Please review the checklist below. Any NO signifies non-compliance. Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues.

If you have any questions or further instruction, please contact our Project Coordinator at (702) 307-2659.

Cooler Received/Opened On: 9/13/2013 Workorder: N011009

Rep sample Temp (Deg C): 3.6/5.4 IR Gun ID: 2

Temp Blank: ☐ Yes ☑ No

Carrier name: GSO

Last 4 digits of Tracking No.: 8221/8222 Packing Material Used: None

Cooling process: ☑ Ice ☐ Ice Pack ☐ Dry Ice ☐ Other ☐ None

Sample Receipt Checklist

1. Shipping container/cooler in good condition?	Yes ☑	No ☐	Not Present ☐
2. Custody seals intact, signed, dated on shippping container/cooler?	Yes ☐	No ☐	Not Present ☑
3. Custody seals intact on sample bottles?	Yes ☐	No ☐	Not Present ☑
4. Chain of custody present?	Yes ☑	No ☐	
5. Sampler's name present in COC?	Yes ☑	No ☐	
6. Chain of custody signed when relinquished and received?	Yes ☑	No ☐	
7. Chain of custody agrees with sample labels?	Yes ☑	No ☐	
8. Samples in proper container/bottle?	Yes ☑	No ☐	
9. Sample containers intact?	Yes ☑	No ☐	
10. Sufficient sample volume for indicated test?	Yes ☑	No ☐	
11. All samples received within holding time?	Yes ☑	No ☐	
12. Temperature of rep sample or Temp Blank within acceptable limit?	Yes ☑	No ☐	NA ☐
13. Water - VOA vials have zero headspace?	Yes ☐	No ☐	NA ☑
14. Water - pH acceptable upon receipt? Example: pH > 12 for (CN,S); pH<2 for Metals	Yes ☐	No ☐	NA ☑
15. Did the bottle labels indicate correct preservatives used?	Yes ☐	No ☐	NA ☑
16. Were there Non-Conformance issues at login?	Yes ☐	No ☐	NA ☑
Was Client notified?	Yes ☐	No ☐	NA ☑

ATLInc Reports

From: Luann Beadle <beadle@geoconinc.com>
Sent: Monday, September 16, 2013 2:32 PM
To: Advanced Technology Labs, Inc.
Subject: Caltrans TO-55 Cedar St
Attachments: MX-5111N_20130916_142847.pdf

Hi Marlon and Glen,

Attached is a scan of the COC's for this project. I noted necessary changes in red ink and initialed nearby. Please proceed with the analyses as shown here. The TAT is still standard. If you could, please send results to Rick Day as well. I may be on vacation when they come in, as noted below.

Thank you for your patience. I appreciate it.

Sincerely,
Luann

I will be on vacation September 23rd through 27th . If you need assistance during that time, please contact Rick Day at (925) 961-5270.

RE: 800 Cedar St, E8560-02-55

Attention: Rebecca Silva

Enclosed are the results for sample(s) received on September 13, 2013 by Advanced Technology Laboratories, Inc. . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

This is an addendum report. Please incorporate with documentation previously submitted.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

Jose Tenorio Jr.
Laboratory Director

Hi Glen,

Please run samples N1-0, N1-1, N1-2, and N1-3 for CAM 17 metals and sample N1-1 for Hexavalent Chromium (7196) on a regular TAT.

Thank you,

Luann

RE: 800 Cedar St, E8560-02-55

Attention: Rebecca Silva

Enclosed are the results for sample(s) received on September 13, 2013 by Advanced Technology Laboratories, Inc. . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

This is an addendum report. Please incorporate with documentation previously submitted.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

for Nancy

Jose Tenorio Jr.

CASE NARRATIVE

Analytical Comments for EPA 1311/6010B:

RPD for sample duplicate N011008-003 is outside criteria ; however, the analytical batch was validated by the Laboratory Control Sample (LCS).

To: Advanced Technology Labs, Inc.
Subject: TO-55 Cedar St Lab Orders N1011008 and N011009

Hi ATL,

Please run TCLP lead on the following samples from these two lab orders:

D6-3
D1-7.5
D3-4
A2-7.5
B8-5
B7-10
G4-8
B5-5
B8-0
B7-5
H1-4

Regular TAT please.
Thanks,
Luann

Mr. Kevin Brown
Urban Designs, LLC
1201 Pine Street, #151
Oakland, CA 94612
(Sent via electronic mail to: KB@hollidaydevelopment.com)

Subject: Conditional Approval of Additional Site Investigation Activities for Site Cleanup Program Case No. RO0003269 and GeoTracker Global ID T10000011072, The Phoenix, located at 801 Pine Street, Oakland, CA 94601, APN: 6-47-1.

Dear Mr. Brown:

Alameda County Department of Environmental Health (ACDEH) staff has reviewed the email to ACDEH, dated Friday, November 9, 2018, presenting results of field investigation activities conducted in October 2018 and recommendations for additional subsurface investigation activities at the subject site to evaluate vapor intrusion to onsite receptors as well as offsite receptors (east of Pine Street) and north of existing soil gas wells SG10 and SG11 in the vicinity of proposed Parcel 3. On Wednesday November 7, 2018 ACDEH met with you and your environmental consultants to discuss the results of soil gas and grab groundwater investigations; including the advancement of five soil gas wells (SG10 through SG14), two grab groundwater samples (GW10 and GW11) and sampling of existing soil gas wells SG2, SG4, SG5, and SG6. Results of the October 2018 investigation indicate tetrachloroethylene (PCE) concentrations in soil gas have not been delineated offsite to the east in addition to the north and northeast of proposed Parcels 2 and 3. Trichloroethylene (TCE) concentrations in soil gas have not been delineated offsite east of proposed Parcel 2.

ACDEH understands the scope of work for the additional subsurface investigation activities will include the following:

1. Installation of **soil gas well SG15 to** evaluate potential offsite migration and delineation of TCE concentrations east of existing soil gas wells SG10 and SG14. The soil gas well will be advanced and sampled using previously ACDEH-approved methods outlined in the *Limited Subsurface Investigation Work Plan* (the Work Plan), dated March 23, 2018 and the *Limited Subsurface Investigation Work Plan Addendum* (the Addendum), dated May 15, 2018, submitted by P&D and approved by ACDEH on May 22, 2018.

2. Installation of **soil gas wells SG16 through SG20** to evaluate potential offsite migration east of Parcel 2 and 3 and delineation of soil gas north and northeast of SG10 and SG11. The soil gas well will be advanced and sampled using previously ACDEH-approved methods outlined in the *Limited Subsurface Investigation Work Plan* (the Work Plan), dated March 23, 2018 and the *Limited Subsurface Investigation Work Plan Addendum* (the Addendum), dated May 15, 2018, submitted by P&D and approved by ACDEH on May 22, 2018.

Based on our review, ACDEH conditionally approves the scope of work mentioned above and requests that you perform the proposed work. Please provide 72-hour advance written notification to this office (e-mail preferred to: andrew.york@acgov.org) prior to the start of field activities. In order to facilitate the proposed site redevelopment schedule for Parcel 1 (proposed permanent supportive housing), ACDEH requests that the reporting of all subsurface activities conducted at the site be used to complete the conceptual site model and included in the in Corrective Action Plan for the site.

ACDEH notes that although you are in the process of completing the additional data gap sampling discussed above to provide a complete assessment of the extent of volatile organic compounds (VOCs) in soil vapor, ACDEH agrees that the site can be redeveloped provided corrective actions are implemented at the site that will be protective of environmental risks to future building residents and workers. These measures may include excavation of lead-impacted soil and/or offsite disposal at a permitted landfill or onsite consolidation and capping to prevent direct contact exposure, and installation of vapor mitigation engineering controls underlying the structures and hardscape to reduce the inhalation risk of exposure to VOCs.

ACDEH understands that the project is scheduled to be reviewed and approved by the City of Oakland Planning Commission on December 19, 2018 and Holliday Development will be submitting a funding application to the Alameda County Housing and Community Development agency for Proposition A1 funds. That funding program requires the project to have local approvals and environmental clearances by the end of 2018.

Based on our November 7th meeting with you, ACDEH understands that Holliday anticipates completion of the data gap investigation field activities and submittal of a corrective action plan to ACDEH before the end of 2018. ACDEH is committed to working with you on this important project and will expedite review of submittals to the extent practicable during the upcoming holiday season.

Thank you for your cooperation. ACDEH looks forward to working with you in developing a corrective action plan that will provide long-term protection for potential environmental risk. If you have any questions, please call me at (510) 639-1276 or send me an email message at andrew.york@acgov.org

Sincerely,

Drew J. York
Senior Hazardous Materials Specialist

1.0 INTRODUCTION

This Construction Soil and Groundwater Management Plan (SGMP) has been prepared by P&D Environmental, Inc. of Oakland, California (P&D) on behalf of Urban Designs, LLC (Urban Designs) for earthwork activities associated with the redevelopment project of 800 Cedar Street in Oakland, California (***Figure 1***) with Alameda County Assessor Parcel Number (APN) 006-047-1 (the Site) for what is identified on the Alameda County parcel viewer page as 800 Cedar Street. Cedar Street no longer exists, and the site is bounded on the east by Pine Street. The Site is currently vacant with a concrete surface covering almost all of the property. The redevelopment project ("Project") consists of (1) demolition of the existing concrete cover; (2) grading and soil excavation for utilities, elevator shafts, and foundations; and (3) construction of multi-story, mixed-use residential buildings and landscaped areas.

