U.S. Fish and Wildlife Service Coastal Barrier Resources System

CBRS Mapper

This map is for general reference only. The Coastal Barrier Resources System (CBRS) boundaries depicted on this map are representations of the controlling CBRS boundaries, which are shown on the official maps, accessible at <https://www.fws.gov/library/collections/official-coastal-barrier-resources-system-maps>. All CBRS related data should be used in accordance with the layer metadata found on the CBRS Mapper website.

The CBRS Buffer Zone represents the area immediately adjacent to the CBRS boundary where users are advised to contact the Service for an official determination (<https://www.fws.gov/service/coastal-barrier-resources-system-property-documentation>) as to whether the property or project site is located "in" or "out" of the CBRS.

CBRS Units normally extend seaward out to the 20- or 30-foot bathymetric contour (depending on the location of the unit). The true seaward boundary was produced by the CBRS Mapper

1.0 INTRODUCTION

This report documents the results of an Air Quality Assessment completed for the Danco Homekey Project (Project), which includes the renovation of an existing and operating 37-unit motel into 36 affordable studio apartments and one studio-manager apartment for a total of 37 residential dwelling units in Oakland, California. The purpose of this report is to estimate the emissions generated during the one-time Project renovations and ongoing operations and compare them to the Conformity Determination thresholds established by the U.S. Environmental Protection Agency (USEPA).

1.1 Project Location and Description

The Proposed Project is intended to provide affordable living opportunities that would enhance the quality of life for the homeless population in the City of Oakland. The Danco Homekey Project aims to provide a supportive, safe and stable environment for homeless persons and their families to receive life-changing services needed to break the cycle of homelessness and improve quality of life. The Project Site is planned as a navigation center providing long-term housing, supportive services, medical oversight and recuperative care to help homeless men, women, and families transition out of homelessness.

The 0.83-acre Project Site is located at 4801 Coliseum Way in central Oakland (see Figures 1 & 2), on the west side of Coliseum Way between 46th Avenue and 50th Avenue. The Project Site is currently developed with an operating 37-unit motel, the Inn by the Coliseum. This motel consists of two, 2-story buildings. Both of the existing structures consists of wood construction at grade which sit on a concrete slab. The interior of the rooms has a combination of plaster and drywall ceiling and wall finish. The floors of the rooms have drywall ceiling and wall-finish and the floors have a combination of ceramic tile and laminate flooring. The Project Site is generally bound by Interstate 880 (I-880) to the west and south and Coliseum Way to the north and east, with industrial land uses beyond. There is also a railway corridor traversing the area in a general north-south direction approximately 700 feet (0.1 mile) east of the Project Site.

The Project is proposing the renovation of the existing hotel into 36 studio apartments. The one studio-manager's unit is proposed to remain for a total of 37 Project housing units. Renovation would involve the installation of kitchenettes in all units, each containing a stovetop, sink and refrigerator for food storage and prep. Patching and repair work would be completed as necessary to accommodate for the new kitchenettes, ventilation, and electrical changes. All existing carpet is proposed to be removed and replaced with luxury vinyl tile. New bedroom furniture as well as common area furniture would be provided throughout, all units would be painted, the existing central HVAC system would be disconnected, and individual HVAC units added to each room. Of the 36 proposed studio apartments, there would be a total of six Americans with Disabilities Act (ADA) compliant units including two visual and hearing-impaired units. Some additional ADA renovation, such as handrail upgrades and minor upgrades to the accessible rooms may be necessary.

The Project also proposes to utilize the approximate 1,000 square foot community lounge area at the northwestern corner of the Project Site for outdoor activities area and designated outdoor smoking area for the residences. Minor changes in the parking lot area are also proposed to enhance the outdoor community recreation area, and new landscaping would be added. All other existing landscaping would

remain. No repairs to the existing exterior or roof are necessary, though the entire building exterior would be inspected, sealed and repainted. A controlled access gate is proposed to be installed so that there is one point of exit/entry. In addition, a new controlled pedestrian entry would be added.

An additional structure is proposed at the north end of the Project Site to serve as a space for four staff offices and other resident services. There would be 36 new bicycle racks installed.

2.0 AIR QUALITY

2.1 Air Quality Setting

The Project Site is located in Alameda County, which lies in the San Francisco Bay Area Air Basin (SFBAAB). The SFBAAB is approximately 5,600 square miles in area and consists of nine counties that surround the San Francisco Bay, including all of Alameda, Contra Costa, Marin, San Francisco, San Mateo, Santa Clara, and Napa Counties; the southwestern portion of Solano County; and the southern portion of Sonoma County. The topography of the SFBAAB is characterized by complex terrain, consisting of coastal mountain ranges, inland valleys and bays. This complex terrain, especially the higher elevations, distorts the normal wind flow patterns in the SFBAAB. The greatest distortions occur when low-level inversions are present and the air beneath the inversion flows independently of air above the inversion, a condition that is common in the summertime (BAAQMD 2017).

The air flowing in from the coast to the Central Valley, called the sea breeze, begins developing at or near ground level along the coast in late morning or early afternoon. As the day progresses, the sea breeze layer deepens and increases in velocity while spreading inland. The depth of the sea breeze depends in large part upon the height and strength of the inversion. If the inversion is low and strong, and hence stable, the flow of the sea breeze will be inhibited and stagnant conditions are likely to result (BAAQMD 2017).

Summertime temperatures in the SFBAAB are determined by the effect of differential heating between land and water surfaces. Because land tends to heat up and cool off more quickly than water, a large-scale gradient (differential) in temperature is often created between the coast and the Central Valley, and small-scale local gradients are often produced along the shorelines of the ocean and bays (BAAQMD 2017).

During the summer, winds flowing from the northwest are drawn inland through the Golden Gate and over the lower portions of the San Francisco Peninsula. Immediately south of Mount Tamalpais, the northwesterly winds accelerate considerably and come more directly from the west as they stream through the Golden Gate. This channeling of wind through the Golden Gate produces a jet that sweeps eastward and splits off to the northwest toward Richmond and to the southwest toward San Jose when it meets the East Bay hills. Wind speeds may be strong locally in areas where air is channeled through a narrow opening, such as the Carquinez Strait, the Golden Gate, or the San Bruno Gap.

An inversion is a layer of warmer air over a layer of cooler air. Inversions affect air quality conditions significantly because they influence the mixing depth, i.e., the vertical depth in the atmosphere available for diluting air contaminants near the ground. The highest air pollutant concentrations in the SFBAAB generally occur during inversions. The areas having the highest air pollution potential tend to be those that experience the highest temperatures in the summer and the lowest temperatures in the winter. The coastal areas are exposed to the prevailing marine air, creating cooler temperatures in the summer, warmer temperatures in winter, and stratus clouds all year. The inland valleys are sheltered from the marine air and experience hotter summers and colder winters. Thus, the topography of the inland valleys creates conditions conducive to high air pollution potential.

The Bay Area Air Quality Management District (BAAQMD) is designated by law to adopt and enforce regulations to achieve and maintain ambient air quality standards. The BAAQMD is required to reduce emissions of criteria pollutants for which the air basin is in nonattainment. Criteria air pollutants are defined as those pollutants for which the federal government has established air quality standards for outdoor or ambient concentrations to protect public health with a determined margin of safety. In order to reduce such emissions, the local agency, BAAQMD, adopts and enforces rules and regulations concerning sources of air pollution, issues permits for stationary sources of air pollution, monitors ambient air quality and meteorological conditions, and implements programs and regulations required by the federal Clean Air Act (CAA) and CAA Amendments.

The federal CAA (and its subsequent amendments) requires each state to prepare an air quality control plan referred to as the State Implementation Program (SIP). The SIP is a living document that is periodically modified to reflect the latest emissions inventories, plans, and rules and regulations of air basins as reported by the agencies with jurisdiction over them. The CAA Amendments dictate that the states containing areas violating the National Ambient Air Quality Standards (NAAQS) revise their SIPs to include extra control measures to reduce air pollution. The SIP includes strategies and control measures to attain the NAAQS by deadlines established by the CAA.

2.1.1 Criteria Air Pollutants

The USEPA focuses on the following criteria pollutants to determine air quality: ozone (O₃), carbon monoxide (CO), nitrogen dioxide (NO₂), sulfur dioxide (SO₂), coarse particulate matter (PM₁₀), fine particulate matter (PM_{2.5}), and lead. In the Alameda County portion of the SFBAAB, the majority of criteria pollutant emissions come from mobile sources. Health effects commonly associated with criteria pollutants are summarized in Table 2-1.

Pollutant	Major Manmade Sources	Human Health & Welfare Effects
CO	An odorless, colorless gas formed when carbon in fuel is not burned completely; a component of motor vehicle exhaust.	Reduces the ability of blood to deliver oxygen to vital tissues, effecting the cardiovascular and nervous system. Impairs vision, causes dizziness, and can lead to unconsciousness or death.
NO ₂	A reddish-brown gas formed during fuel combustion for motor vehicles, energy utilities and industrial sources.	Respiratory irritant; aggravates lung and heart problems. Precursor to ozone and acid rain. Causes brown discoloration of the atmosphere.
O ₃	Formed by a chemical reaction between volatile organic compounds (VOCs) and nitrous oxides (N ₂ O) in the presence of sunlight. Common sources of these precursor pollutants include motor vehicle exhaust, industrial emissions, solvents, paints and landfills.	Irritates and causes inflammation of the mucous membranes and lung airways; causes wheezing, coughing and pain when inhaling deeply; decreases lung capacity; aggravates lung and heart problems. Damages plants; reduces crop yield.
PM ₁₀ & PM _{2.5}	Power plants, steel mills, chemical plants, unpaved roads and parking lots, wood-burning stoves and fireplaces, automobiles and others.	Increased respiratory symptoms, such as irritation of the airways, coughing, or difficulty breathing; aggravated asthma; development of chronic bronchitis; irregular heartbeat; nonfatal heart attacks; and premature death in people with heart or lung disease. Impairs visibility (haze).
SO ₂	A colorless, nonflammable gas formed when fuel containing sulfur is burned. Examples are refineries, cement manufacturing, and locomotives.	Respiratory irritant. Aggravates lung and heart problems. Can damage crops and natural vegetation. Impairs visibility.

Source: California Air Pollution Control Officers Association (CAPCOA 2013)

2.1.1.1 Carbon Monoxide

CO in the urban environment is associated primarily with the incomplete combustion of fossil fuels in motor vehicles. CO combines with hemoglobin in the bloodstream and reduces the amount of oxygen that can be circulated through the body. High CO concentrations can cause headaches, aggravate cardiovascular disease and impair central nervous system functions. CO concentrations can vary greatly over comparatively short distances. Relatively high concentrations of CO are typically found near crowded intersections and along heavy roadways with slow moving traffic. Even under the most severe meteorological and traffic conditions, high concentrations of CO are limited to locations within relatively short distances of the source. Overall CO emissions are decreasing as a result of the Federal Motor Vehicle Control Program, which has mandated increasingly lower emission levels for vehicles manufactured since 1973. CO levels in the SFBAAB are in compliance with the state and federal one- and eight-hour standards.

2.1.1.2 Nitrogen Oxides

Nitrogen gas comprises about 80 percent of the air and is naturally occurring. At high temperatures and under certain conditions, nitrogen can combine with oxygen to form several different gaseous compounds collectively called nitric oxides (NO_x). Motor vehicle emissions are the main source of NO_x in urban areas.

NO_x is very toxic to animals and humans because of its ability to form nitric acid with water in the eyes, lungs, mucus membrane, and skin. In animals, long-term exposure to NO_x increases susceptibility to respiratory infections and lowering resistance to diseases such as pneumonia and influenza. Laboratory studies show that susceptible humans, such as asthmatics, who are exposed to high concentrations can suffer from lung irritation or possible lung damage. Precursors of NO_x, such as NO and NO₂, attribute to the formation of O₃ and PM_{2.5}. Epidemiological studies have also shown associations between NO₂ concentrations and daily mortality from respiratory and cardiovascular causes and with hospital admissions for respiratory conditions.

2.1.1.3 Ozone

O₃ is a secondary pollutant, meaning it is not directly emitted. It is formed when volatile organic compounds (VOCs) and NO_x undergo photochemical reactions that occur only in the presence of sunlight. The primary source of VOC emissions is unburned hydrocarbons in motor vehicle and other internal combustion engine exhaust. NO_x forms as a result of the combustion process, most notably due to the operation of motor vehicles. Sunlight and hot weather cause ground-level O₃ to form. Ground-level O₃ is the primary constituent of smog. Because O₃ formation occurs over extended periods of time, both O₃ and its precursors are transported by wind and high O₃ concentrations can occur in areas well away from sources of its constituent pollutants.

People with lung disease, children, older adults, and people who are active can be affected when O₃ levels exceed ambient air quality standards. Numerous scientific studies have linked ground-level O₃ exposure to a variety of problems including lung irritation, difficult breathing, permanent lung damage to those with repeated exposure, and respiratory illnesses.

2.1.1.4 Particulate Matter

PM includes both aerosols and solid particulates of a wide range of sizes and composition. Of concern are those particles smaller than or equal to 10 microns in diameter size (PM₁₀) and small than or equal to 2.5 microns in diameter (PM_{2.5}). Smaller particulates are of greater concern because they can penetrate deeper into the lungs than larger particles. PM₁₀ is generally emitted directly as a result of mechanical processes that crush or grind larger particles or form the resuspension of dust, typically through construction activities and vehicular travel. PM₁₀ generally settles out of the atmosphere rapidly and is not readily transported over large distances. PM_{2.5} is directly emitted in combustion exhaust and is formed in atmospheric reactions between various gaseous pollutants, including NO_x, sulfur oxides (SO_x) and VOCs. PM_{2.5} can remain suspended in the atmosphere for days and/or weeks and can be transported long distances.

The principal health effects of airborne PM are on the respiratory system. Short-term exposure of high PM_{2.5} and PM₁₀ levels are associated with premature mortality and increased hospital admissions and emergency room visits. Long-term exposure is associated with premature mortality and chronic respiratory disease. According to the USEPA, some people are much more sensitive than others to breathing PM₁₀ and PM_{2.5}. People with influenza, chronic respiratory and cardiovascular diseases, and the elderly may suffer worse illnesses; people with bronchitis can expect aggravated symptoms; and children may experience decline in lung function due to breathing in PM₁₀ and PM_{2.5}. Other groups considered sensitive include smokers and

people who cannot breathe well through their noses. Exercising athletes are also considered sensitive because many breathe through their mouths.

2.1.2 Hazardous Air Pollutants

In addition to the criteria pollutants discussed above, hazardous air pollutants (HAPs) are another group of pollutants of concern. HAPs are considered either carcinogenic or noncarcinogenic based on the nature of the health effects associated with exposure to the pollutant. For regulatory purposes, carcinogenic HAPs are assumed to have no safe threshold below which health impacts would not occur, and cancer risk is expressed as excess cancer cases per one million exposed individuals. Carcinogens, such as diesel particulate matter (DPM), are considered dangerous at any level of exposure. Noncarcinogenic HAPs differ in that there is generally assumed to be a safe level of exposure below which no negative health impact is believed to occur. These levels are determined on a pollutant-by-pollutant basis.

There are many different types of HAPs, with varying degrees of toxicity. Sources of HAPs include industrial processes such as petroleum refining and chrome plating operations, commercial operations such as gasoline stations and dry cleaners, and motor vehicle exhaust. Additionally, diesel engines emit a complex mixture of air pollutants composed of gaseous and solid material. The solid emissions in diesel exhaust are known as DPM. Public exposure to HAPs can result from emissions from normal operations, as well as from accidental releases of hazardous materials during upset conditions. The health effects of HAPs include cancer, birth defects, neurological damage, and death.

2.1.3 Ambient Air Quality

The USEPA designate air basins or portions of air basins and counties as being in “attainment” or “nonattainment” for each of the criteria pollutants. Areas that do not meet the standards are classified as nonattainment areas. The NAAQS (other than O₃, PM₁₀ and PM_{2.5} and those based on annual averages or arithmetic mean) are not to be exceeded more than once per year. The NAAQS for O₃, PM₁₀, and PM_{2.5} are based on statistical calculations over one- to three-year periods, depending on the pollutant. The attainment status for the Alameda County portion of the SFBAAB, which encompasses the Project Site, is included in Table 2-2.

Table 2-2. Attainment Status for the Alameda County Portion of the San Francisco Bay Area Air Basin

Pollutant	Federal Designation
O ₃	Marginal Nonattainment
PM ₁₀	Unclassified
PM _{2.5}	Moderate Nonattainment
CO	Unclassified/Attainment
NO ₂	Unclassified/Attainment
SO ₂	Unclassified/Attainment

Source: CARB 2019; USEPA 2018

The determination of whether an area meets the federal standards is based on air quality monitoring data. Some areas are unclassified, which means there is insufficient monitoring data for determining attainment or nonattainment. Unclassified areas are typically treated as being in attainment. Because the attainment/nonattainment designation is pollutant-specific, an area may be classified as nonattainment for one pollutant and attainment for another. The region is designated as Marginally Nonattainment for the federal O₃ standard and Moderate Nonattainment for the federal PM_{2.5} standard (USEPA 2018).

2.2 Regulatory Framework

2.2.1 Federal

2.2.1.1 Clean Air Act

The Clean Air Act (CAA) of 1970 and the CAA Amendments of 1971 required the USEPA to establish the NAAQS, with states retaining the option to adopt more stringent standards or to include other specific pollutants.

These standards are the levels of air quality considered safe, with an adequate margin of safety, to protect the public health and welfare. They are designed to protect those “sensitive receptors” most susceptible to further respiratory distress such as asthmatics, the elderly, very young children, people already weakened by other disease or illness, and persons engaged in strenuous work or exercise. Healthy adults can tolerate occasional exposure to air pollutant concentrations considerably above these minimum standards before adverse effects are observed.

The USEPA has classified air basins (or portions thereof) as being in attainment, nonattainment, or unclassified for each criteria air pollutant, based on whether or not the NAAQS have been achieved. If an area is designated unclassified, it is because inadequate air quality data were available as a basis for a nonattainment or attainment designation. Table 2-2 lists the federal attainment status of the SFBAAB for the criteria pollutants.

2.2.1.2 California State Implementation Plan

The federal CAA (and its subsequent amendments) requires each state to prepare an air quality control plan referred to as the SIP. The SIP is a living document that is periodically modified to reflect the latest emissions inventories, plans, and rules and regulations of air basins as reported by the agencies with jurisdiction over them. The CAA Amendments dictate that states containing areas violating the NAAQS revise their SIPs to include extra control measures to reduce air pollution. The SIP includes strategies and control measures to attain the NAAQS by deadlines established by the CAA. The USEPA has the responsibility to review all SIPs to determine if they conform to the requirements of the CAA.

State law makes the California Air Resources Board (CARB) the lead agency for all purposes related to the SIP. Local air districts and other agencies prepare SIP elements and submit them to CARB for review and approval. CARB then forwards SIP revisions to the USEPA for approval and publication in the Federal Register.

Local air districts, such as the BAAQMD, prepare air quality attainment plans or air quality management plans and submit them to CARB for review, approval, and incorporation into the applicable SIP. The air districts develop the strategies stated in the SIPs for achieving air quality standards on a regional basis.

The SFBAAB currently has four air quality plans in place, discussed below, which collectively constitute the SFBAAB SIP elements.

- **2001 Ozone Attainment Plan.** The 2001 Ozone Attainment Plan was developed for compliance with the NAAQS for the 1-hour O₃ standard. In June 2005, the USEPA revoked the standard for 1-hour O₃; however, the state standard for 1-hour O₃ remains. Therefore, BAAQMD continues to implement the strategies outlined in the 2001 Ozone Attainment Plan.
- **2005 Bay Area Ozone Strategy.** The 2005 Bay Area Ozone Strategy served as an update to the 2001 Ozone Attainment Plan and expanded on strategies to achieve compliance with the state 1-hour O₃ standard.
- **2010 Clean Air Plan.** The 2010 Clean Air Plan addresses various pollutants including O₃, PM, and air toxics, as well as GHG emissions within the SFBAAB. It serves to update the Bay Area 2005 Ozone Strategy in accordance with the requirements of the CCAA to implement all feasible measures, to reduce O₃, and to consider the impacts of O₃ control measures on particulate matter, air toxics, and greenhouse gas emissions in a single, integrated plan and review progress in improving air quality in recent years.
- **2017 Clean Air Plan.** In April 2017, BAAQMD adopted the 2017 Clean Air Plan, whose primary goals are to protect public health and to protect the climate. The 2017 Clean Air Plan updates the Bay Area 2010 Clean Air Plan and complies with state air quality planning requirements, as codified in the California Health and Safety Code (although the 2017 plan was delayed beyond the three-year update requirement of the code). State law requires the Clean Air Plan to include all feasible measures to reduce emissions of O₃ precursors and to reduce the transport of O₃ precursors to neighboring air basins. The 2017 Clean Air Plan contains 85 measures to address reduction of

several pollutants: O₃ precursors, PM, air toxics, and GHGs. Other measures focus on a single type of pollutant: super GHGs such as methane and black carbon that consists of harmful fine particles that affect public health. These control strategies are grouped into the following categories:

- a. Stationary Source Measures
- b. Transportation Control Measures
- c. Energy Control Measures
- d. Building Control Measures
- e. Agricultural Control Measures
- f. Natural and Working Lands Control Measures
- g. Waste Management Control Measures
- h. Water Control Measures
- i. Super GHG Control Measures

2.2.2 Local

2.2.2.1 Bay Area Air Quality Management District

The BAAQMD is the local air quality agency and shares responsibility with CARB for ensuring that state and federal ambient air quality standards are achieved and maintained in the SFBAAB. The BAAQMD is designated by law to adopt and enforce regulations to achieve and maintain ambient air quality standards. The BAAQMD responsibilities include preparing plans for the attainment of ambient air quality standards, adopting and enforcing air pollution rules, issuing permits for and inspecting stationary air pollution sources, responding to citizen complaints, monitoring ambient air quality and meteorological conditions, and implementing state and federal programs and regulations. The BAAQMD has also adopted various rules and regulations that are designed to reduce and control pollutant emissions from project's construction and operational activities. The following provisions are applicable to the Proposed Project are summarized as follows:

- **Regulation 2, Rule 1, General Permit Requirements:** Includes criteria for issuance or denial of permits, exemptions, appeals against decisions of the Air Pollution Control Officer (APCO) and BAAQMD actions on applications.
- **Regulation 2, Rule 2, New Source Review:** Applies to new or modified sources and contains requirements for Best Available Control Technology and emission offsets. Rule 2 implements federal New Source Review and Prevention of Significant Deterioration requirements.
- **Regulation 6, Rule 1, General Requirements:** Limits the quantity of particulate matter in the atmosphere by controlling emission rates, concentration, visible emissions and opacity.

- **Regulation 6, Rule 6, Prohibition of Trackout:** Controls trackout of solid material onto public paved roads from three types of sites: large bulk material sites, large construction sites, and large disturbed area sites. Under this regulation, the owners and operators of a construction site are required to clean up trackout on public roadways within four hours of identification and at the conclusion of each workday. The rule also includes requirements regarding the emission of fugitive dust during cleanup of trackout, and requirements for monitoring and reporting trackout at regulated sites

- **Regulation 7, Odorous Substances:** Regulation 7 places general limitations on odorous substances and specific emission limitations on certain odorous compounds. A person (or facility) must meet all limitations of this regulation but meeting such limitations shall not exempt such person from any other requirements of BAAQMD, state, or national law. The limitations of this regulation shall not be applicable until BAAQMD receives odor complaints from ten or more complainants within a 90-day period, alleging that a person has caused odors perceived at or beyond the property line of such person and deemed to be objectionable by the complainants in the normal course of their work, travel, or residence. When the limits of this regulation become effective, as a result of citizen complaints described above, the limits shall remain effective until such time as no citizen complaints have been received by BAAQMD for one year. The limits of this Regulation shall become applicable again if BAAQMD receives odor complaints from five or more complainants within a 90-day period. BAAQMD staff investigate and track all odor complaints it receives and make attempts to visit the site and identify the source of the objectionable odor and assist the owner or facility in finding a way to reduce the odor.

2.3 Impact Assessment

2.3.1 Thresholds of Significance

2.3.1.1 U.S. Environmental Protection Agency General Conformity

The impact analysis provided below is based on thresholds set by the USEPA Conformity Determination Analysis. The General Conformity process begins with an “applicability analysis,” whereby it must be determined how and to what degree the Conformity Rules apply. According to USEPA’s General Conformity Guidance: Questions and Answers (1994), before any approval is given for a Federal Action to go forward, the federal agency must apply the applicability requirements found at 40 Code of Federal Regulations [CFR] § 93.153 to the Federal Action and/or determine on a pollutant-by-pollutant basis, whether a determination of General Conformity is required. During the applicability analysis, the federal agency determines the following:

- Whether the action will occur in a nonattainment or maintenance area;
- Whether one or more of the specific exemptions apply to the action;
- Whether the federal agency has included the action on its list of presumed-to-conform actions;
- Whether the total direct and indirect emissions are below or above the de minimis levels; and/or

- Where a facility has an emissions budget approved by the State or Tribe as part of the SIP or TIP, the federal agency determines that the emissions from the proposed action are within the budget.

