OS User Manual

Ver. 2021-06

Chapter 1. DVR / NVR Operation Setup

1 - 1 Power ON.

① connect the power

② Once Power cable is connected (found in Rear Side), booting will be enabled. .

③ After booting is finished, the live screen and channel indication / clock are shown.

④ Menu window pops up by clicking the right button of the mouse or pressing [MENU] button in the remote control as shown below.

[Figure 1-1. Menu]

⑤ Login window pops up by clicking the login button. Login is available after inputting the password.
[Figure 1-2. Login pop up]

※ Password is available to change at {Menu} -> {Setup} -> {System} -> {Modify}.

---

1 - 2 Storage Setup

Select {Menu} -> {Setup} -> {Storage} and configure HDD.
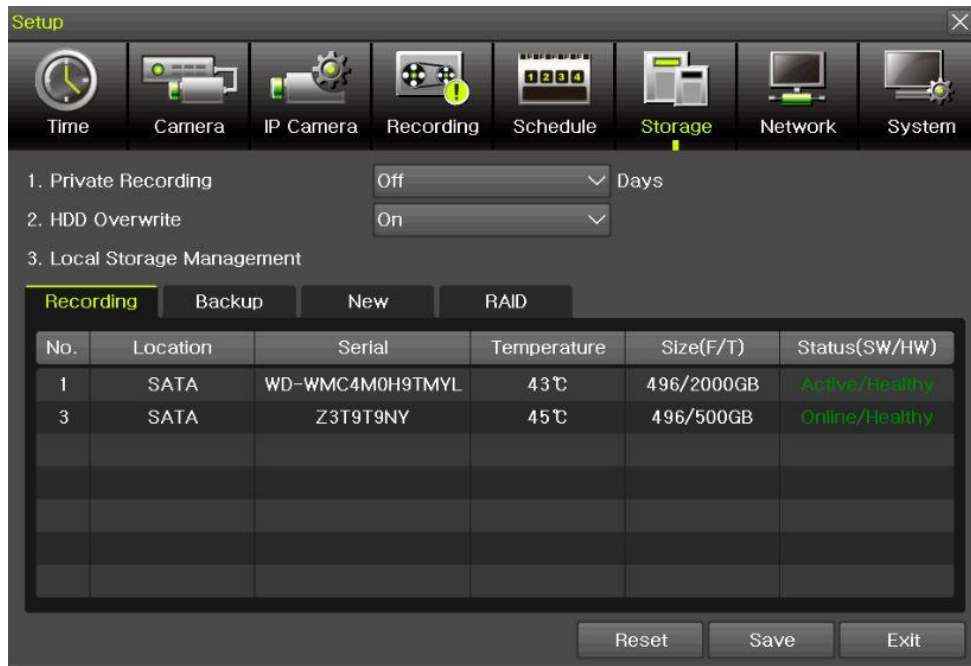

[Figure 1-3. Storage selection]

1 - 3 Recording Setup

Select {Menu} -> {Setup} -> {Recording} -> {Recording}

[Figure 1-4. Recording Setup]

Setup [Recording Resolution]/[Continuous Speed]/[Event Speed]/[Audio].

1 - 4 Date/Time Setup

① Select {Menu} -> {Setup} -> {Time}.
② Configure [Time Sever]/[Date and Time]/[Standard Time Zone]/[Auto Reboot].

[Figure 1-5. Date/Time Setup]

1 - 5 Display Setting and Other Setup
Select and set up {Menu} -> {Miscellaneous} -> {Display Setting}.
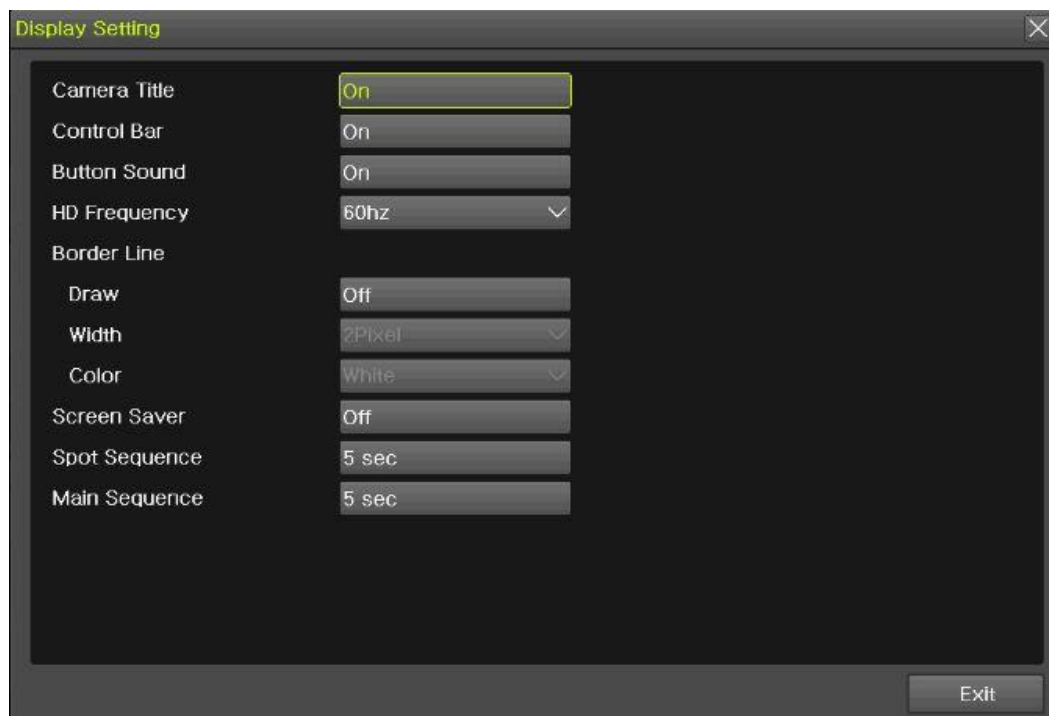

[Figure 1-6. Display Setting]

1 - 6 Search
① Search the video records depending on Time list/Event/Multi mode/Channel.
② For more information, check [2-6 Search], [2-7 Playback], [2-8 Log viewer].

1 - 7 Backup
① Backup is available in Monitoring, Search, Log and Playback Mode.
② For more information, check [2-10-5 Backup].
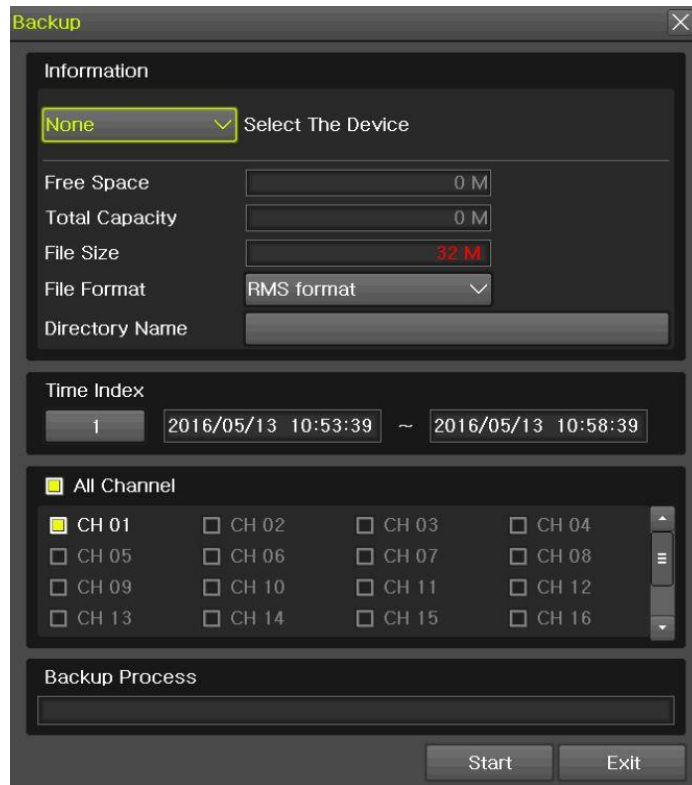

[Figure 1-7. Backup Setup]

1 - 8 DVR / NVR Info.
Move to {Menu} -> {Miscellaneous} -> {DVR/NVR Info}.

2 - 2 System Login

2 - 2 - 1 User Account and Authorization

System users are divided into local administrators and general users and the local administrator can use all functions.

admin	The local administrator can use all functions: System Power On/Off, Setup, Monitoring, and Playback
user	Up to 15 users are allowed. Each user can access the functions depending on the given authorities. For Authorization Setup, Move to {Menu} {Setup} {System} {4. User Registration}.

※ **Functions available for Authorization Setup** ※	
ID/PW	Administrator ID/PW setup (admin account ID can't be changed)
Network live	Network live
Playback	Playback & Network playback
Backup	Backup control
Setup	Setup menu control
PTZ control	PTZ control
Network Upgrade	Network Upgrade control
PW	Using PW or not (Login available without PW by unchecking)
Use of channel (user)	Authorization By each channel

2 - 2 - 2 Login

For security purpose, user must log in first to use **{Monitoring Menu}.**
[Figure 2-2. Login Window]

    ①   On the real-time monitoring window, select {Menu} -> {Login}

    ②   Enter the password or select cancel.

2 - 2 - 3 Log out
After logging out, the user cannot use {Menu}.

2 - 3 Monitoring
Powerful monitoring functions as shown below

- **1 / 4 / 9 / 16 Division Mode and Auto Sequence Mode**
- **Channel Grouping**
- **TV mode**
- **Menu Controlling in Monitoring Mode**
- **Zoom**
- **Live Event Indication**
- **Screen Control by using PTZ.**

※ **Division mode is depending on Max. Ch**

2 - 3 - 1 Screen Division and Auto Sequence
Our products provide the auto sequence mode as follows.

1/16 – basic mode
Auto sequence mode –special mode
[Feature 2-3. 16ch mode]

※ In Basic Mode; 1/4/9/16, pressing the same mode button leads to screens as shown below.	
1 Channel Division Mode (16 Group)	
16 Channel Division Mode (1 Group)	
※ The user can view an image on full screen by double-clicking a desired channel in the 1/16 mode. Double-click any part of the screen to return to the previous mode. ※ Max. 16ch Division mode is available	

※ **Auto Sequence**

Auto Sequence is to rotate images at an interval of the certain time in Basic & Special Division mode. Auto Sequence is not available in the Basic 16 Division mode.
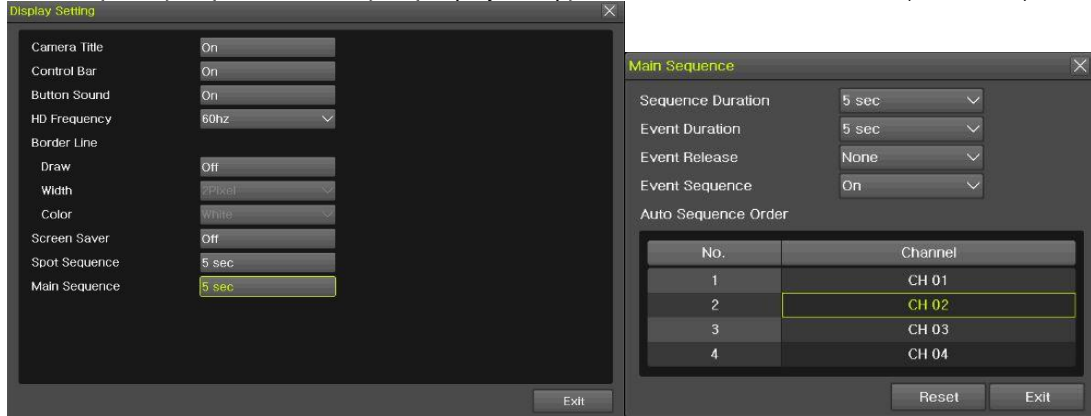

① Move to {Menu} -> {Miscellaneous} -> {Display Setup} and select the time as follows (1 ~ 10 sec)

② Pressing Remote Controller {SEQUENCE} Button or Mouse Arrow Button initiate the Auto Sequence mode.

③ Basic mode – Auto sequence in 1 CH mode

1 CH mode sequence
(*Unavailable by connecting only one camera)

2 - 3 - 2 Menu in Monitoring Mode

The user can control all functions available in Monitoring Mode in {Menu}.

① Press the Menu or right-click mouse button. The {Menu} will then appear.

② Select the desired item by using the arrow keys or mouse.

③ Press the ESC button or right-click mouse button to end the menu.

2 - 3 - 3 Zoom

Zoom is to zoom in or out the 1 channel division image in the real time monitoring mode.

[Figure 2-7. Control Bar]

① Move to {Menu} -> {Zoom} or press the zoom icon from the control bar in the real time monitoring mode.

② After selecting a channel, it becomes the 1 channel mode and the zoom control screen shows at bottom-right.

[Figure 2-8. Zoom control screen]

③　In case of the mouse, move the pointer to an area to be zoomed in the zoom control screen and double-click on it.

④　Then, it zooms in 3 levels; Normal, x4, x16. Those 3 levels can be controlled by the wheel of the mouse. The user also can left-click and drag the yellow box to move the focused image in higher than the x4 mode.

⑤　In case of the remote controller and front panel, it is available to move to 3 levels by using

[SEQUENCE] button in the remote controller. The yellow box can be moved by the arrow keys

2 - 3 - 4 Screen Control by using PTZ

This enables the user the real-time monitoring by using PTZ camera.
The PTZ camera must be connected to the system.
Select {Menu} -> {Setup} -> {Camera} -> {PTZ}.

①　Configure Protocol / ID / Baud Rate / Duration / Tour.

[Figure 2-9. PTZ Setup]

※ Baud rate can be selected at 2400/4800/9600/19200/38400.

※ Duration can be selected at 5/10/15/20/5-60(User setting) seconds.

※ Tour consists of Tour 1/ Tour 2 and each tour can be set with 8 Preset.

※ **PTZ supporting IPCAM sets the protocol as IP camera automatically.**

⚠ ※ For supported protocols, refer to APPENDIX.

② To control PTZ camera, select {PTZ Control} in Menu or press {PTZ} in the remote controller.

[Figure 2-10. PTZ control]

[Figure 2-11. PTZ control]

> ⚠️ In the PTZ mode, there are two function (Full and Mini). Speed can be different depending on the camera manufacturers. Tour has [Tour1] and [Tour2]. Home Position Time is 1/5/10/User setting (1-60)minutes.

> 📖 Preset? Using horizontal/vertical/Zoom/Focus/Iris movement of PTZ Camera, zoom or focus or Iris a certain spot of the image by designating the coordinates and move to the designated coordinates quickly.

> 📖 Home Position Time? If there are no controlling signals to PTZ camera after a certain time, it goes automatically to the Preset No.1 position as Preset No. 1 is designated as Home Position

2 - 4 System Information and Screen Setup Change
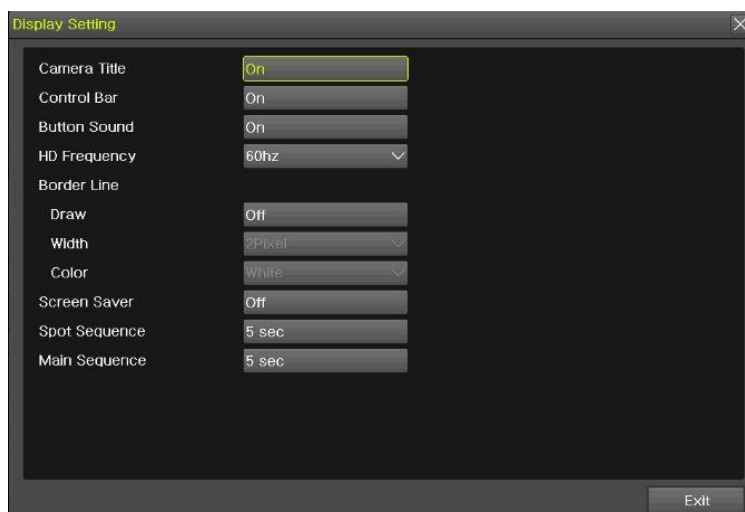

2 - 4 - 1 System information
[Menu] → [Miscellaneous] → [DVR/NVR info]

※ Check the Figure [1-8] DVR / NVR info

2 - 4 - 2 Display setting

Camera Title On/Off, Control Bar On/Off, Button Sound On/Off, Border Line Draw/Width/Color, Sequence Duration 1-10seconds. After selecting Display Setting, it becomes the 1 channel mode and a menu pops up as shown below.
2 - 4 - 3 Screen Saver

Monitor connected with DVR can be shut down to protect monitor. {Menu} -> {Miscellaneous} -> {Display Setting} -> {Screen Saver}

Name	Description
Enable	on/off setting
Duration	Screen Save duration setting
Starting	Screen Save starting setting, 0 to 24
Waiting time	Screen Save activating term when there is no input

[Figure 2-13. Display Setting Window]

2 - 5 Control

In the real-time monitoring, move to {Menu} -> {Miscellaneous} -> {Misc. Control}.
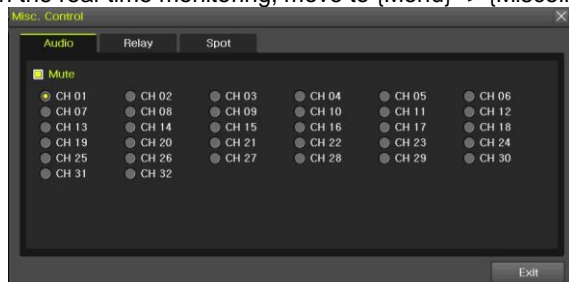

[Figure 2-14. Audio]
[Figure 2-15. Relay]

① Move to the Audio tab and select the channel to be activated or Mute.

② Move to the Relay tab and select.

2 - 6 Search

2 - 6 - 1 Search mode

Move to {Menu} -> {Search} in the real-time monitoring mode.

2 - 6 - 2 Calendar search
[Figure 2-16. Search Menu Window]

① Select [Menu] → [Search] → [Calendar Search]

② Calendar Search allows the users search and playback by [Time]/[Multi-Channel]/[Event].

15
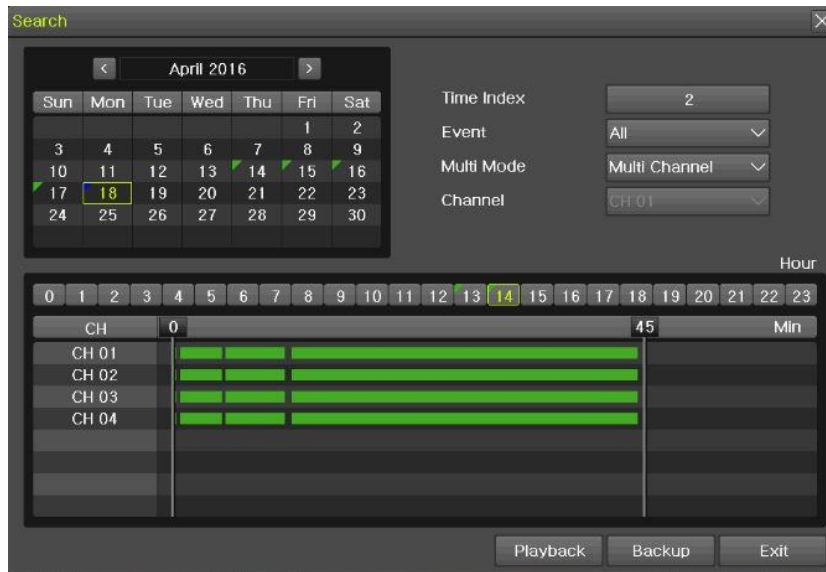

[Figure 2-17. Calendar Search Window]

(1) Time Index
Every time when the user changes the time, a new folder (Index) is created and files saved
in the folder before the time change can be found at {Menu} -> {Calendar Search} -> {Time Index}.
Selecting a file at {Menu} -> {Calendar Search} -> {Time Index} leads to a selection window popup
and the user can select a file in different folders (before time change).

📖	※ Searching by using the file lists is only available on multi-channel mode.
Current time	The recorded file by time of the current system
Old time	The recorded file before time change

(2) Event
Event is to search the data by the events. Select [All/Motion/Sensor/Audio].

(3) Multi mode
Multi-Channel: The user can playback the video contents of the certain channels recorded
in specific time simultaneously.
Multi-Time : The user can playback the video contents of the certain channels recorded
in different time zone simultaneously. Entering into the search mode
during the Multi-Time playback leads to the Multi-Time Search.
Multi-Date : The user can playback the video contents of the certain channels recorded
in different dates simultaneously. Entering into the search mode during the
Multi-Time playback leads to the Multi-Time Search.
(4) Channel
User can select the specific channel when selecting Multi-Time/Multi-date in Multi-mode.

2 - 6 - 3 Time Search
User can search the specific date and time records.
[Figure 2-18. Time Search Window]

2 - 6 - 4 Go To The Last
The user can search and playback the last (ahead of 5 minutes) recorded data by Multi-Channel Mode.

2 - 6 - 5 Go To The First
The user can search and playback the first recorded data in HDD by Multi-Channel Mode.

2 - 6 - 6 Go to The Last Played Time
The user can playback from the last played time.

2 - 7 Playback

[Figure 2-19. Playback Screen]

※ There are five routes to play the recorded image.
   ➢ Playback in the Calendar Search
      Select **{Playback} in {Menu} → {Search} → {Calendar Search} → {Search}**.
   ➢ Playback in the Go To The Last
      Select **{Menu} → {Search} → {Go to The Last}**.
   ➢ Playback in the Go To The First
      Select **{Menu} → {Search} → {Go To the First}**.
   ➢ Playback in the Last Played Time
      Select **{Menu} → {Search} → {The Last Played Time}**.
   ➢ Playback in the Log View
      After selecting **{Menu} → {Miscellaneous} → {Log Viewer},** select or double-click the
      time line listed to play.

※ Our products provide a variety of the playback as follows.

   ● **Calendar Search**
   ● **Multi-Time**
   ● **Multi-Day**
   ● **Panorama Play**
   ● **Event Play**
   ● **Zoom Play**

2 - 7 - 1 Playback and Playback Speed Control
   ① In the Playback mode, the user can playback video contents by using buttons as shown below.
   ② After the data is played to the end, the data of the next time zone will be automatically searched and
       played (this function is possible only in the Multi-channel Playback mode; both backward playback and
       forward playback are possible).

③ Pessing buttons, the user can adjust the playback speed by(x 1) / (x 2) / (x 4) / (x 8) / (x 16) / (x 32) / (x 300).

[Figure 2-20. Playback Status and Control Window]

Description of the Search Buttons		
Button	Name	Features
	Channel Mode Change	Switch the channel mode.
	Zoom Mode	Switch to the Zoom mode.
	Forward Play / Fast Forward	Press one time - Playback forward (x 1)
		Press two times - Fast forward (x 2)
		Press three times - Fast forward (x 4)
		Press four times - Fast forward (x 8)
		Press five times - Fast forward (x 16)
		Press six times - Fast forward (x 32)
		Press seven times - Fast forward (x 300) Pressing one more time in x300 leads to x1 back.
	Forward Frame by Frame	Playback frame-by-frame Pause
	Pause	Pause
	Reverse Frame by Frame	Reverse playback frame by frame Pause
	Reverse Play / Fast Reverse	Press one time - Playback reverse (x 1)
		Press two times - Fast reverse (x 2)
		Press three times - Fast reverse (x 4)
		Press four times - Fast reverse (x 8)
		Press five times - Fast reverse (x 16)
		Press six times - Fast reverse (x 32)
		Press seven times - Fast reverse (x 300) Pressing one more time in x300 leads to x1 back.
LIVE	Live button	Exit out of Playback Mode.
x1		Status bar indicating information of the hourly recorded image data and the speed

Selecting the right-mouse button or menu button in the Playback Mode pops up the {Playback Menu} as shown below.

18

[Figure 2-21. Playback Menu]

2 - 7 - 2 Calendar Search
Move to {Menu} -> {Search} -> {Calendar Search} and then a searching window pops up.
Check [Figure 2-21. Playback menu]

2 - 7 - 3 Multi Time
The user can playback the video recorded image of the certain channel recorded in different time zones simultaneously. The arrangement of the searching result is the past to recent format.
Check [Figure 2-21. Playback Menu]

2 - 7 - 4 Multi Day
The user can playback the video recorded image of the certain channel recorded in different dates simultaneously. The arrangement of the searching result is the past to recent format.
Check [Figure 2-21. Playback menu]

2 - 7 - 5 Audio
Audio is to select the use of mute function in the recorded data.
Check [Figure 2-21. Playback menu]

2 - 7 - 6 Event
Event is to search and play events [All/Motion/Sensor/Audio].
Check [Figure 2-21. Playback menu]

2 - 7 - 7 Backup
The user can save the backup image data and capture the image into [USB/External Device].

Backup	Save the recorded data into [External Device].
Snapshot	Capture and save the current displaying screen.

Check [Figure 2-21. Playback menu]

2 - 7 - 8 Screen Mode
Screen division is available in the Playback mode as same in the Monitoring Mode.
Select the screen division mode by using the mouse or arrow keys in the front panel and remote controller.

[Figure 2-25. Control bar]

2 - 8 Log Viewer
DVR/NVR records all Log information over the system operation including Power on/off, System Setup and Network Access. Move to {Menu} -> {Miscellaneous} -> {Log Viewer} to see the logs.
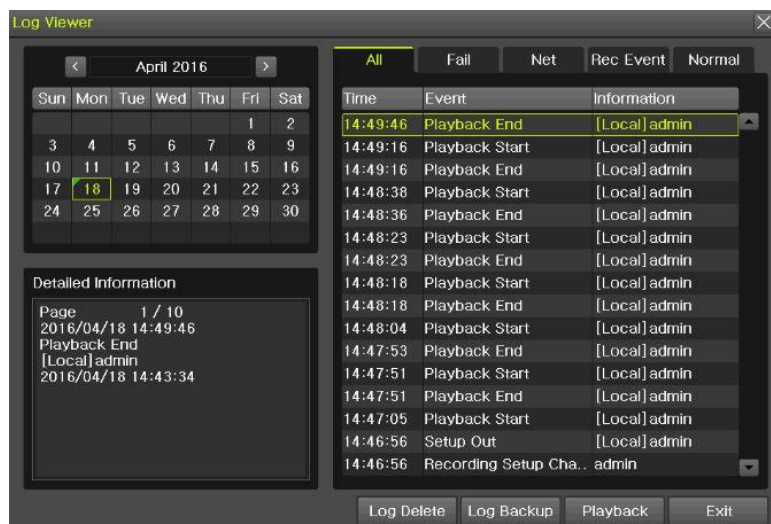

[Figure 2-26. Log Viewer]

2 - 8 - 1 Log Type

General	Logs related to power ON/OFF, file copy/backup failure, setup start/end, playback, and other basic system operations
Recording Event	Logs related to the recording including motion detection and sensor detection, Audio detection
Network	Logs related to network operations including network login, network logout, and network live
Fail	Logs related to system operation failures including signal loss and network connection failure
All	Logs related to all system operations

2 - 8 - 2 System Log Viewer

① In the real-time monitoring mode, {Menu} {Miscellaneous} {Log Viewer}, then, Log List Window pops up.

② On the activated calendar window, select the desired date (year/month/day) by using the arrow keys and the Select button.

③ The user can check the time and the log type by using the arrow keys in the log list.

④ Use the Up/Down button to check the logs by time and type on each page.

⑤ The user can shift the focus to a certain time zone to play the certain time (playback will start from the time point when logs are saved)

⑥ Click the right-mouse button or select {Menu} button in the remote controller and select {Hour} to move the desired log time zone.

	Time Changed Log Data View The stored data folder is created each time the user changes the time. A blue triangular icon is displayed at a date in the calendar window that time changes are made. Otherwise, a red triangular icon is displayed at an unchanged date. To view the log details, select the desired date with a red icon. Selecting a date with the blue icon causes the changed date list window to appear.

2 - 9 Recording

2 - 9 - 1 Recording Type

It supports various recording types as shown below.

Recording Type	Description
Continuous	The Continuous recording will be initiated based on the general frame rate.
Motion	When motion is detected, the recording will be initiated based on the event frame value.
Sensor	When input signal from an external sensor is generated, the recording will be initiated based on the event frame value.

Audio	When audio is detected, the recording will be initiated based on the event frame value.

2 - 9 - 2 Recording Setup
Move to {Menu} -> {Setup} -> {Recording} -> {Recording}.

2 - 9 - 3 Recording Status View
1) Recording Status by Color

<table>
<tr><th colspan="3">※ Recording Event / Recording Mode Icon ※</th></tr>
<tr><td rowspan="3">Recording Event</td><td>M</td><td>Motion Detection Recording</td></tr>
<tr><td>A</td><td>Audio Recording</td></tr>
<tr><td>S</td><td>Sensor Recording</td></tr>
<tr><td rowspan="2">Recording Mode</td><td>V</td><td>Video Recording</td></tr>
<tr><td>A</td><td>Audio Recording</td></tr>
</table>

2 - 1 0 Backup.
In order to backup the data, make sure to check that external storage devices (CD, DVD or HDD) supports USB 2.0 interface is connected. The user can back up data in the real-time monitoring, search, log, or the playback mode.

⚠ ※ In case of using USB with NTFS file system, 'Hardware safety removal' is necessary from Windows. If not, USB memory can be damaged.

After the backup, USB can be removed from DVR/NVR.

[Figure 2-27. Backup Menu]

2 - 1 0 - 1 Backup in the Real-Time Monitoring Mode

① In the real-time monitoring mode, select {Menu} -> {Backup} -> {Backup}. The backup menus will then appear.

② The automatic backup time is set to 5 minutes before the Copy (Backup) button is pressed, and the end time, to the time the Copy (Backup) button is pressed.

③ All channels containing data at the time of backup are backed up automatically. Depending on the divided screen mode, however, only those channels that can be viewed may be selected.

④ For the remaining backup procedures, see [2-10-5 Common Backup Procedure].
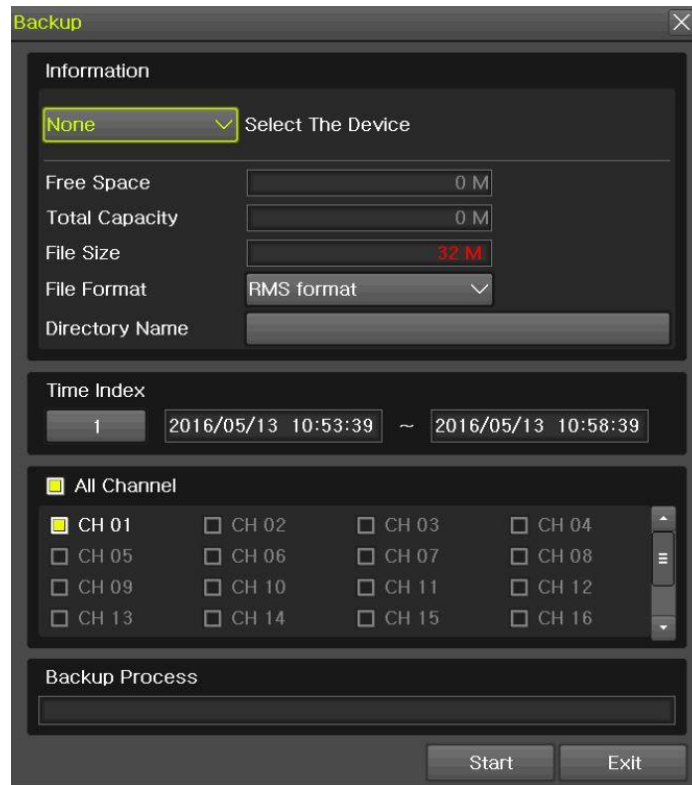

[Figure 2-28. Backup in the Real-Time Monitoring Mode]

2 - 1 0 - 2 Backup in Search Mode

[Figure 2-29. Backup in Search Mode]

① Select {Menu} -> {Search} -> {Calendar Search}.

② The automatic backup start time is set to the year/month/date/hour/minute set
   in the search mode, and the end time, to the last minute/second of the data
   existing at the selected time.

③ All channels with existing data at the time of backup are backed up automatically.

④ For the remaining backup procedures, see [2-10-5 Common Backup Procedure].

2 - 1 0 - 3 Backup in Log Mode
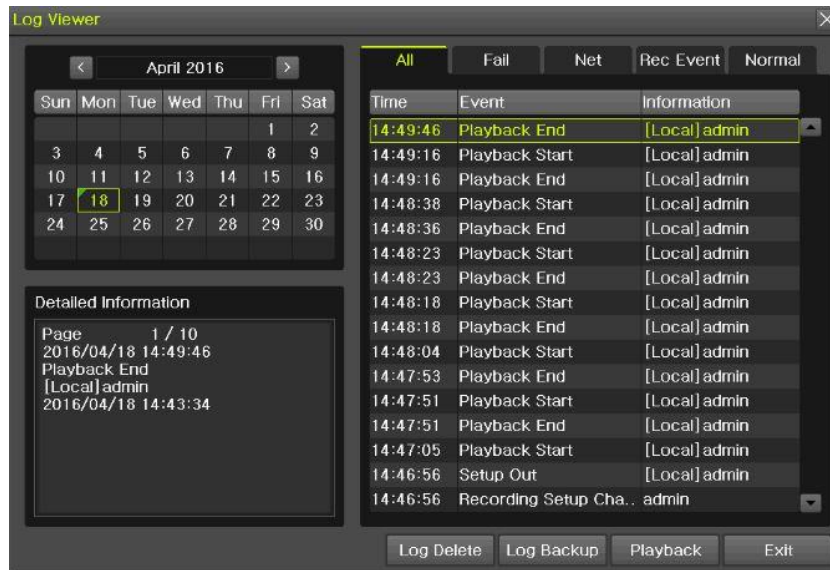

[Figure 2-30. Backup in Log Mode]

① Select a date in {Menu} -> {Miscellaneous} -> {Log Viewer} and select a log related to the data to be backed up.
② Click the right-mouse button or select {MENU} button in the front panel.
③ The automatic backup time is set to 5 minutes before the selected log is generated, and the end time, to the time the selected log is generated.
④ All channels with existing data at the time of backup are backed up automatically. If a log has   been generated for a specific channel, however, then only that channel is selected.
⑤ For the remaining backup procedures, see [3-10-5 Common Backup Procedure].

2 - 1 0 - 4 Backup in Playback Mode

[Figure 2-31. Backup in Playback Mode]

① In the Playback mode, select {Menu} -> {Backup}. Any playback in progress at this time will stop.
② The automatic backup time is set to 5 minutes before the Copy (Backup) button is pressed, and the end time, to the time the Copy (Backup) button is pressed.
③ All channels containing data at the time of backup are backed up automatically. Depending on the divided screen mode, however, only those channels that can be viewed may be selected.
④ For the remaining backup procedures, see [2-10-5 Common Backup Procedure].

2 - 1 0 - 5 Common Backup Procedure

24
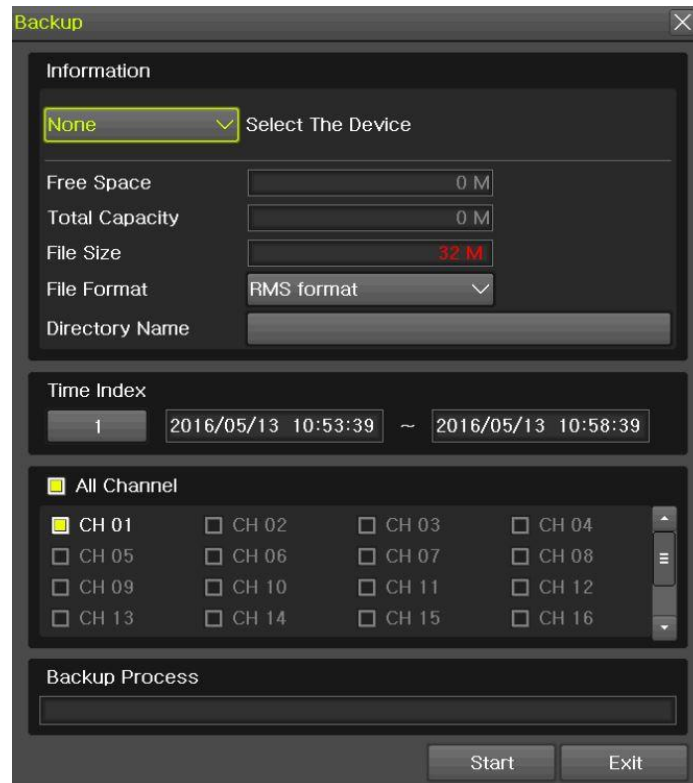

[Figure 2-32. Backup Window]

① [Figure 2-33] shows the initial backup window menus.

② A list of the devices that can be selected is outputted with simple information of the currently selected devices

③ Selecting a device by pressing the Select button causes the free space and total capacity for the selected device to be displayed.

④ Selecting a device causes the directory name based on the initial values for the time and channel to be displayed and the size of the file to be backed up to be calculated.

⑤ The directory is named as same with the backup time. The first 12 digits are determined by the year/month/day/hour/minute/second for From, and the 12 digits in the middle, by the year/month/day/hour/minute/second for To. The last 2 digits are determined by the number of folders in the selected device.

⑥ Selecting a device enables selecting the backup time as well.

⑦ To change the start and end time, press the Select button after choosing the start and end time. Change year/month/day/hour/minute/second by using arrow keys.

⑧ Changing the backup time causes the name of the directory to be backed up to be changed as well.

⑨ Select [Yes/No/Cancel] after pressing Start button.

⚠ ※ In case of AVI file, select [Yes] to back up the data or [No] to stop the backup. Otherwise, press the [Cancel] button to return to the device selection mode on the backup window.

2-1 1 Setup Backup
The Setup Backup is to back all setup values of the current menu up. This function enables the user to copy the setups and apply them into other devices.

[Figure 2-33. Setup backup]

①   For the Setup Backup, a device for backup must be connected.

②   Move to {Menu} -> {Backup} -> {Setup Backup} and a window shown below appears. The setup is copied by the name shown below.

[Figure 2-34. Setup Upgrade]

Saved as the name below..

⚠   H6E04_V1.3.003_20160414_172843.bin
      ①   ②   ③   ④
    Model /   Version   /   Date   /   Time

③   Move to {Menu} -> {Setup} -> {System} -> {Upgrade} -> {Setup} after insert the backup device.

④   With this way, the user can upgrade a new device with the current setup values in easy way.

2-1 2 Log Backup

This is to back logs up including General/ Recording Event / Network / Fail.
Move to {Menu} -> {Backup} -> {Log backup} and start the backup process after selection of the events.
[Figure 2-35. Log Backup]

⚠️ Log files are created at a folder shown below.
📁 20100303_20100303_02_LOG
565645348945_20100303.log
Log file is the text file.

2-1 3 Capture

The Capture function lets the user create a JPG file in the real-time monitoring, playback, search, or log mode and back up the image data.

[Figure 2-36. Capture]

To back up the currently displayed image, select {Menu} -> {Backup} -> {Capture} in real-time monitoring, Playback and Log mode.

2 - 1 4 QR Code(Network information)

QR Code is the function to connect the DVR /NVR scanning the QR code image. The user can connect the devices through the application named 'CCTV SMART VIEWER'.

[Figure 2-37. QR Code]

Chapter 3. Setup

3 - 1 Time

※ **Function Description**

1. Time Synchronization

1) Synchronization with the NTP server

The time is synchronized once every hour with the NTP Server.

　A. Automatic Setup

The nearest server from the user's zone will be selected for connection. If the connection fails, the next nearest server will be chosen.

　B. User Setting

The user sets the URL or IP for the NTP server. If connection is not established, a message will be sent to the user, and the related log, saved.

If synchronization with the NTP server fails, synchronization with RTC will be established.

2. Daylight Saving Time (DST) Setup

Regardless of whether NTP server or DST server is referred to, DST is automatically processed according to the time.

3. Time Setup by User

The user can set the time directly.

For the NTP client setup, the user can read the time but not change it.

※ Move to {Menu} -> {Setup} -> {Time} to set up time functions.
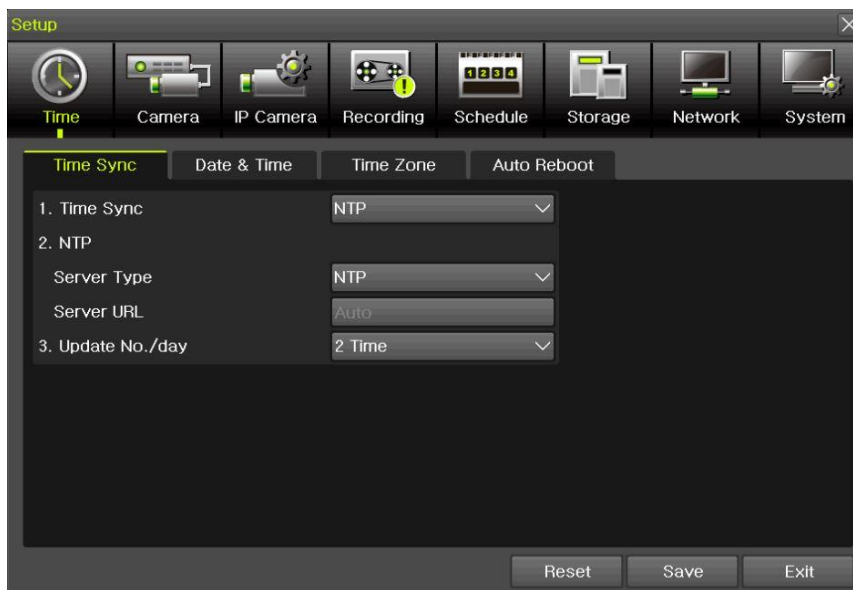

[Figure 3-1. Time Menu]

3 - 1 - 1 Time Sync

Select Time Sever / Sever Type / Sever URL.

