SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 02/11/2019	Source: Department of Energy & Environmental Protection
Date Data Arrived at EDR: 02/12/2019	Telephone: 860-424-3375
Date Made Active in Reports: 03/04/2019	Last EDR Contact: 02/12/2019
Number of Days to Update: 20	Next Scheduled EDR Contact: 05/27/2019
	Data Release Frequency: No Update Planned

NJ MANIFEST: Manifest Information

Hazardous waste manifest information.

Date of Government Version: 12/31/2017	Source: Department of Environmental Protection
Date Data Arrived at EDR: 07/13/2018	Telephone: N/A

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Version Date: 2012

East Map: 5641110 OAKLAND EAST, CA
Version Date: 2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06001C0067G	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>

06001C0086G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
OAKLAND WEST	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile SW
Site Name:	Naval Supply Center, Alameda Annex & Facility
Site EPA ID Number:	CA1170090012
Groundwater Flow Direction:	Southeast
Measured Depth to Water:	5 feet.
Hydraulic Connection:	Information is not available about the hydraulic connection between aquifer(s) underlying the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations

Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon

Source: Department of Public Health

Telephone: 916-210-8558

Radon Database for California

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

CERS ID: 10343530
CERS Description: Chemical Storage Facilities

Violations:

Site ID: 97447
Site Name: BART Lake Merritt Substation (LMA)
Violation Date: 05-01-2017
Citation: HSC 6.95 25507 - California Health and Safety Code, Chapter 6.95, Section(s) 25507
Violation Description: Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: Returned to compliance on 08/11/2017. OBSERVATION: Fire extinguisher with expired date of February 2017 observed in transformer room. Emergency equipment (such as fire extinguishers, spill prevention and alarm equipment) shall be tested and maintained as necessary (e.g. fire extinguishers assessed annually). CORRECTIVE ACTION: Maintain emergency equipment such as fire extinguishers as necessary; ensure fire extinguisher is serviced and is current. Provide written and/or photo documentation of corrective action within 30 days.
Violation Division: Alameda County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Routine hazardous materials business plan (HMBP) inspection of BART Lake Merritt Substation (LMA) located at 800 Madison St, Oakland CA 94607. ACDEH Inspectors Kevin Hom and Antoinette Stetzenmeyer conducted the inspection. Facility walk through conducted with Aaron Meeks, Safety Specialist, and Jonathan Rossen, Manager of Employee/Patron Safety. Email inspection reports to: ameeks@bart.gov; jrossen@bart.gov. Facility inventory confirmed on site. CERTIFICATION OF RETURN TO COMPLIANCE: I certify that the violation(s) noted in this HMBP inspection report have been corrected at BART Lake Merritt Substation (LMA) located at 800 Madison St, Oakland, CA 94607. I have personally examined any documentation attached to the certification to establish that the violations have been corrected. PRINT: _____

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Violations Found: No
 Eval Type: Routine done by local agency
 Eval Notes: Onsite to conduct the Hazardous Materials Business Plan Inspection at BART Metro Center - 101 8th Street, Oakland, CA 94607. Met with Principal Engineer, Gary Jensen. Facility's most recent HMBP submittal was on 2/19/2016. Facility has a room of Lead Acid Batteries that we were unable to access. Will verify when inspecting Lake Meritt BART station in the future. Facility has a 4,000 gallon aboveground diesel convault tank that is backup power for BART's operating system at the Metro Center. The tank and underground piping are monitoring with an INCON monitoring system that was recently tested by TEC Accutite on 5/12/2016.

CERS HAZ WASTE: Local Lists of Hazardous waste / Contaminated Sites

Site ID: 43406
 CERS ID: 10004047
 CERS Description: Hazardous Waste Generator

Violations:

Site ID: 43406
 Site Name: Laney College
 Violation Date: 11-15-2017
 Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
 Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
 Violation Notes: OBSERVATION: Hazardous waste labels missing, incorrect, or missing accumulation start dates, physical state, and chemical properties, facility name and address for the following containers: 1. Hazardous waste containers in the chemistry laboratory- provide accumulation start dates and the contents of the waste stream in percentages 2. 55 gallon drum of waste coolant in machine shop- provide hazardous waste label with all required information 3. 5 gallon bucket of solvent waste in machine shop-provide hazardous waste label with all required information 4. 30 gallon container of waste mineral spirits in art building- provide accumulation start date and name and address of Laney College All hazardous waste containers shall be marked with the following information: 1) the words Hazardous Waste ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTIVE ACTION: Immediately label [Truncated]

 Violation Date: 11-15-2017
 Citation: 22 CCR 23 66273.35 - California Code of Regulations, Title 22, Chapter 23, Section(s) 66273.35
 Violation Description: Failure to accumulate universal waste for one year or less and to demonstrate the length of time that the universal waste has been accumulated from the date it became a waste or was received.
 Violation Notes: OBSERVATION: Universal Waste Handler failed to properly accumulate waste within one year and/or demonstrated accumulation time. Observed no shipping documents or invoices that demonstrate that universal waste are properly disposed of. Royl Roberts states that all universal waste is picked up by North State Environmental. Invoices and shipping documents of universal waste pick up were not available. CORRECTIVE ACTION: Universal Waste Handler shall properly process accumulated waste within one year and/or demonstrated accumulation time. Submit copies of shipping documents or invoices for the disposal of universal waste for the last three years to ACDEH inspector within 30 days.

 Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

MAP FINDINGS

LANEY COLLEGE, 900 FALLON ST, OAKLAND, CA 94606 (Continued)

Violation Notes: OBSERVATIONS: The chemical inventory in CERS needs to be updated. Only chemicals meeting the reporting threshold of 55 gallons for liquids, 500 pounds for solids and 200 cubic feet for compressed gases need to be reported in CERS. Also include any extremely hazardous substances if they are equal to or greater than the federal threshold planning quantity (TPQ) listed in Appendix A, Part 355, Title 40 of the Code of Federal Regulations. CORRECTIVE ACTIONS: The following items need to be addressed in the chemical inventory in CERS: Laney Tower: diesel update the Largest Container size to 500 gallons, Maximum Daily Amount should also be 500 gallons. Pool: Add two 60 gallon tanks of sodium hypochlorite. Add hypochlorite solution (observed 128 one gallon containers). Add carbon dioxide (observed 25 cylinders). Update sodium chloride Largest Container size to 50 pounds and Maximum Daily Amount to at least 500 pounds. Chemistry Lab A237 Add carbon dioxide [Truncated]

Violation Program: HMRRP

Violation Source: CERS

Site ID: 43406

Site Name: Laney College

Violation Date: 11-15-2017

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to complete and electronically submit a site map with all required content.

Violation Notes: OBSERVATION: The annotated site maps that were submitted to CERS are not adequate for the size of this campus. CORRECTIVE ACTION: Submit to CERS an overall site map showing the locations of all of the buildings on campus. Submit to CERS a separate site map for each location that stores or handles hazardous materials or hazardous waste to CERS. At a minimum they should include all of the following on each map: north orientation, loading areas, internal roads, adjacent streets, storm and sewer drains, access and exit points, emergency shutoffs, evacuation staging areas, hazardous materials/waste handling and storage areas and emergency response procedures. Site maps are required for Laney Tower, the chemistry laboratories, pool storage area, boiler rooms, machine shop, welding shop and cage, art building and the community garden.

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to establish and electronically submit an adequate emergency response plan and procedures for a release or threatened release of a hazardous material.

Violation Notes: OBSERVATION: The facility has uploaded "Laney College Emergency Operations Plan" dated 9/20/12 and "Emergency Procedures" booklet that is located in each building on campus. Neither document fully addresses the requirements of Health and Safety Code 25505(a)(3). CORRECTIVE ACTION: Complete the "Consolidated Emergency Response/Contingency Plan" template that is available in CERS in order to supplement the other two documents already submitted to CERS.

Violation Division: Alameda County Environmental Health

Violation Program: HMRRP

Violation Source: CERS

Site ID: 43406

Site Name: Laney College

Violation Date: 11-15-2017

Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)

Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violation Notes: OBSERVATION: No training on hazardous materials handling or emergency response procedures has taken place. No training documentation was found for any past trainings that may have occurred. CORRECTIVE ACTION: Train all employees on hazardous materials handling, emergency response procedures and the Consolidated Emergency Response/Contingency Plan. Document this training and provide a syllabus and sign in sheet. Training must occur annually.

Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.

Violation Notes: OBSERVATION: No waste analysis was available for the following: 1. Saw dust waste used to clean up spills in machine shop is currently discarded in trash. 2. Fine metal shavings located in welding area and machine shop. Shavings are currently being recycled. 3. Waste clay, clay dust, and wash water from ceramics class in art building. 4. Containers that previously held hazardous materials or waste in the chemistry laboratory. Observed crusty glassware discarded in trash. These wastes are being disposed of as non-hazardous waste. A generator shall make a hazardous waste determination and keep a record of any test results, waste analyses, or other determinations made in accordance with hazardous waste regulations for at least three years from the date that the waste was last sent to on-site or off-site treatment, storage, or disposal. CORRECTIVE ACTION: 1. Manage and dispose of saw dust clean up waste as a hazardous waste. 2. Conduct a waste analysis for the [Truncated]

Site Name: Laney College

Violation Date: 11-15-2017

Citation: HSC 6.95 25507 - California Health and Safety Code, Chapter 6.95, Section(s) 25507

Violation Description: Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.

Violation Notes: Laney College failed to establish and adequately implement a Hazardous Materials Business Plan by the following observations: OBSERVATIONS FOR LANEY TOWER: The 500 gallon diesel tank for the generator does not have the contents listed on the tank. CORRECTIVE ACTIONS: Label this tank as diesel . Submit a photo of the correction. OBSERVATIONS FOR CHEMISTRY LABS A235-A277: Many containers of hazardous waste stored in the chemical hoods were found open. According to the lab manager, they are left open to vent. Most hazardous waste containers were not properly labeled with the required information and were stored piled on one another. Acetylene cylinder in A277 was not properly secured. CORRECTIVE ACTIONS: Keep all hazardous waste containers closed except when in use. Hazardous waste cannot be left open to vent . Properly store all containers of hazardous waste so that each container can be inspected weekly for spillage or leaks. Properly secure all compressed [Truncated]

MAP FINDINGS

LANEY COLLEGE, 900 FALLON ST, OAKLAND, CA 94606 (Continued)

Violation Date: 11-15-2017
 Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
 Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
 Violation Notes: OBSERVATION: Observed the following open hazardous waste containers: 1) Numerous open containers in chemistry laboratory hazardous waste storage area 2) Open container of used oil in boiler room 3) Open 5 gallon container of solvent waste in machine shop All hazardous waste containers shall be closed at all times except when adding or removing wastes. CORRECTIVE ACTION: Immediately close these containers and ensure all hazardous waste containers are closed when not adding or removing wastes. Submit photo documentation of corrective action to inspector within 30 days.

Evaluation:

Eval General Type: Compliance Evaluation Inspection
 Eval Date: 11-15-2017
 Violations Found: Yes
 Eval Type: Routine done by local agency
 Eval Notes: Routine hazardous waste generator (HWG) inspection of Laney College at 900 Fallon Street Oakland CA 94607. Met with Royle Roberts, Risk and Safety Program Manager, who granted consent to perform inspection. Alameda County Department of Environmental Health (ACDEH) to provide inspection report by email to: rroberts@peralta.edu. Laney College is a community college that offers classes in art, welding, machinery, chemistry, biology, and other disciplines. Facility wastes streams include: 1) oily coolant from machine shop and boiler room 2) metal fines from machine shop and welding 3) photographic waste from photography lab 4) laboratory waste 5) universal waste and 6) waste from art building. Facility has five to six employees handling hazardous waste. All violations noted in this Hazardous Waste Generator Inspection Report are to be corrected within 30 days and proof of those corrections submitted to ACDEH in the same time frame.

 Violation Date: 11-15-2017
 Citation: 22 CCR 23 66273.35 - California Code of Regulations, Title 22, Chapter 23, Section(s) 66273.35
 Violation Description: Failure to accumulate universal waste for one year or less and to demonstrate the length of time that the universal waste has been accumulated from the date it became a waste or was received.
 Violation Notes: OBSERVATION: Universal Waste Handler failed to properly accumulate waste within one year and/or demonstrated accumulation time. Observed no shipping documents or invoices that demonstrate that universal waste are properly disposed of. Royl Roberts states that all universal waste is picked up by North State Environmental. Invoices and shipping documents of universal waste pick up were not available. CORRECTIVE ACTION: Universal Waste Handler shall properly process accumulated waste within one year and/or demonstrated accumulation time. Submit copies of shipping documents or invoices for the disposal of universal waste for the last three years to ACDEH inspector within 30 days.

Violation Description:	Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes:	OBSERVATIONS: The chemical inventory in CERS needs to be updated. Only chemicals meeting the reporting threshold of 55 gallons for liquids, 500 pounds for solids and 200 cubic feet for compressed gases need to be reported in CERS. Also include any extremely hazardous substances if they are equal to or greater than the federal threshold planning quantity (TPQ) listed in Appendix A, Part 355, Title 40 of the Code of Federal Regulations. CORRECTIVE ACTIONS: The following items need to be addressed in the chemical inventory in CERS: Laney Tower: diesel update the Largest Container size to 500 gallons, Maximum Daily Amount should also be 500 gallons. Pool: Add two 60 gallon tanks of sodium hypochlorite. Add hypochlorite solution (observed 128 one gallon containers). Add carbon dioxide (observed 25 cylinders). Update sodium chloride Largest Container size to 50 pounds and Maximum Daily Amount to at least 500 pounds. Chemistry Lab A237 Add carbon dioxide [Truncated]

MAP FINDINGS

LANEY COLLEGE, 900 FALLON ST, OAKLAND, CA 94606 (Continued)

Violation Description: Failure to establish and electronically submit an adequate emergency response plan and procedures for a release or threatened release of a hazardous material.

Violation Notes: OBSERVATION: The facility has uploaded "Laney College Emergency Operations Plan" dated 9/20/12 and "Emergency Procedures" booklet that is located in each building on campus. Neither document fully addresses the requirements of Health and Safety Code 25505(a)(3). CORRECTIVE ACTION: Complete the "Consolidated Emergency Response/Contingency Plan" template that is available in CERS in order to supplement the other two documents already submitted to CERS.

 Citation: HSC 6.95 25507 - California Health and Safety Code, Chapter 6.95, Section(s) 25507
 Violation Description: Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.
 Violation Notes: Laney College failed to establish and adequately implement a Hazardous Materials Business Plan by the following observations: OBSERVATIONS FOR LANEY TOWER: The 500 gallon diesel tank for the generator does not have the contents listed on the tank. CORRECTIVE ACTIONS: Label this tank as diesel . Submit a photo of the correction. OBSERVATIONS FOR CHEMISTRY LABS A235-A277: Many containers of hazardous waste stored in the chemical hoods were found open. According to the lab manager, they are left open to vent. Most hazardous waste containers were not properly labeled with the required information and were stored piled on one another. Acetylene cylinder in A277 was not properly secured. CORRECTIVE ACTIONS: Keep all hazardous waste containers closed except when in use. Hazardous waste cannot be left open to vent . Properly store all containers of hazardous waste so that each container can be inspected weekly for spillage or leaks. Properly secure all compressed [Truncated]

MAP FINDINGS

LANEY COLLEGE, 900 FALLON ST, OAKLAND, CA 94606 (Continued)

Violation Description: Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.

Violation Notes: OBSERVATION: The Owner/Operator failed to conduct weekly inspections of all hazardous waste containers as demonstrated by observing: missing or incorrect hazardous waste labels (missing accumulation start dates, generator name and address, chemical and physical properties, and contents), open hazardous waste containers, spills not immediately cleaned up, and storing containers in a manner that prevents weekly inspection of each container in all hazardous storage areas. CORRECTIVE ACTION: Conduct weekly inspections and ensure hazardous waste labels are provided and are legible and filled out properly, providing all required information including accumulation start dates, and cleaning up spills immediately. Submit proof of corrective actions to inspector within 30 days.

MAP FINDINGS

LANEY COLLEGE, 900 FALLON ST, OAKLAND, CA 94606 (Continued)

Eval Type: Routine done by local agency
 Eval Notes: Routine hazardous waste generator (HWG) inspection of Laney College at 900 Fallon Street Oakland CA 94607. Met with Royl Roberts, Risk and Safety Program Manager, who granted consent to perform inspection. Alameda County Department of Environmental Health (ACDEH) to provide inspection report by email to: rroberts@peralta.edu. Laney College is a community college that offers classes in art, welding, machinery, chemistry, biology, and other disciplines. Facility wastes streams include: 1) oily coolant from machine shop and boiler room 2) metal fines from machine shop and welding 3) photographic waste from photography lab 4) laboratory waste 5) universal waste and 6) waste from art building. Facility has five to six employees handling hazardous waste. All violations noted in this Hazardous Waste Generator Inspection Report are to be corrected within 30 days and proof of those corrections submitted to ACDEH in the same time frame.

Local Agency: Not Reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: RO0000202
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History:

The site is currently occupied by Vics Auto, an automotive repair facility equipped with one 13,000-gallon underground storage tank (UST). Surrounding land use is mixed commercial and residential. Soils in the vicinity of the site are mostly fine to medium sand, with varying silt and clay content. On June 17, 1993, four 1,000-gallon gasoline USTs and one 250-gallon waste oil UST were removed from the site. No groundwater was encountered during excavation activities. The tank conditions were slightly rusted, with two visible holes noted in the waste oil tank. Soil samples collected from the gasoline UST pit and waste oil UST pit contained up to 24 parts per million (ppm) Total Petroleum Hydrocarbons as gasoline (TPHg) and 2,100 ppm Total Oil and Grease (TOG), respectively. The waste oil tank pit was over-excavated and re-sampled. The over-excavation soil sample contained 3.9 ppm TPHg. On August 23, 1994, the two remaining 6,000-gallon gasoline tanks were removed from the site. The UST located in the northern corner of the site was replaced with a 13,000-gallon gasoline UST. Fourteen soil samples were collected from the tank pits and soil stockpiles. The soil samples collected from beneath the southern-most tank contained the greatest petroleum hydrocarbon concentrations of 160 ppm TPHg and 0.82 ppm benzene. The two tank pits were subsequently over-excavated to approximately 19 feet below ground surface (bgs). Heavily contaminated groundwater and soils were encountered. Confirmation soil samples collected after over-excavation contained up to 3,900 ppm TPHg and 6.1 ppm benzene. On July 14, 1995, two soil borings were advanced and completed as groundwater monitoring wells (MW-1 and

MAP FINDINGS

VIC'S AUTOMOTIVE SERVICE, 245 8TH, OAKLAND, CA 94607 (Continued)

MW-2). Soil samples were collected from each boring at approximately five-foot intervals. Well MW-1 was not sampled for groundwater because free product was observed in the well at a thickness of 2.22 feet. Groundwater depth at the site was measured to be 17.21 feet bgs. The soil samples contained up to 390 ppm TPHg and 0.3 ppm benzene. The groundwater sample from MW-2 contained 68,000 parts per billion (ppb) TPHg and 480 ppb benzene. On August 8, 1996, three soil borings (SB-1 through SB-3) were advanced to depths ranging between 24 and 25 feet bgs. Soil samples were collected from each boring at 24 feet bgs, with an additional sample collected from boring SB-1 at 18 feet bgs. Grab groundwater samples were also collected from each boring. The soil sample collected from boring SB-1 at 18 feet bgs contained the greatest contamination of 9,100 ppm TPHg, 57 ppm benzene, and 47 ppm MTBE. The grab groundwater samples contained concentrations of up to 140,000 ppb TPHg, 19,000 ppb benzene, and 27,000 ppb MTBE. Manual bailing and pumping of Light Non-Aqueous Phase Liquid (LNAPL) from well MW-1 occurred intermittently from 1997 to 1998. On May 25, 2001, two soil borings were advanced and converted to monitoring wells MW-3 and MW-4. Soil samples were collected from each boring at 15 and 20 feet bgs. The completed wells were sampled during the next monitoring event on June 29, 2001. Soil samples collected from the borings did not contain petroleum hydrocarbons or fuel oxygenates at concentrations above reporting limits. Groundwater from wells MW-3 and MW-4 contained up to 550 ppb TPHg. Groundwater from well MW-2 collected during the same monitoring event contained 69,000 ppb TPHg, 7,200 ppb benzene, and 4,400 ppb MTBE. Due to the continued presence of free product, a LNAPL recovery system was installed in well MW-1 in July 2001. Well MW-1 is located within the backfill of the southern-most gasoline UST. The LNAPL recovery system operated between 2001 and 2003. On April 2 and 3, 2003, fourteen soil borings (SB-4 through SB-17) were advanced both on-site and off-site. Soil samples were collected from the borings at depths ranging between 11 and 18 feet bgs. Grab groundwater samples were collected from each boring and soil vapor samples were collected from five of the borings. The soil samples collected from boring SB-7 at 18 feet bgs and SB-11 at 16 feet bgs contained the highest TPHg concentrations of 4,900 ppm and 2,700 ppm, respectively. Borings SB-7

MAP FINDINGS

VIC'S AUTOMOTIVE SERVICE, 245 8TH, OAKLAND, CA 94607 (Continued)

and SB-11 are located southwest of the former UST locations. Similarly, groundwater samples collected southwest of the former UST locations contained the highest TPHg concentrations. TPHg and benzene were detected in grab groundwater samples at concentrations up to 310,000 ppb and 45,000 ppb, respectively. Soil vapor samples did not contain petroleum hydrocarbons at concentrations above reporting limits. On January 11, 19, and 20, 2005, six extraction/monitoring wells (MW-5 through MW-7 and MW-10 through MW-12) were installed both on-site and off-site, with the intent of utilizing a High Vacuum Dual-Phase Extraction (HVDPE) system in the near future. At least one soil sample was selected for analysis from each well. Groundwater samples were collected from newly completed and previously constructed wells (MW-1 through MW-4) on February 3, 2005. The soil samples contained up to 3,200 ppm TPHg, 35 ppm benzene, and 8.5 ppm MTBE. Results of the groundwater samples were similar to previous investigations with the high petroleum hydrocarbon concentrations detected south of the former UST locations. From July 11 to July 27, 2005, a 15-day HVDPE event was conducted in five of the extraction/monitoring wells. During the event, an estimated 10,600 pounds of hydrocarbons were removed in the vapor phase. Following this event, preparations were made to implement a fixed HVDPE system at the site. Startup of the HVDPE system began on June 26, 2007. On July 13, 2006, eight soil borings were advanced throughout the site and off-site in the downgradient direction. Four of the borings were converted to permanent, nested soil gas probes (GP-1 through GP-4). Soil samples and soil gas samples were collected from the gas probes at depths of five and ten feet bgs. The soil samples contained up to 1.6 ppm TPHg, with no concentrations of MTBE above reporting limits. The soil gas samples contained up to 705 micrograms per cubic meter (a%g/m³) TPHg and 6.1 a%g/m³ benzene. On March 18, 2008, wells MW-8, MW-9, and MW-13 were installed to delineate the petroleum hydrocarbon plume in groundwater. Soil samples were collected from the new wells at depths of 15 and 20 feet bgs and contained up to 1.5 ppm TPHG, 0.37 ppm benzene, and 0.089 ppm MTBE. Between August 21 and 22, 2008, soil gas probes GP-3 and GP-4 were decommissioned due to property development. Horizontal HVDPE conveyance piping laterals were installed on wells MW-10 through MW-12 to continue remediation. On

MAP FINDINGS

VIC'S AUTOMOTIVE SERVICE, 245 8TH, OAKLAND, CA 94607 (Continued)

July 28, 2009, three monitoring wells (MW-14 through MW-16) were installed off-site to delineate the downgradient extent of the petroleum hydrocarbon plume in groundwater. Soil samples were collected from each of the monitoring well borings at depths ranging between 16 and 25 feet bgs. Groundwater samples were collected from the new wells during the next monitoring event on August 21, 2009. Results of the monitoring event incorporating the newly established wells indicated that the petroleum hydrocarbon plume extended laterally from the former UST location to approximately 7th Street. On March 17, 2010, four soil borings (SB-16 through SB-19) were advanced as part of a source zone delineation study. Soil samples were collected from the borings at approximately two or three foot intervals at depths ranging between 15 and 25 feet bgs. The highest concentrations of TPHg and benzene in soil were detected in soil samples collected below the water table at a depth of 20 feet bgs. Soil samples from borings SB-19, SB-16, and SB-17 contained TPHg at concentrations up to 7,500 ppm, 4,300 ppm, and 2,100 ppm, respectively. Benzene concentrations in soil were highest in borings SB-19 and SB-17 at concentrations of 100 ppm and 87 ppm, respectively (both samples collected at a depth of 20 feet bgs). Groundwater was first encountered in the borings at approximately 19.5 feet bgs with the exception of borings SB-16 and SB-19, where groundwater was encountered at approximately 25 and 21 feet bgs, respectively. One grab groundwater sample collected from boring SB-18 contained 230 ppb TPHg and 3.2 ppb benzene. On June 30 and July 1, 2010, four air sparge wells (AS-1 through AS-4) were installed within the source zone to a total depth of 30 feet bgs. A pilot test for HVDPE with air sparging was conducted between August and October 2010. Results indicated that air sparging in conjunction with the HVDPE system increased the effectiveness of petroleum hydrocarbon mass removal by increasing the off-gas vapor concentrations. High Vacuum Dual Phase Extraction (HVDPE) remediation was conducted at the site from June 2007 to June 2011 in both on-site and off-site wells. The remediation system removed an estimated total of 5,663 gallons of Total Petroleum Hydrocarbons as gasoline (TPHg). A soil vapor sampling event was conducted on October 16, 2012. Five new soil gas probes (GP-5 through GP-9) were installed and sampled along with the remaining two

MAP FINDINGS

VIC'S AUTOMOTIVE SERVICE, 245 8TH, OAKLAND, CA 94607 (Continued)

existing soil gas probes (GP-1 and GP-2) on October 31, 2012. TPHg was detected in soil vapor from vapor probe GP-1 at a concentration of 2,700 a%/m³. TPHg was not detected at concentrations above reporting limits in the remaining eight soil vapor samples. Benzene was not detected in soil vapor depth at concentrations above reporting limits in any of the nine soil vapor samples collected. Groundwater monitoring began at the site on June 29, 2001 and was conducted quarterly until the most recent groundwater monitoring event on May 5, 2012. The depth to groundwater in site monitoring wells has ranged between 12.61 to 20.44 feet bgs. Soil vapor was also monitored on a quarterly schedule from August 2006 to August 2008. Results of soil, groundwater, and soil vapor investigations indicate that a plume of petroleum hydrocarbons extended from the former southern-most UST location a distance of approximately 200 feet southwest (downgradient) of the site. HVDPE and air sparging remediation has reduced the concentrations of TPHg in groundwater from the highest detection of 310,000 ppb in 2003 to a maximum concentration of 250 ppb during the most recent groundwater monitoring event in May 2012. Benzene has also been reduced from a maximum of 52,000 ppb in February 2005 to a maximum concentration of 250 ppb during the most recent groundwater monitoring event in May 2012. Groundwater monitoring data indicate that the plume of petroleum hydrocarbons is stable or shrinking in extent. Based on evidence from recent investigations, the residual soil, groundwater, and soil vapor contamination from the former USTs does not appear to pose a threat to public or environmental health. Therefore, no further action is required for the site.

 Case Worker: JES
 RB Case Number: 01-0582
 Local Agency: ALAMEDA COUNTY LOP
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Local Case Number: RO0000479
 Potential Media Affect: Other Groundwater (uses other than drinking water)
 Potential Contaminants of Concern: Gasoline
 Site History: A gasoline service station formerly occupied the site. Ten USTs were removed in May 1992. Soil overexcavation was conducted between December 1992 and March 1993. Various site investigation activities have been conducted since 1995. Several remedial actions have taken place since 1999. A remedial system consisting of a soil vapor extraction and ozone sparging system was installed at the site in early 2011. The systems operated at the site until April 2015 when they were shut down to monitor for potential rebound. Quarterly groundwater monitoring is ongoing to evaluate potential rebound of groundwater concentrations while the remedial systems are not operating. A soil vapor sampling work plan has been requested by ACEH to evaluate the effectiveness of the remediation.

Case Worker: JES
RB Case Number: 01-1611
Local Agency: ALAMEDA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: RO0000231
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Three UST were removed in 1990 and significantly elevated concentrations of petroleum hydrocarbons were detected in soil during the UST removal. A program of groundwater monitoring was implemented in 1991 and dissolved phase contamination is migrating offsite and impacting the downgradient sites located at 726 and 706 Harrison Street. Soil and groundwater sampling completed in 2007 detected elevated levels of MTBE in the deeper water bearing zone at 48 feet bgs. This site is part of a commingled plume and remedial action is proposed to remove residual mass beneath the sites. A pilot test of multi-phase extraction and air sparging/soil vapor extraction was conducted in 2013. Based on the results of the pilot test, remediation of 706 and 726 Harrison Street is planned to begin in 2014 using air sparging and soil vapor extraction. A Remedial Action Plan that describes the planned remediation was approved in July 2014 following a public comment period on the Remedial Action Plan.

Citation: 23 CCR 16 2636(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(2)
 Violation Description: Failure of the line leak detector (LLD) monitoring pressurized piping to meet one or more of the following requirements: Monitor at least hourly. Be capable of detecting a release of 3.0 gallons per hour at 10 p.s.i.g. Restrict or shut off the flow of product through the piping when a leak is detected.
 Violation Notes: Returned to compliance on 03/23/2017. OBSERVATION: Regular MLLD failed to detect a 3 gph leak at 10 psi. CORRECTIVE ACTION: The VMI MLLD was adjusted and was able to detect a 3 gph leak at 10 psi. CORRECTED AT THE TIME OF INSPECTION.

Status Date: 07/14/2014
Case Worker: JES
RB Case Number: 01-2307
Local Agency: ALAMEDA COUNTY LOP
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: RO0000321
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History: Three UST were removed in 1990 and significantly elevated concentrations of petroleum hydrocarbons were detected in soil during the UST removal. A program of groundwater monitoring was implemented in 1991 and dissolved phase contamination is migrating offsite and impacting the downgradient sites located at 726 and 706 Harrison Street. Soil and groundwater sampling completed in 2007 detected elevated levels of MTBE in the deeper water bearing zone at 48 feet bgs. This site is part of a commingled plume and remedial action is proposed to remove residual mass beneath the sites. A pilot test of multi-phase extraction and air sparging/soil vapor extraction was conducted in 2013. Based on the results of the pilot test, remediation of 706 and 726 Harrison Street is planned to begin in 2014 using air sparging and soil vapor extraction. A Remedial Action Plan that describes the planned remediation was approved in July 2014 following a public comment period on the Remedial Action Plan.

 Local Agency: ALAMEDA COUNTY LOP
 File Location: All Files are on GeoTracker or in the Local Agency Database

MAP FINDINGS

GIN'S ARCO SERVICE, 706 HARRISON ST, OAKLAND, CA 94607 (Continued)

Local Case Number: RO0000484
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Benzene, Gasoline
Site History: In February 1991 six USTs were removed and confirmation soil sampling detected elevated levels of hydrocarbon contamination beneath the site. Additional site characterization completed from 1993 through 1995 detected significantly elevated levels of TPHg and benzene in soil and groundwater. This site is part of a commingled plume and remedial action is proposed to remove residual mass beneath the sites. A pilot test of multi-phase extraction and air sparging/soil vapor extraction was conducted in 2013. Based on the results of the pilot test, remediation of 706 and 726 Harrison Street is planned to begin in 2014 using air sparging and soil vapor extraction. A Remedial Action Plan that describes the planned remediation was approved in July 2014 following a public comment period on the Remedial Action Plan.

 Used oil transporter: No

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

MAP FINDINGS

PORT OF OAKLAND, FORMER SEABREEZE CAFE, 280 6TH AVE, OAKLAND, CA 94606 (Continued)

. Waste code: D003
. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not Reported
 Completed Document Type: AB 389 Response Plan
 Completed Date: 10/18/2017
 Comments: DTSC issued a letter approving the Response Plan.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not Reported
 Completed Document Type: Other Report
 Completed Date: 02/02/2017
 Comments: DTSC issued a letter approving the Report of Findings: Indoor-Air Sampling Results July 28, 2016 through September 18, 2016.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not Reported
 Completed Document Type: Operations and Maintenance Plan
 Completed Date: 11/28/2016
 Comments: DTSC issued a letter approving the revised OM&M Plan as final.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not Reported
 Completed Document Type: Other Report
 Completed Date: 04/07/2017
 Comments: DTSC provided conditional approval of the document entitled Indoor-Air Sampling Results, Fourth Quarter 2016.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not Reported
 Completed Document Type: Fact Sheets
 Completed Date: 05/11/2017
 Comments: DTSC provided to AMethod the May 2017 Fact Sheet (in english, Spanish and chinese) via email.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not Reported
 Completed Document Type: Other Report
 Completed Date: 05/09/2017
 Comments: DTSC issued its conditional approval of the First Quarter 2017 Indoor-Air Sampling Report.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not Reported
 Completed Document Type: Pilot Study/Treatability Workplan

MAP FINDINGS

301 12TH STREET FUTURE DEVELOPMENT, 301 12TH STREET, OAKLAND, CA 94607 (Continued)

Completed Date: 07/20/2017
 Comments: DTSC issued a letter approving the ZVI Pilot Test Work Plan via email and poste.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not Reported
 Completed Document Type: Public Notice
 Completed Date: 08/11/2017
 Comments: Issued public notices for the draft Response Plan to the Alameda Times Star, the La Opinion De la Bahia and the Sing Tao Daily. Papers are to publish notices on 8/18/2017.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not Reported
 Completed Document Type: Work Notice
 Completed Date: 11/17/2017
 Comments: DTSC issued the work notices (English, Spanish and Chinese versions) for the Response Action field work to commence the week of November 27, 2017 with the pre-demo investigation soil, soil gas and groundwater sampling.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not Reported
 Completed Document Type: Fact Sheets
 Completed Date: 08/14/2017
 Comments: DTSC prepared a Community Update (aka Fact Sheet) for the Response Plan in English, Spanish and Chinese and mailed the update to occupants within a 1/4-mile radius of the project site.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not Reported
 Completed Document Type: Technical Workplan
 Completed Date: 11/15/2017
 Comments: DTSC approved the Pre-demolition Investigation Work Plan. Field activities are scheduled to be conducted the week of November 27, 2017.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not Reported
 Completed Document Type: Fieldwork
 Completed Date: 11/27/2017
 Comments: DTSC traveled to site and oversaw the drilling of soil boring and the collection of soil and groundwater samples as part of the Pre-demolition Investigation fieldwork.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not Reported
 Completed Document Type: Other Report
 Completed Date: 02/15/2018

MAP FINDINGS

301 12TH STREET FUTURE DEVELOPMENT, 301 12TH STREET, OAKLAND, CA 94607 (Continued)

Comments: DTSC issued a letter approving the 1/17/2018 PES Environmental ZVI Pilot Test Report and Preliminary Design.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not Reported
 Completed Document Type: Fieldwork
 Completed Date: 02/21/2018
 Comments: DTSC observed field investigation activities.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not Reported
 Completed Document Type: Technical Report
 Completed Date: 04/05/2018
 Comments: DTSC issued a letter approving the Revised Final ZVI Design report.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not Reported
 Completed Document Type: Fieldwork
 Completed Date: 03/26/2018
 Comments: DTSC's project manager (Harold D.) and engineering support (Li W.) conducted site visit to oversee ZVI injection activities associated with the approved response plan.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not Reported
 Completed Document Type: Other Report
 Completed Date: 08/17/2018
 Comments: DTSC issued an email indicating it has no concerns or recommendations regarding the proposed shoring plans with respect to the remedial activities. However, DTSC in a later transmittal provide comments/recommendations pertaining to geotechnical issues.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not Reported
 Completed Document Type: Technical Report
 Completed Date: 06/25/2018
 Comments: DTSC approved the PES Environmental Response to Comments and the Pre-Construction Soil Profiling Report.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not Reported
 Completed Document Type: California Land Reuse and Revitalization Agreement
 Completed Date: 05/03/2018
 Comments: Not Reported

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not Reported
 Completed Document Type: CEQA - Initial Study/ Environmental Impact Report
 Completed Date: 08/14/2017
 Comments: DTSC signed the Addendum to the Final EIR for the Lake Merritt Area Plan which addresses DTSC's response plan.

 Potential Media Affect: Other Groundwater (uses other than drinking water), Soil, Under Investigation
 Potential Contaminants of Concern: Benzene, Diesel, Ethylbenzene, Gasoline, MTBE / TBA / Other Fuel Oxygenates, Naphthalene, Toluene, Waste Oil / Motor / Hydraulic / Lubricating, Xylene
 Site History: Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is

MAP FINDINGS

SALVATION ARMY, 601 WEBSTER ST, OAKLAND, CA 94607 (Continued)

located on the Alameda County Environmental Health (ACEH) website at <https://ehgis.acgov.org/dehpublic/dehpublic.jsp>. Site is developed as a warehouse and distribution center for The Salvation Army (TSA) and is in the initial characterization phase of investigation. In November 2010, two USTs, a 10,000-gallon diesel and an 8,000-gallon gasoline tank, were removed. Discolored soil and obvious petroleum odor was noted in the pit excavation. Samples recovered from the tank pit were reported to include up to 17,000 milligrams per kilogram (mg/kg) total petroleum hydrocarbons as gasoline (TPHg) and 300 mg/kg benzene. Diesel and MTBE were not detected at the site. The 10,000-gallon diesel and an 8,000-gallon gasoline USTs are second generation tanks. Previous USTs were removed circa 2000. A strong odor emanated from the tank pit, so it was left open to aerate prior to the installation of the second generation USTs. No record of tank condition or sampling was found for the first generation tanks in the files. Initial soil and groundwater investigation performed in January 2014 with the advance of 7 soil bores- three in the former tank pit with 4 bores forming a transect along the SSW side of the pit. No soil samples were collected within 10 feet of the ground surface. Maximum soil concentrations within the pit were near the northwest corner (SB7 @ 20) with TPHg: 8,900 mg/kg, total petroleum hydrocarbons as diesel (TPHd): 41 mg/kg, benzene, toluene, ethylbenzene, and xylenes (collectively BTEX): 64, 260, 170, & 610 mg/kg, & 12 mg/kg methyl tertiary butyl ether (MTBE). Maximum soil concentrations along transect were located in a western bore (SB3 @ 20) at TPHg: 9,400 mg/kg, TPHd: 120 mg/kg, BTEX: 110, 380, 240, & 890 mg/kg, & <2.0 mg/kg MTBE. Maximum grab groundwater (GGW) concentrations within the pit were reported for SB1 with TPHg: 210,000 micrograms per liter (ug/L) (x8015), BTEX (x8015): 35,000, 47,000, 3,000, & 16,000 ug/L, respectively, & 240 ug/L (x8260) MTBE; and maximum GGW concentrations along transect were reported for SB4, the western most soil bore, at TPHg: 280,000 ug/L (x8015), BTEX (x8015): 35,000, 30,000, 3,900, & 20,000 ug/L & 5,300 ug/L (x8260) MTBE. Note: no water was recovered in SB3. Three on-site and one off-site wells installed for GW investigation. Skimmers operational in two wells and sheen consistently reported in two of the 3 on-site wells & intermittent in other well. Most recent event- conducted 1Q18

MAP FINDINGS

SALVATION ARMY, 601 WEBSTER ST, OAKLAND, CA 94607 (Continued)

reported 2 inches of FP in MW-3 skimmer. Passive soil gas survey performed for down gradient plume delineation- report over due, but may have been delayed due to weather-related issues.

8	Facility qualifies for Tier I requirements and plan has been prepared, certified, and implemented	
	<input checked="" type="checkbox"/> NVO <input type="checkbox"/> UD <input type="checkbox"/> NA <input type="checkbox"/> VO <input type="checkbox"/> COS <input type="checkbox"/> RPT	

Violation Code Definition/Section:

Preparation and Self-Certification of Plan. If you are the owner or operator of a facility that meets the Tier I qualified facility criteria in § 112.3(g)(1), you may choose to self-certify your Plan. You must certify in the Plan that:

- (i) You are familiar with the requirements of this part;
- (ii) You have visited and examined the facility;
- (iii) The Plan has been prepared in accordance with accepted and sound industry practices and standards, and with the requirements of this part;
- (iv) Procedures for required inspections and testing have been established;
- (v) You will fully implement the Plan;
- (vi) The facility meets the qualification criteria set forth under § 112.3(g)(1);
- (vii) The Plan does not deviate from any requirement of this part as allowed by § 112.7(a)(2) and 112.7(d) or include measures pursuant to § 112.9(c)(6) for produced water containers and any associated piping, except as provided in paragraph (b)(3) of this section; and
- (viii) The Plan and individual(s) responsible for implementing the Plan have the full approval of management and the facility owner or operator has committed the necessary resources to fully implement the Plan.
(40 CFR 112.6(a) and HSC 25270.4.5(a)) 40 CFR 112.6(a) HSC 6.67 25270.4.5(a)

9	Qualified facility's SPCC self or PE certified	
	<input checked="" type="checkbox"/> NVO <input type="checkbox"/> UD <input type="checkbox"/> NA <input type="checkbox"/> VO <input type="checkbox"/> COS <input type="checkbox"/> RPT	

Violation Code Definition/Section:

The Qualified Facility's Plan has been self certified by the owner/operator or a PE. The owner/operator certifies:

- (i) Familiarity with the requirements of this part;
- (ii) Visitation and examination of facility;
- (iii) Plan preparation in accordance with accepted and sound industry practices and standards, and with requirements of this part;
- (iv) Procedures for required inspections and testing have been established;
- (v) Full implementation of the Plan;
- (vi) It meets qualification criteria set forth under §112.3(g);
- (vii) No deviation from any requirement of this part as allowed by §112.7(a)(2) and 112.7(d), except as provided in paragraph (c) of this section; and
- (viii) The Plan and individual(s) responsible for implementing the Plan have the full approval of management and facility owner or operator has committed the necessary resources to fully implement the Plan. (40 CFR 112.6(a)(1)) 40 CFR 112.6(a)(1) HSC 6.67 25270.4.5(a)

10	Tech amendments have been certified when there has been a change in facility design/operations	
	<input type="checkbox"/> NVO <input type="checkbox"/> UD <input checked="" type="checkbox"/> NA <input type="checkbox"/> VO <input type="checkbox"/> COS <input type="checkbox"/> RPT	

Violation Code Definition/Section:

Technical amendments to the SPCC have been certified when there has been a change in facility design, construction, operation or maintenance that may affect its potential for a discharge. (40 CFR 112.6(a)(2)) 40 CFR 112.6(a)(2) HSC 6.67 25270.4.5(a)

11	SPCC template complete and signed by owner/operator	
	<input checked="" type="checkbox"/> NVO <input type="checkbox"/> UD <input type="checkbox"/> NA <input type="checkbox"/> VO <input type="checkbox"/> COS <input type="checkbox"/> RPT	

Violation Code Definition/Section:

Plan has been prepared in accordance with the template in Appendix G and may be used as the facility's SPCC once completed and signed by the owner/operator. 40 CFR 112.6(a)(3) HSC 6.67 25270.4.5(a)

--	--	--

12	SPCC contains a prediction of direction/rate of flow/total quantity of oil potentially discharged <input checked="" type="checkbox"/> NVO <input type="checkbox"/> UD <input type="checkbox"/> NA <input type="checkbox"/> VO <input type="checkbox"/> COS <input type="checkbox"/> RPT	
Violation Code Definition/Section: Failure Analysis: SPCC contains a prediction of direction, rate of flow, and total quantity of oil potentially discharged from the facility as a result of each type of major equipment failure where experience indicates a reasonable potential (i.e.: loading or unloading equipment, tank overflow, rupture, or leakage). 40 CFR 112.6(a)(3)(i) HSC 6.67 25270.4.5(a)		
13	All bulk storage containers have sec cont and mobile refuelers in a position to prev discharge <input checked="" type="checkbox"/> NVO <input type="checkbox"/> UD <input type="checkbox"/> NA <input type="checkbox"/> VO <input type="checkbox"/> COS <input type="checkbox"/> RPT	
Violation Code Definition/Section: Bulk storage containers do not have proper secondary containment and/or mobile refuelers are not positioned to prevent a discharge (40 CFR 112.6 (a)(3)(ii) 112.6(a)(3)(ii) HSC 6.67 25270.4.5(a)		
14	Containers provided w/overflow prevention, discussion included in SPCC, and tested <input checked="" type="checkbox"/> NVO <input type="checkbox"/> UD <input type="checkbox"/> NA <input type="checkbox"/> VO <input type="checkbox"/> COS <input type="checkbox"/> RPT	
Violation Code Definition/Section: Overflow prevention, in lieu of the requirements in §§ 112.8(c)(8) and 112.12(c)(8). Ensure that each container is provided with a system or documented procedure to prevent overfills of the container, describe the system or procedure in the SPCC Plan and regularly test to ensure proper operation or efficacy. 40 CFR 112.6(a)(3)(iii) HSC 6.67 25270.4.5(a)		
26	Alternative environmental equivalence discussed in SPCC <input checked="" type="checkbox"/> NVO <input type="checkbox"/> UD <input type="checkbox"/> NA <input type="checkbox"/> VO <input type="checkbox"/> COS <input type="checkbox"/> RPT	
Violation Code Definition/Section: Failure to discuss alternative environmental protection to SPCC requirements within the SPCC plan. 40 CFR 112.5(c), 112.7(a)(2); HSC 6.67 25270.4.5(a)		
27	SPCC contains facility management approval to fully implement the SPCC Plan <input checked="" type="checkbox"/> NVO <input type="checkbox"/> UD <input type="checkbox"/> NA <input type="checkbox"/> VO <input type="checkbox"/> COS <input type="checkbox"/> RPT	
Violation Code Definition/Section: Failure to obtain facility management approval to fully implement the SPCC Plan. 40 CFR 112.7; HSC 6.67 25270.4.5(a)		
28	SPCC follows seq/cross ref, good engineering practice, has mgt. approval, in writing, procedures <input checked="" type="checkbox"/> NVO <input type="checkbox"/> UD <input type="checkbox"/> NA <input type="checkbox"/> VO <input type="checkbox"/> COS <input type="checkbox"/> RPT	
Violation Code Definition/Section: 1. Failure to prepare a SPCC plan that follows a sequence of rule and/or cross-reference. 2. Failure of the owner or operator of a facility subject to this part to prepare a SPCC plan in accordance with good engineering practices. 3. Failure to have the full approval of management at a level of authority to commit the necessary resources to fully implement the SPCC plan. 4. Failure to prepare the Plan in writing. AND 5. Failure to prepare a SPCC plan that addresses additional procedures/methods/equipment not yet fully operational. 40 CFR 112.7; HSC 6.67 25270.4.5(a)		
29	Adequate physical facility layout of facility included in SPCC <input checked="" type="checkbox"/> NVO <input type="checkbox"/> UD <input type="checkbox"/> NA <input type="checkbox"/> VO <input type="checkbox"/> COS <input type="checkbox"/> RPT	
Violation Code Definition/Section: Failure to adequately describe the physical layout of the facility, or no description of the physical layout of the facility included within the SPCC plan. 40 CFR 112.7(a)(3); HSC 6.67 25270.4.5(a)

14

Remote unstaffed facility exemption requirements are met when not submitting a business plan

NVO UD NA VO COS RPT

Violation Code Definition/Section:

"Failure to meet one or more of the following to comply with the remote unstaffed facility exemption of electronically submitting a business plan:

(1) The types and quantities of materials onsite are limited to one or more of the following:

(A) One thousand standard cubic feet of compressed inert gases (asphyxiation and pressure hazards only).

(B) Five hundred gallons of combustible liquid used as a fuel source.

(C) Two hundred gallons of corrosive liquids used as electrolytes in closed containers.

(D) Five hundred gallons of lubricating and hydraulic fluids.

(E) One thousand two hundred gallons of flammable gas used as a fuel source.

(F) Any quantity of mineral oil contained within electrical equipment, such as transformers, bushings, electrical switches, and voltage regulators, if the spill prevention control and countermeasure plan has been prepared for quantities that meet or exceed 1,320 gallons.

(2) The facility is secured and not accessible to the public.

(3) Warning signs are posted and maintained for hazardous materials pursuant to the California Fire Code.

(4) A one-time notification and inventory are provided to the unified program agency along with a processing fee in lieu of the existing fee. The fee shall not exceed the actual cost of processing the notification and inventory, including a verification inspection, if necessary.

(5) If the information contained in the initial notification or inventory changes and the time period of the change is longer than 30 days, the notification or inventory shall be resubmitted within 30 days to the unified program agency to reflect the change, along with a processing fee, in lieu of the existing fee, that does not exceed the actual cost of processing the amended notification or inventory, including a verification inspection, if necessary.

HSC 25507.2 "

Overall Inspection Comments:

Onsite to conduct the Hazardous Materials Business Plan Inspection at BART Metro Center - 101 8th Street, Oakland, CA 94607. Met with Principal Engineer, Gary Jensen. Facility's most recent HMBP submittal was on 2/19/2016.

Facility has a room of Lead Acid Batteries that we were unable to access. Will verify when inspecting Lake Merritt BART station in the future.

Facility has a 4,000 gallon aboveground diesel convault tank that is backup power for BART's operating system at the Metro Center. The tank and underground piping are monitoring with an INCON monitoring system that was recently tested by TEC Accutite on 5/12/2016.

Facility representative who granted permission to conduct inspection on 5/24/16 and reviewed inspection report

ALCO Title 6 6.92.050

Business Plan

1	Established and adequately implemented a business plan <input type="checkbox"/> NVO <input type="checkbox"/> UD <input type="checkbox"/> NA <input checked="" type="checkbox"/> VO <input type="checkbox"/> COS <input type="checkbox"/> RPT	CUPA Minor COMPLY BY: 5/31/2017
---	---	------------------------------------

Violation Code Definition/Section:

Failure to adequately establish and implement a Hazardous Materials Business Plan (HMBP) when storing and/or handling a hazardous material in reportable quantities, including the following:

- Emergency shutoffs for chemical processes or equipment are labeled.
- Emergency equipment (such as fire extinguishers, spill prevention & alarm equipment) tested and maintained as necessary (e.g. fire extinguishers assessed annually).
- Spill control and spill mitigation materials are available (e.g. absorbents, rags, or shop vacuum).
- All containers are kept closed unless in use.
- All containers are in good condition.
- Containers stored in a manner to prevent rupture, leaking or structural deterioration.
- Containers are compatible with contents.
- Containers are properly labeled.
- All spills promptly addressed to prevent discharge to air, soil or surface water.
- Storage area is maintained to separate incompatible materials.

Containers of hazardous materials are disposed of properly when empty.
 19 CCR 2651, 2658(c); 22 CCR 66261.7; HSC 6.95 25507

Violation Comments:

OBSERVATION: Fire extinguisher with expired date of February 2017 observed in transformer room. Emergency equipment (such as fire extinguishers, spill prevention and alarm equipment) shall be tested and maintained as necessary (e.g. fire extinguishers assessed annually).

CORRECTIVE ACTION: Maintain emergency equipment such as fire extinguishers as necessary; ensure fire extinguisher is serviced and is current. Provide written and/or photo documentation of corrective action within 30 days.

Business Plan

Violation Code Definition/Section:

Failure to complete and/or electronically submit a complete Hazardous Materials Business Plan (HMBP) when storing and/or handling hazardous materials or a mixture containing a hazardous material at or above the threshold quantities:
 (1) Equal to or greater than 500 pounds for a solid, 55 gallons for a liquid, or 200 cubic feet for a compressed gas, or
 (2) Equal to or greater than the applicable federal threshold planning quantity (TPQ) for an extremely hazardous substance (EHS) listed in Appendix A, Part 355, Title 40, of the Code of Federal Regulations.
 (3) Radioactive materials that are handled in quantities for which an emergency plan is required to be adopted pursuant to Part 30 (commencing with Section 30.1), Part 40 (commencing with Section 40.1), or Part 70 (commencing with Section 70.1), of Chapter 10 of Title 10 of the Code of Federal Regulations (54 Federal Register 14051), or pursuant to any regulations adopted by the state in accordance with those regulations.

Remote Unstaffed Facility

--	--	--

Remote Unstaffed Facility

14	Remote unstaffed facility exemption requirements are met when not submitting a business plan
	<input type="checkbox"/> NVO <input type="checkbox"/> UD <input checked="" type="checkbox"/> NA <input type="checkbox"/> VO <input type="checkbox"/> COS <input type="checkbox"/> RPT

Violation Code Definition/Section:

Failure to meet one or more of the following to comply with the remote unstaffed facility exemption of electronically submitting a business plan:

- (a) The types and quantities of materials onsite are limited to one or more of the following:
 - (1) One thousand standard cubic feet of compressed inert gases (asphyxiation and pressure hazards only)
 - (2) Five hundred gallons of combustible liquid used as a fuel source.
 - (3) Two hundred gallons of corrosive liquids used as electrolytes in closed containers.
 - (4) Five hundred gallons of lubricating and hydraulic fluids.
 - (5) One thousand two hundred gallons of flammable gas used as a fuel source.
 - (6) Any quantity of mineral oil contained within electrical equipment, such as transformers, bushings, electrical switches, and voltage regulators, if the spill prevention control and countermeasure plan has been prepared for quantities that meet or exceed 1,320 gallons.
- (b) The facility is secured and not accessible to the public.
- (c) Warning signs are posted and maintained for hazardous materials pursuant to the California Fire Code.
- (d) (1) A one-time notification and inventory are provided to the unified program agency along with a processing fee in lieu of the existing fee. The fee shall not exceed the actual cost of processing the notification and inventory, including a verification inspection, if necessary.
- (2) If the information contained in the initial notification or inventory changes and the time period of the change is longer than 30 days, the notification or inventory shall be resubmitted within 30 days to the unified program agency to reflect the change, along with a processing fee, in lieu of the existing fee, that does not exceed the actual cost of processing the amended notification or inventory, including a verification inspection, if necessary.

HSC 25507.2

Overall Inspection Comments:

Routine hazardous materials business plan (HMBP) inspection of BART Lake Merritt Substation (LMA) located at 800 Madison St, Oakland CA 94607. ACDEH Inspectors Kevin Hom and Antoinette Stetzenmeyer conducted the inspection. Facility walk through conducted with Aaron Meeks, Safety Specialist, and Jonathan Rossen, Manager of Employee/Patron Safety. Email inspection reports to: ameeks@bart.gov; jrossen@bart.gov. Facility inventory confirmed on site.

CERTIFICATION OF RETURN TO COMPLIANCE:

I certify that the violation(s) noted in this HMBP inspection report have been corrected at BART Lake Merritt Substation (LMA) located at 800 Madison St, Oakland, CA 94607. I have personally examined any documentation attached to the certification to establish that the violations have been corrected.

1. Introduction

On behalf of Chevron Environmental Management Company, for itself and as Attorney-in-Fact for Union Oil Company of California, ARCADIS U.S., Inc. (ARCADIS) prepared this Feasibility Study (FS) to identify and evaluate potential remedial alternatives for interim remedial action to address the petroleum-hydrocarbon-impacted groundwater in the co-mingled plume at 706, 726, and 800 Harrison Street in Oakland, California (site). Figure 1 illustrates the general area of the site and Figure 2 presents a layout of the three properties.

This FS was prepared as requested by the Alameda County Department of Environmental Health (ACEH) in a letter dated July 9, 2012 (Appendix A). This FS presents relevant background information, provides a detailed comparative analysis of potential remedial alternatives, and recommends further actions to address petroleum hydrocarbon concentrations in groundwater.

1.1 Purpose/Remedial Action Objectives

The purpose of this FS is to identify and evaluate remedial action alternatives that are:

- Appropriate for site-specific conditions
- Protective of present and potential future public health, safety, and welfare of the environment
- Consistent with applicable laws, regulations and guidance documents

This FS recommends further action to address groundwater, based on balancing the remedy selection factors.

1.2 Report Organization

A description of site background information is provided in Section 2. A summary of the site conceptual model is provided in Section 3. A discussion of the development of remedial alternatives is presented in Section 4. The analysis and evaluation of each remedial alternative is summarized in Section 5. A discussion of the comparative analysis of remedial alternatives is provided in Section 6.

2. Site Background

This section describes the site's physical setting, regulatory history, and previous environmental investigations conducted at the site.

2.1 Site and Surrounding Area

The site consists of three properties located in a mixed commercial and residential area at 706, 726, and 800 Harrison Street, Oakland, California (Figure 1). All property locations and boundaries are shown on Figure 2.

The 706 Harrison Street Property is a former ARCO service station owned by Mr. Bo Gin. This property currently contains an asphalt parking lot. Former facilities at the 706 Harrison Street Property included four 1,000-gallon and two 6,000-gallon fuel underground storage tanks (USTs), one steel waste oil UST, product line piping and pump islands, and a station building. The USTs and associated piping were removed in January 1991 (Cambria Environmental Technology, Inc. 1995).

The property located at 726 Harrison Street is a former Shell service station owned by Mr. Peter Yee. This property currently contains an asphalt parking lot and building. Former facilities at the 726 Harrison Street Property included three 4,000-gallon and one 8,000-gallon fuel USTs, one steel 1,000-gallon waste oil UST, product line piping and pump islands, and a station building. The USTs and associated piping were removed in October 1995 (Aqua Science Engineers, Inc. [ASE] 2001).

The property located at 800 Harrison Street is an active 76 Station (Unocal) owned by Mr. Muhammad Usman. Current station facilities include a single-story convenience store, three product dispenser islands under two canopies, and two 12,000-gallon double-wall poly-steel gasoline USTs.

2.2 Site Water and Land Use

Sections 2.2.1 and 2.2.2 describe the beneficial water and land use determinations.

2.2.1 Beneficial Water Use Determination(s)

The site is located in the East Bay Plain sub-basin of the Santa Clara Valley groundwater basin, as identified in the San Francisco Bay Basin (Region 2) Water Quality Control Plan (California Regional Water Quality Control Board – San Francisco Bay Region [RWQCB] 2007). The Santa Clara Valley groundwater basin has been designated as having existing

beneficial uses for municipal and domestic water supply, industrial process water supply, industrial service water supply, and agricultural water supply. The information presented in the Sections 2.2.2, 2.2.3, and 2.2.4 will help to evaluate potential receptors for groundwater at the site.

2.2.2 Review of Well Logs

Water well searches have been performed for all three properties to identify the location of permitted water supply wells within a 1-mile radius of the site. The survey included reviewing the California Department of Water Resources files for water wells within a 1-mile radius of the site. The water well survey concluded that five water supply wells are located within a 1-mile radius of the site: four industrial supply wells and one irrigation supply well. The closest water well is an irrigation well located at 900 Fallon Street at Laney College, approximately 1,880 feet southeast (cross gradient) of the site (Stantec 2009).

2.2.3 Summary of Beneficial Water Use Determination

Potential beneficial uses of the site groundwater, as defined by the RWQCB, are broad and include domestic, municipal, agricultural, and industrial uses (RWQCB 2007).

2.2.4 Land Use Determination

According to the City of Oakland, all three properties are zoned in the central business zoning district. For this FS, it is assumed that potential future uses of the properties will be consistent with current zoning or commercial zoning purposes.

3. Site Conceptual Model

This section describes the site geology and hydrogeology as well as the nature and extent of remaining petroleum hydrocarbons in the groundwater.

A summary of the site history, previous investigations, and interim remedial actions is included in Appendix B. Well construction and soil boring details are included in Tables 1 and 2, respectively. Historical soil and groundwater analytical data are provided in Tables 3 and 4, respectively.

3.1 Regional Geology

The site is underlain by Holocene and Pleistocene-age eolian sand deposits referred to as the Merrit Sand. Merrit Sand typically consists of fine grained, very well-sorted, well-drained eolian sand, inter-fingering with Holocene Bay Mud. This silty sand reaches a maximum depth of approximately 50 feet below ground surface (bgs) across all three properties (Stantec 2009).

3.2 Local Geology and Hydrogeology

Property-specific well boring logs and cone penetrometer test (CPT) investigation results indicate that the site lithology is consistent with regional lithology. The general site lithology comprises primarily silty sands and fine-grained sands extending to approximately 30 feet bgs. Deeper CPTs were conducted in the area of 800 Harrison Street and indicate the presence of silt and clay between approximately 30 and 42 feet bgs. Below the clay, fine-grained sand and silty sand are present (Stantec 2009). It is assumed the Merritt Sand lies under the site, based on visual inspections of soil during the investigations (Stantec 2009). Cross-section locations are shown on Figure 3. A generalized cross-section depicting subsurface materials for all three properties is provided on Figure 4. Property-specific cross-sections for 800 Harrison Street, 726 Harrison Street, and 706 Harrison Street are provided on Figures 5, 6, and 7, respectively.

The nearest surface waters to the site are the Oakland Inner Harbor to the south and west and Lake Merritt to the east and northeast. Each body of water is approximately ½ mile from the site (Stantec 2009).

Depth to water beneath the three properties has historically ranged from 10.93 to 20.01 feet bgs. During the second semiannual groundwater monitoring and sampling event in August 2012, average depth-to-water measurements were approximately 16.30

(706 Harrison Street), 19.80 (726 Harrison Street), and 17.92 (800 Harrison Street) feet below top of well casing. A deeper water bearing zone was encountered at depths of 42 to 50 feet bgs during advancement of the cone penetrometers. Prior to the June 2011 site assessment, no wells were installed in the deeper water bearing zone. In June 2011, ASE oversaw the installation of monitoring well MW-6 in the source area near EW-1 on the 726 Harrison Street Property within the deeper water bearing zone. MW-6 is screened from 44 to 49 feet bgs (Table 1).

The predominant groundwater gradient observed across all three properties is south-southeast with a horizontal hydraulic gradient of 0.007 foot per foot (ARCADIS 2011). This gradient direction indicates that groundwater flows from 800 Harrison Street toward 726 Harrison Street and from 726 Harrison Street toward 706 Harrison Street.

A groundwater potentiometric surface map from the second semiannual 2012 monitoring event is presented on Figure 8. A groundwater gradient direction rose diagram is provided on Figure 9.

3.3 Mass Distribution in the Subsurface

3.3.1 Dissolved in Groundwater

The area of impacted groundwater was estimated and is presented on isoconcentration contour maps for total petroleum hydrocarbons quantified as gasoline range organics (TPH-g), benzene, and methyl tert-butyl ether (MTBE) for the August 9, 2012 sampling event (Figures 10, 11, and 12; Table 4). The properties located at 706 and 726 Harrison Street have the greatest mass for the dissolved groundwater plume. The following equation was used to estimate the petroleum hydrocarbon mass remaining in the area of impacted groundwater:

$$\text{Mass remaining} = C * V * n$$

Where:

C = Average concentration (micrograms per liter [$\mu\text{g/L}$])

V = Volume of impacted groundwater

n = Porosity of soil (estimated as 30 percent)

Based on this equation, an estimated total of 1.28 pounds of benzene, 2.58 pounds of MTBE, and 5.09 pounds of TPH-g mass exists in the groundwater at the site. The complete calculations are presented in Appendix C.

3.3.2 Sorbed to Soil Matrix

Various excavations have been performed at each property to address petroleum hydrocarbons in the soils. The details of excavations and soil removal activities are described in Appendix B. Soil isopleth contour maps for benzene, MTBE, and TPH-g at various depths are provided in Appendix D. The soil impacts are generally at the water table or in the saturated zone on the properties located at 706 and 726 Harrison Street.