The General Conformity Rule allows for exemptions for emissions that are not reasonably foreseeable, will not result in an increase in emissions, are below de minimis limits, are the result of emergency actions, are included in stationary source air permits, are for routine maintenance and repair of existing structures, or are included in a transportation conformity determination undertaken by Federal Highway Administration or Federal Transit Administration (40 CFR 93.153(c)).

A conformity determination would be required if the annual emissions of non-attainment pollutants generated by the Proposed Project were to exceed the General Conformity de minimis thresholds. The de minimis limits represent a level of emissions that the USEPA has determined will have only de minimis impacts to the air quality of an area and are thus exempted from the General Conformity Rule. If the overall predicted increase in emissions of a criteria pollutant due to a federal action in a nonattainment area exceeds the de minimis limits as shown in Table 2-3, the lead federal agency is required to make a conformity determination.

Pollutant	Area Type	Tons/Year
Ozone (VOC or NO _x)	Serious nonattainment	50
	Severe nonattainment	25
	Extreme nonattainment	10
	Other areas outside of ozone transport region	100
Ozone (NO _x)	Marginal and moderate nonattainment inside an ozone transport region	100
	Maintenance	100
Ozone (VOC)	Marginal and moderate nonattainment inside an ozone transport region	50
	Maintenance within an ozone transport region	50
	Maintenance outside an ozone transport region	100
CO, SO ₂ and NO ₂	All nonattainment and maintenance	100
PM ₁₀	Serious nonattainment	70
	Moderate nonattainment and maintenance	100
PM _{2.5}	All nonattainment and maintenance	100
Lead	All nonattainment and maintenance	25

2.3.1.2 Bay Area Air Quality Management District

To assist local jurisdictions in the evaluation of air quality impacts, the BAAQMD has published a guidance document for the preparation of the air quality portions of environmental documents that include thresholds of significance to be used in evaluating land use proposals. Thresholds of significance are based on a source's projected impacts and are a basis from which to apply mitigation measures.

The BAAQMD's established thresholds of significance for air quality for construction and operational activities of land use development projects are shown in Table 2-4.

Pollutant	Maximum Annual Emissions (tons per year)
Ozone (VOC)	10
Ozone (NO _x)	10
PM ₁₀ (exhaust)	15
PM _{2.5} (exhaust)	10
PM ₁₀ /PM _{2.5} (fugitive dust)	None
Local CO	9.0 ppm (8-hour average), 20.0 ppm (1-hour average)

Source: BAAQMD 2017

In addition to the USEPA General Conformity de minimis thresholds, Project emissions are compared to the BAAQMD annual significance thresholds for comparison purposes.

2.3.2 Methodology

Potential air quality impacts are assessed in accordance with the thresholds set by the USEPA Conformity Determination Analysis. General Conformity ensures that the actions taken by federal agencies do not interfere with a state's plans to attain and maintain national standards for air quality. Established under the Clean Air Act (section 176(c)(4)), the General Conformity rule plays an important role in helping states improve air quality in those areas that do not meet the NAAQS. Under the General Conformity rule, federal agencies must work with state and local governments in a nonattainment or maintenance area to ensure that federal actions conform to the air quality plans established in the applicable state or tribal implementation plan. The overall purpose of the General Conformity rule is to ensure that:

- federal activities do not cause or contribute to new violations of NAAQS;
- actions do not worsen existing violations of the NAAQS; and
- attainment of the NAAQS is not delayed.

The Proposed Project region is designated as attainment or unclassified for all federal criteria pollutants except O₃ and PM_{2.5} for which the region is in marginal nonattainment and moderate nonattainment, respectively.

Emissions were modeled using the California Emissions Estimator Model (CalEEMod), version 2020.4.0. CalEEMod is a statewide land use emissions computer model designed to quantify potential criteria pollutant emissions associated with both construction and operations from a variety of land use projects. CalEEMod provides the ability to analyze a project based on both California and federal air quality standards. Project air pollutant emissions generated during proposed renovation activities were primarily calculated using CalEEMod model defaults for Alameda County. Operational air pollution impacts were based on assumptions and information provided by the Project applicant.

2.3.3 Impact Discussion

2.3.3.1 Project Construction

As previously described, no repairs to the existing exterior or roof are necessary, though the entire building exterior would be inspected, sealed and repainted. Project proposed renovation would involve the installation of kitchenettes in all units, each containing a stovetop, sink and refrigerator for food storage and prep. Patching and repair work would be completed as necessary to accommodate for the new kitchenettes, ventilation, and electrical changes. All existing carpet is proposed to be removed and replaced with luxury vinyl tile. New bedroom furniture as well as common area furniture would be provided throughout, all units would be painted, the existing central HVAC system would be disconnected, and individual HVAC units added to each room. A total of six of the units would be upgraded to achieve ADA compliance. The Project also proposes to utilize the approximate 1,000 square foot community lounge area at the northwestern corner of the Project Site for outdoor activities area and designated outdoor smoking area for the residences. Minor changes in the parking lot area are also proposed to enhance the outdoor community recreation area, and new landscaping would be added. A controlled access gate is proposed to be installed so that there is one point of exit/entry. In addition, a new controlled pedestrian entry would be added. Lastly, an additional structure is proposed at the north end of the Project Site to serve as a space for four staff offices and other resident services. There would be 36 new bicycle racks installed. Renovation-related activities would generate short-term emissions of criteria air pollutants, including VOC, CO, NO_x, PM₁₀, and PM_{2.5}. Exhaust emissions from construction activities include emissions associated with the transport of machinery and supplies to and from the Project Site, emissions produced on-site as the equipment is used, and emissions from trucks transporting materials to and from the Site.

As previously stated, renovation-generated emissions associated with the Proposed Project were calculated using the CalEEMod computer program. Renovation-generated emissions are short term and of temporary duration, lasting only as long as such activities occur, but would be considered a significant air quality impact if the volume of pollutants generated exceeds the Conformity Determination thresholds.

Predicted Project construction emissions are shown in Table 2-5.

Table 2-5. Construction-Related Emissions (USEPA Conformity Determination Analysis)

Activity	Maximum Pollutants (tons per year)					
	VOC	NO _x	CO	SO ₂	PM ₁₀	PM _{2.5}
Renovation Year One	0.37	0.71	0.90	0.00	0.06	0.04
<i>USEPA Conformity Determination Thresholds (40 CFR 93.153)</i>	100	100	100	100	100	100
Exceed USEPA Conformity Threshold?	No	No	No	No	No	No
<i>BAAQMD Significance Thresholds</i>	10	10	None	None	15	10
Exceed BAAQMD Significance Threshold?	No	No	No	No	No	No

Source: CalEEMod version 2020.4.0. Refer to Attachment A for Model Data Outputs.

Notes: Due to limitations in the modeling software, emissions from renovation activities are calculated as full construction activities, which is conservative. Emissions calculations account for the demolition and offsite hauling of 481.5 tons of material, which includes the asphalt necessary to be removed to accommodate the building footprint of the proposed new offices, as well as existing motel hardware, furnishings, and miscellaneous material that would be removed as part of renovation.

As shown in Table 2-5, Project emissions resulting from construction would not exceed the USEPA Conformity Determination thresholds or the BAAQMD significance thresholds.

2.3.3.2 Project Operations

Implementation of the Project would result in long-term operational emissions of criteria air pollutants such as PM₁₀, PM_{2.5}, CO, and SO₂ as well as O₃ precursors such as VOC and NO_x. Table 2-6 summarizes operational emissions from the Proposed Project. As previously stated, operational related emissions associated with the Proposed Project were calculated using the CalEEMod computer program. Operational air pollution impacts were primarily based on model defaults.

Emission Source	Maximum Pollutants (tons per year)					
	VOC	NO _x	CO	SO ₂	PM ₁₀	PM _{2.5}
Area	0.28	0.01	0.39	0.00	0.02	0.02
Energy	0.00	0.02	0.01	0.00	0.00	0.00
Mobile	0.10	0.12	0.94	0.00	0.22	0.06
Total	0.38	0.15	1.34	0.00	0.24	0.08
<i>USEPA Conformity Determination Thresholds (40 CFR 93.153)</i>	<i>100</i>	<i>100</i>	<i>100</i>	<i>100</i>	<i>100</i>	<i>100</i>
Exceed USEPA Conformity Threshold?	No	No	No	No	No	No
<i>BAAQMD Significance Thresholds</i>	<i>10</i>	<i>10</i>	<i>None</i>	<i>None</i>	<i>15</i>	<i>10</i>
Exceed BAAQMD Significance Threshold?	No	No	No	No	No	No

Source: CalEEMod version 2020.4.0; Refer to Attachment A for Model Data Outputs.

As indicated in Table 2-6, operational emissions would not exceed the USEPA Conformity Determination thresholds or the BAAQMD significance thresholds.

As previously described, the Project Site is currently developed with an operating 37-unit motel, the Inn by the Coliseum. The existing operations at this land use currently generates approximately 0.38 tons of VOC, 0.19 tons of NO_x, 0.52 tons of CO, 0.00 tons of SO₂, 0.09 tons of PM₁₀ and 0.03 tons of PM_{2.5} (see Attachment B). Thus, the Project would result in a slight increase in CO, PM₁₀, and PM_{2.5} emissions and a slight decrease in NO_x emissions compared with the existing baseline. VOC and SO₂ emissions would remain unchanged from the existing baseline.

2.3.3.3 Compliance with Air Quality Management Plans

As part of its enforcement responsibilities, the USEPA requires each state with nonattainment areas to prepare and submit a SIP that demonstrates the means to attain the federal standards. The SIP must integrate federal, state, and local plan components and regulations to identify specific measures to reduce pollution in nonattainment areas, using a combination of performance standards and market-based programs. The SFBAAB portion of the SIP is constituted of air quality attainment plans approved by the USEPA. Air quality attainment plans outline emissions limits and control measures to achieve and maintain these standards by the earliest practical date. As previously mentioned, the SFBAAB is classified nonattainment for the federal standards of O₃ and PM_{2.5}.

The region's SIP is constituted of the BAAQMD air quality plans: 2001 Ozone Attainment Plan, 2005 Bay Area Ozone Strategy, 2010 Clean Air Plan, and 2017 Clean Air Plan. These air quality attainment plans are a compilation of new and previously submitted plans, programs (such as monitoring, modeling, permitting, etc.), district rules, state regulations, and federal controls describing how the state will attain ambient air quality standards. These SIP plans and associated control measures are based on information derived from

projected growth in the SFBAAB in order to project future emissions and then determine strategies and regulatory controls for the reduction of emissions. Growth projections are based on the general plans developed by the counties and the incorporated cities in the SFBAAB.

As such, projects that comply with all applicable BAAQMD significance thresholds, and propose development consistent with the growth anticipated by the respective general plan of the jurisdiction in which the proposed development is located, would be consistent with the SIP. A project is nonconforming if it conflicts with or delays implementation of any applicable attainment or maintenance plan by exceeding air district thresholds of significance or proposing a development substantially denser than that assumed in the general plan.

As previously described, the Project proposes the renovation of an existing and operating 37-unit motel into 36 affordable studio apartments and one studio-manager apartment for a total of 37 residential dwelling units on 0.83 acres of land within the City of Oakland. While the Project includes residential development, Project objective is to provide affordable living opportunities that would enhance the quality of life for the existing homeless population in the City of Oakland. The Project Site is planned as a navigation center providing long-term housing, supportive services, medical oversight and recuperative care to help homeless men, women, and families transition out of homelessness. Thus, the Project would not result in significant population or employment growth and would not cause an increase in currently established population projections. Furthermore, as shown in Tables 2-5 and 2-6, Project Emissions would not exceed the USEPA Conformity Determination thresholds. The USEPA Conformity Determination thresholds represent a level of emissions that the USEPA has determined will have only de minimis impacts to the air quality of an area. Additionally, Project emissions would not exceed the BAAQMD's significance thresholds. Therefore, the Project would not conflict with or obstruct regional air quality planning efforts in the SFBAAB.

1.0 INTRODUCTION

This report documents the results of a Health Risk Assessment (HRA) completed for the Danco Homekey (Project), which includes the renovation of an existing and operating 37-unit motel into 36 affordable studio apartments and one studio-manager apartment for a total of 37 residential dwelling units in Oakland, California. The purpose of this HRA is to evaluate potential health risks associated with exposure of future residents at the Project Site to toxic air contaminants (TACs) (or hazardous air pollutants [HAPs] in the federal parlance) including diesel particulate matter (DPM) and total organic gases (TOG) generated by the vehicular traffic traversing Interstate 880 (I-880) and Coliseum Way, as well as DPM generated by existing rail traffic at a nearby railway corridor. This HRA was prepared in accordance with the requirements of the Office of Environmental Health Hazard Assessment (OEHHA) to determine if health risks are likely to occur to future residents of the Proposed Project. Technical data is included as Attachment A.

1.1 Project Location and Description

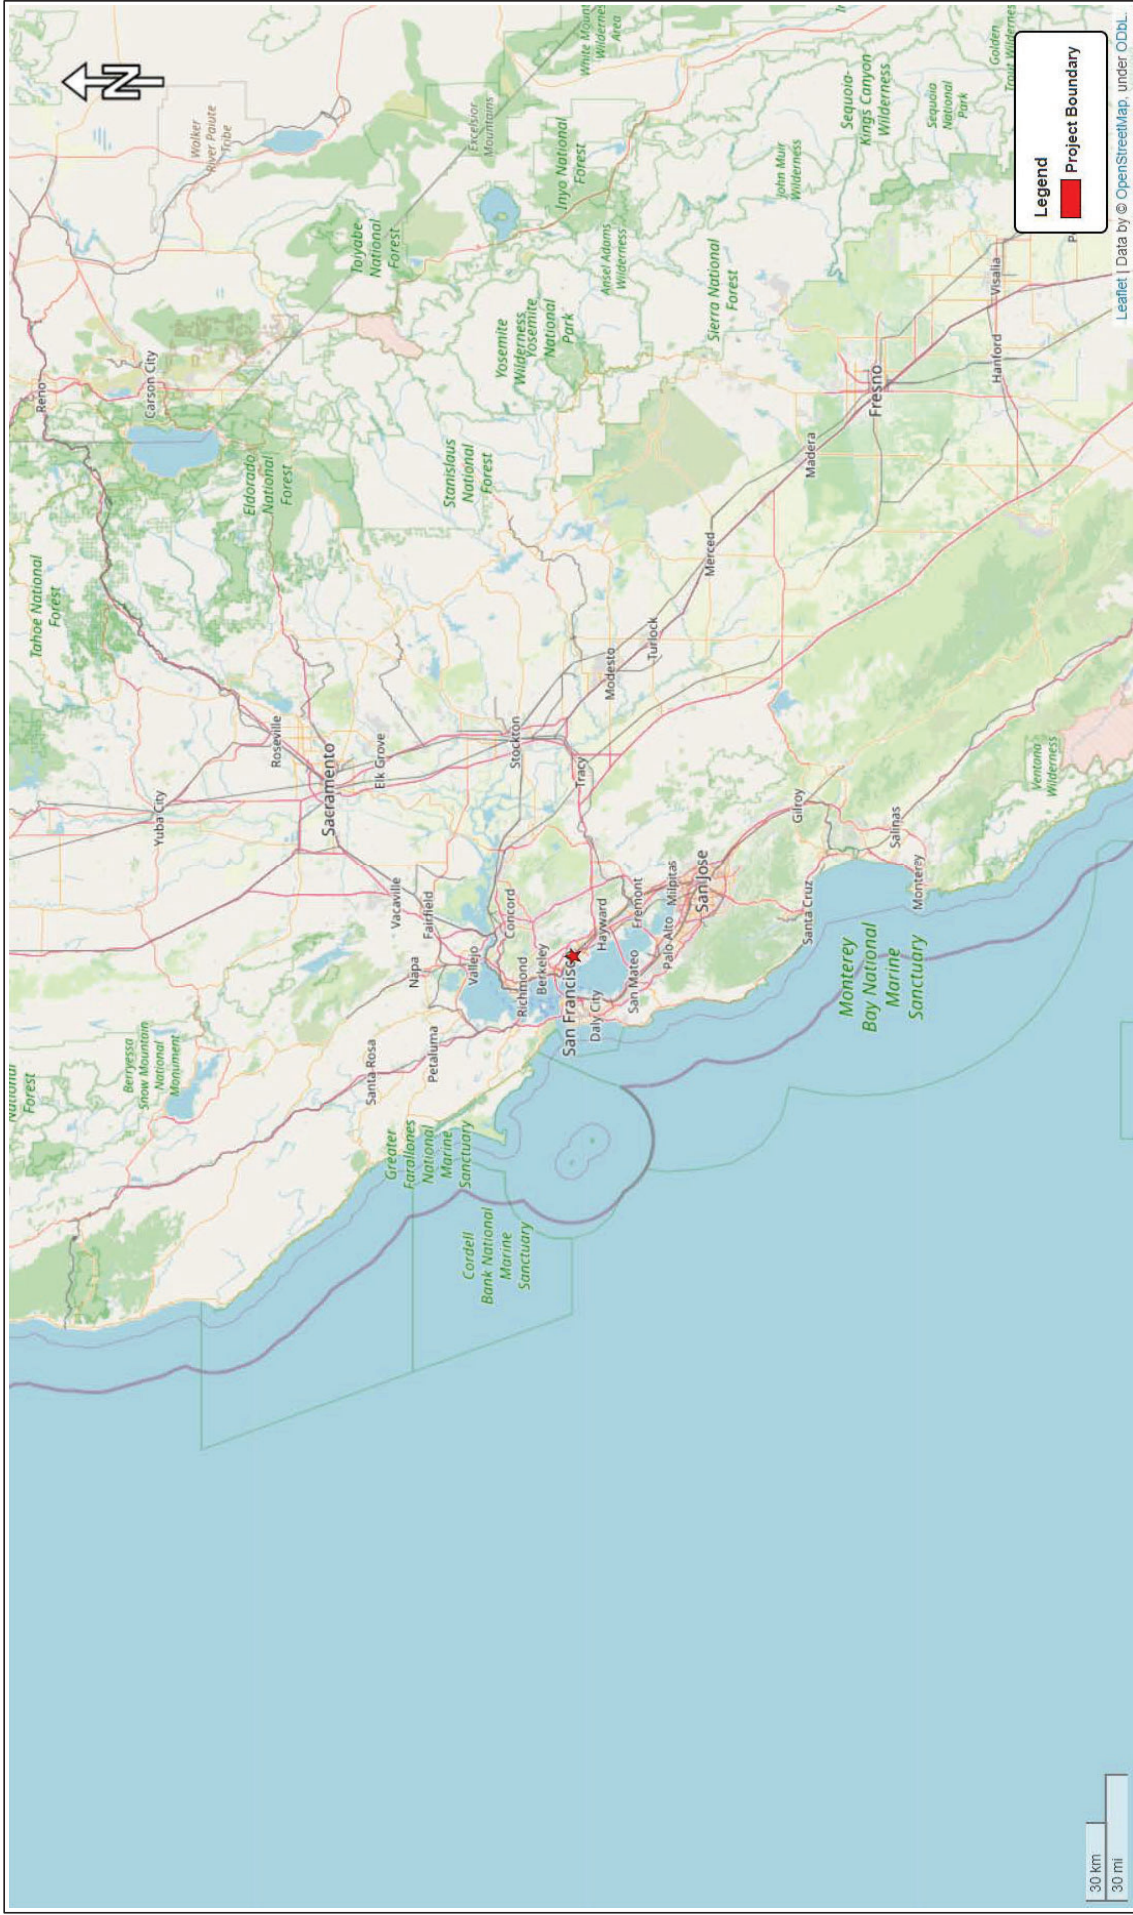

The Proposed Project is intended to provide affordable living opportunities that would enhance the quality of life for the homeless population in the City of Oakland. The Danco Homekey Project aims to provide a supportive, safe and stable environment for homeless persons and their families to receive life-changing services needed to break the cycle of homelessness and improve quality of life. The Project Site is planned as a navigation center providing long-term housing, supportive services, medical oversight and recuperative care to help homeless men, women, and families transition out of homelessness.

The 0.83-acre Project Site is located at 4801 Coliseum Way in central Oakland (see Figures 1 & 2), on the west side of Coliseum Way between 46th Avenue and 50th Avenue. The Project Site is currently developed with an operating 37-unit motel, the Inn by the Coliseum. This motel consists of two, 2-story buildings. Both of the existing structures consists of wood construction at grade which sit on a concrete slab. The interior of the rooms has a combination of plaster and drywall ceiling and wall finish. The floors of the rooms have drywall ceiling and wall-finish and the floors have a combination of ceramic tile and laminate flooring. The Project Site is generally bound by I-880 to the west and south and Coliseum Way to the north and east, with industrial land uses beyond. There is also a railway corridor traversing the area in a general north-south direction approximately 700 feet (0.1 mile) east of the Project Site.

The Project is proposing the renovation of the existing hotel into 36 studio apartments. The one studio-manager's unit is proposed to remain for a total of 37 Project housing units. Renovation would involve the installation of kitchenettes in all units, each containing a stovetop, sink and refrigerator for food storage and prep. Patching and repair work would be completed as necessary to accommodate for the new kitchenettes, ventilation, and electrical changes. All existing carpet is proposed to be removed and replaced with luxury vinyl tile. New bedroom furniture as well as common area furniture would be provided throughout, all units would be painted, the existing central HVAC system would be disconnected, and individual HVAC units added to each room. Of the 36 proposed studio apartments, there would be a total of six Americans with Disabilities Act (ADA) compliant units including two visual and hearing-impaired units. Some additional ADA renovation, such as handrail upgrades and minor upgrades to the accessible rooms may be necessary.

The Project also proposes to utilize the approximate 1,000 square foot community lounge area at the northwestern corner of the Project Site for outdoor activities area and designated outdoor smoking area for the residences. Minor changes in the parking lot area are also proposed to enhance the outdoor community recreation area, and new landscaping would be added. All other existing landscaping would remain. No repairs to the existing exterior or roof are necessary, though the entire building exterior would be inspected, sealed and repainted. A controlled access gate is proposed to be installed so that there is one point of exit/entry. In addition, a new controlled pedestrian entry would be added.

An additional structure is proposed at the north end of the Project Site to serve as a space for four staff offices and other resident services. There would be 36 new bicycle racks installed.

2.0 HEALTH RISK ASSESSMENT

2.1 Environmental Setting

Air quality in a region is determined by its topography, meteorology, and existing air pollutant sources. These factors are discussed below, along with the current regulatory structure that applies to the San Francisco Bay Area Air Basin (SFBAAB), which encompasses the Project Site, pursuant to the regulatory authority of the BAAQMD.

Ambient air quality is commonly characterized by climate conditions, the meteorological influences on air quality, and the quantity and type of pollutants released. The air basin is subject to a combination of topographical and climatic factors that reduce the potential for high levels of regional and local air pollutants. The following section describes the pertinent characteristics of the air basin and provides an overview of the physical conditions affecting pollutant dispersion in the Project Area.

2.1.1 San Francisco Bay Area Air Basin

The Project Site is located in Alameda County, which lies in the SFBAAB. The SFBAAB is approximately 5,600 square miles in area and consists of nine counties that surround the San Francisco Bay, including all of Alameda, Contra Costa, Marin, San Francisco, San Mateo, Santa Clara, and Napa Counties; the southwestern portion of Solano County; and the southern portion of Sonoma County. The topography of the SFBAAB is characterized by complex terrain, consisting of coastal mountain ranges, inland valleys and bays. This complex terrain, especially the higher elevations, distorts the normal wind flow patterns in the SFBAAB. The greatest distortions occur when low-level inversions are present and the air beneath the inversion flows independently of air above the inversion, a condition that is common in the summertime (BAAQMD 2017).

The air flowing in from the coast to the Central Valley, called the sea breeze, begins developing at or near ground level along the coast in late morning or early afternoon. As the day progresses, the sea breeze layer deepens and increases in velocity while spreading inland. The depth of the sea breeze depends in large part upon the height and strength of the inversion. If the inversion is low and strong, and hence stable, the flow of the sea breeze will be inhibited and stagnant conditions are likely to result (BAAQMD 2017).

Summertime temperatures in the SFBAAB are determined by the effect of differential heating between land and water surfaces. Because land tends to heat up and cool off more quickly than water, a large-scale gradient (differential) in temperature is often created between the coast and the Central Valley, and small-scale local gradients are often produced along the shorelines of the ocean and bays (BAAQMD 2017).

During the summer, winds flowing from the northwest are drawn inland through the Golden Gate and over the lower portions of the San Francisco Peninsula. Immediately south of Mount Tamalpais, the northwesterly winds accelerate considerably and come more directly from the west as they stream through the Golden Gate. This channeling of wind through the Golden Gate produces a jet that sweeps eastward and splits off to the northwest toward Richmond and to the southwest toward San Jose when it meets the East Bay hills. Wind speeds may be strong locally in areas where air is channeled through a narrow opening, such as the Carquinez Strait, the Golden Gate, or the San Bruno Gap.

