 Case Type: Cleanup Program Site
 Case Worker: UUU
 Local Agency: Not reported
 RB Case Number: 01S0132
 File Location: Regional Board
 Potential Media Affected: Other Groundwater (uses other than drinking water), Soil
 Potential Contaminants of Concern: Benzene, Other Solvent or Non-Petroleum Hydrocarbon, Vinyl chloride, Diesel, Gasoline, Other Petroleum, Waste Oil / Motor / Hydraulic / Lubricating
 Site History: The site was used for oil recycling from 1925-1981. Current owners Lawrence and Diane Webster purchased the site from Ekotek Inc in 1983 but never operated on-site; they are named as sole dischargers to the current Final SCR for the site. Investigations indicate that oil-water sump, underground storage tanks (USTs), and above-ground tank (AST) farms are sources of TPH gas, diesel, and motor oil, PCBs, and CVOCs in soil and groundwater. Most ASTs and USTs demolished and removed in 1995-96. The Site was then graded and paved. Current Final

CA BOND EXP. PLAN:

Reponsible Party: BACKLOG SITE CLEANUP PLANNING REPORT
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: This site is projected to be remediated by the responsible parties with reimbursement to DHS for its oversight and monitoring costs. If the RPs are unable to pay for remediation, another source of funds will need to be identified.
Site Description: Ekotek is a waste oil recovery and recycling facility. Waste oil and Stoddard's solvent were treated and stored onsite. Some of the hazardous waste may have spilled onto the soil.
Hazardous Waste Desc: Waste oil or solvents may contaminate soil and may contain benzene, toluene, phenol and lead.
Threat To Public Health & Env: Over 100,000 people live within a two mile radius of the site. A coastal wetland is located 4,000 feet away. Arrowhead Marsh is 1.4 miles away. The depth to ground water is from 5 to 28 feet. Approximately 18 irrigation and industrial wells are within 3 miles. The site is securely fenced and posted.

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Benzene, Gasoline
Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>. In February 2003 five USTs were removed from the site and confirmation soil sampling detected significantly elevated levels of petroleum hydrocarbon contamination. No site characterization, source removal or remedial action has been completed.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best

Address: 344 HIGH ST
City,State,Zip: OAKLAND, CA 94601
Site ID: 532523
CERS ID: 228610
CERS Description: Industrial Facility Storm Water

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-02-2018
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: This is an asphalt mix plant. Aggregates and crushed recycled asphalt (RAP) were stored in stockpiles. Asphalt oil and diesel fuel were stored in tanks with secondary containment. Aggregate, RAP and asphalt oil are mixed to create the product. Per Donnie, the yard was ground (graded) to flow to a shallow detention basin. The detention basin is pumped to a treatment tanks where the storm water was filtered. The treated water is tested before discharge. If the water does not meet discharge criteria, it is treated again. Treated water is pumped to a discharge pipe on the canal bank by the High Street bridge. A silt fence and wattles were installed along the canal top of bank. The silt fence appeared in good condition. The wattles should be replaced as part of ongoing maintenance. A street sweeper swept the paved areas of the yard. An oil water separator was located inside the storage shed for oil totes. Continue collection, treatment and testing of storm water. Continue sweeping and other BMPs to control sediment transport, track out and dust.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CA BOND EXP. PLAN:
 Responsible Party: COST RECOVERY/OPERATION AND MAINTENANCE SITE
 Project Revenue Source Company: Not reported
 Project Revenue Source Addr: Not reported
 Project Revenue Source City,St,Zip: Not reported
 Project Revenue Source Desc: The responsible party funded the characterization and remedial action at the site. State Bond funds were used for oversight of the RPs activities. DHS will seek cost recovery for its direct costs including staff costs and overhead related to the RI/FS and implementation of the RAP. DHS has budgeted \$5,000 per year for oversight of operation and maintenance of the ground water extraction and treatment system during a forecasted 15 year period.
 Site Description: The Clorox Company manufactures bleach and other products at this site. The ground water contains mercury.
 Hazardous Waste Desc: Mercury (Hg) has been found in the ground water at a concentration of up to 9,600 parts per billion (ppb).
 Threat To Public Health & Env: Contaminated ground water eventually discharges to the Alameda Estuary, which leads to the San Francisco Bay. Potential receptors to exposure of contaminants in ground water include aquatic life in San Francisco Bay.
 Site Activity Status: The responsible parties completed their investigation at the site to determine the extent of contamination in October, 1985. The RAP was received by the Department in March, 1986. DHS issued a RAO in October, 1986 and the RPs

completed the design of the treatment plant in June, 1987. Clorox began construction of the ground water treatment plant in October, 1987 and DHS granted the RPs a variance in December, 1987 to operate the plant starting in January, 1988. Clorox was issued waste discharge requirements from the Oakland RWQCB and met their discharge requirements in May, 1988. The site was certified in late June, 1988.

 File Location: Regional Board
 Potential Media Affected: Contaminated Surface / Structure, Other Groundwater (uses other than drinking water), Soil, Surface water
 Potential Contaminants of Concern: Not reported
 Site History: Site was used for manufacturing liquid bleach from 1919-1981. Elemental mercury used as an electrical conductor in mercury-cell manufacturing process. Use of the mercury cells discontinued in 1957; liquid bleach production ceased in 1981. Dry bleach production from 1972-1992. Building vacant since 1992. Initial investigations in 1981. Mercury found in soil and groundwater. Max amount of mercury estimated at 18 pounds.

Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 01/05/1996
Comments: Completed Five-Year Review. The site has been in operation and maintenance under the SF Regional Water Quality Control Board (RWQCB) oversight. In October 1995, Clorox requested a containment zone designation for the Site that would allow the cessation of groundwater extraction and treatment. In its request to the RWQCB, Clorox proposed additional removal and treatment of contaminated soil and installation of monitoring wells. The RWQCB approved Clorox's proposal on December 13, 1995. Groundwater monitoring is ongoing at the Site.

Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 03/26/2009
Comments: DTSC conducted its annual inspection of the Site. Some minor cracking was observed on the concrete floor of the warehouse however, the concrete covering the previously-excavated area appeared to be in reasonably good condition. Based on a walkthrough of the Site, there was no evidence of any activities prohibited by the Deed Restriction. Monitoring well 46 was observed to be damaged.

Completed Date: 01/05/1996
Comments: Completed Five-Year Review. The site has been in operation and maintenance under the SF Regional Water Quality Control Board (RWQCB) oversight. In October 1995, Clorox requested a containment zone designation for the Site that would allow the cessation of groundwater extraction and treatment. In its request to the RWQCB, Clorox proposed additional removal and treatment of contaminated soil and installation of monitoring wells. The RWQCB approved Clorox's proposal on December 13, 1995. Groundwater monitoring is ongoing at the Site.

Environmental Interest/Information System:

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number: Not reported
Latitude: 37.7662993110516
Longitude: -122.224285423279
Case Type: Cleanup Program Site
Case Worker: JW
Local Agency: Not reported
RB Case Number: 01S0645
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), Benzene, Other Chlorinated Hydrocarbons, Other Solvent or Non-Petroleum Hydrocarbon, Tetrachloroethylene (PCE), Toluene, Trichloroethylene (TCE), Vinyl chloride, Xylene, Diesel, Gasoline, Other Petroleum
Site History: Site History: 401 High Street: Richfield Oil Company owned the 401 High Street property from 1946 to 1975 and operated a bulk petroleum distribution facility from 1946 to 1967. From 1955 to 1975, American Mineral Spirits Company, Western (AMSCO-W), a joint venture between Richfield Oil Company and Pure Oil Company, operated a bulk terminal for storing, shipping, and receiving chemical products on the property. Pure Oil Company was bought by Union Oil Company of California (Unocal) in 1965. In 1975, Union Oil bought Richfield Oil Company's share of AMSCO-W. The new entity, Union Chemical Division of Unocal, operated the bulk terminal until 1991. The bulk terminal included a tank farm containing 41 12,000-gallon underground storage tanks (USTs) and 8 aboveground storage tanks (ASTs) for fuels, fuel-related chemicals, and solvents. In 2005, Unocal Corporation merged with Chevron Corporation to become a wholly-owned subsidiary of Chevron. A major spill occurred at the northwest edge of the 401 High Street property on July 5, 1983, when 23,300 gallons of toluene was spilled during rail car off-loading at the Unocal tank farm. Unocal estimated that there were between 3,600 and 4,000 gallons of toluene in an undissolved fraction (free phase) in the subsurface, an undetermined portion of which migrated northwest across the property line onto the parcel owned by NEU Investment Corp. and onto the 411 High Street property. In addition, investigations at the 401 High Street property have revealed that soil and groundwater have been impacted by various solvent chemicals and petroleum constituents associated with the former Unocal chemical distribution facility operations. The 401 High Street property was subsequently redeveloped along with 301 High Street (located along High Street) as the existing self-storage facility by the Crist Property Company, and was sold in 2003 to the current owner, Las Vegas II Storage, LLC, now known as Oakland High Street Storage Partners, L.P. 411 High Street: Richfield Oil Company owned and operated a petroleum storage facility in the southern portion of the 411 High Street property from 1946 through 1967. The facility included two large buildings, three ASTs with capacities greater than 50,000 gallons each, six smaller ASTs with capacities less than 50,000 gallons each, a loading rack and numerous product pipelines and manifolds. Gasoline, diesel, and motor oil were stored in the ASTs. The former tanks and associated aboveground piping were removed from the property by ARCO by 1975. The property has been affected by migration of a toluene plume emanating from the 1983 spill on the 401 High Street property. From 1967 through 1975, the northern parcel of the 411 property was subleased from AMSCO-W, first to Earl Foster, and then in 1972 to

Frank Peckett dba the Foster Chemical Company. Foster Chemical mainly operated a fish fertilizer packaging facility on the northern parcel of the 411 property, where four 2,000-gallon USTs, four 6,000-gallon USTs, and a 500-gallon heating oil UST were located. The contents and usage of the eight larger USTs are unknown. In 1975, ARCO sold the property to Mr. William Balfrey who immediately sold it to the current owners, the Richard Koch 411 High Street Annuity Trust and Nancy Koch 411 High Street Annuity Trust. The site was occupied by the Big B Lumberteria lumber yard until 1996 (the Big B retail store was located at 301 High Street). It was subsequently occupied by ITEL Terminals Inc. to store and repair shipping containers from 1996 to 2000. From 2000 to the present, the site has been occupied by First Transit Company as a commercial passenger van storage and maintenance facility. During the tenancy of these occupants subsequent to ARCO, there were no USTs or ASTs installed or operated on the property. In 2000, ARCO merged with BP Amoco P.L.C. to become a wholly-owned subsidiary of BP. Investigations at the property have revealed that soil and groundwater have been impacted by various solvent chemicals and petroleum constituents associated with the former ARCO and possibly Foster Chemical operations.

 Geo Track: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0600143649
 Global Id: T0600143649
 Latitude: 37.770329
 Longitude: -122.217081
 Status: Open - Remediation
 Status Date: 09/08/2017
 Case Worker: MYM
 RB Case Number: 01-3610
 Local Agency: Not reported
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Local Case Number: Not reported
 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Gasoline
 Site History: A fuel release was discovered during the removal of five USTs in April 1999. Site investigation activities have defined the extent of contamination. Interim remediation activities occurred at the site in 2008 and 2009. Additional remediation is proposed. Not all historic documents for the fuel leak case are available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>.

Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number: Not reported
Latitude: 37.76647
Longitude: -122.22494
Case Type: Cleanup Program Site
Case Worker: JW
Local Agency: Not reported
RB Case Number: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern: Benzene, Ethylbenzene, Gasoline, Toluene, Total Petroleum Hydrocarbons (TPH), Xylene

Site History: 401 High Street: Richfield Oil Company owned the 401 High Street property from 1946 to 1975 and operated a bulk petroleum distribution facility from 1946 to 1967. From 1955 to 1975, American Mineral Spirits Company, Western (AMSCO-W), a joint venture between Richfield Oil Company and Pure Oil Company, operated a bulk terminal for storing, shipping, and receiving chemical products on the property. Pure Oil Company was bought by Union Oil Company of California (Unocal) in 1965. In 1975, Union Oil bought Richfield Oil Company's share of AMSCO-W. The new entity, Union Chemical Division of Unocal, operated the bulk terminal until 1991. The bulk terminal included a tank farm containing 41 12,000-gallon underground storage tanks (USTs) and 8 aboveground storage tanks (ASTs) for fuels, fuel-related chemicals, and solvents. In 2005, Unocal Corporation merged with Chevron Corporation to become a wholly-owned subsidiary of Chevron. A major spill occurred at the northwest edge of the 401 High Street property on July 5, 1983, when 23,300 gallons of toluene was spilled during rail car off-loading at the Unocal tank farm. Unocal estimated that there were between 3,600 and 4,000 gallons of toluene in an undissolved fraction (free phase) in the subsurface, an undetermined portion of which migrated northwest across the property line onto the parcel owned by NEU Investment Corp. and onto the 411 High Street property. In addition, investigations at the 401 High Street property have revealed that soil and groundwater have been impacted by various solvent chemicals and petroleum constituents associated with the former Unocal chemical distribution facility operations. The 401 High Street property was subsequently redeveloped along with 301 High Street (located along High Street) as the existing self-storage facility by the Crist Property Company, and was sold in 2003 to the current owner, Las Vegas II Storage, LLC, now known as Oakland High Street Storage Partners, L.P.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 05/06/1991
Comments: SF RWQCB has issued a CAO #90-133 for properties at 301, 411 & 401 High Street, Oakland. The 411 High Street site was formerly an ARCO Products Company bulk transfer facility for petroleum products. The 301 High Street site was formerly used by ARCO for equipment maintenance & storage. The property at 301 & 411 is currently owned by Koch Trust and is currently occupied by Big B Lumberteria. The property at 401 High St is currently owned and operated by Unocal Chemical Division as a bulk chemical transfer facility. In June 1983, approx 23,000 gallons of toluene was spilled during rail car off loading on a rail spur located along the northern part of Unocal facility.

12 ft.

CA BOND EXP. PLAN:
 Responsible Party: DETAILED SITE EXPENDITURE PLAN
 Project Revenue Source Company: Not reported
 Project Revenue Source Addr: Not reported
 Project Revenue Source City,St,Zip: Not reported
 Project Revenue Source Desc: The identified responsible parties include the former L&M Plating owner and the owner of 930 and 920 54th Avenue. Failure by the shop owners to comply with the DHS order has necessitated expenditure of Bond funds. The Department will take appropriate cost recovery actions.
 Site Description: L&M plated metals with zinc, chrome and nickel finish from 1977 until 1983 when an extensive fire occurred. Soil at the site and at 930 54th Avenue is contaminated with cyanide and heavy metals.
 Hazardous Waste Desc: High concentrations of cyanide, zinc, chromium, cadmium, nickel, lead, and antimony have been detected on ground surfaces and in the soil onsite and offsite.
 Threat To Public Health & Env: The site has been fenced and posted and former site residents have been evicted. Onsite soils show hazardous levels of cyanide and heavy metals. Unless the site is remediated, adjacent property owners may be affected by the contaminated soils.
 Site Activity Status: Interim remedial measures (IRMs) including fencing, posting, berming, sealing drums and profiling waste containers have been completed. The removal of drums and tanks of hazardous materials was conducted in August, 1987. A feasibility study for the contaminated soils has been completed. The ground water

L&M PLATING (Continued)

S102008200

Background Info: This Site was a plating facility from 1977 to 1983. The facility plated metals with zinc, chrome, and nickel finish. In 1983 the facility was demolished due to fire. The underlying soil was contaminated with cyanide and metals. DTSC used state monies to remove debris, tanks, drums and contaminated soil.

Comments Date: 01311987
Comments: Completed RA. Fence & Post, Berm.

Comments Date: 03311989
Comments: Completed RA. Approximately 755 cubic yards of contaminated
Comments Date: 03311989
Comments: soils, concrete and building debris were removed and disposed at
Comments Date: 03311989
Comments: a Class I landfill. Approximately 350 cubic yards of clean
Comments Date: 03311989
Comments: soil was imported to restore the excavated area. Several
Comments Date: 03311989
Comments: abandoned trailers which were on the site were decontaminated
Comments Date: 03311989
Comments: and removed.

Comments Date: 05311986
Comments: This is the date the site was first listed pursuant to
Comments Date: 05311986
Comments: section 25356.

Comments Date: 06061989
Comments: Records Search: Site listed in 1989 Bond Expenditure Plan.

Comments Date: 08191991
Comments: Records Search: L&M plated metals with zinc, chrome, and nickel
Comments Date: 08191991
Comments: finish from 1977 until 1983 when an extensive fire occurred and
Comments Date: 08191991
Comments: destroyed the majority of the plating operations. Soils
Comments Date: 08191991
Comments: contained cyanide and heavy metals.

Comments Date: 08311987
Comments: Completed RA. Drums and tanks were removed.

Comments Date: 09031991
Comments: Filed Cost Recovery Case. The total costs to DTSC were
Comments Date: 09031991
Comments: \$976,000. The RP is in a dire financial situation and close to
Comments Date: 09031991
Comments: bankruptcy. The case was settled for \$240,000 to be paid over
Comments Date: 09031991
Comments: eight years. The settlement also includes stipulated penalties
Comments Date: 09031991
Comments: of about \$80,000 if the RP files for bankruptcy.

Comments Date: 11301989
Comments: Certified Site.

Comments: DTSC determined that all removal actions have been satisfactorily completed in accordance with the Removal Action Workplan approved by DTSC on October 5, 2018. Removal actions at the Site consisted of excavation and off-site disposal of contaminated soils. Completion of all removal actions were documented in Removal Action Completion Report approved by DTSC on December 12, 2019. The future land use at the Site will be residential.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Annual Oversight Cost Estimate
Completed Date: 10/07/2019
Comments: Annual DTSC oversight cost estimate letter for fiscal year 2019/2020 (July 1, 2019 - June 30, 2020).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 10/23/2017
Comments: Stantec Consulting Services Inc. (Stantec) performed a Phase II Environmental Site Assessment for the Site in order to evaluate the extent and presence of total petroleum hydrocarbons, metals, and volatile organic compounds. Arsenic was found at concentrations ranging from 2.95 milligrams per kilogram (mg/kg) to 43.2 mg/kg in soil, and lead was found at concentrations between 6.85 mg/kg and 336 mg/kg in soil. Stantec indicated in the Phase II Environmental Site Assessment Report that soil impacts are limited to approximately 2 feet in depth, and provided an estimate for how much soil containing lead and arsenic should be excavated from the Site. Stantec also recommended seeking regulatory oversight from DTSC for remediation and excavation of impacted soils. The investigation was performed and the report was prepared before City Ventures submitted an application requesting agency oversight. Stantec later performed an Additional Phase II Environmental Site Assessment to further delineate the extent of impacted soils prior to requesting agency oversight.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 10/05/2018
Comments: DTSC released the Draft Removal Action Workplan (RAW) for public review and comment from August 17 to September 17, 2018. Only one comment was received during the public review and comment period, and DTSC prepared a responsiveness summary which includes a response to this comment. A California Environmental Quality Act Notice of Exemption was prepared for this project. The remedy selected in the RAW consists of excavating approximately 2,100 cubic yards of metals-impacted soil from select locations at the Site, and disposing the excavated soil at an off-site permitted facility. Cleanup levels have been established to allow for unrestricted future residential usage. Soil confirmation sampling will occur after excavation to verify residential cleanup levels have been achieved. The excavated areas will be backfilled with approximately the same amount of imported clean materials.

Completed Document Type: Community Profile
Completed Date: 08/28/2018
Comments: The Community Profile describes the community and potential community concerns regarding the possible health risks associated with the Site, and anticipated public participation activities to take place at the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Public Notice
Completed Date: 08/17/2018
Comments: DTSC had a public notice published in the Alameda Times Star that announced the public comment period on the draft Removal Action Workplan, from August 17 to September 17, 2018.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 08/17/2018
Comments: A Community Update was mailed out to announce that DTSC was making the draft Removal Action Workplan available for public review and comment. The Community Update gives a brief history of the Site and a summary of the proposed removal action alternative and next steps, as well as DTSC staff contact information.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 08/13/2019
Comments: A Work Notice was mailed out to announce that implementation of the work described in the Removal Action Workplan would begin. The Work Notice gives a brief summary of the work being conducted, the estimated duration of the work, and provided contact information.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 10/30/2019
Comments: The Removal Action implementation was completed on October 30, 2019.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 12/12/2019
Comments: The removal action completion report documents the removal action at the site. Soil contaminated with arsenic, and lead were excavated and transported to off-site disposal facilities. Confirmation soil sampling was conducted to verify that removal action goals were met, and that the Site would be suitable for unrestricted residential usage as planned.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 10/13/2017
Comments: Stantec Consulting Services Inc. (Stantec) performed an Additional Phase II Environmental Site Assessment for the Site in order to

evaluate the extent and presence of total petroleum hydrocarbons, metals, and volatile organic compounds. Arsenic was found at concentrations ranging from 2.2 milligrams per kilogram (mg/kg) to 79.5 mg/kg in soil, and lead was found at concentrations between 5.63 mg/kg and 336 mg/kg in soil. Stantec indicated in the Additional Phase II Environmental Site Assessment Report that soil impacts are limited to approximately 2 feet in depth, and provides an estimate for how much soil containing lead and arsenic should be excavated from the Site. The investigation was performed and the report was prepared before City Ventures submitted an application requesting agency oversight.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1
Completed Date: 10/23/2017
Comments: Stantec Consulting Services Inc. (Stantec) performed a Phase I Environmental Site Assessment (ESA) as part of a due diligence prior to City Ventures purchasing the property and prior to submittal of an application requesting agency oversight. Stantec summarized the Site history and reviewed all relevant files and documents to determine the condition of the Site. Stantec concluded that additional soil and soil vapor sampling would be required to determine whether the historical usages at the Site resulted in releases of hazardous materials including volatile organic compounds and petroleum hydrocarbons. The Stantec Phase I ESA contains Photographs of the Property and the surroundings, a previous Phase I ESA performed in 2000 by RGA Environmental Inc as Appendix B, Environmental Agency Database reports as Appendix C, and agency records as well as user provided records and interview forms.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Date: 08-28-2020
Citation: 22 CCR 11 66261.7 - California Code of Regulations, Title 22, Chapter 11, Section(s) 66261.7

Violation Description: Failure to manage empty containers greater than 5 gallons in capacity that previously held a hazardous material/waste in accordance with 22 CCR 11 66261.7 including but not limited to the following: (e)(2)By reclaiming its scrap value onsite or shipping the container or inner liner to a person who reclaims its scrap value; or (3) By reconditioning or re manufacturing the container or inner liner onsite for subsequent reuse, or shipping the container or inner liner to a person who reconditions or re-manufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of 22 CCR 11 66261.7; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being emptied.

Violation Notes: Numerous (20-plus) empty 55 gallon poly drums were observed in the "containers" area between buildings 1A and 1B without EMPTY labels. Numerous (6-plus) empty 55 gallon steel drums were observed in buildings 1A and 1B without EMPTY labels. Submit photos/documentation to this department demonstrating that the empty containers listed above have been marked with the date they were emptied and are being properly managed pursuant to 22 CCR 11 66261.7.

Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violation Notes: 1) Quantities, Largest Container: Missing for the following chemicals: CN-72 Die Spray, ID Die Release S2, gold gas, oxygen, acetylene, nitrogen, propylene, and 76 Unax Aw 68. 2) Your hazardous materials inventory was not accepted because the 24 new Federal Hazard Categories on your reported chemical(s) has not been completed. Please uncheck all five of the obsolete Federal Hazard Categories and then check the applicable boxes for the 24 new Federal Hazard Categories. You can find the Federal Hazard Category in Section 2 of the Safety Data Sheet (SDS). The new hazard categories were adopted by CalEPA on December 28, 2017 and are required to be used effective January 1, 2018. 3) Missing from the hazardous materials inventory: Caustic rinse tank (approx. 300 gallons), cooling tower water treatment chemicals that exceed 50 gallons (one blue poly 55 gallons) Update CERS with the required inventory changes.

casting), and building 5 (machine room) was observed being disposed of into the municipal trash and a proper waste determination has not been made. Submit documentation to the CUPA demonstrating that the floor sweeps and water-based hydraulic fluid absorbents have been properly characterized to determine if they are a hazardous waste. If determined to be hazardous, submit a manifest/receipt documenting proper disposal and a statement demonstrating how you will manage these wastes in the future. Hazardous waste determination includes TTLC/STLC, CAM 17 metals, and fish bioassay. A local environmental testing lab can provide this service.

Violation Date: 08-28-2020
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11

Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.

Violation Notes: The floor sweeps and water-based hydraulic fluid absorbents located throughout building 3 (auxiliary die casting), building 4 (main die casting), and building 5 (machine room) was observed being disposed of into the municipal trash and a proper waste determination has not been made. Submit documentation to the CUPA demonstrating that the floor sweeps and water-based hydraulic fluid absorbents have been properly characterized to determine if they are a hazardous waste. If determined to be hazardous, submit a manifest/receipt documenting proper disposal and a statement demonstrating how you will manage these wastes in the future. Hazardous waste determination includes TTLC/STLC, CAM 17 metals, and fish bioassay. A local environmental testing lab can provide this service.

Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violation Notes: The business failed to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material including familiarity with the emergency response plan or failure to document and maintain training records for a minimum of three years. Establish and electronically submit an employee training program containing provisions to ensure initial and annual training for all employees in safety procedures in the event of a release or threatened release of a hazardous material and document and maintain training records for a minimum of three years.

Violation Date: 08-28-2020
Citation: 22 CCR 11 66261.7 - California Code of Regulations, Title 22, Chapter 11, Section(s) 66261.7

Violation Description: Failure to manage empty containers greater than 5 gallons in capacity that previously held a hazardous material/waste in accordance with 22 CCR 11 66261.7 including but not limited to the following: (e)(2) By reclaiming its scrap value onsite or shipping the container or inner liner to a person who reclaims its scrap value; or (3) By reconditioning or re manufacturing the container or inner liner onsite for subsequent reuse, or shipping the container or inner liner to a person who reconditions or re-manufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of 22 CCR 11 66261.7; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being emptied.

Violation Notes: Numerous (20-plus) empty 55 gallon poly drums were observed in the "containers" area between buildings 1A and 1B without EMPTY labels. Numerous (6-plus) empty 55 gallon steel drums were observed in buildings 1A and 1B without EMPTY labels. Submit photos/documentation to this department demonstrating that the empty containers listed above have been marked with the date they were emptied and are being properly managed pursuant to 22 CCR 11 66261.7.

Violation Description: Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.

Violation Notes: The business failed to electronically submit and certify that the business plan is complete, accurate, and in compliance with EPCRA on or before the annual due date. Last annual CERS submittal was 10/10/2018. Electronically submit and certify that the business plan is complete, accurate, and in compliance with EPCRA within 30 days. On an ongoing basis, electronically submit and certify the business plan annually on or before the annual due date.

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violation Notes: 1) Quantities, Largest Container: Missing for the following chemicals: CN-72 Die Spray, ID Die Release S2, gold gas, oxygen, acetylene, nitrogen, propylene, and 76 Unax Aw 68. 2) Your hazardous materials inventory was not accepted because the 24 new Federal Hazard Categories on your reported chemical(s) has not been completed. Please uncheck all five of the obsolete Federal Hazard Categories and then check the applicable boxes for the 24 new Federal Hazard Categories. You can find the Federal Hazard Category in Section 2 of the Safety Data Sheet (SDS). The new hazard categories were adopted by CalEPA on December 28, 2017 and are required to be used effective January 1, 2018. 3) Missing from the hazardous materials inventory: Caustic rinse tank (approx. 300 gallons), cooling tower water treatment chemicals that exceed 50 gallons (one blue poly 55 gallons) Update CERS with the required inventory changes.

Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11

Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.

Violation Notes: The floor sweeps and water-based hydraulic fluid absorbents located throughout building 3 (auxiliary die casting), building 4 (main die casting), and building 5 (machine room) was observed being disposed of into the municipal trash and a proper waste determination has not been made. Submit documentation to the CUPA demonstrating that the floor sweeps and water-based hydraulic fluid absorbents have been properly characterized to determine if they are a hazardous waste. If determined to be hazardous, submit a manifest/receipt documenting proper disposal and a statement demonstrating how you will manage these wastes in the future. Hazardous waste determination includes

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-28-2020
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Routine triennial Hazardous Waste Generator (HWG) inspection of Pressure Cast Products. Hazardous waste has not been disposed of since 2011 per DTSC HWTS. Waste streams are/were: RCRA (very small to small quantity generator): corrosives, tetrachloroethylene. CA-only non-RCRA (small quantity generator): alkaline solution (pH>=12.5) w/o metals, unspecified aqueous solution (2<pH<12.5), degreasing sludge, liquid with halogenated organic compounds (>=1000 mg/l), and liquids with pH<=2). The caustic dip tank is only cleaned out episodically when the solution loses efficacy.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being emptied.

Violation Notes: Returned to compliance on 07/16/2019. (4) empty 55 gallon open head metal containers that used to hold diesel were observed in the hazardous waste management area in the outdoor shipping container without an empty label and the date that the container was first empty. Facility representative stated that the containers used to contain diesel. Facility representative labeled the (4) empty 55 gallon open head metal containers that used to hold diesel with an empty label and the date that that the container was first empty. All empty containers >5 gallons shall be properly managed (e.g. recycled, reconditioned or remanufactured, shipped to another vendor for recycling or reconditioning) within one year, and receipt retained for three years.

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to complete and electronically submit a site map with all required content.

Violation Notes: Returned to compliance on 01/03/2017. OBSERVATION: Asphalt Shingle Recyclers has recently acquired (September 2016) the former Redy-Mix concrete property along the southern property line. Various hazardous materials have been relocated from one property to the other. Example: the covered storage bin has been relocated adjacent to the new mechanics shop; oxygen, acetylene, and argon are stored in the new mechanics shop; No CO2 is stored on the property. NOTE: The current site map has all the required elements, is legible, and follows best management practice. CORRECTIVE ACTION: Update the existing site map (dated 04/11/12), and/or add a new site map for the newly acquired property, to accurately reflect locations and types of hazmat in storage. Update site map within CERS HMBP.

Violation Description: Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.

Violation Notes: Returned to compliance on 01/03/2017. OBSERVATION: 1) Numerous *empty* 30 and 55 gallon steel and poly drums observed within the hazmat trailer (covered storage bin) and new mechanics shop (south side of property). These poly and steel drums intended use is for segregation and storage of potential hazardous wastes embedded in asphalt shingle/green waste/recyclable materials dropped off by consumers. To date, this facility has not made any accumulation of embedded hazwaste within the last three years. Maintenance of these empty containers is considered a best management practice for the potential storage, segregation, and disposal of unanticipated consumer generated hazwaste. Also observed *empty* in the new mechanics shop: 500 gallon used oil tank, 2 x 220 gallon new oil tanks. 2) Oxygen cylinder on the cutting torch wagon was not adequately restrained to prevent tipping over. CORRECTIVE ACTION: 1) All containers that are EMPTY must be marked as EMPTY with the empty date recorded on the The [Truncated]

Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violation Notes: Returned to compliance on 07/23/2019. Facility is a conditionally exempt small quantity generator according to manifest review, but the facility has opted to comply with small quantity generator requirements. Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles). - (1) 55 gallon open head metal container of hazardous waste paint related material located in the hazardous waste management area in the outdoor shipping container was observed without an accumulation start date. Facility representative stated that the accumulation exceeded 180 days. No manifests or records of disposal of waste paint related material were available for review at the time of the inspection. - (2) 55 gallon open head metal containers of hazardous waste oily debris absorbent located in the hazardous waste management area in the outdoor shipping container was observ... Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes: Returned to compliance on 10/25/2016. OBSERVATION: Uniform hazardous waste manifest 013452789 JJK (dated 3/18/15) was observed at the facility; however the TSDF 3rd signature is not present on the facility copy. CORRECTIVE ACTION: Phone call to Anthony Smith on 10/26/2016 confirmed the facility found the missing manifest. Manifest was misfiled. Signed at TSDF by Emily Salisbury on 3/24/2015. Ensure facility retains on-site all hazardous waste manifests signed by TSDF for 3 years. CORRECTED ON SITE

Violations:

Site ID: 93670
Site Name: Asphalt Shingle Recyclers, LLC
Violation Date: 07-16-2019
Citation: 22 CCR 11 66261.7 - California Code of Regulations, Title 22, Chapter 11, Section(s) 66261.7

Violation Description: Failure to manage empty containers greater than 5 gallons in capacity that previously held a hazardous material/waste in accordance with 22 CCR 11 66261.7 including but not limited to the following: (e)(2)By reclaiming its scrap value onsite or shipping the container or inner liner to a person who reclaims its scrap value; or (3) By reconditioning or re manufacturing the container or inner liner onsite for subsequent reuse, or shipping the container or inner liner to a person who reconditions or re-manufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of 22 CCR 11 66261.7; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being emptied.

Violation Notes: Returned to compliance on 07/16/2019. (4) empty 55 gallon open head metal containers that used to hold diesel were observed in the hazardous waste management area in the outdoor shipping container without an empty label and the date that the container was first empty. Facility representative stated that the containers used to contain diesel. Facility representative labeled the (4) empty 55 gallon open head metal containers that used to hold diesel with an empty label and the date that that the container was first empty. All empty containers >5 gallons shall be properly managed (e.g. recycled, reconditioned or remanufactured, shipped to another vendor for recycling or reconditioning) within one year, and receipt retained for three years.

Violation Description: Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.

Violation Notes: Returned to compliance on 01/03/2017. OBSERVATION: 1) Numerous *empty* 30 and 55 gallon steel and poly drums observed within the hazmat trailer (covered storage bin) and new mechanics shop (south side of property). These poly and steel drums intended use is for segregation and storage of potential hazardous wastes embedded in asphalt shingle/green waste/recyclable materials dropped off by consumers. To date, this facility has not made any accumulation of embedded hazwaste within the last three years. Maintenance of these empty containers is considered a best management practice for the potential storage, segregation, and disposal of unanticipated consumer generated hazwaste. Also observed *empty* in the new mechanics shop: 500 gallon used oil tank, 2 x 220 gallon new oil tanks. 2) Oxygen cylinder on the cutting torch wagon was not adequately restrained to prevent tipping over. CORRECTIVE ACTION: 1) All containers that are EMPTY must be marked as EMPTY with the empty date recorded on the The [Truncated]

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to establish and electronically submit an adequate training program in safety procedures in the event of a release or threatened release of a hazardous material.

Violation Notes: Returned to compliance on 01/03/2017. OBSERVATION: Facility has transmitted a CERS HMPB consolidated emergency response and contingency plan. Employee Orientation/Initial Training and Emergency Safety Procedures documents were both transmitted to CERS - thank you for these best management practices demonstrating commitment to employee safety. These programs are adequate to address IIPP, OSHA, and equipment operations; however, these documents do not contain all required content as it relates to site-specific hazardous materials handling and spill response. The Emergency Safety Procedures adequately discusses fire hazards of materials and use of emergency response equipment (e.g. fire extinguishers). CORRECTIVE ACTION: Include the applicable content as outlined in CERS HMBP emergency response plan Part "I" Employee Training . Note training shall be site specific to include discussion on compressed gases, labeling of containers, and spill notification procedures.

Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violation Notes: Returned to compliance on 01/03/2017. OBSERVATION: Facility maintains robust training and employee documentation of training in: IIPP, OSHA, machinery safety, LOTO, fire suppression. Various topics are discussed on a monthly rotating basis. However, per Item 11, additional training is required for hazardous materials specific handling. CORRECTIVE ACTION: Transmit evidence of employee training in hazardous materials management to ACDEH CUPA within 30 days. ACDEH to provide example hazmat training form.

Completed Document Type: RCRA Facility Assessment Report
Completed Date: 09/01/1991
Comments: PA completed which identified 2 SWMUs and 2 AOC DRUM STORAGE AREA-This unit consists of a bermed concrete pad with a design capacity of 256 drums measuring approximately 20 feet by 40 feet that is enclosed by a chain-link fence. Drums of waste solvent were formerly stored here until 1988. This unit was located outside in the yard near the product storage building. According to the closure plan, this unit was used for hazardous waste storage beginning in September 1983 and has not been used to store wastes since 1988 At the time of the FIT site visit no drummed wastes were present and this unit was being steam-cleaned. Waste Managed: Drummed waste liquids including waste machine oil, spent solvent, paint sludge, waste hydrochloric acid solution, and waste copper sulfate (liquid) were stored here. Among the constituents in these wastes were methyl ethyl ketone, aromatic hydrocarbons, isopropanol, toluene, benzene, methanol, ethanol, copper sulfate, and hydrogen chloride. This unit is a bermed (6 inches) concrete pad surrounded by a chain-link fence (2,14). A removable plug at one end of the unit was used to drain rainwater. Drums were stored within the area on wooden pallets. No releases are known to have occurred from this unit. No sampling has been performed to determine whether or not there have been releases. SOLDER DROSS STORAGE AREA - The solder dross storage area is a section of the concrete railroad platform that is cordoned off with a chain-link fence. This unbermed unit has a design capacity of

approximately 100 drums and measures approximately 40 feet by 8 feet (2,14). A raised roof (no walls) affords some protection from the elements for this unit. According to the closure plan, this unit was first used in 1983. This unit was being steam-cleaned at the time of the FIT site visit. Waste Managed: This unit was used to store drummed lead solder dross and baghouse dust which have a composition of 97 percent lead and 3 percent tin and antimony. The solder dross storage area is part of a converted railroad platform. There are no apparent release controls. No releases are known to have occurred from this unit. No sampling is known to have been performed to determine whether or not releases have occurred. AREA OF CONCERN - OLD BOILER FUEL TANK This area of concern is located on the east side of the property in a small area between the edge of the property and the building foundation. The old boiler fuel tank was installed probably before World War II. Fuel product is floating on the aquifer in this area and is being pumped out and disposed of by a contractor. This unit was filled with concrete instead of being removed because its awkward physical location (between the building foundation and East 8th Street) precluded removal. AREA OF CONCERN - SOLVENT PRODUCT TANK FARM Located on the west side of the property just south of the product storage building were six underground storage tanks that were removed in 1986 and 1987. Non-chlorinated solvents (including methyl ethyl ketone, toluene and xylene) used in the can coatings were stored in these tanks. Solvent-contaminated soil was excavated from the surrounding area during removal. Although according to ANCC post-removal sampling was conducted, specific information about the event does not appear to exist.

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

S112891097

Comments: The removal action included disposal of approximately 590 cubic yards or approximately 15 truckloads of soils contaminated with soil contaminated with arsenic. A different area of lead contaminated soils was identified on site and a second Removal Action Completion Report (RACR) was required. The second RACR will summarize and address both the arsenic and lead impacted soil removals.

Completed Area Name: PROJECT WIDE

Completed Sub Area Name: Not reported

Completed Document Type: Removal Action Workplan

Completed Date: 12/23/2003

Comments: On 12/23/03, DTSC issued a final RAW approval based on resolution of the conditional approval issued on June 18, 2003 and the inclusion of 0.3 acre parcel investigated and reported in a Technical Memorandum dated May 13, 2003. The 0.3 acres was not available during the PEA. The parcel is a portion of a railroad right-of-way and is also contaminated with elevated arsenic.

Completed Area Name: PROJECT WIDE

Completed Sub Area Name: Not reported

Completed Document Type: Removal Action Completion Report

Completed Date: 12/21/2006

Comments: DTSC approved the RACR and certifies that all removal actions have been completed.

Completed Area Name: PROJECT WIDE

Completed Sub Area Name: Not reported

Completed Document Type: Preliminary Endangerment Assessment Workplan

Completed Date: 04/18/2001

Comments: DTSC approved the workplan submittal with modifications listed in the letter.

Completed Area Name: PROJECT WIDE

Completed Sub Area Name: Not reported

Completed Document Type: Preliminary Endangerment Assessment Report

Completed Date: 12/23/2003

Comments: DTSC approved the Tech Memo with the recommendation that arsenic impacted soils will be addressed in the Removal Action Workplan.

Completed Area Name: PROJECT WIDE

Completed Sub Area Name: Not reported

Completed Document Type: Other Report

Completed Date: 01/07/2004

Comments: Meeting to discuss additional work effort- the removal for soil impacted with lead from lead-based paint in the former housing area.

Completed Area Name: PROJECT WIDE

Completed Sub Area Name: Not reported

Completed Document Type: Phase 1

Completed Date: 02/16/2001

Comments: DTSC completed review of the Phase I and determined a Preliminary Environmental Assessment is required.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Inspections/Visit (Non LUR)
Completed Date: 03/20/2004
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Inspections/Visit (Non LUR)
Completed Date: 01/13/2003
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Notice of Exemption
Completed Date: 05/22/2003
Comments: Project scope changed for arsenic removal. Additional area of lead contamination added to project which caused an increase in the volume needed to be removed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 02/15/2007
Comments: Certification was signed 2/15/07

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Environmental Oversight Agreement
Completed Date: 03/16/2001
Comments: DTSC entered into an Environmental Oversight Agreement (Docket Number HSA-A 00/01-194) with Oakland Unified School District to provide oversight for a Preliminary Endangerment Assessment for the proposed Dewey School Expansion Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Cost Recovery Closeout Memo
Completed Date: 06/22/2007
Comments: DTSC issued a Cost Recovery Memorandum to the Accounting Department to close out the project.

Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 05/28/2003
Comments: DTSC approved the PEA report recommending further action in the form of a Removal Action Workplan to address arsenic and benzo(a)pyrene impacted soil.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 12/21/2006
Comments: The removal action included disposal of approximately 590 cubic yards or approximately 15 truckloads of soils contaminated with soil contaminated with arsenic. A different area of lead contaminated soils was identified on site and a second Removal Action Completion Report (RACR) was required. The second RACR will summarize and address both the arsenic and lead impacted soil removals.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 12/23/2003
Comments: On 12/23/03, DTSC issued a final RAW approval based on resolution of the conditional approval issued on June 18, 2003 and the inclusion of 0.3 acre parcel investigated and reported in a Technical Memorandum dated May 13, 2003. The 0.3 acres was not available during the PEA. The parcel is a portion of a railroad right-of-way and is also contaminated with elevated arsenic.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 12/21/2006
Comments: DTSC approved the RACR and certifies that all removal actions have been completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Workplan
Completed Date: 04/18/2001
Comments: DTSC approved the workplan submittal with modifications listed in the letter.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 12/23/2003
Comments: DTSC approved the Tech Memo with the recommendation that arsenic impacted soils will be addressed in the Removal Action Workplan.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 01/07/2004
Comments: Meeting to discuss additional work effort- the removal for soil impacted with lead from lead-based paint in the former housing area.