Evaluation of the soil data with the corresponding groundwater potentiometric surface maps and cross-sections indicates the presence of two source areas beneath the former USTs at 706 and 726 Harrison Street, which were removed in 1991 and 1995, respectively. Due to the building location, over excavation of the tank pit was not completed for the removal of impacted soil at 726 Harrison Street.

3.4 Groundwater

Elevated concentrations of dissolved TPH-g, benzene, and MTBE are currently present in groundwater on site and downgradient from the USTs at 706 and 726 Harrison Street. A statistical analysis of groundwater analytical trends is presented in Section 3.4.1. Biogeochemical and natural attenuation indicator parameters are discussed in Section 3.4.2. Groundwater isoconcentration contour maps for benzene, MTBE, and TPH-g for the August 2012 sampling event are included on Figures 10, 11, and 12. Groundwater monitoring well hydrographs depicting groundwater elevation and constituent concentration trends are provided in Appendix E.

3.4.1 Linear Regression Trend Analysis

To assess trends in benzene, MTBE, and TPH-g concentrations with time, a statistical evaluation of the groundwater monitoring data was prepared for monitoring wells demonstrating decreasing trends. MTBE is the slowest constituent to naturally attenuate in groundwater and was therefore the focus of the linear regression trend analysis. All monitoring wells from the three properties were included in the linear regression trend analysis. The statistical analysis was performed using a linear regression trend test on historical groundwater analytical data.

Data sets for the analyzed monitoring wells at 706 and 726 Harrison Street consist of monitoring results from 1997 through February 2012, while the data set for 800 Harrison Street consists of monitoring results from 1991 to February 2012. Where non-detect concentrations were used in the calculations, the concentrations were assumed to be equal to the detection limits. Use of the detection limit for concentrations that were below detection provides a conservative estimate for evaluating the concentration trends through time.

Linear regression trend analyses were conducted using natural log-normalized benzene, MTBE, and TPH-g concentration data to estimate concentration-time trend direction, attenuation rates, and approximate time to achieve cleanup goals using a point-rate approach (United States Environmental Protection Agency [USEPA] 2002). The results of the linear regression trend analyses, including correlation coefficients, p-value of the correlation, trend direction, and anticipated date to reach cleanup goals, are summarized in Appendix F. Linear regression analysis allows for estimating the time to reach the cleanup goal at wells with decreasing constituent of concern (COC) concentration trends. The correlation coefficient, R^2 , is a measure of how well the linear regression fits the site data; values close to one are considered to be a good fit, while values close to zero are considered to be a poor fit. The p-value of the correlation provides a measure of the level of significance of the statistical test. Correlations were accepted as significant for p-values less than or equal to 0.05 and not significant for p-values greater than 0.05.

Groundwater monitoring data collected at the following wells indicate statistically significant decreasing concentration trends for MTBE:

- 706 Harrison Street: MW-1
- 726 Harrison Street: MW-1, MW-3, MW-4
- 800 Harrison Street: MW-1, MW-5, MW-6, MW-7, MW-8

The groundwater monitoring data collected in the remaining wells do not indicate statistically significant trends. Based on the data sets from 2003 through 2012, the average projected date to reach the water quality objective for MTBE [5 µg/L] in wells with decreasing trends is 2046.

3.4.2 Biogeochemical and Natural Attenuation Indicator Parameters

Native bacteria in soil and groundwater obtain energy for cell production and maintenance by facilitating thermodynamically advantageous reduction-oxidation reactions, involving the transfer of electrons from electron donors to available electron acceptors. Electron

acceptors in groundwater systems include oxygen, nitrate, manganese oxides, ferric iron hydroxides, sulfate, and carbon dioxide.

Natural biodegradation of petroleum hydrocarbons can occur in both aerobic and anaerobic environments. Aerobic biodegradation occurs when sufficient oxygen is present in groundwater. Anaerobic biodegradation processes will become dominant as oxygen is consumed. Anaerobic microorganisms will consume other electron acceptors in the absence of oxygen in the following order of thermodynamic preference: nitrate, ferric iron, sulfate, and carbon dioxide.

As hydrocarbons are biodegraded through anaerobic processes, concentrations of nitrate and sulfate will decrease, while concentrations of dissolved ferrous iron increase. Carbon dioxide will be consumed and created, and methane will be produced within in the plume through this process (Suthersan 1997).

During the third quarter 2012 groundwater monitoring event, biogeochemical and natural attenuation indicator parameters were collected from each monitoring well at all three properties to better understand the extent of biodegradation of petroleum hydrocarbon compounds in groundwater. The parameters collected include dissolved oxygen (DO), oxidation-reduction potential (ORP), nitrate, nitrite, total iron, sulfate, methane, alkalinity as calcium carbonate, nonvolatile organic carbon, and dissolved metals. The biogeochemical and natural attenuation indicator results are presented in Table 5.

Biogeochemical parameters have only been collected once at all three properties. To better understand the biodegradation process in groundwater, one additional round of biogeochemical parameters will be collected from each monitoring well during the first semiannual 2013 groundwater monitoring event. Biogeochemical parameter results are discussed below (without detailed interpretation due to the lack of historical data):

- DO concentrations in groundwater ranged from 0.01 milligram per liter (mg/L) (MW-8, 800 Harrison Street) to 6.25 mg/L (MW-6, 800 Harrison Street) across the three properties.
- Nitrate detections in groundwater ranged from 0.56 mg/L (MW-3, 726 Harrison Street) to 66 mg/L (MW-2, 726 Harrison Street) across the three properties.
- Sulfate detections in groundwater ranged from 2.5 mg/L (MW-5, 800 Harrison Street) to 130 mg/L (MW-2, 800 Harrison Street) across the three properties.

- Dissolved iron detections ranged from 0.16 mg/L (MW-6, 800 Harrison Street) to 6.9 mg/L (MW-2, 706 Harrison Street) across the three properties.
- Methane detections ranged from 0.0012 mg/L (MW-2, 726 Harrison Street) to 6.8 mg/L (MW-2, 706 Harrison Street) across the three properties.

The biogeochemical parameter monitoring results generally indicate aerobic conditions in groundwater at the site. Monitoring wells located outside of the hydrocarbon groundwater plume typically have higher concentrations of DO, while wells located within the plume generally have lower (but not depleted) DO concentrations. Monitoring well MW-2, located at 706 Harrison Street, demonstrated a depleted nitrate concentration and an elevated ferrous iron concentration with respect to other monitoring wells on the same property. This typically indicates anaerobic, iron-reducing conditions in groundwater within the extent of a hydrocarbon plume; however, MW-2 (706 Harrison Street) contains a fairly high DO concentration.

Results from the baseline biogeochemical and natural attenuation monitoring event indicate moderate evidence of active biodegradation processes occurring at the site, with DO, nitrate, and ferric iron used as electron acceptors. Biodegradation processes at the site will be evaluated following the additional biogeochemical monitoring event to be conducted during the first semiannual 2013 groundwater monitoring event. This additional information will help to understand the biodegradation of petroleum hydrocarbon constituents in groundwater at the site.

3.5 Summary

Over-excavations were completed to remove petroleum-impacted soil during UST removal activities at 706 and 726 Harrison Street. As discussed above, the groundwater monitoring network at 800 Harrison Street contains significantly lower concentrations of COCs compared to the other two properties. The property at 800 Harrison is located hydraulically upgradient of the other two properties (726 and 706 Harrison Street, respectively) and monitoring wells MW-1, MW-5, MW-6, MW-7, and MW-8 at 800 Harrison Street exhibit statistically significant declining trends. Therefore, remedial alternatives will focus on dissolved-phase mass in groundwater at 706 and 726 Harrison Street.

The saturated zone at 706 and 726 Harrison Street primarily comprises moderately permeable silty sand material above a denser silty clay layer. Baseline geochemical parameter data indicate possible background aerobic processes in the aquifer and anaerobic conditions within the plume spanning 706 and 726 Harrison Street. Additional

Feasibility Study

706/726/800 Harrison Street,
Oakland, California

biogeochemical parameters will be required to fully understand biodegradation processes in groundwater at all three properties.

4. Development of Remedial Options

Based on results from previous investigations and historical remedial activities conducted at the site, five potential remedial alternatives were compiled for further evaluation in this FS. The following five remedial alternatives were developed for the site:

- Alternative 1 – Monitored Natural Attenuation (MNA)
- Alternative 2 – Air Sparge (AS)/Soil Vapor Extraction (SVE)
- Alternative 3 – Multi-Phase Extraction (MPE)
- Alternative 4 – In-Situ Enhanced Bioremediation
- Alternative 5 – In-Situ Chemical Oxidation (ISCO)

Remedial alternatives 2 through 5 will be evaluated in conjunction with MNA. These remedial alternatives are described in Sections 4.1 through 4.5.

4.1 Remedial Alternative 1 – Monitored Natural Attenuation

Remedial Alternative 1 (RA1) does not involve the implementation of active remediation to remove, treat, or contain COCs at the site. This remedial alternative relies on natural attenuation and biodegradation processes to reduce chemical concentrations through time. Semiannual groundwater monitoring will be performed to document COC concentration changes.

MNA processes achieve site-specific remediation objectives through reliance on natural attenuation within a controlled, monitored site cleanup approach. The natural attenuation process includes a variety of biological, chemical, or physical processes that can reduce mass, toxicity, mobility, volume, or concentrations of COCs in groundwater. Favorable background conditions are necessary in groundwater to drive the natural attenuation process and continued biodegradation of petroleum hydrocarbons. These intrinsic in-situ processes include: biodegradation, volatilization, diffusion, dilution, sorption, and chemical or biological stabilization, transformation, or destruction of COCs.

The effectiveness of natural attenuation processes is driven by the types and concentrations of constituents present and the physical, chemical, and biological characteristics of the soil and groundwater. Natural attenuation processes in the subsurface can reduce the potential risk posed by COCs in multiple ways. The biodegradation process may produce daughter compounds of constituents that are less toxic. Physical processes, dilution, or diffusion within the groundwater aquifer may also reduce risk by decreasing concentration levels. Sorption to soil or aquifer matrix within the subsurface may also decrease constituent mobility.

Components of this alternative include:

- Conducting an additional baseline biogeochemical groundwater monitoring event to further evaluate the biodegradation processes (i.e., anaerobic vs. aerobic) taking place within the site groundwater. This monitoring event would include collection of the same geochemical and natural attenuation parameters collected during the August 9, 2012 event. The supplemental groundwater monitoring event would include collection of DO, nitrate, ferrous iron, sulfate, alkalinity as calcium carbonate, methane, nonvolatile organic carbon, and ORP; and the evaluation of COCs to confirm water quality at the site. This data, in conjunction with initial baseline geochemical parameters, will be used to evaluate the effectiveness of MNA via trend analysis to verify decreasing trends and statistical analysis to determine whether site cleanup objectives can be achieved within a reasonable time frame.
- Continuing the semiannual groundwater monitoring program to confirm continued reduction of site COC concentrations through natural attenuation processes. One semiannual groundwater monitoring event each year would also include collection of biogeochemical indicator parameters, including DO, nitrate, ferrous iron, sulfate, alkalinity as calcium carbonate, methane, nonvolatile organic carbon, and ORP for continued evaluation of the biodegradation processes taking place within site groundwater.

4.2 Remedial Alternative 2 – Air Sparge/Soil Vapor Extraction

Remedial Alternative 2 (RA2) uses AS/SVE to treat petroleum hydrocarbon impacts through physical treatment. AS involves the controlled injection of ambient air into the subsurface beneath the water table through a series of injection wells. The injected air treats dissolved petroleum hydrocarbons through volatilization or stripping. Volatilized volatile organic compounds (VOCs) then migrate upward through groundwater and into the vadose zone. The VOC vapors are captured in SVE wells and directed to a treatment system through air conveyance piping. Typical equipment used for implementation of AS includes vertical sparge wells, a blower to inject air, and system controls and instrumentation.

SVE is a process that removes VOCs from unsaturated soil below the ground surface and above the groundwater table. The SVE process involves inducing a vacuum within the soil matrix through a network of vapor extraction wells. The vacuum induced in the vadose zone volatilizes VOCs in the soil and captures VOCs stripped from groundwater through the AS process. After collection in the SVE wells, vapors are conveyed to a treatment system. Typically, the extracted vapors are treated by vapor-phase granular

activated carbon or thermal destruction (catalytic or thermal oxidation) prior to being discharged through an exhaust stack. Typical equipment used for implementation of SVE includes vertical extraction wells, a vacuum unit (blower), a liquid/vapor separator (knock-out tank), a discharge vapor treatment system, and system controls and instrumentation.

Components of this remedial alternative potentially include:

- Conducting an additional baseline biogeochemical groundwater monitoring event to further evaluate the biodegradation processes taking place within the site groundwater.
- Completing a pilot study to further evaluate soil permeability, porosity, moisture content, VOC mass removal rate, radius of influence, and optimal system design and operation parameters.
- Installing AS and SVE wells, conveyance piping, and a skid-mounted treatment system at the site. The system would include necessary SVE wells to capture subsurface vapors after stripping through the AS process.
- Performing system startup, optimization, and operation and maintenance (O&M) activities.
- Conducting air monitoring activities to evaluate the reduction of total VOC concentrations in the influent and effluent air of the treatment system.
- Maintaining and repairing the concrete/pavement materials covering the majority of the properties during remediation.
- Continuing the semiannual groundwater monitoring program. One semiannual groundwater monitoring event each year would also include collection of biogeochemical indicator parameters, including DO, nitrate, ferrous iron, sulfate, alkalinity as calcium carbonate, methane, nonvolatile organic carbon, and ORP for continued evaluation of the biodegradation processes taking place within site groundwater.

4.3 Alternative 3 – Multi-Phase Extraction

Remedial Alternative 3 (RA3) uses MPE to contain and treat COCs in groundwater. The MPE process extracts impacted groundwater and vapor from the subsurface through use of a high vacuum system and an extraction well network. The vacuum extraction wells are screened across the fringe of the water table to allow removal of soil vapors in the vadose

zone and petroleum-impacted groundwater. The high vacuum induced on the extraction wells lowers the water table surrounding the well casing to expose soil below the water table and allow extraction of the VOCs in the newly exposed soils. The vapors or liquid-phase organics and groundwater are removed, separated, and treated in an aboveground remediation building.

Components of this alternative potentially include:

- Conducting an additional baseline biogeochemical groundwater monitoring event to further evaluate the biodegradation processes taking place within the site groundwater.
- Completing a pilot study to further evaluate soil permeability, porosity, moisture content, VOC mass removal rate, radius of influence, and optimal system design and operation parameters.
- Installing vacuum extraction wells, conveyance piping, and a skid-mounted treatment system at the site. The system could include a sufficient number of vacuum wells to capture subsurface groundwater and vapors.
- Performing system startup, optimization, and O&M activities.
- Conducting air monitoring activities to evaluate the reduction of total VOC concentrations in the influent and effluent air of the treatment system.
- Maintaining and repairing the concrete/pavement materials covering the majority of the properties during remediation.
- Continuing the semiannual groundwater monitoring program. One semiannual groundwater monitoring event each year would also include collection of biogeochemical indicator parameters, including DO, nitrate, ferrous iron, sulfate, alkalinity as calcium carbonate, methane, nonvolatile organic carbon, and ORP for continued evaluation of the biodegradation processes taking place within site groundwater.

4.4 Remedial Alternative 4 – In-Situ Enhanced Bioremediation

Remediation Alternative 4 (RA4) includes in-situ enhanced bioremediation to treat COCs in groundwater through biodegradation. While bioremediation will occur aerobically through natural attenuation at some sites, the enhanced bioremediation approach accelerates the

rate of microorganism degradation reactions and stimulates the activity of microorganisms by optimizing environmental conditions. In-situ enhanced bioremediation typically entails the use of a system to supply oxygen, other electron acceptors, or nutrients to groundwater through an injection well network to stimulate microbial activity.

Components of this alternative potentially include:

- Conducting an additional baseline biogeochemical groundwater monitoring event to further evaluate the biodegradation processes taking place within the site groundwater.
- Completing an injection pilot study to further evaluate soil permeability, porosity, moisture content, radius of influence, required amendment volume, optimal injection well locations, and effectiveness of the enhanced biodegradation process.
- Installing injection wells, conveyance piping, and a skid-mounted treatment system at the site.
- Performing system startup, optimization, and O&M.
- Continuing the semiannual groundwater monitoring program. One semiannual groundwater monitoring event each year would also include collection of biogeochemical indicator parameters, including DO, nitrate, ferrous iron, sulfate, alkalinity as calcium carbonate, methane, nonvolatile organic carbon, and ORP for continued evaluation of the biodegradation processes taking place within site groundwater.

4.5 Remedial Alternative 5 – In-Situ Chemical Oxidation

Remedial Alternative 5 (RA5) involves remediation of groundwater COCs through ISCO by delivering oxidants and other amendments to impacted groundwater to degrade organic hydrocarbon constituents to non-toxic byproducts. Typical chemical oxidants are activated persulfate, ozone, hydrogen peroxide, and potassium permanganate. Oxidant injections can be completed either through direct-push injections or manned injection events into permanent injection wells.

The completion of bench testing and further biogeochemical evaluation would be necessary to determine the proper reagent and dosing requirements. For this FS, we have assumed the use of sodium persulfate as the chemical oxidant with hydrogen peroxide or ferrous sulfate and citric acid as an activator. Assuming adequate dosing and delivery/contact, the

VOCs will likely react rapidly (i.e., within minutes), with complete destruction upon contact (greater than 90 percent effective destruction). Therefore, the effectiveness of this alternative is primarily based on the ability to deliver/distribute the treatment reagents to the affected media, the oxidation reaction kinetics, and the ability to overcome natural oxidant demand of the soils/aquifer. Reaction kinetics will also affect the rate of carbon dioxide generation and the amount of heat generated, and is often an important design consideration from a health and safety perspective.

MNA would be relied upon for areas outside the direct influence of the injection zone for final treatment.

Components of the alternative include:

- Conducting an additional baseline biogeochemical groundwater monitoring event to further evaluate the biodegradation processes taking place within the site groundwater.
- Completing an injection pilot study to further evaluate oxidant demand, potential infiltration/oxidant injection rates, and other parameters related to the design.
- Completing bench testing and further geochemical evaluation to aid in reagent selection and dose requirements.
- Installing an ISCO injection system (such as a network of vertical injection wells) at and hydraulically downgradient from the two source areas on 706 and 726 Harrison.
- Injecting oxidant solution into the injection wells.
- Conducting verification sampling and analysis activities to evaluate the reduction of COC concentrations in unsaturated soil.
- Continuing the semiannual groundwater monitoring program. One semiannual groundwater monitoring event each year would also include collection of biogeochemical indicator parameters, including DO, nitrate, ferrous iron, sulfate, alkalinity as calcium carbonate, methane, nonvolatile organic carbon, and ORP for continued evaluation of the biodegradation processes taking place within site groundwater.

5. Analysis of Remedial Alternatives

This section describes and evaluates the five remedial alternatives identified in Section 4. Each remedial alternative is evaluated by assessing the following five remedy selection factors:

- Effectiveness
- Long-term reliability
- Implementability
- Implementation risk
- Cost

These five remedy selection factors are described in Section 5.1 and the remedial alternatives are evaluated in Section 5.2.

5.1 Remedy Selection Factors

Each of the five remedy selection factors used in this FS is described below.

5.1.1 Effectiveness

Each remedial action alternative is assessed for its short- and long-term effectiveness in achieving site cleanup goals by considering the following criteria, as appropriate:

- Magnitude of risk from untreated waste or treatment residuals remaining at the site with on-site management and controls to mitigate exposure through various exposure pathways. The characteristics of the residuals will be considered to the degree that they remain hazardous, considering their volume, toxicity, mobility, propensity to bioaccumulate, and propensity to degrade.
- Required level of engineering and institutional controls necessary to manage the risk posed from treatment residuals and untreated hazardous substances remaining at the site.
- For areas requiring remedial action, the ability of the remedial action to restore or protect beneficial uses of site groundwater.
- Adequacy of treatment technologies in meeting treatment objectives.
- Time required to achieve the remedial action objectives.

- Any other information relevant to effectiveness.

5.1.2 Long-Term Reliability

Each remedial action alternative is assessed for its long-term reliability by considering the following criteria, as appropriate:

- Reliability of treatment technologies in meeting treatment objectives.
- Reliability of engineering and institutional controls necessary to manage the risk from treatment residuals and untreated hazardous substances.
- Characteristics of the hazardous substance to be managed and the effectiveness and enforceability through time of engineering and institutional controls in preventing migration of constituents and in managing risks associated with potential exposure.
- Nature, degree, and certainties or uncertainties of any long-term management as related to ease of operation (e.g., operation, maintenance, and monitoring).
- Any other information relevant to long-term reliability.

5.1.3 Implementability

Each remedial alternative is assessed for the ease or difficulty of implementing the remedial action, by considering the following criteria, as appropriate:

- Constructability as related to practical, technical, and legal difficulties and unknowns associated with the implementation of a technology, engineering control, or institutional control.
- Ability to monitor the short- and long-term effectiveness of the remedy.
- Consistency with federal, state, and local requirements; activities needed to coordinate with other agencies; and ability and time required to obtain any necessary authorization from other governmental bodies.
- Availability of necessary services, materials, equipment, and specialists, including the availability of adequate off-site treatment, storage, and disposal capacity and services, and availability of prospective technologies.

- Any other information relevant to implementability.

5.1.4 Implementation Risk

Each remedial action alternative is assessed for the risk associated with implementing the remedial action, by considering the following criteria, as appropriate:

- Potential impacts to the community during implementation of the remedial action and the effectiveness and reliability of protective or preventative measures.
- Potential impacts to workers (800 Harrison Street) during implementation of the remedial action and the effectiveness and reliability of protective or preventative measures.
- Potential impacts to the environment during implementation of the remedial action and the effectiveness and reliability of protective or preventative measures.
- Time until the remedial action is complete.
- Any other information relevant to implementation risk.

5.1.5 Cost

Each remedial alternative is assessed for the reasonableness of cost by considering all of the following criteria, as appropriate:

- Cost of the remedial action including:
 - capital costs, including both direct and indirect costs
 - annual O&M costs
 - costs of any periodic review requirements.
- Degree to which the costs of the remedial action are proportionate to the benefits to human health and the environment created through risk reduction or risk management.
- Degree of sensitivity and uncertainty of the costs.
- Any other information relevant to cost-reasonableness.

The total cost of each alternative represents the sum of the direct capital costs (materials, equipment, labor), indirect capital costs (engineering, licenses/permits, and contingency allowances), and O&M costs. O&M costs may include operating labor, utility usage, necessary chemicals/reagents, and sampling and analysis. These costs are estimated with an anticipated accuracy between -30 and +50 percent, in accordance with USEPA guidance (USEPA 1988). The actual costs will depend on true labor and material costs, competitive market conditions, final project scope, and implementation schedule.

5.2 Remedial Alternative Evaluation

This section evaluates each remedial alternative based on the remedy selection factors described in Section 5.1.

5.2.1 Remedial Alternative 1 – Monitored Natural Attenuation Only

RA1 will rely solely on MNA processes (either aerobic respiration or anaerobic oxidation of petroleum hydrocarbon using naturally occurring electron acceptors) to reduce COC concentrations in groundwater through time. Semiannual groundwater monitoring will be performed to document changes in concentrations through time.

5.2.1.1 *Effectiveness*

Under RA1, active remediation will not occur; remediation will rely on natural attenuation processes to continue to reduce total COC mass through time. Due to the lack of historical biogeochemical data, it is difficult to provide a complete assessment of the current biodegradation conditions occurring in the aquifer between all three properties. The baseline natural attenuation indicator analytical results from the August 2012 semiannual monitoring event demonstrate possible aerobic conditions and anaerobic oxidation in groundwater. The results of the additional biogeochemical parameter sampling event during 2013 will provide a better understanding of natural COC degradation in groundwater. Potential sources of impacts (e.g., USTs, associated piping) have been removed and previous remedial activities (i.e., over excavations during UST removal) at 706 and 726 Harrison Street have made future COC concentration increases unlikely.

5.2.1.2 *Long-Term Reliability*

Under RA1, dissolved concentrations of benzene, MTBE, and TPH-g are expected to decrease to cleanup goals within approximately 35 years based on results from the linear regression trend analysis. Groundwater conditions within the plume appear to be anaerobic after baseline geochemical analysis. Under anaerobic conditions, nitrate and sulfate act as

electron-acceptors to support the biodegradation of the petroleum hydrocarbon constituents in groundwater in the presence of depleted DO concentrations. Semiannual groundwater monitoring will document the groundwater changes through time.

5.2.1.3 Implementability

MNA is an easily implementable remedial alternative. MNA relies solely on continuing the current semiannual groundwater monitoring and reporting program with the addition of annual sampling for biogeochemical and natural attenuation indicator parameters.

5.2.1.4 Implementation Risk

The MNA alternative poses minor implementation risk concerns for community members and the environment. Field personnel may come into contact with impacted groundwater during the sampling events and there is the potential for a release of impacted groundwater during sampling activities. Potential risk during sampling procedures can be readily mitigated with proper use of personal protective equipment (PPE) and sampling standard operating procedures.

5.2.1.5 Cost

The costs to implement the MNA alternative include costs associated with groundwater sampling and report preparation. Groundwater concentrations of benzene, MTBE, and TPH-g are expected to reach cleanup goals in approximately 35 years for the majority of wells with remaining impacts. Based on the current remedial time frames estimated using mass remaining calculations, the total estimated cost to implement RA1 is \$2,150,000. Assumptions and a breakdown of costs are summarized along with other remedial alternatives in Appendix G.

Due to the ease of implementation for this alternative and the low annual costs, this alternative has been retained for comparative analysis.

5.2.2 Remedial Alternative 2 – Air Sparge/Soil Vapor Extraction

RA2 will involve the installation of AS and SVE wells. The injection of air into the subsurface below the water table under controlled pressure allows VOCs to be volatilized. The resulting VOC vapors are then captured by SVE wells and conveyed into a treatment system. For this FS, ARCADIS has been assumed that 20 AS wells and 15 SVE wells will be installed on the properties located at 706 and 726 Harrison Street to address remaining dissolved - phase source areas. Groundwater conditions will be monitored for effectiveness of

biodegradation and stripping from air sparging. This remedial alternative will require a pilot test to provide data necessary to evaluate the effectiveness of the remedy and estimate the anticipated remedial timeframe; however, for costing purposes, the duration of RA2 implementation, including performance and groundwater monitoring, is assumed to be 6 years.

5.2.2.1 Effectiveness

Historical AS/SVE system operation at 706 Harrison Street has demonstrated effective treatment of VOCs in groundwater. Groundwater concentrations of COCs decreased in monitoring wells located within the influence of AS wells during AS system operations. However, groundwater COC concentrations rebounded following shutdown of the AS/SVE system in 2002. The AS/SVE technology can be an effective remedy through sustained and optimized system operation. A review of historical boring logs and additional soil boring investigation data collected during pilot testing will provide necessary information to select optimal well locations to remediate the site.

5.2.2.2 Long-Term Reliability

This alternative will be reliable for the long term because the VOC concentrations within the soil and groundwater will be reduced and the reduction would be a permanent and irreversible process. Because air is the only amendment added to groundwater and extracted from the vadose zone, the O&M of an AS/SVE system is relatively simple. Typical O&M activities include collection of AS/SVE system component readings, pressures, vacuums, flow rates, and discharge photoionization detector readings and system optimization.

5.2.2.3 Implementability

RA2 is a readily implementable alternative. Equipment and labor required to install injection wells are available and the well installation depths are easily achieved. The AS/SVE system can be applied using an on-site treatment facility installed at 706 Harrison Street. The existing electrical utility connection and former remediation building location could be used to enhance constructability of the treatment system.

5.2.2.4 Implementation Risk

Implementation risks associated with this alternative, such as the risks associated with injection and extraction well installation, can be readily mitigated using standard operating procedures and PPE.

5.2.2.5 Cost

The estimated costs associated with RA2 are presented in Appendix G. The total capital cost for implementation of RA2 including pilot study, design, equipment procurement, and equipment installation is estimated to be \$415,000. Including indirect costs associated with institutional controls, present worth analysis of O&M costs, utility usage, post-treatment groundwater monitoring, and site decommissioning (total estimated cost of approximately \$850,000), the total 6-year present worth cost associated with implementation of RA2 is estimated to be \$1,408,000.

5.2.3 Remedial Alternative 3 – Multi-Phase Extraction

RA3 involves using MPE to address COCs in groundwater. The MPE process extracts impacted groundwater and/or vapor from the subsurface through use of a high vacuum system and an extraction well network. The groundwater extraction associated with the MPE technology can hydraulically control impacted groundwater migration and increase SVE efficiency. MPE systems can enhance the biodegradation processes in the vadose zone due to the addition of oxygen.

For this FS, ARCADIS has been assumed 15 extraction wells will be installed at 706 and 726 Harrison Street. Groundwater conditions will be monitored for effectiveness of vapor and liquid recovery rates from the extraction wells. RA3 will require a pilot test to provide data necessary to evaluate the effectiveness of the remedy and estimate the anticipated remedial timeframe; however, for costing purposes, remedial operation (including performance and groundwater monitoring) is assumed to continue for 6 years.

5.2.3.1 Effectiveness

Historical SVE system operation at 706 Harrison Street demonstrated effective hydrocarbon soil vapor recovery from the vadose zone. The SVE system was shutdown in 2001 due to diminishing mass removal rates. The MPE system will allow more VOCs to volatilize due to water table depression around MPE wells, increasing mass removal rates during sustained operation while continuing to remove hydrocarbon-impacted groundwater.

5.2.3.2 Long-Term Reliability

This alternative will be reliable for long-term operation because COC concentrations within the lower vadose zone (exposed by water table depression) and groundwater will be reduced through physical treatment. The O&M activities associated with MPE are similar to

RA2, but would entail additional time and effort to monitor vapor and groundwater extraction parameters.

5.2.3.3 Implementability

RA3 is a readily implementable alternative. Equipment and labor required to install extraction wells are available and the well installation depths are easily achieved. The MPE system can be applied using an on-site treatment facility installed at 706 Harrison Street. The existing electrical utility connection and former remediation building location will be used to ease constructability of the treatment system.

5.2.3.4 Implementation Risk

Implementation risks associated with RA3, such as the risks associated with extraction well installation, can be readily mitigated using standard operating procedures and PPE. A high-vacuum system and additional treatment of extracted water pose additional implementation risks that can be accounted for through standard operating procedures and a detailed MPE system O&M manual.

5.2.3.5 Cost

The estimated costs associated with RA3 are presented in Appendix G. The total capital cost for implementation of RA3 is estimated to be \$318,000. Including indirect costs associated with institutional controls, present worth analysis of O&M costs, utility usage, post-treatment groundwater monitoring, and site decommissioning (total estimated cost of \$770,000), the total 6-year present worth cost associated with implementation of RA3 is estimated to be \$1,208,000.

5.2.4 Remedial Alternative 4 – In-Situ Enhanced Bioremediation

RA4 entails in-situ enhanced bioremediation to treat COCs in groundwater through biodegradation. In-situ enhanced bioremediation typically involves the introduction of oxygen, other electron acceptors, or nutrients to groundwater through an injection well network to stimulate microbial activity.

5.2.4.1 Effectiveness

Effectiveness of bioremediation is dependent upon soil permeability, constituent (i.e., MTBE) biodegradability, and native bacteria characteristics. The saturated zone consists primarily of moderately permeable silty sands that may inhibit bioremediation amendment

contact with impacted groundwater during injections. Baseline geochemical parameters indicate possible background aerobic conditions in the aquifer and anaerobic conditions within the plume. These readings may indicate higher effectiveness of oxygen or other electron acceptor introduction.

5.2.4.2 Long-Term Reliability

Bioremediation relies on microbial activity to treat VOCs in groundwater in-situ through biodegradation; as a result, the groundwater monitoring timeframe can be longer than anticipated depending on native bacteria consumption of introduced amendments. This can lead to extended operation of the bioremediation system and decreases the ease of system operation.

5.2.4.3 Implementability

RA4 is a readily implementable alternative. Equipment and labor required to install extraction wells are available and the well installation depths are easily achieved. The bioremediation system can be installed using an on-site treatment facility installed at 706 Harrison. The existing electrical utility connection and former remediation building location would be used to ease constructability of the treatment system. The procurement of oxygen delivery agents, other electron acceptors, or nutrient amendments would not complicate implementability of the remedial alternative.

5.2.4.4 Implementation Risk

Implementation risks associated with RA4, such as the risks associated with injection well installation and groundwater amendment handling, can be readily mitigated using standard operating procedures and PPE.

5.2.4.5 Cost

The estimated costs associated with RA4 are presented in Appendix G. The total capital cost for implementation of RA4 is estimated to be \$300,000. Including indirect costs associated with institutional controls, present worth analysis of O&M costs, utility usage, post-treatment groundwater monitoring, and site decommissioning (total estimated cost of \$1,040,000), the total 8-year present worth cost associated with implementation of RA4 is estimated to be \$1,470,000.

5.2.5 Remedial Alternative 5 – In-Situ Chemical Oxidation

RA5 involves ISCO injections to deliver oxidants and other amendments to impacted groundwater to degrade organic hydrocarbon constituents to non-toxic byproducts. For this FS, ARCADIS has assumed the use of sodium persulfate as the chemical oxidant, with hydrogen peroxide or ferrous sulfate and citric acid as an activator.

5.2.5.1 Effectiveness

The application of ISCO injections is effective in reducing the flux of dissolved hydrocarbon constituents downgradient of the treatment area. Batch ISCO injections can also be effective in reducing the size of the plume and mass of dissolved MTBE and other COCs.

5.2.5.2 Long-Term Reliability

RA5 would target residual dissolved hydrocarbon mass in the source area for active treatment. Petroleum hydrocarbons would be degraded rapidly in the treatment zone and reduce the concentration and migration of COCs downgradient. Long-term reliability would depend on selected oxidant and dosing requirements, which would be developed and refined during injection pilot testing and bench testing procedures. The injection events would be the most labor-intensive portion of the alternative. All four injections would occur within the first 2 years of remedy implementation. Groundwater monitoring would be the only O&M activity associated with RA5 following the ISCO injections.

5.2.5.3 Implementability

Due to the anticipated number of injection locations (40 injection points), RA5 will be the most difficult remedial alternative to implement. Although the anticipated injection areas are located in the parking lots of 706 and 726 Harrison Street, persulfate injection equipment and chemical handling in a moderately trafficked area can cause logistical issues and health and safety concerns.

5.2.5.4 Implementation Risk

Potential risks to workers are high when dealing with persulfate injection and chemical handling. Risk to workers and the community posed by injection equipment and oxidants can be mitigated through proper PPE usage, chemical handling procedures, and work area exclusion zones.

5.2.5.5 Cost

The estimated costs associated with RA5 are presented in Appendix G. The total capital cost for implementation of RA5 is estimated to be \$290,000. Including indirect costs associated with institutional controls, present worth analysis of injection events, post-injection groundwater monitoring, and site decommissioning (total estimated cost of \$1,300,000), the total 8-year present worth cost associated with implementation of RA5 is estimated to be \$1,590,000.

6. Comparative Analysis of Remedial Alternatives

This section presents a comparative analysis of the five remedial alternatives for groundwater remediation:

- Alternative 1 – Monitored Natural Attenuation
- Alternative 2 – Air Spage/Soil Vapor Extraction
- Alternative 3 – Multi-phase Extraction
- Alternative 4 – In-Situ Enhanced Bioremediation
- Alternative 5 – In-Situ Chemical Oxidation

The comparative analysis examines the advantages and disadvantages of each remedial alternative relative to each other and considers the five remedy selection factors: effectiveness, long-term reliability, implementability, implementation risk, and cost. The results of the comparative analysis are used as the basis for selecting a recommended remedial alternative to address groundwater impacts at the site.

6.1 Compliance with Remedy Selection Factors

6.1.1 Effectiveness

No active remedial actions will be implemented under RA1 (MNA) to address petroleum hydrocarbon constituents in groundwater. Baseline biogeochemical parameter results indicate that possible biodegradation is occurring within the plume; however, additional monitoring data is required to fully assess current biodegradation processes and aquifer conditions. RA1 implementation may not be reasonable given the mobility of MTBE in groundwater and potential downgradient migration. Active remediation may be necessary to control potential migration off site from 706 Harrison Street.

RA2, RA3, RA4, and RA5 will likely protect current and future public health, safety, and welfare of the environment because they will actively treat petroleum-hydrocarbon-impacted groundwater. RA4 and RA5 may be limited depending on the radius of influence from injections and ability to deliver amendments/reagents to impacted groundwater in the moderately permeable silty sands beneath the anticipated treatment area.

RA2, RA3, RA4, and RA5 will also require a monitoring component to evaluate the groundwater concentration trends through time to evaluate overall remedy effectiveness. All remedial alternatives would include an annual increase in groundwater monitoring parameter analyses to track biogeochemical parameters during remedy implementation.

6.1.2 Long-Term Reliability

All remedial alternatives will be reliable for long-term implementation because the hydrocarbon source areas have been removed during UST removal and over-excavations at 706 and 726 Harrison Street. Remedial alternatives will be implemented to address residual dissolved-phase mass. Ease of operation was also evaluated as a component of long-term reliability for each remedial alternative.

RA1 entails only groundwater monitoring and sampling throughout remedy duration, with no additional O&M for an active remediation system. RA2 and RA3 entail moderate O&M for physical treatment remediation systems. RA4 requires slightly more intense O&M activities to monitor the bioremediation treatment system. These additional O&M activities entail groundwater amendment procurement and handling, detailed biogeochemical parameter analysis, and ensuring that optimal system parameters remain constant to accelerate biodegradation of hydrocarbon constituents in groundwater. RA5 does not entail long-term O&M activities associated with a treatment system because batch ISCO injections will be performed semiannually. Health and safety risks must be considered when choosing a remedy. Implementation of ISCO injections is a more involved remedy pertaining to chemical handling and health and safety. However, following ISCO injections, groundwater monitoring will be the only task associated with long-term implementation.

6.1.3 Implementability

RA1 would be easily implemented at the site. RA2, RA3, and RA4 are more difficult to implement because an active treatment system will be installed and operated on site. After a constructability review, a remediation system location and electrical utility connection are available in the area of the former AS/SVE system located at 706 Harrison Street for RA2, RA3, and RA4. These available implementation requirements will ease the construction of the treatment systems for RA2, RA3, and RA4. RA5 would be the most difficult remedy to implement at the site due to the number of anticipated ISCO injection points. The injection points would target residual dissolved source mass areas beneath 726 and 706 Harrison Street. While anticipated injection points would be located in the parking lot at each property, performing ISCO injections would be difficult due to traffic in the parking lots and potential injection point accessibility issues.

6.1.4 Implementation Risk

RA1 does not involve any implementation risk because it does not include implementation of active remediation. RA2, RA3, RA4, and RA5 pose risks associated with drilling activities,

soil and groundwater sample collection, and injection activities; however, these hazards can be readily mitigated using standard operating procedures and PPE.

6.1.5 Cost

The estimated costs associated with RA1 are considerable due to the duration of groundwater monitoring necessary to evaluate the effectiveness of MNA and determine where groundwater cleanup objectives can be achieved within a reasonable time frame. The total estimated cost to implement RA1 (estimated to be a 35-year time frame) is \$2.15 million. The total estimated costs to implement RA2, RA3, RA4, and RA5 are \$1.4, \$1.2, \$1.45, and \$1.59 million, respectively.

6.2 Recommended Remedial Alternative

Based on the results of the comparative analysis presented above, RA2 and RA3 are recommended for pilot testing. RA1 is not recommended for further evaluation because it is the least effective alternative, takes the longest to achieve remedial objectives, and is the most costly alternative. RA4 is not recommended for further evaluation because RA4 will likely take longer than RA2 or RA3 to achieve remedial objectives and is not as likely to succeed. RA5 is not recommended for further evaluation because RA5 would be the most difficult alternative to implement. RA5 requires the most disturbance to the site, the most disruption to current operations, and has greater implementation risks due to the chemicals that would be handled on site.

At this time, sufficient information is not available to determine which alternative (RA2 or RA 3) is preferable. ARCADIS recommends pilot testing both AS/SVE and MPE prior to the preparation of a remedial action plan. During pilot testing, additional soil borings will be advanced to record site lithology and confirm the depth of the clay confining layer in the source area. The additional information about site geology and the outcome of the pilot tests will provide the information needed to determine if RA2 or RA3 has a greater likelihood of success.

Following approval of this FS, a work plan will be submitted detailing the methodology of the pilot studies and how the data collected during the pilot studies will be used to select the appropriate remedial alternative for the site.

Explanation

- bgs Below ground surface
- mg/kg Milligrams per kilogram
- TPPH Total purgeable petroleum hydrocarbons
- TPH-g Total petroleum hydrocarbons as gasoline
- TPH-mo Total petroleum hydrocarbons as motor oil
- TOG Total oil and grease
- MTBE Methyl tertiary butyl ether
- EDB 1,2-Dibromoethane
- 1,2-DCA 1,2-Dichloroethane
- NA Not analyzed
- ND Non-detect
- <0.0005 Not detected at concentration threshold as shown
- J Estimated value
- ESL Table C. Environmental Screening Levels (ESLs), Deep Soils (>3meters below ground surface), Groundwater is a Current or Potential Source of Drinking Water, CRWQCB-SFBR, Table C, November 2007

ESLs for Residential Groundwater					100	1	40	30	20	5	5

Explanation

- TOC Top of casing
- ft MSL Feet relative to mean sea level
- ft BTOC Feet below top of casing
- TPH-g Total petroleum hydrocarbons as gasoline
- MTBE Methyl tertiary butyl ether
- NA Not available
- ND Non-detect
- Not analyzed
- <0.0005 Not detected at concentration threshold as shown
- J Estimated value
- ESL Table C. Environmental Screening Levels (ESLs), Deep Soils (>3meters below ground surface), Groundwater is a Current or Potential Source of Drinking Water, CRWQCB-SFBR, Table C, November 2007

Explanation

- Not analyzed or not sampled
- < Not Detected
- mg/l Milligrams per liter
- CaCO3 Calcium carbonate
- NO3 Nitrate
- NO2 Nitrogen dioxide
- EDC 1,2-Dichloroethane (ethylene dichloride)
- A01 PQL's and MDL's are raised due to sample dilution.
- PQL Practical quantitation limit
- MDL Method detection limit
- S01 Sample result is not within the quantitation range of the method

Subject: Case File Review for Commingled Plume Assessment for Fuel Leak Case No. RO0000231 (GeoTracker Global ID T0600101486), Unocal #0752, 800 Harrison Street, Oakland, CA 94607; Fuel Leak Case No. RO0000321 (GeoTracker Global ID T0600102122), Chan's Service Station/Shell, 726 Harrison Street, Oakland, CA 94607; and Fuel Leak Case No. RO0000484 (GeoTracker Global ID T0600100985), Oakland Auto Parts, 706 Harrison Street, Oakland, CA 94607

Dear Responsible Parties:

Alameda County Environmental Health (ACEH) staff has reviewed the fuel leak case files for the above referenced sites including the document entitled, "*Site Assessment Addendum Report, 800, 726, and 706 Harrison Street, Oakland, California,*" dated May 11, 2012 (Report) and "*First Quarter 2012 Semiannual Status Summary Report, 800, 726, and 706 Harrison Street, Oakland, California,*" dated April 6, 2012 (Monitoring Report). Both reports were prepared on your behalf by ARCADIS. The Report presents the results from three soil borings advanced to address data gaps within the area of a commingled plume that affects three adjacent sites at 800, 726, and 706 Harrison Street. The three borings were proposed in a Work Plan Addendum dated November 4, 2011 to address deviations from a previous Work Plan. Unfortunately, the proposed scope of work in the Work Plan Addendum dated November 4, 2011 was not

completed. We request that you address the technical comments below, perform the proposed work, and send us the reports requested below.

TECHNICAL COMMENTS

1. **Boring GP-10.** Boring GP-10 was advanced to a depth of 20 feet bgs but a grab groundwater sample could not be collected. The text of the Report states that no groundwater recharge was observed in GP-10 between approximately 20 and 25 feet bgs. However, the boring log for GP-10 indicates that the total depth of GP-10 was only 20 feet bgs. We are disappointed that additional attempts do not appear to have been made to either collect a grab groundwater sample from the GP-10 boring or to advance an adjacent boring to collect a grab groundwater sample for the following reasons:
 - Boring GP-10 is directly downgradient from the plume and is the key location to defining downgradient plume extent.
 - A significant amount of time and resources went into the planning, reviewing, revision of the location, permitting, and gaining access to advance GP-10.
 - The boring log for GP-10 indicates silty sands to 20 feet bgs which is consistent with other borings in the area that have yielded grab groundwater samples.
 - Additional grab groundwater sampling or boring attempts do not appear to have been made.
 - Soil screening parameters and observations on the boring logs did not indicate obvious evidence of contamination. However, a groundwater sample was needed to confirm this conclusion.

2. **Conclusions Regarding Plume Extent.** We do not concur with the conclusion that the additional investigation addressed the data gap regarding the downgradient extent of the plume. Three downgradient borings were originally proposed for collection of grab groundwater samples to define downgradient plume extent. The number of proposed borings was reduced from three to two in the Work Plan Addendum dated November 4, 2011. Only one of the two proposed grab groundwater samples was collected in March 2012. Although a grab groundwater sample from GP-9 did not contain petroleum constituents at concentrations above the reporting limit, boring GP-9 is located in more of a cross gradient location than GP-10. Therefore, the downgradient plume extent remains a data gap that will need to be addressed at a future date. However, in order to move the case forward, we do not object to the recommendation to prepare a Feasibility Study at this time. Confirmation of the downgradient plume extent could be conducted concurrently with a Feasibility Study or during a future phase of work.

3. **Groundwater Monitoring.** Groundwater monitoring is to be continued on a semi-annual basis during the first and third quarters. Please present the results in the reports requested below.

Responsible Parties

TECHNICAL REPORT REQUEST

Please submit technical reports to Alameda County Environmental Health (Attention: Jerry Wickham), according to the following schedule:

- **October 23, 2012** – Feasibility Study Report
- **October 30, 2012** – Semi-Annual Groundwater Monitoring Report – Third Quarter 2012

If you have any questions, please call me at (510) 567-6791 or send me an electronic mail message at jerry.wickham@acgov.org. Case files can be reviewed online at the following website: <http://www.acgov.org/aceh/index.htm>. As your email address does not appear on the cover page of this notification ACEH is requesting you provide your email address so that we can correspond with you quickly and efficiently regarding your case.

Sincerely,

Jerry Wickham, California PG 3766, CEG 1177, and CHG 297
Senior Hazardous Materials Specialist

Responsible Party(ies) Legal Requirements / Obligations

REPORT REQUESTS

These reports are being requested pursuant to California Health and Safety Code Section 25296.10. 23 CCR Sections 2652 through 2654, and 2721 through 2728 outline the responsibilities of a responsible party in response to an unauthorized release from a petroleum UST system, and require your compliance with this request.

ELECTRONIC SUBMITTAL OF REPORTS

ACEH's Environmental Cleanup Oversight Programs (LOP and SLIC) require submission of reports in electronic form. The electronic copy replaces paper copies and is expected to be used for all public information requests, regulatory review, and compliance/enforcement activities. Instructions for submission of electronic documents to the Alameda County Environmental Cleanup Oversight Program FTP site are provided on the attached "Electronic Report Upload Instructions." Submission of reports to the Alameda County FTP site is an addition to existing requirements for electronic submittal of information to the State Water Resources Control Board (SWRCB) GeoTracker website. In September 2004, the SWRCB adopted regulations that require electronic submittal of information for all groundwater cleanup programs. For several years, responsible parties for cleanup of leaks from underground storage tanks (USTs) have been required to submit groundwater analytical data, surveyed locations of monitoring wells, and other data to the GeoTracker database over the Internet. Beginning July 1, 2005, these same reporting requirements were added to Spills, Leaks, Investigations, and Cleanup (SLIC) sites. Beginning July 1, 2005, electronic submittal of a complete copy of all reports for all sites is required in GeoTracker (in PDF format). Please visit the SWRCB website for more information on these requirements (http://www.waterboards.ca.gov/water_issues/programs/ust/electronic_submittal/).

PERJURY STATEMENT

All work plans, technical reports, or technical documents submitted to ACEH must be accompanied by a cover letter from the responsible party that states, at a minimum, the following: "I declare, under penalty of perjury, that the information and/or recommendations contained in the attached document or report is true and correct to the best of my knowledge." This letter must be signed by an officer or legally authorized representative of your company. Please include a cover letter satisfying these requirements with all future reports and technical documents submitted for this fuel leak case.

PROFESSIONAL CERTIFICATION & CONCLUSIONS/RECOMMENDATIONS

The California Business and Professions Code (Sections 6735, 6835, and 7835.1) requires that work plans and technical or implementation reports containing geologic or engineering evaluations and/or judgments be performed under the direction of an appropriately registered or certified professional. For your submittal to be considered a valid technical report, you are to present site specific data, data interpretations, and recommendations prepared by an appropriately licensed professional and include the professional registration stamp, signature, and statement of professional certification. Please ensure all that all technical reports submitted for this fuel leak case meet this requirement.

UNDERGROUND STORAGE TANK CLEANUP FUND

Please note that delays in investigation, later reports, or enforcement actions may result in your becoming ineligible to receive grant money from the state's Underground Storage Tank Cleanup Fund (Senate Bill 2004) to reimburse you for the cost of cleanup.

AGENCY OVERSIGHT

If it appears as though significant delays are occurring or reports are not submitted as requested, we will consider referring your case to the Regional Board or other appropriate agency, including the County District Attorney, for possible enforcement actions. California Health and Safety Code, Section 25299.76 authorizes enforcement including administrative action or monetary penalties of up to \$10,000 per day for each day of violation.

Alameda County Environmental Cleanup Oversight Programs (LOP and SLIC)	REVISION DATE: July 20, 2010
	ISSUE DATE: July 5, 2005
	PREVIOUS REVISIONS: October 31, 2005; December 16, 2005; March 27, 2009; July 8, 2010
SECTION: Miscellaneous Administrative Topics & Procedures	SUBJECT: Electronic Report Upload (ftp) Instructions

The Alameda County Environmental Cleanup Oversight Programs (LOP and SLIC) require submission of all reports in electronic form to the county's ftp site. Paper copies of reports will no longer be accepted. The electronic copy replaces the paper copy and will be used for all public information requests, regulatory review, and compliance/enforcement activities.

REQUIREMENTS

- **Please do not submit reports as attachments to electronic mail.**
- Entire report including cover letter must be submitted to the ftp site as **a single portable document format (PDF) with no password protection.**
- It is **preferable** that reports be converted to PDF format from their original format, (e.g., Microsoft Word) rather than scanned.
- **Signature pages and perjury statements must be included and have either original or electronic signature.**
- **Do not password protect the document.** Once indexed and inserted into the correct electronic case file, the document will be secured in compliance with the County's current security standards and a password. **Documents with password protection will not be accepted.**
- Each page in the PDF document should be rotated in the direction that will make it easiest to read on a computer monitor.
- Reports must be named and saved using the following naming convention:

RO#_Report Name_Year-Month-Date (e.g., RO#5555_WorkPlan_2005-06-14)

Submission Instructions

- 1) Obtain User Name and Password
 - a) Contact the Alameda County Environmental Health Department to obtain a User Name and Password to upload files to the ftp site.
 - i) Send an e-mail to deh.loptoxic@acgov.org
 - b) In the subject line of your request, be sure to include "**ftp PASSWORD REQUEST**" and in the body of your request, include the **Contact Information, Site Addresses,** and the **Case Numbers (RO# available in Geotracker) you will be posting for.**
- 2) Upload Files to the ftp Site
 - a) Using Internet Explorer (IE4+), go to <ftp://alcoftp1.acgov.org>
 - (i) Note: Netscape, Safari, and Firefox browsers will not open the FTP site as they are NOT being supported at this time.
 - b) Click on Page located on the Command bar on upper right side of window, and then scroll down to Open FTP Site in Windows Explorer.
 - c) Enter your User Name and Password. (Note: Both are Case Sensitive.)
 - d) Open "My Computer" on your computer and navigate to the file(s) you wish to upload to the ftp site.
 - e) With both "My Computer" and the ftp site open in separate windows, drag and drop the file(s) from "My Computer" to the ftp window.
- 3) Send E-mail Notifications to the Environmental Cleanup Oversight Programs
 - a) Send email to deh.loptoxic@acgov.org notify us that you have placed a report on our ftp site.
 - b) Copy your Caseworker on the e-mail. Your Caseworker's e-mail address is the entire first name then a period and entire last name @acgov.org. (e.g., firstname.lastname@acgov.org)
 - c) The subject line of the e-mail must start with the RO# followed by **Report Upload.** (e.g., Subject: RO1234 Report Upload) If site is a new case without an RO#, use the street address instead.
 - d) If your document meets the above requirements and you follow the submission instructions, you will receive a notification by email indicating that your document was successfully uploaded to the ftp site.

Oakland, California

Site History and Previous Investigations and Remedial Actions

800 Harrison Street (Active Unocal)

In November 1990, two gasoline USTs and one waste oil UST were removed from the site. The tanks consisted of one 10,000 gallon regular unleaded gasoline storage tank, one 10,000 gallon super unleaded gasoline storage tank, and one 280 gallon waste oil tank. The waste oil tank was reported to contain one, 1/8 -inch square hole. Based on confirmation soil sampling during the UST removal, the majority of the source area was the soil beneath the former UST pit. In November 1996, one 1,100- gallon waste oil UST and associated product dispensers piping were removed from the site. No apparent holes or cracks were observed in the waste oil tank, or piping at this time.

Gettler-Ryan Inc., in their April 23, 2001 *Site Conceptual Model for 800 Harrison Street*, referenced the source area leak as a potential UST spill bucket containment failure stating that there were several historically documented maintenance reports in which residual rainwater was noted in the spill tank basin after overflow. The spill bucket containment was repaired in November 2001. Since the repair, hydrocarbon concentrations decreased in the short term, but there have been several additional elevated concentrations observed in 2004, which suggests that the spill bucket containment failure was not likely the single contributing source release.

726 Harrison Street (Former Shell)

In October 1995, four gasoline USTs and one waste UST were removed from the site. The tanks consisted of two 5,000-gallon single-walled bare-steel premium unleaded gasoline storage tanks, one 5,000-gallon single-walled bare-steel plus unleaded gasoline storage tank, one 8,000-gallon single-walled bare-steel regular unleaded gasoline storage tank, and one 1,000-gallon single-walled bare-steel waste oil tank. The State of California UST Permit Applications indicate that the USTs contain no spill or overfill preventative containment equipment for any of the former USTs.

Elevated hydrocarbon concentrations were detected in soil beneath each of the former gasoline USTs. Elevated concentrations of Total Oil and Grease (TOG) were detected in soil beneath the waste oil UST. Approximately 530 tons of impacted soil was removed from the excavations to a maximum depth of 20 feet below ground surface (bgs) in December 1995. Seven confirmation soil samples were collected from the bottom and side walls of the excavation to determine the removal of impacted soil. Two of the seven samples contained elevated concentrations of petroleum hydrocarbons at the northern and southern portion of the excavation (Aqua Science Engineers, Inc. [ASE] 2007). Over excavation was not possible due the building location to the southeast and the street to the northwest.

In July 1997, a groundwater monitoring well was installed at the southern edge of the former USTs. Groundwater samples from the well contained elevated concentrations of petroleum hydrocarbons. In December 1998, three additional wells were installed along the southern property boundary between 706 and 726 Harrison Street. Newly installed wells (MW-3 and MW-

Appendix B

Union Oil of California
Station No. 0752/Yee/Gin Co-mingled
706/726/800 Harrison Street
Oakland, California

4) contained much lower detections of hydrocarbons. MW-2 did not contain hydrocarbons detected above laboratory detection limits.

706 Harrison Street (Former ARCO)

In January 1991, four 1,000-gallon gasoline USTs, two 6,000-gallon gasoline USTs, and one unknown size waste oil tank were removed from the site. Confirmation soil samples were collected beneath the tanks, and elevated petroleum hydrocarbon concentrations were observed in confirmation samples. In December 1991, the UST pipes were removed and a limited subsurface investigation was performed to resample the former tank pit areas (Conestoga-Rovers and Associates [CRA] 2007).

In February 1993, an over excavation of unknown volume was performed from three excavations in the vicinity of the former UST locations. Limitations during the excavation related to shoring prevented removal of all impacted soil (CRA 2007). Soil samples collected at 16 feet bgs contained elevated concentrations of hydrocarbons.

In July 1993, monitoring wells (MW-1 through MW-3) and soil vapor extraction (SVE) wells (VW-1 and VW-2) were installed. Soil samples collected during the installation contained elevated total petroleum hydrocarbons as gasoline and benzene (6,000 parts per million [ppm] and 210 ppm, respectively). In December 1993, additional soil samples were collected from the former pump island locations containing concentrations of organic lead with a maximum of 17 ppm at 2 feet bgs.

In April 1994, a SVE pilot test was conducted and SVE was determined to be an effective remedial alternative. In November 1994, additional groundwater monitoring wells, SVE wells, and air sparge (AS) wells were installed for on-site remediation. Operation the AS/SVE began in May 1998 and continued into February 2001. The SVE portion was shut down but the AS system continued to inject air to increase oxygen concentrations to enhance aerobic biodegradation.

Groundwater samples collected from SVE wells determined that the system was effective and the AS system was shut down.

The Co-mingled Plume Investigation (800, 726, and 706 Harrison Street):

In June 2011, ARCADIS conducted site assessment activities to address data gaps presented in Stantec's Work Plan (Stantec 2011) for the site. ARCADIS oversaw the advancement of four soil borings associated with the 800 and 706 Harrison Street properties (Figure 2). ASE oversaw the installation of one monitoring well and one soil boring associated with 726 Harrison Street with observations by ARCADIS (Figure 2).

Soil concentrations for the site assessment were elevated in soil boring GP-2 located at 800 Harrison Street. Total purgeable petroleum hydrocarbons (TPPH) and methyl tertiary butyl ether (MTBE) were detected at 3,200 milligrams per kilograms (mg/kg) and 0.0060 mg/kg, respectively. Groundwater samples were collected from two locations (GP-3 and MW-6) located on the 726 Harrison Street property. Elevated groundwater concentrations for benzene (1,800

Oakland, California

micrograms per liter ($\mu\text{g/L}$), toluene (2,000 $\mu\text{g/L}$), ethylbenzene (1,500 $\mu\text{g/L}$), xylenes (5,000 $\mu\text{g/L}$) (collectively BTEX), and MTBE (4,600 $\mu\text{g/L}$) were from soil boring GP-3.

On March 28, 2012, additional site assessment activities were conducted. ARCADIS oversaw the advancement of three soil borings (GP-1, GP-9 and GP 10) on the 800 Harrison and 640 Harrison Street properties.

800 Harrison Street Summary

Soil borings GP-1 and GP-2 were advanced to a depth of approximately 20 feet bgs to delineate the soil stratigraphy and extent of petroleum hydrocarbon impacts to vadose-zone soil. Soil samples collected from boring GP-2 indicate elevated concentrations for TPPH, toluene, ethylbenzene, xylenes, and MTBE at sample depths ranging from 10 feet to 17 feet bgs. Concentrations were detected above ESLs for two of the five analytes; TPPH and MTBE at sample depths of 14 feet and 17 feet bgs. Soil collected from GP-1 had concentrations below the detection limit for all analyses. Because TOG and Hydraulic Oil were not detected above detection limits, no additional samples were analyzed for Title 22 Metals or SVOCs per the Work Plan (Stantec 2011) specifications. Soil boring GP-1 is located southeast of MW-2 within the smog shop, and soil boring GP-2 is located northeast of MW-1 and southeast of the former USTs.

726 Harrison Street Summary

Soil boring GP-3 was advanced to a depth of approximately 20 feet bgs to delineate the soil stratigraphy and extent of petroleum hydrocarbon impacts to vadose-zone soil. Soil collected from GP-3 had concentrations below the detection limit for all analytes except MTBE at 7 feet bgs which had a concentration above the method detection Limit (MDL) but below the ESL.

The soil samples were collected at depths of 6.5, 11, and 16 feet bgs from MW-6. The newly installed well was placed south of EW-1, which previously had the highest detected MTBE groundwater concentrations for the comingled plume. Soil samples were not detected at the 6.5 and 11 feet bgs intervals. Elevated concentrations of TPPH and MTBE were detected at 16 feet bgs but concentrations were below the ESLs.

Groundwater samples were collected from boring GP-3 and from monitoring well MW-6. Concentrations of BTEX and MTBE were detected in excess of the MCL in GP-3 and MTBE was detected at a concentration of 990 micrograms per liter at MW-6. Groundwater was encountered at approximately 20 feet bgs at GP-3 and MW-6.

706 Harrison Street Summary

Soil boring locations GP-5 through GP-7 were advanced and sampled to assess the effectiveness of past site remediation events including several over-excavations to remove impacted hydrocarbon soil and the installation of a SVE and AS well system to remediate the property. Data collected from the assessment work indicates that soil has limited impacts in the vadose-zone. Soil samples collected from soil borings GP-6 located southwest of MW-2 within

the former UST basin and GP-7 located in the southwestern corner along the fence line of the property, indicated that all analytes were not detected at concentrations in excess of the MDL. GP-5 located northeast of MW-4 and within the former UST basin, showed concentrations detected above MDLs for TPPH, ethylbenzene and MTBE at 20 feet bgs.

Downgradient Delineation

Groundwater samples were collected from boring GP-9 located from the 640 Harrison Street property. Groundwater samples collected from GP-9 had concentrations below the detection limit for all analytes. Groundwater was encountered at approximately 20 feet bgs.