1.1 Lead Regulatory Oversight Agency for Environmental Site Cleanup

Soil and groundwater at the Site has been impacted from historical land use practices on-Site and potentially off-Site. Alameda County Department of Environmental Health's (ACDEH) Local Oversight Program for Hazardous Materials Releases (LOP) is the lead regulatory oversight agency for the environmental investigation and cleanup actions at the Site under Site Cleanup Program Case (SCP) No. RO0003269. A separate LOP Case No. RO0000417 was historically associated with a former Underground Storage Tank (UST) release that was located on a portion of the former Phoenix Iron Works that is no longer a portion of the existing property.

Due to the presence soil and groundwater contamination at the Site corrective actions are necessary to safely prepare the Site for development. Corrective actions include: (1) on-Site consolidation of lead-contaminated soil; (2) capping lead impacted soil on-Site beneath building foundations, hardscape and/or clean fill; (3) installation of a vapor mitigation barriers; and (4) installation of trench plugs in utility trenches where required to mitigate vapor migration.

A Site map showing the historical locations of USTs is attached as ***Figure 2***. No ground floor plan is presently available for the project. A complete record of environmental Site investigations at the Site may be obtained in the case files for RO0003269 (i.e., available regulatory directives and correspondence, reports, analytical data, etc.) through review of both the State Water Resources Control Board's GeoTracker database, and the ACDEH website at http://www.acgov.org/aceh/index.htm.

1.2 SGMP Purpose & Objectives

This SGMP is designed to provide Urban Designs and the construction team with guidance for the proper handling and management of contaminated soil and groundwater during redevelopment activities.

The goals of this SGMP are to provide detailed information regarding known environmental conditions at the Site and establish a decision-making structure to assist the construction team in the identification and management of contaminated media, when and if they are encountered. The objectives of this SGMP are as follows:

- Communicate information to Site construction workers about Site environmental conditions;
- Present protocols for appropriate community protection;
- Present guidelines for health and safety precautions for on-Site workers who may access soil or groundwater that could contain residual chemicals of concern;
- Present notification and reporting requirements;
- Present protocols for management of known contaminated soil or extracted groundwater generated during Site redevelopment activities; and
- Present contingency procedures in the event that localized areas of unanticipated chemically-affected soil or other subsurface features of environmental concern are encountered during earthwork or excavation activities;

2.0 RESPONSIBILITY FOR SGMP IMPLEMENTATION

Representatives for the property Owner will oversee implementation of the SGMP at the Site. A copy of this SGMP will be maintained at the Site at all times. The Owner and General Contractor(s) will make all third-party subcontractors working at the Site aware of the requirements of the SGMP, and provide an electronic copy and hard-copy to all subcontractors that are performing activities covered by this SGMP and who may encounter suspect subsurface conditions during execution of their work.

The project Environmental Consultant will be present to assist the Owner and contractors with the implementation of this SGMP when ground-disturbing activities are being conducted in areas where contamination is known or suspected or when unknown conditions are encountered.

2.1 Activities Covered by the SGMP

The following activities constitute the work covered under this SGMP.

- **Subsurface Construction or Repair** – any activity occurring beneath the grade level of existing or future ground surface;
- **Utility Line Work** – any subterranean inspection, excavation, or repair of electrical, telephone, water, sanitary sewer or storm drains occurring within or outside of existing vaults (conducted prior to excavation); and

- **Other** – other subgrade activities not expressly listed a love (e.g., deep landscaping work, sub-slab work, etc.)

2.2 Project Construction Team Contact Information

Prior to the initiation of construction activities that are covered under this SGMP, the Owner will confirm the Owner's project representative and project Environmental Consultant listed below. Regular and 24-hour emergency contact information for these individuals will be confirmed and updated as necessary. A project contact sheet will be provided to the General Contractor and posted in an accessible and suitable location at the Site.

Project Role	Company Name	Name	Contact Information
Owner Representative	Urban Designs, LLC	David Schenker	(510) 588-5134; david@hollidaydevelopment.com
General Contractor	Cannon Constructors North, Inc.	Larry Pace	(415) 546-5500; LPace@cannongroup.com
Environmental Consultant	P&D Environmental, Inc.	Paul King	(510) 658-6916; paul.king@pdenviro.com

2.3 Worker Health and Safety

In addition to following the SGMP, each Contractor and subcontractor is responsible for the safety of its employee and Site visitors including but not limited to adherence to a health and safety plan and use of property-trained personnel:

- **Preparation of a Site-Specific Health and Safety Plan (HASP)**. A HASP will be prepared for the project in accordance with California Occupational Safety and Health Administration (CAL-OSHA) Construction Safety Orders within Title 8 of the California Code of Regulations (CCR). The General Contractor is responsible for notifying subcontractors and visitors of pertinent environmental conditions to ensure adequate protection for workers and visitors while on Site. Subcontractors may either adopt the General Contractor's HASP or prepare their own HASP. In the event that unanticipated conditions occur at the Site, the HASP will be modified accordingly.

- **Use of Properly-Trained Personnel**. Each contractor engaged in contact and management of contaminated soil or groundwater will use properly trained personnel in accordance CCR, Title 29, Part 1910.120 Hazardous Waste Operations and Emergency Response (HAZWOPER) standards.

2.4 Community Protection During Site Redevelopment

Land use in the vicinity of the Site is mixed commercial and residential. A map of the land use in the immediate vicinity of the Site is presented on ***Figure 1***. During the development of the Site, the Owner and contractors will implement measures to control potential risks to the surrounding community from fugitive dust emissions. These activities will be implemented when there is the potential for exposed soil to affect the nearby community. It is anticipated that following placement of hardscapes and building pads, air monitoring will not be required as there will not be exposed soil surfaces.

2.5 Agreement and Acknowledgement Statement

Prior to commencement of any Site activities that disturb the ground surface, the General Contractor and subcontractors of the Owner will read this plan and sign the Agreement and Acknowledgement Statement (***Appendix A***) to certify that they have read, understood and agreed to abide by its provisions.

3.0 AGENCY NOTIFICATION & REPORTING REQUIREMENTS

The Owner will notify the ACDEH and other agencies as applicable during Site development activities in accordance with the protocols described below.

3.1 ACDEH Notification

The Owner will notify the ACDEH and the ACDEH Certified Unified Program Agency (CUPA) during Site redevelopment activities in accordance with the protocols below.

3.1.1 Twenty-four (24) Hour Notification

The ACDEH will be notified within 24 hours of discovery if any of the following potentially hazardous conditions are encountered:

- Releases spills or releases of hazardous substances or petroleum hydrocarbons to soil or water that are considered, based on best professional judgment and/or physical evidence (including but not limited to olfactory, visual, field instrument, and lab data), to be an immediate threat to human health and the environment; and/or

- Discovery of unknown conditions (underground storage tanks, sumps, vaults, piping, etc.) or newly found contamination.

In the event of the discovery of USTs, vaults, hoists, & pipelines, the ACDEH CUPA must also be notified within 24 hours of the discovery.

3.1.2 Seventy-two (72) Hour Notification

The ACDEH will be notified 72 hours in advance of ground disturbing activities in areas of known contamination or suspected contamination.

3.1.3 ACDEH and CUPA Contact Information

The primary points of contact for the ACDEH LOP and CUPA are provided below. All agency notifications must be made by phone and email. An ACDEH contact sheet will be provided to the General Contractor and posted in an accessible and suitable location at the Site.

Drew York, ACDEH Case Worker	(510) 639-1276; Andrew.York@acgov.org
Paresh Khatri, ACDEH Program Manager	(510) 777-2478; paresh.khatri@acgov.org
ACDEH CUPA	(510) 567-6700 dehalamedacers@acgov.org

3.2 Other Agency Notification

In addition to the ACDEH notification requirements discussed above, other agency notifications may be required. Contact information for other agency notifications that may be required is provided below. Prior to the initiation of construction activities that are covered under this SGMP, the Owner will confirm the contact information listed below. An agency contact sheet will be provided to the General Contractor and posted in an accessible and suitable location at the Site.

Conditions Posing an Immediate Threat. For life-threatening or serous hazardous materials incidents, the following number will be contacted immediately upon discovery.	
Local police, fire and rescue services	911
Releases to Water. For spills or releases of hazardous substances or petroleum hydrocarbons to surface water, the following agencies will be contacted immediately upon discovery.	
National Spill Response Center	(800) 424-8802
United States Coast Guard – San Francisco Sector (if spill is going to reach navigable waters)	(415) 399-3547
California Office of Emergency Services	(800) 852-7550; (916) 845-8911
California Regional Water Quality Control Board – San Francisco Bay Region	(510) 622-2300
Local Emergency Response Agency	911
VOC-Impacted Soil. If VOC-impacted soil is discovered during Site grading activities, the following agency will be notified.	