Off	The time server is not used.
NTP	NTP is used to set the time for the time DVR/NVR

⚠️ **{NTP} setup is available when {Time Sync} is set as NTP.**
Server URL is [Auto] when the server type is [NTP]. The user can enter the IP, URL when the server type is [PC]

3 - 1 - 2 Date and Time
    (1)Date and Time
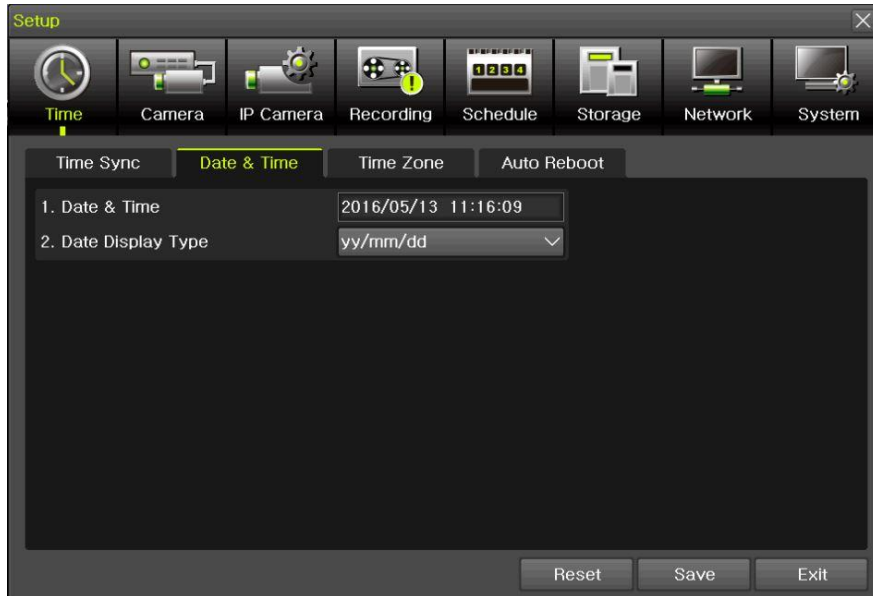

[Figure 3-2. Date and Time]

⚠️   Only available when Time Server is off.

The system date and time format is Year/Month/Day/Hour/Minute/Second.

    ①   By using the arrow keys and the Select button, move the focus onto the desired field; Year/Month/Day/Hour/Minute/Second and press the Select button.
    ②   Select a field you want to change by using the arrow buttons and press the Select button.

    (2)Time Display Format

Select Time Display Format among [Day/Month/Year] / [Month/Day/Year] / [Year/Month/Day].

3 - 1 - 3 Standard Time Zone
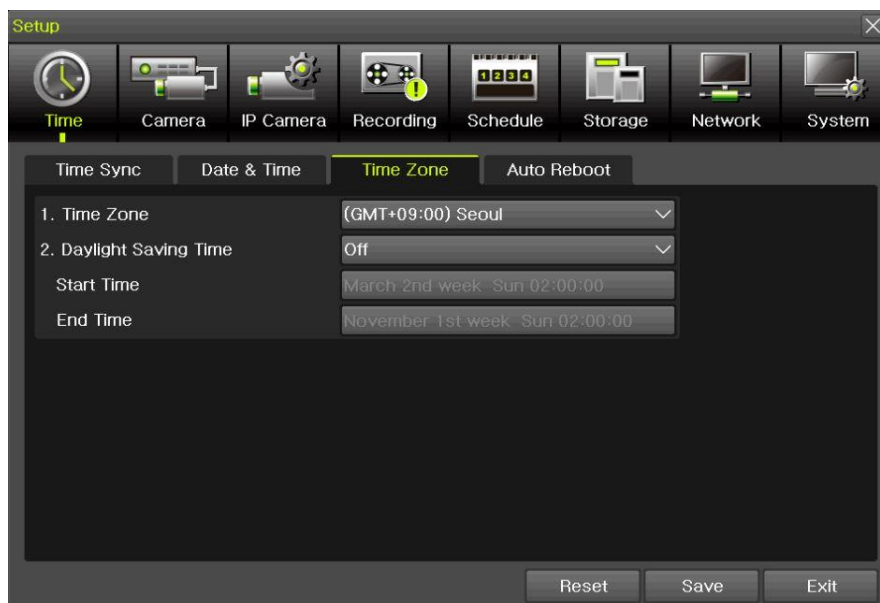

[Figure 3-3. Standard Time Zone]

(3)Standard Time Zone

① Select {Standard Time Zone}.

② On the selection window, select the standard time zone you want to set.

(4)DST

① By using the arrow keys and the Select button, select {Summer Time}.

② On the selection window, select On/Off by using the arrow keys and the Select button.

(5)Start Time

① By using the arrow keys and the Select button, select {Start Time}.

② On the selection window, set up Start Time by using the arrow keys and the Select button.

(6)End Time

① By using the arrow keys and the Select button, select {End Time}.

② On the selection window, set up End Time by using the arrow keys and the Select button.

	※ For a weekly setting in the {Start Time} and {End Time} fields, set Day to [week]. ※ After the Daylight Saving Time is selected, the existing data will be displayed as "OLD_" in the search and log list.

3 - 1 - 4 Auto Reboot
Auto Reboot is for system stability, rebooting itself regularly.

[Figure 3-4. Auto Reboot Menu]

3 - 2 Camera
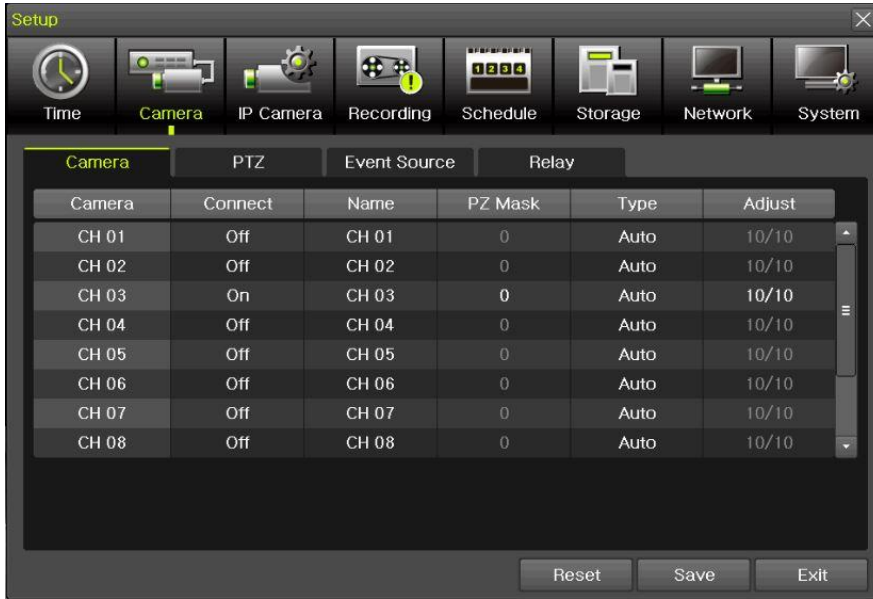

[Figure 3-5. Camera Menu]

※ **The channels which are connected with IPCAM in DVR/NVR are not available with the following features. [PZ Mask, Type, Adjust]**

3 - 2 - 1 Camera

① Connection
   Used to set whether to connect or disconnect each camera channel.

   ⚠ ※ When the camera channel is set to disconnected, the video contents will not be displayed even if the camera is actually connected.

② Title
   Name each camera. Max. 10 letters, 20 numbers are available.

③ Privacy
   The feature that the monitors can't see the specific parts of the real-time monitoring channel.
   Privacy setting available once selecting the privacy tab of each channel. And the screen is converted to 1ch mode accordingly.

   Max.4 privacy parts are available.
   ※ **The channels which are connected with IPCAM in DVR/NVR are not available with this feature.**
[Figure 3-6. Privacy Menu]

④ Type
 Set the camera type. There are different camera types depending on the models.
 Please note that IPCAM & EX-SDI 1HDD Bay models do not support the camera type setting.
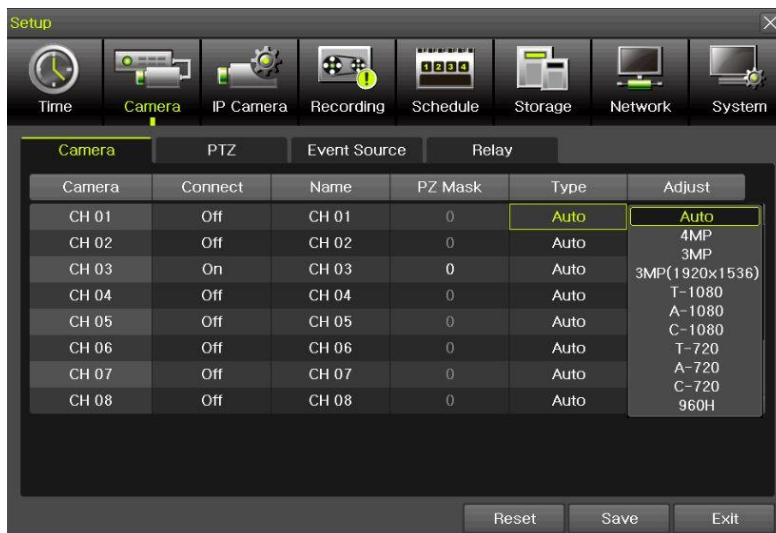

[Figure 3-7. Camera Type Menu]

※ **The channels which are connected with IPCAM in DVR/NVR and EX-SDI 1HDD Bay models
   are not available with this feature.**

⑤ Adjust (IPCAM)
 Adjust Brightness/Contrast/Color/Saturation/Sharpen/Camera.
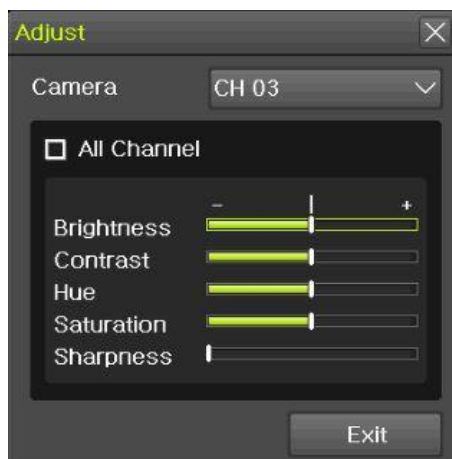

[Figure 3-8. Camera Adjust Menu]

※ **The channels which are connected with IPCAM in DVR/NVR are not available with this feature.**

3 - 2 - 2 PTZ

Setup the protocol and baud rate of the PTZ Camera.
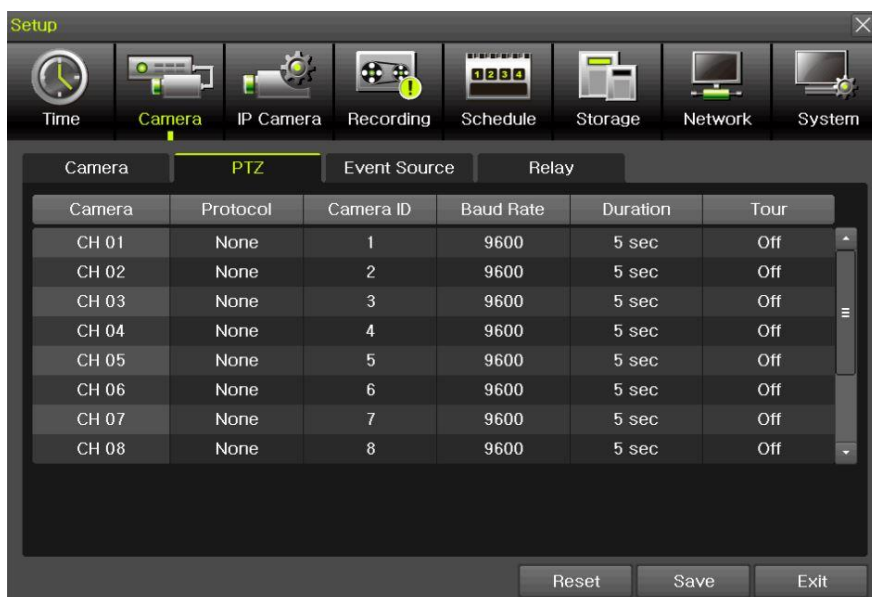

[Figure 3-9. PTZ Menu]

※ **IPCAM supporting PTZ is set to Protocol as IP Camera automatically.**

3 - 2 - 3 Event Source

Select **{Menu}** → **{Setup}** → **{Camera}** → **{Event Source}**.
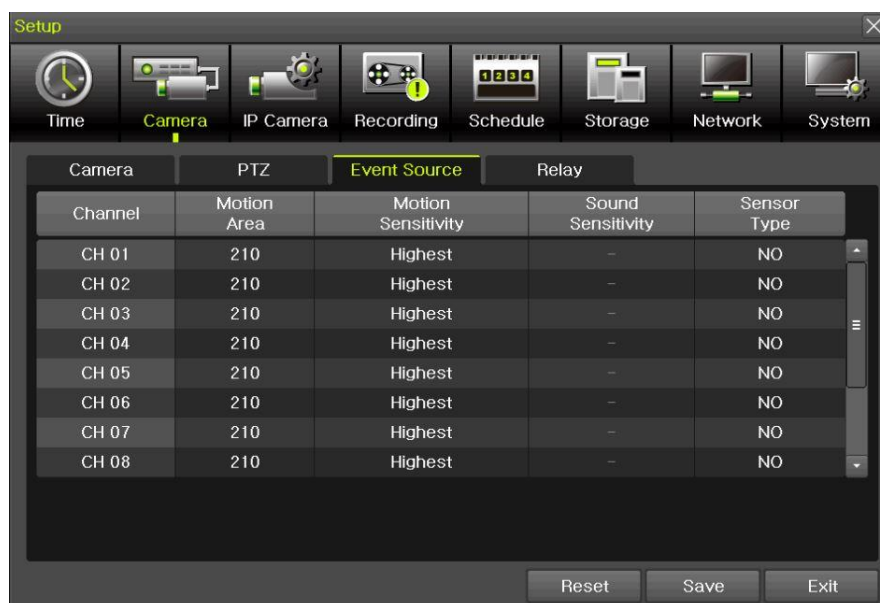

[Figure 3-12. Event Source Menu]

(1) Motion Area
The user can setup the motion detection area.

[Figure 3-13. Motion Area Setup]

① Select Motion Area of each channel.
② It becomes the 1 channel division mode and rectangular boxes appear where motions occur. Drag the yellow pixel cursor by using the mouse or the front button/remote controller and select pixels where motion detection doesn't applied. The selected area turns black.
③ Click the right button of the mouse to finish.

(2) Motion Sensitivity: Lowest/Low/Middle/High/Highest.
(3) Sound Sensitivity: Lowest/Low/Middle/High/Highest
(4) Sensor Type: Select the sensor type. (NO/NC)

3 - 2 - 4 Relay

[Figure 3-14. Relay Type Setup]

Select the relay type. (NO/NC)

3 - 3 IP Camera

3 - 3 - 1 IP Camera Setup
IP Camera can be registered to NVR. The user can check the information of IP Camera channel, Model Name, IP, Port and Protocol.

[Figure 3-15. IP Camera Setup]

    ①   Click [Search] button.

[Figure 3-16. IP Camera Search]

    ②   Check the camera search list [Figure 3-16. IP Camera Search]

[Figure 3-17. IP Camera Registration]

③ Click [Register] button after selecting the camera among the searched IP cameras.

④ Select ID/PW, Port and Protocol of IP camera and click [Register] then finish the registration

⑤ In case of registration with POE, it'll take about 1-3 minutes after connecting the IP camera.

And [Figure 3-18. IP Camera Link up using POE] is displayed on the screen.
[Figure 3-18. IP Camera Link up using POE]

⑥ After finishing IP Camera Link up, the registration popup appears on the screen.

⑦ Finish the IP Camera registration by clicking the registration button after selecting ID/PW, Port and Protocol of IP camera.

3 - 3 - 2 IP Camera Stream Setup

[Figure 3-19. IP Camera Stream Setup]

① Select the stream of the channel

[Figure 3-20. IP Camera Stream Change]

② Click [Change] button after setting [Resolution, Bit Rate, Frame Rate]

3 - 3 - 3 IP Camera Search Protocol Setup

[Figure 3-21. IP Camera Search Protocol Setup, Plug & Play Setup]

IP Camera Search Protocol Setup, Plug & Play Setup feature.
Plug & Play is only available with POE supporting models.
Input the information of IPC ID/PW/Protocol to NVR. Then POE Camera Plug & Play feature is available.

3 - 3 - 4 IP Camera Information
[Menu] → **[Setup]** → **[IP Camera]** → **[Register]** → Select the camera and camera information.

[Figure 3-22. IP Camera Information]

The user can check the IP Camera information connected to NVR.

3 - 4 Recording
The Main setup is to configure the environment of record and system and major functions.
In the real-time monitoring, move to **{Menu}** → **{Setup}** → **{Recording}**

[Figure 3-23. Recording Setup Window]

3 - 4 - 1 Schedule Selection (Schedule1 ~ Schedule4)
Each channel can be scheduled in 4 different schedules. This schedule can be set as the recording schedule and each time can be 4 different schedules.
"Event, Recording, Alarm, Duration, Log" setup is available to schedule 1~4 anytime the user want.
[Figure 3-24. Schedule Selection Window]

3 - 4 - 2 Event

[Figure 3-25. Event Setup Window]

This is to set the events On/Off of Motion / Sensor / Sound.

Recording Type	Description

41

Motion	When motion is detected, recording will be initiated based on the event frame rate.
Sensor	When input signal from an external sensor is generated, recording will be initiated based on the event frame value.
Sound	When audio is detected, recording will be initiated based on the event frame value.

※ **The channels which are connected with IPCAM in DVR/NVR are not available with the sound detection feature.**

3 - 4 - 3 Recording
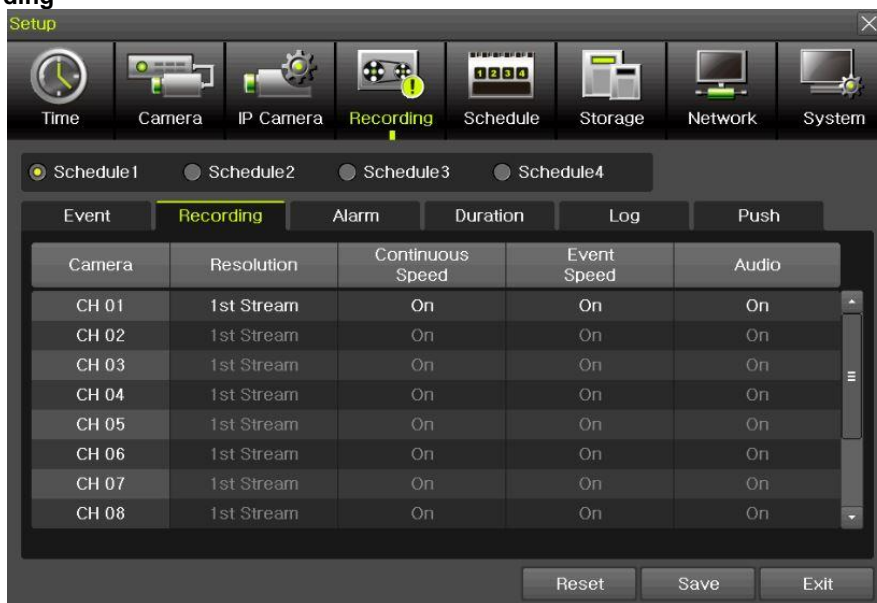

[Figure 3-26. Recording Setup Window]

Used to set the resolution of the recorded channel.

(7) Frame Rate

If the user configures Continuous recording and Event recording at the same time, the continuous recording follows Continuous Speed frame rate and the event recording follows Event Speed frame rate.

Continuous Recording	Set the recording frame rate for continuous recording regardless of events.
Event Recording	Set the recording frame rate for events.
Sensor	Set the recording frame rate for events once input signal occurs from the external sensor.

3 - 4 - 4 Alarm

[Figure 3-27. Recording Alarm Setup Window]

※ This function is used to generate alarms through the Buzzer / PTZ Preset / e-mail / Relay / Popup /　FTP in case of an event.

⚠ ※ Popup function is to inform event occurrence to the user through a warning window in the real-time monitoring mode.

3 - 4 - 5 Duration

[Figure 3-28. Duration Setup Window]

.
Setup Pre-Recording(On / OFF), Post-Recording(5 / 10 / 15 / 20 / 60 / 150 / 300 seconds).
※in Pre-Recording, images of the last 7 seconds before the event occurrence are recorded.

3 - 4 - 6 Log
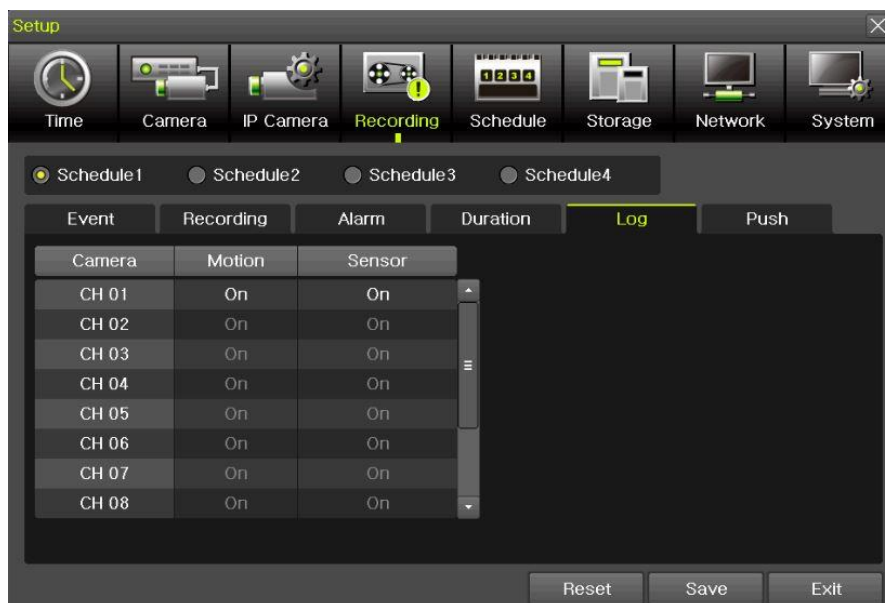

[Figure 3-29. Log Setup Window]

Setup On / Off for Motion / Sensor / Sound.
※ **The channels which are connected with IPCAM in DVR/NVR are not available with this feature.**

3 - 4 - 7 Push

[Figure 3-30. Push Setup Window]

Setup On / Off for Motion / Sensor / Sound.
※ **The channels which are connected with IPCAM in DVR/NVR are not available with this feature.**

3 - 5 Schedule
Provide 4 different recording mode configurations. Each schedule mode can be set one week/24 hours and
the recording follows the setting automatically.
Select **[Menu]** → **[Setup]** → **[Schedule]** in the real-time monitoring menu.
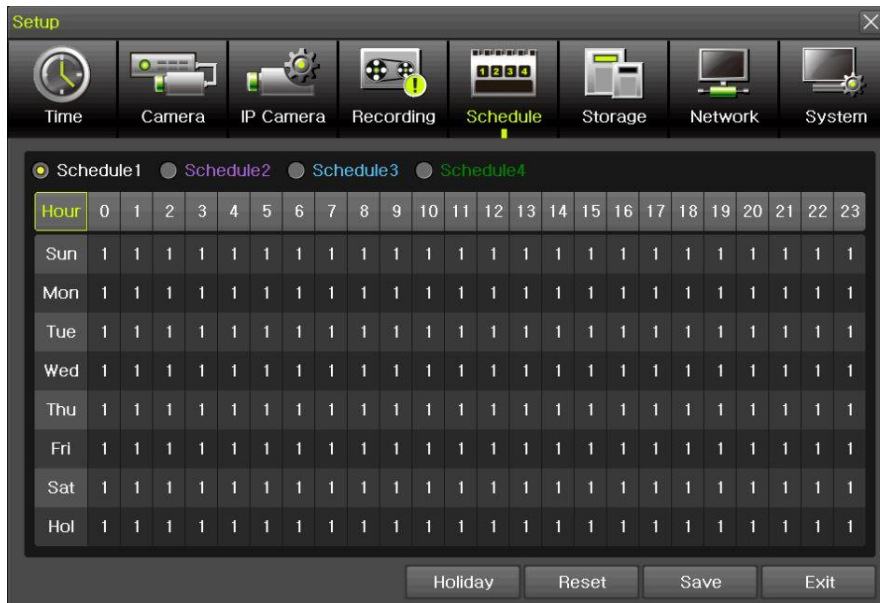

[Figure 3-31. Schedule Window]

3 - 5 - 1 Schedule Setup
Select one schedule among Schedule1, Schedule2, Schedule3 and Schedule4.

(1) Selection Tip

① Select the day and time to be set by using the arrow keys.

② Select after moving the cursor onto Time(0-23) or Day(Sun. – Holiday) then the user can configure the whole line at once.

③ Using the mouse can be easier.

(2)Holiday Registration
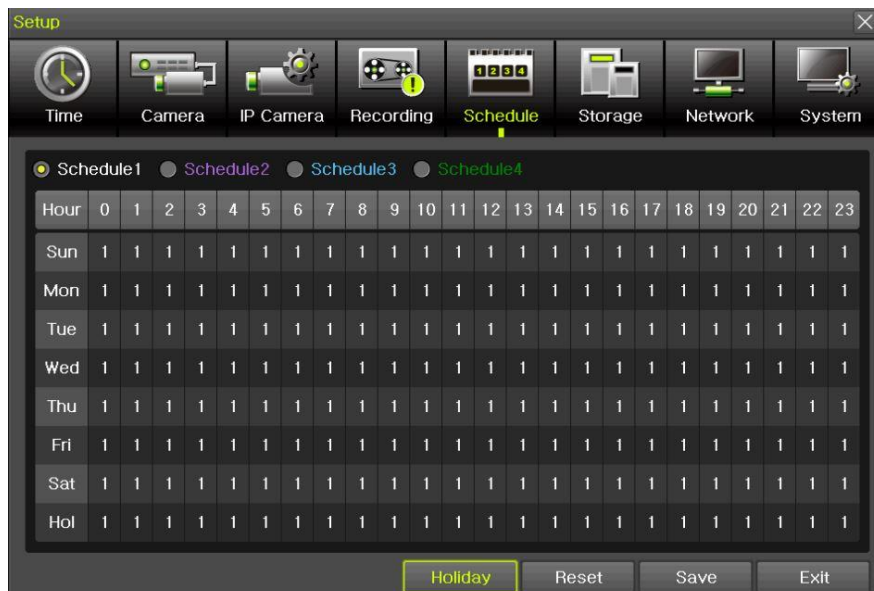

[Figure 3-32. Holiday Registration Window]

This feature is used to enable the user to set the holidays and schedule independently.

　① Move to {Schedule} -> {Holiday}.

📖	※ If the date for the holiday and day of the week are the same in the **{Schedule}** menu, the holiday setup will have priority over the date setup.
	※ Designated holidays are marked with a green tag.

　② On the Holiday Registration Window, select the date by using the arrow keys and the Select button and press the Select button.

　③ After setting the holiday, move to {Save} at the bottom of the menu. Afterward, press the Select button.

3 - 6 Storage
Select [Menu]->[Setup]->[Storage] in the real-time monitoring menu.
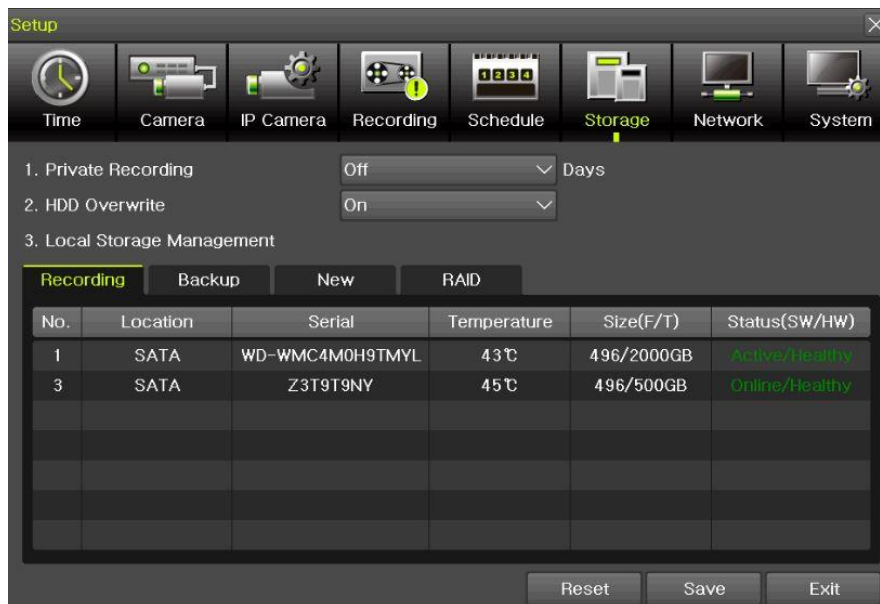

[Figure 3-33. Storage Device Window]

📖	In the Storage menu, To apply the new setting, save the new setting after changing the setting. **Reset**: Initialize the menu to the basic setting.

3 - 6 - 3 Max. Recording Days

This is to limit the recording days. None/1day/7days/30days/User setting(1-99) selection is available.

3 - 6 - 4 HDD Overwrite
Select On/Off for HDD Overwrite.

On	If there is no more hard disk space left, the existing files will be overwritten by starting with the oldest.
Off	If there is no more hard disk space left, the further recording will not be executed.

3 - 6 - 5 Local Storage Management
(1)Local Storage Management Function

Local Storage refers to the internal hard disk and storages connected to the system via USB. Local Storage is classified and managed as **{Recording}, {Backup}**, **{New}** and functions are described below.

    ① Recording
The Recording storage is managed in Direct. The Recording storage stores data on the hard disk in the real time. Two commands can be executed. Depending on the SW/HW status, however, some commands cannot be executed.

New	Returns the status of the selected storage device to New; if this command is executed, the selected storage device will be moved to the **{New}** storage device manager.
📖	※ Physical states supporting the execution of the commands above includes Healthy and Warning. In fault state, however, no command can be executed.

    ② Backup
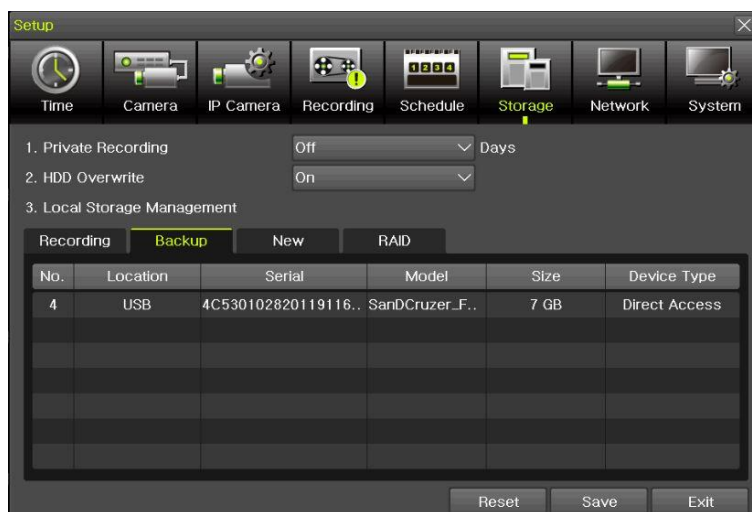

[Figure 3-34. Backup Storage Device Window]

The backup storage is managed in Backup. Backup storages are only used to back up the data.

⚠️   Depending on the storage type, the storage is used only for (Recording) or (Backup) purposes.

③ New

[Figure 3-35. New Storage Device Window]

All storages, initially detected are managed in {New}. All initially detected storages are displayed as New and can be changed into Recording storage or Backup Storage.

Recording-Format	Changes the selected storage into a dedicated recording storage.
Backup-Format	Changes the selected storage into a backup storage.

> ⚠ **Caution** In **{New}**, At least, one storage shall be selected as a dedicated storage. Otherwise, the data cannot be stored in the real time.

④ RAID : User can use RAID thru the e-sata storage only.

(1)Composition of the local storage device

	※ There are three software status types.
Active	Connected to storage or backup device; currently saving the data.
Online	Only connected to storage or backup device.
Offline	Not connected to storage or backup device.

3 - 7 Network
Select **[Menu]** → **[Setup]** → **[Network]**

3 - 7 - 1 Ethernet 1 (Client Port)
This is for the feature to do monitoring thru VMS, Web, Smartphone app.
It sets DHCP as default. DHCP can make the DVR/NVR to have the IP address from the router automatically. DHCP setting is recommended.
If user wants to use the IP address by manually, then unchecked DHCP and input the IP address user want.

[Figure 3-37. Ethernet 1]

① **[Menu] → [Setup] → [Network] → [Ethernet1]**

② Set the details then save. [IP address, Subnet Mask, Default Gateway, Primary DNS, Secondary DNS, Client Port, Web Server Port, Auto Port Forwarding]

③ Client port is for user's connection and it sets '50100' as default. It can be changed by user's situation like firewall or network status.

④ Web port is for user's web monitoring of DVR/NVR. It sets '80' as default.

⑤ We recommend to use the Client port and Web ports with '50100' and '80'.

⑥ 'Auto Port Forwarding': If user set it as 'On', it is no necessary to do Port forwarding at router. If the router is not supporting Port forwarding feature, user should connect to the router menu then do Port forwarding with Client and Web port.

3 - 7 - 2 Ethernet2 (IP Camera port)
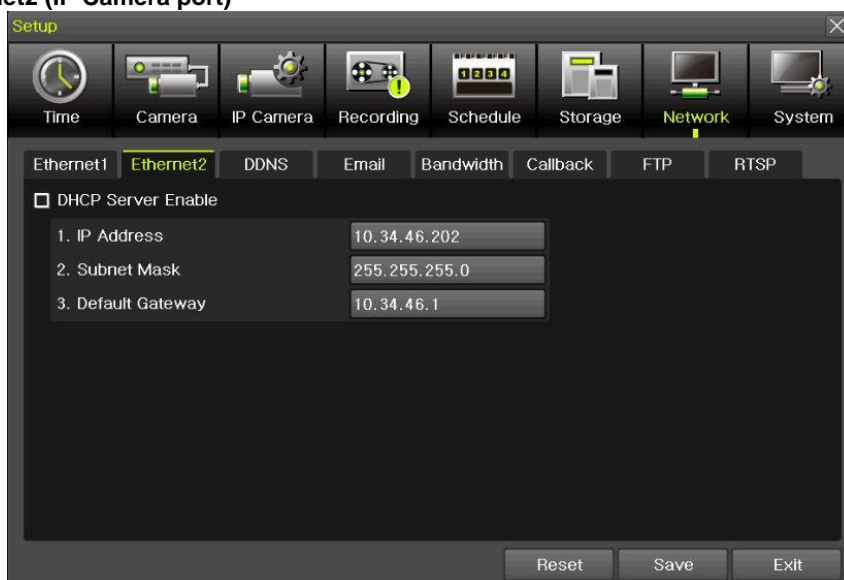

[Figure 3-38. Ethernet 2]

① **[Menu] → [Setup] → [Network] → [Ethernet2]**

② Set the details then save. [IP address, Subnet Mask, Default Gateway]

※ **This feature is available in NVR & DVR except EX-SDI DVR.**

49

3 - 7 - 3 DDNS

[Figure 3-39. DDNS setting]

DDNS(Dynamic Domain Name System): the Dynamic Domain Name System (DDNS) service updates IP addresses of the host name in the real time and allocates fixed domain names to systems linked to dynamic IP addresses to allow users to use the same DNS name regardless of the change of in the IP address. It provides dynamic DNS to ensure URL access in the dynamic IP environment. User can monitor the remote place thru internet with web server functions which is equipped in DVR.
DDNS helps the user who doesn't know the IP address to connect DVR/NVR by using Domain Name.

① Select On/Off of DDNS or a domain name to use by using arrow keys and the selection button.
② In case of DDNS On, enter the host name and save it then, the registration procedure of the host name proceeds automatically. You can enter the host name with 2-20 letters.
③ The host name to enter must not be pre-registered in DDNS sever. Otherwise it won't work.
④ The basic host name is the MAC address of appertaining DVR.
⑤ In case the host name have entered starts with "000c28", none of MAC address will work excepting for appertaining DVR's.
⑥ In case of DynDNS On, enter the host name, user name registered in DynDNS and password then, save them.

	※ Access to DynDDNS sever(http://www.dyndns.org) and apply for the user account then, register the domain name to use and enter URL.
	※ For more information, please access to the site.

3 - 7 - 4 E-mail

[Figure 3-40. E-mail]

This is to set automatic E-mail transmission service when an event occurs.

①　**[Menu] → [Setup] → [Network] → [E-Mail]**
②　To use the e-mail function, **{E-mail}** in **{Menu} → {Setup} → {System} → {9. Alarm}** or **{E-mail}** in **{Menu} → {Setup} → {Action} → {Alarm}** need to be configured.

③　Relay SMTP is set on 'Gmail' as default, but when 'Default' (in menu tab) is selected
④　Receiver Email can be set up to 5 users (emails).
⑤　Email Interval settings are as follows [5 sec / 1 min / 3 min / 5 min /10 min].

3 - 7 - 5 Bandwidth

[Figure 3-41. Bandwidth]

① **[Menu] → [Setup] → [Network] → [Bandwidth]**

② This sets up the limit of the bandwidth to be used when bringing the live image, adjust resolution/quality and transmitting the data by using the network.

※ In case of smartphone app monitoring, you can control the network resolution here to save the data cost.

Picture Resolution	CIF/2CIF/D1/960H/720P/1080P
Picture Quality	Adjust quality of the image, as the value increases, the compression rate gets higher and image quality gets low. However the transmission rate gets higher.
Bandwidth Limitation	Set the network bandwidth between 56 Kbps ~ 8 Mbps. The network transmission speed gets faster when value gets higher. Select Off if you don't want to limit the network bandwidth.
Transmission Code	JPEG / H.264
IPC Stream Bypass	NVR/DVR pass the stream of IPCAM to the network without filtering.

※ For 8/16 CH DVR/NVR, recording resolution for the DVR/NVR is same with the max network image resolution.
Example) if user sets 720p as recording resolution, network image resolution will be 720p even if you sent 1080p for Picture Resolution on Bandwidth.

※ **IPC Stream bypass features is available with the channel connected to IPCAM.**

3 - 7 - 6 FTP

[Figure 3-43. FTP setting]

This to be sent JPG image to FTP server when the event occurs.

① **[Menu] → [Setup] → [Network] → [FTP]**
② Select FTP1 or FTP2 then tick FTP Server Enable.

Server IP Address	FTP IP address
Port	FTP Port
User ID	FTP ID
User Password	FTP Password
FTP Directory	FTP location to save JPG image file JPG
TEST	Test button to make sure FTP server works or not

After setting FTP here, then go to **[Menu] → [Setup] → [Recording] → [Alarm]** then thru on for **FTP.**
After that, user can receive the JPG image file at FTP Directory.

3 - 7 - 7 RTSP

[그림 3-44. RTSP 설정창]

Tick RTSP Service Enable then set RTSP port.
Please refer to the example shown on the menu. This RTSP address makes user to see the camera.

3 - 8 System
[Menu] → [Setup] → [System]

[Figure 3-45. System]

ID for remote controller	ID to be controlled by Remote controller
Users	Users authorities, modification, add and delete
Upgrade	Upgrade, setup change, Logo change

54

Factory Setup	Go back to default setting except Network setting
Error Alarm Action	Alarm setting for many types of system failure
Error Alarm Duration	Set for Alarm duration
Menu Time Out	Time setting from menu to live display
Language	System OSD Language setting
Video Loss Event Delay Time	It keeps 'Video Loos' during the setting period, then Video Loss event comes out
BNC out type	HD, SD resolution selection

3 - 8 - 1 ID For Remote Controller
This to be set when user have many DVR/NVRs with one remote controller

	It shows how it works between DVR/NVR and Remote controller by using ID.
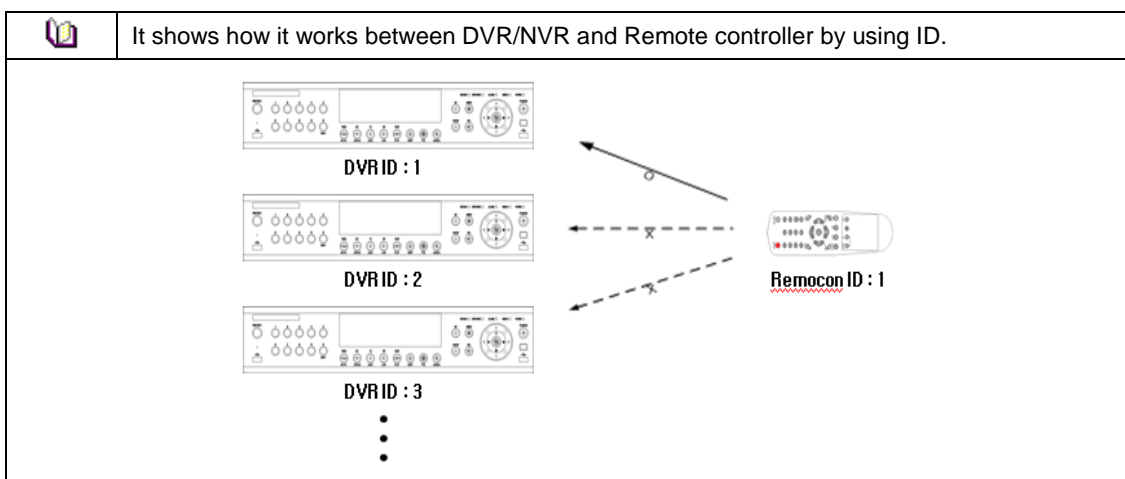

① **[Menu] → [Setup] → [System] → [ID for Remote Controller]**

	※ **To configure Remote Controller ID** (Example: ID setting as 3)
	1) Press {ID} button on the remote controller. 2) Press the {0} key and {3} key. 3) Press {ID} button again. 4) Remote Controller ID is set as 3.