Benzene	0.581
MTBE	1.171
	COC Total Mass lbs
TPH-g	5.09
Benzene	1.28
MTBE	2.58

Explanations for Calculations:

Volume (ft³)= Area x Thickness x Porosity

Volume (liters)= Volume (ft³) x 28.317

Mass per Interval= Average TPH-g (µg/L) x Groundwater Mass (kg)

1 µg/L= 10⁻⁹ kg

1 kg= 2.204 lbs

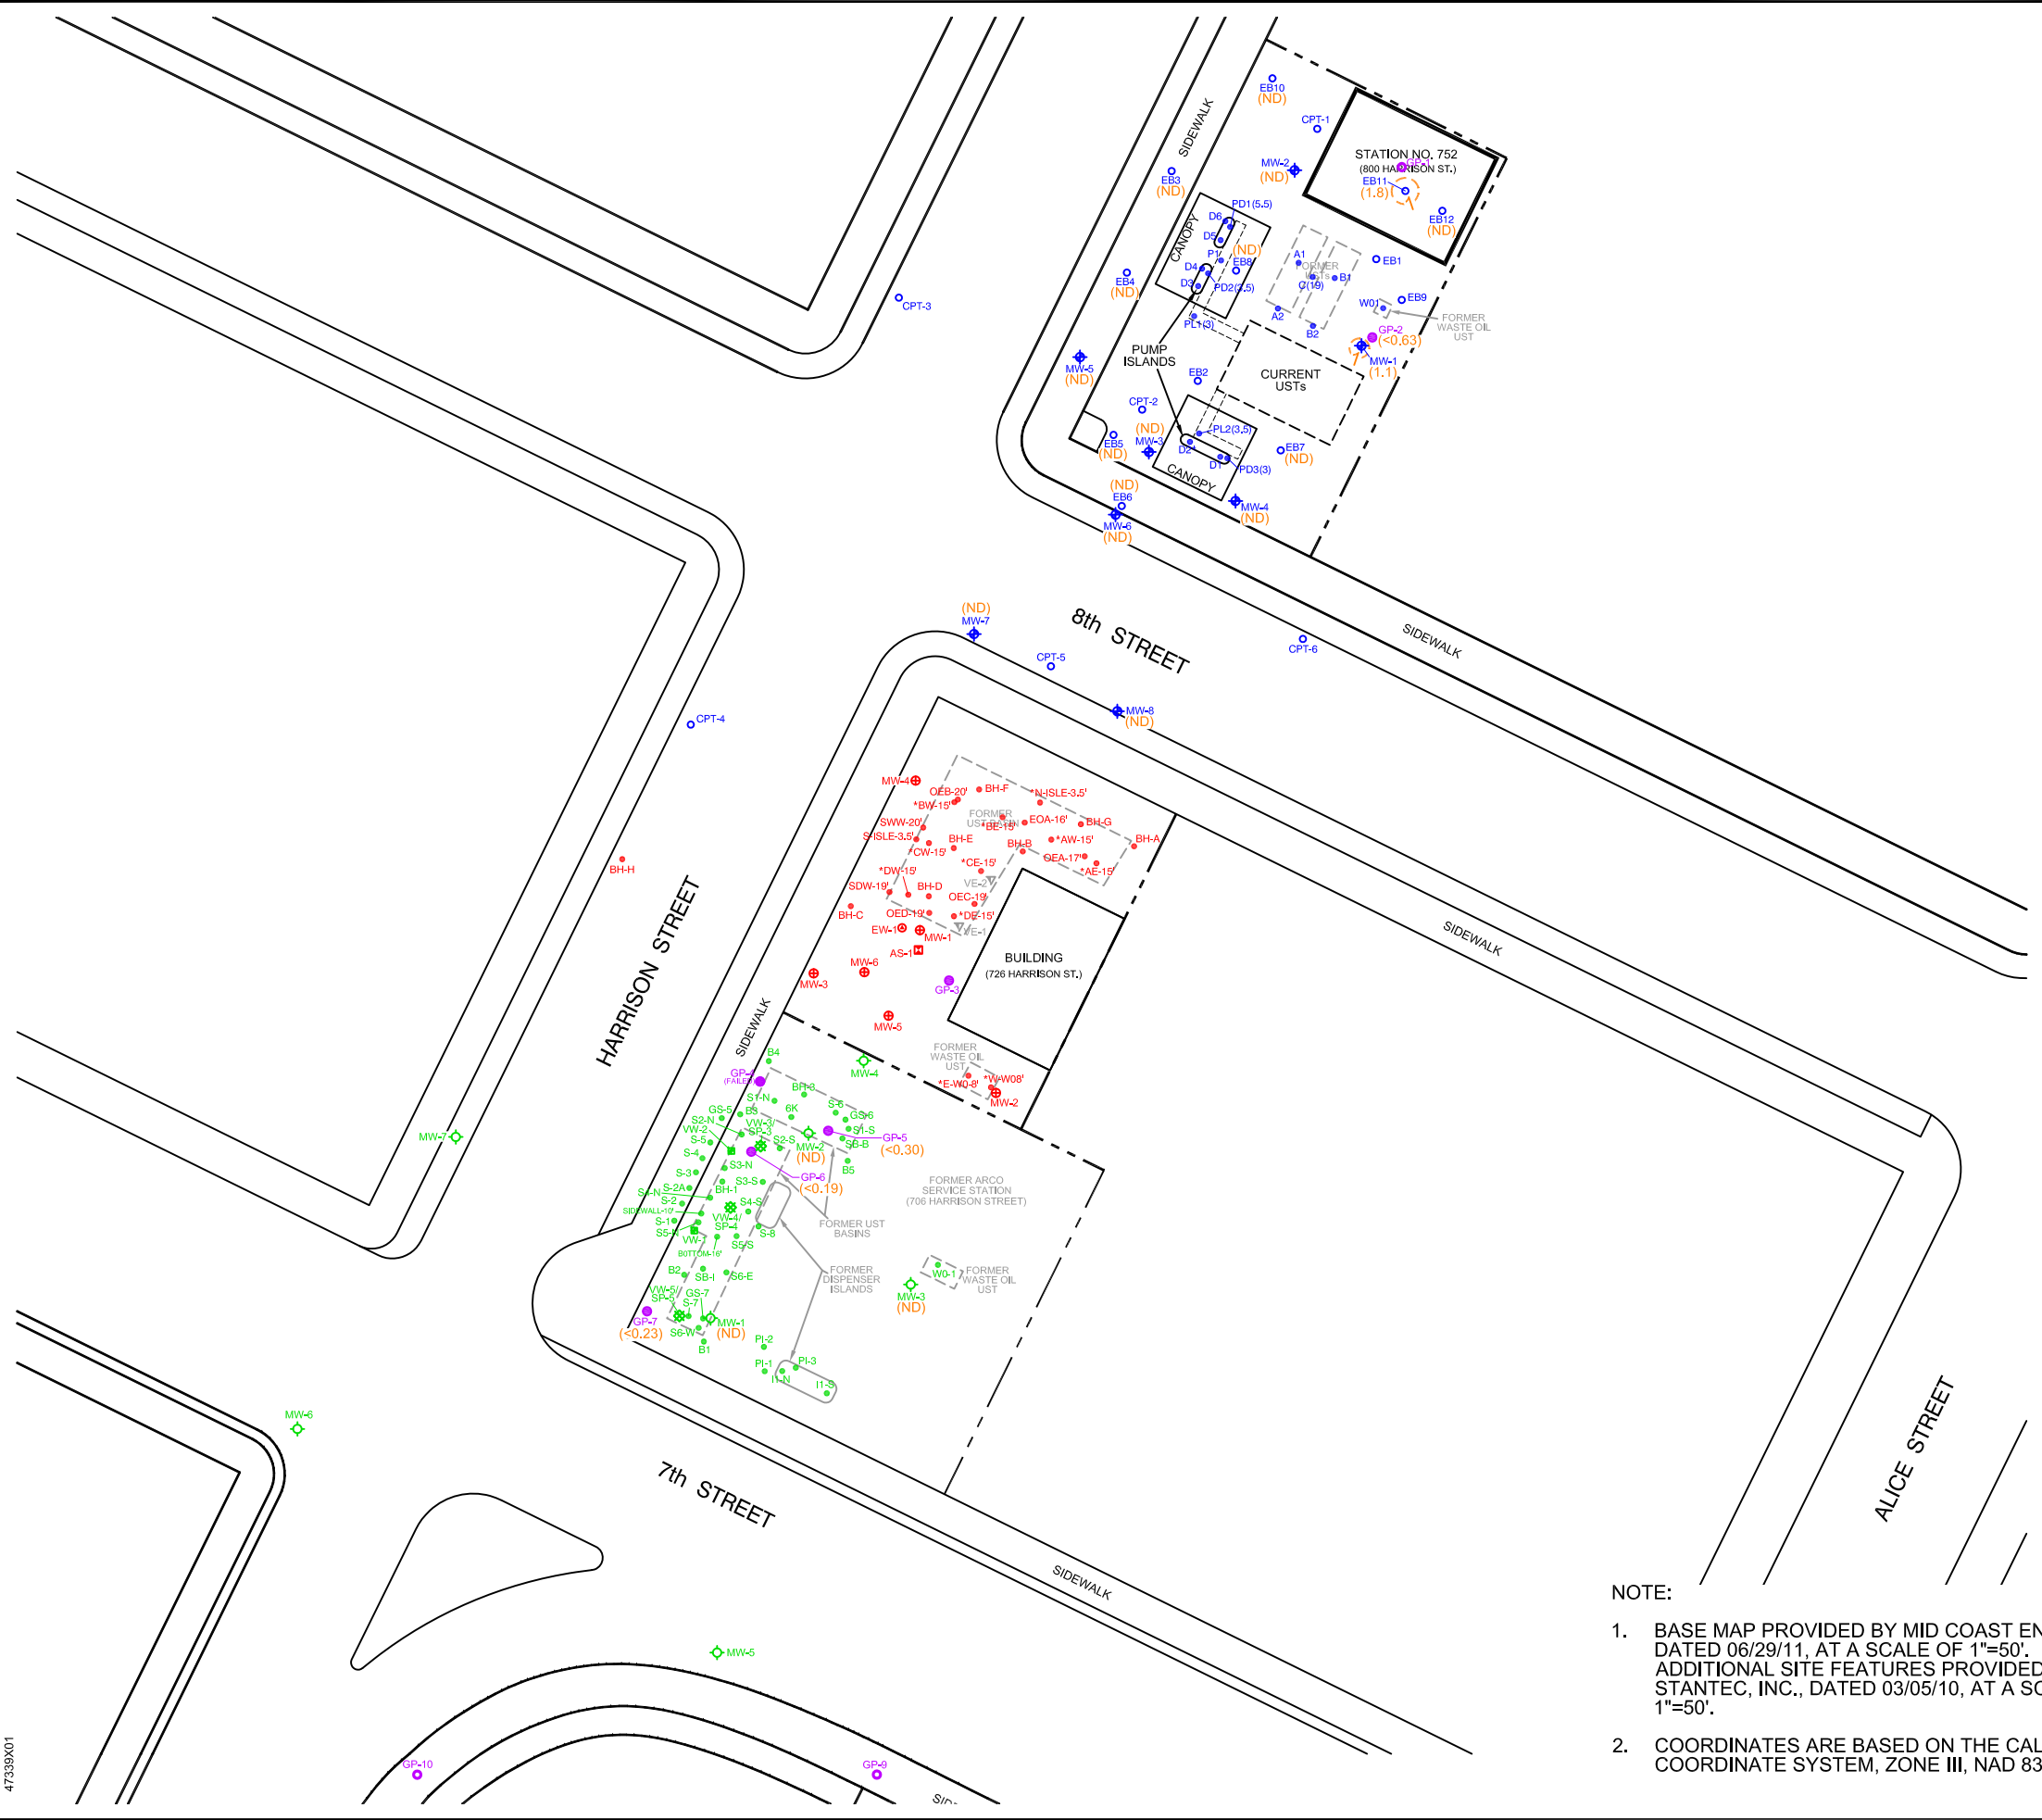

* assumes aquifer porosity is 35% (0.35)

Notes:

- (1) Upper and lower bounds are shown as dashed lines at 95% confidence.
- (2) Linear regressions were performed on log-normalized concentration data.
- (3) Date to target concentration is not estimated if the constituent concentrations are showing increasing trends.

Appendix G

Remedial Alternative Cost Estimate

Remedial Alternative 1 (RA1)	
Monitored Natural Attenuation	
Remedial Alternative 1 - Key Assumptions	
Remedial alternative duration assumes 35 years are required to achieve cleanup goals for benzene, MTBE, and TPHH	
Semi-annual sampling and reporting for 25 years	
Annual sampling and reporting for 10 years	
Monitoring for MNA parameters in select wells within existing monitoring network	
Total anticipated remedial alternative duration: 35 years	
Remedial Alternative 1 Tasks	Estimated Cost
Semi-annual sampling and reporting (25 years, \$70,000/year)	\$1,750,000
Annual sampling and reporting (10 years, \$35,000/year)	\$350,000
Site decommissioning and well abandonment	\$50,000
Lifecycle Cost Totals (RA1): \$2,150,000	

Remedial Alternative 2 (RA2)	
Air Sparge (AS)/Soil Vapor Extraction (SVE)	
Remedial Alternative 2 - Key Assumptions	
Pilot study will be completed to determine key design parameters (2 AS wells, 1 SVE well)	
Full-scale AS/SVE system includes installation of 20 AS wells, 15 SVE wells, distribution piping, and remediation system equipment	
AS/SVE system O&M for 4 years	
Semi-annual sampling and reporting for 6 years (4 years during active treatment, 2 years post-treatment)	
Monitoring for MNA parameters in select wells within existing monitoring network	
Total anticipated remedial alternative duration: 6 years	
Remedial Alternative 2 Tasks	Estimated Cost
<u>AS/SVE Pilot Study</u>	
Work plan preparation	\$20,000
Permitting (Air Permit)	\$8,000
Pilot study well installation (2 AS wells and 1 SVE well)	\$15,000
Perform AS/SVE Pilot Study	\$50,000
RAP preparation and system design	\$50,000
<u>Full-Scale AS/SVE System</u>	
Installation of 20 AS wells and 15 SVE wells	\$125,000
Installation of full-scale AS/SVE system (including major system components, trenching, distribution piping, utility connection, and remediation building)	\$290,000
Quarterly system O&M (4 years, \$45,000/year)	\$180,000
Utility Usage (4 years, \$15,000/year)	\$60,000
Semi-annual sampling and reporting (6 years, \$70,000/year)	\$510,000
Site decommissioning and well abandonment	\$100,000
Lifecycle Cost Totals (RA2): \$1,408,000	

Remedial Alternative 3 (RA3)	
Multi-Phase Extraction (MPE)	
Remedial Alternative 3 - Key Assumptions	
Pilot study will be completed to determine key design parameters (2 extraction wells)	
Full-scale MPE system includes installation of 15 MPE wells, distribution piping, and remediation system equipment	
MPE system O&M for 4 years	
Semi-annual sampling and reporting for 6 years (4 years during active treatment, 2 years post-treatment)	
Monitoring for MNA parameters in select wells within existing monitoring network	
Total anticipated remedial alternative duration: 6 years	
Remedial Alternative 3 Tasks	Estimated Cost
<u>MPE Pilot Study</u>	
Work plan preparation	\$20,000
Permitting (Air Permit, POTW)	\$8,000
Pilot study well installation (2 extraction wells)	\$10,000
Perform MPE Pilot Study	\$50,000
RAP preparation and system design	\$50,000
<u>Full-Scale MPE System</u>	
Installation of 15 MPE wells	\$100,000
Installation of full-scale MPE system (including major system components, trenching, distribution piping, utility connection, and remediation building)	\$200,000
Monthly system O&M and annual utility usage (4 years, \$80,000/year)	\$320,000
Utility Usage (4 years, \$20,000/year)	\$80,000
Semi-annual sampling and reporting (6 years, \$70,000/year)	\$280,000
Site decommissioning and well abandonment	\$90,000
Lifecycle Cost Total (RA3): \$1,208,000	

Remedial Alternative 4 (RA4)	
In-Situ Enhanced Bioremediation	
Remedial Alternative 4 - Key Assumptions	
Pilot injection study will be completed to determine key design parameters (2 injection wells)	
Full-scale system includes installation of 25 injection wells, distribution piping, and remediation system equipment	
Bioremediation system O&M for 4 years	
Semi-annual sampling and reporting for 8 years (4 years during active treatment, 4 years post-treatment)	
Monitoring for MNA parameters in select wells within existing monitoring network	
Total anticipated remedial alternative duration: 8 years	
Remedial Alternative 4 Tasks	Estimated Cost
<u>Pilot Injection Study</u>	
Work plan preparation	\$20,000
Pilot injection study well installation (2 injection wells)	\$10,000
Perform Pilot Injection Study	\$50,000
RAP preparation and system design	\$50,000
<u>Full-Scale Bioremediation System</u>	
Installation of 25 injection wells	\$100,000
Installation of full-scale Bioremediation system (including major system components, trenching, distribution piping, utility connection, and remediation building)	\$200,000
Monthly system O&M and annual utility usage (4 years, \$80,000/year)	\$320,000
Utility Usage (4 years, \$20,000/year)	\$80,000
Semi-annual sampling and reporting (8 years, \$70,000/year)	\$560,000
Site decommissioning and well abandonment	\$80,000
Lifecycle Cost Total (RA4):	
\$1,470,000	

Remedial Alternative 5 (RA5)	
In-Situ Chemical Oxidation (ISCO)	
Remedial Alternative 5 - Key Assumptions	
Pilot injection study will be completed to determine key design parameters (2 injection wells)	
Full-scale system includes installation of 40 injection wells, distribution piping, and remediation system equipment	
4 persulfate injection events over 2 years	
Quarterly sampling and semi-annual reporting for 2 years during injections	
Semi-annual sampling and reporting for 4 years following injections	
Monitoring for MNA parameters in select wells within existing monitoring network	
Total anticipated remedial alternative duration: 6 years	
Remedial Alternative 5 Tasks	Estimated Cost
<u>Pilot Injection Study</u>	
Work plan preparation	\$20,000
Pilot injection study well installation (2 injection wells, 1 dose response well)	\$10,000
Perform Pilot Injection Study	\$50,000
RAP preparation and system design	\$50,000
<u>Full-Scale ISCO System</u>	
Installation of 40 ISCO injection wells	\$160,000
Perform semi-annual persulfate injections (4 events, \$120,000/event)	\$480,000
Quarterly sampling and semi-annual reporting for persulfate injection performance assessment (2 years, \$100,000/year)	\$200,000
Semi-annual sampling and reporting (6 years, \$70,000/year)	\$420,000
Site decommissioning and well abandonment	\$200,000
Lifecycle Cost Total (RA5):	
\$1,590,000

1. Introduction

On behalf of Chevron Environmental Management Company's affiliate, Union Oil Company of California (Union Oil), ARCADIS U.S., Inc. (ARCADIS) prepared this Remedial Action Plan (RAP) to address petroleum hydrocarbon impacted groundwater in a co-mingled plume at 706, 726, and 800 Harrison Street in Oakland, California (site). A co-mingled plume application was accepted by the co-mingled plume case board (Co-mingled plume Case #0068) and a letter of commitment for enrollment into the co-mingled plume fund is expected by June 30, 2014. Figure 1 illustrates the general area of the site and Figure 2 presents a layout of the three properties.

This RAP was prepared as requested by the Alameda County Department of Environmental Health (ACEH) in a letter dated December 2, 2013 (Appendix A). This RAP presents relevant background information, a summary of pilot test activities completed to evaluate potential remedial action alternatives, and a detailed design basis for the selected remedial action (air sparge [AS]/soil vapor extraction [SVE]).

1.1 Objectives

Union Oil's primary objective for this project is remedial implementation at the site in accordance with ACEH requirements to obtain a low-threat closure determination in accordance with the Low-Threat Underground Storage Tank Case Closure Policy (Low-Threat Closure Policy [SWRCB 2012]).

1.2 Report Organization

Following this introduction, the remaining sections of this report include:

- Description of site background information (Section 2).
- Design basis, including pilot test results (Section 3).
- Discussion of the cleanup approach (Section 4).
- Discussion of the permitting and regulatory involvement (Section 5).
- Remedy implementation process (Section 6).

2. Site Background

This section describes the site's physical setting, regional and local geology, project history, and mass distribution in the subsurface at the site.

2.1 Site and Surrounding Area

The site consists of three properties located in a mixed commercial and residential area at 706, 726, and 800 Harrison Street, in Oakland, California (Figure 1). All property locations and boundaries are shown on Figure 2.

The 706 Harrison Street Property is a former ARCO service station owned by Mr. Bo Gin. This property currently contains an asphalt parking lot. Former facilities at the 706 Harrison Street Property included four 1,000-gallon and two 6,000-gallon fuel underground storage tanks (USTs), one steel waste oil UST, product line piping, pump islands, and a station building. The USTs and associated piping were removed in January 1991 (Cambria Environmental Technology, Inc. 1995).

The property located at 726 Harrison Street is a former Shell service station owned by Mr. Peter Yee. This property currently contains an asphalt parking lot and one building. Former facilities at the 726 Harrison Street Property included three 4,000-gallon USTs, one 8,000-gallon fuel UST, one steel 1,000-gallon waste oil UST, product line piping, pump islands, and a station building. The USTs and associated piping were removed in October 1995 (Aqua Science Engineers, Inc. 2001).

The property located at 800 Harrison Street is an active 76 Station (Union Oil) owned by Mr. Muhammad Usman. Current station facilities include a single-story convenience store, three product dispenser islands under two canopies, and two 12,000-gallon double-wall poly-steel gasoline USTs.

2.2 Regional Geology

The site is underlain by Holocene and Pleistocene-age eolian sand deposits referred to as the Merrit Sand. This sand typically consists of fine-grained, well-sorted, well-drained eolian sand, inter-fingering with Holocene Bay Mud. Merrit Sand reaches a maximum depth of approximately 50 feet below ground surface (bgs) across all three properties (Stantec 2009).

2.3 Local Geology and Hydrogeology

Property-specific well boring logs and cone penetrometer test (CPT) investigation results indicate that the site lithology is consistent with regional lithology. The general site lithology comprises primarily silty and fine-grained sands extending to approximately 30 feet bgs. Deeper CPTs were conducted in the area of 800 Harrison Street and indicate the presence of silt and clay between approximately 30 and 42 feet bgs. Below the clay, fine-grained and silty sands are present (Stantec 2009). Visual inspections of soil during the investigations are consistent with Merritt Sand (Stantec 2009). Geologic cross-section locations are shown on Figure 3. A generalized cross-section depicting subsurface materials for all three properties is provided on Figure 4. Property-specific cross-sections for 800 Harrison Street, 726 Harrison Street, and 706 Harrison Street are provided on Figures 5, 6, and 7, respectively.

The nearest surface waters to the site are the Oakland Inner Harbor to the south and west and Lake Merritt to the east and northeast. Each body of water is approximately ½ mile from the site (Stantec 2009).

Depth to water beneath the three properties has historically ranged from 10.93 to 20.01 feet bgs. During the first semiannual groundwater monitoring and sampling event in February 2014, average depth-to-water measurements were approximately 18.92 (706 Harrison Street), 21.17 (726 Harrison Street), and 19.85 (800 Harrison Street) feet below top of well casing. A deeper water-bearing zone was encountered at depths of 42 to 50 feet bgs during advancement of the cone penetrometers. Prior to the June 2011 site assessment, no wells were installed in the deeper water-bearing zone. A February 2014 groundwater elevation contour map is provided on Figure 8.

The predominant groundwater gradient observed across all three properties is south-southeast, with a horizontal hydraulic gradient of 0.007 foot per foot (ARCADIS 2011). This gradient direction indicates that groundwater flows from 800 Harrison Street toward 726 Harrison Street and from 726 Harrison Street toward 706 Harrison Street.

2.4 Project History

This section summarizes previous pilot studies and remedial actions at the site. Excavations were completed to remove petroleum-impacted soil during UST removal activities at 706 and 726 Harrison Street. Previous pilot tests include SVE at 800 Harrison Street, AS at 726 Harrison Street, and AS/SVE at 706 Harrison Street. An AS/SVE system operated at 706 Harrison Street from May 1998 through February 2001. The SVE portion was shut down in 2001, while the AS system continued to inject air to increase oxygen

concentrations to enhance aerobic biodegradation. The AS system was subsequently shut down in 2003. No active remediation was performed at the three properties from 2003 to 2011. Groundwater monitoring at all three properties continued during this period. The three sites were classified as a co-mingled plume in 2011. During September 2013, ARCADIS conducted a multiphase extraction (MPE) pilot test and an AS/SVE pilot test on the site. Details of site history, previous remedial actions, and pilot studies conducted at all three properties are provided in Appendix B.

2.5 Mass Distribution in the Subsurface

2.5.1 Dissolved in Groundwater

Isoconcentration contour maps for total petroleum hydrocarbons quantified as total purgeable petroleum hydrocarbons (TPPH), benzene, and methyl tert-butyl ether (MTBE) for the February 6, 2014 sampling event are presented on Figures 9, 10, and 11, respectively. Well construction details and historical groundwater analytical data for all three properties are provided in Tables 1 and 2, respectively. Hydrographs depicting groundwater concentration and groundwater elevation are provided in Appendix C. Groundwater monitoring results from the first semiannual 2014 monitoring event at each property are discussed below.

2.5.1.1 706 Harrison Street

The maximum dissolved concentration of TPPH (5,200 micrograms per liter [$\mu\text{g/L}$]), benzene (1,400 $\mu\text{g/L}$), toluene (5,200 $\mu\text{g/L}$), ethylbenzene (1,300 $\mu\text{g/L}$), total xylenes (5,000 $\mu\text{g/L}$), and MTBE (3,000 $\mu\text{g/L}$) were detected in the samples collected from MW-2. Ethylene dibromide (EDB), ethylene dichloride (EDC), and ethanol were not detected above the laboratory reporting limits in any of the wells sampled. Maximum concentrations of the monitored natural attenuation (MNA) parameters were detected in samples collected from MW-2: methane (6.5 milligrams per liter [mg/L]), alkalinity as calcium carbonate (490 mg/L), and nonvolatile organic carbon (20 mg/L). The maximum concentration of nitrate as NO_3 (33 mg/L) was detected in MW-3. The maximum concentration of sulfate (51 mg/L) was detected in samples collected from MW-5. Nitrite as NO_2 was not detected above laboratory reporting limits.

2.5.1.2 726 Harrison Street

The maximum dissolved concentrations of TPPH (3,400 $\mu\text{g/L}$), benzene (1,900 $\mu\text{g/L}$), and toluene (150 $\mu\text{g/L}$) were detected in the samples collected from MW-5. The maximum dissolved concentrations of ethylbenzene (400 $\mu\text{g/L}$), total xylenes (250 $\mu\text{g/L}$), and MTBE

(10,000 µg/L) were detected in the samples collected from MW-1. EDB, EDC, and ethanol were not detected above the laboratory reporting limits in any of the wells sampled. Maximum concentrations of the MNA parameters were detected in samples collected from MW-5: methane (11 mg/L) and alkalinity as calcium carbonate (430 mg/L). Maximum concentrations of nitrate as NO₃ (38 mg/L) and sulfate (38 mg/L) were detected in MW-2. The maximum concentration of nonvolatile organic carbon (51 mg/L) was detected in samples collected from MW-1. Nitrite as NO₂ was not detected above laboratory reporting limits.

2.5.1.3 800 Harrison Street

The maximum dissolved concentration of TPPH (1,400 µg/L) was detected in the samples collected from MW-5. The maximum dissolved concentrations of benzene (66 µg/L), toluene (10 µg/L), ethylbenzene (2.5 µg/L), and total xylenes (17 µg/L) were detected in the samples collected from MW-7. The maximum dissolved concentration of MTBE (760 µg/L) was detected in the samples collected from MW-3. EDB, EDC, and ethanol were not detected above the laboratory reporting limits in any of the wells sampled. The maximum concentration for dissolved iron was detected in samples from MW-3 at 2,600 µg/L. Samples collected from MW-1 were analyzed for additional metals and had detected concentrations of dissolved zinc (14 µg/L) and dissolved iron (56 µg/L). Semivolatile organic compounds were analyzed for in the samples collected from MW-1 and were not detected above the laboratory limits for all analytes. Dissolved cadmium, chromium, lead, and nickel were below reporting limits in MW-1. Maximum concentrations of the MNA parameters were detected in samples collected from MW-3: methane (8.7 mg/L), alkalinity as calcium carbonate (420 mg/L), and nonvolatile organic carbon (5.1 mg/L). Maximum concentrations of nitrate as NO₃ (6.4 mg/L) and sulfate (110 mg/L) were detected in MW-2.

2.5.2 Sorbed to Soil Matrix

Various excavations have been performed at each property to address petroleum hydrocarbons in the soil. Soil impacts are generally at the water table or in the saturated zone on the properties located at 706 and 726 Harrison Street. A site assessment performed on June 20 through 24, 2011 consisted of collecting 20 soil samples from six locations across 706, 726, and 800 Harrison Street. BTEX, EDB, and 1,2-dichloroethane were not detected in any of the samples. Total petroleum hydrocarbons as gasoline (TPH-g) was detected above the environmental screening limit (ESL) of 83 milligrams per kilogram (mg/kg) in two of the samples. TPH-g exceedances were found in samples collected from GP-2 (1,000 mg/kg at 14 feet bgs and 3,200 mg/kg at 17 feet bgs). MTBE was detected above the ESL in two of the samples. MTBE exceedances were found in samples collected from GP-2 (0.028 mg/kg at 14 feet bgs and 0.060 mg/kg at 17 feet bgs).

Soil isopleth contour maps for benzene, MTBE, and TPPH at various depths are provided in Appendix D. The soil impacts are generally at the water table or in the saturated zone on the properties located at 706 and 726 Harrison Street. Soil boring details and historical soil analytical results are presented in Tables 2 and 3, respectively.

2.6 Summary

Benzene and MTBE have been detected in groundwater samples at concentrations greater than the Low-Threat Closure Policy (SWRCB 2012) Groundwater-Specific Criteria 2 and 4. The AS/SVE remediation system detailed in this RAP will target benzene and MTBE groundwater concentrations to achieve closure under the Low-Threat Closure Policy (SWRCB 2012). The monitoring wells with benzene and MTBE concentrations exceeding Groundwater-Specific Criteria are located at 706 and 726 Harrison Street. Groundwater analytical concentrations of benzene and MTBE are significantly lower at 800 Harrison Street in relation to the other two properties in the co-mingled plume. The remedial design presented in this RAP targets dissolved-phase mass in groundwater at 706 and 726 Harrison Street.

3. Basis of Design

The basis of design for the full-scale remedy proposed in this RAP is generated from results of MPE and AS/SVE pilot tests conducted during September 2013. The MPE pilot test was conducted on September 10 and 11, 2013 and the AS/SVE pilot test was conducted on September 12, 2013. Data from the AS/SVE pilot study have been used to estimate achievable extraction and injection influences, along with assessing the viability of relying upon AS/SVE to treat hydrocarbon-impacted soil. Additional consideration has been given to remedy effectiveness, constructability, integration with existing site infrastructure, and compliance with applicable ACEH regulations. Collectively, this information has been used to develop design configuration, extraction/injection operations, and monitoring criteria, which will govern the implementation of this remedy. This section summarizes existing AS/SVE systems, recent pilot testing efforts, and design basis considerations.

3.1 Former Air Sparge/Soil Vapor Extraction System

The former AS/SVE system located at 706 Harrison Street was operated from May 1998 through February 2001. The SVE portion was shut down in 2001, while the AS system continued to inject air to increase oxygen concentrations to enhance aerobic biodegradation. The AS system was subsequently shut down in 2003. The former AS/SVE major system components were removed from the site. Remaining system infrastructure includes the AS manifold and electrical meter. The former AS/SVE system remediation wells were not destroyed following system shutdown.

The remaining AS/SVE system components from historical operations include AS/SVE remediation wells, an above-ground AS manifold, and the system electrical meter. The AS manifold and electrical meter will be removed prior to proposed AS/SVE system installation. The existing remediation well network at 706 Harrison Street includes three AS wells (SP-3, SP-4, SP-5) dual-nested with three SVE wells (VW-3, VW-4, VW-5). These wells were installed following over-excavation and UST removal in the early 1990s. The 1-inch-diameter AS wells are installed to approximately 30 feet bgs with a 1-foot screen interval. The 2-inch-diameter SVE wells are installed to approximately 18 feet bgs with a 10-foot screen interval.

The existing AS and SVE wells located at 706 Harrison Street are currently covered by concrete. These AS and SVE wells will be uncovered and inspected during new remediation well installation to evaluate well casing integrity and functionality, as discussed in Section 4.1.2.

3.2 Multiphase Extraction Pilot Test

The MPE pilot test results were reported in the Multi-Phase Extraction and AS/SVE Pilot Test Summary Report (ARCADIS 2013). This section summarizes the MPE pilot test activities, results, and conclusions.

An MPE pilot test was conducted on pilot test well MPE-1 on September 10 and 11, 2013. Pilot testing consisted of two operational phases on MPE-1. Phase 1 was a pump test to determine dewatering capabilities in the well casing screen interval and expose soil in the smear zone for remediation through vapor extraction. A 3-hour pump test was performed on MPE-1 prior to initiating vacuum application and subsequent MPE operation. Once sufficient dewatering was observed in MPE-1, Phase 2 was initiated and vacuum was applied to the wellhead to determine optimal vacuum and flow rate operational parameters. The MPE pilot test operated under a 5-day pilot test exemption from air permitting with the Bay Area Air Quality Management District (BAAQMD).

3.2.1 Phase 1: Pump Test Results

On September 10, 2013, the pump test portion of the MPE pilot test was initiated on MPE-1. The maximum extraction rate applied was 3.5 gallons per minute (gpm) (maximum capacity of submersible pump) in an attempt to dewater MPE-1 to completely expose the screen interval. Groundwater was extracted at 3.5 gpm for approximately 2 hours and a maximum depth to water of 25.60 feet below top of casing (BTOC) was observed from PZ-1 pressure transducer data. This depth to water measurement correlates to a maximum water level drawdown of 6.23 feet in PZ-1 and a total exposed screen interval in MPE-1 of 10.60 feet. Water-level drawdown data from pressure transducers installed in the MPE pilot test monitoring network indicated maximum drawdown levels in MW-5, MW-4, and MP-1 of 2.87, 1.70, and 1.25 feet BTOC, respectively.

3.2.2 Phase 2: Multiphase Extraction Pilot Test Results

Phase 2 was initiated immediately following the completion of Phase 1. The initial wellhead vacuum at MPE-1 was 10 inches of water column (inH₂O) and subsequent vacuum steps of approximately 25, 40, and 60 inH₂O were applied to MPE-1 during Phase 2 startup. Wellhead vacuum was sustained at approximately 60 inH₂O throughout Phase 2. A maximum vacuum of 61.2 inH₂O was observed, with a flow rate of 11.2 standard cubic feet per minute (scfm) during Phase 2. The maximum observed photo ionization detector (PID) reading during the pilot test was 382 parts per million (ppm). Maximum induced wellhead vacuums at MW-5, MW-4, and MP-1 during Phase 2 were 9.83, 1.84, and 0.23 inH₂O, respectively. The average groundwater extraction flow rate from MPE-1 during Phase 2 was

3.5 gpm. The minimum and maximum depth to water measurements in PZ-1 during Phase 2 were 22.64 and 27.28 feet BTOC, respectively. The average depth to water in PZ-1 was 24.88 feet BTOC. Compared to the depth to water observed in PZ-1 during Phase I, less screen (0.72 foot less) was exposed in MPE-1 when vacuum was applied to the casing while extracting groundwater. A total of 5,065.5 gallons of groundwater were extracted from MPE-1 during both phases of the pilot test.

3.2.3 Mass Removal Estimates

To assess dissolved-phase mass removal, samples of influent water to the on-site storage tank were collected. To characterize the vapor-phase stream, samples were collected in SUMMA[®] canisters from the influent vapor stream before treatment by the oxidizer. The samples were submitted to a California Department of Health Services approved analytical laboratory for analyses. One vapor sample was collected from the effluent of the treatment system to confirm destruction efficiency of the catalytic oxidizer.

Dissolved mass removal rates for benzene, MTBE, and TPH-g during MPE operation ranged from approximately 2.98 to 3.50, 13.34 to 18.39, and 29.57 to 32.04 pounds per day (lbs/day), respectively. The estimated cumulative dissolved mass removed for benzene, MTBE, and TPH-g during 26 hours of MPE operation was 3.31, 19.35, and 36.02 pounds.

Vapor mass removal rates for TPH-g and BTEX during MPE operation ranged from approximately 0.71 to 5 and 0.006 to 0.063 lbs/day, respectively. The estimated cumulative mass removed for total BTEX, MTBE, and TPH-g during 23 hours of MPE Phase 2 operation was 3.31, 19.35, and 36.02 pounds, respectively.

3.3 Air Sparge/Soil Vapor Extraction Pilot Test

The AS/SVE pilot test results were reported in the Multi-Phase Extraction and AS/SVE Pilot Test Summary Report (ARCADIS 2013). This section summarizes the AS/SVE pilot test activities, results, and conclusions.

A combined AS/SVE pilot test was conducted on September 12, 2013 to determine if sufficient air delivery to groundwater was possible through AS. The AS pilot test was conducted on AS-1, which is located at 726 Harrison Street (installed in August 2001). AS-1 is a 2-inch-diameter well, installed to a total depth of approximately 30 feet with a 1-foot screen interval. An air compressor capable of at least approximately 20 actual cubic feet per minute (acfm) at a pressure of 40 pounds per square inch (psi) was used for AS pilot testing. A 20-horsepower rotary claw vacuum pump was used for the SVE pilot testing.

SVE data collected during MPE pilot testing was used to evaluate the effectiveness of SVE application in the subsurface. SVE was operated during AS pilot test activities to capture vapors from the vadose zone. A 1-day AS/SVE pilot test operated under the 5-day pilot test exemption from the BAAQMD. Vacuum was applied to existing extraction well EW-1 (approximately 8 feet from AS-1) and VE-3 (6.5 feet from AS-1, installed in June 2013) to capture vapors from the vadose zone during AS pilot testing. Soil vapor was extracted from EW-1 and VE-3 at a maximum of approximately 75 inH₂O and 12.5 scfm, respectively. The injection pressure during the pilot test ranged from 1 to 6 psi, with a flow rate of approximately 1 to 7.1 scfm. Measureable flow was observed at a sustained injection pressure of 6 psi.

PID measurements were used to evaluate increases in vapor-phase volatile organic compound (VOC) concentrations due to AS during the pilot test. The PID concentrations in EW-1 and VE-1 during initial SVE only pilot test operation were 675 and 380 ppm, respectively. Influent VOC vapor concentrations in EW-1 and VE-3 after approximately 4 hours of AS/SVE operation increased to 1,300 and 750 ppm, respectively.

4. Cleanup Approach

Based on site characterization results and pilot test findings, AS/SVE has been selected as the most appropriate technology to treat hydrocarbon impacts at the site. Petroleum hydrocarbon impacted soil will be treated through SVE application, while groundwater treatment will be accomplished through AS system operation.

4.1 Proposed Air Sparge/Soil Vapor Extraction System

An AS/SVE system has been designed based on site characterization and pilot test results. The proposed AS/SVE remediation system consists of 16 AS wells (13 new wells and three existing wells) and six SVE wells (two new wells and four existing wells). A Busch 1502 rotary claw blower, powered by a 20-horsepower (hp) totally enclosed, fan-cooled (TEFC) motor, capable of extraction air flows of 300 scfm at a vacuum of 7.87 inches of mercury will be used for the SVE system. A Busch model 1102 BP rotary claw compressor system, powered by a 10-hp TEFC motor, capable of delivering approximately 70 scfm of injection air at a discharge pressure of 23.5 psi will be used on site. The oxidizer will be an Intellishare ECO-300 catalytic oxidizer with a maximum air flow capacity of 300 scfm. Additional information is provided in the subsections that follow. AS/SVE system major equipment components specifications are provided in Appendix E.

AS treatment will consist of continuously cycled (i.e., pulsed) AS wells operating in four zones. A system performance monitoring program will be used to evaluate treatment

effectiveness for the AS/SVE system. Additionally, each AS/SVE remediation well location will be periodically monitored and adjusted to optimize treatment conditions and ensure that emissions remain within permit-required thresholds for the site. The AS/SVE remediation system described in the RAP is intended as an adaptable and effective remedial approach to address both dissolved and residual-/adsorbed-phase contaminant mass in the shallow water-bearing zone at the site.

4.2 Air Sparge/Soil Vapor Extraction System Components

The AS system will be used to volatilize and enhance biodegradation of hydrocarbon constituents in shallow groundwater at the site. The AS system will also be operated in a manner to facilitate bulk water movement in the capillary fringe, thereby desorbing mass from smear zone soil and dissolving it into the aqueous phase where it can be treated via AS. The SVE system will be used to volatilize any residual hydrocarbon constituents that are adsorbed to capillary fringe and overlying vadose zone soil. SVE will also capture vapors emitted during AS operation and promote secondary treatment of soil via enhanced biodegradation through the transfer/recharge of oxygen to subsurface pore spaces near the groundwater surface and within contaminant smear zones. Periodic performance monitoring will be conducted to quantify contaminant mass removal rates and qualitatively assess system effectiveness. This information will be used to identify opportunities to optimize the system cycling schedule and streamline operations and maintenance (O&M) costs. The system will be operated until asymptotic mass removal rates have been achieved, or until corresponding groundwater cleanup objectives have been met.

4.2.1 Soil Vapor Extraction Well Configuration and Network

The proposed SVE system uses four existing SVE wells (VW-3, VW-4, VW-5, and VE-3) and two new SVE wells (VE-4 and VE-5); approximate well locations are shown on Figure C-2 of Appendix E. A centralized manifold will be located in the treatment enclosure and each SVE well will have a dedicated pipe run (i.e., lateral). Instrumentation and controls to facilitate performance monitoring and wellfield optimization functions for each well will be located at the manifold. The proposed treatment enclosure location and new pipe run locations are shown on Figure 12. Details for the SVE manifold configuration, trenching details, and wellhead connections are presented on the system design drawings included with Appendix E.

4.2.2 Air Sparge Well Configuration and Network

The proposed AS well configuration consists of three existing AS wells (SP-3, SP-4, and SP-5) and 13 new AS wells (AS-2 through AS-14). Approximate well locations are depicted on Figure C-2 of Appendix E. A centralized manifold will be located in the treatment enclosure and each AS well will have a dedicated pipe run (i.e., lateral). The AS manifold will include flow control valves for individual well performance optimization and balancing pulsed air delivery among the various zones and phases of operation. Instrumentation and controls to facilitate performance monitoring and well field optimization functions for each well will be located at the manifold. Details for the AS manifold configuration, trenching details, and wellhead connections are presented on the system design drawings included with Appendix E.

During AS/SVE well installation, existing remediation wells VW-3/SP-3, VW-4/SP-4, and VW-5/SP-5 will be evaluated to determine if it is feasible for each well to be incorporated into the AS/SVE remediation system. Well casing integrity and functionality will be assessed for each existing remediation well. These wells were last used in 2003 and their current condition is not known. Due to potential infrastructure degradation and system operational limitations, only components that will support the operational function of the final remedy design will be used. If existing remediation well VW-5/SP-5 is inoperable, one additional AS well will be installed near VW-5/SP5. Replacement wells will not be installed if existing remediation wells VW-3/SP-3 or VW-4/SP-4 are inoperable; proposed wells AS-10 through AS-14 will adequately address the portion of the site covered by existing wells VW-3/SP-3 and VW-4/SP-4.

4.2.3 Soil Vapor Extraction Well Installation

Two new SVE wells will be installed at the site: VE-4 will be installed at 726 Harrison Street and VE-5 will be installed at 706 Harrison Street. SVE well installation will be performed using hollow-stem augers. Both new SVE wells will be installed to a total boring depth of approximately 15 feet bgs. The wells will be completed with a 2-inch-diameter Schedule 80 polyvinyl chloride (PVC) well casing with a 0.020-inch slot screen extending from approximately 5 to 15 feet bgs. The new SVE wells will be installed and constructed according to ARCADIS' Well Installation Standard Operating Procedure (SOP) and completed with a locking, flush-mount, 12-inch-diameter traffic-rated well box. Relevant ARCADIS SOPs are included in Appendix F.

Drilling augers and sampling tools will be decontaminated after drilling in accordance with ARCADIS' Field Equipment Decontamination SOP (Appendix F). Soil cuttings and decontamination water will be collected in labeled drums and temporarily stored on site

pending results of characterization sampling. Waste profile forms will be prepared and the soil and purge water will be transported for off-site disposal in accordance with applicable regulations. Approximate well locations and SVE well construction details are provided on Figures C-2 and C-4 of Appendix E, respectively. Well construction details, completions, with below-grade piping connections will adhere to the design requirements specified in Appendix E.

4.2.4 Air Sparge Well Installation

Thirteen new AS wells will be installed on site. AS-2 through AS-6 will be installed at 726 Harrison Street and AS-7 through AS-14 will be installed at 706 Harrison Street. AS soil borings will be advanced to a depth below the water table with a target depth for setting the bottom of the AS well screen at of the top of the clay lens (approximately 30 feet bgs). During well installation, the soil from each borehole will be continuously logged by a geologist to locate the target depth for each AS well screen.

Each well will be completed with a 2-inch-diameter Schedule 80 PVC well casing with a 0.010-inch slot 1-foot screen interval. Each AS well will be constructed with a 3-foot sump at the bottom of the well casing. The new AS wells will be installed and constructed according to ARCADIS' Well Installation SOP (Appendix F) and completed with a locking, flush-mount, 12-inch-diameter traffic-rated well box. Approximate well locations and AS well construction details are provided on Figures C-2 and C-5 of Appendix E, respectively. Well construction details, completions, with below-grade piping connections will adhere to the design requirements specified in Appendix E.

During well installation, soil from the borehole will be continuously logged by a geologist in accordance with the Unified Soils Classification System and screened with a PID and a flame ionization detector (FID). The PID and FID results, in parts per million, from the field screening will be recorded on the field boring logs. Soil samples will be collected for laboratory analysis, biased toward the highest probable degree of petroleum hydrocarbon concentration and based on the highest PID/FID readings greater than the background concentration. Soil samples will be collected for laboratory analysis at a frequency of every 5 feet if PID/FID readings are not detected above background concentrations and if other indicators of potential hydrocarbon impacts (e.g., staining, odor) are absent. If elevated PID/FID readings or other indicators of potential hydrocarbon impacts are observed during well installation, additional soil samples will be collected.

4.2.5 Air Sparge/Soil Vapor Extraction System Startup

Once the AS/SVE system has been installed, it will be inspected, started up, and tested to verify that the operation meets or exceeds performance design criteria, including equipment operating performance, system control functionality, measurement accuracy, compliance with applicable permits, and safety. Performance design criteria will be detailed in a site-specific performance monitoring plan

AS system startup will include balancing individual well pressures and flows during their respective zoned operation. AS pressures will typically range from 10 to 12 psi and will be adjusted, as appropriate, to flow rates of approximately 10 scfm per well. During startup, the system will be set up to sustain target wellhead pressures during the pulse interval, which is important to achieve AS break-through in the formation and deliver injected air distribution over the estimated AS radius of influence (ROI).

Individual SVE wells will be optimized and balanced at a target wellhead vacuum of 110 inH₂O to achieve a flow of approximately 40 scfm per well. The effective target ROI for the SVE wells is 30 feet. The SVE well network is designed to effectively capture residual soil contaminant mass and recover VOCs generated during AS operations. The treatment system has been designed to accommodate a flow rate up to 300 acfm at a vacuum of 7.5inHg to allow flexibility if it becomes apparent during performance monitoring that higher vacuum and flow are appropriate.

Vacuum, flow, and extracted vapor VOC concentrations will be measured periodically throughout startup testing activities. Data from each well will be used to assess individual wellhead extraction characteristics and to identify areas of the site with higher mass removal rates. The relative distribution of mass removal rates will factor into AS and SVE optimization efforts. System SVE data will also be collected and monitored to estimate emission attenuation rates.

Collectively, data from all AS and SVE wells will be used to develop system performance curves. Information gathered during startup will also be used to establish a baseline for subsequent treatment system performance evaluations.

4.2.6 Air Sparge/Soil Vapor Extraction System Optimization

System performance data will primarily be used to verify that the system is performing properly. A comprehensive system performance evaluation will be performed semiannually to assess treatment progress toward meeting cleanup objectives. The semiannual evaluation will consider all data collected to date; estimate mass removal of TPPH, benzene

and MTBE; and ultimately determine if AS/SVE is achieving cleanup objectives in a timely and cost-effective manner. Data collected monthly will be evaluated and used to optimize system operational parameters during subsequent O&M events to maintain optimal system performance.

4.2.7 Operations and Maintenance

ARCADIS will prepare an O&M manual for all AS/SVE treatment equipment. In addition to detailing system operating instructions, the O&M manual will outline equipment maintenance requirements. The level of detail will be sufficient for ensuring proper and efficient treatment throughout the project. The O&M manual will include a system maintenance schedule, detailing manufacturer recommended mechanical and electrical maintenance requirements based on equipment hours of operation and will document equipment make, model, troubleshooting, and manufacturer contact information for all treatment system components.

5. Remedy Implementation

Upon approval of this RAP from the ACEH, Chevron will proceed with implementing the final remedy. The following tasks are anticipated in order to implement this RAP:

- Design modifications based on feedback from the ACEH.
- Apply for and obtain construction and system operation permits as required.
- Develop detailed scopes of work for subcontractor procurement.
- Equipment procurement, contracting, and construction scheduling.
- Remove any existing AS/SVE system components that will not be incorporated into the final design.
- Utility surveying and locates in advance of well installation.
- Install AS and SVE wells.
- Complete installation of AS/SVE treatment enclosure.
- Install new AS/SVE piping and complete connections.

- System startup testing and optimization.
- Commence monthly and quarterly monitoring programs.

This section discusses the remedy implementation expectations.

5.1 Permitting and Utility Locates

Prior to initiation of on-site construction activities, permits will be obtained as required for building and electrical upgrades. ARCADIS personnel will mark all AS and SVE well locations to identify utilities in those areas. Utility locates will be performed on site before commencing drilling or intrusive excavation activities. A geophysical survey using a combination of ground-penetrating radar and electromagnetic utility locating equipment, metal detectors, utility locators, and conductivity meters will be performed to screen designated areas for utilities, buried metallic objects, and anomalies. Following well installation, well permits will be filed with the ACEH, as necessary.

5.1.1 Well Installation Permits

Prior to commencing well installations, all applicable well permits will be obtained from the Alameda County Public Works Agency.

5.1.2 Air Permit

An air permit will be procured from the BAAQMD for the duration of AS/SVE system operation. An SVE emissions evaluation will be performed immediately after AS/SVE system startup to confirm catalytic oxidizer destruction efficiency and air permit compliance. Air emissions monitoring will be performed monthly for one quarter after startup to verify anticipated declines in SVE mass removal rates. If the monitoring identifies point source emissions in excess of allowable thresholds, modification to system operations to maintain emission rates below the threshold will be performed or supplemental emission control measures will be used.

5.1.3 Building Permit

A building permit will be obtained from the City of Oakland for the AS/SVE treatment enclosure.

5.2 Surveying

Following AS/SVE well, conveyance piping and treatment enclosure installation, a licensed surveyor will perform an as-built survey of the major remediation system components. The survey will include measurement and identification of the following in both northing/easting and global positioning system (GPS) coordinates:

- Location of remediation equipment and treatment enclosure
- AS/SVE well locations
- Transect locations of SVE and AS pipe runs
- Locations of existing site utilities.

Results of the survey will be used to develop a revised site map and will be included in subsequent documentation of remediation activities, as appropriate.

5.3 Monitoring

The semiannual groundwater monitoring program will continue during 2014 at all three properties comprising the site.

5.4 Waste and Disposal

Construction waste that is characterized as nonhazardous material will be disposed of off site at an appropriate local landfill. Soil boring cuttings from installation of AS/SVE wells will be staged in drums until drilling completion. Soil cuttings will be sampled and analyzed for constituents of concern and any supplemental waste profiling tests required by the designated landfill. Investigation-derived waste handling will adhere to the ARCADIS SOP provided in Appendix F. Following characterization, soil cuttings will be transported for off-site disposal in accordance with applicable regulations.

Table 4
Historical Soil Analytical Data
Chevron Site ID 351646
800, 726, and 706 Harrison Street, Oakland, California

Sample Name	Sample Date	Sample Depth (ft bgs)	LUFT GC/MS					EPA 8260B						
			TPPH (mg/kg)	TPH-d (mg/kg)	TPH-g (mg/kg)	TPH-mo (mg/kg)	TOG (mg/kg)	Benzene (mg/kg)	Toluene (mg/kg)	Ethylbenzene (mg/kg)	Xylenes (mg/kg)	MTBE (mg/kg)	EDB (mg/kg)	1,2-DCA (mg/kg)

Abbreviations:

- ft bgs Feet below ground surface
- mg/kg Milligrams per kilogram
- TPPH Total purgeable petroleum hydrocarbons
- TPH-g Total petroleum hydrocarbons as gasoline
- TPH-mo Total petroleum hydrocarbons as motor oil
- TOG Total oil and grease
- MTBE Methyl tertiary butyl ether
- EDB 1,2-Dibromoethane
- 1,2-DCA 1,2-Dichloroethane
- NA Not analyzed
- ND Non-detect
- <0.0005 Not detected at concentration threshold as shown
- J Estimated value
- ESL Table C. Environmental Screening Levels (ESLs), Deep Soils (>3meters below ground surface), Groundwater is a Current or Potential Source of Drinking Water, CRWQCB-SFBR, Table C, November 2007
- BOLD** Indicates analytical result is above ESL for residential soils

Explanation

- Not analyzed or not sampled
- < Not Detected
- mg/l Milligrams per liter
- CaCO3 Calcium carbonate
- NO3 Nitrate
- NO2 Nitrogen dioxide
- EDC 1,2-Dichloroethane (ethylene dichloride)
- A01 PQL's and MDL's are raised due to sample dilution.
- PQL Practical quantitation limit
- MDL Method detection limit
- S01 Sample result is not within the quantitation range of the method

Katherine,

Based on your request, the schedule for submittal of a Remedial Action Plan for the case referenced above is extended to April 18, 2014.

Regards,
Jerry Wickham
Alameda County Environmental Health

Jerry,

As we discussed on the phone today, ARCADIS and Chevron requests a 30 day extension for the Remedial Action Plan due March 18, 2014.

Thank you
Kathy

Subject: Pilot Test Summary Report for Commingled Plume Assessment for Fuel Leak Case No. RO0000231 (GeoTracker Global ID T0600101486), Unocal #0752, 800 Harrison Street, Oakland, CA 94607; Fuel Leak Case No. RO0000321 (GeoTracker Global ID T0600102122), Chan's Service Station/Shell, 726 Harrison Street, Oakland, CA 94607; and Fuel Leak Case No. RO0000484 (GeoTracker Global ID T0600100985), Oakland Auto Parts, 706 Harrison Street, Oakland, CA 94607

Dear Responsible Parties:

Alameda County Environmental Health (ACEH) staff has reviewed the case file for the above-referenced site including the most recent document entitled, "*Multi-Phase Extraction and Air Sparge/Soil Vapor Extraction Pilot Test Summary Report 800, 726, and 706 Harrison Street, Oakland,*" dated October 9, 2013. The Pilot Test Report, which was prepared on behalf of Chevron Environmental Management Company by ARCADIS, presents results from a pilot test conducted in September 2013.

Based on the results of the pilot test activities, the Pilot Test Report recommends preparation of a Remedial Action Plan. We concur and request that you submit a Remedial Action Plan no later than March 18, 2014.

Responsible Parties

Page 2

TECHNICAL REPORT REQUEST

Please upload technical reports to the ACEH ftp site (Attention: Jerry Wickham), and to the State Water Resources Control Board's GeoTracker website according to the following schedule and file-naming convention:

- **March 18, 2014** – Remedial Action Plan
File to be named: RAP_R_yyyy-mm-dd RO231
- **April 29, 2014** – Semi-annual Groundwater Monitoring Report – First Quarter 2014
File to be named: GWM_R_yyyy-mm-dd RO231

These reports are being requested pursuant to California Health and Safety Code Section 25296.10. 23 CCR Sections 2652 through 2654, and 2721 through 2728 outline the responsibilities of a responsible party in response to an unauthorized release from a petroleum ST system, and require your compliance with this request.

If you have any questions, please call me at (510) 567-6791 or send me an electronic mail message at jerry.wickham@acgov.org. Online case files are available for review at the following website: <http://www.acgov.org/aceh/index.htm>.

Sincerely,

Jerry Wickham, California PG 3766, CEG 1177, and CHG 297
Senior Hazardous Materials Specialist

GeoTracker, eFile

Attachment 1

Responsible Party(ies) Legal Requirements/Obligations

REPORT/DATA REQUESTS

These reports/data are being requested pursuant to Division 7 of the California Water Code (Water Quality), Chapter 6.7 of Division 20 of the California Health and Safety Code (Underground Storage of Hazardous Substances), and Chapter 16 of Division 3 of Title 23 of the California Code of Regulations (Underground Storage Tank Regulations).

ELECTRONIC SUBMITTAL OF REPORTS

ACEH's Environmental Cleanup Oversight Programs (Local Oversight Program [LOP] for unauthorized releases from petroleum Underground Storage Tanks [USTs], and Site Cleanup Program [SCP] for unauthorized releases of non-petroleum hazardous substances) require submission of reports in electronic format pursuant to Chapter 3 of Division 7, Sections 13195 and 13197.5 of the California Water Code, and Chapter 30, Articles 1 and 2, Sections 3890 to 3895 of Division 3 of Title 23 of the California Code of Regulations (23 CCR). Instructions for submission of electronic documents to the ACEH FTP site are provided on the attached "Electronic Report Upload Instructions."

Submission of reports to the ACEH FTP site is in addition to requirements for electronic submittal of information (ESI) to the State Water Resources Control Board's (SWRCB) Geotracker website. In April 2001, the SWRCB adopted 23 CCR, Division 3, Chapter 16, Article 12, Sections 2729 and 2729.1 (Electronic Submission of Laboratory Data for UST Reports). Article 12 required electronic submittal of analytical laboratory data submitted in a report to a regulatory agency (effective September 1, 2001), and surveyed locations (latitude, longitude and elevation) of groundwater monitoring wells (effective January 1, 2002) in Electronic Deliverable Format (EDF) to Geotracker. Article 12 was subsequently repealed in 2004 and replaced with Article 30 (Electronic Submittal of Information) which expanded the ESI requirements to include electronic submittal of any report or data required by a regulatory agency from a cleanup site. The expanded ESI submittal requirements for petroleum UST sites subject to the requirements of 23 CCR, Division, 3, Chapter 16, Article 11, became effective December 16, 2004. All other electronic submittals required pursuant to Chapter 30 became effective January 1, 2005. Please visit the SWRCB website for more information on these requirements. (http://www.waterboards.ca.gov/water_issues/programs/ust/electronic_submittal/)

PERJURY STATEMENT

All work plans, technical reports, or technical documents submitted to ACEH must be accompanied by a cover letter from the responsible party that states, at a minimum, the following: "I declare, under penalty of perjury, that the information and/or recommendations contained in the attached document or report is true and correct to the best of my knowledge." This letter must be signed by an officer or legally authorized representative of your company. Please include a cover letter satisfying these requirements with all future reports and technical documents submitted for this fuel leak case.

PROFESSIONAL CERTIFICATION & CONCLUSIONS/RECOMMENDATIONS

The California Business and Professions Code (Sections 6735, 7835, and 7835.1) requires that work plans and technical or implementation reports containing geologic or engineering evaluations and/or judgments be performed under the direction of an appropriately registered or certified professional. For your submittal to be considered a valid technical report, you are to present site specific data, data interpretations, and recommendations prepared by an appropriately licensed professional and include the professional registration stamp, signature, and statement of professional certification. Please ensure all that all technical reports submitted for this fuel leak case meet this requirement.

UNDERGROUND STORAGE TANK CLEANUP FUND

Please note that delays in investigation, late reports, or enforcement actions may result in your becoming ineligible to receive grant money from the state's Underground Storage Tank Cleanup Fund (Senate Bill 2004) to reimburse you for the cost of cleanup.

AGENCY OVERSIGHT

If it appears as though significant delays are occurring or reports are not submitted as requested, we will consider referring your case to the Regional Board or other appropriate agency, including the County District Attorney, for possible enforcement actions. California Health and Safety Code, Section 25299.76 authorizes enforcement including administrative action or monetary penalties of up to \$10,000 per day for each day of violation.

Alameda County Environmental Cleanup Oversight Programs (LOP and SCP)	REVISION DATE: July 25, 2012
	ISSUE DATE: July 5, 2005
	PREVIOUS REVISIONS: October 31, 2005; December 16, 2005; March 27, 2009; July 8, 2010
SECTION: Miscellaneous Administrative Topics & Procedures	SUBJECT: Electronic Report Upload (ftp) Instructions

The Alameda County Environmental Cleanup Oversight Programs (petroleum UST and SCP) require submission of all reports in electronic form to the county's FTP site. Paper copies of reports will no longer be accepted. The electronic copy replaces the paper copy and will be used for all public information requests, regulatory review, and compliance/enforcement activities.

REQUIREMENTS

- **Please do not submit reports as attachments to electronic mail.**
- Entire report including cover letter must be submitted to the ftp site as a **single Portable Document Format (PDF) with no password protection.**
- It is **preferable** that reports be converted to PDF format from their original format, (e.g., Microsoft Word) rather than scanned.
- **Signature pages and perjury statements must be included and have either original or electronic signature.**
- **Do not password protect the document.** Once indexed and inserted into the correct electronic case file, the document will be secured in compliance with the County's current security standards and a password. **Documents with password protection will not be accepted.**
- Each page in the PDF document should be rotated in the direction that will make it easiest to read on a computer monitor.
- Reports must be named and saved using the following naming convention:

RO#_Report Name_Year-Month-Date (e.g., RO#5555_WorkPlan_2005-06-14)

Submission Instructions

- 1) Obtain User Name and Password
 - a) Contact the Alameda County Environmental Health Department to obtain a User Name and Password to upload files to the ftp site.
 - i) Send an e-mail to .loptoxic@acgov.org
 - b) In the subject line of your request, be sure to include **"ftp PASSWORD REQUEST"** and in the body of your request, include the **Contact Information, Site Addresses,** and the **Case Numbers (RO# available in Geotracker) you will be posting for.**
- 2) Upload Files to the ftp Site
 - a) Using Internet Explorer (IE4+), go to <://alcoftp1.acgov.org>
 - (i) Note: Netscape, Safari, and Firefox browsers will not open the FTP site as they are NOT being supported at this time.
 - b) Click on Page located on the Command bar on upper right side of window, and then scroll down to Open FTP Site in Windows Explorer.
 - c) Enter your User Name and Password. (Note: Both are Case Sensitive.)
 - d) Open "My Computer" on your computer and navigate to the file(s) you wish to upload to the ftp site.
 - e) With both "My Computer" and the ftp site open in separate windows, drag and drop the file(s) from "My Computer" to the ftp window.
- 3) Send E-mail Notifications to the Environmental Cleanup Oversight Programs
 - a) Send email to .loptoxic@acgov.org notify us that you have placed a report on our ftp site.
 - b) Copy your Caseworker on the e-mail. Your Caseworker's e-mail address is the entire first name then a period and entire last name @acgov.org. (e.g., firstname.lastname@acgov.org)
 - c) The subject line of the e-mail must start with the RO# followed by **Report Upload.** (e.g., Subject: RO1234 Report Upload) If site is a new case without an RO#, use the street address instead.
 - d) If your document meets the above requirements and you follow the submission instructions, you will receive a notification by email indicating that your document was successfully uploaded to the ftp site.

Oakland, California

Site History, Previous Investigations and Remedial Actions

800 Harrison Street (Active Unocal)

In November 1990, two gasoline USTs and one waste oil UST were removed from the site. The tanks consisted of one 10,000 gallon regular unleaded gasoline storage tank, one 10,000 gallon super unleaded gasoline storage tank, and one 280 gallon waste oil tank. The waste oil tank was reported to contain one, 1/8 -inch square hole. Based on confirmation soil sampling during the UST removal, the majority of the source area was the soil beneath the former UST pit.

In August 1995, Kapraelian Engineering, Inc. (KEI) conducted an SVE pilot test. Pilot testing activities were conducted at MW-1 and MW-3, with a maximum applied wellhead vacuum of approximately 50 inH₂O for both tests. No measureable flow was observed after sustained operation at the maximum vacuum. Additional pilot testing was performed at on-site monitoring wells MW-5 and MW-6. No measureable flow was observed after sustained operation at the maximum vacuum (Stantec 2009).