Bay Area Air Quality Management District (BAAQMD)	(415) 749-4900
Dust Complaints. For dust complaints during ground disturbing activities, the following agencies will be notified.	
City of Oakland Building Department	(510) 238-3381
BAAQMD	800-334-ODOR (6367)

3.3 LMC Record Keeping & Reporting Requirements

All groundwater removal and soil excavation, disposal and import activities will be documented in daily field reports by the Contractor and/or Environmental Consultant and will kept at the Site and made available to ACDEH upon request. Documentation will include at a minimum the following, as applicable:

- **Groundwater** – volume of groundwater that is removed, characterization, treatment, and destination (transported to temporary holding tanks, used as dust suppression, and/or disposed of off-Site);
- **Underground Structures** – type, contents, characterization, and destination (abandoned in place or disposed of off-Site);
- **Impacted Soil** – origin, volume, characterization, and destination (transported to temporary soil locations within the Site, disposed of off-Site, and/or re-used on Site);
- **Imported Soil** – origin, volume, characterization, and destination (location on-Site);
- **Off-Site Disposal Records** – date, time, trucking company, driver and vehicles used for the trip, equipment decontamination and tarping, waste/material type, volume, copies of bills-of-lading, and hazardous waste manifests; and
- **Dust Complaint Logs** – time, name and contact information, complaint description, earthwork activities associated with complaint, and measures taken to mitigate dust;
- **Analytical Reports** – copies of waste characterization laboratory analytical results.

Following completion of the work covered by this SGMP, the Environmental Consultant will prepare a report for submittal to ACDEH that documents compliance with this SGMP including soil and/or groundwater sampling, removal and management of unknown structures, chemical analysis and proper disposal of contaminated materials and soil import. The report will include at a minimum the information described in Section 3.3 above.

4.0 ENVIRONMENTAL SITE CONDITIONS

Soil and groundwater has been impacted at the Site from historical Site use and potentially from off-Site sources. A summary of known environmental conditions in soil and groundwater is provided below. Tabulated results of analytical data with figures showing the sample collection locations are provided in ***Appendix B***. ***Figures 4 through 7*** of this SGMP show the locations of contaminants historically detected at the Site at concentrations exceeding regulatory agency screening levels. All historical borehole locations are shown in attached ***Figure 3***; historical locations of petroleum and PAHs detected in soil at concentrations exceeding Tier 1 screening levels are shown in attached ***Figure 4***; historical locations of lead detected in soil at concentrations exceeding Tier 1 screening levels are shown in attached ***Figure 5***; historical locations of Total Petroleum Hydrocarbons (TPH) and Volatile Organic Compounds (VOCs) detected in groundwater at concentrations exceeding Tier 1 screening levels are shown in attached ***Figure 6***; historical locations of metals detected in groundwater at concentrations exceeding Tier 1 screening levels are shown in attached ***Figure 7***; and the historical locations of VOCs detected in soil gas at concentrations exceeding Tier 1 screening levels are shown in attached ***Figure 8***.

4.1 Soil

The concrete cover at the Site is underlain by fine to medium sand and silty sand, with poorly graded sand encountered on the eastern portion of the Site and silty sand predominantly encountered in the western portion of the Site. Where both lithologies are encountered, the poorly graded sand overlies the silty sand. Known soil contamination includes the following:

- **Petroleum Impacts.** Elevated concentrations of petroleum-related compounds, detected as Total Recoverable Petroleum Hydrocarbons (TRPH), Total Petroleum Hydrocarbons as Diesel (TPH-D), and Total Petroleum Hydrocarbons as Motor Oil (TPH-MO) have been detected at concentrations exceeding Tier 1 soil screening levels at only a limited number of locations on the western side of the property at depths of 1.5 feet bgs or less (see ***Figure 4***). TRPH, TPH-D and TPH-MO have also been detected in soil at concentrations exceeding Tier 1 soil screening levels at locations to the west of the current property boundary (see ***Figure 4***). Petroleum related Volatile Organic Compounds (VOCs) such as Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX) have only been detected in soil at very low concentrations in soil (below Tier 1 soil screening level concentrations) during historical removal activities of a former gasoline and two former solvent Underground Storage Tanks (USTs). Polyaromatic Hydrocarbons (PAHs) have only been detected on-Site in soil at two locations in the western portion of the Site at a depth of 0.5 feet bgs at concentrations exceeding Tier 1 soil screening levels, at one location to the west of the existing property (see ***Figure 4***).

- **Lead Impacts.** Lead is encountered at concentrations exceeding the Tier 1 soil screening level at a limited number of locations at the Site at a depth of 0.5 to 1.0 feet bgs. Additionally, lead exceeding the Tier 1 soil screening level is encountered on the western edge of the property at one location at a depth of 3.0 feet bgs and at a second location at a depth of 7.0 feet bgs (see ***Figure 5***). During earthwork activities soil excavated to achieve Site grades and construct building foundations that contains lead concentrations exceeding Tier 1 soil screening levels will be consolidated on Site with on-Site burial beneath building foundations, hardscape, or clean fill material.

4.2 Groundwater

Unconfined groundwater has been encountered at depths of approximately 9 to 10 feet bgs. Petroleum hydrocarbons (TPH-D, TPH-MO and TPH Bunker Oil (TPH-BO)) and volatile organic compounds (benzene, trichloroethylene (TCE), and chloroform) are present in groundwater at concentrations exceeding Tier 1 groundwater screening levels beneath the eastern and southern portions of the Site (see ***Figure 6***). Additionally, dissolved metals (barium, beryllium, chromium, lead, and nickel) have also historically been detected at concentrations exceeding Tier 1 groundwater screening levels beneath the eastern and southern portions of the Site (see ***Figure 7***).

4.3 Discovery of Unexpected Conditions

Due to historical Site use as a commercial iron foundry, redevelopment activities may reveal unexpected conditions such as previously unidentified areas of contamination or underground structures such as USTs, vaults, hoists, sumps, maintenance pits, pipelines, etc. In the event that unexpected conditions are discovered during Site development that indicate the presence of contamination, the contractor is to stop work at the location of the discovery and notify the general contractor or the property owner of the discovered conditions. The area where the conditions have been discovered will be cordoned off and identified with caution tape and workers will be directed to not enter the area until the area has been evaluated by the general contractor or the owner and authorization has been provided by the general contractor or owner to resume work in the are identified with caution tape. Work may continue in the vicinity of the area identified with caution tape outside the area identified with caution tape.

See also section 6.3 below for procedures associated with discovery of unexpected conditions.

5.0 PRE-FIELD ACTIVITIES

The pre-field activities include a description of planning and organizational aspects of soil excavation required for excavation to begin.

5.1 Site Security and Access

During remedial activities, the Site will be secured to provide protection and safety to on-Site personnel and equipment, and to prevent unauthorized access to areas of remedial activity. A 6-foot high chain link fence exists around the perimeter of the Site and encloses the staging area and the work zones (*i.e.*, any exclusion, decontamination, and support zones). During non-working hours, the fencing will be fully closed and locked. During remedial activities, access will be restricted to authorized personnel only.

5.2 Traffic Control

Caution will be exercised during entrance and exiting of the work area to ensure safe and uninterrupted traffic flow. Entrance into and departure from the Site by trucks will be facilitated by a flagman, or comparable contractor personnel, as necessary. Once trucks have left the Site, they will follow specific haul routes to disposal facilities as described in the Transportation Plan, Section 5.3.5.

5.3 Excavation Permit

All necessary permits for removal activities, transportation, and/or air quality will be obtained prior to remediation. The permits will be kept on-Site and made available for inspection during working hours.

The procedures proposed for remediation activities will comply with federal, State and local rules and regulations, regardless of whether permit documents are required.

5.4 Notifications and Utility Clearance

The general contractor or owner will notify the Bay Area Air Quality Management District (BAAQMD) of excavation activities at least five days prior to implementation. In addition, the general contractor or owner will also notify ACDEH of the soil excavation activities at least 72 hours prior to commencing work. The proposed excavation areas will be marked in white paint prior to contacting Underground Service Alert (USA) at least 48 hours prior to excavating, as required by law. A private utility locating service will be contracted prior to conducting the field activities to mark and/or clear proposed excavation locations relative to the presence and/or marked locations of potential subsurface utilities.

6.0 SOIL MANAGEMENT

Redevelopment activities include grading of the Site. Site grading will include removing the top concrete cover of Site material (pavement, fill material) and excavating soil in conjunction with installation of utility trenches, elevator shafts, and building foundations. Lead-impacted soil will be excavated under the observation of the Environmental Consultant in the areas shown on ***Figure 5*** prior to completing general grading activities during Site redevelopment. Any excess soil generated during grading may be temporarily stockpiled on-Site and either re-distributed for re-compaction on-Site as part of Site grading activities, or transported off-Site for disposal.