An inversion is a layer of warmer air over a layer of cooler air. Inversions affect air quality conditions significantly because they influence the mixing depth, i.e., the vertical depth in the atmosphere available for diluting air contaminants near the ground. The highest air pollutant concentrations in the SFBAAB generally occur during inversions. The areas having the highest air pollution potential tend to be those that experience the highest temperatures in the summer and the lowest temperatures in the winter. The coastal areas are exposed to the prevailing marine air, creating cooler temperatures in the summer, warmer temperatures in winter, and stratus clouds all year. The inland valleys are sheltered from the marine air and experience hotter summers and colder winters. Thus, the topography of the inland valleys creates conditions conducive to high air pollution potential.

2.1.2 Toxic Air Contaminants

In addition to the criteria pollutants discussed above, TACs are another group of pollutants of concern. TACs are considered either carcinogenic or noncarcinogenic based on the nature of the health effects associated with exposure to the pollutant. For regulatory purposes, carcinogenic TACs are assumed to have no safe threshold below which health impacts would not occur, and cancer risk is expressed as excess cancer cases per one million exposed individuals. Noncarcinogenic TACs differ in that there is generally assumed to be a safe level of exposure below which no negative health impact is believed to occur. These levels are determined on a pollutant-by-pollutant basis. Carcinogenic TACs can also have noncarcinogenic health hazard levels.

There are many different types of TACs, with varying degrees of toxicity. Sources of TACs include industrial processes such as petroleum refining and chrome plating operations, commercial operations such as gasoline stations and dry cleaners, and motor vehicle exhaust. Additionally, diesel engines emit a complex mixture of air pollutants composed of gaseous and solid material. The solid emissions in diesel exhaust are known as diesel particulate matter (DPM). In 1998, California identified DPM as a TAC based on its potential to cause cancer, premature death, and other health problems (e.g., asthma attacks and other respiratory symptoms). Those most vulnerable are children, whose lungs are still developing, and the elderly, who may have other serious health problems. Overall, diesel engine emissions are responsible for the majority of California's known cancer risk from outdoor air pollutants. Diesel engines also contribute to California's fine particulate matter (PM_{2.5}) air quality problems. Public exposure to TACs can result from emissions from normal operations, as well as from accidental releases of hazardous materials during upset conditions. The health effects of TACs include cancer, birth defects, neurological damage, and death.

2.1.2.1 Diesel Exhaust

Most recently, the California Air Resources Board (CARB) identified DPM as a TAC. DPM differs from other TACs in that it is not a single substance but rather a complex mixture of hundreds of substances. Diesel exhaust is a complex mixture of particles and gases produced when an engine burns diesel fuel. DPM is a concern because it causes lung cancer; many compounds found in diesel exhaust are carcinogenic. DPM includes the particle-phase constituents in diesel exhaust. The chemical composition and particle sizes of DPM vary between different engine types (i.e., heavy-duty, light-duty), engine operating conditions (i.e., idle, accelerate, decelerate), fuel formulations (i.e., high/low sulfur fuel), and the year of the manufacture of the engine (USEPA 2002). Some short-term (acute) effects of diesel exhaust include eye, nose, throat,

and lung irritation, and diesel exhaust can cause coughs, headaches, light-headedness, and nausea. DPM poses the greatest health risk among the TACs; due to their extremely small size, these particles can be inhaled and eventually trapped in the bronchial and alveolar regions of the lung.

2.1.2.2 Total Organic Gases

TOG emissions are compounds of carbon, excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate. Specifically, TOG emissions include all organic gas compounds emitted to the atmosphere, including the low-reactivity compounds (methane, ethane, various chlorinated fluorocarbons, acetone, perchloroethylene, volatile methyl siloxanes, etc.). TOG emissions also include low volatility or "low vapor pressure" organic compounds (e.g., some petroleum distillate mixtures). TOG includes all organic compounds that can become airborne (through evaporation, sublimation, as aerosols, etc.), excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate.

Various subsets of TOG cause headaches, dizziness, upper respiratory tract irritation, nausea, and cancer. Vehicular traffic traveling on I-880 and Coliseum Way is a source of TOG.

2.1.3 Sensitive Receptors

Sensitive receptors are defined as facilities or land uses that include members of the population who are particularly sensitive to the effects of air pollutants such as children, the elderly, and people with illnesses. Examples of these sensitive receptors are residences, schools, hospitals, and daycare centers. CARB has identified the following groups of individuals as the most likely to be affected by air pollution: the elderly over 65, children under 14, athletes, and persons with cardiovascular and chronic respiratory diseases such as asthma, emphysema, and bronchitis.

Once constructed, the Project would be considered a sensitive receptor.

2.2 Regulatory Framework

2.2.1 Federal

2.2.1.1 Clean Air Act

The Federal Clean Air Act (CAA) was amended in 1990 to address a large number of air pollutants that are known to cause or may reasonably be anticipated to cause adverse effects to human health or adverse environmental effects. 188 specific pollutants and chemical groups were initially identified as HAPs, and the list has been modified over time. The CAA Amendments included new regulatory programs to control acid deposition and for the issuance of stationary source operating permits.

In 2001, the U.S. Environmental Protection Agency (USEPA) issued its first Mobile Source Air Toxics Rule, which identified 21 mobile source air toxic (MSAT) compounds as being HAPs that required regulation. A subset of six of these MSAT compounds were identified as having the greatest influence on health and included benzene, 1,3-butadiene, formaldehyde, acrolein, acetaldehyde, and diesel particulate matter.

More recently, the USEPA issued a second MSAT Rule in February 2007, which generally supported the findings in the first rule and provided additional recommendations of compounds having the greatest impact on health. The rule also identified several engine emission certification standards that must be implemented. Unlike the criteria pollutants, toxics do not have National Ambient Air Quality Standards (NAAQS) making evaluation of their impacts more subjective.

National Emissions Standards for Hazardous Air Pollutants (NESHAPs) were incorporated into a greatly expanded program for controlling toxic air pollutants. The provisions for attainment and maintenance of the NAAQS were substantially modified and expanded. Other revisions included provisions regarding stratospheric ozone protection, increased enforcement authority, and expanded research programs.

Section 112 of the CAA Amendments governs the federal control program for HAPs. NESHAPs are issued to limit the release of specified HAPs from specific industrial sectors. These standards are technology-based, meaning that they represent the best available control technology an industrial sector could afford. The level of emissions controls required by NESHAPs are not based on health risk considerations because allowable releases and resulting concentrations have not been determined to be safe for the general public. The CAA does not establish air quality standards for HAPs that define legally acceptable concentrations of these pollutants in ambient air.

2.2.2 State

2.2.2.1 California Clean Air Act

California Air Resources Board

CARB's statewide comprehensive air toxics program was established in 1983 with AB 1807 the Toxic Air Contaminant Identification and Control Act (Tanner Air Toxics Act of 1983). AB 1807 created California's program to reduce exposure to air toxics and sets forth a formal procedure for CARB to designate substances as TACs. Once a TAC is identified, CARB adopts an airborne toxics control measure (ATCM) for sources that emit designated TACs. If there is a safe threshold for a substance at which there is no toxic effect, the control measure must reduce exposure to below that threshold. If there is no safe threshold, the measure must incorporate toxics best available control technology (T-BACT) to minimize emissions.

CARB also administers the state's mobile source emissions control program and oversees air quality programs established by state statute, such as AB 2588, the Air Toxics "Hot Spots" Information and Assessment Act of 1987. Under AB 2588, TAC emissions from individual facilities are quantified and prioritized by the air quality management district or air pollution control district. High priority facilities are required to perform a health risk assessment and, if specific thresholds are exceeded, required to communicate the results to the public in the form of notices and public meetings. In September 1992, the "Hot Spots" Act was amended by Senate Bill (SB) 1731 which required facilities that pose a significant health risk to the community to reduce their risk through a risk management plan.

Diesel Risk Reduction Plan

The identification of DPM as a TAC in 1998 led CARB to adopt the *Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel-Fueled Engines and Vehicles* (Risk Reduction Plan) in October 2000. The Risk Reduction Plan's goals included an 85 percent reduction in DPM by 2020 from the 2000 baseline. The Risk Reduction Plan includes regulations to establish cleaner new diesel engines, cleaner in-use diesel engines (retrofits), and cleaner diesel fuel.

Truck and Bus Regulation Reducing Emissions from Existing Diesel Vehicles

On December 12, 2008, CARB approved the Truck and Bus Regulation to significantly reduce particulate matter (PM) and oxides of nitrogen emissions from existing diesel vehicles operating in California. The regulation requires diesel trucks and buses that operate in California to be upgraded to reduce emissions. Heavier trucks must be retrofitted with PM filters beginning January 1, 2012, and older trucks must be replaced starting January 1, 2015. By January 1, 2023, nearly all trucks and buses would need to have 2010 model year engines or equivalent.

The regulation applies to nearly all privately and federally owned diesel fueled trucks and buses and to privately and publicly owned school buses with a gross vehicle weight rating greater than 14,000 pounds. Small fleets with three or fewer diesel trucks can delay compliance for heavier trucks by reporting and there are a number of extensions for low-mileage construction trucks, early PM filter retrofits, adding cleaner vehicles, and other situations. Privately and publicly owned school buses have different requirements.

Tanner Air Toxics Act & Air Toxics "Hot Spot" Information and Assessment Act

CARB's Statewide comprehensive air toxics program was established in 1983 with Assembly Bill (AB) 1807, the Toxic Air Contaminant Identification and Control Act (Tanner Air Toxics Act of 1983). AB 1807 created California's program to reduce exposure to air toxics and sets forth a formal procedure for CARB to designate substances as TACs. Once a TAC is identified, CARB adopts an airborne toxics control measure for sources that emit designated TACs. If there is a safe threshold for a substance at which there is no toxic effect, the control measure must reduce exposure to below that threshold. If there is no safe threshold, the measure must incorporate toxics best available control technology to minimize emissions.

CARB also administers the state's mobile source emissions control program and oversees air quality programs established by state statute, such as AB 2588, the Air Toxics Hot Spots Information and Assessment Act of 1987. Under AB 2588, TAC emissions from individual facilities are quantified and prioritized by the air quality management district or air pollution control district. High priority facilities are required to perform a HRA and, if specific thresholds are exceeded, required to communicate the results to the public in the form of notices and public meetings. In September 1992, the Hot Spots Act was amended by SB 1731, which required facilities that pose a significant health risk to the community to reduce their risk through a risk management plan.

2.2.3 Local

2.2.3.1 Bay Area Air Quality Management District

The BAAQMD is designated by law to adopt and enforce regulations to achieve and maintain ambient air quality standards. The BAAQMD responsibilities include preparing plans for the attainment of ambient air quality standards, adopting and enforcing air pollution rules, issuing permits for and inspecting stationary air pollution sources, responding to citizen complaints, monitoring ambient air quality and meteorological conditions, and implementing state and federal programs and regulations. The BAAQMD has also adopted various rules and regulations that are designed to reduce and control pollutant emissions from project's construction and operational activities.

2.2.4 Threshold of Significance

The impact analysis provided below is based on the following local (BAAQMD) cumulative risk thresholds. The BAAQMD has established the cumulative threshold to determine if the effects of nearby sources are significant to a proposed receptor.

Air Pollutant/Risk Parameter	Value	Units
Ambient PM _{2.5}	0.8	µg/m ³
Elevated Cancer Risk	100	In one million
Chronic Hazard Quotient	10	HHI

Cancer risk is expressed in terms of expected incremental incidence per million population. This threshold serves to determine whether nearby sources potentially have cumulatively significant impacts on a receptor. The 100-in-one-million standard is a very health-protective significance threshold. A risk level of 100 in one million implies a likelihood that up to 100 persons out of one million equally exposed people would contract cancer if exposed continuously (24 hours per day) to the levels of TACs over a specified duration of time. This risk would be an excess cancer that is in addition to any cancer risk borne by a person not exposed to these air toxics. To put this risk in perspective, the risk of dying from accidental drowning is 1,000 in a million, which is 10 times more than the BAAQMD's threshold of 100 in one million.

The BAAQMD has also established non-carcinogenic risk parameters for use in HRAs. Noncarcinogenic risks are quantified by calculating a *hazard index*, expressed as the ratio between the ambient pollutant concentration and its toxicity or Reference Exposure Level (REL). An REL is a concentration at, or below which health effects are not likely to occur. A hazard index less of than ten (10.0) means that adverse health effects are not expected. Within this analysis, non-carcinogenic exposures of less than 10.0 are considered less than significant. In addition, the BAAQMD has established a threshold for nearby sources' contribution to ambient PM_{2.5} concentrations.

2.2.5 Methodology

2.2.5.1 Stationary Source Identification and Risk Calculations

Stationary sources within 1,000 feet of the Project Site have been identified using the BAAQMD's Stationary Source Screening Map online tool. Table 2-2 lists the stationary sources with relevant risk information. Table 2-2 also lists the distance between the source and the BAAQMD factor to correct for distance to the source with the maximum Risk/Concentration value. The maximum values and more information on stationary sources can be found in Attachment B of this document.

Table 2-2. Stationary Source Screening Information					
Source Subsector	Distance (feet)	Distance Factor	Corrected PM_{2.5}	Scaled Cancer Risk	Corrected Chronic HI
Fabricated Metal Product Manufacturing	50	0.883	0.002	0.08	0.0005
Mineral Product Manufacturing	900	0.155	0.021	-	-
Utilities	550	0.319	0.002	1.08	0.0017
Telecommunications	900	0.155	0.001	0.48	0.0007
Social Assistance	800	0.195	0.002	1.70	0.0027

Total at Project Site			0.04	5.60	0.06

(1) BAAQMD Diesel Particulate Matter distance factor used for diesel sources

2.2.5.2 Road and Rail Emission Calculations

Offsite DPM and other MSAT TAC concentrations resulting from vehicle traffic on freeways and major roads within 1,000 feet of the Project were modeled. Annual Average Daily Trips (AADT) for the I-880 and Coliseum Way were gathered from the Caltrans Performance Measurement System (PeMS). CARB's EMFAC2021 was used to estimate emission rates for diesel and non-diesel vehicles. DPM emission rates were modeled using the coarse particulate matter (PM₁₀) running exhaust emission factors at an average speed for emission scenario years 2022, 2026, and 2030. TOG emissions were calculated for gasoline-fired vehicles. The TOG emissions were speciated using a Gasoline-Powered Vehicle Stabilized Running Exhaust profile produced in 2013 found on CARB's website (Yang 2013). The speciated TOG parameters identified as TACs were included in the emission calculations as presented in Attachment B of this document.

DPM concentrations from locomotive engine traffic within 1,000 feet of the Project Site were quantified for this analysis. Emission factors found in the 2008 HRA conducted by CARB for Union Pacific operations in the Oakland Area (CARB 2008) were used along with assumptions for trip frequency at the tracks

located within 1,000 feet of the Project Site. Only DPM emissions were calculated for rail as TOG and PM_{2.5} emissions were considered to be negligible per the distance to the Project (+700 feet).

2.2.5.3 Dispersion Modeling

The air dispersion modeling for the HRA was performed using the USEPA AERMOD Version 21112 dispersion model. AERMOD is a steady-state, multiple-source, Gaussian dispersion model designed for use with emission sources situated in terrain where ground elevations can exceed the stack heights of the emission sources. The USGS_NED_13_n38w123 file found at U.S. Geological Survey (USGS) was used for elevation data for all sources and receptors in the Project domain. All regulatory defaults were used for dispersion modeling.

AERMOD requires hourly meteorological data consisting of wind vector, wind speed, temperature, stability class, and mixing height. Pre-processed meteorological data files provided by BAAQMD using USEPA's AERMET program, designed to create AERMOD input files for the Oakland Airport monitoring station, were selected as being the most representative meteorology based on proximity. The location of the monitoring station in respect to the Project Site is presented in Attachment B to this document. The unit emission rate of one gram per second was utilized in AERMOD to create plot files containing the dispersion factor (X/Q) for each source group. Emissions for each source group as described above were input into HARP2 to calculate the ground level concentrations (GLC) related to Project operations. AERMOD summary files, calculations and figures can be found in Attachment B.

A uniform grid was placed over the Project Area with a spacing of 10 meters.

Based on the OEHHA methodology, the residential inhalation cancer risk from the annual average TAC concentrations is calculated by multiplying the daily inhalation or oral dose, by a cancer potency factor, the age sensitivity factor (ASF), the frequency of time spent at home, and the exposure duration divided by averaging time, to yield the excess cancer risk. These factors are discussed in more detail below. Cancer risk must be separately calculated for specified age groups, because of age differences in sensitivity to carcinogens and age differences in intake rates (per kilogram [kg] body weight). Separate risk estimates for these age groups provide a health-protective estimate of cancer risk by accounting for greater susceptibility in early life, including both age-related sensitivity and amount of exposure.

Exposure through inhalation (Dose-air) is a function the breathing rate, the exposure frequency, and the concentration of a substance in the air. For residential exposure, the breathing rates are determined for specific age groups, so Dose-air is calculated for each of these age groups, 3rd trimester, 0<2, 2<9, 2<16, 16<30 and 16-70 years. To estimate cancer risk, the dose was estimated by applying the following formula to each ground-level concentration:

$$\text{Dose-air} = (C_{\text{air}} * \{BR/BW\} * A * EF * 10^{-6})$$

Where:

Dose-air = dose through inhalation (mg/kg/day)
 C_{air} = air concentration (µg/m³) from air dispersion model

{BR/BW}	=	daily breathing rate normalized to body weight (L/kg body weight – day) (361 L/kg BW-day for 3 rd Trimester, 1,090 L/kg BW-day for 0<2 years, 861 L/kg BW-day for 2<9 years, 745 L/kg BW-day for 2<16 years, 335 L/kg BW-day for 16<30 years, and 290 L/kg BW-day 16<70 years)
A	=	Inhalation absorption factor (unitless [1])
EF	=	exposure frequency (unitless), days/365 days (0.96 [approximately 350 days per year])
10 ⁻⁶	=	conversion factor (micrograms to milligrams, liters to cubic meters)

OEHHA developed ASFs to consider the increased sensitivity to carcinogens during early-in-life exposure. In the absence of chemical-specific data, OEHHA recommends a default ASF of 10 for the third trimester to age 2 years, an ASF of 3 for ages 2 through 15 years to account for potential increased sensitivity to carcinogens during childhood and an ASF of 1 for ages 16 through 70 years.

Fraction of time at home (FAH) during the day is used to adjust exposure duration and cancer risk from a specific facility's emissions, based on the assumption that exposure to the facility's emissions are not occurring away from home. OEHHA recommends the following FAH values: from the third trimester to age <2 years, 85 percent of time is spent at home; from age 2 through <16 years, 72 percent of time is spent at home; from age 16 years and greater, 73 percent of time is spent at home.

To estimate the cancer risk, the dose is multiplied by the cancer potency factor, the ASF, the exposure duration divided by averaging time, and the frequency of time spent at home (for residents only):

$$\text{Risk}_{\text{inh-res}} = (\text{Dose}_{\text{air}} * \text{CPF} * \text{ASF} * \text{ED/AT} * \text{FAH})$$

Where:

Risk _{inh-res}	=	residential inhalation cancer risk (potential chances per million)
Dose _{air}	=	daily dose through inhalation (mg/kg-day)
CPF	=	inhalation cancer potency factor (mg/kg-day ⁻¹)
ASF	=	age sensitivity factor for a specified age group (unitless)
ED	=	exposure duration (in years) for a specified age group (0.25 years for 3 rd trimester, 2 years for 0<2, 7 years for 2<9, 14 years for 2<16, 14 years for 16<30, 54 years for 16-70)
AT	=	averaging time of lifetime cancer risk (years)
FAH	=	fraction of time spent at home (unitless)

Non-cancer chronic impacts are calculated by dividing the annual average concentration by the Reference Exposure Level (REL) for that substance. The REL is defined as the concentration at which no adverse non-cancer health effects are anticipated. The following equation was used to determine the non-cancer risk:

$$\text{Hazard Quotient} = \text{Ci/RELi}$$

Where:

Ci	=	Concentration in the air of substance i (annual average concentration in µg/m ³)
RELi	=	Chronic noncancer Reference Exposure Level for substance i (µg/m ³)

2.2.5.4 Cancer Risk

Cancer risk calculations for existing residential receptors are based on 70-, 30-, and 9-year exposure periods and worker receptors are based on a 25-year exposure period. The calculated cancer risk accounts for 350 days per year of exposure to residential receptors. While the average American spends 87 percent

of their life indoors (USEPA 2001), neither the pollutant dispersion modeling nor the health risk calculations account for the reduced exposure structures provide. Instead, health risk calculations account for the equivalent exposure of continual outdoor living. The calculated carcinogenic risk at Project vicinity receptors is depicted in Table 2-3.

Table 2-3. Maximum Cancer Risk Summary			
Maximum Exposure Scenario	Total Maximum Risk		
	9-Year	30-Year	70-Year
Scaled Stationary Sources	6	6	6
Modeled Mobile Sources	44	62	88
Total Risk	54	72	94
<i>Significance Threshold</i>	<i>100</i>	<i>100</i>	<i>100</i>
Exceed Threshold?	No	No	No

Source: ECORP Consulting 2022. See Attachment B.

As shown, future residents of the Project would not experience a significant amount of cumulative cancer risk from local stationary and mobile sources.

2.2.5.5 Non-Carcinogenic Hazards

In addition to cancer risk, the significance thresholds for TAC exposure requires an evaluation of non-cancer risk stated in terms of a hazard index and incremental PM_{2.5} concentration. Non-cancer chronic impacts are calculated by dividing the annual average concentration by the REL for that substance. The REL is defined as the concentration at which no adverse non-cancer health effects are anticipated. The potential for acute non-cancer hazards is evaluated by comparing the maximum short-term exposure level to an acute REL. RELs are designed to protect sensitive individuals within the population. The calculation of acute non-cancer impacts is like the procedure for chronic non-cancer impacts.

Table 2-4. Maximum Non-Cancer Risk Summary		
Maximum Exposure Scenario	Noncancer Risk	
	Chronic HI	PM_{2.5} (ug/m³)
Scaled Stationary Sources	0.04	0.06
Modeled Mobile Sources	0.03	0.54
<i>Total Risk</i>	0.07	0.6
<i>Significance Threshold</i>	10	0.8
Exceed Threshold?	No	No

Source: ECORP Consulting 2022. See Attachment B.

A chronic hazard index of 10.0 is considered individually significant. The hazard index is calculated by dividing the chronic exposure by the REL. The highest maximum chronic hazard indexes for residents and workers in the Proposed Project vicinity as a result of operations emission exposure is shown in Table 2-4. No acute health risk is associated with DPM under current OEHHA guidelines, thus acute health risk cannot be quantified for the Project. As shown in Table 2-4, impacts related to non-cancer risk (chronic hazard index) because of the Project are less than significant.

*** MODELOPTs: RegDEFAULT CONC ELEV RURAL ADJ_U*

*** MODEL SETUP OPTIONS SUMMARY

**Model Is Setup For Calculation of Average CONCentration Values.

-- DEPOSITION LOGIC --

**NO GAS DEPOSITION Data Provided.

**NO PARTICLE DEPOSITION Data Provided.

**Model Uses NO DRY DEPLETION. DRYDPLT = F

**Model Uses NO WET DEPLETION. WETDPLT = F

**Model Uses RURAL Dispersion Only.

**Model Uses Regulatory DEFAULT Options:

1. Stack-tip Downwash.
2. Model Accounts for ELEVated Terrain Effects.
3. Use Calms Processing Routine.
4. Use Missing Data Processing Routine.
5. No Exponential Decay.

**Other Options Specified:

ADJ_U* - Use ADJ_U* option for SBL in AERMET

CCVR_Sub - Meteorological data includes CCVR substitutions

TEMP_Sub - Meteorological data includes TEMP substitutions

**Model Assumes No FLAGPOLE Receptor Heights.

**The User Specified a Pollutant Type of: UNITIZED

**Model Calculates 1 Short Term Average(s) of: 1-HR
and Calculates ANNUAL Averages

**This Run Includes: 251 Source(s); 4 Source Group(s); and 38
Receptor(s)

with: 0 POINT(s), including
0 POINTCAP(s) and 0 POINTHOR(s)
and: 251 VOLUME source(s)
and: 0 AREA type source(s)
and: 0 LINE source(s)

and: 0 RLINE/RLINEXT source(s)
and: 0 OPENPIT source(s)
and: 0 BUOYANT LINE source(s) with a total of 0 line(s)

**Model Set To Continue RUNning After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 18081

**Output Options Selected:

Model Outputs Tables of ANNUAL Averages by Receptor

Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)

Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)

Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
m for Missing Hours
b for Both Calm and

Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 0.00 ; Decay
Coef. = 0.000 ; Rot. Angle = 0.0
Emission Units = GRAMS/SEC ;
Emission Rate Unit Factor = 0.10000E+07
Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 3.6 MB of RAM.

**Input Runstream File: aermod.inp

**Output Print File: aermod.out

**Detailed Error/Message File: DancoHomekey.err

**File for Summary of Results: DancoHomekey.sum

Subject: Phase I Environmental Site Assessment

4801 Coliseum Way
Oakland, California 94601
AEI Project No. 453946
Client Reference No. N/A
Client Reference Name: Inn at the Coliseum

Dear Ms. Dibble:

AEI Consultants is pleased to provide the *Phase I Environmental Site Assessment* of the above referenced property. This assessment was authorized and performed in accordance with the scope of services engaged.

