12	Soil Vapor Impacts	<p>Langan has conducted soil vapor sampling in areas closest to the former USTs, including six sub-slab vapor samples (SS-1 through SS-6) and five soil gas samples (SG-1 through SG-5), including soil gas near the elevator at a depth below the bottom of the elevator pit. Samples were collected from within both the first floor parking garage and commercial spaces. All sub-slab and soil vapor samples with reported VOC detections were at concentrations below current ESLs, where established.</p> <p>Based on the soil vapor analytical data, soil vapor does not pose a significant vapor intrusion concern at the site.</p> <p>In January 2018, soil boring EB-11 was advanced near the elevator pit. Soil samples were collected within the bioattenuation zone from zero to five feet below the building foundation and at five foot intervals until groundwater was encountered. Only TPHmo was detected in soil samples from EB-11 at a depth of 2.5 feet bgs and a concentration of 11 mg/kg. TPHg, TPHd and VOCs were not detected above laboratory reporting limits. Based on concentrations of VOCs detected in groundwater in comparison to ESLs for vapor intrusion, as well as the presence of a suitable bioattenuation zone beneath the building slab, there is not a significant risk related to vapor intrusion at the site.</p>	<p>Table 5—Volatile Organic Compound Analytical Results in Vapor</p> <p>Figure 2 – Site Plan</p>	Langan, <i>Underground Storage Tank Closure Investigation Report, 1110 Jackson Street, Oakland, California</i> dated 13 September 2016.	None	Not applicable
13	Source Removal and Remediation	Source removal consisted of excavation of the former USTs (two 265-gallon gasoline USTs, one 110-gallon gasoline UST, and one 750-gallon diesel UST) performed by Golden Gate Tank Removal in April 2016 (USTs 1 through 3) and November 2016 (UST 4). All four former USTs were removed from beneath the Jackson Street sidewalk adjacent to the site. Remediation consisted of removal of visibly contaminated soil to the extent practical without compromising the structures surrounding the pits by over-excavation and backfill with imported fill material.	Figure 2 – Site Plan	<p>Golden Gate Tank Removal (GGTR), <i>Underground Storage Tank Closure Report, 1110 Jackson Street, Oakland, California</i> dated 23 June 2016.</p> <p>GGTR, <i>Underground Storage Tank (T4) Closure Report, 1110 Jackson Street, Oakland, California</i> dated 13 January 2017.</p>	None	Not applicable

GROUNDWATER PROTECTION ORDINANCE PERMIT APPLICATION

FOR APPLICANT TO COMPLETE

FOR OFFICE USE

(1) LOCATION OF PROJECT 17TH + HARRISON
NW CORNER
OAKLAND

PERMIT NUMBER 88540
LOCATION NUMBER _____

(2) CLIENT
[Redacted]

Approved Wyman Hong Date 24 Oct 88
Wyman Hong

(3) APPLICANT
Name TOM HOWARD
WESTERN GEOLOGIC RESOURCES
Address 2169 E. FRANCISCO Phone 415 457 7595
City SAN RAFAEL Zip 94901

PERMIT CONDITIONS

Circled Permit Requirements Apply

(4) DESCRIPTION OF PROJECT
Water Well Construction Geotechnical _____
Cathodic Protection _____ Well Destruction _____

A. GENERAL

1. A permit application should be submitted so as to arrive at the Zone 7 office five days prior to proposed starting date.
2. Notify this office (484-2600) at least one day prior to starting work on permitted work and before placing well seals.
3. Submit to Zone 7 within 60 days after completion of permitted work the original Department of Water Resources Water Well Drillers Report or equivalent for well projects, or bore hole logs and location sketch for geotechnical projects. Permitted work is completed when the last surface seal is placed or the last boring is completed.
4. Permit is void if project not begun within 90 days of approval date.

(5) PROPOSED WATER WELL USE
Domestic _____ Industrial _____ Irrigation _____
Municipal _____ Monitoring Other _____

B. WATER WELLS, INCLUDING PIEZOMETERS

1. Minimum surface seal thickness is two inches of cement grout placed by tremie, or equivalent.
2. Minimum seal depth is 50 feet for municipal and industrial wells or 20 feet for domestic, irrigation, and monitoring wells unless a lesser depth is specially approved.

(6) PROPOSED CONSTRUCTION
Drilling Method:
Mud Rotary _____ Air Rotary _____ Auger
Cable _____ Other _____

C. GEOTECHNICAL. Backfill bore hole with compacted cuttings or heavy bentonite and upper two feet with compacted material.

D. CATHODIC. Fill hole above and below zone with concrete placed by tremie, or equivalent.

E. WELL DESTRUCTION. See attached.

WELL PROJECTS
Drill Hole Diameter 12 in. Depth(s) ~60 ft. ^{MAX}
Casing Diameter 4 in. Number _____
Surface Seal Depth ~10 ft. of Wells 3
Driller's License No. 437836
ALL TERRAIN MARYSVILLE, CA

GEOTECHNICAL PROJECTS
Number _____
Diameter _____ in. Maximum Depth _____ ft.

(7) ESTIMATED STARTING DATE 10/26/88
ESTIMATED COMPLETION DATE 10/28/88

I hereby agree to comply with all requirements of this permit and Alameda County Ordinance No. 73-68.

APPLICANT'S SIGNATURE Tom Howard Date 10/24/88

Approved _____

Re: Groundwater Protection Ordinance Permit #88614

Dear Mr. Hong:

Enclosed please find a location sketch map, and drilling and completion logs for three monitoring wells and two soil borings constructed under permit number 88614 (highlighted in red). The soil borings were backfilled with a light grout. The monitoring wells are temporary and will be removed by excavation for the new building at 1111 Broadway. Foundation excavation and well removal will be completed in the first three months of 1989.

Sincerely yours,

WOODWARD-CLYDE CONSULTANTS

Mr. Todd Wendler
Water Resources Technician
Alameda County Flood Control and Water Conservation District
5997 Parkside Dr.
Pleasanton, Ca. 94566

Dear Mr. Wendler:

Enclosed is the well construction report required after completion of the work on April 21, 1989 permitted by the Groundwater Protection Ordinance permit #89226 for a monitoring well construction project near the intersection of Jefferson Street and 9th Street in Oakland, Ca. Drilling logs, a schematic of the monitoring well, and a site layout are included.

Please note that all boreholes were backfilled with a sand / cement grout on April 21, 1989. If you have any questions, please call me at 874-3203.

Sincerely,
Woodward-Clyde Consultants

Well Construction Report
14th Street & Martin Luther King, Jr. Way
Oakland, California

Dear Mr. Mayfield,

As requested, we have submitted the Location Sketch, drilling logs and well details for the additional groundwater monitoring wells installed under the Groundwater Protection Ordinance Permit #88278. Originally, this project was to consist of 3 monitoring wells (8, 11 and 16). However, after reviewing analytical test results, the Alameda County Environmental Health Department requested additional groundwater monitoring wells to more fully characterize the groundwater quality in this area. To date, 7 groundwater monitoring wells exist at the site; no further well installations are currently planned.

Attached you will find monitoring well details for Wells 28 through 31 and a new Location Sketch. Well details for Wells 8, 11 and 16 were included in our memorandum to Mr. Wyman Hong, dated August 30, 1988. If you have any questions regarding this project, please call.

Yours very truly,

Subsurface Consultants, Inc.

DAILY REPORT

Project: 13th & Harrison

Project No. 8844 499 01

Inspector: Etienne Constable

Day Thurs Date 8-4-88

Time On Site: From 6:30 To 5:00; From _____ To _____ Report No. _____

Weather: Over cast

Equipment In Use: Sm. Drill rig, Peristaltic Pump, 1.05 OD
stst bailor, cord, tools, well points; sounder

Work In Progress/Completed: Install, sample & remove 4 well points

6:30 on Site set up Barricades

8:43 WP-3 DTW = 24.00 TOC

Purged 2.5 gal from WP-3

Sample WP-3 Shene present

10:20 WP-6 DTW = 26-11-0 TOC (after raising WP 2 ft.)

Purged 2.5 gal from WP-6

11:50 Sample WP-6 shene present

13:39 WP-4 (After raising WP) DTW = 26-0-0 TOC

Sample WP-4 after Purging 1.5 gal shene present

14:15 WP-5 DTW = 29-0-0 TOC

Purged 2 gals

Sampled shene present

Special Conditions/Corrective Work Required:

14:55 Begin Backfill of WP's

Bentonite up to 20' BGS

Soil up to 3" BGS

Cement cap

16:10 TOC above Ground WP-3 18 5/8

WP-4 13 1/2

WP-5 46 1/2

WP-6 20 1/2

WELL POINT INSTALLATION AND GROUNDWATER SAMPLING

On July 21, 1988, CECC representatives installed two well points (WP1 and WP2) at the locations shown on Drawing 1. The well points were installed using hand drilling methods to the first water-bearing zone at depths of approximately 25 feet below ground surface (bgs). WP1 and WP2, as well as the previously-installed well B4, were purged, and groundwater samples were obtained and transported to an approved laboratory for chemical analysis under EPA protocol and chain-of-custody. Groundwater samples were obtained from the previously-installed observation well at B1, although the attempts to purge the well proved unsuccessful. Depths to ground water were measured and the collar elevations of the well points and wells were surveyed to provide information on groundwater gradient. Following sampling, the well points were abandoned by backfilling with bentonite pellets and soil cuttings. On July 28, 1988, additional groundwater samples were obtained from wells B1 and B4 for additional analysis. Again, attempts to purge well B1 proved unsuccessful.

On August 4, 1988, CECC representatives installed four additional well points (WP3 through WP6) at the locations shown in Drawing 1. Holes for the well points were drilled by Datum Exploration, Inc., under supervision by CECC personnel. Following sampling, the well points were abandoned by removing casing and backfilling with bentonite and soil cuttings.

Note: Groundwater flow direction based on measurements from temporary well points.

B-1 unable to be purged prior to sampling.

Hole locations as of 8-4-88

HARRISON STREET

ELEVATIONS BASED ON PARCEL MAP PREPARED BY BISSELL AND KARN, INC, DATED APRIL, 1988, AND ARE BASED ON CITY OF OAKLAND DATUM

Well Destruction Report
Well Number 2 (SCI designation)
Permit No. 90225
13th and Jefferson Streets
Oakland, California

Dear Mr. Esposito:

This letter describes the methods and materials used to destroy a well near 13th and Jefferson Streets in Oakland, California. Subsurface Consultants, Inc. (SCI) encountered the well during excavation of gasoline contaminated soils at the site. The top of the well was encountered approximately 7 feet below street grade.

The well was located approximately 70 feet north of 13th Street and 63 feet west of Jefferson Street in Oakland, California, as shown on the attached Site Plan, Plate 1. The well consisted of an 8-inch-diameter steel casing positioned inside a 14-inch-diameter steel casing. The 14-inch casing was observed to be very corroded and appeared much older than the 8-inch casing. The 14-inch casing was in direct contact with native soils. The annulus between the 8 and 14 inch casings had been filled with sand. The well extended approximately 55 feet below the adjacent street grades. The top of the well was clogged with bricks and oily debris. Groundwater was encountered approximately 25 feet below street grade. A sample of the well water was obtained by SCI prior to well destruction and analytically tested. Analytical test results are summarized below.

Table 1. CONTAMINANT CONCENTRATIONS IN WELL 2 WATER

<u>Sample</u>	<u>TEH¹</u> <u>mg/L⁵</u>	<u>O&G²</u> <u>mg/L</u>	<u>Benzene</u> <u>ug/L⁶</u>	<u>Other³</u> <u>VOCs</u> <u>ug/L</u>	<u>PNAs⁴</u> <u>ug/L</u>
Well 2	ND ⁷	50	6	ND	ND

-
- 1 TEH = Total Extractable Hydrocarbons, EPA 8015/3550
 - 2 O&G = Oil and Grease, Method SMWW 503E
 - 3 VOCs = Volatile Organic Compounds: EPA Methods 601 and 602
 - 4 PNAs = Polynuclear Aromatic Hydrocarbons
 - 5 mg/L = milligrams per liter or parts per million (ppm)
 - 6 ug/L = micrograms per liter or parts per billion (ppb)
 - 7 ND = None detected at concentrations above detection limits.
See analytical test reports for detection limits

The analytical results indicate that the well water contained low concentrations of oil and grease and benzene, a soluble constituent of gasoline. The well is situated in an area where gasoline contamination is present. The benzene is likely the result of this problem.

Initially, the 8-inch casing was removed utilizing a hoisting cable. Next, an 18-inch steel casing was driven into the ground around the outside of the remaining 14 inch well casing. The corroded 14-inch casing was subsequently drilled out using cable-tool drilling equipment. Cement grout was then pumped into the 18-inch casing using tremmie methods, displacing the water upwards. The tremmie pipe and the 18-inch casing remained below the grout/water interface so that a continuous column of grout was constructed. Approximately 8 cubic yards of neat cement grout (11 sacks of cement per cubic yard) were pumped into the well.

The water and drilling cuttings from the well were placed into a steel waste storage bin. The material was removed from the site under manifest by Hydro Tech, Inc. to the Valley Rock Disposal facility in Orland, California, which exclusively handles the disposal of drilling cuttings. Prior to disposal, a variety of chemical analyses were performed on the cuttings. The results are summarized below.

Page 3

Table 2. CONTAMINANT CONCENTRATIONS IN DRILLING CUTTINGS

Sample	TEH ¹ mg/kg ⁶	O&G ² mg/kg	Title 26 Metals mg/kg	BTXE ³ ug/kg ⁷	Semi VOC's ⁴ ug/kg	PCB's ⁵ ug/kg
Cuttings	ND	180	ND	ND	ND	ND

- 1 TEH = Total Extractable Hydrocarbons, EPA 8015/3550
- 2 O&G = Oil and Grease, Method SMWW 503E
- 3 BTXE = Benzene, Toluene, Xylene, Ethylbenzene
- 4 Semi-VOC's = Semi Volatile Organics, EPA 8270
- 5 PCB's = Polychlorinatedbiphenyls, EPA 8270
- 6 mg/kg = milligrams per kilogram or parts per million (ppm)
- 7 ug/kg = micrograms per kilogram or parts per billion (ppb)
- 8 ND = None detected at concentration above detection limits.
See analytical test reports for detection limits

Groundwater monitoring wells have been constructed down-gradient of Well 2 as part of an assessment evaluating gasoline contamination. It is anticipated that groundwater remediation in the area will be required, and will be initiated in the near future.

If you have any questions regarding abandonment of this well, please call.

Yours very truly,
Subsurface Consultants, Inc.

Sean O. Carson

Well Destruction Report
Monitoring Well 49
13th and Jefferson Streets
Oakland, California

Dear Ms. Eberle:

This letter records the destruction of one groundwater monitoring well at the referenced site. Well 49 was installed in December 1990, as part of a groundwater contamination assessment for releases related to a concrete floor drain sump. Over the past two years, water samples from the well were obtained and analytically tested for petroleum hydrocarbons, i.e. oil & grease, total volatile and extractable hydrocarbons, benzene, toluene, xylene, and ethylbenzene (BTXE) and volatile organic chemicals (EPA 8010). To date, none of these compounds have been detected at concentrations in excess of detection limits. A site plan showing the location of the well is attached.

Because of construction activities in the area, associated with the [REDACTED] it was necessary to abandon the well. The well was destroyed on December 18, 1992 by HEW Drilling Company, in accordance with Alameda County, Zone 7 Water Agency requirements. The grout seal and sand pack were removed using hollow-stem auger drilling equipment. The casing was then removed and the borehole was filled with cement grout using tremie placement methods. Well materials and soil generated during well destruction were removed from the site.

County Alameda Owner's Well Number MW-2
Well address if different from above 11th & WEBSTER, OAKLAND
Township 1S Range 4W Section _____
Distance from cities, roads, railroads, fences, etc. _____

(3) TYPE OF WORK:

- New Well Deepening
 - Reconstruction
 - Reconditioning
 - Horizontal Well
 - Destruction (Describe destruction materials and procedures in Item 12)
- (4) PROPOSED USE:
- Domestic
 - Irrigation
 - Industrial
 - Test Well
 - Stock
 - Municipal
 - Other

(12) WELL LOG: Total depth 45.5 ft. Depth of completed well 45.0 ft.

from ft.	to ft.	Formation (Describe by color, character, size or material)
0.0	0.3	Asphalt
0.3	1.5	Sandy gravel (GP) very dense fill
1.5	9.5	Dark yellow brown poorly sorted clayey sand (SC), medium dense, moist
9.5	21.0	Dark yellow brown poorly sorted sand with lean clay (SP-SC), dense, moist
21.0	24.7	Dark yellow brown poorly sorted clayey sand (SC), very dense, moist
24.7	35.0	Olive gray poorly sorted sand (SP), dense
35.0	40.5	Brown poorly sorted sand (SP) hard, wet
40.5	43.5	Brown sandy lean clay (CL), trace gravelly silt
43.5	45.5	Pale olive lean clay with silt (CL), stiff

(5) EQUIPMENT:

- Rotary Reverse
- Cable Air
- Other auger Bucket

(6) GRAVEL PACK: Monterey

- Yes No Size #3
- Diameter of bore 12"
- Packed from 18 to 45 ft.

(7) CASING INSTALLED:

- Steel Plastic Concrete

(8) PERFORATIONS:

Type of perforation or size of screen			
From ft.	To ft.	Dia. in.	Gage or Wall
0	20	4	Sch 40

(9) WELL SEAL:

Was surface sanitary seal provided? Yes No If yes, to depth 16 ft.
Were strata sealed against pollution? Yes No Interval 16-18 ft.
Method of sealing BENTONITE

(10) WATER LEVELS:

Depth of first water, if known _____ ft.
Standing level after well completion _____ ft.

(11) WELL TESTS:

Was well test made? Yes No If yes, by whom? _____
Type of test Pump Bailor Air lift
Depth to water at start of test _____ ft. At end of test _____ ft.
Discharge _____ gal/min after _____ hours Water temperature _____
Chemical analysis made? Yes No If yes, by whom? _____
Electric log made? Yes No If yes, attach copy to this report

Work started: 12-8 19 87 Completed 12-8 19 87

ALAMEDA COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT

5997 PARKSIDE DRIVE PLEASANTON, CALIFORNIA 94566 (415) 484-2600

GROUNDWATER PROTECTION ORDINANCE PERMIT APPLICATION

FOR APPLICANT TO COMPLETE

FOR OFFICE USE

(1) LOCATION OF PROJECT 1633 Harrison St. C 17th
Oakland, Ca
(Kaiser) on 17th street

PERMIT NUMBER 91481
LOCATION NUMBER _____

This permit is good for 2 wells on Harrison & 4 on-site Borings.
PERMIT CONDITIONS

(2) CLIENT EA
[Redacted]

Circled Permit Requirements Apply

(3) APPLICANT
Name Pacific Environmental Group, Inc
Consultant for Chevron
Address 1601 Civic Center Plaza Phone (408) 984 6536
City Santa Clara, Ca Zip 95050

A. GENERAL

1. A permit application should be submitted so as to arrive at the Zone 7 office five days prior to proposed starting date.
2. Submit to Zone 7 within 60 days after completion of permitted work the original Department of Water Resources Water Well Drillers Report or equivalent for well projects, or drilling logs and location sketch for geotechnical projects.
3. Permit is void if project not begun within 90 days of approval date.