3 - 8 - 2 Users

※ User's Authorization ※	
ID/PW	Admin can change the User's ID/PW ID/PW support max 31 letters and numbers
Network Live	Network Live
Playback (Download)	Local Playback Network playback/download
Local Backup	Local backup
Setup	Changing settings
PTZ Control	PTZ Control
Network Upgrade	Network upgrade control
Password	Password enable/disable
Channel Enable(user)	Authorization for each channels

⚠ Up to 14 users can be registered.
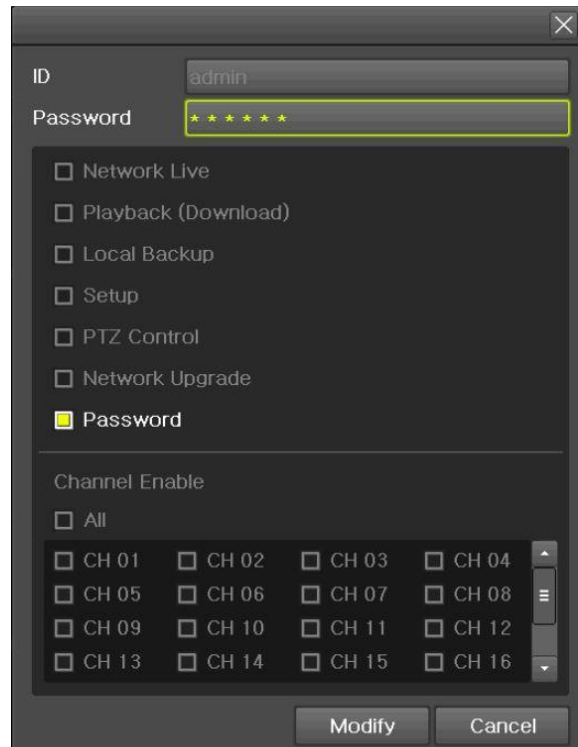

[Figure 3-46. Users → Modify]

3 - 8 - 3 Upgrade
To upgrade by external storage devices supports USB2.0.

※ Firmware which will be upgraded should be located to the highest(root) location from the external devices supports USB 2.0

⚠	1) After copying the upgrade file, be advised to get rid of the USB device with safety removal mode from PC. 2) If the USB device is disconnected from the USB port while the upgrade file is being copied, the DVR system may not automatically detect the file.

⚠ Caution	Removing USB during the upgrade in progress may cause damage on the system. The system starts over when the upgrade is completed.

(1) Firmware Upgrade method
①　Insert (input) USB 2.0 device into the DVR/NVR then select **[Menu]→[Setup]→[System]→[Upgrade-> firmware]** then you will see the menu below.
②　Find the correct firmware then do double click to upgrade

[Figure 3-47. Firmware Upgrade Method]

| ⚠️ | ※ After 3 ~15 Seconds, you can see the Firmware upgrade process menu. |

③ Read the information and select {Yes} to start the upgrade gradually. Select {No} to return to the **{System}** mode

④ After the upgrade is completed, the system reboots.

⑤ Move to **{Menu} →{Miscellaneous}→ {DVR Information} → {3. Software Version}** to check the   version.

(2) Setup Upgrade

① Select **[Setup]** and the upgrade file list stored in the selected device and simple version info of   the selected file are then displayed.

② Select a file and then the upgrade starts immediately.

| ⚠️ Caution | Select a file and then the upgrade starts immediately. All setting values of the current menu will be changed to the upgrade setting values. |

(3) Logo Upgrade

※ This to be changed to booting logo.

※ Image format: JPG format, booting logo image size [720 x 480]

3 - 8 - 4 Factory Setup
[Menu] → [Setup] → [System] → [Factory Setup]
Select Yes or No

| ⚠️ Caution | Take a note that all settings will be to default except network setting. |

3 - 8 - 5 Error Alarm Action

① **[Menu] → [Setup] → [System] → [Error Alarm Action]**

② This is to set the alarm which is serious for system operation

[Figure 3-48. Alarm Action]

[Figure 3-49. Alarm List]
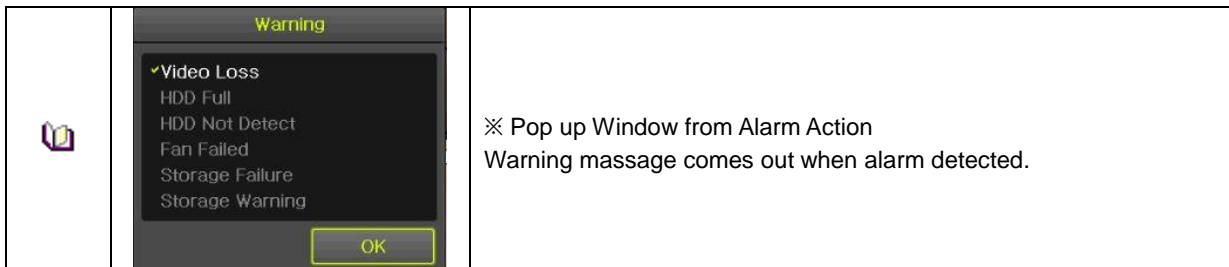

📖		※ Pop up Window from Alarm Action Warning massage comes out when alarm detected.

3 - 8 - 6 Error Alarm Duration
This is to set duration not only for alarm but also, recording.

3 - 8 - 7 Menu Time Out

If no input is made in the System Setup menu from the front buttons, remote controller and mouse, the system automatically shifts to the real-time monitoring mode.

3 - 8 - 8 Language

System OSD (On Screen Display) selection.

3 - 8 - 9 Video Loss Event Delay Time

This is to set the time for 'Video Loss' when the camera is disconnected.

Chapter 4. DVR / NVR Web Service

[DVR/NVR Web Service] through the Ethernet/Port setup and web server composition. The main purpose of DVR/NVR WEB SERVICE is for easy setup for users to control DVR/NVR setup and live view by WEB easily.

4 - 1 DVR / NVR Web Service

4 - 1 - 1 Web service connection

If the user is using the firmware 15.x.xxx, it means that DVR WEB SERVICE is available.
Check the URL and Web port that DVR/NVR IP or DDNS is set.
Input the confirmed 'IP or URL:Port' on the web browser then enter the page.
[Figure 4-1. Browser Address Input]

Then, user can see the log-in menu as follows.
Input ID/PW for the DVR/NVR. Click the [Login] button.

[Figure 4-2. Login Window]

	※ **This web service has been developed only for the Internet Explorer and Chrome. We can't guarantee the other web browser.**
⚠	**Recommended web browser:** **More than Internet Explorer 10** **More than Chrome 42.0** **More than Safari 5.1.7** **If the web browser is lower version, some features are not able to be controlled. In case of [PC Web Viewer Connection], it can be available with Internet Explorer.**

4 - 1 - 2 Web Service Feature

After log-in, [PC Web Viewer/Information/QR Code/JPEG Viewer/Calculator/Setup] features are available.

** The main screen composition is as follows.
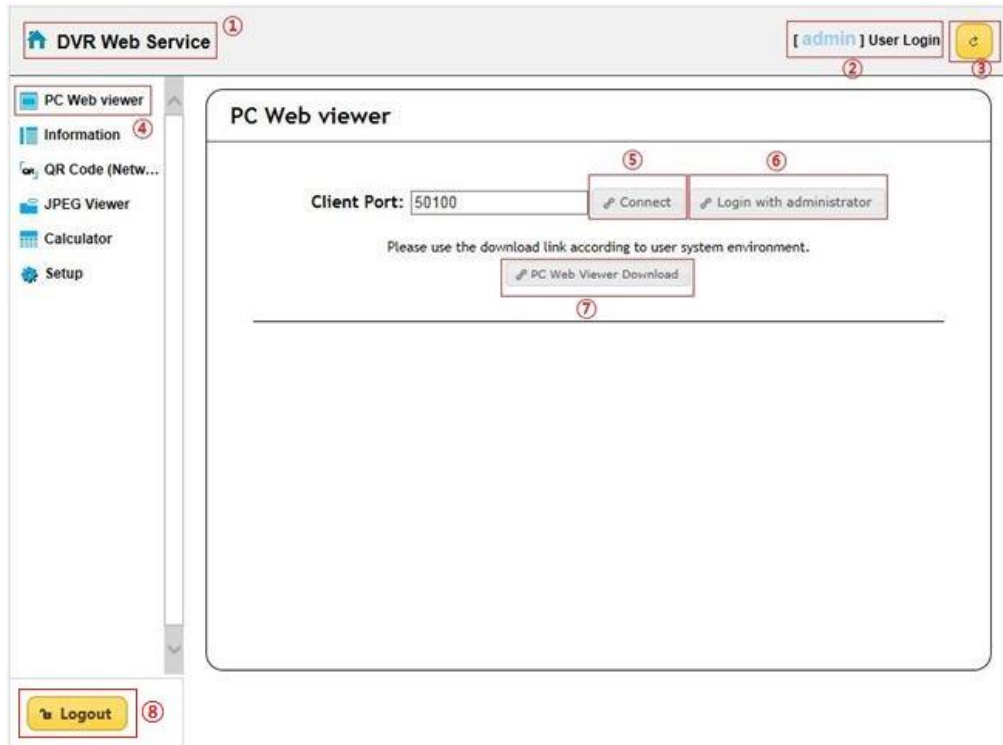

[Figure 4-3. Web Service Main Window]

① Go to main menu
② ID for the user log-in
③ Refreshing
④ Setup/Information/QR code/JPEG viewer/Calculator selection
⑤ PC web viewer connection (Real-Time monitoring and playback)
⑥ Login with administrator
⑦ PC web viewer download.
⑧ Log out

** Currently connected DVR / NVR information check is available.

[Figure 4-4. DVR / NVR Information Window]

** Connection available through the mobile app using the QR code.
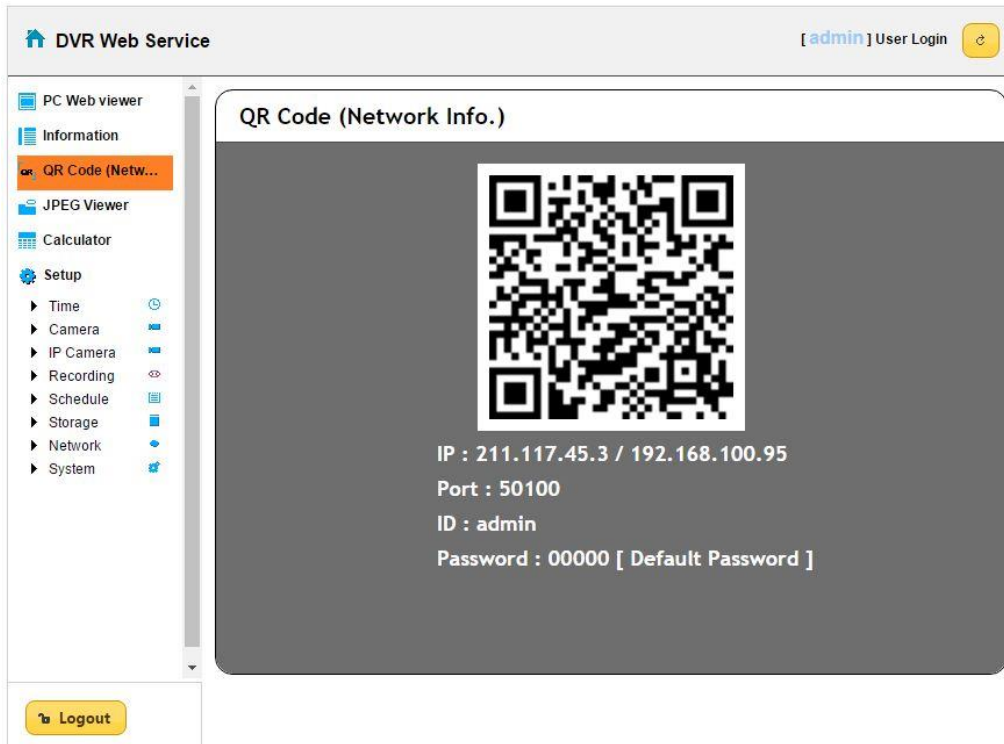

[Figure 4-5. QR Code Information Window]

** Real time video can be shown in seconds via JPEG image.
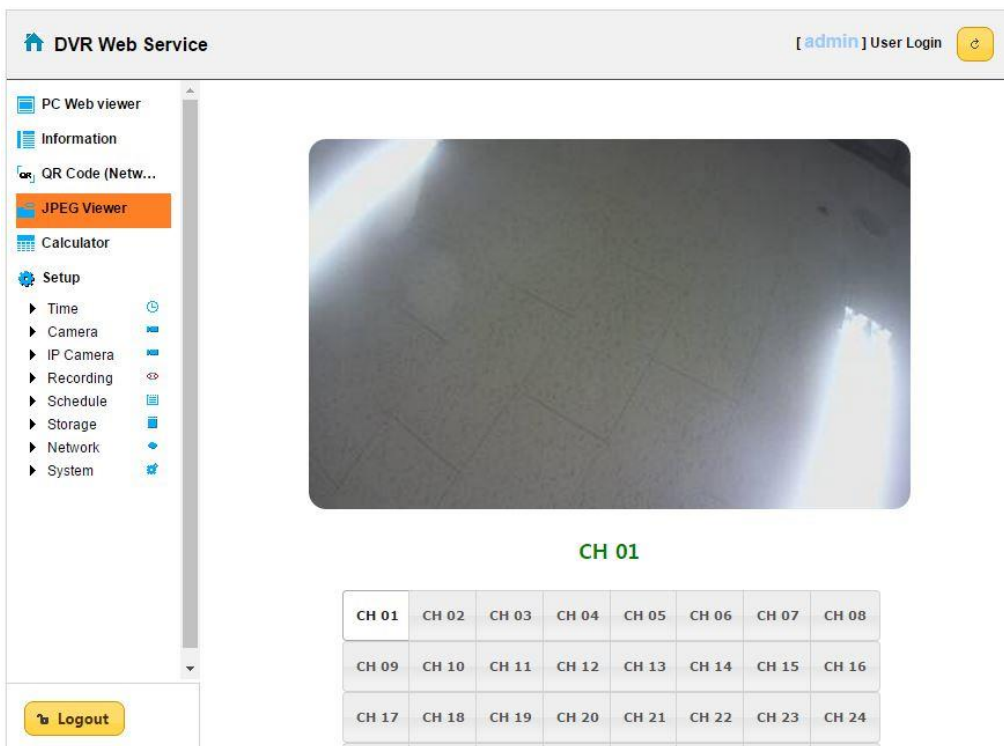

[Figure 4-6. JPEG Viewer]

** Depending on the recording setup, storable date and time can be calculated compared to disk capacity.

[Figure 4-7. Calculator]

** Recording setup is available by each channel.

[Figure 4-8. Setup Recording Page]

A/P/P/E/N/D/I/X
Recommended PTZ Camera Protocol

NO	Vendor	Model	Protocol
1	HONEYWELL	SCANDOME2	HSDN-251
2	LG	LG	LG_MULTIX,

- End -

Network Camera User Manual

Manual Version: V3.00

Thank you for your purchase. If you have any questions, please do not hesitate to contact your dealer.

Disclaimer

No part of this manual may be copied, reproduced, translated or distributed in any form or by any means without prior consent in writing from Zhejiang Uniview Technologies Co., Ltd (hereinafter referred to as Uniview or us).

The content in the manual is subject to change without prior notice due to product version upgrades or other reasons.

This manual is for reference only, and all statements, information, and recommendations in this manual are presented without warranty of any kind.

To the extent allowed by applicable law, in no event will Uniview be liable for any special, incidental, indirect, consequential damages, nor for any loss of profits, data, and documents.

Safety Instructions

CAUTION!
The default password is intended only for your first login. For security, we strongly recommend you set a strong password of at least 9 characters comprising digits, letters, and special characters.

Be sure to read this manual carefully before use and strictly comply with this manual during operation.

The illustrations in this manual are for reference only and may vary depending on the version or model. The screenshots in this manual may have been customized to meet specific requirements and user preferences. As a result, some of the examples and functions featured may differ from those displayed on your monitor.

- This manual is intended for multiple product models, and the photos, illustrations, descriptions, etc, in this manual may be different from the actual appearances, functions, features, etc, of the product.
- Uniview reserves the right to change any information in this manual without any prior notice or indication.
- Due to uncertainties such as physical environment, discrepancy may exist between the actual values and reference values provided in this manual. The ultimate right to interpretation resides in our company.
- Users are fully responsible for the damages and losses that arise due to improper operations.

Environmental Protection

This product has been designed to comply with the requirements on environmental protection. For the proper storage, use and disposal of this product, national laws and regulations must be observed.

Safety Symbols

The symbols in the following table may be found in this manual. Carefully follow the instructions indicated by the symbols to avoid hazardous situations and use the product properly.

Symbol	Description
⚠️ WARNING!	Indicates a hazardous situation which, if not avoided, could result in bodily injury or death.
ⓘ CAUTION!	Indicates a situation which, if not avoided, could result in damage, data loss or malfunction to product.
📝 NOTE!	Indicates useful or supplemental information about the use of product.

Contents

1 Login

1.1 Preparation

Refer to the camera's quick guide to install it properly, and then connect power to start up it. You can log in to the camera's web interface to perform management or maintenance operations.

The following takes IE on a Windows 7.0 operating system as an example.

1. Check before login

- The camera runs normally.

- The PC has a network connection to the camera.

- A web browser has been installed on the PC. Microsoft Internet Explorer 10.0 or later is recommended.

- For optimal display, it is recommended to choose a monitor with the highest resolution of the camera.

> **NOTE!**
> Recommended PC specifications for 32MP live view: CPU: Intel® Core™ i7 8700; Graphics card: GTX 1080; RAM: DDR4 8GB or higher.
3. **(Optional) Change user account control settings**

Before you access the camera, it's recommended to set **User Account Control** to **Never notify** as shown below.
1.2 **Login**

The default static IP address of the camera is 192.168.1.13, and the default subnet mask is 255.255.255.0.
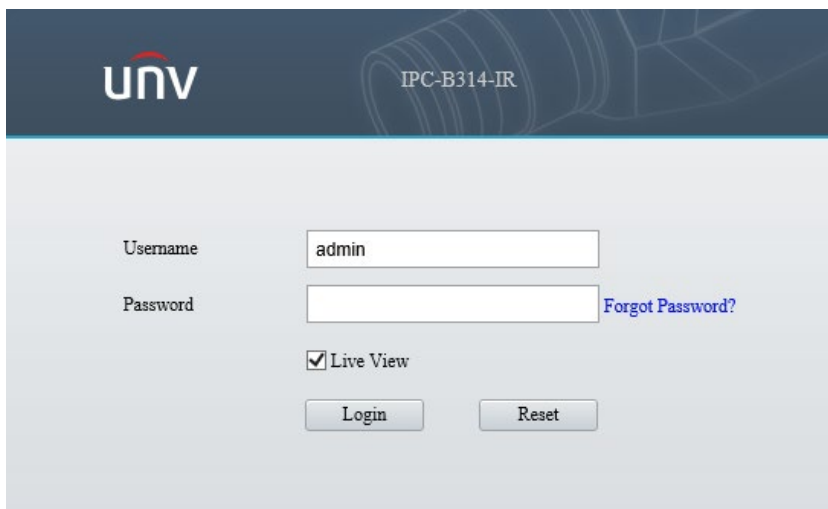

DHCP is enabled by default on the camera. If a DHCP server is deployed in the network, the camera may be assigned an IP address, and you need to use the assigned IP address to log in.

Follow the steps below to log in to the camera's web interface (take IE10 as an example):

1. Open IE, enter the IP address of your camera in the address bar and press **Enter**.

2. At your first login, you need to follow the on-screen instructions to install a plug-in (close all browsers before installation), and then open the browser again to log in. To manually load the plug-in, type http://*IP address*/ActiveX/Setup.exe in the address bar and press **Enter**.

⚠ Please click here to **Download** and install the latest plug-in. Close your browser before installation.

3. Set whether to start live view automatically after login.

- With **Live View** selected, live view will start automatically after login.

- With **Live View** not selected, you need to start live view manually.

5. After first login, the **Change Password** dialog box appears, in which you must set a strong password and enter your email address in case of password retrieval.

(1) Set a strong password of 9 to 32 characters including all three elements: digits, letters, and special characters.

(2) Enter your email address in case of password retrieval.

3

See <u>User</u> for more information.

If you forgot your password, click **Forgot Password** in the login page, then follow the on-screen instructions to reset your password.

2 Live View

2.1 Live View

The page shows the live video from the camera.

You may double-click the window to enter or exit full screen mode.

Live view page of dual-channel camera
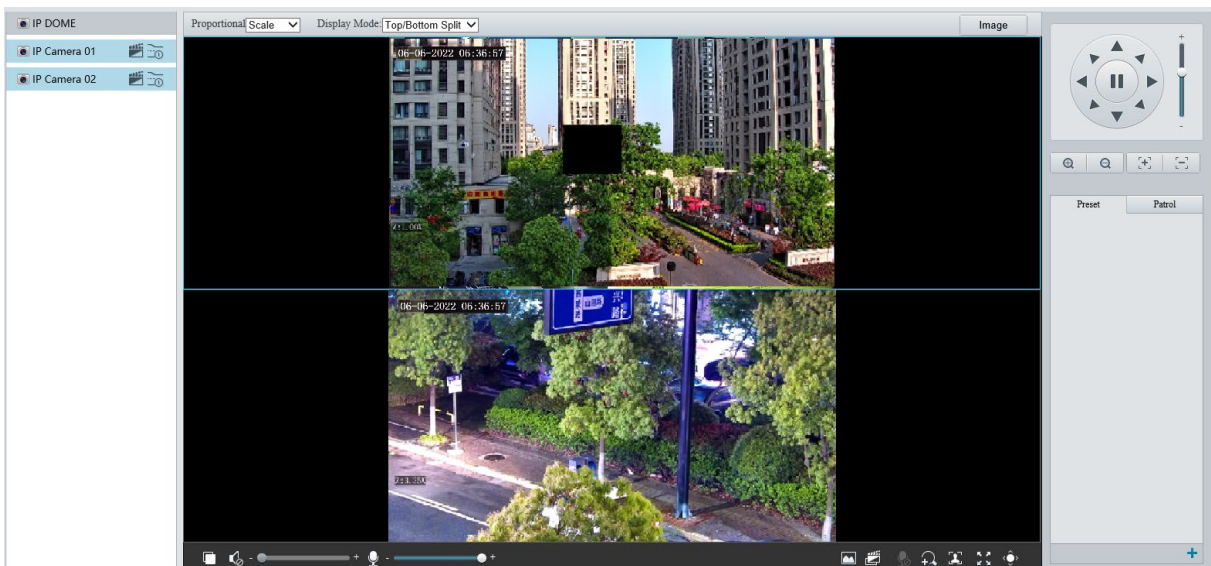

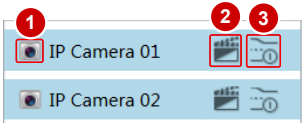

Live view page of single-channel camera

> **NOTE!**
>
> Live view operations supported may vary with device model.

Live View Toolbar

Item	Description
Proportional Scale ▼	Set the image display ratio in the window. ● Scale: Displays 16:9 images. ● Stretch: Displays images according to the window size (stretch images to fit the window). ● Original: Displays images with original size.
Display Mode: Top/Bottom Split ▼	Set the image display mode in the window. ● Single Channel: Displays live video of a single channel. ● Left/Right Split: Displays live video in left/right split mode. ● Top/Bottom Split: Displays live video in top/bottom split mode. ● Picture in Picture: Opens a floating live view window on top of the current window. **NOTE!** This function is only available on dual-channel cameras.
① IP Camera 01 ② ③ IP Camera 02	① : Stop/start live view of the selected channel. ② : Start local recording. ③ : Switch streams.
Main Stream Sub Stream Third Stream	Select a live video stream according to your camera.
Image	Set image parameters.
▶ / ☐	Start/stop live view.
🔊 / 🔇	Turn off/on sound.
🔊 - ———●——— +	Adjust the output volume for the media player on the PC. Range: 1 to 100.
🎤 - ——————●— +	Adjust the microphone volume on the PC during audio communication between the PC and the camera. Range: 1 to 100.
[25fps] [7.24Mbps] [3840×2160] [H.264] [0.00%]	Frame rate/bit rate/resolution/packet loss rate.
🖼	Take a snapshot from the displayed live video. **NOTE!** See Local Parameters for the path of the saved snapshots.
🎬 / 🎬	Start/stop local recording. **NOTE!** ● See Local Parameters for the path of the saved local recordings. ● VLC media player is recommended for playing local recordings of 4K cameras.
🎤 / 🎤	Start/stop two-way audio.
🔍 / 🔍	Start/stop digital zoom. See Digital Zoom for details.
📷 / 📷	Start/stop capturing. See Snapshot for details.
⛶	Full screen.
◈	Show/hide PTZ control panel.

2.1.1 Digital Zoom

1. Click ⊕ in the live view toolbar to enable digital zoom.
2. View the magnified area.
- Click in the live view window and roll the wheel to zoom in or out on the image. Drag your mouse to view all the magnified area. To restore, right-click in the window.
- Click in the live view window and drag your mouse to specify the area (rectangular area) to be magnified. Drag your mouse to view all the magnified area. To restore, right-click in the window.
3. To exit, click ⊕.

2.1.2 Capture

📝 **NOTE!**
This function is only available on certain models.

1. Click 📷 in the live view toolbar to start capture.

2. View captured images.

- Click **Open Image Folder** to view the images captured from the live video on your PC. The images are saved in JPEG format.

  You can change the storage location in **Setup** > **Common** > **Local Parameters**. If the disk has less than 100MB free space, you will be prompted to clear up the auto snapshot folder, and new snapshots will not be displayed in the live view page until the disk space is freed.

- To delete all captured images, click **Clear All Records**.

3. To exit, click ⬚.

2.1.3 **5ePTZ**

1. Click ⊠ in the live view toolbar to enable 5ePTZ tracking.

2. Set the tracking area. In 5ePTZ tracking mode, the live view window is divided into 1 panoramic window and 5 tracking windows. You may rest the cursor on the tracking boxes in the panoramic window or tracking windows and use the scroll wheel to zoom in or out, and drag the tracking windows to rearrange them.

3. Enable perimeter protection (see Smart), then the camera can automatically detect moving objects in the detection area, and simultaneously track and enlarge 5 objects that trigger the alarm rules until the objects disappear.
4. To exit, click ⬚.

2.2 **PTZ Control**

📝 **NOTE!**
- This function is only available on PTZ cameras or cameras installed on PT mounts.
- Some lens control functions are available on cameras equipped with motorized lenses.
- The PTZ control buttons may vary with camera model.

PTZ Control Panel

Item	Description
+ Zoom −	Zoom in/out on images.
+ Focus −	Focus far/near for sharp images at a distance/at close range.
+ Iris −	Increase/reduce the amount of light that enters the camera for brighter/darker images.
🔓	Scene lock, used for locking PTZ and lens. **NOTE!** After you lock the scene, the camera does not move, zoom and focus.
3D	3D positioning.
[○]	One-click focus.
[□]	Area focus.
✎ / ✎⊠	Enable/disable wiper.
(speed slider)	Adjust the rotation speed of the camera.
(direction pad)	Adjust the rotation direction of the camera or stop rotation.
•)) / •⊠	Enable/disable IR.
☀ / ☀⊠	Enable/disable heater.
💡 / 💡⊠	Enable/disable light.
❄ / ❄⊠	Enable/disable snow removal.
⊕ ⊖	Adjust camera zoom.
⊕ ↻	Auto back focus adjustment.
◀▶▼◢◣◤▼▲	Shortcut keys for PTZ control. After the mouse cursor changes to one of these shapes in live view, click and hold the left mouse button to operate the PTZ camera. **NOTE!** These buttons are unavailable when 3D positioning or digital zoom is enabled.
⊕ ⊖	Shortcut keys for zooming in or out in live view. Scroll the wheel forward to zoom in or backward to zoom out. **NOTE!** This function is only available on cameras with motorized lenses.

2.2.1 3D Positioning

> **NOTE!**
>
> This function is only available on dome cameras and box cameras with motorized lens and PTZ.

1. Click in the PTZ control panel to enable 3D positioning.

2. Click on the image and drag down/up to delineate a rectangular area to zoom in/out.

3. To exit, click .

2.2.2 Area Focus

1. Click in the PTZ control panel to enable area focus.
2. Click on the image and drag to delineate a rectangular area to start auto focus in this area.

3. To exit, click .

2.2.3 Preset

A preset position (preset for short) is a saved view used to quickly steer the PTZ camera to a specific position.

On the PTZ control panel, click **Preset**.

- Add a preset

1. Use the PTZ directional buttons to steer the camera to the desired position.
2. Select a preset not in use and click ✎ to edit the preset name.
3. Click 🖫 to save.

- Call a preset

In the preset list, select the preset to call, and then click ➔.

- Delete a preset

In the preset list, select the preset to delete, and then click 🗑.

2.2.4 Patrol

You can define a patrol route comprising several actions or presets or record a patrol route to allow the PTZ camera to automatically move along the route.

1. Add a patrol route

- Add a common patrol route

In a common patrol route, the PTZ camera performs linear motion between presets.

1. On the PTZ control panel, click **Patrol**.

2. Click ➕.

3. Set the route ID and name. On certain models, you may need to set the **Patrol Type** to **Common Patrol**.

4. Click **Add** to add patrol actions.

5. Complete the action settings.

Item	Description
Action Type	10 options: **Move Left**, **Move Right**, **Move Up**, **Move Down**, **Move Up Left**, **Move Up Right**, **Move Down Left**, **Move Down Right**, **Zoom**, **Goto Preset**. Up to 64 actions are allowed. All action types except **Goto Preset** are recorded as 2 actions.You may use the up and down arrows to rearrange the patrol actions. **NOTE!** It is recommended to set the first action to **Goto Preset**.
Speed	Set how fast the camera performs the action. 1 means the slowest, 9 means the fastest.
Keep Rotating	When enabled, the camera repeats this action for patrol.
Duration(ms)/Ratio	Set the duration/zoom ratio for the action.
Preset	Select the preset you want the camera to go to.
Stay Time	Set the dwell time after the camera has performed the action. Range: 15s to 1800s.

6. Click **OK**.
Item	Description
▶	Start patrol.
✏	Edit patrol route.
🗑	Delete patrol route.

● Add a scan patrol route

In a scan patrol route, the camera rotates from the start preset to the end preset in a specified gradient and direction.

NOTE!
This function is only available on certain models.

1. Before adding a scan patrol route, set presets first. See [Preset](#) for details.
2. On the PTZ control panel, click **Patrol**.

3. Click .

4. Set the patrol type to **Scan Patrol**.
5. Set the route ID and name.
6. Set the patrol parameters.
Item	Description
Speed	Set how fast the camera rotate. 1 means the slowest, 9 means the fastest.
Tilt Gradient	The average division value of the vertical distance between the start and end presets. The greater the value, the shorter the patrol route.
Initial Patrol Direction	The direction of the first rotation from the start preset to the end preset.
Start/End Preset	Select a preset from the drop-down list as the start/end preset. The start and end presets must be different.

- Record a patrol route

1. On the PTZ control panel, click **Patrol**.
2. Click 🖳 to start recording. You can adjust the direction, rotation speed and zoom of the camera during recording. All movement data of the camera will be recorded.

3. Click ▬ to finish recording and the recording is saved as a patrol route automatically.
2. **Call a patrol route**

Manual calls take precedence over scheduled calls.

Auto tracking and trigger tracking is executed only within the duration that the camera stays at a position during common patrol.

- Call manually

1. On the PTZ control panel, click **Patrol**.

Select the patrol route to call and click ▶ to start patrol.
- Call by schedule

1. On the PTZ control panel, click **Patrol**.

2. Click .

3. Select the **Enable Patrol Plan** check box.
4. Select the patrol route to call and set a start time and an end time for it.
5. Click **OK**.

3 Playback
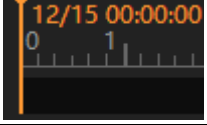

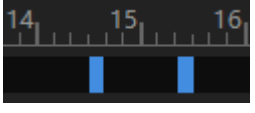

> **NOTE!**
> - Edge recordings refer to video recorded on storage media of cameras; local recordings refer to video recorded on a local PC.
> - Before you search for edge recordings, make sure that the camera has storage resources such as memory card, and the storage parameters in Storage are properly configured.
> - Recording playback and download functions are only available on certain models.
> - For dual-channel devices, you can set playback parameters for the channels separately.

On the home page, click **Playback**.
3.1 Playback Toolbar

Button	Description
	Adjust sound volume. Range: 1 to 100.
	Start playback.
	Pause playback.
	Stop playback.
	Clip video.
	Save.
	Adjust playback speed. The default playback speed is 1x. Both rewind and forward are supported.
	Take a snapshot. The snapshots are saved locally by default. You can change the storage location in Local Parameters.
	Digital zoom. See Digital Zoom for details.
	Zoom in/out on the time scale. You can also use the scroll wheel to zoom.
	When the time scale is zoomed in, you can click ❮ or ❯ to view the previous or next section of the video.

	Playhead. Drag the playhead to skip to any point in the video.
	Playback bar. Blue: Normal recording. Red: Alarm recording. To view alarm recordings, you need to configure alarm-triggered recording. See Alarm-triggered Actions for details.

3.2 Search and Play Recordings

1. In case of a multi-channel camera, select the channel to search for recordings.
2. Select the date and recording type.
3. Click **Search**.
4. The search results are displayed. Double-click a result to play it back.
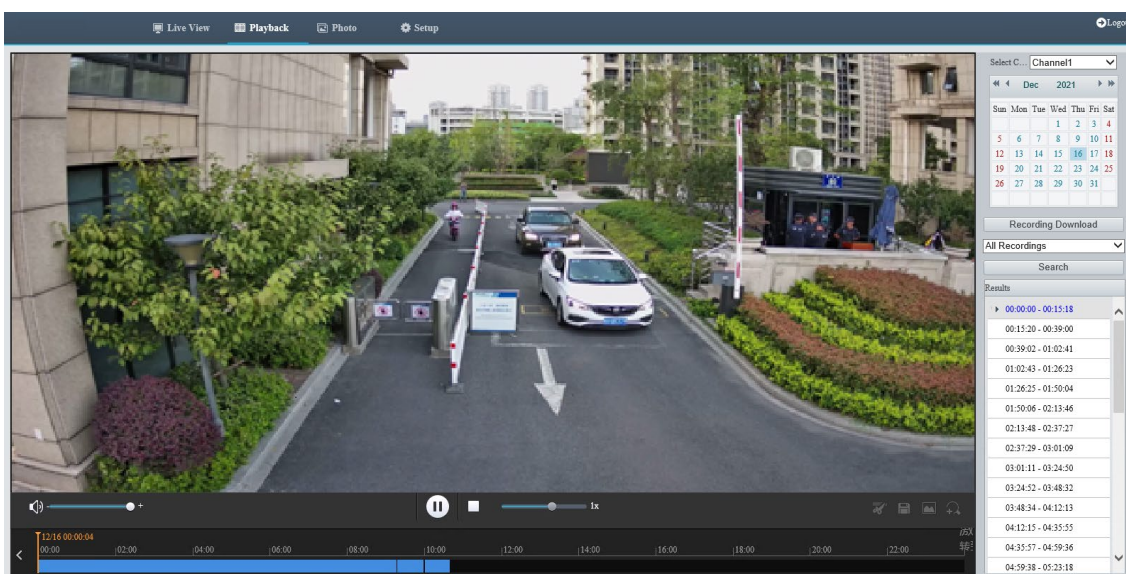

3.3 Download Recordings

You can download videos in batches or clip videos to download.

● Download in batches

1. Click **Recording Download**.
2. Select the recording type, set the start time and end time, and then click **Search**.

19
3. Click **Browse…** to set the path to the recordings.

4. Select the recordings to download and click **Download**.

- Download video clips

1. Search for the video to clip.

2. In the playback toolbar, click .

3. Click in the time bar to determine the start time and end time.

4. Click to finish. The time bar of the clip turns blue and green.
5. Click .

6. Click **Recording Download**, select the video clip, and click **Download**.
4 Photo

View the photo storage status. See Storage for photo storage policy.

![NOTE icon] **NOTE!**
This function is only available on cameras with storage capabilities.

On the home page, click **Photo**.
Item	Description
Refresh	Refresh the displayed content.
Export	Export the selected photos.
Delete	Delete the selected photos.
Export & Delete	Export the selected photos and delete them on the server.
Ascending Order	Arrange the items in chronological order.
Descending Order	Arrange the items in reverse chronological order.
SmartServer	Used to store smart snapshots.
CommonServer	Used to store common snapshots.

![NOTE icon] **NOTE!**
To allocate photo capacity, go to **Setup** > **Storage** > **Storage**.

5 Setup

5.1 Local Parameters

Set local parameters for your PC, including smart, video, recording and snapshot.

> **NOTE!**
> The local parameters displayed may vary with camera model.

1. Go to **Setup** > **Common** > **Local Parameters**.

Smart

Intelligent Mark	◉ On ○ Off
Target Mark	☑ Vehicle ☑ Non-Motor Vehicle ☑ Pedestrian
Object Attributes	◉ On ○ Off
Font Size	Small ▾
Display Human Body Sn...	◉ On ○ Off

Note: When enabled, snapshots of human body will show in live view page. Only effective when face detection is enabled.

Video

Display Mode	Balanced ▾
Protocol	TCP ▾

Recording and Snapshot

Recording	Subsection By Time ▾
Subsection Time (min)	30
When Storage Full	◉ Overwrite Recording ○ Stop Recording
Total Capacity(GB)	10
Local Recording	MP4 ▾
Files Folder	C:\Users\l07053\WebPlugin_IPC\IPCUN\ [Browse...] [Open]

[Save]

2. Set local parameters as needed.

Item		Description
Smart	Intelligent Mark	This function shall be used with <u>Cross Line Detection</u>, <u>Intrusion Detection</u>, <u>Enter Area</u>, <u>Leave Area</u>, <u>Mixed-Traffic Detection</u>, and <u>Face Detection</u>.
	Object Attributes	When enabled, the attributes of detected objects appear on the live view page.
	Font Size	Set the font size of object attributes, including **Large**, **Medium**, and **Small**.
	Display Human Body Snapshot	When enabled, human body snapshots appear on the live view page. **NOTE!** Only effective when face detection is enabled.
Video	Display Mode	Set the display mode according to the network status, including **Min. Delay**, **Balanced**, and **Fluent** (from low delay to high delay). You may also customize the display mode as needed.
	Protocol	Set the protocol used to transmit media streams to be decoded by the PC, including **TCP** and **UDP**.
Recording and Snapshot	Recording	● Subsection By Time: Length of each local recording file. For example, 2 minutes. ● Subsection By Size: Size of each local recording file. For example, 10MB.

22

Subsection Time (min)/Subsection Size (MB)	• Subsection Time (min): Available when **Subsection By Time** is selected. 1 to 60 minutes allowed. • Subsection Size (MB): Available when **Subsection By Size** is selected. 10 to 1024MB allowed.	
When Storage Full	• Overwrite Recording: When the local recording capacity is full, older recordings are overwritten automatically. • Stop Recording: When the local recording capacity is full, recording stops automatically.	
Total Capacity (GB)	Allocate storage capacity for local recording. Range: 1 to 1024GB.	
Local Recording	Set the file format for saving local recordings, including **TS** and **MP4**.	
Files Folder	Set the location where snapshots and recordings are saved. • Click **Browse...** to select the storage location. • Click **Open** to quickly open the folder. **NOTE!** The maximum length of the directory is 260 bytes. If the limit is exceeded, recording or snapshot during live view will fail.	

3. Click **Save**.

5.2 Network

5.2.1 Ethernet

Connect the camera to the network so that it can communicate with other devices.

NOTE!
After you change the IP address, you need to log in again with the new IP address.

1. Go to **Setup** > **Network** > **Network**.
2. Configure Ethernet parameters.
● IPv4
  ➢ Static Address (obtain IP manually)
  (1) Select **Static** from the **Obtain IP Address** drop-down list.
  (2) Enter the IP address, subnet mask, and default gateway address. Make sure that the IP address of the camera is unique in the network.
  (3) Click **Save**.