All soil management and handling activities will be conducted in accordance with applicable federal, state, and local regulations. During implementation of the project other data may be collected for profiling purposes and to further refine the quantities and classification of potential waste materials that may be generated.

6.1 Excavation of TPH- and PAH-Contaminated Soil

TPH- and PAH-impacted soil at the Site exceeds residential human health risk-based screening levels at a limited number of locations (see ***Figure 4***). Excavation of TPH- and PAH-impacted soil will be conducted in the following general sequence:

- Develop staging areas, access paths for equipment, work zones, and decontamination areas for use during handling of contaminated soil to reduce the potential of tracking waste off-Site;
- Identify locations of perimeter air monitoring stations, as necessary, and begin monitoring to comply with BAAQMD regulations, the HASP, and the protocols in Section 10.0 of this SGMP;
- Excavate and stockpile soil for characterization or direct load onto trucks for appropriate off-Site disposal.
- Environmental consultant will collect discrete confirmation soil samples from locations where TPH- and PAH-impacted soil has been removed in accordance with the Site Remedial Action Plan to confirm that impacted soil has been removed. Areas where impacted soil has been excavated will not be filled without written authorization from the general contractor or owner.

6.2 Excavation of Lead-Contaminated Soil

Lead-impacted soil at the Site exceeds residential human health risk-based screening levels at a limited number of locations (see ***Figure 5***). Excavation of lead-impacted soil will be conducted in the following general sequence:

- Develop staging areas, access paths for equipment, work zones, and decontamination areas for use during handling of contaminated soil to reduce the potential of tracking waste off-Site;
- Identify locations of perimeter air monitoring stations, as necessary, and begin monitoring to comply with BAAQMD regulations, the HASP, and the protocols in Section 10.0 of this SGMP;
- Remove lead-impacted soil that requires consolidation to locations that have been designated for on-Site consolidation.

- The environmental consultant will collect discrete confirmation soil samples from locations where lead-impacted soil has been removed in accordance with the Site Remedial Action Plan to confirm that lead-impacted soil has been removed. Areas where lead-impacted soil have been excavated will not be filled without written authorization from the general contractor or owner.

6.3 Contingency Measures for Previously Unidentified Suspect Soils

The following contingency measures will be implemented in the event that previously unidentified suspected chemically-affected soil is identified during Site excavation. All contingency measures will be conducted by HAZWOPER-trained environmental professionals in accordance with the HASP.

Additionally, as a precaution, the Environmental Consultant will be present during excavation and grading activities in areas of historical underground storage tanks, subsurface anomaly detections, and deeper soil contamination (as shown on ***Figures 2 and 5***) in the event that unexpected contamination or subsurface structures are encountered.

6.3.1 Identification of Contaminated Soil

The Contractor will be instructed to report indicators of contaminated soil, in particular, petroleum hydrocarbons. The three primary physical indicators of petroleum-related contamination in soil include staining, sheen, and petroleum-like odor, as described below:

- **Staining:** Generally, soil that is impacted with petroleum hydrocarbons exhibits gray, black or green staining, although other contaminants and natural conditions may also cause staining.

- **Sheen:** Sheen is another indication of petroleum contamination. Soil exhibiting sheen may appear shiny and reflective. Sheens from heavily impacted soil may appear iridescent with rainbow-like colors.

- **Odor:** Soil impacted with petroleum products, volatile organics, and other types of contamination may release vapors when exposed to the atmosphere. These vapors can be interpreted as an odor. Odor can be subjective, and inhalation of vapors from impacted soil is harmful to human health. Therefore, odor is considered a qualitative field indicator and should not be used for continuous screening of soil.

If soil exhibiting evidence of contamination is encountered during excavation, the Contractor will cease excavation activities in the area and notify the general contractor, the property owner, or the Environmental Consultant within 24 hours. The Contractor will not conduct any work in the area of concern or replace any known or suspected contaminated soil in the excavation area without prior approval by either the general contractor or the property owner. The general contractor or the property owner will not provide authorization for work within the suspected contaminated area without authorization from the ACDEH.

6.3.2 Preliminary Assessment

Preliminary assessment of the previously unidentified suspect soil will include confirmation that access control measures installed by the General Contractor are adequate to provide necessary protection to on-Site workers and the public during the evaluation phase. Confirmation will consist of visual assessment of the installed barriers as well as monitoring of the air outside the control area.

Air sampling will be conducted around the perimeter of the secured area using a combination photoionization detector (PID) meter to measure volatile organic compounds (VOCs) in the breathing zone and a lower explosive limit (LEL)/oxygen (O_2) meter to measure concentrations of combustible gases and available oxygen. If the air sampling suggests that the control measures are improperly positioned to provide necessary protection to on-Site workers, the barriers will be relocated as necessary.

The Environmental Consultant will conduct a preliminary assessment to determine if the previously unidentified suspect soil is considered a significant risk to human health or the environment. If field observations suggest that the suspect conditions are *de minimis* and: (1) do not present a threat to human health or the environment; or (2) would generally not be subject of an enforcement action if brought to the attention of appropriate governmental agencies; then the Environmental Consultant will terminate the contingency plan process and release the suspect areas to the General Contractor.

6.3.3 Evaluation of Previously Unidentified Suspect Soil

If conditions in the suspect area are not considered *de minimis*, the Environmental Consultant will notify the ACDEH on behalf of the Owner within 24-hours of discovery and evaluate the nature and extent of the potentially chemically-affected soil in accordance with the protocols below.

- **In-Situ Soil Samples.** An in-situ soil sample will be collected from the same location and depth as the previously unidentified suspect soil and at 1-foot below this depth. Additional samples will also be collected at the same depths at a minimum of four step-out locations to assess soil conditions around the suspect sample location. The four step-out locations will be located approximately 5 feet to the north, south, east, and west of the suspect sample location. The dimensions of the area of evaluation can be adjusted to a larger dimension vertically and horizontally based on the size of the impacted area. Each sample will be collected as a relatively undisturbed sample using a stainless steel tube and observed for evidence of odors and staining and screened for VOCs using a PID. If any of the in-situ soil samples show evidence of odors and staining or VOCs are detected above 10 parts per million by volume (ppmv) then environmental sample(s) will be retained for analyses.

- **Stockpiled Soil Samples.** If previously unidentified suspect soil is stockpiled on-Site, discrete samples will be obtained for off-Site disposal using stainless steel tubes at a frequency and for analytes specified by the disposal facility. For re-use at the Site soil samples will be collected at a frequency and for analysis as specified in the Department of Toxic Substances Control (DTSC) *Information Advisory – Clean Imported Fill Material* (2001). .
- **Laboratory Analysis.** Following soil sample collection, the containers will be labeled for identification and immediately placed in a chilled, thermally insulated cooler containing ice. The cooler containing the samples will then be delivered under chain-of-custody protocol to a state-certified laboratory. Any sample compositing will be performed at the laboratory. Laboratory analysis will be performed in accordance with requirements set forth by the disposal facility. For consideration for re-use of the soil at the Site, the following laboratory analysis:
    - TPH-G using EPA Method 5030B in conjunction with modified EPA Method 8015B.
    - TPH-D and TPH-MO using EPA Method 3550 in conjunction with modified EPA Method 8015B.
    - VOCs (including MTBE, benzene, toluene, ethylbenzene, and xylenes (MBTEX), and fuel oxygenates and lead scavengers, and naphthalene) using EPA Method 8260B.
    - SVOCs (including PAHs) using EPA Method 8270C.
    - Organochlorine Pesticides by EPA Method 8081.
    - PCBs by EPA Method 8082.
    - CAM 17 metals using EPA Method 6020.
    - If necessary, extractable metals tests (i.e., leaching test including waste extraction test [WET] and/or toxicity characteristic leaching procedure [TCLP] procedures) will be conducted on the samples with elevated total metals concentrations to establish if the soils are hazardous based on their leaching characteristics.

After the evaluation is complete, the Environmental Consultant will provide the Owner, General Contractor and the ACDEH with conclusions regarding potential risks of the suspect material to human health and the environment as well as recommendations for proper management of the affected soil. All soil removal and soil re-use work will be approved by the ACDEH prior to implementation. If VOC-affected soil is encountered, notification will be provided to BAAQMD as required in the guidelines and notification requirements set by Regulation 8, Rule 40 of the BAAQMD Rules and Regulations for aeration of contaminated soil.

6.4 Reuse of Concrete & Soil Importation

Reuse of crushed concrete or use of imported fill material will be characterized and approved by ACDEH prior to being placed at the Site in accordance with the DTSC *Information Advisory – Clean Imported Fill Material* (2001) and the New Jersey Department of Environmental Protection *Guidance for Characterization of Concrete and Clean Material Certification for Recycling* (updated January 12, 2010). Discrete samples will be collected from the import source for characterization and specific laboratory analyses will be based on the fill source characteristics. The analytical results of the import soil samples will be compared to applicable screening criteria to evaluate whether the material is suitable for import to the Site.