Completed Document Type: Cost Recovery Closeout Memo
Completed Date: 09/27/2005
Comments: Project was closed due to inactivity.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Standard Voluntary Agreement
Completed Date: 04/07/2003
Comments: DTSC entered into a Voluntary Cleanup Agreement (VCA) (Docket Number HSA-A 00/01-194-A) with the Oakland Unified School District (Proponent). The purpose of this VCA is for the Proponent to complete a Removal Action Workplan (RAW) for lead impacted soils, and conduct a removal action, under the oversight of DTSC in an effort to satisfy DTSC's requirements, such that a No Further Remediation and Site Certification, regarding the Ascend Site (aka Dewey School Expansion), may be obtained from DTSC.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Consent Order
Completed Date: 05/18/1989
Comments: Signed Consent Order to investigate and cleanup the PCB contamination.
Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Inspections/Visit (Non LUR)
Completed Date: 08/08/2018
Comments: General Site Visit with DTSC's geologist. Inspect Groundwater extraction system, groundwater wells and extraction wells.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 11/30/2018
Comments: Letter from General Electric Company (GE) to DTSC providing notification of GE's intent to sell the Site to Bridge Development Partners.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 01/30/2019
Comments: DTSC concurred with Bridge's conceptual remedy, including: soil management of impacted soil with VOCs and PCBs, air monitoring, soil vapor mitigation system for the new warehouse, capping, and utility corridor. A detailed Remedy Design Implementation Plan addendum will be submitted in early March from Bridge.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 09/14/2018
Comments: Site visit to observe PCB soil sampling and to conduct a site walk through with U.S. EPA staff.

Comments: groundwater monitoring and system monitoring indicate contaminants remain within historic ranges. 31 pounds of VOCs were removed this quarter.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 02/13/2017
Comments: Work plan to replace two monitoring wells at the GE Oakland site located on International Blvd. The two wells are W-003B and GW-5A. Well W-003B has a bent casing and is screened in clay, which makes water level data often unusable for contouring and the well extremely slow to recharge. Well W-003B is a B-zone monitoring well; however, no B zone was encountered at this location, which is why it is screened in clay.

Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 01/30/2002
Comments: Completed RA. 295 cubic yards of PCB contaminated soils were excavated and disposed offsite. Concentrations above the PCB cleanup goal remain in areas underneath a culvert which was discovered during the excavation. These areas are within the GE property line. The culvert was left in place and the excavation was backfilled until further evaluation of cleanup alternatives.

Completed Area Name: Backyard OU
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 10/03/2000
Comments: Approved RAW for backyards. The selected cleanup alternative is excavation of PCB contaminated soils to residential standards and offsite disposal. Between June and October 1999, GE collected soil samples from residential properties located adjacent to the Site on 54th Avenue. Soil samples were collected only from backyards of properties where permission was obtained. The soil investigations

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Tank Removal Report
Completed Date: 03/04/2010
Comments: This report describes the work that was conducted to close the tank, the results of analyses of a soil sample collected beneath the tank, and the work conducted to repair the cap at the former tank location. Gasoline [930 milligrams per kilogram ((mg/kg))] was detected in the soil sample. In addition, lead (2,600 mg/kg) and zinc (1,800 mg/kg) were detected at levels similar to those reported for the site in the 2002 Remedial Investigation Report. Based on these findings, it is recommended that the presence of these compounds in soil at the location of the former UST be evaluated in conjunction with ongoing remediation efforts under the jurisdiction of DTSC. DTSC did not provide comments on this report. The tanks were removed under permit through, and inspected by, the Oakland Fire Department.

Completed Date: 07/31/2013
Comments: The Department of Toxic Substances Control (DTSC) is distributing this work notice to inform the community that General Electric Company (GE) will be performing field work as part of an environmental cleanup for a site located at 5411 International Boulevard in Oakland, California. GE contractors, under the oversight of DTSC, will be implementing a cleanup plan to address the chemical contamination in soil and groundwater from past site activities. Work will be conducted in stages and will last for a total of about 24 months. During active stages, the work will be conducted from 8:00 a.m. to 5:00 p.m., Monday through Friday. Trained environmental engineers, geologists and technicians will be conducting the work.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 09/04/2012
Comments: This approval is contingent upon the United States Environmental Protection Agency concurrence with GE's June 6, 2012 letter regarding PCB contamination at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 03/25/2015
Comments: Field activities are complete except for resurfacing the areas around building.

Comments: The total VOC concentrations in OW-2A increased slightly from previous sampling results. The total VOC concentrations in all other well clusters are generally within the range of previous sampling results. MNA data will be evaluated annually and reported in the combined Fourth Quarter 2016 and Annual Monitoring Report. The GETS has been successful in capturing onsite groundwater and treating it to meet EBMUD discharge requirements. During the reporting period, a total of 1,349,932 gallons of water were treated and discharged. Approximately 32.4 pounds of VOCs were removed. The extraction wells with the highest mass recoveries were EW-1, EW-2, and EW-4. Figure 9 shows the mass of VOCs removed each month. As of September 30, 2016,

over 7.5 million gallons of water have been treated, and 216 pounds of VOCs have been removed. VGAC monitoring results are provided in Table 10. VGAC effluent continues to meet the BAAQMD requirements for vapor discharge.

Completed Date: 07/03/2020
Comments: DTSC has completed review of Health and Safety Plans submitted by FACS and SVD contractors and has no further comments. DTSC recommends that SVD submit summary air monitoring reports for Department review on a frequency to be agreed upon by SVD and the DTSC Project Manager. These summary reports should include the type of samples (personnel or perimeter), sample analyte (asbestos, lead, PCB, and silica), location of samples, personnel/location monitored, date and time of sample, and laboratory results. In addition to sample information, the report should also include the exposure controls in use during sampling, as well as any additional controls implemented due to elevated exposure concerns. The Department may also ask to review the fieldbooks.

Completed Document Type: Technical Workplan
Completed Date: 02/13/2017
Comments: Work plan to replace two monitoring wells at the GE Oakland site located on International Blvd. The two wells are W-003B and GW-5A. Well W-003B has a bent casing and is screened in clay, which makes water level data often unusable for contouring and the well extremely slow to recharge. Well W-003B is a B-zone monitoring well; however, no B zone was encountered at this location, which is why it is screened in clay.

excavated and disposed offsite. Concentrations above the PCB cleanup goal remain in areas underneath a culvert which was discovered during the excavation. These areas are within the GE property line. The culvert was left in place and the excavation was backfilled until further evaluation of cleanup alternatives.

Completed Area Name: Backyard OU
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 10/03/2000
Comments: Approved RAW for backyards. The selected cleanup alternative is excavation of PCB contaminated soils to residential standards and offsite disposal. Between June and October 1999, GE collected soil samples from residential properties located adjacent to the Site on 54th Avenue. Soil samples were collected only from backyards of properties where permission was obtained. The soil investigations detected PCBs as high as 130 parts per million (ppm) on one property.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Design/Implementation Workplan
Completed Date: 09/04/2012
Comments: The approval is contingent upon the United States Environmental Protection Agency concurrence with GE's June 6, 2012 letter regarding PCB contamination at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Plan
Completed Date: 06/30/2011
Comments: The RAP has been approved for implementation. The RAP requires excavation of a small VOC hot spot, capping of the entire site and extraction of ground water contaminated with VOCs.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 03/31/1993
Comments: Construction of an approved surface water and groundwater oil plume control system and submitted procedures for long-term monitoring, operations, and maintenance. Groundwater was extracted and treated with oil/water separator and air stripping column.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation / Feasibility Study
Completed Date: 05/04/1991
Comments: Completed RI/FS for PCB contamination.

Completed Document Type: Tank Removal Report
Completed Date: 03/04/2010
Comments: This report describes the work that was conducted to close the tank, the results of analyses of a soil sample collected beneath the tank, and the work conducted to repair the cap at the former tank location. Gasoline [930 milligrams per kilogram ((mg/kg))] was detected in the soil sample. In addition, lead (2,600 mg/kg) and zinc (1,800 mg/kg) were detected at levels similar to those reported for the site in the 2002 Remedial Investigation Report. Based on these findings, it is recommended that the presence of these compounds in soil at the location of the former UST be evaluated in conjunction with ongoing remediation efforts under the jurisdiction of DTSC. DTSC did not provide comments on this report. The tanks was removed under permit through, and inspected by, the Oakland Fire Department.

Comments: The Department of Toxic Substances Control (DTSC) is distributing this work notice to inform the community that General Electric Company (GE) will be performing field work as part of an environmental cleanup for a site located at 5411 International Boulevard in Oakland, California. GE contractors, under the oversight of DTSC, will be implementing a cleanup plan to address the chemical contamination in soil and groundwater from past site activities. Work will be conducted in stages and will last for a total of about 24 months. During active stages, the work will be conducted from 8:00 a.m. to 5:00 p.m., Monday through Friday. Trained environmental

Completed Date: 12/07/2016
Comments: The total VOC concentrations in OW-2A increased slightly from previous sampling results. The total VOC concentrations in all other well clusters are generally within the range of previous sampling results. MNA data will be evaluated annually and reported in the combined Fourth Quarter 2016 and Annual Monitoring Report. The GETS has been successful in capturing onsite groundwater and treating it to meet EBMUD discharge requirements. During the reporting period, a total of 1,349,932 gallons of water were treated and discharged. Approximately 32.4 pounds of VOCs were removed. The extraction wells with the highest mass recoveries were EW-1, EW-2, and EW-4. Figure 9 shows the mass of VOCs removed each month. As of September 30, 2016, over 7.5 million gallons of water have been treated, and 216 pounds of VOCs have been removed. VGAC monitoring results are provided in Table 10. VGAC effluent continues to meet the BAAQMD requirements for vapor discharge.

Completed Document Type: Health & Safety Plan
Completed Date: 07/03/2020
Comments: DTSC has completed review of Health and Safety Plans submitted by FACS and SVD contractors and has no further comments. DTSC recommends that SVD submit summary air monitoring reports for Department review on a frequency to be agreed upon by SVD and the DTSC Project Manager. These summary reports should include the type of samples (personnel or perimeter), sample analyte (asbestos, lead, PCB, and silica), location of samples, personnel/location monitored, date and time of sample, and laboratory results. In addition to sample information, the report should also include the exposure controls in use during sampling, as well as any additional controls implemented due to elevated exposure concerns. The Department may also ask to review the fieldbooks.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are

transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/20/2021	Source: EPA
Date Data Arrived at EDR: 11/05/2021	Telephone: N/A
Date Made Active in Reports: 11/29/2021	Last EDR Contact: 12/01/2021
Number of Days to Update: 24	Next Scheduled EDR Contact: 01/10/2022
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/20/2021	Source: EPA
Date Data Arrived at EDR: 11/05/2021	Telephone: N/A
Date Made Active in Reports: 11/29/2021	Last EDR Contact: 12/01/2021
Number of Days to Update: 24	Next Scheduled EDR Contact: 01/10/2022
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/20/2021

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

Date of Government Version: 02/04/2021	Source: Los Angeles County Department of Public Works

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

South Map:	5641120 SAN LEANDRO, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06001C0089G	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
06001C0088G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
OAKLAND EAST	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AEI Consultants were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

SLIC Case R00002661 and Geotracker Global ID T06019788277; 4800
Coliseum Way; Oakland, CA 94601
Our File No. R848.01

Dear Mr. Wickham:

Pursuant to the request set forth in your letter of January 9, 2008, enclosed is our client's check in the amount of \$6,000. We want to stress that my client only is sending this check because you have demanded that sum be paid before you will even meet with him regarding his concerns about the above-referenced matter and his forced involvement in it.

As you know, it is our position that the 4800 Coliseum Way property and our client are not responsible or liable for any environmental concerns discussed by you during your correspondence of the last several months. The fact my client is sending you \$6,000 therefore is not, and cannot be taken as, an admission of any kind by him regarding any possible such liability or responsibility. Nor may his payment or this letter be used in evidence against my client for any purpose whatsoever.

As Mr. Siegel wrote to you previously, we do want to meet with you regarding this matter as soon as possible. Please provide me with several dates and times that work for you and we will respond to that immediately.

Very truly yours,

Ray W. Sherman, Jr.RWS/ldh

Mr. John Miller
P.O. Box 61103
Palo Alto, CA 94306

Subject: SLIC Case RO0002661 and Geotracker Global ID T06019788277, Superior Plaster Castings, 4800 Coliseum Way, Oakland, CA 94601

Dear Mr. Nichols and Mr. Miller:

Alameda County Environmental Health (ACEH) staff received correspondence by electronic mail from ERAS Environmental dated December 20, 2007. The December 20, 2007 correspondence presents theories regarding the source of contamination in the area and requests that ACEH provide information regarding adjacent sites. Please note that effective January 31, 2006, the Alameda County Environmental Cleanup Oversight Programs (LOP and SLIC) require submission of all reports in electronic form to the county's ftp site. Hard copies of reports are no longer accepted. Therefore, please submit all future report to the ACEH ftp site. With regard to the request for additional information on adjacent sites, you may fax a list of the addresses that you are interested in to Roseanna Garcia-La Grille of ACEH at 510-337-9335 (fax number) to schedule an appointment to review the case files for adjacent sites.

The December 20, 2007 correspondence from ERAS Environmental asks why Mr. Nichols is being asked to pay \$6,000 for regulatory oversight. ACEH provides oversight for all SLIC cases on a cost recovery basis. An oversight account must be established in order for ACEH to provide regulatory oversight. We cannot make progress on this open SLIC case until funds for regulatory oversight are submitted.

In correspondence dated September 26, 2007, Alameda County Environmental Health (ACEH) requested that you submit a Work Plan to evaluate the extent and potential human health risks posed by soil and groundwater contamination beneath your property. The schedule for submittal of a Work Plan was extended to December 30, 2007 in ACEH correspondence dated November 30, 2007. To date, we have not received the requested Work Plan. In addition, we requested that you provide funds for regulatory oversight, most recently in correspondence dated November 9, 2007. To date, we have not received funds for regulatory oversight.

The December 20, 2007 correspondence from ERAS Environmental requested a meeting with ACEH. We have no objection to meeting with you; however, we cannot schedule a meeting until funds for regulatory oversight are provided. Please submit the requested regulatory oversight funds and your request for a meeting date no later than February 13, 2008. If we do not receive these two items by February 13, 2008, a Notice of Violation will be issued. Further delays in investigation, late reports, or enforcement actions may result in referral of your case to the Water Board or other appropriate agency for possible enforcement actions.

Mr. Robert Nichols
Mr. John Miller
RO0002661

Page 2

TECHNICAL REPORT REQUEST

Please submit technical reports to Alameda County Environmental Health (Attention: Jerry Wickham), according to the following schedule:

- **February 13, 2008** – Funds for Regulatory Oversight and Request for Meeting or Work Plan

ELECTRONIC SUBMITTAL OF REPORTS

The Alameda County Environmental Cleanup Oversight Programs (LOP and SLIC) require submission of all reports in electronic form to the county's ftp site. Paper copies of reports will no longer be accepted. The electronic copy replaces the paper copy and will be used for all public information requests, regulatory review, and compliance/enforcement activities. Instructions for submission of electronic documents to the Alameda County Environmental Cleanup Oversight Program ftp site are provided on the attached "Electronic Report Upload (ftp) Instructions." Please do not submit reports as attachments to electronic mail.

Submission of reports to the Alameda County ftp site is an addition to existing requirements for electronic submittal of information to the State Water Resources Control Board (SWRCB) Geotracker website. Submission of reports to the Geotracker website does not fulfill the requirement to submit documents to the Alameda County ftp site. In September 2004, the SWRCB adopted regulations that require electronic submittal of information for groundwater cleanup programs. For several years, responsible parties for cleanup of leaks from underground storage tanks (USTs) have been required to submit groundwater analytical data, surveyed locations of monitor wells, and other data to the Geotracker database over the Internet. Beginning July 1, 2005, electronic submittal of a complete copy of all necessary reports was required in Geotracker (in PDF format). Please visit the SWRCB website for more information on these requirements (http://www.swrcb.ca.gov/ust/cleanup/electronic_reporting).

PERJURY STATEMENT

All work plans, technical reports, or technical documents submitted to ACEH must be accompanied by a cover letter from the responsible party that states, at a minimum, the following: "I declare, under penalty of perjury, that the information and/or recommendations contained in the attached document or report is true and correct to the best of my knowledge." This letter must be signed by an officer or legally authorized representative of your company. Please include a cover letter satisfying these requirements with all future reports and technical documents submitted for this case.

PROFESSIONAL CERTIFICATION & CONCLUSIONS/RECOMMENDATIONS

The California Business and Professions Code (Sections 6735, 6835, and 7835.1) requires that work plans and technical or implementation reports containing geologic or engineering evaluations and/or judgments be performed under the direction of an appropriately registered or certified professional. For your submittal to be considered a valid technical report, you are to present site specific data, data interpretations, and recommendations prepared by an appropriately licensed professional and include the professional registration stamp, signature, and statement of professional certification. Please ensure all that all technical reports submitted for this case meet this requirement.

Mr. Robert Nichols
Mr. John Miller
RO0002661

and statement of professional certification. Please ensure all that all technical reports submitted for this case meet this requirement.

AGENCY OVERSIGHT

If it appears as though significant delays are occurring or reports are not submitted as requested, we will consider referring your case to the Regional Board or other appropriate agency, including the County District Attorney, for possible enforcement actions. California Health and Safety Code, Section 25299.76 authorizes enforcement including administrative action or monetary penalties of up to \$10,000 per day for each day of violation.

If you have any questions, please call me at (510) 567-6791 or send me an electronic mail message at jerry.wickham@acgov.org.

Sincerely,

Jerry Wickham, California PG 3766, CEG 1177, and CHG 297

Hi Cleet, this is just a heads up that I am going to send you a letter regarding 4800 Coliseum Way that is implicated along with three other sites. I, the owner and his attorney really want you to at least know what is going on. It is only FYI because I think there may be some funny non-standard forces involved here.

**Re: Request for Additional Information Regarding
4800 Coliseum Way, Oakland, California**

Dear Mr. Wickham:

ERAS client, Mr. Bob Nichols, has asked that we prepare this letter to request additional information regarding the contamination investigation that includes his property (hereinafter the "Property"). This is the result of large gaps of data that have been generated on the adjacent sites that have been named as part of this investigation.

First of all, ERAS has been attempting since 2000 to have first the Regional Water Quality Control Board and then the Alameda County Health Care Services Agency (ACHCSA) consider data and information pertaining to the source of the contamination on the Property. This data has been ignored and our client has been provided only speculative conclusions in subsequent correspondence including the assertion that the oil and tar was deposited on the rail spur for weed control. Common sense dictates that pools of oozing tar and oil would not be required for "weed control".

The weed control theory does not explain why 1) tar was oozing from under the fence of the AAA property in 2000, 2) tar was identified in soil borings at the up-gradient Property line at 2-3 feet below ground surface (bgs) by other consultants but was not present at the surface and 3) several pipelines used to convey petroleum products and chlorobenzene were discovered leading from huge underground tanks at the AAA site right to the Property line. ERAS has identified a clear up-gradient off-site source for the petroleum and solvent contamination while none exists on the Property and no data produced recently by the other names property owners indicated otherwise. In fact, data provided confirms a source of these contaminants on two of the nearby properties.

The data that was shown on maps provided to Mr. Nichols indicated a large number of gaps of data which further lead to the speculative conclusions provided by the other owner's representatives regarding the source of contamination. It appears that the other parties responsible, while being superficially cooperative, have not provided sufficient data. I contrast this to the efforts of Mr. Bob Nichols and Mr. John Miller, who have provided a significant amount of information generated during the previous at least 15 years. This information was voluntarily and willingly supplied even in advance of the listing of their property as a SLIC case by the ACHCSA. This situation in no way appears to be fair to Mr. Nichols and Mr. Miller. The information required by my client, in order for him to respond appropriately to your request for a workplan, includes at least the following.

- Why was significant remediation performed near the apparent common area of contamination in 2003 but no notice of the SLIC listing of Mr. Nichols site was provided to him until at least 2006?
- Although an estimated 1,000 to 1,500 cubic yards of soil was removed from adjacent to the Property line (at Learner and AAA) as part of the remediation, there was no documentation of confirmation soil sampling performed despite the fact that it was previously reported that significant contamination was likely present at this site. Why was this remediation performed and was it overseen by the ACHCSA? Where are the sample results? What was the disposition of the excavated soil?
- There was no indication of confirmation soil sampling that was performed along the underground pipelines from the USTs at AAA. These pipelines emptied into sumps along the former rail line on the AAA property. There was no indication of the results of confirmation soil sampling conducted under or near the sumps. Was this work conducted under proper regulatory oversight?
- Why did the dichlorobenzene isoconcentration map provided by LFR not include the data from the groundwater sample collected under the small tank? Including this data point would significantly affect the interpretation of the extent of groundwater contamination as well as the source.
- The groundwater flow direction has been well documented at the PG&E site to be southward. Why were no soil and groundwater samples collected in the area directly down-gradient of the former USTs at the AAA site?
- Why is Mr. Nichols being asked to pay \$6,000 for Alameda County oversight services when the source of contamination has not been firmly established in the most likely source areas?

We are concerned that little meaningful investigation by the parties that are the most likely source of reported and known contamination has been performed. It still appears that appropriate

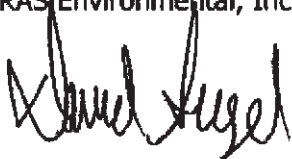

Mr. Jerry Wickham
4800 Coliseum Way
December 20, 2007
Page 3

Investigation has not been undertaken to address the source and extent of contamination on the Learner and AAA sites we strongly believe is affecting Mr. Nichols property.

I do understand that to date, for the most part, Mr. Nichols has attempted to address this matter on his own without significant input from technical experts or legal counsel. However that has changed and I will be advising Mr. Nichols on future technical matter Ray Sherman of Sherman & Feller of Oakland on legal matters.

It may be that communication has been incomplete in the recent past. If you believe a meeting with the four of us to address this issue would be useful, we would welcome that opportunity.

Sincerely,
ERAS Environmental, Inc.

Cc: Mary Rose Cassa
Subject: Superior Plaster - 4800 Coliseum case

Hi Jerry,

I received a call from Dave Seagal (sp?) of Eras Environmental regarding this case. He was seeking support for his position that contamination (pools of oil/tar) are from an adjacent off-site source. I told him that this was brought to the attention of the Water Board back in 2000, and it appears that there was insufficient information, at least brought to the Water Board's attention at that time, to issue a comfort letter for 4800 Coliseum.

He said he has information to draw a connection to a former asphalt plant on property between the subject site and the RR tracks (pipelines, product along the property boundary). I urged him to work with ACEH, as the lead on the case, to resolve the issue. I do not see the adjacent property listed as a case, but please keep me informed if you find that there's reason to do so.

Thanks,
Cleet

Dear Mr. Nichols and Mr. Miller:

In correspondence dated September 26, 2007, Alameda County Environmental Health (ACEH) requested that you submit a Work Plan to evaluate the extent and potential human health risks posed by soil and groundwater contamination beneath your property. To date, we have not received the requested Work Plan. In addition, we requested that you provide funds for regulatory oversight, most recently in correspondence dated November 9, 2007. To date, we have not received funds for regulatory oversight. To set up your account, please send a check in the amount of \$6,000.00 payable to Alameda County Environmental Health. Please send your check to the attention of our Finance Department.

We received correspondence dated October 24, 2007 from ERAS Environmental, Inc. addressed to Mr. Robert Nichols. We assume that this correspondence was submitted by ERAS Environmental, Inc. on your behalf. Please note that a perjury statement is required to indicate that the responsible party has read and agrees with the contents of all submittals. The October 24, 2007 correspondence recommends that the client should request a letter from ACEH indicating that no further action is required. The October 24, 2007 correspondence reviews historical information and provides speculative conclusions. This approach is unconvincing and does not affect the previous request in our September 26, 2007 correspondence for a work plan to address soil and groundwater contamination at your site. Please submit the requested regulatory oversight funds and requested Work Plan no later than December 30, 2007. If we do not receive these two items by December 30, 2007, a Notice of Violation will be issued. Further delays in investigation, late reports, or enforcement actions may result in referral of your case to the Water Board or other appropriate agency for possible enforcement actions.

TECHNICAL REPORT REQUEST

Please submit technical reports to Alameda County Environmental Health (Attention: Jerry Wickham), according to the following schedule:

- **December 30, 2007** – Work Plan for Site Assessment

ELECTRONIC SUBMITTAL OF REPORTS

The Alameda County Environmental Cleanup Oversight Programs (LOP and SLIC) require submission of all reports in electronic form to the county's ftp site. Paper copies of reports will no longer be accepted. The electronic copy replaces the paper copy and will be used for all public information requests, regulatory review, and compliance/enforcement activities. Instructions for submission of electronic documents to the Alameda County Environmental Cleanup Oversight Program ftp site are provided on the attached "Electronic Report Upload (ftp) Instructions." Please do not submit reports as attachments to electronic mail.

Submission of reports to the Alameda County ftp site is an addition to existing requirements for electronic submittal of information to the State Water Resources Control Board (SWRCB) Geotracker website. Submission of reports to the Geotracker website does not fulfill the requirement to submit documents to the Alameda County ftp site. In September 2004, the SWRCB adopted regulations that require electronic submittal of information for groundwater cleanup programs. For several years, responsible parties for cleanup of leaks from underground storage tanks (USTs) have been required to submit groundwater analytical data, surveyed locations of monitor wells, and other data to the Geotracker database over the Internet. Beginning July 1, 2005, electronic submittal of a complete copy of all necessary reports was required in Geotracker (in PDF format). Please visit the SWRCB website for more information on these requirements (http://www.swrcb.ca.gov/ust/cleanup/electronic_reporting).

PERJURY STATEMENT

All work plans, technical reports, or technical documents submitted to ACEH must be accompanied by a cover letter from the responsible party that states, at a minimum, the following: "I declare, under penalty of perjury, that the information and/or recommendations contained in the attached document or report is true and correct to the best of my knowledge." This letter must be signed by an officer or legally authorized representative of your company. Please include a cover letter satisfying these requirements with all future reports and technical documents submitted for this fuel leak case.

PROFESSIONAL CERTIFICATION & CONCLUSIONS/RECOMMENDATIONS

The California Business and Professions Code (Sections 6735, 6835, and 7835.1) requires that work plans and technical or implementation reports containing geologic or engineering evaluations and/or judgments be performed under the direction of an appropriately registered or certified professional. For your submittal to be considered a valid technical report, you are to present site specific data, data interpretations, and recommendations prepared by an appropriately licensed professional and include the professional registration stamp, signature, and statement of professional certification. Please ensure all that all technical reports submitted for this fuel leak case meet this requirement.

AGENCY OVERSIGHT

If it appears as though significant delays are occurring or reports are not submitted as requested, we will consider referring your case to the Regional Board or other appropriate agency, including the County District Attorney, for possible enforcement actions. California Health and Safety Code, Section 25299.76 authorizes enforcement including administrative action or monetary penalties of up to \$10,000 per day for each day of violation.

Dear Mr. Nichols and Mr. Miller:

Alameda County Environmental Health (ACEH) previously requested in correspondence in 2006 and 2007 that you provide funds for regulatory oversight of a Spills, Leaks, Investigations, and Cleanups (SLIC) case for the above referenced site. To date we have not received funds for regulatory oversight. The SLIC case for 4800 Coliseum Way in Oakland remains open due to the confirmed presence of soil and groundwater contamination beneath your property.

ACEH requires that an oversight account be established to cover our costs for regulatory oversight. To set up your account, please send a check in the amount of \$6,000.00 payable to Alameda County Environmental Health. Please send your check to the attention of our Finance Department.

This initial deposit may or may not be sufficient to provide all necessary regulatory oversight. ACEH will deduct actual costs incurred based upon the hourly rate specified below. If these funds are insufficient, additional deposit will be requested. Otherwise, any unused monies will be refunded to you or your designee.

The deposit is authorized in Section 6.92.040L of the Alameda County Ordinance Code. Work on this project is being debited at the Ordinance specified rate, currently \$173.00 per hour.

Please write "SLIC" (the type of project), the site address, and the AR# 314793 on your check.

If you have any questions, please call me at (510) 567-6791 or send me an electronic mail message at jerry.wickham@acgov.org.

Subject: SLIC Case RO0002661 and Geotracker Global ID T06019788277, Superior Plaster Castings, 4800 Coliseum Way, Oakland, CA 94601

Dear Mr. Nichols and Mr. Miller:

Alameda County Environmental Health (ACEH) previously requested in correspondence in 2006 and 2007 that you provide funds for regulatory oversight of a Spills, Leaks, Investigations, and Cleanups (SLIC) case for the above referenced site. To date we have not received funds for regulatory oversight. The SLIC case for 4800 Coliseum Way in Oakland remains open due to the confirmed presence of soil and groundwater contamination beneath your property.

Although you have not submitted funds for regulatory oversight, we are issuing this directive letter specifying the required actions for this site. Further delays in investigation, late reports, or enforcement actions may result in referral of your case to the Water Board or other appropriate agency for possible enforcement actions.

Previous investigations conducted at the site to date have identified petroleum hydrocarbons in soil and groundwater beneath the northeastern portion of the property adjacent to a former railroad spur. Elevated concentrations of Total Petroleum Hydrocarbons (TPH) as gasoline, diesel, and motor oil have been detected in shallow soil at your site at concentrations up to 1,000, 13,000, and 29,000 milligrams per kilogram (mg/kg), respectively. In addition, chlorinated solvents have also been detected in shallow soil beneath your site at concentrations up to 33 mg/kg (1,4-dichlorobenzene). A tar-like material was observed at depths of 1 to 3 feet bgs across much of the northeastern portion of the site. Similar materials have been encountered during site investigations conducted on contiguous properties to the north and east. Elevated concentrations of petroleum hydrocarbons and chlorinated solvents have been detected in soil and groundwater samples collected at three adjacent properties (AAA Equipment at 745 50th Avenue owned by Alta Properties LLC [Case RO0002746], Learner Investment Company at 768 46th Avenue [Case RO0002661], and PG&E GC Gas Service at 4930 Coliseum Way [case RO0000099]). The petroleum hydrocarbons and chlorinated solvents appear to be from a common source of historic releases that occurred on each of the four properties (Superior Plaster Casing, PG&E, Learner Property, and AAA Equipment), resulting in a commingled plume. Therefore, all parties are considered responsible for the release. We encourage all parties to cooperate in terms of sharing data and generating compatible and comprehensive Corrective Action Plans for their sites. Whether you choose to investigate this source of contamination on your property individually or in conjunction with the other three responsible parties, we request that you submit plans for investigation of this area of your site **no later than October 30, 2007.**

REQUEST FOR INFORMATION

We request that you submit copies of the following reports, which are referenced in existing site investigation reports but are not in the ACEH case file:

- Aqua Terra Technologies. Phase I Environmental Site Assessment, April 1991.
- ERAS Environmental, Inc. Phase I Environmental Site Assessment, May 31, 2000.

TECHNICAL COMMENTS

1. **Limited Soil Excavation in June 2000.** Approximately 25 cubic yards of soil was excavated and removed from the northeastern portion of the site on June 14, 2000. Soil excavation was apparently limited to the immediate area of boring ATC-3. However, the documented extent of soil and groundwater contamination at the site extends over a significantly larger area than the excavation. Additional work is required to address site-wide contamination issues.
2. **Conclusions in Soil Remediation Report.** Results from the excavation and removal of approximately 25 cubic yards of soil are presented in a report entitled, "Soil Remediation," dated June 26, 2000, which was prepared by ERAS Environmental. The report describes the results from excavation activities including laboratory analytical results, and presents conclusions based on previous investigation results and the excavation. We do not concur with the conclusions stated in the June 26, 2000 report. In particular, the second conclusion on page 5, which states, "The fill identified as containing solvents was successfully removed and analytical data indicated the solvents did not impact underlying groundwater," appears to be speculative and unsupported by site data. There appears to be no basis for assuming that elevated concentrations of 1,3-dichlorobenzene (19 mg/kg) and 1,4-dichlorobenzene (33 mg/kg) in shallow soil (3 feet bgs) are not related to detections of 1,3-dichlorobenzene and 1,4-dichlorobenzene in the underlying groundwater, which is encountered at depths of 3 to 5 feet bgs in this area. Moreover, 1,2-dichlorobenzene, 1,3-dichlorobenzene, and 1,4-dichlorobenzene were detected in soil samples collected from the bottom of the ATC-3 excavation at 4.5 feet bgs. These same chemicals were detected in groundwater from boring ATC-3. Future work plans and reports must include more rigorous, technically defensible, and comprehensive evaluations of results.

TECHNICAL REPORT REQUEST

Please submit technical reports to Alameda County Environmental Health (Attention: Jerry Wickham), according to the following schedule:

- **October 30, 2007** – Work Plan

These reports are being requested pursuant to California Health and Safety Code Section 25296.10. 23 CCR Sections 2652 through 2654, and 2721 through 2728 outline the responsibilities of a responsible party in response to an unauthorized release from a petroleum UST system, and require your compliance with this request.

ELECTRONIC SUBMITTAL OF REPORTS

The Alameda County Environmental Cleanup Oversight Programs (LOP and SLIC) require submission of all reports in electronic form to the county's ftp site. Paper copies of reports will no longer be accepted. The electronic copy replaces the paper copy and will be used for all public information requests, regulatory review, and compliance/enforcement activities. Instructions for submission of electronic documents to the Alameda County Environmental Cleanup Oversight Program ftp site are provided on the attached "Electronic Report Upload (ftp) Instructions." Please do not submit reports as attachments to electronic mail.

Submission of reports to the Alameda County ftp site is an addition to existing requirements for electronic submittal of information to the State Water Resources Control Board (SWRCB) Geotracker website. Submission of reports to the Geotracker website does not fulfill the requirement to submit documents to the Alameda County ftp site. In September 2004, the SWRCB adopted regulations that require electronic submittal of information for groundwater cleanup programs. For several years, responsible parties for cleanup of leaks from underground storage tanks (USTs) have been required to submit groundwater analytical data, surveyed locations of monitor wells, and other data to the Geotracker database over the Internet. Beginning July 1, 2005, electronic submittal of a complete copy of all necessary reports was required in Geotracker (in PDF format). Please visit the SWRCB website for more information on these requirements (http://www.swrcb.ca.gov/ust/cleanup/electronic_reporting).

PERJURY STATEMENT

All work plans, technical reports, or technical documents submitted to ACEH must be accompanied by a cover letter from the responsible party that states, at a minimum, the following: "I declare, under penalty of perjury, that the information and/or recommendations contained in the attached document or report is true and correct to the best of my knowledge." This letter must be signed by an officer or legally authorized representative of your company. Please include a cover letter satisfying these requirements with all future reports and technical documents submitted for this fuel leak case.

PROFESSIONAL CERTIFICATION & CONCLUSIONS/RECOMMENDATIONS

The California Business and Professions Code (Sections 6735, 6835, and 7835.1) requires that work plans and technical or implementation reports containing geologic or engineering evaluations and/or judgments be performed under the direction of an appropriately registered or certified professional. For your submittal to be considered a valid technical report, you are to present site specific data, data interpretations, and recommendations prepared by an appropriately licensed professional and include the professional registration stamp, signature, and statement of professional certification. Please ensure all that all technical reports submitted for this fuel leak case meet this requirement.

AGENCY OVERSIGHT

If it appears as though significant delays are occurring or reports are not submitted as requested, we will consider referring your case to the Regional Board or other appropriate agency, including the County District Attorney, for possible enforcement actions. California Health and Safety Code, Section 25299.76 authorizes enforcement including administrative action or monetary penalties of up to \$10,000 per day for each day of violation.

Barney and Jerry-

I figured that was the case, but just wanted to make sure. As I mentioned in the phone conversation with Barney, an investigation on the Superior Plasters property is essential to understanding the source and extents of the VOC impacts to the PG&E, AAA, Leaner and Superior Plaster properties. Even though Superior Plasters was not directed to perform an investigation, I would like to approach them with the idea of doing a joint investigation or providing us access to their property to investigate. However, the contact information I have for the Superior Plasters' RP appears to be out dated. When I mail a copy of a letter to Mr.. John Miller at 1550 Wakefield Terrace, Los Altos, CA 94024, the letter was returned to me indicating the forwarding order had expired. Do you have Mr.. John Miller's new address or phone number or email address?

Thanks,

-Rob

From: Chan, Barney, Env. Health [mailto:barney.chan@acgov.org]**Sent:** Wednesday, August 22, 2007 10:06 AM**To:** Saur, Robert**Subject:** Superior Plastic letter

Rob: I spoke with Jerry Wickham about the site, the problem is this, Superior has not provided any oversight fees, therefore, Jerry cannot issue a directive letter. It appears that this does not bode well for a co-operative work plan since they are not even willing to pay oversight fees at this time.

Subject: SLIC Case RO0002661 and Geotracker Global ID T06019788277, Superior Plaster Castings, 4800 Coliseum Way, Oakland, CA 94601

Dear Mr. Nichols and Mr. Miller:

Alameda County Environmental Health (ACEH) previously requested that you provide funds for regulatory oversight of a Spills, Leaks, Investigations, and Cleanups (SLIC) case for the above referenced site. The SLIC case for 4800 Coliseum Way in Oakland remains open due to the confirmed presence of soil and groundwater contamination beneath your property. To date we have not received funds for regulatory oversight. In correspondence dated June 4, 2007, Mr. Robert Nichols indicates that Mr. John Miller, the previous owner, is to be contacted for all matters regarding the open SLIC case (see attached copy of correspondence).

We wish to clarify that both Mr. Robert Nichols and Mr. John Miller are responsible parties for the above referenced SLIC case. Mr. John Miller is a responsible party because he was a former property owner and Mr. Robert Nichols is a responsible party because he is the current property owner. Both responsible parties are jointly and severally liable for the environmental contamination. Please note that property owners are responsible for releases that may have occurred prior to their purchase of the property. ACEH correspondence is directed to all responsible parties regardless of any private arrangements made between the responsible parties.

We reiterate our request for the responsible parties on this case to provide a regulatory oversight account to cover our costs. ACEH holds both responsible parties liable and does not apportion costs among multiple responsible parties. Apportionment of costs may be decided by private arrangement between the two responsible parties. To set up your account, please send one or more checks totaling \$6,000.00 payable to Alameda County Environmental Health. Please send your checks to the attention of our Finance Department and write "SLIC" (the type of project), the site address, and the AR# 314793 on your check.

If you have any questions, please call me at (510) 567-6791.

Sincerely,

Jerry Wickham
Hazardous Materials Specialist

Subject: SLIC Case [REDACTED], Superior Plaster Castings, 4800 Coliseum Way, Oakland, CA

Dear Mr. Miller and Mr. Nichols:

In order for ACEH to review reports for your site, we require an oversight account for the above-referenced site in order to recover our costs. To set up your account, please send a check in the amount of \$6,000.00 payable to Alameda County Environmental Health. Please send your check to the attention of our Finance Department.

This initial deposit may or may not be sufficient to provide all necessary regulatory oversight. ACEH will deduct actual costs incurred based upon the hourly rate specified below. If these funds are insufficient, additional deposit will be requested. Otherwise, any unused monies will be refunded to you or your designee.

The deposit is authorized in Section 6.92.040L of the Alameda County Ordinance Code. Work on this project is being debited at the Ordinance specified rate, currently \$166.00 per hour.

Please write "SLIC" (the type of project), the site address, and the AR# 314793 on your check.

If you have any questions, please contact Jerry Wickham at (510) 567-6791.

Sincerely,

Atiu Levi

Mr. Jack Krause
Alta Properties, LLC
P.O. Box 2399
Oakland, CA 94614

Subject: SLIC Case [REDACTED] under AAA Equipment, 745 50th Avenue, Oakland, CA

Dear Mr. Krause:

Alameda County Environmental Health (ACEH) staff has reviewed the Spills, Leaks, Investigations, and Cleanups (SLIC) case file for the above-referenced site, including the report entitled, "Underground Storage Tank Removal Report," dated April 27, 2004 and prepared on your behalf by Levine Fricke. The above-referenced report references several previous reports that are listed in the Request for Information below. We request that you submit these reports in order for us to complete our review of the SLIC case. We also request that you provide a response to the technical comments below by the date indicated in the Technical Report Request.

REQUEST FOR INFORMATION

ACEH's case files for the subject site contains only the report entitled, "Underground Storage Tank Removal Report," dated April 27, 2004. We request that you submit copies of the reports listed below along with other reports you have documenting additional investigation activities or other environmental work related to this site:

- Phase I Environmental Site Assessment (Hageman-Aguilar 2000)
- Soil and Groundwater Investigation Report (Harding ESE 2002)
- Underground Storage Tank Closure Report (Morgan Environmental Services 2002).

TECHNICAL COMMENTS

1. **Soil Excavation and Disposal.** The "Underground Storage Tank Removal Report," dated April 27, 2004 describes various excavations at the site, soil stockpiles, and soil disposal. However, the report is not clear as to the origins and dispositions of excavated and stockpiled soils from each area of the site. Presentation of a table with the approximate volumes of soil excavated from each area shown on Figure 3 would be useful. The table should also include a reference to the soil stockpiles shown on Figure 2, soil samples collected, and whether the soil was disposed off-site or used for backfill. If the soils were used for backfill, please clarify where the soils were placed. Based on the discussions in various locations within the report, the "Loaf Pile" appears to have been a stockpile of spoils from grading an adjacent area of the site. Please clarify whether the soils from the "Loaf Pile" were used for backfill and if so, where the soils were placed.

Re: Environmental Information Review Request for
4800 Coliseum Way, Oakland, California

SLIC referral from sealed SH 10/1/02

STID 1762

Dear Mr. Levu:

As we discussed, Mr. Leroy Griffin of the City of Oakland Fire Department contacted me yesterday and indicated the file for the site located at 4800 Coliseum Way in Oakland, California (hereinafter the "Property") is in the process of reaching the County Health Care Services Agency (ACHCSA).

Since contamination at this site is not the result of a leaking tank known to have been on the Property, ERAS understands it does not qualify under the local oversight program (LOP). ERAS client Mr. John Miller, the owner of the Property, has indicated he would be willing to reimburse the ACHCSA for reasonable costs associated with the review of the environmental information pertaining to the Property. Obviously, he would like to have some estimate in writing so that he may approve this effort.

This process has become lengthy, having begun in June of this year when it was indicated to Mr. Miller that the Regional Water Quality Control Board would provide this service. The Board subsequently decided the Property should be reviewed by the ACHCSA. ERAS respectfully requests, on behalf of Mr. Miller that the review process be expedited, if and when possible. Thanks for your assistance.

Please call if you have any questions or require additional information.

Respectfully,
ERAS Environmental, Inc.

Re: Groundwater Monitoring at 4930 Coliseum Way, Oakland CA 94601

Dear Mr. Robinson:

Our office has received and reviewed the August 18, 2000 Semi-annual Groundwater Monitoring Report for the above referenced site as prepared by CSS Environmental Services, Inc. As you are aware, this monitoring is part of the long term requirement for this site to monitor the potential impact to groundwater from the residual elevated lead contamination allowed to be left in-place by our office and the Regional Water Quality Control Board. Also required is an annual inspection of the asphalt cap at this site.