> ➢ PPPoE

Configure PPPoE to assign the camera a dynamic IP address to establish network connection.

(1) Select **PPPoE** from the **Obtain IP Address** drop-down list.

(2) Enter the username and password provided by your ISP (Internet Service Provider).

(3) Click **Save**.

> ➢ DHCP

DHCP (Dynamic Host Configuration Protocol) is enabled by default. If a DHCP server is deployed in the network, the camera can automatically obtain an IP address from the DHCP server.

(1) Select **DHCP** from the **Obtain IP Address** drop-down list.

(2) Click **Save**.

- IPv6
  - ➢ DHCP

By default, the IPv6 mode is set to **DHCP**. The IP address is automatically obtained from the DHCP server.

  - ➢ Manual

   (1) Set the IPv6 mode to **Manual**.
   (2) Enter the IPv6 address, prefix length and default gateway. Make sure that the IPv6 address is unique in the network.

3. Set the MTU value, port type and operating mode.

- MTU: Set the maximum packet size supported by the network in bytes. The greater the value, the higher the communication efficiency, the higher the transmission delay.
- Port Type: **FE Port** by default.
- Operating Mode: **Auto-negotiation** by default.

4. Click **Save**.

5.2.2 Port

1. Port

1. Go to **Setup** > **Network** > **Port**.

HTTP Port	80
HTTPS Port	443
RTSP Port	554

Note: Modifying the RTSP port number will cause the device to restart.

2. You can use the defaults or customize them in case of port conflicts.

> ⓘ **CAUTION!**
>
> - If the HTTP port number you entered has been used, a message "Port conflicts. Please try again." will appear. 23, 81, 82, 85, 3260, and 49152 have been assigned for other purposes and cannot be used.
>
> - In addition to the above port numbers, the system can also dynamically detect other port numbers that are already in use.

- HTTP/HTTPS Port: If you change the HTTP/HTTPS port number, then you need to add the new port number after the IP address when logging in. For example, if the HTTP port number is set to 88, you need to use http://192.168.1.13:88 to log in to the camera.
- RTSP Port: Real-Time Streaming Protocol port, enter an available port number.

3. Click **Save**.

2. Port Mapping

Configure port mapping so computers on the WAN can access your camera on the LAN.

1. Go to **Setup** > **Network** > **Port** > **Port Mapping**.
2. Enable **Port Mapping**.
3. Select the mapping type.

- UPnP

> ➢ Auto: Enable UPnP on the router, then the external port numbers are assigned automatically.
> ➢ Manual: The external port numbers need to be set manually.

- Manual

> ➢ If your router does not support UPnP, you need to set the external port numbers manually.

26

> ➢ "Inactive" displayed in the **Status** column indicates that the port number you entered is already in use.

4. Click **Save**.

5.2.3 E-mail

Configure E-mail so that the camera can e-mail an alarm message to the specified email addresses when an alarm occurs.

1. Go to **Setup** > **Network** > **E-mail**.

2. Set the sender and recipient information.

Item	Description
Sender Name	Enter the device name.
Sender Address	Enter the device IP.
SMTP Server/SMTP Port	Enter the IP address and port number of SMTP server of the sender's e-mail. The default SMTP port number is 25.
TLS/SSL	Enable TLS/SSL to secure e-mail communication.
Snapshot Interval	Set the interval for taking snapshots to be attached to alarm e-mails. **NOTE!** • The interval for taking snapshots attached to alarm e-mails is subject to the settings on the **E-mail** page. • Deep-learning exception detection functions captures 1 snapshot by default, and you do not need to set the snapshot interval for them.

Attach Image	When enabled, the camera will automatically send an alarm e-mail with 3 attached snapshots taken at se intervals in the event of an alarm. 1. Select the **Attach Image** check box. 2. Enable Snapshot and set the snapshot resolution as needed. Snapshot ● On ○ Off Resolution 2560×1440 ▼ Max. Size (KB) 500 **Scheduled Snapshot** Snapshot Interval(s) 1 Number to Snapshot 1 ▼ Snapshot Mode ● Schedule ○ Repeat No. Snapshot Time ✚
Server Authentication	Enable SMTP server authentication to secure e-mail transmission.
Username/Password	Enter the username and password of the SMTP server. **NOTE!** • The email only shows the sender name not the username. ● 📎 217.2.1.196-lly 217.2.1.196-lly: Motion Detection 03-07 10:23 489 KB • The password allows special characters.
Recipient Name/Address	1. Enter the e-mail name and address to receive e-mails. 2. After recipient configuration, you can click **Test** to test the email sending function.

3. Click **Save**.

Sender

5.2.4 EZCloud

You can add the camera to EZCloud via EZView app (without registering an EZCloud account) or EZCloud website to remotely access the camera.

Go to **Setup** > **Network** > **EZCloud**. EZCloud is enabled by default.

EZCloud	⦿ On ○ Off
Add Without Signup	⦿ On ○ Off
Address	ap.ezcloud.uniview.com
Register Code	313SYJOZJSBEVR08D7VUZEK4Y
Device Status	Offline
Username	limaoji
Scan	[QR code]

Save

1. Add cameras on EZView app without signup

After you add the camera to EZCloud on EZView, you can view live or recorded video and receive alarm notifications from the camera on EZView. Certain functions are not available to cameras added without signup in the app.

1. Enable **Add Without Signup**.
2. Search and download EZView in the app store of your phone.
3. Open EZView and tap **Try Now**.

> **NOTE!**
>
> If your have EZView on your phone already, open it, and then select ☰ > **Devices** > **Add** > **Add Without Signup**.

4. A message pops up to inform you that no devices have been added. Tap **Add**.
5. Tap **Add Without Signup**.
6. Scan the OR code on the **EZCloud** page using EZView.
7. Enter the password and tap **Login** to add the camera to EZCloud.

2. Add cameras on EZCloud website

1. Enter en.ezcloud.uniview.com in the address bar of a web browser.
2. Click **Sign Up** and follow the on-screen instructions to create an account.
3. Log in to the EZCloud.

Device Management	Organization Management	Sharing Records	Personal Info

Organization		My Cloud Devices	Devices Shared to Me				
Please enter organization name		+ Add 🗑 Delete ⟳ Refresh			Online Device 1 Total Number 1		Please enter device nam
⊟ root		☐	IP Address	Device Name	Model	Organization	Latest Online Time	Status	Operation
4. Go to **Device Management** > **My Cloud Devices** and click **Add**.

Item	Description
Device Name	Enter the device name.
Register Code	Enter the register code.
Organization	Select an organization for your camera. By default, the root organization is selected. You may add or delete organizations under **Organization Management** > **My Cloud Organizations**.

5. Click **OK**.
6. Click **Save**.
7. Check device status.

- EZCloud website: Go to **Device Management** > **My Cloud Devices** to check whether the camera is online.
- Camera's web interface: Go to **Setup** > **Network** > **EZCloud** to check whether the camera is online.

5.2.5 **DNS**

DNS (Domain Name System) is a distributed database system for translating human readable domain names to machine readable IP addresses, facilitating devices to access external servers or hosts through domain names.

1. Go to **Setup** > **Network** > **DNS**.
2. The default DNS server addresses are as follows.

5.2.6 **DDNS**

DDNS (Dynamic Domain Name System) automatically updates the DNS server with the dynamic IP address of the device to enable remote Internet access to the device on the network.

1. Go to **Setup** > **Network** > **DDNS**.
2. Enable **DDNS Service**.

3. Select the DDNS type.

➥ DynDNS/NO-IP: Third-party DDNS service provider, enter the domain name registered with the DDNS provider.

➥ EZDDNS: Uniview's DDNS service, enter a domain name for your camera and click **Test** to check if the domain name is available.

4. Click **Save**.

5.2.7 SNMP

SNMP is required for the camera to share configuration information to servers.

1. Go to **Setup** > **Network** > **SNMP**.

2. Enable **SNMP**.

> **NOTE!**
> This function is enabled by default on certain models.

3. Set SNMP parameters.

● SNMPv3

> **NOTE!**
> Before you enable SNMPv3, make sure that it is supported both on your camera and the server.

Item	Description
SNMP Type	The default SNMP type is **SNMPv3**.
Password	Set a password for authentication.
Confirm	Confirm the password you entered by entering it again.
Password	Set a password for data
Confirm	Confirm the password you entered by entering it again.
Trap Server Address	Set the trap server address in Management Server.
SNMP Port	The default SNMP port number is 161. You may change it as needed.

- SNMPv2

Item	Description
SNMP Type	Select **SNMPv2**. After you select SNMPv2, a message pops up to remind you of potential risks and ask if you want to continue. Click **OK**.
Read Community	The default read community name is public, and you may change it as needed. Make sure the read community names of the server and camera are the same, otherwise the two-way authentication will fail.
Trap Server Address	Set the trap server address in Management Server.
SNMP Port	The default SNMP port number is 161. You may change it as needed.

4. Click **Save**.

5.2.8 **802.1x**

802.1x provides authentication to devices for access to the network and enhances network security by allowing only authenticated devices to access.

1. Go to **Setup** > **Network** > **802.1x**.

2. Enable **802.1x**.

3. By default, the protocol is set to EAP-MD5. Select the same EAPOL version as that of the router or the switch.

4. Enter the username and password for authentication.

5. Click **Save**.

5.2.9 **QoS**

QoS (Quality of Service) has the ability to guarantee the performance of high-priority services under limited network capacity.

1. Go to **Setup** > **Network** > **QoS**.

2. Set a priority level (0 to 63) for each service.

At present, QoS allows you to assign different priority to audio and video, alarm report, configuration management and FTP transmission. The greater the value, the higher the priority.

As shown in the figure above, the audio & video service takes priority over all other services in case of network congestion.

> **NOTE!**
> To use QoS, make sure that the router or switch is also configured with QoS.

3. Click **Save**.

5.2.10 WebSocket

WebSocket allows you to manage your camera on a third-party platform, such as device version and capability information acquisition, PTZ control, alarm reporting, etc.

1. Go to **Setup** > **Network** > **WebSocket**.

WebSocket	○ On ⦿ Off
Destination IP	
Destination Port	7766
Device ID	
Authentication Key	
Confirm Authentication Key	
Online Status	Offline

Save

2. Set the parameters.

Item	Description
WebSocket	Select to enable or disable WebSocket.
Destination IP	Enter the IP address of the third-party platform.
Destination Port	Enter the listener port of the third-party platform.
Device ID	The default device ID is the device's serial number. You can set a device ID as needed.
Authentication Key	Enter the authentication key used to connect the camera to a third-party platform. Make sure the authentication key configured on the camera and the third-party platform is the same.
Confirm Authentication Key	Confirm the authentication key you entered by entering it again.
Online Status	Check whether the device is successfully connected to the third-party platform.

3. Click **Save**.

5.3 Video & Audio

For dual-channel devices, you can set video and audio parameters for the channels separately.

5.3.1 Video

1. Go to **Setup** > **Video & Audio** > **Video**.

2. Select a capture mode for your camera.

The **Extended Encoding** function is available only when the capture mode is greater than 8MP.

After you change the capture mode, the encoding settings will be reset to defaults and some models of cameras will restart.

3. Set stream parameters.

The streams are independent of each other and can be set with different resolutions, frame rates, video compression formats, etc. Only the main stream supports full resolution.

> **NOTE!**
> * The fourth and fifth streams are only available on certain models.
> * Before configuring the fifth stream, you need to enable the fourth stream first.

Item	Description
Video Compression	Select a video compression standard for your camera: **H.265**, **H.264** or **MJPEG**. **NOTE!** • When H.265 or H.264 is selected, **Image Quality** is not available; When MJPEG is selected, **Bit Rate**, **I Frame Interval**, **Smoothing**, **SVC** and **U-Code** are not available. • The bit rate restores to the default when you switch between H.264 and H.265.
Resolution	Select a video resolution for your camera. The higher the resolution, the clearer the image.
Frame Rate(fps)	Select the frame rate. **NOTE!** To ensure image quality, the frame rate shall not be greater than the reciprocal of the shutter speed.
Bit Rate(Kbps)	Set the bit rate. Range: 128 to 16384. **NOTE!** The bit rate range may vary with device model.

Bitrate Type	Select the bitrate type. ● CBR: The camera keeps a specific bit rate by varying the quality of video streams. ● VBR: The camera keeps the quality of video streams as constant as possible by varying the bit rate.
Image Quality	Configurable when **Bitrate Type** is set to **VBR**. The closer the slider is to **Quality**, the higher the bit rate, and the higher the image quality. The closer the slider is to **Bit Rate**, the lower the bit rate, and the image quality will be affected.
I Frame Interval	Set the number of frames between I-frames. A shorter interval presents better image quality but consumes more bandwidth and storage.
GOP	Group of Pictures, defines the basic pattern of the video stream encoded with I and P frames.
Smoothing	Set the smoothness of the video stream. Drag the slider to choose whether smoothness or clarity takes precedence. **NOTE!** Smoothing is recommended for fluent video in a poor network environment.
SVC	SVC (Scalable Video Coding) enables a video stream to be broken into multiple layers of resolution, quality and frame rate, reducing bandwidth consumption without compromising the image quality.
U-Code	Select the U-code mode. ● Basic Mode: The bit rate is reduced by about 25%. ● Advanced Mode: The bit rate is reduced by about 50%.

4. Set the BNC output format, **PAL** or **NTSC**.

5. Click **Save**.

2. **Adaptive Streams**

The bit rate of the media stream is automatically adjusted according to the network conditions.

📝 **NOTE!**
- This function is only available on certain models.
- This function is enabled by default on certain models.
- It's recommended to enable Adaptive Streams in a poor network environment.

1. Go to **Setup** > **Video & Audio** > **Video** > **Adaptive Streams**.

2. Enable **Adaptive Streams**.

3. Click **Save**.

5.3.2 Snapshot

Configure basic snapshot parameters and scheduled snapshot.

1. Go to **Setup** > **Video & Audio** > **Snapshot**.

2. Enable **Snapshot** and set the resolution and maximum size of snapshots to be saved.

3. Set the snapshot mode.

   ➢ Schedule: Set a time for snapshot. For example, with snapshot interval set to 20s, number to snapshot set to 3, and snapshot time set to 16:00:00, the camera will take a snapshot at 16:00:00, 16:00:20 and 16:00:40.

   To delete a snapshot time, click 🗑.

   ➢ Repeat: Set an interval for snapshot. For example, with snapshot plan set to 16:00:00 to 20:00:00 on Monday, repeat interval set to 120s, snapshot interval set to 20s, and number to snapshot set to 2, the camera will take a snapshot at 16:00:00, 16:00:20, 16:02:00 and 16:02:20.

   a Select **Repeat** and set the repeat interval. A valid repeat interval ranges from 1 to 86400.

   b Select the **Enable Snapshot Plan** check box and set the snapshot plan. See Arming Schedule for details. A 24/7 snapshot plan is enabled by default.

4. Set the snapshot interval and number to snapshot. For example, if the interval is set to 1s and the number to snapshot is set to 2, the camera will take 2 snapshots (take one first and then take another after 1 second).

5. Click **Save**.

5.3.3 **Audio**

1. **Audio**

1. Go to **Setup** > **Video & Audio** > **Audio**.

2. Set audio input parameters.

Item	Description
Audio Input	Enable/disable audio input. **NOTE!** If audio data is not required, select **Off** to improve camera performance.
Access Mode	Select the audio input mode, including **Line/Mic** and **RS485**. **NOTE!** This function is not available on dual-channel cameras.
Input Volume	Set the input volume using the slider.
Audio Compression	Select the audio compression format, including **G.711U** and **G.711A**.
Sampling Rate(KHz)	Set the sampling rate according to your required audio compression. In G.711A or G.711U format, only 8KHz is available.
Noise Suppression	Reduce noise in audio to improve audio output quality. **NOTE!** This function is enabled by default.
Channel 1/Channel 2	Select the **Enable** check box to enable audio input for the channel. Channel 1 and Channel 2 (if available) cannot be enabled simultaneously. The default audio input mode of Channel 1 is Mic. You can change it to Line.

3. Set audio output parameters.

Item	Description
Audio Output	Select the audio output mode, including **Line** and **Speaker**.

Output Volume	Set the output volume using the slider.

4. Click **Save**.

2. Audio File

1. Go to **Setup** > **Video & Audio** > **Audio**.

2. Set audio file parameters.

Item	Description
Alarm Volume	Set the alarm volume using the slider.
Alarm Audio File	Click **Browse…** to import audio files. To play an audio file, click 🔊 . **NOTE!** • This function is available only on certain models. Up to 5 audio files are allowed. • Built-in audio files may vary depending on the smart functions supported by the device.

3. Click **Save**.

5.3.4 ROI

ROI helps ensure image quality for the specified areas on the image first at low bit rate.

1. Go to **Setup** > **Video & Audio** > **ROI**.

2. Set ROI areas.

(1) Click to add a ROI area. The area is a rectangle by default. Up to 8 areas are allowed.

(2) Adjust the position and size of the area or draw an area as needed.

➢ Adjust the position and size of the area.

– Point to a border of the area and drag it to the desired position.

– Point to a handle of the area and drag to resize it.

➢ Draw an area.

Click on the image and drag to draw an area.

5.3.5 View Cropping

You can crop the live video to view and save only the video of the region of interest in the form of sub or third stream to save transmission bandwidth and storage.

1. Go to **Setup** > **Video & Audio** > **View Crop**.

2. Select the **Enable View Crop** check box.
3. Select the cropping mode.
- Field of View Mode: Size priority. Set the output stream type, crop size and resolution.

- Resolution Mode: Resolution priority. Set the output stream type and resolution.

4. Click **Save**.

5.3.6 Media Stream

1. Media Stream

You can configure a media stream for your camera so that media contents from the camera such as audio and video can be transmitted over the network and played immediately on a third-party client rather than being downloaded first.

1. Go to **Setup** > **Video & Audio** > **Media Stream**.

2. Click to add a media stream.

3. Complete the media stream settings.

Item	Description
Stream Profile	Select a stream type for the camera to transmit media contents to a third-party client.
Destination IP	Enter the IP address of the device receiving media streams.
Destination Port	Enter the port number of the device receiving media streams.
Protocol	Select a protocol for streaming media data over the network, including **TS/UDP**, **ES/UDP**, **PS/UDP**, and **RTMP**.
Persistent	Set whether to automatically establish the configured media stream after the camera restarts.

4. Click **OK**.

2. RTSP Multicast

RTSP multicast allows third-party players to request RTSP multicast media streams from the camera through the RTSP protocol.

1. Go to **Setup** > **Video & Audio** > **Media Stream** > **RTSP Multicast Address**.

2. Set the multicast address and port number (multicast address range: 224.0.1.0 to 239.255.255.255, port number range: 0 to 65535).

3. Click **Save**.

5.4 PTZ

5.4.1 Basic PTZ Settings

Go to **Setup** > **PTZ** > **Basic Settings**.

1. Preset Image Freeze

After you enable **Preset Image Freeze**, as the camera moves from one preset to another, the live view window keeps displaying the image of the previous preset until the camera stops at the next preset.

Preset Image Freeze	○ On ◉ Off

2. PTZ Timeout

After you enable **Stop PTZ Control After Timeout** and set a timeout period, the camera will stop rotation when the predefined timeout period is reached.

Stop PTZ Control After Tim...	○ On ◉ Off
PTZ Control Timeout(s)	10

3. PTZ Speed

Speed Level between Presets	▬▬▬▬▬○	9
Manual Operation Speed Le...	▬▬○	5

● Speed Level between Presets: Set the rotation speed of the camera between presets.

● Manual Operation Speed Level: Set the speed level for manually controlling the PTZ on the live view page.

> **NOTE!**
>
> ● The higher the manual operation speed level, the higher each PTZ speed level on the live view page.
>
> ● When both manual operation speed level and PTZ speed on the live view page are set to the maximum, the PTZ speed reaches the upper limit.

4. PTZ Rectification

Check for PTZ zero point offset and perform rectification.

Rectify		
☐ Enable Auto Rectification Execute Time	02:30:00	🕒

● Rectify manually: Click **Rectify** to start rectification immediately.

● Rectify automatically: Select the **Enable Auto Rectification** check box and set the execute time. The camera automatically performs PTZ rectification at the set time.

5. Power Off Memory

When enabled, the system will record the last position of the PTZ and lens in case of power failure. This function is enabled by default.

Power Off Memory	◉ On ○ Off

5.4.2 Home Position

The PTZ camera can automatically operate as configured (e.g., go to a preset or start patrol) if no operation is made within a specified period.

> **NOTE!**
> Before use, you need to add a preset or a patrol route. See <u>Preset</u> and <u>Add a patrol route</u> for details.

1. Go to **Setup** > **PTZ** > **Home Position**.

Home Position	● On ○ Off
Mode	Preset ▾
ID	[None] ▾
Idle State(s)	60

Save

2. Enable **Home Position** and complete the settings.

Item	Description
Mode	Select the home position mode, including **Preset** and **Patrol**.
ID	Select the desired preset or patrol route.
Idle State	Set the idle duration for the camera to start auto guard.

3. Click **Save**.

5.4.3 Pan/Tilt Limit

You can filter out the undesired scenes by limiting the pan and tilt movements.

1. Go to **Setup** > **PTZ** > **Limit**.

2. Select the **Enable PTZ Limit** check box.
3. Set the pan and tilt limits. Take the tilt limit configuration as an example:

(1) Use ▲ to move the camera to the desired upper tilt limit position.

(2) Click 📌 above the rectangle to set the position as the upper tilt limit.
(3) Use ▼ to move the camera to the desired lower tilt limit position.

(4) Click 📌 below the rectangle to set the position as the lower tilt limit.
Item	Description
➡	Rotate the camera to the limit.
🗑	Delete the limit.

4. Click **Save**.

5.4.4 Remote PTZ Control

Remote PTZ control is required when the camera is added to a third-party platform and the PTZ protocol does not match.

1. Go to **Setup** > **PTZ** > **Remote Control**.

2. Enable **Remote Control** and complete the settings.

Item	Description
Listener Port	Local port number of the camera. Make sure that the port number you entered is not in use. In general, it's recommended to keep the default value.
Address Code	The address code in the command must be the same as the address code configured on the camera, so that the camera can parse the command.

5.4.5 Preset Snapshot and Patrol Resumption

Go to **Setup** > **PTZ** > **Patrol**.

Preset Snapshot	○ On ● Off
Resume Patrol(s)	60

Save

- Preset Snapshot

The camera takes a snapshot at each preset during patrol and uploads the snapshots to FTP.

> **NOTE!**
> Before use, please configure FTP and Snapshot first.

- Resume Patrol

In the event of a patrol interruption, the camera can automatically resume the patrol after a specified time period.

5.4.6 Orientation Calibration

1. North Calibration

Calibrate the north direction.

1. Go to **Setup** > **PTZ** > **Orientation**.

2. Select the mode to calibrate the camera to north.

Item	Description
Manual	- Set the north direction manually. - After calibration, you can click **Go to north** to rotate the camera to the calibrated north direction.
Automatic	- Automatically determines the north position based on the geomagnetic field. - After calibration, you can click **Go to north** to rotate the camera to the calibrated north direction. **NOTE!** This option is only available on cameras that support electronic compass.

Configure a home position so that the camera can use it as the zero degree pan and tilt positions.

1. Go to **Setup** > **PTZ** > **Orientation**.
2. Move the camera to the desired position.
3. Click **Orient** to set the position as the home position.

Item	Description
Call	Move the camera to the home position.
Clear	Clear the home position.

5.5 Image

5.5.1 Image
For dual-channel devices, you can set image parameters for the channels separately.

1. **Scenes**

A scene mode is a collection of image parameters preset in the camera. The camera provides several predefined scene modes for different application scenarios. You can select a scene as required.

1. Go to **Setup** > **Image** > **Image**.
2. Click **Scenes**.

3. Set the scene parameters.

Item	Description
Current	Select the scene you want to use.
Scene Name	Select the scene mode. ● Common: Recommended for outdoor scenes. ● Indoor: Recommended for indoor scenes. ● Road Highlight Compensation/Park Highlight Compensation: Recommended for capturing vehicle license plates. ● WDR: Recommended for scenes with high-contrast lighting, such as window, corridor, front door or other scenes that are bright outside but dim inside. ● Custom: Set a scene as needed. ● Test: Recommended for test scenes. ● Standard: Recommended for most standard scenes both indoor and outdoor. ● Vivid: Enhanced saturation based on the Standard scene. ● Bright: Enhanced brightness based on the Standard scene. ● Starlight: Recommended for obtaining clear and bright images in low light conditions. ● Face: Recommended for capturing faces in motion in complicated scenes. ● Person And Vehicle: Recommended for detecting motor vehicles, non-motor vehicles and pedestrians in road scenes. ● Intrusion Prevention: Recommended for perimeter protection scenes.
Auto Switching	Select whether to add the scene to the auto-switching list. When enabled, if the conditions for switching to a non-default scene are met, the device will automatically switch to the scene.

48

	Set auto-switching conditions, including schedule, illumination and PTZ elevation. Auto switching can only be triggered when all the set conditions are met.
	Set the scene as the default scene.

4. (Optional) Enable auto switching.

● When enabled, if the conditions for switching to a non-default scene are met, the camera will automatically switch to the scene; otherwise, the camera uses the default scene.

● After you select the **Enable Auto Switching** check box, all scene parameters cannot be configured.

● If multiple non-default scenes meet the switching condition at the same time, the camera will switch to the scene with the minimum number (starts from 1 to 5).
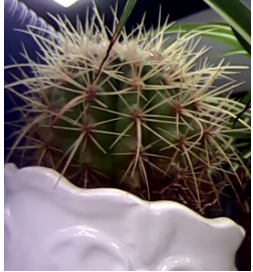

2. Image Enhancement

1. On the **Image** page, click **Image Enhancement**.

2. Set the image enhancement parameters.

Item	Description
Brightness	The overall lightness or darkness of the image. Low brightness High brightness

Item	Description
Saturation	The intensity or vividness of colors in the image. Low saturation High saturation
Contrast	The difference between the lightest and darkest tones in the image. Low contrast High contrast
Sharpness	The definition of edges in the image. Low sharpness High sharpness
2D Noise Reduction	Reduce noise by individually analyzing each frame, which may cause image blur.
3D Noise Reduction	Reduce noise by analyzing the difference between successive frames, which may cause image smearing or ghosting.

Item	Description
Image Rotation	The rotation of the image. Normal Flip vertical Flip horizontal 180° 90° clockwise 90° anti-clockwise

To restore defaults, click **Default**.

3. **Exposure**

📝 **NOTE!**
- The exposure settings may vary with device model.
- The default settings are scene-adaptive. Use default settings unless modification is necessary.

1. On the **Image** page, click **Exposure**.

2. Set the exposure parameters.

Item	Description
Exposure Mode	Select the exposure mode. • Automatic: The camera automatically set the optimum shutter speed according to the scene. • Custom: User can set exposure parameters as needed. • Shutter Priority: The camera adjusts shutter as priority to adjust the image quality. • Iris Priority: The camera adjusts iris as priority to adjust the image quality. • Indoor 50Hz: Reduce stripes by limiting shutter frequency. • Indoor 60Hz: Reduce stripes by limiting shutter frequency. • Manual: Fine-tune image quality by setting shutter, gain and iris manually. • Low Motion Blur: Control the minimum shutter to reduce motion blur in faces captured in motion.
Shutter(s)	Shutter is used to control the light that comes into the lens. A fast shutter speed is ideal for scenes in quick motion. A slow shutter speed is ideal for scenes that change slowly. **NOTE!** • This parameter is configurable when **Exposure Mode** is set to **Manual**, **Shutter Priority**, or **Custom**. • If **Slow Shutter** is disabled, the reciprocal of the shutter speed must be greater than the frame rate.
Gain	Control image signals so that the camera can output standard video signals in different light conditions. **NOTE!** This parameter is configurable when **Exposure Mode** is set to **Manual** or **Custom**.

Slow Shutter	Increase image brightness in low light conditions. **NOTE!** This parameter is configurable when **Exposure Mode** is not set to **Iris Priority** and **Image Stabilization** is disabled.
Slowest Shutter	Set the slowest shutter speed for exposure.
Compensation	Adjust the compensation value as required to achieve the desired image effect. **NOTE!** This parameter is configurable when **Exposure Mode** is not set to **Manual**.
Restore Auto Exposure(min)	Set the duration for the camera to restore automatic exposure mode.
Metering Control	Set how the camera measures the intensity of light. ● Center-Weighted Average Metering: Measure light mainly in the central part of the image. ● Evaluative Metering: Measure light in the specified area of the image. ● Spot Metering: Similar to evaluative metering. But it cannot increase the brightness of images. ● Face Metering: Adjust image quality in poor lighting conditions by controlling the brightness of captured faces in face scenes. **NOTE!** This parameter is configurable when **Exposure Mode** is not set to **Manual**.
Day/Night Mode	● Automatic: The camera automatically switches between day mode and night mode according to the ambient lighting condition to output optimum images. ● Day: The camera outputs high-quality images in daylight conditions. ● Night: The camera outputs high-quality images in low-light conditions. ● Input Boolean: The camera switches between day mode and night mode according to the Boolean value input from a connected third-party device. **NOTE!** The **Input Boolean** option is only available on certain models.
Day/Night Sensitivity	Light threshold for switching between day mode and night mode. A higher sensitivity value means that the camera is more sensitive to the change of light and is therefore more easily to switch between day mode and night mode. **NOTE!** This parameter is configurable when **Day/Night Mode** is set to **Automatic**.
Day/Night Switching(s)	Set the length of time before the camera switches between day mode and night mode after the switching conditions are met. **NOTE!** This parameter is configurable when **Day/Night Mode** is set to **Automatic**.
WDR	Enable WDR to ensure clear images in high contrast conditions. **NOTE!** This parameter is configurable when **Exposure Mode** is set to **Automatic**, **Custom**, **Shutter Priority**, **Indoor 50Hz** or **Indoor 60Hz** and when **Image Stabilization** and **Defog** are disabled.
WDR Level	Adjust the WDR level. **NOTE!** Level 7 or higher is recommended if there is a high contrast between the bright and dark areas in the scene. In the case of low contrast, it is recommended to disable WDR or use level 1 to 6.
WDR On/Off Sensitivity	When **WDR** is set to **Automatic**, adjust the parameter to change the WDR switching sensitivity.
Suppress WDR Stripes	When enabled, the camera automatically adjusts the slow shutter frequency according to the light frequency to minimize stripes in the image.

To restore defaults, click **Default**.

4. **Smart Illumination**

1. On the **Image** page, click **Smart Illumination**.

2. Enable **Smart Illumination**.

3. Set the smart illumination parameters.

Item	Description
Illumination Mode	• Infrared: The camera uses infrared light illumination. • White Light: The camera uses white light illumination. • Warm Light: The camera uses warm light illumination. • Laser: The camera uses laser light illumination. **NOTE!** Before you select **Warm Light**, please set the **Port Mode** to **Illumination** (go to Setup > System > Ports & Devices > Serial Port).
Control Mode	• Global Mode: The camera automatically adjusts illumination and exposure to achieve the balanced image effect. Some areas might be overexposed if you select this option. This option is recommended if you focus on the monitoring range and image brightness. • Overexposure Restrain: The camera automatically adjusts illumination and exposure to avoid regional overexposure. Some areas might be dark if you select this option. This option is recommended if you focus on the clarity of the monitoring center area. • Road: This mode offers a strong overall illumination and is recommended for monitoring wide-range scenes, for example, road. • Park: This mode offers a uniform illumination and is recommended for monitoring small-range scenes with many obstacles, for example, park. • Custom Level: This mode allows you to manually control the intensity of illumination. • Custom Level(Always On): In this mode, the illumination is always on.
Illumination Level	Set the intensity of the illuminator. The greater the value, the higher the intensity. 0 is off. • Near-illumination Level: Recommended for near focus scenes. • Mid-illumination Level: Recommended for medium distance focus scenes. • Far-illumination Level: Recommended for far focus scenes. **NOTE!** This parameter is configurable when **Control Mode** is set to **Custom Level**.

To restore defaults, click **Default**.

5. **Focus**

1. On the **Image** page, click **Focus**.

2. Set the focus parameters.

Item	Description
Focus Mode	- Auto Focus: Automatic focus control based on the current light conditions. - Manual Focus: Manual focus control. - One-Click Focus: Automatic focus in the event of rotation, zoom, and preset call. - One-Click Focus (IR): Recommended for low light scenes. - One-click Focus (Locked): Recommended for road highlight scenes.
Scene	- Normal: Common monitoring scenes such as road, park, etc. - Long Distance: Long-distance monitoring scenes
Zoom Speed	1: Low zoom speed. Recommended for common scenes. 2: High zoom speed. Recommended when **Quick Focus** is enabled.
Min. Focus Distance	Select the minimum focus distance.
Max. Zoom Ratio	Select the maximum digital zoom ratio, including **22**, **44**, **88**, **176**, and **352**.

To restore the default settings, click **Default**.

6. **White Balance**

White balance is used to eliminate unnatural color casts in images under different color temperatures for optimal color reproduction.

1. On the **Image** page, click **White Balance**.

2. Set the white balance parameters.

Item	Description
White Balance	Adjust the red and blue gains of the image to remove unrealistic color casts. - Auto/Auto 2: Automatically adjust the red and blue gains according to the lighting conditions. If there are still color casts in Auto mode, try Auto 2 mode. - Fine Tune: Manually adjust the red and blue offsets. - Sodium Lamp: Automatically adjust the red and blue gains for optimal color reproduction in sodium light sources. - Outdoor: Recommended for outdoor scenes where the color temperature varies widely. - Locked: Keep the current color temperature.
Red/Blue Offset	Set the red/blue offset. **NOTE!** This parameter is configurable when **White Balance** is set to **Fine Tune**.

To restore defaults, click **Default**.

7. **Defog**

Defog is used to improve image visibility in foggy, hazy and other low-visibility scenes.

1. On the **Image** page, click **Advanced**.

2. Set the defog parameters.

Item	Description
Defog	Select the defog mode, including **Automatic**, **On**, and **Off**. In **Automatic** mode, the camera automatically adjusts the defog intensity according to the fog concentration for clear images.
Defog Intensity	Adjust the defog intensity. In a heavy-fog environment, the higher the defog level, the clearer the image; in a fog-free or light-fog environment, there is not much difference between levels 1 to 9. **NOTE!** Optical defog is available on certain models. To enable optical defog, select **On** and set the defog intensity to 6 or higher, or select **Automatic**. Optical defog is automatically turned on in thick fog, and the image changes from color to black and white.

To restore defaults, click **Default**.

8. **Lens Info**

1. On the **Image** page, click **Lens Info**.

2. Set the lens parameters.

Item	Description
Lens Type	Select the lens type, including **Common** and **IR**.
Lens Model	Select the lens model, including **LENS-DC-IRIS**, **LENS-DM0734P**, etc. **NOTE!** The lens models supported may vary with device model.

Aperture Control	Select automatic or manual iris control. **NOTE!** This parameter is configurable when **Lens Type** is **P-IRIS**.
F-Number	Set the f-number to adjust the iris opening manually.
Use Recommended Value	The camera optimizes the iris opening based on the current lighting conditions.

To restore defaults, click **Default**.

9. Dewarping

Dewarping is used to correct distorted images caused by wide-angle lenses.

1. On the **Image** page, click **Advanced**.

2. Enable **Dewarping** and set the dewarping level as needed.

To restore defaults, click **Default**.

10. Image Stabilization

A camera mounted outdoors may be shaken by external forces (e.g., wind), causing image blur. In this case, you can enable image stabilization to ensure the image quality.
1. On the **Image** page, click **Advanced**.
2. Select **On** or **Off** to enable or disable image stabilization.

To restore defaults, click **Default**.

11. Fusion Mode

In fusion mode, the object details on the visible image are overlayed on the thermal image, so that you can see the object details on the thermal image as well.

1. On the **Image** page, select **Channel 2** and click **Fusion Mode**.

2. Select **On** to enable fusion mode.
3. Set the fusion percentage.

Item	Description
Image Fusion Percentage	The greater the value, the closer the thermal image effect is to the visible image effect. Image fusion percentage: 0 Edge fusion percentage: 50 Image fusion percentage: 100 Edge fusion percentage: 50

|	The greater the value, the sharper the object edges in the thermal image.
Edge Fusion Percentage	Image fusion percentage: 50 Image fusion percentage: 50 Edge fusion percentage: 0 Edge fusion percentage: 100

NOTE!
The frame rate of live video may be limited when the fusion mode is enabled on certain models.

12. Non-Uniformity Correction

Non-uniformity correction is used to correct the non-uniformity of pixels caused by different response rates between thermal units to generate higher quality and more accurate images.

1. On the **Image** page, select **Channel 2** and click **Advanced**.
2. Select the non-uniformity correction mode.
- Shutter Compensation: In this mode, the live video may be lost.
- Background Compensation: In this mode, scene change may occur during image collection.
13. Reduce Vertical Stripe Noise

This function helps remove vertical stripes in images caused by sensor process or external temperature.

1. On the **Image** page, select **Channel 2** and click **Advanced**.

2. Drag the slider or enter a value to set the intensity. The greater the value, the blurrier the image.

Before removing vertical stripe noise

After removing vertical stripe noise

## 14. Thermal Imaging Palette

The camera offers a variety of color display options for thermal imaging. The rainbow palette has a strong contrast and a clear distinction between colors of different temperatures, ideal for pinpointing objects in environments with subtle temperature differences.

1. On the **Image** page, select **Channel 2** and click **Advanced**.
2. Select the appropriate thermal imaging palette for your camera.

Common Palette "Rainbow 3"
Common Palette "White Hot"
5.5.2 OSD

On Screen Display (OSD) are characters displayed with video images, for example, camera name, date and time.
 NOTE!
- This function may vary with device model.
- For dual-channel devices, you can set OSD parameters for the channels separately.
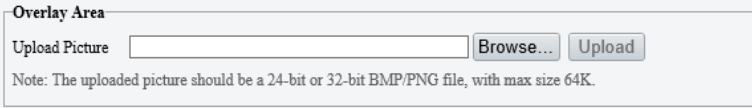

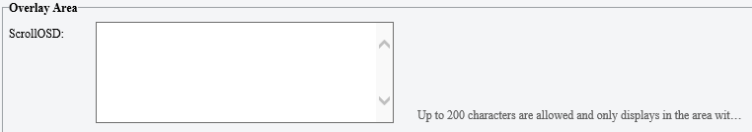

1. Live View OSD

Configure OSD overlayed on the live video.

1. Go to **Setup** > **Image** > **OSD** > **Live View**.

2. Set the OSD position and content.

Item	Description
Enable	Select the check boxes in the **Enable** column to overlay the corresponding contents on the live video. **NOTE!** Up to 8 overlays allowed.
Overlay OSD Content	Set the OSD content you want to overlay. Point to the OSD content, click ✎ , select the OSD content from the drop-down list or customize it. Some OSD contents are described below. ● Preset: When you call a preset, the preset ID will be displayed on the live image, such as "Preset 1". ● People Counting: Before use, you need to enable and configure People Flow Counting, Crowd Density Monitoring, or Face Detection, then you can view the people flow information (number of people entering/leaving), crowd density information (number of people present), or face detection information (number of people entering/leaving) on the live image. ● Motor Vehicle&Non-Motor Vehicle&Pedestrian Count: Before use, you need to enable Mixed-Traffic Detection and **Motor Vehicle&Non-Motor Vehicle&Pedestrian Count**, then you can view motor vehicle/non-motor vehicle/pedestrian counting information on the live image. **NOTE!** ● The OSD content only takes effect after you select the **Enable** check box. ● Some models allow different OSD contents in one overlay area.
X-Axis/Y-Axis	Specify the exact position of the OSD by entering the X and Y coordinates. Take the top left corner of the image as the origin coordinates (0, 0), the horizontal axis is the X-axis, and the vertical axis is the Y-axis. **NOTE!** You can also set the OSD position as follows: point to the OSD box in the preview window, drag the box to the desired position after the cursor shape is changed.
✔	✔ indicates the OSD overlay is set successfully.
⌃ / ⌄	Use the two buttons to rearrange the OSDs.

Upload Picture	This parameter is available only when the **Overlay OSD Content** is set to **Picture Overlay**. 1. Click **Browse…** to select the picture you want to overlay. 2. Click **Upload**, then the picture is displayed on the live video. **Overlay Area** Upload Picture [_____] [Browse...] [Upload] Note: The uploaded picture should be a 24-bit or 32-bit BMP/PNG file, with max size 64K.
ScrollOSD	This parameter is available only when the **Overlay OSD Content** is set to **Picture Overlay**. 1. Enter the text information you want to overlay. 2. After successful configuration, the text will be scrolled from right to left on the live video **Overlay Area** ScrollOSD: [_____] Up to 200 characters are allowed and only displays in the area wit…

📝 **NOTE!**

To cancel an OSD, clear the corresponding check box in the **Enable** column or click × in the **Overlay OSD Content** text box.

3. Set the OSD display style.

| Item	Description
Effect	Select the display effect of the OSD content, including **Background**, **Stroke**, **Hollow**, or **Normal**.
Font Size	Select the font size of the OSD content, including **X-large**, **Large**, **Medium**, or **Small**.
Font Color	Click 🌈 to select the text color of the OSD content.
Min. Margin	Select the minimum distance between the OSD area and the edge of the image, including **None**, **Single**, and **Double**.
Date Format	Select the date format, including **dd/MM/yyyy**, **MM/dd/yyyy**, etc.
Time Format	Select the time format, including **HH:mm:ss**, **HH:mm:ss.aaa**, **hh:mm:ss tt**, and **hh:mm:ss.aaa tt**.