(4) DESCRIPTION OF PROJECT
Water Well Construction Geotechnical Investigation _____
Cathodic Protection _____ General _____
Well Destruction _____ Contamination _____

B. WATER WELLS, INCLUDING PIEZOMETERS

1. Minimum surface seal thickness is two inches of cement grout placed by tremie.
2. Minimum seal depth is 50 feet for municipal and industrial wells or 20 feet for domestic, irrigation, and monitoring wells unless a lesser depth is specially approved.

(5) PROPOSED WATER WELL USE
Domestic _____ Industrial _____ Irrigation _____
Municipal _____ Monitoring Other _____

C. GEOTECHNICAL. Backfill bore hole with compacted cuttings or heavy bentonite and upper two feet with compacted material. In areas of known or suspected contamination, tremied cement grout shall be used in place of compacted cuttings.

(6) PROPOSED CONSTRUCTION
Drilling Method:
Mud Rotary _____ Air Rotary _____ Auger _____
Cable _____ Other Hollow Stem Auger

D. CATHODIC. Fill hole above anode zone with concrete placed by tremie.

DRILLER'S LICENSE NO. C57-554979

E. WELL DESTRUCTION. See attached.

WELL PROJECTS
- Drill Hole Diameter 8 In. Maximum _____
- Casing Diameter 2 In. Depth ~26 ft.
- Surface Seal Depth ~18 ft. Number 1

GEOTECHNICAL PROJECTS
Number of Borings _____ Maximum _____
Hole Diameter _____ In. Depth _____ ft.

(7) ESTIMATED STARTING DATE ~ Sept. 9
ESTIMATED COMPLETION DATE ~ Sept 9 *pending encroachment w/ City of Oakland*

(8) I hereby agree to comply with all requirements of this permit and Alameda County Ordinance No. 73-68.

Approved Wyman Hong Date 27 Aug 91

TEST GEOTECH LOG 403401.GPJ TR.GDT 12/16/04

Boring terminated at a depth of 21 feet below ground surface.
 Boring backfilled with cement grout.
 Groundwater encountered at a depth of 15 feet during drilling.
 2" monitoring well installed in boring.

¹ SPT blow counts converted to SPT N-Values using a factor of 0.6.
² Elevations based on City of Oakland datum (COD).

TEST GEOTECH LOG 403401.GPJ TR.CDT 12/18/04

Boring terminated at a depth of 31.5 feet below ground surface.
 Boring backfilled with cement grout.
 Groundwater encountered at a depth of 15 feet during drilling.
 2" monitoring well installed in boring.

* SPT blow counts converted to SPT N-Values using a factor of 0.5.
 ** Elevations based on City of Oakland datum (COD).

DESCRIPTION
Describe material, grain size, color, etc.

Well closed by tremie injection of Portland cement Type I/II grout, followed by pressure-grouting until pressure of 10 psi held for minimum of 5 minutes. Well-head casing removed and resulting excavation back-filled with concrete laid to conform with paving.

Log of Boring MW-14
 Sheet 1 of 1

Date(s) Drilled July 28, 2009	Logged By Ricky Bradford	Checked By Peter McIntyre
Drilling Method Hollow Stem Auger	Drill Bit Size/Type 8 inch	Total Depth of Borehole 25 feet bgs
Drill Rig Type CME 75	Drilling Contractor RSI	Approximate Surface Elevation 35 feet MSL
Groundwater Level and Date Measured 14 feet ATD, 15 feet after 1 hour	Sampling Method(s) Tube	Hammer Data
Borehole Backfill Well Completion	Location Parking Lane Along 7th Street Southwest of the Subject Property

UNIFIED SOIL CLASSIFICATION SYSTEM

Major Divisions	Symbols	Typical Names
Coarse-Grained Soils <small>(more than half of soil > no. 200 sieve size)</small>	Gravels <small>(More than half of coarse fraction > no. 4 sieve size)</small>	GW Well-graded gravels or gravel-sand mixtures, little or no fines
		GP Poorly-graded gravels or gravel-sand mixtures, little or no fines
		GM Silty gravels, gravel-sand-silt mixtures
		GC Clayey gravels, gravel-sand-clay mixtures
	Sands <small>(More than half of coarse fraction < no. 4 sieve size)</small>	SW Well-graded sands or gravelly sands, little or no fines
		SP Poorly-graded sands or gravelly sands, little or no fines
		SM Silty sands, sand-silt mixtures
		SC Clayey sands, sand-clay mixtures
Fine -Grained Soils <small>(more than half of soil < no. 200 sieve size)</small>	Silts and Clays <small>LL = < 50</small>	ML Inorganic silts and clayey silts of low plasticity, sandy silts, gravelly silts
		CL Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, lean clays
		OL Organic silts and organic silt-clays of low plasticity
	Silts and Clays <small>LL = > 50</small>	MH Inorganic silts of high plasticity
		CH Inorganic clays of high plasticity, fat clays
		OH Organic silts and clays of high plasticity
Highly Organic Soils	PT	Peat and other highly organic soils

"When Quality Counts"

Analytical Report

WorkOrder: 1801A01

Report Created for: Langan

501 14th Street, 3rd Floor
Oakland, CA 94612

Project Contact: Noel Liner

Project P.O.:

Project: 750622405; 1110 Jackson

Project Received: 01/18/2018

Analytical Report reviewed & approved for release on 01/25/2018 by:

Yen Cao

Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: Langan
Project: 750622405; 1110 Jackson
WorkOrder: 1801A01

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Glossary of Terms & Qualifier Definitions

Client: Langan
Project: 750622405; 1110 Jackson
WorkOrder: 1801A01

Analytical Qualifiers

H Samples were analyzed out of holding time.
S Surrogate spike recovery outside accepted recovery limits.
c2 Surrogate recovery outside of the control limits due to matrix interference.
e2 Diesel range compounds are significant; no recognizable pattern.
e4 Gasoline range compounds are significant.
e7 Oil range compounds are significant.

Quality Control Qualifiers

F1 MS/MSD recovery and/or RPD is out of acceptance criteria; LCS validates the prep batch.

Prepared by: Agustina Venegas

The following SampIDs: 001A, 002A, 003A, 004A, 005A, 006A contain testgroup Multi Range_S.; The following SampIDs: 007A, 008A contain testgroup Multi Range_W.

Comments:

NOTE: Soil samples are discarded 60 days after results are reported unless other arrangements are made (Water samples are 30 days). Hazardous samples will be returned to client or disposed of at client expense.

Chain of Custody (COC) Information

Chain of custody present?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Chain of custody signed when relinquished and received?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Chain of custody agrees with sample labels?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Sample IDs noted by Client on COC?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Date and Time of collection noted by Client on COC?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Sampler's name noted on COC?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
COC agrees with Quote?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>

Sample Receipt Information

Custody seals intact on shipping container/cooler?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>
Shipping container/cooler in good condition?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Samples in proper containers/bottles?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Sample containers intact?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Sufficient sample volume for indicated test?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	

Sample Preservation and Hold Time (HT) Information

All samples received within holding time?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	NA <input type="checkbox"/>
Sample/Temp Blank temperature	Temp: 5.5°C		NA <input type="checkbox"/>
Water - VOA vials have zero headspace / no bubbles?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	NA <input type="checkbox"/>
Sample labels checked for correct preservation?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
pH acceptable upon receipt (Metal: <2; 522: <4; 218.7: >8)?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>
Samples Received on Ice?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	

(Ice Type: WET ICE)

UCMR Samples:

Total Chlorine tested and acceptable upon receipt for EPA 522?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>
Free Chlorine tested and acceptable upon receipt for EPA 218.7, 300.1, 537, 539?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>

"When Quality Counts"

Analytical Report

WorkOrder: 1801844

Report Created for: Langan

501 14th Street, 3rd Floor
Oakland, CA 94612

Project Contact: Noel Liner

Project P.O.:

Project: 750622405; 1110 Jackson

Project Received: 01/16/2018

Analytical Report reviewed & approved for release on 01/25/2018 by:

Jennifer Lagerbom
Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: Langan
Project: 750622405; 1110 Jackson
WorkOrder: 1801844

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Glossary of Terms & Qualifier Definitions

Client: Langan
Project: 750622405; 1110 Jackson
WorkOrder: 1801844

Analytical Qualifiers

e2 Diesel range compounds are significant; no recognizable pattern
e7 Oil range compounds are significant

Quality Control Qualifiers

F1 MS/MSD recovery and/or RPD is out of acceptance criteria; LCS validates the prep batch.
F3 The surrogate standard recovery and/or RPD is outside of acceptance limits.

Chain of Custody (COC) Information

- Chain of custody present? Yes No
- Chain of custody signed when relinquished and received? Yes No
- Chain of custody agrees with sample labels? Yes No
- Sample IDs noted by Client on COC? Yes No
- Date and Time of collection noted by Client on COC? Yes No
- Sampler's name noted on COC? Yes No
- COC agrees with Quote? Yes No NA

Sample Receipt Information

- Custody seals intact on shipping container/cooler? Yes No NA
- Shipping container/cooler in good condition? Yes No
- Samples in proper containers/bottles? Yes No
- Sample containers intact? Yes No
- Sufficient sample volume for indicated test? Yes No

Sample Preservation and Hold Time (HT) Information

- All samples received within holding time? Yes No NA
- Sample/Temp Blank temperature Temp: 4.8°C NA
- Water - VOA vials have zero headspace / no bubbles? Yes No NA
- Sample labels checked for correct preservation? Yes No
- pH acceptable upon receipt (Metal: <2; 522: <4; 218.7: >8)? Yes No NA
- Samples Received on Ice? Yes No

(Ice Type: WET ICE)

UCMR Samples:

- Total Chlorine tested and acceptable upon receipt for EPA 522? Yes No NA
- Free Chlorine tested and acceptable upon receipt for EPA 218.7, 300.1, 537, 539? Yes No NA

McC Campbell Analytical, Inc.

"When Quality Counts"

Analytical Report

WorkOrder: 1801844 A

Report Created for: Langan

501 14th Street, 3rd Floor
Oakland, CA 94612

Project Contact: Noel Liner

Project P.O.:

Project: 750622405; 1110 Jackson

Project Received: 01/16/2018

Analytical Report reviewed & approved for release on 01/26/2018 by:

Yen Cao

Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: Langan
Project: 750622405; 1110 Jackson
WorkOrder: 1801844 A

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Analytical Qualifiers

e7 Oil range compounds are significant.

Glossary of Terms & Qualifier Definitions

Client: Langan
Project: 750622405; 1110 Jackson
WorkOrder: 1801844 A

Quality Control Qualifiers

F1 MS/MSD recovery and/or RPD is out of acceptance criteria; LCS validates the prep batch.
F3 The surrogate standard recovery and/or RPD is outside of acceptance limits.

NOTES: - STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

"When Quality Counts"

Analytical Report

WorkOrder: 1801938

Report Created for: Langan

501 14th Street, 3rd Floor
Oakland, CA 94612

Project Contact: Noel Liner

Project P.O.:

Project: 750622405; 1110 Jackson

Project Received: 01/17/2018

Analytical Report reviewed & approved for release on 01/24/2018 by:

Christine Askari
Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: Langan
Project: 750622405; 1110 Jackson
WorkOrder: 1801938

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Glossary of Terms & Qualifier Definitions

Client: Langan
Project: 750622405; 1110 Jackson
WorkOrder: 1801938

Analytical Qualifiers

b1 Aqueous sample that contains greater than ~1 vol. % sediment
e2 Diesel range compounds are significant; no recognizable pattern
e7 Oil range compounds are significant

Quality Control Qualifiers

F3 The surrogate standard recovery and/or RPD is outside of acceptance limits.

Analytical Report

1801938-007B	EB-13-GW-25	Water	SW8260B (VOCs)	2	VOA w/ HCl	<input type="checkbox"/>	1/17/2018 9:03	5 days	5%+	<input type="checkbox"/>	

NOTES: - STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

Chain of Custody (COC) Information

Chain of custody present?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Chain of custody signed when relinquished and received?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Chain of custody agrees with sample labels?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Sample IDs noted by Client on COC?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Date and Time of collection noted by Client on COC?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Sampler's name noted on COC?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
COC agrees with Quote?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>

Sample Receipt Information

Custody seals intact on shipping container/cooler?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>
Shipping container/cooler in good condition?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Samples in proper containers/bottles?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Sample containers intact?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
Sufficient sample volume for indicated test?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	

Sample Preservation and Hold Time (HT) Information

All samples received within holding time?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	NA <input type="checkbox"/>
Sample/Temp Blank temperature	Temp: 7.3°C		NA <input type="checkbox"/>
Water - VOA vials have zero headspace / no bubbles?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	NA <input type="checkbox"/>
Sample labels checked for correct preservation?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	
pH acceptable upon receipt (Metal: <2; 522: <4; 218.7: >8)?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>
Samples Received on Ice?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	

(Ice Type: WET ICE)

UCMR Samples:

Total Chlorine tested and acceptable upon receipt for EPA 522?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>
Free Chlorine tested and acceptable upon receipt for EPA 218.7, 300.1, 537, 539?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	NA <input checked="" type="checkbox"/>

Comments: Method SW8260B (VOCs) was received with temperature condition not met.

"When Quality Counts"

Analytical Report

WorkOrder: 1801F31

Report Created for: Langan

501 14th Street, 3rd Floor
Oakland, CA 94612

Project Contact: Noel Liner

Project P.O.:

Project: 750022405; 1110 Jackson

Project Received: 01/17/2018

Analytical Report reviewed & approved for release on 02/02/2018 by:

Christine Askari
Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: Langan
Project: 750022405; 1110 Jackson
WorkOrder: 1801F31

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Glossary of Terms & Qualifier Definitions

Client: Langan
Project: 750022405; 1110 Jackson
WorkOrder: 1801F31

Analytical Qualifiers

S Surrogate spike recovery outside accepted recovery limits
c2 Surrogate recovery outside of the control limits due to matrix interference.

Quality Control Qualifiers

F1 MS/MSD recovery and/or RPD is out of acceptance criteria; LCS validates the prep batch.
F2 LCS/LCSD recovery and/or RPD is out of acceptance criteria.
F3 The surrogate standard recovery and/or RPD is outside of acceptance limits.
F10 MS/MSD outside control limits. Physical or chemical interferences exist due to sample matrix.

LAKE MERRITT SUBSTATION (ALM) A3

ABOVE GROUND STATION

Spill Prevention and Emergency Response Plan

I. Facility Information

BART Lake Merritt Substation (ALM)
800 Madison Street, sub-concourse level in LMA
Oakland, CA 94607

II. Emergency Contact

BART Power Support Desk	(510) 465-2260
BART Power and Way Dispatch	(510) 464-6615
BART Police	(510) 464-7000
OCC Manager	(510) 834-1297

III. Emergency Notification

Report all emergencies by radio or telephone to the BART Operations Control Center (OCC). The OCC has direct lines to all emergency service providers.

IV. Arrangements

The District has a formalized emergency response agreement with Consolidated Waste Industries. Telephone: (800) 922-9984.

V. Evacuation Information

This facility is not normally occupied. Any personnel working at the site when an evacuation becomes necessary shall spread the evacuation order by shouting and shall travel by the safest route to the gate used to access the substation. This will be the assembly area.

VI. Procedures

1. General

- a. When approaching the substation, observe for abnormal conditions such as fire, spill, etc.
- b. During maintenance, check for the damage to the transformers and leakage.
- c. Inspect the oil retention pond for signs of release (i.e., floating oil or oil sheen).
- d. If there is no sign of oil in the retention pond, note it on the maintenance form and drain any accumulated water from the retention pond. Check to ensure the drainage valve is closed.

2. Hazardous Material Release

- a. Identify the character, source, amount, and extent of any released material.
- b. All released material will drain to the oil retention pond. Inspect retention pond to verify it has sufficient capacity to contain release.
- c. Notify OCC. OCC will implement emergency plans.
- d. OCC and System Safety will notify fire department, OES, and BART's emergency response contractor as appropriate.

- e. Emergency response personnel will remove any spilled material and return the facility to normal operation. Small releases can be cleaned up using absorbent pads or booms. Large releases will be removed using vacuum trucks.

3. Fire

- a. Evacuate personnel from the affected area.
- b. Notify OCC. Implement emergency plan.
- c. Have OCC drop power to the substation.
- d. Assess whether there is a release or threatened release of oil from the transformers. Take steps to prevent fire-fighting operations from washing oil off the property.

4. Earthquake

- a. Inspect transformers for signs of leaks or structural damage.
- b. Inspect oil retention pond for damage.

VII. Equipment

The following equipment shall be carried on each maintenance vehicle / crew.

Nitrile Gloves
First Aid Kit
Fire Extinguisher
Spill Pads and Booms
BART Trunk Radio

VIII. Medical Attention

Notify OCC to request an ambulance.

The nearest medical facility is:

Summit Medical Center
350 Hawthorne Avenue
Oakland, CA 94609
(510) 655-4000

When using any driving directions or map, it's a good idea to do a reality check and make sure the road exists, watch out for construction, and follow all traffic safety precautions. This is only to be used as an in planning.

**EMERGENCY RESPONSE / CONTINGENCY PLAN
Attachment 1. SPILL PROCEDURES**

Provide spill procedures for the following situations (as they apply to your facility)

Describe the types of spills that might occur and briefly describe actions to be taken. Also include levels of PPE to be used. Standard procedures are included if there are universally accepted ones. Use terms like: contain, absorb, dike, spill kit, drain, pump, place into container, sweep, shut off, etc. For indicating type of Personal Protection Equipment (PPE), use OSHA designated levels (A, B, C, D). Indicate if there are modifications to standard OSHA protection levels. If power is to be shut off, or some equipment needs to be shut down, please describe procedure, who does it and where shut-off is located.

Emergency	Response Action(s)	Person(s) trained to perform	PPE level

BART Emergency Plan
Chapter VIII – Hazardous Materials Spill / Leak

801. Reporting a Hazardous Material Spill / Leak

1. When odors or visible evidence of a gas, gasoline or hazardous materials spill is detected on or near BART facilities, the detecting employee shall immediately report this fact and any other details known to the OCC. These facts shall be updated as changes occur or when new information becomes available.
2. The first employee to arrive at the scene shall attempt to clear all personnel or patrons from the affected area. Without jeopardizing their own safety, they must attempt to prevent all personnel, other than emergency response crews, from entering the area.
3. If the spill involves or contaminates a train, stop the train in a safe manner and location away from the spill area if possible.
4. If the spill occurs at a Shop facility, refer to the Hazardous Material Business Plan for action.
5. Remain in a safe area away from the scene to brief arriving BPD Officers, BART Maintenance and Engineering, BART System Safety, Fire Department, PG&E and other emergency response personnel.
6. Personnel detecting the presence of hazardous materials within the system should also be aware of the potential for intentional placement of these items. This placement may be a means of system disruption or terrorism, which may have the capability of severe consequences to passengers and employees. In the event of unexplained illnesses or odors which could be the result of contaminants within the system, immediate consideration should be given to the possibility of Nuclear/Biological/Chemical (NBC) releases. Any suspicions regarding the development of NBC weapons requires the immediate notification to appropriate emergency response personnel.