The results of this sampling indicate that lead continues not to be present in shallow groundwater beneath the impacted area, however, total petroleum hydrocarbons in the gasoline and diesel range and specific chlorinated solvents continue to impact the site.

As a point of clarification, the state maximum contaminant level (MCL) for lead provided in the report, 50 ppb, is incorrect. The current MCL set by US EPA is 0, while the MCL observed by state water treatment systems is 15 ppb. This is the level at which water treatment systems may have to take treatment steps should 10% of the tested samples exceed this level.

In regards to the TPH and chlorinated solvents being detected at this site, our office agrees that this appears to be the result of release(s) from up-gradient sites. Unfortunately, the County does not have the jurisdiction to require investigation, remediation or inspection of these nearby properties. We advise that you contact the City of Oakland Hazardous Materials Program, the Regional Water Quality Control Board and/or the Department of Toxic Substances Control to voice your concern and request their assistance.

You may contact me at (510) 567-6765 if you have any questions.

Sincerely,

Barney M. Chan

Sampling Event,**
Pacific Gas and Electric Company, Oakland General Construction Yard,
4930 Coliseum Way, Oakland, California

Dear Mr. Wickham:

Please find enclosed the *Semiannual Groundwater Monitoring Report, November 2009 Sampling Event, Pacific Gas and Electric Company, Oakland General Construction Yard, 4930 Coliseum Way, Oakland, California*, dated January 13, 2010. Pacific Gas and Electric Company (PG&E) has retained ENTRIX, Inc., and AMEC Geomatrix Consultants, Inc. (AMEC) to perform groundwater monitoring and other technical studies at the subject site (site). The attached report was prepared by Innovative Technical Solutions, Inc. with review by AMEC on behalf of PG&E.

The possibility of discontinuing groundwater monitoring was discussed during the October 27, 2009 meeting among representatives of Alameda County Environmental Health Department (ACEHD), PG&E, and AMEC. As a follow-up to this discussion, a letter will be submitted separately to ACEHD to request discontinuation of the groundwater monitoring program at the site at this time.

Please contact Erin Zavarin of AMEC at (510) 663-4203 with any questions or comments pertaining to this report. For any other questions or requests regarding this site, please contact me at (925) 415-6381.

Sincerely yours,

Anne Conner

1.0 INTRODUCTION

This report presents the results of semiannual groundwater monitoring completed on November 5, 2009, at the Pacific Gas and Electric Company (PG&E) General Construction Yard located at 4930 Coliseum Way in Oakland, California (the site, Figure 1). The groundwater monitoring program includes the following activities: (1) measuring groundwater elevations; (2) collecting groundwater samples from monitoring wells on site; and (3) performing laboratory analyses of the samples. The program objective is to monitor the distribution of select fuel-related compounds, volatile organic compounds (VOCs), and dissolved lead in shallow groundwater beneath the site. The following sections summarize the site description, site history, groundwater monitoring activities, and analytical results of samples collected on November 5, 2009. Previous analytical results are summarized in Appendix A.

2.0 SITE DESCRIPTION

The site consists of approximately 4 acres and is operated as a storage yard for equipment and vehicles (Figure 2). The surrounding area is primarily commercial and light industrial. The site is bounded by Coliseum Way to the south, 50th Avenue to the southeast, and commercial properties to the north (Figure 1).

3.0 SITE HISTORY

The following summarizes previous environmental activities associated with the site:

- **February 1987** - Soil borings were advanced and soil and groundwater samples were collected in the vicinity of the former waste oil underground storage tank (UST) cluster and the diesel UST (PG&E, 1987).
- **December 1987** - Samples of the contents of five USTs were collected and analyzed (the four USTs in the former waste oil UST cluster and the former diesel UST [PG&E, 1987]).
- **January 1988** - Five USTs and associated piping located in the northern and eastern portions of the site were removed (Figure 2). Four of the former USTs were located in a cluster in the northern portion of the site (former UST cluster). Two of these USTs reportedly contained heavy oil and two contained mineral spirits (PG&E, 1988). The fifth former UST was located near the west corner of the yard and reportedly contained diesel fuel.
- **March and April 1988** - Groundwater monitoring wells OW-1 through OW-4 installed. In addition, soil borings were advanced in the vicinities of the former waste oil UST cluster and the former diesel UST (PG&E, 1988).
- **May 1990** - One natural gas, above ground storage tank (AST) was removed from the central portion of the site (Figure 2). Following demolition of the former natural gas AST, paint chips were reported to have been observed in shallow soil in the vicinity of the former natural gas AST (CSS, 2005).
- **April 1991** - Groundwater monitoring well OW-5 was installed along the northeast property line. A groundwater sample was collected from well OW-5 on April 17, 1991.
- **November and December 1991** - Approximately 2,000 cubic yards of soil were excavated to a depth of approximately 4 to 9 feet below ground surface (bgs) as a remedial action for the petroleum hydrocarbons identified in the soil in the vicinity of the former UST cluster. Groundwater monitoring wells OW-6 and OW-7 were installed, and well OW-3 was abandoned. The concentrations of total petroleum hydrocarbons quantified as diesel (TPHd) and oil and grease in the soil samples collected along the site boundaries during soil excavation activities were greater than soil cleanup target levels, while concentrations of TPHd and oil and grease in each of the remaining confirmatory samples were less than the cleanup target levels. Oil was visible in the soils in the northeast wall of the excavation along the property line, and a pipe that contained a similar petroleum product was also exposed in the northeastern wall of the excavation. The conclusions of the February 1992 *Site Remediation and Closure Report, Former Tank Cluster Area* prepared by Aqua Resources, Inc. suggested that off-site sources of petroleum hydrocarbons may exist in both the northeast and northwest directions.
- **December 1991** - Installation of groundwater monitoring wells OW-6 and OW-7 (Aqua, 1992).

- **September and October 1992** – An asphaltic concrete cap was constructed on lead-affected surface soil in the vicinity of the former natural gas AST. Lead, believed to have originated from lead-based paint chips generated from sandblasting of the former natural gas AST, was found in soil samples collected from this area (CSS, 2005).
- **February 1993** – Groundwater monitoring well OW-8 was installed in the southern area of the yard near the location of the former natural gas AST to monitor lead concentrations in the groundwater.
- **July 1994** – Groundwater sampling frequency reduced from quarterly to a semiannual basis.
- **January through March 2008** - A soil and groundwater investigation was conducted to further define TPHd, total petroleum hydrocarbons quantified as motor oil (TPHmo), and chlorobenzenes impact to groundwater in the northern portion of the site; further assess the potential for chlorobenzenes to be in shallow soil in the northern portion of the site; assess the presence of polyaromatic hydrocarbons, polychlorinated biphenyls, and metals in soil in the vicinity of the former waste oil UST cluster; and further assess the potential presence of TPHd and TPHmo in soil in the vicinity of the former diesel UST and waste oil UST (Geomatrix, 2008).

4.0 GROUNDWATER MONITORING ACTIVITIES

Blaine Tech Services, Inc. performed the groundwater-monitoring event on November 5, 2009. Groundwater sampling was performed using low-flow purging and sampling methods in accordance with the Low-Flow Purging and Sampling Protocol (Appendix B). Depth to groundwater measurements were collected from OW-1, OW-2, OW-4, OW-5, OW-6, OW-7, and OW-8, and were recorded in the Groundwater Purging and Sampling Logs (Appendix C). The groundwater elevation measurements were used to prepare a groundwater elevation map to determine the direction and magnitude of the groundwater gradient. Purge water generated during the groundwater monitoring activities was temporarily stored on site in 55-gallon steel drums pending disposal.

Groundwater samples were collected from OW-1, OW-2, OW-4, OW-5, OW-6, OW-7, and OW-8 in laboratory-supplied containers. The samples were shipped on ice to Creek Environmental Laboratories, Inc., of San Luis Obispo, California, a State of California certified-laboratory, for analysis under chain-of-custody protocol. Groundwater samples collected from site monitoring wells were analyzed for petroleum constituents and dissolved lead as outlined below.

- Wells OW-1 and OW-4 through OW-7: total petroleum hydrocarbons quantified as gasoline (TPHg) using U. S. Environmental Protection Agency (EPA) Method 8015B
- Wells OW-1, OW-2, and OW-4 through OW-8: TPHd and TPHmo using EPA Method 8015B following silica gel cleanup
- Wells OW-2, OW-5, and OW-8: dissolved lead using EPA Method 6010B
- Wells OW-1 and OW-4 through OW-7: VOCs using EPA Method 8260B

Appendix D includes the laboratory analytical reports and chain-of-custody documentation. All analyses were performed within the holding times specified by the EPA. None of the tested analytes were detected in the field blank or laboratory reagent blank. The surrogate recoveries were within the laboratory acceptance limits. Recoveries of matrix spike/matrix spike duplicates (MS/MSDs) were within the laboratory acceptance limits, except for the sample from OW-1 where MS recoveries of 1,3-DCB and 1,4-DCB exceeded QC limits, which the lab report states was due to matrix effects in the source sample. The lab reports that both analytes were found in significant concentrations in the sample, and that the analytical anomaly may be attributed to a

non-homogenous distribution of 1,3-DCB and 1,4-DCB among the different VOA vials presented for analysis, as evidenced by the high RPD (relative percent difference) for MS/MSD. (Appendix D). The RPDs of MS/MSD results were otherwise within the laboratory acceptance limits.

5.0 GROUNDWATER MONITORING RESULTS

Groundwater level measurements collected during the November 5, 2009 monitoring event indicate that depth to water ranged from 2.97 to 5.89 feet below the top of casing. The flow direction and hydraulic gradient varied somewhat across the site. In the northern corner of the site, the flow was toward the south with a hydraulic gradient of approximately 0.043 ft/ft. In the central area of the site, the flow was southeast with an approximate hydraulic gradient of 0.009 ft/ft. Table 1 summarizes the depth to water measurements and groundwater elevation data. Figure 3 shows the groundwater elevation map.

Laboratory analytical results for the groundwater samples collected from the seven monitoring wells sampled during the November 5, 2009 monitoring event indicate the following:

- TPHg was not detected above the reporting limit of 50 micrograms per liter ($\mu\text{g/l}$) in any sample collected from the five wells sampled for this analyte at the site.
- TPHd after silica gel cleanup was not detected above the reporting limit of 50 $\mu\text{g/l}$ in samples collected from the seven wells sampled at the site.
- TPHmo after silica gel cleanup was not detected above the laboratory reporting limit of 100 $\mu\text{g/l}$ in samples collected from the seven wells sampled at the site.
- Dissolved lead was not detected above the laboratory reporting limit of 4 $\mu\text{g/l}$ in any of the three samples collected for this analyte at the site.
- methyl tertiary butyl ether was detected in only one of the five samples (OW-1) at a concentration of 0.8 $\mu\text{g/l}$. Benzene was not detected above the laboratory reporting limit of 0.5 $\mu\text{g/l}$ in any of the five samples collected at the site.
- VOCs were detected in samples collected from wells OW-1, OW-5, OW-6, and OW-7. The highest concentrations of VOCs were found in the sample collected from well OW-7, located in the northern (upgradient) portion of the property.
- DIPE was detected in wells OW-6, and OW-7 at concentrations of 1.1 $\mu\text{g/L}$ and 0.7 $\mu\text{g/L}$, respectively.

Table 2 and Figure 4 present the laboratory analytical results for the November 5, 2009 sampling event.

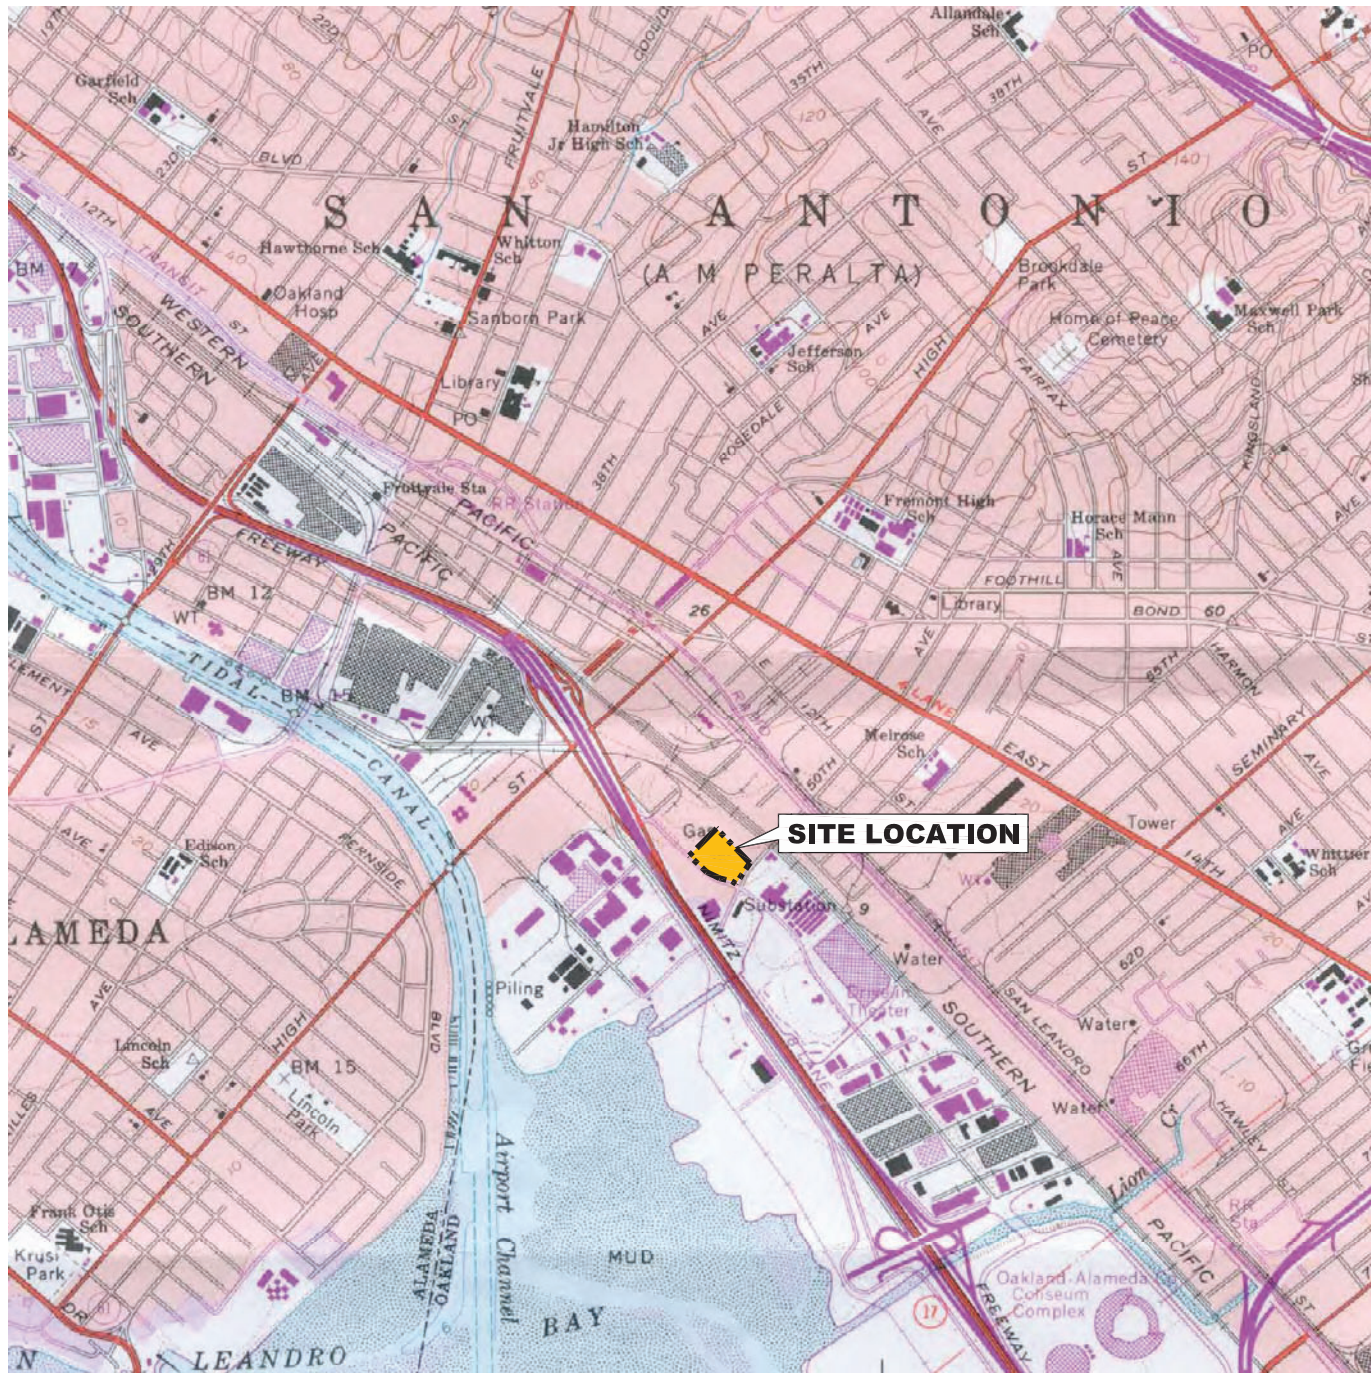

6.0 CONCLUSIONS

The direction and hydraulic gradient of groundwater flow is generally consistent with the results of previous monitoring events, with the exception of the northern corner of the site. In the area approximately bounded by OW-4, OW-5, and OW-7 the hydraulic gradient is steeper than it has been in the last few monitoring events. Overall, the analytical results of the November 5, 2009 groundwater monitoring event are consistent with the results of previous groundwater monitoring events.

Notes:
 OW-4 could not be sampled because a shipping container is located on the well.
 TPH = Total petroleum hydrocarbons
 TPHg = Total petroleum hydrocarbons quantified as gasoline
 TPHd = Total petroleum hydrocarbons quantified as diesel
 TPHmo = Total petroleum hydrocarbons quantified as motor oil
 PAH = Polynuclear aromatic hydrocarbons
 µg/l = Micrograms per liter.
 < = Not detected at or above the practical quantitation limit.
 -- = Not analyzed
 ND = Not detected
 J = Estimated result.
 (1) = The laboratory notes that the chromatogram is mainly a dominant peak(s) which is not indicative of petroleum hydrocarbons.
 (2) = The laboratory notes that the chromatogram is mainly higher boiling hydrocarbons such as asphaltene, waste oil, motor oil, weathered diesel, and hydraulic fluid.
 (3) = The laboratory notes that the chromatogram includes higher boiling hydrocarbons such as diesel
 (4) = The laboratory notes that the chromatogram contains a recognizable contaminant peak(s) that has been removed from quantitation.

OW-8	11/05/09																							

Notes:
 OW-4 could not be sampled because a shipping container is located on the well.
 µg/l = Micrograms per liter.
 < = Not detected at or above the practical quantitation limit.
 -- = Not analyzed
 ND = Not detected above laboratory reporting limits. See laboratory analytical report for individual reporting limits (Appendix C).
 J = Estimated result. Result is less than the laboratory practical quantitation limit.
 MTBE = Methyl tertiary-butyl ether
 CB = Chlorobenzene
 1,2-DCB = 1,2-Dichlorobenzene
 1,3-DCB = 1,3-Dichlorobenzene
 1,4-DCB = 1,4-Dichlorobenzene
 DIPE = Diisopropyl Ether
 1,1-DCA = 1,1-Dichloroethane
 1,1-DCE = 1,1-Dichloroethene
 1,1,1-TCA = 1,1,1-Trichloroethane
 1,2,3-TCB = 1,2,3-Trichlorobenzene
 1,2,4-TCB = 1,2,4-Trichlorobenzene
 TCE = Trichloroethene
 1,2,4-TMB = 1,2,4-Trimethylbenzene
 1,3,5-TMB = 1,3,5-Trimethylbenzene
 VC = Vinyl Chloride
 (1) = 1,2-Dichloroethane was detected at 0.5 µg/l
 (2) = 1,2-Dichloroethane was detected at 0.5 µg/l
 (a) = Isopropylbenzene was detected at 1.5 µg/L
 (b) = Isopropylbenzene was detected at 0.5 µg/L

APPENDIX B

Field Procedures for Low-Flow Purging and Sampling

FIELD PROCEDURES FOR LOW-FLOW PURGING AND SAMPLING

The following sections describe field procedures followed during groundwater monitoring at the site.

EQUIPMENT CALIBRATION

At the beginning of each sampling day, water quality meters for pH, specific electrical conductance (SEC), dissolved oxygen (DO), oxidation reduction potential (ORP), and turbidity are calibrated. Calibration data are recorded on the first Well Sampling Record. A CHEMetrics, or other appropriate, field test kit is used if there is a problem with DO meter calibration.

DOWNHOLE PARAMETER AND GROUNDWATER LEVEL MEASUREMENTS

After opening the wells and allowing time for equilibration to atmospheric conditions, and prior to purging and sampling activities, a complete round of downhole parameter and depth to groundwater measurements are collected from all monitoring wells. Downhole DO and ORP are measured first using a Horiba U-22, or other appropriate, water quality meter. Depth to water is then measured using an electric water level sounder to the nearest 0.01 foot from the top of casing.

FREE PRODUCT MEASUREMENT

The wells are inspected for free product, and if free product is observed, the depths to top and bottom of free product is measured using an interface probe to the nearest 0.01 foot from the top of casing.

SAMPLING ORDER

To minimize potential cross-contamination between wells, the wells are sampled in reverse order of target analyte concentration as measured during the previous sampling event.

GROUNDWATER PURGING AND SAMPLING

Groundwater sampling is performed following EPA low-flow purging and sampling procedures¹. A minimum of three equipment volumes are purged at each well using an electric pump. Typical pump types may include peristaltic, 2-inch stainless steel submersible and/or bladder pumps.

Dedicated tubing and, where necessary, submersible pumps are used to minimize disturbance. When dedicated equipment cannot be used, sufficient time is allowed after equipment installation to allow groundwater conditions to return to equilibrium. The pump inlet is placed in the center of the screened interval. Each well is purged at a flow rate of approximately 200 milliliters per minute (ml/min); flow rate is not to exceed 500 ml/min at any time during purging or sampling. Drawdown in the well is not to exceed 0.3 ft. During purging, temperature, pH, SEC, turbidity, DO, and ORP are monitored using a Horbia U-22, or other appropriate, water quality meter approximately every one equipment volume purged, or every 3 to 5 minutes. Each well is purged until the field parameters are relatively stable for three successive readings. Three successive readings should be within:

- 0.1 for pH
- 3% for SEC
- 10% for temperature
- 10 mV for ORP if practical
- 10% for DO if practical
- 10% for turbidity if practical

If applicable, the ferrous ion concentration is measured using a CHEMetrics, or other appropriate, test kit during the last reading of the field parameters. Immediately after purging, a groundwater sample is collected directly through the pump discharge tubing. Depth to water after sample collection is measured and recorded on the Well Sampling Record.

EQUIPMENT CLEANING

All downhole equipment is cleaned with an Alconox-water solution and double-rinsed with deionized water before use at each well and at the end of each sampling day.

WASTE WATER CONTAINMENT

Waste water including purged groundwater and equipment cleaning water is contained in labeled, DOT-approved, 55-gallon steel drums, or other appropriate containers, and placed at a designated on-site location for future offsite disposal or recycling.

Date: November 20, 2009

CASE NARRATIVE Q5952

Client: AMEC Geomatrix
Project: PG&E Coliseum Way
Sample(s): 09-C16186 to 09-C16193
Sampled: 11/05/09

Received: 11/06/09

Aqueous samples 09-C16186 to 09-C16193 were received at the laboratory at 2.0 °C. All samples were intact and there was no anomaly in sample receipt.

VOCs were analyzed by PAT/GC/MS method (EPA 5030B/8260B). TPH-gasoline was analyzed by PAT/GC/FID method (EPA 5030B/8015M). TPH-diesel was extracted with liquid-liquid extraction method (EPA 3510C), treated with silica gel (EPA 3630C), and analyzed by GC/FID (EPA 8015M). Dissolved Lead on the field-filtered samples was analyzed directly by ICP-MS method (EPA 6020).

All samples were extracted and analyzed within holding time. All analytical quality control parameters were within acceptable limits except for the following remarks:

- MS recoveries of 1,3-DCB and 1,4-DCB in VOC batch 3975 exceeded QC limits due to matrix effects in the source sample 09-C16186. Both 1,3-DCB and 1,4-DCB were found in significant concentrations in sample 09-C16186. The analytical anomaly may be attributed to a non-homogenous distribution of 1,3-DCB and 1,4-DCB among the different VOA vials presented for analysis, as evidenced by the high RPD for MS/MSD.

CREEK ENVIRONMENTAL LABORATORIES

APPENDIX G

QUALIFICATIONS

Michael Audibert, REPA – Associate Consultant

Education:

Master's, Public Administration, San Francisco State University, 2000
BS, Business Administration, University of Vermont, 1992

Training/Licenses/Registrations:

ASTM Phase I Environmental Site Assessments (ESAs)
Phase II ESAs (ASTM E 1527 & ASTM E 1903) Training, 2003 and 2006
AHERA Accredited Asbestos Inspector #30950, 2011
Lead-Related Construction Sampling Technician #23886, 2012
EDR Vapor Intrusion Assessment (VI) Training, 2008
Certified Mold Inspector (CMI) (Environmental Solutions Association), 2005

Summary of Professional Experience:

Mr. Audibert has been conducting Phase I and II Environmental Site Assessments (ESAs) of commercial, industrial, and multi-family residential properties throughout the United States since 2001. He has also managed regulatory compliance evaluation programs on a nationwide basis. With a background in business management and public administration, Mr. Audibert brought these skills into the environmental due diligence and health & safety arenas with strengths in project management, real estate transaction due diligence, and public sector agency correspondence. Mr. Audibert also has extensive experience managing various industrial hygiene projects, including asbestos surveys, mold assessments, radon testing, lead-based paint testing, lead-in drinking-water testing, and other indoor air quality assessments. In addition, Mr. Audibert has completed multiple Phase I ESA's for Fannie Mae, Freddie Mac, and HUD projects.

Select Project Experience for Mr. Audibert includes:

- **Former Steel Foundry, Oakland, CA** - Mr. Audibert performed a Phase I ESA for a former steel and brass foundry to be converted into live/work loft apartments. The City of Oakland required that a comprehensive Phase I ESA be conducted for this property for foundry closure purposes. This project involved extensive agency and historical research, as well as determining what areas of the former foundry would be considered "at risk zones" for subsurface contamination.
- **Gasoline Service Station Portfolio, CA** - Mr. Audibert has performed Phase I ESAs for existing gas stations developed on the sites of former gas stations, as well as several historical and current leaking underground storage tank (LUST) sites, which involve an extensive historical use investigation and agency records review to determine the status of current and past underground storage tanks (USTs).
- **Former Union Hall, San Francisco, CA** – Mr. Audibert performed a Phase I ESA for a former union hall to be developed into a high rise cosmopolitan apartment building. Because of the age of the buildings to be demolished, a comprehensive asbestos survey and ensuing operations and maintenance program for removal and disposal of asbestos was recommended and implemented.
- **Former Printers, San Francisco, CA** – Mr. Audibert performed a Phase I ESA for a former printing operation. The property had a long history of high-risk uses, including various manufacturing, automobile repair, and printing operations. A comprehensive agency records investigation and review was conducted.

D. Howe Gates, Regional Director – Pacific Northwest Region

EDUCATION:

BS - Environmental Health, Oregon State University

CERTIFICATIONS:

AHERA Certified Asbestos Inspector

8-Hour OSHA Site Supervisor Certification

OSHA 40-Hour Hazardous Waste Site Operators Certification

EXPERIENCE SUMMARY:

Mr. Gates has over 38 years of environmental management experience working as an environmental consultant, in industry, and as an environmental regulator. He specializes in environmental due diligence for banks and equity clients.

Current duties include management of AEI's Pacific Northwest Region, including staff development and training, business development, and client management.

Mr. Gates has performed, reviewed, or managed numerous Phase I and II Environmental Site Assessments; Property Condition Assessments; asbestos, mold, radon, Indoor Air Quality, and Lead-Based Paint Assessments; Environmental Transaction Screens, storage tank closures, and compliance assessments throughout the United States. Mr. Gates also has international experience, having conducted environmental and compliance assessments of manufacturing facilities in Mexico and Canada.

REPRESENTATIVE PROJECT EXPERIENCE:

- National Due Diligence Practice – Primary contact with national financial and commercial real estate clients and designed and managed due diligence projects on a national basis. Scopes of work included Phase I and Phase II ESAs, Property Condition Assessments, Indoor Air Quality, mold evaluations, lead-based-paint, asbestos, and radon testing.
- Designed and managed Phase II Subsurface Investigations on a national basis based on findings of initial due diligence assessments. Scopes of work included soil, groundwater and soil gas sampling, Lead Risk Assessments, Asbestos surveys, and Mold evaluations.
- Pre-acquisition and post closure environmental risk management assessments of manufacturing facilities; Scopes of work included comprehensive environmental site assessments and environmental compliance evaluations designed to assist private equity ownership develop facility specific environmental management strategies.

Arcata, CA 95521

Re: Paint Sampling For Lead At the Inn by the Coliseum, 4801 Coliseum Way, in Oakland, CA.

To Whom It May Concern:

This letter is a response to the request for clarification as to the potential Lead Based Paint O&M requirements discussed in the Phase I Environmental Site Assessment report prepared by AEI Consultants.

I have reviewed Section 8.2 of the Phase I report, which discusses Lead Base Paint (LBP), and states paint sampling for lead should be conducted at the site, and an O&M plan should be implanted for LBP.

This office conducted paint sampling for lead at the Inn by the Coliseum on January 11, 2022. The paint sampling was conducted using a portable XRF (X-ray fluorescence) paint analyzer, which was used to measure lead content in paint coatings of fifty-two (52) interior and exterior building components.

Lead Based Paint (LBP) was not identified on any building components. All sampled building component types were found to be negative for lead, or contain only trace amounts of lead content.

Based on the fact that Lead Based Paint (LBP) was not identified at the site, an O&M plan for LBP is not required.

For review of the XRF sampling data and locations, see the survey report provided by this office, titled "*Asbestos Survey & Lead Paint Sampling For Renovations At The Inn By The Coliseum, 4801 Coliseum Way, Oakland, CA,*" dated January 17, 2022.

Please contact this office if you have any questions.

**ASBESTOS SURVEY
FOR RENOVATIONS AT THE
INN BY THE COLISEUM
4801 COLISEUM WAY
OAKLAND, CA**

1.0 PURPOSE

On July 6 and 7, 2022, this office conducted an asbestos survey for renovations at the Inn by the Coliseum, located at 4801 Coliseum Way, in Oakland, CA. The asbestos survey is intended to supplement the initial asbestos & lead survey, conducted in January, 2022.

The asbestos survey was conducted to identify asbestos containing materials (ACM) pursuant to the requirements of the EPA National Emission Standards for Hazardous Air Pollutants (NESHAP) regulations concerning renovation and/or demolition activities (40 CFR, Part 61, Subpart M), and for compliance with Cal/OSHA asbestos regulations (8 CCR 1529), and the California Health & Safety Code (Sec. 25915-25919.7).

The person completing this survey and report is certified through the Division of Occupational Safety & Health (DOSH) as an Asbestos Building Inspector and a Certified Asbestos Consultant (CAC).

2.0 EXECUTIVE SUMMARY

The Inn by the Coliseum site has two motel buildings, referred to as Building 1 and Building 2 in this report. Both buildings are wood framed two story structures, and sit on concrete slab foundations. The two buildings contain approximately 37 individual motel rooms. The interior of the rooms have a combination of plaster and drywall ceiling and wall finish. The floors of the rooms included in this survey have vinyl sheet flooring.

The initial asbestos and lead survey report was provided by this office, and is contained in Appendix E of this current report. The initial survey report is titled "*Asbestos Survey & Lead Paint Sampling For Renovations At The Inn By The Coliseum, 4801 Coliseum Way, Oakland, CA,*" dated January 17, 2022. See the initial survey report for initial asbestos sampling data.

The lead paint sampling for the project was conducted during the initial survey. The lead sampling data and findings can be found in the initial survey report in Appendix E of this current report.

The current asbestos survey includes all suspect materials within the defined renovation project area, that were not sampled during the initial survey. The areas included in this current survey are listed below (see Figures 1-8, Appendix A).

Motel Rooms (Bldgs. 1 & 2):

- All ceiling and wall finish

- Flooring in area of bedroom impacted by new kitchenette cabinet
- Attic materials

Note: Floor finish in bathrooms, and doors are not included in the survey

Storage Closets (Bldg. 2):

- Vinyl floor tile

Exterior:

- Stucco siding (both buildings)
- Concrete & Asphalt (surrounding flatwork)
- Roofing (both buildings)

No other areas or materials at the site are included in this current asbestos survey.

During the current asbestos survey, 127 bulk samples were collected from suspect materials. **Two (2) types of materials were found to contain asbestos.** Asbestos materials were not identified in the initial survey.

The disturbance, abatement, and demolition of the materials containing asbestos will require compliance with the EPA NESHAP and Cal/OSHA regulations regarding asbestos in construction.

3.0 ASBESTOS SURVEY

During this survey, a total of one hundred and twenty-seven (127) bulk samples were collected from suspect materials and submitted for the laboratory analysis of asbestos content. A description of all samples, and sample locations are contained in Table 1, Appendix B. All sample locations are indicated on Figures 1-6, Appendix A.

The bulk samples were submitted to an NVLAP accredited laboratory, AmeriSci Richmond (Midlothian, VA) for the analysis of asbestos content by Polarized Light Microscopy (PLM) by EPA 600/R-93/116. The sample Chain of Custody and Laboratory Report is contained in Appendix B. All the Asbestos analytic data are summarized in Table 1, Appendix B.

Materials found to contain asbestos are divided into categories according to percentage and type of asbestos found in the materials, as defined below.

- *Asbestos Containing Construction Materials (ACCM)* contain asbestos in amounts between 0.1% and 1.0%.
- *Asbestos Containing Materials (ACM)* are materials that contain >1% asbestos.
- *Presumed Asbestos Containing Material (PACM)* is material presumed to be >1% asbestos.
- *Regulated Asbestos Containing Materials (RACM)* refers to “regulated” ACM, a category of ACM that is subject to NESHAP regulation.

- *“Friable” asbestos material is defined as: material containing >1% asbestos, that when dry, may be crumbled, pulverized, or reduced to powder by hand pressure.*

Asbestos was found present in two (2) building materials. Both materials are categorized as Asbestos Containing Material (ACM), which are listed below.

ACM

- **Vinyl floor tile, 9”x 9”, green & associated black mastic**
- **Tar roof patch, gray** (all tar roof patch)

The project ACM and/or ACCM are listed in Table 2 below, including location, asbestos content, the agency categorization, abatement requirements, and waste categorization. The locations of the project ACM/ACCM are shown on Figures 7 & 8, Appendix A.

TABLE 2
ASBESTOS IDENTIFICATIONS & CLASSIFICATIONS

Inn by the Coliseum
4801 Coliseum Way
Oakland, CA

MATERIAL	LOCATION	QUANTITY	ASBESTOS CONTENT & TYPE	OSHA CLASSIFICATION	NESHAP CATEGORY	WASTE DISPOSAL CLASSIFICATION
<p>Vinyl Floor Tile, 9" x 9", green & associated Black Mastic</p> <p>Note: the wood floor substrate is contaminated</p>	<p>Bldg. 2, 2nd Floor, Storage Room (ST2), floor, on plywood (See Fig. 7)</p>	<p>Approx. 125 SF</p>	<p>VFT= 5% CH Mastic= 6% CH</p>	<p>ACM, Class II abatement if by "hand" methods Class I abatement if by "mechanical" means</p>	<p>Category I Non-Friable ACM & not RACM* if abated by "hand" methods Friable and RACM if abated by "mechanical" means"</p>	<p>Non-Friable asbestos waste if abated by hand methods Friable waste if abated by mechanical means</p>
<p>Tar roof patch, gray</p> <p>Note: all roof patch is ACM</p>	<p>Bldg. 1 Roof, around a few septic vents, exhaust vents, and equipment anchors, and a few patches on the clay roofing tile (See Fig. 8)</p>	<p>Approx. 25 SF</p>	<p>3% CH</p>	<p>ACM, Class II abatement required where disturbed</p>	<p>Category I Non-Friable ACM Not RACM*</p>	<p>Non-friable asbestos waste</p>

ACCM = Asbestos Containing Construction Materials, asbestos content of 0.1% to 1.0%

ACM = Asbestos Containing Materials, containing >1% asbestos

CH = Chrysotile Asbestos

Friable = asbestos material containing >1% asbestos, that when dry, may be crumbled, pulverized, or reduced to powder by hand pressure

NAD = No asbestos detected

PACM = Presumed ACM

RACM = Regulated ACM under NESHAP regulations

RACM* = Not considered RACM if asbestos content is 1% or less, or if not made friable by disturbance

SF = Square Feet

TBD = To be determined

4.0 CONCLUSIONS AND REGULATORY REQUIREMENTS FOR ASBESTOS

Conclusions

Asbestos was identified in two (2) types of building materials. **The materials that contain asbestos must be abated prior to renovations that would disturb the asbestos materials.**

Any disturbance, abatement, or demolition of the materials containing asbestos will require compliance with the EPA NESHAP, and Cal/OSHA regulations regarding asbestos in construction.

All disturbance, abatement, or demolition of asbestos containing material must be done by a registered asbestos abatement contractor, using trained and certified personnel, and conducted as an asbestos abatement project.

The data and conclusion contained in this report are only applicable to the sampled/surveyed spaces/materials and should not be used to assess materials elsewhere at the site. If suspect materials that were not covered by this survey are encountered by the contractor during the project, the disturbance of such materials should cease until such materials are surveyed and/or sampled for asbestos. (Note: un-sampled materials must be presumed to contain asbestos until sampled and proven otherwise).

Regulatory Requirements

The EPA National Emission Standards for Hazardous Air Pollutants (NESHAP) requires an asbestos survey to identify the possible presence of any *Asbestos Containing Materials* (ACM) prior to any renovation and/or demolition work at “subject” sites. That requirement has been met with this report.

Friable NESHAP Regulated Asbestos Containing Material (RACM) was not identified during this survey. **A NESHAP Notification for “abatement” is not required prior to abatement of the asbestos containing materials.**

NESHAP defines the removal of any “load bearing” members” in the course of renovation work as “demolition” work. **If any “load bearing members” are to be removed during renovation activities, a NESHAP Notification for “demolition” will need to be filed at least 10 days prior to such work.** See the EPA NESHAP section below for detail on the NESHAP notification requirements.

In Santa Clara County, the NESHAP regulations concerning renovation and/or demolition work are enforced by the **Bay Area Air Quality Management District (BAAQMD)**, which is located at 375 Beale Street, Suite 600, San Francisco, CA 94105. For questions regarding asbestos related renovation or demolition work, contact the Asbestos, Compliance & Enforcement office, at (415) 749-4762, or email at asbestosjobs@baaqmd.gov.

When NESHAP Notifications are required, they must be submitted to the BAAQMD using their Online Asbestos Notification System, and must be submitted at least 10 days prior to conducting asbestos abatement and/or demolition work. The BAAQMD requires notification for abatement of RACM quantities greater than 100 square feet, 100 linear feet, and 35 cubic feet.

Online asbestos notification information, account setup, and application for a renovation or demolition Asbestos Notification Job Number can be found on the BAAQMD website, using the following links.

Asbestos Demolition and Renovation Notification / Job Number Information

<https://www.baaqmd.gov/permits/asbestos>

Online Asbestos Notification System Account Setup Information

<http://learn.baaqmd.gov/course/view.php?id=4>

Online Asbestos Notification System Customer Portal

<https://myaironline.baaqmd.gov/account/login>

Applicable BAAQMD asbestos related documents can be found in Appendix C of this report, and include the following documents.

- Asbestos Notifications Compliance Advisory, April 7, 2016
- Online Asbestos Notifications Compliance Advisory, January 22, 2018
- Asbestos Operations Fees Change Compliance Advisory, June 5, 2019
- New Asbestos Credit Card Procedures Compliance Advisory, April 17, 2013
- Regulation 11, Rule 2, Asbestos Demolition, Renovation and Manufacturing

Cal/OSHA regulates any disturbance or abatement of any material containing any amount of asbestos. All asbestos abatement or asbestos related demolition work must be performed by a registered asbestos abatement contractor, using properly trained and certified asbestos abatement workers. All asbestos abatement must be conducted following Cal/OSHA defined asbestos abatement methods.

A “Report of Use of Regulated Carcinogens,” notification must be submitted to the Division of Occupational Safety and Health, a minimum of 24-hours prior to asbestos abatement or asbestos related demolition activities.

If you are required to obtain a permit from a local or county building department, you will need to file this report with them.

Project ACM & ACCM

The regulatory requirements for the abatement and disposal of project ACM and/or ACCM identified in this survey are discussed below.

ACM Vinyl Floor Tile (VFT) & ACM Black Mastic: Any abatement or disturbance of the ACM VFT/Black Mastic identified in this report must be done by a licensed asbestos abatement contractor. Class II asbestos abatement methods are required for abatement by “hand” methods, with disposal as “non-friable” asbestos waste.

If abated by “mechanical” means, which includes using a buffer machine for mastic removal, the mastic will be rendered “friable,” and be re-classified as RACM. Class I abatement measures will be required, with disposal of the abated RACM as “friable” asbestos waste, which will require the use of a licensed “hazardous” waste hauler. A NESHAP Notification for RACM abatement will also be required if mechanical means are used for abatement of the mastic.

ACM Tar Roof Patch: Any abatement or disturbance of the ACM tar roof patch identified in this report must be done by a licensed asbestos abatement contractor using Class II methods, with disposal as “non-friable” asbestos waste.

5.0 ASBESTOS REGULATIONS

The following regulations are some of the more pertinent Federal and California asbestos regulations, and one or more of these regulations will apply to construction projects in California.

EPA Asbestos Hazard Emergency Response Act (AHERA): The Asbestos-Containing Materials in Schools Rule (40 CFR Part 763, Subpart E) regulates asbestos in schools including, but not limited to; inspections, response actions, clearances, training, and certifications.

EPA National Emissions Standard For Hazardous Air Pollutants (NESHAP): The NESHAP regulation (40 CFR, Part 61, Subpart M) applies to all commercial, public, institutional, industrial, and residential structures with more than four dwelling units, and requires an asbestos survey prior to demolition and/or renovation activities on subject properties.

Cal/OSHA Asbestos Construction Standard: The Cal/OSHA standard (8 CCR 1529) is designed to protect employees (workers) from adverse exposure to asbestos in any workplace, and in particular, regulates the asbestos abatement industry.

