOS in the chart above refers to the capacity of weaving traffic only; through and ramp to ramp traffic is not included.

* Note: **Do not adjust by a Peak Hour Factor (PHF).** The methodology incorporates the PHF in the Service Volume tables.

Leisch Method for Weaving Analysis

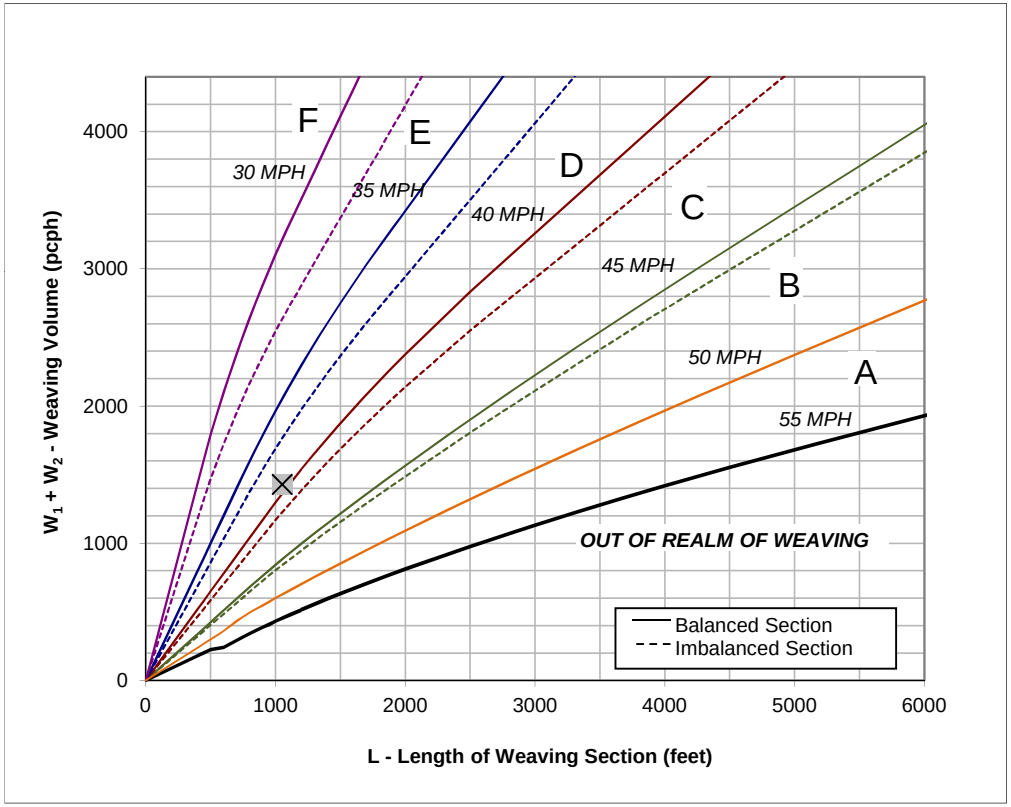
Data Input

Number of Entering Mainline Lanes	N_b	4
Number of Lanes in Weaving Section	N	5
Length of Weaving Section (feet)	L	1,050

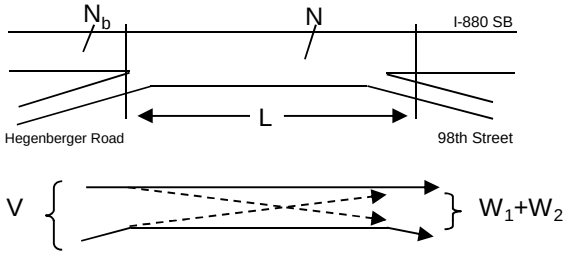
Total Weaving Section (V)		On-ramp to Mainline (W_1)		Mainline to Off-ramp (W_2)	
Volume (vph)*	6,002	Volume (vph)*	592	Volume (vph)*	824
Truck Percentage	3%	Truck Percentage	2%	Truck Percentage	2%
PCE for Trucks	1.5	PCE for Trucks	1.5	PCE for Trucks	1.5
Volume (pcph)	6,092	Volume (pcph)	598	Volume (pcph)	832