802. BART and Local Agencies' Response

1. BART Police Department:
 - a. BPD Officer(s) nearest to the reported incident shall be dispatched upwind of the scene as near as safety permits to: prohibit unauthorized personnel from entering, establish communications with the OCC and assume the duties of IC for mainline incidents.
 - b. For those incident occurring off property which will affect BART employees or operations, a police sergeant or officer in charge shall be sent to the Command Post in the appropriate jurisdiction to report information to the OCC and relay information to the Command Post.
2. BART Supervisory Personnel: Transportation and Power & Way Maintenance Supervisors are dispatched to locations designated by the OCC to assist as necessary.

3. Fire Department: The appropriate fire department shall be notified of any hazardous material that, because of its quantity, concentration, or physical or chemical characteristics, poses a significant present or potential hazard to human health and safety to the environment if released into the workplace or the environment.
4. PG&E and Other Outside Agencies: The appropriate outside agencies shall be called for assistance at the emergency scene upon report from the IC that the condition cannot be corrected without outside assistance and/or is a threat to life safety.
5. In the event that intentional Nuclear/Biological/Chemical NBC releases are suspected within the system, or in surrounding areas which could impact the system, response should also be guided by the District's Nuclear/Biological/Chemical Incident Response Plan. Whether the source of hazardous materials is an accidental or intentional release, provisions of this Emergency Plan chapter will still be undertaken, with the exception of the operation of ventilation fans. In the event of suspected NBC weapons releases, ventilation fans will be turned off unless specifically requested by the Fire Department IC.

803. Protecting the Emergency Scene

1. Stations and Buildings: Stations and/or other buildings within the area of the emergency scene shall be closed, evacuated and may be guarded to prevent re-entry by unauthorized personnel.
2. Underground Areas: Ventilation fans shall be operated in the exhaust mode unless directed otherwise by the IC. The OCC shall advise personnel at the emergency scene the direction the air is being drawn.
3. Train Restriction: No trains shall be allowed in the area of the emergency scene until the area has been declared safe by the IC.
4. Restriction of Personnel: Only authorized BART personnel and those agencies/personnel called by the OCC to respond to the scene shall be permitted to enter the emergency scene.
5. Third Rail Power: The removal/restoration of third rail power shall be as directed by the IC or as required to move trains away from the emergency scene.

804. Determining and Evaluating the Facts

1. The OCC shall make every effort to determine the following from the person reporting the incident:
 - a. Origin of the reported leakage or spill.
 - b. The area of BART property affected by the incident, i.e.: station(s) or other structures, trackage by milepost location and track designation.
 - c. Natural Gas: The odor strength, i.e., light, moderate or heavy.
 - d. Gasoline: Seepage, flowing, pool or odor.

- e. Suspected Hazardous Spill: The color and quantity of substance, approximate area covered, any physical discomfort experienced, e.g., harsh coughing, difficult breathing or burning sensations, etc.

805. Evacuation of Personnel / Passengers

If evacuation is necessary, the following instructions should be given to evacuees:

1. Where to assemble (an area upwind from the spill).
2. Keep out of smoke, fumes or dust resulting from the incident.
3. Avoid breathing vapors from the spill material.
4. DO NOT smoke, light any matches, eat or drink anything, or apply cosmetics.

806. Restoration of Service

Normal revenue service shall resume when the necessary repairs have been completed and the area is released by the IC.

EMERGENCY PROCEDURE CHECKLIST
TRAIN CONTROLLER

GAS LEAK

1. Advise OCC Manager.
2. Restrict trains from entering the affected area.
3. Broadcast 10-43 to all trains. Inform trains in the affected area of expected delay.
4. Name the Incident.
5. Designate the IC/BART Liaison.
6. Establish truncated service as necessary.
7. Update IC/BART Liaison's ID and Command Post location, as needed.
8. Preserve all documentation/evidence and submit to OCC Manager.

HAZARDOUS MATERIAL INCIDENTS

1. Advise OCC Manager.
2. Restrict trains from the affected area.
3. Announce to trains 10-43 or 10-33 as appropriate.
4. Name the Incident.
5. Designate the IC/BART Liaison.
6. Implement strategies of the OCC Manager.
7. Update IC/BART Liaison's ID and Command Post location, as needed.
8. Preserve all documentation/evidence and submit to OCC Manager.

EMERGENCY PROCEDURE CHECKLIST
POWER/SUPPORT CONTROLLER

GAS LEAKS

1. Advise OCC Manager.
2. Advise Train Controller; restriction of train movement.
3. Advise Power & Way for investigation.
4. Advise Fire Department.
5. Interrogate CSS/UCS to determine information on incident location.
6. Operate ventilation fans in exhaust mode or as directed by IC.
7. Notify PG&E Gas Dispatcher, if required.
8. Obtain verification from the OCC Manager that the area is safe before canceling ventilation.
9. Notify Muni Central, if appropriate.
10. Preserve all documentation/evidence and submit to OCC Manager.

HAZARDOUS MATERIAL INCIDENT

1. Advise Fire Department.
2. Advise Governors' Office of Emergency Services (OES) Warning Center (800-852-7550) if significant spill, release or potential release.
3. If the incident is in Contra Costa County, immediate notification must be given to the Health Services Department at (925) 646-2286 (0800-1700) or (925) 646-1112 (1700-0800) for extreme emergencies.

EMERGENCY PROCEDURE CHECKLIST
OCC MANAGER

GAS LEAK

1. Advise OCC personnel.
2. Verify that the following have taken place:
 - a. Trains restricted from entering the affected area.
 - b. Power & Way notified to investigate.
 - c. Fire Department notified.
 - d. Affected area, Work Orders canceled, personnel on Simple Approval advised.
 - e. Communications established with IC/BART Liaison at the scene.
 - f. Insure location of command post is known and appropriate personnel notified.
 - g. Incident has been named.
 - h. Ventilation established correctly, interrogate CCS.
 - i. MNL implemented.
 - j. Proper Public Address announcements are being made.
3. Resume normal operations after the area is released by the IC.
4. Collect documentation/evidence from OCC personnel.

HAZARDOUS MATERIAL INCIDENT

1. Advise OCC personnel.
2. Verify the following:
 - a. System Safety notified.
 - b. Fire Department notified.
 - c. Governor's Office of Emergency Services (OES) notified, if significant spill, release or potential release.
 - d. Health Services Department notified, if in Contra Costa County.
3. Implement other OCC checklist as required for the impact on train operations.
4. MNL implemented.
5. If train service is impacted, insure proper Public Address announcements are being made.
6. Collect documentation/evidence from OCC personnel.

EMERGENCY PROCEDURES CHECKLIST
COMMUNICATIONS SPECIALIST

HAZARDOUS MATERIALS SPILL/GAS LEAKS

1. Notify Media & Public Affairs personnel, BPD and the Information Center.
2. Advise Station Agents of any change made or required in station/train operations.
3. Make public address announcements to advise passengers of changes in train operating patterns, anticipated delays, alternate modes of transportation and estimated duration of the emergency.
4. As directed by the OCC Manager, coordinate and develop bus bridge(s) in areas where train service has been temporarily discontinued.
5. Make updated PA announcements to station as required and call local radio stations to inform them of the location and cause of the service disruption, bus bridge arrangements, anticipated duration and any changes to normal train operating patterns.

EMERGENCY PROCEDURE CHECKLIST
BART POLICE

HAZARDOUS MATERIAL SPILLS/GAS LEAKS

1. Respond to a position upwind of the scene as near as safety permits to prohibit unauthorized personnel from entering.
2. Establish communications with the OCC and assume the duties of IC for mainline incidents; advise on the exact location, nature and severity of the incident, and of its effect on train operations. For those incidents occurring off-property which will affect BART, respond to the command post in the appropriate jurisdiction to relay information to the OCC.
3. Close, evacuate and, if necessary, guard stations and/or other buildings as warranted.
4. Advise of the need for PG&E, fire department, emergency medical services, and other outside agencies, and of the type of materials needed to contain the emergency, if known.
5. Coordinate all BART emergency response efforts at the scene until the fire department arrives, providing necessary access to, and staffing areas for the incident.
6. Isolate and arrange medical treatment for any contaminated persons.
7. Prevent unauthorized access to the emergency scene.

EMERGENCY PROCEDURE CHECKLIST
POWER & WAY

HAZARDOUS MATERIAL SPILLS/GAS LEAK

1. Advise OCC Manager.
2. Broadcast a 10-33.
3. Get Computer Printout.
4. Determine if gas sniffer required.
5. Dispatch assistance crews.
6. Determine if mechanical/electrical needed at vents/tunnels.

Employee Training Plan Form

1. Scope

This plan is designed to provide hazardous materials and hazardous waste training to employees to satisfy the requirements of the Hazardous Materials Business Plan of California Health and Safety Code Chapter 6.95, and the Hazardous Waste Generator requirements of California Health and Safety Code Chapter 6.5.

Facility Name:	
Address:	
Facility Purpose:	High Voltage Substation
Haz Mats used in building(s) areas:	Shell Diala AX Oil

2. Responsibilities: Responsibility for ensuring the Training Plan is implemented is assigned as follows:

Name/Title	Training Responsibility
Randy Clark, Manager, Power and Mechanical Maintenance	Assure assigned BART personnel are trained IAW HMBP.
Gary Ramirez, EDS, Power and Mechanical Maintenance	Conduct training; maintain HMBP training record.
Gary Jensen, Principal Engineer, Environmental Compliance	Conduct training.

3. Employees/New Employees. Attachment T1 documents each employee's training.

Yes	No	
✓		New employees are provided training during their orientation before job assignment. If no, it is completed within six months.

4. New Assignments or changes in Operations.

Yes	No	
✓		In the event of new assignments or changes in operation for existing employees, training will be provided before the new assignment or change in operation takes place.

5. Refresher Training. Attachment T2 documents refresher training.

Yes	No	
✓		Refresher training will be provided at least annually. It is provided every <u>12</u> months. The method used will be (check all that apply): <input type="checkbox"/> use of outside classes, <input type="checkbox"/> in house classes provided by others, <input type="checkbox"/> safety meetings*, <input checked="" type="checkbox"/> periodic in house classes by in house personnel*. * complete attachment T5, qualification of in-house personnel.

Employee Training Plan Form

6. **Training Topics.** The following table indicates the training topics covered for this facility. Other documentation on these training topics is maintained and available to the inspector during inspections or on request.

Yes	No	NA	General Safety Precautions	Other documents
✓			Material Safety Data Sheets used	
✓			Nature and Hazards of materials present	
			Emergency Response including	
✓			The Emergency Response Plan	
✓			Notification/coordination with local emergency response agencies	
		✓	Procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment	
✓			Communication and alarm systems (i.e., telephones, walkie-talkies)	
✓			Response to fires or explosions	
✓			Response to release or threatened release of hazardous materials	
			Hazardous Waste Management	
		✓	On-site management and storage requirements	
		✓	Packaging and labeling	
		✓	Proper use of safety equipment	
		✓	Proper use of hazardous waste management supplies	
		✓	Off-site transportation requirements	
		✓	Interaction with waste haulers and disposal sites	
		✓	Conducting periodic inspections (storage areas, tanks, etc.)	
		✓	Key parameters for automatic waste feed cut-off systems	
		✓	Response to groundwater contamination incidents	
		✓	Shutdown of operations	

7. **Emergency Response Team:**

- yes no This facility has an Emergency Response Team (ERT) Attachment T4 provides a listing of the team members
- yes no The ERT coordinates with the local Fire Department (FD) Name of local FD _____
- yes no The ERT trains/drills with the FD following a _____ schedule. Name of FD contact/phone # _____

8. **Training topics by job title.** Employees are trained based on the hazardous materials/hazardous waste activity level that they are involved in. Attachment T1 details topics in which each employee has been trained, and Attachment T3 provides a summary of each person trained, and their title and areas of training.

9. **Training Documentation:** The person(s) who shall update and keep a copy of the Employee Training Plan and associated records is/are:

Name	Title	Phone Number
Gary Ramirez	EDS	(510) 476-3734

EmpTrain.Form (01/28/00)

**RE: UNDERGROUND STORAGE TANK COMPLIANCE MONITORING PLAN FOR THE BAY
AREA RAPID TRANSIT DISTRICT.**

Dear Mr. Gerow

Please find enclosed the compliance plan pertaining to the BART
underground storage tank at the Oakland Shop facility.

Of interest to you will be the section regarding the waste oil and
motor fuel tanks at the Richmond Shop facility. After your review and
concurrence with the plan, Mr. Joe VanOverveen of the District will be
looking forward to your written approval.

Please call if you have any questions or desire more information.

Sincerely,

Terrance E. Carter

INSTRUCTIONS

GENERAL

In box titled "EMERGENCY", indicate whether emergency response personnel and equipment were involved at any time. If so, a Hazardous Material Incident Report should be filed with the State Office of Emergency Services (OES) at 2800 Meadowview Road, Sacramento, CA 95832. Copies of the OES report form may be obtained at your local underground tank permitting agency. Indicate whether the OES report has been filed as of the date of this report.

In space provided, enter state tank ID number if known. State ID numbers have been assigned to all tanks that are on file with the State Water Resources Control Board. Enter today's date in the box titled "Report Date". Enter local and Regional Water Quality Control Board case numbers if known. Enter the US EPA facility number if applicable.

REPORTED BY

Enter your name, telephone number and address. Indicate which party you represent, and provide company or agency name.

RESPONSIBLE PARTY

Enter the name, telephone number, contact person, and address of the party responsible for the leak, or mark unknown. For tank leaks, the responsible party would normally be the tank owner.

SITE LOCATION

Enter information regarding the tank facility and surrounding area. If a known tank or facility is not involved, enter general location of the contamination site as best possible; i.e., street, city, county, zip, cross street, and type of area.

IMPLEMENTING AGENCIES

Enter names of the local agency, Regional Board and/or Toxic Substances Control Division (TSCD) regional office involved and a contact person and telephone number for each.

SUBSTANCES INVOLVED

Enter the CAS number(s) (if known), name(s), and quantities lost of all hazardous substances involved. Attach an extra sheet if more than two substances are involved. Be as specific as possible.

DISCOVERY/ABATEMENT

Provide information regarding the discovery and abatement of the discharge. More than one box may be checked in the sections titled "How Discovered" and "Method Used To Stop Discharge" if appropriate.

8. SOURCE/CAUSE

Indicate source(s) of discharge. Provide details on tank age, capacity and material if a tank is involved. Check box(es) indicating cause of discharge. More than one box may be checked if appropriate.

9. RESOURCES AFFECTED/AT RISK

In section titled "RESOURCES AFFECTED" indicate whether any of the resources listed have been affected ("YES"), will not be affected ("NO"), or may be affected ("THREATENED") by the release. Check "UNKNOWN" if unsure of the status of a resource. Specify any unlisted resources which are, or may be, involved under "OTHER". The same instructions apply to the section titled "WATER SUPPLIES AFFECTED". Give the number of water wells affected or threatened, if known. Provide the name of the ground-water basin underlying the site, if known, in the space provided.

10. COMMENTS

Use this space to elaborate on any aspects of the incident. Comments on cleanup work or planning or related investigations should be reported on a separate Cleanup Tracking Report.

11. SIGNATURE

Sign the form in the space provided.

DISTRIBUTION

Hand deliver or mail copies of the form as follows:

RE: UNDERGROUND STORAGE TANK COMPLIANCE MONITORING PLAN FOR THE BAY
AREA RAPID TRANSIT DISTRICT.

Dear Mr. Gerow

Per submittal of the July 28, 1986 report addressing tank compliance
and cover letter requesting written approval of the recommendations,
Mr. Van Overveen of BART has not yet received your approval.
Therefore, Bart assumes approval and will proceed with the work. The
technical specifications will be sent to you for your review and
comment prior to going out to bid.

Please call if you have any questions.

Sincerely,

Terry

EXECUTIVE SUMMARY

This report provides the compliance monitoring plan for the underground storage tanks owned by the Bay Area Air Quality Control District. The recommendations are:

1. Waste Oil Tanks - (1) remove the metal tanks at the Richmond Shop, the Concord Shop, the Oakland Shop and the single walled fiberglass tank at the Hayward Shop; and (2) replace the tanks with double walled fiberglass tanks and double contained piping and an electronic leak detection device with sensors located between the double walls that will automatically alarm if a leak occurs.

The estimated costs for removal and replacement of the Oakland Shop waste oil tank is \$7500.00 - \$12,500.00. The estimated costs for removal and replacement at the waste oil tanks at the Concord Shop, Richmond Shop and Hayward Shop is \$8,000.00 - \$15,500.00.

2. Motor Fuel Tanks - install an electronic continuous groundwater monitoring and/or vapor monitoring system at the Oakland Shop and the Metro Center drawings is the minimum number of wells that we judge to

The estimated costs for installation of a continuous dedicated monitoring system at the Metro Center is \$3,000.00 - \$6,000.00, and \$8,500.00 - \$11,000.00 for the Oakland Shop site.

3. Oxalic Acid Cleaning Solution Tanks - No action required, at this time. A one percent solution of oxalic acid is used to clean commuter cars at the Concord Shop and Richmond Shop. An evaluation was made to determine if the oxalic acid in its dilute form may be delisted as non-hazardous, thereby rendering the cleaning system underground tanks exempt from monitoring. An assessment was made and the results presented to the Contra Costa County Department of Environmental Health and the California Department of Health Services (DOHS) - Toxics Division. In summary, the results indicate that a solution of 1 percent oxalic acid in water should not be classified as a hazardous material.

BART UNDERGROUND STORAGE COMPLIANCE MONITORING PLAN

I. INTRODUCTION

With the passage of California Administrative Code - Title 23 Subchapter 16, Underground Storage Tank Regulations in January 1985, an owner or operator of an underground tank containing a hazardous substance is required to monitor the tank for leaks. The regulations are intended to protect waters of the State from discharges of hazardous substances from underground storage tanks. The regulations establish construction standards for new underground storage tanks; establish separate monitoring standards for new and existing underground storage tanks; establish standards for release reporting, repair and closure requirements; specify variance request procedures and establish tank use permit application procedures. Prior to receiving a permit to operate an underground storage tank, the tank owner or user must have a monitoring or tank integrity assurance program in place. The deadline for filing an action plan regarding existing tanks is September 1, 1986.

The state of California has listed eight alternatives from which a tank owner can select a testing or monitoring program that best suits his tank operation plan and addresses the potential threat to groundwater at the site. The alternatives incorporate combinations and frequencies of inventory reconciliation, tank pressure testing, and soils or groundwater monitoring. The eight alternatives are listed in Table 1.

Administration of the California Underground Storage Tank program is at the county and city level. The Contra Costa County Health Department administers the underground storage tank program within that county. Administration of underground storage tank program in Oakland is by the Alameda County Health Agency. The City of Hayward administers their own underground storage tank program. While the state guidelines establish the minimum acceptable standards that local agencies can adopt, the local agencies have in some cases exercised their prerogative to require measures above those imposed by the state and also to disallow some of the alternatives listed within the state guidelines.

To comply with the underground storage tank requirements within the Bay Area Rapid Transit District (BART) service area, BART contracted with Aqua Science Engineers (ASE) to: (1) verify the contents of each tank and determine if the contents are considered hazardous substance; (2) determine the necessary action to bring the underground tanks into compliance; and (3) provide specifications and drawings for any further work that may be required for compliance.

II. INVENTORY OF UNDERGROUND STORAGE TANKS AND REGULATORY AGENCY JURISDICTION

BART owns and operates 22 underground storage tanks. The content and location of each tank is shown in Table 2. The Concord and Richmond Shop facilities lie within Contra Costa County and therefore fall under the County Health Department's guidelines. The Metro Center and Oakland Shop facilities are under the guidelines set by the Alameda County

Health Agency - Division of Environmental Health. The Hayward Shop facility is under the guidelines set by the City of Hayward - Fire Prevention Bureau.