Department of Toxic Substance Control (DTSC): The California code of Regulations, 22 CCR 66261- 66263 apply to hazardous waste generation and disposal in California, including “friable” asbestos.

Some of the general regulatory requirements for asbestos related construction work and asbestos containing waste are discussed below. Depending on the types of asbestos containing material found at a site, some or all of these regulatory requirements will apply.

EPA NESHAP

All commercial, public, institutional, industrial, and residential structures with more than four dwelling units, are subject to the EPA NESHAP regulations concerning renovation and/or demolition work. NESHAP requires an asbestos survey to identify the possible presence of any *Asbestos Containing Materials* (ACM) prior to any renovation and/or demolition work at “subject” sites.

The NESHAP regulation requires filing a NESHAP Notification with the enforcing agency in the following two cases.

If Regulated Asbestos Containing Material (RACM) is present and is to be abated, and the amount of RACM to be abated exceed the threshold quantity of 160 square feet, 260 linear feet, or 35 cubic feet, a NESHAP Notification for the *abatement* of RACM will need to be filed with the enforcing agency, at least ten working days prior to the commencement of abatement activities. The notification includes: the NESHAP notification form; a copy of this report; and a filing fee.

If the proposed renovations will disturb any “*load bearing*” members, such work is considered “demolition” work, and a NESHAP Notification is required prior to any “demolition” work. The NESHAP Notification for *demolition* must be filed with the enforcing agency, at least ten working days prior to any “demolition” activity.

If both abatement of RACM and demolition are to be conducted, the NESHAP notification for “abatement” and “demolition” can be filed using the same form however, a filing fee is required for each notification.

The assistance of the asbestos abatement contractor will typically be needed to file the NESHAP Notification form.

Cal/OSHA

The Cal/OSHA Asbestos Standard for the Construction Industry (8 CCR 1529) regulates any disturbance or abatement of any material containing any amount of asbestos. All employees are covered by OSHA regulations, and the disturbance of ACM or ACCM is subject to Cal/OSHA worker protection regulations for asbestos related work.

The Cal/OSHA regulations require that “any activities disturbing” ACM or ACCM materials must be done by properly trained and certified asbestos abatement contractors & workers, using proper abatement methods. It is therefore necessary to identify, and properly abate ACM and ACCM from buildings prior to the disturbance of such materials by renovation or demolition activities.

An employer who conducts asbestos related work involving more than 100 square feet of material containing any amount of asbestos must be registered with the Division of Occupational Safety and Health (DOSH).

A temporary worksite notification must be filed with Division of Occupational Safety and Health (DOSH) at least 24 hours prior to asbestos abatement activities. The asbestos abatement contractor will typically submit this notification.

DTSC

The Department of Toxic Substance Control (DTSC) is the California agency responsible for enforcing the hazardous waste laws. The California code of Regulations, 22 CCR 66261.24 (a)(2) defines “friable” asbestos waste as “hazardous” waste.

A hazardous waste generator “Temporary State Hazardous Waste Id Number” must be obtained from the DTSC when friable ACM waste is generated at a site, all friable asbestos waste must be transported as hazardous waste by a licensed hazardous waste hauler, and all friable asbestos waste must be disposed of as hazardous waste, at an approved Class I waste facility. The Temporary State Id number can be obtained on the DTSC website at:

- <https://dtsc.ca.gov/apply-for-hazardous-waste-epa-id-number/>

Friable asbestos waste may be temporarily stored on-site pending transport for a period of up to 90 days. While being stored pending transport, such waste must be contained in proper bags of containers, clearly and properly labeled as hazardous asbestos material, and secured in a locked storage location with proper asbestos warning signs.

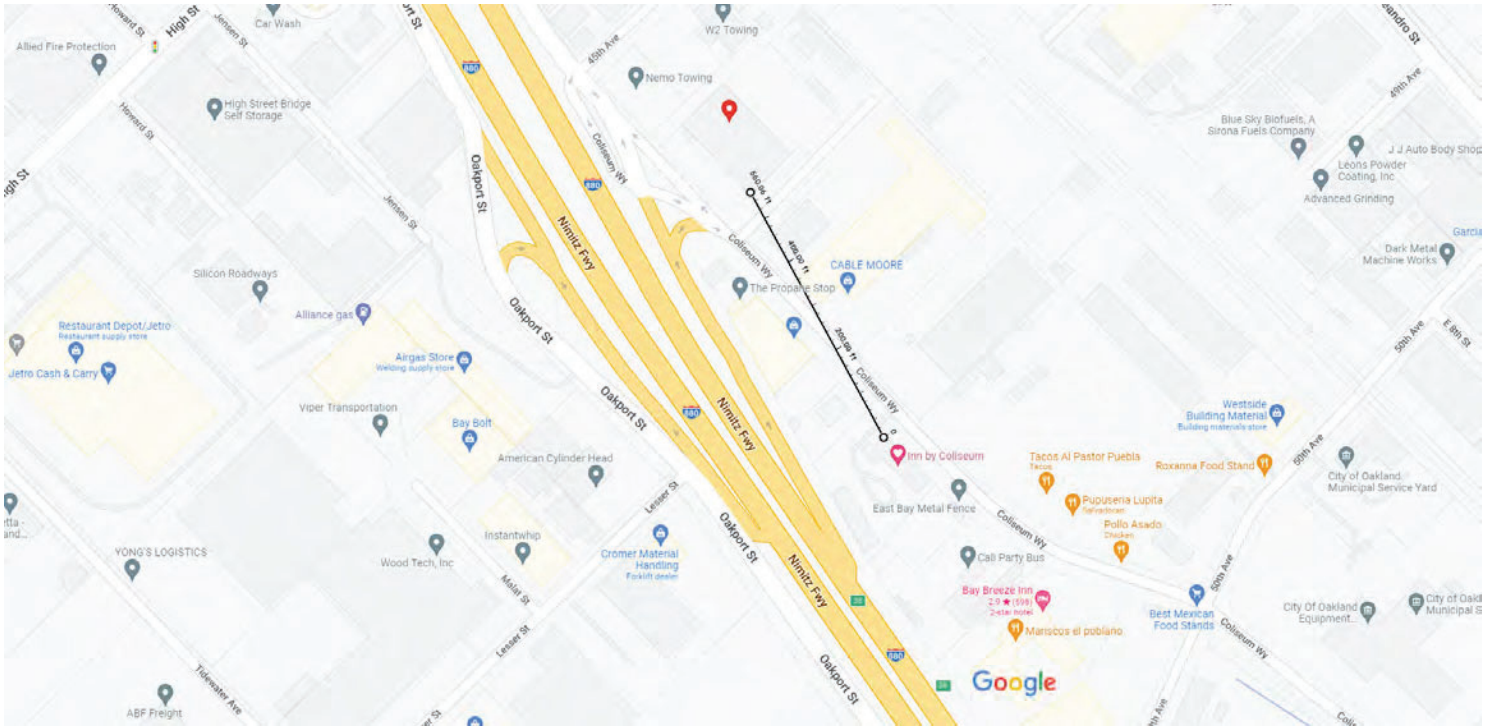

The shipping of “non-friable” asbestos waste does not require a hazardous waste hauler, and can be performed by an abatement contractor or other commercial transporters however, the material must be handled and disposed of as asbestos containing material.

6.0 DISCLAIMER

The sole purpose of this investigation and of this report is to assess the site with respect to asbestos and/or lead materials as defined by the scope of work. Brunelle & Clark Consulting, LLC, is not responsible for locating asbestos containing building material in inaccessible areas such as behind walls, above hard ceilings, beneath flooring or underground. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration at the site, analysis of data, and reevaluation of the findings, observations, conclusions, and recommendations expressed in the report. This report has been prepared on behalf of, and for the exclusive use of the client, and is subject to and issued in connection with the agreement and the provisions thereof. All findings, conclusions, and analytical data presented in this report are based on the information obtained by Brunelle & Clark Consulting, LLC’s survey and by the laboratory analysis. While the owner/operator was responsible for describing the extent and limits of site work, materials to be sampled were determined by the certified (asbestos) building inspector who performed this survey and was not otherwise subject to limitations by the owner/operator.

IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

Location

Alameda County, California

Local office

Sacramento Fish And Wildlife Office

☎ (916) 414-6600

📄 (916) 414-6713

Federal Building
2800 Cottage Way, Room W-2605
Sacramento, CA 95825-1846

NOT FOR CONSULTATION

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Draw the project location and click CONTINUE.
2. Click DEFINE PROJECT.
3. Log in (if directed to do so).
4. Provide a name and description for your project.
5. Click REQUEST SPECIES LIST.

Listed species¹ and their critical habitats are managed by the [Ecological Services Program](#) of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries²).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact [NOAA Fisheries](#) for [species under their jurisdiction](#).

-
1. Species listed under the [Endangered Species Act](#) are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the [listing status page](#) for more information. IPaC only shows species that are regulated by USFWS (see FAQ).

2. [NOAA Fisheries](#), also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following species are potentially affected by activities in this location:

Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

There are no critical habitats at this location.

Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act¹ and the Bald and Golden Eagle Protection Act².

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described [below](#).

1. The [Migratory Birds Treaty Act](#) of 1918.
2. The [Bald and Golden Eagle Protection Act](#) of 1940.

Additional information can be found using the following links:

- Birds of Conservation Concern <https://www.fws.gov/program/migratory-birds/species>
- Measures for avoiding and minimizing impacts to birds <https://www.fws.gov/library/collections/avoiding-and-minimizing-incident-take-migratory-birds>
- Nationwide conservation measures for birds <https://www.fws.gov/sites/default/files/documents/nationwide-standard-conservation-measures.pdf>

The birds listed below are birds of particular concern either because they occur on the [USFWS Birds of Conservation Concern \(BCC\) list](#) or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ [below](#). This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the [E-bird data mapping tool](#) (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found [below](#).

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON
<p>Allen's Hummingbird <i>Selasphorus sasin</i></p> <p>This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.</p> <p>https://ecos.fws.gov/ecp/species/9637</p>	<p>Breeds Feb 1 to Jul 15</p>

- Bald Eagle** *Haliaeetus leucocephalus* Breeds Jan 1 to Aug 31
 This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.
<https://ecos.fws.gov/ecp/species/1626>
- Belding's Savannah Sparrow** *Passerculus sandwichensis beldingi* Breeds Apr 1 to Aug 15
 This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
<https://ecos.fws.gov/ecp/species/8>
- Black Oystercatcher** *Haematopus bachmani* Breeds Apr 15 to Oct 31
 This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
<https://ecos.fws.gov/ecp/species/9591>
- Black Skimmer** *Rynchops niger* Breeds May 20 to Sep 15
 This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
<https://ecos.fws.gov/ecp/species/5234>
- Black Turnstone** *Arenaria melanocephala* Breeds elsewhere
 This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
- Bullock's Oriole** *Icterus bullockii* Breeds Mar 21 to Jul 25
 This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
- California Thrasher** *Toxostoma redivivum* Breeds Jan 1 to Jul 31
 This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
- Clark's Grebe** *Aechmophorus clarkii* Breeds Jun 1 to Aug 31
 This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

- Common Yellowthroat** *Geothlypis trichas sinuosa* Breeds May 20 to Jul 31
 This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
<https://ecos.fws.gov/ecp/species/2084>
- Golden Eagle** *Aquila chrysaetos* Breeds Jan 1 to Aug 31
 This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.
<https://ecos.fws.gov/ecp/species/1680>
- Gull-billed Tern** *Gelochelidon nilotica* Breeds May 1 to Jul 31
 This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
<https://ecos.fws.gov/ecp/species/9501>
- Lawrence's Goldfinch** *Carduelis lawrencei* Breeds Mar 20 to Sep 20
 This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
<https://ecos.fws.gov/ecp/species/9464>
- Marbled Godwit** *Limosa fedoa* Breeds elsewhere
 This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
<https://ecos.fws.gov/ecp/species/9481>
- Nuttall's Woodpecker** *Picoides nuttallii* Breeds Apr 1 to Jul 20
 This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
<https://ecos.fws.gov/ecp/species/9410>
- Oak Titmouse** *Baeolophus inornatus* Breeds Mar 15 to Jul 15
 This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
<https://ecos.fws.gov/ecp/species/9656>
- Olive-sided Flycatcher** *Contopus cooperi* Breeds May 20 to Aug 31
 This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
<https://ecos.fws.gov/ecp/species/3914>

<p>Short-billed Dowitcher <i>Limnodromus griseus</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9480</p>	Breeds elsewhere
<p>Tricolored Blackbird <i>Agelaius tricolor</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/3910</p>	Breeds Mar 15 to Aug 10
<p>Western Grebe <i>aechmophorus occidentalis</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/6743</p>	Breeds Jun 1 to Aug 31
<p>Willet <i>Tringa semipalmata</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.</p>	Breeds elsewhere
<p>Wrentit <i>Chamaea fasciata</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.</p>	Breeds Mar 15 to Aug 10
<p>Yellow-billed Magpie <i>Pica nuttalli</i> This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9726</p>	Breeds Apr 1 to Jul 31

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey

effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is $0.25/0.25 = 1$; at week 20 it is $0.05/0.25 = 0.2$.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

Breeding Season (■)

Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)

Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

To see a bar's survey effort range, simply hover your mouse cursor over the bar.

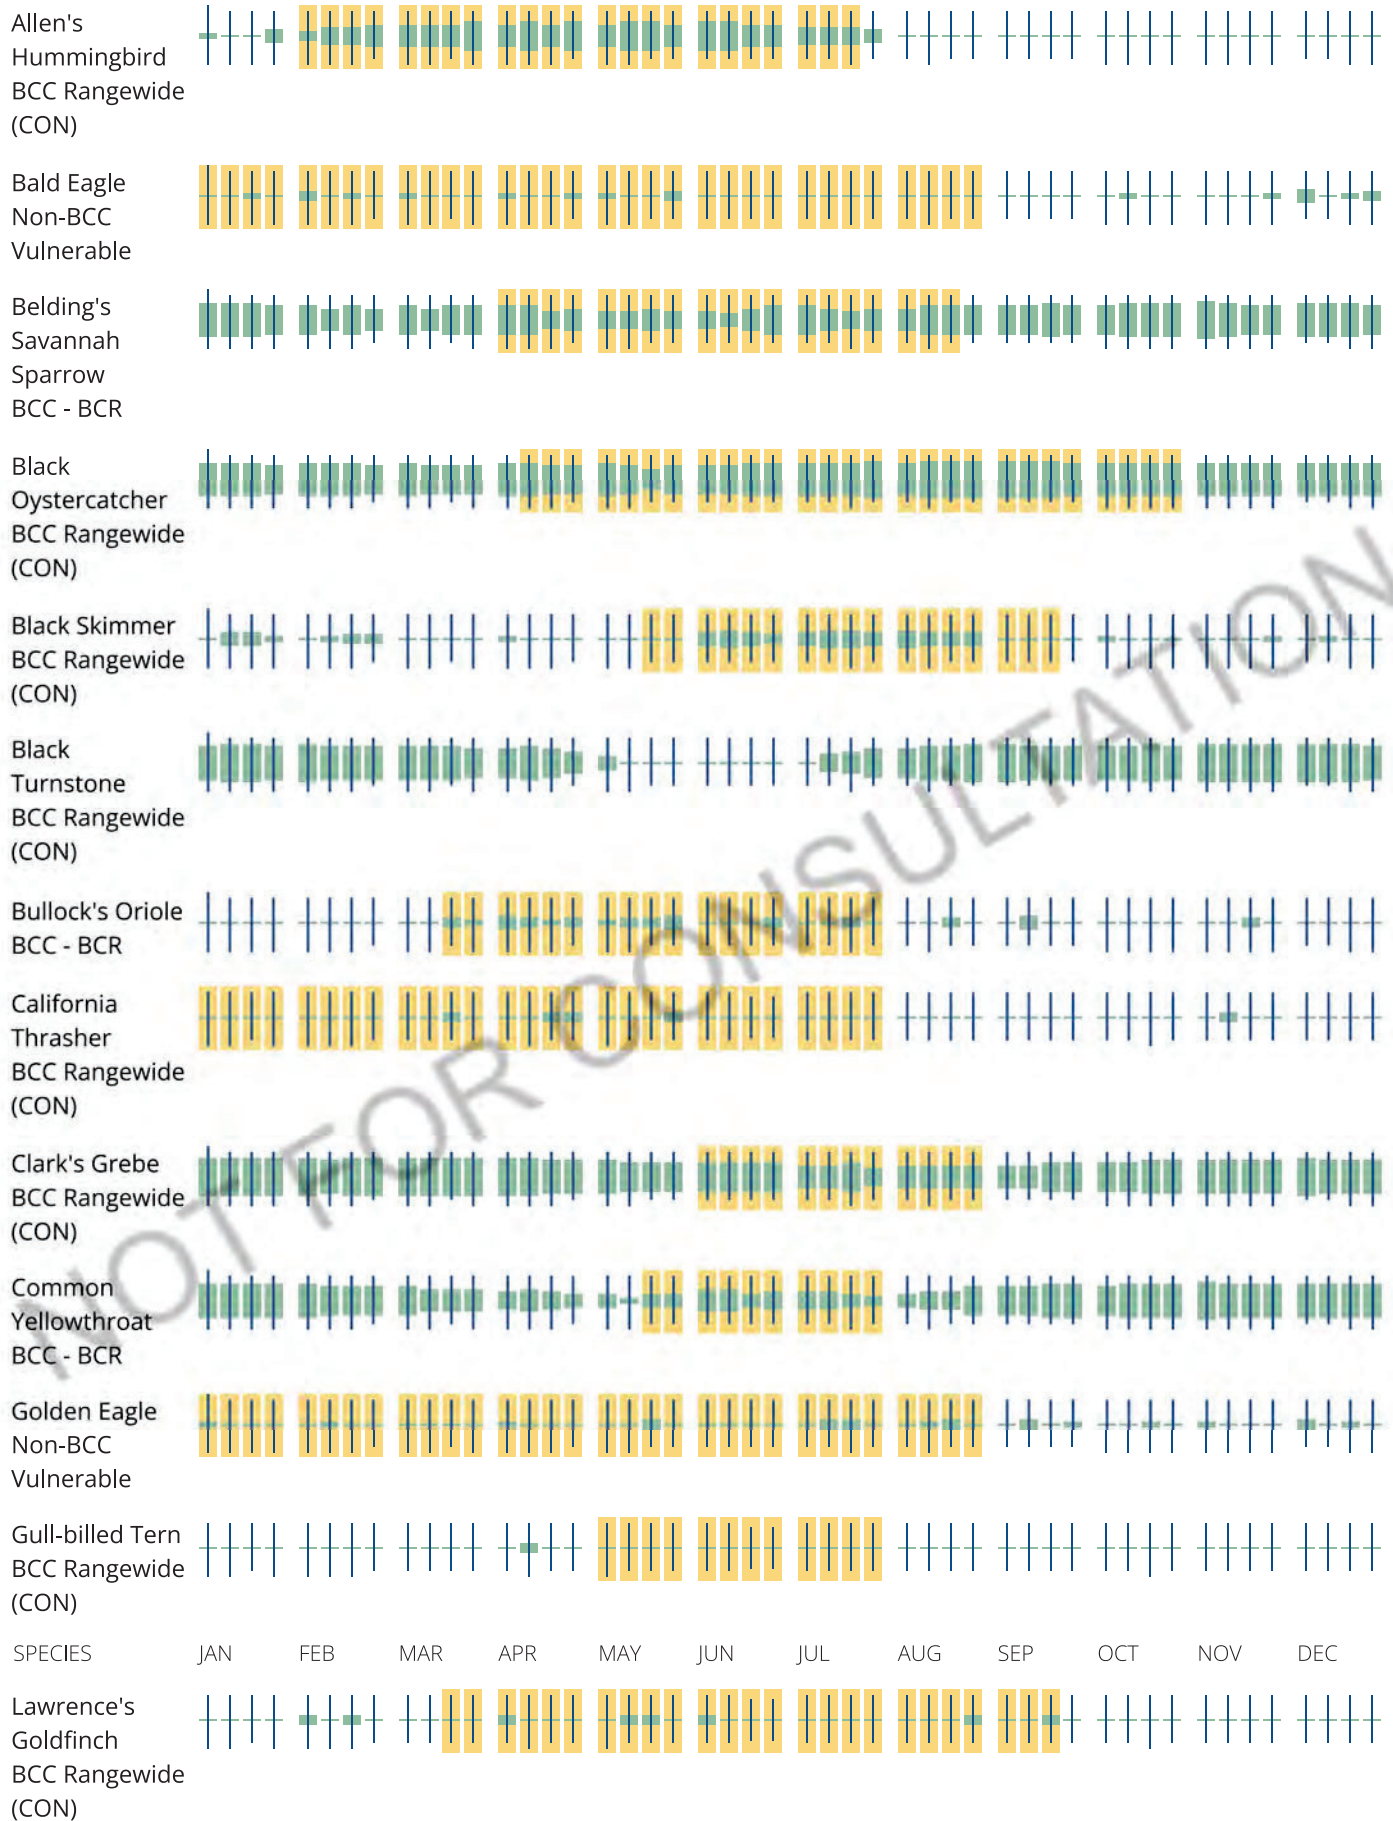

No Data (—)

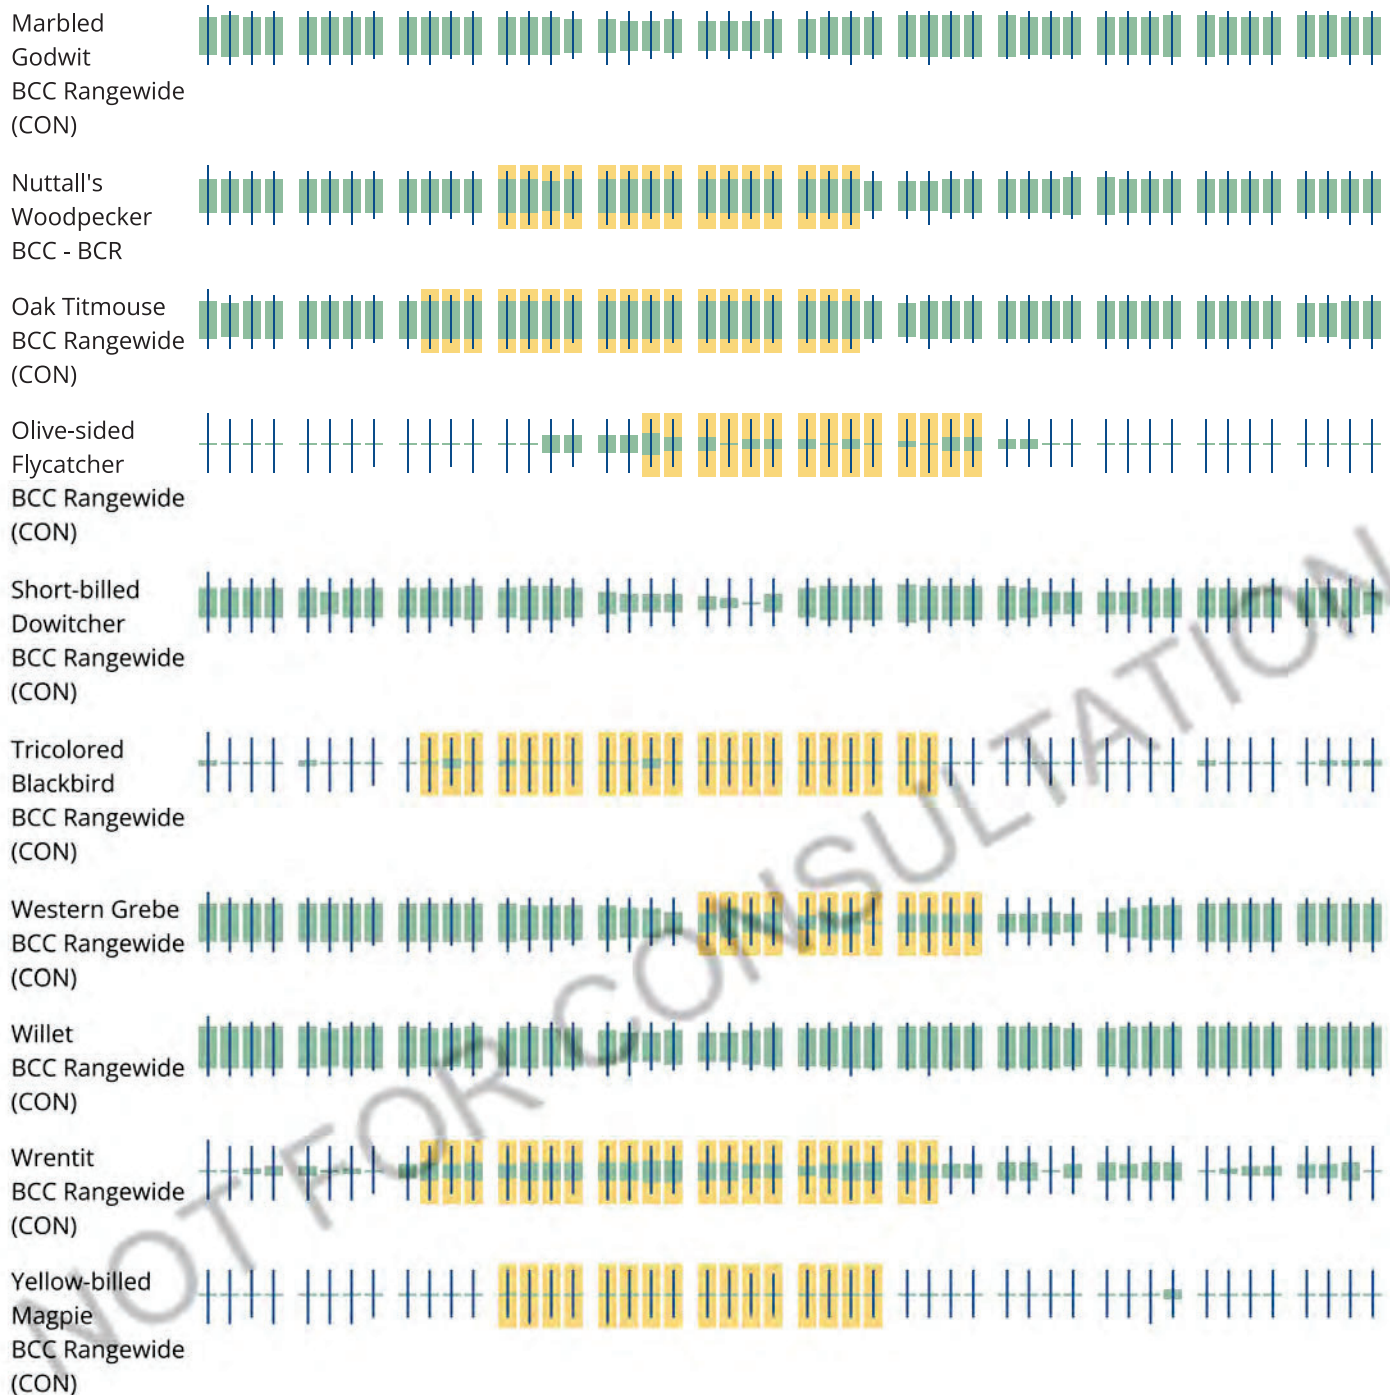

A week is marked as having no data if there were no survey events for that week.

Survey Timeframe

Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

[Nationwide Conservation Measures](#) describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. [Additional measures](#) or [permits](#) may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the list of migratory birds that potentially occur in my specified location?

The Migratory Bird Resource List is comprised of USFWS [Birds of Conservation Concern \(BCC\)](#) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the [Avian Knowledge Network \(AKN\)](#). The AKN data is based on a growing collection of [survey, banding, and citizen science datasets](#) and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle ([Eagle Act](#) requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the [Rapid Avian Information Locator \(RAIL\) Tool](#).

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the [Avian Knowledge Network \(AKN\)](#). This data is derived from a growing collection of [survey, banding, and citizen science datasets](#).

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go to the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering or migrating in my area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may query your location using the [RAIL Tool](#) and look at the range maps provided for birds in your area at the bottom of the profiles provided for each bird in your results. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are [Birds of Conservation Concern](#) (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the [Eagle Act](#) requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the [Northeast Ocean Data Portal](#). The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the [NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf](#) project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the [Diving Bird Study](#) and the [nanotag studies](#) or contact [Caleb Spiegel](#) or [Pam Loring](#).

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to [obtain a permit](#) to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

Coastal Barrier Resources System

Projects within the [John H. Chafee Coastal Barrier Resources System](#) (CBRS) may be subject to the restrictions on federal expenditures and financial assistance and the consultation requirements of the Coastal Barrier Resources Act (CBRA) (16 U.S.C. 3501 et seq.). For more information, please contact the local [Ecological Services Field Office](#) or visit the [CBRA Consultations website](#). The CBRA website provides tools such as a flow chart to help determine whether consultation is required and a template to facilitate the consultation process.

There are no known coastal barriers at this location.

Data limitations

The CBRS boundaries used in IPaC are representations of the controlling boundaries, which are depicted on the [official CBRS maps](#). The boundaries depicted in this layer are not to be considered authoritative for in/out determinations close to a CBRS boundary (i.e., within the "CBRS Buffer Zone" that appears as a hatched area on either side of the boundary). For projects that are very close to a CBRS boundary but do not clearly intersect a unit, you may contact the Service for an official determination by following the instructions here: <https://www.fws.gov/service/coastal-barrier-resources-system-property-documentation>

Data exclusions

CBRS units extend seaward out to either the 20- or 30-foot bathymetric contour (depending on the location of the unit). The true seaward extent of the units is not shown in the CBRS data, therefore projects in the offshore areas of units (e.g., dredging, breakwaters, offshore wind energy or oil and gas projects) may be subject to CBRA even if they do not intersect the CBRS data. For additional information, please contact CBRA@fws.gov.

Facilities

National Wildlife Refuge lands

Any activity proposed on lands managed by the [National Wildlife Refuge](#) system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

There are no refuge lands at this location.

Fish hatcheries

There are no fish hatcheries at this location.

Wetlands in the National Wetlands Inventory (NWI)

Impacts to [NWI wetlands](#) and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local [U.S. Army Corps of Engineers District](#).

Wetland information is not available at this time

This can happen when the National Wetlands Inventory (NWI) map service is unavailable, or for very large projects that intersect many wetland areas. Try again, or visit the [NWI map](#) to view wetlands at this location.

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tubercid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

Acceptable Separation Distance (ASD) Electronic Assessment Tool

The Environmental Planning Division (EPD) has developed an electronic-based assessment tool that calculates the Acceptable Separation Distance (ASD) from stationary hazards. The ASD is the distance from above ground stationary containerized hazards of an explosive or fire prone nature, to where a HUD assisted project can be located. The ASD is consistent with the Department's standards of blast overpressure (0.5 psi-buildings) and thermal radiation (450 BTU/ft² - hr - people and 10,000 BTU/ft² - hr - buildings). Calculation of the ASD is the first step to assess site suitability for proposed HUD-assisted projects near stationary hazards. Additional guidance on ASDs is available in the Department's guidebook "Siting of HUD- Assisted Projects Near Hazardous Facilities" and the regulation 24 CFR Part 51, Subpart C, Sitting of HUD-Assisted Projects Near Hazardous Operations Handling Conventional Fuels or Chemicals of an Explosive or Flammable Nature.

Note: Tool tips, containing field specific information, have been added in this tool and may be accessed by hovering over the ASD result fields with the mouse.

Acceptable Separation Distance Assessment Tool

Is the container above ground?	Yes: <input checked="" type="checkbox"/> No: <input type="checkbox"/>
Is the container under pressure?	Yes: <input checked="" type="checkbox"/> No: <input type="checkbox"/>
Does the container hold a cryogenic liquified gas?	Yes: <input type="checkbox"/> No: <input checked="" type="checkbox"/>
Is the container diked?	Yes: <input type="checkbox"/> No: <input type="checkbox"/>
What is the volume (gal) of the container?	<input type="text" value="1000"/>
What is the Diked Area Length (ft)?	<input type="text"/>
What is the Diked Area Width (ft)?	<input type="text"/>
<input type="button" value="Calculate Acceptable Separation Distance"/>	
Diked Area (sqft)	<input type="text"/>
ASD for Blast Over Pressure (ASDBOP)	<input type="text" value="219.03"/>

ASD for Thermal Radiation for People (ASDPPU)	276.57
ASD for Thermal Radiation for Buildings (ASDBPU)	50.28

Schleck, Brent

From: Klein, Heather <HKlein@oaklandca.gov>
Sent: Monday, November 28, 2022 2:34 PM
To: Schleck, Brent
Subject: EXTERNAL: FW: Section 106 HUD Inn at Coliseum Conversion and Construction Project, Oakland CA

Below is the letter/email from SHPO. Please add to Attachment M and finalize the EA.

From: Pries, Shannon@Parks <Shannon.Pries@parks.ca.gov>
Sent: Monday, November 28, 2022 2:28 PM
To: Klein, Heather <HKlein@oaklandca.gov>
Subject: RE: Section 106 HUD Inn at Coliseum Conversion and Construction Project, Oakland CA

[EXTERNAL] This email originated outside of the City of Oakland. Please do not click links or open attachments unless you recognize the sender and expect the message.

Hi Heather,

I realize that it is three days past due, but I was just going in to review the Inn at Coliseum Conversion project. Unfortunately, the link no longer works.

I suspect this project is the conversion of an existing hotel or motel into supportive housing. Given that those projects rarely have the potential to affect historic properties, I am comfortable with the City proceeding based on 36 CFR Part 800.3(c)(4) *Failure of the SHPO/THPO to respond* for this type of undertaking. Please feel free to use the email to demonstrate the City's efforts to consult with our office and the SHPO's inability to respond in a timely manner.

Let me know if you have any questions or concerns about this recommendation.

I hope you had a nice holiday weekend!

All the best,
Shannon

You don't often get email from hklein@oaklandca.gov. [Learn why this is important](#)

To whom it may concern,

We are submitting documents pursuant to the Section 106 process for the Inn at Coliseum project in the City of Oakland. Unfortunately the files are too large to send in 18 MB segments. Hopefully you can access these documents via this link.

<https://eFTP.mbakerintl.com/message/GK0cc3E2MAk5VD8YXLRv3h>

If you have any questions or cannot access the files please let me know

Best,

Re: Inn by the Coliseum Project, City of Oakland, Alameda County, California: Request for Concurrence on Finding of No Historic Properties Affected

Dear Ms. Pries:

The City of Oakland is proposing to use US Department of Housing and Urban Development Community Development Block Grants funding for the Inn by the Coliseum Project (project). Enclosed are materials to identify and evaluate historic properties in the Area of Potential Effects of this undertaking under Section 106 of the National Historic Preservation Act and its implementing regulations at 36 CFR Part 800. On behalf of William Gilchrist, Agency Official for this project, I request your views regarding the report's conclusions and the effect of the project on historic properties.

If you have questions regarding the City's determination, please contact Brent Schleck, Senior Environmental Planner, Michael Baker International, at (562) 200-7181 or brent.schleck@mbakerintl.com. We appreciate your assistance in this matter.

Sincerely,

Betty Marvin

Historic Preservation Planner

RE: HISTORIC PROPERTY IDENTIFICATION AND EVALUATION MEMORANDUM FOR THE INN BY THE COLISEUM PROJECT, CITY OF OAKLAND, ALAMEDA COUNTY, CALIFORNIA

Dear McKenzie Dibble:

The City of Oakland (City) proposes the Inn By The Coliseum Project (project) which will be completed using U.S. Department of Housing and Urban Development (HUD) Community Development Block Grant funding. In support of the project, Michael Baker International completed a Northwest Information Center (NWIC) records search, archival research, literature, historical map and aerial photograph review, historical society consultation, Native American Heritage Commission Sacred Lands File search, Native American consultation, field survey, archaeological sensitivity assessment, and evaluation of properties over 50 years old to determine whether the project could result in adverse effects to historic properties in accordance with Section 106 of the National Historic Preservation Act (NHPA). The methods, results, and recommendations are summarized below.

PROJECT DESCRIPTION

The Proposed Project would consist of the rehabilitation of two motel buildings located on the Project Site for conversion to residential use (affordable housing for households experiencing homelessness), along with construction of a one-story structure within an existing surface parking lot on the south side of the Project Site (see **Attachment 1 – Figures** for project location). The two existing motel buildings include 36 motel rooms and one two-bedroom manager’s unit on the first floor. Rehabilitation of the two existing motel buildings would involve converting the motel rooms into 36 studio apartments and maintaining the one two-bedroom manager’s unit. An existing 1,000-square-foot motel lounge area located on the north side of the eastern motel building would be expanded and utilized for property management and resident services. This expansion would extend this lounge area approximately 14-feet west and would be approximately 21 feet wide by 12.5 feet high. The expansion would be clad in a stucco coating and would be designed so as to match the existing motel exterior (i.e., a similar roof pitch, color, and tile style). Other proposed amenities would involve an outdoor activities area along with a designated

MICHAEL BAKER INTERNATIONAL
RE: MEMORANDUM REPORT FOR THE 2022 INN AT COLISEUM PROJECT, CITY OF OAKLAND,
CALIFORNIA

outdoor smoking area on the northwest side of the Project Site. Rehabilitation activities would include upgrades to each motel room, such as the addition of kitchenettes in each unit (with an electric stovetop, sink, and refrigerator), and new window coverings and carpeting. Other proposed rehabilitation activities include landscaping improvements; updating some units to be compliant with the Americans with Disabilities Act; replacing the existing central heating, ventilation, and air conditioning (HVAC) system with new HVAC equipment in each unit; making electrical upgrades to the units; creating shared amenities, such as community rooms and a laundry area; and improving project site security (e.g., locking gates and security cameras).

In addition to the proposed rehabilitation activities discussed above, the Project would involve construction of a single-story office building on the south side of the existing surface parking lot. This proposed one-story structure would include four resident services offices, which would allow operational space for service providers visiting the Project Site. This building would be designed to complement the red and tan painted exterior and the sloped, tiled roofs of the existing motel buildings.

The Project Site is relatively flat, and the Project would likely require minimal grading associated with construction of the single-story office building on the south side of the Project Site

AREA OF POTENTIAL EFFECTS

The area of potential effects (APE) for this project is based on the project description outlined above, and is depicted in **Figure 1**. The APE encompasses the full geographic extent of the parcel identified as Assessor Parcel Number (APN) 034-2295-016-05 and addressed as 4801 Coliseum Way. The APE is coincident with the parcel's legal boundary. Surrounding properties have not been included within the APE because the project includes rehabilitation of the existing motel property with small common area addition, and construction of a single-story office building. The office building is set between the existing buildings and not visible from surrounding properties; the character of the motel property would remain unchanged. Thereby there would be no direct physical affect or indirect visual or audible affect to surrounding properties. See **Attachment 1** for figures and **Attachment 5** for site plans.

CULTURAL RESOURCES IDENTIFICATION METHODS

The results of the NWIC records search, literature and historical map review, field survey, archaeological sensitivity analysis, historical society and Native American consultation, City of Oakland records search, and NRHP/CRHR evaluation are presented below.

NORTHWEST INFORMATION CENTER RECORDS SEARCH

Michael Baker International conducted a records search (File No. NWIC 22.0025) of the APE and a quarter-mile radius on July 6, 2022 (**Attachment 2**). The NWIC, as part of the California Historical Resources Information System, Sonoma State University, Rohnert Park, California, an affiliate of the California OHP, is the official state repository of cultural resources records and reports for Alameda County. As part of the records search, the following federal and California inventories were reviewed:

- California Inventory of Historic Resources (OHP 1976).
- California Points of Historical Interest (OHP 1992 and updates).
- California Historical Landmarks (OHP 1996).
- Archaeological Determinations of Eligibility (OHP 2012).
- Built Environment Resource Directory (BERD), Alameda County (OHP 2022) (**Attachment 2**).

NWIC Results

Cultural Resources

No cultural resources were identified within the APE as a result of the NWIC records search; 15 cultural resources were identified within the quarter-mile search radius of the APE and include buildings, structures, and one historic-period archaeological site, as described below.

Review of City of Oakland Records

Michael Baker International staff reviewed information that Betty Marvin, Historic Preservation Planner at the City of Oakland, provided regarding resources adjacent to the APE (**Attachment 2**). Ms. Marvin noted that the residence at 4731 Coliseum Way has an estimated date of "1900s" and is "extremely old and rare for the area." The property has been assigned a preliminary Oakland Cultural Heritage Survey (OCHS) rating of C3, which, according to the City's historical and architectural rating system, indicates that the property is a "superior or visually important example, or very early (pre-1906)" example, that possesses "secondary importance" warranting limited recognition, as identified by the "C" rating, and that it is not in a historic district, as denoted by the "3" rating (City of Oakland 2022). The C rating also makes it a Potentially Designated Historic Property (PDHP). According to the City of Oakland's website, any property that has at least a contingency rating of C ("secondary importance") or contributes or potentially contributes to a primary or secondary district, warrants consideration for possible preservation. If the property is not already designated and it meets these minimum significance thresholds, it is categorized as a PDHP. Additionally, 4731 Coliseum Way was identified in the BERD with a 6Y status code: determined ineligible for the NRHP by the OHP (see **Attachment 2**). Therefore, the resource is not a historic property as defined by 36 CFR 800.

Ms. Marvin also confirmed that the buildings addressed as 717 and 733 50th Avenue are located on one parcel (034-2293-009-02). The building addressed as 733 50th Avenue is located at the south end of the parcel and is a monitor-roofed PG&E Compressor House built in 1926 by the Austin Company of California. The building has a C rating, which makes it a PDHP. Additionally, 717 and 733 50th Avenue was identified in the BERD with a 6Y status code: determined ineligible for the NRHP by the OHP and 7R (identified in a reconnaissance level survey, but not evaluated) (see **Attachment 2**). Therefore, the resource is not a historic property as defined by 36 CFR 800.

In addition to the information that Ms. Marvin provided, Michael Baker International staff also conducted a review of the parcel data layers in the City of Oakland's online Planning and Zoning Map for the resource in the APE, as well as the adjacent properties. The results of that review are presented below and in **Attachment 2**.

Results

Archaeological

The Paleo-Archaic-Emergent chronological sequence of the San Francisco Bay region consists of three broad periods (Fredrickson 1974): the Paleo-Indian period (10,000–6,000 BC); the Archaic period consisting of the Lower Archaic (6,000–3,000 BC), Middle Archaic (3,000–1,000 BC, and Upper Archaic (1,000 BC–AD 500); and the Emergent period (AD 500–1800). The cultural patterns relevant to the APE include the Berkeley Pattern during the Archaic period (1,000 BC–AD 500) and Augustine Pattern (AD 500–1800).

The Berkeley Pattern is characterized by deeply stratified midden deposits containing diverse tools, large assemblages of milling and grinding stones for the processing of plant resources, distinctive diagonal flaking projectile points, flexed position burials with burial ornaments such as shell beads, and extensive bone tools. The Augustine Pattern is characterized by intensive hunting, fishing, and gathering; a focus on acorn processing; large population increases; intensified trade and exchange networks; more complex ceremonial and social attributes; and the practice of cremation in addition to flexed burials. The Augustine Pattern can be characterized as the apex of Native American cultural development in this part of California (Fredrickson 1973).