Project Information

Project	Coliseum City SP/EIR
Scenario	Existing Conditions - AM Peak
Freeway	I-880 SB
On-ramp	Hegenberger Road
Off-ramp	98th Street



Figure



Capacity Analysis

1. Is the weaving section balanced (Y / N)? **N**
   [If optional exit lane, then "Y". Otherwise "N".]
2. In the Weaving Speed Chart to the left, which two speed curves is the black "x" between?
   35 MPH and **40 MPH**
   If below the 55 MPH curve, out of the realm of weaving.
   If left of the 30 MPH curve, LOS is F.
3. Interpolated Weaving Speed (S_w, mph) **38.1**
4. Weaving Intensity Factor (k) **2.70**
5. Service Volume (SV, pcph)
   $SV = (1/N)*[V + (k - 1)*\min(W_1, W_2)]$ **1,422**
6. Level of Service (LOS) **C**

The LOS in the chart above refers to the capacity of weaving traffic only; through and ramp to ramp traffic is not included.

* Note: **Do not adjust by a Peak Hour Factor (PHF).** The methodology incorporates the PHF in the Service Volume tables.

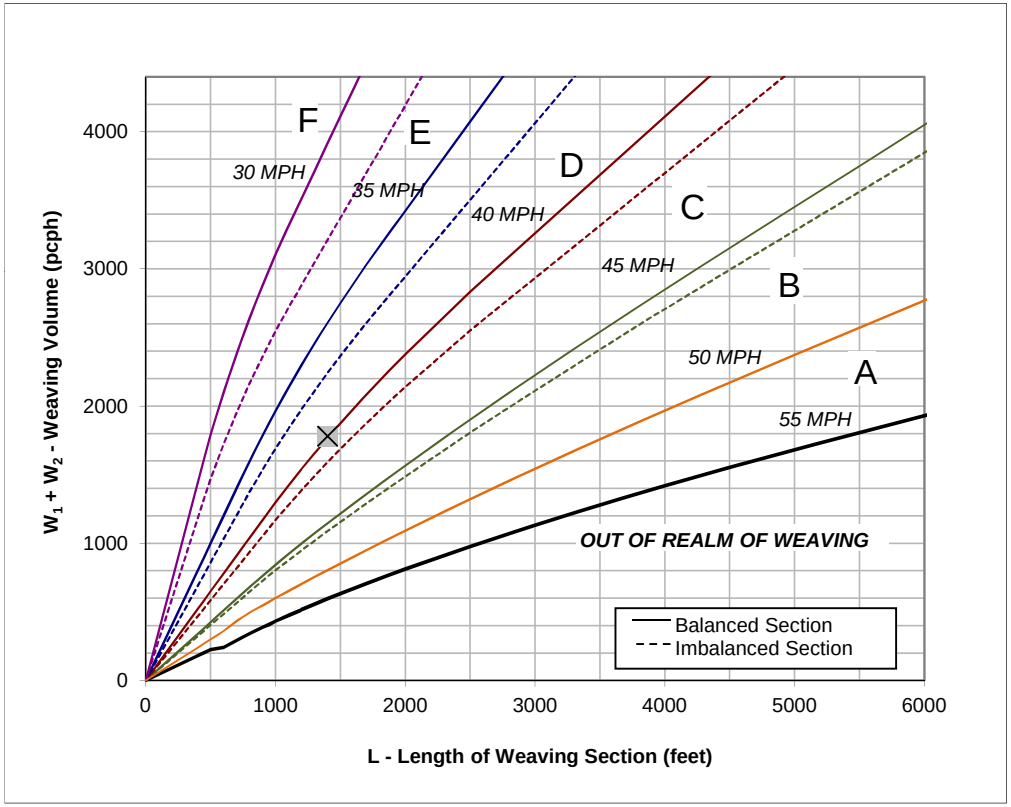
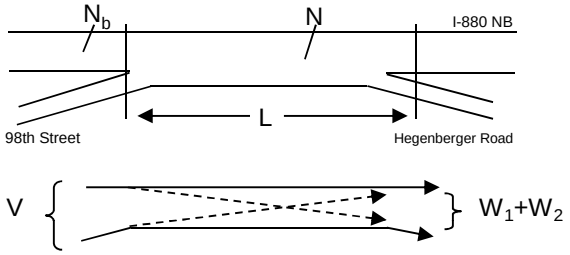
Freeway	I-880 NB
On-ramp	98th Street
Off-ramp	Hegenberger Road