The regulatory requirements of each implementing agency vary. For example, the alternative allowing for the installation of vapor monitoring and groundwater monitoring wells as a monitoring alternative is widely accepted by the City of Hayward where groundwater is shallow (< 15 feet). However, this alternative is much less favored in Contra Costa County where groundwater is frequently deep (> 45 feet). Additionally, the formula establishing the number of monitoring wells that must be installed varies among the administrative agencies. The formula used by Contra Costa County is the same as that specified in the State guidelines, whereas the City of Hayward has adopted guidelines set forth by the Alameda County Water District which does not mandate upgradient monitoring wells but has stricter requirements regarding well spacing.

The following underground storage tank regulation compliance program we are presenting to BART addresses the requirements of each implementing agency. The alternatives presented will provide the greatest margin of protection in relation to dollar cost.

The 22 underground tanks may be broken down by contents into the following five categories: motor fuel, waste oil, cleaning solution and rinse water, and waste water within an oil separator. Each category reflects a different concern to the regulatory agency in regard to its potential impact to groundwater should there be a discharge from a leaky tank. For example, the water soluble fractions of motor fuel are benzene, toluene, and xylene. Two of these soluble constituents are considered hazardous substances and represent a potential threat to groundwater and public health if allowed to escape into the soils.

The viscosity and low volatility crank case and gear case oils greatly retards their movement through soils and groundwater. Thus it would seem that waste oil tanks would present a relatively low threat to groundwater resources. However, from a regulatory agency viewpoint, waste oil storage tanks are an equal or greater concern than motor fuel tanks. This is because waste oil tanks become a receptacle for other materials other than waste oil. Experience shows that substances such as anti-freeze and cleaning solvents that are placed in the tanks can be very difficult and costly to recover from groundwater.

While it is our understanding that the waste oil tanks presently in use at the BART facilities other than the Oakland Shop do not contain any material other than lubricating oil and that the Oakland Shop tank is used for service vehicle motor oil only, shop practices can change and from a practical standpoint any solvents, cleaners or other potentially harmful liquid found in the maintenance shop has a reasonable probability of finding its way into the waste oil tank.

BART has 3-300 gallon oil separator tanks; one each at the Concord Shop, the Richmond Shop, and the Oakland Shop. These oil separator tanks are connected in-line to the sanitary sewer line and function as a skimmer, preventing the oil from entering the sanitary sewer.

The Contra Costa Health Department has, in the past, given variance from monitoring these tanks and in recent conversations with Health officials the variance will be upheld.

III. PRESENT TANK USE AND MONITORING OPTIONS

The following section describes underground storage tank location and tank use, discusses available options for monitoring and provides estimated costs and recommendations for compliance.

TANKS CONTAINING OXALIC ACID CLEANING AND RINSE SOLUTION

The Concord Shop and Richmond Shop are the sites where commuter cars are cleaned with a solution stored in underground tanks. A schematic of the cleaning system is shown in Figure 1. The component of concern in the cleaning solution is oxalic acid. The solution is sprayed on the cars to assist in removing foreign particles and as an aid in reversing the oxidative process that leads to rust. The oxalic acid is stored above ground in 55-gallon drums, then poured into two underground tanks, 1-6,000 gallon and 1-2,000 gallon. The oxalic acid is diluted with water to a 1 percent solution then pumped under pressure and used for cleaning.

Although oxalic acid is listed as a hazardous material, an evaluation was made to determine if the oxalic acid in its dilute form may be delisted as non-hazardous, thereby rendering the cleaning system underground tanks exempt from monitoring. An assessment was made and the results presented to the Contra Costa County Department of Environmental Health and the California Department of Health Services (DOHS) - Toxics Division. In summary, the results indicate that a solution of 1 percent oxalic acid in water should not be classified as a hazardous material. The toxicology report describing the toxicity of a 1 percent oxalic acid solution is in Appendix A.

As of this writing, neither Contra Costa County nor the DOHS have provided ASE with a written confirmation that they agree with the assessment. However, in conversations with the agencies, it seems probable that they will consider the solution non-hazardous and the County will exempt the tanks from monitoring. The County is in the process of reviewing the manufacturer's list of materials included in the cleaning solution for substances other than oxalic acid that may be of concern to them. If the County's review is favorable, we fully expect the cleaning tanks to be given an exempt status.

Contra Costa County has indicated that should they approve exemption, it will be conditional upon the assurance that the oxalic acid cleaning product be consistent from one supplier to the next. To insure the consistency of the oxalic acid it may be necessary for BART to provide very close bid specifications to future suppliers. A review of the bid specification will take place once the agency comments are received by ASE and BART.

TANKS CONTAINING WASTE OIL

BART has five waste oil tanks. The location and size of each tank are:

(1) the Oakland Shop, 1- 550 gallon, (2) the Hayward Shop, 1- 1,000 gallon, (3) the Concord Shop, 1- 1,500 gallon, and (4) the Richmond Shop, 2- 1,500 gallon. All of the tanks are single walled carbon steel except for the waste oil tank in Hayward which is a single walled fiberglass tank.

Selecting a monitoring alternative to implement that could be applied to the waste oil tanks currently in place and that provides sufficient protection from risk in the event of a leak is sometimes more difficult than for the other tanks. This is in part due to the restrictive nature of the alternatives and in part due to the product currently being stored in the BART waste oil tanks.

IV. AVAILABLE OPTIONS FOR WASTE OIL TANKS

1. Tank Testing. The eight alternatives listed within the California State Underground Storage Tank Regulations (Table 1.) provide several options for existing tanks. In general, the alternatives consider tank testing, inventory control and groundwater monitoring wells as an effective means of monitoring tank integrity. However, from our own perspective and in conversations with the regulatory agencies about the applicability of these methods to the BART waste oil tanks, it is inadvisable. Tank testing a waste oil tank, or for that matter any tank, requires that the tank be completely full of a liquid. This presents a problem in that regulatory requirements call for the tank test on a monthly basis, or annual tank testing if (1), the tank is to be removed within three years, or (2) line leak detectors are installed, which are difficult to retrofit and may not provide adequate risk protection from leaks.

If an alternative is selected by BART that calls for tank testing, we must advise that it may create more problems than it is worth. As previously stated, before a tank can be tested it is necessary to fill the tank with a liquid for the purposes of the test alone. Once tested and certified that the tank is free from leaks, the make-up liquid becomes a hazardous material requiring that it be disposed of as manifested hazardous waste at a cost of approximately \$0.60 per gallon. The use of tank testing as a monitoring alternative also requires that an inventory of the liquid levels in the tank be kept on a daily basis. The estimated cost for tank testing and inventory reconciliation is: \$4200.00 - \$6000.00 per year per tank.

2. Vapor and groundwater monitoring wells. Waste oil tank monitoring with vapor and groundwater monitoring wells are currently in use in the Bay area as a means of monitoring tanks and detecting if a tank has a leak problem. However, the Contra Costa County Department of Environmental Health has indicated a hesitancy in approving this alternative for the BART waste oil tanks at the Concord Shop and Richmond Shop facilities. The concerns of Contra Costa County Department of Environmental Health is that: (1) groundwater in the area of the Concord Shop is relatively deep (depth to groundwater > 40 feet) and should a leak occur, by the time the waste oil is detected in the groundwater monitoring well, significant contamination could have occurred; (2) the low volatility of crank case and gear case oils raises some question on applicability of using a vadose well and

sampling by vacuum lysimeter as is frequently done with volatile liquids.

It is our understanding that the use of monitoring wells at the BART facilities may present a personnel problem in that the duties would need to be specified in a particular job and if this were not desirable, then an outside entity would be contracted to perform the necessary monitoring. The use of groundwater monitoring wells require that a qualified person be given the responsibility of sampling the well, keeping accurate records, and semi-annually testing the water sample.

The estimated cost for installation of groundwater monitoring well is: \$2,000.00 - \$3,000.00 per well plus personnel costs to monitor the well. We estimate that as many as 10 wells are needed to adequately monitor the five waste oil tanks. Groundwater sample costs are estimated at \$100.00 - \$150.00 per well on a semi-annual basis. Vapor sample costs would run \$200.00 - \$300.00 per vadose well semi-annually

3. Continuous electronic monitoring. The use of electronic monitoring devices that monitor vapor levels in the tank backfill, alerting the facility of a leak, are an acceptable method of monitoring an underground tank in cases where vapors given off by the tank contents will be sufficient to be detected by the monitoring system. They are quite effective for monitoring relatively high vapor products such as motor fuels. However, as with vacuum lysimeter samples of vadose wells, the effectiveness of continuous electronic monitoring is questionable when used to monitor products that give off low levels of vapor such as waste crank case oil and gear lube. The Contra Costa County - Environmental Health Agency and the City of Hayward - Fire Prevention Bureau have expressed a hesitance in approving this method of monitoring waste oil tanks based on their questionable effectiveness in detecting leaks.

The estimated cost of installation of a dedicated electronic monitoring devise is \$3,000.00 - \$6,000.00 per tank.

4. A final concern is that the tank life (20 to 25 years) of the metal tanks may be significantly reduced due to the inductive ground current from the electric cars and tracks. It may simply not be worth the effort to retrofit a tank monitoring system to tanks which may be near the end of their life expectancy.

V. RECOMMENDATION FOR WASTE OIL TANKS

1. The most effective means of providing adequate leak protection is of course to remove the underground tank. However, the waste oil tanks are necessary to the BART operations. Under these circumstances, our recommendation is to (1) remove the metal tanks at the Richmond Shop, the Concord Shop, the Oakland Shop and the single walled fiberglass tank at the Hayward Shop; and (2) replace the tanks with double walled fiberglass tanks and double contained piping and an electronic leak detection devise with sensors located between the double walls that will automatically alarm if a leak occurs.

The estimated costs for removal and replacement of [the Oakland Shop

waste oil tank is \$7,500.00 - \$12,500.00. The estimated costs for removal and replacement at the waste oil tanks at the Concord Shop, Richmond Shop and Hayward Shop is \$8,000.00 - \$15,500.00.

The specification and associated drawings that may be used to seek a bid from a qualified contractor are presented in Appendix B.

VI. TANKS CONTAINING MOTOR FUEL

The Alameda County Health Agency - Division of Environmental Health has been designated as the agency responsible for the implementation of the underground storage tank regulations.

BART has four motor fuel tanks. The location and size of each tank are: (1) the Oakland Shop, 1 6,000 and 1 8,000 gallon gasoline, and 1 6,000 gallon diesel, and (2) the Metro Center, 1 4,000 gallon diesel. The fuel tanks at the Oakland Shop provide fuel to the BART automobiles and trucks. The Metro Center tank is used as an emergency fuel supply source for the Metro Center office complex. The two 6,000 gallon tanks at the Oakland Shop were installed in 1968 while the 8,000 gallon tank was installed in 1978. The 6,000 gallon tanks are approaching the life expectancy of a tank, estimated to be 20 to 25 years. However, this figure may be predicated on the local geological conditions. For example, tanks in dry soil and low acidity have a longer life expectancy than those in damp, acidic soils. The estimated life expectancy of a tank should be considered as a guide and not as an absolute figure. Indeed, many tanks remain in tact, free from leaks long after this period of time; however, the risk for leaks does increase, also. Our first recommendation is based on information that the tanks are in good working order and that the tanks are free of problems.

VII. AVAILABLE OPTIONS FOR MOTOR FUEL TANKS

Several options are available for monitoring motor fuel tanks. The appropriate options will be discussed here with an estimate of the costs for each option.

1. Annual tank testing, inventory reconciliation, and pipeline leak detectors. Motor fuel tanks must be tested on an annual basis, inventory must be reconciled daily, and pipeline leak detectors installed that have a visual or an audible alarm. Tank testing under this option requires that the tanks be full of motor fuel before they can be tested.

The estimated costs for annual tank testing approximate \$500.00 per tank, \$6000.00 - \$9000.00 for pipeline tank detectors plus labor costs for inventory reconciliation.

2. Vapor and groundwater monitoring wells. The number of wells required is based on the tank size and depth to groundwater. In the Oakland Shop and Metro Shop area, groundwater is less than 50 feet and all of the tanks are greater than 1000 gallons, thus, a total of five wells, three at the Oakland Shop and two at the Metro Center, will be required to satisfy agency requirements governing groundwater monitoring. As stated above in regard to waste oil tanks, the choice of this option for motor fuel tanks requires that a qualified person be given the responsibility

of sampling the well, keeping accurate records, and semi-annually testing the water sample.

It is our understanding that the use of monitoring wells at the BART facilities may present a personnel problem in that the duties would need to be specified in a particular job and if this were not desirable, then an outside entity would be contracted to perform the necessary monitoring.

The estimated cost for installation of groundwater monitoring well is: \$2,000.00 - \$3,000.00 per well plus personnel costs to monitor the well. Groundwater sample costs are estimated at \$100.00 - \$150.00 per well on a semi-annual basis.

3. Continuous electronic monitoring. The use of electronic monitoring devices that monitor vapor levels in the tank backfill alerting the facility of a leak, are an acceptable method of monitoring an underground tank in cases where vapors given off by the tank contents will be sufficient to be detected by the monitoring system. They are quite effective for monitoring relatively high vapor products such as motor fuels.

The estimated cost of installation of a dedicated electronic monitoring device for the Metro Center motor fuel tank is \$3,000.00 - \$6,000.00, and \$8,500.00 - \$11,000.00 for the Oakland Center fuel tanks.

VIII. RECOMMENDATIONS FOR MOTOR FUEL TANKS

1. The retrofit monitoring system option most suitable for the BART single wall fuel tanks should incorporate an electronic continuous groundwater monitoring and/or vapor monitoring system. The location of the wells specified in the [Oakland Shop and the Metro Center drawings is the minimum number of wells that we judge to be sufficient and that comply with the State monitoring alternatives. However, there are dedicated systems that allow for more monitoring ports.

The estimated costs for installation of a continuous dedicated monitoring system at the Metro Center is \$3,000.00 - \$6,000.00, and \$8,500.00 - \$11,000.00 for the [Oakland Shop site.

DRAWING NUMBER

APPENDIX A.

DETERMINATION OF TOXICITY OF A 1 PERCENT OXALIC ACID SOLUTION

Prepared for AquaScience Engineers
By John Hambrow-Beach, Toxicologist

Underground storage tanks containing hazardous materials must be monitored according to the guidelines set forth by Sher bill. Materials defined as hazardous, and the properties making them hazardous, are listed in the California Administrative Code, Title 22 (Social Security), Division 4 (Environmental Health), Chapter 30 (Minimum Standards for Management of Hazardous and Extremely Hazardous Wastes), Article 9 (Hazardous Wastes and Hazardous Materials), Section 66680 (Lists of Chemical Names and Common Names). Criteria for delisting materials on the basis of toxicity are defined in Article 11 (Criteria for Identification of Hazardous and Extremely Hazardous Waste), Section 66696 (Toxicity Criteria). In this section, a waste is defined as hazardous if it: (1) has an acute oral LD50 of less than 5000 milligrams per kilogram (mg/kg); (2) has an acute dermal LD50 of less than 4300 mg/kg; or (3) has an acute inhalation LD50 of less than 10,000 ppm as a gas or vapor, or has an acute aquatic 96-hour LC50 less than 500 mg/l measured in soft water, using fathead minnows, rainbow trout, or golden shiners, in the standard APHA bioassay procedure. Provisions are made for evaluating the toxicity of mixtures containing toxic materials, with adjustments made for the concentration of the toxicant in the mixture. A material may be delisted if it is not toxic using these criteria.

The material contained in the tanks in question is a 1 percent solution (by weight) of oxalic acid in water. Oxalic acid is listed in Title 22 as a hazardous material, with toxicity being the hazardous property. This evaluation was made to determine if this oxalic acid solution may be delisted as nonhazardous, based on toxicity.

The acute oral LD50 (in the rat) of oxalic acid in aqueous solutions is 475 mg oxalic acid per kg body weight (mg/kg) (1). Using the equation listed in Article 11, Section 66696, for calculating the acute oral or dermal LD50 for a mixture, the toxicity of a 1 percent aqueous solution of oxalic acid is 47,500 mg/kg. This value is greater than the criterion value of 5000 mg/kg, (nontoxic).

The dermal toxicity of oxalic acid solutions is low also, although no experimental data is available. Since oxalic acid is ionic under most conditions, percutaneous absorption would be expected to be very low. Supporting that contention is the fact that workers are routinely exposed to solutions of 10 percent oxalic acid in water, without protection (2). Caution is suggested for prolonged exposures of 5-10 percent solutions, as skin irritation may occur (2). This indicates that toxicity by the dermal route is not significant.

The vapor pressure for oxalic acid is very low, and as with all ionic species, even lower when in dilute aqueous solutions. Airborne oxalic acid is only considered important as a dust or aerosol (2). Again, routine workplace exposure evidence indicates that toxicity by the inhalation route is insignificant.

A computerized literature search showed no data available for the species listed under the aquatic toxicity testing requirements. The only toxicity data found used Artemia salina L. (brine shrimp) larvae, and indicated the LC50 for these marine organisms is greater than 1500 mg/l for oxalic acid (3), and 150,000 mg/l for the 1 percent oxalic acid solution, both over the 500 mg/l criterion specified in Title 22.

These data indicate that a solution of 1 percent oxalic acid in water should not be classified as a hazardous material under the Title 22 guidelines.

(Register 84, No. 2-1-12-85)

- (b) Requests for waiver shall be made in writing and shall include:
- (1) A description of the processing method used.
 - (2) A chemical analysis of the waste before and after treatment.
 - (3) The volume of the waste before and after treatment.
 - (4) The volumes and compositions of any hazardous residues which are removed from the waste or which are generated as result of treatment of the waste.
 - (5) The method to be used for disposal of the treated waste and of any residues.
- (c) The Department may obtain and analyze samples of the waste collected before and after treatment.
- (d) The Department shall continue, grant or deny each request within 30 days.
- (e) The Department may waive the fee for disposal of a waste for a period up to 12 months, provided the treatment and disposal method and the chemical composition of the waste do not change during that period.

Article 9. Hazardous Wastes and Hazardous Materials

66680. Lists of Chemical Names and Common Names.

(a) A waste that meets the definition of hazardous waste presented in Section 25117 of the Health and Safety Code or satisfies any of the criteria of hazardous waste presented in Article 11 of this chapter shall be considered a hazardous waste whether or not the waste is cited in this article. Such a waste shall be handled and disposed of according to the provisions of this chapter.

(b) A waste that meets the definition of extremely hazardous waste presented in Section 25115 of the Health and Safety Code or satisfies any of the criteria of extremely hazardous waste presented in Article 11 of this chapter shall be considered an extremely hazardous waste whether or not the waste is cited in this article. Such a waste shall be handled and disposed of according to the provisions of this chapter.

(c) The potential hazardous property of a material cited in the List of Chemical Names or the List of Common Names is indicated in the list as follows: (T) toxic, (C) corrosive, (F) ignitable and (R) reactive. An asterisk (*) in Section 66680(d) denotes an extremely hazardous waste. All letters in trademark names are capitalized.