In November 1996, one 1,100- gallon waste oil UST and associated product dispensers piping were removed from the site. No apparent holes or cracks were observed in the waste oil tank, or piping at this time.

Gettler-Ryan Inc., in their April 23, 2001 *Site Conceptual Model for 800 Harrison Street*, referenced the source area leak as a potential UST spill bucket containment failure stating that there were several historically documented maintenance reports in which residual rainwater was noted in the spill tank basin after overflow. The spill bucket containment was repaired in November 2001. Since the repair, hydrocarbon concentrations decreased in the short term, but there have been several additional elevated concentrations observed in 2004, which suggests that the spill bucket containment failure was not likely the single contributing source release.

726 Harrison Street (Former Shell)

In October 1995, four gasoline USTs and one waste UST were removed from the site. The tanks consisted of two 5,000-gallon single-walled bare-steel premium unleaded gasoline storage tanks, one 5,000-gallon single-walled bare-steel plus unleaded gasoline storage tank, one 8,000-gallon single-walled bare-steel regular unleaded gasoline storage tank, and one 1,000-gallon single-walled bare-steel waste oil tank. The State of California UST Permit Applications indicate that the USTs contain no spill or overflow preventative containment equipment for any of the former USTs.

Elevated hydrocarbon concentrations were detected in soil beneath each of the former gasoline USTs. Elevated concentrations of Total Oil and Grease (TOG) were detected in soil beneath the waste oil UST. Approximately 530 tons of impacted soil was removed from the excavations to a maximum depth of 20 feet below ground surface (bgs) in December 1995. Seven confirmation soil samples were collected from the bottom and side walls of the excavation to determine the removal of impacted soil. Two of the seven samples contained elevated concentrations of

Appendix B

Union Oil of California
Station No. 0752/Yee/Gin Co-mingled
706/726/800 Harrison Street
Oakland, California

petroleum hydrocarbons at the northern and southern portion of the excavation (Aqua Science Engineers, Inc. [ASE] 2007). Over excavation was not possible due the building location to the southeast and the street to the northwest.

In July 1997, a groundwater monitoring well was installed at the southern edge of the former USTs. Groundwater samples from the well contained elevated concentrations of petroleum hydrocarbons. In December 1998, three additional wells were installed along the southern property boundary between 706 and 726 Harrison Street. Newly installed wells (MW-3 and MW-4) contained much lower detections of hydrocarbons. MW-2 did not contain hydrocarbons detected above laboratory detection limits.

In August 2001, ASE installed one extraction well (EW-1), one AS well (AS-1), and two SVE wells (VE-1 and VE-2). A step drawdown test was performed at a pumping rate of 0.5 gallon per minute (gpm). A 640-minute constant rate pumping test was performed on EW-1 at an average flow rate of 0.65 gpm. Major and minor hydraulic conductivities of 20.2 and 5.02 feet per day, respectively, were determined from the constant rate pumping test.

In September 2001, ASE performed an AS/SVE pilot test on VE-1. The vacuum applied to VE-1 ranged from 26 to 54 inH₂O. Approximately 1 to 2 acfm were observed during pilot testing at these operational conditions. The AS pilot test was performed on AS-1 where applied injection pressure ranged from 1 to 5 psi. No flow was observed during the 90 minute pilot test activities (ASE 2001).

706 Harrison Street (Former ARCO)

In January 1991, four 1,000-gallon gasoline USTs, two 6,000-gallon gasoline USTs, and one unknown size waste oil tank were removed from the site. Confirmation soil samples were collected beneath the tanks, and elevated petroleum hydrocarbon concentrations were observed in confirmation samples. In December 1991, the UST pipes were removed and a limited subsurface investigation was performed to resample the former tank pit areas (Conestoga-Rovers and Associates [CRA] 2007).

In February 1993, an over excavation of unknown volume was performed from three excavations in the vicinity of the former UST locations. Limitations during the excavation related to shoring prevented removal of all impacted soil (CRA 2007). Soil samples collected at 16 feet bgs contained elevated concentrations of hydrocarbons.

In July 1993, monitoring wells (MW-1 through MW-3) and soil vapor extraction (SVE) wells (VW-1 and VW-2) were installed. Soil samples collected during the installation contained elevated total petroleum hydrocarbons as gasoline and benzene (6,000 parts per million [ppm] and 210 ppm, respectively). In December 1993, additional soil samples were collected from the former pump island locations containing concentrations of organic lead with a maximum of 17 ppm at 2 feet bgs.

In April 1994, a SVE pilot test was conducted and SVE was determined to be an effective remedial alternative. In November 1994, additional groundwater monitoring wells, SVE wells,

Appendix B

Union Oil of California
Station No. 0752/Yee/Gin Co-mingled
706/726/800 Harrison Street
Oakland, California

and air sparge (AS) wells were installed for on-site remediation. Operation the AS/SVE began in May 1998 and continued into February 2001. The SVE portion was shut down but the AS system continued to inject air to increase oxygen concentrations to enhance aerobic biodegradation.

Groundwater samples collected from SVE wells determined that the system was effective and the AS system was shut down.

The Co-mingled Plume Investigation (800, 726, and 706 Harrison Street):

In June 2011, ARCADIS conducted site assessment activities to address data gaps presented in Stantec's Work Plan (Stantec 2011) for the site. ARCADIS oversaw the advancement of four soil borings associated with the 800 and 706 Harrison Street properties (Figure 2). ASE oversaw the installation of one monitoring well and one soil boring associated with 726 Harrison Street with observations by ARCADIS (Figure 2).

Soil concentrations for the site assessment were elevated in soil boring GP-2 located at 800 Harrison Street. Total purgeable petroleum hydrocarbons (TPPH) and methyl tertiary butyl ether (MTBE) were detected at 3,200 milligrams per kilograms (mg/kg) and 0.0060 mg/kg, respectively. Groundwater samples were collected from two locations (GP-3 and MW-6) located on the 726 Harrison Street property. Elevated groundwater concentrations for benzene (1,800 micrograms per liter (µg/L)), toluene (2,000 µg/L), ethylbenzene (1,500 µg/L), xylenes (5,000 µg/L) (collectively BTEX), and MTBE (4,600 µg/L) were from soil boring GP-3.

On March 28, 2012, additional site assessment activities were conducted. ARCADIS oversaw the advancement of three soil borings (GP-1, GP-9 and GP 10) on the 800 Harrison and 640 Harrison Street properties.

800 Harrison Street Summary

Soil borings GP-1 and GP-2 were advanced to a depth of approximately 20 feet bgs to delineate the soil stratigraphy and extent of petroleum hydrocarbon impacts to vadose-zone soil. Soil samples collected from boring GP-2 indicate elevated concentrations for TPPH, toluene, ethylbenzene, xylenes, and MTBE at sample depths ranging from 10 feet to 17 feet bgs. Concentrations were detected above ESLs for two of the five analytes; TPPH and MTBE at sample depths of 14 feet and 17 feet bgs. Soil collected from GP-1 had concentrations below the detection limit for all analyses. Because TOG and Hydraulic Oil were not detected above detection limits, no additional samples were analyzed for Title 22 Metals or SVOCs per the Work Plan (Stantec 2011) specifications. Soil boring GP-1 is located southeast of MW-2 within the smog shop, and soil boring GP-2 is located northeast of MW-1 and southeast of the former USTs.

726 Harrison Street Summary

Soil boring GP-3 was advanced to a depth of approximately 20 feet bgs to delineate the soil stratigraphy and extent of petroleum hydrocarbon impacts to vadose-zone soil. Soil collected

Appendix B

Union Oil of California
Station No. 0752/Yee/Gin Co-mingled
706/726/800 Harrison Street
Oakland, California

from GP-3 had concentrations below the detection limit for all analytes except MTBE at 7 feet bgs which had a concentration above the method detection Limit (MDL) but below the ESL.

The soil samples were collected at depths of 6.5, 11, and 16 feet bgs from MW-6. The newly installed well was placed south of EW-1, which previously had the highest detected MTBE groundwater concentrations for the comingled plume. Soil samples were not detected at the 6.5 and 11 feet bgs intervals. Elevated concentrations of TPPH and MTBE were detected at 16 feet bgs but concentrations were below the ESLs.

Groundwater samples were collected from boring GP-3 and from monitoring well MW-6. Concentrations of BTEX and MTBE were detected in excess of the MCL in GP-3 and MTBE was detected at a concentration of 990 micrograms per liter at MW-6. Groundwater was encountered at approximately 20 feet bgs at GP-3 and MW-6.

706 Harrison Street Summary

Soil boring locations GP-5 through GP-7 were advanced and sampled to assess the effectiveness of past site remediation events including several over-excavations to remove impacted hydrocarbon soil and the installation of a SVE and AS well system to remediate the property. Data collected from the assessment work indicates that soil has limited impacts in the vadose-zone. Soil samples collected from soil borings GP-6 located southwest of MW-2 within the former UST basin and GP-7 located in the southwestern corner along the fence line of the property, indicated that all analytes were not detected at concentrations in excess of the MDL. GP-5 located northeast of MW-4 and within the former UST basin, showed concentrations detected above MDLs for TPPH, ethylbenzene and MTBE at 20 feet bgs.

Downgradient Delineation

Groundwater samples were collected from boring GP-9 located from the 640 Harrison Street property. Groundwater samples collected from GP-9 had concentrations below the detection limit for all analytes. Groundwater was encountered at approximately 20 feet bgs.

1.0 INTRODUCTION

1.1 GENERAL

THE ENCLOSED DRAWINGS AND SPECIFICATIONS CONTAIN INFORMATION FOR THE CONSTRUCTION AND INSTALLATION OF A SOIL VAPOR EXTRACTION AND AIR SPARGE SYSTEM (SVE/AS) TREATMENT FACILITY. THE FOLLOWING DRAWINGS DEPICTING THE TREATMENT FACILITY ARE REQUIRED FOR CONSTRUCTION AND INSTALLATION:

Table with 2 columns: DRAWING NO. and TITLE. Lists drawings from G-1A to S-1 including construction notes, site plan, remediation system details, etc.

1.2 DEFINITIONS

CHEVRON: CHEVRON ENVIRONMENTAL MANAGEMENT COMPANY
ENGINEER: ARCADIS
CONTRACTOR: TO BE DETERMINED BY BID
EQUIPMENT OWNER: UNION OIL COMPANY OF CALIFORNIA

THIS PACKAGE ALSO CONTAINS THE FOLLOWING SPECIFICATIONS REQUIRED FOR CONSTRUCTION AND INSTALLATION:

2.0 GENERAL CONSTRUCTION SPECIFICATIONS

- 2.1 THE CONTRACTOR SHALL REVIEW THE SVE/AS FACILITY DESIGN PLANS...
2.2 ALL MATERIALS USED FOR CONSTRUCTION OF THE SVE/AS FACILITY SHALL BE NEW...
2.3 THE ENGINEER WILL REQUEST A PLAN CHECK, IF APPLICABLE...
2.4 THE CONTRACTOR SHALL OBTAIN AND PAY FOR ALL BUILDING PERMITS...
2.5 THE CONTRACTOR SHALL PROVIDE A ONE YEAR WARRANTY ON ALL...
2.6 IN ADDITION TO THE REMEDIATION DESIGN PLANS...
2.7 THE ENGINEER WILL CLEARLY INDICATE IN THE REMEDIATION DESIGN PLANS...
2.8 THE CONTRACTOR SHALL BE RESPONSIBLE FOR KEEPING THE SITE FREE OF EXCESSIVE DEBRIS...

TO TAKE THE NECESSARY PRECAUTIONS TO CONTROL DUST AND STORMWATER RUNOFF FROM EXCAVATION AND CONSTRUCTION ACTIVITIES.

- 2.9 THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE INDEPENDENT LOCATION OF ALL UTILITIES...
2.10 CONTRACTOR SHALL ALSO BE RESPONSIBLE FOR REPAIRING ALL DAMAGE MADE BY THE CONTRACTOR...
2.11 THE CONTRACTOR SHALL RESTORE ALL DISTURBED AREAS TO MATCH THE PRE-CONSTRUCTION CONDITIONS...
2.12 UPON COMPLETION OF THE PROJECT, THE CONTRACTOR SHALL ASSIST THE ENGINEER...
2.13 A FINAL INSPECTION WILL BE PERFORMED BY THE ENGINEER AND/OR A CEMC REPRESENTATIVE...
2.14 THE CONTRACTOR SHALL PROVIDE AN ELECTRICIAN FOR A MINIMUM OF TWO DAYS...
2.15 ALL NECESSARY CONSTRUCTION INSPECTIONS SHALL BE OBTAINED AND PAID FOR BY THE CONTRACTOR...
2.16 ALL WORK SHALL BE CONDUCTED UNDER CEMC "PERMIT TO WORK" SYSTEM...
2.17 THE CONTRACTOR SHALL PROVIDE A TECHNICIAN FOR 8 HOURS DURING THE STARTUP...
2.18 THE CONTRACTOR SHALL CONFIRM A CONSTRUCTION SCHEDULE WITH ARCADIS...
2.19 THE PROPOSED CONSTRUCTION SCHEDULE SHALL BE PRESENTED IN A TIMELINE...
3.0 TRENCHING AND BACKFILL
3.1 GENERAL
3.1.1 TRENCHING AND BACKFILL SPECIFICATIONS WILL BE DEVELOPED BY THE ENGINEER...
3.1.2 THE TRENCHING AND BACKFILL SPECIFICATIONS ARE SUBJECT TO APPROVAL...
3.1.3 ALL MECHANIZED EQUIPMENT OPERATION (I.E., BACKHOE, EXCAVATOR, OR OTHER POWERED EQUIPMENT)...
3.2 PAVEMENT CUTTING
3.2.1 EXISTING PAVEMENT SHALL BE SAW CUT TO PROVIDE A NEAT VERTICAL FACE...
3.2.2 THE CONTRACTOR SHALL MAKE EVERY EFFORT TO USE EXISTING PAVEMENT EDGES...

PAVEMENT REMOVED FROM TRENCHES OR OTHER EXCAVATIONS SHALL BE REPLACED TO MATCH THE EXISTING MATERIAL.

- 3.2.3 CONCRETE OR ASPHALT TRENCH CUTS SHALL NOT EXCEED A NOMINAL WIDTH OF 36 INCHES...

3.3 TRENCH EXCAVATION

- 3.3.1 TRENCHES SHALL BE EXCAVATED TO THE SPECIFIED WIDTHS AND DEPTHS SPECIFIED IN THE DESIGN PLANS...
3.3.2 CONTRACTOR SHALL STOP WORK IMMEDIATELY IF PRODUCT PIPING OR TANK FIELD IS ENCOUNTERED...
3.3.3 ALL EXCAVATION ACTIVITIES SHALL BE IN STRICT ACCORDANCE WITH OSHA REGULATIONS...
3.3.4 ALL EXCAVATED SOIL SHALL BE MONITORED BY THE ENGINEER IN ACCORDANCE WITH BAY AREA AIR QUALITY...
3.3.5 THE CONTRACTOR SHALL BE RESPONSIBLE FOR LOADING SOIL INTO TRUCKS...
3.3.6 THE CONTRACTOR SHALL TAKE ALL NECESSARY PRECAUTIONS TO AVOID DAMAGING EXISTING UNDERGROUND UTILITIES...
3.3.7 THE CONTRACTOR SHALL HAND-EXCAVATE TO EXPOSE ALL EXISTING PRODUCT, VENT, ELECTRICAL CONDUIT...
3.3.8 ONCE ALL EXISTING LINES HAVE BEEN LOCATED, THE TRENCHES SHALL BE NEATLY CUT BY A BACKHOE...
3.3.9 THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE SAFETY AND INTEGRITY OF TRENCHES...
3.3.10 THE CONTRACTOR SHALL TAKE PRECAUTIONS TO MINIMIZE SURFACE WATER ENTERING EXCAVATIONS...
3.3.11 WHEN REQUIRED BY LOCAL AUTHORITY, THE ENGINEER WILL IMPLEMENT A STORM WATER POLLUTION PREVENTION PLAN...
3.3.12 EXCAVATION SHALL NOT INTERFERE WITH 45-DEGREE ZONE OF INFLUENCE ON ANY EXISTING FOUNDATION...

Footer area containing scale information, revision table, professional engineer details, ARCADIS logo, project name 'CONSTRUCTION NOTES AND SPECIFICATIONS', date 'DRAFT - NOT FOR CONSTRUCTION', and sheet identifier 'G-1A'.

 G:\ENV\CAD\lakewood-CA\ACT\B0047339\Design\20140205 from roseville\47339G03.dwg PROJECTNAME: IMAGES: 47339X00

3.4 BACKFILL

- 3.4.1 TRENCHES SHALL BE BACKFILLED AS SOON AS PRACTICAL AFTER PRESSURE TESTING THE UNDERGROUND PIPE RUNS, AND FOLLOWING ANY REQUIRED INSPECTIONS. TRENCHES SHALL NOT REMAIN OPEN LONGER THAN NECESSARY TO PREVENT SIDEWALL CAVING. IF CAVING IS ANTICIPATED, THE CONTRACTOR SHALL USE A COMMERCIAL SOIL SEALANT/BINDER OR FORMS TO PREVENT CAVING. CHEMICAL SOIL BINDERS/SEALANTS SHALL BE APPROVED BY CEMC.
- 3.4.2 PRIOR TO BACKFILLING, THE CONTRACTOR SHALL CONFIRM THAT THE UNDERGROUND PIPE IS BURIED TO A MINIMUM DEPTH OF 18 INCHES FROM THE TOP OF THE PIPE, UNLESS OTHERWISE NOTED IN THE DESIGN PLANS AND LOCAL BUILDING CODES.
- 3.4.3 UNDERGROUND PIPING SHALL BE BEDDED IN CLEAN SAND, OR THE ENGINEER-APPROVED EQUIVALENT, TO A MINIMUM DEPTH OF 2-INCHES BELOW THE BOTTOM OF THE PIPING AND 2-INCHES ABOVE THE PIPING. THE SAND SHALL BE CLEAN, ROCK-FREE (100 PERCENT PASSING NO. 4 SIEVE), AND FREE OF SILT AND CLAY.
- 3.4.4 TRENCH BACKFILL MATERIAL WILL CONSIST OF CDF SLURRY MIX. BACKFILL MATERIALS SHALL NOT CONTAIN RUBBLE, VEGETATION, TRASH, BOULDERS, OR OTHER DEBRIS.
- 3.4.5 NATIVE SOIL MAY BE USED AS BACKFILL WITH APPROVAL OF CEMC AND THE ENGINEER. IT IS RECOMMENDED THAT NATIVE SOIL BE TESTED FOR GEOTECHNICAL PROPERTIES TO DETERMINE IF THE MATERIAL IS SUITABLE FOR BACKFILL.
- 3.4.6 BACKFILL SOIL SHALL BE COMPACTED TO 95 PERCENT OF THE MAXIMUM DRY DENSITY AT OPTIMUM MOISTURE CONTENT (BASED ON ASTM D1557) OR IN ACCORDANCE WITH THE LOCAL CODES.
- 3.4.7 CDF MAY BE USED AS BACKFILL MATERIAL WITH THE APPROVAL OF CEMC AND THE ENGINEER. THE CDF SHALL BE 1.5 TO 2 SACK SLURRY. NO COMPACTION TESTING IS REQUIRED FOR CDF.
- 3.4.8 CLASS 2 AGGREGATE BASE SHALL BE PLACED UNDER NEW ASPHALT PAVEMENT. THE AGGREGATE BASE THICKNESS SHOULD EQUIVALENT TO THE EXISTING AGGREGATE BASE THICKNESS OR SIX INCHES WHICHEVER IS GREATER.
- 3.4.9 PRIOR TO PAVING, THE CONTRACTOR SHALL REMOVE ALL VEGETATION, SURPLUS SOIL, RUBBLE, TRASH, DEBRIS AND OTHER MATERIALS AND PROVIDE A FLAT, UNYIELDING SUBGRADE SURFACE FOR PAVING. SATURATED, SOFT OR PUMPING SOILS SHALL BE REMOVED AND REPLACED WITH SUITABLE MATERIAL IN ACCORDANCE THESE SPECIFICATIONS.
- 3.4.10 THE CONTRACTOR SHALL PREPARE THE SUB-GRADE ELEVATION TO MATCH THE BASE OF THE EXISTING PAVEMENT, UNLESS THE ASPHALT RESTORATION DESIGN EXCEEDS EXISTING IN-PLACE ASPHALT DESIGN.

4.0 PIPING

4.1 GENERAL

- 4.1.1 THE LOCAL AUTHORITY, AND BUILDING AND PLUMBING CODES, ALONG WITH ASTM SPECIFICATIONS, SHALL BE USED TO DESIGN THE TYPES OF PIPING AND INSTALLATION METHODS REQUIRED FOR EACH REMEDIATION SITE.
- 4.1.2 ALL PIPING WORK SHALL BE INSTALLED BY TRAINED PERSONNEL OPERATING UNDER A STATE-LICENSED CONTRACTOR.
- 4.1.3 ALL MATERIALS SHALL BE NEW, UNLESS OTHERWISE SPECIFIED IN THE DESIGN PLANS.
- 4.1.4 ALL MATERIALS AND WORK SHALL BE IN ACCORDANCE WITH THE PIPE MANUFACTURER'S SPECIFICATIONS, THE DESIGN PLANS, AND ALL APPLICABLE CODES.
- 4.1.5 ALL PIPING AND PLUMBING SHALL BE PERFORMED BY TRAINED AND COMPETENT PERSONNEL, WHO MEET ALL OF THE REQUIREMENTS DICTATED BY THE LOCAL AUTHORITIES. IN ADDITION, THE CONTRACTOR IS RESPONSIBLE FOR ENSURING THE INSTALLATION OF ANY EQUIPMENT OR MATERIALS WHICH REQUIRE SPECIFIC LICENSING SHALL BE PERFORMED UNDER THE DIRECTION OF THE INDIVIDUAL WHO HOLDS A CURRENT LICENSE FOR SUCH WORK.
- 4.1.6 WHEN CONNECTING TO EXISTING UNDERGROUND PIPING, THE CONTRACTOR SHALL FIRST VERIFY THE EXISTING PIPING PATH. IF THE EXISTING UNDERGROUND PIPING IS TO BE USED FOR CONVEYANCE, THE CONTRACTOR SHALL ALSO FIELD VERIFY THE INTEGRITY OF THE EXISTING PIPE PRIOR TO CONNECTING TO IT.
- 4.1.7 ALL PROCESS PIPING SHALL BE TESTED ACCORDING TO LOCAL SPECIFICATIONS AND WITNESSED BY THE ENGINEER OR THE ENGINEER'S REPRESENTATIVE. NO TESTING WILL BE CONDUCTED THROUGH INSTRUMENTS OR EQUIPMENT. NO VACUUM OR PRESSURE TESTING WILL OCCUR WITHOUT CHEVRON'S APPROVAL.
- 4.1.8 THE PIPE FOR VAPOR LINES SHALL BE SLOPED TOWARDS THE WELLHEADS AT A RATIO OF 1:100 TO AVOID ACCUMULATION OF CONDENSATE IN THE PIPES. IF A

TRENCH DEPTH OF GREATER THAN 4 FEET IS NEEDED TO ACHIEVE A REQUIRED SLOPE, THE CONTRACTOR SHALL NOTIFY THE ENGINEER AND IMPLEMENT MEASURES TO ADDRESS POTENTIAL CONDENSATE ACCUMULATION IN THE PIPE AS DIRECTED BY THE ENGINEER.

- 4.1.9 WHERE PIPING IS INSTALLED ABOVE GROUND, PIPE SUPPORTS AND CLAMPS SHALL BE USED TO SUPPORT THE PIPE AT APPROPRIATE INTERVALS TO PREVENT SAG AS SPECIFIED BY THE PIPING MANUFACTURER'S SPECIFICATIONS. WHEN UNISTRUT SUPPORTS ARE USED THE ENDS OF THE SUPPORTS SHALL BE COVERED WITH PLASTIC PROTECTIVE CAPS.
- 4.1.10 THE CONTRACTOR SHALL PAINT ALL ABOVE GROUND PIPING AS APPROPRIATE FOR UV PROTECTION, WHERE REQUIRED BY CODE AND TO IDENTIFY POTENTIAL HAZARDS (I.E.; OVERHEAD PIPING, POTENTIAL TRIP HAZARD). WHEN PAINTING PIPING IS APPLICABLE, THE FOLLOWING SCHEDULE SHALL BE FUSED: "GREY - SOIL VAPOR", "YELLOW - GAS SUPPLY", "AIR LINES - NOT PAINTED".
- 4.1.11 THE CONTRACTOR SHALL LABEL ALL ABOVE GROUND PIPING WITH INDELIBLE OR PERMANENT MARKING INDICATING THE CONTENTS OF THE PIPE (I.E., "GROUNDWATER," "VAPOR," OR "TREATED WATER", COMPRESSED AIR, GAS, ELECTRIC) AND THE FLOW DIRECTION.
- 4.1.12 THE CONTRACTOR SHALL MAKE ALL WELLHEAD CONNECTIONS AS SHOWN IN THE DESIGN PLANS.
- 4.1.13 THE CONTRACTOR WILL IDENTIFY (ID) ALL WELL MANIFOLD PIPING STEEL TAGS. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO STAMP THE APPROPRIATE WELL ID'S ON THE STEEL TAGS AND ATTACH THE TAGS WITH CHAINS TO THE CORRESPONDING WELLS AT THE MANIFOLD.
- 4.1.14 THE PIPING MATERIALS SHALL BE SPECIFIED BY THE ENGINEER IN THE DESIGN PLANS. ANY CONFLICTS OR QUESTIONS CONCERNING PIPE MATERIAL COMPATIBILITY, AS DISCOVERED BY THE CONTRACTOR, SHALL BE IMMEDIATELY BROUGHT TO THE ATTENTION OF THE ENGINEER.
- 4.1.15 THE USE OF DISSIMILAR METALS AND ALLOYS IN DIRECT CONTACT WITH EACH OTHER IS PROHIBITED ON ALL PIPE LINES CONTAINING LIQUIDS DUE TO THE POTENTIAL FOR GALVANIC CORROSION. WHERE DISSIMILAR METALS MUST BE JOINED, DI-ELECTRIC UNIONS OR COUPLERS SHALL BE USED.
- 4.1.16 TRACER WIRE TERMINALS WILL BE TAGGED AND IDENTIFIED IN THE EQUIPMENT COMPOUND, AT JUNCTION BOXES, AND WELL BOXES.
- 4.1.17 ALL UNDERGROUND PIPING SHALL BE IDENTIFIED USING TRACER WIRE AND METALLIC TAPE PLACED ABOVE THE PIPING AT THE TOP OF THE BEDDING MATERIAL ABOVE THE PIPING. TRACER WIRE TERMINALS WILL BE TAGGED AND IDENTIFIED IN THE EQUIPMENT COMPOUND, AT JUNCTION BOXES, AND WELL BOXES.
- 4.1.18 THE CONTRACTOR SHALL ENSURE THAT ALL FOREIGN MATERIALS HAVE BEEN REMOVED FROM THE UNDERGROUND PIPING FOLLOWING INSTALLATION AND BEFORE BACKFILLING.
- 4.1.19 ALL ABOVE GROUND PIPING SHALL BE PERMANENTLY LABELED WITH DIRECTIONAL FLOW ARROWS AND LINE CONTENTS AT 5 FOOT INTERVALS. (I.E. KNOCKOUT WATER, SOIL VAPOR, AND PRODUCT)
- 4.1.21 WHERE PIPING IS ROUTED ABOVEGROUND INSIDE THE EQUIPMENT ENCLOSURE, THE PIPING SHALL BE SUPPORTED BY UNI-STRUT PIPE SUPPORT AND CLAMPS. THE UNI-STRUT SUPPORTS SHALL BE FASTENED TO THE WALL OR MOUNTED ON A BASE THAT IS SECURED TO THE GROUND SURFACE AT 10 INCH MINIMUM SPACING.

4.2 POLYVINYL CHLORIDE (PVC) PIPE SPECIFICATIONS

- 4.2.1 ALL UNDERGROUND PVC PROCESS PIPING SHALL BE SCHEDULE 40 (UNLESS NOTED OTHERWISE IN DESIGN DRAWINGS). ALL ABOVEGROUND PVC PROCESS PIPING SHALL BE SCHEDULE 80 (UNLESS NOTED OTHERWISE IN DESIGN DRAWINGS OR REQUIRED BY APPLICABLE CODES).
- 4.2.2 ALL PIPE JOINTS ARE TO BE GLUED USING PVC PRIMER AND PVC SOLVENT CEMENT. CONNECTIONS TO OTHER TYPE OF PIPES ARE TO BE BY FLANGE OR MALE/FEMALE ADAPTERS SPECIFICALLY DESIGNED FOR A TRANSITION FROM PVC PIPE TO A SPECIFIC TYPE OF PIPE (I.E., GALVANIZED STEEL, COPPER).
- 4.2.3 PVC PIPE SHALL NOT BE USED FOR ABOVE GROUND OR UNDERGROUND COMPRESSED AIR SERVICE, OR FOR HIGH TEMPERATURE APPLICATIONS, SUCH AS BLOWER DISCHARGE PIPING.

4.3 GALVANIZED PIPE SPECIFICATIONS

- 4.3.1 GALVANIZED PIPE SHALL BE SCHEDULE 40 HOT-DIP GALVANIZED (HDG) STEEL PER ASTM A53.
- 4.3.2 GALVANIZED PIPE SHALL NOT BE USED TO CONVEY SOIL VAPOR. USE OF GALVANIZED PIPE PRIOR TO CATALYTIC OXIDIZER ABATEMENT SYSTEMS MAY INCREASE RISK OF POISONING THE CATALYTIC CELL MATERIAL. OXIDIZER VENDORS SHOULD BE CONSULTED FOR APPROPRIATE PIPING MATERIAL USE PRIOR TO INSTALLING THE OXIDIZER.

4.4 ABS COMPRESSED AIR PIPE SPECIFICATIONS

- 4.4.1 ABS PIPE AND FITTINGS SHALL BE DURAPLUS™ OR EQUIVALENT AND CAPABLE OF WITHSTANDING CONTINUOUS WORKING PRESSURES GREATER THAN 100 PSI.
- 4.4.2 ABS-COMPRESSED AIR FITTINGS SHALL BE THE SOCKET TYPE, DESIGNED FOR SOLVENT WELDING.
 - FITTINGS SHALL BE DESIGNED AND MANUFACTURED TO WITHSTAND THE CONTINUOUS PRESSURES APPLICABLE TO THE MAXIMUM PRESSURE RATING OF THE PIPE.
 - THE SOLVENT CEMENT SHALL BE ABS SOLVENT CEMENT AND DESIGNED TO WITHSTAND CONTINUOUS PRESSURES UP TO 185 PSI AT 73°F.
- 4.4.3 WHEN TRANSITIONING FROM ABS TO NON-ABS PIPING MATERIAL, THE CONTRACTOR SHALL ENSURE APPROPRIATE TRANSITION FITTINGS ARE USED.

4.5 PRESSURE TESTING

- 4.5.1 ALL PROCESS PIPING SHALL BE PRESSURE TESTED ACCORDING TO LOCAL SPECIFICATIONS AND WITNESSED BY AN ENGINEER OR AN APPROVED REPRESENTATIVE. NO TESTING WILL BE CONDUCTED THROUGH INSTRUMENTS OR EQUIPMENT
- 4.5.2 ALL PVC LINES USED FOR VACUUM WILL BE TESTED AT 5 POUNDS PER SQUARE INCH (PSI) OF PRESSURE AND HELD FOR AN HOUR. IF A PRESSURE DROP OF MORE THAN 1 PSI IS OBSERVED DURING THE HOUR, THE LINE WILL BE INSPECTED AND REPAIRED AS NECESSARY PRIOR TO RETESTING THE LINE.
- 4.5.3 ALL PVC LINES USED FOR WATER WILL BE TESTED AT 5 PSI FOR A PERIOD OF 60 MINUTES. IF A LEAK IS OBSERVED DURING THE HDPE TESTING TIME OR A PRESSURE DROP OF MORE THAN 1 PSI IS NOTED, THE LINE WILL BE INSPECTED AND REPAIRED AS NECESSARY PRIOR TO RETESTING THE LINE.
- 4.5.4 ALL ABS LINES USED FOR COMPRESSED AIR WILL BE TESTED AT 100 PSI FOR A PERIOD OF 60 MINUTES. IF A PRESSURE DROP OF MORE THAN 1 PSI IS OBSERVED DURING THE TESTING TIME, THE LINE WILL BE INSPECTED AND REPAIRED AS NECESSARY PRIOR TO RETESTING THE LINE. A CURING TIME (MINIMUM OF 24 HOURS OR PER THE MATERIAL MANUFACTURER, WHICHEVER IS THE LARGEST), WILL BE FOLLOWED PRIOR TO BEGINNING ANY TESTING ON THE ABS LINES. ONLY THREADED FITTINGS TO BE USED ON THE ABS PIPE AND TRANSITION FITTINGS ARE TO BE METAL REINFORCED.

5.0 ASPHALT PAVEMENT

5.1 GENERAL

- 5.1.1 HOT MIX ASPHALT CONCRETE SHALL NOT BE USED TO RESTORE ASPHALT SURFACES AFFECTED BY CONSTRUCTION ACTIVITIES. EXCEPTION: ASPHALT COLD PATCH MAY BE USED AS A TEMPORARY SURFACE FOR SMALL PAVEMENT PATCHES (NOT TO EXCEED 3 FEET BY 3 FEET) DURING SITE CONSTRUCTION ACTIVITIES. TEMPORARY ASPHALT PATCH MUST BE REMOVED PRIOR TO OR DURING FINAL SITE RESTORATION ACTIVITIES.
- 5.1.2 ASPHALT DRIVEWAYS, PARKING STRIPS, OR OTHER AREAS DESIGNED FOR VEHICULAR AND PEDESTRIAN TRAFFIC SHALL BE RESTORED TO MATCH EXISTING GRADES.
- 5.1.3 THE CONTRACTOR SHALL ASSURE THAT THE SUB-GRADE HAS BEEN PROPERLY PREPARED. NO ASPHALT SHALL BE INSTALLED ON SATURATED, SOFT OR PUMPING SOIL, FROZEN SOIL, ICE, SNOW, OR STANDING WATER.
- 5.1.4 FINISHED SURFACES SHALL BE SMOOTH WITH UNIFORM TEXTURE AND BE FREE OF VOIDS, MOUNDS, RIDGES, DEPRESSIONS, CRACKS, ROLLER MARKS, PITS, OR OTHER IRREGULARITIES (1/4 INCH MAXIMUM OVER 10 FEET STRAIGHT EDGE). EDGES SHALL BE CAPPED OVER AND STRAIGHT. RESTORED PAVEMENT SURFACES NOT MEETING THESE REQUIREMENTS WILL BE REPLACED AT THE CONTRACTOR'S EXPENSE.

5.2 ASPHALT CONCRETE MATERIALS

- 5.2.1 ASPHALT CONCRETE SHALL BE A HIGH-QUALITY, CONTROLLED HOT MIXTURE OF ASPHALT AND WELL-GRADED QUALITY AGGREGATE, AND COMPACTED INTO A UNIFORMLY DENSE MASS. THE PAVING MATERIALS SHALL CONFORM TO ASTM SPECIFICATION D3515.
- 5.2.2 A TACK COAT BONDING AGENT SHALL BE APPLIED BETWEEN ASPHALT LAYERS, BETWEEN LAYERS OF CONCRETE OR SLURRY AND THE ASPHALT, AND BETWEEN CUT EDGES OF EXISTING ASPHALT TO BOND TO THE NEW ASPHALT TO THE OLD SURFACE. THE TACK COAT MATERIAL SHALL MEET THE SPECIFICATIONS IN ASTM D977 OR D2397 AND BE GRADES SS-1, SS-1H, CSS-1, OR CSS-1H. THE ASPHALT TACK COAT SHALL BE A DILUTED EMULSIFIED ASPHALT MIXTURE OF EQUAL PARTS EMULSION AND CLEAN WATER.
- 5.2.3 THE AGGREGATE USED FOR THE BASE COURSE AND SURFACE MIXTURE SHALL BE CRUSHED STONE, GRAVEL, STONE OR SLAG SCREENINGS, SAND, MINERAL FILLER, OR A COMBINATION OF THESE MATERIALS. UNCRUSHED COARSE AGGREGATE MAY BE USED IN BASE COURSE MIXTURES ONLY.

CONSTRUCTION NOTES AND SPECIFICATIONS

DRAFT - NOT FOR CONSTRUCTION

ARCADIS Project No. B0047339.0001	G-1B
Date APRIL 2014	
ARCADIS 2000 POWELL STREET SUITE 700 EMERYVILLE, CALIFORNIA 94608	

CITY: PETALUMA, CA DIV/GROUP: ENV DE: J. HARRIS LAYOUT: G-1C ACADVER: 18.15 (LMS TECH) PAGES: 41/72014.143 PM ACADVER: 18.15 (LMS TECH) PAGES: 41/72014.143 PM BY: HOEFER, MATTHEW
 G:\ENV\CA\Lakeview-CA\ACT\B\0047339\Design\20140205 from roseville\47339G03.dwg XREFS: 47339X00 IMAGES: PROJECTNAME:

- COARSE AND FINE AGGREGATE SHALL CONFORM TO ASTM D692 AND ASTM D1073.
 - MINERAL FILLER SHALL CONFORM TO ASTM D242.
 - IF APPROVED FOR USE BY CHEVRON, SLAG SHALL BE BLAST FURNACE, AIR COOLED SLAG THAT IS NOT LESS THAN 70 POUNDS PER CUBIC FOOT IN MASS.
- 5.2.4 THE LIQUID ASPHALT USED SHALL CONFORM TO ASTM D3381 AND D946, AND SHALL BE THE APPROPRIATE GRADE FOR THE AMBIENT MEAN ANNUAL TEMPERATURE CONDITIONS.
- 5.3 ASPHALT CONCRETE PAVEMENT CONSTRUCTION**
- 5.3.1 PRIOR TO PLACING NEW ASPHALT ADJACENT TO EXISTING PAVEMENT, THE CONTRACTOR SHALL SAW-CUT A CLEAN, STRAIGHT EDGE ALONG THE EXISTING PAVEMENT, AND APPLY TACK COAT TO THE VERTICAL CUT SURFACE. ALL SAW CUT DEBRIS SHALL BE REMOVED FROM THE TRENCH PRIOR TO LAYING THE NEW PAVEMENT.
- 5.3.2 THE TEMPERATURE OF THE ASPHALT MIXTURE SHALL NOT EXCEED 325°F WHEN DISCHARGED FROM THE SPREADER. INITIAL COMPACTION SHALL BE PERFORMED WHEN THE TEMPERATURE OF THE MIXTURE IS ESTIMATED TO BE LESS THAN 250°F. FINAL COMPACTION SHALL BEGIN WITH THE ASPHALT AS HOT AS POSSIBLE, BUT NOT LESS THAN 150°F.
- 5.3.3 THE ASPHALT MIXTURE SHALL BE PLACED IN LIFTS AND COMPACTED TO A MAXIMUM NOMINAL THICKNESS OF 2 INCHES UNTIL THE NEW ASPHALT SURFACE MATCH THE EXISTING SURFACE. THE ASPHALT SHALL BE COMPACTED TO A MINIMUM OF 96 PERCENT OF THE REFERENCE DENSITY.
- 5.3.4 A TACK COAT OF 0.15 GALLON PER SQUARE YARD OF DILUTED EMULSIFIED ASPHALT SHALL BE APPLIED BETWEEN THE BASE COARSE SURFACE AND ASPHALT PAVEMENT. ALL VERTICAL SURFACES, WHICH WILL CONTACT THE NEW ASPHALT PAVING, SHALL BE TACK COATED. THE TACK COAT SHALL BE ALLOWED TO CURE BEFORE ASPHALT PLACEMENT, AND SHALL BE APPLIED ON SURFACES THAT CAN BE COVERED WITH AN ASPHALT MIXTURE DURING THE SAME DAY.
- 5.3.5 THE ASPHALT MIX SHALL BE COMPACTED IMMEDIATELY AFTER PLACEMENT. INITIAL COMPACTION SHALL BE ACCOMPLISHED USING A STEEL WHEEL TANDEM ROLLER, STEEL THREE-WHEELED ROLLER, OR VIBRATORY ROLLER. AS NEEDED, INTERMEDIATE ROLLING WITH A PNEUMATIC TIRE ROLLER SHALL BE DONE IMMEDIATELY BEHIND THE INITIAL ROLLING. IN AREAS TOO SMALL FOR THE ROLLER COMPACTOR, A VIBRATING PLATE COMPACTOR OR HAND TAMPER SHALL BE USED TO ACHIEVE THE REQUIRED COMPACTION. NOTE: THE CONTRACTOR SHALL BE RESPONSIBLE FOR PREVENTING TRAFFIC LOADS ON NEWLY ASPHALTED SURFACES UNTIL IT HAS SUFFICIENTLY COOLED TO SUPPORT TRAFFIC.
- 5.3.6 THE CONTRACTOR SHALL RETURN TO THE SITE AFTER ONE WEEK AND APPLY ASPHALT JOINT SEALER TO ALL ASPHALT JOINTS.

6.0 PORTLAND CEMENT CONCRETE PAVEMENT

6.1 GENERAL

- 6.1.1 FINISHED CONCRETE SURFACES SHALL BE TRUE AND EVEN WITH THE EXISTING GRADE (1/4 INCH MAXIMUM OVER 10 FEET STRAIGHT EDGE). THE SURFACE GRADE AND FINISH MUST MATCH THE SURROUNDING AREA. THE FINISHED CONCRETE SHALL BE FREE OF VOIDS, MOUNDS, RIDGES, DEPRESSIONS, CRACKS, OR OTHER IRREGULARITIES. ANY CONCRETE DETERMINED TO BE SUBSTANDARD SHALL BE REMOVED AND REPLACED AT NO COST TO CEMC OR THE ENGINEER.
- 6.1.2 CONCRETE RESTORATION SHALL ONLY OCCUR ALONG VERTICAL FORMS OR SAW CUT WALLS. WHEN POSSIBLE, SAW CUTS SHALL FOLLOW EXISTING JOINTS AND THE LAYOUT EXISTING CONCRETE SURFACE PATTERNS. NEWLY PLACED CONCRETE PAVEMENT SHALL BE PROTECTED FROM VEHICULAR AND PEDESTRIAN TRAFFIC UNTIL IT IS SUITABLY CURED. THE CONTRACTOR SHALL BE RESPONSIBLE FOR REPLACEMENT OF THE CONCRETE PAVEMENT NOT MEETING DESIGN DOCUMENTS AND/OR SPECIFICATIONS.
- 6.1.3 CONCRETE SHALL BE THOROUGHLY MIXED TO ASSURE UNIFORM MIXTURE OF COMPONENTS WITHIN THE MASS.
- 6.1.4 THE SELECTED CONTRACTOR SHALL VERIFY ALL DIMENSIONS FOR CONCRETE RESURFACING REQUIREMENTS.
- 6.1.5 A. THE REQUIREMENTS OF AMERICAN CONCRETE INSTITUTE (ACI) 301, SPECIFICATIONS FOR STRUCTURAL CONCRETE, SHALL APPLY AS MODIFIED HEREIN.
 B. CONCRETE STRENGTH AT 28 DAYS: 3,000 PSI.
 C. TYPE 2 PORTLAND CEMENT, 560 POUNDS PER CUBIC YARD (LB/CU YD) MINIMUM.
 D. AGGREGATE: ASTM C33 SIZE 67 OR 57 (3/4 INCH OR 1 INCH)

- E. REINFORCEMENT: ASTM A615, GRADE 60.
 F. MAXIMUM WATER/CEMENTITIOUS MATERIAL RATIO: 0.45.
 G. SLUMP: 3 INCHES +/- 1 INCH.
 H. SET REINFORCEMENT ON CONCRETE DOBIE BLOCKS WITH EMBEDDED WIRE TIES
 I. WATER SHALL BE POTABLE, AND FREE OF ACIDS, ALKALIES, AND ORGANIC MATERIAL.

6.2 CONCRETE MATERIALS

- 6.2.1 PORTLAND CEMENT SHALL CONFORM TO ASTM C-150 TYPE II.
- 6.2.2 FINE AND COARSE AGGREGATES FOR NORMAL WEIGHT CONCRETE SHALL CONFORM TO ASTM C-33 AND SHALL CONFORM TO THE APPROPRIATE ASTM GRADING REQUIREMENT. AGGREGATES SHALL BE CLEAN, HARD AND UNIFORMLY GRADED SAND, CRUSHED ROCK OR GRAVEL, FREE FROM LOAM, CLAY OR ORGANIC MATTER. SOUND AGGREGATE SHALL BE USED AND SHALL HAVE A MAXIMUM DIAMETER OF 1.5-INCHES.
- 6.2.3 WATER SHALL BE POTABLE AND FREE OF ACIDS, ALKALIS, AND ORGANIC MATERIALS.
- 6.2.4 THE CONCRETE MIX SHALL PASS A COMPRESSIVE STRENGTH TEST OF 2,500 PSI AFTER 28 DAYS. IN CERTAIN LOCALITIES, 3,000 PSI COMPRESSIVE STRENGTH CONCRETE IS REQUIRED BY SEISMIC CODE.
- 6.2.5 THE CONCRETE MIX SHALL HAVE A MINIMUM SLUMP OF 3-INCHES AND A MAXIMUM SLUMP OF 4-INCHES.
- 6.2.6 THE CONTRACTOR SHALL SPECIFY THE CONCRETE MIX, AND PROVIDE A COPY OF THE CONCRETE SPECIFICATIONS FOR APPROVAL FROM CEMC AND THE ENGINEER PRIOR TO PLACEMENT, IF REQUESTED. THE NUMBER OF BAGS OF CEMENT PER YARD, COMPRESSIVE STRENGTH, VOLUME OF WATER, SLUMP, TYPE AND WEIGHT OF FINE AND COARSE AGGREGATES, AND TYPE AND AMOUNT OF ADMIXTURES SHALL BE ADDRESSED IN THE SPECIFICATION.

6.3 CONCRETE JOINTS

- 6.3.1 JOINTS SHALL BE PROVIDED IN PAVING WHERE THEY PREVIOUSLY EXISTED AND SHALL BLEND SMOOTHLY WITH THOSE EXISTING JOINTS. AS A GENERAL RULE, JOINT SPACING SHALL NOT EXCEED 15 FEET.
- 6.3.2 THE CONTRACTOR SHALL INSTALL THE SAME TYPE OF JOINT AS THOSE IN EXISTING SLAB.
- 6.3.3 JOINTS SHALL BE PROVIDED ALONG PROPERTY LINES, WHERE ENTRY RAMPS CROSS AND AT CHANGES IN GRADE OR SLOPE
- 6.3.4 SAW CUT CONTROL JOINTS SHALL BE CUT 4 TO 12 HOURS AFTER CONCRETE IS POURED, OTHERWISE USE TOOLED OR PREFORMED JOINT INSERTS.
- 6.3.5 THE CONTRACTOR SHALL USE AQUA CRETE® OR EQUIVALENT SEALANT TO SEAL THE CONCRETE JOINTS. JOINT SURFACES SHALL BE THOROUGHLY CLEANED PRIOR TO APPLYING JOINT COMPOUND.

6.4 CONCRETE PLACEMENT

- 6.4.1 THE CONTRACTOR SHALL ASSURE THAT THE SUB-GRADE HAS BEEN PROPERLY PREPARED. NO CONCRETE SHALL BE POURED ON SOFT, SATURATED OR PUMPING SOIL, FROZEN SOIL, ICE, SNOW, OR STANDING WATER.
- 6.4.2 CONCRETE SHALL BE POURED IN ACCORDANCE WITH COMMONLY ACCEPTED INDUSTRY PRACTICES.
- THE CONTRACTOR SHALL PREVENT OVERWORKING AND AGGREGATE SEGREGATION.
 - THE CONCRETE SHALL BE ADEQUATELY TAMPED OR VIBRATED TO PREVENT VOIDS OR HONEYCOMBING.
 - AREA BETWEEN JOINTS SHALL BE CAST AS ONE CONTINUOUS POUR.
 - CONCRETE CURBS SHALL BE MONOLITHICALLY POURED WITH THE ADJACENT CONCRETE PAVING, UNLESS PRIOR APPROVAL FROM THE ENGINEER IS OBTAINED.
 - THE MAXIMUM ALLOWABLE TRAVEL TIME TO THE SITE IN HOT WEATHER WILL BE 1 HOUR AND 15 MINUTES AND COLD WEATHER WILL BE 2 HOURS.

6.5 CONCRETE FINISHING

- 6.5.1 THE CONTRACTOR SHALL FINISH THE CONCRETE IN ACCORDANCE WITH STANDARD INDUSTRY PRACTICES.
- AFTER ALL THE BLEED WATER HAS DISAPPEARED; THE CONTRACTOR SHALL FLOAT THE FLAT SURFACE BY HAND USING A TROWEL.

- AFTER FLOATING, A SOFT CONCRETE FINISH BROOM SHALL BE USED TO FINISH THE SURFACE TO MATCH THE EXISTING CONCRETE FINISH.
- 6.5.2 DRY CEMENT SHALL NOT BE USED TO REMOVE EXCESS WATER FROM THE SURFACE. FINISH WORK MUST BE DELAYED UNTIL THE WATER SHEEN HAS DISAPPEARED.
- 6.5.3 WATER SHALL NOT BE ADDED TO EASE THE FINISHING.
- 6.5.4 CARE SHALL BE USED TO NOT OVERWORK THE SURFACE.
- 6.5.5 CONSTRUCTION/CONTROL JOINTS AND EDGES SHALL BE HAND-TOOLED TO A ¼-INCH RADIUS.

7.0 ELECTRICAL

7.1 GENERAL

- 7.1.1 THE LOCAL AUTHORITY AND BUILDING CODES, INCLUDING THE NATIONAL ELECTRIC CODE (NEC), ARE USED TO DICTATE THE SPECIFIC TYPE OF ELECTRICAL ENCLOSURES AND RACEWAYS THAT ARE REQUIRED FOR USE IN SPECIFIC HAZARDOUS AND NON-HAZARDOUS LOCATIONS.
- 7.1.2 ALL WORK WILL BE PERFORMED IN ACCORDANCE WITH THE NEC. LOCAL CODES WILL GOVERN, BUT ANY DIFFERENCES SHOULD BE POINTED OUT TO THE LOCAL AUTHORITY. ALL WORK SHALL CONFORM TO THE REGULATIONS AND SPECIFICATIONS OF THE LOCAL POWER COMPANY PROVIDING THE SERVICE.
- 7.1.3 ELECTRICAL WORK SHALL ONLY BE CONDUCTED BY AN ELECTRICAL CONTRACTOR WHO IS LICENSED IN THE STATE WHERE THE WORK IS TO BE PERFORMED.

7.2 ELECTRICAL SERVICE

- 7.2.1 THE CONTRACTOR SHALL INSTALL A WEATHER-TIGHT MAIN ELECTRICAL BREAKER/DISCONNECT PANEL LOCATED OUTSIDE THE SVE/AS EQUIPMENT ENCLOSURE AS SHOWN ON THE SITE PLANS. THE MAIN PANEL SHALL HAVE A LOCKABLE DISCONNECT/SHUT-OFF SWITCH. THE CONTRACTOR SHALL INSTALL THE POWER AS REQUIRED BY THE ENGINEER.
- 7.2.2 ALL SERVICE EQUIPMENT SHALL BE ENCLOSED IN A WATER-TIGHT NATIONAL ELECTRICAL MANUFACTURERS ASSOCIATION [NEMA] ENCLOSURE, IF EXPOSED TO THE ELEMENTS.
- 7.2.3 THE POWER METER IS TYPICALLY SUPPLIED AND INSTALLED BY THE LOCAL POWER UTILITY COMPANY.
- 7.2.4 IF THREE-PHASE POWER IS REQUIRED AND ONLY SINGLE-PHASE POWER IS AVAILABLE, A PHASE CONVERTER SHALL BE USED FOR THOSE COMPONENTS REQUIRING SUCH SERVICE. THE EQUIPMENT VENDOR SHALL ENSURE THAT ALL ELECTRICAL MOTORS AND CONTROLS ARE RATED FOR CONVERTER USE, AND CAN WITHSTAND THE ADDITIONAL HEAT BUILDUP CAUSED BY PHASE CONVERTER USE.

7.3 ELECTRICAL SERVICE DISCONNECTS

- 7.3.1 THE CONTRACTOR SHALL INSTALL ALL SERVICE DISCONNECT SWITCHES NECESSARY TO SAFELY SHUTDOWN AND LOCKOUT THE SVE/AS EQUIPMENT.
- 7.3.2 AT A MINIMUM, THE SWITCHES SHALL BE CONTAINED IN A WATER-TIGHT NEMA 4 PANEL.
- 7.3.3 THE CONTRACTOR SHALL INSTALL AN EMERGENCY STOP SWITCH ON THE EXTERIOR OF THE COMPOUND.

7.4 ELECTRICAL ABOVE GROUND CONDUITS AND ENCLOSURES

- 7.4.1 THE CONTRACTOR SHALL INSTALL THREADED RIGID GALVANIZED METAL CONDUIT IN ALL ABOVEGROUND INSTALLATIONS, UNLESS OTHERWISE SPECIFIED BY THE ENGINEER.
- 7.4.2 THREADED JOINTS SHALL BE INSTALLED PER LOCAL CODE WITH AT LEAST FIVE THREADS FULLY ENGAGED.
- 7.4.3 ALL COUPLINGS, UNIONS, JUNCTION BOXES, DEVICE BOXES, AND CONDUIT BODIES SHALL HAVE TIGHT JOINTS.
- 7.4.4 IN UNCLASSIFIED AREAS, LIQUID-TIGHT FLEXIBLE NONMETALLIC TUBING MAY BE USED TO MAKE CONNECTIONS TO MOTORS AND OTHER ELECTRICAL EQUIPMENT. THE MAXIMUM LENGTH SHALL NOT EXCEED 18 INCHES.
- 7.5.5 WIRE NUTS OR TWIST-LOCK TERMINATIONS SHALL NOT BE USED FOR GROUND, MOTOR, OR POWER CONNECTIONS.

7.7 ELECTRICAL GROUNDING

- 7.7.1 THE CONDUIT SYSTEM AND NEUTRAL CONDUCTORS SHALL BE GROUNDED IN ACCORDANCE WITH LOCAL CODE. GROUND TESTING SHALL BE DOCUMENTED AND SUBMITTED TO THE ENGINEER.

CITY: PETALUMA, CA DIV/GROUP: ENV DE: J. HARRIS LAYOUT: G-ID SAVED: 4/17/2014 1:43 PM ACADVER: 18.1S (LMS TECH) PAGES: 18 PLOTTED: 4/17/2014 1:44 PM BY: HOEFER, MATTHEW
 G:\ENV\CAD\lakewood-coa\ACT\B0047339\Design\20140205 from roseville\47339G03.dwg IMAGES: PROJECTNAME: XREFS: 47339X00

8.1 EQUIPMENT ENCLOSURE

- 8.1.1 INSTALL TEMPORARY RAILING (TYPE K) AND EQUIPMENT ENCLOSURE AS SHOWN ON THE DESIGN PLANS
- 8.1.2 CONTRACTOR SHALL INSTALL THE FOLLOWING SIGNAGE ON ALL SIDES OF THE EQUIPMENT BUILDING AND INSIDE THE DOOR OF THE REMEDIATION EQUIPMENT BUILDING:
 - DANGER HIGH VOLTAGE
 - NO SMOKING
 - 24-HOUR CONTACT NUMBERS
 - PROPOSITION 65 SIGN
 - NFPA 704 SIGN
 - EMERGENCY CONTACT INFORMATION
- 8.1.3 CONTRACTOR WILL SUPPLY AND INSTALL A YELLOW WALL MOUNT STORAGE BOX, KNOCK PADLOCK, FIRE BLANKET, AND FIRST AID KIT.

9.0 CONSTRUCTION SCHEDULE

- 9.1 THE CONTRACTOR SHALL CONFIRM A CONSTRUCTION SCHEDULE WITH THE ENGINEER LEAST ONE WEEK (5 BUSINESS DAYS) PRIOR TO ANY WORK AT THE SITE.
- 9.2 THE PROPOSED CONSTRUCTION SCHEDULE SHALL BE PRESENTED IN A TIME LINE FORMAT SHOWING ESTIMATED START DATE, DURATION AND COMPLETION TIMES FOR EACH ACTIVITY. ANY DEVIATION FROM THE ORIGINALLY PROPOSED SCHEDULE MUST BE COMMUNICATED TO THE ENGINEER WITHIN 24-HOURS.
- 9.3 THE CONTRACTOR SHALL MAKE PROPER AND TIMELY NOTIFICATION OF ALL WORK AND INSPECTIONS TO REGULATORY OR GOVERNING AGENCIES AS REQUIRED BY BUILDING AND OTHER CONSTRUCTION PERMITS.

10.0 CONTRACTOR SAFETY REQUIREMENTS

- 10.1 THE CONTRACTOR IS RESPONSIBLE FOR THE SAFETY OF HIS PERSONNEL AND SUBCONTRACTOR PERSONNEL. THE CONTRACTOR SHALL CONFORM WITH THE ENGINEER'S AND CEMC BEHAVIOR BASED SAFETY PROGRAM REQUIREMENTS. AT A MINIMUM THE CONTRACTOR SHALL:
 - DEVELOP AND HAVE AVAILABLE SITE SPECIFIC HEALTH AND SAFETY PLAN (HASP) AND JOURNEY MANAGEMENT PLAN (JMP) WHICH CONFORMS TO THE ENGINEER'S AND CEMC STANDARDS.
 - DEVELOP AND HAVE AVAILABLE ON SITE JOB SAFETY ANALYSIS FORMS OUTLINING THE TASKS TO BE PERFORMED, THE JOB STEPS, THE HAZARDS, AND THE MITIGATING PROCEDURES TO MINIMIZE RISK AND MAXIMIZE SAFETY.
 - COMPLETE THE CEMC PERMIT-TO-WORK PROCESSES AND PROCEDURES.
 - CONDUCT AND DOCUMENT A TAILGATE SAFETY MEETING EACH MORNING AND AFTERNOON WHEN SITE WORK IS TO BE PERFORMED.
 - ENSURE COMPLIANCE WITH ALL FEDERAL AND STATE OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION (OSHA) AND LOCAL SAFETY REGULATIONS.
 - MEET REQUIREMENTS OF CEMC SHORT SERVICE EMPLOYEE (SSE) PROCESS.
 - ENSURE THE APPROPRIATE PERSONNEL HAVE RECEIVED DEFENSIVE DRIVING TRAINING.
- 10.2 WORK HOURS SHALL BE DURING DAYLIGHT HOURS ONLY, UNLESS APPROVED BY THE CHEVRON PROJECT MANAGER AND ENGINEER PRIOR TO THE WORK BEING PERFORMED. WEEKEND WORK WILL NOT BE ALLOWED, UNLESS APPROVED BY CHEVRON PROJECT MANAGER AND ENGINEER PRIOR TO THE WORK BEING PERFORMED. WORK HOURS MAY BE DICTATED BY THE LOCAL PLANNING DEPARTMENT OR THE BUILDING PERMIT.
- 10.3 THE CONTRACTOR SHALL HAVE SUFFICIENT QUANTITIES AND QUALITY OF HARD HATS, GOGGLES, SAFETY GLASSES, REFLECTIVE VESTS, AND GLOVES ON SITE TO OUTFIT ALL CONTRACTOR WORKERS, AND PROVIDE FOR A SECURE WORK AREA.
- 10.4 THE CONTRACTOR SHALL SECURE ALL WORK AREAS WITH BARRICADES, SNOW FENCE, OR TEMPORARY CHAIN LINK FENCE TO PROTECT THE WORK AREA FROM INTRUSION BY UNAUTHORIZED VEHICLES OR PEDESTRIANS. WHEN CONDITIONS WARRANT, THE CONTRACTOR SHALL PROVIDE TRAFFIC FLAGGERS IN ADDITION TO BARRICADES TO CONTROL INGRESS AND EGRESS FROM THE WORK AREA. A TRAFFIC CONTROL PLAN SHALL BE INCLUDED IN THE CONTRACTOR HASP.
- 10.5 A PRE-CONSTRUCTION SAFETY MEETING SHALL BE HELD AT THE SITE WITHIN TWO WEEKS PRIOR TO THE ANTICIPATED START OF CONSTRUCTION. THE PRE-

CONSTRUCTION SAFETY MEETING SHALL BE ATTENDED BY CEMC, THE ENGINEER, THE CONTRACTOR, AND OTHER INTERESTED PARTIES.

- IF THE SITE IS AN ACTIVE BUSINESS, THE SITE OWNER/MANAGER MUST BE PRESENT TO DISCUSS IMPACTS TO THE FACILITY ACTIVITIES.
- THE BASIS FOR THE JMP IS TO BE DISCUSSED DURING THE MEETING. INGRESS AND EGRESS FOR EQUIPMENT AND DELIVERIES, EXCLUSION ZONES, IMPACTS ON VEHICLE AND PEDESTRIAN TRAFFIC, AND EMERGENCY RESPONSE ARE TO BE DISCUSSED AND DOCUMENTED DURING THE MEETING.

10.6 THE CONTRACTOR SHALL HAVE ACCESS TO AT LEAST ONE 20-POUND DRY CHEMICAL TYPE-ABC FIRE EXTINGUISHER AT THE SITE, WITH CURRENT INSPECTION TAGS, DURING ALL CONSTRUCTION ACTIVITIES.

10.7 THE CONTRACTOR SHALL CONTAIN LOOSE DEBRIS AND STORE CONSTRUCTION MATERIALS ON A DAILY BASIS MAKE SURE THAT THE WORK AREA IS CLEAN AND ORDERLY PRIOR TO DEPARTURE FROM THE SITE.

11.0 EQUIPMENT

11.1 EQUIPMENT, TO BE PROVIDED TO THE CONTRACTOR BY THE ENGINEER FOR INSTALLATION, IS DESCRIBED ON SHEET M-1, M-2, AND M-3 (PROCESS AND INSTRUMENTATION DIAGRAM) AND IS INCLUDED ON SHEET G-2 (MAJOR EQUIPMENT AND INSTRUMENT LIST). EQUIPMENT NOT EXPLICITLY DETAILED AS SUPPLIED BY THE ENGINEER ON SHEETS M-1, M-2, M-3, AND G-2 SHALL BE SUPPLIED BY THE CONTRACTOR.

11.2 CONTRACTOR TO SUPPLY AND INSTALL A MINIMUM OF TWO (2) 20-POUND CLASS ABC FIRE EXTINGUISHERS IN ALL WEATHER FIRE EXTINGUISHER CABINETS IN ACCORDANCE WITH CEMC REQUIREMENTS AND LOCAL FIRE CODE.

12 SAFETY/CLEANUP

12.1 THE CONTRACTOR SHALL CONDUCT TASK IMPROVEMENT PROCESS (TIP) IN ACCORDANCE WITH ARCADIS POLICY AND PROCEDURES.

12.2 ALL EMPLOYEES OF THE CONTRACTOR SHALL BE CURRENT WITH THEIR 40-HOUR HAZWOPER TRAINING AND 8-HOUR REFRESHER.

12.3 CONTRACTOR SHALL MARK ALL POTENTIAL OVERHEAD AND/OR TRIP HAZARDS IN YELLOW.

12.4 THE CONTRACTOR SHALL HAVE SUFFICIENT QUANTITIES OF PERSONAL PROTECTIVE EQUIPMENT (PPE) AND SAFETY EQUIPMENT ON SITE TO OUTFIT ALL CONTRACTOR AND SUBCONTRACTOR WORKERS, AND PROVIDE FOR A SECURE WORK AREA.