The APE is located within the historical territory of the Costanoan/Ohlone. Eight Ohlone languages were spoken in the area from the southern edge of the Carquinez Strait to a portion of the Big Sur and Salinas Rivers south of Monterey Bay to approximately 50 miles inland from the coast (Levy 1978). The Ohlone lived in tribelets, which were autonomous political units that occupied a distinct territory. Tribelets generally consisted of one main village occupied year round and a series of smaller hamlets and resource gathering and processing locations occupied intermittently or seasonally. The tribelet population ranged from about 50 to 500 persons. The larger tribelets usually had a large territory of several permanent villages, located in the proximity of each other. At the time of Euro-American contact, the Huchiun tribelet occupied territory that included present-day Oakland (Milliken et al. 2007). The Ohlone ensured a sustained yield of plant and animal foods, and important food staples including acorns gathered from different oak species; nuts from the buckeye tree; hazelnuts; grassland and plant seeds from buttercup, chia, redmaids,

MICHAEL BAKER INTERNATIONAL
RE: MEMORANDUM REPORT FOR THE 2022 INN AT COLISEUM PROJECT, CITY OF OAKLAND,
CALIFORNIA

tarweed, and grey pine; wild strawberries, elderberries, madrone berries; and wild grapes, in addition to hunting and gathering numerous creek, shore, and terrestrial species (Levy 1978: 491-492)

The Ohlone traded items like abalone, mussels, salt, Olivella shells, and bows to neighboring groups, such as Sierra Miwok and Yokuts groups to the east. Pinon nuts obtained from the Yokuts are the only ethnographically documented import of Ohlone groups, although undoubtedly other significant economic items, including obsidian used for tools, were imported as well. By the late eighteenth century, Spanish exploration and settlement of the Bay Area had dramatically transformed Ohlone culture. Spanish settlers moved into northern California and established the mission system. Mission records indicate that the first Huchiun was baptized in 1787 with the first large group from that tribelet arriving at Mission San Francisco in the fall of 1794. Following the secularization of the missions in 1834, many Ohlone worked as laborers on ranchos (Levy 1978: 486)

Historical

The APE is first depicted in an 1870 Bureau of Land Management map as part of Peralta's Rancho San Antonio, located east of the San Leandro Bay and north of the East Creek Slough (BLM 1870). No cultural resources or features are depicted within or in the vicinity of the APE on the 1870 map. By 1897, the APE and the surrounding area had grown as part of the community of Melrose with roads platted and buildings sparsely spread from the bay and the Southern Pacific Railroad tracks, east to International Boulevard. By virtue of its proximity to the bay waters and railroad, the APE and surrounding area developed as industrial. The APE contained an industrial building in 1897 with smaller rectangular-shaped dwellings to the north. The area just west of the APE contained a very large, approximately 2,000-foot, I-shaped shoreline structure spanning the former tidewater area (USGS 1897). Between 1913 and 1915, the shoreline structure was demolished, and two circular gas structures were built across the street to the east of the APE (USGS 1913, 1915). The tidewater area west of the APE was slowly filled in and further developed with industrial buildings between 1915 and 1942 (USGS 1913, 1942). During the World War II era of the 1940s, the area was developed for wartime housing. A large federal housing area constructed west and south of the APE appears between the 1943 and 1947 topographic maps and are noted as the "High Street Homes Federal Housing Project" on the 1952 edition of the Sanborn maps (USGS 1943, 1947; Sanborn Map Company 1952: 594).

The 1952 Sanborn map shows several industrial buildings at the APE associated with a roofing material business, including a warehouse, storage building, and office building (Sanborn Map Company 1952: 591). By 1955, the extant two motel buildings for the Rancho del Rey Motel were

MICHAEL BAKER INTERNATIONAL
RE: MEMORANDUM REPORT FOR THE 2022 INN AT COLISEUM PROJECT, CITY OF OAKLAND,
CALIFORNIA

constructed at the APE; their footprint is visible on the 1958 aerial map (NETR 2022: 1946, 1958; Oakland Tribune 1955).

ARCHAEOLOGICAL SENSITIVITY ANALYSIS

Sensitivity for cultural resources consisting of archaeological sites is considered low to moderate based upon the known cultural resources in the vicinity of the project, the depth of previous disturbance in the APE, and various natural factors discussed below.

The APE is located within an area that is mapped by the Natural Resources Conservation Service (NRCS 2022) as Urban Land complex. Major soil types within this complex include approximately 95% Urban land series soil (i.e., fill), and the remaining approximately 5% is unnamed series. However, the amount of urban land indicates a high degree of disturbance within the APE and its surrounding areas. This disturbance decreases the sensitivity for significant prehistoric archaeological sites. Sensitivity for buried prehistoric archaeological sites is low.

The NWIC records search results and the field survey identified no cultural resources within the APE. However, one historic-period archaeological site (CA-ALA-000643H) was identified within a quarter-mile to the southwest of the APE. Archaeological excavation at this site documented the presence of artifact-filled pits and privies, and industrial features dating between the 1880s to 1940s.

The APE is located within a heavily developed industrial area. It was first developed into several industrial buildings during the late 1940s and early 1950s. The 1952 Sanborn map shows several industrial buildings within the APE associated with a roofing material business, including a warehouse, stage building, and office building (Sanborn Map Company 1952: 591). The two existing motel buildings for the Rancho del Rey Motel were constructed within the APE by 1955. Since then, the APE has been subject to some improvements such as landscaping and parking lot construction. The APE has moderate sensitivity for buried significant or potentially significant historic-period archaeology sites as a result of historical and modern development.

INTERESTED PARTIES CONSULTATION

Historical Society Consultation

On August 12, 2022, Michael Baker International staff emailed a letter and figures depicting the APE to the Oakland Heritage Alliance and the Alameda County Historical Society. The correspondence requested any information or concerns regarding historic properties within the APE. No responses have been received to date (**Attachment 3**).

MICHAEL BAKER INTERNATIONAL
RE: MEMORANDUM REPORT FOR THE 2022 INN AT COLISEUM PROJECT, CITY OF OAKLAND,
CALIFORNIA

Native American Consultation

On July 6, 2022, Michael Baker International sent a letter via email describing the project to the Native American Heritage Commission (NAHC) in Sacramento, asking the commission to review its Sacred Lands File for any Native American cultural resources that might be affected by the project. Also requested were the names of Native Americans and tribes who might have information or concerns about the APE. On July 29, 2022, the NAHC responded via email stating that a search of the Sacred Lands File provided negative results. The NAHC also provided the names of Native American tribes to contact for further information (**Attachment 3**).

Per HUD guidelines, consultation invitations were sent via email on September 19, 2022, by Michael Baker International staff on behalf of the City to federally recognized tribes identified in the NAHC lists. Tribal contacts were directed to reach out to Betty Marvin, Historic Preservation Planner, City of Oakland for further Section 106 consultation. On October 14, 2022, Michael Baker International staff sent out follow-up consultation invitations via email. Presented below is a table describing the consultation efforts to date, with further details provided in **Attachment 3**.

Corrina Gould responded via email on 9/26/22 stating that "At this time the Tribe has no further information to supply about the proposed site for this plan" and that "The tribe wishes to be contacted if there are any findings."

PEDESTRIAN FIELD SURVEY

An archaeological field survey was not completed because the APE is fully hardscaped with no exposed soils. An intensive-level, built environment survey of the APE containing the motel property was conducted by Michael Baker International staff on August 31, 2022. Photographs and notes were taken during the survey. Notes and visual inspection consisted of observations of exposed building elevations, architectural design, materials, and alterations. Photographs, property histories, and a brief historic context are presented in the California Department of Parks and Recreation (DPR) 523 forms (**Attachment 4**).

MICHAEL BAKER INTERNATIONAL
RE: MEMORANDUM REPORT FOR THE 2022 INN AT COLISEUM PROJECT, CITY OF OAKLAND,
CALIFORNIA

NATIONAL REGISTER AND CALIFORNIA REGISTER EVALUATION

The following section provides an evaluation of the former Rancho del Rey Motel at 4801 Coliseum Way in Oakland based on NRHP/CRHR eligibility criteria. This property has not been previously evaluated for either register (see **Attachment 4**).

The NRHP eligibility criteria for evaluating the significance of resources within the APE is outlined in 36 Code of Federal Regulations (CFR) Section 60.4 as follows:

Criterion A. Association with “events that have made a significant contribution to the broad patterns of our history.

Criterion B. Association with “the lives of persons significant in our past.”

Criterion C. Resources “that embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.”

Criterion D. Resources “that have yielded, or may be likely to yield, information important to history or prehistory.”

The eligibility criteria for listing in the CRHR are based upon the NRHP criteria. To be eligible for listing, a property must be at least 50 years of age. A resource less than 50 years of age may be eligible if it can be demonstrated that sufficient time has passed to understand the historical importance of the resource. Listing in the CRHR also requires that a resource possess significance at the local, state, or national level, under one or more of the following criteria:

Criterion 1. It is associated with events that have made a significant contribution to the broad patterns of California’s history and cultural heritage.

Criterion 2. It is associated with the lives of persons important in our past.

Criterion 3. It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic value.

Criterion 4. It has yielded, or may yield, information important in history or prehistory.

In addition to meeting a significance criterion, a property must also have integrity, or the ability to convey its significance, under a majority of the seven aspects of integrity—location, design,

MICHAEL BAKER INTERNATIONAL
RE: MEMORANDUM REPORT FOR THE 2022 INN AT COLISEUM PROJECT, CITY OF OAKLAND,
CALIFORNIA

materials, workmanship, setting, feeling and association—before being recommended as eligible for listing in the NRHP/CRHR under the above criteria.

Rancho del Rey Motel

NRHP Criterion A / CRHR Criterion 1 – Research did not indicate that the Rancho del Rey Motel at 4801 Coliseum Way (formerly 4801 Clement Street) is associated with events significant to the broad patterns of our history at the local, state, or national level. The motel buildings on the property were constructed ca. 1955 during a postwar tourism boom, expansion of freeways, and an expansion of the Oakland Airport (City of Oakland 1955). As displayed in an advertisement from the 1959 Yellow Pages: “Rancho del Rey Motel/AAA approved/American Express Credit Cards/Room Phones Kitchenettes 36 sound proofed units continental Breakfast/East Shore Freeway off High Street, 4801 Clement Street, 5 minutes to Bustiness District & Airport, KEllog 2-4084.” By 1972, the property is known as Coliseum Motel and its street address was changed to 4801 Coliseum Way. The property is not directly or significantly associated with this period in history and is not known to have made a significant contribution to any other broad patterns of local, regional, state, or national culture and history. A newspaper account indicates that it received an award in the 1961 edition of *Adventures in Good Eating*, a travel book published by Duncan Hines. These travel books were published from the 1930s to the 1950s by Duncan Hines. After Hines passed in 1958, the publication was purchased by Procter and Gamble (Schedler 2021). By the 1960s, these guides included thousands of national listings. A recommendation in these travel books, however, does not itself confer historic significance. Therefore, the property is recommended not eligible for listing in the NRHP under Criterion A or the CRHR under Criterion 1.

NRHP Criterion B / CRHR Criterion 2 – Research did not indicate that this property is associated with the lives of persons who significantly contributed to the local, state, or national culture and history. The original owner is unknown, and the owners listed in the 1970 deed (Alameda County Assessor 1970) have not made any significant contributions to history that would warrant inclusion in either register. Therefore, this property is recommended not eligible under NRHP Criterion B or CRHR Criterion 2.

NRHP Criterion C / CRHR Criterion 3 – The ca. 1955 constructed motel complex has been heavily modified and no longer reflects its original Ranch-style features as shown on the ca. 1960 postcard of the property (Ancestry.com 1960). Any original decorative features have long been removed and the façade redesigned. The complex, therefore, is not a characteristic example of the style type, nor do the buildings possess high artistic value. The property is also not a significant example of a work completed by a known master architect or builder. Therefore, this property is recommended not eligible for the NRHP under Criterion C or the CRHR under Criterion 3.

MICHAEL BAKER INTERNATIONAL
RE: MEMORANDUM REPORT FOR THE 2022 INN AT COLISEUM PROJECT, CITY OF OAKLAND,
CALIFORNIA

NRHP Criterion D / CRHR Criterion 4 – The property is not likely to yield valuable information that will contribute to our understanding of human history because the property is not and never was the principal source of important information pertaining to significant events, people, or architectural style. Therefore, this property is recommended not eligible for listing in the NRHP under Criterion D or CRHR under Criterion 4.

Conclusion – The former Rancho del Rey Motel at 4801 Coliseum Way (formerly 4801 Clement Street) lacks sufficient significance to meet any of the criteria for listing in the NRHP and CRHR. To be eligible for listing in either register, a resource must first meet one or more of the significance criteria outlined above before a determination can be made as to whether the resource retains its historic character and is able to convey its significance. In the specific case of the property at 4801 Coliseum Way, an integrity analysis was considered immaterial because the evaluation found that the property lacked the necessary significance to warrant further analysis of its physical and historic integrity. Consequently, the evaluation determined that the former Rancho del Rey Motel is not a historic property for the purposes of Section 106 of the NHPA per 36 CFR § 60.4, nor is it a historical resource for the purposes of the California Environmental Quality Act (CEQA) as defined under Public Resources Code Section 5024.1 and California Code of Regulations, Title 14, Section 15064.5(a). The City of Oakland’s online Planning and Zoning database indicates that the subject property is not a Local Landmark, Heritage Property, Designated Historic Property, Potentially Designated Historic Property, or a contributor to a Local Historic District. An OHP Status Code of 6Z, “ineligible for NR, CR or Local designation through survey evaluation,” is, therefore, recommended for the property.

SUMMARY OF FINDINGS AND RECOMMENDATIONS

The NWIC records search, literature and historical map review, historical society consultation, Native American tribal consultation, field survey, and NRHP/CRHR evaluation identified no historic properties within the APE. The archaeological sensitivity analysis identified low prehistoric archaeological sensitivity and moderate historic-period archaeological sensitivity. Therefore, a finding of no historic properties affected is appropriate for this project.

Provided below are the applicable City of Oakland’s Standard Conditions of Approval for this project.

32. ARCHAEOLOGICAL AND PALEONTOLOGICAL RESOURCES—DISCOVERY DURING CONSTRUCTION

Requirement: Pursuant to CEQA Guidelines section 15064.5(f), in the event that any historic or prehistoric subsurface cultural resources are discovered during ground disturbing activities, all work within 50 feet of the resources shall be halted and the project applicant shall notify the City

MICHAEL BAKER INTERNATIONAL
RE: MEMORANDUM REPORT FOR THE 2022 INN AT COLISEUM PROJECT, CITY OF OAKLAND,
CALIFORNIA

and consult with a qualified archaeologist or paleontologist, as applicable, to assess the significance of the find. In the case of discovery of paleontological resources, the assessment shall be done in accordance with the Society of Vertebrate Paleontology standards. If any find is determined to be significant, appropriate avoidance measures recommended by the consultant and approved by the City must be followed unless avoidance is determined unnecessary or infeasible by the City. Feasibility of avoidance shall be determined with consideration of factors such as the nature of the find, project design, costs, and other considerations. If avoidance is unnecessary or infeasible, other appropriate measures (e.g. data recovery, excavation) shall be instituted. Work may proceed on other parts of the project site while measures for the cultural resources are implemented.

In the event of data recovery of archaeological resources, the project applicant shall submit an Archaeological Research Design and Treatment Plan (ARDTP) prepared by a qualified archaeologist for review and approval by the City. The ARDTP is required to identify how the proposed data recovery program would preserve the significant information the archaeological resource is expected to contain. The ARDTP shall identify the scientific/historic research questions applicable to the expected data classes would address the applicable research questions. The ARDTP shall include the analysis and specify the curation and storage methods. Data recovery, in general, shall be limited to the portions of the archaeological resource that could be impacted by the proposed project. Destructive data recovery methods shall not be applied to portions of the archaeological resources if nondestructive methods are practicable. Because the intent of the ARDTP is to save as much of the archaeological resources as possible, including moving the resource, if feasible, preparation and implementation of the ARDTP would reduce the potential adverse impact to less than significant. The project applicant shall implement the ARDTP at his/her expense.

In the event of excavation of paleontological resources, the project applicant shall submit an excavation plan prepared by a qualified paleontologist to the City for review and approval. All significant cultural materials recovered shall be subject to scientific analysis, professional museum curation, and/or a report prepared by a qualified paleontologist, as appropriate, according to current professional standards and at the expense of the project applicant.

When required: During construction.

Initial approval: N/A

Monitoring/Inspection: Bureau of Building

34. HUMAN REMAINS—DISCOVERY DURING CONSTRUCTION

Requirement: Pursuant to CEQA Guidelines section 15054.5(1), in the event that human skeletal remains are uncovered at the project site during construction activities, all work shall immediately halt and the project applicant shall notify the City and the Alameda County Coroner. If the County Coroner determines that an investigation of the cause of death is required or that the remains are Native American, all work shall cease within 50 feet of the remains until appropriate arrangements are made. In the event that the remains are Native American, the City shall contact the California Native American Heritage Commission (NAHC), pursuant to subdivision (c) of section 7050.5 of the California Health and Safety Code. If the agencies determine that avoidance is not feasible, than an alternative plan shall be prepared with specific steps and timeframe required to resume construction activities. Monitoring, data recovery, determination of significance, and avoidance measures (if applicable) shall be completely expeditiously and at the expense of the project applicant.

When required: During construction

Initial approval: N/A

Monitoring/Inspection: Bureau of Building

PREPARER QUALIFICATIONS

This memorandum was prepared by Michael Baker International Senior Architectural Historian Monte Kim, Senior Architectural Historian Aisha Fike, and Senior Archaeologist Kholood Abdo. The memo was reviewed for quality assurance by Senior Cultural Resources Manager Margo Nayar.

MONTE KIM, PHD, SENIOR ARCHITECTURAL HISTORIAN

Mr. Kim has over 20 years of professional experience inventorying, evaluating, and assessing effects on resources within the historic built environment. Mr. Kim meets the Secretary of the Interior's Professional Qualification Standards in history and architectural history and has experience in all phases of regulatory compliance under Section 106 of the NHPA, Section 4(f) of the Department of Transportation Act, National Environmental Policy Act, and CEQA.

AISHA FIKE, SENIOR ARCHITECTURAL HISTORIAN

Ms. Fike is an architectural historian with 12 years of experience in cultural resource management and is skilled in conducting historical research and completing field inventories and site assessments. Ms. Fike has completed numerous documents in support of a range of projects requiring compliance with CEQA. As the lead architectural historian on multiple California-based development, redevelopment, and transportation projects, she has acquired expertise in assessing

MICHAEL BAKER INTERNATIONAL
RE: MEMORANDUM REPORT FOR THE 2022 INN AT COLISEUM PROJECT, CITY OF OAKLAND,
CALIFORNIA

both direct and indirect impacts to historic resources and in preparing Historic Resource Inventory and Evaluation Reports, California DPR 523 forms, cultural resources sections of environmental documents, finding of effects documents, and Secretary of the Interior analysis. Ms. Fike meets the Secretary of the Interior's Professional Qualifications Standards for history and architectural history.

KHOLOOD ABDO, SENIOR ARCHAEOLOGIST

Ms. Abdo is an archaeologist with 26 years of experience in prehistoric and historical archaeology and cultural resources management. Her experience includes writing technical reports, including NHPA, National Environmental Policy Act, and CEQA compliance documents. She has supervised and managed all phases of archaeological fieldwork, including survey, Phase II testing and evaluations and data recovery, and monitoring at sites throughout California and Arizona since 1999. In her current capacity as senior archaeologist and laboratory director, Ms. Abdo oversees the processing, analysis, and curation of artifact collections from both prehistoric and historical sites. Her cultural material analysis experience includes flaked and ground stone lithics, glass, prehistoric and historic ceramic, and bead analysis. Ms. Abdo meets the Secretary of the Interior's Professional Qualification Standards for prehistory and historical archaeology.

MARGO NAYYAR, SENIOR CULTURAL RESOURCES MANAGER

Senior Cultural Resources Manager Margo Nayyar provided QA/QC review of this report. Ms. Nayyar is an architectural historian with 12 years of cultural management experience in California, Nevada, Arizona, Idaho, Texas and Mississippi. Her experience includes built environment surveys, evaluation of historic-era resources using guidelines outlined in the National and California Registers, and preparation of cultural resources technical studies pursuant to CEQA and Section 106 of the NHPA, including identification studies, finding of effect documents, memorandum of agreements, programmatic agreements, and Historic American Buildings Survey/Historic American Engineering Record/Historic American Landscapes Survey mitigation documentation. She prepares cultural resources environmental document sections for CEQA environmental documents including infill checklists, initial studies, and environmental impact reports, as well as National Environmental Policy Act environmental documents, including environmental impact statements and environmental assessments. Ms. Nayyar meets the Secretary of the Interior's Professional Qualification Standards for history and architectural history.

Sincerely,

MICHAEL BAKER INTERNATIONAL

*Notes:

No Resources within project area. One Archaeological Resource in buffer, PDF provided. PDFs for Non-Archaeological Resources in buffer NOT requested.

Please forward a copy of any resulting reports from this project to the office as soon as possible. Due to the sensitive nature of archaeological site location data, we ask that you do not include resource location maps and resource location descriptions in your report if the report is for public distribution. If you have any questions regarding the results presented herein, please contact the office at the phone number listed above.

The provision of CHRIS Data via this records search response does not in any way constitute public disclosure of records otherwise exempt from disclosure under the California Public Records Act or any other law, including, but not limited to, records related to archeological site information maintained by or on behalf of, or in the possession of, the State of California, Department of Parks and Recreation, State Historic Preservation Officer, Office of Historic Preservation, or the State Historical Resources Commission.

Due to processing delays and other factors, not all of the historical resource reports and resource records that have been submitted to the Office of Historic Preservation are available via this records search. Additional information may be available through the federal, state, and local agencies that produced or paid for historical resource management work in the search area. Additionally, Native American tribes have historical resource information not in the CHRIS Inventory, and you should contact the California Native American Heritage Commission for information on local/regional tribal contacts.

Should you require any additional information for the above referenced project, reference the record search number listed above when making inquiries. Requests made after initial invoicing will result in the preparation of a separate invoice.

Thank you for using the California Historical Resources Information System (CHRIS).

Sincerely,

Annette Neal

RECEIVED

MAR 20 1969

OAKLAND CITY COUNCIL

RESOLUTION NO. 50085 C. M. S.

INTRODUCED BY COUNCILMAN

Coliseum Way

RECEIVED
MAY 21 1969
Building Division

RESOLUTION GRANTING ON CONDITIONS A MAJOR CONDITIONAL USE PERMIT TO OPERATE A TRUCK SALES AND SERVICE YARD ON PROPERTY SOUTH OF AND ADJACENT TO 4801 COLISEUM WAY IN THE M-40 HEAVY INDUSTRIAL ZONE.

WHEREAS, on or about January 27, 1969, JAMES S. YONAH applied to the City Planning Commission for a Major Conditional Use Permit to operate a truck sales and service yard on property south of and adjacent to 4801 Coliseum Way in the M-40 Heavy Industrial Zone; and

WHEREAS, a notice of public hearing upon said application was duly made and given, and a public hearing thereon was held on February 5, 1969; and

WHEREAS, on February 19, 1969, the City Planning Commission denied said application for said Major Conditional Use Permit; and

WHEREAS, thereafter, and within the time provided therefor, an appeal was filed by applicant from said decision of the Planning Commission, and on March 11, 1969, review of said decision came on for hearing before the City Council; and

WHEREAS, the Council did on March 11, 1969, reverse the decision of the City Planning Commission and referred the matter to the Planning Department staff to submit recommendations to the Council for conditions to be attached to the Conditional Use Permit; and

WHEREAS, the Planning Department staff has now submitted said recommendations and the matter has come on again for hearing before the City Council, now, therefore, be it

RESOLVED: That the City Council, having heard all of the evidence adduced on behalf of all interested parties, finds and determines:

(a) That the location, size, design and operating characteristics of the proposed development will be compatible with and will not adversely affect the livability or appropriate development of abutting properties and the surrounding neighborhood.

(b) That the location, design and site-planning of the proposed development will provide a convenient and functional living, working, shopping, or civic environment and will be as attractive as the nature of the use and its location and setting warrant.

(c) That the proposed development will enhance the successful operation of the

surrounding area in its basic community functions and will provide an essential service to the community or region;

and be it

FURTHER RESOLVED: That the decision of the City Planning Commission denying the Major Conditional Use Permit be, and the same hereby is, reversed; and said application is granted on the following conditions:

1. That parking sites and buildings be located and constructed according to the plans and building elevations submitted January 27, 1969.
2. That the 6 foot high Cyclone fencing indicated on the plans as surrounding the site be provided with redwood slats or other screening devices acceptable to the Director of City Planning.
3. That the color, texture and architectural design of the exterior walls of the building and screen walls be approved by the Director of City Planning prior to the issuance of any building permits, with particular attention given to the wall along the southern property line.
4. That the front fence be set back five feet from the property line and the setback area landscaped.
5. That all planter boxes indicated on the plans be landscaped.
6. That all landscaping be installed prior to the issuance of occupancy permits in accordance with a plan prepared by a registered landscape architect and approved by the Director of City Planning prior to issuance of building permits, such landscaping to be permanently maintained.
7. That street trees be provided in accordance with a plan to be prepared by the applicant and approved by the Director Parks prior to the issuance of any occupancy permits.
8. That the design and location, including distribution diagrams, of all exterior illumination be approved by the Director of City Planning prior to the issuance of any Certificate of Occupancy.
9. That the permit shall become effective upon satisfactory compliance with the above conditions and failure to comply with such conditions by March 31, 1970, shall invalidate this approval.

I certify that the foregoing is a full, true and correct copy of a Resolution passed by the City Council of the City of Oakland, Calif., on MAR 20 1969
GLADYS H. MURPHY, City Clerk

REQUEST TO INSPECT PUBLIC RECORDS FOR _____
(address)
Oakland, California

I wish to examine the _____ (indicate type) records
which may exist in the City of Oakland, Building and Housing Department,
pertaining to the above address and which records are subject to inspection
under the California Public Records Act.

My purpose for making this request is to check the
city code

I wish to examine the records on: 7-20-76 1970
(date)

Patel C.B.
(please print name)

Patel C.B.

1616 67th St.
(address)

S.F.
(City, State)

Phone: 521-9162

The City of Oakland, Building and Housing Department's public records are
available for inspection between the hours of 9:00 a.m., and 4:00 p.m.
each working day.

Due to our operating procedures, the above are the only times when records
will be available for inspection. If copies are requested, a charge of
\$1.00 per page will be made. This Department will make public records
available for your inspection on the date requested or at the earliest
possible date. Please enclose a self-addressed and stamped envelope, so
we may notify you that the record is available subject to inspection under
the California Public Records Act and when the records can be made avail-
able.

I have examined the file on _____

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7004, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law Chapter 9 (commencing with Sec. 7000) of Division 3 of the Business and Professions Code, or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars (\$500).):

I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure if not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.)

I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.)

I am exempt under Sec. _____ B.P.C. for this reason _____

Good afternoon,

Michael Baker International is conducting a cultural resources investigation for the Inn at the Coliseum HUD Housing Development project in Oakland, California. Please see the attached letter and maps for additional details about the project. This is not a request for research; We are conducting outreach to you, the local historical society, to ask if you have any information or concerns about historic properties/cultural resources within the project area. If you have any questions or comments, please contact Michael Baker International using the contact information in the attached letter.

Thank you for your time,

Epifanio Figueroa, RA | Archaeologist | he/him
9755 Clairemont Mesa Boulevard | San Diego, CA 92124-1333 | [O] 858-614-5086

P.O. BOX 13145,
OAKLAND, CALIFORNIA 94661
VIA EMAIL: INFO@ALAMEDACOUNTYHISTORY.ORG

RE: INN AT THE COLISEUM PROJECT, OAKLAND, ALAMEDA COUNTY, CALIFORNIA

To Whom It May Concern:

Michael Baker International is conducting a cultural resources study in support of the Inn at the Coliseum Project (project) in Oakland, California. The project site is located at 4801 Coliseum Way project in Oakland, California. Two existing 2-story motel buildings on the site will be converted into 37 studio apartments, with an approximate 1,000 square-foot residential services area. An additional outdoor use area for recreation purposes is planned for a portion of the parking lot area between the two existing buildings. An outdoor use area exists in the northwest corner of the site. An additional office structure is planned for the southeast end of the existing surface parking lot. Interstate 880 (I-880) runs along the southwest side of the site. The Union Pacific Railroad (UPRR) tracks are located approximately 700 feet northeast of the site, and other rail lines in the area are more than 1,000 feet away from the site. (see **Attachment 1**). The proposed project would create a 37-unit HUD-supported affordable housing development project. The project is subject to the National Environmental Policy Act (NEPA).

Please notify us if your organization has any information or concerns about historical resources on the project site. This is not a request for research; it is solely a request for public input related to any concerns that the Alameda County Historical Society may have. If you have any questions or comments, please contact me at your earliest convenience at epifanio.figueroa@mbakerintl.com or 858-614-5086.

Sincerely,

Epifanio Figueroa
Archeologist, RA

Good morning NAHC staff,

Please disregard the previous Sacred Lands Files search request sent earlier this morning, and instead use this one in its place.

Attached, please find our updated Sacred Lands File search request and a map for the Inn at the Coliseum Project, located in Oakland, California.

Please let me know if you need any additional information or have any questions about this request.

Thank you, and have a wonderful day,

NATIVE AMERICAN HERITAGE COMMISSION

July 29, 2022

Epifanio Figueroa
Michael Baker International

Via Email to: Epifanio.Figueroa@mbakerintl.com

Re: Inn at the Coliseum Project, Alameda County

Dear Epifanio Figueroa:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Cody.Campagne@nahc.ca.gov.

Sincerely,

Cody Campagne
Cultural Resources Analyst

Re: Section 106 Consultation for the Inn at the Coliseum Project, City of Oakland, Alameda County, California

Dear Chairwoman Arellano,

The Oakland Housing Authority is considering funding the project listed above with federal funds from the U.S. Department of Housing and Urban Development (HUD). Under regulation 24 CFR 58.4, the City has assumed HUD's environmental review responsibilities for the project, including tribal consultation related to historic properties, on behalf of HUD. Historic properties include archeological sites, burial grounds, sacred landscapes or features, ceremonial areas, traditional cultural places and landscapes, plant and animal communities, and buildings and structures with significant tribal association.

The project is located at 4801 Coliseum Way in Oakland, California, as depicted in the accompanying location figures (see attachments). The project proposes interior and exterior improvements to the two existing two-story motel buildings to convert them to affordable apartment housing. An outdoor seating area is proposed between the two buildings. An additional office structure is planned for construction at the southeast end of the existing surface parking lot. Ground disturbance would be limited to the surface preparation of the office foundation and minor trenching for utility connections on previously disturbed land. The area of potential effects (APE) is coincident with the legal parcel boundary of APN 034-2295-016-05, as depicted in Figure 3.

We are requesting any information that you may have regarding traditional cultural properties, values, or other cultural resources within the APE so that this information can be incorporated into the planning phase of the project. To meet the project time frames, please let us know of your interest to consult within 30 day of this letter. Your comments and concerns are important to us and we look forward to hearing from you. Please contact me at bmarvin@oaklandca.gov or (510) 238-6879.

Sincerely,

Re: Section 106 Consultation for the Inn at the Coliseum Project, City of Oakland, Alameda County, California

Dear Chairperson Gould,

The Oakland Housing Authority is considering funding the project listed above with federal funds from the U.S. Department of Housing and Urban Development (HUD). Under regulation 24 CFR 58.4, the City has assumed HUD's environmental review responsibilities for the project, including tribal consultation related to historic properties, on behalf of HUD. Historic properties include archeological sites, burial grounds, sacred landscapes or features, ceremonial areas, traditional cultural places and landscapes, plant and animal communities, and buildings and structures with significant tribal association.

The project is located at 4801 Coliseum Way in Oakland, California, as depicted in the accompanying location figures (see attachments). The project proposes interior and exterior improvements to the two existing two-story motel buildings to convert them to affordable apartment housing. An outdoor seating area is proposed between the two buildings. An additional office structure is planned for construction at the southeast end of the existing surface parking lot. Ground disturbance would be limited to the surface preparation of the office foundation and minor trenching for utility connections on previously disturbed land. The area of potential effects (APE) is coincident with the legal parcel boundary of APN 034-2295-016-05, as depicted in Figure 3.

We are requesting any information that you may have regarding traditional cultural properties, values, or other cultural resources within the APE so that this information can be incorporated into the planning phase of the project. To meet the project time frames, please let us know of your interest to consult within 30 day of this letter. Your comments and concerns are important to us and we look forward to hearing from you. Please contact me at bmarvin@oaklandca.gov or (510) 238-6879.

Sincerely,

Good morning Tribal Chair Gould,

Thank you for your email. A records search of the Native American Heritage Commission Sacred Lands File for the project area was completed on July 29, 2022, and the results were negative. Attached is the letter that we received from the Commission. Please let me know if you have any additional questions or concerns.

Thank you,

Monte Kim, PhD | Technical Manager - Cultural Resources | Pronouns: he/him

Hello,

Thank you for your email. Can you please send additional information regarding the site? Has there been a Sacred Lands File search at the Native American Heritage Commission with Negative or Positive findings? Once this information is available, we can move forward with possible consultation.

'Uni (Respectfully),

Corrina Gould, Tribal Chair

NATIVE AMERICAN HERITAGE COMMISSION

July 29, 2022

Epifanio Figueroa
Michael Baker International

Via Email to: Epifanio.Figueroa@mbakerintl.com

Re: Inn at the Coliseum Project, Alameda County

Dear Epifanio Figueroa:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Cody.Campagne@nahc.ca.gov.

Sincerely,

Cody Campagne
Cultural Resources Analyst

Thank you for reaching out to the Tribe about the proposed project. At this time the Tribe has no further information to supply about the proposed site for this plan. As always we encourage developers in our traditional territories to remain cognizant of the facts that our tribal people lived all over the Bay Area and because of colonization and genocidal practices that reached into the late 19th century and early 20th Century, it is not always possible to know for certain if you may find cultural resources or burials at sites where you anticipate ground disturbance. The Tribe wishes to be contacted if there are any findings.

Re: Section 106 Consultation for the Inn at the Coliseum Project, City of Oakland, Alameda County, California

Dear Timothy Perez,

The Oakland Housing Authority is considering funding the project listed above with federal funds from the U.S. Department of Housing and Urban Development (HUD). Under regulation 24 CFR 58.4, the City has assumed HUD's environmental review responsibilities for the project, including tribal consultation related to historic properties, on behalf of HUD. Historic properties include archeological sites, burial grounds, sacred landscapes or features, ceremonial areas, traditional cultural places and landscapes, plant and animal communities, and buildings and structures with significant tribal association.

The project is located at 4801 Coliseum Way in Oakland, California, as depicted in the accompanying location figures (see attachments). The project proposes interior and exterior improvements to the two existing two-story motel buildings to convert them to affordable apartment housing. An outdoor seating area is proposed between the two buildings. An additional office structure is planned for construction at the southeast end of the existing surface parking lot. Ground disturbance would be limited to the surface preparation of the office foundation and minor trenching for utility connections on previously disturbed land. The area of potential effects (APE) is coincident with the legal parcel boundary of APN 034-2295-016-05, as depicted in Figure 3.

We are requesting any information that you may have regarding traditional cultural properties, values, or other cultural resources within the APE so that this information can be incorporated into the planning phase of the project. To meet the project time frames, please let us know of your interest to consult within 30 day of this letter. Your comments and concerns are important to us and we look forward to hearing from you. Please contact me at bmarvin@oaklandca.gov or (510) 238-6879.

Sincerely,

e. Other Locational Data: APN 034-2295-016-05

***P3a. Description:**

The subject property at 4801 Coliseum Way is in the Oakland Coliseum neighborhood, an industrial area between the Nimitz Freeway (Interstate 880, East Shore Freeway) to the west and the Southern Pacific Railroad tracks to the east. Built ca. 1955 as a motel complex, the property features an interior courtyard, an asphalt-paved parking area, and two rectangular-shaped buildings at the east and west ends of the parcel. The driveway entrance to the complex is at the northeast corner of the property along Coliseum Way (**Photograph 1**). Both buildings are of wood-frame construction, sit on a concrete slab foundation, and capped with a hip roof with clay tile cladding and enclosed rafters. The exterior walls are sheathed in painted cementitious stucco. Each building contains two rows of motel room entry doors and windows along the interior elevations facing the courtyard and parking area. The second-story balcony displays quatrefoil motifs along the concrete knee wall and is supported with two rows of square concrete columns. Fenestration consists of a regular arrangement of replacement vinyl-frame, horizontally sliding windows and replacement wood-paneled doors. The main east building facing Coliseum Way features a one-story gable office wing with an exterior fountain and a semi-circular pedestrian path leading to the office entry. At each end of the building there is a two-story, front-facing concrete staircase sheltered beneath a concrete and clay tile awning (**Photograph 2**). The office entry features a glazed door that faces the driveway (**Photograph 3**). The east building also has a maintenance and storage shed attached to the south wall. The stairs on the west building are side facing and oriented parallel to the front façade (**Photograph 4**). The east elevation of the east building and the west elevation of the west building display flush, stucco-clad walls with in-filled quatrefoil openings that have been altered with the removal of the original glass windows (**Photograph 5**). The center of the courtyard features an oval-shaped driveway separator with shaped trees. A rectangular metal sign on a concrete column announces the name of the business at the driveway entry along Coliseum Way, while another sign on a tall circular metal post south of the west building is visible to passing travelers on the freeway.

BUILDING, STRUCTURE, AND OBJECT RECORD

- B1. Historic Name:** Rancho del Rey Motel
- B2. Common Name:** Inn by the Coliseum
- B3. Original Use:** Motel
- B4. Present Use:** Motel
- *B5. Architectural Style:** Ranch/Altered
- *B6. Construction History:**

Both buildings on the property were constructed ca. 1955 (NETR 2022: 1946, 1958; Sanborn Map Company 1952; Oakland Tribune 1955). Sometime between the 1970s and 1990s, the wood features—such as the wood siding, second-story wood balcony railing, columns and stairs—as well as the stone siding were replaced with concrete on both buildings (Ancestry 1960; see **Figure 3**). Further changes were made during a 1990s renovation, which consisted of window replacements with vinyl frames, motel unit door replacements, concrete and clay tile awning shelter above the stairs at the east building, eave board additions to the roof enclosing the exposed rafters, and new exterior paint with quatrefoil motifs. A wheelchair-accessible concrete ramp with metal railing was added at the front office entrance on the east building. All windows on east wall of the east building facing Coliseum Way and west wall of the west building facing the freeway were removed and the openings filled in and replastered. Decorative pilasters and arches were added to the site wall on the north and east boundary of the parcel. Palm trees were also planted on Coliseum Way and at the courtyard at this time (Google 2022).

- Period of Significance:** 1955 **Property Type:** Motel **Applicable Criteria:** N/A

Mid-Nineteenth Century History – Oakland

In the years during and after World War II, much of the nation experienced a period of unprecedented population growth as new residents, including veterans, inundated California seeking jobs in the emerging industries that had evolved from the wartime defense and agriculture. The mid-century period in Oakland, however, was characterized by widespread urban renewal under the Oakland Redevelopment Agency formed in 1956. The practice of urban renewal displaced many historic minority communities and spurred suburbanization. Jobs and people left Oakland in the postwar years to other areas in the east Bay Area. Between 1950 and 1970, nearly 10,000 jobs and 23,000 residents left Oakland (Mac Donald 1999; City of Oakland 1993). For the city, the postwar years of the 1950s to 1970s were one of decreased growth and increased poverty and racial division—a marked difference from the growth of the 1930s and military expansion of the 1940s. One such division was the East Shore Freeway, completed by 1960, and later the Nimitz Freeway portion that intentionally went around West Oakland. The Oakland Coliseum, constructed just south of the subject property on former San Leandro Bay marshlands, was one of the only beneficial investments in Oakland during this period of economic decline and urban divestment. Built in 1966, when unemployment was at twice the national average, the Coliseum was built in an area that did not displace any neighborhoods (Moore 2021).

***B10. Significance (continued):**

Property History

The property boundary was previously a collection of several industrial buildings associated with a roofing material company during the early 1950s (Sanborn Map Company 1952; **Figure 1**). The extant two motel buildings on the subject property were built ca. 1955 in their current massing, form, and roof configuration (**Figure 2**).

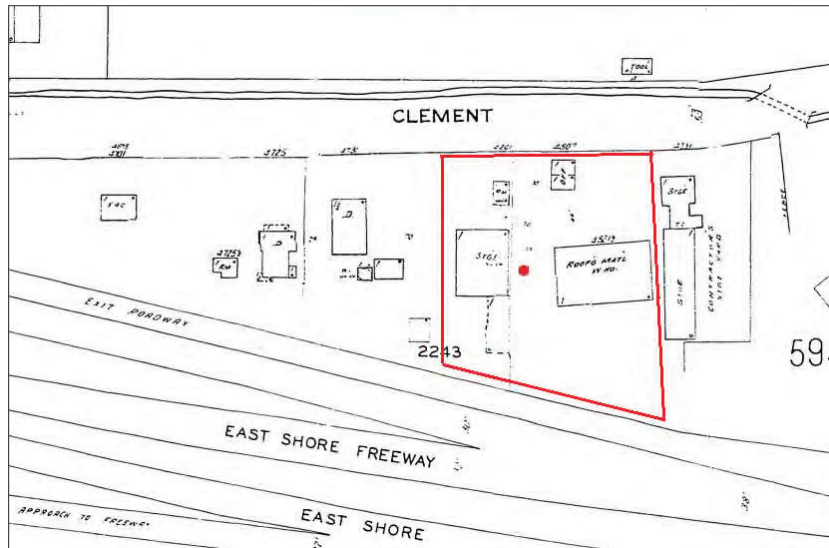

Figure 1: 1952 Sanborn Map showing area prior to construction of Rancho del Rey Motel. Subject property area shown with a red dot (Sanborn Map Company 1952).

Figure 2: 1965 aerial image of subject parcel and surrounding area showing the footprint of the two motel buildings. The large circular gas tank to the east of the property (no longer extant) appeared between 1952 and 1965. The subject parcel is shown with a red dot (UCSB 1965).