(d) List of Chemical Names:

- 477A. *Methomyl, LANNATE, S-Methyl-N-((methyl-carbamoyl)oxy)thioacetimidate (T)
- 477B. *Methoxychlor; 1,1,1-Trichloro-2, 2-bis(p-methoxyphenyl)ethane, CHEMFLOM, MARLATE (T)
- 478. *Methoxyethylmercuric chloride, AGALLOL, ARETAN (T)
- 479. Methyl acetate (T,F)
- 480. Methyl acetone (Mixture of acetone, methyl acetate, and methyl alcohol) (T,F)
- 481. Methyl alcohol, Methanol (T,F)
- 482. *Methylaluminum sesquibromide (F,R)
- 483. *Methylaluminum sesquichloride (F,R)
- 484. Methylamine, Aminomethane (T,F)
- 485. N-Methylaniline (T)
- 486. *Methyl bromide, Bromomethane (T)
- 487. 2-Methyl-1-butene (F)
- 488. 3-Methyl-1-butene (F)
- 489. Methyl butyl ether (and isomers) (T,F)
- 490. Methyl butyrate (and isomers) (T,F)
- 491. Methyl chloride, Chloromethane (T,F)
- 492. *Methyl chloroformate, Methyl chlorocarbonate (T,F,R)
- 493. *Methyl chloromethyl ether, CMME (T,F)
- 494. Methylcyclohexane (T,F)
- 495. *Methyldichloroarsine (T)
- 496. *Methyldichlorosilane (T,F,R)
- 497. *4,4-Methylene bis(2-chloroaniline), MOCA (T)
- 498. Methyl ethyl ether (T,F)
- 499. Methyl ethyl ketone, 2-Butanone (T,F)
- 500. Methyl ethyl ketone peroxide (T,F)
- 501. Methyl formate (T,F)
- 502. *Methyl hydrazine, Monomethyl hydrazine, MMH (T,F)
- 503. *Methyl isocyanate (T,F)
- 504. Methyl isopropenyl ketone, 3-Methyl-3-butene-2-one (T,F)
- 505. *Methylmagnesium bromide (C,F,R)
- 506. *Methylmagnesium chloride (C,F,R)
- 507. *Methylmagnesium iodide (C,F,R)
- 508. Methyl mercaptan, Methanethiol (T,F)
- 509. Methyl methacrylate (monomer) (T,F)
- 510. *Methyl parathion; O,O-Dimethyl-O-para-nitrophenylphosphorothioate (T)
- 511. Methyl propionate (F)
- 512. *Methyltrichlorosilane (T,C,F,R)
- 513. Methyl valerate, Methyl pentanoate (and isomers) (F)
- 514. Methyl vinyl ketone, 3-Butene-2-one (T,F)
- 515A. *Mevinphos, PHOSDRIN, 2-Carbomethoxy-1-methylvinyl dimethyl phosphate (T)
- 515B. *Mirex; 1,1a,2,2,3,3a,4,5,5,5a,5b,6-Dodecachlorooctahydro-1, 3, 4-metheno-1H-cyclobuta (cd) pentalene, Dechlorane (T)

- 516. *MOCAP, O-Ethyl-S,S-dipropyl phosphorodithioate (T)
- 517. Molybdenum (powder) (F)
- 518. Molybdenum trioxide, Molybdenum anhydride (T)
- 519. Molybdic acid and salts (T)
- 520. Monochloroacetic acid, Chloroacetic acid, MCA (T,C)
- 521. Monochloroacetone, Chloroacetone, 1-Chloro-2-propanone (T)
- 522. Monofluorophosphoric acid (T,C)
- 523. Naphtha (of petroleum or coal tar origin), Petroleum ether, Petroleum naphtha (T,F)
- 524. Naphthalene (T,S)
- 525. *alpha-Naphthylamine, 1-NA (T)
- 526. *beta-Naphthylamine, 2-NA (T)
- 527. Neohexane; 2,2-Dimethylbutane (T,F)
- 528. Nickel (powder) (T,F)
- 529. Nickel acetate (T)
- 530. Nickel antimonide (T)
- 531. *Nickel arsenate, Nickelous arsenate (T)
- 532. *Nickel carbonyl, Nickel tetracarbonyl (T)
- 533. Nickel chloride, Nickelous chloride (T)
- 534. *Nickel cyanide (T)
- 535. Nickel nitrate, Nickelous nitrate (T,F,R)
- 536. Nickel selenide (T)
- 537. Nickel sulfate (T)
- 538. Nicotine, beta-pyridyl-alpha-N-methyl pyrrolidine (T)
- 539. Nicotine salts (T)
- 540. Nitric acid (T,C,F)
- 541. Nitroaniline, Nitraniline (ortho, meta, para) (T,R)
- 542. *Nitrobenzol, Nitrobenzene (T)
- 543. *4-Nitrobiphenyl, 4-NBP (T)
- 544. Nitro carbo nitrate (F,R)
- 545. Nitrocellulose, Cellulose nitrate, Guncotton, Pyroxylin, Collodion, Pyroxylin (nitrocellulose) in ether and alcohol (F,R)
- 546. Nitrochlorobenzene, Chloronitrobenzene (ortho,meta,para) (T)
- 547. Nitrogen mustard (T,C)
- 548. Nitrogen tetroxide, Nitrogen dioxide (T,F)
- 549. Nitroglycerin, Trinitroglycerin (T,F,R)
- 550. Nitrohydrochloric acid, Aqua regia (T,C,F)
- 551. *Nitrophenol (ortho, meta, para) (T)
- 552. *N-Nitrosodimethylamine, Dimethyl nitrosoamine (T)
- 553. Nitrosoguanidine (R)
- 554. Nitrostarch, Starch nitrate (F,R)
- 555. Nitroxylol, Nitroxylene, Dimethylnitrobenzene (2,4-,3,4-,2,5-isomers) (T)
- 556. 1-Nonene, 1-Nonylene (and isomers) (T,F)
- 557. *Nonyltrichlorosilane (T,R)
- 558. *Octadecyltrichlorosilane (T,R)
- 559. n-Octane (and isomers) (T,F)
- 560. 1-Octene, 1-Caprylene (T,F)

- 561. *Octyltrichlorosilane (T,R)
- 563. *Oleum, Fuming sulfuric acid (T,C,R)
- 565. Osmium compounds (T)
- 566. Oxalic acid (T)
- 567. *Oxygen difluoride (T,C,R)
- 568. *Para-oxon, MINTACOL; O,O-Diethyl-O-para-nitrophenyl phosphate (T)
- 569. *Parathion; O,O-Diethyl-O-para-nitrophenyl phosphorothioate (T)
- 570A. *Pentaborane (T,F,R)
- 570B. Pentachlorophenol, PCP, DOWICIDE 7 (T)
- 571. Pentaerythrite tetranitrate, Pentaerythritol tetranitrate (R)
- 572. n-Pentane (and isomers) (T,F)
- 573. 2-Pentanone, Methyl propyl ketone (and isomers) (T,F)
- 574. Peracetic acid, Peroxyacetic acid (T,C,F,R)
- 575. Perchloric acid (T,C,F,R)
- 576. Perchloroethylene, Tetrachloroethylene (T)
- 577. *Perchloromethyl mercaptan, Trichloromethylsulfenyl chloride (T)
- 578. Perchloryl fluoride (T,C,F)
- 580. Phenol, Carboic acid (T,C)
- 581. *Phenyldichloroarsine (T,I)
- 582. Phenylenediamine, Diaminobenzene (ortho,meta,para) (T)
- 583. Phenylhydrazine hydrochloride (T)
- 584. *Phenylphenol, Orthozenol, DOWICIDE I (T)
- 585. *Phenyltrichlorosilane (T,R)
- 586. *Phorate, THIMET; O,O-Diethyl-S-[(Ethylthio) methyl] phosphorodithioate (T)
- 587. *Phosfolan, CYOLAN, 2-(Diethoxyphosphinylimino)-1,3-dithiolane (T)
- 588. *Phosgene, Carbonyl chloride (T,R)
- 589. *Phosphamidon, DIMECRON, 2-Chloro-2-diethylcarbamoyl-1-methylvinyl dimethyl phosphate (T)
- 590. *Phosphine, Hydrogen phosphide (T,F)
- 591. Phosphoric acid (C)
- 592. Phosphoric anhydride, Phosphorus pentoxide (C,F)
- 593. Phosphorus (amorphous, red) (T,F,R)
- 594. *Phosphorus (white or yellow) (T,F,R)
- 595. *Phosphorus oxybromide, Phosphoryl bromide (T,C,R)
- 596. *Phosphorus oxychloride, Phosphoryl chloride (T,C,R)
- 597. *Phosphorus pentachloride, Phosphoric chloride (T,C,F,R)
- 598. *Phosphorus pentasulfide, Phosphoric sulfide (T,C,F,R)
- 599. *Phosphorus sesquisulfide, Tetraphosphorus trisulfide (T,C,F,R)
- 600. *Phosphorus tribromide (T,C,R)
- 601. *Phosphorus trichloride (T,C,R)
- 602. Picramide, Trinitroaniline (T,R)
- 603. Picric acid, Trinitrophenol (T,R)
- 604. Picryl chloride, 2-Chloro-1,3,5-trinitrobenzene (T,R)
- 605. *Platinum compounds (T)
- 606. *Polychlorinated biphenyls, PCB, Askarel, AROCLOR, CHLOREX-TOL, INERTEEN, PYRANOL (T)

- 607. Polyvinyl nitrate (F,R)
- 608. POTASAN; O,O-Diethyl-O-(4-methylumbelliferone) phosphorothioate (T)
- 609. *Potassium (C,F,R)
- 610. *Potassium arsenate (T)
- 611. *Potassium arsenite (T)
- 612. *Potassium bifluoride, Potassium acid fluoride (T,C)
- 613. Potassium binoxalate, Potassium acid oxalate (T)
- 614. Potassium bromate (T,F)
- 615. *Potassium cyanide (T)
- 616. Potassium dichloroisocyanurate (T,F)
- 617. Potassium dichromate, Potassium bichromate (T,C,F)
- 619. Potassium fluoride (T)
- 620. *Potassium hydride (C,F,R)
- 621. Potassium hydroxide, Caustic potash (T,C)
- 622. Potassium nitrate, Saltpeter (F,R)
- 623. Potassium nitrite (F,R)
- 624. Potassium oxalate (T)
- 625. Potassium perchlorate (T,F,R)
- 626. Potassium permanganate (T,C,F)
- 627. Potassium peroxide (C,F,R)
- 628. Potassium sulfide (T,F)
- 629. *Propargyl bromide, 3-Bromo-1-propyne (T,F)
- 630. *beta-Propiolactone, BPL (T)
- 631. Propionaldehyde, Propanal (T,F)
- 632. Propionic acid, Propanoic acid (T,C,F)
- 633. n-Propyl acetate (T,F)
- 634. n-Propyl alcohol, 1-Propanol (T,F)
- 635. n-Propylamine (and isomers) (T,F)
- 636. *Propyleneimine, 2-Methylaziridine (T,F)
- 637. Propylene oxide (T,F)
- 638. n-Propyl formate (T,F)
- 639. n-Propyl mercaptan, 1-Propanethiol (T,F)
- 640. *n-Propyltrichlorosilane (T,C,F,R)
- 641. *Prothoate, FOSTION, FAC; O,O-Diethyl-S-carboethoxyethyl phosphorodithioate (T)
- 642. Pyridine (T,F)
- 643. *Pyrosulfuryl chloride, Disulfuryl chloride (T,C,R)
- 644. *Quinone; 1,4-Benzoquinone (T)
- 645. Raney nickel (F)
- 646. *Schradan, Octamethyl pyrophosphoramidate, OMPA (T)
- 647A. *Selenium (T)
- 647B. *Selenium compounds (T)
- 648. *Selenium fluoride (T)
- 649. *Selenous acid, Selenious acid and salts (T)
- 650. *Silicon tetrachloride, Silicon chloride (T,C,R)
- 651. *Silver acetylide (T,R)
- 652. Silver azide (T,R)
- 653. Silver compounds (T)

- 744. Trichloroethylene; Trichlorethene (T)
- 745. Trichloroisocyanuric acid (T,I,F)
- 746. *2,4,5-Trichlorophenoxyacetic acid; 2,4,5-T (T)
- 747. *Trichlorosilane, Silicochloroform (T,C,F,R)
- 748. Trimethylamine, TMA (T,F)
- 749. Trinitroanisole; 2,4,6-Trinitrophenyl methyl ether (T,R)
- 750. 1,3,5-Trinitrobenzene, TNB (T,R)
- 751. 2,4,6-Trinitrobenzoic acid (T,R)
- 752. Trinitronaphthalene, Naphtite (T,R)
- 753. 2,4,6-Trinitroresorcinol, Styphnic acid (T,R)
- 754. 2,4,6-Trinitrotoluene, TNT (T,F,R)
- 755. *tris(1-Aziridinyl) phosphine oxide, Triethylenephosphoramidate, TEPA (T)
- 756. Tungstic acid and salts (T)
- 757. Turpentine (T,F)
- 758. Uranyl nitrate, Uranium nitrate (T,F,R)
- 759. Urea nitrate (T,F,R)
- 760. n-Valeraldehyde, n-Pentanal (and isomers) (T,F)
- 761. Vanadic acid salts (T)
- 762. Vanadium oxytrichloride (T,C)
- 763. *Vanadium pentoxide, Vanadic acid anhydride (T)
- 764. Vanadium tetrachloride (T,C)
- 765. Vanadium tetraoxide (T)
- 766. Vanadium trioxide, Vanadium sesquioxide (T)
- 767. Vanadyl sulfate, Vanadium sulfate (T)
- 768. Vinyl acetate (F,T)
- 769. *Vinyl chloride (T,F)
- 770. Vinyl ethyl ether (F)
- 771. Vinylidene chloride, VC (T,F)
- 772. Vinyl isopropyl ether (F)
- 773. *Vinyltrichlorosilane (T,C,F,R)
- 774. VX, O-Ethyl methyl phosphoryl N,N-diisopropyl thiocholine (T)
- 775. *WEPSYN 155, WP 155, Triamiphos, para-(5-Amino-3-phenyl-1H-1,2,4-triazol-1-yl)-N,N,N',N'-tetramethyl phosphonic diamide (T)
- 776. Xylene, Dimethylbenzene (ortho,meta,para) (T,F)
- 777. Zinc (powder) (F)
- 778. Zinc ammonium nitrate (T,F)
- 779. *Zinc arsenate (T)
- 780. *Zinc arsenite (T)
- 781. Zinc chloride (T,C)
- 782. Zinc compounds (T)
- 783. *Zinc cyanide (T)
- 784. Zinc nitrate (T,F,R)
- 785. Zinc permanganate (T,F)
- 786. Zinc peroxide, Zinc dioxide (T,F,R)
- 787. *Zinc phosphide (T,F,R)
- 788. Zinc sulfate (T)
- 789. Zirconium (powder) (F)
- 790. *Zirconium chloride, Zirconium tetrachloride (T,C,R)
- 791. Zirconium picramate (F)

(e) List of Common Names. In this subsection a dagger denotes the common name of a waste which comes under the provisions of this chapter if it contains a hazardous material.

- Acetylene sludge (C)
- Acid and water (C)
- Acid sludge (C)
- AFU Floc (T)
- Alkaline caustic liquids (C)
- Alkaline cleaner (C)
- Alkaline corrosive battery fluid (C)
- Alkaline corrosive liquids (C)
- Asbestos waste (T)
- Ashes (T,C)
- Bag house wastes†
- Battery acid (C)
- Beryllium waste (T)
- Bilge water (T)
- Boiler cleaning waste (T,C)
- Bunker Oil (T,F)
- Catalyst†
- Caustic sludge (C)
- Caustic wastewater (C)
- Chemical cleaners†
- Chemical toilet waste†
- Cleaning solvents (F)
- Corrosion inhibitor (T,C)
- Data processing fluid (F)
- Drilling fluids†
- Drilling mud†
- Dyes†
- Etching acid liquid or solvent (C,F)
- Fly ash (T,C)
- Fuel waste (T,F)
- Insecticides (T)
- Laboratory waste†
- Lime and sulfur sludge (C)
- Lime and water (C)
- Lime sludge (C)
- Lime wastewater (C)
- Liquid cement†
- Liquid cleaning compounds†
- Mine tailings†
- Obsolete explosives (R)
- Oil and water (T)
- Oil Ash (T,C)
- Paint (or varnish) remover or stripper (F)
- Paint thinner (T,F)
- Paint waste (or slops) (T,F)

- 654. Silver nitrate (T)
- 655. Silver styphnate, Silver trinitroresorcinate (T,R)
- 656. Silver tetrazene (T,R)
- 657. *Sodium (C,F,R)
- 658. Sodium aluminate (C)
- 659. *Sodium aluminum hydride (C,F,R)
- 660. *Sodium amide, Sodamide (C,F,R)
- 661. *Sodium arsenate (T)
- 662. *Sodium arsenite (T)
- 663. Sodium azide (T,R)
- 664. *Sodium bifluoride, Sodium acid fluoride (T,C)
- 665. Sodium bromate (T,F)
- 666. *Sodium cacodylate, Sodium dimethylarsenate (T)
- 667. Sodium carbonate peroxide (F)
- 668. Sodium chlorate (T,F)
- 669. Sodium chlorite (T,F)
- 670. Sodium chromate (T,C)
- 671. *Sodium cyanide (T)
- 672. Sodium dichloroisocyanurate (F)
- 673. Sodium dichromate, Sodium bichromate (T,C,F)
- 674. Sodium fluoride (T)
- 675. *Sodium hydride (T,C,F,R)
- 676. Sodium hydrosulfite, Sodium hyposulfite (F)
- 677. Sodium hydroxide, Caustic soda, Lye (T,C)
- 678. *Sodium hypochlorite (T,F,R)
- 679. *Sodium methylate, Sodium methoxide (C,F,R)
- 680. Sodium molybdate (T)
- 681. Sodium nitrate, Soda niter (T,F,R)
- 682. Sodium nitrite (T,F,R)
- 683. Sodium oxide, Sodium monoxide (T,C)
- 684. Sodium perchlorate (T,F,R)
- 685. Sodium permanganate (T,F)
- 686. *Sodium peroxide (T,F,R)
- 687. Sodium picramate (T,F,R)
- 688. *Sodium potassium alloy, NaK,Naack (C,F,R)
- 689. *Sodium selenate (T)
- 690. Sodium sulfide, Sodium hydrosulfide (T,F)
- 691. Sodium thiocyanate, Sodium sulfocyanate (T)
- 692. Stannic chloride, Tin tetrachloride (T,C)
- 693. *Strontium arsenate (T)
- 694. Strontium nitrate (T,F,R)
- 695. Strontium peroxide, Strontium dioxide (F,R)
- 696. *Strychnine and salts (T)
- 697. Styrene, Vinylbenzene (T,F)
- 698. Succinic acid peroxide (T,F)
- 699. Sulfide salts (soluble) (T)
- 700. *Sulfotepp, DITHIONE, BLADAFUM, Tetraethyl dithiopyrophosphate, TEDP (T)
- 701. *Sulfur chloride, Sulfur monochloride (T,C,R)