We appreciate the opportunity to provide services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (925) 746-0000 or GReynolds@aeiconsultants.com.

Sincerely,

Gary Reynolds
Senior Business Development Manager
AEI Consultants

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by Danco Communities to conduct a Phase I ESA in conformance with AEI's contract and the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 4801 Coliseum Way, Oakland, Alameda County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

Pertinent subject property information is noted below:

PROPERTY INFORMATION	
Site Address(es)	4801 Coliseum Way, Oakland, Alameda County, California 94601
Property ID (APN or Block/Lot)	34-2295-16-5
Location	West of Coliseum Way and half way between 46th Avenue and 50th Avenue
Property Type	Hospitality
SITE AND BUILDING INFORMATION	
Approximate Site Acreage/Source	.84/Assessor
Number of Buildings	1
Building Construction Date(s)/Source	1955/Assessor
Building Square Footage (SF)/Source	8,000/Assessor
Number of Floors/Stories	2
Basement or Subgrade Area(s)	None identified
Number of Units	36
Additional Improvements	Concrete sidewalks and walkways, an outdoor seating area, asphalt-paved parking areas, and associated landscaping
On-site Occupant(s)	Inn by the Coliseum
Current On-site Operations/Use	Hospitality/hotel lodging and associated administrative activities
Current Use of Hazardous Substances	Yes; refer to Section 7.1
REGULATORY INFORMATION	
Regulatory Database Listing(s)	None identified

A chronological summary of historical subject property information is as follows:

Date Range	Subject Property Description and Occupancy (Historical Addresses)	Source(s)
Prior to 1925	Unknown use/Data failure; refer to Section 1.6.1	Sanborn maps
1925	Developed with storage sheds/warehouse, a small office structure, and a dwelling.	Sanborn map
1939-1952	Developed with a contractor's storage facility, including three storage warehouses and two small office structures.	Aerial photographs, Sanborn maps
1955	Current buildings constructed for motel/hospitality use (4801 Coliseum Way)	Agency records

Date Range	Subject Property Description and Occupancy (Historical Addresses)	Source(s)
1970-Present	Current commercial buildings/Coliseum Motel (hospitality)	Aerial photographs, city directories, agency records, interview, onsite observations

The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
Northeast	Coliseum Way, followed by Superior Plaster Castings and a PG&E Equipment/Materials Storage Yard (4800 and 4930 Coliseum Way)	CPS-SLIC, Alameda County CS, CERS, RCRA-LQG, RCRA-SQG, FINDS, ECHO, HIST UST, CERS HAZ WASTE, RCRA NonGen/NLR, LUST, SWEEPS UST, CA FID UST, HIST CORTESE, CERS, HAZNET, HWTS
Southeast	A pallet storage yard (4901 Coliseum Way)	None identified
Southwest	Bay Shore Freeway (Highway 880)	None identified
Northwest	A residence with auto storage and repair onsite (4731 Coliseum Way)	None identified

If the surrounding properties are listed in the regulatory database, please refer to [Section 5.1](#) for discussion.

FINDINGS

Recognized Environmental Condition (REC) is defined by the ASTM Standard Practice E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

- AEI did not identify evidence of RECs during the course of this assessment.

Controlled Recognized Environmental Condition (CREC) is defined by the ASTM Standard Practice E1527-13 as a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

- AEI did not identify evidence of CRECs during the course of this assessment.

Historical Recognized Environmental Condition (HREC) is defined by the ASTM Standard Practice E1527-13 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

- AEI did not identify evidence of HRECs during the course of this assessment.

Other Environmental Considerations (OEC) warrant discussion, but do not qualify as RECs as defined by the ASTM Standard Practice E1527-13. These include, but are not limited to, de minimis conditions and/or environmental considerations such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property. A de minimis condition is defined by the ASTM Standard as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

- Due to the age of the subject property buildings, there is a potential that ACMs are present. The observed suspect ACMs at the subject property were in good condition at the time of the site reconnaissance and are not expected to pose a health and safety concern to the occupants of the subject property at this time. Based on the potential presence of ACMs, AEI recommends the implementation of an O&M Plan which stipulates that the repair and maintenance of damaged materials should be performed to protect the health and safety of the building occupants. In the event that building renovation or demolition activities are planned, a thorough asbestos survey to identify asbestos-containing building materials is required in accordance with the EPA NESHAP 40 CFR Part 61 prior to demolition or renovation activities that may disturb suspect ACMs.
- Due to the age of the subject property buildings, there is a potential that LBP is present. All observed painted surfaces were in good condition and are not expected to pose a health and safety concern to the occupants of the subject property at this time. Local regulations may apply to LBP in association with building demolition/renovations and worker/occupant protection. Actual material samples would need to be collected or an x-ray fluorescence (XRF) survey performed in order to determine if LBP is present. It should be noted that construction activities that disturb materials or paints containing any amount of lead may be subject to certain requirements of the OSHA lead standard contained in 29 CFR 1910.1025 and 1926.62.

CONCLUSIONS, OPINIONS, AND RECOMMENDATIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) of 4801 Coliseum Way, Oakland, Alameda County, California, the *subject property*. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

AEI did not identify evidence of RECs or CRECs in connection with the subject property during the course of this assessment. AEI recommends no further investigation for the subject property at this time.

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I Environmental Site Assessment performed in conformance with AEI's contract and scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 4801 Coliseum Way, Oakland, Alameda County, California ([Appendix A: Figures](#) and [Appendix B: Property Photographs](#)).

1.1 SCOPE OF WORK

The purpose of the Phase I ESA is to assist the client in identifying potential RECs, in accordance with ASTM E1527-13, associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal, and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

1.2 ADDITIONAL SERVICES

Other Environmental Considerations such as ACMs, LBP, lead in drinking water, radon, mold, and wetlands can result in business environmental risks for property owners which may disrupt current or planned operations or cash flow and are generally beyond the scope of a Phase I assessment as defined by ASTM E1527-13. Based upon the agreed-on scope of services this ESA did not include subsurface or other invasive assessments, business environmental risks, or other services not specifically identified and discussed herein.

1.3 SIGNIFICANT ASSUMPTIONS

The following assumptions are made by AEI in this report. AEI relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow, unless otherwise specified by on-site well data or well data from the subject property or nearby sites, is inferred from contour information depicted on the USGS topographic maps. AEI assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.4 LIMITATIONS

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this assessment apply strictly to the environmental regulations and property conditions existing at the time the assessment was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: ACMs, radon, LBP, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-13.

If requested by the client, these non-scope issues are discussed herein. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under CERCLA. ASTM Standard Practice E1527-13 and the United States EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

1. 42 U.S.C. § 9601(35)(B), referenced in the ASTM Standard Practice E1527-13.
2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
3. 42 U.S.C. § 9601(40) and 42 U.S.C. § 9607(q).

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, current subject property use, and observations and conditions that existed on the date and time of the property reconnaissance.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

AEI's limited radon screening, if included, is intended to provide a preliminary screening to evaluate the potential presence of elevated radon concentrations at the site. The proposed scope is not intended to define the full extent of the presence of radon at the subject property. As such, the results should be used for lending purposes only. The recommendations and conclusions presented as a result of the limited preliminary radon screening apply strictly to the property conditions existing at the time the sampling was performed. The sample analytical results are only valid for the time, place, and condition of the site at the time of collection and AEI does not warrant that the results will be repeatable or are representative of past or future conditions.

1.5 LIMITING CONDITIONS/DEVIATIONS

The performance of this assessment was limited by the following:

- While additional assessments may have been conducted on the subject property, these documents must be provided for AEI's review in order for the information to be summarized/included in this report. Please refer to [Section 6.3](#) for a summary of previous reports and other documentation provided to AEI during this assessment.
- The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.
- AEI observed a representative sample of interior guest room units (approximately 10%). In addition, AEI observed common and exterior areas of the property, including storage and mechanical rooms. Based on the nature of property occupancy, this method of assessment is presumed to be appropriate due to the size of the subject property.

1.6 DATA FAILURE AND DATA GAPS

According to ASTM E1527-13, data gaps occur when the Environmental Professional is unable to obtain information required by the Standard, despite good faith efforts to gather such information. Pursuant to ASTM E1527-13, only significant data gaps, defined as those that affect the ability of the Environmental Professional to identify RECs, need to be documented.

Data failure is one type of data gap. According to ASTM E1527-13, data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Pursuant to ASTM E1527-13, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier, or periods of five years or greater.

1.6.1 DATA FAILURE

The following data failure was identified during the course of this assessment:

Data Failure	The earliest historical resource obtained during this assessment was a Sanborn map from 1925 indicating that the subject property was developed with a residence and storage buildings. The lack of historical sources for the subject property dating back to first developed use represents historical data source failure. However, as it is assumed that the subject property would have been previously used for residential purposes, if not undeveloped, this data failure is not expected to significantly alter the findings of this assessment.
Information/Sources Consulted	Sanborn fire insurance maps

1.6.2 SIGNIFICANT DATA GAPS

AEI did not identify significant data gaps which affected our ability to identify RECs.

1.7 RELIANCE

All reports, both verbal and written, are for the benefit of Danco Communities. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns. Reliance is provided in accordance with AEI's contract and Terms and Conditions executed by Danco Communities on December 22, 2021. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

2.0 SITE AND VICINITY DESCRIPTION

2.1 SITE LOCATION AND DESCRIPTION

PROPERTY INFORMATION	
Site Address(es)	4801 Coliseum Way, Oakland, Alameda County, California 94601
Property ID (APN or Block/Lot)	34-2295-16-5
Location	West of Coliseum Way and half way between 46th Avenue and 50th Avenue
Property Type	Hospitality
SITE AND BUILDING INFORMATION	
Approximate Site Acreage/Source	.84/Assessor
Number of Buildings	1
Building Construction Date(s)/Source	1955/Assessor
Building Square Footage (SF)/Source	8,000/Assessor
Number of Floors/Stories	2
Basement or Subgrade Area(s)	None identified
Number of Units	36
Additional Improvements	Concrete sidewalks and walkways, an outdoor seating area, asphalt-paved parking areas, and associated landscaping
On-site Occupant(s)	Inn by the Coliseum
Current On-site Operations/Use	Hospitality/hotel lodging and associated administrative activities
Current Use of Hazardous Substances	Yes; refer to Section 7.1
REGULATORY INFORMATION	
Regulatory Database Listing(s)	None identified

2.2 ON-SITE UTILITIES

Utility	Source/System Information
Heating System	Natural gas
Cooling System	Electricity
Potable Water	East Bay Municipal Water District (EBMUD)
Sewage Disposal/Treatment	EBMUD

Utility source/system information listed in the table above is provided by Ownership, unless otherwise noted above.

2.3 SITE AND VICINITY CHARACTERISTICS

The subject property is located in a mixed commercial and light industrial area of Oakland, California. The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
Northeast	Coliseum Way, followed by Superior Plaster Castings and a PG&E Equipment/Materials Storage Yard (4800 and 4930 Coliseum Way)	CPS-SLIC, Alameda County CS, CERS, RCRA-LQG, RCRA-SQG, FINDS, ECHO, HIST UST, CERS HAZ WASTE, RCRA NonGen/NLR, LUST, SWEEPS UST, CA FID UST, HIST CORTESE, CERS, HAZNET, HWTS
Southeast	A pallet storage yard (4901 Coliseum Way)	None identified
Southwest	Bay Shore Freeway (Highway 880)	None identified
Northwest	A residence with auto storage and repair onsite (4731 Coliseum Way)	None identified

If the surrounding properties are listed in the regulatory database, please refer to [Section 5.1](#) for discussion.

2.4 PHYSICAL SETTING

Geologic Unit: Description/Source	Alluvial deposits of the Cenozoic Era/USGS and United States Department of the Interior
Soil Series: Description/Source	Urban Land: this designation indicates that more than 85 percent of the original soils have been disturbed or covered by paved surfaces, buildings or other structures; due to the variability of the soil material, on-site investigation would be required to determine the specific soil composition at the subject property/USDA Soil Survey
Groundwater Flow Direction/Source	South-southeast/Topographic map interpretation
Estimated Depth to Groundwater/ Source	3 to 6 feet bgs/SWRCB GeoTracker Database data for an adjacent site (4930 Coliseum Way)
Surface waters on the subject property or adjoining sites	None

Note: Groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

3.0 HISTORICAL REVIEW OF SITE AND VICINITY

Reasonably ascertainable standard historical sources as outlined in ASTM Standard E1527-13 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historical city directories, Sanborn fire insurance maps, and agency records, is as follows:

Date Range	Subject Property Description and Occupancy (Historical Addresses)	Source(s)
Prior to 1925	Unknown use/Data failure; refer to Section 1.6.1	Sanborn maps
1925	Developed with storage sheds/warehouse, a small office structure, and a dwelling.	Sanborn map
1939-1952	Developed with a contractor's storage facility, including three storage warehouses and two small office structures.	Aerial photographs, Sanborn maps
1955	Current buildings constructed for motel/hospitality use (4801 Coliseum Way)	Agency records
1970-Present	Current commercial buildings/Coliseum Motel (hospitality)	Aerial photographs, city directories, agency records, interview, onsite observations

AEI did not identify potential environmental concerns in association with the current or historical use of the subject property.

If available, copies of historical sources are provided in [Appendix D](#).

3.1 AERIAL PHOTOGRAPHS

AEI reviewed aerial photographs of the subject property and surrounding area. A search was made of the EDR collection of aerial photographs. Aerial photographs were reviewed for the following years:

Year(s)	Subject Property Description	Adjoining Site Descriptions
1939	Appears to be developed with two residential/commercial buildings.	NORTHEAST: A roadway, followed by a large aboveground tank and associated support buildings SOUTHEAST: Undeveloped land SOUTHWEST: A warehouse structure and undeveloped land NORTHWEST: A possible residence and associated out buildings
1946	Appears to be developed with two residential/commercial buildings.	NORTHEAST: A roadway, followed by a large aboveground tank and associated support buildings SOUTHEAST: Undeveloped land, followed by possible military (or other) lodging buildings SOUTHWEST: A warehouse structure and

Year(s)	Subject Property Description	Adjoining Site Descriptions
		undeveloped land NORTHWEST: A possible residence and associated out buildings
1958	Appears to be developed with the current two-building motel facility.	NORTHEAST: A roadway, followed by a large aboveground tank and associated support buildings SOUTHEAST: Undeveloped land, followed by possible military (or other) lodging buildings SOUTHWEST: The current Eastshore Freeway infrastructure NORTHWEST: The current Eastshore Freeway infrastructure
1963	Appears to be developed with the current two-building motel facility.	NORTHEAST: A roadway, followed by a large aboveground tank and associated support buildings, and the current large commercial (warehouse-type) building SOUTHEAST: Undeveloped land, followed by possible military (or other) lodging buildings SOUTHWEST: The current Eastshore Freeway infrastructure NORTHWEST: A possible residence and associated out buildings
1968	Appears to be developed with the current two-building motel facility.	NORTHEAST: A roadway, followed by a large aboveground tank and associated support buildings, and the current large commercial (warehouse-type) building SOUTHEAST: Unimproved land SOUTHWEST: The current Eastshore Freeway infrastructure NORTHWEST: A possible residence and associated out buildings
1974, 1982	Appears to be developed with the current two-building motel facility.	NORTHEAST: A roadway, followed by a large aboveground tank and associated support buildings, and the current large commercial (warehouse-type) building SOUTHEAST: An unimproved storage yard SOUTHWEST: The current Eastshore Freeway infrastructure NORTHWEST: A possible residence and associated out buildings
1993, 1998, 2005, 2009, 2012, 2016	Appears to be developed with the current two-building motel facility.	NORTHEAST: A roadway, followed by a large yard area, and the current large commercial (warehouse-type) building SOUTHEAST: An unimproved storage yard SOUTHWEST: The current Eastshore Freeway infrastructure NORTHWEST: A possible residence and associated out buildings

AEI did not identify potential environmental concerns in association with the historical use of the subject property during the aerial photograph review.

3.2 SANBORN FIRE INSURANCE MAPS

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of the EDR collection of Sanborn Fire Insurance maps.

The following maps were reviewed:

Year(s)	Subject Property Description (Listed Address)	Adjoining Site Descriptions
1925	Depicted as developed with storage sheds/warehouse, a small office structure, and a dwelling.	NORTHEAST: Clement Street, followed by vacant land SOUTHEAST: Vacant land SOUTHWEST: A vacant building and vacant land NORTHWEST: A dwelling with associated out buildings
1950, 1952	Depicted as developed with a contractor's storage facility, including three storage warehouses and two small office structures.	NORTHEAST: Clement Street, followed by a PG&E Company Gasholder materials yard SOUTHEAST: Vacant land, followed by flats SOUTHWEST: East Shore Freeway NORTHWEST: A dwelling with associated out buildings
1957, 1961	Depicted as developed with the Rancho Del Rey Motel (two buildings). Addressed as 4801 & 4831 Clement Street.	NORTHEAST: Clement Street, followed by a PG&E Company Gasholder materials yard SOUTHEAST: Vacant land, followed by flats SOUTHWEST: East Shore Freeway NORTHWEST: Dwelling
1966, 1969	Depicted as developed with the Rancho Del Rey Motel (two buildings). Addressed as 4801 & 4831 Clement Street.	NORTHEAST: Clement Street, followed by a PG&E Company Gasholder materials yard and a sporting goods warehouse SOUTHEAST: Vacant land SOUTHWEST: East Shore Freeway NORTHWEST: Dwelling

AEI did not identify potential environmental concerns in association with the historical use of the subject property during the Sanborn map review.

3.3 CITY DIRECTORIES

A search of historical city directories was conducted for the subject property utilizing EDR. No potential tenants of concern were identified based on AEI's review of the historical city directories. Directories were reviewed in approximate five-year increments from 1920 to 2017. The first listing for the subject property appeared in 1967. The following table summarizes the results of the city directory search.

Year(s)	Address - Occupant Listed
1967, 1970, 1980, 1986, 1991, 1992, 1994, 1996, 1999, 2000, 2004, 2006, 2009	4801 Coliseum Way - Coliseum Motel
2014	4801 Coliseum Way - Coliseum Motel, Rodeway Inn & Suites
2017	4801 Coliseum Way - Coliseum Motel, Onsite TV Service & Repair

If listed above, XXXX indicates that the address is valid but there is no occupancy information available.

AEI did not identify potential environmental concerns in association with the historical use of the subject property during the city directory review.

3.4 HISTORICAL TOPOGRAPHIC MAPS

Based on the quality of information obtained from other sources, historical topographic maps were not reviewed as a part of this assessment.

3.5 CHAIN OF TITLE

Based on the quality of information obtained from other sources, a chain of title search was not performed as part of this assessment.

4.0 REGULATORY AGENCY RECORDS REVIEW

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous substance use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to AULs, defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested.

4.1 LOCAL ENVIRONMENTAL HEALTH DEPARTMENT AND/OR STATE ENVIRONMENTAL AGENCY

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Alameda County Environmental Health Department (ACEHD)	January 5, 2022	Website	Records Manager	No hazardous substances records on file

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
California Environmental Protection Agency (Cal-EPA)	January 5, 2022	Website	Website	No records on file

4.2 FIRE DEPARTMENT

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Oakland Fire Department (OFD)	January 5, 2022	Telephone	Records Clerk	No hazardous substances records on file

4.3 BUILDING DEPARTMENT

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Oakland Building Department (OBD)	January 5, 2022	Telephone	Records Clerk	Records discussed below

Records Summary

Year(s)	Owner/Applicant	Description of Permit and Building Use
1957-58	Coliseum Motel	Tenant improvements/interior alterations
2000	Coliseum Motel	Re-roof
2012	Coliseum Motel	Interior remodel of onsite office, lobby, and associated common areas

Evidence indicating current or prior use or storage of hazardous substances was not on file for the subject property with the OBD.

4.4 PLANNING DEPARTMENT

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Oakland Planning Department (OPD)	January 5, 2022	Telephone	Associate Planner	No evidence indicating the existence of AULs on file for the subject property

4.5 ASSESSOR'S OFFICE

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Alameda County Assessor's Office	January 5, 2022	Website	N/A	Information obtained is discussed below

Records Summary

APN	34-2295-16-5
Acreage	.84 acres
Construction Date	1955
Building Square Footage	8,000 square feet
Current Owner	Not provided

4.6 OTHER AGENCIES SEARCHED

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
CA State Water Resources Control Board (SWRCB) GeoTracker	January 5, 2022	Website	N/A	No records on file
SWRCB GeoTracker Historical Hazardous Substance Storage Information	January 5, 2022	Website	N/A	No records on file
CA Department of Toxic Substances Control (DTSC) Hazardous Waste Tracking System (HWTS)	January 5, 2022	Website	N/A	No records on file
CA DTSC EnviroStor	January 5, 2022	Website	N/A	No records on file
Bay Area Air Quality Management District (AQMD)	January 5, 2022	Website	N/A	No records on file

No other agencies were contacted during the course of this assessment.

4.7 OIL AND GAS WELLS

Agency	Date Referenced	Resource	Oil or gas wells located within 500 feet of the subject property
California Geologic Energy Management (Cal-GEM)	January 5, 2022	Cal-GEM Map	No

4.8 OIL AND GAS PIPELINES

Agency	Date Referenced	Resource	Pipelines located within 500 feet of the subject property
National Pipeline Mapping System (NPMS)	January 5, 2022	NPMS Public Map Viewer	Information obtained is discussed below

According to information obtained from the NPMS Public Map Viewer, an active underground natural gas pipeline operated by PG&E is located adjacent to the northeast along the Coliseum Way corridor; see NPMS map in appendices. No stressed vegetation or olfactory indications of a release were observed in the vicinity of the pipeline and no records of past releases or violations associated with this pipeline were identified within the regulatory database or NPMS Public Map Viewer. Due to its contents, the natural gas pipeline is not expected to represent a potential threat to soil or groundwater conditions at the subject property. Based on this information, the pipeline does not appear to represent a significant environmental concern to the subject property at this time.

4.9 STATE ENVIRONMENTAL SUPERLIENS

In accordance with our approved scope of services, AEI did not assess whether the subject property is subject to any state environmental superliens.

4.10 STATE PROPERTY TRANSFER LAWS

In accordance with our approved scope of services, AEI did not assess whether the subject property is subject to any state property transfer laws.

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted EDR to conduct a search of publicly available information from federal, state, tribal, and local databases containing known and suspected sites of environmental contamination and sites of potential environmental significance. Data gathered during the current regulatory database search is compiled by EDR into one regulatory database report. Location information for listed sites is designated using geocoded information provided by federal, state, or local agencies and commonly used mapping databases with the exception of "Orphan" sites. Due to poor or inadequate address information, Orphan sites are identified but not geocoded/mapped by EDR, rather, information is provided based upon vicinity zip codes, city name, and state. The number of listed sites identified within the approximate minimum search distance from the federal and state environmental records database listings specified in ASTM Standard E1527-13 is summarized in Section 5.1, along with the total number of Orphan sites. A copy of the regulatory database report, which includes detailed descriptions of the databases noted below, is included in [Appendix C](#) of this report.

In determining if a listed site is a potential environmental concern to the subject property, AEI generally applies the following criteria to classify the site as lower potential environmental concern: 1) the site only holds an operating permit (which does not imply a release), 2) the site's distance from, and/or topographic position relative to, the subject property, and/or 3) the site has recently been granted "No Further Action" by the appropriate regulatory agency.

Regulatory database listings associated with the subject property, adjoining site(s) and/or nearby sites of concern that were determined to warrant additional discussion are identified and further discussed in Section 5.1.