7.0 CONTINGENCY MEAUSURES FOR DISCOVERY OF UNEXPECTED UNDERGROUND STRUCTURES

If any previously unidentified or unknown underground structures including tanks, vaults, sumps, containment structures, separators, or piping that has previously contained or has the potential to contain hazardous materials is encountered during Site grading activities, the contractor will provide notification to the general contractor or owner so that the general contractor, owner, or Environmental Consultant can provide notification to the ACDEH and CUPA within 24-hours of the discovery and consulted on appropriate next steps. USTs may be identified during grading and Site excavation activities by the presence of vent pipes that extend above the ground surface, product distribution piping that leads to the UST, fill pipes, backfill materials, or the underground structure itself. Other buried structures may not have features that extend above ground surface, and could be discovered only after contact with construction equipment.

The removal or burying of any of these structures without prior acknowledgement and approval form ACDEH is prohibited. Discovered structures will be assessed as follows:

- The structure will be inspected to assess whether it contains any indication of chemical residuals or free-phase liquids other than water. This assessment will be conducted by the Environmental Consultant, and will be based on visual evidence and the results of vapor monitoring using a PID. Under no circumstances will any personnel enter an unknown subsurface structure at any time. If chemicals are not indicated within the structure by the above-referenced means and with ACDEH approval the structure may be removed or abandoned in place in a safe manner by the contractor;

- If liquids or solids are present within the structure, measures will be taken to contain the liquids to avoid spills to the subsurface. Samples will be collected and submitted to a California-certified laboratory for analysis. Liquids or solids may be temporarily drummed, or liquids may be collected by vacuum truck, while analysis is pending. Based on analytical results, the liquids or solids will be disposed of under the direction of the Environmental Consultant in accordance with all applicable environmental laws and disposal requirements;

- If contaminated liquid or solids are present in the structure, the structure will be inspected for physical integrity following removal of the contaminated media. The Environmental Consultant will document the results of this inspection, including an estimation of the volume and former use of the structure.

- If the physical inspection of the structure suggests that chemicals may have been released to the underlying soils additional environmental investigations of the underlying soils will be conducted to assess whether a release sufficient to warrant removal has occurred.

- If, based on the opinion of the Environmental Consultant and ACDEH, it is assessed that the structure is intact, that subsurface releases of the chemicals to the underlying soils likely did not occur, and no free-phase liquids or chemical residues remain inside, removal of the structure may not be required for environmental reasons.

- Otherwise, with ACDEH approval, the structure will be excavated and disposed of at the direction of the Environmental Professional. Once the structure is removed, soils adjacent to and beneath the structure will be assessed for contamination through visual observation and organic vapor analysis and the results documented. If soils are determined to be "contaminated" with VOCs in the context of BAAQMD Rule 8-40, the appropriate response will be determined in consultation with ACDEH.

ACDEH may require further response actions based on the discovery of hazardous materials that pose an unreasonable risk to human health and safety or the environment.

8.0 GROUNDWATER MANAGEMENT

Groundwater at the Site is typically encountered at depths 9 to 10 feet bgs. As the excavation is at most approximately 6 feet (for elevator pits), construction dewatering is not anticipated. If dewatering of an excavation will be necessary during construction activities, a wastewater discharge permit will be obtained from the East Bay Municipal Utility District (EBMUD) for discharging water encountered during construction activities to the sanitary sewer system. Alternatively, water removed from the ground will be containerized and evaluated for alternate disposal methods that will be approved by the ACDEH prior to implementation.

If dewatering effluent is to be discharged to the storm drain, a National Pollutant Discharge Elimination System (NPDES) permit from the Regional Water Quality Control Board. Permits will be obtained from the City of Oakland Public Works Department and/or the East Bay Municipal Utility District (EBMUD) if dewatering effluent is discharged to the City of Oakland sanitary sewer system.

Chemical testing will be performed in accordance with the receiving facility's requirements prior to discharge. If concentrations exceed the limits established for the discharge point, the dewatering effluent will either will be (1) transported off-Site for disposal at a licensed disposal facility or (2) treated and discharged following sampling and analysis to confirm the success of treatment.

9.0 WASTE MANAGEMENT

9.1 Soil Characterization Prior to Off-Site Disposal

Soil that has been pre-characterized by in-situ soil testing and is intended for off-Site disposal can be loaded directly into trucks for transport to the receiving facility once the appropriate off-Site disposal location acceptance approval has been provided. Some soil may need to be placed in temporary on-Site stockpiles because: (1) they require further characterization prior to off-Site disposal; (2) short-term storage is necessary until haul trucks are available to transport the soil off-Site for disposal; or (3) the need for processing or sorting prior to landfilling. If soil is not adequately characterized to directly load and haul then it may be necessary to stockpile and sample. Stockpiled soil will be characterized as required by the receiving facility.

Soil considered for re-use at the Site will be tested in accordance with methods described in section 6.3.3 of this SGMP. In the event very elevated data are found in a four-point composite sample, the Environmental Consultant may elect, in consultation with the Owner, to have the four individual subsamples analyzed for that specific compound in an attempt to isolate the soils containing the highest concentrations for disposal evaluation.

9.2 Soil Stockpile Management

Soil that is placed in temporary stockpiles will be well maintained at all times to prevent run-on/runoff and fugitive dust emissions. All stockpiled soil will be placed on impermeable plastic sheeting (minimum 6-mil-thick) with a berm around the perimeter of the stockpile. The plastic sheeting and berm will prevent the runoff of soil and potential contaminants to surrounding areas. The berm will be constructed with hay bales, dimensional lumber, or other equivalent methods. The bottom plastic sheeting will be lapped over the berm materials, and the soil stockpile will be covered with plastic sheeting to prevent erosion or leaching of contaminants to underlying soil and prevent exposure to precipitation and wind. Plastic sheeting that covers the soil stockpile will be secured using sand bags or equivalent. Following removal, the soil stockpile area will be restored to a pre-stockpile condition. Residual plastic or debris will also be disposed of following stockpile removal.

9.3 Decontamination Procedures

In order to prevent residual contamination from leaving the Site by construction equipment and personnel during remedial excavation activities, the following decontamination procedures will be followed:

- Prior to loading excavated materials into trucks, plastic sheeting will be placed on the ground such that any spilled material will be prevented from contacting the ground surface. Upon completion of loading, any debris will be placed in the transportation vessel and the plastic sheeting will be reused, or disposed of.

- To minimize the spread of contaminated soil, equipment will be cleaned prior to movement out of active work zones. The equipment wheels/tires will be cleaned over plastic sheeting by means of shovels and stiff-bristled brooms or brushes or by power washing until they are fully cleaned. Upon completion of cleaning, any debris will be placed in the appropriate transportation vessel, fluids will be containerized, and the plastic sheeting will be folded and disposed of. The rinsate water will be distributed over contaminated soil (to be exported) for dust control purposes. Equipment exiting the Site will be inspected and logged for compliance with the Site decontamination requirements.

- Personal protective equipment, such as disposable coveralls, will be removed and discarded in the contamination reduction zone. In order to decontaminate reusable items such as work boots, a two-stage decontamination process will be used. This process will include washing in a detergent solution with a stiff-bristled brush and rinsing in clean water. The rinsate water will be distributed over contaminated soil (to be exported) for dust control purposes.

9.4 Off-Site Soil Disposal & Transportation Plan

Following acceptance of the excavated soil at an appropriate-licensed disposal facility, the soil will be loaded in licensed haul trucks (such as end-dumps or transfers) and transported off the Site following appropriate California and Federal waste manifesting procedures. The appropriate waste manifest documentation will be provided to truck drivers hauling the affected soil off-Site.

Transportation equipment will be chosen to safely transport the expected volumes of soil, taking into consideration the types of roads to be traveled and their loading capacity. Routine truck maintenance and repairs will be performed at the contractor's premises prior to picking up loads of waste material from the Site.

As each truck is filled, an inspection will be made to verify that the waste soil is securely covered, to the extent practicable, and that the tires of the haul trucks are reasonably free of accumulated soil prior to leaving the Site. During loading, dust and odor emissions will be monitored and mitigated as necessary. During transportation, the hauling trucks will be equipped to fully cover all soil and debris, such as with a heavy tarpaulin. A street sweeper will be made available, as needed, to keep the loading area clean. The soil will be wetted, as necessary, to reduce the potential for dust generation during loading and transportation activities.

A detailed log of the loads hauled from the Site will be maintained. The log will include, at a minimum, the date and the time trucks were loaded and off-loaded, the destination, size (volume and weight) of the load, description of contents, name and signature of the hauler, and name and signature of the contractor's representative. The waste will be off-loaded for treatment or disposal in a manner consistent with current Federal, State, and local regulations. Shipments of hazardous waste will be tracked with the appropriate hazardous waste manifests.