Property History (Continued)

The earliest newspaper account for the property is an ad in 1955 looking for a helper to install window decals for Rancho del Rey Motel at 4801 Clement Street (Oakland Tribune 1955). Another early account is a travel article that mentions Rancho del Rey would be named as one of 12 recognized in the “eating and lodging establishments” category of the 1961 edition of “Duncan Hines Travel Books” (Oakland Tribune 1960). Newspaper accounts of the establishment during the 1960s and 1970s consist of crime reports at or near the motel. After the completion of the Oakland Coliseum in 1966, Clement Street was changed to Coliseum Way and Rancho del Rey Motel was changed to Coliseum Motel (Oakland Tribune 1966). Research into available online sources did not reveal the original owner(s) of the motel property. The earliest record at the County Assessor, a 1970 deed, named Ora A. Traynor, John E. Traynor and Carolyn E. McElhinney as deed holders (Alameda County Assessor 1970). The 1966 name change of the hotel and the 1970 deed could indicate the Traynors may have purchased the property earlier during 1966. Not much is known about these individuals. John Emmet Traynor (1902-1983) was born in Oakland and married Ora Haws in October 1935, worked as a manager in the manufacturing industry, and came to own the property possibly by 1966. Research failed to identify additional information regarding Carolyn McElhinney (Ancestry.com 2022).

Architectural Style

The motel complex located at 4801 Coliseum Way was built in the Ranch style of architecture in 1955 during the height of the style’s popularity. The only evidence of the complex’s original style and façade is from a ca. 1960 postcard that shows the façade and composition of the west building from the property courtyard (**Figure 3**). Constructed between 1935 and 1975, the Ranch style dominated the single-family residential stock built post-World War II as the preferred style. These buildings were typically one story with horizontal façades, usually built low to the ground, with low-pitched roofs, off-center front entry, a large picture window, and a garage attached to the main façade. The side-gable types represent about 40 percent of the style constructed and consist of broad side-gable forms with long roof ridges parallel to the street and single prominent front-facing gable extension. The side-gable variants represent about 10 percent of one-story Ranch houses and are more common in rural areas (McAlester 2013). The Ranch-style was less commonly used for motels and commercial buildings. The Ranch-style motels of the 1950s typically featured large, stylized business signs at the main street entrance.

Figure 3: Postcard image ca. 1960 of Rancho del Rey Motel showing original façade and details of the main east building facing Coliseum Way (former Clement Street). (Ancestry 1960)

Architect/Builder

Research through newspapers and Ancestry.com did not reveal the architect or builder of the motel complex (Newspapers.com 2022; Ancestry.com 2022). No building permits or plans associated with the property have been digitized for public online access through the City of Oakland's website for the Planning and Building Department.

Evaluation

The following includes an evaluation of the former Rancho del Rey Motel at 4801 Coliseum Way in Oakland for its eligibility to the National Register of Historic Places (NRHP) and the California Register of Historical Resources (CRHR). This property has not previously been evaluated for either register.

NRHP Criterion A / CRHR Criterion 1 – Research did not indicate that the Rancho del Rey Motel at 4801 Coliseum Way (formerly 4801 Clement Street) is associated with events significant to the broad patterns of our history at the local, state, or national level. The motel buildings on the property were constructed ca. 1955, during a postwar tourism boom, expansion of freeways, and an expansion of the Oakland Airport (City of Oakland 1955). The 1959 Yellow Pages reflected the boom in tourism in the city in this advertisement: "Rancho del Rey Motel/AAA approved/American Express Credit Cards/Room Phones Kitchenettes 36 sound proofed units continental Breakfast/East Shore Freeway off High Street, 4801 Clement Street, 5 minutes to Bustiness District & Airport, KELlog 2-4084." By 1972, the property is known as Coliseum Motel and its street address was changed to 4801 Coliseum Way. The property is not directly or significantly associated with this period in history and is not known to have made a significant contribution to any other broad patterns of local, regional, state, or national culture and history. A newspaper account indicates it received an award in the 1961 edition of Duncan Hines travel books *Adventures in Good Eating*. These were travel books written by Duncan Hines from the 1930s to the 1950s and later published and owned by Procter and Gamble after Hines's passing in 1958 (Schedler 2021). The guides by the 1960s included thousands of national listings. A recommendation in the travel books by itself does not confer sufficient significance to the property. Therefore, the property is recommended not eligible for listing in the NRHP under Criterion A or the CRHR under Criterion 1.

NRHP Criterion B / CRHR Criterion 2 – Research failed to indicate that this property is associated with the lives of persons who significantly contributed to the local, state, or national culture and history. The original owner is unknown, and the owners listed in the 1970 deed have not made any significant contributions to history that would warrant inclusion on either register. Therefore, this property is recommended not eligible under NRHP Criterion B or CRHR Criterion 2.

NRHP Criterion C / CRHR Criterion 3 – The ca. 1955 constructed motel complex has been heavily modified and no longer reflects its original Ranch style. Any original decorative features have long been removed and the façade redesigned. The complex, therefore, is not a characteristic example of the style type nor do the buildings possess high artistic value. The property is also not a significant example of work completed by a known master architect or builder. Therefore, this property is recommended not eligible for the NRHP under Criterion C or CRHR under Criterion 3.

NRHP Criterion D / CRHR Criterion 4 – The property is not likely to yield valuable information which will contribute to our understanding of human history because the property is not and never was the principal source of important information pertaining to significant events, people, or architectural style. Therefore, this property is recommended not eligible for listing in the NRHP under Criterion D or CRHR under Criterion 4.

Conclusion – The former Rancho del Rey Motel at 4801 Coliseum Way (formerly 4801 Clement Street) lacks sufficient significance to meet any of the criteria for listing in the NRHP and CRHR. To be eligible for listing in either register, a resource must first meet one or more of the significance criteria outlined above before a determination can be made as to whether the resource retains its historic character and is able to convey its significance. In the specific case of the property at 4801 Coliseum Way, an integrity analysis was considered immaterial because the evaluation found that the property lacked the necessary significance to warrant further analysis of its physical and historic integrity. Consequently, the evaluation determined that the former Rancho del Rey Motel is not a historic property for the purposes of Section 106 of the NHPA per 36 Code of Federal Regulations Section 60.4, nor is it a historical resource for the purposes of CEQA as defined under Public Resources Code Section 5024.1 and California Code of Regulations Title 14, Section 15064.5(a). The City of Oakland's online Planning and Zoning database indicates that the subject property is not a Local Landmark, Heritage Property, Designated Historic Property, Potentially Designated Historic Property, or a contributor to a Local Historic District. An OHP Status Code of 6Z, "ineligible for NR, CR or Local designation through survey evaluation," is, therefore, recommended for the property.

INTRODUCTION

This report presents the results of the noise assessment completed for the 4801 Coliseum Way project in Oakland, California. Two existing 2-story motel buildings on the site will be converted into to 37 studio apartments, with an approximate 1,000 square-foot residential services area. An outdoor use area exists in the northwest corner of the site. An additional outdoor use area for recreation purposes is planned for a portion of the parking lot area between the two existing buildings. An additional office structure is planned for the southeast end of the existing surface parking lot. Interstate 880 (I-880) runs along the southwest side of the site. The Union Pacific Railroad (UPRR) tracks are located approximately 700 feet northeast of the site and other rail lines in the area are more than 1,000 feet away from the site.

The project's potential to result in adverse effects with respect to applicable National Environmental Policy Act (NEPA) guidelines is assessed in this report. The report is divided into two sections. The Setting Section provides a brief description of the fundamentals of environmental noise, summarizes applicable regulatory criteria, and discusses the results of the ambient noise monitoring survey completed to document existing noise conditions. The NEPA Noise Assessment Section evaluates noise effects resulting from the project. Based on the results of the analysis, no additional noise abatement would be required to meet the U.S. Department of Housing and Urban Development (HUD) standards in relation to interior noise levels. The projects two outdoor-use areas would be in the "unacceptable" and "normally unacceptable" ranges of the exterior noise standards for new housing construction.

SETTING

Fundamentals of Environmental Noise

Noise may be defined as unwanted sound. Noise is usually objectionable because it is disturbing or annoying. The objectionable nature of sound could be caused by its *pitch* or its *loudness*. *Pitch* is the height or depth of a tone or sound, depending on the relative rapidity (*frequency*) of the vibrations by which it is produced. Higher pitched signals sound louder to humans than sounds with a lower pitch. *Loudness* is intensity of sound waves combined with the reception characteristics of the ear. Intensity may be compared with the height of an ocean wave in that it is a measure of the amplitude of the sound wave.

In addition to the concepts of pitch and loudness, there are several noise measurement scales which are used to describe noise in a particular location. A *decibel (dB)* is a unit of measurement which indicates the relative amplitude of a sound. The zero on the decibel scale is based on the lowest sound level that the healthy, unimpaired human ear can detect. Sound levels in decibels are calculated on a logarithmic basis. An increase of 10 decibels represents a ten-fold increase in acoustic energy, while 20 decibels is 100 times more intense, 30 decibels is 1,000 times more intense, etc. There is a relationship between the subjective noisiness or loudness of a sound and its intensity. Each 10 decibel increase in sound level is perceived as approximately a doubling of loudness over a fairly wide range of intensities. Technical terms are defined in Table 1.

There are several methods of characterizing sound. The most common in California is the *A-weighted sound level (dBA)*. This scale gives greater weight to the frequencies of sound to which the human ear is most sensitive. Representative outdoor and indoor noise levels in units of dBA are shown in Table 2. Because sound levels can vary markedly over a short period of time, a method for describing either the average character of the sound or the statistical behavior of the variations must be utilized. Most commonly, environmental sounds are described in terms of an average level that has the same acoustical energy as the summation of all the time-varying events. This *energy-equivalent sound/noise* descriptor is called L_{eq} . The most common averaging period is hourly, but L_{eq} can describe any series of noise events of arbitrary duration.

The scientific instrument used to measure noise is the *sound level meter*. Sound level meters can accurately measure environmental noise levels to within about plus or minus 1 dBA. Various computer models are used to predict environmental noise levels from sources, such as roadways and airports. The accuracy of the predicted models depends upon the distance the receptor is from the noise source. Close to the noise source, the models are accurate to within about plus or minus 1 to 2 dBA.

Since the sensitivity to noise increases during the evening and at night -- because excessive noise interferes with the ability to sleep -- 24-hour descriptors have been developed that incorporate artificial noise penalties added to quiet-time noise events. The *Community Noise Equivalent Level (CNEL)* is a measure of the cumulative noise exposure in a community, with a 5 dB penalty added to evening (7:00 pm - 10:00 pm) and a 10 dB addition to nocturnal (10:00 pm - 7:00 am) noise levels. The *Day/Night Average Sound Level (L_{dn} or DNL)* is essentially the same as CNEL, with the exception that the evening time period is dropped and all occurrences during this three-hour period are grouped into the daytime period.

TABLE 1 Definition of Acoustical Terms Used in this Report

Term	Definition
Decibel, dB	A unit describing, the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure. The reference pressure for air is 20 micro Pascals.
Sound Pressure Level	Sound pressure is the sound force per unit area, usually expressed in micro Pascals (or 20 micro Newtons per square meter), where 1 Pascal is the pressure resulting from a force of 1 Newton exerted over an area of 1 square meter. The sound pressure level is expressed in decibels as 20 times the logarithm to the base 10 of the ratio between the pressures exerted by the sound to a reference sound pressure (e.g., 20 micro Pascals). Sound pressure level is the quantity that is directly measured by a sound level meter.
Frequency, Hz	The number of complete pressure fluctuations per second above and below atmospheric pressure. Normal human hearing is between 20 Hz and 20,000 Hz. Infrasonic sound are below 20 Hz and Ultrasonic sounds are above 20,000 Hz.
A-Weighted Sound Level, dBA	The sound pressure level in decibels as measured on a sound level meter using the A-weighting filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise.
Equivalent Noise Level, L_{eq}	The average A-weighted noise level during the measurement period.
L_{max} , L_{min}	The maximum and minimum A-weighted noise level during the measurement period.
L_{01} , L_{10} , L_{50} , L_{90}	The A-weighted noise levels that are exceeded 1%, 10%, 50%, and 90% of the time during the measurement period.
Day/Night Noise Level, L_{dn} or DNL	The average A-weighted noise level during a 24-hour day, obtained after addition of 10 decibels to levels measured in the night between 10:00 pm and 7:00 am.
Community Noise Equivalent Level, CNEL	The average A-weighted noise level during a 24-hour day, obtained after addition of 5 decibels in the evening from 7:00 pm to 10:00 pm and after addition of 10 decibels to sound levels measured in the night between 10:00 pm and 7:00 am.
Ambient Noise Level	The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location.
Intrusive	That noise which intrudes over and above the existing ambient noise at a given location. The relative intrusiveness of a sound depends upon its amplitude, duration, frequency, and time of occurrence and tonal or informational content as well as the prevailing ambient noise level.

TABLE 2 Typical Noise Levels in the Environment

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
	110 dBA	Rock band
Jet fly-over at 1,000 feet		
	100 dBA	
Gas lawn mower at 3 feet		
	90 dBA	
Diesel truck at 50 feet at 50 mph		Food blender at 3 feet
	80 dBA	Garbage disposal at 3 feet
Noisy urban area, daytime		
Gas lawn mower, 100 feet	70 dBA	Vacuum cleaner at 10 feet
Commercial area		Normal speech at 3 feet
Heavy traffic at 300 feet	60 dBA	
		Large business office
Quiet urban daytime	50 dBA	Dishwasher in next room
Quiet urban nighttime	40 dBA	Theater, large conference room
Quiet suburban nighttime		
	30 dBA	Library
Quiet rural nighttime		Bedroom at night, concert hall (background)
	20 dBA	
	10 dBA	Broadcast/recording studio
	0 dBA	

Source: Technical Noise Supplement (TeNS), California Department of Transportation, September 2013.

Regulatory Background

HUD environmental noise regulations are set forth in 24CFR Part 51B (Code of Federal Regulations). The following exterior noise standards for new housing construction would be applicable to this project:

- 65 dBA DNL or less – acceptable.
- Exceeding 65 dBA DNL but not exceeding 75 dBA DNL – normally unacceptable (appropriate sound attenuation measures must provide an additional 5 decibels of attenuation over that typically provided by standard construction in the 65 dBA DNL to 70 dBA DNL zone; 10 decibels additional attenuation in the 70 dBA DNL to 75 dBA DNL zone).
- Exceeding 75 dBA DNL – unacceptable.

These noise standards also apply, “... at a location 2 meters from the building housing noise sensitive activities in the direction of the predominant noise source...” and “...at other locations where it is determined that quiet outdoor space is required in an area ancillary to the principal use on the site.”

A goal of 45 dBA DNL is set forth for interior noise levels and attenuation requirements are geared toward achieving that goal. It is assumed that with standard construction any building will provide sufficient attenuation to achieve an interior level of 45 dBA DNL or less if the exterior level is 65 dBA DNL or less. Where exterior noise levels range from 65 dBA DNL to 70 dBA DNL, the project must provide a minimum of 25 decibels of attenuation, and a minimum of 30 decibels of attenuation is required in the 70 dBA DNL to 75 dBA DNL zone.

Existing Noise Environment

Figure 1 shows the site, adjacent land uses, and transportation noise sources in the project vicinity. The site is bordered by industrial uses to the northwest and southeast. A mix of industrial and commercial land-uses exist to the northeast across Coliseum Way. I-880 runs along the southwest side of the site and is mostly obscured by the existing southwest building, as well as from a ten-foot sound wall. An approximately three-foot gap between the southwest building and the sound wall allows for some I-880 traffic noise to permeate the site. The UPRR tracks are located approximately 700 feet northeast of the site, and associated train horns are audible on site at times. I-880 traffic noise is the primary source of noise affecting the site, with local traffic along Coliseum Way also contributing to the noise environment at the project site. No industrial noise sources are audible over the traffic noise.

FIGURE 1 Aerial Image Showing Noise Monitoring Locations

Source: Google Earth, July 2022.

A noise monitoring survey was completed by Illingworth & Rodkin, Inc. (I&R) between Tuesday, July 12, 2022, and Thursday, July 14, 2022, to establish existing noise levels at the site. The noise survey consisted of two long-term (LT-1 and LT-2) and four short-term (ST-1 through ST-4) noise measurements. All measurement locations are shown in Figure 1. The noise measurements were conducted with Larson Davis Laboratories (LDL) Model LxT1 Type I Sound Level Meters fitted with ½-inch pre-polarized condenser microphones and windscreens. The meters were calibrated with a Larson Davis precision acoustic calibrator prior to and following the measurement survey. Weather conditions were good for conducting noise measurements during the survey.

Long-term noise measurement LT-1 was conducted approximately 35 feet southwest of the centerline of Coliseum Way for the purpose of documenting typical noise levels at the existing northeast building façade along Coliseum Way. Hourly average noise levels at LT-1 typically ranged from 66 to 71 dBA L_{eq} during daytime hours (7:00 a.m. and 10:00 p.m.) and from 59 to 69 dBA L_{eq} during nighttime hours (10:00 p.m. and 7:00 a.m.). The day-night average noise level was 72 dBA DNL on Wednesday, July 13, 2022.

Long-term noise measurement LT-2 was conducted approximately 130 feet northeast of the centerline of I-880 to document typical noise levels at the northwest portion of the project site closest to I-880. Hourly average noise levels at LT-2 typically ranged from 72 to 77 dBA L_{eq} during daytime hours (7:00 a.m. and 10:00 p.m.) and from 69 to 77 dBA L_{eq} during nighttime hours (10:00 p.m. and 7:00 a.m.). The day-night average noise level was 81 dBA DNL on Wednesday, July 13, 2022. The daily trends in noise levels at LT-1 and LT-2 are shown in Figures 2 through 7 below.

Short-term noise measurement ST-1 was conducted on Tuesday, July 12, 2022, between 10:10 a.m. and 10:20 a.m. to document typical noise levels expected at the rear of the southwest building, closest to I-880. This location was approximately 100 feet from the centerline of I-880, with direct line of site to the freeway traffic. I-880 traffic typically produced noise levels ranging from 74 to 85 dBA. The 10-minute L_{eq} measured at ST-1 was 79 dBA.

Short-term noise measurement ST-2 was conducted on Tuesday, July 12, 2022, between 10:20 a.m. and 10:30 a.m. to document typical noise levels expected at the center of the existing outdoor-use area in the northwest corner of the site. This location was approximately 125 feet from the centerline of I-880, with a 10-foot-tall sound wall shielding much of the freeway traffic. I-880 traffic typically produced noise levels ranging from 67 to 78 dBA. The 10-minute L_{eq} measured at ST-2 was 71 dBA.

Short-term noise measurement ST-3 was conducted on Tuesday, July 12, 2022, between 10:30 a.m. and 10:40 a.m. to document typical noise levels expected at the northeastern side of the existing building closest to I-880. This location was on the second-floor walkway of the building, approximately 135 feet from the centerline of the freeway and shielded from I-880 traffic noise by the building itself. I-880 traffic typically produced noise levels ranging from 63 to 68 dBA, while a train horn briefly produced noise levels ranging from 73 to 75 dBA. The 10-minute L_{eq} measured at ST-3 was 65 dBA.

Short-term noise measurement ST-4 was conducted on Tuesday, July 12, 2022, between 10:40 a.m. and 10:50 a.m. to document typical noise levels expected at the southwest side of the existing building that is further from I-880. This location was on the second-floor walkway of the building, approximately 240 feet from the centerline of the freeway and partially shielded from I-880 traffic noise by the other existing building and sound wall. I-880 traffic typically produced noise levels ranging from 67 to 76 dBA. The 10-minute L_{eq} measured at ST-4 was 70 dBA. The short-term noise measurement results for ST-1 through ST-4 are summarized below in Table 3.

TABLE 3 Summary of Short-Term Noise Measurements (dBA) on July 12, 2022

Noise Measurement Location	Time	Measured Noise Level, dBA					
		L_{max}	$L_{(1)}$	$L_{(10)}$	$L_{(50)}$	$L_{(90)}$	L_{eq}
ST-1: ~100 feet Northeast of the Centerline I-880	10:10-10:20	85	82	80	79	77	79
ST-2: ~125 feet Northeast of the Centerline I-880	10:20-10:30	78	75	72	71	69	71
ST-3 ~135 feet Northeast of the Centerline I-880	10:30-10:40	75	71	67	65	64	65
ST-4 ~240 feet Northeast of the Centerline I-880	10:40-10:50	76	73	72	70	69	70

In addition to collecting long-term and short-term noise data, the HUD DNL Calculator (Appendix 1) and HUD Barrier Performance Module (Appendix 2) were used to estimate the existing noise exposure at the site. A traffic study was not provided for the proposed project. I-880 traffic volumes from the Caltrans Traffic Census Program were utilized for this noise study.¹ Coliseum Way traffic volumes from the City of Oakland GIS were also utilized.² U.S. Dot Crossing Inventory data from the Department of Transportation, Federal Transit Administration (FTA), as well as daily passenger train schedules were utilized to determine the number of trains and inputs to enter into the HUD DNL calculator.³ The HUD DNL calculator results assumed 12 daily passenger trains and 12 daily freight trains.

Based on the results of the HUD modeling, the existing worst-case noise exposure is at the southwest side of the existing building nearest I-880, and is 82 dBA DNL. This number accounts for the shielding of the location from Coliseum Way and UPRR noise by the existing building. This location is shown as ST-1 in Figure 1. This side of the building does not have any windows or doors facing the freeway. The northeast side of this building faces away from I-880, toward the parking lot and Coliseum Way, is more shielded, and does have windows and doors. Shown as ST-3 in Figure 1, HUD modeling calculated the existing noise exposure at this location to be 70 dBA DNL. These calculated noise levels were consistent with the on-site noise levels measured by I&R.

HUD modeling shows that the existing noise exposure at the southwest façade of the existing building along Coliseum Way is 73 dBA DNL. The measurement location on this side of the building, which faces the parking lot and I-880 and has windows and doors, is shown as ST-4 in Figure 1. The northeast side of this building, which does have windows and doors, faces away from I-880 and toward Coliseum Way. Shown as LT-1 in Figure 1, HUD modeling calculated the existing noise exposure at this location to be 72 dBA DNL. These calculated noise levels were also consistent with the on-site noise levels measured by I&R.

The existing outdoor use area in the northwest corner of the site was modeled in the HUD DNL Calculator, resulting in a calculated noise exposure level of 75 dBA DNL. This location is shown as ST-2 in Figure 1. The project description states that an additional outdoor use area will be constructed in the existing parking lot area, but its location is not shown in the most recent plans. To modeling this location in the HUD calculator, it was assumed that the center of the proposed outdoor use area will be in the center of the existing parking lot between the two existing buildings. This receptor location is shown as R-1 in Figure 1. HUD DNL Calculator and Barrier Performance Module modeling calculated the existing noise exposure at this location to be 68 dBA DNL. These calculated noise levels were further consistent with the on-site noise levels measured by I&R.

The above noise exposure levels were calculated in the HUD DNL Calculator in conjunction with the HUD Barrier Performance Model. Existing on-site buildings and sound walls were taken into consideration during the calculations and the HUD Barrier Performance Model was utilized in calculating the final noise exposure levels stated above. The HUD Barrier Performance Model calculations are shown below in Appendix 2.

NOISE ASSESSMENT

Significance Criteria

An adverse effect would result if noise levels at the project site would exceed HUD Guidelines for acceptability. Exterior noise levels exceeding 65 dBA DNL or interior noise levels exceeding 45 dBA DNL would exceed HUD's noise compatibility criteria.

Future Exterior Noise Environment

Pursuant to the HUD Guidelines, the noise exposure at least 10 years in the future must be considered in addition to the existing noise exposure. Under future conditions, I-880 traffic is expected to continue to be the dominant noise source at the project site. A substantial increase in rail activity is not expected along with general growth throughout the City and surrounding region. A one-percent increase in vehicle traffic each year was assumed in estimating future traffic volumes. Based on future traffic volume estimates, the future noise environment on the project site is expected to increase up to 1 dBA DNL or less throughout the site. According to the HUD modeling the future worst-case noise exposure will be 82 dBA DNL at the southwest façade of the proposed building nearest I-880. The on-site noise measurements correlated well with the HUD predictions.

The future noise exposure will remain at 82 dBA DNL on the southwest side of the existing building closest to I-880. The northeast side of this building will remain at 70 dBA DNL in the future. The southwest side of the building along Coliseum Way will remain at 73 dBA DNL, and the northeast side of this building, adjacent to Coliseum Way, will also remain at 72 dBA DNL in the future.

Noise levels at the two outdoor use areas will increase by approximately 1 dBA DNL in the future. The existing outdoor use area in the northwest corner of the site will increase from 75 to 76 dBA DNL. The proposed outdoor use area in the center of the existing parking lot will increase from 68 to 69 dBA DNL in the future. The predicted future exterior noise level at the existing outdoor-use area would be in HUD's "unacceptable" range of greater than 75 dBA DNL. The predicted future exterior noise level at the proposed new outdoor-use area would be within HUD's "normally unacceptable" range of 65 to 75 dBA DNL, and appropriate sound attenuation measures would need to provide an additional 5 decibels of attenuation over what is typically provided by standard construction. Existing construction was calculated in the HUD Barrier Performance Module to provide approximately 10 decibels of attenuation at this location.

Future Interior Noise Environment

According to the HUD modeling, the back side of residential units along the southwest façade of the existing building nearest to I-880 would be exposed to future worst-case exterior noise levels reaching 82 dBA DNL. The predicted exterior noise level would be in HUD's "unacceptable" threshold of 75 dBA DNL or greater, and thirty-seven (37) decibels of attenuation would be required to achieve acceptable interior noise levels. HUD calculations show that the northeast side of this building would be exposed to future exterior noise levels up to 70 dBA DNL, and twenty-five (25) decibels of attenuation would be required to achieve acceptable interior noise levels. Future noise levels would be 73 dBA DNL along the southwest side of the other existing building, and twenty-eight (28) decibels of attenuation would be required to achieve acceptable interior noise levels. Future noise levels are calculated to be 72 dBA DNL along the northeast side of this

building, adjacent to Coliseum Way, and twenty-seven (27) decibels of attenuation would be required to achieve acceptable interior noise levels. See HUD Figure 19 in Appendix 3 for a description of noise attenuation measures related to acoustical construction.

Measurements were taken of the existing wall, window, and door dimensions at the site for the purpose of calculating noise transmission loss of the existing building façades. It is assumed that the existing buildings are built with standard construction materials. Transmission loss calculations show that the existing construction provides 40 dBA of outdoor to indoor noise reduction for the sides of the existing buildings that do not have windows or doors, and 29 dBA of outdoor to indoor noise reduction for the sides of the existing buildings that do have windows and doors. Interior noise levels in the southeast building closest to I-880 will be between 41 and 42 dBA DNL. Interior noise levels in the northeast building closest to Coliseum Way will be between 32 and 44 dBA DNL. Interior noise levels in both buildings will be below the 45 dBA DNL threshold when doors and windows are closed. Forced air mechanical ventilation systems are provided so that windows and doors can be kept closed at the occupant's discretion to control noise intrusion indoors. Therefore, the existing building construction provides the required attenuation such that future interior noise levels would be maintained below 45 dBA DNL, meeting HUD's interior noise criterion, and no additional noise abatement is required.

Appendix 1 HUD DNL Calculator

DNL Calculator

The Day/Night Noise Level Calculator is an electronic assessment tool that calculates the Day/Night Noise Level (DNL) from roadway and railway traffic. For more information on using the DNL calculator, view the [Day/Night Noise Level Calculator Electronic Assessment Tool Overview](#).

Guidelines

- To display the Road and/or Rail DNL calculator(s), click on the "Add Road Source" and/or "Add Rail Source" button(s) below.
- All Road and Rail input values must be positive non-decimal numbers.
- All Road and/or Rail DNL value(s) must be calculated separately before calculating the Site DNL.
- All checkboxes that apply must be checked for vehicles and trains in the tables' headers.
- **Note #1:** Tooltips, containing field specific information, have been added in this tool and may be accessed by hovering over all the respective data fields (site identification, roadway and railway assessment, DNL calculation results, roadway and railway input variables) with the mouse.
- **Note #2:** DNL Calculator assumes roadway data is always entered.

Mitigation Options

If your site DNL is in Excess of 65 decibels, your options are:

- **No Action Alternative:** Cancel the project at this location
- **Other Reasonable Alternatives:** Choose an alternate site
- **Mitigation**
 - Contact your [Field or Regional Environmental Officer](#)
 - Increase mitigation in the building walls (only effective if no outdoor, noise sensitive areas)
 - Reconfigure the site plan to increase the distance between the noise source and noise-sensitive uses
 - Incorporate natural or man-made barriers. See *The Noise Guidebook*
 - Construct noise barrier. See the [Barrier Performance Module](#)

Appendix 2 HUD Noise Barrier Workchart

Barrier Performance Module

This module provides to the user a measure on the barrier's effectiveness on noise reduction. A list of the input/output variables and their definitions, as well as illustrations of different scenarios are provided.

Calculator

[View Day/Night Noise Level Calculator](#)

[View Descriptions of the Input/Output variables.](#)

Note: Tool tips, containing field specific information, have been added in this tool and may be accessed by hovering over the Input and Output variables with the mouse.

WARNING: If there is direct line-of-sight between the Source and the Observer, the module will report erroneous attenuation. "Direct line-of-sight" means if the 5' tall Observer can see the noise Source (cars, trucks, trains, etc.) over the Barrier (wall, hill/excavation, building, etc.), the current version of Barrier Performance Module will not accurately calculate the attenuation provided. In this instance, there is unlikely to be any appreciable attenuation.

Note: Barrier height must block the line of sight

Input/Output Variables

Input Variables

The following variables and definitions from the barrier being assessed are the input required for the web-based barrier performance module:

- H = Barrier Height
- S = Noise Source Height
- O = Observer Height (known as the receiver)
- R^1 = Distance from Noise Source to Barrier
- D^1 = Distance from the Observer to the Barrier
- α = Line of sight angle between the Observer and the Noise Source, subtended by the barrier at observer's location

Output Variables

Definitions of the output variables from the mitigation module of the Day/Night Noise Level Assessment Tools as part of the Assessment Tools for Environmental Compliance:

- h = The shortest distance from the barrier top to the line of sight from the Noise source to the Observer.
- R = Slant distance along the line of sight from the Barrier to the Noise Source
- D = Slant distance along the line of sight from the Barrier to the Observer

The "actual barrier performance for barriers of finite length" is noted on the worksheets(in the Guidebook) as **FS**.

Barrier Implementation Scenarios

Locate the cursor on the following thumbnails to enlarge the respective scenario as implementation examples of the barrier performance module.

Scenario #1:

Noise receiver at a higher elevation than the noise source and a man-made noise barrier is between the receiver and the source.

Scenario #2:

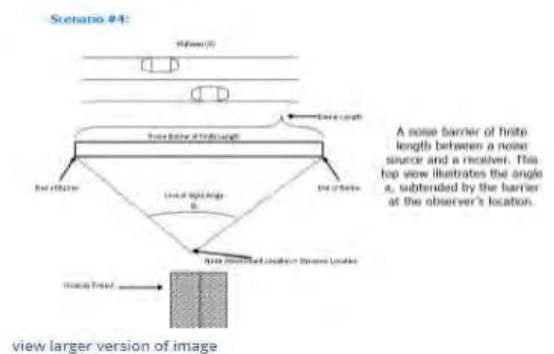

Noise receiver at a higher elevation than the noise source and a natural barrier (hill) between the receiver and the source.

Scenario #3:

Noise receiver at almost the same elevation of the noise source and a man-made noise barrier between the receiver and the source.

Scenario #4:

A noise barrier of finite length between a noise source and a receiver. This top view illustrates the angle α , subtended by the barrier at the observer's location.

Appendix 3 - HUD Figure 19

Figure 19
Description of Noise Attenuation Measures
(Acoustical Construction)

Part I

Project Name: 4801 Coliseum Way, Southwest Façade of Southwest Building (Worst-Case Noise Exposure)

Location: Oakland, California

Sponsor/Developer: The Danco Group of Companies

Noise Level (From NAG): 82 dBA DNL Attenuation Required: 37 dBA

Primary Noise Source(s): I-880 traffic

Part II

1. For wall(s) facing and parallel to the noise source(s) (or closest to parallel):
 - a. Description of wall construction*: Stucco Exterior, Insulated Wood Stud Wall, Gypsum Board Interior
 - b. STC rating for wall (rated for no windows or doors): N/A
 - c. Description of windows: N/A
 - d. STC rating for window type: N/A
 - e. Description of doors: N/A
 - f. STC rating for doors: N/A
 - g. Percentage of wall (per wall, per dwelling unit) composed of windows: 0% and doors: 0%
 - h. Combined STC rating for wall component: 40 dBA
2. For walls perpendicular to noise source(s):
 - a. Description of wall construction*: Stucco Exterior, Insulated Wood Stud Wall, Gypsum Board Interior
 - b. STC rating for wall (rated for no windows or doors): N/A
 - c. Description of windows: N/A
 - d. STC rating for window type: N/A
 - e. Description of doors: N/A
 - f. STC rating for doors: N/A
 - g. Percentage of wall (per wall, per dwelling unit) composed of windows: 0% and doors: 0%
 - h. Combined STC rating for wall component: 40 dBA
3. Roofing component (if overhead attenuation is required to aircraft noise):
 - a. Description of roof construction: N/A
 - b. STC rating (rated as if no skylights or other openings): N/A
 - c. Description of skylights or overhead windows: N/A
 - d. STC rating for skylights or overhead windows: N/A
 - e. Percentage of roof composed of skylights or windows (per dwelling unit): N/A
 - f. Percentage of roof composed of large uncapped openings such as chimneys: N/A
 - g. Combined STC rating for roof component: N/A
4. Description of type of mechanical ventilation provided: Satisfactory forced air mechanical ventilation system.

Figure 19
Description of Noise Attenuation Measures
(Acoustical Construction)

Part I

Project Name: 4801 Coliseum Way, Northeast Façade of Southwest Building (Worst-Case Noise Exposure)

Location: Oakland, California

Sponsor/Developer: The Danco Group of Companies

Noise Level (From NAG): 70 dBA DNL Attenuation Required: 25 dBA

Primary Noise Source(s): I-880 traffic and Coliseum Way traffic

Part II

1. For wall(s) facing and parallel to the noise source(s) (or closest to parallel):
 - a. Description of wall construction*: Stucco Exterior, Insulated Wood Stud Wall, Gypsum Board Interior
 - b. STC rating for wall (rated for no windows or doors): STC 46
 - c. Description of windows: Double Glazed
 - d. STC rating for window type: STC 26
 - e. Description of doors: Standard
 - f. STC rating for doors: STC 26
 - g. Percentage of wall (per wall, per dwelling unit) composed of windows: 20% and doors: 23%
 - h. Combined STC rating for wall component: 29 dBA
2. For walls perpendicular to noise source(s):
 - a. Description of wall construction*: Stucco Exterior, Insulated Wood Stud Wall, Gypsum Board Interior
 - b. STC rating for wall (rated for no windows or doors): N/A
 - c. Description of windows: N/A
 - d. STC rating for window type: N/A
 - e. Description of doors: N/A
 - f. STC rating for doors: N/A
 - g. Percentage of wall (per wall, per dwelling unit) composed of windows: 0% and doors: 0%
 - h. Combined STC rating for wall component: 40 dBA
3. Roofing component (if overhead attenuation is required to aircraft noise):
 - a. Description of roof construction: N/A
 - b. STC rating (rated as if no skylights or other openings): N/A
 - c. Description of skylights or overhead windows: N/A
 - d. STC rating for skylights or overhead windows: N/A
 - e. Percentage of roof composed of skylights or windows (per dwelling unit): N/A
 - f. Percentage of roof composed of large uncapped openings such as chimneys: N/A
 - g. Combined STC rating for roof component: N/A
4. Description of type of mechanical ventilation provided: Satisfactory forced air mechanical ventilation system.

EJ Index for Wastewater Discharge	54	82

EJ Index for the Selected Area Compared to All People's Blockgroups in the State/US

This report shows the values for environmental and demographic indicators and EJScreen indexes. It shows environmental and demographic raw data (e.g., the estimated concentration of ozone in the air), and also shows what percentile each raw data value represents. These percentiles provide perspective on how the selected block group or buffer area compares to the entire state or nation. For example, if a given location is at the 95th percentile nationwide, this means that only 5 percent of the US population has a higher block group value than the average person in the location being analyzed. The years for which the data are available, and the methods used, vary across these indicators. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJScreen documentation for discussion of these issues before using reports.

*Diesel particulate matter, air toxics cancer risk, and air toxics respiratory hazard index are from the EPA's Air Toxics Data Update, which is the Agency's ongoing, comprehensive evaluation of air toxics in the United States. This effort aims to prioritize air toxics, emission sources, and locations of interest for further study. It is important to remember that the air toxics data presented here provide broad estimates of health risks over geographic areas of the country, not definitive risks to specific individuals or locations. Cancer risks and hazard indices from the Air Toxics Data Update are reported to one significant figure and any additional significant figures here are due to rounding. More information on the Air Toxics Data Update can be found at: <https://www.epa.gov/haps/air-toxics-data-update>. (<https://www.epa.gov/haps/air-toxics-data-update>)

For additional information, see: www.epa.gov/environmentaljustice (<https://www.epa.gov/environmentaljustice>)

EJScreen is a screening tool for pre-decisional use only. It can help identify areas that may warrant additional consideration, analysis, or outreach. It does not provide a basis for decision-making, but it may help identify potential areas of EJ concern. Users should keep in mind that screening tools are subject to substantial uncertainty in their demographic and environmental data, particularly when looking at small geographic areas. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJScreen documentation for discussion of these issues before using reports. This screening tool does not provide data on every environmental impact and demographic factor that may be relevant to a particular location. EJScreen outputs should be supplemented with additional information and local knowledge before taking any action to address potential EJ concerns.

Type of Services	Geotechnical Investigation
Project Name	Inn By The Coliseum Improvements
Location	4801 Coliseum Way Oakland, California

SECTION 1: INTRODUCTION

This geotechnical report was prepared for the sole use of Danco for the Inn by the Coliseum Improvements project in Oakland, California. The location of the site is shown on the Vicinity Map, Figure 1. For our use, we were provided with the following documents:

- A boundary survey titled, "Boundary Survey, AEI Job #453946, Inn by the Coliseum, 4801 Coliseum Way, Oakland, Alameda County, CA," prepared by AEI Consultants, dated February 3, 2022.
- A hand sketched site plan provided by Danco on May 11, 2022 showing locations of potential building additions.

1.1 PROJECT DESCRIPTION

Based on the information provided, the project will include renovations to the existing buildings and other improvements to the site. We understand non-structural renovations will be made to convert the existing buildings into studio apartments; however, an evaluation of the existing buildings, soil conditions beneath the existing buildings, and seismic design parameters for renovation of these existing buildings is not needed at this time and not a part of this report. We understand a one-story, wood-frame tenant services structure will be added at the far end of the parking lot on the south side of the property between the existing buildings. This building will have a footprint of roughly 40 feet by 12 feet and consist of four resident service offices, a lobby, and a staff restroom. Additionally, an addition to the northwest end of the existing eastern building is being considered. This addition will be a one-story common area consisting of wood-frame construction. Minor changes to the parking lot area are also planned. We understand an evaluation of the existing pavements is not currently desired.

Grading plans are not available at this time; however, we assume grading will consist of minor cuts and fills on the order of 1 foot or less. Structural loads have also not been provided; however, we assume structural loads to be generally light and typical for similar structures.

1.2 SCOPE OF SERVICES

Our scope of services was presented in our proposal dated May 12, 2022 and consisted of field and laboratory programs to evaluate physical and engineering properties of the subsurface soils, engineering analysis to prepare recommendations for site work and grading, building

foundations, flatwork, and preparation of this report. Brief descriptions of our exploration and laboratory programs are presented below.

1.3 EXPLORATION PROGRAM

Field exploration consisted of two borings drilled on June 7, 2022 with truck-mounted hollow-stem auger drilling equipment and three Cone Penetration Tests (CPTs) advanced on June 1, 2022. The borings were drilled to depths of 20 to 45 feet; the CPTs were advanced to depths of about 50 to 100 feet. Seismic shear wave velocity measurements were collected from CPT-1. Borings EB-1 and EB-2 were advanced adjacent to CPT-3 and CPT-2, respectively, for direct evaluation of physical samples to correlated soil behavior.

The borings and CPTs were backfilled with cement grout in accordance with local requirements; exploration permits were obtained as required by local jurisdictions. The approximate locations of our exploratory borings and CPTs are shown on the Site Plan, Figure 2. Details regarding our field program are included in Appendix A.

1.4 LABORATORY TESTING PROGRAM

In addition to visual classification of samples, the laboratory program focused on obtaining data for foundation design and seismic ground deformation estimates. Testing included moisture contents, dry densities, washed sieve analyses, a Plasticity Index test, and consolidation tests. Details regarding our laboratory program are included in Appendix B.

1.5 ENVIRONMENTAL SERVICES

Environmental services were not requested for this project. If environmental concerns are determined to be present during future evaluations, the project environmental consultant should review our geotechnical recommendations for compatibility with the environmental concerns.

SECTION 2: REGIONAL SETTING

2.1 REGIONAL SEISMICITY

The San Francisco Bay area is one of the most seismically active areas in the Country. While seismologists cannot predict earthquake events, geologists from the U.S. Geological Survey have recently updated (in 2015) earlier estimates from their 2014 Uniform California Earthquake Rupture Forecast (Version 3; UCERF3) publication. The estimated probability of one or more magnitude 6.7 earthquakes (the size of the destructive 1994 Northridge earthquake) expected to occur somewhere in the San Francisco Bay Area has been revised (increased) to 72 percent for the period 2014 to 2043 (Aagaard et al., 2016). The faults in the region with the highest estimated probability of generating damaging earthquakes between 2014 and 2043 are the Hayward (33%), Calaveras (26%), and San Andreas Faults (22%). In this 30-year period, the probability of an earthquake of magnitude 6.7 or larger occurring is 22 percent along the San Andreas Fault and 33 percent for the Hayward Fault.

The faults considered capable of generating significant earthquakes are generally associated with the well-defined areas of crustal movement, which trend northwesterly. The table below presents the State-considered active faults within 25 kilometers of the site.

Table 1: Approximate Fault Distances

Fault Name	Distance	
	(miles)	(kilometers)
Hayward (Total Length)	2.6	4.2
Calaveras	11.7	18.8
Concord-Green Valley Fault	15.5	24.9

A regional fault map is presented as Figure 3, illustrating the relative distances of the site to significant fault zones.

SECTION 3: SITE CONDITIONS

3.1 SITE BACKGROUND AND SURFACE DESCRIPTION

We reviewed historical aerial imagery provided online by Historical Aerials (www.historicaerials.com). A summary of pertinent surface changes at and near the site is as follows:

- 1946: The project site appears to be used for industrial use and Coliseum way has already been established.
- 1958: The two motel structures and an asphalt parking lot appear on the property. The structures appear in the same location as the two structures currently on-site. Interstate 880 is established and borders the southern boundary of the project site.
- 2000: Surface pavements and landscaping improvements are observed at the project site. No pertinent changes are observed at and near the site from 2002 to 2018, the last available aerial image of the project site.