Figure



Capacity Analysis

1. Is the weaving section balanced (Y / N)? **N**
   [If optional exit lane, then "Y". Otherwise "N".]
2. In the Weaving Speed Chart to the left, which two speed curves is the black "x" between?
   40 MPH and **45 MPH**
   If below the 55 MPH curve, out of the realm of weaving.
   If left of the 30 MPH curve, LOS is F.
3. Interpolated Weaving Speed (S_w, mph) **38.1**
4. Weaving Intensity Factor (k) **2.70**
5. Service Volume (SV, pcph)
   $SV = (1/N)*[V + (k - 1)*\min(W_1, W_2)]$ **1,615**
6. Level of Service (LOS) **D**

The LOS in the chart above refers to the capacity of weaving traffic only; through and ramp to ramp traffic is not included.

* Note: **Do not adjust by a Peak Hour Factor (PHF).** The methodology incorporates the PHF in the Service Volume tables.

Leisch Method for Weaving Analysis

Data Input

Number of Entering Mainline Lanes	N_b	4
Number of Lanes in Weaving Section	N	5
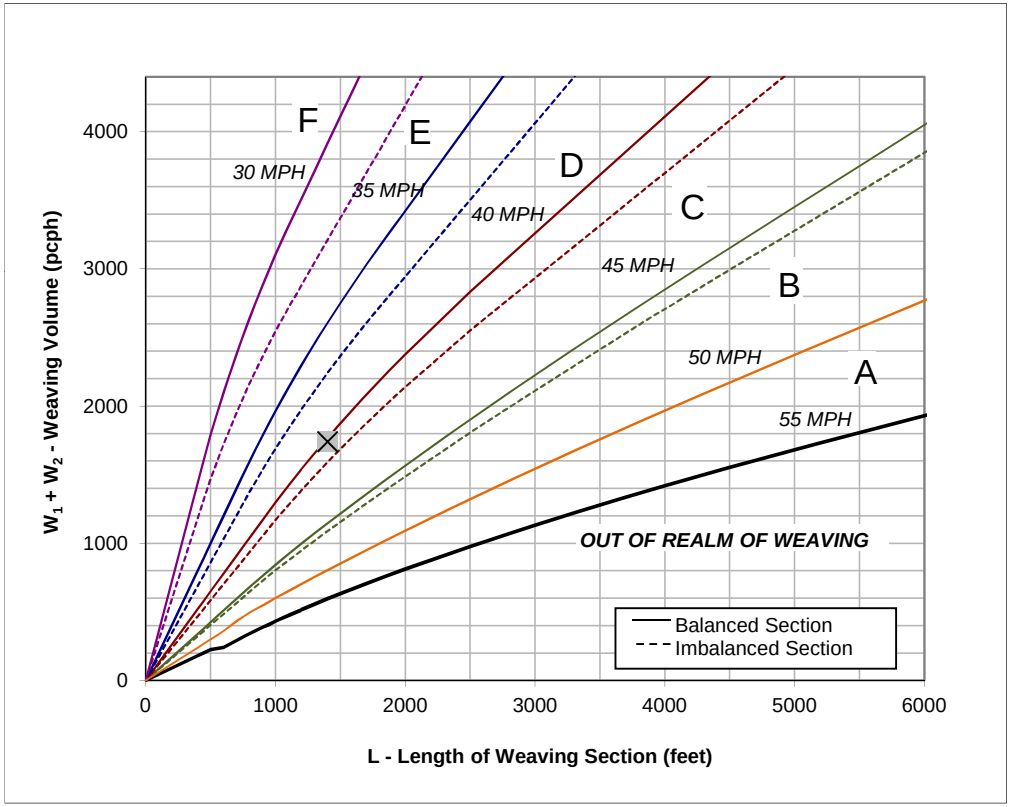
Length of Weaving Section (feet)	L	1,400