5.1 RECORDS SUMMARY

Database	Search Distance (Miles)	Listings Within Search Distance	Subject Property	Adjoining Site(s)	Other Nearby Sites of Concern

ADDITIONAL ENVIRONMENTAL RECORD SOURCES	SP/ADJ	See below		✓	

Facility Name	Superior Plaster Castings
Address	4800 Coliseum Way
Distance & Direction	Adjoining to the northeast
Hydrologic Position	Cross-gradient
Databases Listed	RCRA-SQG, FINDS, ECHO, CPS-SLIC, Alameda County CS, CERS
Comments	<p>According to the regulatory database, this adjacent site is identified as a release site due to the detection of volatile organic compounds (VOCs) in soil and groundwater in the area of former onsite railroad tracks, discovered in 1991. Various subsurface investigations were conducted between 1991 and 1998, indicating that soil and groundwater at the site appeared to be impacted by petroleum hydrocarbons, solvents, and metals. Although elevated concentrations of petroleum hydrocarbons were detected in soil in the vicinity of the former onsite railroad tracks, it was determined that an up-gradient site was likely the source of the VOC contamination in groundwater. As such, the release case currently has an "Open - Inactive" status. In 2000, it was requested by the acting environmental consultant that the Alameda County LOP issue a No Further Action (NFA) status for this specific site (4800 Coliseum Way). In the late 2000s, the Alameda County LOP determined that this site be part of a comingled groundwater plume.</p> <p>Refer to the segment below for discussion of the adjacent, up-gradient PG&E facility that is the likely source of regional groundwater contamination.</p>

Facility Name	PG&E Gas General Construction Yard
Address	4930 Coliseum Way
Distance & Direction	Adjoining to the northeast
Hydrologic Position	Cross-gradient
Databases Listed	RCRA-LQG, HIST UST, CERS HAZ WASTE, CERS, RCRA NonGen/NLR, LUST, CPS-SLIC, Alameda County CS, SWEEPS UST, CA FID UST, HAZNET, HWTS, HIST CORTESE
Comments	<p>According to the regulatory database, this adjacent site is identified as a release site due to a release of diesel that impacted soil and other groundwater (uses other than drinking water) at the site, discovered in 1990 during tank closure (diesel and waste oil USTs). The site was used by PG&E as a natural gas</p>

	<p>distribution center and equipment storage facility from the late 1930s until 1990, when a former gas-holder tank was removed. Since 1990, the site has been used as an equipment and vehicle storage facility. PG&E personnel occupy a small office on-site during regular business hours. The gas holder tank was originally painted with lead-based paint and sandblasted on-site during historical site activities. In 1992, a Covenant of Deed Restriction was put into effect stating that the site is to remain covered with asphalt to prevent the lateral and vertical spread of lead impacts to ground and surface water with an additional requirement to inspect the cap annually. A Corrective Action Plan dated July 2, 2012, which was approved in 2013, selected maintenance of an asphalt cap to cover areas where lead concentrations in soil exceed regulatory levels for industrial/commercial use in conjunction with a Site Management Plan and administrative controls. ACEH recently received a document entitled, Corrective Action Plan Implementation Workplan, Oakland Construction Yard, 4930 Coliseum Way, Oakland, California, dated January 2016, which proposes specific repair and replacement activities for the existing asphalt cap at the site. A report documenting the cap repair and replacement activities is to be submitted by July 29, 2016. Following submittal of the Cap Repair and Maintenance Report, a Soil Management Plan and an updated Covenant and Environmental Restriction on Property are to be completed. The release case has a current regulatory status of "Open - Remediation" and "Open - Long Term Management". However, according to the most recent Semiannual Groundwater Monitoring Report available for review (November 2009 Sampling Event), groundwater flow was found to be to the south-southeast, which is cross-gradient in relation to the subject property site. As such, it does not appear that the contamination plume from this adjacent site has migrated toward or beneath the subject property site, as the flow direction runs parallel to the direction of the adjacent Coliseum Way roadway. Based on this information, the adjacent site(s) to the northeast are not expected to represent a significant environmental concern.</p> <p>This adjacent site is also identified as a handler and generator of hazardous waste. Hazardous wastes generated have included PCBs, contaminated soil from cleanup, laboratory waste chemicals, ignitable waste, corrosive waste, lead, methyl ethyl ketone, PCE, and ethene. No violations were noted regarding the generation of hazardous wastes onsite. As such, the generation of hazardous waste at this adjacent site is not expected to represent a significant environmental concern.</p>
--	--

Facility Name	AAA Equipment Company
Address	745 50th Avenue
Distance & Direction	Approximately 700 feet to the northeast
Hydrologic Position	Cross-gradient
Databases Listed	CPS-SLIC, Alameda County CS, HAZNET, CERS, HWTS, RCRA-SQG, FINDS, ECHO, RCRA NonGen/NLR
Comments	According to the regulatory database, this nearby site is identified as a release site due to a release of acetone, gasoline, and lead that impacted soil and other groundwater (uses other than drinking water) at the site, discovered in 1987. A former batch asphalt plant which included the use of two underground storage tanks (USTs) operated at the site in the 1950s and 1960s. Oil was shipped by rail cars and transferred by underground pipelines to the USTs. AAA Equipment

occupied the site from at least 1967 until 2002. The use of the site by AAA Equipment is not well documented but apparently included storage of vehicles, drums, racks, etc. During the removal of the two USTs in 2003, petroleum hydrocarbons were encountered in the area of the former batch plant. Residual contamination at the site includes petroleum hydrocarbons, volatile organic compounds, and metals. The property is currently covered by asphalt, buildings, and concrete that is part of a building materials supply yard. The case is under consideration for case closure pending completion of a site management plan and an environmental covenant for the site. The site has a current regulatory status of "Open - Site Assessment. Based on the relative distance from the subject property, the estimated direction of groundwater flow, and the ongoing regulatory oversight, this nearby site is not expected to represent a significant environmental concern.

5.2 VAPOR MIGRATION

AEI reviewed reasonably ascertainable information for the subject and nearby properties, including a regulatory database, files for nearby release sites, and/or historical documentation, to determine if potential vapor-phase migration concerns may be present which could impact the subject property.

AEI did not identify significant on-site concerns and/or regulated listings from nearby sites which suggest that a vapor-phase migration concern currently exists at the subject property.

6.0 INTERVIEWS AND USER PROVIDED INFORMATION

6.1 INTERVIEWS

Pursuant to ASTM E1527-13, the following interviews were performed during this assessment in order to obtain information indicating RECs in connection with the subject property.

6.1.1 OWNER AND KEY SITE MANAGER

Relation to Property	Name	Date Interviewed	Method of Contact	Year First Associated w/ Property	Notes
Owner/Owner Representative and Key Site Manager	Mr. Tony Dumbhalia	January 7, 2022	In Person	2017	Interviewed; see Interview Summary table below

Interview Summary

Question	Owner (Representative) Response/ Comment	Key Site Manager Response/ Comment
Do you have any knowledge of USTs, clarifiers or oil/water separators, sumps, or other subsurface features?	No	N/A
Do you have any knowledge of previous environmental investigations conducted on site?	No	N/A
Do you have any knowledge of current or past industrial operations and/or other operations which would involve the use of hazardous substances and/or petroleum products?	No	N/A
Are you aware of any known plans for site redevelopment or change in site use?	No	N/A
Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?	No	N/A
Are you aware of any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property?	No	N/A
Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?	No	N/A
Are you aware of any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality?	No	N/A
Additional information provided:	N/A	N/A

6.1.2 PAST OWNERS, OPERATORS, AND OCCUPANTS

AEI did not attempt to interview past owners, operators, and occupants of the subject property because information from these sources would likely be duplicative of information already obtained from other sources.

6.1.3 INTERVIEW WITH OTHERS

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this report.

6.2 USER PROVIDED INFORMATION

User provided information is intended to help identify the possibility of RECs in connection with the subject property. According to ASTM E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), certain items should be researched by the prospective landowner or grantee, and the results of such inquiries may be provided to the Environmental Professional. The responsibility for qualifying for LLPs by conducting the inquiries ultimately rests with the User, and providing the information to the Environmental Professional would be prudent if such information is available.

The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.

Question	Response/ Comment
1. Environmental liens that are filed or recorded against the property (40 CFR 312.25) Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?	Information not provided
2. Activity and use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and vi)). Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?	Information not provided
3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28). Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	Information not provided
4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29). Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	Information not provided
5. Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).	Information not provided

Question	Response/ Comment
<p>Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example:</p> <p>(a) Do you know the past uses of the property?</p> <p>(b) Do you know of specific chemicals that are present or once were present at the property?</p> <p>(c) Do you know of spills or other chemical releases that have taken place at the property?</p> <p>(d) Do you know of any environmental cleanups that have taken place at the property?</p>	
<p>6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).</p> <p>Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?</p>	<p>Information not provided</p>

6.3 PREVIOUS REPORTS AND OTHER PROVIDED DOCUMENTATION

No prior reports or other relevant documentation in association with the subject property was made available to AEI during the course of this assessment.

6.4 ENVIRONMENTAL LIEN SEARCH

In accordance with our approved scope of services, an environmental lien search was not performed as part of this assessment.

7.0 SITE RECONNAISSANCE

Site Reconnaissance Date	January 7, 2022
AEI Site Assessor(s)	Michael Audibert
Property Escort(s)/ Relationship(s) to Property	Mr. Tony Dumbhalia/Property Owner
Units/Areas Observed	All common areas, mechanical areas, and storage areas of the onsite buildings, as well as a representative sample of motel guest rooms Exterior areas: All exterior grounds
Area(s) not accessed and reason(s)	Remaining motel guest rooms Exterior areas: Roof areas Refer to Section 1.5 for discussion of limiting condition(s).
Other Physical Constraints	None

Reconnaissance Findings Summary

Feature	Observed on Subject Property (see Section 7.1)	Observed on Adjoining Property (see Section 7.2)
Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use		
Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)		
Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use		
Unidentified Substance Containers		
Electrical or Mechanical Equipment Likely to Contain Fluids	✓	✓
Interior Stains or Corrosion		
Strong, Pungent, or Noxious Odors		
Pools of Liquid		
Drains, Sumps, and Clarifiers	✓	✓
Pits, Ponds, and Lagoons		
Stained Soil or Pavement		
Stressed Vegetation		
Solid Waste Disposal or Evidence of Fill Materials		
Waste Water Discharges		
Wells		
Septic Systems		
Biomedical Wastes		
Other	✓	

7.1 SUBJECT PROPERTY RECONNAISSANCE FINDINGS

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

7.1.1 ELECTRICAL OR MECHANICAL EQUIPMENT LIKELY TO CONTAIN FLUIDS

Toxic PCBs were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR Part 761, there are three categories for classifying such equipment: <50 ppm of PCBs is considered "Non-PCB"; between 50 and 500 ppm is considered "PCB-Contaminated"; and >500 ppm is considered "PCB-Containing." Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Transformers

Type	Quantity	Owner	Presumed Date of Installation	Spills or Stains Observed (Yes/No)	Non-PCB Label (Yes/No)
Pole-Mounted	Three	PG&E	Unknown	No	No

The management of potential PCB-containing transformers is the responsibility of the local utility or the transformer owner. Actual material samples need to be collected to determine if transformers are PCB-containing.

Transformers installed prior to 1977 may be PCB containing while transformers installed after 1977 are unlikely to be PCB containing. Federal Regulations (40 CFR 761 Subpart G) require any release of material containing >50 ppm PCB and occurring after May 4, 1987, be cleaned up by the transformer owner following the United States EPA's PCB spill cleanup policy.

AEI did not observe evidence of spills, staining, or leaks on or around the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

7.1.2 DRAINS, SUMPS, AND CLARIFIERS

Various storm drains were observed in the parking area of the subject property. AEI did not observe evidence of hazardous substances or petroleum products in the vicinity of the drains. Based on the use of the drains solely for storm water runoff, the presence of the drains is not expected to represent a significant environmental concern.

7.1.3 OTHER

Cleaning supplies and detergents are stored in the commercial laundry room and boiler room of the main subject property motel building. All chemicals were packaged in consumer quantities. No drains or other subsurface conduits were observed in this area. Based on the small quantities present, the nature of the material, the lack of subsurface conduits and the good housekeeping observed, the presence of these materials is not expected to represent a significant environmental concern.

7.2 ADJOINING PROPERTY RECONNAISSANCE FINDINGS

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

7.2.1 ELECTRICAL OR MECHANICAL EQUIPMENT LIKELY TO CONTAIN FLUIDS

Transformers

Various pole-mounted transformers were observed on the adjoining sites during the site reconnaissance. No spills, staining, or leaks were observed on or around the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

7.2.2 DRAINS, SUMPS, AND CLARIFIERS

Several storm drains were observed in the parking areas of the adjoining properties and adjoining roadways. AEI did not observe evidence of hazardous substances or petroleum products in the vicinity of the drains. Based on the use of the drains solely for storm water runoff, the presence of the drains is not expected to represent a significant environmental concern.

8.0 NON-ASTM SERVICES

8.1 ASBESTOS-CONTAINING BUILDING MATERIALS

Asbestos is the name for a group of naturally occurring silicate minerals that can be separated into fibers. The fibers are strong, durable, and resistant to heat and fire. They are also long, thin and flexible, so they can even be woven into cloth. Because of these qualities, asbestos has been used in thousands of consumer, industrial, maritime, automotive, scientific and building products. During the 20th century, some 30 million tons of asbestos have been used in industrial sites, homes, schools, shipyards and commercial buildings in the United States. Commercial use of ACM began in the early 1900s and peaked in the period between 1940 and into the 1970s. Common ACMs include pipe-covering, insulating cement, insulating block, refractory and boiler insulation materials, transite board, fireproofing spray, joint compound, vinyl floor tile, ceiling tile, mastics, roofing products, and duct insulation for HVAC applications. Inhalation of asbestos fibers can result in deleterious health effects.

The potential for ACM was evaluated based the United States EPA Guidance Document: Managing Asbestos in Place - A Building Owner's Guide to Operations and Maintenance Programs for Asbestos-Containing Materials (the Green Book). In 1973 the NESHAPS banned the use of most spray-applied surfacing ACM, specifically asbestos containing spray-on fireproofing and insulation. Subsequent revisions to this regulation in 1975 and 1978 effectively eliminated the use of friable pre-molded pipe, boiler, turbine, and duct insulation; and the spray application of friable asbestos-containing materials for all uses in buildings. In 1989 the EPA issued regulations to ban some asbestos-containing products and phase out most others over a multi-year period. The "Ban and Phase-Down" rule was challenged in court and the regulation remanded to the agency. As a result, any asbestos-containing products then "in commerce" would not be banned. Those not in commerce would be banned. Those materials "banned" could not be sold. It did not affect such materials already installed, or in use. Most US firms voluntarily ceased production of asbestos containing building materials not covered by the aforementioned Federal bans by the mid-1980s. In 1994, the OSHA determined that employers and building owners are required to treat installed thermal system installation and sprayed on and troweled-on surfacing materials, as well as vinyl or asphalt flooring material, as ACM in buildings constructed no later than 1980 until tested by laboratory analysis to prove otherwise.

The information below is for general informational purposes only and does not constitute an asbestos survey. In addition, the information is not intended to comply with federal, state or local regulations in regards to ACM.

Due to the age of the subject property buildings, there is a potential that ACMs are present. A limited list of typical suspect ACMs is included in the following table:

Material Type	Location
Plaster (acoustical and smooth)	Walls and ceilings
Ceiling tile	Ceiling systems
Thermal systems insulations, packings, and gaskets	Heating systems, cooling systems, domestic and heating and cooling piping, ductwork, and other equipment
Floor tile and associate mastics, flooring felts, and papers (under hardwood/other)	Floors
Vinyl sheet flooring and adhesives	Floors
Cove base and associated mastics	Walls
Ceramic tile adhesives and grouts	Walls, floors, and ceilings
All adhesives	Mirrors, wall coverings, construction, etc.
Grout and caulking	Windows and doors
Gypsum board, tape, and joint compound	Wall and ceiling systems
Insulation materials	Walls, ceilings, and attic spaces
Roofing materials (felts, rolled, shingle, flashings, adhesives, tar, and insulations)	Roof and parapet wall systems
Brick and block, mortars	Walls

The observed suspect ACMs at the subject property were in good condition at the time of the site reconnaissance and are not expected to pose a health and safety concern to the occupants of the subject property at this time. Based on the potential presence of ACMs, AEI recommends the implementation of an O&M Plan which stipulates that the repair and maintenance of damaged materials should be performed to protect the health and safety of the building occupants. In the event that building renovation or demolition activities are planned, a thorough asbestos survey to identify asbestos-containing building materials is required in accordance with the EPA NESHAP 40 CFR Part 61 prior to demolition or renovation activities that may disturb suspect ACMs.

8.2 LEAD-BASED PAINT

Lead-based paint (LBP) is defined as any paint, varnish, stain, or other applied coating that has ≥ 1 mg/cm² (5,000 µg/g or 5,000 ppm) or more of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from 0.5 mg/cm² to 2.0 mg/cm². Section 1017 of the Housing and Urban Development (HUD) Guidelines, Residential Lead-Based Paint Hazard Reduction Act of 1992, otherwise known as "Title X," defines a LBP hazard as "any condition that causes exposure to lead that would result in adverse human health effects" resulting from lead-contaminated dust, bare, lead-contaminated soil, and/or lead-contaminated paint that is deteriorated or present on accessible, friction, or impact surfaces. Therefore, under Title X, intact LBP on most walls and ceilings would not be considered a "hazard," although the paint should be maintained and its condition monitored to ensure that it does not deteriorate and become a hazard. Additionally, Section 1018 of this law directed HUD and EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978. Most private housing, public housing, or federally owned or subsidized housing is affected by this rule.

Under OSHA, lead-containing paint (LCP) is defined as any paint with any detectable amount of lead present in it. Therefore, all LBP is considered LCP. Conversely, LCP may not meet the criteria to be considered LBP in accordance with HUD guidelines or some states' definition of LBP.

It is important to note that LCP may create a lead hazard when being removed. The condition of these materials must be monitored when they are being disturbed. In the event LCP is subject to abrading, sanding, torching, and/or cutting during demolition or renovation activities, there may be regulatory issues that must be addressed.

The information below is for general informational purposes only and does not constitute a lead hazard evaluation. In addition, the information is not intended to comply with federal, state, or local regulations in regards to LBP.

In buildings constructed after 1978, it is unlikely that LBP is present; however, some paints utilized after 1978 will be LCP under OSHA. Structures built prior to 1978 and especially prior to the 1960s should be expected to contain LBP.

Due to the age of the subject property buildings, there is a potential that LBP is present. All observed painted surfaces were in good condition and are not expected to pose a health and safety concern to the occupants of the subject property at this time. Local regulations may apply to LBP in association with building demolition/renovations and worker/occupant protection. Actual material samples would need to be collected or an XRF survey performed in order to determine if LBP is present. It should be noted that construction activities that disturb materials or paints containing any amount of lead may be subject to certain requirements of the OSHA lead standard contained in 29 CFR 1910.1025 and 1926.62.

8.3 RADON

Radon is a naturally-occurring, odorless, and invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

The United States EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three radon zones, with Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action Limit of 4.0 pCi/L. It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the EPA recommends site specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not requested as part of this assessment. According to the US EPA, the radon zone level for the area is Zone 2, which has a predicted average indoor screening level between 2 pCi/L and 4 pCi/L, equal to or below the action level of 4 pCi/L set forth by the US EPA.

8.4 MOLD

Molds are simple microscopic organisms which can often be seen in the form of discoloration, frequently green, gray, white, brown, or black. When excessive moisture or water accumulates indoors, mold growth may occur, particularly if the moisture problem remains undiscovered or unaddressed. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials, including drywall,

wallpaper, baseboards, wood framing, insulation, and carpeting, often play host to such growth. Mold spores primarily cause health problems through the inhalation of spores or the toxins they emit when they are present in large numbers. This can occur when there is active mold growth within places where people live or work.

Mold, if present, may or may not visually manifest itself. Neither the individual completing this inspection, nor AEI has any liability for the identification of mold-related concerns except as defined in applicable industry standards. In short, this Phase I ESA should not be construed as a mold survey or inspection.

This activity was not designed to discover all areas which may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication if significant (based on observed areas) mold growth is present at the subject property. Potential areas of mold growth, such as in pipe chases, HVAC systems, and behind enclosed walls and ceilings, were not observed as part of this limited assessment.

AEI observed interior areas of the subject property buildings to identify the potential presence of mold. AEI did not note obvious visual or olfactory indications of the presence of mold, nor did AEI observe obvious indications of significant water damage. As such, no bulk sampling of suspect surfaces was conducted as part of this assessment and no additional action with respect to suspect mold appears to be warranted at this time.

9.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR Part 312.

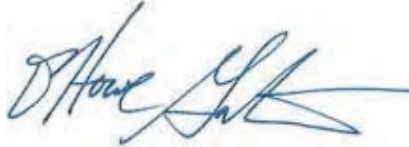

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Prepared By:

Michael Audibert

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for

EXECUTIVE SUMMARY

listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/20/2021 has revealed that there are 6 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2021 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 4 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 18 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal (Superfund) equivalent sites

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there are 4 RESPONSE sites within approximately 1 mile of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/22/2021 has revealed that there are 20 ENVIROSTOR sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 2 SWF/LF sites within approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 39 CPS-SLIC sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Alameda County CS: A listing of contaminated sites overseen by the Toxic Release Program (oil and groundwater contamination from chemical releases and spills) and the Leaking Underground Storage Tank Program (soil and ground water contamination from leaking petroleum USTs).

A review of the Alameda County CS list, as provided by EDR, and dated 01/09/2019 has revealed that there are 47 Alameda County CS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

Lists of state and tribal voluntary cleanup sites

VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the VCP list, as provided by EDR, and dated 07/22/2021 has revealed that there are 4 VCP sites within approximately 0.5 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 12 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 34 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval Date:	01-03-2020
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	Routine Material Business Plan (HMBP) inspection of PG&E Oakland General Construction Yard located at 4930 Coliseum Way in Oakland, CA 94601. Met with PG&E Environmental Field Specialist Eric Ostrom who granted consent to perform inspection. Alameda County Department of Environmental Health (ACDEH) to provide inspection report by email to: EXOC@pge.com. Facility is a material storage yard for the Division and Construction departments for PG&E. The Division department provides maintenance on gas and electric lines. The Construction department installs new gas and electric lines for new projects such as the installation of new housing developments. Hazardous material inventory for the facility includes: compressed natural gas, acetylene, oxygen, calibration gas, nitrogen, lead acid batteries, concrete and mortar mix, paint, and fire suppression chemical (bromochlorodifluoromethane).

File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Diesel
Site History: The site is located in a commercial/industrial area located to the west of Interstate I-580. It is bordered to the south by Coliseum Way, to the southeast by 50th Avenue and to the north by industrial properties. The site was used by PG&E as a natural gas distribution center and equipment storage facility from the late 1930s until 1990, when a former gas-holder tank was removed. Since 1990, the site has been used as an equipment and vehicle storage facility. PG&E personnel occupy a small office on-site during regular business hours. The gas holder tank was originally painted with lead-based paint and sandblasted on-site during historical site activities. In 1992, a Covenant of Deed Restriction was put into effect stating that the site remain covered with asphalt to prevent the lateral and vertical spread of lead impacts to ground and surface water with an additional requirement to inspect the cap annually. A Corrective Action Plan dated July 2, 2012, which was approved in 2013, selected maintenance of an asphalt cap to cover areas where lead concentrations in soil exceed regulatory levels for industrial/commercial use in conjunction with a Site Management Plan and administrative controls. ACEH recently received a document entitled, Corrective Action Plan Implementation Workplan, Oakland Construction Yard, 4930 Coliseum Way, Oakland, California, dated January 2016, which proposes specific repair and replacement activities for the existing asphalt cap at the site. A report documenting the cap repair and replacement activities is to be submitted by July 29, 2016. Following submittal of the Cap Repair and Maintenance Report, a Soil Management Plan and an updated Covenant and Environmental Restriction on Property are to be completed.

Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-06-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: ALAMEDA COUNTY DEPARTMENT OF ENVIRONMENTAL HEALTH (ACDEH) ON SITE FOR HAZARDOUS WASTE GENERATOR PROGRAM (HWG) INSPECTION. ESCORTED BY MARK THOMAS, THE OPERATIONS MANAGER. ALL VIOLATIONS NOTED IN THE INSPECTION REPORT SHALL BE CORRECTED BY JULY 6, 2018 AND ANY VERIFICATION DOCUMENTATION SUBMITTED WITHIN THE SAME TIME FRAME. THE FACILITY HAS 2 EMPLOYEES THAT HANDLE HAZARDOUS WASTE. AFTER REVIEWING THE GENERATOR'S DISPOSAL RECORDS AND BUSINESS OPERATIONS, IT WAS OBSERVED THE FACILITY IS A VERY SMALL QUANTITY HAZARDOUS WASTE GENERATOR WHO GENERATES LESS THAN 100 KG OF HAZARDOUS WASTE PER MONTH. CERTIFICATION OF RETURN TO COMPLIANCE I certify that the violation(s) noted in this Hazardous Waste Generator inspection report for The Cable Group dba Cable Moore on June 6, 2018 located at 4700 Coliseum Way, Oakland, CA have been corrected. I have personally examined any documentation attached to the certification to establish that the violations have been [Truncated]

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

MAP FINDINGS

Site Name: East Bay Clarklift
Violation Date: 02-22-2018
Citation: HSC 6.95 25507 - California Health and Safety Code, Chapter 6.95, Section(s) 25507
Violation Description: Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: Returned to compliance on 11/05/2018. OBSERVATION: The Hazardous Materials Business Plan has not been adequately implemented as demonstrated by a copy of the plan not available on site and available to all employees in case of an emergency. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that the Hazardous Materials Business Plan is on site and readily available to all employees to be implemented in case of an emergency.

Violation Source:

Site ID: 409610
Site Name: East Bay Clarklift
Violation Date: 02-22-2018
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)

Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violation Notes: Returned to compliance on 10/29/2018. OBSERVATION: The initial and annual training documentation for all applicable employees was not available for review. The General Service Manager, Mike Neale stated that the employees are trained, however the training is not documented. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that employees have received training on safe handling of hazardous materials and the Emergency Response Plan.

Violation Date: 02-22-2018
Citation: HSC 6.5 25250.22 - California Health and Safety Code, Chapter 6.5, Section(s) 25250.22

Violation Description: Failure to properly manage used oil and/or fuel filters in accordance with the requirements.