2. **Photo OSD**

Configure OSD overlayed on the images captured from the live video.

1. Go to **Setup** > **Image** > **OSD** > **Photo**.

2. Select how the photo OSD is configured, **Use Live View OSD** or **Configure Separately**.

- Use Live View OSD: Use the OSD overlayed on the live video.

- Configure Separately: Configure the OSD overlayed on the snapshots separately.

3. Set the text color and background color for the OSD.

4. Refer to the table below to set other parameters as needed.

Item	Description
Overlay Position	Select the position for the OSD on the snapshot. ● Inside: Overlay inside the image. ● External Top: Overlay at the top outside the image ● External Bottom: Overlay at the bottom outside the image.
Font Size	Select the font size of the OSD content, including **X-large**, **Large**, **Medium**, and **Small**.
Character Space	Set the distance between the OSD area and the edge of the image. Range: 0 to 10px.
Show Configuration Item Name	Select whether to show the configuration item name, such as **Date Time**, **Device ID**, etc.
Time Format	Select the time format, including **HH:mm:ss**, **HH:mm:ss.aaa**, **hh:mm:ss tt**, and **hh:mm:ss.aaa tt**.
Date Format	Select the date format, including **dd/MM/yyyy**, **MM/dd/yyyy**, etc.
Configuration Item Name	Select the configuration items you want to overlay, then the selected items are listed in the table.
Custom Configuration Item Name	Customize the configuration item name.
Overlay Area	Select an overlay area for the configuration item. You may change the area position by dragging it on the image or entering the X and Y coordinates. **NOTE!** This parameter is available only when **Overlay Position** is set to **Inside**.
Space Count	Set the number of spaces after the overlay. Range: 0 to 10.
Line Feed Count	Set whether and how to break line for the subsequent configuration items. ● 0: No line break. ● 1: Second line. ● 2/3: Third/fourth line. **NOTE!** ● In **External Top** or **External Bottom** mode, if the **Line Feed Count** is set to 2 or 3, the subsequent configuration items move to the next line. ● In **External Top** or **External Bottom** mode, up to 8 lines are allowed. The larger the font, the fewer lines are displayed; the smaller the font, the more lines are displayed.
⌃ / ⌄	Use the two buttons to rearrange the configuration items.
🗑	Delete the configuration item.

5. Click **Save**.

5.5.3 Privacy Mask

Privacy mask is used to cover certain areas on the image for privacy, for example, ATM keyboard.

NOTE!

- This function may vary with device model.
- For dual-channel devices, you can set privacy mask parameters for the channels separately.
1. Go to **Setup** > **Image** > **Privacy Mask**.

2. Select the mask mode, **Rectangle** or **Polygon**.

- 2D-mask camera: For a PTZ camera, the privacy mask does not move and zoom with the camera.
- 3D-mask camera: For a PTZ camera, the privacy mask moves and zooms with the camera and the masked area is always covered.

3. Add a privacy mask.

   (1) Click **Add**. The privacy mask is a rectangle by default.

   (2) Adjust the position and size of the mask or draw a mask as needed.

   ➢ Adjust the position and size of the mask.

   – Point to a border of the mask and drag it to the desired position.

   – Point to a handle of the mask and drag to resize it.

   ➢ Draw a mask.

   – Polygon: Click on the image and drag to draw a line. Repeat the action to draw more lines to form an enclosed shape as needed. Up to 4 lines are allowed.

   – Rectangle: Click on the image and drag to draw a rectangle.

4. Set the privacy mask.

Item	Description
Mask style	Select the mask style, **Black** or **Mosaic**. **NOTE!** • This parameter is configurable when **Mask Mode** is set to **Rectangle**. By default, the mask style of polygon mask is black and cannot be modified. • Mosaic is only available on certain models.
Max. Zoom (3D-mask camera)	Set the maximum zoom ratio to determine whether to show or hide the privacy mask. If the current lens zoom ratio is less than the maximum zoom ratio, the privacy mask is invalid.
Set As Max. (3D-mask camera)	Click to set the current lens zoom ratio as the maximum zoom ratio.
Preset (3D-mask camera)	Click to rotate the camera to the masked area (generally, the masked area is in the center of the live video).

5.5.4 Quick Focus
Fast focus effectively saves focus time and avoids missing important information after the camera changes the scene, focus and zoom.

![notebook icon] **NOTE!**
• This function is only available on certain models.
• Set the zoom speed to 2 on the **Image** page when quick focus is enabled.

1. Go to **Setup** > **Image** > **Quick Focus**.
2. Select the **Enable Quick Focus** check box to enable it.

3. Add a calibration line for the desired scene.

   (1) Click **Add**. A line displays on the image.

    (2) Adjust the position and length of the line or draw a line as needed.

    ➢ Adjust the position and length of the line.

    – Point to the line and drag it to the desired position.

    – Point to a handle of the line and drag to resize it.

    ➢ Draw a line.

    Click on the image and drag to draw a line.

4. Click **Demarcate** to start automatic zoom. After the auto zoom is completed, click **Finish** to complete calibration. If you click **Finish** during calibration, the calibration line is considered invalid.

5. Repeat the above steps to calibrate more scenes. Up to 4 scenes are allowed.

5.6 **Smart**

On the **Smart** page, you can select the smart event to be monitored and click ⚙ to configure relevant parameters.

The smart events supported by the device and the parameters supported by the events may vary with device model.
Common Button Description

Button	Description
➕	Create detection rules. Up to 4 detection rules are allowed for each smart event.
🗑	Delete detection rules.
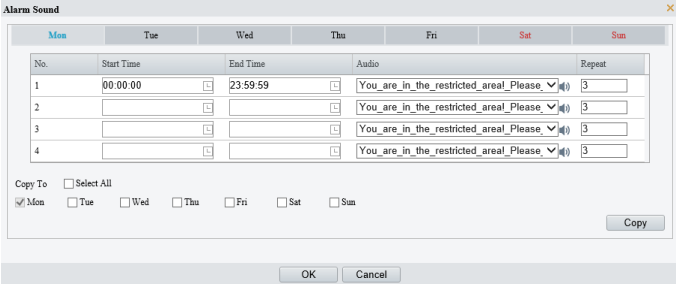

5.6.1 **Alarm-triggered Actions**
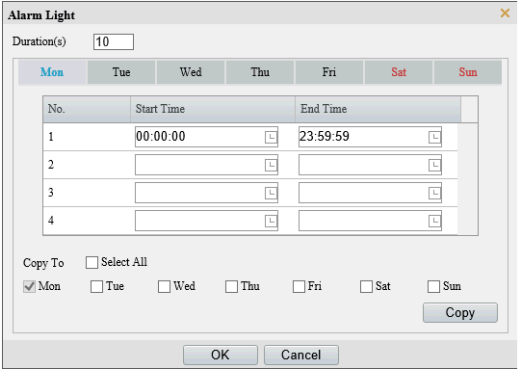

You can set how the camera responds to an event to alert you to deal with it in time.

Item	Description
Upload to FTP	The camera uploads snapshots to the specified FTP server when an alarm occurs. Please configure FTP and Snapshot first before use.
Send E-mail	The camera sends snapshots to the specified email addresses when an alarm occurs. Please configure E-mail and Snapshot first before use.
Alarm the Center	The camera uploads alarm information to the surveillance center when an alarm occurs.
Attribute Collection	The camera uploads the attribute information of the object that triggers the alarm to the server when an alarm occurs. Please configure Attribute Collection first before use.
Upload Image(Original)	The camera uploads the original snapshots of the object that triggers the alarm to the server when an alarm occurs.
Upload Image(Target)	The camera uploads the object snapshots to the server.
Alarm Output	The camera outputs an alarm to trigger actions by an alarm output device when an alarm occurs. Please configure Alarm Output first before use.

	The camera plays warning sounds when an alarm occurs.
Alarm Sound	1. Select the **Alarm Sound** check box and click ⚙ to configure relevant parameters. 2. Set the arming schedule for audible alarms. See [Arming Schedule](#) for details. 3. Set the alarm audio content and alarm times. ● Audio: Set the audio content to be played when an alarms occurs. See [Audio File](#) for details. ● Repeat: Set the number of times the audio to be played when an alarm occurs. **NOTE!** This function may vary with device model.
Alarm Light	The illuminator of the camera flashes for a certain period of time when an alarm occurs. 1. Select the **Alarm Light** check box and click ⚙ to configure relevant parameters. 2. Set the duration that the illuminator flashes when an alarm occurs. 3. Set the arming schedule for visible alarms. See [Arming Schedule](#) for details. **NOTE!** This function may vary with device model.
Recording Edge Storage	The camera saves alarm recordings to its memory card or NAS when an alarm occurs. Please configure [Memory Card](#) or [Network Disk](#) first before use.
Image Edge Storage	The camera saves alarm snapshots to its memory card or NAS when an alarm occurs. Please configure [Memory Card](#) or [Network Disk](#) first before use.
FTP Video Storage	The camera uploads alarm recordings to the specified FTP server when an alarm occurs. Please configure [FTP](#) first before use.
Trigger Tracking	The camera starts tracking the object that triggers the alarm automatically until the set tracking time is reached or the object disappears when an alarm occurs. You can click **Tracking** to configure tracking parameters. See [Tracking](#) for details.
Go to Preset	The camera automatically goes to a preset position when an alarm occurs. Select the preset position you want the camera to go to. See [PTZ](#) for details.

5.6.2 Arming Schedule

You can set an arming schedule to determine when the camera performs detection.
● Draw a schedule

To set an armed period, click **Armed**, and then click or drag on the schedule to select the time cells you want to enable arming. To set a disarmed period, click **Unarmed**, and then click or drag on the schedule to select the time cells you want to disable arming.

> **NOTE!**
> Only browsers of IE 9 or higher allows schedule drawing.

● Edit a schedule

Click **Edit**, set the arming time, and then click **OK**.

> **NOTE!**
> ● Up to 4 time periods are allowed per day. The time periods cannot overlap.
> ● To apply the same time settings to other days, select the desired day(s), and then click **Copy**.

5.6.3 Cross Line Detection

Cross line detection detects objects crossing a user-specified virtual line in a specified direction. The camera reports an alarm when the detection rule is triggered.

1. Go to **Setup** > **Intelligent** > **Smart**.

68

2. Select **Cross Line** and click ⚙ to configure it.
3. Add a detection rule.

   (1) Click ➕ to add a detection line. Up to 4 detection rules are allowed.

   (2) Adjust the position and length of the line or draw a line as needed.

   ➢ Adjust the position and length of the line.

   – Point to the line and drag it to the desired position.

   – Point to a handle of the line and drag to resize it.

   ➢ Draw a line.

      Click on the image and drag to draw a line.

4. Set the detection rule.

| Item	Description
Trigger Direction	Select the direction from which the object crosses the line to trigger an alarm. • A->B: The camera reports a cross line alarm when it detects an object crossing the line from A to B. • B->A: The camera reports a cross line alarm when it detects an object crossing the line from B to A. • A<->B (default): The camera reports a cross line alarm when it detects an object crossing the line from A to B or from B to A.
Sensitivity	Set the detection sensitivity. The higher the sensitivity, the more likely cross line behaviors will be detected, and the more likely false alarms will occur.
Level	Select the priority of the detection rule, including **High**, **Medium**, and **Low**. The camera detects the rule that is triggered first by default. If multiple rules are triggered at the same time, the camera detects the rule with higher priority.

Detection Object	Select the object to be detected, including **Motor Vehicle**, **Non-Motor Vehicle**, and **Pedestrian**.
Filter Type	After you select a detection object, you can set a filter rule for it. For example, if you have selected **Motor Vehicle** as a detection object, select **Motor Vehicle** from the **Filter Type** drop-down list and set the **Max. Size** or **Min. Size** for it, then motor vehicles larger than the Max. Size or smaller than the Min. Size will not be detected.
Max. Size/Min. Size	When enabled, a box appears on the image, you can point to a handle of the box and drag to resize it. The camera filters objects larger than the Max. Size or smaller than the Min. Size. The width and height of the maximum filter area must be greater than that of the minimum filter area.

5. Set the alarm-triggered actions and arming schedule. See [Alarm-triggered Actions](#) and [Arming Schedule](#) for details.

6. Click **Save**.

5.6.4 Enter Area Detection

Enter area detection detects objects entering a user-specified area. The camera reports an alarm when the detection rule is triggered.

1. Go to **Setup** > **Intelligent** > **Smart**.

2. Select **Enter Area** and click ⚙ to configure it.

3. Add a detection rule.

(1) Click ➕ to add a detection area. The detection area is a hexagon by default. Up to 4 detection rules are allowed.
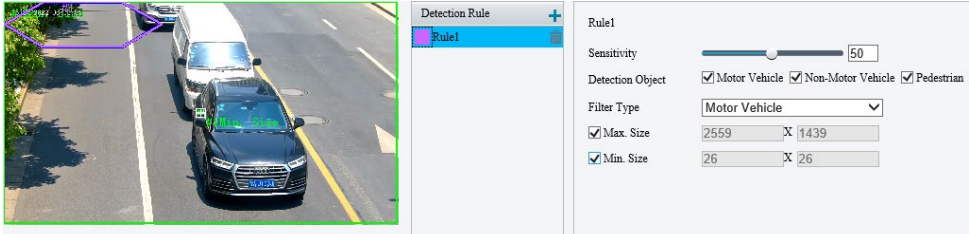

(2) Adjust the position and size of the area or draw an area as needed.

> ➢ Adjust the position and size of the area.

> – Point to a border of the area and drag it to the desired position.

> – Point to a handle of the area and drag to resize it.

> ➢ Draw an area.

> Click on the image and drag to draw a line. Repeat the action to draw more lines to form an enclosed shape as needed. Up to 6 lines are allowed.

4. Set the detection rule.

Item	Description
Sensitivity	Set the detection sensitivity. The higher the sensitivity, the more likely entry behaviors will be detected, and the more likely false alarms will occur.
Level	Select the priority of the detection rule, including **High**, **Medium**, and **Low**. The camera detects the rule that is triggered first by default. If multiple rules are triggered at the same time, the camera detects the rule with higher priority.
Detection Object	Select the object to be detected, including **Motor Vehicle**, **Non-Motor Vehicle**, and **Pedestrian**.
Filter Type	After you select a detection object, you can set a filter rule for it. For example, if you have selected **Motor Vehicle** as a detection object, select **Motor Vehicle** from the **Filter Type** drop-down list and set the **Max. Size** or **Min. Size** for it, then motor vehicles larger than the Max. Size or smaller than the Min. Size will not be detected.
Max. Size/Min. Size	When enabled, a box appears on the image, you can point to a handle of the box and drag to resize it. The camera filters objects larger than the Max. Size or smaller than the Min. Size. The width and height of the maximum filter area must be greater than that of the minimum filter area.

5. Set the alarm-triggered actions and arming schedule. See Alarm-triggered Actions and Arming Schedule for details.
6. Click **Save**.

5.6.5 Leave Area Detection

Leave area detection detects objects leaving a user-specified area. The camera reports an alarm when the detection rule is triggered.

1. Go to **Setup** > **Intelligent** > **Smart**.

2. Select **Leave Area** and click ⚙ to configure it.

3. Add a detection rule.

(1) Click ➕ to add a detection area. The detection area is a hexagon by default. Up to 4 detection rules are allowed.

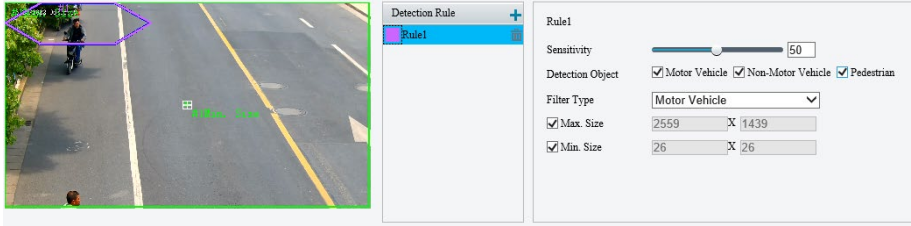

(2) Adjust the position and size of the area or draw an area as needed.

➢ Adjust the position and size of the area.

– Point to a border of the area and drag it to the desired position.

– Point to a handle of the area and drag to resize it.

➢ Draw an area.

Click on the image and drag to draw a line. Repeat the action to draw more lines to form an enclosed shape as needed. Up to 6 lines are allowed.

4. Set the detection rule.

| Item	Description
Sensitivity	Set the detection sensitivity. The higher the sensitivity, the more likely cross line behaviors will be detected, and the more likely false alarms will occur.
Level	Select the priority of the detection rule, including **High**, **Medium**, and **Low**. The camera detects the rule that is triggered first by default. If multiple rules are triggered at the same time, the camera detects the rule with higher priority.
Detection Object	Select the object to be detected, including **Motor Vehicle**, **Non-Motor Vehicle**, and **Pedestrian**.

Filter Type	After you select a detection object, you can set a filter rule for it. For example, if you have selected **Motor Vehicle** as a detection object, select **Motor Vehicle** from the **Filter Type** drop-down list and set the **Max. Size** or **Min. Size** for it, then motor vehicles larger than the Max. Size or smaller than the Min. Size will not be detected.
Max. Size/Min. Size	When enabled, a box appears on the image, you can point to a handle of the box and drag to resize it. The camera filters objects larger than the Max. Size or smaller than the Min. Size. The width and height of the maximum filter area must be greater than that of the minimum filter area.

5. Set the alarm-triggered actions and arming schedule. See <u>Alarm-triggered Actions</u> and <u>Arming Schedule</u> for details.

6. Click **Save**.

5.6.6 Intrusion Detection

Intrusion detection detects objects entering a user-specified area and staying for a preset time. The camera reports an alarm when the detection rule is triggered.

1. Go to **Setup** > **Intelligent** > **Smart**.

2. Select **Intrusion** and click ⚙ to configure it.

3. Add a detection rule.

   (1) Click ➕ to add a detection area. The detection area is a hexagon by default. Up to 4 detection rules are allowed.

(2) Adjust the position and size of the area or draw an area as needed.

- ➢ Adjust the position and size of the area.
- – Point to a border of the area and drag it to the desired position.
- – Point to a handle of the area and drag to resize it.
- ➢ Draw an area.

  Click on the image and drag to draw a line. Repeat the action to draw more lines to form an enclosed shape as needed. Up to 6 lines are allowed.

4. Set the detection rule.

| Item	Description
Time Threshold(s)	Set how long the object stays in the detection area to trigger an intrusion alarm. If an object stays in the detection area for the set time, an intrusion alarm will be triggered.
Sensitivity	Set the detection sensitivity. The higher the sensitivity, the more likely intrusion behaviors will be detected, and the more likely false alarms will occur.
Level	Select the priority of the detection rule. The camera detects the rule that is triggered first by default. If multiple rules are triggered at the same time, the camera detects the rule with higher priority.
Detection Object	Select the object to be detected, including **Motor Vehicle**, **Non-Motor Vehicle**, and **Pedestrian**.
Filter Type	After you select a detection object, you can set a filter rule for it. For example, if you have selected **Motor Vehicle** as a detection object, select **Motor Vehicle** from the **Filter Type** drop-down list and set the **Max. Size** or **Min. Size** for it, then motor vehicles larger than the Max. Size or smaller than the Min. Size will not be detected.
Max. Size/Min. Size	When enabled, a box appears on the image, you can point to a handle of the box and drag to resize it. The camera filters objects larger than the Max. Size or smaller than the Min. Size. The width and height of the maximum filter area must be greater than that of the minimum filter area.

5. Set the alarm-triggered actions and arming schedule. See [Alarm-triggered Actions](#) and [Arming Schedule](#) for details.
6. Click **Save**.

74

5.6.7 Object Removed Detection

Object removed detection detects objects removed from a user-specified area. The camera reports an alarm when the detection rule is triggered.

1. Go to **Setup** > **Intelligent** > **Smart**.

2. Select **Object Removed** and click ⚙ to configure it.

3. Add a detection rule.

   (1) Click ➕ to add a detection area. The detection area is a hexagon by default. Up to 4 detection rules are allowed.

   (2) Adjust the position and size of the area or draw an area as needed.
   - ➢ Adjust the position and size of the area.
   - – Point to a border of the area and drag it to the desired position.
   - – Point to a handle of the area and drag to resize it.
   - ➢ Draw an area.

      Click on the image and drag to draw a line. Repeat the action to draw more lines to form an enclosed shape as needed. Up to 6 lines are allowed.

4. Set the detection rule.

Item	Description
Time Threshold(s)	Set how long the object is removed from the detection area to trigger an alarm. If an object is removed from the detection area for the set time, an alarm will be triggered.
Sensitivity	Set the detection sensitivity. The higher the sensitivity, the more likely object removal behaviors will be detected, and the more likely false alarms will occur.

5. Set the alarm-triggered actions and arming schedule. See [Alarm-triggered Actions](#) and [Arming Schedule](#) for details.
6. Click **Save**.

5.6.8 Object Left Behind Detection

Object left behind detection detects objects left behind in a user-specified area. The camera reports an alarm when the detection rule is triggered.

1. Go to **Setup** > **Intelligent** > **Smart**.

2. Select **Object Left Behind** and click ⚙ to configure it.

3. Add a detection rule.

(1) Click ➕ to add a detection area. The detection area is a hexagon by default. Up to 4 detection rules are allowed.

(2) Adjust the position and size of the area or draw an area as needed.

➢ Adjust the position and size of the area.

– Point to a border of the area and drag it to the desired position.

- Point to a handle of the area and drag to resize it.
➢ Draw an area.

Click on the image and drag to draw a line. Repeat the action to draw more lines to form an enclosed shape as needed. Up to 6 lines are allowed.

4. Set the detection rule.

Item	Description
Time Threshold(s)	Set how long the object is left behind in the detection area to trigger an alarm.
	If an object is left behind in the detection area for the set time, an alarm will be triggered.
Sensitivity	Set the detection sensitivity.
	The higher the sensitivity, the more likely object left behind behaviors will be detected, and the more likely false alarms will occur.

5. Set the alarm-triggered actions and arming schedule. See Alarm-triggered Actions and Arming Schedule for details.

6. Click **Save**.

5.6.9 Defocus Detection

Defocus detection detects lens defocus. The camera reports an alarm when the detection rule is triggered.

1. Go to **Setup** > **Intelligent** > **Smart**.

2. Select **Defocus** and click ⚙ to configure it.

3. Set the detection sensitivity. The higher the sensitivity, the more likely defocus will be detected, and the more likely false alarms will occur.

4. Set the alarm-triggered actions. See Alarm-triggered Actions for details.

5. Click **Save**.

5.6.10 Scene Change Detection

Scene change detection detects the change of surveillance scene caused by external factors such as intentional camera movement. The camera reports an alarm when the detection rule is triggered.

1. Go to **Setup** > **Intelligent** > **Smart**.

2. Select **Scene Change** and click ⚙ to configure it.
3. Set the detection sensitivity. The higher the sensitivity, the more likely scene change behaviors will be detected, and the more likely false alarms will occur.

4. Set the alarm-triggered actions and arming schedule. See [Alarm-triggered Actions](#) and [Arming Schedule](#) for details.

5. Click **Save**.

5.6.11 Face Detection

Face detection detects and captures faces in a specified detection area.

1. Go to **Setup** > **Intelligent** > **Smart**.

2. Select **Face Detection** and click ⚙ to configure it.

3. Set the face detection rule.

Item	Description

Snapshot Area	Select the snapshot area.
	• Full Screen: The camera detects and captures all faces in the live video.
	• Specified Area: The camera only detects and captures faces in a specified area of live video.
	  ➢ Select **Specified Area** and a detection box appears in the left preview window.
	
	  ➢ Adjust the position and size of the area or draw an area as needed.
	  – Adjust the position and size of the area. Point to a border of the area and drag it to the desired position. Point to a handle of the area and drag to resize it.
	  – Draw an area. Click on the image and drag to draw a line. Repeat the action to draw more lines to form an enclosed shape as needed. Up to 6 lines are allowed.

Snapshot Sensitivity	Set the snapshot sensitivity. The higher the sensitivity, the more likely a face will be detected.
Snapshot Mode	Set the snapshot mode. • Intelligent Recognition: The camera continuously performs face detection. • Alarm Input: The camera only performs face detection in the event of an alarm input. Before use, you need to enable alarm input and configure arming schedule for it. See Alarm Input for details.
Human Body Snapshot	Select to enable or disable human body snapshot.
Min. Pupillary Distance (px)	The minimum distance (measured in pixels) between two pupils. The face with pupillary distance smaller than the value will not be captured. To set the minimum pupillary distance, you can click **Draw** and drag the corners of the box in the preview window to resize it, or type the pupillary distance value in the text box.
Static Object Detection	Select whether to detect static objects.
Counting	After you enable **Counting** and select the people counting direction, the statistics of people entering or leaving are displayed on the live image. Before use, please configure a people counting OSD overlay on the **OSD** page. See OSD for details.
Reset Counter at	• Select the **Reset Counter at** check box and set a time for the camera to clear people counting statistics. • To clear people counting statistics immediately, click **Clear Counting Result**. This operation only clears the people statistics displayed on the OSD, and does not affect the reported data.

4. Set the face selection rule.

Item	Description
Selection Mode	Select the face selection mode. • Effect Priority: The camera selects 1 to 3 snapshots with the best quality to report. You can specify the number of photos to select. • Speed Priority: The camera selects certain number of snapshots from the moment that the face is detected till **Selection Timeout** is up. You can specify the number of photos to select. • Periodic Selection: The camera selects a snapshot in every selection period. For example, if **Selection Period** is set to 500ms, the camera selects a face snapshot every 500ms, and if **Upload Original Image** is enabled, both the original snapshot containing the face and the face cutout will be uploaded.

Number of Selected Photos	Set the number of snapshots to be selected in the range of 1 to 3. This parameter is set to 1 by default and cannot be modified on certain models.
Filter by Angle	After you enable **Filter by Angle** and set the filtering rule, faces with unqualified angles (larger than the set angles) will be filtered during face detection.

5. Set the face recognition rule. See Face Recognition for details.

> **NOTE!**
>
> Face recognition and human body snapshot cannot be enabled at the same time.

6. Mask undesired areas.

   (1) Click ✚ to add a masked area. The masked area is a hexagon by default. Up to 4 masked areas are allowed.
   (2) Adjust the position and size of the area or draw an area as needed.

   ➢ Adjust the position and size of the area.

   – Point to a border of the area and drag it to the desired position.

   – Point to a handle of the area and drag to resize it.

   ➢ Draw an area.

   Click on the image and drag to draw a line. Repeat the action to draw more lines to form an enclosed shape as needed. Up to 6 lines are allowed.

7. Set the alarm-triggered actions and arming schedule. See Alarm-triggered Actions and Arming Schedule for details.

8. Click **Save**.

5.6.12 Face Recognition

Face recognition compares the faces captured in live view with the faces stored in face libraries, and uploads the comparison results to the server.

1. Go to **Setup** > **Intelligent** > **Smart**.

2. Select **Face Detection** and click ⚙ .

3. Click the **Face Library** tab.
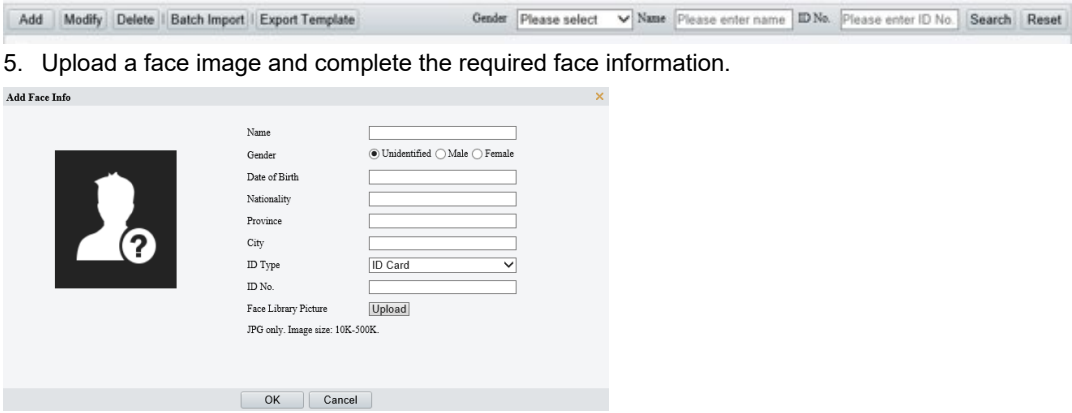

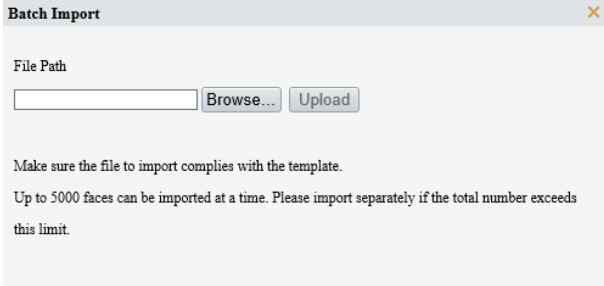

4. Create face libraries.

   Click **Add** in the left area, enter the library name, and click **OK**.

5. Add face data.

Item	Description
Add one by one	4. Click **Add**. 5. Upload a face image and complete the required face information.
Add in batches	1. Click **Export Template** to export the CSV face template file to the PC. 2. Complete the required face data in the template with reference to the import guide. Refer to the import guide to fill in the template with the required face data. 3. Click **Batch Import**, select the CSV file you have edited, and click **Upload**.

The imported face data are shown as below:
6. Add monitoring tasks.

Open the **Monitoring Task** tab.
(1) Click **Add**.
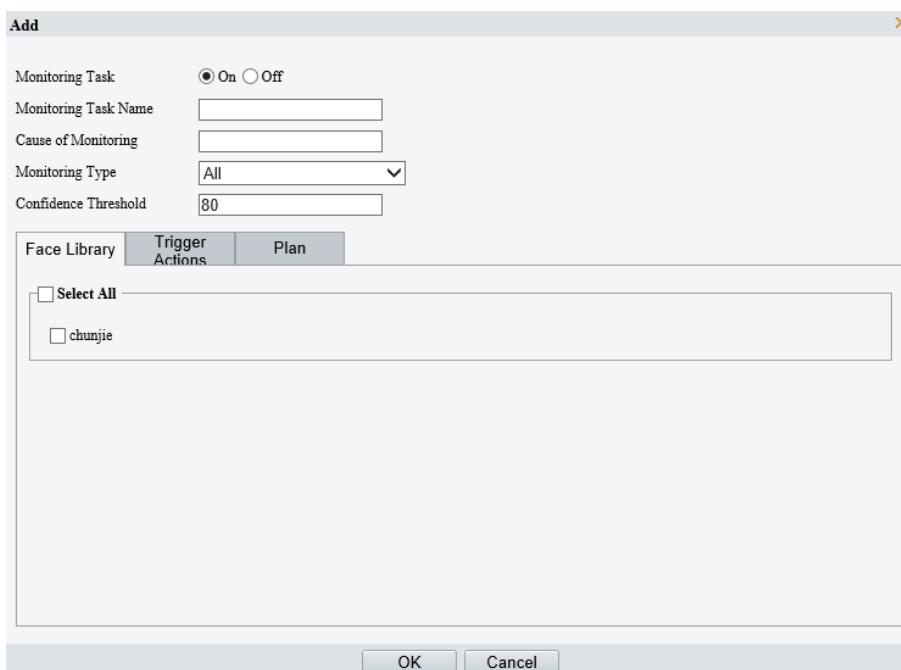

(2) Complete the monitoring task settings.

Monitoring Type	Description
Monitoring Task	Select to enable or disable the monitoring task.
Monitoring Task Name	Enter a name for the monitoring task.
Cause of Monitoring	Enter the cause of the monitoring task.
Monitoring Type	Select the monitoring type. ● All: The camera reports an alarm and performs the set alarm-triggered actions once it detects a face. ● Match Alarm: The camera reports a match alarm and performs the set alarm-triggered actions when the similarity between a captured face and a face in the monitored face library reaches the confidence threshold. ● Not Match Alarm: The camera reports a not match alarm and performs the set alarm-triggered actions when the similarity between a captured face and a face in the monitored face library fails to reach the confidence threshold.
Confidence Threshold	By default, the confidence threshold is set to 80. A match alarm/not match alarm occurs when the similarity between a captured face and a face in the face library reaches/fails to reach the threshold. The higher the value, the more accurate the face recognition.

(3) Select the face library to be monitored.

(4) Set the alarm-triggered actions and arming schedule. See [Alarm-triggered Actions](#) and [Arming Schedule](#) for details.

(5) Click **OK**.

7. Click **Save**.

5.6.13 Human Body Detection

Human body detection detects humans in a specified area. The camera reports an alarm when the detection rule is triggered.

1. Go to **Setup** > **Intelligent** > **Smart**.

2. Select **Human Body Detection** and click ⚙ to configure it.
3. Add a snapshot area.

(1) Click ➕. The snapshot area is a hexagon by default. Only one snapshot area is allowed.

(2) Adjust the position and size of the area or draw an area as needed.

    ➢ Adjust the position and size of the area.

       Point to the area and drag it to the desired position. Drag the corners of the area to resize it.

    ➢ Draw an area.

       Click in the preview window to draw a polygonal area with up to 6 sides.

4. Set the detection sensitivity. The higher the sensitivity, the more likely humans will be detected, and the more likely false alarms will occur.

5. Set the alarm-triggered actions and arming schedule. See [Alarm-triggered Actions](#) and [Arming Schedule](#) for details.

6. Click **Save**.

5.6.14 Mixed-Traffic Detection

Mixed-traffic detection detects and captures motor vehicles, non-motor vehicles, and pedestrians in a user-specified area. You can set a mixed-traffic counting OSD to view realtime motor vehicle, non-motor vehicle and pedestrian statistics on the live video. See [Live View OSD](#) for details.

1. Go to **Setup** > **Intelligent** > **Smart**.

2. Select **Mixed-Traffic Detection** and click ⚙ to configure it.

3. Set the detection rule.

Item	Description

Snapshot Area	Select the snapshot area.
	• Full Screen: The camera detects and captures objects in the live video.
	• Specified Area: The camera only detects and captures objects in a specified area of live video.
	  ➢ Select **Specified Area** and a detection box appears in the left preview window.
	
	  ➢ Adjust the position and size of the area or draw an area as needed.
	  – Adjust the position and size of the area. Point to the area and drag it to the desired position. Drag the corners of the area to resize it.
	  – Draw an area. Click in the preview window to draw a polygonal area with up to 6 sides. Select the area you want to monitor.

Snapshot Sensitivity	Set the detection sensitivity. The higher the sensitivity, the more likely objects will be detected, and the more likely false alarms will occur.
Detection Object	Select the object to be detected, including **Motor Vehicle**, **Non-Motor Vehicle**, and **Pedestrian**.
Filter Type	After you select a detection object, you can set a filter rule for it. For example, if you have selected **Motor Vehicle** as a detection object, select **Motor Vehicle** from the **Filter Type** drop-down list and set the **Max. Size** or **Min. Size** for it, then motor vehicles larger than the Max. Size or smaller than the Min. Size will not be detected.
Max. Size/Min. Size	When enabled, a box appears on the image, you can point to a handle of the box and drag to resize it. The camera filters objects larger than the Max. Size or smaller than the Min. Size. The width and height of the maximum filter area must be greater than that of the minimum filter area.
Static Object Detection	Select whether to detect static objects.
Motor Vehicle&Non-Motor Vehicle&Pedestrian Count	Select whether to count motor vehicles, non-motor vehicles and pedestrians.
Reset Counter at	You can set a time for the camera to clear the traffic statistics or click **Reset Flow Counting** to clear immediately.

4. Mask undesired areas.

(1) Click ➕ to add a masked area. The masked area is a hexagon by default. Up to 4 masked areas are allowed.

(2) Adjust the position and size of the area or draw an area as needed.

➢ Adjust the position and size of the area.

Point to the area and drag it to the desired position. Drag the corners of the area to resize it.

➢ Draw an area.

Click in the preview window to draw a polygonal area with up to 6 sides.

5. Set the alarm-triggered actions and arming schedule. See [Alarm-triggered Actions](#) and [Arming Schedule](#) for details.
6. Click **Save**.

5.6.15 People Flow Counting

People flow counting counts people passing a specified tripwire and triggers an alarm if the number of people exceeds the set alarm threshold.

1. Go to **Setup** > **Intelligent** > **Smart**.

2. Select **People Flow Counting** and click ⚙ to configure it.

3. A tripwire is displayed in the left preview window by default. You can adjust the position and size of it or draw a tripwire as needed. Only one tripwire is allowed.
- Adjust the position and size of the tripwire.

  Point to the tripwire and drag it to the desired position. Drag the endpoints of the tripwire to resize it.

- Draw a tripwire.

  Click in the preview window to draw a tripwire.

4. Set the people flow counting rule.

Item	Description
Data Report Interval(s)	Set the time interval for the camera to report people flow statistics. Default: 60. Range: 1 to 60. For example, if the interval is set to 60, the camera will report people flow statistics to the server every 60 seconds.
Reset Counter at	● Select the **Reset Counter at** check box and set a time for the camera to clear people counting statistics on the OSD. ● To clear now, click **Clear**.
Enter	Set the entry direction.
Counting Type	Select the counting type. Before use, configure a people counting OSD first. See OSD for details. ● Total: The number of people entering and leaving the area is displayed in real time on the video image. ● People Entered: The number of people entering the area is displayed in real time on the video image. ● People Exited: The number of people leaving the area is displayed in real time on the video image.
People Present Alarm	Set the people present alarm threshold. When the number of people present reaches a set threshold, an alarm is triggered. Range: 1 to 180. ● Minor Alarm: A minor alarm is triggered when the number of people present reaches the set value. ● Major Alarm: A major alarm is triggered when the number of people present reaches the set value. The value of major alarm must be greater than that of minor alarm. ● Critical Alarm: A critical alarm is triggered when the number of people present reaches the set value. The value of critical alarm must be greater than that of major alarm.

5. Set the alarm-triggered actions and arming schedule. See Alarm-triggered Actions and Arming Schedule for details.

Edit-Trigger Actions-People Present Minor Alarm

☐ Alarm Sound

OK   Cancel

6. Click **Save**.

5.6.16 Crowd Density Monitoring

Crowd density monitoring monitors the number of people in a specified area and triggers an alarm if the number exceeds the set alarm threshold.

1. Go to **Setup** > **Intelligent** > **Smart**.

2. Select **Crowd Density Monitoring** and click ⚙ to configure it.
3. A detection box is displayed in the left preview window by default. You can adjust the position and size of it or draw an area as needed. Only one area is allowed.
- Adjust the position and size of the area.

  Point to the area and drag it to the desired position. Drag the corners of the area to resize it.

- Draw an area.

  Click in the preview window to draw a polygonal area with up to 6 sides.

4. Set the crowd density monitoring rule.

Item	Description
Report Interval(s)	Set the time interval for reporting crowd density statistics. Default: 60. Range: 1 to 60. For example, if the interval is set to 60, the camera will report crowd density statistics to the server every 60 seconds.
People Present Alarm	Set the crowd density alarm threshold. When the number of people in the specified area reaches a set threshold, an alarm is triggered. Range: 1 to 40. ● Minor Alarm: A minor alarm is triggered when the number of people in the specified area reaches the set value. ● Major Alarm: A major alarm is triggered when the number of people in the specified area reaches the set value. The value of major alarm must be greater than that of minor alarm. ● Critical Alarm: A critical alarm is triggered when the number of people in the specified area reaches the set value. The value of critical alarm must be greater than that of major alarm.

5. Set the alarm-triggered actions and arming schedule. See Alarm-triggered Actions and Arming Schedule for details.

Edit-Trigger Actions-Crowd Density Minor Alarm
Alarm Output

☐ A → 1
☐ Alarm Sound

OK   Cancel

6. Click **Save**.

5.6.17 Auto Tracking

The camera can automatically track objects that trigger the predefined tracking rule.

1. Go to **Setup** > **Intelligent** > **Smart**.

2. Select **Auto Tracking** and click ⚙ to configure it.
3. Set the tracking rule.

Item	Description
Tracking Object	Select the object to be tracked, including **Motor Vehicle**, **Non-Motor Vehicle**, and **Pedestrian**.
Filter Type	After you select a detection object, you can set a filter rule for it. For example, if you have selected **Motor Vehicle** as a detection object, select **Motor Vehicle** from the **Filter Type** drop-down list and set the **Max. Size** or **Min. Size** for it, then motor vehicles larger than the Max. Size or smaller than the Min. Size will not be detected.

Max. Size/Min. Size	When enabled, a box appears on the image, you can point to a handle of the box and drag to resize it. The camera filters objects larger than the Max. Size or smaller than the Min. Size. The width and height of the maximum filter area must be greater than that of the minimum filter area.
Tracking	Click to set tracking parameters. See Tracking for details.

4. Set the alarm-triggered actions and arming schedule. See Alarm-triggered Actions and Arming Schedule for details.

5. Click **Save**.

5.6.18 Smoke and Fire Detection

Smoke and fire detection detects smoke and fire in the visible light channel and triggers an alarm. The camera uploads the original snapshots triggered by smoke and fire alarms by default.