9.4.1 Off-Site Disposal Facilities

If soil is classified as hazardous waste by State and Federal standards, it will be disposed of at a licensed and approved hazardous waste disposal facility.

If soil is classified as non-hazardous waste by State and Federal standards, it will likely be disposed of at a Class II licensed landfill facility such as:

- Waste Management's Altamont Landfill in Livermore, California;
- Republic Services' Vasco Road Landfill in Livermore or Keller Canyon Landfill in Pittsburg, California;
- Waste Connections' Potrero Hills Landfill in Suisun City, California: or
- Republic Services' Forward Landfill in Manteca, California.

9.4.2 Transportation Plan

All transportation activities will be performed in strict compliance with all regulations and ordinances. Hauling contractor(s) used to transport non-hazardous or hazardous waste will be fully licensed and permitted by the State of California. For hazardous waste haulers, the selected transportation company will be certified by the State of California as a hazardous waste hauler, and appropriately permitted to haul contaminated waste material. All Department of Transportation (DOT) and California Highway Patrol (CHP) safety regulations will be strictly followed by both hazardous and non-hazardous waste haulers.

Transportation routes will be developed to minimize transporting the affected soil through residential areas. The affected soil will be transported via surface streets to the closest suitable freeway, which is Interstate 880. The proposed routes for transportation to and on Interstate 880 will be established upon selection of the appropriate landfill(s).

9.5 Wastewater and Groundwater Management Protocols

Wastewater generated during Site redevelopment, such as decontamination liquids, will be temporarily stored on-Site. Decontamination water will be profiled and transported to an appropriate disposal or recycling facility, or will be distributed over contaminated soil (to be exported) for dust control purposes.

If a saturated zone is encountered during earthwork activities that produces accumulated water, the water will be temporarily containerized on-Site.. Holding tanks will be staged on the existing hardscape (i.e. concrete or asphalt) where feasible.

Collected wastewater and groundwater will be transferred into a vacuum truck, pumper truck, totes, 55-gallon steel drums, or other appropriate vessel for off-Site transportation and disposal.

9.6 Spill Response Plan

In the event of a spill, the Contractor will be responsible and prepared to respond in a safe and efficient manner, specific to the particular spill situation. Standards will be set and consistent procedures will be used for handling of spills, whether they are on-Site spills or spills occurring during transportation. Haulers will have an Emergency Spill Contingency Plan (ESCP) to ensure that all drivers and dispatchers know their responsibilities in the unlikely event that an accidental spill occurs while transporting contaminated material off-Site. The drivers and dispatchers will be required to know the procedures for emergency spill response. The ESCP will meet or exceed all Federal, State, and County regulations currently in effect. The provisions of the ESCP will be strictly adhered to, in order to ensure continued protection of the public safety and the environment. The HASP will address the handling of on-Site spills.

10.0 Dust and Odor Emissions

During excavation activities, depending on soil and weather conditions, there is potential to generate airborne dust and fugitive emissions. Standard dust and fugitive emissions control measures will be followed during the ground disturbing activities to comply with OSHA and BAAQMD rules and accomplish the following goals:

- Reduce the potential for health impacts to workers;
- Reduce the potential for health impacts to facility neighbors;
- Prevent violations of ambient air quality standards;
- Minimize nuisance dust complaints from facility neighbors; and
- Minimize the migration of contaminants adhered to fugitive dust particles outside the Site.

10.1 Erosion, Dust, and Odor Control Measures

Once the pre-construction ground surface is stripped from the Site, the exposed soil will become susceptible to erosion by wind and water. Therefore, erosion control measures and dust control measures will be in place before construction begins. Emission (dust) control measures will at a minimum comply with those established by OSHA and the BAAQMD for construction-related activities. Dust control measures will be based on "Best Management Practices" and will be used throughout all phases of construction.

10.1.1 Construction Mitigation Measures

The following basic construction mitigation measures will be implemented in accordance with recommendations for all proposed projects in the BAAQMD California Environmental Quality Act Air Quality Guidelines (BAAQMD, 2017):

- All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) will be watered two times per day;
- All haul trucks transporting soil, sand, or other loose material off-Site will be covered;
- All visible mud or dirt track-out onto adjacent public roads will be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited;
- All vehicle speeds on unpaved roads will be limited to 15 miles per hour (mph);
- All roadways, driveways, and sidewalks to be paved will be completed as soon as possible. Building pads will be laid as soon as possible after grading unless seeding or soil binders are used;
- Idling times will be minimized either by shutting equipment off when not in use or by reducing the maximum idling time to 5 minutes (as required by the California airborne toxics control measure CCR Title 13, Section 2485). Clear signage will be provided for construction workers at all access points;
- All construction equipment will be maintained and properly tuned in accordance with manufacturer‘s specifications. All equipment will be checked by a certified mechanic and determined to be running in proper condition prior to operation; and
- A publicly visible sign with the telephone number and person to contact at the Lead Agency regarding dust complaints will be posted. This person will respond and take corrective action within 48 hours. The BAAQMD’s phone number will also be visible to ensure compliance with applicable regulations.

Dust level monitoring of air will be conducted to evaluate the potential exposure to Site personnel and to off-Site downwind receptors. The presence of airborne dust will be evaluated through the use of real time personal sampling equipment and perimeter air sampling. If the difference between the upwind and downwind dust monitoring levels exceeds 50 micrograms per cubic meter ($\mu g/m^3$), additional dust control methods (i.e., applying additional water to disturbed areas) will be implemented.

10.1.2 Dust Suppression Measures

If dust is excessive, some or all of the following mitigation procedures may be implemented:

- Active areas adjacent to residences may need to be kept damp at all times.
- Apply water or (non-toxic) soil stabilizers to unpaved access roads, parking areas, and staging areas.
- Sweep (with water sweepers) paved access roads, parking areas, and staging areas.
- Cover or otherwise stabilize exposed soil stockpiles.
- Suspend construction activities that cause visible dust plumes and odors to extend beyond the limits of the Site.

10.1.3 Odor and Vapor Suppression Measures

By controlling the dust as described above, the emission of odor and vapors will be reduced to levels that likely will not pose a risk to the health of the public and Site workers. The water spray used to control dust will also significantly reduce the emissions of any potential volatiles that may be present in the soil. The selective loading and transportation of impacted soils could minimize the use of soil stockpiling, further reducing potential emissions of volatiles. Any active stockpile of contaminated soil or exposed excavation left overnight at the Site will be properly covered with plastic so emissions of volatiles will be minimized.

If odor is excessive and vapor emissions are detected, some or all of the following mitigation procedures may be implemented:

- Use of chemical suppressants mixed with water and applied using various applications such as spray or mist;
- Use of plastic sheeting to cover the sidewalls of open excavations during non-active remedial activities will minimize the migration of VOCs and odors;
- Alternative work sequencing, such that excavation of soil with potential odor during mid- day or afternoon (during hot weather) is avoided;
- Any highly odorous soil could be segregated and placed inside a roll-off bin equipped with a lid. This will minimize the amount of highly odorous soil during loading; and
- Balancing the excavation with transportation so that the need for large stockpiles is reduced.

Other emissions include exhaust from remediation equipment. The equipment proposed for the Site redevelopment will be maintained properly so that exhaust emissions will be within acceptable standards.

10.2 Air Monitoring

To the extent feasible, the presence of airborne contaminants will be evaluated through the use of portable monitoring equipment. Information gathered will be used to ensure the adequacy of the levels of protection being employed at the Site, and may be used as the basis for upgrading or downgrading levels of personal protection, at the discretion of the Site Safety Officer. In addition, this sampling equipment will be utilized to monitor the potential for the migration of contaminants off-Site (i.e. fence line monitoring). Such monitoring will incorporate off-Site receptor type, wind direction, work tasks being performed, etc.

The following air sampling equipment will be utilized for Site monitoring:

- Personal sampling pumps with appropriate sample collection media; and
- Dust monitors.

The above instruments will serve as the primary instruments for personal exposure monitoring. They will be utilized to fully characterize potential employee exposure and the need for equipment upgrades/downgrades.

10.2.1 Integrated Industrial Hygiene Sampling

Integrated Industrial Hygiene (IH) sampling for airborne contaminants and dust will be conducted during the excavation process and/or loading operation. This IH sampling will be performed to properly characterize potential employee exposures and/or to establish baseline levels. Sampling may include personnel monitoring and fence line sampling. The duration of such monitoring will be determined based upon analytical results, regulatory requirements, etc.

10.2.2 Real-Time Air Monitoring During Excavation of Contaminated Soil

Dust monitoring will also be conducted to characterize the potential for exposure to Site personnel during excavation of contaminated soil using a direct-reading dust monitor. Continuous monitoring will also be performed during operations that have not previously been characterized. After initial Site screening, monitoring will be conducted periodically or anytime Site conditions might be altered (i.e. weather, drilling, excavation, spills, etc.).

Results of monitoring information will be recorded, and will include time, date, location operations, and any other conditions that may contribute to potential exposures. Maintenance and calibration information will be maintained and made available upon request. The monitoring equipment will be calibrated in accordance with the manufacturer's specifications, and the records of such maintained with the project HASP.