Violation Notes: Returned to compliance on 03/23/2018. OBSERVATION: Generator failed to properly handle, manage, label, and/or recycle used oil and fuel filters. A black 55 gallon drum of metal filters inside the pressure washer station room was open and did not have a start accumulation date. CORRECTIVE ACTION: Generator shall immediately comply with the Title 22 regulations with regards to the proper handling, management, labeling and recycling of used oil and fuel filters. Since it cannot be determined how long the filters have been on site, immediately contact a licensed hazardous waste hauler to dispose of the filters and submit a copy of the disposal records to the CUPA within 30 days.

Violation Notes: miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Returned to compliance on 11/05/2018. OBSERVATION: A black/ red 55 gallon drum of waste antifreeze did not have a hazardous waste label outside on the south west end of the shop. Since it could not be determined how long the waste antifreeze was stored onsite, immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest. Facilities who generate less than 1000 kg of hazardous waste per month and do not exceed 6000 kg of waste stored on site at any time may store waste on site up to 180 days. CORRECTIVE ACTION: Immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the CUPA within 30 days.

Longitude: -122.1930517
Case Type: Cleanup Program Site
Case Worker: Not reported
Local Agency: Not reported
RB Case Number: NA
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: * Chlorinated Hydrocarbons, Other Chlorinated Hydrocarbons
Site History: The site, which is 2.7-acres in size, is comprised of two adjacent parcels with addresses of 4600 and 4700 Coliseum Way in Oakland, CA. Buildings at the site consist of two smaller metal-framed warehouses in the western portion of the site and a large warehouse building in the center of the site. The two metal-framed warehouses in the western portion of the site were constructed between 1913 and 1925 for use as storage facilities for feed and coal. A Phase I Environmental Site Assessment (ESA) dated October 22, 2007 and prepared by AEI Consultants, indicates that the warehouses have historically been used for wooden molding operations, insulation manufacturing, and cabinet making. Currently, the warehouses are used for storage of miscellaneous equipment and construction supplies. The large metal warehouse in the central portion of the site was constructed in 1968 for use by Bostrom Bergen Manufacturing for use as a metal manufacturing facility. Bostrom occupied the site from 1969 through 2000. The large warehouse building is currently occupied by Cable Moore, Inc., which manufactures wire rope, cable, rigging, and safety construction equipment. Surrounding land use is commercial/industrial. This case closure summary addresses three environmental conditions at the site: 1) VOC-contaminated soil beneath a former shed located northeast of the large warehouse building. 2) Red-stained soil containing elevated concentrations of metals northeast of the large warehouse building. 3) An underground storage tank (UST) located in the western portion of the site. VOC-Contaminated Soil beneath Former Shed Based on the results of a Phase I ESA by AEI Consultants dated October 22, 2007, three soil borings were advanced in the northeastern portion of the site to evaluate potential migration of contaminants onto the site from off-site locations and two soil borings were advanced in the area of a former gasoline UST. The VOCs 1,1,1-trichloroethane (TCA) and its degradation products were detected in groundwater in the northeastern portion of the site at concentrations up to 1,200 ppb. Low concentrations of toluene were detected in groundwater in the area of the former gasoline tank. In June and July 2008, 15 soil borings were advanced in the area of the former shed in the northeastern portion of the site to evaluate whether soil beneath the shed was the source of VOCs detected in groundwater. The VOCs 1,1-DCE, 1,1-DCA, and 1,1,1-TCA were detected in soil with the highest concentrations detected in the immediate vicinity of the shed. Low concentrations of VOCs were detected in soil samples collected outside the immediate vicinity of the shed. Based on the results of these investigations, soil was excavated to a depth of approximately 5.5 feet bgs from an area beneath the former shed. Soil excavation was conducted in three slot trenches from April 8 through April 10, 2009. Analytical results from verification sidewall and bottom samples indicated that the VOC-affected soil with concentrations exceeding ESLs were removed from the area of the former shed. Red-stained Soil Northeast of the

BOSTRUM BERGER METAL PRODUCTS / WEBER PROPERTY (Continued)

S109521328

Large Warehouse Building In 2002, Kleinfelder prepared an ESA that identified red-stained soil in the painting area in the rear of the site. Based on the observations in the ESA, four soil samples were collected in 2003 from the red-stained soil at the rear of the site and analyzed for metals. Maximum concentrations of metals in the four soil samples were 8.3 ppm for cadmium, 1,100 ppm for chromium, 4,500 ppm for lead, 130 ppm for nickel, and 18,000 ppm for zinc. Based on these results, the red-stained soil was excavated to a depth of 12 inches on June 12 and 18, 2003. Approximately 226 tons of soil classified as California hazardous and 159 tons of RCRA hazardous soil was removed from an area measuring 140 by 40 feet. Following the excavation, four confirmation soil samples were collected and analyzed for lead. Total lead concentrations in the four confirmation samples ranged from 42 to 130 ppm. On March 27, 2009, 23 soil borings were advanced in the northeastern portion of the site to evaluate whether the soil with elevated concentrations of metals was sufficiently delineated and remediated. Select soil samples from 16 of the 23 soil borings were analyzed for lead and zinc. During a second phase of investigation on April 3, 2009, near surface soil samples were collected at locations B-37 through B-40 to further delineate the lateral extent of elevated zinc detected in the vicinity of boring B-31 in the overhead crane area. Elevated concentrations of zinc were not detected in soil samples collected in close proximity to B-31. Excavation and removal was not considered necessary based on these results. The overhead crane area including B-31 was covered with concrete as part of facility improvements. Between April 10 and May 20, 2009, near surface soil samples were collected at 10 additional locations (B-41 through B-50) to assess the lateral extent of elevated lead and zinc associated with red-stained soil in the vicinity of the former shed northeast of the large warehouse building. The shed, including the 12 by 20 foot concrete pad for the shed, was removed in April 2009. Red-stained soil in the area of the former shed was excavated on April 9, 2009 and May 21, 2009. Soil excavation, which was based on visual observation and analytical results from samples collected in the area of the former shed, extended to the northeastern property boundary. Based on analytical results, the vertical extent of the excavation was extended to the top of native soil, which was typically encountered at depths of 8 to 12 inches. Soil with concentrations exceeding the target cleanup goals (ESLs for commercial land use) was removed during the excavation activities with two exceptions. A small quantity soil containing zinc at a concentration exceeding the target cleanup goal was left in place in the area of B-31; the area was covered with a concrete pad. A small quantity of soil containing lead and zinc was left in place in the area of samples B-49 and B-50. Gasoline Tank A 6,000-gallon gasoline tank was noted in the northwest portion of the site on historical Sanborn maps (1952 and 1966). Two soil borings were advanced in the area of the gasoline tank in January 2008. Toluene was detected at low concentrations (less than 2 ppb) in grab groundwater samples from the two soil borings (B4 and B5). TPHg, benzene, ethylbenzene, and xylenes were not detected in grab groundwater samples from the two borings. In correspondence dated March 13, 2009, ACEH requested that a geophysical investigation be conducted in the suspected area of the gasoline tank to assess whether the tank remained in place. A geophysical survey conducted on April 8, 2009 identified a large subsurface metal object with a signature consistent with a UST. Excavation activities revealed that

the UST had a capacity of approximately 1,100 gallons. Approximately 900 gallons of liquid were removed and disposed off-site. The UST was removed on May 19, 2009. Two soil samples collected from the tank pit contained TPHd and TPHmo at maximum concentrations of 7 and 56 ppm, respectively. TPHg was not detected in soil at concentrations above the reporting limit. A grab groundwater sample collected from the tank pit contained TPHg at a concentration of 68 ppb and did not contain TPHd and TPHmo at concentrations above the reporting limit. Based on the limited extent and concentrations of fuel hydrocarbons observed in the area of the former tank, no further action was required.

 RB Case Number: Not reported
 Local Agency: ALAMEDA COUNTY LOP
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Local Case Number: RO0003135
 Potential Media Affect: Other Groundwater (uses other than drinking water), Soil, Under Investigation
 Potential Contaminants of Concern: Diesel, Gasoline
 Site History: The Site previously housed an 8,000-gallon underground storage tank, which was reportedly closed in place on April 9, 1987. Soil, soil vapor, groundwater, and indoor air sampling was completed at the site in 2014. Indoor air sampling indicated vapor intrusion concerns are limited to a storage building (Building 2). Recent detected sub-slab and indoor air concentrations are above the January 2019 Regional Water Boards ESLs for sub-slab vapor intrusion and direct exposure human health risk under commercial use. The site was closed with a land use covenant (LUC) dated May 20, 2015 that restricts access to

Building 2 and requires further evaluation if the site is to be redeveloped in the future. Access to Building 2 has been restricted. ACDEH determined that regulatory oversight and additional investigation and corrective activities should be conducted under the former Leaking Underground Storage Tank (LUST) Case No. RO0003135 and administratively close SCP Case No RO0003348. As outlined in ACDEH's directive letter dated April 8, 2019 further investigation including an update Site Conceptual Model and Data Gap Work Plan as well as a Feasibility Study/Corrective Action Plan have been requested for the site.

Site History: Alameda County Department of Environmental Health (ACDEH) staff conducted a initial site review of the associated documents prepared and submitted by Odic Environmental (Odic) on behalf of Calmeat 2 LLC including the Phase II Environmental Site Assessment (Phase II), dated March 13, 2018. On January 14, 2019, Calmeat 2 LLC paid a deposit of \$1,392.00 dollars and requested ACDEH to conduct a preliminary site review of the data from the Phase II report. A Site Cleanup Program (SCP) Case No. RO0003348 was opened to conduct the initial review on Phase II. Subsequent to ACDEH's initial review a preliminary kick-off meeting was conducted on February 20, 2019, with Calmeat 2 LLC, their environmental consultant (Odic) and the associated ACDEH case worker to discuss the current status of the site. Based on our review, a second follow-up phone conversation with Calmeat 2 LLC and ACDEH was conducted on March 13, 2019. Based on results of sub-slab vapor constituents, ACDEH has determined that regulatory oversight and additional investigation and corrective activities should be conducted under the former Leaking Underground Storage Tank (LUST) Case No. RO0003135 rather than creating a new SCP case. As a result, ACDEH administratively closed the SCP Case No

POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

S121788196

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to complete and electronically submit the Business Activities Page and/or Business Owner Operator Identification Page.

Violation Notes: Returned to compliance on 01/31/2020. William Berry is listed as the Environmental Contact; Marc Morolla is the new, current Environmental Contact. UPDATE CERS HMBP Business Owner Operator to show Marc Morolla as the current Environmental Contact.

Violation Division: Alameda County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 56713
Site Name: PG&E - Oakland "J" Substation
Violation Date: 12-30-2019
Citation: HSC 6.95 25507 - California Health and Safety Code, Chapter 6.95, Section(s) 25507

Violation Description: Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.

Violation Notes: Returned to compliance on 12/30/2019. Several five gallon containers observed without labels or markings (clean transformer oil, and latex paint), and one 1 liter glass bottle marked "poison" (sodium cyanide - silver plating solution) sitting on a shelf. ALL containers were labeled during inspection. Latex paint labeled as "non-hazardous waste" Silver plating solution labeled as hazardous waste and placed on secondary containment pallet for proper disposal. CORRECTED ON SITE. Ensure ALL containers remain marked with contents and good housekeeping is maintained (e.g. expired chemicals are properly disposed of when they become inherently waste like). CORRECTED ON SITE.

Violation Division: Alameda County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-20-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Onsite to conduct the Hazardous Materials Business Plan Inspection at PG&E Oakland "J" Substation - 645 50th Ave., Oakland, CA. Met with Environmental Field Specialist, David Hendricks. Facility meets HSC Section 25270.2(a)(4) exemption from APSA. Any oil-filled electrical equipment above 10,000 gallons onsite is below 50 ppm PCB levels. Confirmed with PCB level plates observed on equipment.

Eval Division: Alameda County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-30-2019
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Routine triennial hazardous waste generator (HWG) inspection. Hazwaste handling employees = 12.

S121788321

Violation Date: 10-03-2016
Citation: HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description: Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.
Violation Notes: Returned to compliance on 10/03/2016. OBSERVATION: The facility has not submitted the Hazardous Materials Inventory Chemical Description page for six 55 gallon drums of DEF 32.5% Diesel Exhaust Fluid to the CUPA. HMBP is to be updated within 30 days of a chemical inventory, change of address, ownership, or business name. CORRECTIVE ACTION: Complete and submit the Hazardous Materials Inventory Chemical Description page for all materials listed above electronically in the California Environmental Reporting System (CERS) at <http://cers.calepa.ca.gov/>.

Hazardous Waste Summary:

Waste Code: D001
 Waste Description: IGNITABLE WASTE

Waste Code: D035
 Waste Description: METHYL ETHYL KETONE

Waste Code: F003
 Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
 Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF

Environmental Interest/Information System:

AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

Region: STATE
Facility Status: **Open - Site Assessment**
Status Date: 02/27/2002
Global Id: SL0600186350
Lead Agency: ALAMEDA COUNTY LOP
Lead Agency Case Number: RO0002746
Latitude: 37.765187
Longitude: -122.214148
Case Type: Cleanup Program Site
Case Worker: DR
Local Agency: ALAMEDA COUNTY LOP
RB Case Number: 01S0660
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Acetone, Lead, Gasoline
Site History: A former batch asphalt plant which included the use of two underground storage tanks (USTs) operated at the site in the 1950s and 1960s. Oil was shipped by rail cars and transferred by underground pipelines to the USTs.. AAA Equipment occupied the site from at least 1967 until 2002. The use of the site by AAA Equipment is not well documented but apparently included storage of vehicles, drums, racks, etc. During the removal of the two USTs in 2003, petroleum hydrocarbons were encountered in the area of he former batch plant. Residual contamination at the site includes petroleum hydrocarbons, volatile organic compounds, and metals. The property is currently covered by asphalt, buildings, and concrete that is part of a building materials supply yard. The case is under consideration for case closure pending completion of a site management plan and an environmental covenant for the site.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes: Returned to compliance on 07/11/2018. OBSERVATION: Signed copies of hazardous waste disposal records for June 2015 through December 2015 were not found on site. Hazardous waste generators shall retain copies of all manifests signed off by the disposal facility and all receipts used in a consolidated manifesting procedure on site for three years and have them readily available for review. CORRECTIVE ACTION: Immediately locate a copy of all manifests and receipts for the last three years, maintain them on site, and submit copies to the CUPA by within 30 days.

Violation Date: 06-14-2018
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Returned to compliance on 07/11/2018. OBSERVATION: The facility is disposing of paint booth filters without making a hazardous waste determination. Herb Vega, the Controller stated that the paint booth filters have been replaced but he was unsure as to how filters were disposed of. Any person who generates a waste shall determine if the waste is a hazardous waste. CORRECTIVE ACTION: Immediately stop disposing of the paint booth filters, make a hazardous waste determination for the paint booth filters, and manage it according the Title 22 hazardous waste regulations if the hazardous waste determination documents that the waste is a regulated hazardous waste. If the waste stream is determined to be non-hazardous, submit documentation supporting this conclusion. Submit a statement and supporting documentation explaining how this waste was managed by 30 days.

site. Facility representative stated drums are empty and provided by CASS Inc., 2730 Peralta St, Oakland, CA 510-893-6476 to contain metal sludge. Facility generates 3/4 of a 55-gallon drum per day of metal sludge and CASS Inc. picks up 30 55-gallon drums every 5 weeks. CORRECTIVE ACTION: Facility must G emptyG the containers and implement management practices pursuant to California Code of Regulations, Title 22, Section 66261.7. Submit documentation of corrective action to CUPA within 30 days.

Violation Division: Alameda County Environmental Health

Violation Description: Failure to dispose of hazardous waste within 180 days (or 270 if waste is transported over 200 miles) for the generator who generates less than 1000 kilogram per month, but more than 100 kilograms per month.

Violation Notes: Returned to compliance on 06/22/2016. OBSERVATION: Receipts from used oil haulers show used oil disposed of yearly in quantities of 375 gallons (5/21/12), 200 gallons and 85 gallons of oil water (11/18/14), and 175 gallons (9/1/15). No documented disposal in 2013. CORRECTIVE ACTION: Immediately dispose of used oil properly, submit documentation (receipt/manifest) and submit procedure to properly dispose of used oil every 180 days to CUPA within 30 days.

submit a complete, accurate and up-to-date HMBP. Missing/inaccurate information was identified during inspection and listed in previous section. CORRECTIVE ACTION: Submit a corrected HMBP to CERS within 30 days.

Violation Division: Alameda County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 3234
Site Name: Advanced Grinding, Inc.
Violation Date: 05-18-2016
Citation: 40 CFR 1 265.172 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.172

Violation Description: Failure to accumulate or store hazardous waste in a lined/compatible container.

Violation Notes: Returned to compliance on 06/22/2016. OBSERVATION: Metal grindings containing cutting oil were stored in 55-gal drums covered with plastic outside on pavement surrounded by soil and approximately 20 feet upgradient from a storm drain. Staining was observed halfway to the storm drain. CORRECTIVE ACTION: Transfer metal grindings containing cutting oil into non-leaking containers, implement procedure to prevent release to the environment. Submit documentation of proper storage and procedure to prevent release to the environment to CUPA within 30 days.

Violation Division: Alameda County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 3234

Violation Date: 05-18-2016
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: Returned to compliance on 06/22/2016. OBSERVATION: 55-gallon drums containing metal grindings containing cutting oil for recycling are currently labeled as hazardous waste. Used oil and used sorbents are not labeled properly which was corrected on site. Label for containers of used oil must include "Used Oil". CORRECTIVE ACTION: Label containers of metal grindings containing cutting oil for recycling according to HSC 25143.9(a) including "container or tank shall be labeled or marked clearly with the words 'Excluded Recyclable Material' instead of the words 'Hazardous Waste'." Submit photographs of containers of hazardous waste with proper labels to CUPA within 30 days.

Violation Date: 05-18-2016
Citation: HSC 6.5 25160.2 - California Health and Safety Code, Chapter 6.5, Section(s) 25160.2
Violation Description: Failure to meet any of the following consolidated manifest requirements: 1) Legible receipts for each quantity of hazardous waste that is received from a generator, 2) The generator's information (name, address, identification number, contact person, telephone number of the generator, the signature of the generator or the generator's representative), 3) Date of the shipment, 4) The manifest number, 5) The volume or quantity of each waste stream received, 6) The name, address, and identification number of the authorized facility to which the hazardous waste will be transported, 7) The transporter's information (name, address, and identification number, the driver's signature), 8) A statement, signed by the generator, certifying that the generator has established a program to reduce the volume or quantity and toxicity of the hazardous waste to the degree economically practicable. 9) The generator shall retain each receipt for at least three years.
Violation Notes: Returned to compliance on 06/22/2016. OBSERVATION: Facility generates used oil from its machinery. Used oil disposal receipt dated 5/21/12 from American Valley Waste Oil, Inc. PO Box 340, Delhi, CA did not identify the name, address and identification number of the authorized facility to which the hazardous waste was transported. The receipts from 5/21/12 and 11/18/14 used CAL000127603 (Status: INACTIVE Inactive Date: 2004-04-30) for ADVANCED GRINDING INC. No receipt was available for 2013. According to Mr. Corvey, facility did not dispose of used oil in 2013. Facility also disposed of 175 gallons of used oil on 9/1/15. Hazardous waste generators of >100 but <1,000 kg/month - 66262.34(d), HSC 25123.3 (h)(1) has accumulation time limit of 180 days. CORRECTIVE ACTION: Within 30 days, correct and submit the following to CUPA. 1. Obtain complete and correct manifests using Advanced Grinding's active EPA ID and identifying the name, address and identification number of the authorized facility to which the [Truncated]

product, a general description of the material and products, identification of the constituents or group of constituents, and their approximate concentrations, that would render the material or product hazardous under the regulations adopted pursuant to HSC 25140 and 25141, if it were a waste, and the means by which the material is beneficially used.

Violation Notes: Returned to compliance on 06/22/2016. OBSERVATION: Facility generates 3/4 of a 55-gallon drum per day of metal grindings containing cutting oil. According the facility representative, CASS Inc. picks up 30 55-gallon drums every 5 weeks for recycling. According to available receipts, the metal grindings containing cutting oil are picked up at a maximum quantity of 26,360 lbs every 3 to 4 mos in 2013, 24,690 lbs every 1 to 2 mos in 2014 and 25,980 lbs every 1 to 2 mos in 2015. CORRECTIVE ACTION: Submit required documentation satisfying HSC 25117.9 and 25143.2.(d)(5)(c) to CUPA within 30 days.

 Longitude: -122.2155
 Case Type: Cleanup Program Site
 Case Worker: AR
 Local Agency: Not reported
 RB Case Number: 01S0510
 File Location: Regional Board
 Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Soil Vapor
 Potential Contaminants of Concern: Benzene, Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Vinyl chloride, Chlordane, DDD / DDE / DDT, Endrin, Other Insecticides / Pesticide / Fumigants / Herbicides, Diesel, Gasoline, Other Petroleum
 Site History: The site was leased from 1925-2003 by UPRR to industrial tenants (Chevron, CIM Industries, Superior Products Company/Frank D. Gaus), including a manufacturer of asphaltic membranes and mixtures. Chemicals used at the operation include alcohols, solvents, pesticides, and petroleum hydrocarbon products. In 2003 the site was vacated and all structures were removed. Soil and groundwater were impacted by the materials used in the manufacture of the asphaltic membranes and mixtures. A risk assessment has been performed and has determined that additional site remediation is necessary to reduce the risk of exposure of pollutants to human and ecological receptors. The final remedial investigation/ feasibility study (RI/FS) has been submitted in 2020 and is currently under review by Water Board staff.

Baseline Flow: 0
Reclamation: Not reported
POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

FINDS:
Registry ID: 110070087303

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as

RB Case Number: Not reported
Local Agency: ALAMEDA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: RO0003133
Potential Media Affect: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: Polychlorinated biphenyls (PCBs), Cyanide, Arsenic, Lead, Nickel, Zinc, Benzene, Diesel, Ethylbenzene, Gasoline, MTBE / TBA / Other Fuel Oxygenates, Naphthalene, Other Petroleum, Toluene, Xylene
Site History: From approximately 1928 to 1964 the property housed the Panama Refining Company, Mileage Gasoline Company, and Golden Gate Oil Company which conducted oil refining, storage, and/or sales with three above ground storage tanks (ASTs) a 20,000 gallon, and two 15,000 gallon ASTs. Beginning in 1972, the property has been occupied by Equipment Fabrication Corporation which installed and utilized three, 500-gallon underground storage tanks (USTs) on the eastern edge of the property bordering 45th Avenue. By June 1986 of the three USTs two were reportedly in use for storage of gasoline and paint thinner. The USTs were reportedly removed in 1991 without agency oversight or documentation. A geophysical survey conducted in 2013 indicated the former USTs were removed from the Site. An environmental investigation was conducted in November 2013 which found petroleum hydrocarbons were detected in soil and groundwater samples collected adjacent to the former locations of the three underground storage tanks. A case (RO0003133) was opened in Alameda County Department of Environmental Health's Local Oversight Program (LOP) for the three USTs. In 2018, remedial actions were undertaken which consisted of excavation and removal of soil at the former UST locations in an area of approximately 12 feet by 8 feet by 7 feet in depth. Following the remedial excavation, Alameda County Department of Environmental Health closed the Site in June of 2020. Due to the extensive industrial history at the property, Alameda County Department of Environmental Health has required that any future subsurface work at the property may only proceed following the use of the approved Site Management Plan (SMP) and recordation of a Land Use Covenant (LUC) on the property was required as part of the closure process.