The site is bounded by a residential house and storage yard to the north, Coliseum Way to the north and east, a materials storage lot to the south, and Interstate 880 to the west. The site is currently occupied by The Inn by the Coliseum consisting of two existing two-story, wood-frame construction, at-grade motel buildings with a northern and central asphalt concrete pavement area for parking. The site appears to be relatively level and graded to drain to storm drainage facilities.

Surface pavements in our explorations generally consisted of two inches of asphalt concrete over three to four inches of aggregate base. Based on visual observations, the existing pavements are in fair condition.

3.2 SUBSURFACE CONDITIONS

Below the surface pavements, our borings generally encountered undocumented fills consisting of medium dense clayey sand with gravel and stiff to very stiff lean clay with varying amounts of sand to a depth of about 2½ to 4 feet. Below the fills, our borings encountered loose to medium dense silty sand to a depth of 4½ to 5 feet, over medium stiff to very stiff lean clay with varying amounts of sand to a depth of about 11 to 12 feet. Below the lean clays, interbedded layers of medium dense to dense sands with varying amounts of clay and silt and medium stiff to very stiff lean clay was encountered to a depth of 30 feet. Beneath the interbedded layers of sand and clay, Boring EB-2 encountered stiff to very stiff lean clay to a depth of 45 feet, the maximum depth explored.

Below the depth of our borings, our CPTs generally inferred soil behaviors corresponding to interbedded layers of stiff to very stiff clays and silts and dense to very dense sands to the maximum depth explored of about 100 feet. Larger sand layers were inferred at depths of about 55 to 90 feet.

3.2.1 Plasticity/Expansion Potential

We performed one Plasticity Index (PI) test on a representative soil sample. Test results were used to evaluate expansion potential of surficial soils. The results indicated a PI of 12, indicating low to moderate expansion potential to wetting and drying cycles.

3.2.2 In-Situ Moisture Contents

Laboratory testing indicated that the in-situ moisture contents within the upper 10 feet range from near optimum moisture content to about 10 to 12 percent over the estimated laboratory optimum moisture.

3.3 GROUNDWATER

Groundwater was encountered in our borings at a depth of 5 feet below current grades. Groundwater was inferred in CPT-1 at a depth of about 4½ based on a pore pressure dissipation test. All measurements were taken at the time of drilling and may not represent the stabilized levels that can be higher than the initial levels encountered.

Historic high groundwater levels are mapped at a depth less than 5 feet (CGS, Oakland East Quadrangle, 2003). We also reviewed groundwater data available online from the website GeoTracker, <https://geotracker.waterboards.ca.gov/>. Nearby monitoring well data from December 2004 through September 2009 indicates groundwater has been measured at depths of approximately 1¾ to 7 feet at wells located at 4930 Coliseum Way, Oakland, located approximately 200 feet northeast of the site.

Based on the above, we considered a design groundwater depth of 2 feet. Fluctuations in groundwater levels occur due to many factors including seasonal fluctuation, underground drainage patterns, regional fluctuations, and other factors.

SECTION 4: GEOLOGIC HAZARDS

4.1 FAULT SURFACE RUPTURE

As discussed above some significant faults are located within 25 kilometers of the site. The site is not located within a State-designated Alquist Priolo Earthquake Fault Zone. As shown in Figure 2, no known surface expression of fault traces is thought to cross the site; therefore, fault surface rupture hazard is not a significant geologic hazard at the site.

4.2 ESTIMATED GROUND SHAKING

Moderate to severe (design-level) earthquakes can cause strong ground shaking, which is the case for most sites within the Bay Area. A peak ground acceleration (PGA_M) was estimated following the ground motion hazard analysis procedure presented in Chapter 16 and 18 and Appendix J of the 2019 California Building Code (CBC) and Chapter 21, Section 21.2 of ASCE 7-16 and Supplement No. 1. For our analysis we used a PGA_M of 0.891g, which was determined in accordance with Section 21.5 of ASCE 7-16.

4.3 LIQUEFACTION POTENTIAL

The site is within a State-designated Liquefaction Hazard Zone (CGS, Oakland East Quadrangle, 2003). Our field and laboratory programs addressed this issue by testing and sampling potentially liquefiable layers to depths of at least 50 feet, performing visual classification on sampled materials, evaluating CPT data, and performing various tests to further classify soil properties.

4.3.1 Background

During strong seismic shaking, cyclically induced stresses can cause increased pore pressures within the soil matrix that can result in liquefaction triggering, soil softening due to shear stress loss, potentially significant ground deformation due to settlement within sandy liquefiable layers as pore pressures dissipate, and/or flow failures in sloping ground or where open faces are present (lateral spreading) (NCEER 1998). Limited field and laboratory data is available regarding ground deformation due to settlement; however, in clean sand layers settlement on the order of 2 to 4 percent of the liquefied layer thickness can occur. Soils most susceptible to liquefaction are loose, non-cohesive soils that are saturated and are bedded with poor drainage, such as sand and silt layers bedded with a cohesive cap.

4.3.2 Analysis

As discussed in the "Subsurface" section above, several sand layers were encountered below the design groundwater depth of 2 feet. Following the liquefaction analysis framework in the 2008 monograph, *Soil Liquefaction During Earthquakes* (Idriss and Boulanger, 2008), incorporating updates in *CPT and SPT Based Liquefaction Triggering Procedures* (Boulanger and Idriss, 2014), and in accordance with CDMG Special Publication 117A guidelines (CDMG, 2008) for quantitative analysis, these layers were analyzed for liquefaction triggering and

potential post-liquefaction settlement. These methods compare the ratio of the estimated cyclic shaking (Cyclic Stress Ratio - CSR) to the soil's estimated resistance to cyclic shaking (Cyclic Resistance Ratio - CRR), providing a factor of safety against liquefaction triggering. Factors of safety less than or equal to 1.3 are considered to be potentially liquefiable and capable of post-liquefaction re-consolidation (i.e. settlement).

The CSR for each layer quantifies the stresses anticipated to be generated due to a design-level seismic event, is based on the peak horizontal acceleration generated at the ground surface discussed in the "Estimated Ground Shaking" section above and is corrected for overburden and stress reduction factors as discussed in the procedure developed by Seed and Idriss (1971) and updated in the 2008 Idriss and Boulanger monograph.

The soil's CRR is estimated from the in-situ measurements from CPTs and laboratory testing on samples retrieved from our borings. SPT "N" values obtained from hollow-stem auger borings were not used in our analyses, as the "N" values obtained are less reliable in sands below groundwater. The tip pressures are corrected for effective overburden stresses, taking into consideration both the groundwater level at the time of exploration and the design groundwater level, and stress reduction versus depth factors. The CPT method utilizes the soil behavior type index (I_c) to estimate the plasticity of the layers.

Additionally, in estimating post-liquefaction settlement at the site, we have implemented a depth weighting factor proposed by Cetin (2009). Following evaluation of 49 high-quality, cyclically induced, ground settlement case histories from seven different earthquakes, Cetin proposed the use of a weighting factor based on the depth of layers. The weighting procedure was used to tune the surface observations at liquefaction sites to produce a better model fit with measured data. Aside from the better model fit it produced, the rationale behind the use of a depth weighting factor is based on the following: 1) upward seepage, triggering void ratio redistribution, and resulting in unfavorably higher void ratios for the shallower sublayers of soil layers; 2) reduced induced shear stresses and number of shear stress cycles transmitted to deeper soil layers due to initial liquefaction of surficial layers; and 3) possible arching effects due to nonliquefied soil layers. All these may significantly reduce the contribution of volumetric settlement of deeper soil layers to the overall ground surface settlement (Cetin, 2009).

The results of our CPT analyses (CPT-1, CPT-2, and CPT-3) are presented on Figures 4A through 4C of this report. Calculations for these CPTs are attached as Appendix C.

4.3.3 Summary

Our analyses indicate that several layers could potentially experience liquefaction triggering that could result in post-liquefaction total settlement at the ground surface ranging from about $\frac{1}{2}$ to $\frac{3}{4}$ inch based on the Yoshimine (2006) method. As discussed in SP 117A, differential movement for level ground sites over deep soil sites will be up to about two-thirds of the total settlement between independent foundation elements. As discussed in the following "Conclusions" and "Earthwork" sections of this report, we recommend the existing surficial undocumented fills be removed and replaced as engineered fill and the loose to medium dense sandy layer encountered at depths ranging from about $2\frac{1}{2}$ to 5 feet beneath the surface be compacted.

Provided this mitigation is performed, the post-liquefaction total settlements will be reduced to less than ½ inch. In our opinion, differential settlements are anticipated to be on the order of ¼ inch or less between independent foundation elements.

4.3.4 Ground Deformation and Surficial Cracking Potential

The methods used to estimate liquefaction settlements assume that there is a sufficient cap of non-liquefiable material to prevent ground deformation or sand boils. For ground deformation to occur, the pore water pressure within the liquefiable soil layer will need to be great enough to break through the overlying non-liquefiable layer, which could cause significant ground deformation and settlement. Provided undocumented fills and the loose to medium dense shallow sandy layer are mitigated as discussed above and in the forthcoming “Conclusions” and “Earthwork” sections of this report, the work of Youd and Garris (1995) indicates that the non-liquefiable cap is sufficient to prevent ground deformation and significant surficial cracking; therefore, the above total settlement estimates are reasonable.

4.4 LATERAL SPREADING

Lateral spreading is horizontal/lateral ground movement of relatively flat-lying soil deposits towards a free face such as an excavation, channel, or open body of water; typically, lateral spreading is associated with liquefaction of one or more subsurface layers near the bottom of the exposed slope. As failure tends to propagate as block failures, it is difficult to analyze and estimate where the first tension crack will form.

There are no open faces within a distance considered susceptible to lateral spreading, therefore, in our opinion, the potential for lateral spreading to affect the site is low.

4.5 SEISMIC SETTLEMENT/UNSATURATED SAND SHAKING

Loose to medium dense unsaturated sandy soils can settle during strong seismic shaking. As the soils encountered at the site above the design groundwater depth were predominantly stiff to very stiff clays and medium dense clayey sands, in our opinion, the potential for significant differential seismic settlement affecting the proposed improvements is low.

4.6 TSUNAMI/SEICHE

The terms tsunami or seiche are described as ocean waves or similar waves usually created by undersea fault movement or by a coastal or submerged landslide. Tsunamis may be generated at great distance from shore (far field events) or nearby (near field events). Waves are formed, as the displaced water moves to regain equilibrium, and radiates across the open water, similar to ripples from a rock being thrown into a pond. When the waveform reaches the coastline, it quickly raises the water level, with water velocities as high as 15 to 20 knots. The water mass, as well as vessels, vehicles, or other objects in its path create tremendous forces as they impact coastal structures.

Tsunamis have affected the coastline along the Pacific Northwest during historic times. The Fort Point tide gauge in San Francisco recorded approximately 21 tsunamis between 1854 and 1964. The 1964 Alaska earthquake generated a recorded wave height of 7.4 feet and drowned eleven people in Crescent City, California. For the case of a far-field event, the Bay area would have hours of warning; for a near field event, there may be only a few minutes of warning, if any.

A tsunami or seiche originating in the Pacific Ocean would lose much of its energy passing through San Francisco Bay. Based on the mapping of tsunami inundation potential for the San Francisco Bay Area by CGS (conservation.ca.gov/cgs/tsunami/maps), areas most likely to be inundated are marshlands, tidal flats, and former bay margin lands that are now artificially filled, but are still at or below sea level, and are generally within 1½ miles of the shoreline. The site is approximately ¼ mile inland from the San Francisco Bay shoreline and is approximately 10 to 11 feet above mean sea level (Google Earth, 2022). Additionally, the site is mapped by the California Geologic Survey Tsunami Hazard Area Map as within a tsunami hazard area. We recommend the project civil engineer be retained to confirm this information and verify the potential for inundation due to tsunami or seiche.

4.7 FLOODING

Based on our internet search of the Federal Emergency Management Agency (FEMA) flood map public database, the site is located within Zone X, described as “0.2% Annual Chance Flood Hazard, Areas of 1% annual chance flood with average depth less than one foot or with drainage areas of less than one square mile.” We recommend the project civil engineer be retained to confirm this information and verify the base flood elevation, if appropriate.

The Department of Water Resources (DWR), Division of Safety of Dams (DSOD) compiled a database of Dam Failure Inundation Hazard Maps (DSOD, 2021). The generalized hazard maps were prepared by dam owners as required by the State Office of Emergency Services; they are intended for planning purposes only. Based on our review of these maps, the site is located within a dam failure inundation area for the New Upper San Leandro Reservoir.

SECTION 5: CONCLUSIONS

5.1 SUMMARY

From a geotechnical viewpoint, the project is feasible provided the concerns listed below are addressed in the project design. Descriptions of each concern with brief outlines of our recommendations follow the listed concerns.

- Potential for liquefaction-induced settlements and ground deformation
- Potential for static settlements
- Redevelopment considerations
- Undocumented fill
- Presence of loose to medium dense sands

- Shallow groundwater
- Proximity to existing building foundations and improvements

5.1.1 Potential for Liquefaction-Induced Settlements and Ground Deformation

As discussed, our liquefaction analysis indicates that there is a potential for liquefaction of localized sand layers during a significant seismic event. Our analysis indicates that total liquefaction-induced settlement on the order of $\frac{1}{2}$ to $\frac{3}{4}$ inch could occur. Our analysis also indicates there is a potential for ground deformation during a seismic event. However, based on the over-excavation and recompaction procedures we recommend below, in our opinion ground deformation potential would be reduced to a low potential and the total liquefaction-induced settlement would be reduced to less than $\frac{1}{2}$ inch, resulting in differential settlements on the order of $\frac{1}{4}$ inch or less between adjacent foundation elements. Foundations should be designed to tolerate the anticipated total and differential settlements. Detailed foundation recommendations are presented in the "Foundations" section.

5.1.2 Potential for Static Settlements

Building loads were not available at the time of this report, however we understand the proposed new one-story building will be of wood-frame construction with approximate plan dimensions of 40 feet by 12 feet. We also understand the new common area addition will be one-story and likely also wood-frame construction. We are not aware of any significant changes to site grades at this time and have not included loading from potential site fills in our analysis.

For our analysis, we estimated column loads of about 10 to 25 kips and perimeter wall loading of about $\frac{1}{2}$ to 1 kip per lineal foot for the wood structures. Based on our assumed loads and footing depths of 2 feet or less below existing site grades, we estimate static settlement on the order of about $\frac{1}{2}$ to $\frac{2}{3}$ inch could occur due to the weight of the new building loads. The above estimates are based on fill thicknesses and structural loads summarized above. If final design site grades and structural loads are different than noted above, additional settlement estimates and recommendations may be required. The building foundations will need to be designed to tolerate total and differential settlements due to static and liquefaction-induced settlement. Detailed foundation recommendations are presented in the "Foundations" section of this report.

5.1.3 Redevelopment Considerations

As discussed, the site is currently occupied by existing buildings and appurtenant pavements, flatwork, site fixtures, and landscaping. Potential issues that are often associated with building additions and improvements to developed sites include demolition of existing improvements, abandonment of existing utilities, and undocumented fills, and undermining of existing footings. Please refer to the "Earthwork" section below for further recommendations.

5.1.4 Undocumented Fill

Undocumented fills were identified in our borings and may also be present as a result of prior development grading. Undocumented fills are expected to vary in thickness, density, and consistency across the site. Any fills encountered during site grading should be completely removed from within building areas and replaced as engineered fill. Additional recommendations are provided in the “Earthwork” section below.

5.1.5 Presence of Loose to Medium Dense Sands

As mentioned, beneath the surficial undocumented fills encountered in our explorations, loose silty sands were encountered in our borings to depths of about 4½ and 5 feet below existing site grades. These soils have a potential for increased total and differential static and seismic settlements and lower bearing capacities. Additionally, ground deformation could occur as a result of these sandy soils. To reduce the potential for the above, we recommend these sandy soils be compacted/densified. In areas of the building additions, we recommend an over-excavation to a minimum depth of 3 feet beneath existing site grades be performed, the excavation bottom scarified and compacted, and the over-excavation recompacted as engineered fill prior to construction of subgrade and foundations. Additional recommendations are presented in the “Earthwork” section of this report.

5.1.6 Shallow Groundwater

Shallow groundwater was measured at a depth of 5 feet below the existing ground surface in our borings. As discussed above, we considered a design groundwater depth of 2 feet based on local mapping, nearby well measurements, and shallow groundwater encountered in our explorations. Our experience with similar sites in the vicinity indicates that shallow groundwater could significantly impact grading and underground construction. These impacts typically consist of potentially wet and unstable subgrade, difficulty achieving compaction, and difficult underground utility installation. Dewatering and shoring of utility trenches may be required in some isolated areas of the site. Detailed recommendations addressing this concern are presented in the “Earthwork” section of this report.

5.1.7 Proximity to Existing Building Foundations and Improvements

Depending on the final proposed improvements, the proposed building additions and associated foundations may be directly adjacent to existing building foundations and improvements. Therefore, protecting the existing foundations and improvements may be required to excavate new foundations and perform additional fill removal and over-excavation as discussed in the “Earthwork” section. If new foundations/excavations extend into the 1:1 plan of existing foundations, shoring or underpinning may be required. Additionally, any new loads placed adjacent to existing building foundations from the improvements may cause additional settlement beneath the existing building foundations. We recommend the contractor and design team be aware of the above concerns. We should be retained to evaluate these potential settlements during the project.

5.2 PLANS AND SPECIFICATIONS REVIEW

We recommend that we be retained to review the geotechnical aspects of the project structural, civil, and landscape plans and specifications, allowing sufficient time to provide the design team with any comments prior to issuing the plans for construction.

5.3 CONSTRUCTION OBSERVATION AND TESTING

As site conditions may vary significantly between the small-diameter borings performed during this investigation, we also recommend that a Cornerstone representative be present to provide geotechnical observation and testing during earthwork and foundation construction. This will allow us to form an opinion and prepare a letter at the end of construction regarding contractor compliance with project plans and specifications, and with the recommendations in our report. We will also be allowed to evaluate any conditions differing from those encountered during our investigation and provide supplemental recommendations as necessary. For these reasons, the recommendations in this report are contingent of Cornerstone providing observation and testing during construction. Contractors should provide at least a 48-hour notice when scheduling our field personnel.

SECTION 6: EARTHWORK

6.1 SITE DEMOLITION

All existing improvements not to be reused for the current development, including all foundations, flatwork, pavements, utilities, and other improvements should be demolished and removed from the site. Recommendations in this section apply to the removal of these improvements, which may and/or are currently on the site, prior to the start of mass grading or the construction of new improvements for the project.

Cornerstone should be notified prior to the start of demolition and should be present on at least a part-time basis during all backfill and mass grading as a result of demolition. Occasionally, other types of buried structures (wells, cisterns, debris pits, etc.) can be found on sites with prior development. If encountered, Cornerstone should be contacted to address these types of structures on a case-by-case basis.

6.1.1 Demolition of Existing Slabs, Foundations and Pavements

All slabs, foundations, and pavements should be completely removed from within planned improvement areas.

Special care should be taken during the demolition and removal of existing floor slabs, foundations, utilities and pavements to minimize disturbance of the subgrade. Excessive disturbance of the subgrade, which includes either native or previously placed engineered fill, resulting from demolition activities can have serious detrimental effects on planned foundation and other improvement elements.

Existing foundations are typically mat-slabs, shallow footings, or piers/piles. If slab or shallow footings are encountered, they should be completely removed. If drilled piers are encountered, they should be cut off at an elevation at least 60-inches below proposed footings or the final subgrade elevation, whichever is deeper. The remainder of the drilled pier could remain in place. Foundation elements to remain in place should be surveyed and superimposed on the proposed development plans to determine the potential for conflicts or detrimental impacts to the planned construction. Following review, additional mitigation or planned foundation elements may need to be modified.

6.1.2 Abandonment of Existing Utilities

All utilities should be completely removed from within planned building and addition areas. All utilities to be abandoned should be removed from within building areas and all utilities within improvement areas should be completely removed. For any utility line to be considered acceptable to remain within building and addition areas, the utility line must be completely backfilled with grout or sand-cement slurry (sand slurry is not acceptable), the ends outside the improvement area capped with concrete, and the trench fills either removed and replaced as engineered fill with the trench side slopes flattened to at least 1:1, or the trench fills are determined not to be a risk to the structure. The assessment of the level of risk posed by the particular utility line will determine whether the utility may be abandoned in place or needs to be completely removed. The contractor should assume that all utilities will be removed from within building and addition areas unless provided written confirmation from both the owner and the geotechnical engineer.

Utilities extending beyond the building and addition area may be abandoned in place provided the ends are plugged with concrete, they do not conflict with planned improvements, and that the trench fills do not pose significant risk to the planned surface improvements.

The risk for owners associated with abandoning utilities in place include the potential for future differential settlement of existing trench fills, and/or partial collapse and potential ground loss into utility lines that are not completely filled with grout.

6.2 SITE CLEARING AND PREPARATION

6.2.1 Site Stripping

The areas designated for improvements should be stripped of all surface vegetation, and surface and subsurface improvements to be removed within the proposed improvement areas. Demolition of existing improvements is discussed in the prior paragraphs. In vegetated areas, surface vegetation and topsoil should be stripped to a sufficient depth to remove all material greater than 3 percent organic content by weight.

6.2.2 Tree and Shrub Removal

Trees and shrubs designated for removal should have the root balls and any roots greater than ½-inch diameter removed completely. Mature trees are estimated to have root balls extending

to depths of 2 to 4 feet, depending on the tree size. Significant root zones are anticipated to extend to the diameter of the tree canopy. Grade depressions resulting from root ball removal should be cleaned of loose material and backfilled in accordance with the recommendations in the "Compaction" section of this report.

6.3 MITIGATION OF UNDOCUMENTED FILLS AND LOOSE/MEDIUM DENSE SANDS

As previously discussed, undocumented fill was encountered to a depth of 2½ to 4 feet within our Borings EB-1 and EB-2. Deeper localized undocumented fill may also be present and should be expected within areas of the site. Additionally, loose to medium dense sandy soils were encountered to depths of 4½ and 5 feet within our explorations which have a potential for increased total and differential settlements and lower bearing capacities. Additionally, ground deformation could occur as a result of the loose to medium dense sandy soils encountered.

The building and addition footprint should be overexcavated a minimum of 3 feet beneath existing site grades and all additional undocumented fills should be completely removed from within building and addition areas. The overexcavations should extend a lateral distance of at least 5 feet beyond the building and addition footprints or to a lateral distance equal to the final over-excavation depth below the perimeter footing, whichever is greater. Prior to backfilling, excavation bottoms should be reviewed to determine if all fills have been removed. Once all fill material is removed, the excavation bottom should be scarified at least 12 inches, moisture conditioned, and re-compacted as engineered fill in accordance with the "Compaction" section of this report. Following compaction of the excavation bottom, backfill of the excavations should be placed in lifts and compacted in accordance with the "Compaction" section below. The above recommendations may be modified at the time of construction based on actual field conditions.

Provided the fills meet the "Material for Fill" requirements below, the fills may be reused when backfilling the excavations. Based on review of the samples collected from our borings, it appears that the fill may be reused. If materials are encountered that do not meet the requirements, such as debris, wood, trash, those materials should be screened out of the remaining material and be removed from the site. Backfill of excavations should be placed in lifts and compacted in accordance with the "Compaction" section below.

Fills and loose to medium dense native soils extending into planned pavement and flatwork areas may be left in place provided they are determined to be a low risk for future differential settlement and that the upper 12 inches of fill below subgrade is re-worked and compacted as discussed in the "Compaction" section below.

It should be noted that the over-excavation may extend near to the groundwater level. The contractor should anticipate and plan for highly wet and potentially unstable soil conditions.

6.4 TEMPORARY CUT AND FILL SLOPES

The contractor is responsible for maintaining all temporary slopes and providing temporary shoring where required. Temporary shoring, bracing, and cuts/fills should be performed in

accordance with the strictest government safety standards. On a preliminary basis, the upper 10 feet at the site may be classified as OSHA Soil Type C materials. For cuts of 10 feet or less, the side slopes should be 1.5:1 (H:V) or flatter per OSHA requirements or supported by shoring. The use of Stay-Form® or continuous lagging that is installed as the excavations progress down may need to be implemented by the contractor to support excavations. Actual excavation inclinations should be reviewed in the field during construction, as needed.

It is the sole responsibility of the contractor to ensure the integrity of the existing building, utilities, existing foundations, and other improvements when excavating adjacent to the existing building footings, utilities, and other improvements.

6.5 SUBGRADE PREPARATION

After the areas designated for improvements have been properly cleared, stripped, and demolition is complete, and prior to backfilling any excavations resulting from fill removal or demolition, the excavation subgrade and subgrade within areas to receive additional site fills, slabs-on-grade and/or pavements should be scarified to a depth of 6 inches, moisture conditioned, and compacted in accordance with the "Compaction" section below. The finished compacted subgrade should be firm and non-yielding under the weight of compaction equipment.

6.6 SHALLOW GROUNDWATER

Shallow groundwater was measured in our borings at a depth of approximately 5 feet below the existing ground surface. As discussed above, we considered a design groundwater depth of 2 feet based on groundwater data in proximity to the site. We recommend that contractors anticipate dewatering to control water seeping into deeper excavations close to or below the groundwater. Groundwater conditions can be difficult to maintain, and if the groundwater is in a relatively widespread, continuous layer, it may be hard to dewater, requiring continuous dewatering during excavations. The contractors should anticipate working with and mitigating unstable soil conditions, especially when close to the groundwater depth.

6.7 WET SOIL STABILIZATION GUIDELINES

Native soil and fill materials, especially soils with high fines contents such as clays and silty soils, can become unstable due to high moisture content, whether from high in-situ moisture contents or from winter rains. As the moisture content increases over the laboratory optimum, it becomes more likely the materials will be subject to softening and yielding (pumping) from construction loading or become unworkable during placement and compaction.

As discussed in the "Subsurface" section in this report, the in-situ moisture contents range from near optimum to about 10 to 12 percent over the estimated laboratory optimum in the upper 10 feet of the soil profile. The contractor should anticipate needing to moisture condition some soils and drying others prior to reusing them as fill. In addition, repetitive rubber-tire loading may de-stabilize the soils.

There are several methods to address potential unstable soil conditions and facilitate fill placement and trench backfill. Some of the methods are briefly discussed below. Implementation of the appropriate stabilization measures should be evaluated on a case-by-case basis according to the project construction goals and the site conditions.

6.7.1 Scarification and Drying

The subgrade may be scarified to a depth of 12 inches and allowed to dry to near optimum conditions if sufficient dry weather is anticipated to allow sufficient drying. More than one round of scarification may be needed to break up the soil clods.

6.7.2 Removal and Replacement

As an alternative to scarification, the contractor may choose to over-excavate the unstable soils and replace them with dry on-site or import materials. A Cornerstone representative should be present to provide recommendations regarding the appropriate depth of over-excavation, whether a geosynthetic (stabilization fabric or geogrid) is recommended, and what materials are recommended for backfill.

6.8 MATERIAL FOR FILL

6.8.1 Re-Use of On-site Soils

On-site soils with an organic content less than 3 percent by weight may be reused as general fill. General fill should not have lumps, clods or cobble pieces larger than 6 inches in diameter; 85 percent of the fill should be smaller than 2½ inches in diameter. Minor amounts of oversize material (smaller than 12 inches in diameter) may be allowed provided the oversized pieces are not allowed to nest together and the compaction method will allow for loosely placed lifts not exceeding 12 inches.

6.8.2 Re-Use of On-Site Site Improvements

Asphalt concrete (AC) grindings and aggregate base (AB) may be generated during site demolition. If the AC grindings are mixed with the underlying AB to meet Class 2 AB specifications, they may be reused within new pavement and flatwork structural sections. Fill containing AC products should not be reused within the building and addition areas. Laboratory testing will be required to confirm the grindings meet project specifications.

6.8.3 High Moisture in Fills and Underlying Native Soils

As discussed, the in-situ moisture contents range up to about 10 to 12 percent over the estimated laboratory optimum in the upper 10 feet of the soil profile. Additionally, the soils may become significantly wetter during wet winter weather. The contractor should anticipate drying and processing soils prior to reusing them as fill. The contractors should anticipate working with and mitigating unstable soil conditions.

6.8.4 Potential Import Sources

Imported and non-expansive material should be inorganic with a Plasticity Index (PI) of 15 or less, and not contain recycled asphalt concrete where it will be used within the building and addition areas. To prevent significant caving during trenching or foundation construction, imported material should have sufficient fines. Samples of potential import sources should be delivered to our office at least 10 days prior to the desired import start date. Information regarding the import source should be provided, such as any site geotechnical reports. If the material will be derived from an excavation rather than a stockpile, potholes will likely be required to collect samples from throughout the depth of the planned cut that will be imported. At a minimum, laboratory testing will include PI tests. Material data sheets for select fill materials (Class 2 aggregate base, ¾-inch crushed rock, quarry fines, etc.) listing current laboratory testing data (not older than 6 months from the import date) may be provided for our review without providing a sample. If current data is not available, specification testing will need to be completed prior to approval.

Environmental and soil corrosion characterization should also be considered by the project team prior to acceptance. Suitable environmental laboratory data to the planned import quantity should be provided to the project environmental consultant; additional laboratory testing may be required based on the project environmental consultant's review. The potential import source should also not be more corrosive than the on-site soils, based on pH, saturated resistivity, and soluble sulfate and chloride testing.

6.9 COMPACTION REQUIREMENTS

All fills, and subgrade areas where fill, slabs-on-grade, and pavements are planned, should be placed in loose lifts 8 inches thick or less and compacted in accordance with ASTM D1557 (latest version) requirements as shown in the following table. In general, clayey soils should be compacted with sheepsfoot equipment and sandy/gravelly soils with vibratory equipment; open-graded materials such as crushed rock should be placed in lifts no thicker than 18 inches and consolidated in place with vibratory equipment. Each lift of fill and all subgrade should be firm and unyielding under construction equipment loading in addition to meeting the compaction requirements to be approved. The contractor (with input from a Cornerstone representative) should evaluate the in-situ moisture conditions, as the use of vibratory equipment on soils with high moistures can cause unstable conditions. General recommendations for soil stabilization are provided in the "Wet Soil Stabilization Guidelines" section of this report. Where the soil's PI is 20 or greater, the expansive soil criteria should be used.

Table 2: Compaction Requirements

Description	Material Description	Minimum Relative ¹ Compaction (percent)	Moisture ² Content (percent)
General Fill (within upper 5 feet)	On-Site Expansive Soils	87 – 92	>3
	Low Expansion Soils	90	>1
General Fill (below a depth of 5 feet)	On-Site Expansive Soils	95	>3
	Low Expansion Soils	95	>1
Trench Backfill	On-Site Expansive Soils	87 – 92	>3
	Low Expansion Soils	90	>1
Trench Backfill (upper 6 inches of subgrade)	On-Site Low Expansion Soils	95	>1
Crushed Rock Fill	¾-inch Clean Crushed Rock	Consolidate In-Place	NA
Non-Expansive Fill	Imported Non-Expansive Fill	90	Optimum
Flatwork Subgrade	On-Site Expansive Soils	87 - 92	>3
	Low Expansion Soils	90	>1
Flatwork Aggregate Base	Class 2 Aggregate Base ³	90	Optimum
Pavement Subgrade	On-Site Expansive Soils	87 - 92	>3
	Low Expansion Soils	95	>1
Pavement Aggregate Base	Class 2 Aggregate Base ³	95	Optimum
Asphalt Concrete	Asphalt Concrete	95 (Marshall)	NA

1 – Relative compaction based on maximum density determined by ASTM D1557 (latest version)

2 – Moisture content based on optimum moisture content determined by ASTM D1557 (latest version)

3 – Class 2 aggregate base shall conform to Caltrans Standard Specifications, latest edition, except that the relative compaction should be determined by ASTM D1557 (latest version)

6.9.1 Construction Moisture Conditioning

Expansive soils can undergo significant volume change when dried then wetted. The contractor should keep all exposed expansive soil subgrade (and also trench excavation side walls) moist until protected by overlying improvements (or trenches are backfilled). If expansive soils are allowed to dry out significantly, re-moisture conditioning may require several days of re-wetting (flooding is not recommended), or deep scarification, moisture conditioning, and re-compaction.

6.10 TRENCH BACKFILL

Utility lines constructed within public right-of-way should be trenched, bedded and shaded, and backfilled in accordance with the local or governing jurisdictional requirements. Utility lines in private improvement areas should be constructed in accordance with the following requirements unless superseded by other governing requirements.

All utility lines should be bedded and shaded to at least 6 inches over the top of the lines with crushed rock ($\frac{3}{8}$ -inch-diameter or greater) or well-graded sand and gravel materials conforming to the pipe manufacturer's requirements. Open-graded shading materials should be consolidated in place with vibratory equipment and well-graded materials should be compacted to at least 90 percent relative compaction with vibratory equipment prior to placing subsequent backfill materials. Open-graded materials (i.e. crushed rock, pea gravel, etc.) should also be completely enclosed within filter fabric, Mirafi 140N, or approved equivalent when extending near and below the design groundwater.

General backfill over shading materials may consist of on-site native materials provided they meet the requirements in the "Material for Fill" section, and are moisture conditioned and compacted in accordance with the requirements in the "Compaction" section.

Where utility lines will cross perpendicular to strip footings, the footing should be deepened to encase the utility line, providing sleeves or flexible cushions to protect the pipes from anticipated foundation settlement, or the utility lines should be backfilled to the bottom of footing with sand-cement slurry or lean concrete. Where utility lines will parallel footings and will extend below the "foundation plane of influence," an imaginary 1:1 plane projected down from the bottom edge of the footing, either the footing will need to be deepened so that the pipe is above the foundation plane of influence, or the utility trench will need to be backfilled with sand-cement slurry or lean concrete within the influence zone. Sand-cement slurry used within foundation influence zones should have a minimum compressive strength of 75 psi.

On expansive soils sites it is desirable to reduce the potential for water migration into building and pavement areas through the granular shading materials. We recommend that a plug of low-permeability clay soil, sand-cement slurry, or lean concrete be placed within trenches just outside where the trenches pass into building and pavement areas.

6.11 SITE DRAINAGE

Ponding should not be allowed adjacent to foundations, slabs-on-grade, or pavements. Hardscape surfaces should slope at least 2 percent towards suitable discharge facilities; landscape areas should slope at least 3 percent towards suitable discharge facilities. Roof runoff should be directed away from building and addition areas in closed conduits, to approved infiltration facilities, or on to hardscaped surfaces that drain to suitable facilities. Retention, detention or infiltration facilities should be spaced at least 10 feet from buildings and additions, and preferably at least 5 feet from slabs-on-grade or pavements.

6.12 LANDSCAPE CONSIDERATIONS

If landscaping areas will be adjacent to improvement areas, we recommend reducing the amount of surface water infiltrating these soils near foundations and exterior slabs-on-grade. This can typically be achieved by:

- Using drip irrigation

- Avoiding open planting within 3 feet of the building perimeter or near the top of slopes
- Regulating the amount of water distributed to lawns or planter areas by using irrigation timers
- Selecting landscaping that requires little or no watering, especially near foundations.

We recommend that the landscape architect consider these items when developing landscaping plans.

SECTION 7: 2019 CBC SEISMIC DESIGN CRITERIA

7.1 SEISMIC DESIGN CRITERIA

We developed site-specific seismic design parameters in accordance with Chapter 16, Chapter 18 and Appendix J of the 2019 California Building Code (CBC) and Chapters 11, 12, 20, and 21 and Supplement No. 1 of ASCE 7-16.

7.1.1 Site Location and Provided Data For 2019 CBC Seismic Design

The project is located at latitude 37.764722° and longitude -122.216744°, which is based on Google Earth (WGS84) coordinates at the approximate center of the site in Oakland, California. We have assumed that a Seismic Importance Factor (I_e) of 1.00 has been assigned to the structures in accordance with Table 1.5-2 of ASCE 7-16 for structures classified as Risk Category II. The building periods have not been provided by the project structural engineer.

7.2 2019 CBC SEISMIC DESIGN CRITERIA

As discussed in the “Subsurface” section, our CPT and exploratory borings generally encountered medium dense to dense sands and medium stiff to very stiff clay deposits to a depth of 100 feet, the maximum depth explored. Shear wave velocity measurements (V_s) were performed while advancing CPT-1 to a depth of approximately 95 feet resulted in an average shear wave velocity of 238 meters per second (782 feet per second). Based on our review of the local geology, we anticipate the average shear wave velocity to remain consistent down to 100 feet with the value mentioned above.

7.2.1 2019 CBC Seismic Design

As our borings encountered deep alluvial soils with shear wave velocity for the upper 30 meters between 600 and 1200 feet per second, per section 20.3.2 of ASCE 7-16, we have classified the site as Soil Classification D, which is described as a “stiff soil” profile. Because we used site specific data from our explorations and laboratory testing, the site class should be considered as “determined” for the purposes of estimating the seismic design parameters from the code. Our site-specific ground motion hazard analysis considered a V_{S30} of 238 m/s (782 ft/s).

In accordance with Section 11.4.8 of ASCE 7-16, we performed a ground motion hazard analysis following Chapter 21, Section 21.2 of ASCE 7-16. We evaluated both Probabilistic MCE_R Ground Motions in accordance with Method 1 and Deterministic MCE_R Ground Motions to generate our recommended design response spectrum for the project, see Figure 6. The recommended design spectral accelerations and associated periods are also provided graphically on Figure 6.

SECTION 8: FOUNDATIONS

8.1 SUMMARY OF RECOMMENDATIONS

In our opinion, the proposed building and addition may be supported on shallow foundations provided the recommendations in the “Earthwork” section and the sections below are followed.

8.2 SHALLOW FOUNDATIONS

8.2.1 Conventional Shallow Footings

Conventional shallow footings should bear on engineered fill, be at least 15 inches wide, extend at least 15 inches below the lowest adjacent grade, but also not extend deeper than about 2 feet beneath existing grades. Lowest adjacent grade is defined as the deeper of the following: 1) bottom of the adjacent interior slab-on-grade, or 2) finished exterior grade, excluding landscaping topsoil.

Footings constructed to the above dimensions and in accordance with the “Earthwork” recommendations of this report are capable of supporting maximum allowable bearing pressures of 1,330 psf for dead loads, 2,000 psf for combined dead plus live loads, and 2,660 psf for all loads including wind and seismic. These pressures are based on factors of safety of 3.0, 2.0, and 1.5 applied to the ultimate bearing pressure for dead, dead plus live, and all loads, respectively. These pressures are net values; the weight of the footing may be neglected for the portion of the footing extending below grade (typically, the full footing depth). Top and bottom mats of reinforcing steel should be included in continuous footings to help span irregularities and differential settlement.

Due to the lower strength clay soils encountered within our explorations at depths ranging from about 4½ to 8 feet beneath existing site grades, we should review the final footing layout, depths, and loading, and verify the above bearing capacities.

8.2.2 Footing Settlement

Structural loads were not provided to us at the time this report was prepared; therefore, we assumed the typical loading in the following table.

Table 3: Assumed Structural Loading

Foundation Area	Range of Assumed Loads
Isolated Column Footing	10 to 25 kips
Perimeter Strip Footing	0.5 to 1 kip per lineal foot

For our analysis, we have assumed bottom of footings will be 2 feet or less below existing site grades. Based on the above loading, the allowable bearing pressures presented above, and assumed bottom of footings, we estimate that the total static footing settlement will be on the order of about ½ to ⅔ inch, with less than ½ inch of post-construction differential settlement between adjacent foundation elements. In addition, we estimate that differential seismic movement will be on the order of ¼ inch, or less, between independent foundation elements, resulting in a total estimated differential footing movement on the order of about ⅔ to ¾ inch between foundation elements. As our footing loads were assumed, we recommend we be retained to review the final footing layout and loading, and verify the settlement estimates above.

8.2.3 Lateral Loading

Lateral loads may be resisted by friction between the bottom of footing and the supporting subgrade, and also by passive pressures generated against footing sidewalls. An ultimate frictional resistance of 0.40 applied to the footing dead load, and an ultimate passive pressure based on an equivalent fluid pressure of 450 pcf may be used in design. The structural engineer should apply an appropriate factor of safety to the ultimate values above. Where footings are adjacent to landscape areas without hardscape, the upper 12 inches of soil should be neglected when determining passive pressure capacity.

8.2.4 Conventional Shallow Footing Construction Considerations

Where utility lines will cross perpendicular to strip footings, the footing should be deepened to encase the utility line, providing sleeves or flexible cushions to protect the pipes from anticipated foundation settlement, or the utility lines should be backfilled to the bottom of footing with sand-cement slurry or lean concrete. Where utility lines will parallel footings and will extend below the “foundation plane of influence,” an imaginary 1:1 plane projected down from the bottom edge of the footing, either the footing will need to be deepened so that the pipe is above the foundation plane of influence, or the utility trench will need to be backfilled with sand-cement slurry or lean concrete within the influence zone. Sand-cement slurry used within foundation influence zones should have a minimum compressive strength of 75 psi.

Footing excavations should be filled as soon as possible or be kept moist until concrete placement by regular sprinkling to prevent desiccation. A Cornerstone representative should observe all footing excavations prior to placing reinforcing steel and concrete. If there is a significant schedule delay between our initial observation and concrete placement, we may need to re-observe the excavations.

Some sandier soils are present at the site and footing excavation walls may not stand vertical and may need to be sloped to a minimum 1:1 inclination or Stay-Form or similar may need to be placed within the footing excavations as they are excavated during construction of the foundation elements. Granular material encountered in the footing bottoms may also be disturbed to a depth of 6 to 8 inches following excavation and will need to be compacted to 90 percent relative compaction prior to steel placement. Care should be taken to not disturb the compacted granular material during steel placement. We should re-observe the footing excavations in granular materials after reinforcing steel has been placed and just prior to concrete placement. Footing excavations should also be kept moist by regular sprinkling with water to prevent desiccation and potential raveling of the granular materials. As an alternative, a rat slab can be placed over the granular material after we have observed the footing excavation to protect the granular material prior to steel placement.

SECTION 9: CONCRETE SLABS AND PEDESTRIAN PAVEMENTS

9.1 INTERIOR SLABS-ON-GRADE

The proposed slabs-on-grade should be supported on at least 6 inches of non-expansive fill (NEF) to reduce the potential for slab damage due to soil heave. The NEF layer should be constructed over subgrade prepared in accordance with the recommendations in the “Earthwork” section of this report. If moisture-sensitive floor coverings are planned, the recommendations in the “Interior Slabs Moisture Protection Considerations” section below may be incorporated in the project design if desired. If significant time elapses between initial subgrade preparation and NEF construction, the subgrade should be proof-rolled to confirm subgrade stability, and if the soil has been allowed to dry out, the subgrade should be re-moisture conditioned in accordance with the “Compaction” section of this report.