1. Go to **Setup** > **Intelligent** > **Smart**.

2. Select **Smoke and Fire Detection** and click ⚙ to configure it.
3. Set the detection rule.

● Bounding Box Overlay: A rectangular box is used to frame the object that triggers the detection rule for you to quickly locate it.

● Sensitivity: Set the detection sensitivity. The higher the sensitivity, the more likely smoke and fire will be detected, and the more likely false alarms will occur.

● Shield Area: Shield areas that may interfere with detection or trigger false alarms. A total of 64 shielding areas are allowed, with a maximum of 8 shielding areas per image.

(1) Move the camera to the desired position manually or using presets.

(2) Click **Add**.

(3) Adjust the position and size of the area or draw an area as needed.

➢ Adjust the position and size of the area.

Point to the area and drag it to the desired position. Drag the corners of the area to resize it.

➢ Draw an area.

Click in the preview window to draw a polygonal area with up to 6 sides.
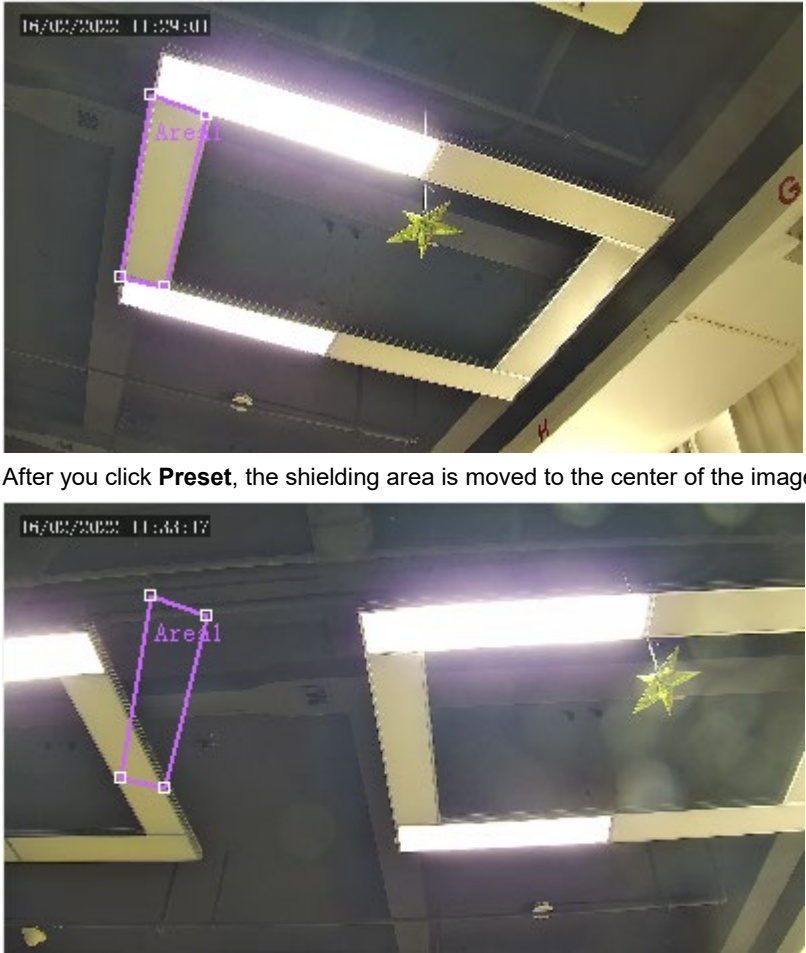

Item	Description
Preset	Click to move the shielding area to the center of the image. For example: Area 1 in the figure below is set as a shielding area. After you click **Preset**, the shielding area is moved to the center of the image. **NOTE!** The area box does not move with the shielding area.
Delete	Delete the shielding area.

4. Set the alarm-triggered actions and arming schedule. See <u>Alarm-triggered Actions</u> and <u>Arming Schedule</u> for details.
5. Click **Save**.

5.6.19 Fire Detection

Fire detection detects fire or heat in a specified detection area and triggers an alarm.

1. Go to **Setup** > **Events** > **Thermal Alarm** > **Fire Detection**.

This function may vary with device model. The following shows the fire detection page of two models for reference.

Model 1
Model 2
2. Enable fire detection.

3. Set the detection rule.

Item	Description
Detection Mode	Select the detection mode.

Fire Detection Overlay	Select whether to show the object bounding box.
Auxiliary Visual Confirmation	Enable **Auxiliary Visual Confirmation** to work with smoke and fire detection to confirm detected fire or heat for more accurate detection results. After the fire detection detects a fire point, if the smoke and fire detection confirms that the fire point has smoke, a fire alarm will be reported. **NOTE!** • When both fire detection and auxiliary visual confirmation are enabled, all smart functions except smoke and fire detection are unavailable. • This function only works during the day.
Sensitivity	Set the detection sensitivity. The higher the sensitivity, the more likely fire or heat will be detected, and the more likely false alarms will occur.

4. Shield areas that may interfere with detection or trigger false alarms. A total of 24 shielding areas are allowed, with a maximum of 8 shielding areas per image.

    (1) Move the camera to the desired position manually or using presets.

    (2) Click **Add**.

    (3) Adjust the position and size of the area or draw an area as needed.

        ➤ Adjust the position and size of the area.

           Point to the area and drag it to the desired position. Drag the corners of the area to resize it.

        ➤ Draw an area.

           Click in the preview window to draw a polygonal area with up to 6 sides.

Item	Description
Shield Area	Select to show or hide the shielding area.
Preset	Click to move the shielding area to the center of the image.
Delete	Delete the shielding area.

5. Set the alarm-triggered actions and arming schedule. See [Alarm-triggered Actions](#) and [Arming Schedule](#) for details.

6. Click **Save**.

5.6.20 Attribute Collection

1. Collect Attributes

You can collect attribute information of monitored objects.

1. Go to **Setup** > **Intelligent** > **Attribute Collection**.

2. Select the attributes to be collected.

3. Click **Save**.

2. Monitor by Attribute

1. Go to **Setup** > **Intelligent** > **Attribute Collection** > **Monitor by Attribute**.
2. Click ![+] to add a monitoring rule.

3. Set the monitoring rule.

Item	Description
Rule Name	Set a name for the rule.
Trigger Source	Select the attribute to trigger monitoring.
Trigger Actions	See Alarm-triggered Actions for details.

4. Click **OK**.

5.6.21 Advanced Settings

Advanced settings include snapshot clarity and detection mode for smart functions.

1. Photo

1. Go to **Setup** > **Intelligent** > **Advanced Settings** > **Photo Parameters**.
2. Select to enable or disable object overlay on the image.

3. Adjust the thumbnail image clarity. Please disable **Face Detection** before setting the photo parameters.

4. Click **Save**.

2. Detection

1. Go to **Setup** > **Intelligent** > **Advanced Settings** > **Detection Parameters**.

2. Set the detection parameters.

Item	Description
Detection Mode	Select the detection mode. **Filter Repeated Motion Mode** is used to prevent repeated alarm reporting caused by repeated motion detected in the surveillance scene.
Sync Intelligent Mark with Video	When enabled, the intelligent mark will follow the detected object.

3. Click **Save**.

3. Tracking

1. Go to **Setup** > **Intelligent** > **Advanced Settings** > **Tracking**.
2. Set the tracking parameters.

Item	Description
Continuously Track	When enabled, the camera continuously tracks the object that triggers the tracking rule until the object disappears.
Tracking Timeout(s)	Set the tracking time. When the set time is reached, the camera stops tracking. **NOTE!** ● This parameter is not configurable when **Continuously Track** is enabled. ● If the object disappears within the set time, the actual tracking time is the time from the appearance to the disappearance of the object.
Zoom	Select the tracking zoom ratio. ● Auto: The camera automatically adjusts the zoom ratio according to the object distance during tracking. ● Current Zoom: The camera keeps the current zoom ratio during tracking.

5.7 Alarm

Configure the alarm function, so the camera can report alarms when an event occurs. Configure alarm linkage, so the camera can trigger other devices to perform specified actions when an event occurs.

> **NOTE!**
> The supported alarms and linkage actions (or trigger actions) may vary with camera model.

5.7.1 Common Alarm

1. Motion Detection
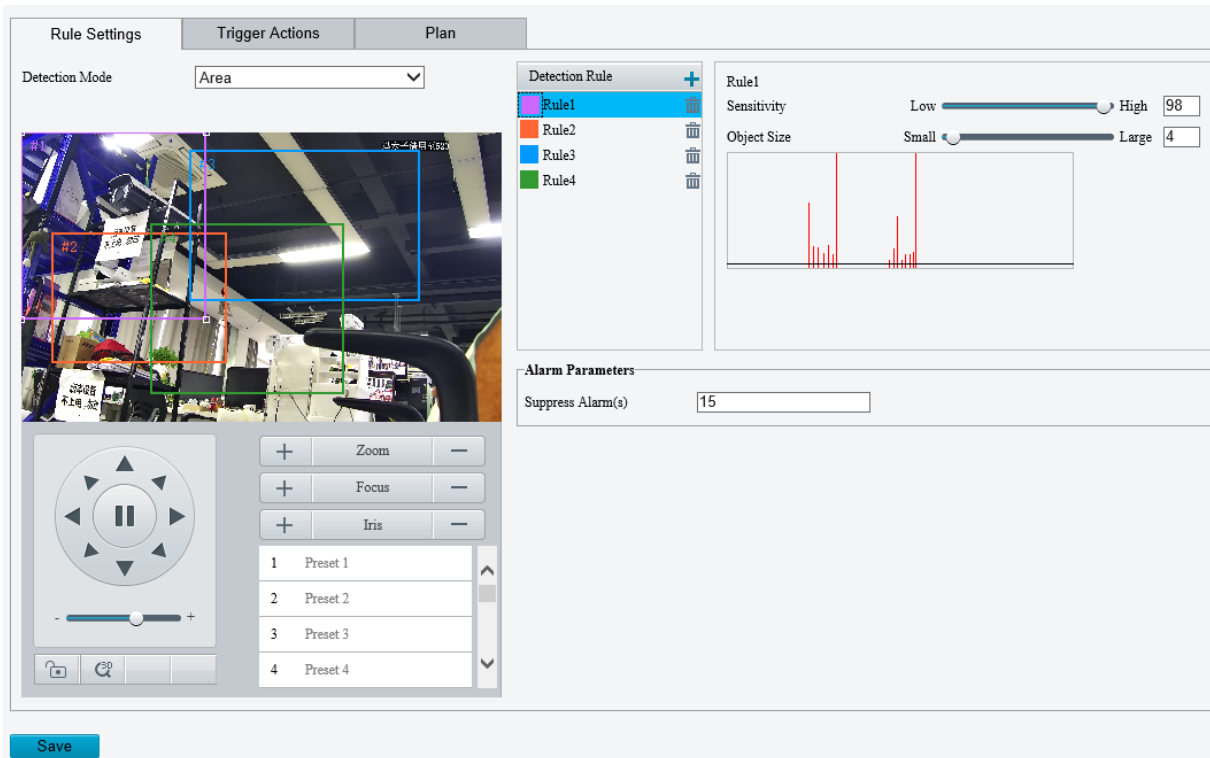

The camera detects motions in specified detection areas or grids on the image and reports an alarm when detection rules are triggered.

> **NOTE!**
>
> The ![icon] icon appears in the upper right corner of the image when a motion detection alarm occurs.

1. Go to **Setup** > **Events** > **Common Alarm** > **Motion Detection**.

2. Choose a detection mode from the drop-down list.

● Detection area
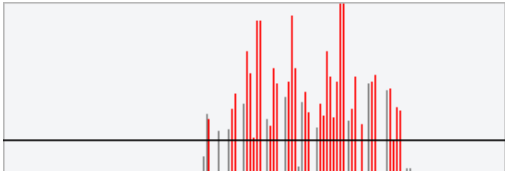

(1) Up to four detection rules are allowed. To add one, click ![plus]. A rectangle appears on the image.
(2) Adjust the position, size and shape of the rectangle detection area, or draw a new one.

➢ Point to a border of the area and drag it to the desired position.

➢ Point to a handle of the area and drag to resize it.

➢ Click anywhere on the image, and then drag to draw a new area.
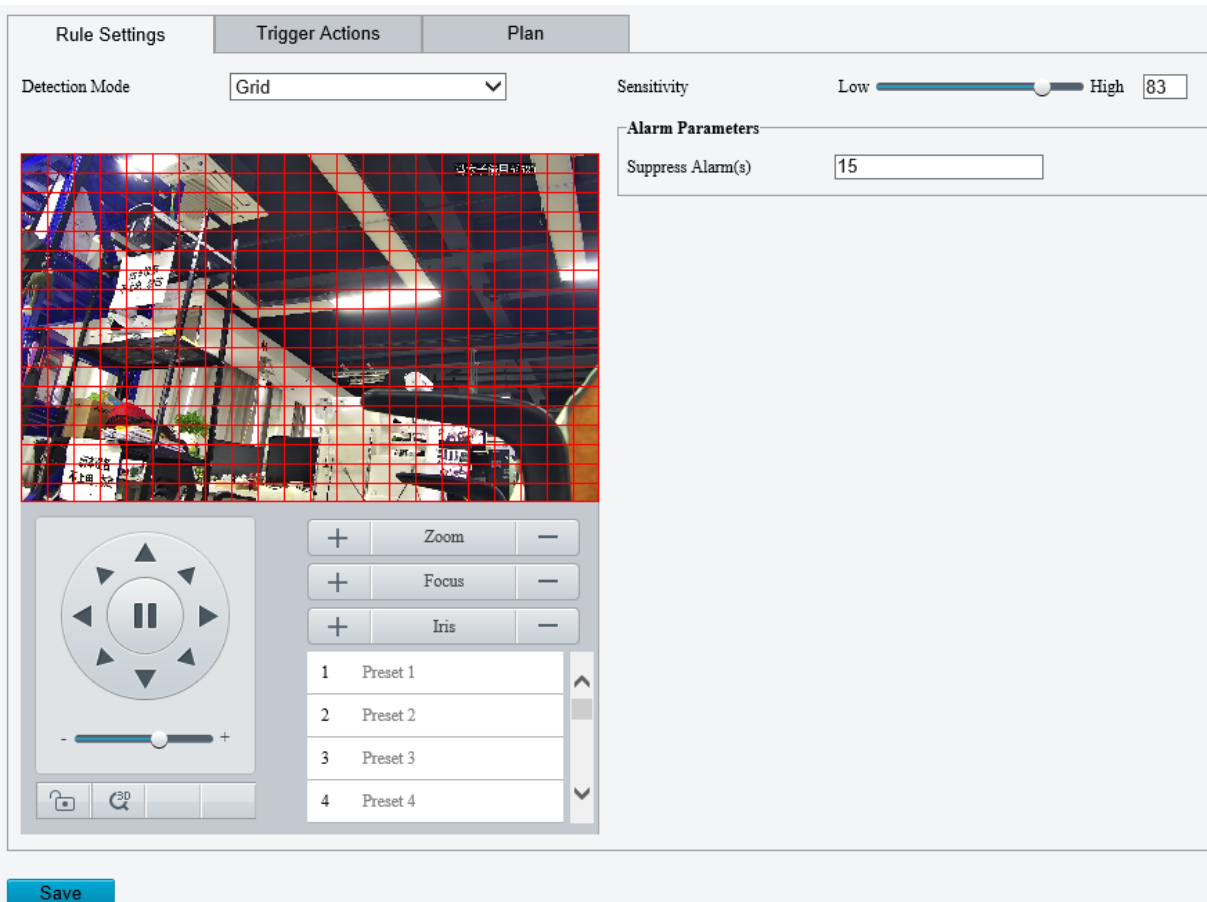

(3) Set detection rules.

Item	Description
Sensitivity	Drag the slider to adjust detection sensitivity. The higher the sensitivity level, the higher the detection rate of small motions, and the higher the false alarm rate. Set based on the scene and your actual needs.
Object size	Drag the slider to set object size. ● Object size: The ratio of the size of the detected object to the size of the detection area. An alarm is triggered when the ratio reaches the set value. To detect motion of small objects, you need to draw a small detection area separately. ● Motion detection results of the current detection area are shown below in real time. The red means motions that have triggered a motion detection alarm. The height of the lines indicates the extent of motion. The density of the lines indicates the frequency of motion. The higher a line, the greater the extent. The denser the lines, the higher the frequency.

(4) Set **Suppress Alarm** to avoid receiving the same alarms within a certain length of time (alarm suppression time). For example, alarm suppression time is set to 5s, after an alarm is reported:

➢ If no motion is detected within the next 5s, new alarms can be reported after 5s when the alarm suppression time is over.

➢ If motion is detected within the next 5s, the alarm suppression time recounts from the time of the last alarm, and new alarms can be reported when the alarm suppressions time (5s) is over.

● Grid detection

(1) Set grid detection areas (covered by grid), which is by default the whole screen.
(2) Edit detection areas as needed.

➢ Click or drag on grid areas to erase grids.

➢ Click or drag on blank areas to draw grids.

(3) Drag the slider to adjust detection sensitivity.

The higher the sensitivity level, the higher the detection rate of small motions, and the higher the false alarm rate. Set based on the scene and your actual needs.

(4) Set **Suppress Alarm** to avoid receiving the same alarms within a certain length of time (alarm suppression time). For example, alarm suppression time is set to 5s, after an alarm is reported:

➢ If no motion is detected within the next 5s, new alarms can be reported after 5s when the alarm suppression time is over.

➢ If motion is detected within the next 5s, the alarm suppression time recounts from the time of the last alarm, and new alarms can be reported when the alarm suppression time (5s) is over.

3. Set alarm linkage and an arming schedule. See [Alarm-triggered Actions](#) and [Arming Schedule](#) for details.

4. Click **Save**.

2. Tampering Detection

The camera triggers a tampering alarm after the lens is blocked for a certain length of time.

1. Go to **Setup** > **Events** > **Common Alarm** > **Tampering Detection**.
2. Select **Enable Tampering Detection**.

3. Set detection rules.

(1) Drag the slider to adjust detection sensitivity. The higher the sensitivity level, the higher the detection rate, and the higher the false alarm rate. Set based on the scene and your actual needs.

(2) Set the duration of lens blocking. The camera reports an alarm when the duration of lens blocking exceeds the set value. Set based on the scene and your actual needs.

4. Set alarm linkage and an arming schedule. See [Alarm-triggered Actions](#) and [Arming Schedule](#) for details.

5. Click **Save**.
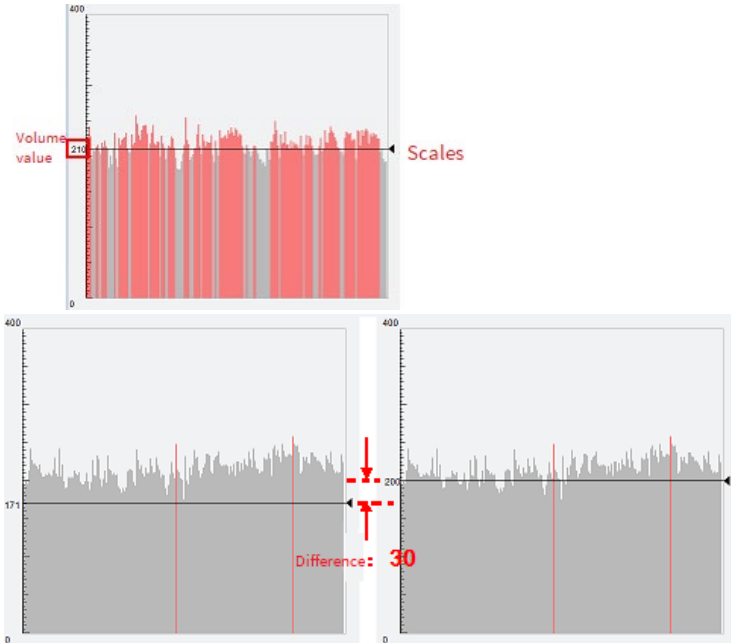

3. Audio Detection

The camera monitors input audio signals and triggers an audio detection alarm when an exception is detected. Make sure an audio collection device (e.g. sound pickup) is connected, and audio detection is enabled (see [Audio](#)).

- When audio input mode is Line/Mic.

1. Go to **Setup** > **Events** > **Common Alarm** > **Audio Detection**.

2. Enable **Audio Detection**.

3. Set audio detection rules.

Item	Description
Detection Type	• Sudden Rise: Detects sudden rising sound volume, and triggers an alarm when the rise of volume exceeds the difference. • Sudden Fall: Detects sudden falling sound volume, and triggers an alarm when the fall of volume exceeds the difference. • Sudden Change: Detects sudden rising and falling sound volume, and triggers an alarm when the rise or fall of volume exceeds the difference. • Threshold: Triggers an alarm when the volume exceeds the threshold.
Difference/Threshold	• Difference: The difference between two sound volumes. The camera triggers an alarm when the rise or fall of volume exceeds the difference (range: 0-400). This parameter is applicable when the detection type is **Sudden Rise**, **Sudden Fall**, or **Sudden Change**. • Threshold: The camera triggers an alarm when the sound volume exceeds the threshold (range: 0-400). This parameter is applicable when the detection type is **Threshold**.

Item	Description
Diagram of relative audio intensity	- Audio detection results are displayed and updated in real time. You can control the display progress by clicking the **Start/Stop** button. - The scales are used to measure sound volume. Gray indicates relative sound intensity. Red means sound volume that has triggered alarms.

4. Set alarm linkage and an arming schedule. See [Alarm-triggered Actions](#) and [Arming Schedule](#) for details.

5. Click **Save**.

- When audio input mode is RS485.

1. Go to **Setup** > **Events** > **Common Alarm** > **Audio Detection**.
2. Enable **Audio Detection**.

3. Set audio detection rules.

Item	Description
Detection Type	Volume Difference: Compare the difference between the actual ambient volume and the reference value.
Reference Volume	Standard value of ambient volume. Range: 0-90.

4. Set alarm linkage and an arming schedule. See [Alarm-triggered Actions](#) and [Arming Schedule](#) for details.

5. Click **Save**.

4. Alarm Input

The camera can receive alarms from external third-party devices such as infrared detectors, smoke detectors, etc. After alarm input is configured, the third-party device can send signals to the camera after an event occurs.

1. Go to **Setup** > **Events** > **Common Alarm** > **Alarm Input**.

Select Alarm	Alarm Input 1 ⌄

Rule Settings	Trigger Actions	Plan
Alarm Name	A1	
Alarm ID		
Alarm Type	N.O. ⌄	
Alarm Input	○ On ◉ Off	

Save

2. Choose an alarm input from the drop-down list.

The number of alarm inputs available may vary with camera model. For example, if the camera has two alarm inputs on the tail cable, you can configure alarm input 1 and alarm input 2 separately.

3. Configure alarm input.

Item	Description
Alarm Name	The default name is the alarm input channel ID. You rename it as needed.
Alarm ID	Set an alarm ID as you need.
Alarm Type	Set the alarm type according to the alarm input device. ● If the alarm input device is normally open (N.O.), choose **N.C.**. ● If the alarm input device is normally closed (N.C.), choose **N.O.**.
Alarm Input	Click **On** to enable **Alarm Input**.

4. Set alarm linkage and an arming schedule. See [Alarm-triggered Actions](#) and [Arming Schedule](#) for details.

5. Click **Save**.

5. Alarm Output

The camera can output alarms to external third-party devices such as alarm bell, buzzer, etc. After alarm output is configured, the camera can output alarm signals when an alarm (such as motion detection alarm, tamping alarm) occurred and trigger the third-party device to perform certain actions.

1. Go to **Setup** > **Events** > **Common Alarm** > **Alarm Output**.

2. Choose an alarm output from the drop-down list. The number of alarm outputs available may vary with camera model.

3. Configure alarm output parameters.

Item	Description
Alarm Name	The default name is the alarm output channel ID. You can rename it as needed.
Default Status	Choose the default status. The default is **N.O.**. ● If the external alarm device is normally open (N.O.), choose **N.O.**. ● If the external alarm device is normally closed (N.C.), choose **N.C.**.
Delay(s)	The duration of alarm output after the alarm is triggered. Set it as needed.
Relay Mode	The default is **Monostable**. ● Monostable: The circuit can only remain in one stable state. When a trigger pulse is applied, the circuit switches to another state, and then automatically switches back to the original stable state. The circuit will repeat the same actions when the next trigger pulse arrives. ● Bistable: The circuit can remain in two stable states. When a trigger pulse is applied, the circuit switches to another state, and remains in this state after the trigger pulse is removed. When the next trigger pulse is applied, the circuit switches back to the other stable state and remains in that state. **NOTE!** Set relay mode to better adapt to third-party alarm devices such as alarm lights. Please set the relay mode according to the trigger mode of the third-party alarm device.

4. On the **Output Schedule** page, select **Enable Plan**, and then set when the camera can output alarms. By default, the schedule (plan) is disabled.

Two methods are available to make an arming schedule:

● Draw a schedule

Click **Armed**, and then drag on the calendar to set when the camera can output alarms. Click **Unarmed**, and then drag on the calendar to set when the camera cannot output alarms.

NOTE!

You need Internet Explorer (higher than IE8) to draw on the calendar. IE10 is recommended.

- Edit the schedule

Click **Edit**, set a refined schedule, click **OK**.

NOTE!

- Four periods are allowed each day. The periods must not overlap.
- To apply the current settings to other days, select the check box for the days one by one or select the **Select All** check box, and then click **Copy**.

5. Click **Save**.
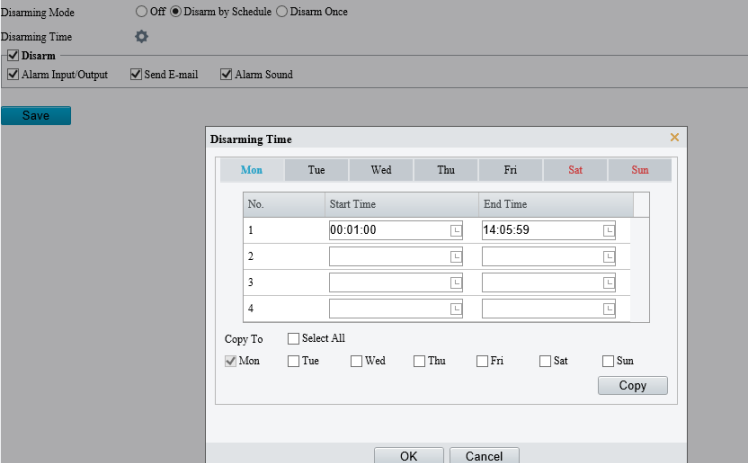

5.7.2 One-key Disarming

The camera cannot trigger linked actions when disarmed.

1. Go to **Setup** > **Events** > **One-key Disarming**.

2. Choose a disarming mode.

- Disarm by Schedule: Disarm according to a weekly schedule.
- Disarm Once: Disarm during a specified time period.
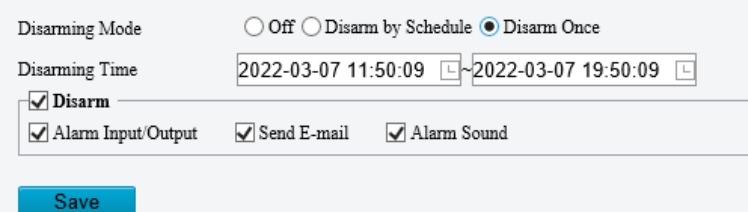

3. Configure disarming schedule or time according to the disarming mode you chose. The disarming schedule or time applies to all the actions selected.

- Disarm by schedule: Click ⚙ to configure disarming time.

- Disarm Once: Set the disarming time.

4. Choose actions to be disarmed. The actual actions available, for example, for example, alarm light, alarm sound, email, alarm output, may vary with camera model and version.

5. Click **Save**.

5.8 Storage

Go to **Setup** > **Storage** > **Storage**.

5.8.1 Memory Card

> **NOTE!**
> Before you use this function, make sure a memory card has been mounted on the camera.

1. Set **Storage Media** to **Memory Card**, and select **Enable**.

Item	Description
Storage Media	Includes **Memory Card** and **NAS**.
Format	Stop using the storage resource and then click **Format**. The camera will restart after completing the formatting.
Memory Card Health Index	Show the health status of the memory card. **NOTE!** ● This feature is not available to all devices. ● This feature is available to TF cards only.
When Storage Full	● Overwrite: When space is used up on the memory card, new data overwrites old data. ● Stop: When space is used up on the memory card, the camera stops saving new data.
Post-Record(s)	Sets the duration of alarm-triggered recording after the alarm ended.

2. Allocate storage space as needed.

3. Configure storage information.

● To store manual recordings and alarm recordings

Choose **Manual and Alarm Recording**. By default, the main stream is stored.

Storage Policy	◉ Manual and Alarm Recording ○ Scheduled and Alarm Recording ○ Alarm Recording Only
Stream	Main Stream ⌄
When Storage Full	◉ Overwrite ○ Stop
Post-Record(s)	60

● To store scheduled recordings and alarm recordings

(1) Choose **Scheduled and Alarm Recording**.

Storage Policy	○ Manual and Alarm Recording ◉ Scheduled and Alarm Recording ○ Alarm Recording Only
Stream	Main Stream ⌄
When Storage Full	◉ Overwrite ○ Stop
Post-Record(s)	60

(2) The default recording schedule is 24/7. To change the schedule, drag on the calendar or click **Edit**.

● To store alarm recordings only

Choose **Alarm Recording Only**.

Storage Policy	○ Manual and Alarm Recording ○ Scheduled and Alarm Recording ◉ Alarm Recording Only
When Storage Full	◉ Overwrite ○ Stop
Post-Record(s)	60

5.8.2 Network Disk

Use a Network Attached Storage (NAS) server to store camera videos.

1. Set **Storage Medium** to **NAS**.

2. Enter the server address.

● Enter the path to the destination folder on the NAS server. You can find the path by viewing the folder properties.

Storage Medium	NAS		Format
Server IP	192.161.3.250	
Path	/volume1/IPC-TEST1/I04	NAS Test	✓Test succeeded.

> **NOTE!**
> Letters, digits, dots, spaces, and symbols / : , - _ @ = are allowed in the path.
> Other characters are not allowed and will cause failed NAS test.

3. After the test succeeded, click **Save**.

Storage Medium	NAS		Format
Server IP	192.161.3.250	
Path	/volume1/IPC-TEST1/I04	NAS Test	✓Test succeeded.

Total Capacity 1828 GB, Free Space 1821 GB.

Allocate Capacity

Video(GB)	1553	(The remaining capacity is used for image storage.)
Common Snapshot(GB)	275	
Smart Snapshot(GB)	0	

Video Storage Info

Storage Policy	○ Manual and Alarm Recording ○ Scheduled and Alarm Recording ● Alarm Recording Only
When Storage Full	● Overwrite ○ Stop
Post-Record(s)	60

Save

> **NOTE!**
> - The capacity status appears after you click **Save**. So to change the settings, click **Save** first.
> - By default, 85% of the folder space is used to store videos, and the remaining 15% is used to store common snapshots. To allocate space for smart snapshots, you need to reduce space for videos and common snapshots.

5.8.3 FTP

Upload images and videos to an FTP server for storage.

1. Go to **Setup** > **Storage** > **FTP**.

2. Configure server parameters.

Item	Description
Server IP	IP address of the FTP server.
Port No.	The default is 21. You can set a different port as needed.
Username	Username used to log in to the FTP server.
Password	Password used to log in to the FTP server.
Test	Test the connection to the FTP server.
Upload Images	Select the check box if you want to upload common (non-smart) snapshots. To configure an FTP server for smart snapshots, go to **Setup** > **System** > **Server** > **Intelligent Server**. Overwrite Storage: When the number of images in the folder of the lowest level reaches the threshold, the server continues to save new images by overwriting the existing images. For example, if the folder path is \IP\date, the level-2 folder "date" is the lowest. When the images uploaded on Jan. 4, 2022 exceeds 1,000, existing images in the 20220104 folder will be overwritten by new images. **NOTE!** If you select **Overwrite Storage**, make sure the last naming element of filename is **Photo No.**. The default overwrite storage threshold is 1000 images, and the maximum is 100,000 images.
Upload Video	Select if you want to upload alarm-triggered recordings.
Convert Path into UTF8 Format	Select if you want to convert the path into UTF8 format.
Post-Record(s)	Fill in the number of seconds, which is the duration of the alarm-triggered recording after the alarm has ended.

3. Configure the storage path.

Item	Description
Photo	File path, up to 6 levels. If not specified, the default path "\IP\Date\Common" will be used. Common means common snapshots.
	Filename, up to 20 fields are allowed. If not specified, the sequence number such as 1, 2, 3, … will be used as the filename.
Recording	File path, up to 6 levels. If no path is specified, the default path "\IP\Date\Common" will be used.
	The default filename is "S+recording start time+E+recording end time". For example, S20220104174903E20220104175002.

4. Click **Save**.

5.9 Security

The security functions available may vary with camera model and version.

5.9.1 User

Go to **Setup** > **Security** > **User**. You can add, edit, and delete users.

No.	Username	User Type
1	admin	Admin
● Add user

1. Click **Add**.

Common User

Operator

2. Configure the parameters.

Item	Description
Username	Set the username that you prefer.
User Type	Choose **Common User** or **Operator**. **NOTE!** • Up to 32 users are allowed, including admin (at least one), common users and operators (up to 31). • Admin has all permissions in the system, including device operation and user management. • Operator has higher privilege than common user and can configure in the web interface.
Password	Enter a password. **NOTE!** A strong password is required for the new user.
Confirm Password	Enter the password again.
Select Permission	Different user types have different permissions. Select permissions you want to assign to the new user. **NOTE!** You can select the **Select Permission** check box to select/deselect all permissions.

3. Click **OK**.

● Edit user information

1. Click the user.

2. Click **Edit**.

Common User

Admin

3. Configure the parameters.

Item	Description
Admin Password	Password of administrator, not the user being editing.
Password	Enter a password that you prefer.
Confirm Password	Enter the password again.
Select Permission	Different user types have different permissions. Select permissions you want to assign to the new user. **Note** You can select the **Select Permission** check box to select/deselect all permissions.

4. Click **OK**.

NOTE!

- When editing admin information, you can change the registered mobile phone number. The phone number can be used to reset the device password if you forgot it.

- Only admin can change the device password. The new password must be different from the old.

- Only admin can change the username and password of a new user. If the user is logged in, the user will log out automatically and must use the new username and password to log in.

- Delete a user

Click the user, click **Delete**, and then click **OK** to confirm.

5.9.2 HTTPS

You can choose to enable HTTPS to enhance data security during network transmission.

1. Enable **HTTPS**.

Go to **Setup** > **Security** > **Network Security** > **HTTPS**.

NOTE!

The default HTTPS port is 443. To use a different port, go to **Setup** > **Network** > **Port**.

The camera automatically generates a default certificate. To edit certificate contents (such as expiration date), you can delete the installed certificate and re-create one.

- Use the default certificate

(1) Enable **HTTPS**.

(2) Click **Save**.

- Create a certificate

(1) Click **Delete** to delete the current certificate.

(2) Choose a certificate type: private certificate or certificate request.

➢ Private certificate: Suitable for low-security application scenarios without any signature from a third-party certificate authority.

➢ Certificate request: Suitable for high-security application scenarios and with a third-party certificate.

(3) Click **Create**, and fill in the required information.

Create a private certificate

Create a certificate request

Item	Description
Public Key	Length of the public key: 2048 or 1024. Default: 2048.
Country	Two-character country code, for example, CN for China.
Domain Name/IP	Device's IP address or domain name.
Valid Period(day)	Validity period of the certificate.
Province	Complete province name.
City	Complete city name.
Organization	Organization name.
Organizational Unit	Organizational unit name.
Email	Email address of the contact.

(4) Click **OK**.

NOTE!

After the certificate request is created, click **Export** to export the certificate request file. After the third-party certificate authority (CA) signs and issues the certificate request, import the acquired CA certificate into the device.

(5) Enable **HTTPS**.

(6) Click **Save**.

2. Log in

The login page appears when HTTPS is enabled. A secure data transmission channel is established after you log in.

5.9.3 Authentication

Configure RTSP authentication and HTTP authentication to improve the security of network transmission. Only after successful authentication can data such as videos, audios, text, and images be transferred on the network.

1. Go to **Setup** > **Security** > **Network Security** > **Authentication**.

RTSP Authentication   Digest MD5

HTTP Authentication   Digest MD5

Save

2. Choose an authentication mode.

Item	Description
RTSP Authentication	Choose an authentication mode from the drop-down list. • Basic: Basic authentication. The username and password are transferred on network in plaintext, which imposes serious security risks. • Digest MD5: Digest authentication, which uses MD5 to protect the username, password, and domain of the requester, and provides higher security. • Digest SHA256: Digest authentication, which uses SHA256 for authentication and provides higher security than Digest MD5. • None: Transmit message without authenticating the RTSP address.
HTTP Authentication	Choose an authentication mode from the drop-down list. • Digest MD5: Digest authentication, which uses MD5 to protect the username, password, and domain of the requester, and provides higher security. • Digest SHA256: Digest authentication, which uses SHA256 for authentication and provides higher security than Digest MD5. • None: Transmit message without authenticating the RTSP address.

3. Click **Save**.

5.9.4 Registration Information

You can set to hide vendor information of the camera from the server.

1. Go to **Setup** > **Security** > **Registration Information**.

2. Enable **Hide Vendor Info**. Vendor information will not be displayed on the management platform.

Hide Vendor Info   ⦿ On ◯ Off
Save

3. Click **Save**.

5.9.5 ARP Protection

Protect the camera from ARP spoofing attacks by binding the gateway's IP address and MAC address.

1. Go to **Setup** > **Security** > **Network Security** > **ARP Protection**.

2. Enable **ARP Protection**.
3. Enter the gateway's MAC address.
4. Click **Save**.

5.9.6 IP Address Filtering

Use IP address filtering to allow or forbid access from specified IP addresses.

1. Go to **Setup** > **Security** > **Network Security** > **IP Address Filtering**.

2. Enable **IP Address Filtering**.
3. Choose **Allow** or **Forbid** to filter IP addresses. When **Allow** is selected, access is allowed only from the added IP addresses. If **Forbid** is selected, access is forbidden from the added IP addresses.
4. Click ✛, enter IP addresses.
   ➢ Up to 32 IP addresses can be added. Duplicate addresses are not allowed.
   ➢ The first byte of the IP must be 1-233, and the fourth byte cannot be 0. Invalid IP addresses such as 0.0.0.0, 127.0.0.1, 255.255.255.255, and 224.0.0.1 are not allowed.
5. Click **Save**.

5.9.7 Access Policy

Access policies are used to prevent unauthorized access and operation from the network.

1. Go to **Setup** > **Security** > **Network Security** > **Access Policy**.
● Illegal Login Lock

Item	Description
Illegal Login Lock	If the client IP address is not on the blocklist, the input username is correct, but the input password is wrong, it is an illegal login attempt. **NOTE!** • When an account is locked, information including the username, IP address, etc, is logged by the system. • The user can unlock the account by disconnecting power and rebooting the camera.
Illegal Login Limit	The maximum number of illegal login attempts allowed. Range: 2-10. The account is locked when the limit is reached.
Lock Time (min)	Integer within the range of 1-120.

Example: User A tries to log in from the client IP address 192.168.1.33 and is locked. Then user A cannot log in within the lock time, but user B is not affected and can still log in from the same IP address.

● Session timeout

A session is the connection established between the client (Web browser) and the server (camera). When session timeout is enabled, if the client cannot obtain or save configurations within the set time, the user will automatically log out and go to the login page.

Item	Description
Session Timeout	Sessions are counted as follows. Take one device as an example. • If the session is established using one web browser from one client IP, there is one session. • If sessions are established using one web browser from one client IP, there are two sessions. • If sessions are established using two web browsers from two client IPs (two browsers from each IP), there are four sessions. **NOTE!** Up to 36 sessions are allowed at the same time.
Timeout (min)	Enter an integer within the range of 1-120. **NOTE!** The timer restarts when the session is re-established after a reboot.

2. Click **Save**.

● Friendly password

Users are not affected when friendly password is enabled. When friendly password is disabled, users who are already logged in with a weak password will be forced to set a strong password before the user can proceed with other actions in the web interface.

> **NOTE!**
> Friendly password is not available to all cameras.

5.9.8 Watermark

Use watermark to encrypt custom information in videos to prevent tampering.

> **NOTE!**
> - Watermarks can be verified using EZPlayer (available for download from Uniview website).
> - For devices with two video channels, watermark parameters need to be configured for the channels separately.

1. Go to **Setup** > **Security** > **Watermark**.

Watermark	○ On ● Off
Watermark Content	

Save

2. Enable **Watermark**.
3. Set watermark contents, which may include uppercase letters, lowercase letters, and digits. Up to 16 characters are allowed.
4. Click **Save**.

5.9.9 WebSockets

WebSockets encrypts data based on SSL. You can enable WebSockets to enhance the security of data transmission.