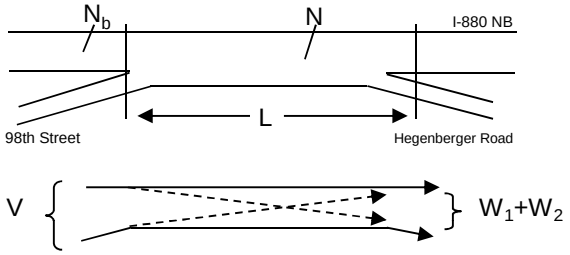
	Total Weaving Section (V)	On-ramp to Mainline (W_1)	Mainline to Off-ramp (W_2)
Volume (vph)*	7,433	805	919
Truck Percentage	4%	2%	2%
PCE for Trucks	1.5	1.5	1.5
Volume (pcph)	7,582	813	928

Project Information

Project	Coliseum City SP/EIR
Scenario	EPP - AM Peak
Freeway	I-880 NB
On-ramp	98th Street
Off-ramp	Hegenberger Road



Figure



Capacity Analysis

1. Is the weaving section balanced (Y / N)? **N**
   [If optional exit lane, then "Y". Otherwise "N".]
2. In the Weaving Speed Chart to the left, which two speed curves is the black "x" between?
   40 MPH and **45 MPH**
   If below the 55 MPH curve, out of the realm of weaving.
   If left of the 30 MPH curve, LOS is F.
3. Interpolated Weaving Speed (S_w, mph) **38.5**
4. Weaving Intensity Factor (k) **2.67**
5. Service Volume (SV, pcph)
   $SV = (1/N)*[V + (k - 1)*\min(W_1, W_2)]$ **1,787**
6. Level of Service (LOS) **E**

The LOS in the chart above refers to the capacity of weaving traffic only; through and ramp to ramp traffic is not included.

* Note: **Do not adjust by a Peak Hour Factor (PHF).** The methodology incorporates the PHF in the Service Volume tables.

Leisch Method for Weaving Analysis

Data Input

Number of Entering Mainline Lanes	N_b	4
Number of Lanes in Weaving Section	N	5
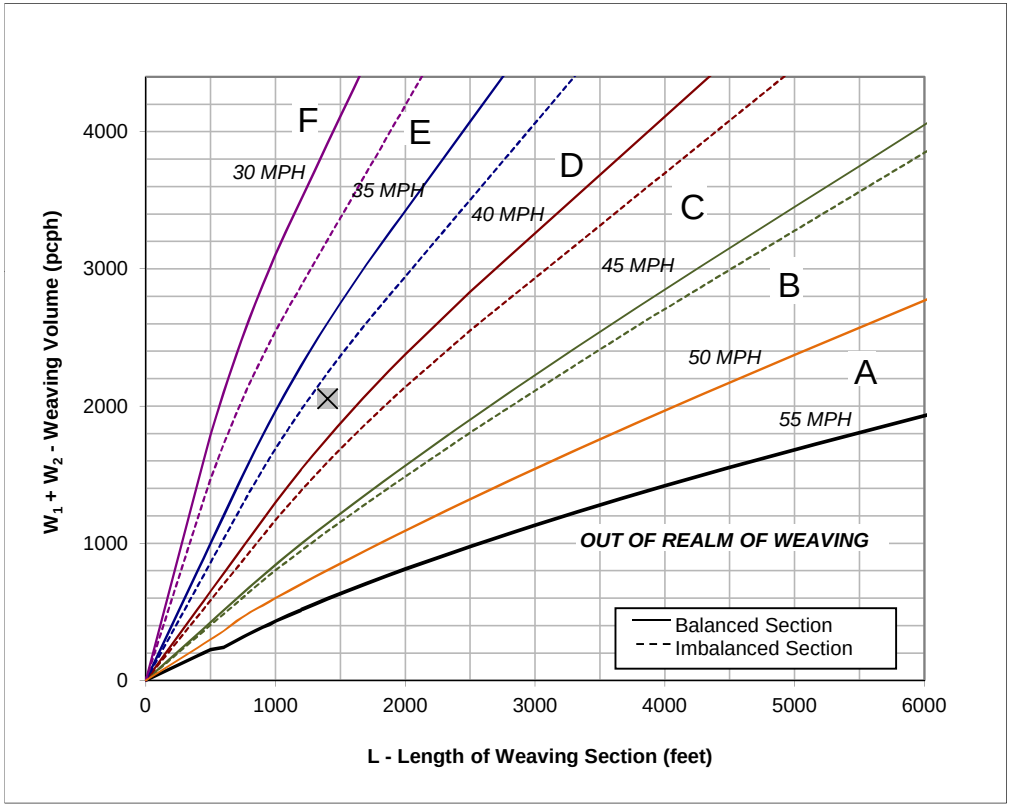
Length of Weaving Section (feet)	L	1,400