- 702. *Sulfur mustard (T,C,R)
- 703. *Sulfur pentafluoride (T,C)
- 704. Sulfur trioxide, Sulfuric anhydride (T,C,F)
- 705. Sulfuric acid, Oil of vitriol, Battery acid (T,C)
- 706. Sulfurous acid (T,C)
- 707. *Sulfuryl chloride, Sulfonyl chloride (T,C,R)
- 708. *Sulfuryl fluoride, Sulfonyl fluoride (T,C,R)
- 709. *SUPRACIDE, ULTRACIDE, S-[5-Methoxy-2-oxo-1,3,4-thiadiazol-3(2H)-yl) methyl]-O,O-dimethyl phosphorodithioate (T)
- 710. *SURECIDE, Cyanophenphos, O-para-Cyanophenyl-O-ethyl phenyl phosphonothioate (T)
- 711. *Tellurium hexafluoride (T,C)
- 712. *TELODRIN, Isobenzan; 1,3,4,5,6,7,8,8-Octachloro-1,3,3a,4,7,7a-hexahydro-4,7-methanoisobenzofuran (T)
- 713. *TEMIK, Aldicarb, 2-Methyl-2(methylthio) propionaldehyde-O-(methylcarbamoyl) oxime (T)
- 714. *2,3,7,8-Tetrachlorodibenzo-para-dioxin, TCDD, Dioxin (T)
- 715. sym-Tetrachloroethane (T)
- 717. *Tetraethyl lead, TEL (and other organic lead) (T,F)
- 718. *Tetraethyl pyrophosphate, TEPP (T)
- 719A. Tetrahydrofuran, THF (T,F)
- 719B. Tetrahydrophthalic anhydride, Memtetrahydrophthalic anhydride (T)
- 720. TETRALIN, Tetrahydronaphthalene (T)
- 721. Tetramethyl lead, TML (T,F)
- 722. *Tetramethyl succinonitrile (T)
- 723. *Tetranitromethane (T,F,R)
- 724. *Tetrasul, ANIMERT V-101, S-para-Chlorophenyl-2,4,5-trichlorophenyl sulfide (T)
- 725. Tetrazene, 4-Amidino-1-(nitrosamino-amidino)-1-tetrazene (T,R)
- 726. *Thallium (T)
- 727. *Thallium compounds (T)
- 728. *Thallosulfate, Thallium sulfate, RATOX (T)
- 729. *Thiocarbonylchloride, Thiophosgene (T,C,R)
- 730. *Thionazin, ZINOPHOS; O,O-Tetramethylthiuram monosulfide (T)
- 731. *Thionyl chloride, Sulfur oxychloride (T,C,R)
- 732. *Thiophosphoryl chloride (T,C,R)
- 733. Thorium (powder) (F)
- 734. Tin compounds (organic) (T)
- 735. Titanium (powder) (F)
- 736. Titanium sulfate (T)
- 737. *Titanium tetrachloride, Titanic chloride (T,C,R)
- 738. Toluene, Methylbenzene (T,F)
- 739. *Toluene-2,4-diisocyanate, TDI (T,R)
- 740A. Toluidine, Aminotoluene (ortho,meta,para) (T)
- 740B. *Toxaphene, Polychlorocamphene (T)
- 741. *TRANID, exo-3-Chloro-endo-6-cyano-2-norbornanone-O-(methylcarbamoyl) oxime (T)
- 743. 1,1,2-Trichloroethane (T)

Pickling liquor (C)
Pigments†
Plating waste (T,C)
Printing Ink†
Retrograde explosives (R)
Sludge acid (C)
Soda ash (C)
Solvents (F)
Spent acid (C)
Spent caustic (C)
Spent (or waste) cyanide solutions (T,C)
Spent mixed acid (C)
Spent plating solution (T,C)
Spent sulfuric acid (C)
Stripping solution (T,F)
Sulfonation oil (F)
Tank bottom sediment†
Tank cleaning sludges†
Tanning sludges (T)
Toxic chemical toilet wastes (T)
Unrinsed pesticide containers (T)
Unwanted or waste pesticides—an unusable portion of active ingredient or undiluted formulation (T)
Waste chemicals†
Waste exopides†
Waste (or slop) oil (T)
Weed Killer (T)

NOTE: Authority cited: Sections 208, 25141 and 25150, Health and Safety Code. Reference: Sections 25140 and 25141, Health and Safety Code.

HISTORY:

1. Amendment filed 9-27-84; effective thirtieth day thereafter (Register 84, No. 41).
2. Editorial correction of subsection (d) and NOTE filed 10-5-84; designated effective 10-27-84 (Register 84, No. 41)

Article 10. Extremely Hazardous Wastes and Extremely Hazardous Materials

66685. List of Extremely Hazardous Wastes.

NOTE: Authority cited: Sections 208, 25141 and 25150, Health and Safety Code. Reference: Section 25141, Health and Safety Code.

HISTORY:

1. Repealer of Article 10 (Section 66685) filed 9-27-84; effective thirtieth day thereafter (Register 84, No. 41).

Article 11. Criteria for Identification of Hazardous and Extremely Hazardous Wastes

66693. Applicability of Hazardous Waste Criteria.

Any waste which is hazardous pursuant to any of the criteria set forth in this article is a hazardous waste and shall be managed in accordance with the provisions of this chapter.

NOTE: Authority cited: Sections 208, 25141 and 25150, Health and Safety Code. Reference: Section 25141, Health and Safety Code.

HISTORY:

1. New Article 11 (Sections 66693-66723, not consecutive) filed 9-27-84; effective thirtieth day thereafter (Register 84, No. 41).

66694. Sampling and Sample Management.

Sampling and sample management of the wastes and other materials for analysis and testing pursuant to the criteria of this article shall be in accord with the sampling planning, methodology and equipment, and the sample processing, documentation and custody procedures specified in Section One of "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW-846, 2nd edition, U.S. Environmental Protection Agency, 1982.

NOTE: Authority cited: Sections 208, 25141 and 25150, Health and Safety Code. Reference: Section 25141, Health and Safety Code.

HISTORY:

1. Editorial correction filed 10-5-84; designated effective 10-27-84 (Register 84, No. 41).

66696. Toxicity Criteria.

- (a) A waste, or a material, is toxic and hazardous if it:
- (1) Has an acute oral LD₅₀ less than 5,000 milligrams per kilogram; or
 - (2) Has an acute dermal LD₅₀ less than 4,300 milligrams per kilogram; or
 - (3) Has an acute inhalation LC₅₀ less than 10,000 parts per million as a gas or vapor; or
 - (4) Has an acute aquatic 96-hour LC₅₀ less than 500 milligrams per liter when measured in soft water (total hardness 40 to 48 milligrams per liter of calcium carbonate) with fathead minnows (*Pimephales promelas*), rainbow trout (*Salmo gairdneri*) or golden shiners (*Notemigonus crysoleucas*) according to procedures described in Part 800 of "Standard Methods for the Examination of Water and Wastewater (15th Edition)", American Public Health Association, 1981, or by other test methods or test fish approved by the Department, using test samples prepared or meeting the conditions for testing as prescribed in Section 66700(c) and (d), and solubilized, suspended, dispersed or emulsified by the procedures recommended in Part 800 of the cited text or by other methods approved by the Department; or
 - (5) Contains any of the following substances at a single or combined concentration equal to or exceeding 0.001 percent by weight:
 - (A) 2-Acetylaminofluorene (2-AAF)
 - (B) Acrylonitrile
 - (C) 4-Aminodiphenyl
 - (D) Benzidine and its salts
 - (E) bis (Chloromethyl) ether (BCME)
 - (F) Methyl chloromethyl ether
 - (G) 1,2-Dibromo-3-chloropropane (DBCP)
 - (H) 3,3'-Dichlorobenzidine and its salts (DCB)
 - (I) 4-Dimethylaminoazobenzene (DAB)
 - (J) Ethyleneimine (EL)
 - (K) *o*-Naphthylamine (1-NA)

- (M) 4-Nitrobiphenyl (4-NBP)
- (N) N-Nitrosodimethylamine (DMN)
- (O) β-Propiolactone (BPL)
- (P) Vinyl chloride (VCM); or

(6) Has been shown through experience or testing to pose a hazard to human health or environment because of its carcinogenicity, acute toxicity, chronic toxicity, bioaccumulative properties or persistence in the environment; or

(7) Is listed in 40 CFR 261 (codified July 1, 1982) as a hazardous waste which is:

- (A) From a nonspecific source listed in Section 261.31; or
- (B) From a specific source listed in Section 261.32; or
- (C) An acute hazardous commercial chemical product or manufacturing chemical intermediate listed in Section 261.33(e); or
- (D) A toxic commercial chemical product or manufacturing chemical intermediate listed in Section 261.33(f).

(b) A waste containing one or more materials which are toxic according to the criterion of subsection (a) (3) of this section may be classified as nonhazardous pursuant to Section 66305 if the waste is not hazardous by any other criterion of this article and its head space vapor contains no such toxic materials in concentrations exceeding their respective eight-hour inhalation LC_{50} or their LC_{LO} . The head space vapor of a waste shall be prepared, and two milliliters of it shall be sampled using a five milliliter gas-tight syringe, according to method 5020 in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW-846, 2nd edition, U.S. Environmental Protection Agency, 1982. The quantity of each material in milligrams, which is toxic according to the criterion of paragraph (a) (3) of this section, in the sampling syringe shall be determined by comparison to liquid standard solutions according to the appropriate gas chromatographic procedures in method 8010, 8015, 8020 or 8030 in "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods", SW-846, 2nd edition, U.S. Environmental Protection Agency, 1982. The concentration of each material in the head space vapor shall be calculated using the following equation:

$$C_A = \frac{Q_A}{MW} \times 29.8 \text{ ml/mole} \times \frac{1}{2 \times 10^{-6} \text{ M}^3}$$

where C_A (in parts per million) is the concentration of material A in head space vapor, Q_A (in milligrams) is the quantity of material A in sampling syringe and MW (in milligrams per millimole) is the molecular weight of material A. Where an eight-hour LC_{50} is not available, an LC_{50} measured for another time (t) may be converted to an eight-hour value with the following equation:

$$\text{Eight-hour } LC_{50} = (t/8) \times (t\text{-hour } LC_{50}).$$

(c) A waste containing one or more materials which are toxic according to any criterion of paragraph (a) (1) or (a) (2) of this section may be classified as nonhazardous pursuant to Section 66305 if the waste is not hazardous by any other criterion of this article and the calculated oral LD_{50} of the waste mixture is greater than 5,000 milligrams per kilogram and the calculated dermal LD_{50} is greater than 4,300 milligrams per kilogram by the following equation:

$$\text{Calculated oral or dermal } LD_{50} = \frac{100}{\sum_{x=1}^n \frac{\%Ax}{Ax}}$$

where %Ax is the weight percent of each component in the waste mixture and T_{Ax} is the acute oral or dermal LD_{50} or the acute oral LD_{LO} of each component.

NOTE: Authority cited: Sections 208, 25141 and 25150, Health and Safety Code. Reference: Section 25141, Health and Safety Code.

HISTORY:

1. Editorial correction filed 10-5-84; designated effective 10-27-84 (Register 84, No. 41).

66699. Persistent and Bioaccumulative Toxic Substance.

(a) Any waste is a hazardous waste which contains a substance listed in subsections (b) or (c) of this section:

- (1) at a concentration in milligrams per liter as determined pursuant to Section 66700 which exceeds its listed soluble threshold limit concentration, or
- (2) at a concentration in milligrams per kilogram in the waste which exceeds its listed total threshold limit concentration.

(b) List of Inorganic Persistent and Bioaccumulative Toxic Substances and Their Soluble Threshold Limit Concentration (STLC) and Total Threshold Limit Concentration (TTLC) Values.

Substance	STLC mg/l	TTLC Wet-Weight mg/kg
Antimony and/or antimony compounds.....	15	500
Arsenic and/or arsenic compounds	5.0	500
Asbestos	-	1.0 (as percent)
Barium and/or barium compounds (excluding barite)	100	10,000††
Beryllium and/or beryllium compounds.....	0.75	75
Cadmium and/or cadmium compounds	1.0	100
Chromium (VI) compounds	5	500
Chromium and/or chromium (III) compounds	560	2,500
Cobalt and/or cobalt compounds	80	8,000
Copper and/or copper compounds	25	2,500
Fluoride salts	180	18,000
Lead and/or lead compounds	5.0	1,000
Mercury and/or mercury compounds	0.2	20
Molybdenum and/or molybdenum compounds	350	3,500
Nickel and/or nickel compounds	20	2,000
Selenium and/or selenium compounds.....	1.0	100
Silver and/or silver compounds	5	500
Thallium and/or thallium compounds.....	7.0	700
Vanadium and/or vanadium compounds	24	2,400
Zinc and/or zinc compounds.....	250	5,000

* STLC and TTLC values are calculated on the concentrations of the elements, not the compounds.

† In the case of asbestos and elemental metals, applies only if they are in a friable, powdered or finely divided state. Asbestos includes chrysotile, amosite, crocidolite, tremolite, anthophyllite, and actinolite.

†† Excluding barium sulfate.

(c) List of Organic Persistent and Bioaccumulative Toxic Substances and Their Soluble Threshold Limit Concentration (STLC) and Total Threshold Limit Concentration (TTLC) Values.

Substance	STLC	TTLC
	mg/l	Wet Weight mg/kg
Aldrin	0.14	1.4
Chlordan	0.25	2.5
DDT, DDE, DDD	0.1	1.0
2,4-Dichlorophenoxyacetic acid	10	100
Dieldrin	0.8	8.0
Dioxin (2,3,7,8-TCDD)	0.001	0.01
Endrin	0.02	0.2
Heptachlor	0.47	4.7
Keponc	2.1	21
Lead compounds, organic	-	13
Lindane	0.4	4.0
Methoxychlor	10	100
Mirex	2.1	21
Pentachlorophenol	1.7	17
Polychlorinated biphenyls (PCBs)	5.0	50
Toxaphene	0.5	5
Trichloroethylene	204	2,040
2,4,5-Trichlorophenoxypropionic acid	1.0	10

NOTE: Authority cited: Sections 208, 25141 and 25150, Health and Safety Code. Reference: Section 25141, Health and Safety Code.

HISTORY:

66700. Waste Extraction Test (WET).

(a) The WET described in this section shall be used to determine the amount of extractable substance in a waste or other material as set forth in Section 66699(a).

(b) Except as provided in Section 66700(d), the WET shall be carried out if the total concentration in the waste, or other material, of any substance listed in Section 66699 equals or exceeds the STLC value, but does not exceed the TTLC value, given for that substance. The total concentrations of substances listed in Section 66699 shall be determined by analysis of samples of wastes, or other materials, which have been prepared, or meet the conditions, for analysis as set forth in subsections (c) and (d) of this section. Methods used for analysis for total concentrations of substances listed in Section 66699 shall be those given in the following documents or alternate methods that have been approved by the Department pursuant to Section 66310(e):

(1) For metal elements and their compounds, the waste shall be digested according to the indicated methods described in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW-846, 2nd edition, U.S. Environmental Protection Agency, 1982:

(A) All listed metal elements and their compounds, except hexavalent chromium: Method 3050.

(B) Hexavalent chromium: Method 3060.

(2) For the following substances, the indicated methods as described in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW-846, 2nd edition, U.S. Environmental Protection Agency, 1982 shall be utilized:

(A) Antimony: Method 7040 or Method 7041.

(B) Arsenic: Method 7060 or Method 7061.

(C) Barium: Method 7080 or Method 7081.

(D) Cadmium: Method 7131.

(E) Total chromium: Method 7190.

(F) Hexavalent chromium: Method 7195, Method 7196 or Method 7197.

(G) Lead: Method 7421.

(H) Mercury: Method 7470 or Method 7471.

(I) Nickel: Method 7520 or Method 7521.

(J) Selenium: Method 7740 or Method 7741.

(K) Silver: Method 7760 or Method 7761.

(L) Trichloroethylene: Method 8010 or Method 8240.

(M) Pentachlorophenol: Method 8040, Method 8250 or Method 8270.

(N) Aldrin, Lindane, Chlordane, DDD, DDE, DDT, Dieldrin, Heptachlor, Toxaphene and PCBs: Method 8080, Method 8250 or Method 8270.

(O) 2,4-Dichlorophenoxyacetic acid and 2,4,5-trichlorophenoxypropionic acid: Method 8150.

(3) For the following substances, the indicated methods as described in "Methods for Chemical Analysis of Water and Wastes", EPA-600/4-79-020, U.S. Environmental Protection Agency, 1979 shall be utilized:

(A) Beryllium: Method 210.1 or Method 210.2.

(B) Cobalt: Method 219.1 or Method 219.2.

(C) Copper: Method 220.1 or Method 220.2.

(D) Molybdenum: Method 246.1 or Method 246.2.

(E) Thallium: Method 279.1 or Method 279.2.

(F) Vanadium: Method 286.1 or Method 286.2.

(G) Zinc: Method 289.1 or Method 289.2.

(H) Fluoride: Method 340.1, Method 340.2 or Method 340.3.

(4) For the following substances, the indicated methods as described in "Manual of Analytical Methods for the Analysis of Pesticides in Humans and Environmental Samples", EPA-600/8-80-038, U.S. Environmental Protection Agency, 1980 shall be utilized:

(A) Kepone: Section 5.A, (5), (a).

(B) 2,3,7,8-Tetrachlorodibenzo-p-dioxin: Section 9.C.

(5) For asbestos, the indicated method as described in the Federal Register, Volume 47, Number 103, Appendix A, pages 23376-23389, May 7, 1982 shall be utilized.

(c) Samples shall be prepared for analysis for total and extractable content of substances listed in Section 66699 (b) and (c) as follows:

(1) Type i: If the waste or other material is a millable solid, the sample shall be passed directly, or shall be milled to pass, through a No. 10 (two millimeter) standard sieve before it is analyzed. If the sample contains non-friable solid particles which do not pass directly through a No. 10 sieve and which are extraneous and irrelevant as hazardous constituents to the waste or other material, they shall be removed to the extent feasible by mechanical means and discarded. Solids which remain in the waste or other material after removal of the aforesaid extraneous particles shall be milled to pass through a No. 10 sieve and shall then be combined and mixed well with the solids which passed through the sieve without milling. The reconstituted sample shall then be analyzed as prescribed in this section.

(2) Type ii: If the waste or other material is a filterable mixture of liquid and solids in which the solids constitute five-tenths (0.5) percent by weight or greater of the sample, the liquid and solids shall be separated by filtration through a 0.45 micron membrane filter. The filtrate so obtained is to be designated as Initial Filtrate. Its volume is determined, and it is retained. The separated solids shall be sieved in a No. 10 sieve and any nonfriable extraneous particles of the kinds described in subsection (c) (1) which do not pass through the sieve shall be removed to the extent feasible by mechanical means and discarded. The solids which remain after removal of the extraneous particles shall be milled to pass through a No. 10 sieve and shall be recombined with solids which passed through the sieve without milling. This recombined solid material shall be extracted following the procedure in subsection (f). A ratio of 10 milliliters of extraction solution per gram of solid shall be utilized with appropriate modifications for extraction vessel size. After completion of solids extraction, the filtered extractant is combined with Initial Filtrate mixed thoroughly and analyzed as described in subsection (f) (3).

(3) Type iii: If the waste or other material is a nonfilterable and nonmillable sludge, slurry, or oily, tarry or resinous material, it shall be analyzed as received unless it contains non-friable extraneous and irrelevant solid particles of the kinds described in paragraph (c) (1) of this section. If it contains such solid particles and they are of such size as not to pass through a No. 10 sieve, they shall be removed to the extent feasible by mechanical means and discarded. The remainder of the sample shall be analyzed as prescribed in this section.