Latitude: 37.76746
Longitude: -122.21896
Case Type: Cleanup Program Site
Case Worker: NL
Local Agency: ALAMEDA COUNTY LOP
RB Case Number: Not reported
File Location: Not reported
Potential Media Affected: Not reported
Potential Contaminants of Concern: Lead, Diesel, Other Petroleum
Site History: The Site is approximately 35,000 square feet (0.82-acres) in size and is situated to the northeast of the intersection at Coliseum Way and 45th Avenue on Alameda County Assessor Parcel Numbers (34-2290-4-1, 34-2290-3-1, and 34-2290-2-1). Redevelopment of the Site is proposed for development of a five-story, commercial self-storage building constructed on a slab-on-grade foundation; construction activities include the demolition of flatwork and the excavation and grading of existing fill material at the Site. Site environmental investigations have been advanced at the Site to support characterization of the Site prior to planned redevelopment. Based on Sanborn Fire Insurance Maps, multiple historical Site configurations included the following:
- The 1897 Sanborn map depicts a Magazine building in the southeast corner of the Site, a "Varnish Ho" with "Kettles" identified in the central and southcentral portions of the Site, and two "W. Ho" (warehouse) structures located in the northwestern portion of the Site. - By 1912, the Site is depicted as vacant and undeveloped on the Sanborn map. - Historical on-Site operations since at least 1925 have included sandblasting, cabinetry, furniture refinishing, paint studios, sign manufacturing, auto body repair, welding and iron works, plumbing, upholstery services, machine shops, and residential use. Environmental investigations for due diligence were performed by the project proponent in August and November 2020. In August 2020, a total of 40 soil samples were collected from eight locations at the Site in one foot increments up to five feet below the existing grade; analysis included the following: - 40 samples were analyzed at a State of California certified analytical laboratory for total lead by United States Environmental Protection Agency (US EPA) test Method 6010B. - Two soil samples from each boring (total of 16) were analyzed for volatile organic compounds (VOCs) by US EPA test Method 8260B, total petroleum hydrocarbons (TPH) by US EPA test Method 8015B, semi-volatile organic compounds (SVOCs) by US EPA test Method 8070C, and Title 22 Metals by US EPA test Method 6010B/7174. Additional shallow soil and soil gas sampling was completed at the Site on November 20, 2020. During the sampling activities, nine

ROSA ELLA BELMONTE DBA COLISEUM SANDBLASTING (Continued)

1005774528

additional borings were advanced at the Site to five feet below grade and six step-out borings were advanced to three feet below grade; analysis included the following: - Select soil samples were analyzed for total lead, asbestos, and polychlorinated biphenyls (PCBs) by US EPA test method 8082A. - Nine of the soil borings were converted to permanent soil vapor probes at a depth of 5 feet below existing grade and analyzed for VOCs and TPHg by test method TO-15. Based on the results of sampling and analysis, residual metals, TPH, and Semi-Volatile Organic Compounds (SVOCs) have been detected in relatively shallow undocumented fill material. For metals, lead is considered to be the primary element of concern, with fourteen of the seventy total soil samples analyzed for lead exceeding the construction worker ESL of 160 mg/kg. On this basis, lead has been determined to be the primary chemical of concern in shallow soil at the Site. Soil gas samples collected from the nine soil gas probes at the Site indicated TPH-g, benzene, ethylbenzene, and methylene chloride were reported at concentrations exceeding their respective commercial ESLs at concentrations of 820,000; 80; 380; and 2,100 micrograms per cubic meter, respectively. The chlorinated VOC tetrachloroethene was also detected at a maximum concentration of 25 micrograms per cubic meter and was non-detectable in one sample at an elevated reporting limit of 270 micrograms per cubic meter. A Grading Sequencing Plan has been developed to outline the procedures for excavating areas of soil impacted with lead at concentrations above the construction worker San Francisco Bay Regional Water Quality Control Board's Environmental Screening Level (ESL) of 160 milligrams per kilogram (mg/kg) and consolidate this impacted soil at the bottom of the excavation footprint. The lead impacted soil will then be recompacted, covered with a Geotextile delineation marker fabric, topped with remaining soil from the Site, and capped with a 4 inch gravel base and 14 inch mat slab. Soil management protocols during construction will be carried out under a Soil and Groundwater Management Plan (SGMP). Real-time air monitoring for respirable dust will be performed during excavation and handling of lead-impacted soil at the Site. Based on the soil gas analytical data obtained during the recent assessment work, a vapor intrusion mitigation system will be designed and installed at the Site as part of the planned construction.

Global Id: T0600100507
Lead Agency: ALAMEDA COUNTY LOP
Lead Agency Case Number: RO0002500
Latitude: 37.765966
Longitude: -122.22042
Case Type: Cleanup Program Site
Case Worker: DR
Local Agency: ALAMEDA COUNTY LOP
RB Case Number: NA
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: * Solvents, Gasoline
Site History: A1,000-gallon gasoline UST was removed from the site on November 15, 1991. Petroleum hydrocarbons were detected in soil samples collected at the time of the removal. Approximately 110 cubic yards of gasoline-impacted soil was overexcavated from the tank pit on June 24, 1993, resulting in a pit approximately 15 x 20 feet x 10 feet deep. The pit was backfilled with clean imported fill and the gasoline-impacted soil was disposed off-site. Site investigation activities including monitoring well installation have been conducted at various times since 1993. Volatile organic compounds, consisting primarily of trichloroethene (TCE), has been detected in groundwater beneath the site. The source of the TCE is under investigation. Additional investigation was requested in 2012, however, no activity has occurred.

Name: TIDEWATER SUBSITE
 Address: 4723 TIDEWATER AVENUE
 City,State,Zip: OAKLAND, CA 94601
 Region: STATE
Facility Status: Completed - Case Closed
 Status Date: 12/20/2016
 Global Id: T10000007146
 Lead Agency: ALAMEDA COUNTY LOP
 Lead Agency Case Number: RO0003177
 Latitude: 37.76242
 Longitude: -122.22063
 Case Type: Cleanup Program Site
 Case Worker: MD
 Local Agency: ALAMEDA COUNTY LOP
 RB Case Number: Not reported
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Potential Media Affected: Soil, Under Investigation
 Potential Contaminants of Concern: Total Petroleum Hydrocarbons (TPH)
 Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A complete case file for this site is located on the Alameda County Department Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>. This case was opened in 2015 to address Total Petroleum Hydrocarbons as motor oil (TPHmo) contamination along an abandoned railroad spur located on the property. The contamination was discovered in a soil sampling event in June 1988 for a proposed redevelopment project (former case RO0002664) which documented historic rail spur contamination to be present in near surface soil at the site. Subsequent to sampling event, the proposed redevelopment site was subdivided into six smaller parcels and each redeveloped (34-2300-19, 34-2300-20, 34-2300-21, 34-2300-22, 34-2300-23, and 34-2300-24. This case (RO0003177 Tidewater Subsite, Global Id T10000007146) was opened subsequent to the parcel split to address the TPHmo contamination on APN 34-2300-19. Case number RO0002664 for the remaining five parcels was closed without further investigation. This parcel is currently developed as a commercial property on fill marshlands along the bay margin. The subject parcel is entirely capped with pavement and a building, with a landscaped area in the eastern third of the parcel

in the location of the former rail spur alignment. Potential source areas associated with the former rail tracks were investigated and analyzed for petroleum hydrocarbons, volatile organic compounds (VOC; full analytical suite), semi-volatile organic compounds (SVOC), polychlorinated biphenyls (PCBs), and metals in soil and groundwater. Downgradient soil and grab groundwater samples were also collected. The analytical results detected TPHmo, TPH as diesel, and metals in soil, and dissolved metals in groundwater. Although the site is not documented to have contained an underground storage tank (UST), this case has been evaluated for closure consistent with the State Water Boards Low-Threat Underground Storage Tank Closure Policy (LTCP) for petroleum related contaminants. The LTCP states that it is appropriate to apply the policy to other petroleum releases. Closure of the case under the LTCP for petroleum compounds appears appropriate with a commercial land use restriction to manage limited residual petroleum contamination at the site. The non-petroleum contamination has been evaluated consistent with criteria described in the Regional Water Boards Environmental Screening Level Tables, in conjunction with Users Guide: Derivation and Application of Environmental Screening Levels, revised in March 2016. Case closure is granted for the current commercial land use. Due to limited residual subsurface contamination remaining at the site, if any redevelopment occurs, or if a change in land use to residential, or other conservative land use, Alameda County Department of Environmental Health (ACDEH) must be notified as required by Government Code Section 65850.2. Excavation or construction activities in areas of residual contamination require planning and implementation of appropriate health and safety procedures by the responsible party prior to and during excavation and construction activities. This site is to be entered into the City of Oakland Permit Tracking System due to the residual contamination on site.

Site Name: General Grinding, Inc.
Violation Date: 11-19-2018
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 11/19/2018. OBSERVATION: The business failed to update business plan within 30 days when one of the following occurs: a 100 percent or more increase in the quantity of a previously disclosed material; any handling of a previously undisclosed hazardous material; a change of business address, business ownership, or business name; or a substantial change in the handler's operations that requires modification to any portion of the business plan. Observed the following missing materials or materials with a 100% or more increase: 385 Gallons of Blascut BC 40 NF Oil 110 gallons of Ace-o-sol 55 gallons Rust stop/ace-o-sol mixture 335 gallons of hydraulic oil #32 175 gallons of 90 way lube 55 gallons of used motor oil 75 gallons of 80 way lube 75 gallons of 90 way lube CORRECTED ONSITE: Inventory was updated and submitted during inspection.

Site ID: 32855
Site Name: General Grinding, Inc.
Violation Date: 11-19-2018
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes: OBSERVATION: The business failed to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material including familiarity with the emergency response plan or failure to document and maintain training records for a minimum of three years. Business failed to document hazardous materials handling and emergency response training. Mr. Jonathan Bardon said that they conduct tailgate trainings, but do not document it. CORRECTIVE ACTION: Train all employees on hazardous materials handling and emergency response. Provide ACDEH with documentation of annual training and keep training records for 3 years for review.

Site Name: General Grinding, Inc.
Violation Date: 11-19-2018
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31

Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.

Violation Notes: Returned to compliance on 11/19/2018. OBSERVATION: Used motor oil and motor oil/coolant were observed in secondary containment areas in the hazardous waste location and under the new oil and coolant rack. CORRECTED ONSITE: Facility removed oil from the secondary containments and placed into the 55 gallon used oil drum.

Violation Division: Alameda County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 32855
Site Name: General Grinding, Inc.
Violation Date: 11-19-2018
Citation: 40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)

Violation Description: Failure to ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.

Violation Notes: OBSERVATION: Employees are not thoroughly familiar with proper waste handling and emergency procedures as demonstrated by the number and/or type of hazardous waste violations observed at the time of inspection. Observed that the hazardous waste used oil drum is not closed and missing the accumulation start date. Last pick up was on 11/14/2018, so drum is currently empty. Also observed an estimated 2 gallons of oil in the secondary containment for the used oil drum. Jonathan mentioned that they conduct tailgate safety meetings and cover hazardous waste. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that employees have been properly trained.

Eval Notes: Onsite to conduct the Hazardous Waste Generator inspection at General Grinding, Inc. - 801 51st Ave., Oakland, CA. Met with Owners, Michael and Jonathan Bardon. Facility operates as a hazardous waste generator. The hazardous waste streams are used oil and potentially coolant and metal grindings. Coolant is recycled and used in the process over time, but rarely needed to be disposed of. Metal shreddings and grindings are currently sent to ALCO Metal, but ACDEH informed facility that particle size can determine it to be hazardous waste.

 Local Agency: Not reported
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Local Case Number: Not reported
 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Diesel, Gasoline
 Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>. In March 1989 four USTs (10,000-gallon diesel, 5,000-gallon diesel, 280-gallon waste oil, and 550-gallon hydrocarbons), were removed from the site. Diesel free phase was observed flowing into the excavation. In May 1989 19

hand augered soil bores were installed at the site, and 2,400 gallons of free phase and 20,000 gallons of water was removed from the UST excavation. Approximately 3,000 cubic yards of soil is reported to have been removed in 1989, treated, and stockpiled into a landscape berm between the property and Tidewater Ave. A 10-inch diameter pipe line was encountered during the excavation, broke, and 3,000 gallons of diesel entered the excavation at that time. A recovery well with a skimmer pump operated in EW-1 between April and August 1989 but was shut down due to an increased product thickness. In April 1994 wells MW-1 to MW-3 and bores EB-1 to EB-11 were installed. In July 1995 bores SB1, SB2, and MW-4 were installed. In December 2000 soil bores SB-1 to SB-16 were installed. In February 2001 a CAP was submitted and selected aquifer excavation as most cost effective. The CAP methodology was approved in February 2001. In October 2002 a revised CAP was submitted and selected enhanced bio-degradation due to a change in approach and costs; a pilot test was subsequently requested in October 2002 and does not appear to have been conducted. In February 2006 additional investigation was conducted to gather additional information and bores B-1 to B-15, EW-1 (second), and OB-3 to OB-6 were installed. A feasibility study (FS) and SCM was submitted in February 2007 and subsequently approved in May 2007. The FS selected groundwater extraction and treatment and limited source excavation. In September 2008 bores C-1 to C-16 were installed and a combined site investigation, revised SCM, and RAP was submitted in January 2009. The report was rejected as the recently generated data and resulting conclusions had not been incorporated into the RAP analysis. The CAP was implemented in July 2019, with excavation completed at areas A, B, C, D, E. As of June 2020, post remedial groundwater monitoring wells have been installed to evaluate the effectiveness of the soil excavation work.

POTW: The facility is not a POTW.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Description: 6.67, Section(s) 25270.4.5(a)
Failure to provide the following training to all oil-handling personnel: 1. Operation and maintenance of equipment to prevent discharges. 2. Discharge procedure protocols. 3. Applicable pollution control laws, rules, and regulations. 4. General facility operations. 5. Contents of the SPCC Plan.

Violation Notes: Returned to compliance on 02/18/2017. Observations: the SPCC plan states that annual training is provided to employees and the training is documented. However, no employee training records were available for review during the inspection. Corrective Action: immediately complete employee training as discussed in the SPCC and provide ACDEH with proof that training has been completed.

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)

Violation Description: "Failure to engineer or update each container installation to avoid discharges by providing at least one of the following devices: 1. An audible or visual high liquid level alarm. 2. High liquid level pump cutoff devices. 3. Audible or code signal communications between tank gauger and pumping station. 4. A fast response system for determining liquid levels, such as computers, telepulse or direct vision gauges.

Violation Notes: Returned to compliance on 02/18/2017. Observations: the 12000 gallon AST does not currently have a high level monitoring device. The designated person uses a measuring stick to determine the volume of the AST; however this is not a viable alternative for high level monitoring device. Corrective Action: install a high level monitoring device on the 12000 gallon AST and notify ACDEH when the device has been installed and tested for functionality.

Eval Notes: ACDEH arrived on site to complete an unannounced inspection for a trucking and truck fleet maintenance facility. Facility operates a vehicle maintenance shop with 1-250 gallon used oil AST, 1-250 gallon lubrication oil AST, 1-250 gallon DEF container, 1-12000 gallon diesel AST and various other compressed gases below the regulatory reporting threshold. Facility information is current and annual CERS submittal has been completed. Employee training is required for all new staff, within the first 6 months of the initial hire date and annually thereafter, with all employee training documented. Used lead acid batteries are stored onsite and are serviced by a contractor on an as needed basis. No violations were noted during the inspection.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-14-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: ACDEH completed an unannounced inspection for a logistics and truck fleet service business. Hazardous waste generated onsite includes 1-250 gallon used oil AST, used coolant, used oil filters. Facility currently has an active EPA generator ID; however, the used oil container did not have a properly completed hazardous waste label; a label was provided, completed and placed on the container during the inspection. ABE services the facility and the most recent disposal of used oil occurred on 3/17/2016. All violations noted during the inspection were corrected on site, during the inspection.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-14-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: ACDEH arrived on site to complete an unannounced inspection for a logistics and truck fleet maintenance center. Facility operates 1-12000 gallon diesel fuel AST, 1-250 gallon used oil AST and 1-250 gallon lubrication oil AST; however, the 2-250 gallon ASTs are not referenced in the SPCC plan. All containers above 55 gallons used to store petroleum oil, or any fraction thereof must be included in the SPCC plan. Additionally, employee training for operation and maintenance, and annual spill briefings are discussed in the SPCC plan, but no documentation is available to demonstrate that any training has been completed as stated in the SPCC plan. Furthermore, 1-12000 gallon AST is not equipped with liquid level sensing device to ensure proper operation and prevent AST overflow; moreover, AST tank integrity testing has not been completed as referenced in the SPCC plan. All violations noted during the inspection are referenced in the inspection checklist above. [Truncated]

Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-06-2020
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Alameda County Dept. of Environmental Health (ACDEH) inspectors Corinne Lowe and Luke Voropaeff arrived on-site at EBMUD - Pump Station H located at 4399 Oakport St Oakland, CA 94621 to conduct a routine CUPA inspection for the Hazardous Materials Business Plan (HMBP) and the Aboveground Petroleum Storage Act (Spill Prevention Control and Countermeasure (SPCC)) programs. ACDEH met with EBMUD Senior Environmental Specialist Chris Dembiczak who gave consent for and assisted with this inspection. This facility is within a secured area, inspected daily by EBMUD staff Operators although normally unstaffed. Facility operates as a sewer pump station on the main interceptor. Diesel is stored in an aboveground tank and day tank to fuel onsite emergency generator providing back up power to the station. A review of the business plan is consistent with observations during inspection. Noted during inspection follow up a possible discrepant... [TRUNCATED: Refer to full Inspection Report]

Violation Date: 10-29-2019
Citation: HSC 6.95 25507 - California Health and Safety Code, Chapter 6.95, Section(s) 25507

Violation Description: Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.

Violation Notes: Returned to compliance on 11/27/2019. The business failed to establish and implement a business plan when handling hazardous materials at or above the reportable threshold quantities. a) Fire extinguishers throughout the facility were not uniformly certified within the last year. Observed several fire extinguishers with certification that expired in mid 2019. b) Secondary containment for new oils 55 gallon storage rack and used oil lube cube in the Lube Room were observed with oils in the secondary containment. c) Diesel was observed in the nozzle receptacle; diesel was almost full to the top. d) Oil saturated spill absorbents observed on the floor of the Lube Room and outside around machinery at the mechanic's shop. e) Operational oil leaks observed in drip pans at the Cutting/Shear machine. There is minimal protection from precipitation. The Shear is secondarily contained by a concrete berm; however, the berm appears broken on one side. f) Several small containers (p... Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11

Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.

Violation Notes: Dry sweepings of recycling yard have not been characterized. Dry sweepings are currently disposed of in the municipal trash. Waste generated from the stormwater treatment system (STS) is off-hauled as RCRA hazardous waste. The same processes, or point of generation, that creates hazardous waste in the STS may create hazardous waste accumulated from dry sweeping the yard. Submit documentation to the CUPA demonstrating that the yard dry sweepings have been properly characterized to determine if it is a hazardous waste. If determined to be hazardous submit a manifest/receipt documenting proper disposal and a statement demonstrating how you will manage it in the future.

Violation Description: Failure to properly complete the Hazardous Waste manifest.

Violation Notes: Returned to compliance on 02/05/2016. OBSERVATION: Facility had the following manifests during inspection. 2013 - 010190947JJK, 010198235JJK (not signed by designated facility) 2015 - 014051823JJK No manifests were found for 2014. According to facility representative, oily water/sludge were sold. CORRECTIVE ACTION: Submit manifest(s) including "milk run" pick up and disposal receipts for 2014 to CUPA within 30 days.

Violation Description: 6.67, Section(s) 25270.4.5(a)
Failure to provide training regarding: 1. The operation and maintenance of equipment to prevent discharges. 2. Discharge procedure protocols. 3. Applicable pollution control laws, rules, and regulations. 4. General facility operations. AND 5. The contents of the SPCC Plan.

Violation Notes: Returned to compliance on 03/23/2016. OBSERVATION: Training on the SPCC plan was not provided to employees. Training must include the following: 1. The operation and maintenance of equipment to prevent discharges. 2. Discharge procedure protocols. 3. Applicable pollution control laws, rules, and regulations. 4. General facility operations. 5. The contents of the SPCC Plan. CORRECTIVE ACTION: Immediately provide training to employees and provide documentation of training elements and record within 30 days.

Violation Description: Failure to determine if the waste generated is a hazardous waste and to maintain analysis results for three years.

Violation Notes: Returned to compliance on 01/06/2017. OBSERVATION: Facility collects and treats stormwater runoff before discharge to creek. According to facility, stormwater runoff historically had high metal content. Sludge from water treatment is dried by evaporation and disposed of as hazardous waste in 2015 under manifest 014051823JJK. Non-hazardous waste manifest from Icon Environmental for disposal of 700 gallons of water on 8/23/13 (12566) and 11/29/12 (10944). No designated facility was listed. No manifest was available for 2014. CORRECTIVE ACTION: Submit documentation of the following to the CUPA within 30 days. 1. Stormwater runoff treatment system and date operation started 2. Chemical profile of collected water before treatment 3. Chemical profile of water disposed on 8/23/13 and 11/29/12

Violation Date: 10-29-2019
Citation: 22 CCR 31 67100.9 - California Code of Regulations, Title 22, Chapter 31, Section(s) 67100.9

Violation Description: Failure of a large quantity generator to prepare a summary progress report every four years, using DTSC s Form # 1262 (3/99) titled "Summary Progress Report".

Violation Notes: Returned to compliance on 11/27/2019. The generator failed to prepare a summary progress report every four years. Plan Year 2018 was due 9/1/2019 and was not available for review/facility has not prepared. Source Reduction Evaluation based on 2015 waste generation quantities, dated 2016 for the 2014 reporting year, was observed with the Feb 2016 RTC documents. Prepare a summary progress report and submit a copy to the CUPA. Information regarding the summary progress report is here: <https://dtsc.ca.gov/sb14/sb14-introduction-and-overview/>.

Eval Type: Routine done by local agency
Eval Notes: Routine triennial California Large Quantity Generator inspection on Oct 29 with continued inspection on Oct 30, 2019. Facility representatives: Tony Geremia and Jason Allen accompanied ACDEH Inspectors Steven Plunkett and Matthew Soby. Facility is a California Large Quantity Generator (CA LQG) due to generation of oily water and used oil (an average of 453 gallons/month, or 1714 kgs/month), and organic solids; and small quantity generator of RCRA waste (lead, D008). HW handling employees = approximately 40 to 45.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-29-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Routine triennial hazardous materials business plan (HMBP) inspection. Inspection conducted with facility representatives Tony Geremia and Jason Allen. ACDEH inspectors S. Plunkett and M. Soby conducted the inspection. Facility operates as scrap metal recycling facility for both ferrous and non-ferrous metal recycling. The facility collects and recycles parts, industrial scrap, manufacturing scrap, and construction & demolition materials. Commercial customers are pre-screened for types and amounts of scrap they will sell. SIMCO does not accept "white appliances" and they are not a certified appliance recycler. Additionally, the facility does not accept scrap parts, such as automobile engines or transmissions, with oil. Customers are required to drain oil prior to SIMCO acceptance. The facility operates two industrial balers and one industrial metal cutter/shear. The facility does not shred metals.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site ID: 41368
Site Name: Ken Betts Towing Service
Violation Date: 06-18-2019
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.

Violation Notes: Returned to compliance on 08/06/2019. The business failed to electronically submit and certify that the business plan is complete, accurate, and in compliance with EPCRA on or before the annual due date. The hazardous materials inventory did not include the 7 cylinders of propane and the waste antifreeze. The site map did not have the location of the propane. The largest container size for the used motor oil is listed as 55 gallons instead of 170 gallons. Electronically submit and certify that the business plan is complete, accurate, and in compliance with EPCRA within 30 days. On an ongoing basis, electronically submit and certify the business plan annually on or before the annual due date.

Violation Description: 6.95, Section(s) 25505(a)(4)
Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violation Notes: The business failed to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material including familiarity with the emergency response plan or failure to document and maintain training records for a minimum of three years. The facility did not have training records. Establish and electronically submit an employee training program containing provisions to ensure initial and annual training for all employees in safety procedures in the event of a release or threatened release of a hazardous material and document and maintain training records for a minimum of three years.

Violation Division: Alameda County Environmental Health

Site ID: 41368
Site Name: Ken Betts Towing Service
Violation Date: 06-18-2019
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173

Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Violation Notes: Containers of hazardous waste that were observed open: - A blue 55 gallon drum of used antifreeze inside the shop was open during the inspection. - A white tank of used antifreeze inside the shop was open during the inspection. - A blue 170 gallon used oil tank inside the shop was open during the inspection. Submit photos to the CUPA demonstrating that the container listed above has been properly closed.

Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 08/20/2009
Comments: Upon observing the current site conditions, DTSC concludes that the remedies remain protective of human health and the environment. Impacted soil remains under the concrete asphalt surfaces, which remain undisturbed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 03/19/2012
Comments: DTSC conducted its annual site visit to check the condition of the pavement over contaminated soil and to verify compliance with the restrictions and requirements of the Land Use Covenant. Minor cracks in the concrete and asphalt surface were observed during the inspection. Weeds were observed growing along the fence and in the south part of the lot. There was no evidence of any activities prohibited by the Land Use Covenant.

Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 08/20/2009
Comments: Upon observing the current site conditions, DTSC concludes that the remedies remain protective of human health and the environment. Impacted soil remains under the concrete asphalt surfaces, which remain undisturbed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 03/19/2012
Comments: DTSC conducted its annual site visit to check the condition of the pavement over contaminated soil and to verify compliance with the restrictions and requirements of the Land Use Covenant. Minor cracks in the concrete and asphalt surface were observed during the inspection. Weeds were observed growing along the fence and in the south part of the lot. There was no evidence of any activities prohibited by the Land Use Covenant.

The Collins' parcel is located at 4701 San Leandro Street and parcels 1 and 2 are located at 4825 San Leandro Street. Parcels 1 and 2 are identified by Assessor's Parcel Number 034-2269-005. The property which DTSC calls Dutch Boy #3 consists of parcel 2. In 1918, NL Industries, Inc., a paint manufacturer, purchased and developed the Site (about eight acres) to operate a paint factory. A series of additions were made in 1921-1948. The NL Industries, Inc. operated at the Site from 1919 to 1970. NL Industries, Inc. marketed its Dutch Process lead under the Dutch Boy Brand. The site soils are contaminated with elevated levels of lead.

FINDS:

Registry ID: 110002635747

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Status: Completed - Case Closed
Status Date: 03/27/2014
Case Worker: REL
RB Case Number: 01-2242
Local Agency: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: Not reported
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: In March 1991 two USTs were removed and confirmation soil samples detected elevated levels of hydrocarbon contamination. In February 2001 installed groundwater monitoring wells to evaluate the dissolved contaminant plume. Currently, elevated concentrations of hydrocarbon contamination were detected in groundwater and additional site characterization has been proposed. Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at:
<http://ehgis.acgov.org/dehpublic/dehpublic.jsp>.