Real-time air monitoring for respirable dust will be performed during the first three days of excavation of contaminated soil. The objective of the perimeter air-monitoring program is to protect the health and safety of the nearby community and to document the effectiveness of the dust control measures.

The Site Health and Safety Officer will determine the air monitoring locations based on Site operations and the location of areas that could be adversely impacted by air emissions. In general, real-time monitoring will be conducted downwind and around the perimeter of relevant activities. Monitoring locations will be documented on a monitoring log, along with any concentrations detected.

The dust standard will be based on the PM10 ambient air quality standards adopted by BAAQMD, which specifies a ceiling level of no more than 50 micrograms per cubic meter ($\mu g/m^3$) difference between upwind and downwind sampling locations. The ceiling level of 50 $\mu g/m^3$ represents the Bay Area 24-hour time-weighted average standard for 10 micron diameter particulate matter (the PM10 24-hour standard).

The perimeter of the work area will be monitored while excavation of contaminated soil is being conducted. If any readings exceed action levels, work will be stopped, engineering controls will be implemented and the work and monitoring schedule will be adjusted until background level concentrations are achieved.

Real-time dust monitors will be used to measure mass concentrations of airborne dust and provide respirable dust, expressed as concentration of particulates smaller than 10 microns (PM10) correlated measurements. A handheld respirable air monitor (mini-RAM) will be used to provide real-time data on total dust levels as PM10. Real-time worker dust monitoring will be performed continuously during work activities where soil disturbance is anticipated, downwind of active excavations. Measurements of real-time and time-weighted averages (TWA) of airborne particulate concentrations will be recorded using a Monitoring Instruments for the Environment, Inc. (MIE) RAM, model PDR-1000 (miniRAM) or equivalent equipment. The miniRAM measures the concentration of airborne particulate matter using a high sensitivity nephelometer (photometer) using a light scatter sensor. The sensitivity of the miniRAM is reported to range from 0.001 milligrams per cubic meter (mg/m3) to 400 mg/m3. The miniRAM will be calibrated daily in the supplied calibration pouch.

Real-time monitoring will consist of the following activities:

- Determine the predominant wind direction;
- Place one instrument upwind of Site operations for ambient sampling;
- Place one or more instrument(s) downwind of Site operations, at the Site Perimeter;
- Position the instrument probe near the normal breathing zone and monitor for approximately five minutes after instrument readings have stabilized; and

- Record the following observations and readings in real-time:
    - Location;
    - Time;
    - Site activity;
    - Readings;
    - Visual observations of dust;
    - Site conditions, including current weather conditions; and
    - Odors and/or other miscellaneous observations.

11.0 STORM WATER MANAGEMENT

Other environmental controls may be required in the event that anticipated conditions at the Site change. In the event that remediation activities occur during the rainy season, then water management procedures will be implemented in addition to probable modifications of other plans, such as the HASP. The following procedures will be implemented at the Site during the rainy season:

- The weather forecast will be monitored. During the days heavy rain is forecasted, remediation activities may be stopped;

- The boundary of the remediation area will be properly bermed to prevent storm water from entering or leaving the remediation area;

- Storm water entering the remediation area from non-impacted areas and storm water originating within the excavated area will be pumped to settlement tanks and treated prior to discharge under permit;

- The excavation will be conducted in small sections so that the exposed excavated area can be covered immediately if heavy rains occur;

- Procedures will be used to prevent wet soil from sticking to the tires of trucks used to haul soil off Site. These procedures may include plastic sheeting at the loading area, a tire wash at Site egress paths, and/or a stabilized gravel construction entrance; and

- Plastic sheeting will be used extensively to cover the area of excavation during non-working hours.

In general, the excavation will be kept as dry as possible in order to minimize the waste generated and the backfilling (as necessary) of the excavation. Storm water best management practices (BMPs) will be followed in accordance with the contractors Storm Water Pollution Prevention Plan (SWPPP) to be prepared for the Site. The BMPs for the Site development activities should include: use of fiber rolls; inlet protection; stabilized construction entrance; landscape and paving; street cleaning and catch basin cleaning.

Reporting Limits			1.0	1.0	50	0.002 to 0.0071	0.33 to 1.6

Notes:

1. Analyses conducted in general accordance with the U.S. Environmental Protection Agency Method listed. DHS-LUFT = Department of Health Services Leaking Underground Tank Manual method.
2. Sample depths reported in approximate meters (m) / feet (ft) below the ground surface.
3. Concentrations reported in milligrams per kilogram.
4. ND = not detected in concentrations exceeding the listed reporting limit.
5. VOCs = volatile organic compounds. SVOCs = semivolatile organic compounds. TPHg = total petroleum hydrocarbons as gasoline. TPHd = total petroleum hydrocarbons as diesel. TRPH = total recoverable petroleum hydrocarbons.
6. Soil samples labeled as follows: boring no.-depth-sample tube no. with 1 being from the bottom. Ex.: P1-0.5': boring P-1, 0.5-foot depth.

Notes:

1. Metals analyses conducted in general accordance with U.S. Environmental Protection Agency (EPA) Methods 6010 and 7471.
2. Sample depths reported in approximate meters (m) / feet (ft) below the ground surface.
3. Concentrations reported in milligrams per kilogram.
4. ND = not detected in concentrations exceeding the listed reporting limit.
5. Soil samples labeled as follows: boring no.-depth. Ex.: P1-0.5': boring P-1, 0.5-foot depth.
6. TTLC = Total Threshold Limit Concentration.
7. 10X STLC = 10 times the Soluble Threshold Limit Concentration. Values listed in milligrams per liter.
8. PRG = preliminary remediation goal established for the Cypress area of investigation by the Office of Scientific Affairs. PRG for chromium is for trivalent chromium.
9. Bold results equal or exceed 10X STLC values. Bold and italics results equal or exceed the TTLC. Underlined results equal or exceed the PRG.

P-23	0.15	0.5	144	**10**	
P-25	0.15	0.5	182	**35**	
P-26	0.15	0.5	70	**10**	
TTLC			1,000		
STLC				5.0	
TCLP					5.0
Reporting Limit			1.0	0.050	0.050

Notes:

1. TTLC = total threshold limit concentration. STLC = soluble threshold limit concentration. WET = waste extraction test. TCLP = toxicity characteristic leaching procedure.
2. Sample depths reported in approximate meters (m) / feet (ft) below the ground surface.
3. WET conducted in general accordance with California Title 22 procedures. TCLP extraction and metal analyses conducted in general accordance with U.S. Environmental Protection Agency methods.
4. Total metal results reported in milligrams per kilogram. WET and TCLP results reported in milligrams per liter.
5. ND = not detected in concentrations exceeding the listed reporting limit.
6. Soil samples labeled as follows: boring no.-depth. Ex.: P1-0.3 - boring P-1, 0.3-meter depth.
7. Bold values exceed the TTLC, STLC, or TCLP.

Reporting Limits		0.05	0.05	5.0	0.002 to 0.0071	0.01 to 0.05

Notes:

1. Analyses conducted in general accordance with the U.S. Environmental Protection Agency Method listed. DHS-LUFT = Department of Health Services Leaking Underground Tank Manual method.
2. Sample types: GW = groundwater grab sample. ER = equipment rinse sample.
3. Concentrations reported in milligrams per liter (mg/l).
4. ND = not detected in concentrations exceeding the listed reporting limit.
5. VOCs = volatile organic compounds. SVOCs = semivolatile organic compounds.
   TPHg = total petroleum hydrocarbons as gasoline. TPHd = total petroleum hydrocarbons as diesel.
   TRPH = total recoverable petroleum hydrocarbons.
6. Groundwater samples labeled as follows: boring no.-GW. Ex.: P-1-GW for the groundwater sample collected from boring P-1.

Notes:

Feet bgs = Feet Below Ground Surface.

PCE = Tetrachloroethene.

TCE = Trichloroethene.

cis-1,2-DCE = cis-1,2-Dichloroethene.

1,1,1-TCA = 1,1,1-Trichloroethane.

DFA = 1,1-Difluoroethane. (tracer gas)

ND = Not Detected.

Percent Shroud = The ratio of tracer gas concentration detected in the soil gas sample to the tracer gas concentration detected in the shroud air sample, expressed as a percentage.

ESL[1] = Environmental Screening Level, by San Francisco Bay – Regional Water Quality Control Board, updated February 2016 (Revision 3), from Table SG1 – Subslab/Soil Gas Vapor Intrusion: Human Health Risk Levels for Residential Land Use.

ESL[2] = Environmental Screening Level, by San Francisco Bay – Regional Water Quality Control Board, updated February 2016 (Revision 3), from Table SG1 – Subslab/Soil Gas Vapor Intrusion: Human Health Risk Levels for Commercial/Industrial Land Use.

BOLDED concentrations exceed their respective ESL[1] value.

Results and ESLs in micrograms per cubic meter (µg/m3), unless otherwise indicated.