(4) If it is necessary to dry a solid sample or the solids fraction of a sample before sieving, milling or removal of extraneous solids, or if a sample is dried prior to analysis, all weight losses due to drying shall be determined, and these losses and the conditions of drying shall be reported.

(d) If the waste or other material is a liquid containing less than five-tenths (0.5) percent by weight of undissolved solids, it shall not be subject to the WET procedure, but shall be analyzed directly for the substances listed in Section 66699. The waste shall be classified as a hazardous waste if the total concentration in the waste of any substances listed in Section 66699 exceeds the TTLC value given for that substance. If, however, the total concentration is less than the TTLC but exceeds the STLC when expressed on a milligrams per liter basis, the waste or other material shall be filtered through a 0.45 micron membrane filter, the solids discarded and the filtrate shall be analyzed directly for the substances listed in Section 66699. The waste shall be classified as a hazardous waste if the concentration in the filtrate of any of the substances listed in Section 66699 exceeds the STLC value given for that substance.

(e) The WET extraction solution shall consist of 0.2 M sodium citrate at pH 5.0 ± 0.1 , which is prepared by titrating an appropriate amount of analytical grade citric acid in deionized water with 4.0 N NaOH, except that the extraction solution for the determination of chromium (VI) shall consist of deionized water.

(f) The extraction procedure shall be as follows:

(1) Fifty grams of sample, or less if it is a type ii sample prepared pursuant to subsection (c) (2), obtained pursuant to subsection (c) or (d) of this section shall be placed in a clean polyethylene or glass container designated the Treatment, capable of physically withstanding the extraction procedure and which was rinsed previously with, in succession, an aqueous 1:1 ratio by volume nitric acid solution and deionized water. If the extract will be analyzed for any of the organic substances listed in Section 66699(c), a glass container shall be used. Furthermore, a container of the same size, shape and material shall be used for an extraction designated as the Blank, which shall be carried through the same procedure as the Treatment, but without addition of the sample.

(2) Five hundred milliliters of extraction solution, or less if the waste sample is a type ii sample prepared pursuant to subsection (c) (2) shall be added to the Treatment and Blank containers, which shall be then fitted with covered air scrubbers extended well into the extraction solutions and flushed vigorously with nitrogen gas for 15 minutes so as to remove and exclude atmospheric oxygen from the extraction medium. If the sample is to be analyzed for any volatile substance, such as trichloroethylene, the sample shall be added after deaeration with nitrogen to avoid volatilization loss. After deaeration the containers shall be quickly sealed with tightly fitting caps and agitated, using a table shaker, an overhead stirrer or a rotary extractor, operated at a speed which shall maintain the sample in a state of vigorously agitated suspension. Required equipment is described in test method 1310 in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW-846, 2nd edition, U.S. Environmental Protection Agency, 1982. The temperature during the extraction shall be maintained between 20 and 40 degrees centigrade. After 48 hours of extracting, the contents of the Treatment and Blank containers shall be either filtered directly or centrifuged and then filtered. Filtering shall be through a medium porosity prefilter and then through a 0.45 micron membrane filter, using a clean, thick-walled suction flask. For coarser solids, prefiltration shall not be necessary. Pressure filtration shall be an optional alternative to vacuum filtration. If the extracts are first centrifuged, glass or polyethylene bottles shall be used as prescribed for extraction. For very fine solids, centrifuging at as high as $10,000 \times G$ may be necessary. After centrifugation, the liquids shall be decanted, prefiltered if necessary, and then passed through a 0.45 micron membrane filter. All filters shall be of low and identified extractable heavy metals, fluoride and organic chemicals content.

(3) If the filtered extracts are to be analyzed only for the metal elements listed in Section 66699(b), the filtered extracts from the Treatment and Blank shall be transferred to clean polyethylene bottles and acidified with nitric acid to five percent by volume acid content soon after each extract is filtered. For those wastes or waste materials classified under subsection (c) (2), the Treatment shall be the Initial Filtrate combined with the extract generated by the WET extraction of the initially separated solids. Similarly the Blank in this instance shall be the filtrate generated by the WET Blank accompanying the initially separated solids, to which is subsequently added a volume of deionized

water equivalent to that of the Initial Filtrate. These procedures shall be followed prior to acidification of Treatment and Blank solutions with nitric acid to five percent (by volume) acid content. The bottle shall then be stored at room temperature or frozen. If the extracts are also to be analyzed for the organic substances listed in Section 66699(c), or for the organic substances only, the filtered extracts shall be transferred to clean glass bottles. If the extracts are to be analyzed for fluoride, they shall be transferred to clean polyethylene bottles. These extracts, containing organic substances or fluoride, shall not be acidified, but shall be frozen soon after each extract is obtained and held frozen until the day of analysis, unless the extracts are analyzed within 24 hours.

(g) Sample analysis and data treatment shall be as follows:

(1) Each of the filtered extracts from the Treatment and Blank extractions shall have been acidified to five percent by volume nitric acid, and stored at room temperature or frozen in polyethylene bottles or kept frozen without addition of acid in glass bottles until the day of analysis, as prescribed. Each of the extracts shall be thoroughly mixed just prior to being individually analyzed for the substances listed in Section 66699 in order to determine whether the extractable concentration (EC) in the waste or other material exceeds the STLC for any of the substances listed. The extracts shall be analyzed according to the procedures identified in Sections 66700(b)(2), (b)(3) and (b)(4).

(2) The net EC of a substance in the Treatment sample which is listed in Section 66699 shall be calculated and reported as milligrams per liter of sample (mg/l). This value is derived after subtracting the concentration of the substance in the appropriate Blank extract from that concentration determined in the Treatment extract.

NOTE: Authority cited: Sections 208, 25141 and 25150, Health and Safety Code. Reference: Section 25141, Health and Safety Code.

HISTORY:

1. Editorial correction filed 10-5-84; designated effective 10-27-84 (Register 84, No. 41).

66702. Ignitability Criteria.

(a) A waste, or a material, is ignitable and hazardous if it:

(1) Is a liquid, other than an aqueous solution containing less than 24 percent alcohol by volume, and has a flash point less than 60 degrees centigrade (140 degrees Fahrenheit), as determined by a Pensky-Martens Closed Cup Tester, using the test method specified in American Society for Testing and Materials (ASTM) Standard D-93-79, or a Setaflash Closed Cup Tester, using the test method specified in ASTM Standard D-3278-73; or

(2) Is not a liquid and is capable, under standard temperature and pressure, of causing fire through friction, absorption of moisture or spontaneous chemical changes and, when ignited, burns so vigorously and persistently that it creates a hazard; or

(3) Is a flammable compressed gas as defined in 49 CFR 173.300(b) (codified October 1, 1982) and as determined by the test methods described in that regulation; or

(4) Is an oxidizer as defined in 49 CFR 173.151 (codified October 1, 1982).

NOTE: Authority cited: Sections 208, 25141 and 25150, Health and Safety Code. Reference: Section 25141, Health and Safety Code.

66705. Reactivity Criteria.

(a) A waste, or a material, is reactive and hazardous if it:

(1) Is normally unstable and readily undergoes violent change without detonating; or

(2) Reacts violently with water; or

(3) Forms potentially explosive mixtures with water; or

(4) Generates toxic gases, vapors or fumes, when mixed with water, in a quantity sufficient to present a danger to human health or the environment; or

(5) Is a cyanide or sulfide bearing waste which, when exposed to pH conditions between 2 and 12.5, generates toxic gases, vapors or fumes in a quantity sufficient to present a danger to human health or the environment; or

(6) Is capable of detonation or explosive reaction if it is subjected to a strong initiating source or if heated under confinement; or

(7) Is readily capable of detonation or explosive decomposition or reaction at standard temperature and pressure; or

(8) Is a forbidden explosive as defined in 49 CFR 173.51 (codified October 1, 1982), or a Class A explosive as defined in 49 CFR 173.53 (codified October 1, 1982), or a Class B explosive as defined in 49 CFR 173.88 (codified October 1, 1982).

NOTE: Authority cited: Sections 208, 25141 and 25150, Health and Safety Code. Reference: Section 25141, Health and Safety Code.

66708. Corrosivity Criteria.

(a) A waste, or a material, is corrosive and hazardous if it:

(1) Is aqueous and has a pH less than or equal to 2 or greater than or equal to 12.5, or its mixture with an equivalent weight of water produces a solution having a pH less than or equal to 2 or greater than or equal to 12.5. The pH shall be determined by a pH meter using either test method 9040 specified in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW-846, U.S. Environmental Protection Agency, 2nd edition, 1982, or as described in "Methods for Chemical Analysis of Water and Wastes", EPA 600/4-79-020, March 1979; or

(2) Is a liquid, or when mixed with an equivalent weight of water produces a liquid, and corrodes steel (SAE 1020) at a rate greater than 6.35 millimeters (0.250 inch) per year at a test temperature of 55 degrees centigrade (130 degrees Fahrenheit) as determined by the test method specified in the National Association of Corrosion Engineers (NACE) Standard TM-01-69 as standardized as test method 1110 in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods", SW-846, U.S. Environmental Protection Agency, 2nd edition, 1982.

NOTE: Authority cited: Sections 208, 25141 and 25150, Health and Safety Code. Reference: Section 25141, Health and Safety Code.

HISTORY:

1. Editorial correction filed 10-5-84; designated effective 10-27-84 (Register 84, No. 41).

66717. Applicability of Extremely Hazardous Waste Criteria.

Any waste which is extremely hazardous pursuant to any of the criteria of Sections 66720 or 66723 is an extremely hazardous waste and shall be managed in accordance with the provisions of this chapter.

NOTE: Authority cited: Sections 208, 25141 and 25150, Health and Safety Code. Reference: Section 25141, Health and Safety Code.

66720. Extremely Hazardous Criteria.

(a) A waste, or a material, is extremely hazardous if it:

(1) Has an acute oral LD₅₀ less than or equal to 50 milligrams per kilogram;

- (2) Has an acute dermal LD₅₀ less than or equal to 43 milligrams per kilogram; or
- (3) Has an acute inhalation LC₅₀ less than or equal to 100 parts per million as a gas or vapor; or
- (4) Contains any of the substances listed in Section 66696(a) (5) at a single or combined concentration equal to or exceeding 0.1 percent by weight; or
- (5) Has been shown through experience or testing to pose an extreme hazard to the public health because of its carcinogenicity, high acute or chronic toxicity, bioaccumulative properties, or persistence in the environment; or
- (6) Is water-reactive.

(b) A waste containing one or more materials which are extremely toxic according to any criterion of paragraphs (a) (1) or (a) (2) of this section may be classified by the Department as not extremely hazardous if neither the calculated acute oral toxicity nor the calculated acute dermal toxicity of the waste using the equation in Section 66696(c) is numerically equal to or less than the toxicity limits prescribed in paragraphs (a) (1) or (a) (2) of this section and the waste is not extremely hazardous by any other criterion of this section.

NOTE: Authority cited: Sections 208, 25141 and 25150, Health and Safety Code. Reference: Section 25141, Health and Safety Code.

HISTORY:

- 1. Editorial correction filed 10-5-84; designated effective 10-27-84 (Register 84, No. 41).

66723. Total Threshold Limit Concentration Values of Persistent and Bioaccumulative Toxic Substances in Extremely Hazardous Wastes.

(a) Any waste containing a substance listed in subsection (b) of this section at a concentration equal to or exceeding its listed total threshold limit concentration is an extremely hazardous waste.

(b) List of Persistent and Bioaccumulative Toxic Substances and Their Total Threshold Limit Concentration (TTLC) Values.

<i>Substance</i>	<i>TTLC (Wet-Weight in mg/kg)</i>
Aldrin	140
Arsenic and/or arsenic compounds.....	50,000 (as As)
Beryllium and/or beryllium compounds*	7,500 (as Be)
Cadmium and/or cadmium compounds*	10,000 (as Cd)
Chlordan.....	250
2,4-Dichlorophenoxyacetic acid	10,000
Dieldrin	800
Dioxin (2,3,7,8-TCDD)	1
Endrin.....	20
Heptachlor	470
Kepone	2,100
Lead compounds, organic	1,300 (dry weight basis; as Pb)
Lindane.....	400
Mercury and/or mercury compounds	2,000 (as Hg)
Mirex	2,100
Polychlorinated biphenyls (PCBs)	5,000
Selenium and/or selenium compounds*	10,000 (as Se)
Thallium and/or thallium compounds*	70,000 (as Tl)
Toxaphene	800
2,4,5-Trichlorophenoxypropionic acid.....	1,000

* In the case of elemental metals, applies only if they are in a friable, powdered or finely divided state.

NOTE: Authority cited: Sections 208, 25141 and 25150, Health and Safety Code. Refer.

Article 12. Recyclable Hazardous Wastes

66763. Recyclable Hazardous Waste Disposal Statement

(a) Within 180 days of the disposal of a recyclable hazardous waste of a type listed in Section 66796, the Department may request the generator of such waste to provide the Department with a written statement justifying having not recycled the waste. A person requested to provide such a statement shall comply within 30 days of the Department's written request. If the request is made of an entity specified in Section 66160 other than an individual, the statement shall be issued by the responsible management of that entity.

(b) The Department's request for a statement from the waste generator pursuant to subsection (a) above shall cite a special property or component of the waste and a possible use or method of reclamation on the basis of which the Department considers that the waste might feasibly be recycled.

(c) The statement from the waste generator justifying having not recycled a hazardous waste pursuant to subsection (a) above shall include, but need not be limited to, the following:

(1) The general description, source, chemical composition, physical state, and amount of the waste.

(2) The amount of similar waste discarded or recycled during the 365-day period preceding the disposal in question.

(3) An estimate of the amount of similar waste to be generated by the generator in the 365-day period succeeding the disposal in question.

(4) A summary of efforts made to find a use for the waste such as the following:

(A) Use without processing.

(B) Use after processing to remove or modify undesired impurities.

(C) Use as a source of energy by the generator or by another person.

(5) Technologic, economic or other reason for not recycling the waste, taking into account relevant factors which may include any of the following:

(A) The available amount and the storability of the waste.

(B) Chemical, physical, toxicological or other properties of the waste which might affect its recyclability.

(C) The concentration or recoverability of the chemical component, chemical reactivity, fuel value or other attribute cited by the Department pursuant to subsection (b) above which may determine the feasibility of recycling the waste.

(D) The processing required in recycling the waste and the availability and cost of suitable processing technology and facilities.

(E) The marketability of the waste as such or as its reclaimed components in terms of the distance from the waste source to the point of use or reclamation, the costs of handling and transport, and the current market prices for the individual waste components as pure or technical grade materials.

(d) The statement shall indicate what information contained therein is considered to be a trade secret. The Department shall keep confidential trade secrets contained in any statement submitted to the Department pursuant to this section.

NOTE: Authority cited: Section 25175, Health and Safety Code. Reference: Sections 25175 and 27159.5, Health and Safety Code.

HISTORY:

- 1. New Article 12 (Sections 66763 and 66796) filed 5-16-79; effective thirtieth day thereafter (Register 79, No. 19).
- 2. Amendment filed 1-3-85; effective thirtieth day thereafter (Register 85, No. 2).

§ 66796
(p. 1800.86)

ENVIRONMENTAL HEALTH

TITLE 22
(Register 85, No. 2—1-12-85)

66796. List of Recyclable Hazardous Waste Types.

(a) Wastes of the types cited on the list of Recyclable Hazardous Wastes in subsection (b) are waste types which the Department finds to be both economically and technologically feasible to recycle.

(b) List of Recyclable Hazardous Waste Types (including examples of potential recycling methods or uses);

(1) Commercial chemical products including unused laboratory grade products (return to manufacturer or supplier or turn over to chemical salvager for resale or resource recovery; sell or barter to another consumer).

(2) Solvents, used or contaminated (reclaim, in-plant or through custom solvent reclaimer, by purification processes of rectification, ion exchange, adsorption, or extraction; or if combustible, use in-plant or sell for use as energy resource for heating, cooling, or power generation), including:

(A) Halogenated solvents such as trichloroethane, perchloroethylene, methylene dichloride, chloroform, carbon tetrachloride, Freons. (R)

(B) Oxygenated solvents, such as acetone, methyl ethyl ketone, methanol, ethanol, butanol, ethyl acetate;

(C) Hydrocarbon solvents, such as hexanes, Stoddard, benzene, toluene, xylenes, paint thinner.

(3) Used or unused petroleum products, including motor oils, hydraulic fluids, cutting lubricants, fortified weed oils (turn over to reclaimer of motor oils and other petroleum products for recovery of petroleum components; or use in-plant, or sell for use as energy resource for heating, cooling, or power generation).

(4) Pickling liquor (recover iron salts by concentration, e.g., by solar evaporation of spent liquor).

(5) Unspent acids, such as hydrochloric, hydrofluoric, nitric, phosphoric, sulfuric, in concentrations exceeding 15% (use directly as pickling and etching acids; in neutralization of alkaline process waste streams; or in manufacture of useful salt products, e.g., ammonium salts, calcium fluoride).

(6) Unspent alkalis, including hydroxides and carbonates of sodium, potassium, and calcium, and acetylene sludge (use directly in certain metal finishing operations; in neutralization of pickling acids and acid process waste streams; in precipitation of heavy metals; or in manufacture of useable products, e.g., calcium oxide, sulfate, fluoride, and chloride).

(7) Unrinsed empty containers of iron or steel used for pesticides or other hazardous chemicals:

(A) Pesticide containers (return to the registrant or, if 30- or 55-gallon size, recondition, pursuant to Section 3143 of Title 3, California Administrative Code; or shred or bale, after removal of pesticide residues by solvent or chemical action or burning, for use as steel scrap).

(B) Hazardous chemical containers (other than pesticide containers return to product supplier or, if 30- or 55-gallon size, recondition; or shred or bale, after removal of chemical residues by solvent or chemical action or burning, for use as steel scrap).

NOTE: Authority cited: Section 25175, Health and Safety Code. Reference: Section 25175, Health and Safety Code.

HISTORY:

1. Amendment of subsection (b) (2) (A) filed 1-3-85; effective thirtieth day thereafter (Register 85, No. 2).

TITLE 22
(Register 85, No. 2—1-12-85)

ENVIRON

Article 1.

66835. Requirements for Production of Infectious Waste.

(a) All the requirements of this article shall apply to any production of more than 100 kilograms of infectious waste.

(b) All the requirements of this article shall apply to any production of infectious waste produced per year at a facility which is a primary care or intermediate care facility as defined in Chapter 1, Division 2, Section 20199, or a hospital, acute psychiatric hospital, or intermediate care facility as defined in Chapter 2, Division 2, Section 20200.

(c) The requirements of Section 66835 shall apply to any production of infectious waste.

NOTE: Authority cited: Sections 20199, 20200, 20201, 20202, 20203, 20204, 20205, 20206, 20207, 20208, 20209, 20210, 20211, 20212, 20213, 20214, 20215, 20216, 20217, 20218, 20219, 20220, 20221, 20222, 20223, 20224, 20225, 20226, 20227, 20228, 20229, 20230, 20231, 20232, 20233, 20234, 20235, 20236, 20237, 20238, 20239, 20240, 20241, 20242, 20243, 20244, 20245, 20246, 20247, 20248, 20249, 20250, 20251, 20252, 20253, 20254, 20255, 20256, 20257, 20258, 20259, 20260, 20261, 20262, 20263, 20264, 20265, 20266, 20267, 20268, 20269, 20270, 20271, 20272, 20273, 20274, 20275, 20276, 20277, 20278, 20279, 20280, 20281, 20282, 20283, 20284, 20285, 20286, 20287, 20288, 20289, 20290, 20291, 20292, 20293, 20294, 20295, 20296, 20297, 20298, 20299, 20300.