12.5 THE CONTRACTOR SHALL HAVE ACCESS TO AT LEAST ONE FIRST AID KIT, EYEWASH STATION, AND 20-POUND CLASS ABC FIRE EXTINGUISHER, WITH CURRENT INSPECTION TAGS AT THE SITE, DURING ALL CONSTRUCTION ACTIVITIES.

13 INSPECTIONS

13.1 ALL SITE INSPECTIONS REQUIRE A MINIMUM OF 24 HOURS NOTICE BEFORE START OF WORK. CONTRACTOR SHALL BE RESPONSIBLE FOR SCHEDULING, FACILITATING, AND OBTAINING ALL REQUIRED INSPECTIONS, INCLUDING CITY OF OAKLAND, ALAMEDA COUNTY.

GENERAL NOTES

- 1. THIS IS A GENERAL ELECTRICAL SYMBOLS AND GENERAL NOTES SHEET. SOME SYMBOLS AND/OR NOTES MAY NOT BE USED IN THIS SET OF DRAWINGS.
- 2. LIGHT LINES () DESIGNATE EXISTING CONDITIONS AND EQUIPMENT.
- 3. HEAVY LINES () DESIGNATE PROPOSED WORK OR EQUIPMENT.
- 4. ALL HOMERUNS TO THE LIGHTING PANELS AND MINI POWER CENTERS AND WIRE/CONDUIT RUNS BETWEEN ALL SINGLE PHASE EQUIPMENT (TYPICALLY 1/2 HP MOTORS AND EQUIVALENT LOADS) SHALL BE 2 #12, 1#12 GND.-3/4" C. UNLESS OTHERWISE NOTED.
- 5. ALL HOMERUNS TO THE DISTRIBUTION PANELBOARDS, MOTOR CONTROL CENTERS AND MOTOR STARTER SWITCHBOARDS AND WIRE/CONDUIT RUNS BETWEEN ALL THREE PHASE EQUIPMENT (TYPICALLY 1/2 HP AND LARGER AND EQUIVALENT LOADS) SHALL BE 3 #12, 1 #12 GND.-3/4" C. UNLESS OTHERWISE NOTED.
- 6. ALL HOMERUNS TO THE INSTRUMENTATION PANEL (IP), RMP'S, RTU'S ETC. AND BETWEEN INSTRUMENTATION TYPE EQUIPMENT SHALL BE TWO PAIR #20 AWG SHIELDED CABLE, 1 #12 GND.-3/4" C. UNLESS OTHERWISE NOTED.
- 7. ALL SURFACE MOUNTED AND PENDANT MOUNTED LIGHTING FIXTURES SHALL BE MOUNTED TO AVOID INTERFERENCE WITH OTHER EQUIPMENT IN THE SAME LOCATION.
- 8. ALL TABLES ARE SHOWN FOR REFERENCES ONLY. IT SHALL BE THE CONTRACTORS RESPONSIBILITY TO PROVIDE ALL OF THE ITEMS SHOWN ON THE INDIVIDUAL DRAWINGS.
- 9. ALL HOMERUNS TO LIGHTING PANELS AND THE HOMERUNS TO THE INSTRUMENTATION PANELS CAN BE COMBINED IN THEIR RESPECTIVE HOMERUN CONDUITS TO MINIMIZE THE TOTAL NUMBER OF CONDUITS ENTERING THE PANEL, PROVIDED THE INTEGRITY OF REDUNDANCY IS MAINTAINED AND PRIOR APPROVAL IS OBTAINED FROM THE ENGINEER. CONTRACTOR MUST DERATE THE CONDUCTORS IN ACCORDANCE WITH MOST RECENT NEC REQUIREMENTS.
- 10. NUMERALS ADJACENT TO RECEPTACLES, LIGHTING FIXTURES, AND MISC. EQUIPMENT DENOTE BRANCH CIRCUIT NUMBERS. e.g. FA 3
- 11. ALL INSTALLATIONS SHALL BE IN ACCORDANCE WITH THE PROJECT SPECIFICATIONS AND SHALL CONFORM TO THE LATEST EDITIONS OF THE NATIONAL ELECTRICAL CODE, LOCAL ORDINANCE, AND STATE CODES.
- 12. ALL EXPOSED CONDUIT SHALL BE INSTALLED AT RIGHT ANGLES.

WP - WEATHERPROOF
CR - CORROSION RESISTANT
EP - EXPLOSION PROOF
GFI - GROUND FAULT INTERRUPT
T - TWISTLOCK

Soil Drilling and Sample Collection

Rev. #: 2

Rev Date: March 8, 2011

Approval Signatures

Prepared by: Caron Koff Date: 03/08/2011

Reviewed by: Michael J. Goff Date: 03/08/2011
(Technical Expert)

I. Scope and Application

Overburden drilling is commonly performed using the hollow-stem auger drilling method. Other drilling methods suitable for overburden drilling, which are sometimes necessary due to site-specific geologic conditions, include: drive-and-wash, spun casing, Rotasonic, dual-rotary (Barber Rig), and fluid/mud rotary. Direct-push techniques (e.g., Geoprobe or cone penetrometer) may also be used. The drilling method to be used at a given site will be selected based on site-specific consideration of anticipated drilling depths, site or regional geologic knowledge, types of sampling to be conducted, required sample quality and volume, and cost.

No oils or grease will be used on equipment introduced into the boring (e.g., drill rod, casing, or sampling tools).

II. Personnel Qualifications

The Project Manager (a qualified geologist, environmental scientist, or engineer) will identify the appropriate soil boring locations, depth and soil sample intervals in a written plan.

Personnel responsible for overseeing drilling operations must have at least 16 hours of prior training overseeing drilling activities with an experienced geologist, environmental scientist, or engineer with at least 2 years of prior experience.

III. Equipment List

The following materials will be available during soil boring and sampling activities, as required:

- Site Plan with proposed soil boring/well locations;
- Work Plan or Field Sampling Plan (FSP), and site Health and Safety Plan (HASP);
- personal protective equipment (PPE), as required by the HASP;
- drilling equipment required by the American Society for Testing and Materials (ASTM) D 1586, when performing split-spoon sampling;
- disposable plastic liners, when drilling with direct-push equipment;
- appropriate soil sampling equipment (e.g., stainless steel spatulas, knife);

- equipment cleaning materials;
- appropriate sample containers and labels;
- chain-of-custody forms;
- insulated coolers with ice, when collecting samples requiring preservation by chilling;
- photoionization detector (PID) or flame ionization detector (FID); and
- field notebook and/or personal digital assistant (PDA).

IV. Cautions

Prior to beginning field work, underground utilities in the vicinity of the drilling areas will be identified by one of the following three actions (lines of evidence):

- Contact the State One Call
- Obtain a detailed site utility plan drawn to scale, preferably an “as-built” plan
- Conduct a detailed visual site inspection

In the event that one or more of the above lines of evidence cannot be conducted, or if the accuracy of utility location is questionable, a minimum of one additional line of evidence will be utilized as appropriate or suitable to the conditions. Examples of additional lines of evidence include but are not limited to:

- Private utility locating service
- Research of state, county or municipal utility records and maps including computer drawn maps or geographical information systems (GIS)
- Contact with the utility provider to obtain their utility location records
- Hand augering or digging
- Hydro-knife
- Air-knife
- Radio Frequency Detector (RFD)

- Ground Penetrating Radar (GPR)
- Any other method that may give ample evidence of the presence or location of subgrade utilities.

Overhead power lines also present risks and the following safe clearance must be maintained from them.

Power Line Voltage Phase to Phase (kV)	Minimum Safe Clearance (feet)
50 or below	10
Above 50 to 200	15
Above 200 to 350	20
Above 350 to 500	25
Above 500 to 750	35
Above 750 to 1,000	35

ANSI Standard B30.5-1994, 5-3.4.5

Avoid using drilling fluids or materials that could impact groundwater or soil quality, or could be incompatible with the subsurface conditions.

Water used for drilling and sampling of soil or bedrock, decontamination of drilling/sampling equipment, or grouting boreholes upon completion will be of a quality acceptable for project objectives. Testing of water supply should be considered.

Specifications of materials used for backfilling borehole will be obtained, reviewed and approved to meet project quality objectives.

V. Health and Safety Considerations

Field activities associated with overburden drilling and soil sampling will be performed in accordance with a site-specific HASP, a copy of which will be present on site during such activities.

VI. Procedure

Drilling Procedures

The drilling contractor will be responsible for obtaining accurate and representative samples; informing the supervising geologist of changes in drilling pressure; and

keeping a separate general log of soils encountered, including blow counts (i.e., the number of blows from a soil sampling drive weight [140 pounds] required to drive the split-barrel sampler in 6-inch increments). The term “samples” means soil materials from particular depth intervals, whether or not portions of these materials are submitted for laboratory analysis. Records will also be kept of occurrences of premature refusal due to boulders or construction materials that may have been used as fill. Where a boring cannot be advanced to the desired depth, the boring will be abandoned and an additional boring will be advanced at an adjacent location to obtain the required sample. Where it is desirable to avoid leaving vertical connections between depth intervals, the borehole will be sealed using cement and/or bentonite. Multiple refusals may lead to a decision by the supervising geologist to abandon that sampling location.

Soil Characterization Procedures

Soils encountered while drilling soil borings will be collected using one of the following methods:

- 2-inch split-barrel (split-spoon) sampler, if using the ASTM D 1586 - Standard Test Method for Penetration Test and Split-Barrel Sampling of Soils
- Plastic internal soil sample sleeves if using direct-push drilling.

Soils are typically field screened with an FID or PID at sites where volatile organic compounds are present in the subsurface. Field screening is performed using one of the following methods:

- Upon opening the sampler, the soil is split open and the PID or FID probe is placed in the opening and covered with a gloved hand. Such readings should be obtained at several locations along the length of the sample
- A portion of the collected soil is placed in a jar, which is covered with aluminum foil, sealed, and allowed to warm to room temperature. After warming, the cover is removed, the foil is pieced with the FID or PID probe, and a reading is obtained.

Samples selected for laboratory analysis will be handled, packed, and shipped in accordance with the procedures outlined in the Work Plan, FSP, or Chain-of-Custody, Handling, Packing, and Shipping SOP.

A geologist will be onsite during drilling and sampling operations to describe each soil interval on the soil boring log, including:

- percent recovery;
- structure and degree of sample disturbance;
- soil type;
- color;
- moisture condition;
- density;
- grain-size;
- consistency; and
- other observations, particularly relating to the presence of waste materials

Further details regarding geologic description of soils are presented in the Soil Description SOP.

Particular care will be taken to fully describe any sheens observed, oil saturation, staining, discoloration, evidence of chemical impacts, or unnatural materials.

VII. Waste Management

Water generated during cleaning procedures will be collected and contained onsite in appropriate containers for future analysis and appropriate disposal.

PPE (such as gloves, disposable clothing, and other disposable equipment) resulting from personnel cleaning procedures and soil sampling/handling activities will be placed in plastic bags. These bags will be transferred into appropriately labeled 55-gallon drums or a covered roll-off box for appropriate disposal.

Soil materials will be placed in sealed 55-gallon steel drums or covered roll-off boxes and stored in a secured area. Once full, the material will be analyzed to determine the appropriate disposal method.

VIII. Data Recording and Management

The supervising geologist or scientist will be responsible for documenting drilling events using a bound field notebook and/or PDA to record all relevant information in a clear and concise format. The record of drilling events will include:

- start and finish dates of drilling;
- name and location of project;
- project number, client, and site location;
- sample number and depths;
- blow counts and recovery;
- depth to water;
- type of drilling method;
- drilling equipment specifications, including the diameter of drilling tools;
- documentation of any elevated organic vapor readings;
- names of drillers, inspectors, or other people onsite; and
- weather conditions.

IX. Quality Assurance

Equipment will be cleaned prior to use onsite, between each drilling location, and prior to leaving the site. Drilling equipment and associated tools, including augers, drill rods, sampling equipment, wrenches, and other equipment or tools that may have come in contact with soils and/or waste materials will be cleaned with high-pressure steam-cleaning equipment using a potable water source. The drilling equipment will be cleaned in an area designated by the supervising engineer or geologist that is located outside of the work zone. More elaborate cleaning procedures may be required for reusable soil samplers (split-spoons) when soil samples are obtained for laboratory analysis of chemical constituents.

Utilities and Structures Checklist

Project: _____
 Project Number: _____
 Date: _____
 Work locations applicable to this clearance checklist: _____

Pre-Field Work

One Call or "811" notified 48-72 hours in advance of work? Yes No
 Utility companies notified during the One Call process See attached ticket

List any other utilities requiring notification: None

Client provided utility maps or "as built" drawings showing utilities? Yes No

Field Work

Markings present: Paint Pin flags/stakes Other None

Subsurface Utility Lines of Evidence Used (3 Minimum):

- One Call/"811"
- Client Provided Maps/Drawings
- Client Clearance
- Interviews: Name(s)/Affiliation(s) _____

Did persons interviewed indicate depths of any utilities in the subsurface?
 Yes, depths provided:
 Did not know or refused to answer

Comments:

- Site Inspection
- GPR
- Air-Knife
- Hydro-Knife
- Public Records/Maps
- Radiofrequency
- Metal Detector
- Handauger
- Potholing
- Probing
- Private Locator: Name and Company: _____
- Marine Locator: Name and Company: _____
- Other: _____

Tips for Successful Utility Location:

1. No excessive turning or downward force of handaugers/shovels, etc.
2. No hammering- no pickaxes-no digging bars-no hurrying or shortcutting
3. Select alternate/backup locations for clearance
4. Utilities may run directly under asphalt/concrete or be > 5 ft depth
5. Be on site when utilizing private utility locators

Site Inspection

During inspections look for the following ("YES" requires follow up investigation):

		Utility color codes				
a)	Natural gas line present (evidence of a gas meter)?	Yellow	<input type="checkbox"/>	Yes	<input type="checkbox"/>	No
b)	Evidence of subsurface electric lines :	Red				
	i) Conduits to ground from electric meter?		<input type="checkbox"/>	Yes	<input type="checkbox"/>	No
	ii) Overhead electric lines absent		<input type="checkbox"/>	Yes	<input type="checkbox"/>	No
	iii) Light poles, electric devices with no overhead lines?		<input type="checkbox"/>	Yes	<input type="checkbox"/>	No
c)	Evidence of water lines:	Blue				
	i) Water meter on site?		<input type="checkbox"/>	Yes	<input type="checkbox"/>	No
	ii) Fire hydrants in vicinity of work?		<input type="checkbox"/>	Yes	<input type="checkbox"/>	No
	iii) Irrigation systems?		<input type="checkbox"/>	Yes	<input type="checkbox"/>	No
d)	Evidence of sewers or storm drains:	Green				
	i) Restrooms or kitchen on site?		<input type="checkbox"/>	Yes	<input type="checkbox"/>	No
	ii) Gutter down spouts going into ground		<input type="checkbox"/>	Yes	<input type="checkbox"/>	No
	iii) Grates in ground in work area		<input type="checkbox"/>	Yes	<input type="checkbox"/>	No
e)	Evidence of telecommunication lines:	Orange				
	i) Fiber optic warning signs in areas?		<input type="checkbox"/>	Yes	<input type="checkbox"/>	No
	ii) Lines from cable boxes running into ground?		<input type="checkbox"/>	Yes	<input type="checkbox"/>	No
	iii) Conduits from power poles running into ground?		<input type="checkbox"/>	Yes	<input type="checkbox"/>	No
	iv) Aboveground boxes or housings in work area?		<input type="checkbox"/>	Yes	<input type="checkbox"/>	No
f)	Underground storage tanks:					
	i) Tank pit present?		<input type="checkbox"/>	Yes	<input type="checkbox"/>	No
	ii) Product lines running to dispensers/buildings?		<input type="checkbox"/>	Yes	<input type="checkbox"/>	No
	iii) Vent present away from tank pit?		<input type="checkbox"/>	Yes	<input type="checkbox"/>	No
g)	Proposed excavation markings in work area?	White	<input type="checkbox"/>	Yes	<input type="checkbox"/>	No
h)	Other:					
	i) Evidence of linear asphalt or concrete repair		<input type="checkbox"/>	Yes	<input type="checkbox"/>	No
	ii) Evidence of linear ground subsidence or change in vegetation?		<input type="checkbox"/>	Yes	<input type="checkbox"/>	No
	iii) Manholes or valve covers in work area?		<input type="checkbox"/>	Yes	<input type="checkbox"/>	No
	iv) Warning signs ("Call Before you Dig", etc) on or adjacent to site?		<input type="checkbox"/>	Yes	<input type="checkbox"/>	No
	v) Utility color markings not illustrated in this checklist?		<input type="checkbox"/>	Yes	<input type="checkbox"/>	No
i)	Aboveground lines in or near the work area:					
	i) < 50 kV within 10 ft of work area?		<input type="checkbox"/>	Yes	<input type="checkbox"/>	No

Investigation-Derived Waste Handling and Storage

Rev. #: 2

Rev Date: March 6, 2009

Approval Signatures

Prepared by: Andrew Kamik Date: 3/6/09

Reviewed by: Jim Marsh Date: 3/6/09
(Technical Expert)

I. Scope and Application

The objective of this Standard Operating Procedure (SOP) is to describe the procedures to manage investigation-derived wastes (IDW), both hazardous and non-hazardous, generated during site activities, which may include, but are not limited to - drilling, trenching/excavation, construction, demolition, monitoring well sampling, soil sampling, decontamination and remediation. Please note that this SOP is intended for materials that have been deemed a solid waste as defined by 40 CFR § 261.2 (which may include liquids, solids, and sludges). In some cases, field determinations will be made based on field screening or previous data that materials are not considered a solid waste. IDW may include soil, groundwater, drilling fluids, decontamination liquids, personal protective equipment (PPE), sorbent materials, construction and demolition debris, and disposable sampling materials that may have come in contact with potentially impacted materials. IDW will be collected and staged at the point of generation. Quantities small enough to be containerized in 55-gallon drums will be taken to a designated temporary storage area (discussed in further detail under Drum Storage) onsite pending characterization and disposal. Waste materials will be analyzed for constituents of concern to evaluate proper disposal methods. PPE and disposable sampling equipment will be placed in DOT-approved drums prior to disposal and typically does not require laboratory analysis. This SOP describes the necessary equipment, field procedures, materials, regulatory references, and documentation procedures necessary for proper handling and storage of IDW up to the time it is properly disposed. The procedures for handling IDW are based on the United States Environmental Protection Agency's Guide to Management of Investigation Derived Wastes (USEPA, 1992). IDW is assumed to be contaminated with the site constituents of concern (COCs) until analytical evidence indicates otherwise. IDW will be managed to ensure the protection of human health and the environment and will comply with all applicable or relevant and appropriate requirements (ARAR). The following Laws and Regulations on Hazardous Waste Management are potential ARAR for this site.

State Laws and Regulations

- To Be Determined Based on Location of Site and Location of Treatment, Storage, and/or Disposal Facility (TSDF) to be utilized

Federal Laws and Regulations

- Resource Conservation and Recovery Act (RCRA) 42 USC § 6901-6987
- Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) 42 USC § 9601-9675

- Superfund Amendments and Reauthorization Act (SARA)
- Department of Transportation (DOT) Hazardous Materials Transportation

Pending characterization, IDW will be stored appropriately within each area of contamination (AOC). Under RCRA, "storage" is defined as the holding of hazardous waste for a temporary period, at the end of which the hazardous waste is treated, disposed of, or stored elsewhere" (40 CFR § 260.10). The onsite waste staging area will be in a secure and controlled area. Waste characterization can either be based on generator knowledge, such as using materials safety data sheets (MSDS'), or can be based upon analytical results. The laboratory used for waste characterization analysis must have the appropriate state and federal certifications and be approved by ARCADIS and Client. IDW will be classified as RCRA hazardous or non-regulated under RCRA based on the waste characterization.

If IDW is characterized as RCRA hazardous waste, RCRA and DOT requirements must be followed for packaging, labeling, transporting, storing, and record keeping as described in 40 CFR § 262 and 49 CFR § 171-178. Wastes judged to potentially meet the criteria for hazardous wastes shall be stored in DOT approved packaging. Waste material classified as RCRA non-hazardous may be handled and disposed of as an industrial waste.

Liquid wastes judged to potentially meet the criteria for hazardous wastes shall be stored in DOT approved 55 gallon drums or other approved containers that are compatible with the type of material stored therein. Solid materials deemed to potentially meet hazardous criteria will be drummed where practicable. Large quantities of potentially hazardous solid materials must be containerized (such as in a roll-off box) for up to a maximum of 90 or 180 days as described in the Excavated Solids Section. Waste material classified as non-hazardous may be handled and disposed of as an industrial waste and is not subject to the 90-day or 180-day on-site storage limitation.

This is a standard (i.e., typically applicable) operating procedure which may be varied or changed as required, dependent upon site conditions, equipment limitations, or limitations imposed by the procedure. The ultimate procedure employed will be documented in the project work plans or reports. If changes to the sampling procedures are required due to unanticipated field conditions, the changes will be discussed with the Project Manager and Client as soon as practicable and documented in the report.

II. Personnel Qualifications

ARCADIS field sampling personnel will have current health and safety training including 40-hour HAZWOPER training, site supervisor training, site-specific training, first aid, and CPR, as needed. ARCADIS personnel may sign manifests on a case-to-case basis for clients, provided the appropriate agreement is in place between ARCADIS and the client documenting that ARCADIS is not the generator, but is acting as authorized representative for the generator. ARCADIS personnel who sign hazardous waste manifests will have the current DOT hazardous materials transportation training according to 49 CFR § 172.704. ARCADIS field personnel will also comply with client-specific training such as LPS. In addition, ARCADIS field sampling personnel will be versed in the relevant SOPs and possess the required skills and experience necessary to successfully complete the desired field work.

III. Equipment List

The following materials, as required, shall be available for IDW handling and storage:

Appropriate personal protective equipment as specified in the Site Health and Safety Plan

- 55-gallon steel drums, DOT 1A2 or equivalent
- $\frac{3}{4}$ -inch socket wrench
- Hammer
- Leather gloves
- Drum dolly
- Appropriate drum labels (outdoor waterproof self adhesive)
- Polyethylene storage tank
- Appropriate labeling, packing, chain-of-custody forms, and shipping materials as specified in the *Chain-of-Custody SOP* and *Field Sampling Handling, Packing, and Shipping SOP*.
- Indelible ink and/or permanent marking pens
- Plastic sheeting

- Appropriate sample containers, labels, and forms
- Stainless-steel bucket auger
- Stainless steel spatula or knife
- Stainless steel hand spade
- Stainless steel scoop
- Digital camera
- Field logbook.

IV. Cautions

- Filled drums can be very heavy, always use appropriate moving techniques and equipment.
- Similar media will be stored in the same drums to aid in sample analysis and disposal.
- Drum lids must be secured to prevent rainwater from entering the drums.
- Drums containing solid material may not contain any free liquids.
- Waste containers stored for extended periods of time may be subject to deterioration. Drum over packs may be used as secondary containment.
- All drums must be in good condition to prevent potential leakage and facilitate subsequent disposal. Inspect the drums for dents and rust, and verify the drum has a secure lid prior to use.

V. Health and Safety Considerations

- Appropriate personal protective equipment must be worn by all field personnel within the designated work area.
- Air monitoring may be required during certain field activities as required in the Site Health and Safety Plan.

- If excavating in potentially hazardous areas is possible, contingency plans should be developed to address the potential for encountering gross contamination or non-aqueous phase liquids.
- ARCADIS field personnel will be familiar and compliant with Client-specific health and safety requirements such as Chevron's hand safety policy including the prohibition of fixed and/or folding blade knives.

VI. Procedure

Waste storage and handling procedures to be used depend upon the type of generated waste. For this reason, IDW should be stored in a secure location onsite in separate 55-gallon storage drums, solids can be stockpiled onsite (if non-hazardous), and purge water may be stored in polyethylene tanks. Waste materials such as broken sample bottles or equipment containers and wrappings will be stored in 55-gallon drums unless they were not in contact with sample media.

Management of IDW

Minimization of IDW should be considered by the Project Manager during all phases of the project. Site managers may want to consider techniques such as replacing solvent-based cleaners with aqueous-based cleaners for decontamination of equipment, reuse of equipment (where it can be decontaminated), limitation of traffic between exclusion and support zones, and drilling methods and sampling techniques that generate little waste. Alternative drilling and subsurface sampling methods may include the use of small diameter boreholes, as well as borehole testing methods such as a core penetrometer or direct push technique instead of coring (EPA, 1993).

Drum Storage

Drums containing hazardous waste shall be stored in accordance with the requirements of 40 CFR 265 Subpart I (for containers) and 265 Subpart DD (for containment buildings). All 55-gallon drums will be stored at a secure, centralized on-site location that is readily accessible for vehicular pick-up. Drums confirmed as, or believed to contain hazardous waste will be stored over an impervious surface provided with secondary containment. The storage location will, for drums containing liquid, have a containment system that can contain at least the larger of 10% of the aggregate volume of staged materials or 100% of the volume of the largest container. Drums will be closed during storage and be in good condition in accordance with the Guide to Management of Investigation-Derived Wastes (USEPA, 1992).

Hazardous Waste Determination

Waste material must be characterized to determine if it meets any of the federal definitions of hazardous waste as required by 40 CFR § 262.11. If the waste does not meet any of the federal definitions, it must then be established if any state-specific hazardous waste criteria exist/apply.

Generator Status

Once hazardous waste determination has been made, the generator status will be determined. Large quantity generators (LQG) are generators who generate more than 1,000 kilograms of hazardous waste in a calendar month. Small quantity generators (SQG) of hazardous waste are generators who generate greater than 100 kilograms but less than 1,000 kilograms of hazardous waste in a calendar month. Conditionally exempt small quantity generators (CESQG) are generators who generate less than 100 kilograms of hazardous waste per month. Please note that a generator status may change from month to month and that a notice of this change is usually required by the generator's state agency.

Accumulation Time for Hazardous Waste

A LQG may accumulate hazardous waste on site for 90 days or less without a permit and without having interim status provided that such accumulation is in compliance with specifications in 40 CFR § 262.34. A SQG may accumulate hazardous waste on site for 180 days or less without a permit or without having interim status subject to the requirements of 40 CFR § 262.34(d). CESQG requirements are found in 40 CFR § 261.5. **NOTE:** The CESQG and SQG provisions of 40 CFR § 261.5, 262.20(e), 262.42(b) and 262.44 may not be recognized by some states (e.g. Rhode Island).

State-specific regulations must be reviewed and understood prior to the generation of hazardous waste.

Satellite Accumulation of Hazardous Waste

Satellite accumulation (SAA) shall mean the accumulation of as much as fifty-five (55) gallons of hazardous waste, or the accumulation of as much as one quart of acutely hazardous waste, in containers at or near any point of generation where the waste initially accumulates, which is under the control of the operator of the process generating the waste, without a permit or interim status and without complying with the requirements of 40 CFR § 262.34(a) and without any storage time limit, provided that the generator complies with 40 CFR § 262.34(c)(1)(i).

Once more than 55 gallons of hazardous waste accumulates in SAA, the generator has three days to move this waste into storage.

Storage recommendations for hazardous waste include:

- Ignitable Hazardous wastes must be >50 feet from the property line per 40 CFR § 265.176 (LQG generators only).
- Hazardous waste must be stored on a concrete slab (asphalt is acceptable if there are no free liquids in the waste) per 40 CFR § 265.176.
- Drainage must be directed away from the accumulation area.
- Area must be properly vented.
- Area must be secure.

Drum/Container Labeling

Drums will be labeled on both the side and lid of the drum using a permanent marking pen. Old drum labels must be removed to the extent possible, descriptions crossed out should any information remain, and new labels affixed on top of the old labels. Other containers used to store various types of waste (polyethylene tanks, roll-off boxes, end-dump trailers, etc.) will be labeled with an appropriate "Waste Container" or "Testing in Progress" label pending characterization. Drums and containers will be labeled as follows:

- Appropriate waste characterization label (Testing In Progress, Hazardous, or Non-Hazardous)
- Waste generator's name (e.g., client name)
- Project name
- Name and telephone number of ARCADIS project manager
- Composition of contents (e.g., used oil, acetone 40%, toluene 60%)
- Media (e.g., solid, liquid)
- Accumulation start date

- Drum number of total drums as reconciled with the Drum Inventory maintained in the field log book.

IDW containers will remain closed except when adding or removing waste. Immediately upon beginning to place waste into the drum/container, a "Waste Container" or "Testing in Progress" label will be filled out to include the information specified above, and affixed to the container. Once the contents of the container are identified as either non-hazardous or hazardous, the following additional labels will be applied. Containers with waste determined to be non-hazardous will be labeled with a green and white "Non-Hazardous Waste" label over the "Waste Container" label. Containers with waste determined to be hazardous will be stored in an onsite storage area and will be labeled with the "Hazardous Waste" label and affixed over the "Waste Container" label. The ACCUMULATION DATE for the hazardous waste is the date the waste is first placed in the container and is the same date as the date on the "Waste Container" label. DOT hazardous class labels must be applied to all hazardous waste containers for shipment offsite to an approved disposal or recycling facility. In addition a DOT proper shipping name shall be included on the hazardous waste label. The transporter should be equipped with the appropriate DOT placards. However, placarding or offering placards to the initial transporter is the responsibility of the generator per 40 CFR § 262.33.

Inspections and Documentation

All IDW will be documented as generated on a Drum Inventory Log maintained in the field log book. The Drum Inventory will record the generation date, type, quantity, matrix and origin (e.g. Boring-1, Test Pit 3, etc) of materials in every drum, as well as a unique identification number for each drum. The drum inventory will be used during drum pickup to assist with labeling of drums. The drum storage area and any other areas of temporarily staged waste, such as soil/debris piles, will be inspected weekly. The weekly inspections will be recorded in the field notebook or on a Weekly Inspection Log. Digital photographs will be taken upon the initial generation and drumming/staging of waste, and final labeling after characterization to document compliance with labeling and storage protocols, and condition of the container. Evidence of damage, tampering or other discrepancy should be documented photographically.

Emergency Response and Notifications

Specific procedures for responding to site emergencies will be detailed in the HASP. If the generator is designated as a LQG, a Contingency Plan will need to be prepared to include emergency response and notification procedures per 40 CFR § 265 Subpart D. In the event of a fire, explosion, or other release which could threaten human health

outside of the site or when Client or ARCADIS has knowledge of a spill that has reached surface water, Client or ARCADIS must immediately notify the National Response Center (800-424-8802) in accordance with 40 CFR § 262.34. Other notifications to state agencies may also be necessary.

Drilling Soil Cuttings and Muds

Soil cuttings are solid to semi-solid soils generated during trenching activities, subsurface soil sampling, or installation of monitoring wells. Depending on the drilling method, drilling fluids known as "muds" may be used to remove soil cuttings. Drilling fluids flushed from the borehole must be directed into a settling section of a mud pit. This allows reuse of the decanted fluids after removal of the settled sediments. Soil cuttings will be labeled and stored in 55-gallon drums with bolt-sealed lids.

Excavated Solids

Excavated solids may include, but are not limited to soil, fill and construction and demolition debris. Excavated solids may be temporarily stockpiled onsite as long as the material is a RCRA non-hazardous waste and the solids will be treated onsite pursuant to a certified, authorized, or permitted treatment method, or properly disposed off-site. Stockpiled materials characterized as hazardous must be immediately containerized and removed from the site within 90 days of generation (except for soils using satellite accumulation). Excavated solids should be stockpiled and maintained in a secure area onsite. At a minimum, the floor of the stockpile area will be covered with a 20-mil high density polyethylene liner that is supported by a foundation or at least a 60-mil high density polyethylene liner that is not supported by a foundation. The excavated material will not contain free liquids. The owner/operator will provide controls for windblown dispersion, run-on control, and precipitation runoff. The run-on control system will prevent flow onto the active portion of the pile during peak discharge from at least a 25-year storm and the run-off management system will collect and control at least the water volume resulting from a 24-hour, 25-year storm (EPA, 1992). Additionally, the stockpile area will be inspected on a weekly basis and after storm events. Individual states may require that the stockpile be inspected/certified by a licensed professional engineer. Stockpiled material will be covered with a 6-mil polyvinyl chloride (PVC) liner. The stockpile cover will be secured in place with appropriate material (concrete blocks, weights, etc.) to prevent the movement of the cover. Excavated solids may also be placed in roll off containers and covered with a 6-mil PVC liner pending results for waste characterization.

Decontamination Solutions

Decontamination solutions are generated during the decontamination of personal protective equipment and sampling equipment. Decontamination solutions may range from detergents, organic solvents and acids used to decontaminate small field sampling equipment to steam cleaning rinsate used to wash heavy field equipment. These solutions are to be labeled and stored in 55-gallon drums with bolt-sealed lids.

Disposable Equipment

Disposable equipment includes personal protective equipment (tyvek coveralls, gloves, booties and APR cartridges) and disposable sampling equipment such as trowels or disposable bailers. If the media sampled exhibits hazardous characteristics per results of waste characterization sampling, disposable equipment will also be disposed of as a hazardous waste. These materials will be stored onsite in labeled 55-gallon drums pending analytical results for waste characterization.

Purge Water

Purge water includes groundwater generated during well development, groundwater sampling, or aquifer testing. The volume of groundwater generated will dictate the appropriate storage procedure. Monitoring well development and groundwater sampling may generate three well volumes of groundwater or more. This volume will be stored in labeled 55-gallon drums. Aquifer tests may generate significantly greater volumes of groundwater depending on the well yield and the duration of the test. Therefore, large-volume portable polyethylene tanks will be considered for temporary storage pending groundwater-waste characterization.

Purged Water Storage Tank Decontamination and Removal

The following procedures will be used for inspection, cleaning, and offsite removal of storage tanks used for temporary storage of purge water. These procedures are intended to be used for rented portable tanks such as Baker Tanks or Rain for Rent containers. Storage tanks will be made of inert polyethylene materials.

The major steps for preparing a rented tank for return to a vendor include characterizing the purge water, disposing of the purge water, decontaminating the tank, final tank inspection, and mobilization. Decontamination and inspection procedures are describe in further detail below.

- Tank Cleaning: Most vendors require that tanks be free of any sediment and water before returning, a professional cleaning service may be required. Each

specific vendor should be consulted concerning specific requirements for returning tanks.

- Tank Inspection: After emptying the tank, purged water storage tanks should be inspected for debris, chemical staining, and physical damage. The vendors require that tanks be returned in the original condition (i.e., free of sediment, staining and no physical damage).

VII. Waste Characterization Sampling and Shipping

Soil/Solids Characterization

Waste characterization will be conducted in accordance with waste hauler, waste handling facility, and state/federal requirements. In general, RCRA hazardous wastes are those solid wastes determined by a Toxicity Characteristic Leaching Procedure (TCLP) test or to contain levels of certain toxic metals, pesticides, or other organic chemicals above specific federally regulated thresholds. If the one or more of 40 toxic compounds listed in Table I of 40 CFR § 261.24 are detected in the sample at levels above the maximum unregulated concentrations, the waste must be characterized as a toxic hazardous waste. Wastes can also be considered "listed" hazardous waste depending on site-specific processes.

Composite soil samples will be collected at a frequency of one sample per 10 cubic yard basis for stockpiled soil or one per 55-gallon drum for containerized. A four point composite sample will be collected per 10 cubic yards of stockpiled material and for each drum. Sample and composite frequencies may be adjusted in accordance with the waste handling facility's requirements. Waste characterization samples may be analyzed for the TCLP volatile organic compounds (VOCs), TCLP semi-volatile organic compounds (SVOCs), TCLP RCRA metals, and polychlorinated biphenyls, as well as corrosivity (pH), reactivity and flammability (flashpoint). Additional samples may be collected and analyzed by the laboratory on a contingency basis.

Wastewater Characterization

Waste characterization will be conducted in accordance with the requirements of the waste hauler, waste handling facility, and state/federal governments. In general, purge water should be analyzed by methods appropriate for the known contaminants, if any, that have been historically detected in the monitoring wells. Samples will be collected and analyzed in accordance with the requirements of the waste disposal facility.

Wastewater characterization samples may be analyzed for TCLP volatile organic compounds (VOCs), TCLP semi-volatile organic compounds (SVOCs), TCLP RCRA

metals, and polychlorinated biphenyls, as well as corrosivity (pH), reactivity and flammability (flashpoint). Additional samples may be collected and analyzed by the laboratory on a contingency basis.

Sample Handling and Shipping

All samples will be appropriately labeled, packed, and shipped, and the chain-of-custody will be filled out in accordance with the Chain-of-Custody SOP and Field Sampling Handling, Packing, and Shipping SOP and Hazardous Materials Packaging and Shipping SOP.

It should be noted that additional training is required for packaging and shipping of hazardous and/or dangerous materials. Please reference the following ARCADIS intranet team page for more information: <http://team/sites/hazmat/default.aspx>.

Preparing Waste Shipment Documentation (Hazardous and Non-Hazardous)

Waste profiles will be prepared by the ARCADIS PM and forwarded, along with laboratory analytical data to the Client PM for approval/signature. The Client PM will then return the profile to ARCADIS who will then forward to the waste removal contractor for preparation of a manifest. The manifest will be reviewed by ARCADIS prior to forwarding to the Client PM for approval. Upon approval of the manifest, the Client PM will return the original signed manifest directly to the waste contractor or to the ARCADIS PM for forwarding to the waste contractor.

Final drum labeling and pickup will be supervised by an ARCADIS representative who is experienced with waste labeling procedures. The ARCADIS representative will have a copy of the drum inventory maintained in the field book and will reconcile the drum inventory with the profile numbers on the labels and on the manifest. Different profile numbers will be generated for different matrices or materials in the drums. For example, the profile number for drill cuttings will be different than the profile number for purge water. **When there are multiple profiles it is critical that the proper label, with the profile number appropriate to a specific material be affixed to the proper drums.** A copy of the ARCADIS drum inventory will be provided to the waste transporter during drum pickup and to the facility receiving the waste.

VIII. Data Recording and Management

Waste characterization sample handling, packing, and shipping procedures will be documented in accordance with the *Quality Assurance Project Plan*, if one exists. Copies of the chains-of-custody forms will be maintained in the project file.

Following waste characterization, IDW containers will be re-labeled with the appropriate waste hazardous or non-hazardous waste labels and the client will initiate disposal at the appropriate waste disposal facility.

IX. Quality Assurance

The chain-of-custody and sample labels for waste characterization samples will be filled out in accordance with the *Quality Assurance Project Plan*.

Field Equipment Decontamination

Rev. #: 3

Rev Date: April 26, 2010

Approval Signatures

Prepared by: 
Keith Shepherd

Date: 4/26/2010

Reviewed by: 
Richard Murphy (Technical Expert)

Date: 4/26/2010

I. Scope and Application

Equipment decontamination is performed to ensure that sampling equipment that contacts a sample, or monitoring equipment that is brought into contact with environmental media to be sampled, is free from analytes of interest and/or constituents that would interfere with laboratory analysis for analytes of interest. Equipment must be cleaned prior to use for sampling or contact with environmental media to be sampled, and prior to shipment or storage. The effectiveness of the decontamination procedure should be verified by collecting and analyzing equipment blank samples.

The equipment cleaning procedures described herein includes pre-field, in the field, and post-field cleaning of sampling tools which will be conducted at an established equipment decontamination area (EDA) on site (as appropriate). Equipment that may require decontamination at a given site includes: soil sampling tools; groundwater, sediment, and surface-water sampling devices; water testing instruments; down-hole instruments; and other activity-specific sampling equipment. Non-disposable equipment will be cleaned before collecting each sample, between sampling events, and prior to leaving the site. Cleaning procedures for sampling equipment will be monitored by collecting equipment blank samples as specified in the applicable work plan or field sampling plan. Dedicated and/or disposable (not to be re-used) sampling equipment will not require decontamination.

II. Personnel Qualifications

ARCADIS field sampling personnel will have current health and safety training, including 40-hour HAZWOPER training, site supervisor training, and site-specific training, as needed. In addition, ARCADIS field sampling personnel will be versed in the relevant SOPs and possess the skills and experience necessary to successfully complete the desired fieldwork. The project HASP and other documents will identify any other training requirements such as site specific safety training or access control requirements.

III. Equipment List

- health and safety equipment, as required in the site Health and Safety Plan (HASP)
- distilled water

- Non-phosphate detergent such as Alconox or, if sampling for phosphorus phosphorus-containing compounds, Luminox (or equivalent).
- tap water
- rinsate collection plastic containers
- DOT-approved waste shipping container(s), as specified in the work plan or field sampling plan (if decontamination waste is to be shipped for disposal)
- brushes
- large heavy-duty garbage bags
- spray bottles
- (Optional) – Isopropyl alcohol (free of ketones) or methanol
- Ziploc-type bags
- plastic sheeting

IV. Cautions

Rinse equipment thoroughly and allow the equipment to dry before re-use or storage to prevent introducing solvent into sample medium. If manual drying of equipment is required, use clean lint-free material to wipe the equipment dry.

Store decontaminated equipment in a clean, dry environment. Do not store near combustion engine exhausts.

If equipment is damaged to the extent that decontamination is uncertain due to cracks or dents, the equipment should not be used and should be discarded or submitted for repair prior to use for sample collection.

A proper shipping determination will be performed by a DOT-trained individual for cleaning materials shipped by ARCADIS.

V. Health and Safety Considerations

Review the material safety data sheets (MSDS) for the cleaning materials used in decontamination. If solvent is used during decontamination, work in a well-ventilated area and stand upwind while applying solvent to equipment. Apply solvent in a manner that minimizes potential for exposure to workers. Follow health and safety procedures outlined in the HASP.

VI. Procedure

A designated area will be established to clean sampling equipment in the field prior to sample collection. Equipment cleaning areas will be set up within or adjacent to the specific work area, but not at a location exposed to combustion engine exhaust. Detergent solutions will be prepared in clean containers for use in equipment decontamination.

Cleaning Sampling Equipment

1. Wash the equipment/pump with potable water.
2. Wash with detergent solution (Alconox, Liquinox or equivalent) to remove all visible particulate matter and any residual oils or grease.
3. If equipment is very dirty, precleaning with a brush and tap water may be necessary.
4. (Optional) – Flush with isopropyl alcohol (free of ketones) or with methanol. This step is optional but should be considered when sampling in highly impacted media such as non-aqueous phase liquids or if equipment blanks from previous sampling events showed the potential for cross contamination of organics.
5. Rinse with distilled/deionized water.

Decontaminating Submersible Pumps

Submersible pumps may be used during well development, groundwater sampling, or other investigative activities. The pumps will be cleaned and flushed before and between uses. This cleaning process will consist of an external detergent solution wash and tap water rinse, a flush of detergent solution through the pump, followed

by a flush of potable water through the pump. Flushing will be accomplished by using an appropriate container filled with detergent solution and another contained filled with potable water. The pump will run long enough to effectively flush the pump housing and hose (unless new, disposable hose is used). Caution should be exercised to avoid contact with the pump casing and water in the container while the pump is running (do not use metal drums or garbage cans) to avoid electric shock. Disconnect the pump from the power source before handling. The pump and hose should be placed on or in clean polyethylene sheeting to avoid contact with the ground surface.

VII. Waste Management

Equipment decontamination rinsate will be managed in conjunction with all other waste produced during the field sampling effort. Waste management procedures are outlined in the work plan or Waste Management Plan (WMP).

VIII. Data Recording and Management

Equipment cleaning and decontamination will be noted in the field notebook. Information will include the type of equipment cleaned, the decontamination location and any deviations from this SOP. Specific factors that should be noted include solvent used (if any), and source of water.

Any unusual field conditions should be noted if there is potential to impact the efficiency of the decontamination or subsequent sample collection.

An inventory of the solvents brought on site and used and removed from the site will be maintained in the files. Records will be maintained for any solvents used in decontamination, including lot number and expiration date.

Containers with decontamination fluids will be labeled.

IX. Quality Assurance

Equipment blanks should be collected to verify that the decontamination procedures are effective in minimizing potential for cross contamination. The equipment blank is prepared by pouring deionized water over the clean and dry tools and collecting the deionized water into appropriate sample containers. Equipment blanks should be analyzed for the same set of parameters that are performed on the field samples collected with the equipment that was cleaned. Equipment blanks are collected per equipment set, which represents all of the tools needed to collect a specific sample.

Standard Groundwater Sampling for Monitoring Wells

Rev. #: 1

Rev Date: July 16, 2008

Approval Signatures

Prepared by: *Sonja A Cadde* Date: 7/16/08

Reviewed by: *[Signature]* Date: 7/16/08
(Technical Expert)

I. Scope and Application

This Standard Operating Procedure (SOP) describes the procedures to be used to collect groundwater samples using traditional purging and sampling techniques. For low-flow purging techniques, please refer to the Low Flow Purging SOP. Monitoring wells must be developed after installation at least 1 week prior to groundwater sample collection. Monitoring wells will not be sampled until the well has been developed. During precipitation events, groundwater sampling will be discontinued until precipitation ceases or a cover has been erected over the sampling area and monitoring well.

Both filtered and unfiltered groundwater samples may be collected using this SOP. Filtered samples may be obtained using a 1.0-, 0.45-, or 0.1-micron disposable filter.

II. Personnel Qualifications

ARCADIS personnel directing, supervising, or leading groundwater sample collection activities should have a minimum of 2 years of previous groundwater sampling experience. Field employees with less than 6 months of experience should be accompanied by a supervisor (as described above) to ensure that proper sample collection techniques are employed.

III. Equipment List

The following materials shall be available, as required, during groundwater sampling:

- site plan of monitoring well locations and site Field Sampling Plan (FSP);
- appropriate health and safety equipment, as specified in the site Health and Safety Plan (HASP);
- photoionization detector (PID) or flame ionization detector (FID), as needed, in accordance with the HASP;
- monitoring well construction logs or tables and historical water level information, if available;
- dedicated plastic sheeting or other clean surface to prevent sample contact with the ground;
- if bailers are to be used in sampling:

- appropriate dedicated bottom-loading, bottom-emptying bailers (i.e., polyvinyl chloride [PVC], Teflon, or stainless steel);
 - polypropylene rope;
- if submersible pumps are to be used in sampling:
 - dedicated tubing and other equipment necessary for purging;
 - generator or battery for operation of pumps, if required;
 - a pump selected in accordance with the FSP or Work Plan (parameter-specific [e.g., submersible, bladder, peristaltic]);
- graduated buckets to measure purge water;
- water-level or oil/water interface probe, in accordance with the FSP or Work Plan;
- conductivity/temperature/pH meter;
- down-hole dissolved oxygen meter, oxidation reduction potential meter, and/or turbidity meter, if specified in the FSP;
- water sample containers appropriate for the analytical method(s) with preservative, as needed (parameter-specific);
- filter, as needed, in accordance with the analytical method and parameter;
- appropriate blanks (trip blank supplied by the laboratory), as specified in the FSP;
- Ziploc-type freezer bags for use as ice containers;
- appropriate transport containers (coolers) with ice and appropriate labeling, packing, and shipping materials;
- appropriate groundwater sampling log (example attached);
- chain-of-custody forms;
- site map with well locations and groundwater contour maps;

- keys to wells and contingent bolt cutters for rusted locks and replacement keyed-alike locks; and
- drums or other containers for purge water, as specified by the site investigation derived waste (IDW) management plan.

IV. Cautions

If heavy precipitation occurs and no cover over the sampling area and monitoring well can be erected, sampling must be discontinued until adequate cover is provided. Rain water could contaminate groundwater samples.

Remember that field logs and some forms are considered to be legal documents. All field logs and forms should therefore be filled out in indelible ink.

It may be necessary to field filter some parameters (e.g., metals) prior to collection, depending on preservation, analytical method, and project quality objectives.

Check monitoring well logs for use of bentonite pellets. Make note of potential use of bentonite pellets on the groundwater sampling log. Coated bentonite pellets have been found to contaminate monitoring wells with elevated levels of acetone.

Store and/or stage empty and full sample containers and coolers out of direct sunlight.

To mitigate potential cross-contamination, groundwater samples are to be collected in a pre-determined order from least impacted to more impacted based on previous analytical data. If no analytical data are available, samples are to be collected in the following order:

1. First sample the upgradient well(s).
2. Next, sample the well located furthest downgradient of the interpreted or known source.
3. The remaining wells should be progressively sampled in order from downgradient to upgradient, such that the wells closest to the interpreted or known source are sampled last.

Be careful not to over-tighten lids with Teflon liners or septa (e.g., 40 mL vials). Over-tightening can impair the integrity of the seal.

V. Health and Safety Considerations

If thunder or lightning is present, discontinue sampling until 30 minutes have passed after the last occurrence of thunder or lightning.

VI. Procedure

The procedures to sample monitoring wells will be as follows:

1. Don safety equipment, as required in the HASP. Depending on site-specific security and safety considerations, this often must be done prior to entering the work area.
2. Review equipment list (Section III above) to confirm that the appropriate equipment has been acquired.
3. Record site and monitoring well identification on the groundwater sampling log, along with date, arrival time, and weather conditions. Also identify the personnel present, equipment utilized, and other relevant data requested on the log.
4. Label all sample containers with indelible ink.
5. Place plastic sheeting adjacent to the well for use as a clean work area, if conditions allow. Otherwise, prevent sampling equipment from contacting the ground or other surface that could compromise sample integrity.
6. Remove lock from well and if rusted or broken, replace with a new brass keyed-alike lock.
7. Unlock and open the well cover while standing upwind of the well. Remove well cap and place on the plastic sheeting.
8. Set the sampling device, meters, and other sampling equipment on the plastic sheeting. If a dedicated sampling device stored in the well is to be used, this may also be set temporarily on the plastic sheeting, for convenience. However, if a dedicated sampling device is stored below the water table, removing it may compromise water-level data, so water level measurements should be taken prior to removing the device.
9. Obtain a water-level depth and bottom-of-well depth using an electric well probe and record on the groundwater sampling log using indelible ink. Clean the probe(s) after each use in accord with the FSP or the equipment

decontamination SOP.

Note: Water levels may be measured at all wells prior to initiating any sampling activities, depending on FSP requirements.

10. Calculate the number of gallons of water in the well using the length of water column (in feet). Record the well volume on the groundwater sampling log using indelible ink.
11. Remove the required purge volume of water from the well (measure purge water volume in measuring buckets). The required purge volume will be three to five well volumes (the water column in the well screen and casing) unless the well runs dry, in which case, the water that comes into the well will be sampled (USEPA, 1996). In any case, the pumping rate will be decreased during sampling to limit the potential for volatilization of organics potentially present in the groundwater.
12. Field parameter measurements will be periodically collected in accord with FSP specifications. The typical time intervals of field parameter measurement are (1) after each well volume removed, and (2) before sampling. If the field parameters are being measured above-ground (rather than with a downhole probe), then the final pre-sampling parameter measurement should be collected at the reduced flow rate to be used during sampling. The physical appearance of the purged water should be noted on the groundwater sampling log. In addition, water level measurements should be collected and recorded to verify that the well purging is in accord with the guidelines set forth in the previous step.
13. Unless otherwise specified by the applicable regulatory agencies, all purge water will be contained. Contained purge water will be managed in accordance with the FSP or Work Plan. If historical concentrations in the well are less than federal or state regulated concentrations appropriate for current land use, *and permission has been granted by the oversight regulatory agency* to dispose of clean purge water on the ground next to the well(s), then purge water will be allowed to infiltrate into the ground surface downgradient from the monitoring well after the well is sampled.
14. After the appropriate purge volume of groundwater in the well has been removed, or if the well has been bailed dry and allowed to recover, obtain the groundwater sample needed for analysis with the dedicated bailer or from the dedicated sampling tubing, pour the groundwater directly from the sampling device into the appropriate container in the order of volatilization sensitivity of

the parameters sampled, and tightly screw on the cap (snug, but not too tight). The suggested order for sample parameter collection, based on volatilization sensitivity, is presented below:

- a. volatile organic compounds (VOCs);
 - b. semi-volatile organic compounds (SVOCs);
 - c. polychlorinated biphenyls (PCBs)/pesticides;
 - d. metals; and
 - e. wet chemistry.
15. When sampling for volatiles, water samples will be collected directly from the bailer or dedicated tubing into 40 mL vials with Teflon-lined septa.
 16. For other analytical samples, sample containers for each analyte type should be filled in the order specified by the FSP. If a bailer is used, then the sample for dissolved metals and/or filtered PCBs should either be placed directly from the bailer into a pressure filter apparatus or pumped directly from the bailer with a peristaltic pump, through an in-line filter, into the pre-preserved sample bottle. If dedicated sample tubing is used, then the filter should be installed in-line just prior to filtered sample collection.
 17. If sampling for total and filtered metals and/or PCBs, a filtered and unfiltered sample will be collected. Sample filtration for the filtered sample will be performed in the field utilizing a pump prior to preservation. Attach (clamp) a new 1.0-, 0.45-, or 0.1-micron filter to the discharge tubing of the pump (note the filter flow direction). Turn the pump on and allow 100 mL (or manufacturer recommended amount) of fluid through the filter before sample collection. Dispense the filtered liquid directly into the laboratory sample bottles. If bailers are used for purging and sampling, a proper volume of purge water will be placed in a disposable or decontaminated polyethylene container and pumped through the filter and into the sample container using a peristaltic pump.
 18. Place the custody seal around the cap and the sampler container, if required. Note the time on the sample label. Secure with packing material and maintain at approximately 4°C on wet ice contained in double Ziploc-type freezer bags during storage in an insulated, durable transport container.
 19. Replace the well cap and lock well, or install a new lock if needed.

20. Record the time sampling procedures were completed on the appropriate field logs (using indelible ink).
21. Complete the procedures for chain-of-custody, handling, packing, and shipping. Chain-of-custody forms should be filled out and checked against the labels on the sample containers progressively after each sample is collected.
22. Place all disposable sampling materials (such as plastic sheeting, disposable tubing or bailers, and health and safety equipment) in appropriate containers.
23. If new locks were installed, forward copies of the keys to the client Project Manager (PM) and ARCADIS PM at the end of the sampling activities.

VII. Waste Management

Purge water will be managed as specified in the FSP or Work Plan, and according to state and/or federal requirements. Personal protective equipment (PPE) and decontaminated fluids will be contained separately and staged at the sampling location. Containers must be labeled at the time of collection. Labels will include date, location(s), site name, city, state, and description of matrix contained (e.g., soil, groundwater, PPE). General guidelines for IDW management are set forth in a separate IDW management SOP.

VIII. Data Recording and Management

Initial field logs and chain-of-custody records will be transmitted to the ARCADIS PM at the end of each day unless otherwise directed by the PM. The groundwater team leader retains copies of the groundwater sampling logs. All field data should be recorded in indelible ink.

IX. Quality Assurance

Field-derived quality assurance blanks will be collected as specified in the FSP, depending on the project quality objectives. Typically, field rinse blanks will be collected when non-dedicated equipment is used during groundwater sampling. Field rinse blanks will be used to confirm that decontamination procedures are sufficient and samples are representative of site conditions. Trip blanks for VOCs, which aid in the detection of contaminants from other media, sources, or the container itself, will be kept with the coolers and the sample containers throughout the sampling activities.

1 INTRODUCTION

On behalf of Chevron Environmental Management Company, for itself, and as Attorney-in-Fact for Union Oil Company of California (hereinafter “EMC”), Arcadis U.S. Inc. (Arcadis) has prepared this Construction and Start-up Report for the Air Sparge/Soil-Vapor Extraction (AS/SVE) System at Chevron Facility #351646 / Union Oil Company of California Station No. 0752 located at 706/726/800 Harrison Street, Oakland, California (the Site). A Site location map is provided as Figure 1.

The AS/SVE System was constructed in accordance with *Remedial Action Plan* (RAP) dated April 18, 2014 and two subsequent *RAP Addendum's* dated July 1, 2014 and December 2, 2016, respectively. Further modifications to the remediation system were discussed and approved during phone conversations between the Responsible Parties, Alameda County Department of Environmental Health (ACDEH) and the California Water Resources Control Board (Water Board). The AS/SVE system was installed by Cornerstone Environmental Contractors Inc. (Cornerstone) under permits approved by the City of Oakland.

The AS/SVE System start-up was performed in accordance with the RAP, Arcadis' *Remediation Performance Evaluation and Monitoring Plan* dated February 10, 2015, ACDEH's subsequent conditions of approval provided in ACDEH's Directive Letter dated March 11, 2015, as well as the Bay Area Quality Management District (BAAQMD) Permit to Operate (PTO) for Plant No. 21947 (included in Appendix A).

1.1 Site Description

The Site consists of three properties located in a mixed commercial and residential area at 706, 726, and 800 Harrison Street, in Oakland, California (Figure 1). All property locations and boundaries are shown on Sheet C-2 of Appendix A.

The 706 Harrison Street Property is a former Atlantic Richfield Company (ARCO) service station owned by Mr. Bo Gin. This property currently consists of an asphalt parking lot with the AS/SVE system located in the southwest corner. Former facilities at the 706 Harrison Street Property included four 1,000-gallon and two 6,000-gallon fuel underground storage tanks (USTs), one steel waste oil UST, product line piping, pump islands, and a station building. The USTs and associated piping were removed in January 1991 (Cambria Environmental Technology, Inc. 1995).

The property located at 726 Harrison Street is a former Shell service station owned by Mr. Peter Yee. This property currently contains an asphalt parking lot and one building. Former facilities at the 726 Harrison Street Property included three 4,000-gallon USTs, one 8,000-gallon fuel UST, one steel 1,000-gallon waste oil UST, product line piping, pump islands, and a station building. The USTs and associated piping were removed in October 1995 (Aqua Science Engineers, Inc. 2001).

The property located at 800 Harrison Street is an active 76 Station (Union Oil) owned by Mr. Muhammad Usman. Current station facilities include a single-story convenience store, three product dispenser islands under two canopies, and two 12,000-gallon double-wall poly-steel gasoline USTs.

2 AS/SVE DESIGN AND COMPONENTS

2.1 Air Sparge System

The Air Sparge (AS) system will be used to inject air into the saturated zone to volatilize and enhance biodegradation of hydrocarbon constituents in shallow groundwater at the Site. The AS system will also be operated in a manner to facilitate bulk water movement in the capillary fringe, thereby desorbing mass from smear zone soil and dissolving it into the aqueous phase. AS treatment will consist of continuously cycled (i.e., pulsed) AS wells operating in zones.

2.1.1 AS Well Configuration and Network

The AS well network consists of 17 sparge wells. SP-3, SP-4, and SP-5 were part of a previously operated remediation system and reincorporated into the current AS/SVE system. These wells are constructed of 1-inch diameter schedule 40 polyvinyl chloride (PVC) pipe. Total depth of these wells varies from 28 to 29.5 feet below ground surface (bgs) with a 1-foot screened section at the bottom. AS-1 through AS-14 were constructed using 2-inch schedule 80 PVC pipe. Total depth of these wells varies from 33 to 35 feet bgs with a 3-foot sump at the bottom and a 2-foot screened interval located directly above the sump. AS well construction details are included in Table 1.

2.1.2 AS System Components

The AS compressor is a Becker model DTLF400 rotary screw compressor, powered by a 30-horsepower totally enclosed fan-cooled (TEFC) motor, capable of delivering approximately 230 standard cubic feet per minute (scfm) of injection air at a discharge pressure of 25 psi.

The AS system is operated by a control panel equipped with a programmable logic controller (PLC). This PLC allows the operator to set the order and duration of the AS zones. The AS system is also equipped with pressure relief valves, a high temperature switch, an emergency E-stop button, and is interlocked with the operation of the soil vapor extraction system.

An AS manifold is located in the treatment enclosure and each AS well has a dedicated pipe run (i.e., lateral). The AS manifold includes flow control valves for individual well performance optimization and balanced pulsed air delivery among the various zones and phases of operation. In addition, instrumentation and controls to facilitate performance monitoring and well field optimization functions for each well are located at the manifold. Details for the AS manifold configuration, trenching details, and wellhead connections are presented in the As-built AS/SVE System Design Drawings included in Appendix A.

2.2 Soil Vapor Extraction System

The Soil Vapor Extraction (SVE) system is used to volatilize any residual hydrocarbon constituents that are adsorbed to capillary fringe and overlying vadose zone soil. SVE will also capture vapors emitted during AS operation and promote secondary treatment of soil via enhanced biodegradation through the transfer/recharge of oxygen to subsurface pore spaces near the groundwater surface and within

contaminant smear zones. Periodic performance monitoring will be conducted to quantify contaminant mass removal rates and qualitatively assess system effectiveness.

2.2.1 SVE Well Configuration and network

The SVE well network consists of 6 extraction wells (VW-3, VW-4, VW-5, VE-3, VE-4, and VE-5). The “VW” wells were part of a previously operated remediation system and reincorporated into the current AS/SVE system. All wells are constructed of 2-inch diameter schedule 40 PVC pipe. Total depth of the SVE wells varies from 15 to 18 feet bgs with a 10-foot screened section at the bottom. SVE well construction details are included in Table 1.

2.2.2 SVE System Components

The SVE system is equipped with two Busch 1502 rotary claw blowers, each powered by a 20-horsepower TEFC motor and variable frequency drive, and capable of extraction air flow rates of 215 scfm at a vacuum of 22 inches of mercury. Only one blower is anticipated to be used at a time. Extracted vapors are treated with an electric catalytic oxidizer (ECAT). Extracted water and entrained moisture collected in the air/water separator (AWS) tank will be allowed to accumulate in the AWS tank until being transferred to a 55-gallon drum utilizing the in-line transfer pump.

The SVE system is operated with a control panel equipped with a touchscreen supervisory control and data acquisition (SCADA) system and PLC. The SCADA system is equipped with a cellular modem which allows for remote access and operational control. The SVE system is also equipped with various pressure, vacuum, and temperature switches that will automatically shutdown the SVE system if operational setpoints are exceeded.

An SVE manifold is located in the treatment enclosure and each SVE well has a dedicated lateral. Each lateral is equipped with a control valve, vacuum gauge and sample/monitoring port to facilitate performance monitoring and wellfield optimization. Details for the SVE manifold configuration, trenching details, and wellhead connections are presented in the As-built AS/SVE System Design Drawings included in Appendix A.

3 AS/SVE SYSTEM CONSTRUCTION

3.1 Pre-construction Activities

Prior to construction activities, the AS/SVE system design was submitted to the City of Oakland Planning and Building Departments, and an approved building permit was procured by Cornerstone. Once the building permit was received, a private utility locate was conducted at the Site to identify potential conflicts with underground utilities in anticipation of trenching and intrusive excavation activities. The local electrical service provider (PG&E) was also consulted prior to the implementation of construction to finalize the electrical service trench layout and specifications and connection details.