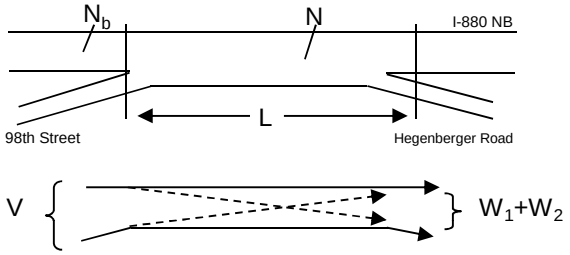
	Total Weaving Section (V)	On-ramp to Mainline (W_1)	Mainline to Off-ramp (W_2)
Volume (vph)*	7,142	1,026	1,008
Truck Percentage	3%	2%	2%
PCE for Trucks	1.5	1.5	1.5
Volume (pcph)	7,249	1,036	1,018

Project Information

Project	Coliseum City SP/EIR
Scenario	EPP - PM Peak
Freeway	I-880 NB
On-ramp	98th Street
Off-ramp	Hegenberger Road



Figure



Capacity Analysis

1. Is the weaving section balanced (Y / N)? **N**
   [If optional exit lane, then "Y". Otherwise "N".]
2. In the Weaving Speed Chart to the left, which two speed curves is the black "x" between?
   40 MPH and **45 MPH**
   If below the 55 MPH curve, out of the realm of weaving.
   If left of the 30 MPH curve, LOS is F.
3. Interpolated Weaving Speed (S_w, mph) **35.4**
4. Weaving Intensity Factor (k) **2.87**
5. Service Volume (SV, pcph)
   $SV = (1/N)*[V + (k - 1)*\min(W_1, W_2)]$ **1,831**
6. Level of Service (LOS) **E**

The LOS in the chart above refers to the capacity of weaving traffic only; through and ramp to ramp traffic is not included.

* Note: **Do not adjust by a Peak Hour Factor (PHF).** The methodology incorporates the PHF in the Service Volume tables.