HISTORY:

1. New Article 13 (Sections 66835, 66836, 66837, 66838, 66839, 66840, 66841, 66842, 66843, 66844, 66845, 66846, 66847, 66848, 66849, 66850, 66851, 66852, 66853, 66854, 66855, 66856, 66857, 66858, 66859, 66860, 66861, 66862, 66863, 66864, 66865, 66866, 66867, 66868, 66869, 66870, 66871, 66872, 66873, 66874, 66875, 66876, 66877, 66878, 66879, 66880, 66881, 66882, 66883, 66884, 66885, 66886, 66887, 66888, 66889, 66890, 66891, 66892, 66893, 66894, 66895, 66896, 66897, 66898, 66899, 66900).

2. Certificate of Compliance transmitted to OAL within 120 days after filing (Register 84, No. 24).

3. New Article 13 (Sections 66835, 66836, 66837, 66838, 66839, 66840, 66841, 66842, 66843, 66844, 66845, 66846, 66847, 66848, 66849, 66850, 66851, 66852, 66853, 66854, 66855, 66856, 66857, 66858, 66859, 66860, 66861, 66862, 66863, 66864, 66865, 66866, 66867, 66868, 66869, 66870, 66871, 66872, 66873, 66874, 66875, 66876, 66877, 66878, 66879, 66880, 66881, 66882, 66883, 66884, 66885, 66886, 66887, 66888, 66889, 66890, 66891, 66892, 66893, 66894, 66895, 66896, 66897, 66898, 66899, 66900).

4. Certificate of Compliance transmitted to OAL within 120 days after filing (Register 84, No. 41).

5. Amendment of subsection (a) (Register 84, No. 41).

66840. Storage and Containment of Infectious Waste.

(a) The provisions of this article shall supersede the provisions of any other article which relate to the storage of hazardous waste.

(b) Containment of infectious waste shall afford protection from animals, insects, and humans.

(c) Infectious waste shall be stored in a place or a food source for animals, insects, and humans.

(d) Unless approved by the Department, infectious waste shall not be stored at a facility for more than four calendar months.

(e) Infectious waste shall be stored at a temperature of 0°C (32°F) or below.

(f) Infectious waste shall be disposed of without specific approval within 90 days at the waste producing facility or without a hazardous waste permit.

(g) Containment of infectious waste shall be achieved by use of enclosures or containers which are so secured as to deny access to the waste.

(h) Prominent warning signs or labels shall be placed on the enclosures or containers. The signs or labels shall be in English, Spanish, and Chinese. The English signs shall be readily legible.

(i) The signs or labels shall include the words "INFECTIOUS WASTE STORAGE" and "DANGER".

(j) The signs or labels shall include the words "PROHIBIDA LA ENTRADA" and "DANGER".

(k) The signs or labels shall include the words "PROHIBIDA LA ENTRADA" and "DANGER".

(l) The signs or labels shall include the words "PROHIBIDA LA ENTRADA" and "DANGER".

(m) The signs or labels shall include the words "PROHIBIDA LA ENTRADA" and "DANGER".

(n) The signs or labels shall include the words "PROHIBIDA LA ENTRADA" and "DANGER".

(o) The signs or labels shall include the words "PROHIBIDA LA ENTRADA" and "DANGER".

(p) The signs or labels shall include the words "PROHIBIDA LA ENTRADA" and "DANGER".

APPENDIX B.

SPECIFICATIONS AND DRAWINGS WASTE OIL TANK REMOVAL AND REPLACEMENT

The Bay Area Rapid Transit District (BART) is seeking bids to remove and replace five (5) waste oil tanks at BART facilities. The waste oil tank location and size is shown in Table 1.

Table 1.
LIST OF WASTE OIL TANKS

<u>FACILITY</u>	<u>SIZE - IN GALLONS</u>
Oakland Shop	550
Richmond Shop	2-1,500
Coccord Shop	1,500
Hayward Shop	1,000

Site drawings of each facility is attached.

The contractor will be required to:

- Break and remove tank cover material.
- Excavate tank fill from around the tank.
- Remove and dispose of the tank.
- Collect and analyze soil and/or water samples employing standard EPA procedures and methods.
- Provide a written report of the findings. This scope of work does not cover contamination if found.
- Remove underground piping from the waste oil tank to the cap at the foundation.
- Replace the tank a U. L. labled double-walled fiberglass tank according to the manufactures specifications.
- Install double-walled secondary piping from the tank to receptacle installed inside the shop area allowing for gravity feed to the tank.
- Tank will be complete with one (1) 4" NPT primary fitting (tank center) (waste drain) covered by 24" diameter by 3 ft. 6" high manway pipe containment collar attached to exterior tank and supplied with lid, gasket and bolts and one (1) 4" NPT fitting (double pipe) and one (1) 2" NPT fitting (liquid/vapor sensor probes) on sidewall; one (1) 4" NPT primary fitting (one end) (extraction

draw-off) and one (1) 4" primary fitting (other end vent). Tank shall have hold down straps and cable guides as specified by manufacturer.

-Install an electronic continuous monitoring device as specified by the tank manufacturer or equal. The monitoring device is subject to approval by BART.

APPENDIX C.

SPECIFICATIONS AND DRAWINGS FOR INSTALLATION OF CONTINUOUS MONITORING SYSTEMS

The Bay Area Rapid Transit District is seeking bids to install two continuous underground storage tank leak monitoring systems. We anticipate that the depth to groundwater will be less than 10 feet. Therefore, vapor and groundwater monitoring may be accomplished within the same wells with a vapor monitoring system.

A vapor monitoring system shall be installed to monitor three (3) motor fuel tanks (2 x 6000 gallon gasoline and 1 x 8000 gallon diesel) at the Oakland Shop facility, and another shall be installed to monitor one (1) diesel tank (1 x 4000 gallon) at the Oakland Metro Center facility.

- The contractor shall install a continuous monitoring device complete with all appurtenances necessary for satisfactory operation.
- The contractor shall furnish a letter from the manufacturer's representative that the systems have been satisfactorily installed and are functioning properly.
- The monitoring device may be a:
 1. Leak Alert by Universal Sensors and Devices.
 2. Leak-X Monitor.
 3. Genelco.
 4. Or equal, approved by BART
- Well installation and soil/water sampling shall meet all guidelines set forth by the California Administrative Code, Title 23, Subchapter 16, Alternative 2; the EPA and the California State Regional Water Quality Control Board.
- The suggested boring locations are shown in the accompanying drawings for the Metro Center and the Oakland Shop. However, the bidder may propose additional monitoring locations according to the manufacturers' specification. The number of probes shall be sufficient to monitor the tank(s) and piping.
- The monitoring systems shall be installed adjacent to the motor fuel tank. The procedure shall be to drill the borings within the tank backfill or within ten feet of the storage tanks. The borings will penetrate the water table and continue downward until; (a) a competent clay layer, constituting an aquaclude, of 5 feet thickness is encountered; or, (b) 20 feet of water bearing material have been penetrated. The borings will then be backfilled with 5 feet of bentonite before monitoring well installation. Well perforations shall be installed from the bottom of the boring to approximately five feet below the ground surface.

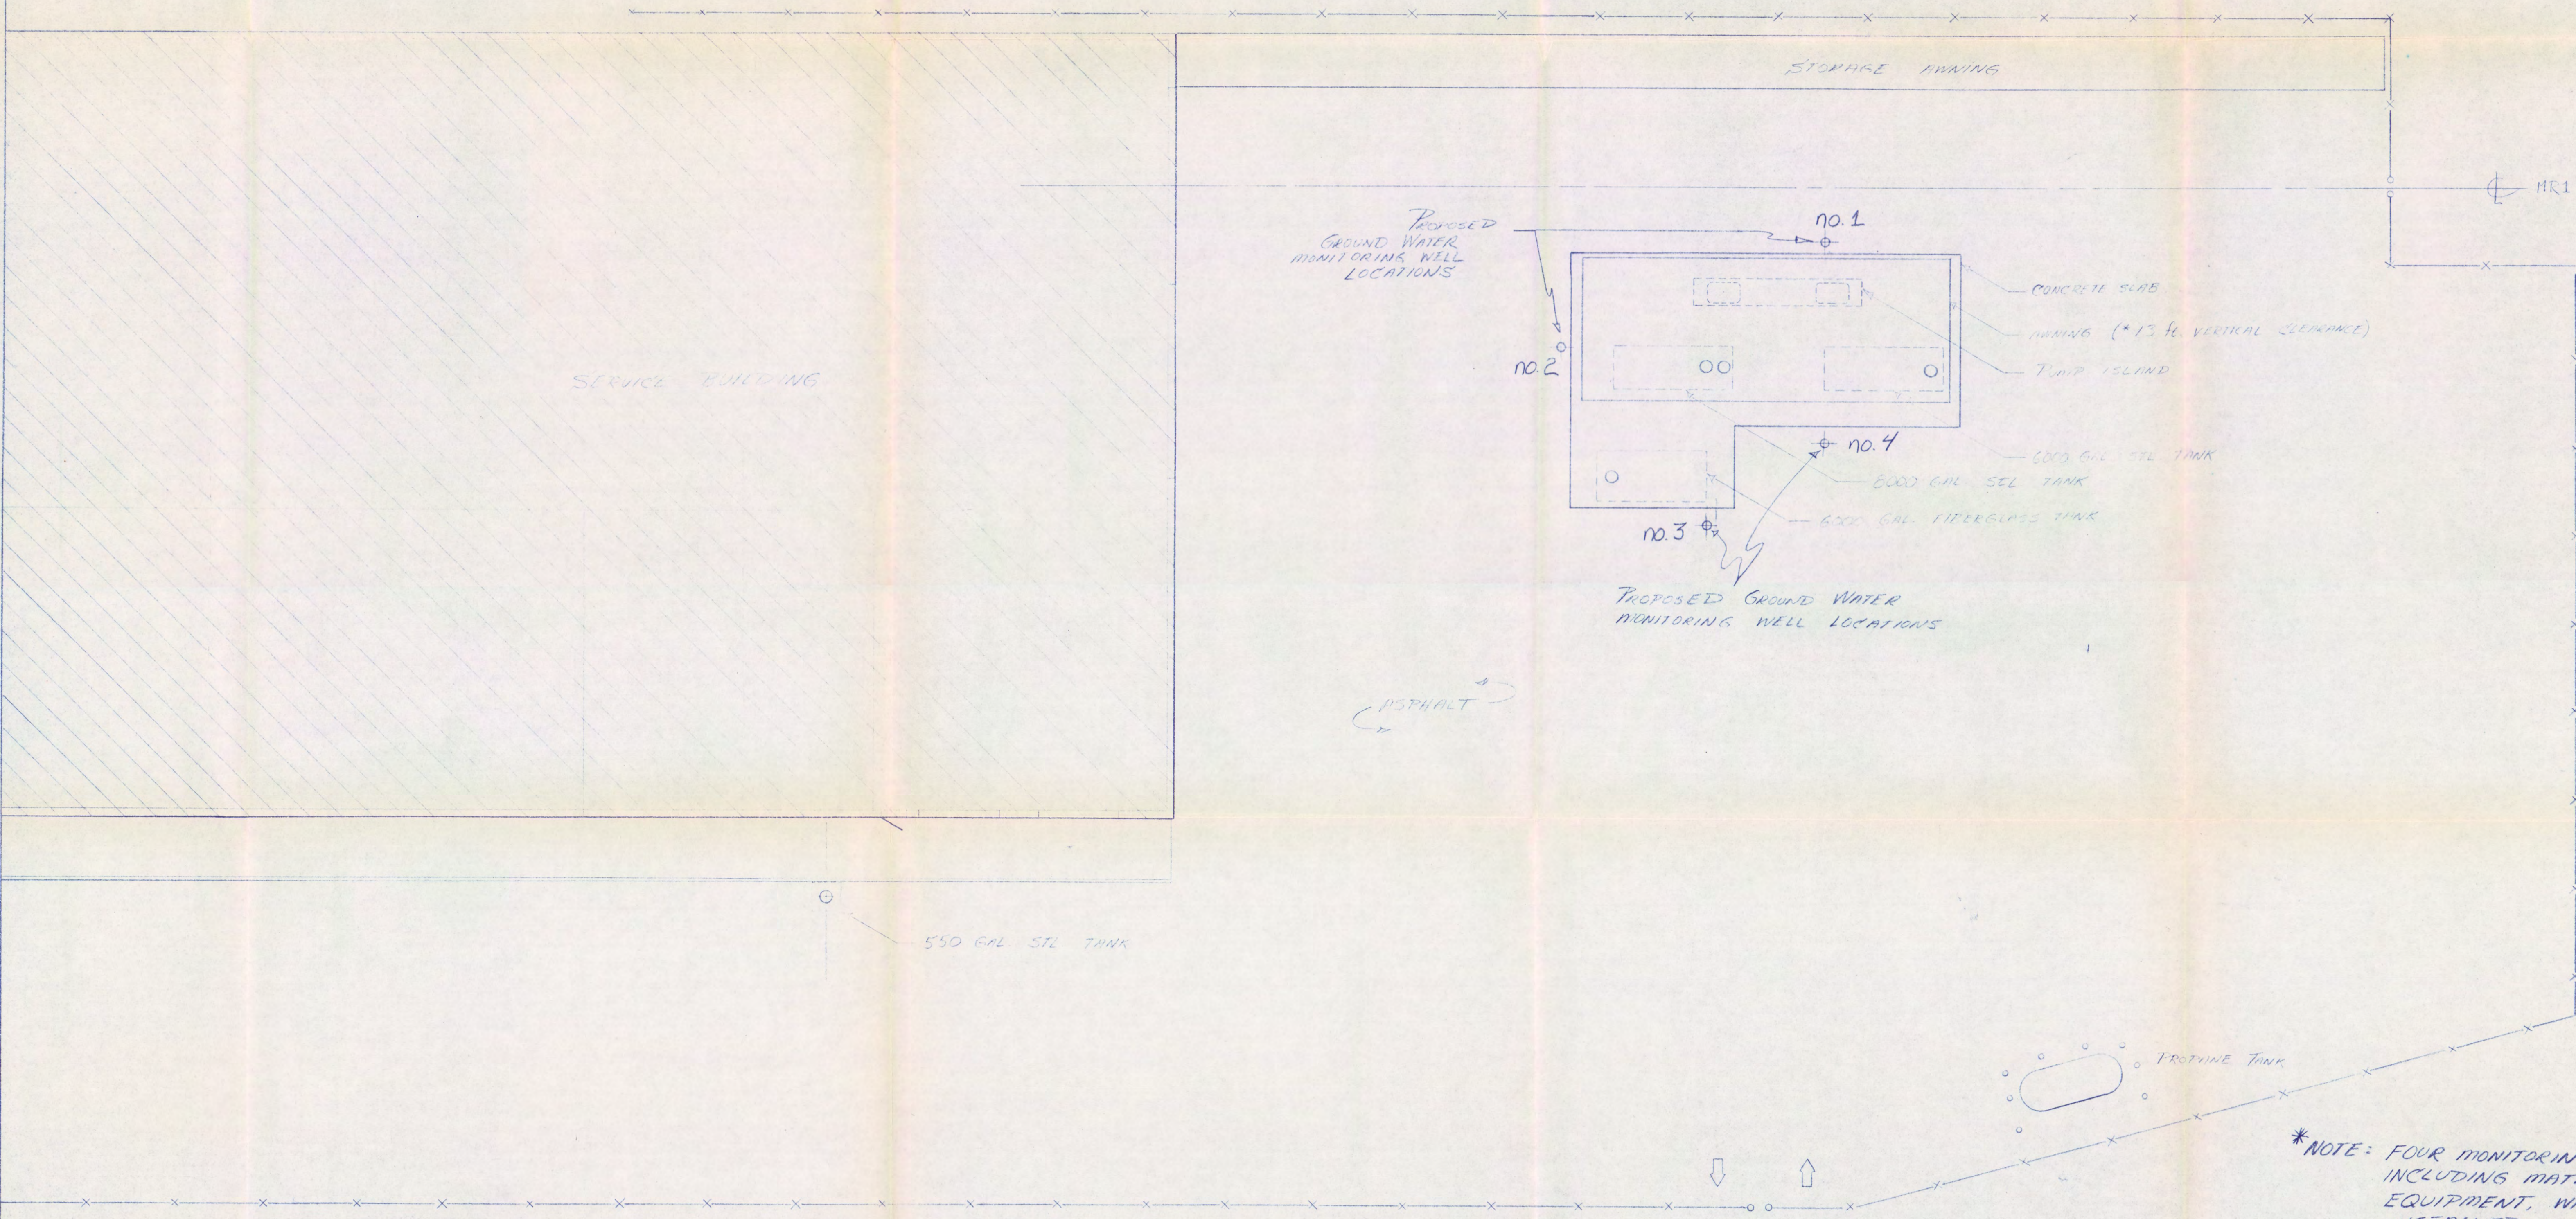

- During boring, soil samples are to be taken at 5 foot intervals downward from the surface to the groundwater surface. Samples are to be taken with a split-spoon sampler lined with clean brass tubes. A center tube is to be taken and immediately capped with aluminum foil and plastic caps, wrapped with tape, labelled, iced down and transported to the laboratory for analysis.

- Groundwater samples shall be taken using a teflon bailer, washed with TSP, rinsed with tap water and then distilled water. A minimum of four well volumes will be removed from the well prior to sampling. The sample vials and bottles will be filled to overflowing in such a manner: (1) that precludes air bubbles passing through the sample during filling, and (2) sealed so that no air is entrapped in the vial. Once filled, samples will be inverted and tapped to test for air bubbles. Samples will be discarded if air bubbles are found. Samples will be placed on ice and delivered to the lab as soon as possible.

- Analysis of the soil and water samples shall be Gas Chromatograph/Flame Ionization Detection (GC/FID) for benzene, toluene, and zylene (gasoline) and for Total Petroleum Hydrocarbons (diesel).

- The system installation shall be managed by a registered engineer or geologist.

- The bidder should include a service contract for the system to cover alarm conditions preventative and routine manitenance, and system integrity.

AS-BUILT

10-23-73: ADDED 1KV DC. POWER SUPPLY
1/27/74 JH: AS-BUILT
16 SEP 69 B.D. RSC: REVISED FOR 2 UNDERDRAIN PUMPS

ADDED 2 AMMETERS
ADDED 2 DOOR MOTORS, 2 SUMP PUMPS, & AC-2
ADDED BREAKER 19, 21 TO PNL LDPI. REVISED P23.
ADDED P2G & LUBE OIL PUMPS.
ADDED P24, CORRECTED MCC-1

DESIGNED BY P.T. WILLIS
DRAWN BY C.Y. NG
CHECKED BY A.V. SPENCE
IN CHARGE A.V. SPENCE

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

<u>Year</u>	<u>Scale</u>	<u>Details</u>	<u>Source</u>
2016	1"=500'	Flight Year: 2016	USDA/NAIP

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Langan were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.