An Authority to Construct/Permit to Operate (PTO) was obtained from BAAQMD (Appendix B) prior to system installation activities. The PTO has several requirements that must be met to keep the AS/SVE system in operational compliance. Pertinent operational requirements of the PTO include the following:

- The soil vapor flow rate from the SVE system shall not exceed 300 scfm.
- The electric oxidizer shall not operate below 600-degree Fahrenheit.
- The abatement efficiency of the electric oxidizer shall be maintained at a minimum of:
 - 98.5% by weight for inlet volatile organic compound (VOC) concentrations greater than or equal to 2,000 parts per million by volume (ppmV),
 - 97% by weight for inlet VOC concentrations below 2,000 ppmV and greater than 200 ppmV,
 - 90% by weight for inlet VOC concentrations below 200 ppmV.
- The minimum abatement efficiency shall be waived if outlet VOC concentrations are shown to be less than 10 ppmV.
- The SVE system shall be equipped with a continuous measuring and temperature recording instrumentation.

3.2 Construction Activities

Under Arcadis supervision, Cornerstone began the AS/SVE system construction on June 26, 2017. Construction activities continued through August 31, 2017 and included saw cutting asphalt, excavating conveyance trenches, installing AS and SVE well boxes, placing and connecting conveyance piping to AS and SVE wells, pressure testing conveyance piping, completing trench backfill with concrete slurry and an asphalt grade finish, building AS and SVE Manifolds, installing an electrical service panel with protective bollards, and installing an 8-foot chain link fence compound enclosure.

The AS Shed and SVE Mobile Remediation Trailer (MRT) were delivered to the Site and installed on August 22 and 23, 2017. These pieces of equipment were previously used on other EMC managed remediation projects in Northern California and were chosen based on the technical specifications outlined in the RAP and favorable operational history. The electrical service meter was installed by PG&E on September 26, 2017.

4 AS/SVE SYSTEM START-UP AND OPTIMIZATION

4.1 Initial Startup and Troubleshooting

Following final electrical connection activities, the AS/SVE system was started in order to confirm proper operation as part of the initial “shakedown” phase. Shakedown consists of functional testing of system components and alarms to document electrical, mechanical, and control system operability. The objectives of shakedown are to confirm functionality and adjust operational setpoints and alarms as needed to ensure the system operates according to the criteria established during the remedial design phase. Initial testing also supports identification of potential repairs or modifications to system infrastructure that may be required prior to full-scale startup. Functional AS/SVE system testing activities included:

- Testing all pumps, blowers, and mechanical equipment
- Testing all valves and appurtenances
- Completing hydrostatic pressure and leak testing of the treatment system conveyance, tanks, and vessels
- Calibrating and testing all instrumentation, switches, indicators, and transmitters
- Testing the function and integrity of electrical systems
- Testing and reviewing the programming, integration, operation, and displays
- Testing all alarms, interlocks, setpoints, and delays
- Testing the remote access and alarm condition callouts.

While system troubleshooting efforts were underway, a caseworker for the Leaking Underground Storage Tank (LUST) Trust Fund contacted the project team and asked that the AS/SVE system not be started until a meeting could be conducted with all stakeholders to determine if active remediation was the correct path forward for the project. All system repairs and modifications ceased at this time.

In May 2018, the request to startup the AS/SVE system was granted. System repairs, reprogramming, and troubleshooting activities resumed in June of 2018 and routine operation of the AS/SVE system started on September 6, 2018.

4.2 Routine Operation

On September 6, 2018, Arcadis started continuous operation of the SVE system. System startup was conducted in several stages to collect performance data at the system and at extraction well locations under various operating scenarios. The objective of varying the operating conditions was to establish operational ranges (e.g., flowrate, applied vacuum, dilution percentage) that would effectively maximize system effectiveness for full-scale operations and collection of data.

AS/SVE SYSTEM CONSTRUCTION AND START-UP REPORT

Consistent operation of the SVE system and extraction well network was established, and the AS system was brought online October 11, 2018. All operational data collected to-date for the AS/SVE system is presented in Appendix C.

During startup and routine system operation, concentrations of total VOCs were recorded at the catalytic oxidizer influent and the effluent stack using a photo ionization detector (PID), measured as hexane, as required by the BAAQMD permit conditions (Appendix B). In addition, monthly compliance vapor grab samples were collected and analyzed for Total Purgeable Hydrocarbons as Gasoline (TPHg), benzene, toluene, ethylbenzene, xylene, (collectively known as BTEX), and methyl tertiary butyl ether (MtBE), via Environmental Protection Agency (EPA) Method TO-15. Results from PID monitoring, mass removal calculations, and destruction efficiency is included in Table 1 of the operational data. Analytical vapor data are included in Table 4 of the operational tables and laboratory reports are included in Appendix D.

A summary of operational data and key points is as follows:

- SVE system vacuum was initially set to 13.5 inches of mercury (in Hg) but has steadily been reduced to 6 in Hg by increasing the amount of dilution air in the process flow. The reduction of applied system vacuum was driven by two factors. The higher vacuum caused a significant amount of water to be extracted from SVE wells VW-3, VW-4, and VW-5. Reducing the vacuum allowed VW-3 to be brought back online. VW-4 and VW-5 remain closed at this time. It was also noted that the operating temperature of the ECAT was fluctuating due to an oxygen deficient process air mixture. The additional dilution air stabilized oxidizer operations.
- Current operational SVE wells include: VW-3, VE-3, VE-4, and VW-5. Current operational AS wells include AS-1, AS-2, AS-3, AS-4, AS-6, AS-7, AS-8, AS-9, AS-10, and AS-12.
- With the current well configuration and operational setpoints; the post-dilution (Influent-2) extraction air flow rate and VOC concentrations are approximately 150 scfm and 1,700 ppmV, respectively. Data collected from the pre-dilution (Influent-1) sample point has been inconsistent or unobtainable due to the high operating vacuum and equipment limitations. Arcadis is working to modify the equipment for better data collection in the future.
- Individual SVE well flows have ranged from 18.6 acfm (VE-5) to 70 acfm (VE-4) and VOC concentrations have ranged from 17.2 ppmV (VE-4) to 4,430 ppmV (VE-3). SVE well monitoring data is included in Table 2 of Appendix C.
- The final certified laboratory analytical report for the initial compliance samples was received on September 19, 2018, and indicated effluent concentrations in compliance with the conditions of the BAAQMD PTO. Effluent concentrations of TPHg were reported at 2.100 ppmV, ethylbenzene at 0.011 ppmV, and total xylenes at 0.022 ppmV. Benzene, Toluene, and MtBE were reported at non-detect values (reporting limit of 0.005 ppmV).
- The AS system is currently cycling through four zones of operation. The current zone configuration is as follows:
 - Zone 1: AS-1, AS-2, and AS-3
 - Zone 2: AS-4, AS-5, AS-6, AS-7, and AS-8
 - Zone 3: AS-9, AS-10, and AS-11

AS/SVE SYSTEM CONSTRUCTION AND START-UP REPORT

- Zone 4: AS-12
- AS-5 and AS-11 were closed after limited operation due to potential short circuiting to nearby monitoring wells. Arcadis will continue to investigate this issue.
- The AS system injects air into each zone for 5 minutes with 5 minutes of non-operational lag time between closing the Zone 4 wells and opening the Zone 1 wells. Current injection pressures and flow rates for the individual wells range from 9 to 15 pounds per square inch gauge (psig) and 2 to 6 acfm, respectively.

4.3 Radius of Influence Monitoring

On October 5, 2018, Arcadis conducted a preliminary SVE radius of influence (ROI) monitoring event. To perform this study, each SVE well (VW-3 and VW-3 through VW-5) was operated in-turn and used as the only extraction well. After one hour of operation, the other SVE wells were measured for induced vacuum at the respective wellheads using a sample port and digital manometer. The only extraction well to show the influence of induced vacuum was VE-3 at 1.1 inches of water (in H₂O) when VE-4 was used as the extraction well with 193.7 in H₂O of applied vacuum. The linear distance from VE-3 to VE-4 is approximately 20 feet.

Arcadis does not consider the results of this preliminary ROI monitoring event to be fully indicative of the functional ROI of the SVE system. Additional ROI monitoring will be implemented using the extraction well network and nearby existing groundwater monitoring wells as induced vacuum measuring points. The extraction wells will also be allowed to operate longer in order to ensure that the maximum induced vacuum can equilibrate in the subsurface.

Influence of the AS system will be evaluated by comparing current and future water quality data collected during groundwater monitoring events with similar historical data. Specific water quality parameters to be evaluated include dissolved oxygen and oxygen reduction potential.

5 ONGOING OPERATION AND MAINTENANCE

The AS/SVE system is scheduled to operate continuously, 24 hours a day, seven days a week until remedial goals are achieved. Throughout system operation, performance and compliance will be monitored and optimized by a technician under the direction of an Arcadis Professional Engineer, following the standard operating procedures (SOPs) for O&M of the AS/SVE system.

5.1 Data Collection

During routine O&M visits, various data will be collected to evaluate the system's efficiency and to optimize system performance including: hour meter readings, utility meter readings, system dilution valve opening, flow rates, temperature, pressure, vacuum, vapor concentrations, and maintenance activities. Data will be collected from the AS and SVE systems as well as from individual wells. The measurements will be documented on field data sheets and copies of these records will be maintained per BAAQMD requirements. O&M visits will be conducted at a minimum on a monthly basis to monitor and collect data, provide site maintenance and ensure efficient operation of the system.

5.2 System Optimization

Performance monitoring for the AS/SVE system is intended to evaluate the pneumatic and hydraulic responses to remedy implementation in the treatment area, as well as monitor the long-term effect of continuous operations on various media. Operational adjustments will be continuously implemented to maintain the highest possible rate of VOC mass removal. Evaluation of the long-term effect of AS/SVE operations on various media and VOC concentration trends at monitoring locations will be provided in subsequent reports.

5.3 Shut-Down Criteria

Soil vapor extraction well vapor field concentration data will be evaluated on a monthly basis at a minimum to maximize efficiency of the system. Extraction efforts will focus on extraction wells with the highest mass removal rates, relative to the well system. The AS/SVE system will operate until asymptotic overall system mass removal rates are reached or mass removal rates below 10 pounds per day (lbs./day) are achieved. When the system reaches shut-down criteria, the system will be evaluated, and recommendations will be presented to the ACDEH. Upon completion of the remediation project, Arcadis shall notify the BAAQMD Engineering Division within two weeks of decommissioning the operation.

6 CONCLUSIONS AND RECOMMENDATIONS

The AS/SVE system is now fully operational and is functioning in compliance with the operational permit and in alignment with the design parameters as described in the RAP. The current operational focus remains on ensuring proper and consistent operation of the system components. As system operation progresses, the focus will move to optimization as described above and more efficient operation. Remedial progress reports shall be provided to the ACDEH on a quarterly basis and will include updates on operational and performance data, including runtime and laboratory and mass removal data. The progress reports will detail AS/SVE system decision making and modifications. During quarters in which routine groundwater monitoring reports are also submitted, remedial progress updates will be included within the routine groundwater monitoring reports.

1.2 DEFINITIONS

CHEVRON: CHEVRON ENVIRONMENTAL MANAGEMENT COMPANY (CEMC)
ENGINEER: ARCADIS
CONTRACTOR: TO BE DETERMINED BY BID
EQUIPMENT OWNER: UNION OIL COMPANY OF CALIFORNIA

THIS PACKAGE ALSO CONTAINS THE FOLLOWING SPECIFICATIONS REQUIRED FOR CONSTRUCTION AND INSTALLATION:

2.0 GENERAL CONSTRUCTION SPECIFICATIONS

- THE CONTRACTOR SHALL REVIEW THE SVE/AS FACILITY DESIGN PLANS, AND FIELD VERIFY ALL DIMENSIONS AND SITE CONDITIONS BEFORE STARTING WORK. THE ENGINEER SHALL BE NOTIFIED OF ANY DISCREPANCY.
- ALL MATERIALS USED FOR CONSTRUCTION OF THE SVE/AS FACILITY SHALL BE NEW UNLESS OTHERWISE NOTED.
- THE ENGINEER WILL REQUEST A PLAN CHECK, IF APPLICABLE. THE ENGINEER SHALL APPLY FOR AND OBTAIN ALL DISCHARGE PERMITS FOR TREATED WATER AND AIR, AS APPLICABLE. THE ENGINEER WILL OBTAIN THE REQUIRED WELL INSTALLATION PERMITS.
- THE CONTRACTOR SHALL OBTAIN AND PAY FOR ALL BUILDING PERMITS. THE CONTRACTOR SHALL OBTAIN ALL NECESSARY INSPECTIONS, INCLUDING ROUGH ELECTRICAL, MECHANICAL, CIVIL, OR OTHER APPLICABLE INSPECTIONS, AND OBTAIN A FINAL SIGNED OFF INSPECTION CARD FROM THE LOCAL AUTHORITY.
- THE CONTRACTOR SHALL PROVIDE A ONE YEAR WARRANTY ON ALL CONTRACTOR-PROVIDED MATERIALS AND SUPPLIES. THE CONTRACTOR SHALL PROVIDE A WARRANTY ON WORKMANSHIP FOR A PERIOD OF NOT LESS THAN ONE YEAR. ALL DEFECTS IN CONTRACTOR SUPPLIED AND INSTALLED MATERIALS AND SUPPLIES SHALL BE REPAIRED AT CONTRACTOR EXPENSE.
- IN ADDITION TO THE REMEDIATION DESIGN PLANS, THE ENGINEER WILL SUPPLY THE CONTRACTOR WITH MANUFACTURER'S EQUIPMENT HANDLING AND INSTALLATION PROCEDURES. THE CONTRACTOR WILL INSTALL ALL EQUIPMENT IN ACCORDANCE WITH THE MANUFACTURER'S SPECIFICATIONS AND INSTRUMENTS.
- THE ENGINEER WILL CLEARLY INDICATE IN THE REMEDIATION DESIGN PLANS THE ITEMS TO BE PROVIDED BY CEMC, THE ENGINEER AND OTHERS. ALL OTHER ITEMS AND EQUIPMENT NOT CLEARLY INDICATED AS PROVIDED BY OTHERS IN THE REMEDIATION DESIGN PLANS SHALL BE PROVIDED BY AND INSTALLED BY THE CONTRACTOR.
- THE CONTRACTOR SHALL BE RESPONSIBLE FOR KEEPING THE SITE FREE OF EXCESSIVE DEBRIS AND WASTE DURING CONSTRUCTION. THE CONTRACTOR IS TO TAKE THE NECESSARY PRECAUTIONS TO CONTROL DUST AND STORMWATER RUNOFF FROM EXCAVATION AND CONSTRUCTION ACTIVITIES.
- THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE INDEPENDENT LOCATION OF ALL UTILITIES AND SHALL TAKE APPROPRIATE MEASURES TO PROTECT THEM FROM DAMAGE. THE CONTRACTOR SHALL FORMALLY CONTACT THE REGIONAL UNDERGROUND UTILITY NOTIFICATION SERVICE, SUCH AS THE UNDERGROUND SERVICE ALERT (USA), ONE CALL, AND OBTAIN ALL NECESSARY CLEARANCES BEFORE BREAKING GROUND. SHOULD ANY UTILITIES, INCLUDING BUT NOT LIMITED TO, ELECTRICAL CONDUITS, TELEPHONE LINES, WATER LINES, SEWER, OR STORM DRAIN LINES BE DAMAGED DURING CONSTRUCTION, THE CONTRACTOR SHALL BE RESPONSIBLE FOR NOTIFYING THE AFFECTED PARTIES AND COMPLETING REPAIRS, IF APPLICABLE. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL REPAIR COSTS.
- CONTRACTOR SHALL ALSO BE RESPONSIBLE FOR REPAIRING ALL DAMAGE MADE BY THE CONTRACTOR TO MONITORING WELLS, WELL SEALS, MANHOLE BOXES, AND ALL ABOVE GROUND STRUCTURES AS THE RESULT OF ACCIDENT OR NEGLIGENCE.
- THE CONTRACTOR SHALL RESTORE ALL DISTURBED AREAS TO MATCH THE PRE-CONSTRUCTION CONDITIONS AND THE SURROUNDING AREA. THIS INCLUDES DISTURBED LAWNS, TREES, SHRUBS, PLANTINGS, FENCES, SIDEWALKS, AND OTHER STRUCTURES.
- UPON COMPLETION OF THE PROJECT, THE CONTRACTOR SHALL ASSIST THE ENGINEER IN PREPARING "AS-BUILT" DRAWINGS (RED LINES). THE "AS-BUILT" DRAWINGS SHALL SHOW THE ACTUAL CONSTRUCTION DETAILS, INCLUDING FINAL TRENCH AND WELL LOCATIONS, COMPOUND LAYOUT, AND PIPING DETAILS.
- A FINAL INSPECTION WILL BE PERFORMED BY THE ENGINEER AND/OR A CEMC REPRESENTATIVE. ALL ITEMS NOT MEETING THE SPECIFICATIONS AND THE REMEDIATION DESIGN PLANS SHALL BE PROMPTLY REPAIRED AND/OR REPLACED BY THE CONTRACTOR AT NO EXPENSE TO CEMC.
- THE CONTRACTOR SHALL PROVIDE AN ELECTRICIAN FOR A MINIMUM OF TWO DAYS FOR THE STARTUP OF THE EQUIPMENT, UNLESS THIS WORK CAN BE SAFELY ACCOMPLISHED IN LESS TIME. THE ELECTRICIAN SHALL BE PREPARED TO DEMONSTRATE PROPER MOTOR ROTOR PROPER CONNECTIONS OF EQUIPMENT TO CIRCUIT BREAKERS, AND BE AVAILABLE TO TROUBLESHOOT ELECTRICAL PROBLEMS WITH THE SYSTEM.
- ALL NECESSARY CONSTRUCTION INSPECTIONS SHALL BE OBTAINED AND PAID FOR BY THE CONTRACTOR, INCLUDING INSPECTIONS FOR ELECTRICAL, MECHANICAL, AND CIVIL CONSTRUCTION. THE ENGINEER WILL OBTAIN THE REQUIRED WELL INSTALLATION PERMITS.

- ALL WORK SHALL BE CONDUCTED UNDER CEMC "PERMIT TO WORK" SYSTEM. CONTRACTOR WILL NOT CONDUCT ANY WORK WITHOUT A VALID PERMIT TO WORK.
- THE CONTRACTOR SHALL PROVIDE A TECHNICIAN FOR A MINIMUM OF 8 HOURS DURING THE STARTUP OF THE SVE/AS REMEDIATION SYSTEM.
- THE CONTRACTOR SHALL CONFIRM A CONSTRUCTION SCHEDULE WITH ARCADIS AT LEAST 14 DAYS PRIOR TO ANY WORK AT THE SITE.
- THE PROPOSED CONSTRUCTION SCHEDULE SHALL BE PRESENTED IN A TIMELINE FORMAT SHOWING ESTIMATED START DATE, DURATION, AND COMPLETION TIMES FOR EACH ACTIVITY. ANY DEVIATION FROM THE ORIGINALLY PROPOSED SCHEDULE MUST BE COMMUNICATED TO ARCADIS WITHIN 24 HOURS.

3.0 TRENCHING AND BACKFILL

3.1 GENERAL

- ENGINEER, AND BE PRESENTED IN THE DESIGN PLANS.
- THE TRENCHING AND BACKFILL SPECIFICATIONS ARE SUBJECT TO APPROVAL BY THE LOCAL AUTHORITY DURING PLANNING AND BUILDING DEPARTMENT PERMIT REVIEWS.
- ALL MECHANIZED EQUIPMENT OPERATION (i.e., BACKHOE, EXCAVATOR, OR OTHER POWERED EQUIPMENT) SHALL BE PERFORMED BY COMPETENT PERSONNEL AND/OR PERSONS LICENSED TO PERFORM SUCH WORK. ALL CONSTRUCTION SHALL BE PERFORMED BY TRAINED PERSONNEL OPERATING UNDER A LICENSED CONTRACTOR.

3.2 PAVEMENT CUTTING

- EXISTING PAVEMENT SHALL BE SAW CUT TO PROVIDE A NEAT VERTICAL FACE FOR REPAVING. WHEN WET-CUTTING, BEST MANAGEMENT PRACTICES (BMPs) SHALL BE IMPLEMENTED TO PREVENT CUTTING WATER FROM ENTERING STORM DRAINS OR MIGRATING FROM THE SITE.
- THE CONTRACTOR SHALL MAKE EVERY EFFORT TO USE EXISTING PAVEMENT EDGES AND JOINTS WHEN SAW CUTTING TO REDUCE UNNECESSARY CUTS. PAVEMENT REMOVED FROM TRENCHES OR OTHER EXCAVATIONS SHALL BE REPLACED TO MATCH THE EXISTING MATERIAL.
- CONCRETE OR ASPHALT TRENCH CUTS SHALL NOT EXCEED A NOMINAL WIDTH OF 36 INCHES, AND SHALL BE NOT LESS THAN 18 INCHES WIDE (NOMINAL) UNLESS SPECIFIED OTHERWISE IN THE DESIGN PLANS. TRENCHES SHALL BE CUT TO THE MINIMUM WIDTH NECESSARY TO ACCOMMODATE ALL PIPING SHOWN IN THE DESIGN PLANS.

3.3 TRENCH EXCAVATION

- TRENCHES SHALL BE EXCAVATED TO THE SPECIFIED WIDTHS AND DEPTHS SPECIFIED IN THE DESIGN PLANS. ANY DEVIATION FROM THE TRENCHING PLANS SHALL BE BY THE ENGINEER BEFORE WORK COMMENCES. ALL DEVIATIONS SHALL BE DOCUMENTED ON THE AS-BUILT DRAWINGS.
- CONTRACTOR SHALL STOP WORK IMMEDIATELY IF PRODUCT PIPING OR TANK FIELD IS ENCOUNTERED DURING EXCAVATION. FURTHER EXCAVATION SHALL NOT BE CONDUCTED WITHOUT THE APPROVAL OF CEMC AND ENGINEER.
- ALL EXCAVATION ACTIVITIES SHALL BE IN STRICT ACCORDANCE WITH OSHA REGULATIONS AND ALL FEDERAL, STATE, AND LOCAL LAWS AND REGULATIONS.
- ALL EXCAVATED SOIL SHALL BE MONITORED BY THE ENGINEER IN ACCORDANCE WITH BAY AREA AIR QUALITY MANAGEMENT DISTRICT (BAQMD) REGULATION 8 - RULE 40). IF HYDROCARBON IMPACTED SOIL IS DETECTED, THE SOIL SHALL BE STOCKPILED IN AN AREA DESIGNATED BY THE ENGINEER. THE IMPACTED SOIL SHALL BE PLACED ON 6 MIL THICK PLASTIC SHEETING AND SECURELY COVERED USING A MINIMUM OF 6 MIL THICK PLASTIC SHEETING. ALTERNATIVELY, IMPACTED SOIL MAY BE PLACED IN PROPERLY LABELED DOT-APPROVED 55 GALLON STEEL DRUMS OR ROLL-OFF BINS. THE ENGINEER SHALL BE RESPONSIBLE FOR SAMPLING AND CHEMICALLY ANALYZING THE EXCAVATED SOIL FOR HYDROCARBONS FOR WASTE PROFILING. CEMC WILL BE RESPONSIBLE FOR DISPOSAL/TREATMENT OF HYDROCARBON IMPACTED SOIL.
- THE CONTRACTOR SHALL BE RESPONSIBLE FOR LOADING SOIL INTO TRUCKS AND OFF-SITE DISPOSAL OR RECYCLING OF ALL HYDROCARBON-FREE SOIL AND CONSTRUCTION DEBRIS.
- THE CONTRACTOR SHALL TAKE ALL NECESSARY PRECAUTIONS TO AVOID DAMAGING EXISTING UNDERGROUND UTILITIES, PIPING, AND UNDERGROUND STRUCTURES DURING EXCAVATION ACTIVITIES.
- THE CONTRACTOR SHALL HAND-EXCAVATE TO EXPOSE ALL EXISTING PRODUCT, WENT, ELECTRICAL CONDUIT, WATER, AND SEWER LINES BEFORE EXCAVATING WITH MECHANICAL EQUIPMENT.
- ONCE ALL EXISTING LINES HAVE BEEN LOCATED, THE TRENCHES SHALL BE NEATLY CUT BY A BACKHOE, EXCAVATOR, BOBCAT, OR OTHER APPROVED METHOD TO PROVIDE A SQUARE CUT TRENCH.
- THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE SAFETY AND INTEGRITY OF TRENCHES AND TRENCH PLATES PLACED OVER OPEN TRENCHES DURING WORKING AND NON-WORKING HOURS. IF TRENCHES MUST REMAIN OPEN AFTER NORMAL WORK HOURS THE CONTRACTOR SHALL IMPLEMENT THE FOLLOWING MEASURES:
 - ACTIVE TRAFFIC AREAS - OPEN TRENCHES SHALL BE COVERED BY STEEL TRENCH PLATES CAPABLE OF SUPPORTING VEHICULAR TRAFFIC. TRENCH PLATES ARE TO BE PLACED SO THAT THERE ARE NO GAPS BETWEEN PLATES. THE EDGES OF THE PLATES SHALL BE SECURED WITH TEMPORARY ASPHALT PATCH TO MINIMIZE DISPLACEMENT BY VEHICLES CROSSING THE PLATES.
 - NON-TRAFFIC AREAS - OPEN TRENCHES SHALL BE COVERED BY STEEL TRENCH PLATES (NON-SKID PLATES IN FREQUENTLY USED PEDESTRIAN AREAS) OR 1/2-INCH THICK PLYWOOD.
- THE CONTRACTOR SHALL TAKE PRECAUTIONS TO MINIMIZE SURFACE WATER ENTERING EXCAVATIONS AND PREVENTING OVERSATURATION OF TRENCHES.
- WHEN REQUIRED BY LOCAL AUTHORITY, THE ENGINEER WILL IMPLEMENT A STORM WATER POLLUTION PREVENTION PLAN (SWPPP). THE CONTRACTOR SHALL STRICTLY FOLLOW THE REQUIREMENTS OF THE SWPPP. IF NO SWPPP IS REQUIRED, THE CONTRACTOR SHALL IMPLEMENT BEST MANAGEMENT PRACTICES TO ENSURE THAT ALL STORM WATER RUNOFF FROM CONSTRUCTION DEBRIS, EXCAVATED SOIL, OR DISTURBED SURFACES WILL NOT TO ENTER A STORM DRAIN OR RUNOFF OF THE SITE.
- EXCAVATION SHALL NOT INTERFERE WITH 45-DEGREE ZONE OF INFLUENCE ON ANY EXISTING FOUNDATION OR FOOTING. EXISTING FOOTINGS OR FOUNDATIONS THAT MAY BE AFFECTED BY ANY EXCAVATION SHALL BE UNDERPINNED ADEQUATELY OR OTHERWISE PROTECTED AGAINST SETTLEMENT AND SHALL BE PROTECTED AGAINST LATERAL MOVEMENT PER APPLICABLE BUILDING CODE. CONTRACTOR TO NOTIFY ENGINEER IF EXCAVATION COMES WITHIN 5 FEET OF EXISTING STRUCTURES.

3.4 BACKFILL

- TRENCHES SHALL BE BACKFILLED AS SOON AS PRACTICAL AFTER PRESSURE TESTING THE UNDERGROUND PIPE RUNS, AND FOLLOWING ANY REQUIRED INSPECTIONS. TRENCHES SHALL NOT REMAIN OPEN LONGER THAN NECESSARY TO PREVENT SIDEWALL CAVING. IF CAVING IS ANTICIPATED, THE CONTRACTOR SHALL USE A COMMERCIAL SOIL SEALANT/BINDER OR FORMS TO PREVENT CAVING. CHEMICAL SOIL BINDERS/SEALANTS SHALL BE APPROVED BY CEMC.
- PRIOR TO BACKFILLING, THE CONTRACTOR SHALL CONFIRM THAT THE UNDERGROUND PIPE IS BURIED TO A MINIMUM DEPTH OF 18 INCHES FROM THE TOP OF THE PIPE, UNLESS OTHERWISE NOTED IN THE DESIGN PLANS AND LOCAL BUILDING CODES.
- UNDERGROUND PIPING SHALL BE BEDDED IN CLEAN SAND, OR THE ENGINEER-APPROVED EQUIVALENT, TO A MINIMUM DEPTH OF 2-INCHES BELOW THE BOTTOM OF THE PIPING AND 2-INCHES ABOVE THE PIPING. THE SAND SHALL BE CLEAN, ROCK-FREE (100 PERCENT PASSING NO. 4 SIEVE), AND FREE OF SILT AND CLAY.
- TRENCH BACKFILL MATERIAL WILL CONSIST OF CDF SLURRY MIX. BACKFILL MATERIALS SHALL NOT CONTAIN RUBBLE, VEGETATION, TRASH, BOULDERS, OR OTHER DEBRIS.
- NATIVE SOIL MAY BE USED AS BACKFILL WITH APPROVAL OF CEMC AND THE ENGINEER. IT IS RECOMMENDED THAT NATIVE SOIL BE TESTED FOR GEOTECHNICAL PROPERTIES TO DETERMINE IF THE MATERIAL IS SUITABLE FOR BACKFILL.
- BACKFILL SOIL SHALL BE COMPACTED TO 95 PERCENT OF THE MAXIMUM DRY DENSITY AT OPTIMUM MOISTURE CONTENT (BASED ON ASTM D1557) OR IN ACCORDANCE WITH THE LOCAL CODES.
- PDF MAY BE USED AS BACKFILL MATERIAL WITH THE APPROVAL OF CEMC AND THE ENGINEER. THE CDF SHALL BE 1.5 TO 2 SACK SLURRY. NO COMPACTION TESTING IS REQUIRED FOR CDF.
- CLASS 2 AGGREGATE BASE SHALL BE PLACED UNDER NEW ASPHALT PAVEMENT. THE AGGREGATE BASE THICKNESS SHOULD EQUIVALENT TO THE EXISTING AGGREGATE BASE THICKNESS OR SIX INCHES WHICHEVER IS GREATER.
- PRIOR TO PAVING, THE CONTRACTOR SHALL REMOVE ALL VEGETATION, SURPLUS SOIL, RUBBLE, TRASH, DEBRIS AND OTHER MATERIALS AND PROVIDE A FLAT, UNYIELDING SUBGRADE SURFACE FOR PAVING, SATURATED, SOFT OR PUMPING SOILS SHALL BE REMOVED AND REPLACED WITH SUITABLE MATERIAL IN ACCORDANCE THESE SPECIFICATIONS.
- THE CONTRACTOR SHALL PREPARE THE SUB-GRADE ELEVATION TO MATCH THE BASE OF THE EXISTING PAVEMENT, UNLESS THE ASPHALT RESTORATION DESIGN EXCEEDS EXISTING IN-PLACE ASPHALT DESIGN.

4.0 PIPING

4.1 GENERAL

- THE LOCAL AUTHORITY, AND BUILDING AND PLUMBING CODES, ALONG WITH ASTM SPECIFICATIONS, SHALL BE USED TO DESIGN THE TYPES OF PIPING AND INSTALLATION METHODS REQUIRED FOR EACH REMEDIATION SITE.
- ALL PIPING WORK SHALL BE INSTALLED BY TRAINED PERSONNEL OPERATING UNDER A STATE-LICENSED CONTRACTOR.
- ALL MATERIALS SHALL BE NEW, UNLESS OTHERWISE SPECIFIED IN THE DESIGN PLANS.
- ALL MATERIALS AND WORK SHALL BE IN ACCORDANCE WITH THE PIPE MANUFACTURER'S SPECIFICATIONS, THE DESIGN PLANS, AND ALL APPLICABLE CODES.
- ALL PIPING AND PLUMBING SHALL BE PERFORMED BY TRAINED AND COMPETENT PERSONNEL, WHO MEET ALL OF THE REQUIREMENTS DICTATED BY THE LOCAL AUTHORITIES. IN ADDITION, THE CONTRACTOR IS RESPONSIBLE FOR ENSURING THE INSTALLATION OF ANY EQUIPMENT OR MATERIALS WHICH REQUIRE SPECIFIC LICENSING SHALL BE PERFORMED UNDER THE DIRECTION OF THE INDIVIDUAL WHO HOLDS A CURRENT LICENSE FOR SUCH WORK.
- WHEN CONNECTING TO EXISTING UNDERGROUND PIPING, THE CONTRACTOR SHALL FIRST VERIFY THE EXISTING PIPING PATH. IF THE EXISTING UNDERGROUND PIPING IS TO BE USED FOR CONVEYANCE, THE CONTRACTOR SHALL ALSO FIELD VERIFY THE INTEGRITY OF THE EXISTING PIPE PRIOR TO CONNECTING TO IT.
- ALL PROCESS PIPING SHALL BE TESTED ACCORDING TO LOCAL SPECIFICATIONS AND WITNESSED BY THE ENGINEER OR THE ENGINEER'S REPRESENTATIVE. NO TESTING WILL BE CONDUCTED THROUGH INSTRUMENTS OR EQUIPMENT. NO VACUUM OR PRESSURE TESTING WILL OCCUR WITHOUT CHEVRON'S APPROVAL.
- THE PIPE FOR VAPOR LINES SHALL BE SLOPED TOWARDS THE WELLHEADS AT A RATIO OF 1:100 TO AVOID ACCUMULATION OF CONDENSATE IN THE PIPES. IF A TRENCH DEPTH OF GREATER THAN 4 FEET IS NEEDED TO ACHIEVE A REQUIRED SLOPE, THE CONTRACTOR SHALL NOTIFY THE ENGINEER AND IMPLEMENT MEASURES TO ADDRESS POTENTIAL CONDENSATE ACCUMULATION IN THE PIPE AS DIRECTED BY THE ENGINEER.
- WHERE PIPING IS INSTALLED ABOVE GROUND, PIPE SUPPORTS AND CLAMPS SHALL BE USED TO SUPPORT THE PIPE AT APPROPRIATE INTERVALS TO PREVENT SAG AS SPECIFIED BY THE PIPING MANUFACTURER'S SPECIFICATIONS. WHEN UNISTRUT SUPPORTS ARE USED THE ENDS OF THE SUPPORTS SHALL BE COVERED WITH PLASTIC PROTECTIVE CAPS.
- THE CONTRACTOR SHALL PAINT ALL ABOVE GROUND PIPING AS APPROPRIATE FOR UV PROTECTION, WHEN REQUIRED BY CODE AND TO IDENTIFY POTENTIAL HAZARDS (i.e., OVERHEAD PIPING, POTENTIAL TRIP HAZARD). WHEN PAINTING PIPING IS APPLICABLE, THE FOLLOWING SCHEDULE SHALL BE FUSED: "GREY - SOIL VAPOR", "YELLOW - GAS SUPPLY", "AIR LINES - NOT PAINTED".
- THE CONTRACTOR SHALL LABEL ALL ABOVE GROUND PIPING WITH INDELEIBLE OR PERMANENT MARKING INDICATING THE CONTENTS OF THE PIPE (i.e., "GROUNDWATER," "VAPOR," OR "TREATED WATER", COMPRESSED AIR, GAS, ELECTRIC) AND THE FLOW DIRECTION.
- THE CONTRACTOR SHALL MAKE ALL WELLHEAD CONNECTIONS AS SHOWN IN THE DESIGN PLANS.
- THE CONTRACTOR WILL IDENTIFY (ID) ALL WELL MANIFOLD PIPING STEEL TAGS. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO STAMP THE APPROPRIATE WELL IDS ON THE STEEL TAGS AND ATTACH THE TAGS WITH CHAINS TO THE CORRESPONDING WELLS AT THE MANIFOLD.
- THE PIPING MATERIALS SHALL BE SPECIFIED BY THE ENGINEER IN THE DESIGN PLANS. ANY CONFLICTS OR QUESTIONS CONCERNING PIPE MATERIAL COMPATIBILITY, AS DISCOVERED BY THE CONTRACTOR, SHALL BE IMMEDIATELY BROUGHT TO THE ATTENTION OF THE ENGINEER.
- THE USE OF DISSIMILAR METALS AND ALLOYS IN DIRECT CONTACT WITH EACH OTHER IS PROHIBITED ON ALL PIPE LINES CONTAINING LIQUIDS DUE TO THE POTENTIAL FOR GALVANIC CORROSION. WHERE DISSIMILAR METALS MUST BE JOINED, DI-ELECTRIC UNIONS OR COUPLERS SHALL BE USED.

16. TRACER WIRE TERMINALS WILL BE TAGGED AND IDENTIFIED IN THE EQUIPMENT COMPOUND, AT JUNCTION BOXES, AND WELL BOXES.

17. ALL UNDERGROUND PIPING SHALL BE IDENTIFIED USING TRACER WIRE AND METALLIC TAPE PLACED ABOVE THE PIPING AT THE TOP OF THE BEDDING MATERIAL ABOVE THE PIPING. TRACER WIRE TERMINALS WILL BE TAGGED AND IDENTIFIED IN THE EQUIPMENT COMPOUND, AT JUNCTION BOXES, AND WELL BOXES.

18. THE CONTRACTOR SHALL ENSURE THAT ALL FOREIGN MATERIALS HAVE BEEN REMOVED FROM THE UNDERGROUND PIPING FOLLOWING INSTALLATION AND BEFORE BACKFILLING.

19. ALL ABOVE GROUND PIPING SHALL BE PERMANENTLY LABELED WITH DIRECTIONAL FLOW ARROWS AND LINE CONTENTS AT 5 FOOT INTERVALS. (i.e., KNOCKOUT WATER, SOIL VAPOR, AND COMPRESSED AIR)

20. WHERE PIPING IS ROUTED ABOVEGROUND INSIDE THE EQUIPMENT ENCLOSURE, THE PIPING SHALL BE SUPPORTED BY UNI-STRUT PIPE SUPPORT AND CLAMPS. THE UNI-STRUT SUPPORTS SHALL BE FASTENED TO THE WALL OR MOUNTED ON A BASE THAT IS SECURED TO THE GROUND SURFACE AT 10 INCH MINIMUM SPACING.

4.2 POLYVINYL CHLORIDE (PVC) PIPE SPECIFICATIONS

1. ALL UNDERGROUND PVC PROCESS PIPING SHALL BE SCHEDULE 40 (UNLESS NOTED OTHERWISE IN DESIGN DRAWINGS). ALL ABOVEGROUND PVC PROCESS PIPING SHALL BE SCHEDULE 80 (UNLESS NOTED OTHERWISE IN DESIGN DRAWINGS OR REQUIRED BY APPLICABLE CODES).

2. ALL PIPE JOINTS ARE TO BE GLUED USING PVC PRIMER AND PVC SOLVENT CEMENT. CONNECTIONS TO OTHER TYPE OF PIPES ARE TO BE BY FLANGE OR MALE/FEMALE ADAPTERS SPECIFICALLY DESIGNED FOR A TRANSITION FROM PVC PIPE TO A SPECIFIC TYPE OF PIPE (i.e., GALVANIZED STEEL, COPPER).

3. PVC PIPE SHALL NOT BE USED FOR ABOVE GROUND OR UNDERGROUND COMPRESSED AIR SERVICE, OR FOR HIGH TEMPERATURE APPLICATIONS, SUCH AS BLOWER DISCHARGE PIPING.

4.3 GALVANIZED PIPE SPECIFICATIONS

1. GALVANIZED PIPE SHALL BE SCHEDULE 40 HOT-DIP GALVANIZED (HDG) STEEL PER ASTM A53.

2. GALVANIZED PIPE SHALL NOT BE USED TO CONVEY SOIL VAPOR. USE OF GALVANIZED PIPE PRIOR TO CATALYTIC OXIDIZER ABATEMENT SYSTEMS MAY INCREASE RISK OF POISONING THE CATALYTIC CELL MATERIAL. OXIDIZER VENDORS SHOULD BE CONSULTED FOR APPROPRIATE PIPING MATERIAL USE PRIOR TO INSTALLING THE OXIDIZER.

4.4 ABS COMPRESSED AIR PIPE SPECIFICATIONS

1. ABS PIPE AND FITTINGS SHALL BE DURAPLUS™ OR EQUIVALENT AND CAPABLE OF WITHSTANDING CONTINUOUS WORKING PRESSURES GREATER THAN 100 PSI.

2. ABS-COMPRESSED AIR FITTINGS SHALL BE THE SOCKET TYPE, DESIGNED FOR SOLVENT WELDING.

• FITTINGS SHALL BE DESIGNED AND MANUFACTURED TO WITHSTAND THE CONTINUOUS PRESSURES APPLICABLE TO THE MAXIMUM PRESSURE RATING OF THE PIPE.

• THE SOLVENT CEMENT SHALL BE ABS SOLVENT CEMENT AND DESIGNED TO WITHSTAND CONTINUOUS PRESSURES UP TO 185 PSI AT 73° F.

3. WHEN TRANSITIONING FROM ABS TO NON-ABS PIPING MATERIAL, THE CONTRACTOR SHALL ENSURE APPROPRIATE TRANSITION FITTINGS ARE USED.

4.5 PRESSURE TESTING

1. ALL PROCESS PIPING SHALL BE PRESSURE TESTED ACCORDING TO LOCAL SPECIFICATIONS AND WITNESSED BY AN ENGINEER OR AN APPROVED REPRESENTATIVE. NO TESTING WILL BE CONDUCTED THROUGH INSTRUMENTS OR EQUIPMENT.

2. ALL PVC LINES USED FOR VACUUM WILL BE TESTED AT 5 POUNDS PER SQUARE INCH (PSI) OF PRESSURE AND HELD FOR AN HOUR. IF A PRESSURE DROP OF MORE THAN 1 PSI IS OBSERVED DURING THE HOUR, THE LINE WILL BE INSPECTED AND REPAIRED AS NECESSARY PRIOR TO RETESTING THE LINE.

3. ALL PVC LINES USED FOR WATER WILL BE TESTED AT 5 PSI FOR A PERIOD OF 60 MINUTES. IF A LEAK IS OBSERVED DURING THE HDPE TESTING TIME OR A PRESSURE DROP OF MORE THAN 1 PSI IS NOTED, THE LINE WILL BE INSPECTED AND REPAIRED AS NECESSARY PRIOR TO RETESTING THE LINE.

4. ALL ABS LINES USED FOR COMPRESSED AIR WILL BE TESTED AT 100 PSI FOR A PERIOD OF 60 MINUTES. IF A PRESSURE DROP OF MORE THAN 1 PSI IS OBSERVED DURING THE TESTING TIME, THE LINE WILL BE INSPECTED AND REPAIRED AS NECESSARY PRIOR TO RETESTING THE LINE. A CURING TIME (MINIMUM OF 24 HOURS OR PER THE MATERIAL MANUFACTURER, WHICHEVER IS THE LARGEST), WILL BE FOLLOWED PRIOR TO BEGINNING ANY TESTING ON THE ABS LINES. ONLY THREADED FITTINGS TO BE USED ON THE ABS PIPE AND TRANSITION FITTINGS ARE TO BE METAL REINFORCED.

5.0 ASPHALT PAVEMENT

5.1 GENERAL

1. HOT MIX ASPHALT CONCRETE SHALL NOT BE USED TO RESTORE ASPHALT SURFACES AFFECTED BY CONSTRUCTION ACTIVITIES. EXCEPTION: ASPHALT COLD PATCH MAY BE USED AS A TEMPORARY SURFACE FOR SMALL PAVEMENT PATCHES (NOT TO EXCEED 3 FEET BY 3 FEET) DURING SITE CONSTRUCTION ACTIVITIES. TEMPORARY ASPHALT PATCH MUST BE REMOVED PRIOR TO OR DURING FINAL SITE RESTORATION ACTIVITIES.

2. ASPHALT DRIVEWAYS, PARKING STRIPS, OR OTHER AREAS DESIGNED FOR VEHICULAR AND PEDESTRIAN TRAFFIC SHALL BE RESTORED TO MATCH EXISTING GRADES.

3. THE CONTRACTOR SHALL ASSURE THAT THE SUB-GRADE HAS BEEN PROPERLY PREPARED. NO ASPHALT SHALL BE INSTALLED ON SATURATED, SOFT OR PUMPING SOIL, FROZEN SOIL, ICE, SNOW, OR STANDING WATER.

4. FINISHED SURFACES SHALL CONFORM TO EXISTING EDGES AND BE SMOOTH WITH UNIFORM TEXTURE AND BE FREE OF VOIDS, MOUNDS, RIDGES, DEPRESSIONS, CRACKS, ROLLER MARKS, PITS, OR OTHER IRREGULARITIES (1/4 INCH MAXIMUM OVER 10 FEET STRAIGHT EDGE). EDGES SHALL BE CAPPED OVER AND STRAIGHT. RESTORED PAVEMENT SURFACES NOT MEETING THESE REQUIREMENTS WILL BE REPLACED AT THE CONTRACTOR'S EXPENSE.

CONSTRUCTION NOTES AND SPECIFICATIONS

ARCADIS Project No. B0047339.5T16.00003
Date SEPTEMBER 2017
ARCADIS 2999 OAK ROAD SUITE 300 WALNUT CREEK, CALIFORNIA TEL: 925.274.1100

G-1A

- 5.2 ASPHALT CONCRETE MATERIALS
1. ASPHALT CONCRETE SHALL BE A HIGH-QUALITY, CONTROLLED HOT MIXTURE OF ASPHALT AND WELL-GRADED QUALITY AGGREGATE, AND COMPACTED INTO A UNIFORMLY DENSE MASS. THE PAVING MATERIALS SHALL CONFORM TO ASTM SPECIFICATION D3515.
 2. A TACK COAT BONDING AGENT SHALL BE APPLIED BETWEEN ASPHALT LAYERS, BETWEEN LAYERS OF CONCRETE OR SLURRY AND THE ASPHALT, AND BETWEEN CUT EDGES OF EXISTING ASPHALT TO BOND TO THE NEW ASPHALT TO THE OLD SURFACE. THE TACK COAT MATERIAL SHALL MEET THE SPECIFICATIONS IN ASTM D977 OR D2397 AND BE GRADES SS-1, SS-1H, CSS-1, OR CSS-1H. THE ASPHALT TACK COAT SHALL BE A DILUTED EMULSIFIED ASPHALT MIXTURE OF EQUAL PARTS EMULSION AND CLEAN WATER.
 3. THE AGGREGATE USED FOR THE BASE COURSE AND SURFACE MIXTURE SHALL BE CRUSHED STONE, GRAVEL, STONE OR SLAG SCREENINGS, SAND, MINERAL FILLER, OR A COMBINATION OF THESE MATERIALS. UNCRUSHED COARSE AGGREGATE MAY BE USED IN BASE COURSE MIXTURES ONLY.
 - COARSE AND FINE AGGREGATE SHALL CONFORM TO ASTM D692 AND ASTM D1073.
 - MINERAL FILLER SHALL CONFORM TO ASTM D242.
 - IF APPROVED FOR USE BY CHEVRON, SLAG SHALL BE BLAST FURNACE, AIR COOLED SLAG THAT IS NOT LESS THAN 70 POUNDS PER CUBIC FOOT IN MASS.
 4. THE LIQUID ASPHALT USED SHALL CONFORM TO ASTM D3381 AND D946, AND SHALL BE THE APPROPRIATE GRADE FOR THE AMBIENT MEAN ANNUAL TEMPERATURE CONDITIONS.
- 5.3 ASPHALT CONCRETE PAVEMENT CONSTRUCTION
1. PRIOR TO PLACING NEW ASPHALT ADJACENT TO EXISTING PAVEMENT, THE CONTRACTOR SHALL SAW-CUT A CLEAN, STRAIGHT EDGE ALONG THE EXISTING PAVEMENT, AND APPLY TACK COAT TO THE VERTICAL CUT SURFACE. ALL SAW CUT DEBRIS SHALL BE REMOVED FROM THE TRENCH PRIOR TO LAYING THE NEW PAVEMENT.
 2. THE TEMPERATURE OF THE ASPHALT MIXTURE SHALL NOT EXCEED 325° F WHEN DISCHARGED FROM THE SPREADER. INITIAL COMPACTION SHALL BE PERFORMED WHEN THE TEMPERATURE OF THE MIXTURE IS ESTIMATED TO BE LESS THAN 250° F. FINAL COMPACTION SHALL BEGIN WITH THE ASPHALT AS HOT AS POSSIBLE, BUT NOT LESS THAN 150° F.
 3. THE ASPHALT MIXTURE SHALL BE PLACED IN LIFTS AND COMPACTED TO A MAXIMUM NOMINAL THICKNESS OF 2 INCHES UNTIL THE NEW ASPHALT SURFACE MATCH THE EXISTING SURFACE. THE ASPHALT SHALL BE COMPACTED TO A MINIMUM OF 96 PERCENT OF THE REFERENCE DENSITY.
 4. A TACK COAT OF 0.15 GALLON PER SQUARE YARD OF DILUTED EMULSIFIED ASPHALT SHALL BE APPLIED BETWEEN THE BASE COARSE SURFACE AND ASPHALT PAVEMENT. ALL VERTICAL SURFACES, WHICH WILL CONTACT THE NEW ASPHALT PAVING, SHALL BE TACK COATED. THE TACK COAT SHALL BE ALLOWED TO CURE BEFORE ASPHALT PLACEMENT, AND SHALL BE APPLIED ON SURFACES THAT CAN BE COVERED WITH AN ASPHALT MIXTURE DURING THE SAME DAY.
 5. THE ASPHALT MIX SHALL BE COMPACTED IMMEDIATELY AFTER PLACEMENT. INITIAL COMPACTION SHALL BE ACCOMPLISHED USING A STEEL WHEEL TANDEM ROLLER, STEEL THREE-WHEELED ROLLER, OR VIBRATORY ROLLER. AS NEEDED, INTERMEDIATE ROLLING WITH A PNEUMATIC TIRE ROLLER SHALL BE DONE IMMEDIATELY BEHIND THE INITIAL ROLLING. IN AREAS TOO SMALL FOR THE ROLLER COMPACTOR, A VIBRATING PLATE COMPACTOR OR HAND TAMPER SHALL BE USED TO ACHIEVE THE REQUIRED COMPACTION. NOTE: THE CONTRACTOR SHALL BE RESPONSIBLE FOR PREVENTING TRAFFIC LOADS ON NEWLY ASPHALTED SURFACES UNTIL IT HAS SUFFICIENTLY COOLED TO SUPPORT TRAFFIC.
 6. THE CONTRACTOR SHALL RETURN TO THE SITE AFTER ONE WEEK AND APPLY ASPHALT JOINT SEALER TO ALL ASPHALT JOINTS.

6.0 PORTLAND CEMENT CONCRETE PAVEMENT

- 6.1 GENERAL
1. FINISHED CONCRETE SURFACES SHALL BE TRUE AND EVEN WITH THE EXISTING GRADE (1/4 INCH MAXIMUM OVER 10 FEET STRAIGHT EDGE). THE SURFACE GRADE AND FINISH MUST MATCH THE SURROUNDING AREA. THE FINISHED CONCRETE SHALL BE FREE OF VOIDS, MOUNDS, RIDGES, DEPRESSIONS, CRACKS, OR OTHER IRREGULARITIES. ANY CONCRETE DETERMINED TO BE SUBSTANDARD SHALL BE REMOVED AND REPLACED AT NO COST TO CEMC OR THE ENGINEER.
 2. CONCRETE RESTORATION SHALL ONLY OCCUR ALONG VERTICAL FORMS OR SAW CUT WALLS. WHEN POSSIBLE, SAW CUTS SHALL FOLLOW EXISTING JOINTS AND THE LAYOUT EXISTING CONCRETE SURFACE PATTERNS. NEWLY PLACED CONCRETE PAVEMENT SHALL BE PROTECTED FROM VEHICULAR AND PEDESTRIAN TRAFFIC UNTIL IT IS SUITABLY CURED. THE CONTRACTOR SHALL BE RESPONSIBLE FOR REPLACEMENT OF THE CONCRETE PAVEMENT NOT MEETING DESIGN DOCUMENTS AND/OR SPECIFICATIONS.
 3. CONCRETE SHALL BE THOROUGHLY MIXED TO ASSURE UNIFORM MIXTURE OF COMPONENTS WITHIN THE MASS.
 4. THE SELECTED CONTRACTOR SHALL VERIFY ALL DIMENSIONS FOR CONCRETE RESURFACING REQUIREMENTS.
 5. A. THE REQUIREMENTS OF AMERICAN CONCRETE INSTITUTE (ACI) 301, SPECIFICATIONS FOR STRUCTURAL CONCRETE, SHALL APPLY AS MODIFIED HEREIN.
 B. CONCRETE STRENGTH AT 28 DAYS: 3,000 PSI.
 C. TYPE 2 PORTLAND CEMENT, 560 POUNDS PER CUBIC YARD (LB/CU YD) MINIMUM.
 D. AGGREGATE: ASTM C33 SIZE 67 OR 57 (3/4 INCH OR 1 INCH)
 E. REINFORCEMENT: ASTM A615, GRADE 60.
 F. MAXIMUM WATER/CEMENTITIOUS MATERIAL RATIO: 0.45.
 G. SLUMP: 3 INCHES +/- 1 INCH.
 H. SET REINFORCEMENT ON CONCRETE DOBIE BLOCKS WITH EMBEDDED WIRE TIES.
 I. WATER SHALL BE POTABLE, AND FREE OF ACIDS, ALKALIES, AND ORGANIC MATERIAL.

- 6.2 CONCRETE MATERIALS
1. PORTLAND CEMENT SHALL CONFORM TO ASTM C-150 TYPE II.
 2. FINE AND COARSE AGGREGATES FOR NORMAL WEIGHT CONCRETE SHALL CONFORM TO ASTM C-33 AND SHALL CONFORM TO THE APPROPRIATE ASTM GRADING REQUIREMENT. AGGREGATES SHALL BE CLEAN, HARD AND UNIFORMLY GRADED SAND, CRUSHED ROCK OR GRAVEL, FREE FROM LOAM, CLAY OR ORGANIC MATTER. SOUND AGGREGATE SHALL BE USED AND SHALL HAVE A MAXIMUM DIAMETER OF 1.5-INCHES.
 3. WATER SHALL BE POTABLE AND FREE OF ACIDS, ALKALIS, AND ORGANIC MATERIALS.
 4. THE CONCRETE MIX SHALL PASS A COMPRESSIVE STRENGTH TEST OF 2,500 PSI AFTER 28 DAYS. IN CERTAIN LOCALITIES, 3,000 PSI COMPRESSIVE STRENGTH CONCRETE IS REQUIRED BY SEISMIC CODE.
 5. THE CONCRETE MIX SHALL HAVE A MINIMUM SLUMP OF 3-INCHES AND A MAXIMUM SLUMP OF 4-INCHES.
 6. THE CONTRACTOR SHALL SPECIFY THE CONCRETE MIX, AND PROVIDE A COPY OF THE CONCRETE SPECIFICATIONS FOR APPROVAL FROM CEMC AND THE ENGINEER PRIOR TO PLACEMENT. IF REQUESTED, THE NUMBER OF BAGS OF CEMENT PER YARD, COMPRESSIVE STRENGTH, VOLUME OF WATER, SLUMP, TYPE AND WEIGHT OF FINE AND COARSE AGGREGATES, AND TYPE AND AMOUNT OF ADMIXTURES SHALL BE ADDRESSED IN THE SPECIFICATION.
- 6.3 CONCRETE JOINTS
1. JOINTS SHALL BE PROVIDED IN PAVING WHERE THEY PREVIOUSLY EXISTED AND SHALL BLEND SMOOTHLY WITH THOSE EXISTING JOINTS. AS A GENERAL RULE, JOINT SPACING SHALL NOT EXCEED 15 FEET.
 2. THE CONTRACTOR SHALL INSTALL THE SAME TYPE OF JOINT AS THOSE IN EXISTING SLAB.
 3. JOINTS SHALL BE PROVIDED ALONG PROPERTY LINES, WHERE ENTRY RAMPS CROSS AND AT CHANGES IN GRADE OR SLOPE.
 4. SAW CUT CONTROL JOINTS SHALL BE CUT 4 TO 12 HOURS AFTER CONCRETE IS POURED, OTHERWISE USE TOOLED OR PREFORMED JOINT INSERTS.
 5. THE CONTRACTOR SHALL USE AQUA CRETE® OR EQUIVALENT SEALANT TO SEAL THE CONCRETE JOINTS. JOINT SURFACES SHALL BE THOROUGHLY CLEANED PRIOR TO APPLYING JOINT COMPOUND.
- 6.4 CONCRETE PLACEMENT
1. THE CONTRACTOR SHALL ASSURE THAT THE SUB-GRADE HAS BEEN PROPERLY PREPARED. NO CONCRETE SHALL BE POURED ON SOFT, SATURATED OR PUMPING SOIL, FROZEN SOIL, ICE, SNOW, OR STANDING WATER.
 2. CONCRETE SHALL BE POURED IN ACCORDANCE WITH COMMONLY ACCEPTED INDUSTRY PRACTICES.
 - THE CONTRACTOR SHALL PREVENT OVERWORKING AND AGGREGATE SEGREGATION.
 - THE CONCRETE SHALL BE ADEQUATELY TAMPED OR VIBRATED TO PREVENT VOIDS OR HONEYCOMBING.
 - AREA BETWEEN JOINTS SHALL BE CAST AS ONE CONTINUOUS POUR.
 - CONCRETE CURBS SHALL BE MONOLITHICALLY POURED WITH THE ADJACENT CONCRETE PAVING, UNLESS PRIOR APPROVAL FROM THE ENGINEER IS OBTAINED.
 - THE MAXIMUM ALLOWABLE TRAVEL TIME TO THE SITE IN HOT WEATHER WILL BE 1 HOUR AND 15 MINUTES AND COLD WEATHER WILL BE 2 HOURS.
- 6.5 CONCRETE FINISHING
1. THE CONTRACTOR SHALL FINISH THE CONCRETE IN ACCORDANCE WITH STANDARD INDUSTRY PRACTICES.
 - AFTER ALL THE BLEED WATER HAS DISAPPEARED, THE CONTRACTOR SHALL FLOAT THE FLAT SURFACE BY HAND USING A TROWEL.
 - AFTER FLOATING, A SOFT CONCRETE FINISH BROOM SHALL BE USED TO FINISH THE SURFACE TO MATCH THE EXISTING CONCRETE FINISH.
 2. DRY CEMENT SHALL NOT BE USED TO REMOVE EXCESS WATER FROM THE SURFACE. FINISH WORK MUST BE DELAYED UNTIL THE WATER SHEEN HAS DISAPPEARED.
 3. WATER SHALL NOT BE ADDED TO EASE THE FINISHING.
 4. CARE SHALL BE USED TO NOT OVERWORK THE SURFACE.
 5. CONSTRUCTION/CONTROL JOINTS AND EDGES SHALL BE HAND-TOOLED TO A 1/4-INCH RADIUS.

7.0 ELECTRICAL

- 7.1 GENERAL
1. THE LOCAL AUTHORITY AND BUILDING CODES, INCLUDING THE NATIONAL ELECTRIC CODE (NEC), ARE USED TO DICTATE THE SPECIFIC TYPE OF ELECTRICAL ENCLOSURES AND RACEWAYS THAT ARE REQUIRED FOR USE IN SPECIFIC HAZARDOUS AND NON-HAZARDOUS LOCATIONS.
 2. ALL WORK WILL BE PERFORMED IN ACCORDANCE WITH THE NEC, LOCAL CODES WILL GOVERN, BUT ANY DIFFERENCES SHOULD BE POINTED OUT TO THE LOCAL AUTHORITY. ALL WORK SHALL CONFORM TO THE REGULATIONS AND SPECIFICATIONS OF THE LOCAL POWER COMPANY PROVIDING THE SERVICE.
 3. ELECTRICAL WORK SHALL ONLY BE CONDUCTED BY AN ELECTRICAL CONTRACTOR WHO IS LICENSED IN THE STATE WHERE THE WORK IS TO BE PERFORMED.
- 7.2 ELECTRICAL SERVICE
1. THE CONTRACTOR SHALL INSTALL A WEATHER-TIGHT MAIN ELECTRICAL BREAKER/DISCONNECT PANEL LOCATED OUTSIDE THE SVE/AS EQUIPMENT ENCLOSURE AS SHOWN ON THE SITE PLANS. THE MAIN PANEL SHALL HAVE A LOCKABLE DISCONNECT/SHUT-OFF SWITCH. THE CONTRACTOR SHALL INSTALL THE POWER AS REQUIRED BY THE ENGINEER.
 2. ALL SERVICE EQUIPMENT SHALL BE ENCLOSED IN A WATER-TIGHT NATIONAL ELECTRICAL MANUFACTURERS ASSOCIATION (NEMA) ENCLOSURE, IF EXPOSED TO THE ELEMENTS.
 3. THE POWER METER IS TYPICALLY SUPPLIED AND INSTALLED BY THE LOCAL POWER UTILITY COMPANY.

4. IF THREE-PHASE POWER IS REQUIRED AND ONLY SINGLE-PHASE POWER IS AVAILABLE, A PHASE CONVERTER SHALL BE USED FOR THOSE COMPONENTS REQUIRING SUCH SERVICE. THE EQUIPMENT VENDOR SHALL ENSURE THAT ALL ELECTRICAL MOTORS AND CONTROLS ARE RATED FOR CONVERTER USE, AND CAN WITHSTAND THE ADDITIONAL HEAT BUILDUP CAUSED BY PHASE CONVERTER USE.
- 7.3 ELECTRICAL SERVICE DISCONNECTS
 1. THE CONTRACTOR SHALL INSTALL ALL SERVICE DISCONNECT SWITCHES NECESSARY TO SAFELY SHUTDOWN AND LOCKOUT THE SVE/AS EQUIPMENT.
 2. AT A MINIMUM, THE SWITCHES SHALL BE CONTAINED IN A WATER-TIGHT NEMA 4 PANEL.
 3. THE CONTRACTOR SHALL INSTALL AN EMERGENCY STOP SWITCH ON THE EXTERIOR OF THE COMPOUND.
 - 7.4 ELECTRICAL ABOVE GROUND CONDUITS AND ENCLOSURES
 1. THE CONTRACTOR SHALL INSTALL THREADED RIGID GALVANIZED METAL CONDUIT IN ALL ABOVEGROUND INSTALLATIONS, UNLESS OTHERWISE SPECIFIED BY THE ENGINEER.
 2. THREADED JOINTS SHALL BE INSTALLED PER LOCAL CODE WITH AT LEAST FIVE THREADS FULLY ENGAGED.
 3. ALL COUPLINGS, UNIONS, JUNCTION BOXES, DEVICE BOXES, AND CONDUIT BODIES SHALL HAVE TIGHT JOINTS.
 4. IN UNCLASSIFIED AREAS, LIQUID-TIGHT FLEXIBLE NONMETALLIC TUBING MAY BE USED TO MAKE CONNECTIONS TO MOTORS AND OTHER ELECTRICAL EQUIPMENT. THE MAXIMUM LENGTH SHALL NOT EXCEED 18 INCHES.
 5. WIRE NUTS OR TWIST-LOCK TERMINATIONS SHALL NOT BE USED FOR GROUND, MOTOR, OR POWER CONNECTIONS.
 - 7.5 ELECTRICAL GROUNDING
 1. THE CONDUIT SYSTEM AND NEUTRAL CONDUCTORS SHALL BE GROUNDED IN ACCORDANCE WITH LOCAL CODE. GROUND TESTING SHALL BE DOCUMENTED AND SUBMITTED TO THE ENGINEER.