Leisch Method for Weaving Analysis

Data Input

Number of Entering Mainline Lanes	N_b	4
Number of Lanes in Weaving Section	N	5
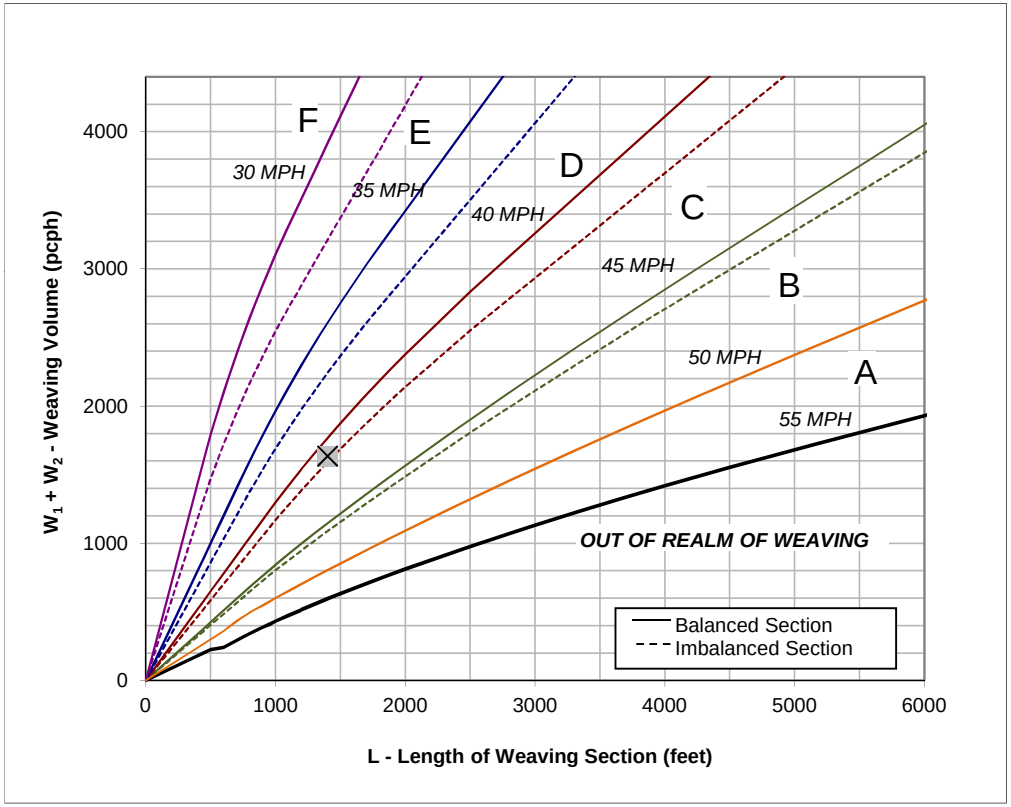
Length of Weaving Section (feet)	L	1,400

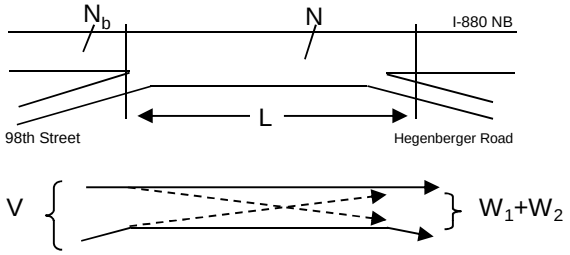
Total Weaving Section (V)		On-ramp to Mainline (W_1)		Mainline to Off-ramp (W_2)	
Volume (vph)*	7,500	Volume (vph)*	730	Volume (vph)*	890
Truck Percentage	4%	Truck Percentage	2%	Truck Percentage	2%
PCE for Trucks	1.5	PCE for Trucks	1.5	PCE for Trucks	1.5
Volume (pcph)	7,650	Volume (pcph)	737	Volume (pcph)	899

Project Information

Project	Coliseum City SP/EIR
Scenario	2035 NP - AM Peak
Freeway	I-880 NB
On-ramp	98th Street
Off-ramp	Hegenberger Road



Figure



Capacity Analysis

1. Is the weaving section balanced (Y / N)? **N**
   [If optional exit lane, then "Y". Otherwise "N".]
2. In the Weaving Speed Chart to the left, which two speed curves is the black "x" between?
   40 MPH and **45 MPH**
   If below the 55 MPH curve, out of the realm of weaving.
   If left of the 30 MPH curve, LOS is F.
3. Interpolated Weaving Speed (S_w, mph) **39.5**
4. Weaving Intensity Factor (k) **2.58**
5. Service Volume (SV, pcph)
   $SV = (1/N)*[V + (k - 1)*\min(W_1, W_2)]$ **1,763**
6. Level of Service (LOS) **E**

The LOS in the chart above refers to the capacity of weaving traffic only; through and ramp to ramp traffic is not included.

* Note: **Do not adjust by a Peak Hour Factor (PHF).** The methodology incorporates the PHF in the Service Volume tables.