1. Go to **Setup** > **Security** > **Network Security** > **WebSockets**.

WebSockets	○ On ● Off

Save

2. Enable **WebSockets**.
3. Click **Save**.

5.10 System
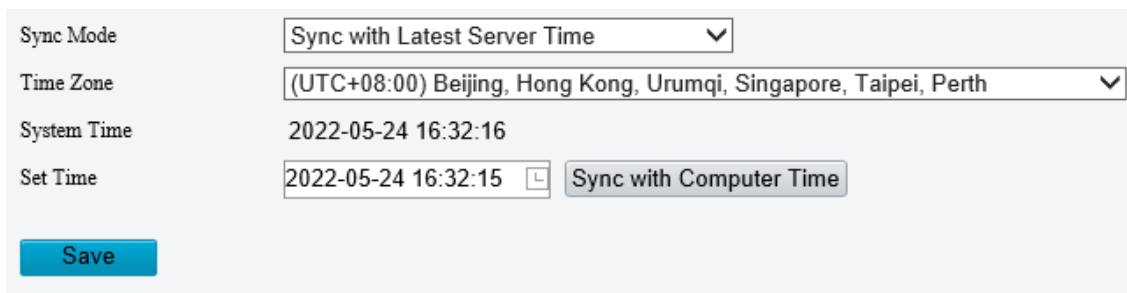

> **NOTE!**
> User operations in this module may vary with camera model.

5.10.1 Time

Set the device's system time manually or sync it with a server.

1. Go to **Setup** > **System** > **Time**.

2. Set system time.

- Set manually in the **Set Time** field.

📝 **NOTE!**
Make sure **Sync Mode** is set to **Sync with System Configuration**; otherwise, the device time will still sync with other sources after you set it manually.
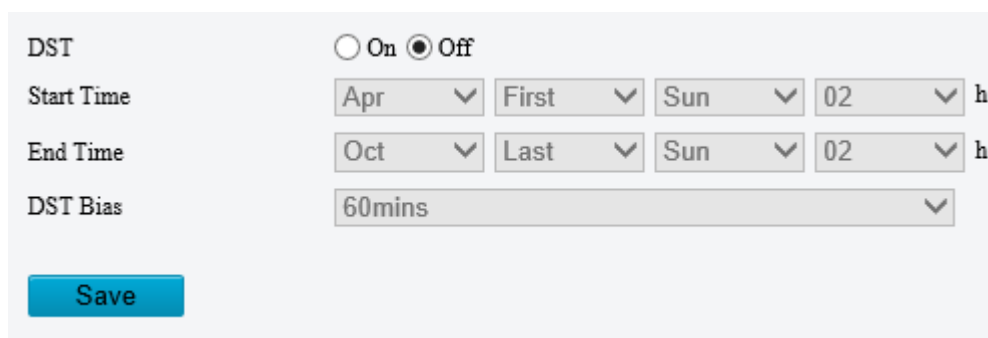

- Sync time

Item	Description
Sync with System Configuration	Default. Time provided by the system's built-in time module.
Sync with Latest Server Time	The camera regularly syncs time with all the connected servers.
Sync with Management Server(Non-ONVIF)	The camera regularly syncs time with the server that is not connected via Onvif.
Sync with Management Server(ONVIF)	The camera regularly syncs time with the server that is connected via Onvif.
Sync with NTP Server	The camera syncs time with the NTP server, for which you need to configure the server address, port, and update interval.
Sync with Cloud Server	The camera syncs time with the cloud server once when it gets online, and does not sync again until it gets offline.
BeiDou Module Auto Sync	The camera syncs time with BeiDou satellites through the BeiDou module (if equipped).
Sync with Computer Time	The camera syncs time with the client computer from which you log in to the camera.

3. Click **Save**.

5.10.2 DST

1. Go to **Setup** > **System** > **Time** > **DST**.

2. Enable DST, and set the start time, end time, and DST bias.

3. Click **Save**.

5.10.3 Server

1. Intelligent Server

If the camera needs to report smart alarms to a server, you need to configure an intelligent server. The camera can be managed by two intelligent servers simultaneously.

- UNV

1. Go to **Setup** > **System** > **Server** > **Intelligent Server**.
2. Set **Platform Communication Type** to **UNV**.

3. Enter the server's IP address. Keep the defaults for other parameters.
4. Click **Save**.

- FTP

1. Go to **Setup** > **System** > **Server** > **Intelligent Server**.
2. Set **Platform Communication Type** to **FTP**.

3. Click **Configure FTP**.

4. Configure the parameters.

Item	Description
Server IP	IP address of the FTP server.
Port No.	Use the default port.
Username	Username used to log in to the FTP server.
Password	Password used to log in to the FTP server.
Test	Click to test the connection to the FTP server.
Upload Images	Select the check box if you want to upload smart snapshots. Overwrite Storage: When the number of images in the folder of the lowest level reaches the threshold, the server will continue to save new images by overwriting the existing images. For example, if the folder path is **\IP\date**, the folder of the lowest level is the level-2 folder **date**. When the images uploaded on Jan. 4, 2022 exceeds 1000, existing images in the **20220104** folder will be overwritten by new images. **NOTE!** If you select **Overwrite Storage**, make sure the last naming element of filename is Photo No.. For **Overwrite storage threshold**, the default is 1000 images, and the maximum is 100,000 images.
Custom Naming Rules	Choose **Enable** and then set the naming rule (see step 5).
Convert Path into UTF8 Format	Select if you want to convert the path into UTF8 format.

5. Configure the storage path.

Item	Description
File Path	Up to 6 levels. If not specified, the default path "\IP\Date\Intelligent" will be used. Intelligent means smart snapshots.
Filename	Naming element: Up to 20 fields are allowed. If not specified, the sequence number such as 1, 2, 3, … will be used as the filename.

6. Click **Save**.

● GA/T1400

1. Go to **Setup** > **System** > **Server** > **Intelligent Server**.

2. Set **Platform Communication Type** to **Video&Image Database**.

3. Configure the parameters.

Item	Description
Server IP	Server's IP address.
Server Port	Use the default port.
VIID Version	Choose the correct version, VIID_2017 or VIID_2018.
Device ID	Make sure the entered device ID conforms to the VIID protocol, and digits 11-13 must be 119.
Username	Username configured at **VIID Management** > **VIID Device Management** > **Gateway Authentication** on the VM.
Platform Access Code	Password configured at **VIID Management** > **VIID Device Management** > **Gateway Authentication** on the VM.
Confirm Platform Access Code	Enter the password again.

4. Configure the VIID parameters.

Item	Description
Coordinate Mode	Includes **Percentage Mode**, **Pixel Mode**, and **Normalized Mode**.
Connection Mode	Short Connection: This mode is implemented based on the standard HTTP protocol, and the server decides the connection mode. Standard: This mode is applicable only when the camera connects to a Uniview server.
Report Data Type	Types of date to be reported.

- LAPI

Only Intelligent Server 2 supports LAPI. Choose LAPI and then click **Save**.

5.10.4 Device Information

Set device information including device name, location, mounting height, etc., which can be used in smart FTP, OSD, etc.

1. Go to **Setup** > **System** > **Device Info**.

2. Complete the information as needed.

3. Click **Save**.

5.10.5 Ports & External Devices

The RS485 port is used for data transmission between the camera and external third-party devices for PTZ control, OSD, audio collection, illumination control, etc. The serial port parameters configured on the camera must match that of the connected external device.

1. Go to **Setup** > **System** > **Ports & Devices** > **Serial Port**.

2. Set **Port Mode** and configure the parameters.

Item	Description
Baud Rate	Data transmission speed (unit: bits per second). The greater the value, the faster the transmission speed, and the shorter the transmission distance. Usually the default value is applicable.
Data Bit	The actual number of data bits in a group of data packets. Usually the default value is applicable.
Stop Bit	Indicates the end of transmission of a group of data. Usually the default value is applicable.
Parity Bit	Used to check whether the received data bits are erroneous. You can choose **Odd-Parity Check** or **Even-Parity Check**.
Flow Control	Used to control data transmission to prevent data loss.

- PTZ control

To control the PTZ using a third-party device, set **Port Mode** to **PTZ Control**.

By sending PELCO-D instructions through the RS485, you can control PTZ without using the PTZ control panel.

(1) Set **Port Mode** to **Local PTZ Control**.

(2) Configure the parameters.

Item	Description
PTZ Protocol	Choose the correct PTZ protocol: PELCO-D, PELCO-P, INTERNAL-PTZ, ALEC, VISCA, ALEC_PELCO-D, ALEC_PELCO-P, MINKING_PELCO-D, MINKING_PELCO-P, YAAN, Private-KR. Some camera models support preset IDs from 1 to 1024 when the PTZ protocol is PELCO-D, and preset IDs from 1 to 255 when the PTZ protocol is other protocols.
Address Code	Set the PTZ address code. **NOTE!** This parameter is configurable only when **Port Mode** is set to **PTZ Control** and **PTZ Protocol** is set to **Local PTZ Control**.

- Trans-channel

Used to transmit data between the RS485 port and the third-party device.

NOTE!
This feature is not available to all camera models.

(3) Set **Port Mode** to **Trans-Channel**.

(4) Enable **Trans-Channel**.

(5) Enter the destination address and port, that is, the IP address and port number of the third-party device to which the transparent channel is connected.

(6) Click **Save**.

- OSD

Receive serial port information from the third-party device through the RS485 port and then overlay the parsed information on the OSD.

NOTE!
In order for the camera to correctly parse the received serial port information, make sure the serial port information sent from the third-party device conforms to our data formats. Contact our technical support for more information.

(1) Set **Port Mode** to **OSD**.
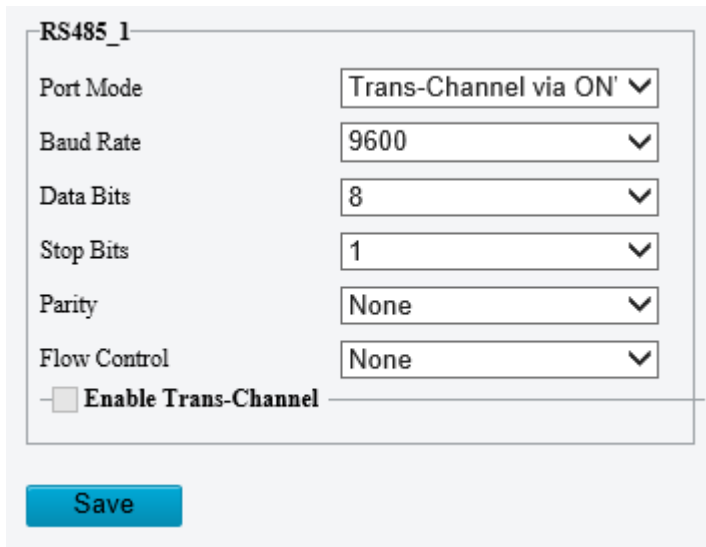

(2) Select **Enable OSD Report**, so OSD data will be uploaded to the platform.

(3) Click **Save**.

● Trans-Channel via ONVIF

Use the RS485 port for data transmission between the camera and third-party devices via Onvif.

(1) Set **Port Mode** to **Trans-Channel via ONVIF**.
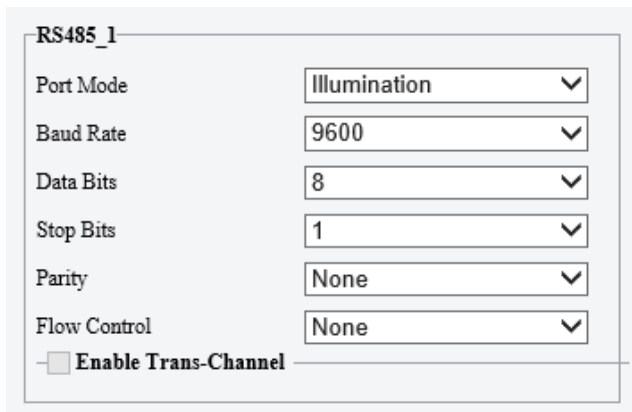

(2) Configure the parameters.

(3) Click **Save**.

● Illumination

Use the RS485 port to transmit data between the camera and the third-party illuminator.

(1) Set **Port Mode** to **Illumination**.
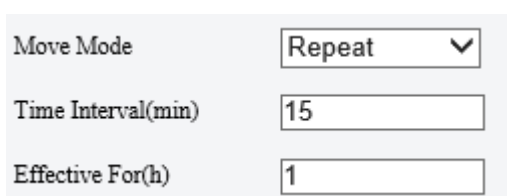

(2) Configure the parameters.

(3) Click **Save**.

● Wiper Control

Configure wiper parameters to control the wiper.

(1) Go to **System** > **Ports & Devices** > **External Device**.

(2) Configure wiper parameters.

Item	Item	Description
Control Mode	Serial Port	The wiper is controlled through PELCO-D instructions, so the PTZ protocol must be set to PELCO-D. See PTZ Protocol for more information.
	Alarm Input/Output	Use alarm input and output to open or close the circuit and control the wiper.
Enable Wiper	Normally Open/Normally Closed	Set according to the actual working status of the wiper.
Move Mode	One Time/Repeat/Automatic	One Time: The wiper works once every time you click the wiper icon on the PTZ control panel.
		Repeat: You need to set the **Effective For** and **Time Interval** parameters. The **Effective For** parameter sets the duration of the **Repeat** mode (1 to 24 hours), and the **Time Interval** parameter sets the interval between two wiper movements (1 to 60 minutes). **NOTE!** If **Time Interval** is set to 60 minutes and **Effective For** is set to 1 hour, then the wiper works once at the last minute and then stops. Only integers are allowed.
		Automatic: Use a rain sensor to detect rains and automatically activate the wiper when the threshold is reached.

(3) Click **Save**.

5.10.6 Maintenance

1. Maintenance

System maintenance include software upgrade, system configuration, diagnosis information, power output, and heater settings.

Go to **Setup** > **System** > **Maintenance**.

- Software upgrade

NOTE!
- Make sure the version to be used matches the device; otherwise, exceptions may occur.
- The version file is a .zip file that includes all the upgrade files.
- Power must be connected throughout the upgrade.

    ➤ Local upgrade

(1) Click **Browse**, locate the version. (If applicable) select **Upgrade Boot Program** to upgrade the boot program.

(2) Click **Upgrade** to start. The device will restart automatically after the upgrade is completed.

    ➤ Peripheral upgrade

    Check for upgradable peripherals such as pan/tilt unit, illuminator, etc., and available versions.

    ➤ Cloud upgrade

    Click **Detect** to check for new versions. You can perform a cloud upgrade if a new version is available on the cloud server.

- System configuration

You can export the current configurations of the camera to the client computer or an external storage device for backup, so when necessary, you can restore camera configurations by importing the backup file.

- Restoring defaults will restore all settings to factory defaults except the administrator password, network interface settings, and system time.
- Before you import a configuration file, make sure the file matches the camera model; otherwise, unexpected results may occur.
- The camera will restart after importing the configuration file.

> ➢ Import configurations

Config Management	
Default	☐ Restore all settings to defaults without keeping current network and user settings.
Importing	[_____] Browse... Import
Exporting	[_____] Browse... Export

(1) Click **Browse** beside the **Import** button.

(2) Locate the configuration file, click **Import**. A dialog box appears.

(3) Enter the password and confirm.

(4) Click **OK**.

> ➢ Export configurations

(1) Click **Browse** beside the **Export** button.

(2) Choose the destination folder, click **Export**. The **File Encryption** dialog box appears.

(3) Enter the password and confirm.

(4) Click **OK**.

> ➢ Restore defaults

> Click **Default**. The system will restore default settings except network settings and user settings.

> To restore all settings, select **Restore all settings to defaults without keeping current network and user settings**.

- Diagnosis information

Diagnosis information includes logs and system configurations and can be exported to your client computer. Select **Collect Image Debugging Info** to collect diagnosis information with accompanying video images to facilitate troubleshooting.

Export Diagnosis Info	[_____] Browse... Export
☑ Collect Image Debugging Info	

(1) Click **Browse** and choose the destination.

(2) Click **Export**.

Diagnosis information is exported as a compressed file. You need to decompress it first (using decompression tools like WinRAR) and then open the file using a text editor (like Notepad).

- Power output

The camera can supply power to external devices with lower power consumption such as a sound pickup.

Power Output

12 VDC	○ On ● Off

- Restart device

Restart	Restart device

Click **Restart** and then confirm to restart the device. You may set a schedule to reboot the camera automatically at the set time.

● Heater

Use the heater to eliminate water droplets on the lens in a high humidity environment.

Heater	○ On ● Off	Remaining Heating Time 0 ∨ Day(s) 0 ∨ Hour(s) 0 ∨ Minute(s)

(1) Enable Heater.

(2) Set **Remaining Heating Time**.

2. **Network Diagnosis**

Go to **Setup** > **System** > **Maintenance** > **Network Diagnosis**.

Select NIC	NIC1 (203.2.1.83) ∨
IP Filter	● All ○ Specify ○ Filter
Port Filter	● All ○ Specify ○ Filter
☐ Custom Rules	

Start Capture

● Select NIC

NIC1 is the camera's IP address.

● IP/port filter

➢ All: Capture all packets of the camera.

➢ Specify: Capture packets of the specified port or IP.

➢ Filter: Filter packets of the specified port or IP and capture other packets.

● Custom Rules

Select **Custom Rules** and set the rules.

Click **Start Capture** to start capturing packets. After packet capture is finished, save data and view the diagnosis.

● Test network delay and packet loss rate

Test network connectivity by sending test packets to a test address.

Network Delay and Packet Loss Test	
Test Address	192. ▮ ▮ ▮ ▮
Packet Size (Bytes)	64
Test Result	Average Delay: 3.558 ms Packet Loss Rate: 0%
Test	

➢ Test Address: Must be a valid IP address or domain name.

➢ Packet Size (Bytes): Size of test packets to be sent. Range: [64-65507]. Sometimes a high delay may be caused by a large packet size. If the test failed, set a smaller packet size and then try again.

> ➢ Test results include average delay and packet loss rate.
>> – Average delay: Average length of time from test packets are sent till responses are received.
>> – Packet loss rate: Ratio of lost packets to the sent packets.

5.10.7 Logs

Search camera operation logs and download to your computer.

Go to **Setup** > **System** > **Log**.

Time	2022-06-09 00:00:00	~2022-06-09 23:59:59					
Main Type	AlarmEvent	Sub Type	All				
Operation	Query	Export					

No.	Type	Sub Type	Date	Time	Username	IP	Result
1	Operator	Login	2022-06-09	10:25:05	admin		Succeeded.
2	Operator	Upgrade	2022-06-09	10:18:25	admin		Succeeded.
3	Operator	Login	2022-06-09	10:05:29	admin		Succeeded.

Total 3 . « ‹ 1 /1 › »

1. Set a time range and choose main and sub log types.

- Main type: Including system operation, alarm parameter configuration, network configuration, audio and video configuration, PTZ configuration, image configuration, smart configuration, system configuration, storage configuration, and alarm events.

- Sub type: You can choose up to 5 types or choose All.

2. Click **Search**. Up to 100 logs can be displayed. The latest logs are displayed on the top.

3. Click **Export** to save search results as a .csv file to the client computer.

NETUS-P

Quick Setup Guide

LIVE / PLAYBACK / BACKUP / SYSTEM / E-MAP

Ver.1.1 / 2018.11

Contents

1. Run NETUS

Input ID / Password.

⚠️ Default ID/PW: admin/1111111

Run NETUS as shown below.
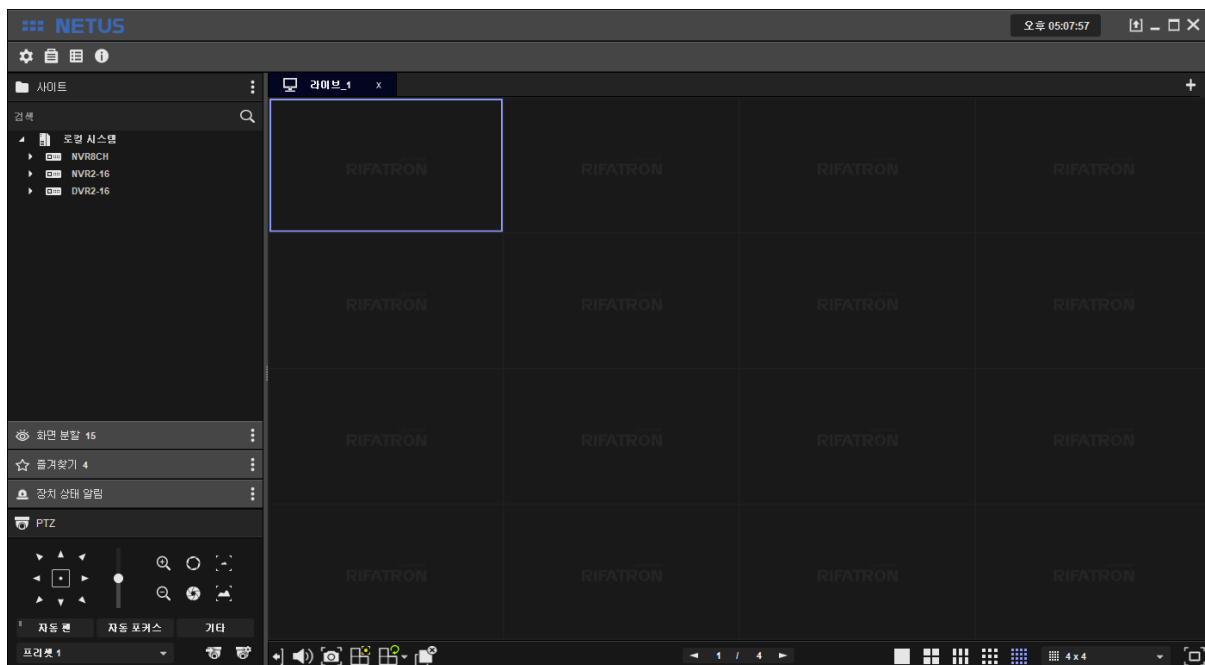

Each menu command of NETUS are shown as below.

2. Device Registration

Click the yellow marked button to register the device.
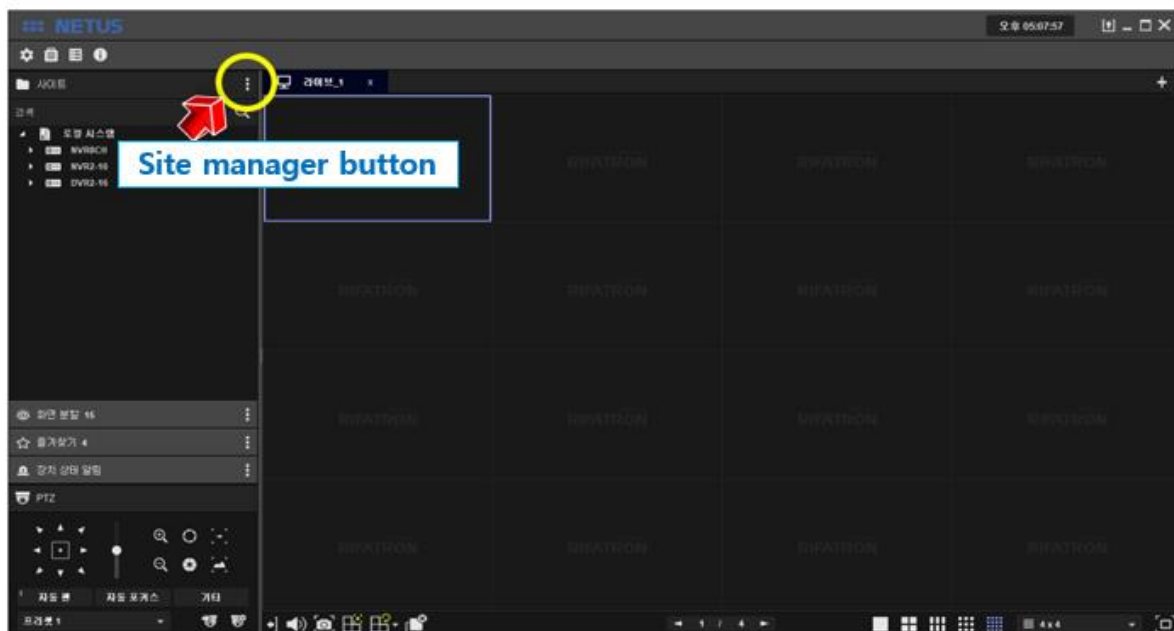

When [Site Manager] window pops-up, RIFATRON DVR/NVR which is in the same band with PC is automatically searched and displayed in Search list on the left.
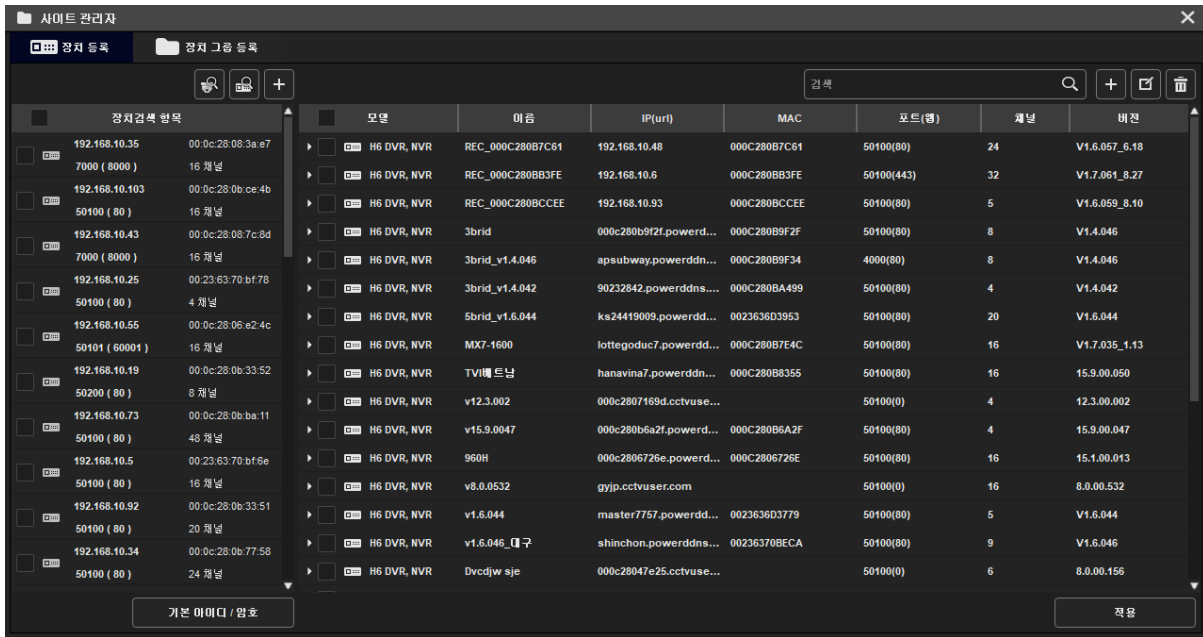

Please select device at below to register device to NETUS and Press button, then selected device is supposed to be registered to right side tab.
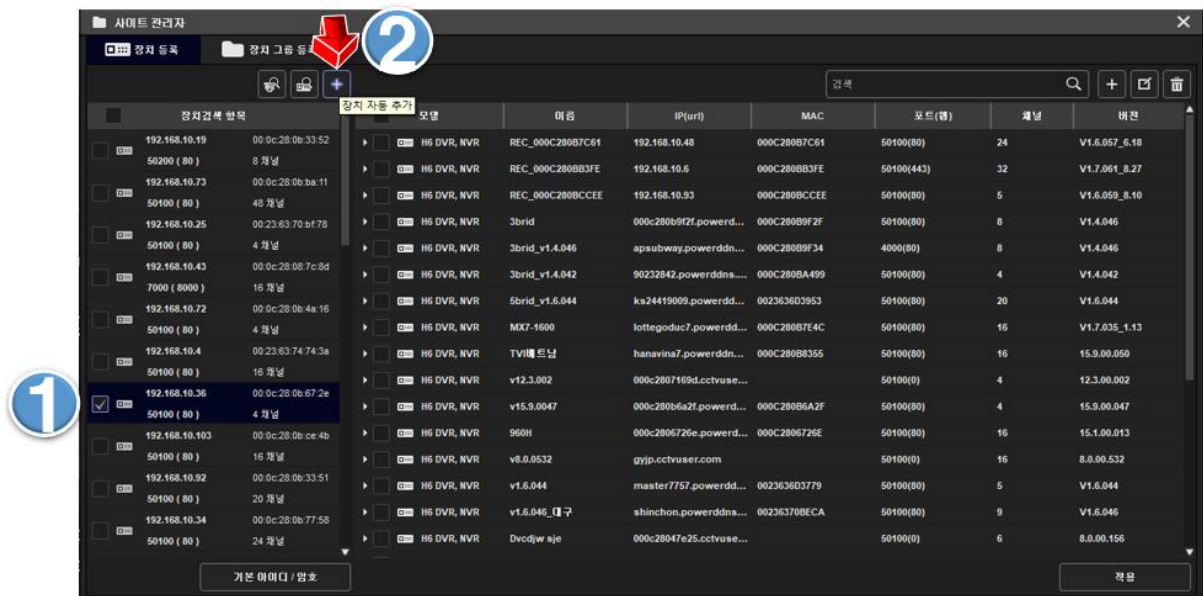

To change ID, Password and settings of registered device, Check the device and click 'modify devices button' in the upper right as shown below.
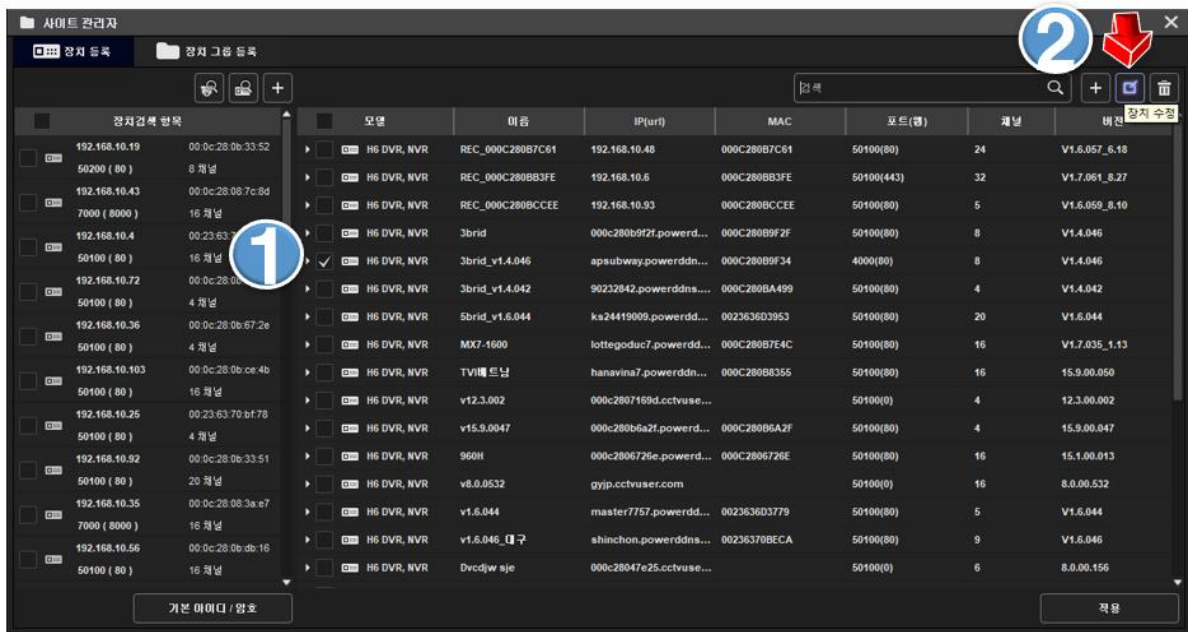

Then poped-up as below.
Registration of device is successful.
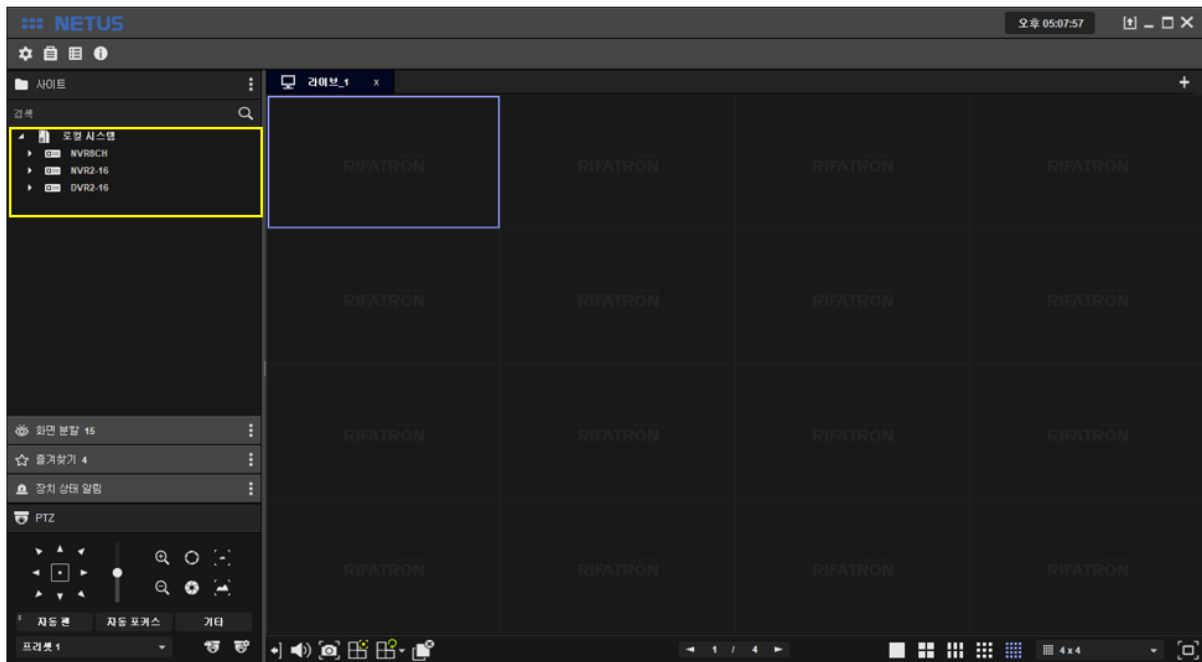

3. Live

Drag and drop the mouse pointer to the display area to see all channels. Or, you can add one by one by dragging each camera.
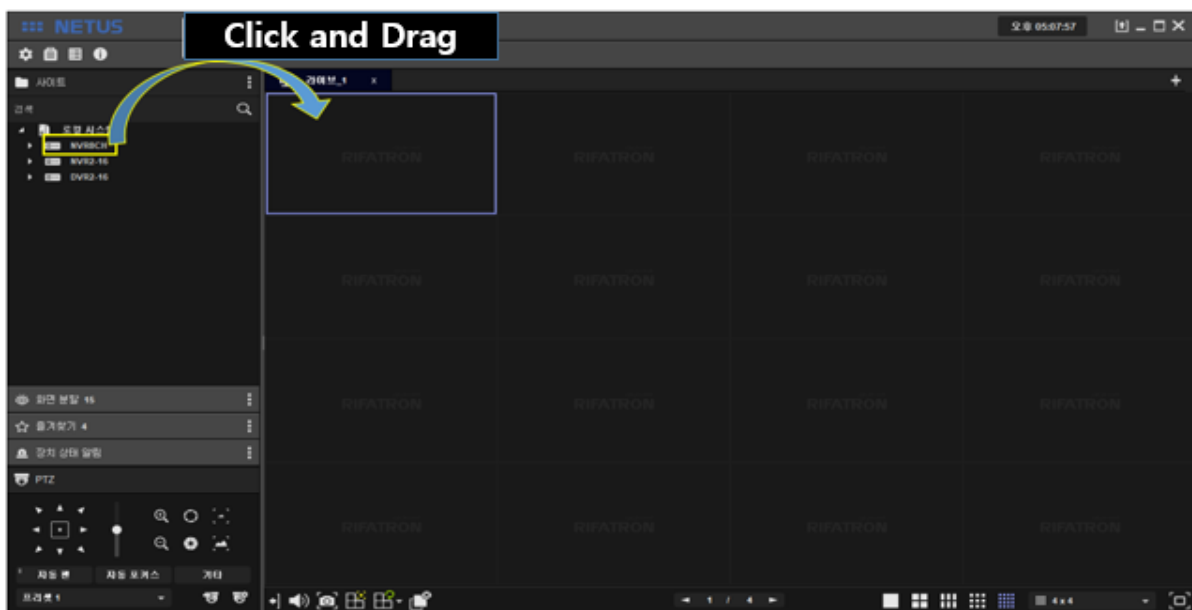

Live images are shown as below.
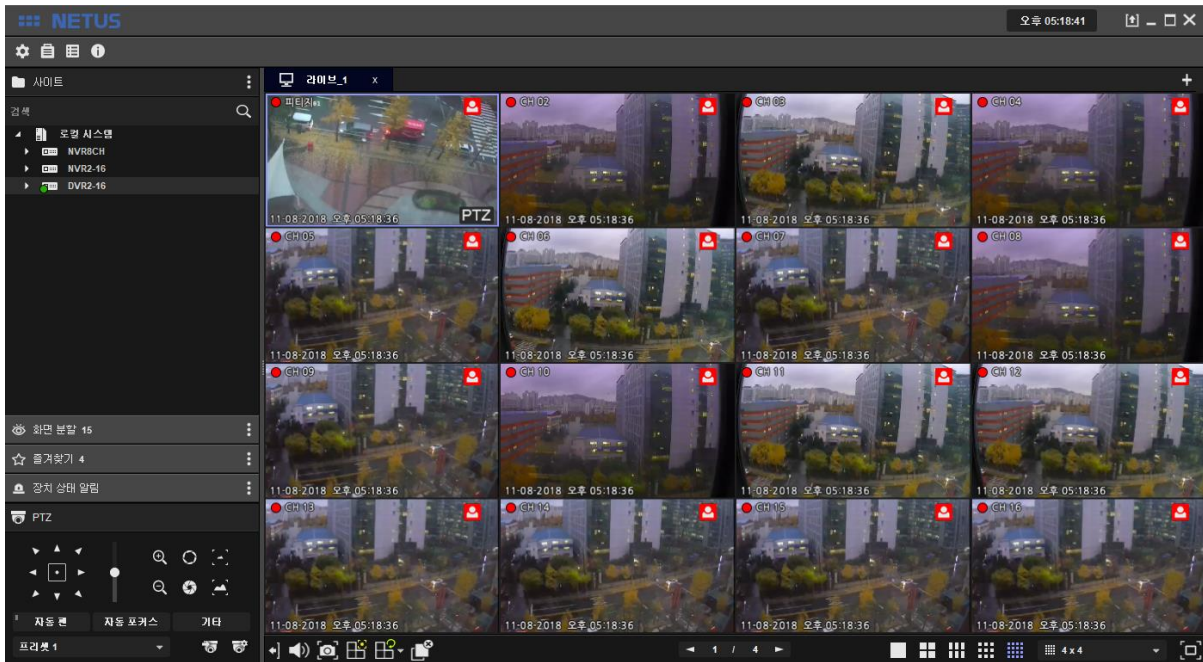

You can stop the display by pressing button below.
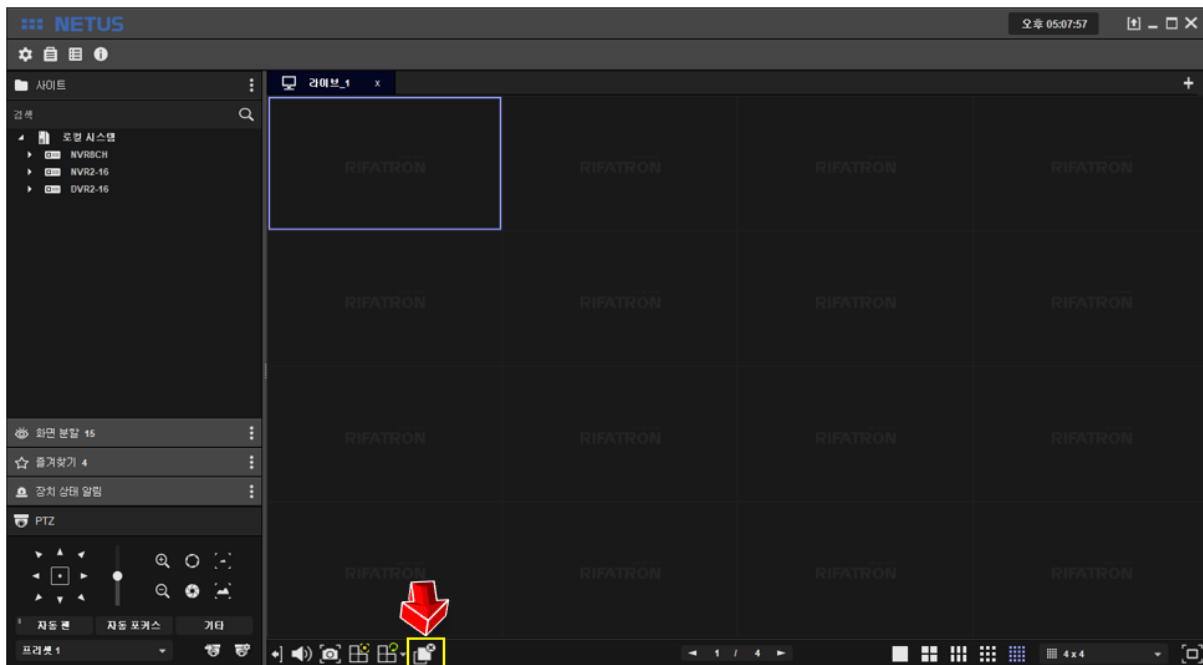

4. Add Tab Menu

The image display tab can be added with right [+] tab add button below.
Menu bar comes out on the right side when you press [+] tab add button.
Each items on menu tab have functions as below.