8.0 CONSTRUCTION DETAILS

- 8.1 EQUIPMENT ENCLOSURE
1. INSTALL FENCING, BOLLARDS, AND EQUIPMENT ENCLOSURE AS SHOWN ON THE DESIGN PLANS.
 2. CONTRACTOR SHALL INSTALL THE FOLLOWING SIGNAGE ON ALL SIDES OF THE EQUIPMENT BUILDING AND INSIDE THE DOOR OF THE REMEDIATION EQUIPMENT BUILDING:
 - DANGER HIGH VOLTAGE
 - NO SMOKING
 - 24-HOUR CONTACT NUMBERS
 - PROPOSITION 65 SIGN
 - NFPA 704 SIGN
 - EMERGENCY CONTACT INFORMATION
 3. CONTRACTOR WILL SUPPLY AND INSTALL A YELLOW WALL MOUNT STORAGE BOX, KNOCK PADLOCK, FIRE BLANKET, AND FIRST AID KIT.

9.0 CONSTRUCTION SCHEDULE

1. THE CONTRACTOR SHALL CONFIRM A CONSTRUCTION SCHEDULE WITH THE ENGINEER AT LEAST ONE WEEK (5 BUSINESS DAYS) PRIOR TO ANY WORK AT THE SITE.
2. THE PROPOSED CONSTRUCTION SCHEDULE SHALL BE PRESENTED IN A TIME LINE FORMAT SHOWING ESTIMATED START DATE, DURATION AND COMPLETION TIMES FOR EACH ACTIVITY. ANY DEVIATION FROM THE ORIGINALLY PROPOSED SCHEDULE MUST BE COMMUNICATED TO THE ENGINEER WITHIN 24-HOURS.
3. THE CONTRACTOR SHALL MAKE PROPER AND TIMELY NOTIFICATION OF ALL WORK AND INSPECTIONS TO REGULATORY OR GOVERNING AGENCIES AS REQUIRED BY BUILDING AND OTHER CONSTRUCTION PERMITS.

10.0 CONTRACTOR SAFETY REQUIREMENTS

1. THE CONTRACTOR IS RESPONSIBLE FOR THE SAFETY OF HIS PERSONNEL AND SUBCONTRACTOR PERSONNEL. THE CONTRACTOR SHALL CONFORM WITH THE ENGINEER'S AND CEMC BEHAVIOR BASED SAFETY PROGRAM REQUIREMENTS. AT A MINIMUM THE CONTRACTOR SHALL:
 - DEVELOP AND HAVE AVAILABLE SITE SPECIFIC HEALTH AND SAFETY PLAN (HASP) AND JOURNEY MANAGEMENT PLAN (JMP) WHICH CONFORMS TO THE ENGINEER'S AND CEMC STANDARDS. CEMC REPRESENTATIVE WILL REVIEW HASP AND JMP PRIOR TO START OF FIELD WORK.
 - DEVELOP AND HAVE AVAILABLE ON SITE JOB SAFETY ANALYSIS (JSA) FORMS OUTLINING THE TASKS TO BE PERFORMED, THE JOB STEPS, THE HAZARDS, AND THE MITIGATING PROCEDURES TO MINIMIZE RISK AND MAXIMIZE SAFETY. CEMC REPRESENTATIVE WILL REVIEW JSAs PRIOR TO START OF FIELD WORK.
 - COMPLETE THE CEMC PERMIT-TO-WORK PROCESSES AND PROCEDURES.
 - CONDUCT AND DOCUMENT A TAILGATE SAFETY MEETING EACH MORNING AND AFTERNOON WHEN SITE WORK IS TO BE PERFORMED.
 - ENSURE COMPLIANCE WITH ALL FEDERAL AND STATE OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION (OSHA) AND LOCAL SAFETY REGULATIONS.
 - MEET REQUIREMENTS OF CEMC SHORT SERVICE EMPLOYEE (SSE) PROCESS.
 - ENSURE THE APPROPRIATE PERSONNEL HAVE RECEIVED DEFENSIVE DRIVING TRAINING.
2. WORK HOURS SHALL BE DURING DAYLIGHT HOURS ONLY, UNLESS APPROVED BY THE CEMC PROJECT MANAGER AND ENGINEER PRIOR TO THE WORK BEING PERFORMED. WEEKEND WORK WILL NOT BE ALLOWED, UNLESS APPROVED BY CHEVRON PROJECT MANAGER AND ENGINEER PRIOR TO THE WORK BEING PERFORMED. WORK HOURS MAY BE DICTATED BY THE LOCAL PLANNING DEPARTMENT OR THE BUILDING PERMIT.
3. THE CONTRACTOR SHALL HAVE SUFFICIENT QUANTITIES AND QUALITY OF HARD HATS, GOGGLES, SAFETY GLASSES, REFLECTIVE VESTS, AND GLOVES ON SITE TO OUTFIT ALL CONTRACTOR WORKERS, AND PROVIDE FOR A SECURE WORK AREA.

4. THE CONTRACTOR SHALL SECURE ALL WORK AREAS WITH BARRICADES, SNOW FENCE, OR TEMPORARY CHAIN LINK FENCE TO PROTECT THE WORK AREA FROM INTRUSION BY UNAUTHORIZED VEHICLES OR PEDESTRIANS. WHEN CONDITIONS WARRANT, THE CONTRACTOR SHALL PROVIDE TRAFFIC FLAGGERS IN ADDITION TO BARRICADES TO CONTROL INGRESS AND EGRESS FROM THE WORK AREA. A TRAFFIC CONTROL PLAN SHALL BE INCLUDED IN THE CONTRACTOR HASP.
5. A PRE-CONSTRUCTION SAFETY MEETING SHALL BE HELD AT THE SITE WITHIN TWO WEEKS PRIOR TO THE ANTICIPATED START OF CONSTRUCTION. THE PRE-CONSTRUCTION SAFETY MEETING SHALL BE ATTENDED BY CEMC, THE ENGINEER, THE CONTRACTOR, AND OTHER INTERESTED PARTIES.
 - AS THE SITE IS AN ACTIVE BUSINESS, THE SITE OWNER/MANAGER MUST BE PRESENT TO DISCUSS IMPACTS TO THE FACILITY ACTIVITIES.
 - THE BASIS FOR THE JMP IS TO BE DISCUSSED DURING THE MEETING. INGRESS AND EGRESS FOR EQUIPMENT AND DELIVERIES, EXCLUSION ZONES, IMPACTS ON VEHICLE AND PEDESTRIAN TRAFFIC, AND EMERGENCY RESPONSE ARE TO BE DISCUSSED AND DOCUMENTED DURING THE MEETING.
6. THE CONTRACTOR SHALL HAVE ACCESS TO AT LEAST ONE 20-POUND DRY CHEMICAL TYPE-ABC FIRE EXTINGUISHER AT THE SITE, WITH CURRENT INSPECTION TAGS, DURING ALL CONSTRUCTION ACTIVITIES.
7. THE CONTRACTOR SHALL CONTAIN LOOSE DEBRIS AND STORE CONSTRUCTION MATERIALS ON A DAILY BASIS MAKE SURE THAT THE WORK AREA IS CLEAN AND ORDERLY PRIOR TO DEPARTURE FROM THE SITE.

11.0 EQUIPMENT

1. EQUIPMENT TO BE PROVIDED TO THE CONTRACTOR BY THE ENGINEER FOR INSTALLATION, IS DESCRIBED ON SHEET M-1, M-2, AND M-3 (PROCESS AND INSTRUMENTATION DIAGRAM) AND IS INCLUDED ON SHEET G-2 (MAJOR EQUIPMENT AND INSTRUMENT LIST). EQUIPMENT NOT EXPLICITLY DETAILED AS SUPPLIED BY THE ENGINEER ON SHEETS M-1, M-2, M-3, AND G-2 SHALL BE SUPPLIED BY THE CONTRACTOR.
2. CONTRACTOR TO SUPPLY AND INSTALL A MINIMUM OF TWO (2) 20-POUND CLASS ABC FIRE EXTINGUISHERS IN ALL WEATHER FIRE EXTINGUISHER CABINETS IN ACCORDANCE WITH CEMC REQUIREMENTS AND LOCAL FIRE CODE.

12.0 SAFETY/CLEANUP

1. THE CONTRACTOR SHALL CONDUCT TASK IMPROVEMENT PROCESS (TIP) IN ACCORDANCE WITH ARCADIS POLICY AND PROCEDURES.
2. ALL EMPLOYEES OF THE CONTRACTOR SHALL BE CURRENT WITH THEIR 40- HOUR HAZWOPER TRAINING AND 8-HOUR REFRESHER.
3. CONTRACTOR SHALL MARK ALL POTENTIAL OVERHEAD AND/OR TRIP HAZARDS IN YELLOW.
4. THE CONTRACTOR SHALL HAVE SUFFICIENT QUANTITIES OF PERSONAL PROTECTIVE EQUIPMENT (PPE) AND SAFETY EQUIPMENT ON SITE TO OUTFIT ALL CONTRACTOR AND SUBCONTRACTOR WORKERS, AND PROVIDE FOR A SECURE WORK AREA.
5. THE CONTRACTOR SHALL HAVE ACCESS TO AT LEAST ONE FIRST AID KIT, EYEWASH STATION, AND 20-POUND CLASS ABC FIRE EXTINGUISHER, WITH CURRENT INSPECTION TAGS AT THE SITE, DURING ALL CONSTRUCTION ACTIVITIES.

13.0 INSPECTIONS

1. ALL SITE INSPECTIONS REQUIRE A MINIMUM OF 24 HOURS NOTICE BEFORE START OF WORK. CONTRACTOR SHALL BE RESPONSIBLE FOR SCHEDULING, FACILITATING, AND OBTAINING ALL REQUIRED INSPECTIONS, INCLUDING CITY OF OAKLAND, ALAMEDA COUNTY.

Permits

December 18, 2017

BAY AREA
AIR QUALITY
MANAGEMENT
DISTRICT

Chevron Environmental Management Company
2300 Clayton Rd, Suite #400
Concord, CA 94520

Attention: Jesse Brockman

ALAMEDA COUNTY
Pauline Russo Cutter
Scott Haggerty
Rebecca Kaplan
Nate Miley

Application Number: 25427
Plant Number: 21947
Equipment Location:
706 Harrison Street
Oakland, CA 94607

CONTRA COSTA COUNTY
John Gioia
David E. Hudson
(Vice Chair)
Karen Mitchoff
Mark Ross

Dear Applicant:

Enclosed is your Permit to Operate the following:

MARIN COUNTY
Katie Rice
(Secretary)

- S-1 Soil Vapor Extraction System, 300 scfm vacuum blower
abated by
- A-1 SVE Abatement System, Electric Catalytic Oxidizer/Carbon Adsorption or two Carbon Vessels

NAPA COUNTY
Brad Wagenknecht

The equipment described above is subject to condition no. 26078.

SAN FRANCISCO COUNTY
Hillary Ronen
Jeff Sheehy

In accordance with Regulation 2-1-411.2, you must sign your Permit to Operate. All Permits should be posted in a clearly visible and accessible place on or near the equipment to be operated, or kept available for inspection at any time. Operation of this equipment in violation of District Regulations or any permit conditions is subject to penalty action.

SAN MATEO COUNTY
David J. Canepa
Carole Groom
Doug Kim

In the absence of specific permit conditions to the contrary, the throughputs, fuel and material consumption, capacities, and hours of operation described in your permit application will be considered maximum allowable limits. A new permit will be required before any increase in these parameters, or change in raw material handled may be made.

SANTA CLARA COUNTY
Margaret Abe-Koga
Cindy Chavez
Liz Kniss
(Chair)
Rod G. Sinks

Please include your permit number with any correspondence with the District. If you have any questions on this matter please call Flora W Chan, Air Quality Engineer II at (415) 749-4630.

SOLANO COUNTY
Pete Sanchez
James Sperring

Very truly yours,

SONOMA COUNTY
Teresa Barrett
Shirlee Zane

PERMIT TO OPERATE

PLANT No. 21947

SOURCE No. 1

Chevron Environmental Management Company

706 Harrison Street, Oakland, CA 94607

IS HEREBY GRANTED A PERMIT TO OPERATE THE FOLLOWING EQUIPMENT

Soil Vapor Extraction System, 300 scfm vacuum blower

abated by

A-1 SVE Abatement System
SVE Abatement System, Electric Catalytic Oxidizer/Carbon Adsorption or two Carbon Vessels

Subject to attached condition no. 26078.¹

ACTING DIRECTOR
ENGINEERING DIVISION

Permit Issue Date December 18, 2017
Reported Start Up Date December 6, 2017
Permit Expiration Date December 6, 2018

By Sanjeev Kambhij

Right of Entry

The Air Pollution Control Officer of the Bay Area Air Quality Management District, the Chairman of the California Air Resources Board, the Regional Administrator of the Environmental Protection Agency, and/or their designees, upon presentation of credentials, shall be granted the right of entry to any premises on which an air pollution source is located for the purposes of: i) the inspection of the source ii) the sampling of materials used at the source iii) the conduction of an emissions source test iv) the inspection of any records required by District rule or permit condition.

Permit Expiration

In accordance with Regulation 3-408, a Permit to Operate is valid for 12 months from the date of issuance or other time period as approved by the APCO. Use of this Permit to Operate is authorized by the District until the later of: the Permit Expiration Date or the Permit Renewal Date. Permit to operate fees will be prorated as described in Regulation 3-402 when the permit is renewed.

This permit does not authorize violation of the rules and regulations of the BAAQMD or the Health and Safety Code of the State of California. District regulations may be viewed on line at www.baaqmd.gov. This permit is not transferable to another person without approval from the District. It is the responsibility of the permit holder to have knowledge of and be in compliance with all District Rules and Regulations.

1. Compliance with conditions contained in this permit does not mean that the permit holder is currently in compliance with District Rules and Regulations.

Permit Holder Must Sign Here _____

Plant Name: Chevron Environmental Management Company

Source No. 1 Soil Vapor Extraction System, 300 scfm vacuum blower

Condition No. 26078

Plant No. 21947

Application No. 25427

1. The owner/operator shall abate the Precursor Organic Compound (POC) emissions from Source S-1 by A-1, SVE Abatement System, consisting of either an Electric Catalytic Oxidizer, or two (200 lbs minimum capacity) Activated Carbon Vessels during all periods of operation. Start-up and subsequent operation of each abatement device shall take place only after written notification of same has been received by the District's Engineering Division. The owner/operator shall operate the sources such that the soil vapor flow rate from S-1 shall not exceed 300 scfm.
[Basis: Cumulative Increase, Regulation 8-47-301 and 302, TBACT]
2. The owner/operator shall operate A-1 Electric Catalytic Oxidizer such that the POC abatement efficiency shall be maintained at a minimum of 98.5% by weight for inlet POC concentrations greater than or equal to 2000 ppmv (measured as hexane). For inlet concentrations below 2000 ppmv and greater than or equal to 200 ppmv, a minimum abatement efficiency of 97% shall be maintained by the owner/operator. For inlet concentrations below 200 ppmv, a minimum abatement efficiency of 90% shall be maintained by the owner/operator. The minimum abatement efficiency shall be waived if outlet POC concentrations are shown to be less than 10 ppmv (measured as hexane). In no event shall the owner/operator emit benzene emissions to the atmosphere exceeding 0.078 pounds per day. [Basis: Cumulative Increase, Regulation. 2-5, TBACT]
3. While operating the Electric Catalytic Oxidizer, the owner/operator shall not operate A-1 below a minimum operating temperature of 600 degrees Fahrenheit. [Basis: Cumulative Increase, Regulation 2-5, TBACT]
4. To determine compliance with part 3, the owner/operator shall equip the A-1 Electric Catalytic Oxidizer with continuous measuring and temperature recording instrumentation. The owner/operator shall collect and maintain the temperature data from the temperature recorder in a file which shall be available for District inspection for a period of at least 2 years following the date on which such data are recorded. [Basis: Regulation 1-523]
5. To determine compliance with part 3, within ten days after start-up of the Electric Catalytic Oxidizer, the owner/operator of this source shall:
 - a. Analyze inlet gas stream to determine the flow rate and concentration of POC present.

Plant Name: Chevron Environmental Management Company

Source No. 1 Soil Vapor Extraction System, 300 scfm vacuum blower

Condition No. 26078

Plant No. 21947

Application No. 25427

- b. Analyze exhaust gas to determine the flow rate, and the concentration of benzene and POC present.
 - c. Calculate the benzene emission rate in pounds per day based on the exhaust gas analysis and the operating exhaust flow rate. The owner/operator shall decrease the soil vapor flow rate, if necessary to demonstrate compliance with part 2.
 - d. Calculate the POC abatement efficiency based on the inlet and exhaust gas analysis. For the purpose of determining compliance with part 2, the owner/operator shall report the POC concentration as hexane.
 - e. Submit to the District's Engineering Division the test results and emission calculations within one month from the testing date. The owner/operator shall analyze samples according to modified EPA test methods 8015 and 8020 or their equivalent to determine the concentrations of POC and benzene.
[Basis: Cumulative Increase, Regulation 2-5, TBACT]
6. The owner/operator of this source shall maintain the following records for each month of operation of the Electric Catalytic Oxidizer:
- a. Days and hours of operation.
 - b. Each emission test, analysis or monitoring results logged in for the day of operation they were taken.
 - c. Total throughput of soil vapor from source S-1 in Standard Cubic Feet.
- Such records shall be retained and made available for inspection by the District for two years following the date the data is recorded. [Basis: Regulation 1-523]
7. The owner/operator shall use a portable analyzer to take NOx and CO emission readings during the start-up. The results shall be submitted to the Engineering Division within 30 days of start-up.
8. During operation of the Activated Carbon Vessels, the owner/operator of this source shall monitor with a photo-ionization detector (PID), flame-ionization detector (FID), or other method approved in writing by the District's Source Test Manager at the following locations:
- a. At the inlet to the second to last carbon vessel in series.
 - b. At the inlet to the last carbon vessel in series.
 - c. At the outlet of the carbon vessel that is last in series prior to venting to the atmosphere.

When using an FID to monitor breakthrough, readings may

Plant Name: Chevron Environmental Management Company

Source No. 1 Soil Vapor Extraction System, 300 scfm vacuum blower

Condition No. 26078

Plant No. 21947

Application No. 25427

be taken with and without a carbon filter tip fitted on the FID probe. Concentrations measured with the Carbon filter tip in place shall be considered methane for the purpose of these permit conditions. [Basis: Cumulative Increase, Regulation 2-5, TBACT]

9. The owner/operator shall record these monitor readings in a monitoring log at the time they are taken. The owner/operator shall use the monitoring results to estimate the frequency of Carbon change-out necessary to maintain compliance with parts 11 and 12, and shall be conducted on a daily basis. The owner/operator of this source may propose for District review, based on actual measurements taken at the site during operation of the source, that the monitoring schedule be changed based on the decline in organic emissions and/or the demonstrated breakthrough rates of the carbon vessels. Written approval by the District's Engineering Division must be received by the owner/operator prior to a change to the monitoring schedule. [Basis: Cumulative Increase, Regulation 2-5, TBACT]
10. The owner/operator shall immediately change out the second to last Carbon vessel with unspent carbon upon breakthrough, defined as the detection at its outlet of the higher of the following:
 - a. 10 % of the inlet stream concentration to the carbon bed.
 - b. 10 ppmv (measured as hexane).[Basis: Cumulative Increase, Regulation 2-5, TBACT]
11. The owner/operator shall immediately change out the last carbon vessel with unspent Carbon upon detection at its outlet of 10 ppmv (measured as hexane). [Basis: Cumulative Increase, Regulation 2-5, TBACT]
12. The owner/operator of this source shall maintain the following information for each month of operation of the Activated Carbon Vessels:
 - a. Hours and time of operation.
 - b. Each emission test, analysis or monitoring results logged in for the day of operation they were taken.
 - c. The number of Carbon vessels removed from service.
 - d. Total throughput of soil vapor from source S-1 in Standard Cubic Feet.

Such records shall be retained and made available for inspection by the District for two years following the date the data is recorded. [Basis: Regulation 1-523]
13. The owner/operator shall report any non-compliance with these conditions to the Compliance and Enforcement

Plant Name: Chevron Environmental Management Company

Source No. 1 Soil Vapor Extraction System, 300 scfm vacuum blower

Condition No. 26078

Plant No. 21947

Application No. 25427

Division at the time that it is first discovered. The owner/operator shall detail the corrective action taken and include the data showing the exceedance as well as the time of occurrence in the submittal. [Basis: Cumulative Increase; Regulation 2-5, TBACT]

14. The owner/operator shall maintain a file containing all measurements, records and other data that are required to be collected pursuant to the various provisions of this conditional Authority to Construct/Permit to Operate. All measurements, records and data required to be maintained by the owner/operator shall be retained for at least two years following the date the data is recorded. [Basis: Regulation 1-523]
15. Upon final completion of the remediation project, the operator of Sources S-1 shall notify the Engineering Division within two weeks of decommissioning the operation. [Basis: Cumulative Increase, Regulation 2-5, TBACT]

End of Conditions

APPENDIX C

Abbreviations:

% = percent
 kWh = kilowatt hours
 kW = kilowatt
 Hz = Hertz
 acfm = actual cubic feet per minute
 deg. F = degrees Fahrenheit
 inWC = inches water column
 inHg = inches mercury
 scfm = standard cubic feet per minute
 PID = photo ionization detector, calibrated with 100 ppmv hexane. A carbon tip is not used for readings.
 VOC = volatile organic compound
 ppmV = parts per million by volume
 lbs = pounds
 --- = not measured/not applicable

Operating Permit: Authority to Construct (ATC), Plant No. 21947, Application No. 25427.

Permit Operational Conditions:
 1. The soil vapor flow from the source shall not exceed 300 scfm. (Item 1)
 2. Electric Catalytic Oxidizer Abatement Efficiency:
 -98.5% for inlet concentrations >2000ppmV
 -97% for inlet concentrations <2000ppmV and >200ppmV
 -90% for inlet concentrations <200ppmV
 -destruction efficiency is waived if effluent concentrations <10ppmV
 -benzene emission rate <0.078 lbs/day
 3. Electric Catalytic Oxidizer to operate at a minimum of 600 degrees Fahrenheit

Calculations:

Destruction Efficiency %

$$= \left(1 - \frac{\text{Effluent PID, ppmV}}{\text{Influent 2 PID, ppmV}} \right) 100$$

Mass Removal Rate

$$\frac{\text{lbs}}{\text{day}} = \left(\frac{\text{MW g}}{1 \text{ mol}} \right) \left(\frac{1 \text{ lb}}{453.6 \text{ g}} \right) \left(\frac{1 \text{ mol}}{24.46 \text{ L}} \right) \left(\frac{1 \text{ L}}{0.03531 \text{ std cu ft}} \right) \left(\frac{\text{CONC ppmV}}{1 \times 10^6 / \text{ppmV}} \right) (\text{SCFM})(1440 \text{ min})$$

Where:

MW = molecular weight of hexane, 86.18 g/mol
 g = grams
 mol = 1 mole of gas
 L = Liters volume at STP (77 deg.F and 29.92 inWC)
 std cu ft = standard cubic feet

Definitions:

lbs = pounds
 ppmV = Parts per million by volume
 scfm = Standard cubic feet per minute
 B = Benzene Benzene
 T = Toluene Toluene
 E = Ethylbenzene Ethylbenzene
 X = Total Xylenes Total Xylenes
 MtBE = Methyl tertiary-butyl ether
 TPHg = Total purgeable hydrocarbons as gasoline
 --- = Data not available
 < = Less than stated laboratory method reporting limit

Calculations:

Mass Removal/Emission Rate

$$\frac{lbs}{day} = \left(\frac{MW \text{ g}}{1 \text{ mol}} \right) \left(\frac{1 \text{ lb}}{453.6 \text{ g}} \right) \left(\frac{1 \text{ mol}}{24.46 \text{ L}} \right) \left(\frac{1 \text{ L}}{0.03531 \text{ std cu ft}} \right) \left(\frac{CONC \text{ ppmV}}{1 \times 10^6 / \text{ppmV}} \right) (SCFM)(1440 \text{ min})$$

Where:

MW = molecular weight
 g = grams
 mol = 1 mole of gas
 L = Liters volume at STP (77 deg.F and 29.92 inWC)
 std cu ft = standard cubic feet

Molecular Weights:

TPHg 100.00
 Benzene 78.77

**VOC MASS REMOVAL RATE AND
CUMULATIVE MASS REMOVED VERSUS TIME**
Soil Vapor Extraction - Air Sparge System
706 Harrison Street
Oakland, CA

Notes
lbs/hr = pounds per hour
lbs = pounds

▲ Mass Removal Rate
■ Cumulative Mass Removed

APPENDIX D

SVE Sample Laboratory Reports

Date of Report: 09/19/2018

Carl Edwards

Arcadis- San Jose

6296 San Ignacio Ave, Suite C&D

San Jose, CA 95119

Client Project: 351646

BCL Project: 0752

BCL Work Order: 1828850

Invoice ID: B316519

Enclosed are the results of analyses for samples received by the laboratory on 9/14/2018. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Contact Person: Molly Meyers

Client Service Rep

Stuart Buttram

Technical Director

Certifications: CA ELAP #1186; NV #CA00014; OR ELAP #4032-001; AK UST101

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

UNION OIL OF CALIFORNIA
SEMI-ANNUAL GROUNDWATER MONITORING REPORT
FIRST QUARTER 2019
April 10, 2019

Facility No.: 0752/Yee/Gin Address: 706/726/800 Harrison Street, Oakland, California
Comingled Plume

Consulting Company/Contact Person/Phone No.: Arcadis / Katherine Szymanowski / 510.596.9675
Primary Agency/Contact Person/Regulatory ID No.: Alameda County Department of Environmental Health
(ACDEH) / Mr. Jonathan E. Sanders / Case No. RO0000231

WORK PERFORMED DURING THIS REPORTING PERIOD (First Quarter 2019):

Gettler-Ryan, Inc. (G-R) conducted groundwater monitoring and sampling on February 7, 2019. Field data sheets and general procedures are included as **Attachment A**. Eight (8) groundwater monitoring wells (MW-1 through MW-8) associated with Unocal station #0752 located at 800 Harrison Street were gauged and sampled, five (5) wells (MW-2, MW-3, MW-4, MW-5 and MW-7) associated with 706 Harrison Street (GIN) were gauged and sampled, and nine (9) wells (MW-1 through MW-6, EW-1, MP-1, MPE-1) associated with 726 Harrison Street (YEE) were gauged and sampled during this monitoring event. Wells MW-1 and MW-6 associated with 706 Harrison were not accessible during this event as MW-1 was located underneath a trailer and G-R was unable to locate well MW-6. MW-1 (located at 706 Harrison) was removed from the scope since the system trailer is parked over this well. Well raising will be performed at well MW-6 so that sampling can continue at this well.

Groundwater samples were analyzed for total purgeable petroleum hydrocarbons (TPPH) by Environmental Protection Agency (EPA) Method 8260B-GC/MS; benzene, toluene, ethylbenzene, and total xylenes (BTEX, collectively), and methyl tert-butyl ether (MTBE) by EPA Method 8260B.

The site location map, site plan, and the groundwater elevation contour map are presented on **Figures 1** through **3**, respectively. Concentration maps for TPPH, benzene, and MTBE are on **Figures 4** through **6**, respectively. Current groundwater gauging and analytical results are summarized in **Table 1**, historical groundwater gauging and analytical results are summarized in **Table 2**, and historical groundwater data for 800 Harrison Street is included as **Attachment B**. A copy of the laboratory analytical report and chain-of-custody documentation is included as **Attachment C**.

In August 2013, Muir Consulting, Inc. (Muir) completed a survey of all the well locations for 726 Harrison Street. The updated survey elevations are presented in **Tables 1** and **2**. A survey discrepancy prevented the conversion of the elevations for 706 Harrison Street. Therefore, the elevations for 706 Harrison remained the same for this quarter's groundwater contouring and are presented on the groundwater contour map separately.

In accordance with the approved *Remedial Action Plan* (RAP) and *RAP Addendum*, an Air Sparge/Soil Vapor Extraction (AS/SVE) system was installed between June and August 2017 to address the elevated concentrations at 706 and 726 Harrison Street. The system was turned on September 6, 2018. Details of first Quarter 2019 system operation are included in Attachment D.

WORK PROPOSED FOR THE NEXT REPORTING PERIOD (Second and Third Quarters 2019):

1. Perform groundwater monitoring and related reporting.
2. System startup, if required.

Current Phase of Project:	<u>Groundwater Monitoring/ Remediation</u>
Site Use:	<u>Active 76 branded service station/parking lots (YEE/GIN)</u>
Frequency of Sampling:	<u>Groundwater – Semi-Annually</u>
Frequency of Monitoring:	<u>Groundwater – Semi-Annually</u>
Are Separate-Phase Hydrocarbons (SPH) Present On-Site:	<u>No</u>
Cumulative SPH Recovered to Date:	<u>None</u>
SPH Recovered This Quarter:	<u>None</u>
Bulk Soil Removed to Date:	<u>Approximately 550 cubic yards</u>
Bulk Soil Removed this Quarter:	<u>None</u>

UNION OIL OF CALIFORNIA
SEMI-ANNUAL GROUNDWATER MONITORING REPORT
FIRST QUARTER 2019
April 10, 2019

Facility No.: 0752/Yee/Gin Address: 706/726/800 Harrison Street, Oakland, California
Comingled Plume

Water Wells or Surface Waters within a 2000' Radius and Their Respective Directions: There are no surface water bodies within a 2000' radius of the site. San Francisco Bay is located approximately 3000' southwest of the site.

Groundwater Use Designation: Potential Drinking Water Source – Santa Clara Valley – East Bay Plain

Current Remediation Techniques: AS/SVE

Permits for Discharge (No.): None

Approximate Depth to Groundwater (at 800 Harrison Street [Unocal 0752] and 726 Harrison Street): 18.24 (Unocal 0752 MW-6) – 25.93 (726 Harrison MW-6) feet below top of casing

Measured Estimated

Approximate Groundwater Elevation (at 800 Harrison Street [Unocal 0752] and 726 Harrison Street): 8.60 (726 Harrison MW-6) – 17.46 (Unocal 0752 MW-2) feet relative to mean sea level

Measured Estimated

Approximate Depth to Groundwater (at 706 Harrison Street): 16.26 (MW-5) – 18.87 (MW-4) feet below top of casing

Measured Estimated

Approximate Groundwater Elevation (at 706 Harrison Street): 11.81 (MW-5) – 12.34 (MW-3) feet relative to mean sea level

Measured Estimated

Groundwater Gradient (at 800 Harrison Street): 0.007 ft/ft (Magnitude) South/southwest (Direction)

Groundwater Gradient (at 726 Harrison Street): 0.008 ft/ft (Magnitude) south/southwest (Direction)

Groundwater Gradient (at 706 Harrison Street): 0.005 ft/ft (Magnitude) south/southwest (Direction)

UNION OIL OF CALIFORNIA
SEMI-ANNUAL GROUNDWATER MONITORING REPORT
FIRST QUARTER 2019
April 10, 2019

Facility No.: 0752/Yee/Gin Address: 706/726/800 Harrison Street, Oakland, California
Comingled Plume

DISCUSSION:

Groundwater conditions during the current event generally were consistent with previous events. All constituents of concern (COCs) remained non-detect in the groundwater samples collected from well MW-2 and MW-4 at 800 Harrison Street, MW-2 at 726 Harrison Street, and MW-3, MW-5 and MW-7 at 706 Harrison Street.

706 Harrison Street:

The maximum dissolved concentrations of TPPH (31,000 micrograms per liter [$\mu\text{g/L}$]), toluene (63 $\mu\text{g/L}$), total xylenes (7,800 $\mu\text{g/L}$), and MTBE (120 $\mu\text{g/L}$) were detected in the sample collected from MW-2. Benzene and ethylbenzene were not detected above laboratory reporting limits in any of the samples collected from the wells at 706 Harrison Street. The constituents detected in the samples collected this event from the wells sampled at 706 Harrison Street decreased moderately to significantly since the last sampling event or remained non-detect above laboratory reporting limits.

726 Harrison Street:

The maximum dissolved concentrations of TPPH (10,000 $\mu\text{g/L}$), benzene (190 $\mu\text{g/L}$), ethylbenzene (27 $\mu\text{g/L}$), total xylenes (380 $\mu\text{g/L}$) and MTBE (5,000 $\mu\text{g/L}$) were detected in the sample collected from MW-1. Toluene was only detected above laboratory detection limits in monitoring well EW-1 at a concentration of 7.3 $\mu\text{g/L}$. The current concentrations of total xylenes and MTBE were at historic highs in wells EW-1. Additionally, the concentrations of TPPH and total xylenes were at historic highs in well MW-1. Concentrations of TPPH, total xylenes, and MTBE were also at historic highs in well MW-3. Concentrations of COCs in the samples collected from well MPE-1, MW-2, MW-4, MW-5; and benzene, toluene, and ethylbenzene in the sample collected from well MW-1 and MTBE in MW-6 decreased slightly to moderately from the last sampling event or remained non-detect above laboratory reporting limits.

800 Harrison Street:

The maximum dissolved concentration of TPPH (1,400 $\mu\text{g/L}$), ethylbenzene (1.0 $\mu\text{g/L}$), and MTBE (8.0 $\mu\text{g/L}$) were detected in the sample collected from MW-3. The maximum concentration of benzene was detected in well MW-7 (3.5 $\mu\text{g/L}$). Toluene and total xylenes detected only in monitoring well MW-5 at concentrations of 2.0 $\mu\text{g/L}$ and 3.6 $\mu\text{g/L}$, respectively. Concentrations decreased slightly to moderately or remained non-detect above laboratory reporting limits since the last sampling event with the exception of TPPH in well MW-1, benzene and MTBE in well MW-3, TPPH in MW-6, and TPPH in MW-8. The current concentration of TPPH in well MW-8 (1,000 $\mu\text{g/L}$) is a historic high at this well.

Groundwater elevations at the site for 726 and 800 Harrison Street vary by approximately 5 feet, due to a low groundwater elevation at MW-6 at 726 Harrison Street. Well MW-6 at 726 Harrison Street is not used in calculating the hydraulic gradient as it is located in a lower water bearing zone. The groundwater elevations at the remaining wells at 800 and 726 Harrison Street create a gentle hydraulic gradient of 0.007 feet per foot (ft/ft) and 0.008 ft/ft, respectively, with a south/southwest direction. Groundwater elevations at the wells at 706 Harrison Street create a relatively gentle hydraulic gradient of 0.005 ft/ft in a south/southwest direction.

CONCLUSIONS AND RECOMMENDATIONS:

The concentrations of COCs detected during the current event at 706, 726, and 800 Harrison Street were generally consistent with previous results. However, historical highs of select COCs were observed in several wells. Arcadis recommends continued semi-annual monitoring to further evaluate groundwater quality and concentration trends. In accordance with the approved RAP and RAP Addendum, the AS/SVE system to address the residual impacts was installed in 2017 and started in September 2018. Arcadis recommends system optimization be performed once weather allows increased operation without significant groundwater recovery.

Table 1
Current Groundwater Gauging and Analytical Results
76 Station 0752/YEE/GIN Comingled Plume
706/726/800 Harrison Street Oakland, California

Notes

Analytical results given in micrograms per liter.
Muir Consulting, Inc. completed a survey of 726 Harrison well locations on August 21, 2013. Elevation data for 800 Harrison Street was converted by using the National Geodetic Survey (NGS) online conversion calculator located from NAV29 to NAV88. The 706 Harrison Street data was not converted due to discrepancies with the data.
EPA Method 8260B for Volatile Organic Compounds.

Standard Abbreviations

--	not analyzed, measured, or collected
<	not detected at or above laboratory detection limit (Practical Quantitation Limit [PQL])
TOC	top of casing (surveyed reference elevation)
AMSL	above mean sealevel
DTW	depth to water
btoc	below top of casing
LPH	liquid-phase hydrocarbons
GW	groundwater
GWE	groundwater elevation
GC/MS	gas chromatography-mass spectrometry for TPPH
A01	PQLs and Method Detection Limits (MDLs) are raised due to sample dilution

Analytes

TPPH	total purgeable petroleum hydrocarbons (C6-C12)
MTBE	methyl tertiary butyl ether
EDB	1,2-dibromoethane
EDC	1,2-dichloroethane (same as ethylene dichloride)

Table 2
Historical Groundwater Gauging and Analytical Results
76 Station 0752/YEE/GIN Comingled Plume
706/726/800 Harrison Street Oakland, California

Notes

Analytical results given in micrograms per liter.

Muir Consulting, Inc. completed a survey of 726 Harrison well locations on August 21, 2013. Elevation data for 800 Harrison Street was converted by using the National Geodetic Survey (NGS) online conversion calculator located from NAV29 to NAV88. The 706 Harrison Street data was not converted due to discrepancies with the data.

EPA Method 8260B for Volatile Organic Compounds.

Standard Abbreviations

--	not analyzed, measured, or collected
*--	not surveyed
<	not detected at or above laboratory detection limit (Practical Quantitation Limit [PQL])
AMSL	above mean sealevel
btoc	below top of casing
DTW	depth to water
GC/MS	gas chromatography–mass spectrometry for TPPH
GW	groundwater
GWE	groundwater elevation
J	estimated value
LPH	liquid-phase hydrocarbons
TOC	top of casing (surveyed reference elevation)
µg/L	micrograms per liter (approx. equivalent to parts per billion, ppb)
**	Survey completed 8/21/2013
8260B	EPA Method 8260B for Volatile Organic Compounds
A01	PQLs and Method Detection Limits (MDLs) are raised due to sample dilution
A90	TPPH does not exhibit a "gasoline" pattern, TPPH is entirely due to MTBE
S05	the sample holding time was exceeded
S09	the surrogate recovery on the sample was not within the control limits

Analytes

TPPH	total purgeable petroleum hydrocarbons
MTBE	methyl tertiary butyl ether
EDB	1,2-dibromoethane
EDC	1,2-dichloroethane (same as ethylene dichloride)

Table 2A
Historical Additional Groundwater Analytical Results - MNA Parameters
76 Station 0752/YEE/GIN Comingled Plume
706/726/800 Harrison Street Oakland, California

Notes

Analytical results given in milligrams per liter.

Standard Abbreviations

--	not analyzed, measured, or collected
<	not detected at or above laboratory detection limit
mg/l	milligrams per liter (approx. equivalent to parts per million, ppm)
A01	PQL's and MDL's are raised due to sample dilution
A10	PQL's and MDL's were raised due to matrix interference
S01	sample result is not within the quantitation range of the method

Analytes

CaCO3	calcium carbonate
NO3	nitrate
NO2	nitrogen dioxide
EDC	1,2-dichloroethane (same as ethylene dichloride)
PQL	practical quantitation limit
MDL	method detection limit

VIA PDF	Groundwater Monitoring and Sampling Data Package First Semi Annual Event of February 7, 2019

COMMENTS:

Pursuant to your request, we are providing you with copies of the above referenced data for your use.

Please provide us the updated historical data prior to the next monitoring and sampling event for our field use.

Please feel free to contact me if you have any comments/questions.

STANDARD OPERATING PROCEDURE GROUNDWATER SAMPLING

Gettler-Ryan Inc. (GR) field personnel adhere to the following procedures for the collection and handling of groundwater samples prior to analysis by the analytical laboratory. All work is performed in accordance with the GR Health & Safety Plan and all client-specific programs. The scope of work and type of analysis to be performed is determined prior to commencing field work.

Prior to sampling, the presence or absence of free-phase hydrocarbons is determined using an interface probe. Product thickness, if present, is measured to the nearest 0.01 foot and is noted in the field notes. In addition, all depth to water level measurements are collected with a static water level indicator and are also recorded in the field notes, prior to purging and sampling any wells. Total well depths are measured annually.

After water levels are collected and prior to sampling, if purging is to occur, each well is purged a minimum of three well casing volumes of water using pre-cleaned pumps (stack, peristaltic or Grundfos), or disposable bailers. Temperature, pH and electrical conductivity are measured a minimum of three times during the purging (additional parameters such as dissolved oxygen, oxidation reduction potential, turbidity may also be measured, depending on specific scope of work.). Purging continues until these parameters stabilize.

Groundwater samples are collected using disposable bailers. The water samples are transferred from the bailer into appropriate containers. Pre-preserved containers, supplied by analytical laboratories, are used. When pre-preserved containers are not available, the laboratory is instructed to preserve the sample as appropriate. Duplicate samples are collected for the laboratory to use in maintaining quality assurance/quality control standards, as directed by the scope of work. The samples are labeled to include the job number, sample identification, collection date and time, analysis, preservation (if any), and the sample collector's initials. The water samples are placed in a cooler, maintained at 4°C for transport to the laboratory. Once collected in the field, all samples are maintained under chain of custody until delivered to the laboratory.

The chain of custody document includes the job number, type of preservation, if any, analysis requested, sample identification, date and time collected, and the sample collector's name. The chain of custody is signed and dated (including time of transfer) by each person who receives or surrenders the samples, beginning with the field personnel and ending with the laboratory personnel.

A laboratory supplied trip blank accompanies each sampling set. The trip blank is analyzed for some or all of the same compounds as the groundwater samples.

As requested by Chevron Environmental Management Company, the purge water and decontamination water generated during sampling activities is transported by Clean Harbors Environmental Services to Seaport Environmental located in Redwood City, California.

Laboratory Reports and Chain-of-Custody Documentation

Date of Report: 02/14/2019

Carl Edwards

Arcadis- San Jose

6296 San Ignacio Ave, Suite C&D
San Jose, CA 95119

Client Project: 351646
BCL Project: 0752
BCL Work Order: 1904256
Invoice ID: B330870

Enclosed are the results of analyses for samples received by the laboratory on 2/7/2019. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Contact Person: Molly Meyers
Client Service Rep

Stuart Buttram
Technical Director

Certifications: CA ELAP #1186; NV #CA00014; OR ELAP #4032-001; AK UST101

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

All results listed in this report are for the exclusive use of the submitting party. BC Laboratories, Inc. assumes no responsibility for report alteration, separation, detachment or third party interpretation.

Remediation Progress Report

REMEDIATION PROGRESS REPORT
First Quarter 2018
April 8, 2019

Facility No:	<u>0752/Yee/Gin Comingled Plume</u>	Address:	<u>706/726/800 Harrison Street, Oakland, California</u>
Arcadis Contact Person / Phone No.:	Katherine Szymanowski / 510.596.9675		
Arcadis Project No.:	YC335135.1646		
Primary Agency/Regulatory ID No.:	Alameda County Department of Environmental Health (ACDEH) / Mr. Jonathan E. Sanders / Case No. RO0000231		

WORK CONDUCTED THIS QUARTER [FIRST QUARTER 2019]:

1. Twice monthly operation & maintenance (O&M) visits of the air sparge/soil vapor extraction (AS/SVE) system were conducted to monitor system operational parameters and performance, including the collection of monthly influent and effluent samples from the SVE system.
2. On February 7, 2019, groundwater monitoring of twenty-two (22) wells was performed. The AS/SVE system shutdown due to a power loss alarm on February 6, 2019 and was left off to allow the subsurface to reach static conditions prior to the groundwater monitoring event. The system was restarted on February 18, 2019 following the sampling event. Data from the site-wide groundwater monitoring event is presented in the First Quarter 2019 Semi-annual Groundwater Monitoring Report.

WORK PROPOSED NEXT QUARTER [SECOND QUARTER 2019]:

Arcadis will continue twice monthly O&M visits and a minimum of monthly sampling for the AS/SVE system. Once reduced groundwater intake to the SVE system is observed, system optimization will be performed to run the system more efficiently and effectively. See below for further explanation on the affect of higher groundwater elevation on SVE system performance.

Current Phase of Project:	Remediation	
Frequency of GW Monitoring / Sampling:	Semi-annual (Quarterly for MW-20)	
Frequency of AS/SVE System O&M / Sampling:	Twice Monthly O&M / Monthly SVE Sampling	
SVE System Reporting Period Hours / Percentage operational:	(12/18/18 – 3/25/19) 1,917 / 82%	
SVE Cumulative Operating Hours since Startup (September 2018) / Percentage operational:	3,437 / 72%	
SVE Hydrocarbon Removal:	Reporting Period	Cumulative
Gasoline Range Organics	207.8	870.8
Benzene:	0.16	0.71
Permits for Discharge:	Permit to Operate (PTO) #E1947 for Plant No. 21947	
AS System Reporting Period Hours / Percentage operational:	(12/18/18 – 3/25/19) 1,728 / 74%	
AS Cumulative Operating Hours since start-up (October 2018) / Percentage operational:	2,479 / 63%	

DISCUSSION

Current and historical system performance, operational, and analytical data are presented in Tables 1 through 4. O&M field notes detailing site activities and field measurements from the site visits conducted during the reporting period are included as Attachment 1. O&M certified laboratory analytical reports and chain-of-custody documents are included as Attachment 2.

The system began operation on September 6, 2018 following completion of system construction and troubleshooting. As discussed in the RAP (Arcadis 2014), system operation focuses on dissolved-phase mass in groundwater at 706 and 726 Harrison Street.

SVE System:

During the first quarter of 2019, monthly system influent and effluent samples were collected on December 18, 2018 and January 15, February 5, March 11, and March 25, 2019. All samples were collected by Arcadis and analyzed by BC Laboratories, Inc. of Bakersfield, California, a State of California accredited environmental laboratory. All samples were analyzed by the following methods for the respective analytes:

- Total petroleum hydrocarbons as gasoline (TPH-g) by EPA Method TO-15
- Benzene, toluene, ethylene and total xylenes (BTEX) and methyl tert-butyl ether (MTBE) by EPA Method TO-15

Influent TPH-g concentrations ranged from 0.7 parts per million by volume (ppmv) to 140 ppmv for the first quarter of 2019, and influent benzene concentrations ranged from below the detection limit (0.005 ppmv) to 0.078 ppmv. In the effluent, TPH-g was only detected in the December 2018 and February 2019 samples at concentrations of 1.2 and 1.6 ppmv, respectively. BTEX compounds and MTBE were not detected or were well below 0.05 ppmv in the effluent samples collected during the reporting period. Based on these analytical results and the vapor flow rates, system operation was compliant with the PTO. Laboratory analytical reports and chain-of-custody documents are included in Attachment 2.

The SVE system operated a total of 1,917 hours during the current reporting period (December 18, 2018 through March 25, 2019), resulting in an average runtime of 82%. Since system startup in September 2018, the SVE system has operated for 3,437 hours, resulting in a cumulative uptime of 72%. The AS/SVE system was found off upon arrival throughout the reporting period due to weather caused power losses.

During the reporting period, the SVE system removed an estimated 207.8 pounds (lbs) of TPH-g and 0.16 lbs of benzene. Cumulatively (since September 2018), the SVE system has removed approximately 870.8 lbs of TPH-g and 0.71 pounds of benzene. The system influent vapor flow rate ranged from 166 to 181 standard cubic feet per minute (scfm). During all visits conducted in the reporting period, a photo ionization detector (PID) calibrated to 100 ppmv hexane was used for field measurements, and measurements were collected without a carbon filter. Field measured influent and effluent concentrations ranged from 68.9 to 609.4 ppmv and 0 to 9.7 ppmv, respectively. A summary of the SVE system operational data and analytical results is presented in Tables 1 through 3.

AS System:

The AS system operated a total of 1,728 hours during the current reporting period (December 18, 2018 through March 25, 2019), resulting in an average runtime of 74%. Since startup in October 2018, the AS system has operated for 2,479, resulting in a cumulative uptime of 63%. As noted above, the AS/SVE system was found off upon arrival during multiple O&M visits in the reporting period due to weather caused power losses.

The minimum, average, and maximum observed AS well operating pressures were 5 pounds per square inch (psi), 8 psi, and 13 psi, respectively. The minimum, average, and maximum observed AS well flowrates were 4 scfm, 5 scfm, and 11 scfm, respectively. AS operational data is presented in Tables 1 and 4.

CONCLUSIONS AND RECOMMENDATIONS

In accordance with the approved RAP, the system was started to address dissolved-phase mass in groundwater at 706 and 726 Harrison Street. Due to high levels of groundwater recovery, two SVE wells (VW-4 and VW-5 located on the southern end of the 706 property) have not operated since system startup and the SVE system has operated at an influent vacuum equal to or less than 5 inches of mercury

(in-hg) since late November. Due to the reduced SVE vacuum and well operation, 7 AS wells have been turned off (AS-5, AS-11, AS-13, AS-14, SP-3, SP-4, and SP-5).

The current system operation has been focused on ensuring proper and consistent operation of the system components. The focus will shift to system optimization when the weather allows increased AS/SVE system operation. Measurements will also be collected to determine SVE radius of influence (ROI) to verify system efficiency.

Notes and Abbreviations:
¹ = reading recorded incorrectly in the field, adjusted for accuracy
 % = percent
 HX = Heat Exchanger
 acfm = actual cubic feet per minute
 deg F = degrees Fahrenheit
 in Hg = inches mercury
 in WC = inches water column
 scfm = standard cubic feet per minute
 PID = photo ionization detector, calibrated with 100 ppmv hexane. A carbon tip is not used for readings.
 VOC = volatile organic compound
 ppmV = parts per million by volume
 lbs = pounds
 Influent 1 = Pre-Dilution
 Influent 2 = Post-Dilution
 --- = not measured/not applicable

Calculations:
Destruction Efficiency %

$$= \left(1 - \frac{\text{Effluent PID, ppmV}}{\text{Influent 2 PID, ppmV}} \right) 100$$

Mass Removal Rate

$$\frac{\text{lbs}}{\text{day}} = \frac{\text{MW g}}{1 \text{ mol}} \left(\frac{1 \text{ lb}}{453.6 \text{ g}} \right) \left(\frac{1 \text{ mol}}{24.46 \text{ L}} \right) \left(\frac{1 \text{ L}}{0.03531 \text{ std cu ft}} \right) \left(\frac{\text{CONC ppmV}}{1 \times 10^6 / \text{ppmV}} \right) (\text{SCFM})(1440 \text{ min})$$

Where:
 MW = molecular weight of hexane, 86.18 g/mol
 g = grams
 mol = 1 mole of gas
 L = Liters volume at STP (77 deg.F and 29.92 inWC)
 std cu ft = standard cubic feet

Notes and Definitions:

¹ = Emissions calculations assume the full detection limit for non detect compounds
 --- = Data not available
 < = Less than stated laboratory method reporting limit
 lbs = pounds
 ppmV = Parts per million by volume
 scfm = Standard cubic feet per minute
 B = Benzene
 T = Toluene
 E = Ethylbenzene
 X = Total Xylenes
 MTBE = Methyl tertiary-butyl ether
 TPHg = Total purgeable hydrocarbons as gasoline

Calculations:

Mass Removal/Emission Rate

$$\frac{lbs}{day} = \left(\frac{MW \text{ g}}{1 \text{ mol}} \right) \left(\frac{1 \text{ lb}}{453.6 \text{ g}} \right) \left(\frac{1 \text{ mol}}{24.46 \text{ L}} \right) \left(\frac{1 \text{ L}}{0.03531 \text{ std cu ft}} \right) \left(\frac{CONC \text{ ppmV}}{1 \times 10^6 / \text{ppmV}} \right) (SCFM)(1440 \text{ min})$$

Where:

MW = molecular weight
 g = grams
 mol = 1 mole of gas
 L = Liters volume at STP (77 deg F and 29.92 inWC)
 std cu ft = standard cubic feet

Molecular Weights:

TPHg 100.00
 Benzene 78.77

Abbreviations:
 scfm = standard cubic feet per minute
 PID = photo ionization detector
 ppmv = parts per million by volume
 inWC = inches water column
 deg. F = degrees Fahrenheit
 acfm = actual cubic feet per minute
 VOC = volatile organic compound
 --- = not measured/not applicable
 ' = PID readings taken at well head.

Convert ACFM to SCFM

$$SCFM = ACFM \left(\frac{P_{actual} - (RH \times P_{sat})}{P_{std}} \right) \times \bar{T}$$

Where:
 SCFM = standard cubic feet per minute
 ACFM = actual cubic feet per minute
 P_{actual} = measured pressure (psia) = 0.036(manifold pres.
 P_{std} = standard absolute air pressure (psia) = 14.696
 P_{sat} = water saturation at actual temperature (psi) = 0.43
 T_{actual} = actual air temperature (degree Rankine) = T deg
 T_{std} = standard temperature (degree Rankine) = 520
 RH = relative humidity (%)

Operation, Maintenance, and Monitoring Field Data Sheets

SITE MAINTENANCE SCOPE OF WORK
 AS/SVE
 Former Unocal Service Station No. 00752
 706/726/800 Harrison Street, Oakland, California

SITE MAINTENANCE SCOPE OF WORK

PM Thomas Kendig Project # B0047339
 Engineer Jesse Brockman Weather, wind velocity/direction, temperature
 Technician Date 12-18-18 Arrival Time 0950 Departure Time 1300

WORK TASKS TO BE COMPLETED

- ✓ Review HASP, conduct tailgate, and discuss SOW with Engineer
- ✓ Report any unusual situations
- ✓ Review OM&M plan and document visit in site entry log
- ✓ Calibrate PID and/or FID
- Perform maintenance and alarm testing per schedule and document items performed
- Collect system data readings and confirm permit conditions as follows:
 - Collect AS/SVE system readings in SVE System and AS System (in OM&M plan)
 - Record relevant data into system summary below and confirm permit compliance
 - Collect AS/SVE monitoring data on appropriate form if requested by Engineer
 - Collect response well data if requested by Engineer
- ✓ Review Compliance Checklist
- ✓ Call Thomas Kendig or Jesse Brockman

Notes:

COMPLIANCE CHECKLIST

- ✓ Permits onsite
- ✓ System in proper working condition
- ✓ Records maintained onsite (OMM log)
- ✓ Monthly SVE sampling
- ✓ Vaults are secure
- ✓ Compound is secure
- AS/SVE system alarms tested
- ✓ Effluent flowrate <300 SCFM
- ✓ Oxidizer temperature >600 deg F
- CatOx Destruction Efficiency measured as hexane (check one)
 - 98.5% if inlet ≥2000 ppmv
 - ✓ 97% if inlet <2000 ppmv and ≥200 ppmv
 - 90% if inlet <200 ppmv
 - No requirement if outlet is <10 ppmv

SITE MAINTENANCE SCOPE OF WORK

PM Thomas Kendig Project # B0047339
 Engineer Jesse Brockman Weather, wind velocity/direction, temperature
 Technician 60 F Rainy
 Date 02-26-19 Arrival Time 0900 Departure Time _____

WORK TASKS TO BE COMPLETED

- ✓ Review HASP, conduct tailgate, and discuss SOW with Engineer
- ✓ Report any unusual situations
- ✓ Review OM&M plan and document visit in site entry log
- ✓ Calibrate PID and/or FID
- ✓ Perform maintenance and alarm testing per schedule and document items performed
- ✓ Collect system data readings and confirm permit conditions as follows:
 - Collect AS/SVE system readings in SVE System and AS System (in OM&M plan)
 - Record relevant data into system summary below and confirm permit compliance
 - Collect AS/SVE monitoring data on appropriate form if requested by Engineer
 - Collect response well data if requested by Engineer
- ✓ Review Compliance Checklist
- ✓ Call Thomas Kendig or Jesse Brockman

SUMMARY OF SYSTEM STATUS AND COMPLIANCE READINGS

Equipment

	Make	Model	Calibrated to:
FID/PID (circle one)	MRAE	3000	Hex
Velocicalc	TSE	9565	

Notes:

AS system was off due to a E-stop alarm dated the 18th of February. [1239 pm]
 Oil Levels good on blowers / pumped
 increased into bearings
 DRAINED 10 tank into drum.
 - 10 tank was 10% full
 - Drum is 85% full

COMPLIANCE CHECKLIST

- ✓ Permits onsite
- ✓ System in proper working condition
- ✓ Records maintained onsite (OMM log)
 - Monthly SVE sampling
 - Vaults are secure
 - Compound is secure
 - AS/SVE system alarms tested
- ✓ Effluent flowrate <300 SCFM
- ✓ Oxidizer temperature >600 deg F
- ✓ CatOx Destruction Efficiency measured as hexane(check one)
 - 98.5% if inlet ≥2000 ppmv
 - ✓ 97% if inlet <2000 ppmv and ≥200 ppmv
 - 90% if inlet <200 ppmv
 - ✓ No requirement if outlet is <10 ppmv

Dear Mr. Nowell:

Langan Engineering and Environmental Services, Inc. (Langan) is pleased to submit this *Supplemental Environmental Investigation and Request for No Further Action* report on behalf of East Bay Asian Local Development Corporation (EBALDC) related to the former petroleum underground storage tanks (USTs) at 1110 Jackson Street in Oakland, California (site). This report describes the environmental data collected to date by Langan and others to assess soil, soil gas and groundwater quality at the site related to the former USTs and presents data supporting our opinion that the site should receive a no further action determination regarding the former USTs.

The objective of our evaluation was to collect sufficient data to support regulatory closure of the former USTs, in accordance with the California State Water Resources Control Board Low-Threat Underground Storage Tank Case Closure Policy (LTCP). We believe this report presents information illustrating that subsurface conditions at the site are consistent with conditions outlined in the LTCP. On behalf of EBALDC, Langan requests that the Alameda County Department of Environmental Health (ACDEH) grant a no further action determination and regulatory closure of the former USTs for the site.

If you have any questions or wish to discuss, please do not hesitate to call.

Sincerely yours,
Langan Engineering & Environmental Services, Inc.

Noel Liner, PG

**SUPPLEMENTAL ENVIRONMENTAL INVESTIGATION
AND REQUEST FOR NO FURTHER ACTION
1110 Jackson Street
Oakland, California**

1.0 INTRODUCTION

Langan Engineering and Environmental Services, Inc. (Langan) has prepared this *Supplemental Environmental Investigation Report and Request for No Further Action* (report), describing recent investigation activities conducted at the 1110 Jackson Street development in Oakland, California (Figure 1, site) for the East Bay Asian Local Development Corporation (EBALDC). The environmental investigation was conducted in January 2018 in accordance with our *Work Plan for Supplemental Environmental Site Assessment* (Work Plan) submitted to the Alameda County Department of Environmental Health (ACDEH) dated 12 October 2017. The purpose of the supplemental environmental investigation was to:

1. Close data gaps identified in Langan's Conceptual Site Model (CSM) (Appendix A) submitted as part of our October 2017 Work Plan; and,
2. Characterize horizontal and vertical impacts to soil and groundwater related to the former Underground Storage Tanks (USTs) and specifically UST #4.

This report summarizes data from Langan's recent environmental investigation and prior subsurface investigations and removal actions performed at the site to support a formal request for no further action related to the four former USTs previously located at the site. Remedial and investigative work at the site has included:

- Removal of four petroleum USTs and associated piping;
- Over-excavation of soil beneath the former USTs to the extent feasible;
- Installing temporary borings for collection of soil, soil gas and groundwater;
- Analyzing shallow and deep groundwater for total petroleum hydrocarbons as gasoline (TPHg), diesel (TPHd), motor oil (TPHmo), volatile organic compounds (VOCs) and polycyclic aromatic hydrocarbons (PAHs);
- Analyzing soil for total petroleum hydrocarbons as TPHg, TPHd, TPHmo, VOCs, PAHs and metals, including within the bioattenuation zone;

- Performing a building survey and inventory using a photo-ionization detector sensitive to the part-per-billion range for identification of potential preferential pathways and soil gas and sub-slab sample locations;
- Collecting and analyzing shallow soil gas and sub-slab soil gas samples for VOCs; and,
- Disposing groundwater and soil generated during sampling at appropriate facilities.

In addition to a summary of the activities presented above, this report also includes a summary of site background, environmental history from previous investigations conducted by others, and recent development activity. Based on the environmental data conducted to date at the site, it is Langan's opinion that the site is eligible for administrative case closure under the California State Water Resource Control Board (CSWRCB) Low-Threat Underground Storage Tank Case Closure Policy (LTCP). Therefore, we respectfully request a no further action and closure letter from the ACDEH with respect to the four former USTs at the site.

2.0 SITE DESCRIPTION AND BACKGROUND

2.1 Site Description

The site is located at 1110 Jackson Street in Oakland, California (Figure 1). The site is bound by 12th Street to the north, Jackson Street to the west, 11th Street to the south and multiple buildings to the east. The site is L-shaped, with long dimensions measuring approximately 190 feet by 200 feet. A 5-story mixed-use building was recently constructed over the entire footprint of the L-shaped lot. The building consists of a concrete podium constructed on grade and shallow foundations. The ground level is completely impervious and consists of a concrete slab and paved sidewalks. The majority of the ground level is openly ventilated and is used for parking. A commercial retail space currently occupied by a dentist is present in the southwestern portion of the building.

The site was first developed in 1889 with a hospital. By 1903, the hospital had been replaced by residences. Two automobile repair garages operated in the northern portion of the site (including two USTs beneath Jackson Street) between 1911 and 1946, while the southern portion of the site was developed for residential use. By 1939, the site was fully developed with two auto repair garages in the northern portion of the site, residences in the southern portion of the site, and a new commercial building at the southern corner of the site. One of the automobile repair garages was removed in 1946 and the residences were removed by 1950, when both became parking lots. The second auto repair garage was converted to a

store, a glass works business, and a parking lot through the 1950's. In the 1960's, a store was constructed in the southwest corner of the site and a small shed was constructed near the glass works facility. The site remained in this state until 2007 when the buildings were demolished (Essel Environmental Consulting, 2015).

2.2 Underground Storage Tanks

In April 2016 during construction of the current building, three USTs were discovered in the sidewalk of Jackson Street. The USTs were designated as UST #1, #2 and #3; all contained gasoline and were approximately 265-, 265- and 110-gallons, respectively. In November 2016, a fourth UST was discovered beneath the sidewalk of Jackson Street, south of the three former USTs. The UST, designated UST #4, contained diesel fuel and had a capacity of 750-gallons. UST removal and over-excavation activities are described in Section 2.7. The locations of the former USTs are presented on Figure 2.

2.3 Potential Preferential Pathways

Backfill around utility corridors and lenses of coarse fill may act as preferential pathways for contaminant migration in groundwater and/or soil gas. To identify potential preferential pathways, a building survey and inventory was completed at the site on 28 October 2016 by Langan personnel in the presence of representatives from EBALDC. The survey consisted of identifying subsurface utility locations, potential sources of VOCs present and evaluating all accessible areas with a photoionization detector (PID) capable of measuring volatile organic vapors down to the part per billion (ppb) level. Subsurface utility corridors downgradient of the former USTs include the sanitary sewer and storm water pipelines. Water supply and electrical service are provided aboveground. Groundwater at the site is found at a depth of around 20 feet below ground surface (bgs), which is significantly deeper than the utility trenches; therefore, the utility corridors would not act as preferential pathways for groundwater.

During the survey, the PID was used to assess background indoor air concentrations and possible preferential pathways for soil vapor migration such as gaps and cracks in building foundations, slab penetrations (such as piping and utility lines), floor drains, sumps, fire suppression lines, and sanitary sewer cleanouts. In general, PID readings across the building were consistent with an active construction site and no potential preferential pathways were registering elevated readings. The results of our building survey were used to develop a sampling plan to evaluate the building for vapor intrusion.

2.4 Current Surface Water/Ground Water Use and Nearby Sensitive Receptors

The site is serviced by East Bay Municipal Utility District's regional water system (EBMUD), which provides drinking water for approximately 1.4 million people in portions of Alameda County and Contra Costa County, including the city of Oakland. EBMUD has water rights for up to 325 million U.S. gallons per day, which is sourced from surface water runoff in the Sierra Nevada, and stored in a system of reservoirs. Groundwater is not used as a drinking water source at the site.