Project Information

Project	Coliseum City SP/EIR
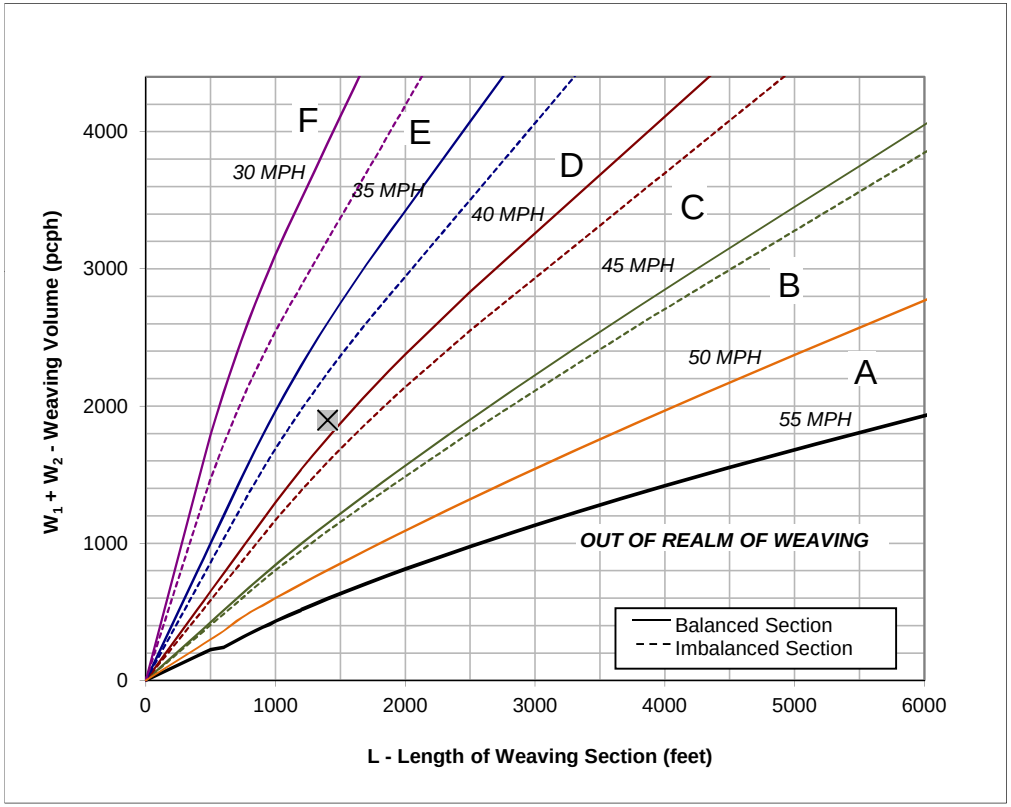
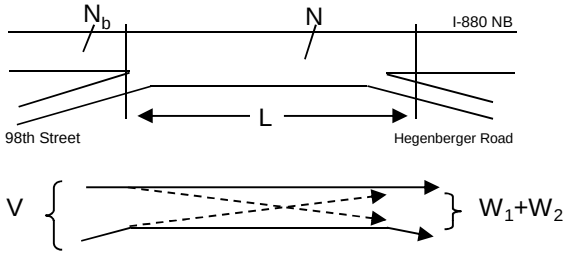
Scenario	2035 NP - PM Peak
Freeway	I-880 NB
On-ramp	98th Street
Off-ramp	Hegenberger Road



Figure



Capacity Analysis

1. Is the weaving section balanced (Y / N)? **N**
   [If optional exit lane, then "Y". Otherwise "N".]
2. In the Weaving Speed Chart to the left, which two speed curves is the black "x" between?
   40 MPH and **45 MPH**
   If below the 55 MPH curve, out of the realm of weaving.
   If left of the 30 MPH curve, LOS is F.
3. Interpolated Weaving Speed (S_w, mph) **36.9**
4. Weaving Intensity Factor (k) **2.78**
5. Service Volume (SV, pcph)
   $SV = (1/N)*[V + (k - 1)*\min(W_1, W_2)]$ **1,699**
6. Level of Service (LOS) **E**

The LOS in the chart above refers to the capacity of weaving traffic only; through and ramp to ramp traffic is not included.

* Note: **Do not adjust by a Peak Hour Factor (PHF).** The methodology incorporates the PHF in the Service Volume tables.