Status: Completed - Case Closed
Status Date: 07/31/2017
Case Worker: MD
RB Case Number: 01-0022
Local Agency: ALAMEDA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: RO0003033
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Diesel, Gasoline, Other Petroleum, Waste Oil / Motor / Hydraulic / Lubricating

Site History:

Current Land-use at time of Case Closure The subject property (APN 34-2300-13-5) is located 4575 Tidewater Avenue, in the western portion of the City of Oakland adjacent to San Francisco bay. The 6.7 acre site, where the four underground storage tanks (USTs) were removed is situated between Tidewater Avenue and the water channel extending north from San Leandro Bay, separating the cities of Alameda and Oakland. At the time of this case closure, the site is used as a trucking terminal with a maintenance building located near the western property boundary and accordingly this case is closed to the current commercial land-use risk scenario, consisting of a maintenance structure developed at the site. Due to residual contamination, the site was closed with site management requirements that include notifying Alameda County Department of Environmental Health (ACDEH) of a proposed change in land use to any residential or conservative land use, or if any redevelopment or building alteration is proposed that affect or disturb the existing subsurface conditions at the site. Adjacent Property(ies) Land-use at Time of Case Closure At the time of this case closure, no potential off-site contamination was identified. However, should off-site redevelopment occur, ACDEH recommends evaluating the redevelopment site(s) for chemicals of concern identified on this site. Historic Land-use / Site Investigation Four USTs once operated at the site until the late 1980s. In June of 1986, two investigations were performed consisting of tank integrity testing and soil and groundwater sampling along with additional soil and groundwater sampling. Based on tank integrity testing results two waste oil USTs and one diesel or formerly gasoline UST were removed. Soil borings and groundwater monitoring wells were installed to determine whether the USTs have contaminated soil and groundwater beneath the site. In July of 1987, the remaining diesel or formerly gasoline UST was removed. In 1999, approximately 80 tons of stockpiled soil generated from the UST removals was disposed of under non-hazardous waste manifest to

Forward Landfill in Manteca, California. In 2012 soil borings were installed to collect soil and groundwater samples. Additionally, soil vapor samples were also collected. In 2014, passive soil vapor sampling probes were installed to delineate PCE detected in soil vapor. In 2015, sewer lines and drain pipes were cleared to perform a video survey to determine whether floor drains and sewer lines are potential sources of light non-aqueous phase liquid (LNAPL) detected at the site. Discovery of the PCE vapor contamination and petroleum Light Non Aqueous Phased Liquids (LNAPL) beneath the maintenance building delayed closure under the State Water Resource Control Board Low Threat Underground Storage Tank Closure Policy (LTCP) in 2014. No other investigation or cleanup was performed in relation to the USTs. Investigation of the PCE contamination has been referred to another environmental case (RO0003134 and T1000005825). Potential Exposure to Chemicals of Concern The USTs that were used to store used oil, motor oil, diesel and gasoline are believed to be the source of the contamination discovered at the site. The main chemicals of concern (COCs) associated with the USTs and detected at the site were TPH-d, TPH-g, BTEX, and PCE. Inhalation and ingestion appear to have been the most likely potential routes of exposure to these COCs. Remediation Activities Source removal of the UST was performed at the site. No additional corrective actions were performed at the site. Case Closure & Future Site Management Requirements This fuel leak case has been evaluated for closure consistent with the LTCP. The site fails the LTCP groundwater criteria as the nearest surface water body is less than 250 feet from the release, however plume concentrations in the downgradient well are below ESLs for the protection of estuary habitats. The site also fails the LTCP vapor intrusion criteria due to the presence of limited LNAPL beneath the maintenance building, the presence of groundwater at a depth of approximately 3.3 feet which precludes the collection of a soil vapor sample at a depth of 5 feet below the foundation (estimated at 6.5 feet below grade surface), the lack of a 5 foot bioattenuation zone, and the presence of TPH concentrations greater than 100 milligrams per kilogram (mg/kg) in the 0 to 5 foot depth interval. Based on the collection of sub-slab petroleum hydrocarbon vapor samples ACDEH has concluded that petroleum vapors migrating from soil or groundwater will not have a significant risk of adversely affecting human health as a result of controlling the exposure through the use of an institutional land use control. Finally, the case does not meet the Direct Contract and Outdoor Air criteria due to non-detectable PAHs above LTCP Table 1 values in the 0 to 5 foot depth interval. However, ACDEH has made the determination that there is low potential threat to human health and safety and to the environment and water quality objectives will be achieved within a reasonable time frame. Due to residual contamination at the site, the site is closed as a commercial site with site management requirements. If there is a proposed change in land use to any residential, or conservative land use, or if any redevelopment occurs, ACDEH must be notified as required by Government Code Section 65850.2.2. ACDEH will re-evaluate the site relative to the proposed redevelopment. Excavation or construction activities in areas of residual contamination require planning and implementation of appropriate health and safety procedures by the responsible party prior to and during excavation and construction activities.

Global Id: T10000005825
Lead Agency: ALAMEDA COUNTY LOP
Lead Agency Case Number: RO0003134
Latitude: 37.7625314108333
Longitude: -122.222954968262
Case Type: Cleanup Program Site
Case Worker: JES
Local Agency: ALAMEDA COUNTY LOP
RB Case Number: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Soil Vapor, Under Investigation
Potential Contaminants of Concern: Tetrachloroethylene (PCE)
Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A complete case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>. Current Site Land-Use: The subject property (APN 34-2300-13-7) is located 4575 Tidewater Avenue, in the western portion of the City of Oakland adjacent to San Francisco Bay. The 6.7 acre site, where the four underground storage tanks (USTs) were removed is situated between Tidewater Avenue and the water channel extending north from San Leandro Bay, separating the cities of Alameda and Oakland. The site is used as a trucking terminal with a maintenance building located near the western property boundary. Site Location and Local Geology/Hydrogeology: The site is located within the historic margins of the San Leandro Bay. Soil encountered during drilling at the site generally consists of 10 feet of fill underlain by tidal march deposits and Bay Mud. The static depth to groundwater based on data collected from borings and groundwater monitoring wells is between 3.2 and 5.6 feet bgs. Environmental Site Cleanup Cases: There are two environmental cases associated with this parcel. Closed Leaking

Underground Storage Tank (LUST) Case No. RO0003033 was related to the investigation and cleanup of petroleum hydrocarbon contamination associated with releases from four former petroleum underground storage tanks (USTs). This Site Cleanup Case (SCP) Case No. RO0003134 is associated with the investigation of tetrachloroethene (PCE) that has been detected in soil vapor and product that was observed in a soil boring (SB-4) in the vicinity of drains in the maintenance bays of the facility. A summary of site investigations and cleanup actions is presented below. Because one of the former petroleum USTs was a waste oil UST, data generated during the LUST case investigations that is pertinent to the PCE site investigation is referenced below in the evaluation of risk of the PCE release. Four USTs once operated to the east side of the maintenance shop site until the late 1980s. Between 1996 and 1997, two waste oil USTs and one diesel or formerly gasoline UST and one diesel or formerly gasoline UST were removed from the site and two groundwater monitoring wells (MW-1 and MW-2) installed to evaluate impacts to groundwater from releases from the tanks. In 2012 two additional groundwater monitoring wells (MW-3 and MW-4), and twelve soil borings (B-1 through B-12) were installed to collect soil and groundwater samples to delineate the extent of petroleum hydrocarbon impacts at the site. Between 2012 and 2013 two vapor pins (SVP-1 and SVP-2) were installed in the maintenance shop building slab sampled in June 2012, December 2012 and January 2012 to evaluate soil vapor concentrations beneath the building. Soil vapor samples had PCE concentrations above the then current Environmental Screening Levels (ESLs; December 2013) promulgated by the San Francisco Bay Regional Water Quality Control Board. In 2014, this case (SCP Case No. RO31340) was opened to investigate the non-petroleum UST releases at the site. In 2015, 10 passive soil vapor sampling probes (SG-1 through SG-10) and six soil bores (SB-1 through SB-8) were installed to investigate the extent of PCE impacts to soil, groundwater and soil vapor. Four-inches of Light Non Aqueous Phased Liquids (LNAPL) was observed in one soil bore (SB-4) located near the location where PCE has been detected at elevated levels in soil vapor. In 2015, two additional bores (SB-7 and SB-8) were installed to refine the extent of potential petroleum hydrocarbon LNAPL or dissolved-phase and PCE contamination in soil and groundwater. Sewer lines and drain pipes were also partially cleared to perform a video survey to determine whether floor drains and sewer lines are potential sources of petroleum LNAPL detected at the site. The drain pipes could not be entirely cleared due to obstructions in the pipes. In February 2017, a third sub-slab vapor pin (SVP-3) was installed to define the lateral limit of PCE sub-slab vapor concentrations. All PCE (and daughter products) concentrations were below the revised (February 2016) commercial ESLs, including those previously collected during the vapor sampling events in 2012 and 2013. Based on the investigations, the PCE vapor contamination appears to be localized to one or more floor drains in the maintenance shop, appears limited in extent, and thus appears associated with a limited maintenance shop operation. Therefore, in a letter dated May 15, 2017 ACDEH staff concluded that the PCE detected in soil vapor beneath the building did not present a significant vapor intrusion risk to occupants of the maintenance building (based on the 2016 ESLs) and was considering the case for closure contingent upon long-term management of the site to control exposure risk. Subsequent to issuance of ACDEH's letter the ESLs were revised in 2019. ACDEH has evaluated the PCE soil vapor concentrations against

the commercial ESLs for vapor intrusion risk and while previously determined to be below the December 2013 and 2016 version of the ESL, are above the 2019 ESLs. Remediation Activities: Besides overexcavation of impacted soil in the UST pit during UST removals in 1987 no corrective actions have been performed at the site where petroleum hydrocarbons and PCE have been detected in the vicinity of the drains and sewer.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tons: 0.02500

Year: 2018
Gepaid: CAD981159734
TSD EPA ID: NED981723513
CA Waste Code: 223 - Unspecified oil-containing waste
Disposal Method: H040 - Incineration--Thermal Destruction Other Than Use As A Fuel
Tons: 0.30000

Year: 2018
Gepaid: CAD981159734
TSD EPA ID: CAD059494310
CA Waste Code: 512 - Other empty containers 30 gallons or more
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.00200

Year: 2017
Gepaid: CAD981159734
TSD EPA ID: AZR000003681
CA Waste Code: 223 - Unspecified oil-containing waste
Disposal Method: H039 - Other Recovery Of Reclamation For Reuse Including Acid Regeneration, Organics Recovery Ect
Tons: 0.5

Year: 2017
Gepaid: CAD981159734
TSD EPA ID: ORQ000025197
CA Waste Code: 223 - Unspecified oil-containing waste
Disposal Method: -
Tons: 0.2

POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Potential Contaminants of Concern: Other Metal, Waste Oil / Motor / Hydraulic / Lubricating
 Site History: Not all historic documents for the case may be available on GeoTracker. A complete case file for this site is located on the Alameda County Environmental Health website at: <http://ehgis.acgov.org/dehpublic/dehpublic.jsp>. This case was opened in approximately 1994 due to the submittal of a report documenting a surficial soil sampling event in June 1988 for a proposed redevelopment project which indicated historic rail spur contamination to be present in near surface soil at the site. Subsequently, the site was subdivided into six smaller parcels and each redeveloped (34-2300-19, 34-2300-20, 34-2300-21, 34-2300-22, 34-2300-23, and 34-2300-24). In 2015, a separate environmental case (Tidewater Subsite; RO0003177, Global Id T10000007146, for parcel 34-2300-19) was opened to allow the investigation of the historic contamination which was now located on that parcel. Additionally a fragment of an underground storage tank (UST) removal report was mistakenly associated with this case due to an address associated with a consultant tenant at the site. This misinformation has also been resolved. This data remains only on the ACDEH website. This case has been administratively closed as there is no documentation of contamination on the five parcels associated with this site.

Status Date: 10/07/2016
Case Worker: KLD
RB Case Number: 01-0599
Local Agency: ALAMEDA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: RO0000491
Potential Media Affect: Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern: Gasoline
Site History:

This site is to be entered into the City of Oakland Permit Tracking System due to the residual contamination on site. Not all historic documents for the fuel leak case may be available on Geotracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at: <http://www.acgov.org/aceh/lop/ust.htm> The subject site is currently in commercial use as a gasoline service station (Current APN: 34-2290-6-2, 34-2290-6-3, former APN: 34-2290-6-1, 34-2290-5 and 34-2290-6). The tidal canal, the closest surface water body is located 1,800 feet southwest and down gradient to the site at its closest point. The direction of groundwater flow is towards the southwest. The underground storage tanks (USTs) associated with fuel leak case RO0000491 consisted of a 6,000 gallon, an 8,000 gallon, and a 10,000 gallon gasoline UST, and a 1,000 gallon waste oil UST that were removed in April 1987. Petroleum hydrocarbon concentrations greater than 1,000 parts per million were detected in soil samples taken during the UST removal indicating that an unauthorized release from the USTs had occurred at the site. This fuel leak case has been evaluated for closure consistent with the State Water Resource Control Board Low-Threat Underground Storage Tank Closure Policy (LTCP). The case meets all the general and media-specific criteria of the LTCP. Due to residual contamination at the site, the site is closed as a commercial site with site management requirements. If there is a proposed change in land use to any residential, or conservative land use, or if any redevelopment occurs, Alameda County Department of Environmental Health (ACDEH) must be notified as required by Government Code Section 65850.2.2. ACDEH will re-evaluate the site relative to the proposed redevelopment. Excavation or construction activities in areas of residual contamination require planning and implementation of appropriate health and safety procedures by the responsible party prior to and during excavation and construction activities. This site is to be entered into the City of Oakland Permit Tracking System due to the residual contamination on site.

RB Case Number: 01-1413
Local Agency: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: RO0001135
Potential Media Affect: Soil, Under Investigation
Potential Contaminants of Concern: Polychlorinated biphenyls (PCBs), Arsenic, Chromium, Chromium VI, Copper, Lead, Mercury (elemental), Nickel, Other Metal, Silver, Zinc, Diesel, Other Petroleum, Waste Oil / Motor / Hydraulic / Lubricating
Site History: This LUST Case (RO0001135) was originally opened by Alameda County Department of Environmental Health (ACDEH) in 1992 as a Leaking Underground Fuel Tank (LUFT) case. The case was opened in response to a July 15, 1986 reported gas leak from an underground storage tank (UST) at the site. Southern Pacific Transportation Company was named as the Responsible Party. In 1996 Union Pacific Railroad (UPRR) acquired Southern Pacific Railroad Transportation company and was named as an RP. In 2011 Leslie Bacon, et al c/o Economy Lumber was added as an RP as property owner (purchase property in 1998). Based on a review of data presented in the Soil and Groundwater Investigation and Updated Site Conceptual Model dated May 8, 2015 and the Human Health Risk Assessment (HHRA) dated July 2, 2015, ACDEH determined that the chemicals of potential concern (CPOCs), sources and release mechanisms documented in these reports can not be attributed to a UST petroleum release, and therefore administratively closed LUFT Case No. RO0001135 and opened Cleanup Program Site Case No. RO0003309 and entered into a Voluntary Remedial Action Agreement with Union Pacific Railroad Company on October 23, 2018. Site History: The site consists of one parcel, with an area of 1.86 acres (Alameda County Assessor's Parcel Number 34-2293-6-7). The site was previously part of a larger Southern Pacific Transportation Company holding located along the railway corridor before purchased by Economy Lumber in November 1990. In August 2015, ACDEH approved a work plan for interim remedial measures presented in a report entitled Addendum to the Revised Surface Improvement Plan Work Plan. Proposed measures include soil cement surface treatment and asphalt paving in an approximate 0.35 acre unpaved area within the southern portion of the site to limit potential worker exposure to CPOCs in shallow soil and create a surface to allow for the existing lumber yard related operations to continue at the site. An Interim Remedial Report was due on November 16, 2015. As of June 28, 2017 the report has not been submitted. The latest correspondence dated June 9, 2016 indicates that UPRR and Economy Lumber were negotiating access permission and operations and maintenance responsibilities and that there was no timetable for implementation of the surface improvement at the site. The site has been used for industrial purposes by known and unknown occupants since the 1910s. The documented uses of the property since that time include scrap metal salvage, sheet metal and welding fabrication and auto body repair in the northern and central portions of the site. Scrap Metal Supply (SMS) operated a scrap metal salvage business at the site for approximately 36 years that included a former UST probably containing diesel fuel. No information concerning SMS's day to day operations is present in the historical documents reviewed however given the distribution and occurrence of chemicals, historical site layout, and an analogous business at he

adjacent property, sources and release mechanisms can be inferred but are not know with certainty. The inference of possible sources and release mechanisms serves to help the understanding the distribution of chemicals of potential concern (CPOCs) at the site. CPOCs for the site appear to be select PCBs, PAHs, TPH-d, TPH-mo and select metals which generally are detected in the upper six feet of soil and shallow groundwater in several areas throughout the site. The areas of greatest soil and groundwater impacts are concentrated near the former scale office and outbuildings, south of the main building at the railroad spur terminus and possible former UST location, and along the peripheries of the central and southern portion of the site. The Learner Investment Company property located southeast of the site at 768 46th Avenue was operated as a scrap metal bailing yard form the 1960s to 1982. this offsite facility received scrap metal such as discarded appliances, industrial machinery, motors, empty drums and other scrap metal light enough to be hydraulically compressed. the occurrence and distribution of chemicals at the learner property are similar to those observed at the site. It has been hypothesized on the basis of results on investigations conducted at Learner Investment Company property and the site, that similar operations and subsequent release took place contemporaneously at SMS and the Learner Investment Company. In addition to soil and groundwater impacts attributable to site activities and releases, fill material of unknown provenance deposited at the site also could have contributed to the presence of COPCs in shallow soil. Abundant metallic scrap and a vesicular, metallic rock like material with a burned appearance have been described in fill materials during subsurface investigations at the site. It is possible that such material is attributable in part to an explosion of the Western Fuse and Explosives Company located in 1898 located adjacent to the site and contributes to the concentrations of metals and other constituents in soil and groundwater samples. collected a the site. The results of the HHRA, based on sampling data collected from 1988 through February 2015 and current exposure setting information, indicate that further action is required to address potential human exposure risk associated with CPOCs in surface (0 to 2 feet below ground surface) and total (0 to 10 feet bgs) in soil.

 Highlights:

Long-term plan is to use the property for roadway expansion. Current short-term plan is to use the property as a shelter where trailers will be parked to provide housing for homeless Oakland residents. Former Use: Per a 2009 Phase I Environmental Site Assessment (ESA) report, the site was operated as a chemical manufacturing facility in 1925. Between 1925 and 1945 the site became a roofing company. In 1947 the site became a paint manufacturing facility, and in the late 1980s paint manufacturing ceased and the site became a paint retail store. An 8,000-gallon underground storage tank (UST) possibly containing paint thinner was removed from the parking lot area adjacent to the storage areas in the 1980s. In May 2008 the site transitioned to the Alameda Design Center. An adjacent property was identified as a former oil recycling facility and there is impacted groundwater in the vicinity. A preliminary Phase II ESA was completed during 2010, consistent with the City's long-term plan of using the property for roadway expansion. Elevated concentrations of volatile organic compounds (VOCs) and petroleum hydrocarbons were found in groundwater. Soil vapor samples were not collected at that time, based on the planned use of the property. Elevated concentrations of metals, notably lead, were found in shallow soils. The City acquired the property during 2011 and it has been a vacant lot, secured from public access since then. The short-term plan for use is now a shelter where trailers will be used to provide housing for homeless persons.

Property Description:	Per a 2009 Phase I Environmental Site Assessment (ESA) report, the site was operated as a chemical manufacturing facility in 1925. Between 1925 and 1945 the site became a roofing company. In 1947 the site became a paint manufacturing facility, and in the late 1980s paint manufacturing ceased and the site became a paint retail store. An 8,000-gallon underground storage tank (UST) possibly containing paint thinner was removed from the parking lot area adjacent to the storage areas in the 1980s. In May 2008 the site transitioned to the Alameda Design Center. An adjacent property was identified as a former

oil recycling facility and there is impacted groundwater in the vicinity. A preliminary Phase II ESA was completed during 2010, consistent with the City's long-term plan of using the property for roadway expansion. Elevated concentrations of volatile organic compounds (VOCs) and petroleum hydrocarbons were found in groundwater. Soil vapor samples were not collected at that time, based on the planned use of the property. Elevated concentrations of metals, notably lead, were found in shallow soils. The City acquired the property during 2011 and it has been a vacant lot, secured from public access since then. The short-term plan for use is now a shelter where trailers will be used to provide housing for homeless persons.

 Property Description:

Per a 2009 Phase I Environmental Site Assessment (ESA) report, the site was operated as a chemical manufacturing facility in 1925. Between 1925 and 1945 the site became a roofing company. In 1947 the site became a paint manufacturing facility, and in the late 1980s paint manufacturing ceased and the site became a paint retail store. An 8,000-gallon underground storage tank (UST) possibly containing paint thinner was removed from the parking lot area adjacent to the storage areas in the 1980s. In May 2008 the site transitioned to the Alameda Design Center. An adjacent property was identified as a former oil recycling facility and there is impacted groundwater in the vicinity. A preliminary Phase II ESA was completed during 2010, consistent with the City's long-term plan of using the property for roadway expansion. Elevated concentrations of volatile organic compounds (VOCs) and petroleum hydrocarbons were found in groundwater. Soil vapor samples were not collected at that time, based on the planned use of the property. Elevated concentrations of metals, notably lead, were found in shallow soils. The City acquired the property during 2011 and it has been a vacant lot, secured from public access since then. The short-term plan for use is now a shelter where trailers will be used to provide housing for homeless persons.

Between 1925 and 1945 the site became a roofing company. In 1947 the site became a paint manufacturing facility, and in the late 1980s paint manufacturing ceased and the site became a paint retail store. An 8,000-gallon underground storage tank (UST) possibly containing paint thinner was removed from the parking lot area adjacent to the storage areas in the 1980s. In May 2008 the site transitioned to the Alameda Design Center. An adjacent property was identified as a former oil recycling facility and there is impacted groundwater in the vicinity. A preliminary Phase II ESA was completed during 2010, consistent with the City's long-term plan of using the property for roadway expansion. Elevated concentrations of volatile organic compounds (VOCs) and petroleum hydrocarbons were found in groundwater. Soil vapor samples were not collected at that time, based on the planned use of the property. Elevated concentrations of metals, notably lead, were found in shallow soils. The City acquired the property during 2011 and it has been a vacant lot, secured from public access since then. The short-term plan for use is now a shelter where trailers will be used to provide housing for homeless persons.

Highlights:

Long-term plan is to use the property for roadway expansion. Current short-term plan is to use the property as a shelter where trailers will be parked to provide housing for homeless Oakland residents. Former Use: Per a 2009 Phase I Environmental Site Assessment (ESA) report, the site was operated as a chemical manufacturing facility in 1925. Between 1925 and 1945 the site became a roofing company. In 1947 the site became a paint manufacturing facility, and in the late 1980s paint manufacturing ceased and the site became a paint retail store. An 8,000-gallon underground storage tank (UST) possibly containing paint thinner was removed from the parking lot area adjacent to the storage areas in the 1980s. In May 2008 the site transitioned to the Alameda Design Center. An adjacent property was identified as a former oil recycling facility and there is impacted groundwater in the vicinity. A preliminary Phase II ESA was completed

 Site History: A report entitled, Soil and Ground-water Contamination, 569 High Street, Oakland, California, and dated July 24, 1987, describes the results from three soil borings advanced in the western portion of the parcel at 569 High Street. Harding Lawson Associates prepared the July 24, 1987 Report for the City of Oakland Real Estate Division. The July 24, 1987 Report indicates that the area of investigation included three oil-stained areas, which appeared to be the result of surface spills. A total of four soil samples that were collected from the three soil borings did not contain total petroleum hydrocarbons as diesel (TPHd) at concentrations above the reporting limit of 20 milligrams per kilogram. However, TPHd was detected in groundwater samples collected from each of the three soil borings at concentrations up to 600,000 micrograms per liter (a%g/L). Benzene was detected in groundwater samples collected from two of the three soil borings at concentrations up to 8,700 a%g/L. Xylenes were detected in groundwater samples collected from each of the three soil borings at concentrations up to 420,000 a%g/L. The concentrations of TPHd, benzene, and xylenes in the groundwater samples significantly exceed Environmental Screening Levels (San Francisco Bay Regional Water Quality Control Board updated February 2013). Environmental Screening Levels provide a tiered approach to evaluating risk for a site. The presence of petroleum hydrocarbon constituents at concentrations that exceed Environmental Screening Levels does not necessarily indicate that adverse impacts to human health or the environment are occurring. However, further investigation is needed to assess the extent of contamination and whether contamination at 569 High Street could pose a risk to current or future users of the site. The case is currently inactive.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.