Langan contacted the California Department of Water Resources (DWR) to verify that groundwater wells supplying potable drinking water are not present downgradient of the site. The DWR well search confirmed that there are no mapped supply wells within one mile downgradient of the site. The nearest surface water body is Lake Merritt, a tidally influenced slough, approximately 1,200 feet east of the site (Figure 3). Appendix B presents the results of the well search.

2.5 Identification of Screening Levels

Screening levels for groundwater were selected from the San Francisco Bay Regional Water Quality Control Board's (RWQCB's) February 2016 Environmental Screening Levels (ESLs). The following ESLs were selected as appropriate screening values for the site:

- Soil: Tier I ESLs
- Soil Gas: Tier I ESLs
- Groundwater: ESLs for saltwater eco-toxicity. Additionally, groundwater was compared to Maximum Contaminant Level (MCL) Priority for reference.

2.6 Soil Types and Geology of Site

In general, the site's surficial geology is mapped as the Holocene and Pleistocene aged Merritt Sand, described as fine-grained, very well sorted, well-drained sand" (Graymer, 2000 – Figure 4). Based on borings advanced by Langan, the subsurface soils at the site are consistent with the geologic description, consisting of sandy fill with varying amounts of silt and clay underlain predominantly by sand and silty to clayey sand. Groundwater was generally encountered about 20 feet bgs. Groundwater flow is likely to the east, based on monitoring data for the nearby Alcoa Park parking garage (PSI, 2009).

2.7 Summary of Remedial Activities

USTs # 1, 2 and 3 were excavated and removed by Golden Gate Tank Removal (GGTR) on 15 April 2016 and UST #4 was excavated and removed on 23 November 2016. Confirmation soil samples were collected from each UST pit following removal. On 4 May 2016 and 2 December 2016, GGTR performed over-excavation of visibly stained soil to the extent practical from the tank pits and additional confirmation soil sampling. UST removal activities at the site were completed under the observation of Langan personnel and a representative from the ACDEH's Certified Unified Program Agency (CUPA). The UST removal activities are described below. Soil sample results for TPH and VOCs from over-excavation are presented on Table 1. Confirmation soil samples removed during excavation are presented in ~~strikeout~~ text on Table 1. Results for metals and PAHs in soil are presented on Tables 2 and 3.

2.7.1 UST Removal (USTs 1-3)

In April 2016, three USTs were discovered in the sidewalk of Jackson Street during site development activities. The USTs, designated as USTs #1, #2 and #3, all contained gasoline and were approximately 265-, 265- and 110-gallons, respectively. The locations of USTs #1, #2 and #3 are shown on Figure 2. Based on a review of Sanborn Fire Insurance maps, the USTs were likely in place prior to 1911. The three USTs were found to be in generally poor condition. GGTR removed the three USTs from beneath the sidewalk and conducted soil excavation and soil sampling activities on 15 April 2016. UST removal activities were completed under the observation of Langan personnel and a representative from the ACDEH's CUPA. After the USTs and associated piping were removed, GGTR collected confirmation soil samples from excavation sidewalls and bottoms. Soil samples collected from soil beneath the former USTs had elevated concentrations of TPHg, ranging between 391 and 2,480 milligrams per kilogram (mg/kg), exceeding the RWQCBs February 2016 Tier I ESLs.

Based on the elevated confirmation sample results and a recommendation by ACDEH, GGTR returned to the site on 4 May 2016 to perform over-excavation and additional confirmation sampling activities. GGTR over-excavated from the north side of UST#1 to the south side of UST#2 and UST#3 to a depth of 12 feet bgs. Following the over-excavation, additional confirmation samples were collected from the new bottom of the excavation and from the sidewalls. TPHg was detected at concentrations ranging from 6.96 to 6,320 mg/kg in soil collected from over-excavation sidewalls and bottoms; TPHd was not detected in any of the soil samples and TPHmo was detected at a maximum concentration of 135 mg/kg.

2.7.2 UST Removal (UST #4)

In November 2016, a fourth UST was discovered beneath the sidewalk of Jackson Street, south of the three former USTs removed earlier that year during construction of the sidewalk. The UST, designated as UST #4, contained diesel fuel and had a capacity of approximately 750-gallons. The top of UST #4 was approximately 5 feet bgs and the bottom was approximately 8 feet bgs. Figure 2 shows the location of the former UST. GGTR removed UST #4 from beneath the sidewalk and conducted the corresponding soil excavation and soil sampling activities on 23 November 2016. UST removal activities were completed under the observation of Langan personnel and a representative from CUPA/ACDEH. After the UST and associated piping were removed, GGTR collected two soil samples at 10 feet bgs from below the southern and northern ends of the UST (9669-S-10 and 9669-N-10, respectively), which was approximately two feet below the UST bottom. Soil samples collected from soil beneath the former UST had elevated concentrations of TPHd exceeding the Tier I ESLs.

Based on the elevated confirmation sample results and a recommendation by ACDEH, GGTR returned to the site on 2 December 2016 to perform over-excavation and additional confirmation sampling activities. GGTR over-excavated the tank pit to a depth of 14 feet bgs, as witnessed by ACDEH and Langan representatives. Following over-excavation, soil samples were collected of the sidewalls and the excavation bottom. One soil sample was collected from the excavation bottom at 14 feet bgs and two additional soil samples were collected at depths of 17.5 and 18.5 feet bgs from beneath the UST. TPHd was detected at concentrations of 10,000 and 11,000 mg/kg in the samples collected from 14 and 17.5 feet bgs beneath the former UST and TPHd was detected at a much lower concentration of 1,100 mg/kg at a depth of 18.5 mg/kg. Sidewall samples all had TPHd detected with concentrations ranging from 1.7 to 4,400 mg/kg.

2.8 Summary of Previous Environmental Investigations

Environmental investigations to evaluate soil and groundwater conditions at the site were conducted in 2005 by Tetra Tech, and in August and November of 2016 by Langan. These previous investigations are described in the following sections. Results of groundwater, soil and soil gas sampling from previous environmental investigations are presented in Tables 1 through 5. Results for TPHg, TPHd, TPHmo and benzene in groundwater are presented on Figure 5. Soil boring logs describing the materials encountered and water level measurements are presented in Appendix C.

2.8.1 January 2006 Phase II ESA

In December 2005, Tetra Tech conducted a limited Phase II Environmental Site Assessment to evaluate if petroleum impacts associated with the Alcopark Garage site were impacting the site. The Alcopark Garage site is about 260 feet to the north of the site across 12th Street.

Tetra Tech advanced three borings (SB-1, SB-2, and SB-3, Appendix C) at the site. Borings SB-1 and SB-2 were located approximately 50 to 60 feet from the former gasoline UST locations in both the northeast and southeast directions, respectively (Figure 2). Borings SB-2 and SB-3 were located approximately 45 feet east (downgradient) and 145 feet southeast of the diesel UST #4, respectively. Soil samples were collected at approximately 12 feet bgs from each boring. Groundwater was encountered at depths ranging between 20 to 22 feet bgs. One groundwater sample was collected from each boring. Soil and groundwater samples were analyzed for TPHg, TPHd, TPHmo, VOCs and metals with the following results:

- TPHg, TPHd and TPHmo were not detected in any of the samples collected. Metals results were within normal background ranges reported for Bay Area soils (Table 2).
- No VOCs were detected in any soil samples collected.
- No VOCs were detected at concentrations above their respective maximum contaminant level (RWQCB, February 2016 Maximum Contaminant Levels [MCL] Priority ESLs) in any groundwater samples collected. However, low levels of trichloroethene (TCE) and tetrachloroethene (PCE) were detected in groundwater collected from boring SB-3.

Based on the data collected, Tetra Tech recommended no further assessment of the site was necessary (Tetra Tech, 2006).

2.8.2 August 2016 Site Assessment

Following discovery and ultimate removal and over-excavation of USTs #1, #2, and #3, ACDEH requested collection of groundwater samples near the former UST locations to evaluate potential impacts of petroleum and petroleum related compounds to groundwater.

On 11 August 2016, Gregg Drilling & Testing, Inc. (Gregg Drilling) of Martinez, California, a California C-57-licensed drilling company advanced four borings (EB-1 through EB-4; Figure 2) to depths of 28 feet bgs. The borings were advanced to facilitate the collection of groundwater in order to evaluate potential impacts related to the former USTs. Soil samples were only collected from boring EB-2 at depths below the soil samples collected during UST removal.

Borings EB-1 through EB-3 were advanced within or adjacent to footprints of the former USTs #1, #2 and #3 and EB-4 was advanced approximately 12 feet east of and downgradient of former UST #2. All borings were hydraulically driven direct push borings advanced by a truck-mounted drill rig operated by Gregg Drilling and observed by Langan. Groundwater was encountered at about 20 feet bgs in each borehole and grab groundwater samples were collected through temporary 1-inch diameter polyvinyl chloride (PVC) well casings with ten feet of well screen to the bottom of each boring. The slotted screen extended above the water table and no free product or sheen was observed on any of the samples.

Langan collected three soil samples from depths of 13, 15.5 and 22.5 feet bgs from environmental boring EB-2 at the former UST #2 location. Soil samples were also collected during the removal of UST #2 at depths of 9 and 12.5 feet bgs. Samples were collected based on field observations (including visual and olfactory) and organic vapor measurement using a PID.

The results of the investigation indicated the following:

- TPHg and TPHd concentrations exceeding the Tier I ESLs were detected in soil greater than 10 feet bgs beneath former UST #2.
- Benzene was detected in the groundwater samples from EB-2 and EB-4 at concentrations of 320 and 110 micrograms per liter ($\mu\text{g/L}$). The EB-2 concentration is above the commercial vapor intrusion RWQCB ESLs ($260 \mu\text{g/L}$), but the EB-4 sample did not exceed the commercial vapor intrusion ESL closest to the existing building.
- Concentrations of TPHg and TPHd exceeding the MCL Priority ESLs were also detected in groundwater from borings EB-1, EB-2 and EB-4. Additionally, concentrations of TPHg and TPHd exceeding the Saltwater Ecological ESLs were detected in groundwater in limited areas from borings EB-2 and EB-4, which were advanced through the UST pits or directly adjacent to them.
- TPHg, TPHd, and TPHmo were not detected above laboratory reporting limits in groundwater from boring EB-3.

2.8.3 November 2016 Site Assessment

In November 2016, Langan conducted an additional site assessment consisting of soil, groundwater, soil gas, and sub-slab vapor sample collection to determine the potential extent of petroleum impacted soil in groundwater, and evaluate the site for potential vapor intrusion risks.

Four environmental borings (EB-5 through EB-8) were advanced using direct push techniques by Gregg Drilling for soil and groundwater collection, five temporary soil gas wells (SG-1 through SG-5) were installed to collect soil gas samples, and five temporary Vapor Pins™ were installed in the slab to facilitate collection of sub-slab samples (SS-1 through SS-5). Soil gas samples were collected near subsurface utility lines and below the bottom of the elevator pit, as these were areas identified as potential preferential pathways. Sub-slab sample locations were focused along the eastern side of the site and in the retail space since this space was the only enclosed space on the ground level proposed for occupation. A sub-slab sampling point (SS-6) was added to the sampling scope, due to the discovery of UST #4. The SS-6 sub-slab sample was collected on 30 November 2016 about 15 feet east of UST #4 in the commercial space. VOCs were not detected above their respective Tier 1 ESLs in soil gas or sub-slab samples collected at the site.

The soil gas and sub-slab samples were submitted under appropriate chain-of-custody documentation to Curtis & Tompkins (now Enthalpy Analytical) of Berkeley California for the following analysis:

- VOCs by United States Environmental Protection Agency (EPA) Method TO-15, Methane by ASTM D-1946, and Helium by ASTM D-1946.

The soil samples were submitted under appropriate chain-of-custody documentation to McCampbell Analytical, for the following analyses:

- TPHg, TPHd, and TPHmo by EPA Method 8015, VOCs by EPA Method 8260, PAHs by EPA Method 8310, and leaking underground fuel tank (LUFT) 5 metals by EPA Method 6020.

The grab groundwater samples were submitted under appropriate chain-of-custody documentation to McCampbell for the following analyses:

- TPHg, TPHd, and TPHmo by EPA Method 8015, VOCs by EPA Method 8260, and PAHs by EPA Method 8310.

The results of the investigation indicated the following:

- In soil gas, eleven VOCs were detected, each below Tier I ESLs, and methane was detected in two soil gas samples, below the lower explosive limit of 5%. Soil gas concentrations were also below the LTCP criteria described in Appendix 4 of the same document.

- In soil, TPHg was not detected, TPHd was detected in only one sample at a concentration of 15 mg/kg, and TPHmo was detected in only two samples at a maximum concentration 160 mg/kg. Metals were generally detected within background ranges; lead was detected in two soil samples at 97 and 150 mg/kg.
- In groundwater, TPHg was not detected above the laboratory reporting limit of 50 µg/L in any of the four samples analyzed. TPHd was detected above the laboratory reporting limit in two of the four samples analyzed at concentrations of 70 µg/L and 290 µg/L. TPHmo was detected above the laboratory reporting limit in each of the four samples analyzed at concentrations ranging from 100 µg/L to 2,800 µg/L.
- No VOCs were detected in groundwater above their respective Tier 1 ESLs. Trace concentrations of t-butyl alcohol (TBA) and PCE were the only VOCs detected in the grab groundwater samples analyzed.
- Acenaphthylene was the only PAH detected in the grab groundwater samples at concentrations ranging from 0.133 µg/L and 0.607 µg/L.

The results of the investigation indicate that soil gas below the elevator, five feet below the slab and directly beneath the slab in areas sampled was only minimally impacted and did not exceed any Tier 1 ESLs. Therefore, the vapor intrusion risk was not considered significant. Soil samples were only minimally impacted. Groundwater beneath the site had concentrations of TPHd did not exceed aquatic habitat screening levels for saltwater eco-toxicity in any borings beneath the building, downgradient of the former USTs. TPHg was not detected in groundwater at any of the November 2016 locations.

3.0 SUPPLEMENTAL ENVIRONMENTAL INVESTIGATION

Langan proposed a supplementary environmental investigation to collect sufficient data to support a no further action request related to the former USTs in our 12 October 2017 *Work Plan for Supplemental Environmental Assessment* (Work Plan). The work plan was conditionally approved by the ACDEH in their 16 November 2017 correspondence titled “*Conditional Work Plan Approval, Fuel Leak Case No. RO0003232 and GeoTracker Global ID T10000009472, 1110 Jackson Street, Oakland CA 94607*”. Additional actions requested by ACDEH consisted of the following:

1. Update the previously submitted CSM to include DWR well search.
2. Collect additional soil samples in areas of “obvious contamination, the soil/groundwater interface, and at significant changes in lithology” to define the vertical and horizontal

extent of TPH impacts, including collection of soil samples in the 0 to 5 foot interval for direct contact.

3. Collection of the deeper groundwater sample at least ten feet below the shallow groundwater sample.
4. Advanced an additional boring east of location EB-6 at location EB-13.

Langan implemented the Work Plan between 15 to 17 January 2018. Five borings (EB-9 through EB-13) were advanced to collect soil and groundwater samples at the site. A deeper groundwater sample was attempted for collection at each location. All hydraulically-driven direct push borings were advanced using the dual tube system by a truck-mounted or track-mounted drill rig operated by Gregg Drilling and supervised by Langan. Borings were advanced to depths ranging from 27 to 38 feet bgs and soil cores were visually logged by Langan personnel in general accordance with the Unified Soil Classification System (USCS).

Subsurface conditions consisted mainly of sandy soil with varying amounts silts and clays. Groundwater was measured at each boring location at depths ranging from approximately 19 to 21 feet bgs. No petroleum odor or light non-aqueous phase liquid (LNAPL) was observed during the duration of the investigation.

Soil samples were collected from all five boring locations in accordance with the Geoprobe® DT325 Dual Tube Sampling System Standard Operating Procedure as discussed in the Work Plan. In each boring, two soil samples were collected within the first five feet, and at five foot intervals thereafter (i.e. 10, 15, 20 feet bgs) until groundwater was encountered. Vadose zone samples (i.e. soil above the water table) were collected to assess the presence of a 'bioattenuation zone', as described in the LTCP. The term 'bioattenuation zone' is defined as an area of soil with conditions that support biodegradation of petroleum hydrocarbon vapors. Soil samples were also collected at first encountered groundwater (smear zone) and any noticeable areas of soil staining. Soil samples were labeled based on their location and depth (i.e. a sample collected from EB-9 at 2.5-feet bgs would be labeled "EB-9-2.5").

Groundwater samples were collected from four of the five borings at two discrete depths (shallow and deep). Shallow groundwater was collected from the zone of first encountered groundwater by setting 1-inch temporary pre-packed PVC casing with a 10-foot 0.010-inch milled slotted screen approximately five feet below first encountered groundwater. Shallow groundwater was sampled using a low flow sampling pump. Deep groundwater samples were collected using a hydro-punch groundwater sampler. The hydropunch sampler was advanced

10-feet below the depth of the shallow groundwater sample in collocated boreholes for locations EB-9 and EB-10 and in the same boreholes for locations EB-11 and EB-13. Due to unforeseen difficulties during drilling, Langan was unable to collect a deep groundwater sample at the EB-12 location. Deep groundwater was collected using a disposable bailer through the center of the drill pipe after exposing the screen of the hydropunch at the desired depth. Groundwater samples were labeled based on their location and bottom of sample depth (i.e. a groundwater sample from EB-9 at 28-feet bgs was labeled "EB-9-GW-28").

To avoid cross contamination, all sampling equipment used during the investigation activities was thoroughly cleaned between sample locations and disposable equipment was replaced with new, clean equipment. All borings were backfilled with neat cement grout under the supervision of an Alameda County Public Works grouting inspector and the surface cover was restored in accordance with the Alameda County Public Works Agency's requirements. Surface restoration for EB-10 included the replacement of a section of sidewalk adjacent to the building where drilling had been performed.

Soil cuttings and decontamination rinseate were placed in a 55-gallon drum, sealed and labeled. The drum was stored onsite, pending analytical profiling and proper disposal. After classification, the drum will be transported and disposed of at an appropriate facility..

3.1 Analytical Results

Immediately following collection, groundwater and soil samples were placed in an ice-cooled chest pending delivery to McCampbell Analytical Laboratory (McCampbell), a California-certified laboratory in Pittsburg, California. Soil and groundwater samples were submitted to McCampbell and were analyzed for the following:

- TPHg, TPHd and TPHmo by EPA Modified Method 8015B; and
- VOCs by EPA Method 8260.

The analytical results are presented in Tables 1 and 3 and analytical reports are included as Appendix D.

3.1.1 Soil Results

Soil analytical results were compared to RWQCB 2016 Tier 1 and residential shallow soil ESLs and to LTCP Criteria, Appendix 3, Scenario 3. A summary of the soil analytical results are presented below.

- TPHg was not detected above the laboratory reporting limit in the 34 samples analyzed.
- TPHd was detected in two of 34 samples analyzed at low concentrations of 1.6 and 1.9 mg/kg.
- TPHmo was detected in five of 34 samples at concentrations ranging from 6.8 to 23 mg/kg.
- Detected concentrations of TPHd and TPHmo were below Tier 1 ESLs.
- VOCs were not detected above the laboratory reporting limit in any soil samples collected from EB-9 through EB-13.

Analytical results for soil are presented on Table 1.

3.1.2 Groundwater Results

Groundwater analytical results were compared to RWQCB 2016 ecological ESLs for saltwater eco-toxicity, MCL Priority ESLs, residential and commercial vapor intrusion ESLs and LTCP Groundwater-Specific Criteria, Appendix 3, Scenario 3.

- TPHg was not detected above laboratory reporting limits in any of the 10 samples analyzed.
- TPHd was detected above laboratory reporting limits in seven of 10 samples analyzed at detected concentrations ranging from 67 to 250 µg/L.
- TPHmo was detected above laboratory reporting limits in five of 10 samples analyzed at detected concentrations ranging from 340 to 580 µg/L.
- None of the detected concentrations of TPHd exceed the ecological ESLs for saltwater eco-toxicity screening criteria. Concentrations of TPHd and TPHmo did exceed MCL Priority ESLs in six groundwater samples.
- Low levels of the VOCs chloroform, cis-1,2-dichloroethene, TBA, PCE and TCE were detected above laboratory reporting limits but did not exceed any of the screening criteria.

Analytical results for groundwater are presented on Table 3 and TPHg, TPHd, TPHmo and benzene concentrations are presented on Figure 5.

3.2 Waste Removal and Disposal

All investigation-derived waste was collected in drums pending analysis and proper disposal. A drum sample of soil was collected on 17 January, 2018, and submitted for analysis of TPHg, TPHd, TPHmo, benzene, toluene, ethylbenzene and xylenes (BTEX), and California Title-22 Metals (CAM 17). The waste profile data indicated the soils were non-hazardous waste. The drum was removed under manifest on 22 February 2018 for disposal at the Soil Safe facility in Adelanto, California as non-hazardous waste. Waste disposal documentation is provided in Appendix E.

4.0 CLOSURE REQUIREMENTS UNDER LTCP

The CSWRCB developed a set of guidelines for closure of sites with petroleum impacts deemed to be low risk. These closure criteria are presented in the LTCP (CSWRCB, 2012). These low-threat underground storage tank closure guidelines indicate that closure is appropriate for a site if the following can be demonstrated:

- The unauthorized release is within the service area of a public water system (i.e.; untreated groundwater is not a municipal resource or the community relies on surface water imports);
- The unauthorized release consists only of petroleum chemicals (including oxygenates);
- The unauthorized release has been stopped;
- Free product has been removed to the maximum extent practicable;
- A CSM has been developed;
- Secondary source has been removed to the extent practicable;
- Soil and groundwater have been tested for methyl tert-butyl ether (MTBE), and results have been reported in accordance with Health and Safety Code Section 25296.15 (indicates that results of MTBE tests are known to the RWQCB); and
- Nuisance as defined by Water Code section 13050 does not exist at the site (indicates no nuisance odors or threat to public health and safety).

Additionally, LTCP has media-specific criteria for groundwater, which includes the following minimum criteria:

- The contaminant plume that exceeds water quality objectives is less than 250 feet in length;
- There is no free product;
- The nearest existing water supply or surface water body is greater than 1,000 feet from the from the defined plume boundary; and
- The dissolved concentration of benzene is less than 3,000 µg/L and dissolved concentration of MTBE is less than 1,000 µg/L.

For sites where a release originated and impacted an existing building that is occupied, additional criteria associated with the LTCP are required to be met. Four potential exposure scenarios are described in Appendices 1 through 4 of the LTCP. Petroleum release sites shall satisfy the media-specific criteria for petroleum vapor intrusion to indoor air and be considered low-threat for the vapor-intrusion-to-indoor-air pathway, if site-specific conditions at the release site satisfy all of the characteristics and criteria of scenarios 1 through 3 as applicable, or all of the characteristics and criteria of scenarios 4 as applicable.

A bioattenuation zone is defined by the LTCP as an “area of soil with conditions that support biodegradation of petroleum hydrocarbons” (CSWRCB, 2012). Where the characteristics of a bioattenuation zone at a site meet certain criteria, the LTCP specifies a bioattenuation zone factor of 1,000. In other words, petroleum concentrations are conservatively assumed to reduce 1,000-fold when a bioattenuation zone is aerobic and consists of a minimum depth of clean soil. Specifically, the LTCP applies a bioattenuation factor of 1,000 where:

1. There is a minimum of five feet of soil between the soil vapor sample location and the building foundation or site grade;
2. The concentration of TPH (sum of TPHg and TPHd) is less than 100 mg/kg in soil within the bioattenuation zone; and
3. Oxygen in soil vapor in the bioattenuation zone is greater than or equal to 4 percent.

The LTCP also applies a bioattenuation factor where:

1. There is a minimum of five feet of soil between groundwater (i.e., the source of petroleum concentrations to soil vapor) and the proposed or existing building foundation or site grade; and

2. The concentration of TPH (sum of TPHg and TPHd) is less than 100 mg/kg in soil within the bioattenuation zone.

Oxygen concentration data for soil vapor is not necessary in the LTCP when the depth of the column of clean soil between petroleum impacted groundwater and the building foundation is at least five feet and dissolved phase benzene is less than 100 µg/L. The following sections discuss how the site data supports closure under the LTCP.

4.1 Interpretation of Data Supporting NFA

Soil and groundwater samples collected during this and previous environmental explorations indicate that petroleum hydrocarbons and petroleum hydrocarbon related compounds are present in subsurface soil and groundwater at the site. However, only relatively low concentrations appear present beneath the building. Detected concentrations of contaminants do not exceed criteria set forth by the LTCP for both groundwater-specific (Scenario 4) and bioattenuation zone requirements (Scenario 3). Additionally, since light non-aqueous phase liquid (LNAPL) is not present, Scenarios 1 and 2 are also met.

Data collected from explorations conducted at the site since December 2005 indicate that site conditions satisfy the groundwater-specific requirements for LTCP. Groundwater chemical data in downgradient borings (EB-7, EB-8, EB-11 and EB-12) indicate that the TPH plume does not extend beyond the boundary of the site at concentrations above water quality goals, and subsequently is less than 250 feet in length (Figure 5). As noted above, no LNAPL (weathered or unweathered) was observed during drilling and sampling activities. A one mile radius well search was requested and conducted by the DWR indicating that no existing water supply wells are located within a 1,000 foot radius of the boundary of the plume. The DWR well search results are available in Appendix B. Additionally, Lake Merritt, the nearest surface water body, is greater than 1,000 feet downgradient of the boundary of the plume (Figure 3). As shown in Table 2, groundwater samples collected since December 2005 indicate concentrations of benzene and MTBE have not exceeded the LTCP criteria (3,000 and 1,000 µg/L, respectively). Benzene was not detected in any groundwater samples collected beneath the building footprint and was only detected in two samples advanced adjacent or directly through the former UST pits at concentrations of 110 and 320 µg/L. MTBE has not been detected in any soil or groundwater samples collected at the site, which is expected given the age of the former USTs.

Because an existing building lies above the delineated TPH plume at the site, low-threat closure requires the presence of a bioattenuation zone to reduce the potential for vapor intrusion into the building. During our explorations, groundwater was generally observed between 20 and 22 feet bgs. Based on the soil data collected beneath the building between the ground surface and the water table, a bioattenuation zone of up to 20 feet is present beneath the building. Benzene was not detected above the laboratory's reporting limit of 0.5 µg/L in any groundwater samples collected beneath the building and therefore, benzene concentrations do not exceed the LTCP criteria of 3,000 µg/L. Based on the benzene concentrations near the former USTs (110 and 320 µg/L in borings EB-2 and EB-4, respectively), conservatively, a minimum five foot bioattenuation zone beneath the slab of the existing building is required (LTCP, Appendix 3, Scenario 3). Bioattenuation zone samples collected between November 2016 and January 2018 (Table 1) indicate that the sum of TPHg and TPHd detections in vadose zone soil (zero to 20 feet bgs) do not exceed the limit of 100 mg/kg in any soil samples collected beneath the building.

4.2 Justification for Closure

The four former USTs that released TPH into the subsurface have been physically removed from the site. Remedial over-excavations were completed following each UST removal to the extent feasible, without compromising the integrity of the building. Groundwater impacts related to the USTs have been delineated in borings advanced downgradient of the former USTs. The extent of the plume exceeding ESLs for ecological toxicity is less than 250 feet in length. Additionally, soil impacts are limited to the locations of the former USTs, and soil gas and sub-slab samples indicate that there is no significant risk of vapor intrusion to site users or residents. Furthermore, the presence of a bioattenuation zone has been confirmed beneath the building and will attenuate potential petroleum hydrocarbon vapors present in the former UST area.

The remedial activities have successfully removed the primary source of petroleum hydrocarbons to groundwater (the former USTs). The sampling data indicate that no VOCs, TPHg, TPHmo, or PAH concentrations were detected in groundwater exceeding ecological screening levels beyond 250 feet downgradient of the former USTs.

The following table summarizes the LTCP guidelines and describes how the soil and groundwater data collected at the site and analytical results support closure under the LTCP guidelines.

LTCP Guidelines	
Guideline	Justification for Site Closure
The unauthorized release is within the service area of a public water system.	The unauthorized release is within the downtown of Oakland, which is served by the East Bay Municipal Utility District water system.
The unauthorized release consists only of petroleum (including oxygenates).	Former USTs #1, #2, and #3 all contained gasoline and UST #4 contained diesel fuel. Therefore, the only releases at the site have been related to petroleum hydrocarbons.
The unauthorized release has been stopped.	The unauthorized releases have been stopped through the physical removal of the four USTs.
Free product has been removed to the maximum extent possible.	Free product has not been detected at the site.
A CSM has been developed.	A conceptual site model has been prepared and is provided in Appendix A.
Secondary source has been removed to the extent practicable.	Secondary sources include residual impacts in soil and shallow groundwater. Soil immediately around and beneath the former USTs was removed to the extent practical when the USTs were removed. Given the age of the former USTs (likely over 100 years old) groundwater concentrations are likely stable or attenuating naturally. Therefore additional source removal action beyond natural attenuation is not necessary.
Soil and groundwater have been tested for MTBE, and results have been reported in accordance with Health and Safety Code section 25296.15 (indicates that results of MTBE tests are known to the Regional Water Board).	Soil and groundwater has been tested for MTBE. MTBE was not detected in any soil or groundwater samples (Tables 1 and 4).
Nuisance as defined by Water Code section 13050 does not exist at the site (indicates no nuisance odors or threat to public health and safety).	Groundwater impacts are not considered to be a nuisance due to the lack of contact with human or other ecological receptors.
The contaminant plume that exceeds water quality objectives is less than 1,000 feet in length.	The contaminant plume that exceeds water quality objectives is less than 250 feet in length. Figure 5 present TPHg, TPHd, TPHmo, and benzene groundwater results.
The nearest existing water supply or surface water body is greater than 1,000 feet from the defined plume boundary.	The nearest surface water body (Lake Merritt) is 1,200 feet east of the plume boundary. No groundwater resources are currently used or anticipated to be used as a drinking water supply within 1,000 feet of the plume boundary.

LTCP Guidelines	
Guideline	Justification for Site Closure
The dissolved concentration of benzene is less than 3,000 µg/L and dissolved concentration of MTBE is less than 1,000 µg/L.	Benzene was not detected in any groundwater samples collected beneath the building. Benzene was only detected in groundwater in borings EB-2 and EB-4 at concentrations of 110 and 320 µg/L, respectively. Borings EB-2 and EB-4 were advanced through the former UST pit and directly adjacent to a former UST. MTBE has not been detected in any of the groundwater samples collected at the site to date.

The LTCP describes conditions, including bioattenuation zones, required to be met to assure that exposure to petroleum vapors in indoor air will not pose unacceptable health risks. Where benzene concentrations are less than 100 µg/L in groundwater, the following guidelines for a bioattenuation zone were evaluated:

Guideline	Justification for Site Closure
The bioattenuation zone shall be a continuous zone that provides a separation of at least five vertical feet between the dissolved phase benzene and the foundation of the existing building.	Table 1 summarizes soil samples collected within the proposed bioattenuation zone (zero to fifteen feet below the foundation of the building). Benzene has not been detected in soil samples collected within the bioattenuation zone above the laboratory reporting limit of 0.0050 mg/kg.
The bioattenuation zone shall contain Total TPH (TPHg and TPHd combined) less than 100 mg/kg throughout the entire depth of the bioattenuation zone.	Table 1 summarized soil samples collected with the proposed bioattenuation zone (zero to fifteen feet below the foundation of the building). The maximum concentration of Total TPH (TPHg and TPHd combined) detected within the proposed bioattenuation zone was from boring EB-6 at a depth of 4.5 feet bgs and at a concentration of 15 mg/kg.

Based on the results of our recent investigations and the preceding environmental investigations at the site, it is Langan’s opinion that the residual petroleum and VOC contamination at the site is attributable to the former USTs, which were removed in 2016. The residual hydrocarbon contamination exceeding the ESLs in soil and groundwater appear to be limited in extent on the following basis:

1. The former USTs and to the extent practical the secondary source of petroleum were removed from the site by excavation; effectively stopping any further release of petroleum to the environment.

2. The results of the grab groundwater sampling indicate that TPH and VOC concentrations exceeding ecological saltwater toxicity ESLs are limited to within the former UST vicinity. TPH and VOCs exceeding drinking water standards as MCLs rapidly decrease in concentrations across the site, suggesting high rates of bioattenuation. The predominantly sandy soils would facilitate to a well oxygenated environment, consistent with conditions that promote biodegradation of TPH.
3. The results of the confirmation soil sampling also indicates that TPH, VOC and PAH concentrations exceeding Tier I ESLs in soil are limited to the immediate vicinity of the former USTs.
4. Soil gas and sub-slab soil gas sampling indicates that vapor intrusion is not a significant risk.

In our opinion, the data collected during our investigations support a no further action determination for the site with regards to the former USTs under the LTCP. Langan therefore respectfully requests administrative case closure be granted under the Water Board LTCP from ACDEH.

6.0 LIMITATIONS

Activities undertaken as part of this report were conducted solely on behalf of EBALDC to assess and address the presence of known contaminants of concern, and no other party should rely on this information without the express, written permission of Langan. Langan assumes no responsibility or liability for errors in the information used or statements from sources other than those of Langan. Unless otherwise referenced, conclusions and recommendations in this report concerning the site are those professional opinions of the Langan personnel involved with the project, and this report should not be considered a legal interpretation of existing environmental regulations. Opinions presented herein apply to site conditions existing at the time of Langan's assessment, and cannot necessarily be taken to apply to site changes or conditions of which we are not aware and have not had the opportunity to evaluate.

Bioattenuation Zone LTCP Criteria ¹					Combined 100		NE	NE	NE	NE	NE	NE	NE	NE	NE	NE	NE	NE	NE	NE	NE	NE	NE

Notes:

1 - Bioattenuation zone is a continuous zone of at least 5 feet vertically between the dissolved phase Benzene (i.e. groundwater) and the foundation of existing or potential building; and containing Total TPH (TPHg and TPHd combined) less than 100 mg/kg throughout the entire depth of the bioattenuation zone.

< 4.6 - Analyte was not detected above the laboratory reporting limit (4.6 mg/kg)

0.900 - Shaded detections are at or above the established Tier 1 ESL

Bold values indicate an exceedance of the Tier 1 ESL

394 - sample over-excavated

-- - Not available

BZ - Saples collected within the bioattenuation zone (above groundwater level)

ESL - Environmental screening level

mg/kg - Milligrams per kilogram

MTBE - Methyl-tertiary-butyl ether

NE - Environmental Screening Level not established

NA - Not analyzed

PCE - Tetrachloroethene

SZ - Soil samples collected in the smear or saturated zone (at or below groundwater level)

TPHg - Total Petroleum Hydrocarbons as Gasoline, EPA Method 8015B

TPHd - Total Petroleum Hydrocarbons as Diesel Range, EPA Method 8015B

TPHmo - Total Petroleum Hydrocarbons as Motor Oil, EPA Method 8015B

TZ - Samples collected from borings advanced within or adjacent to the footprint of the former underground storage tanks

Various - Analysis of multiple compounds with various screening criteria

VOCs - Volatile organic compounds, EPA Method 8260B

Tier 1 ESLs - RWQCB Environmental Soil Screening Levels based on a generic conceptual site model designed for use at most sites. The Tier 1 ESL summary table is generally derived from the most conservative ESL for each compound (February 2016 [Rev.3])

Residential ESLs presented in San Francisco Bay Regional Water Quality Control Board, Environmental Screening Level, Table S-1, Any Land Use: Any Soil Depth Exposure

Bioattenuation Zone LTCP criteria presented in California State Water Resource Control Board Low-Threat Underground Storage Tank Case Closure Policy, Appendix 3, Scenario 3 - Dissolved Phase Benzene Concentrations in Groundwater, Figure A

Notes:
 NE - Environmental Screening Level not established
 NA - Not applicable
 mg/kg - Milligrams per kilogram
 PAHs - Polycyclic aromatic hydrocarbons
 <0.0033 - Analyte was not detected above the laboratory reporting limit (0.0033 mg/kg)
 0.0089 - sample over-excavated
Bold - Detected concentration is at or above the established regulatory environmental screening level
 -- - Not available/analyzed
 Tier 1 ESLs - RWQCB Environmental Soil Screening Levels based on a generic conceptual site model designed for use at most sites. The Tier 1 ESL summary table is generally derived from the most conservative ESL for each compound (February 2016 [Rev.3])

Notes:

- 1 - Reporting limits for "All Other PAHs" are below their respective MCL Priority ESLs, where established.
- 2- TPH motor oil is not soluble. TPH motor oil detections in water most likely are petroleum degradedates or less likely non-aqueous phase liquids. Results of TPH motor oil and TPH diesel results have been added together and compared to the TPH diesel criterion.
- Cis-1,2-DCE - Cis-1,2-Dichloroethene
- ESLs - Environmental Screening Levles
- LTCP - Low-Threat Closure Policy
- TPHg - Total petroleum hydrocarbons as gasoline
- TPHd - Total petroleum hydrocarbons as diesel
- TPHmo - Total petroleum hydrocarbons as motor oil
- TPHk - Total petroleum hydrocarbons as kerosene
- MCL - Maximum Contaminant Level
- MTBE - Methyl-tertiary-butyl ether
- NE - Environmental Screening Level not established
- PCE - Tetrachloroethene
- TBA - Tert-butyl alcohol
- TCE - Trichloroethene
- VOCs - Volatile organic compounds
- PAHs - Polynuclear aromatic hydrocarbons
- µg/L - Micrograms per liter
- < 50 - Analyte was not detected above the laboratory reporting limit (50 µg/L)
- Shaded values are at or above the established ESL MCL Priority criteria
- Bold** values are at or above the established Ecological ESL criteria
- Various - Analysis of multiple compounds with various MCL Priority ESLs
- - Not available/analyzed
- MCL Priority - San Francisco Bay Regional Water Quality Control Board, Environmental Screening Levels, Summary of Groundwater Environmental Screening Levels. (February 2016 [Rev.3])
- Ecological ESLs - Saltwater Ecotox ESLs, as established by the San Francisco Regional Water Quality Control Board dated 22 February 2016.
- Residential Vapor Intrusion ESLs - Groundwater Vapor Intrusion Human Health Risk Levels for Deep Groundwater, Residential Land Use Scenario: Fine to Coarse Soil, as established by the San Francisco Regional Water Quality Control Board dated 22 February 2016
- Commercial Vapor Intrusion ESLs - Groundwater Vapor Intrusion Human Health Risk Levels for Deep Groundwater, Commercial Land Use Scenario: Fine to Coarse Soil, as established by the San Francisco Regional Water Quality Control Board dated 22 February 2016
- LTCP Criteria - Low-Threat Closure Policy, Groundwater-Specific Criteria, Scenario 2

EXPLANATION

- EB-9 ● Approximate location of soil and groundwater sample by Langan, January 2018
- SS-1 ● Approximate location of sub-slab sample by Langan, November 2016
- SG-1 ● Approximate location of soil gas sample by Langan, November 2016
- EB-5 ● Approximate location of soil and groundwater sample by Langan, November 2016
- EB-1 ● Approximate location of grab groundwater sample by Langan, August 2016
- SB-1 ● Approximate location of boring conducted by Tetra Tech, 2005
- Approximate location of former USTs
- Capped in-place former product pipeline

Sample ID	"Environmental Boring-Location-Groundwater-Depth"
TPHg	Total Petroleum Hydrocarbons as gasoline
TPHd	Total Petroleum Hydrocarbons as diesel
TPHmo	Total Petroleum Hydrocarbons as motor oil
Benzene	

Bold - concentrations exceed the San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels, Aquatic Habitat Goal Levels, Saltwater Ecotox (3,700 ug/L for TPHg; 640 ug/L for TPHd; and 350 ug/L for Benzene)

- Notes:
1. Fire and water supply lines are located above ground in building footprint.
 2. Elevator pit constructed with waterproof concrete walls and flooring. The bottom of the elevator pit is approximately 7 feet below ground surface.
 3. UST piping does not extend beneath building, as it was removed during foundation work. Samples collected beneath former product pipelines during tank removal were non-detect for petroleum hydrocarbons. Concentrations greater than the ecological Environmental Screening Level are presented in bold
 5. All concentrations are in milligrams per liter.
 6. Sample IDs not presenting a sample depth (i.e. SB-1-GW1) were collected at first encountered groundwater

APPENDIX A
CONCEPTUAL SITE MODEL

**APPENDIX A
CONCEPTUAL SITE MODEL
1110 JACKSON STREET, OAKLAND, CALIFORNIA**

March 2018
Langan Project: 750622605

NO.	CSM ELEMENT	DESCRIPTION	EXHIBITS	REFERENCES	DATA GAPS	RESOLUTION
1	Site Description	<p>The property, 1110 Jackson Street (site), is located to on Jackson Street and occupies the length of the block from 11th Street to 12th Street in Oakland, California, in a fully developed area known as "Chinatown", characterized primarily by commercial and high density residential buildings. The site is bounded by dense development to the east. The site is L-shaped, with long dimensions measuring approximately 190 feet by 200 feet, along 11th and Jackson Streets, respectively.</p> <p>The L-shaped site is bound by Jackson Street to the west, 12th Street to the north, 11th Street to the south, and a school (the American Indian Model School, 171 12th Street) and residential buildings (1115 and 1109 Madison, and 150 and 168 11th Street) to the east.</p> <p>Based on historical research and supporting documentation (Essel Environmental Consulting, 2015), the site was developed with a hospital in 1889. By 1903, the hospital had been replaced by residences. Two automobile repair garages operated in the northern portion of the site (including two USTs beneath Jackson Street) between 1911 and 1946, while the southern portion of the site was developed for residential use. By 1939, the site was fully developed with two auto repair garages in the northern portion of the site, residences in the southern portion of the site, and a new commercial building at the southern corner of the site. One of the automobile repair garages was removed in 1946 and the residences were removed by 1950, when both became parking lots. The second auto repair garage was converted to a store, a glass works business, and a parking lot through the 1950's. In the 1960's, a store was constructed in the southwest corner of the site and a small shed was constructed near the glass works facility. The site remained in this state until 2007 when all the buildings were demolished. The site was vacant until construction of the current apartment building.</p> <p>The site is currently occupied by a 5-story residential building with an openly ventilated parking garage and a commercial space on the ground floor. The building is currently occupied.</p>	<p>Figure 1 – Site Location Map</p> <p>Figure 2 – Site Plan</p>	<p>EMG, <i>Phase I Environmental Site Assessment, 176 and 198 11th Street/1110 Jackson Street, Oakland, California</i> dated 15 September 2005.</p> <p>Essel Environmental Consulting, <i>Phase I Environmental Site Assessment, 176 and 198 11th Street/1110 Jackson Street, Oakland, California 94607</i> dated 13 February 2015.</p> <p>Langan, <i>Underground Storage Tank Closure Investigation Report, 1110 Jackson Street, Oakland, California</i> dated 13 September 2016.</p> <p>Langan, <i>Additional Environmental Site Assessment Report, 1110 Jackson Street, Oakland, California</i> dated 1 December 2016.</p>	None	Not Applicable
2	Surface Water Bodies	<p>The nearest surface water body is Lake Merritt located approximately 1,200 feet to the east of the site. The San Francisco Bay is approximately 0.7 miles southwest of the site. Lake Merritt is a brackish tidal estuary that is linked by a narrow channel at its southern terminus point into the inner Oakland Harbor of the San Francisco Bay.</p>	<p>Figures 3 – Nearby Surface Water Bodies</p> <p>Figures 4 – Regional Geology and Key Hydrologic Features Map</p>	None	None	Not Applicable
3	Nearby Wells	<p>The State Water Resources Quality Control Board's (RWQCB) Geotracker GAMA website provides the locations of water supply wells. Langan reviewed the GAMA website in July 2017 and no municipal supply wells were shown within 1,000 feet of the site.</p>	Appendix B – Well Search	<p><i>RWQCB Geotracker GAMA, Results of Well Search</i> website accessed 22 February</p>	None	Not Applicable

**APPENDIX A
CONCEPTUAL SITE MODEL
1110 JACKSON STREET, OAKLAND, CALIFORNIA**

March 2018
Langan Project: 750622605

NO.	CSM ELEMENT	DESCRIPTION	EXHIBITS	REFERENCES	DATA GAPS	RESOLUTION
		Langan requested information from the California Department of Water Resources (DRW) for permitted wells and borings within one mile of the site. Appendix B presents the results of the DWR well search. None of the wells within 1 mile of the site were identified as water supply wells based on a review of the documentation provided by DWR.		2018.		
4	Regional Geology and Hydrogeology	<p><u>Regional Geology</u> Regional physiographic conditions are reflective of and affected by the tectonic framework, regional faulting, and geologic units that comprise the site and surrounding area. The regional topography is characterized by northwest to southeast oriented coastal hills and intervening valleys, developed as a consequence of plate motions at the boundary of the North American and Pacific lithospheric plates. Under the current tectonic framework, compressive and shearing forces from the plate motions are distributed regionally across several active, sub-parallel, northwest to southeast trending fault zones. Horizontal motion is distributed across the major active strike-slip faults. Within the East Bay, these faults include the Hayward, Calaveras and Concord Faults, which comprise the East Bay Fault System (EBFS) (Sloan, 2006). Compressive deformation is distributed across northwest to southeast trending thrust and reverse faults parallel to the major strike-slip faults of the EBFS (Graymer, 2000). Regional uplift of the East Bay hills was coincident with a change in tectonic forces to a component of compression beginning approximately 3.5 million years ago (Sloan, 2006); current measurements indicate uplift is occurring at a rate of as much as one millimeter per year (Graymer, 2000). Regionally, bedrock is composed of the Mesozoic Franciscan Assemblage (complexly faulted and folded marine sedimentary and volcanic rocks) and is overlain by Quaternary to modern sedimentary formations which include alluvial fans, and basin and stream valley deposits, amongst others (Graymer, 2000). These Quaternary sedimentary formations were deposited during regional uplift.</p> <p>The site is located within the Coast Ranges geomorphic province, which is characterized by a series of parallel, northwesterly trending, folded and faulted mountain chains and valleys. In central California, these ranges are separated by a geologic depression that formed mainly by Franciscan Formation rock series, consisting of Jurassic Franciscan melanges. The East Bay ranges forms the eastern boundary of the Bay and consist of Late Mesozoic shelf and slope sedimentary rocks. Situated between the East Bay ranges and San Francisco Bay is the Easy Bay Plain. This plain measures approximately 25 miles long and two to seven miles wide. Prior to urban development, the plain consisted of tidal flats, estuaries and alluvial plains.</p> <p><u>Regional Hydrogeology</u> The San Francisco Bay hydrologic region has 28 identified groundwater basins underlying approximately 30 percent of the entire San Francisco Bay region (DWR, 2003). Alameda County is within the East Bay Plain sub-basin of the Santa Clara Valley groundwater basin. The East Bay Plain sub-basin is bounded to the north by San Pablo Bay, to the east by Franciscan bedrock, to the south by the Niles Cone groundwater basin, and extends to the west below the San Francisco Bay. The East Bay Plain is formed in an alluvial plain; the main water bearing units consist of unconsolidated</p>	Figure 4 – Regional Geology and Key Hydrologic Features	<p>Sloan, Doris. <i>Geology of the San Francisco Bay Region, California Natural History Guides</i>, University of California Press; First Printing edition. (360 pages), 27 June 2006.</p> <p>Graymer, R.W. <i>Geologic Map and Map Database of the Oakland metropolitan area, Alameda, Contra Costa, and San Francisco Counties, California</i>. Miscellaneous Field Studies MF-2342, 2000.</p> <p>California Department of Water Resources (DWR). <i>Bulletin 118, Update</i>, October 2003.</p> <p>DWR. <i>San Francisco Bay Hydrologic Region, California's Groundwater Bulletin 118, Santa Clara Valley Groundwater Basin, East Bay Plain Subbasin</i>, Last update 27 February 2004.</p>	None	Not Applicable

**APPENDIX A
CONCEPTUAL SITE MODEL
1110 JACKSON STREET, OAKLAND, CALIFORNIA**

March 2018
Langan Project: 750622605

NO.	CSM ELEMENT	DESCRIPTION	EXHIBITS	REFERENCES	DATA GAPS	RESOLUTION
		<p>Quaternary sedimentary formations, including the Pleistocene Santa Clara and Alameda Formations, and the Holocene Temescal Formation as well as artificial fill. With the exception of artificial fill, these main water-bearing formations were deposited as alluvial fans.</p> <p>Total groundwater storage capacity within the East Bay Plain was estimated to be 2,670,0000 acre feet, of which, approximately 2,500,000 acre feet is in storage to a depth of 1,000 feet below mean sea level; adjusting for potential sea water intrusion reduces the groundwater is storage to approximately 80,000 acre feet (storage above mean sea level). The San Francisco Bay Regional Water Quality Control Board identified 13 areas of major groundwater pollution in the East Bay Plain; contamination was most commonly associated with release of fuels and solvents, and was generally found within the upper 50 feet (DWR, 2004).</p>				
5	Site Geology	<p>The site rests on the Merritt Sand. The site's surficial geology is mapped as Holocene and Pleistocene aged Quaternary eolian deposits described as fine-grained, very well sorted, well-drained sand (Graymer, 2000).</p> <p>The subsurface has been explored to a depth up to 27 feet below ground surface (bgs). The subsurface soil at the site reportedly consists of three to five feet of fill underlain by sand mixed with varying amounts of silty and clayey sand.</p>	<p>Figure 2 – Site Plan</p> <p>Appendix C. Boring Logs and Cross Sections</p>	<p>California Geological Survey, <i>State of California Seismic Hazard Zones, Oakland West Quadrangle, Official Map</i> dated 14 February 2003.</p> <p>Graymer, R.W. <i>Geologic Map and Map Database of the Oakland metropolitan area, Alameda, Contra Costa, and San Francisco Counties, California</i>. Miscellaneous Field Studies MF-2342, 2000.</p> <p>Langan, <i>Additional Environmental Site Assessment Report, 1110 Jackson Street, Oakland, California</i> dated 1 December 2016.</p>	None	Not Applicable
6	Site Groundwater Depth and Flow	<p>Groundwater was generally measured between approximately 20 feet bgs with the potential for seasonal rainfall to influence groundwater levels by several feet.</p> <p>The groundwater flow direction at the site, based on groundwater investigations performed at a nearby site (165 13th Street, Oakland, California), is anticipated to flow in an easterly direction towards Lake Merritt.</p>	Appendix C – Boring Logs and Cross Sections	None	None	Not Applicable

**APPENDIX A
CONCEPTUAL SITE MODEL
1110 JACKSON STREET, OAKLAND, CALIFORNIA**

March 2018
Langan Project: 750622605

NO.	CSM ELEMENT	DESCRIPTION	EXHIBITS	REFERENCES	DATA GAPS	RESOLUTION
7	Preferential Pathways	<p>Utility conduits (storm water, sanitary sewer and water supply lines) enter the property from Jackson Street near the former UST #1, #2, and #3 locations. Utility conduits adjacent to or within the site boundaries are not potential preferential pathways for groundwater migration due to the depth to groundwater beneath the site.</p> <p>Additionally, one elevator bank is located near the commercial space along Jackson and 11th Streets. The elevator pit extends about 6 feet below the slab and is constructed of waterproof concrete. Elevator pits and shafts can act as conduits for vapor intrusion.</p> <p>Sub-slab and soil gas samples were collected in the vicinity of the subsurface utility trenches and the elevator pit in November 2016. No sub-slab or soil gas samples had detected concentrations in excess of their respective Regional Water Quality Control Board (RWQCB) Tier 1 Environmental Screening Levels (ESLs), which indicates that vapor intrusion is not a significant concern at the site.</p> <p>In January 2018, borings (EB-9 through EB-13, Figure 2) were advanced across the footprint of the existing building. Groundwater levels were measured ranging from approximately 19 to 21 feet bgs. Considering these recent groundwater level measurements, utility conduits will not act as preferential pathways for groundwater.</p>	Figure 2 – Site Plan	Langan, <i>Additional Environmental Site Assessment Report, Fuel Leak Case RO0003232, 1110 Jackson Street, Oakland, California</i> dated 1 December 2016.	None	Not Applicable
8	UST Systems or Release Source	<p>The site formerly housed four underground storage tanks (USTs) consisting of two 265-gallon gasoline USTs, one 110-gallon gasoline UST, and one 750-gallon diesel UST. All tanks were located underneath the Jackson Street sidewalk along the eastern side of the site. The three gasoline USTs were removed in April 2016 and the diesel UST was removed in November 2016 by Golden Gate Tank Removal (GGTR). Over-excavation was performed for each of the USTs as part of the removal and sidewall and bottom samples were collected by GGTR following excavation.</p> <p>Two environmental site assessments, performed in August 2016 and November 2016, were completed to evaluate the extent of soil, soil gas, and groundwater impacts related to the release of petroleum products from the USTs at the site. A total of eight borings (EB-1 through EB-8) for soil and/or groundwater collection, five soil gas borings, and six sub-slab sample points were completed to facilitate the collection of environmental samples to delineate the potential contaminant impacts since the discovery and removal of the first three USTs. The analytical results collected to date indicate contaminant impacts at the site are attributable to the former USTs and generally limited to soil immediately surrounding the former USTs and groundwater extending slightly beneath the existing building.</p> <p>Soil and groundwater samples were collected in January 2018 immediately east of the former UST #4 and farther downgradient of the former USTs #1, 2 and 3. Borings EB-10 and EB-11 were advanced approximately five and 60 feet downgradient of the former UST #4, respectively. Analytical results for soil from zero feet bgs to groundwater (approximately 20 feet bgs) as well as shallow and deep discrete groundwater samples (approximately 25 and 35 feet bgs, respectively) indicate that groundwater impacts</p>	Figure 2 – Site Plan	<p>Golden Gate Tank Removal (GGTR), <i>Underground Storage Tank Closure Report, 1110 Jackson Street, Oakland, California</i> dated 23 June 2016.</p> <p>GGTR, <i>Underground Storage Tank (T4) Closure Report, 1110 Jackson Street, Oakland, California</i> dated 13 January 2017.</p> <p>Langan, <i>Underground Storage Tank Closure Investigation Report, 1110 Jackson Street, Oakland, California</i> dated 13 September 2016.</p>	None	Not Applicable

		exceeding ecological ESLs extend less than 250 feet in length from the former UST locations.				
	LNAPL	Based on previous investigations conducted by others and Langan, there is no evidence and/or documentation of light non-aqueous phase liquid (LNAPL) at the site. Groundwater samples were collected from six borings (EB-1 through EB-4 and EB-10 and EB-11) downgradient and cross-gradient of the former USTs. After allowing for groundwater equilibration and before collecting groundwater samples, a disposable bailer was used to skim the surface of groundwater to inspect for the presence of LNAPL. LNAPL was not observed in any borings.	None	None	None	Not Applicable
9	Contaminants of Concern	Chemicals currently or historically detected in site soil and/or groundwater at concentrations greater than ESLs presented in Tables 1 through 4 include: <ul style="list-style-type: none"> <u>Petroleum Hydrocarbons and TPH constituents</u>: total petroleum hydrocarbons as gasoline (TPHg), diesel (TPHd), and motor oil (TPHmo) <u>Polycyclic aromatic hydrocarbons (PAHs)</u>: benzo (a) Anthracene, benzo (a) Pyrene, benzo (b) fluoranthene, dibenz (a,h) anthracene, indeno (1,2,3-cd) pyrene, 2-methyl-naphthalene, naphthalene, <u>Volatile Organic Compounds (VOCs)</u>: benzene, t-Butyl benzene, ethylbenzene, naphthalene, and xylenes <u>Metals</u>: Lead (in soil) 	Table 1—TPH and VOC Analytical Results in Soil Table 2—Metal Analytical Results in Soil Table 3—PAH Analytical Results in Soil Table 4—Non-Metal Analytical Results in Grab-Groundwater	Langan, <i>Underground Storage Tank Closure Investigation Report, 1110 Jackson Street, Oakland, California</i> dated 13 September 2016.	None	Not applicable
10	Soil Impacts	In 2006, Tetra Tech advanced three borings in an effort to assess the potential petroleum impacts associated with an adjacent property. Soil samples were collected at approximately 12 feet bgs and analytical results yielded no detections of TPH, VOCs, or metals above their respective ESLs. In 2016, after discovery of USTs in the Jackson Street sidewalk adjacent to the site, and subsequent removal of the USTs and the associated over-excavation, soil contamination was visually observed and soil samples collected from beneath all USTs. The ACEH recommended over-excavation of contaminated soil and additional bottom wall soil sampling. The recommended over-excavation and additional sampling was completed by GGTR in May 2016. TPHg contamination was detected beneath all three UST excavations at concentrations ranging between 67.8 mg/kg (beneath UST 3) and 6,320 mg/kg (beneath UST 2). The ACEH requested collection of groundwater samples near the former tanks to assess the impact of petroleum and petroleum related compounds to groundwater. In August 2016, Langan performed additional soil sampling in conjunction with the requested groundwater sampling at four locations near the former USTs (EB-1 through 4). Soil sample results collected from beneath UST 2 indicated that petroleum	Table 1—TPH and VOC Analytical Results in Soil Table 2—Metal Analytical Results in Soil Table 3—PAH Analytical Results in Soil Table 4—Non-Metal Analytical Results in Grab-Groundwater Figure 2 – Site Plan	Langan, <i>Underground Storage Tank Closure Investigation Report, 1110 Jackson Street, Oakland, California</i> dated 13 September 2016. 		<p>hydrocarbons and related compounds have impacted subsurface soils at the site.</p> <p>Following the additional soil and groundwater sampling, Langan collected soil and groundwater samples from four additional borings (EB-5 through EB-8) at the site in November 2016. Soil samples were collected at approximately 4.5 and 8.5 feet bgs. Soil samples collected and analyzed for TPH and VOCs were generally non-detect, except TPHd and TPHmo detected at concentrations of 15 and 160 mg/kg in sample EB-6-4.5 and TPHmo detected at 5.1 mg/kg in sample EB-8-4.5.</p> <p>In January 2018, soil borings (EB-9 through EB-13, Figure 2) were advanced throughout the footprint of the existing building for the collection of soil and groundwater samples. Soil samples were collected within the first five feet to characterize the chemical nature of surface soils and to assess the presence of a suitable bioattenuation zone below the slab of the building. Additionally, soil samples were collected at five foot intervals until groundwater was encountered. TPHg was not detected above the laboratory reporting limit of 1.0 mg/kg in 38 of 38 samples analyzed. TPHd was detected in three of 38 samples analyzed at concentrations ranging from 1.6 to 15 mg/kg. TPH-mo was detected in seven of 38 samples analyzed at concentrations ranging from 5.1 to 160 mg/kg. No soil samples analyzed had detected concentrations of TPH exceeding the RWQCB Low-Threat Closure Required Characteristics of Bioattenuation Zones for Sites Without Oxygen Data (i.e. sum of TPHg and TPHd greater than 100 mg/kg).</p>		<p><i>California</i> dated 18 January 2006.</p>		
11	Groundwater Impacts	<p>Groundwater samples were first collected at the site in 2006. Additional groundwater samples were collected subsequent to the removal of USTs #1, #2, and #3. No TPH was detected in any of the groundwater samples collected by Tetra Tech from borings SB-1, SB-2 or SB-3 in 2006. The only VOCs detected were trichloroethene (TCE) and tetrachloroethene (PCE) in boring SB-3 at concentrations of 4.1 µg/L, which are both below their maximum contaminant level (MCL) of 5 µg/L. Boring SB-3 was located in the southeast portion of the site.</p> <p>In August 2016, Langan advanced three borings (EB-1 through EB-3) in the vicinity of the former USTs and one boring (EB-4) downgradient of the former USTs. Analytical results from this investigation revealed the highest concentrations of TPH and related compounds in groundwater were directly below UST #2, which also had the highest concentrations in soil. Contaminants detected above their MCL priority ESLs were reported as follows:</p> <ul style="list-style-type: none"> • TPHg and TPHd in EB-2 at 30,000 and 55,000 µg/L, respectively; • TPHg, TPHd, and TPHmo in EB-1 at 1,600, 3,200, and 250 µg/L, respectively; • TPHg, TPHd, and TPHmo in EB-4 at 16,000, 2,300, and 520 µg/L, respectively; • Benzene in EB-2 and EB-4 at 320 and 110 µg/L, respectively; 	<p>Table 4—Non-Metal Analytical Results in Grab-Groundwater</p> <p>Figure 2 – Site Plan</p>	<p>GGTR, <i>Underground Storage Tank Closure Report, 1110 Jackson Street, Oakland, California</i> dated 23 June 2016.</p> <p>GGTR, <i>Underground Storage Tank (T4) Closure Report, 1110 Jackson Street, Oakland, California</i> dated 13 January 2017.</p> <p>Langan, <i>Underground Storage Tank Closure Investigation Report, 1110 Jackson Street, Oakland, California</i> dated 13 September 2016.</p> <p>Langan, <i>Additional Environmental Site</i></p>	None	Not applicable

		<ul style="list-style-type: none"> • Ethylbenzene EB-2 and EB-4 at 740 and 250 µg/L, respectively; • Naphthalene in EB-2 and EB-4 at 100 and 7.9 µg/L, respectively; • Xylenes in EB-2 and EB-4 at 430 and 27 µg/L, respectively. <p>Based on elevated concentrations downgradient of the USTs, additional groundwater sampling was performed by Langan in November 2016. Four borings (EB-5 through EB-8) were advanced to a maximum depth of 26.5 feet bgs downgradient of the former USTs to determine the extent of the groundwater contamination at the site. TPHd and TPHmo were the only compounds detected above their MCL Priority ESLs. However, no groundwater samples beneath the building had detected concentrations exceeding ecological ESLs (saltwater Ecotox). Groundwater sample results yielded the following maximum detections:</p> <ul style="list-style-type: none"> • TPHd in EB-6 at 290 µg/L • TPHmo in EB-6 at 2,800 µg/L <p>Based on the groundwater investigations to this point, it has been confirmed that groundwater beneath the site has been impacted by TPHd and TPHmo downgradient of the former USTs.</p> <p>Discrete groundwater samples were collected by Langan in January 2018 from five borings from depths of first encountered groundwater (shallow) and approximately 10 feet below the shallow groundwater sample (deep) in an effort to delineate the vertical and horizontal extent of groundwater contamination. A total of 10 groundwater samples were collected including one duplicate sample from boring EB-12 (DUP1-2018-01-17). Shallow groundwater was collected from bottom depths ranging from 25 to 28 feet bgs and deep groundwater samples were collected from bottom depths of 35 to 38 feet bgs. Groundwater results yielded the following maximum concentrations:</p> <ul style="list-style-type: none"> • TPH-g was not detected above the laboratory reporting limit of 50 µg/L in any of the 10 samples analyzed • TPH-d in EB-10 at 35 feet bgs at 250 µg/L • TPH-mo in EB-9 at 38 feet bgs at 580 µg/L • Benzene, toluene, ethylbenzene, xylenes and methyl tert-butyl ether (MTBE) were not detected above the laboratory reporting limit of 0.50 µg/L in the 10 samples analyzed • Naphthalene was not detected above the laboratory reporting limit of 0.50 µg/L in the 10 samples analyzed 		<p><i>Assessment Report, 1110 Jackson Street, Oakland, California</i> dated 1 December 2016.</p> <p>Tetra Tech EM, Inc., <i>Limited Phase II Environmental Site Assessment, Jackson Tower, Oakland, California</i> dated 18 January 2006.</p>