Add live display tab

Run playback

Check status of NETUS

Control 'event manager'

Set E-MAP

Click the live tab on tab of the right side if you want to add live tab.
Live tab comes out as above.

If you want to make other display tab, drag other devices image also.

Live tab can be added maximum 4.
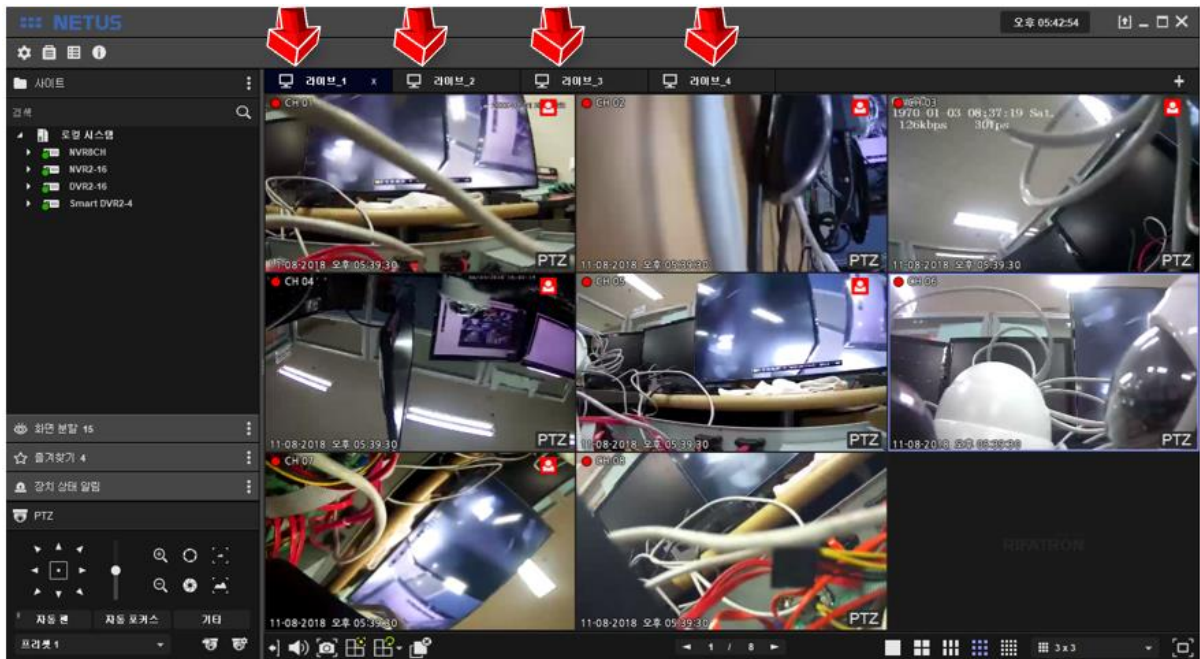

You can separate each display tab by dragging tab name.

5. Split Screen

Click as below to split screen.

Setting window to spit screen has 8x8 cell. Please set size of this cell as you want.

behind them using by button 2 below   and repeat this setting.

Click button 3 once your settings are done and apply setting by click button .
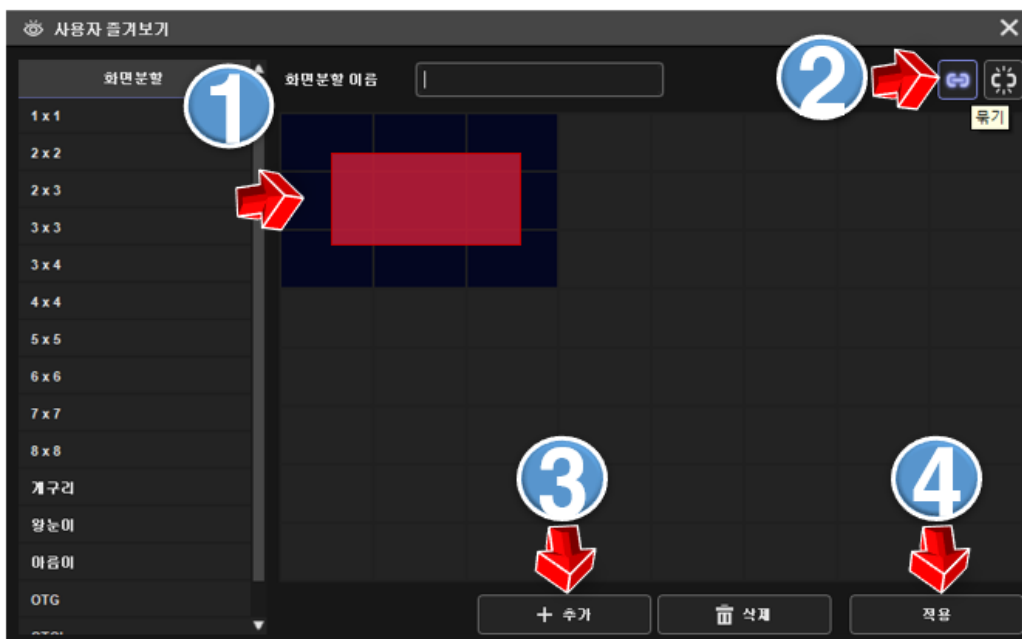

Then you can adjust size of each channel's display as you want.
6. Favorite

Select display mode to set 'favorite' at side menu or bottom menu.
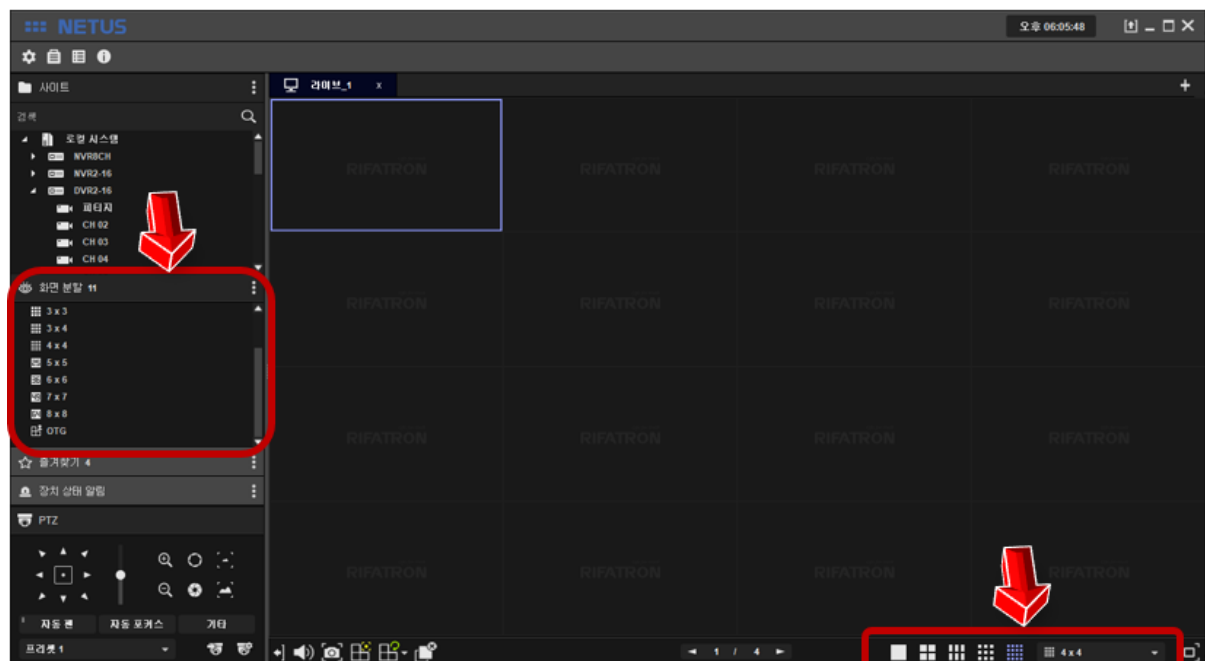

Drag channels you want and put them to the left side as below.

Picture below is to drag only odd number of channels.
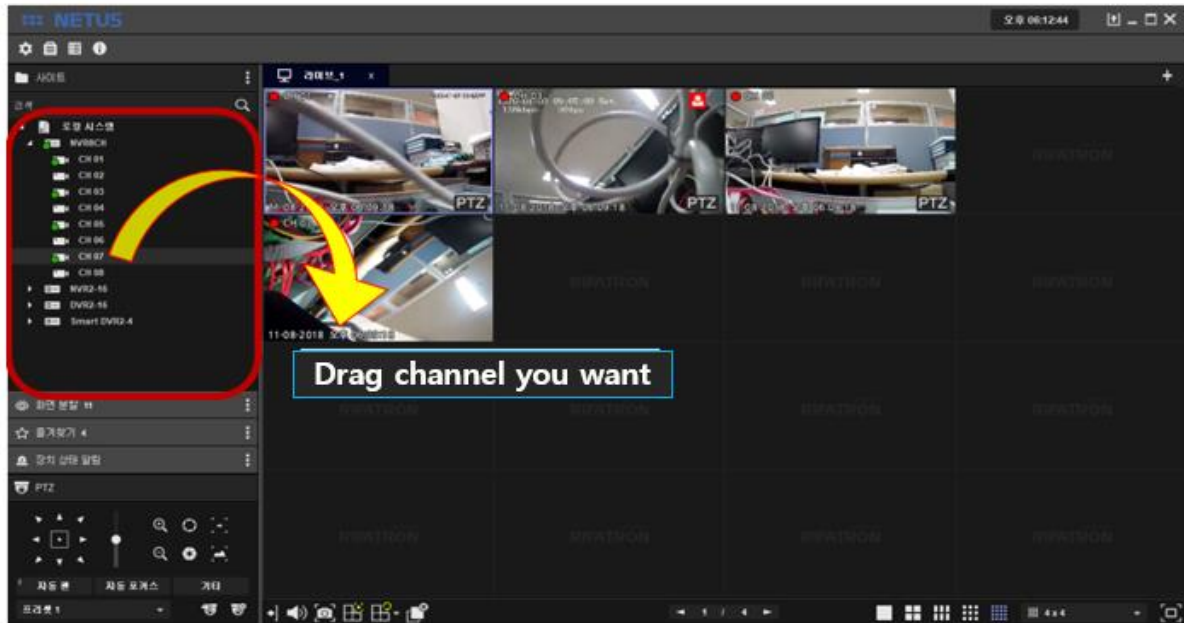

Click add favorite and put favorite name you want.

Settings are applied after click apply.
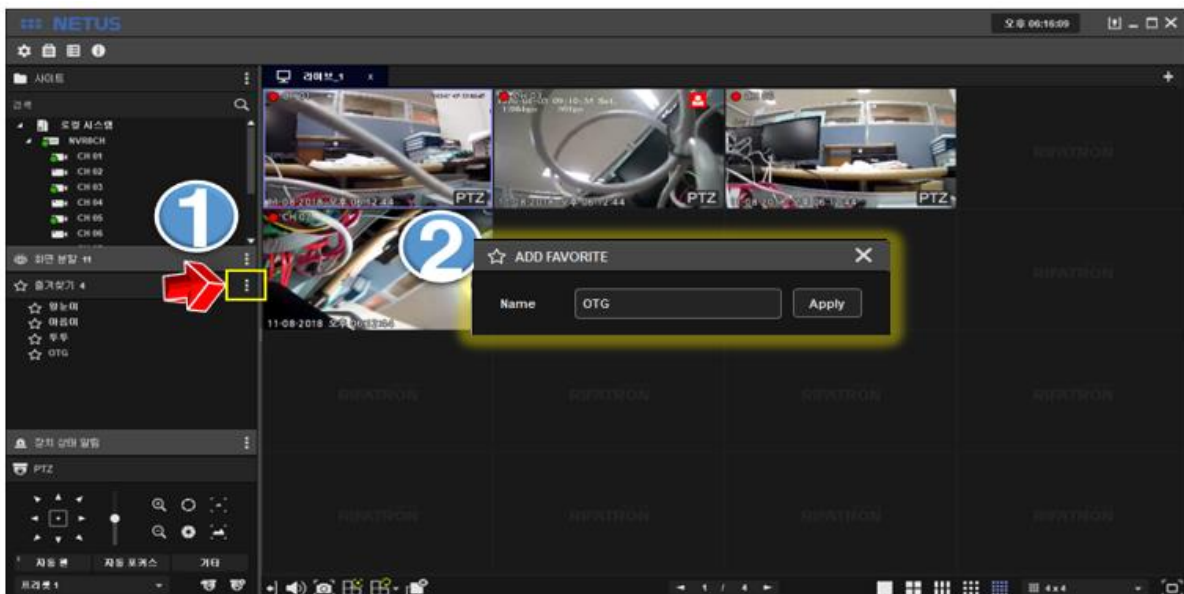

7. Playback

Click ![+] tap on the right side and click the play button ![play].
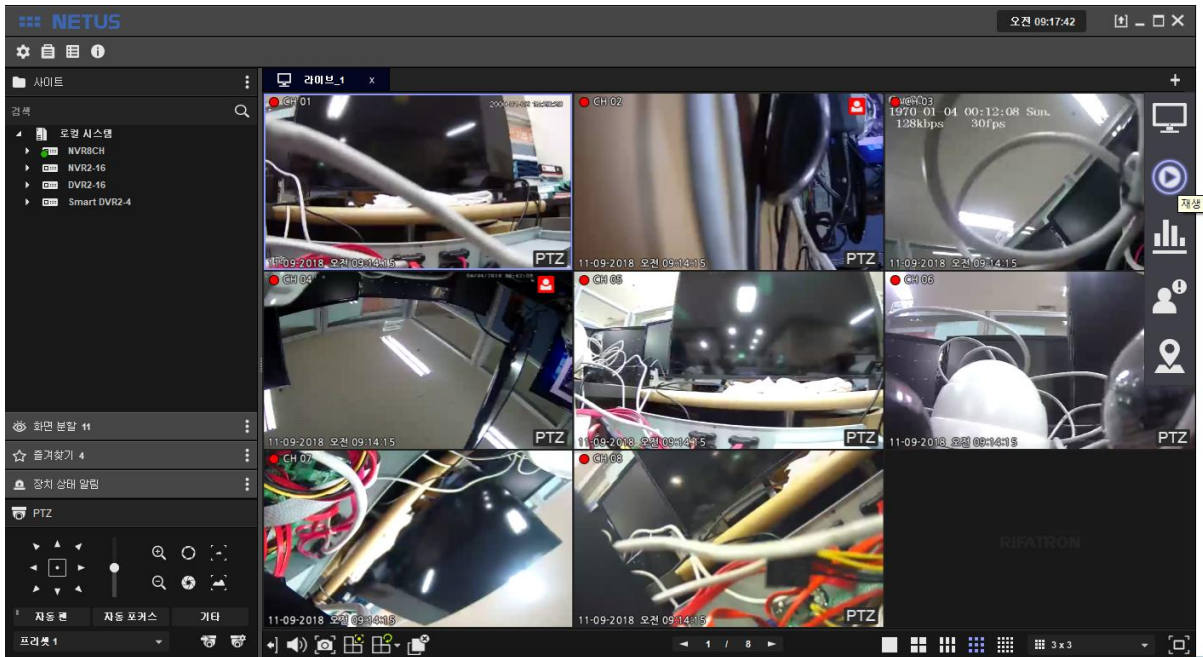

'Play' tab comes out as below.
Drag devices to the right side (play tab) in the same way as 'Live display' and click play button to play video.
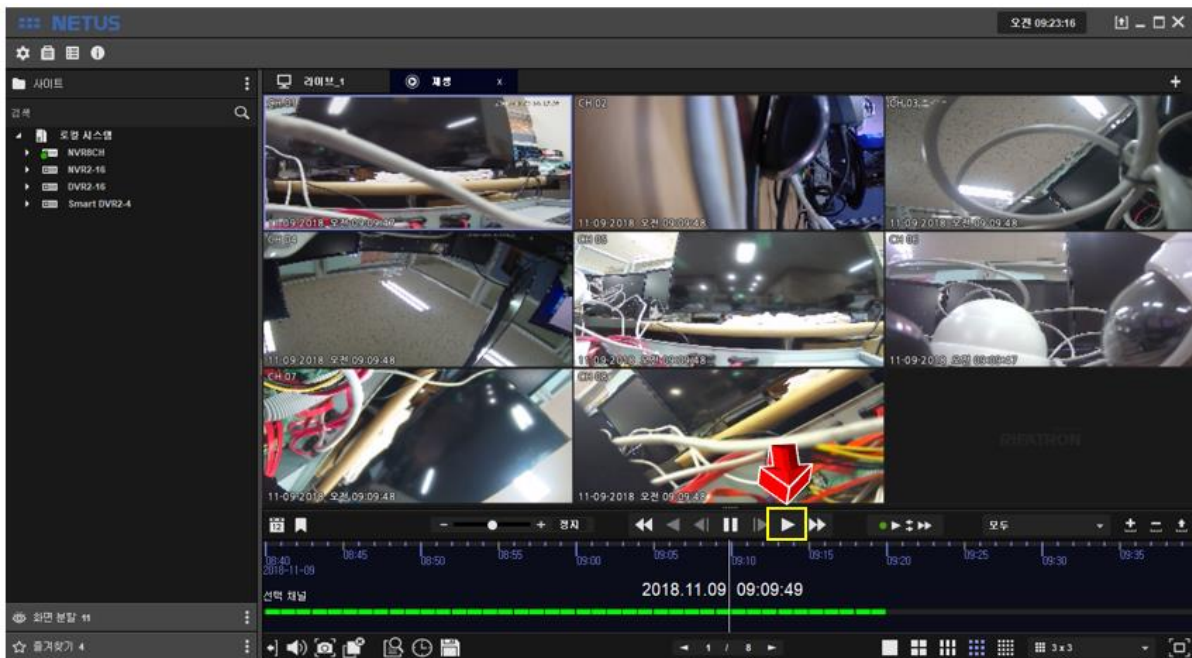

Video can be played back by click yellow area and drag mouse left and right.

.
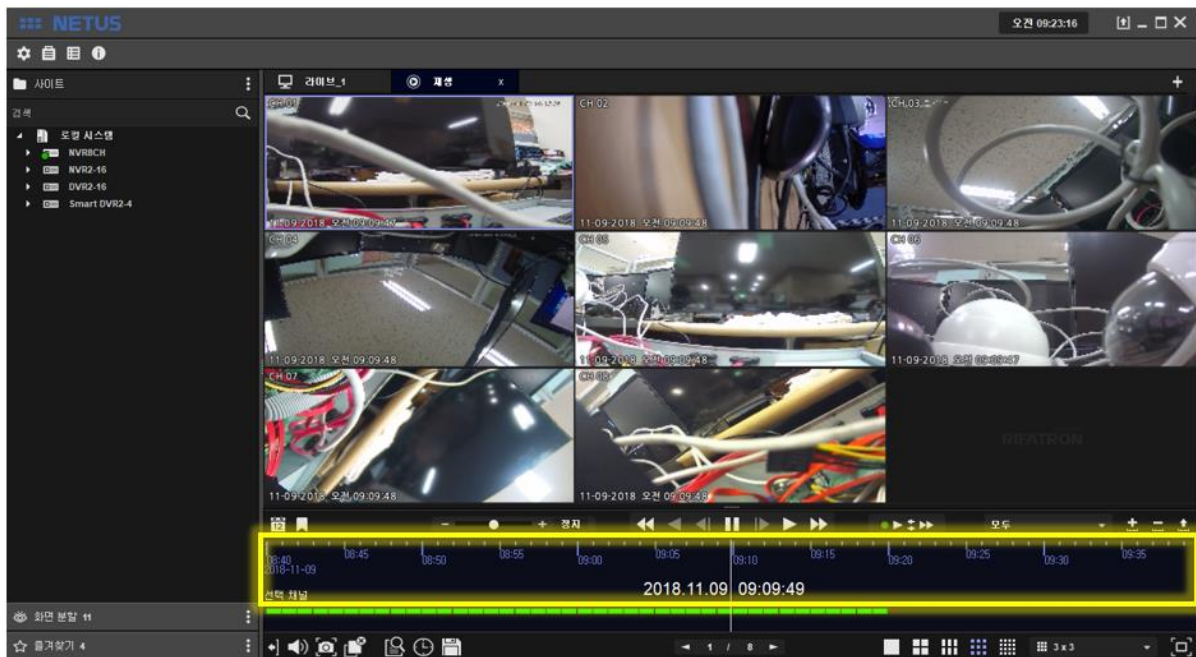

You can search using the calendar.
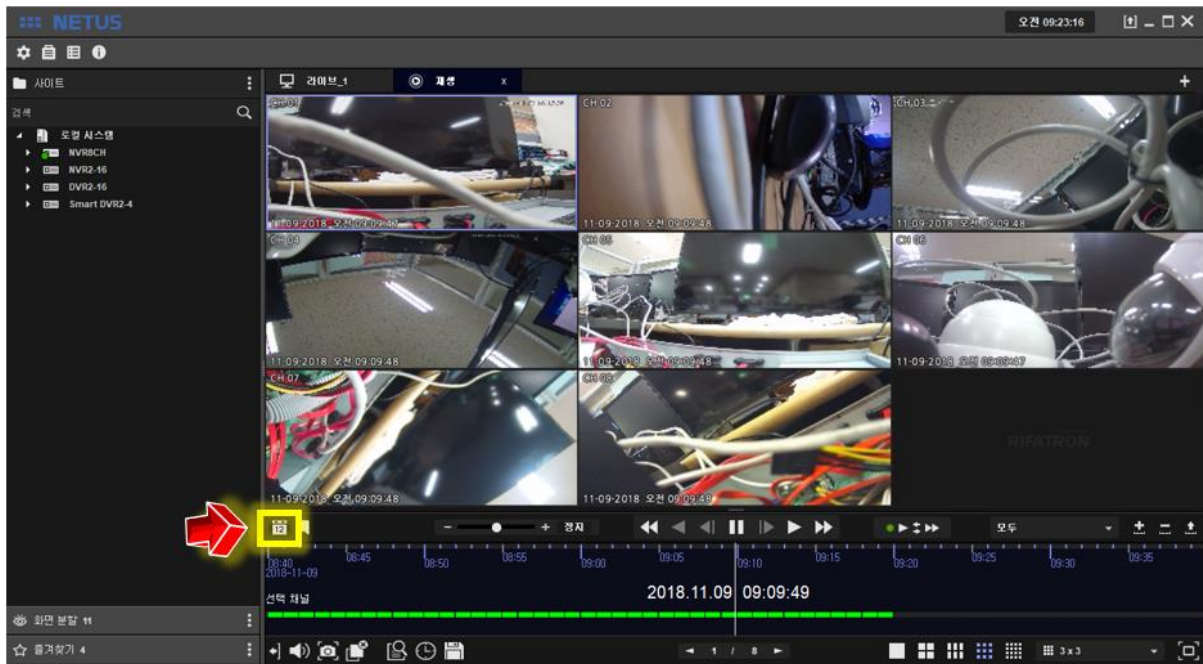

Calendar will be displayed once you click the calendar button .

⚠️ Green mark means there is recording data.

Event search window will be displayed once you click the event search button. Select Event you want to play and click 'start button' . Then particular time you selected will be played.

You can playback by using 'time search' either.
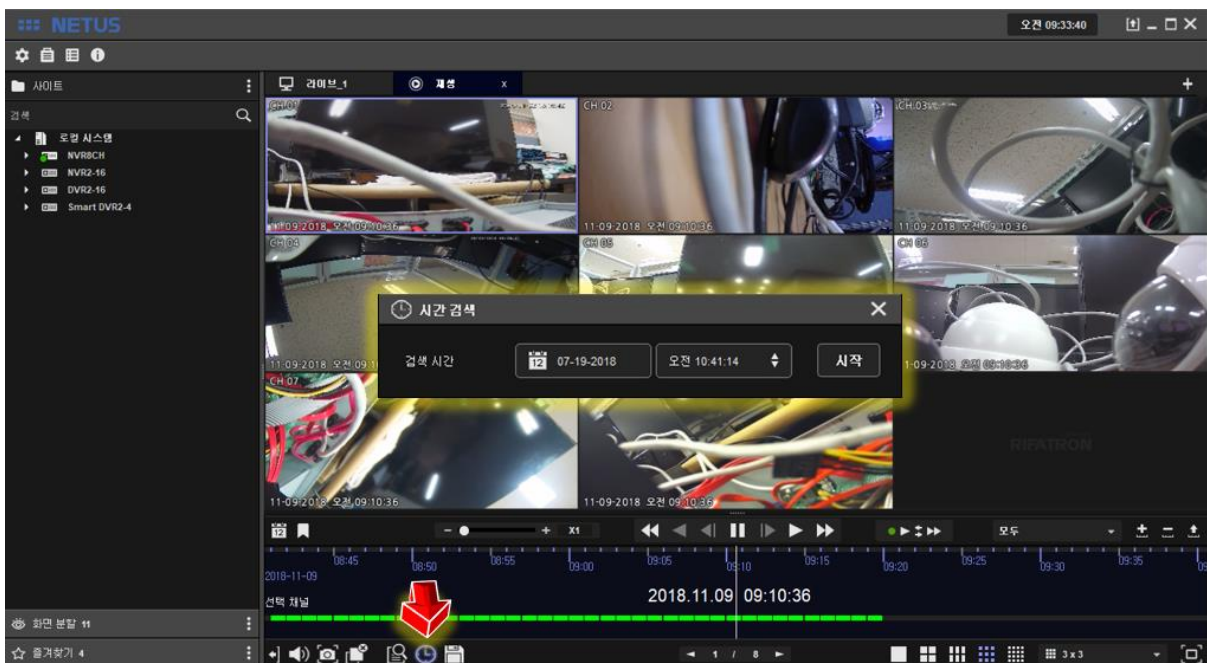

You can stop playback with 'Display Off button' .
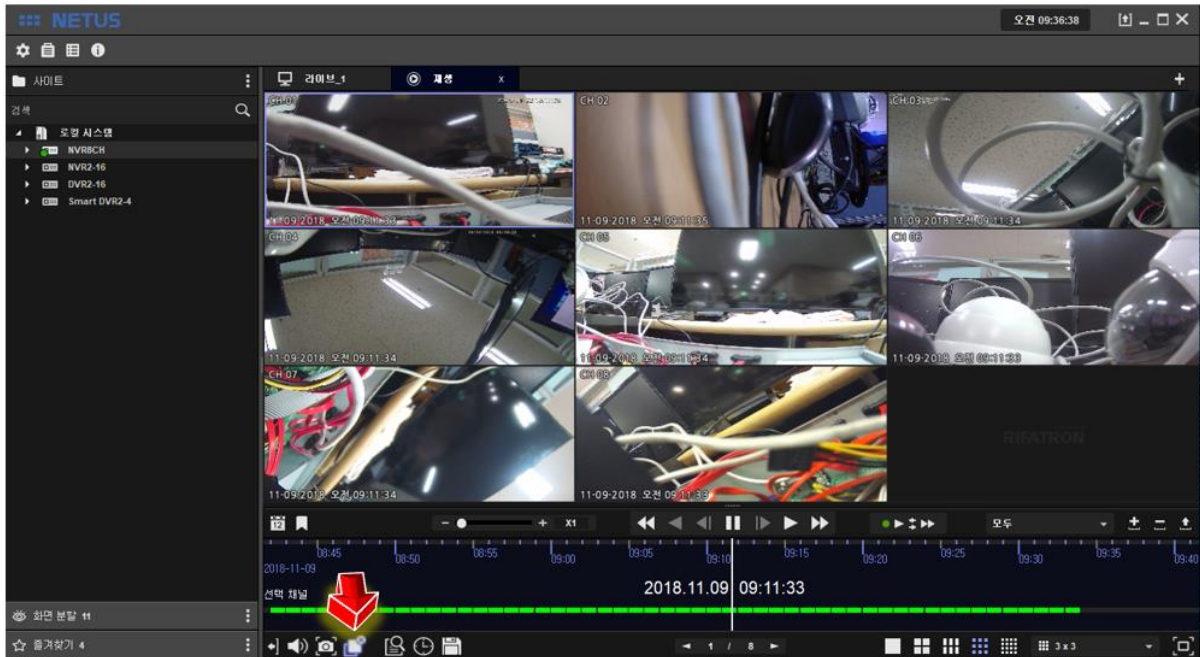

8. Back up

Backup window comes out once you click the backup button at playback tap as below. You can proceed backup with it.
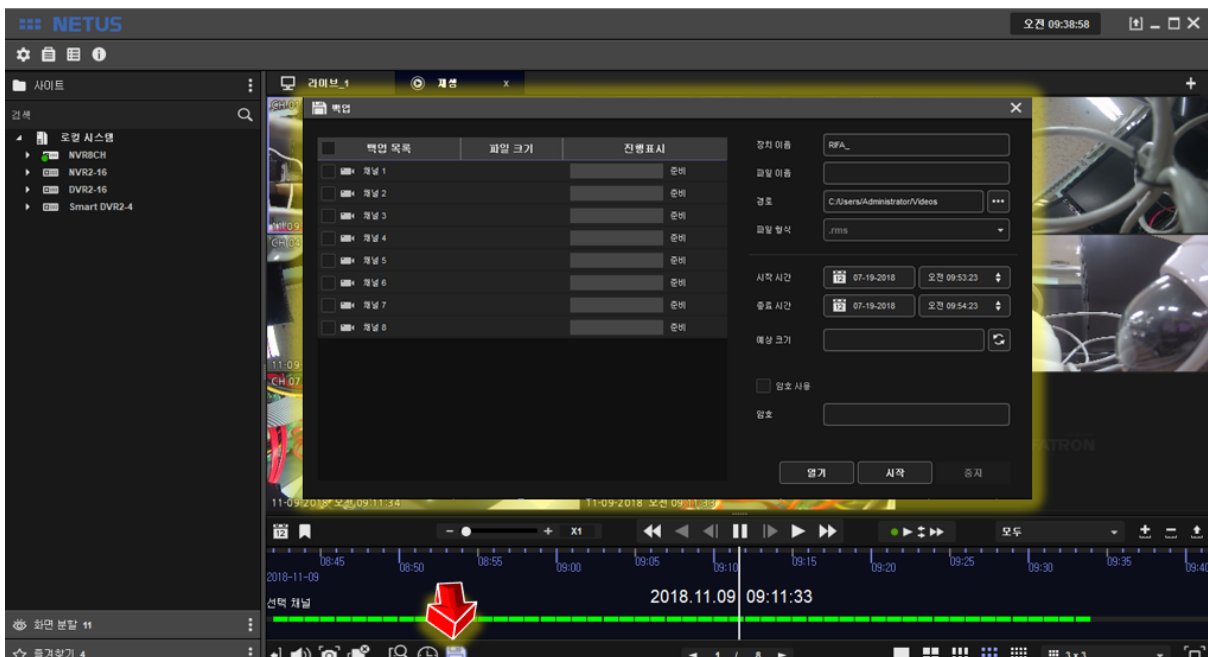

9. System Status

 Click the status button.
It shows the status of the PC where the current NETUS is installed.

You can see the name, address, channels, resolution, HDD status, FPS, KBPS, recording, network status and detailed info of each registered device.

20

You can see the detailed info as shown below once you click the right most ⚙ button.

범주	상태
장치 모델	H6 DVR, NVR
장치 이름	REC_000C280B7C61
고유식별자	192.168.10.48, 000C280B7C61
최대 채널	24
해상도	-
NTSC/PAL	NTSC
HDD(GB)	122/2000, 6.1% (10-29-2018 , 11-01-2018), 덮어쓰기
녹화	네
DSP	좋음
팬	좋음
하드웨어	좋음
온도	좋음

10.E-MAP

Add the image for E-MAP. Click ⚙ the settings button and set up the E-MAP tap.

21
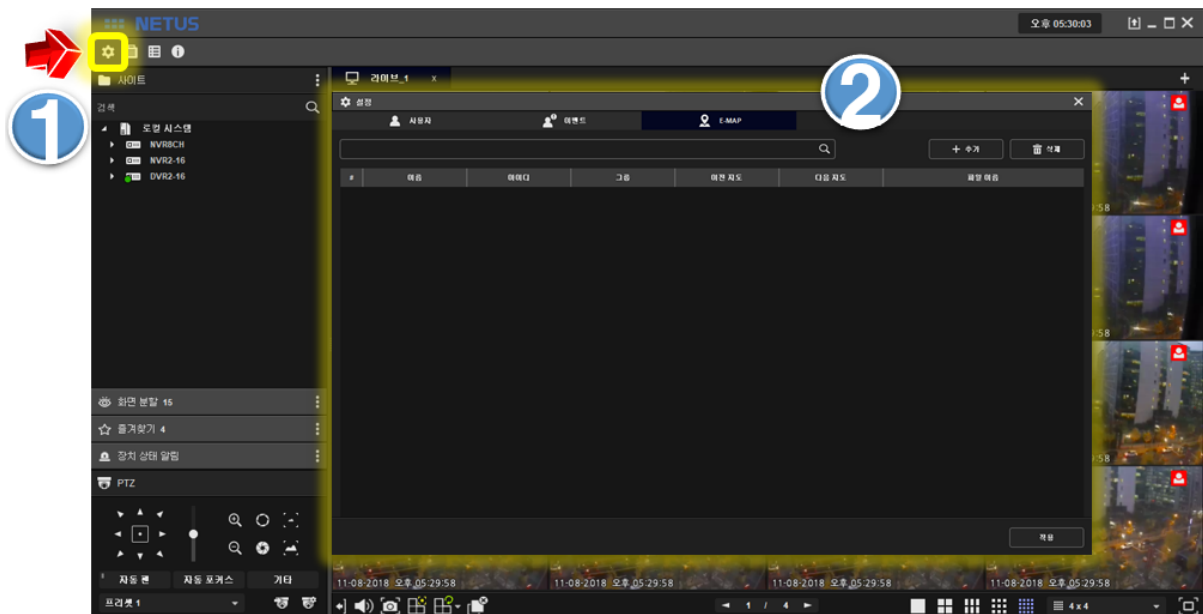

Click the add button and then click the add files button for selecting image.
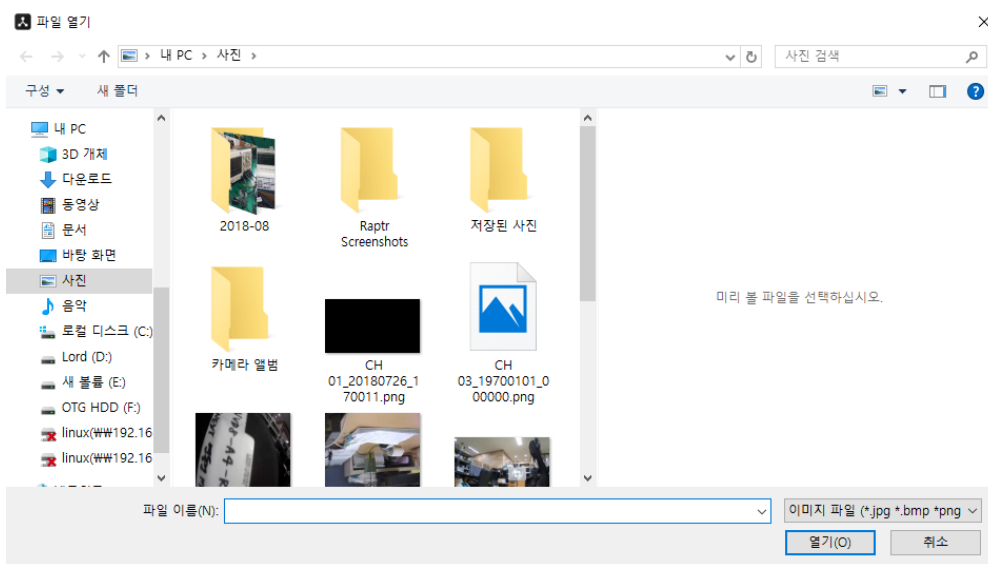

Click the apply button at bottom. Now selecting the map for E-MAP has been completed.

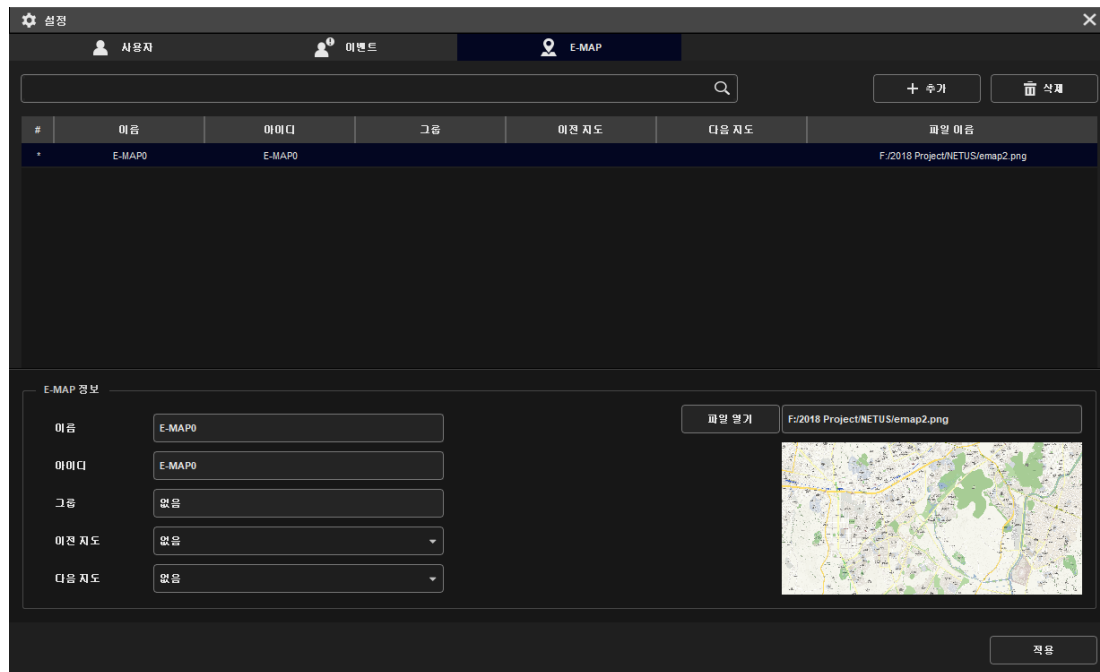

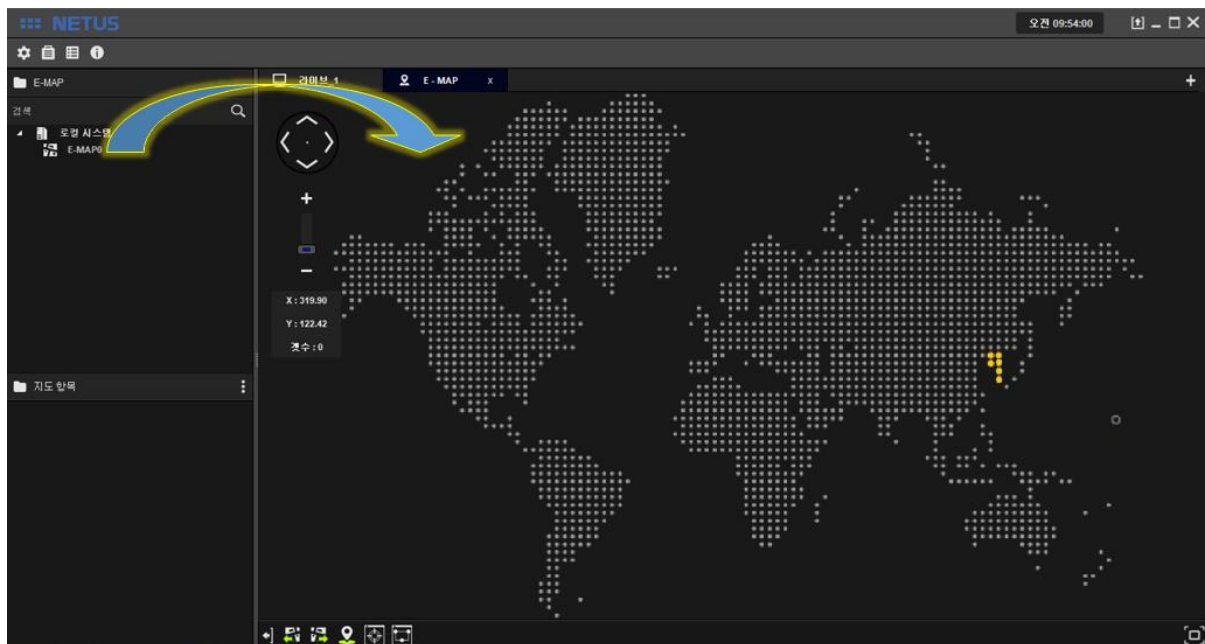

Compose the E-MAP with below steps.

Click the 🔧 button at below image.
Then the window as below will be displayed.

Drag the map image at left side menu to E-MAP tap.

Adjust image as you want with zoom in/out the map.

Click 'add E-MAP button' then E-MAP item property window will come out.

Fill in the name and settings to be displayed in E-MAP. You can select the camera to be connected

to this name like number 2 once you click the selected camera

Select the camera and click OK button.

. You can see the video once camera is added to left side tap.

You can set a number of cameras.

Thank you