The structural engineer should determine the appropriate slab reinforcement for the loading requirements and considering the expansion potential of the underlying soils. For unreinforced concrete slabs, ACI 302.1R recommends limiting control joint spacing to 24 to 36 times the slab thickness in each direction, or a maximum of 18 feet.

9.2 INTERIOR SLABS MOISTURE PROTECTION CONSIDERATIONS

The following general guidelines for concrete slab-on-grade construction where floor coverings are planned are presented for the consideration by the developer, design team, and contractor. These guidelines are based on information obtained from a variety of sources, including the American Concrete Institute (ACI) and are intended to reduce the potential for moisture-related problems causing floor covering failures, and may be supplemented as necessary based on project-specific requirements. The application of these guidelines or not will not affect the geotechnical aspects of the slab-on-grade performance.

- Place a minimum 15-mil vapor retarder conforming to ASTM E 1745, Class C requirements or better directly below the concrete slab; the vapor retarder should extend to the slab edges and be sealed at all seams and penetrations in accordance with manufacturer's recommendations and ASTM E 1643 requirements. A 4-inch-thick

capillary break, consisting of crushed rock should be placed below the vapor retarder and consolidated in place with vibratory equipment. The mineral aggregate shall be of such size that the percentage composition by dry weight as determined by laboratory sieves will conform to the following gradation:

Sieve Size	Percentage Passing Sieve
1"	100
¾"	90 – 100
No. 4	0 – 10
No. 200	0 – 5

The capillary break rock may be considered as the upper 4 inches of the non-expansive fill previously recommended.

- The concrete water:cement ratio should be 0.45 or less. Mid-range plasticizers may be used to increase concrete workability and facilitate pumping and placement.
- Water should not be added after initial batching unless the slump is less than specified and/or the resulting water:cement ratio will not exceed 0.45.
- Polishing the concrete surface with metal trowels is not recommended.
- Where floor coverings are planned, all concrete surfaces should be properly cured.
- Water vapor emission levels and concrete pH should be determined in accordance with ASTM F1869-98 and F710-98 requirements and evaluated against the floor covering manufacturer's requirements prior to installation.

9.3 EXTERIOR FLATWORK

Exterior concrete flatwork subject to pedestrian and/or occasional light pick up loading should be at least 4 inches thick and supported on at least 4 inches of Class 2 aggregate base overlying subgrade prepared in accordance with the "Earthwork" recommendations of this report. Flatwork that will be subject to heavier or frequent vehicular loading should be designed in accordance with the recommendations in the "Vehicular Pavements" section below. To help reduce the potential for uncontrolled shrinkage cracking, adequate expansion and control joints should be included. Consideration should be given to limiting the control joint spacing to a maximum of about 2 feet in each direction for each inch of concrete thickness. Flatwork should be isolated from adjacent foundations or retaining walls.

SECTION 10: VEHICULAR PAVEMENTS

10.1 ASPHALT CONCRETE

The following asphalt concrete pavement recommendations tabulated below are based on the Procedure 608 of the Caltrans Highway Design Manual, estimated traffic indices for various pavement-loading conditions, and on a design R-value of 5. The design R-value was chosen based on engineering judgement considering the variable near surface soil conditions.

Table 4: Asphalt Concrete Pavement Recommendations

Design Traffic Index (TI)	Asphalt Concrete (inches)	Class 2 Aggregate Base ¹ (inches)	Total Pavement Section Thickness (inches)
4.0	2.5	7.5	10.0
4.5	2.5	9.5	12.0
5.0	3.0	10.0	13.0
5.5	3.0	12.0	15.0
6.0	3.5	13.0	16.5
6.5	4.0	14.0	18.0

¹Caltrans Class 2 aggregate base; minimum R-value of 78; subgrade R-value of 5

Frequently, the full asphalt concrete section is not constructed prior to construction traffic loading. This can result in significant loss of asphalt concrete layer life, rutting, or other pavement failures. To improve the pavement life and reduce the potential for pavement distress through construction, we recommend the full design asphalt concrete section be constructed prior to construction traffic loading. Alternatively, a higher traffic index may be chosen for the areas where construction traffic will use the pavements.

10.2 PORTLAND CEMENT CONCRETE

The Portland Cement Concrete (PCC) pavement recommendations outlined in the following table are based on methods presented in American Concrete Pavement Association (ACPA, 2006). We have provided a few pavement alternatives as an anticipated Average Daily Truck Traffic (ADTT) was not provided. The following table presents minimum PCC pavements thicknesses for various traffic loading categories and the anticipated maximum Average Daily Truck Traffic (ADTT).

Table 5: PCC Pavement Recommendations

Traffic Category	Minimum PCC Thickness ¹ (inches)	Class 2 Aggregate Base (inches)
Maximum ADTT = 50	6.5	6.0
Maximum ADTT = 500	7.0	6.0

¹Subgrade design R-Value = 5

The PCC thicknesses above are based on a concrete compressive strength of at least 3,500 psi, and laterally restraining the PCC with curbs or concrete shoulders. Adequate expansion and control joints should be included. Consideration should be given to limiting the control joint spacing to a maximum of about 2 feet in each direction for each inch of concrete thickness. We recommend that the construction and expansion joints be doweled when ADTT is greater than or equal to 80.

10.3 PAVEMENT CUTOFF

Surface water penetration into the pavement section can significantly reduce the pavement life, due to the native expansive clays. While quantifying the life reduction is difficult, a normal 20-year pavement design could be reduced to less than 10 years; therefore, increased long-term maintenance may be required.

It would be beneficial to include a pavement cut-off, such as deepened curbs, redwood-headers, or “Deep-Root Moisture Barriers” that are keyed at least 4 inches into the pavement subgrade. This will help limit the additional long-term maintenance.

SECTION 11: LIMITATIONS

This report, an instrument of professional service, has been prepared for the sole use of Danco specifically to support the design of the Inn By The Coliseum Improvements project in Oakland, California. The opinions, conclusions, and recommendations presented in this report have been formulated in accordance with accepted geotechnical engineering practices that exist in Northern California at the time this report was prepared. No warranty, expressed or implied, is made or should be inferred.

Recommendations in this report are based upon the soil and groundwater conditions encountered during our subsurface exploration. If variations or unsuitable conditions are encountered during construction, Cornerstone must be contacted to provide supplemental recommendations, as needed.

Danco may have provided Cornerstone with plans, reports and other documents prepared by others. Danco understands that Cornerstone reviewed and relied on the information presented in these documents and cannot be responsible for their accuracy.

Cornerstone prepared this report with the understanding that it is the responsibility of the owner or his representatives to see that the recommendations contained in this report are presented to other members of the design team and incorporated into the project plans and specifications, and that appropriate actions are taken to implement the geotechnical recommendations during construction.

Conclusions and recommendations presented in this report are valid as of the present time for the development as currently planned. Changes in the condition of the property or adjacent properties may occur with the passage of time, whether by natural processes or the acts of other persons. In addition, changes in applicable or appropriate standards may occur through legislation or the broadening of knowledge. Therefore, the conclusions and recommendations presented in this report may be invalidated, wholly or in part, by changes beyond Cornerstone's control. This report should be reviewed by Cornerstone after a period of three (3) years has elapsed from the date of this report. In addition, if the current project design is changed, then Cornerstone must review the proposed changes and provide supplemental recommendations, as needed.

An electronic transmission of this report may also have been issued. While Cornerstone has taken precautions to produce a complete and secure electronic transmission, please check the electronic transmission against the hard copy version for conformity.

Recommendations provided in this report are based on the assumption that Cornerstone will be retained to provide observation and testing services during construction to confirm that conditions are similar to that assumed for design, and to form an opinion as to whether the work has been performed in accordance with the project plans and specifications. If we are not retained for these services, Cornerstone cannot assume any responsibility for any potential claims that may arise during or after construction as a result of misuse or misinterpretation of Cornerstone's report by others. Furthermore, Cornerstone will cease to be the Geotechnical-Engineer-of-Record if we are not retained for these services.

1 PROJECT DESCRIPTION

1.1 PROJECT DATA

Project Owner:	DANCO Builders 5251 Ericson Way C, Arcata, CA 95521 707-822-9000
Project Site Address:	4801 Coliseum Way, Oakland, CA 94601
Project Location:	Longitude 122.2167803°W Latitude 37.7647455°N
Adjacent Areas:	North: 50 th Ave. West: Nimitz Freeway South: 46 th Ave. East: Coliseum Way
Adjacent Land Uses:	Commercial

1.2 SCOPE OF REPORT

This study analyzes 15-year storm peak flows for the existing and proposed development conditions to identify the hydrologic impacts of the proposed project. The study documents the performance of the existing stormwater infrastructure. The study will document no change in peak flow in the proposed condition due to the total imperviousness of the site remain the same in the existing and proposed condition within the limits of work.

This report does not discuss required water quality measures to be implemented on an interim level during construction, nor those necessary to be implemented permanently.

1.3 EXISTING CONDITION

The site is an existing commercial development located at 4801 Coliseum Way, Oakland, CA 94601, APN: 034-2295-016-05. The study applies to the parcel that the Inn by the Coliseum is located on. The existing site is mostly impervious, covered by the parking lot or existing buildings. The existing parking lot area is mostly impervious (AC pavement) with some vegetated planters. The topology is flat with ground elevations ranging from 3-5.5 ft (NAVD 88 (US Feet)). There is no site run-on due to walls surrounding the

lot. The existing site area is 0.83 ac. The project site flows confluence and drain to an assumed¹ 8" on-site storm drain with two inlets. Both inlets are in the parking lot, and eventually the inlets drain to the existing storm drainage system on Coliseum way. The site is divided into two basins. The first basin (area = 0.292 acres) is located on the Northwest side of the parking lot and drains to the existing west storm drain inlet labelled node 100. The second basin (area = 0.538 acres) is located on the East side of the parking lot and drains to the existing East storm drain inlet labelled node 200. Refer to existing condition drainage map on attachment B for detailed runoff coefficients of each drainage area.

1.4 PROPOSED CONDITION

The proposed work on the site includes converting the Inn by the Coliseum into 36 studio apartments. The project proposes minor changes in the parking lot to create the outdoor community recreation area, as well as an additional structure at the far end of the parking lot that will serve as a space for 4 resident services offices for the services providers on site. There is still no site run-on due to walls surrounding the lot. The proposed site is still 0.83 ac, and the project site flows confluence and drain to the existing on-site storm drain. The storm drain connects to the storm drain system on Coliseum way. No changes to the site grading will result in no change to the drainage characteristics from the existing site. The project site flows confluence and drain to an assumed 8" on-site storm drain with two inlets. Both inlets are in the parking lot, and eventually the inlets drain to the existing storm drainage system on Coliseum way. The site is divided into two basins. The first basin (area = 0.292 acres) is located on the Northwest side of the parking lot and drains to the existing west storm drain inlet labelled node 100. The second basin (area = 0.538 acres) is located on the East side of the parking lot and drains to the existing East storm drain inlet labelled node 200. Refer to proposed condition drainage map on attachment C for detailed runoff coefficients of each drainage area. The existing downstream storm drain system can fully convey the Q15-year storm from onsite areas. The proposed condition does not change the 15-year peak flow, and detention is not required.

¹ An 8" pipe for the existing storm drain size was assumed based on a high-level hydraulic analysis of the site (see Attachment D).

1.5 PROJECT LOCATION

The location of the site is within the City of Oakland and East of Coliseum Way and west of Nimitz Freeway. The approximate location of the project area can be seen on Figure 1 - Vicinity Map.

FIGURE 1- VICINITY MAP (N.T.S.)

2 STUDY OBJECTIVES

The purpose of this report is to analyze the existing and proposed drainage and provide design backup for proposed improvements, with specific objectives as follows:

- Document the tributary drainage area associated with the project site;
- Develop hydrologic parameters and calculate 15-year flow rates per the City of Oakland Storm Drainage Design Standards Manual.
- Check the capacity of the existing storm drain on site and show that the existing and proposed flows can be passed.

3 METHODOLOGY

3.1 HYDROLOGY

According to the Oakland BMP manual, the Modified Rational Method and Synthetic Unit Hydrograph Method are accepted computation techniques to estimate the storm water runoff in watersheds. Rational Method is suitable for drainage areas less than 320 acres or half square mile. The rational method is a physically based model that calculates peak flow rates (Q) as a function of runoff coefficients (C), rainfall intensities (i), and drainage areas (A):

$$Q = C * I * A$$

Weighted runoff coefficients have been established using regional guidance for impervious and pervious areas. Refer to the existing and proposed condition hydrologic exhibits in Attachments B and C, respectively.

Rainfall intensity was calculated per City of Oakland's BMP manual using Mean Annual Precipitation (MAP), Storm Duration (Ti) and Recurrence Interval (Kj).

- The MAP (mean annual precipitation) of a drainage area can be determined using Attachment 8. This requires the engineer to locate the center of gravity of the entire drainage area above the point of concentration at which the flow rate is being determined.

Area delineations were developed using project specific contour topography. Refer to the existing and proposed, on-site hydrologic work maps found in Attachments B and C, respectively.

- Federal Emergency Management Agency (FEMA) Panels have been reviewed for the site. The site, and surrounding area is located within the 500-year floodplain. The FIRM for the site can be found in Attachment A.
- Hydrologic soil type is assumed to be soil type D per Oakland BMP Manual and NRCS Soil Map.
- The city requires a modified runoff coefficient, C', to be used in the design of drainage facilities. C' is made up of a basic runoff coefficient, C, a ground slope factor, Cs, and a rainfall intensity

factor, C_i . The following sections contain procedures to determine C , C_s , and C_i . The formula for calculating the modified runoff coefficient is:

$$C' = C + C_s + C_i$$

- To determine the appropriate C -value for any given drainage area, the applicable land use is overlaid onto the site map for an area-weighted average C -value (refer to Table 2 on Attachment A).
- Slope Adjustment Factor, C_s , is used to adjust for increases in runoff as the average slope of the drainage area increases. An area weighted average slope, S , for the area shall be calculated as a basis for determining C_s . Slope was calculated using elevation data provided from the field topo data and using the longest flow length of each basin.
- Rainfall Intensity Factor, C_i , is used to account for the decrease in soil permeability that can be expected with an increase in rainfall intensity.
- The drainage area (A) was determined based on available topographic information from as-built data provided from the client. The drainage area delineation can be found on the Hydrology Exhibits in Attachment B & C.

3.2 HYDRAULICS

The hydraulics calculation for the existing storm drain is provided on attachment D hereon. This project is not proposing any changes or new storm drain for the site.

4 RESULTS

4.1 HYDROLOGY

The peak flow rates for the 15-year event are summarized in Table 5-1 below. The calculations can be reviewed in Attachments B & C.

TABLE 4-1- SUMMARY OF PRE VS. POST DEVELOPMENT PEAK FLOW RATES

Discharge Location	A (ac)	Q ₁₅ (cfs)
Existing Condition		
100	0.292	0.096
200	0.538	0.177
Total	0.83	0.274
Proposed Condition		
100	0.292	0.096
200	0.538	0.177
Total	0.83	0.274
Delta Q100		0

5 CONCLUSIONS AND RECOMMENDATIONS

Hydrology

The proposed project will not alter the existing drainage pattern of the site and results in a no change of the 15-year peak flow at the final outfall as compared to existing conditions. The improvements associated with this project will not pose a flood risk to downstream, adjacent, or neighboring properties.

Proposed improvements will not result in areas of concentrated discharge and are not expected to increase the chance of erosion on-site. The proposed condition will not change the peak 15-year flow leaving the site since the hydrology conditions of the site remain the same in both conditions (existing and proposed).

6 DECLARATION OF RESPONSIBLE CHARGE

I, hereby declare that I am the Civil Engineer of work for this project, that I have exercised responsible charge over the design of the project as defined in Section 6703 of the Business and Professions Code, and that the design is consistent with current design.

I understand that the check of project drawings and specifications by the City of San Diego is confined to a review only and does not relieve me, as Engineer of Work, of my responsibilities for the project design.

Stefani Bell, P.E.

NOTES TO USERS

For information and questions about this map, available products associated with this FIRM including historic versions of this FIRM, please contact products at the National Flood Insurance Program in general, either call the FEMA Map Information eXchange at 1-877-FEMA-4347 (1-877-336-6273) or visit the FEMA Map Service Center website at msc.fema.gov. Available products may include preliminary, revised, Letter of Map Change, a Flood Insurance Study Report and/or digital versions of this map. Many of these products can be obtained or ordered directly from the vendor. Users may reference the current map data by using FEMA symbols by visiting the FEMA-Map Service Center website or by calling the FEMA Map Information eXchange.

Comments, proposals, and/or suggestions for map panels may either be e-mailed to mapinfo@fema.gov or sent as the current FIRM index. These may be ordered directly from the Map Service Center at the number listed above.

To determine if map information is available in the community, contact your insurance agent or call the National Flood Insurance Program at 1-800-498-6032.

Some map information shown on this FIRM was derived from Coastal Community (CCAR) and Digital Elevation Data (DED) 2011. USDA NAD 83 2011 imagery is used in areas not covered by the Coastal Community imagery.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
 Web Soil Survey URL:
 Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Alameda County, California, Western Part
 Survey Area Data: Version 19, Sep 14, 2022

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 7, 2021—Mar 27, 2021

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

National Risk Index

November 03, 2022

Census tract 06001407300, Alameda County, California

Summary

Risk Index is **Relatively High**

Expected Annual Loss is **Relatively High**

Social Vulnerability is **Relatively Low**

Community Resilience is **Relatively Moderate**

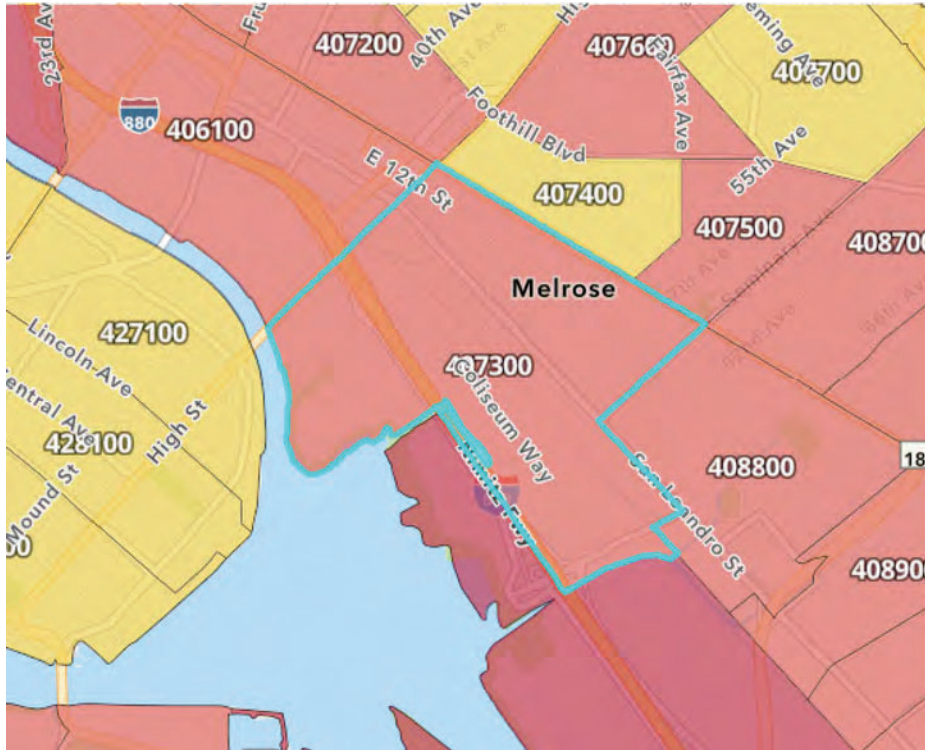

While reviewing this report, keep in mind that low risk is driven by lower loss due to natural hazards, lower social vulnerability, and higher community resilience.

For more information about the National Risk Index, its data, and how to interpret the information it provides, please review the **About the National Risk Index** and **How to Take Action** sections at the end of this report.

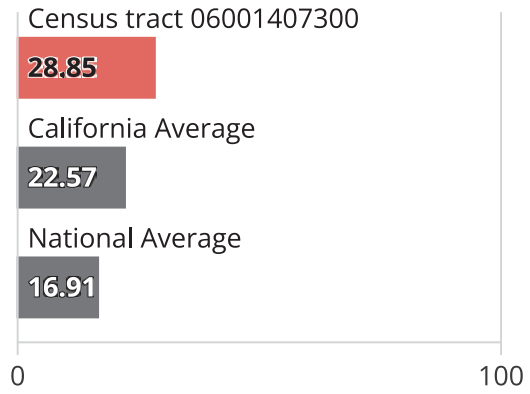

Or, visit the National Risk Index website at hazards.fema.gov/nri/learn-more to access supporting documentation and links.

Risk Index

The Risk Index rating is **Relatively High** for **Census tract 06001407300** when compared to the rest of the U.S.

Score	28.85
-------	--------------

93.6% of U.S. Census tracts have a lower Risk Index

86.9% of Census tracts in California have a lower Risk Index

Risk Index Legend

- Very High
- Relatively High
- Relatively Moderate
- Relatively Low
- Very Low
- No Rating
- Not Applicable
- Insufficient Data

Hazard Type Risk Index

Hazard type Risk Index scores are calculated using data for only a single hazard type, and reflect a community's relative risk for only that hazard type.

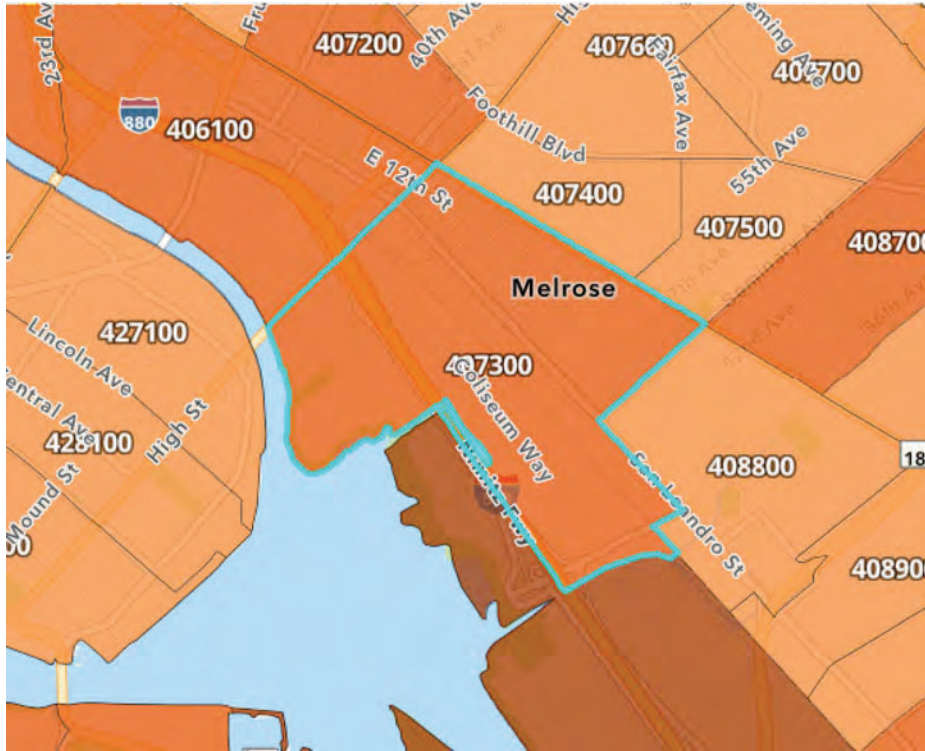

Hazard Type	Risk Index Rating	Risk Index Score	0	100
Avalanche	Not Applicable	--		
Coastal Flooding	Very Low	1.74		100
Cold Wave	No Rating	0.00		100
Drought	No Rating	0.00		100
Earthquake	Very High	49.70		100
Hail	Very Low	4.41		100
Heat Wave	Relatively Low	5.97		100
Hurricane	Not Applicable	--		
Ice Storm	Very Low	4.60		100
Landslide	Very Low	1.24		100
Lightning	Very Low	9.93		100
Riverine Flooding	Very Low	2.83		100
Strong Wind	Very Low	2.73		100
Tornado	Very Low	10.92		100
Tsunami	Very Low	1.41		100
Volcanic Activity	Not Applicable	--		
Wildfire	No Rating	0.00		100
Winter Weather	No Rating	0.00		100

The chart above demonstrates the relative distribution of hazard type Risk Index scores for **Census tract 06001407300**. Risk Index scores are plotted for each hazard type included in the National Risk Index. Higher relative risk corresponds to larger colored areas inside a given hazard type chart slice.

Expected Annual Loss

In **Census tract 06001407300**, expected loss each year due to natural hazards is **Relatively High** when compared to the rest of the U.S.

Score **32.1**

95.4% of U.S. Census tracts have a lower Expected Annual Loss
91.5% of Census tracts in California have a lower Expected Annual Loss

Winter Weather	0 events per year	0	2005-2017 (12 years)

Historic Loss Ratios

Hazard Type	Overall Rating	Building Value	Population	Agriculture Value
Avalanche	--	--	--	--
Coastal Flooding	Very Low	\$3.98 per \$10M	4.81 per 1T	n/a
Cold Wave	No Rating	\$9.15 per \$1B	1.59 per 1M	\$7.36 per \$10K
Drought	No Rating	n/a	n/a	\$4.62 per \$1K
Earthquake	Very Low	\$5.34 per \$1K	2.33 per 100K	n/a
Hail	Very Low	\$1.07 per \$100K	1.50 per 100M	\$1.19 per \$10M
Heat Wave	Very Low	\$1.18 per \$1B	3.28 per 100M	\$1.06 per \$10K
Hurricane	--	--	--	--
Ice Storm	Very Low	\$5.89 per \$1M	1.66 per 10M	n/a
Landslide	Very Low	\$4.62 per \$100K	9.69 per 100M	n/a
Lightning	Relatively High	\$1.73 per \$1B	8.44 per 100M	n/a
Riverine Flooding	Very Low	\$1.05 per \$10K	8.96 per 1M	\$4.25 per \$1K
Strong Wind	Very Low	\$4.85 per \$10M	2.13 per 100M	\$2.11 per \$100K
Tornado	Very Low	\$3.83 per \$100	1.29 per 10K	\$3.85 per \$100
Tsunami	Very Low	\$7.30 per \$10M	3.87 per 1M	n/a
Volcanic Activity	--	--	--	--
Wildfire	No Rating	\$4.00 per \$10	2.24 per 10K	\$8.47 per \$10M
Winter Weather	No Rating	\$9.63 per \$100M	1.44 per 100M	\$2.73 per \$1T

Social Vulnerability

Social groups in **Census tract 06001407300** have a **Relatively Low** susceptibility to the adverse impacts of natural hazards when compared to the rest of the U.S.

Score **29.89**

29.9% of U.S. Census tracts have a lower Social Vulnerability

31.7% of Census tracts in California have a lower Social Vulnerability

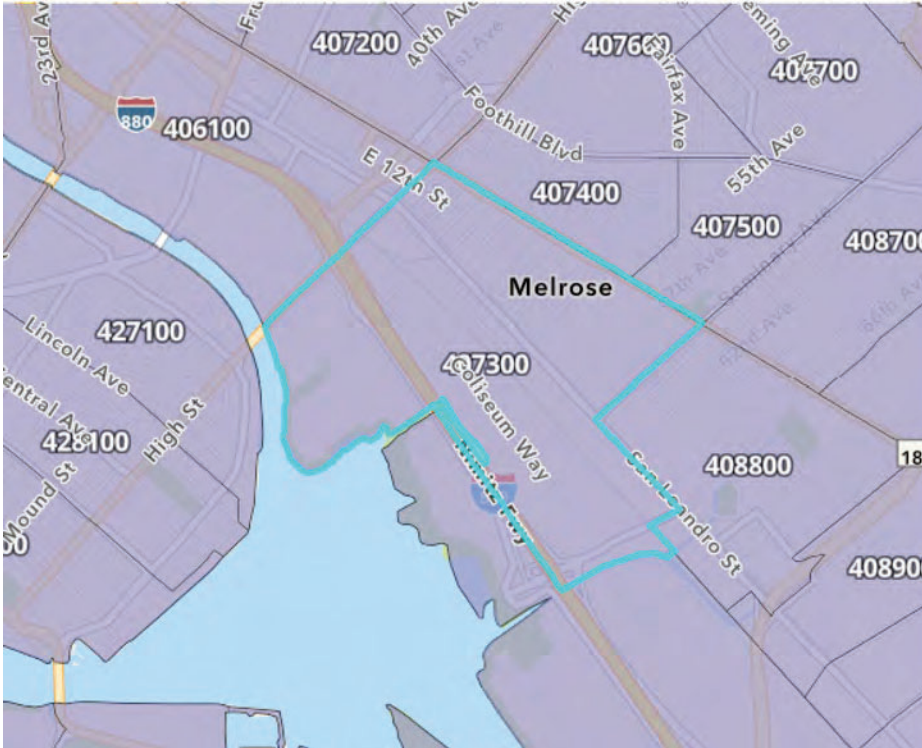

Social Vulnerability Legend

About the National Risk Index

The National Risk Index is a dataset and online tool to help illustrate the United States communities most at risk for 18 natural hazards: Avalanche, Coastal Flooding, Cold Wave, Drought, Earthquake, Hail, Heat Wave, Hurricane, Ice Storm, Landslide, Lightning, Riverine Flooding, Strong Wind, Tornado, Tsunami, Volcanic Activity, Wildfire, and Winter Weather.

The National Risk Index leverages available source data for Expected Annual Loss due to these 18 hazard types, Social Vulnerability, and Community Resilience to develop a baseline relative risk measurement for each United States county and Census tract. These measurements are calculated using average past conditions, but they cannot be used to predict future outcomes for a community. The National Risk Index is intended to fill gaps in available data and analyses to better inform federal, state, local, tribal, and territorial decision makers as they develop risk reduction strategies.

Explore the National Risk Index Map at hazards.fema.gov/nri/map.

Visit the National Risk Index website at hazards.fema.gov/nri/learn-more to access supporting documentation and links.

Calculating the Risk Index

Risk Index scores are calculated using an equation that combines scores for Expected Annual Loss due to natural hazards, Social Vulnerability and Community Resilience:

$$\text{Risk Index} = \text{Expected Annual Loss} \times \text{Social Vulnerability} \div \text{Community Resilience}$$

Risk Index scores are presented as a composite score for all 18 hazard types, as well as individual scores for each hazard type.

For more information, visit hazards.fema.gov/nri/determining-risk.

Calculating Expected Annual Loss

Expected Annual Loss scores are calculated using an equation that combines values for exposure, annualized frequency, and historic loss ratios for 18 hazard types:

$$\text{Expected Annual Loss} = \text{Exposure} \times \text{Annualized Frequency} \times \text{Historic Loss Ratio}$$

Expected Annual Loss scores are presented as a composite score for all 18 hazard types, as well as individual scores for each hazard type.

For more information, visit hazards.fema.gov/nri/expected-annual-loss.

Calculating Social Vulnerability

Social Vulnerability is measured using the Social Vulnerability Index (SoVI) published by the University of South Carolina's Hazards and Vulnerability Research Institute (HVRI).

For more information, visit hazards.fema.gov/nri/social-vulnerability.

Calculating Community Resilience

Community Resilience is measured using the Baseline Resilience Indicators for Communities (HVRI BRIC) published by the University of South Carolina's Hazards and Vulnerability Research Institute (HVRI).

For more information, visit hazards.fema.gov/nri/community-resilience.

How to Take Action

There are many ways to reduce natural hazard risk through mitigation. Communities with high National Risk Index scores can take action to reduce risk by decreasing Expected Annual Loss due to natural hazards, decreasing Social Vulnerability, and increasing Community Resilience.

For information about how to take action and reduce your risk, visit hazards.fema.gov/nri/take-action.

Disclaimer

The National Risk Index (the Risk Index or the Index) and its associated data are meant for planning purposes only. This tool was created for broad nationwide comparisons and is not a substitute for localized risk assessment analysis. Nationwide datasets used as inputs for the National Risk Index are, in many cases, not as accurate as available local data. Users with access to local data for each National Risk Index risk factor should consider substituting the Risk Index data with local data to recalculate a more accurate risk index. If you decide to download the National Risk Index data and substitute it with local data, you assume responsibility for the accuracy of the data and any resulting data index. Please visit the **Contact Us** page if you would like to discuss this process further.

The methodology used by the National Risk Index has been reviewed by subject matter experts in the fields of natural hazard risk research, risk analysis, mitigation planning, and emergency management. The processing methods used to create the National Risk Index have produced results similar to those from other natural hazard risk analyses conducted on a smaller scale. The breadth and combination of geographic information systems (GIS) and data processing techniques leveraged by the National Risk Index enable it to incorporate multiple hazard types and risk factors, manage its nationwide scope, and capture what might have been missed using other methods.

The National Risk Index does not consider the intricate economic and physical interdependencies that exist across geographic regions. Keep in mind that hazard impacts in surrounding counties or Census tracts can cause indirect losses in your community regardless of your community's risk profile.

Nationwide data available for some risk factors are rudimentary at this time. The National Risk Index will be continuously updated as new data become available and improved methodologies are identified.

The National Risk Index Contact Us page is available at hazards.fema.gov/nri/contact-us.

Attn: McKenzie Dibble

Subject: Inn by the Coliseum NEPA Documentation – Trip Generation Analysis

Michael Baker International (Michael Baker) has reviewed the proposed Inn by the Coliseum renovation (Project) located on Coliseum Way in the City of Oakland relative to the required traffic study trip analysis. The purpose of this memorandum is to document the site trip generation analysis and findings, and to provide recommended next steps.

Trip generation rates were evaluated using the Institute of Transportation Engineers (ITE) *Trip Generation Manual*. Based on the *City of Oakland Transportation Impact Review Guidelines* (April 2017), intersections where projects add 50 or more peak hour trips require additional evaluation. The Project is anticipated to add zero (0) new trips during the AM Peak Hour and three (3) fewer trips during the PM Peak Hour. Therefore, there are no intersections in the immediate area of the site where 50 or more trips will be added due to the Project and no further study is recommended.

The following trip generation analysis for the proposed Project includes the details of the analysis approach and assumptions. Please review this analysis and let us know if you have any questions or comments.

Sincerely,

A handwritten signature in black ink, appearing to read "Carla R. Dietrich".

Carla Dietrich, P.E. (PA), PTOE
Transportation Planner

1. Project Information

Project Location:	4801 Coliseum Way, Oakland, CA	
Project Description:	Conversion of existing motel land use (temporarily being utilized as COVID-19 quarantine center) to proposed affordable housing land use.	
Project Opening Year:	2023	
Location:	(See Exhibit 1 in Attachment A)	
	<u>Engineer</u>	<u>Applicant</u>
Company:	Michael Baker International	DANCO BUILDERS
Name:	Carla Dietrich	McKenzie Dibble
Address:	3536 Concoors	5251 Ericson Way
City, State, Zip Code:	Ontario, CA 91764	Arcata, CA 95521
Phone #:	(909) 974-4908	(707) 825-1588
Email:	cdietrich@mbakerintl.com	mdibble@danco-group.com

The Inn by the Coliseum motel currently exists at 4801 Coliseum Way in the City of Oakland. The facility ceased operations as a motel in March 2021 to operate as a County-contracted COVID-19 temporary quarantine center. This analysis focuses on the proposal to convert the existing motel facility into an affordable housing facility with 37 dwelling units (Project). **Exhibit 1** is the Project location map (See **Attachment A**). **Table 1** summarizes key site characteristics for the existing and proposed conditions. It is assumed that the motel facilities will continue to operate as a COVID-19 quarantine center prior to implementation of the affordable housing Project as needed. If the Project doesn't move forward, the property could revert back to a motel.

Table 1: Site Characteristics

Site Characteristic	Existing Condition	Proposed Condition
Site Acreage	0.83 acres	0.83 acres
Land Use	Motel (Temporarily COVID-19 Quarantine Center)	Affordable Housing
Rooms / Dwelling Units	36 rooms + 1 managers unit	36 studio apartments + 1 manager unit = 37 Dwelling Units

The site is currently accessed via a full access driveway along Coliseum Way. This is the main access to the property. No modifications to the site access are being recommended as part of the Project.

2. Trip Generation

Trip Credit

Due to the nature of the site, the following trip adjustments are proposed:

- Internal Trip Reduction = 0%
- Pass-by Trip Reduction = 0%
- Existing Use Trip Credit = Existing motel trips

Finding: Only Existing Use Trip Credit will be used. Credit applied as detailed in the section "[Trip Generation Analysis](#)" below.

Trip Generation Rates/Equations

The *City of Oakland Transportation Impact Review Guidelines* (April 2017) [*City Guidelines*] identifies the Institute of Transportation Engineers (ITE) *Trip Generation Manual* as the appropriate source for determining project trips for proposed land uses. Additionally, the City Guidelines require the use of the ITE process for determining the selection of weighted average rate or fitted curve equation.

The *Trip Generation Manual*, 11th edition was used to obtain trip generation rates/equations for the proposed affordable housing use. Since the motel is temporarily serving as a COVID-19 quarantine site, the *Trip Generation Manual* was also utilized to estimate the number of motel trips.

The *Trip Generation Manual* provides a weighted average rate and/or a fitted curve equation to estimate trips for each specific land use. The ITE *Trip Generation Handbook*, 3rd Edition details the process for determining the selection of weighted average rate or fitted curve equation which includes the evaluation of the number of data points, the R-squared value, and the standard deviation.

Table 2 shows a summary of the determination of the appropriate rate method for each land use by time period.

Table 2: ITE Trip Generation Manual Rate/Equation Determination

Land Use	ITE Code	Daily	AM Peak Hour	PM Peak Hour
Motel	320	Fitted Curve Equation	Weighted Average Rate	Fitted Curve Equation
Affordable Housing (Income Limits)	223	Fitted Curve Equation	Weighted Average Rate	Weighted Average Rate

Source: *ITE Trip Generation Manual*, 11th Edition

Table 3 shows the applicable ITE *Trip Generation Manual*, 11th edition trip rates or equations for the Motel Land Use (Code 320) and the Affordable Housing Land Use (223). The affordable housing rates shown assume the land use will have income limits (not senior housing or special needs). Trip rate units are rooms for motels and dwelling units for affordable housing.

Table 3: ITE Trip Generation Manual Trip Rates/Equations

Land Use	ITE Code	Unit	Average Trip Rate						
			Daily		AM Peak Hour		PM Peak Hour		
			Rate/ Eq	Rate/ Eq	In	Out	Rate/ Eq	In	Out
Motel	320	Rooms	$T = (3.62 * X) - 29.43$	0.35	37%	63%	$T = (0.24 * X) + 11.16$	54%	46%
Affordable Housing (Income Limits)	223	DU	$T = (3.73 * X) + 139.35$	0.36	29%	71%	0.46	59%	41%

Source: *ITE Trip Generation Manual*, 11th Edition

- Notes:
- 1) DU = Dwelling Units
 - 2) Rate = Weighted Average Rate
 - 3) Eq = Fitted Curve Equation

Trip Generation Analysis

The trip generation rates and equations shown in **Table 3** were utilized to calculate the estimated site trips associated with each land use as shown in **Table 4**. The existing motel land use currently generates the estimated trips below. The proposed Project will supplant the existing use trips. To assess the impact of the proposed Project, only the difference in trips from the existing motel land use are considered. Thus, the estimated existing motel land use trips were applied as a trip credit, isolating new additional Project.

Table 4: Estimated Site Trips

Land Use	ITE Code	Intensity	Estimated Number of Trips						
			Daily	AM Peak Hour			PM Peak Hour		
				Total	In	Out	Total	In	Out
Existing [Motel] Trip Credit	320	37 Rooms	105	13	5	8	20	11	9
Proposed [Affordable Housing (Income Limits)]	223	37 DU	277	13	4	9	17	10	7
Difference [New Trips]			+172	0	-1	+1	-3	-1	-2

Source: ITE Trip Generation Manual, 11th Edition

Notes: 1) DU = Dwelling Units

As shown above, after applying the existing land use trip credit, the proposed Project is estimated to generate 172 more daily trips. In the AM Peak Hour, the proposed Project is estimated to generate zero (0) additional total trips than the existing land use. In the PM Peak Hour, the proposed Project is estimated to generate three (3) fewer total trips than the existing land use.

In summary, **the proposed Project is estimated to generate the same or fewer total trips than the existing land use during the peak hours.**

3. Trip Distribution & Assignment

A trip distribution was developed for the existing and proposed land use. The trip distribution accounted for the type of trip (local vs regional) given the land use and a review of the surrounding land uses. **Table 5** summarizes the trip distribution assumptions.

Table 5: Regional Trip Distribution by Land Use

Existing Land Use (Motel)	Proposed Land Use (Affordable Housing)
Greater percentage of regional trips	Greater percentage of local trips
<ul style="list-style-type: none"> • 35% to the north • 25% to the east • 20% to the south • 20% to the west 	<ul style="list-style-type: none"> • 35% to the north • 35% to the east • 15% to the south • 15% to the west

Exhibit 2 shows the site driveway trip distribution percentages based on **Table 5**. It is assumed that all south traffic and half of east traffic will turn right out of the site driveway. All north, west, and half of east traffic is assumed to turn left out of the site driveway. **Exhibit 3** shows the estimated trip assignment based on trip generation and distribution by land use. As shown, the proposed Project is not expected to substantially impact trip patterns during the peak hours.

Exhibit 2: Driveway Trip Distribution Percentages

Exhibit 3: Driveway Trip Assignment

Exhibit 4 shows the projected difference in trip assignment between the proposed Affordable Housing and Motel land uses. As shown, net zero (0) additional trips are estimated in the AM peak hour with the proposed Project. Additionally, three (3) fewer trips are estimated in the PM peak hour with the proposed Project. This translates to a range of -2 to +1 new trips when evaluated by movement at the Site Driveway along Coliseum Way.

Exhibit 4: Driveway Trip Difference

4. Findings and Conclusions

The Project proposes to convert a motel into an affordable housing facility. A trip generation comparison was conducted to determine estimated traffic volumes. The proposed land use is expected to generate between zero (0) additional total trips or three (3) fewer total trips during the peak hours. Therefore, the comparison shows that **the proposed Project is estimated to generate the same or fewer total trips than the existing land use during the peak hours.**

Additionally, a trip distribution and assignment were conducted for the existing and proposed land uses. The trip assignments show that the proposed Project is not expected to substantially impact trip patterns during the peak hours.

Per the *City of Oakland Transportation Impact Review Guidelines* (April 2017), the Project is not expected to add more than 50 vehicles trips to adjacent intersections; therefore, the Project meets the "<50 vehicle trips during peak hour" threshold indicating no need for a level of service traffic study. Thus, given the trip generation and assignment comparison, **no further study is recommended.**

Attachment A – Project Location