Table 2B
Summary of Shroud Air Sample Analytical Results

Sample ID	Sample Date	DFA, #
SG1 DFA	8/14/2017	1,072,468.3
SG2 DFA	8/14/2017	71,587.93
SG3 DFA	8/14/2017	3,079,631.9

<u>Notes:</u>

= 1,1-Difluoroethane (DFA) used as leak detection compound for TO-15 analysis.

Results in micrograms per cubic meter (ug/m^3), unless otherwise indicated.

Report 0772.R4

Mr. Jamie Hiteshew
Urban Designs, LLC
1201 Pine Street, Suite 151
Oakland, CA 94607

SUBJECT: LIMITED SUBSURFACE INVESTIGATION REPORT
(S1 Through S9, GW3 Through GW11, and SG4 Through SG20)
RO Number 0003269
The Phoenix
801 Pine Street
Oakland, CA

Dear Mr. Hiteshew:

P&D Environmental, Inc. (P&D) has prepared this report documenting a limited subsurface investigation of soil, soil gas and groundwater performed at 801 Pine Street in Oakland, California (historically known as 800 Cedar Street, however Cedar Street no longer exists). Historical documents have also identified the site address as 800 Pine Street.

The purpose of the investigation was to evaluate the property in preparation for site development for the presence of near-surface lead concentrations in soil and for Volatile Organic Compounds (VOCs) that were historically detected at the subject site. The work was performed in accordance with a March 23, 2018 Limited Subsurface Investigation Work Plan (document 0772.W2) prepared by P&D, a May 15, 2018 Limited Subsurface Investigation Work Plan Addendum (document 0772.W2A) prepared by P&D, a May 22, 2018 Alameda County Department of Environmental Health (ACDEH) letter approving the work plan and work plan addendum, and subsequent discussions during meetings with the ACDEH on September 13, 2018 and November 7, 2018.

A total of nine boreholes designated as S1 through S9 were drilled on June 1, 2018 to a depth of 5.0 feet below the ground surface (bgs) for soil sample collection for shallow soil lead evaluation. Seven boreholes designated as GW3 through GW9 were hand augered on May 31, 2018 to a depth of 11.5 feet bgs and two additional boreholes designated as GW10 and GW11 were hand augered on October 13, 2018 for groundwater grab sample collection for VOC evaluation and for the evaluation of metals in groundwater at selected locations. Additionally, six soil gas wells, designated as SG4 through SG9 were installed at the site on May 24, 2018, five soil gas wells designated as SG10 through SG14 were installed on October 13, 2018, and an additional six soil gas wells, designated as SG15 through SG20 were installed on November 19, 2018 each to a depth of 7.0 feet bgs with the collection of soil gas samples from soil gas wells on the following dates:

- June 4 and 5, 2018 soil gas wells SG6 through SG9.
- September 6, 2018 soil gas wells SG4 and SG5. Based on the presence of water in soil gas wells SG4 and SG5 during the June 2018 sampling event, soil gas samples were not collected from these two soil gas wells.
- October 17 and 18, 2018soil gas wells SG2, SG4, SG5, SG6, and SG10 through SG14
- December 10 and 15, 2018 soil gas wells SG15 through SG18, and SG20. Based on the presence of water in soil gas wells SG10, SG11 and SG19 during the December 2018 sampling event, soil gas samples were not collected from these soil gas wells.

A Site Location Map is attached as Figure 1 and Figures 2 through 9 show detected VOC, petroleum, lead, and metals concentrations for historical and the current investigation. All work was performed under the direct supervision of a professional geologist.

BACKGROUND

The property is presently a vacant lot that is entirely covered with a concrete slab. The property is presently divided into four parcels (see Figure 2) and is presently scheduled for residential development beginning with development at Parcel 1.

A search of the State Water Resources Control Board's (SWRCB) Geotracker website lists the subject site address as 888 Cedar Street and as an active Leaking Underground Storage Tank (LUST) site. There are no documents associated with the Geotracker case for the subject site, except for a directive letter from the Alameda County Department of Environmental Health (ACDEH) dated July 3, 2008 outlining Geotracker upload requirements for the site.

A search of the ACDEH Local Oversight Program's (LOP) website shows various miscellaneous historical documents and correspondence including the following documents:

- Preliminary Endangerment Assessment (PEA) Volume II for 800 Cedar Street dated November 1993 and prepared by On-Site Technologies (OST),
- Underground Storage Tank Closure Report for Cypress "B" Freeway Reconstruction Project - Phoenix 800 Area "T" dated November 27, 1995 and prepared by OGISO Environmental.

Review of the November 1993 PEA shows that OST reports that the site is located along a portion of the then proposed reconstruction of the I-880 Cypress structure by the California Department of Transportation (Caltrans). The original Cypress structure was demolished following its collapse during the Loma Prieta Earthquake in 1989. Additionally, the PEA identifies the following company names and past site activities:

- The Dunn Cracker Co. from approximately 1889 to 1902,
- California Bedding & Upholstery Co. from approximately 1902 to 1912,
- A soap factory from some period of time between 1912 and 1931,
- California Fireworks from approximately 1923 to 1927,
- Independent Iron Works from 1924 to approximately 1960,

- Pine Iron Works from some unknown time until 1990.
- J&A Machine shop from 1985 through at least the date of the PEA.
- Phoenix Iron Works from approximately 1970 through at least the date of the PEA.
- Michael Bondi Metal Design from 1985 through at least the date of the PEA.
- Cypress Auto Parts from 1970 through at least the date of the PEA.
- Ivan's Auto Body, Unknown Plastic Bag Co., Vennell Steel, and Terminal Manufacturing were located at the subject site at unknown dates and for unknown durations.

A search of the Department of Toxic Substances Control (DTSC) Envirostor website shows that the site is listed as a Voluntary Cleanup site located at 800 Cedar Street and as an Inactive open case as of September 3, 2010. The Envirostor summary page for the site lists only diesel as a potential contaminant of concern and only soil for a potentially impacted media. The Envirostor summary page also states that the site is part of the Cypress Freeway Reconstruction Project as well as having been historically used as an iron works plant that occupied the entire block bounded by Shorey, 9th, Pine, and Cedar (no longer exists) Streets. When the iron works plant went out of business, the building was subdivided into 5 bays and subsequently leased to commercial tenants including machine shops, iron works, auto parts dismantlers, and other manufacturing. The subject site building is reported to have been demolished in July 1995. The former location of Cedar Street (west side of subject site) is shown on Figure 2.

Envirostor also references the approval of proposed excavation of 104 cubic yards of soil on January 13, 1998 and the last available activity listed is dated February 27, 2012 and states that sampling activities were complete and that results were expected in 60 days. Among the documents on Envirostor were the following:

- Site Investigation Report for Highway 880, Cypress Reconstruction - Area 4 dated August 28, 1992 and prepared by Geo/Resource Consultants, Inc.
- Sampling and Analysis Plan Phase II Soil Investigation for 800 Cedar Street dated July 14, 2011 and prepared by Northgate Environmental Management, Inc. (Northgate).

Other documents obtained and reviewed by P&D are as follows:

- Site Investigation Report for 800 Cedar Street dated March 8, 2000 and prepared by IT Corporation,
- Phase II Soil Investigation Report for 800 Cedar Street dated November 9, 2011 and prepared by Northgate,
- Soil Stockpile Sampling Report for 800 Cedar Street dated December 31, 2013 and prepared by Geocon Consultants, Inc.

P&D's September 5, 2017 Limited Subsurface Investigation Report (document 0772.R1) documents the installation and sampling of soil gas wells SG1 through SG3 and the collection of two groundwater grab samples designated GW1 and GW2 at the site during August 2017.

Historical investigation sample results were summarized by P&D in a December 1, 2017 Soil and Groundwater Management Plan (SGMP) for the site. Soil, groundwater, and soil gas have been impacted at the Site from historical Site use and potentially from off-site sources. Tabulated results of analytical data with figures showing the sample collection locations are provided in Appendix B of P&D's December 1, 2017 SGMP. Appendix A of the SGMP also contains figures that summarize contaminants historically detected at concentrations exceeding San Francisco Bay Regional Water Quality Control Board (SFRWQCB) February 2016 revision 3 Tier 1 screening levels.

FIELD ACTIVITIES

Prior to performing field activities, drilling permits W2018-0430, W2018-0431, and W2018-1010 were obtained from the Alameda County Public Works Agency (ACPWA), permits were obtained from the City of Oakland for work in the public right-of-way, site access was arranged, the drilling locations were marked with white paint, Underground Service Alert was notified for underground utility location, a health and safety plan was prepared, and notification of the drilling dates was provided to the ACDEH, ACPWA, and the City of Oakland.

Continuous Coring and Soil Sample Collection

P&D personnel oversaw drilling at locations S1 through S9 on June 1, 2018 for the collection of shallow soil samples to further evaluate the presence and vertical extent of lead concentrations in soil at the subject site. A Site Aerial Photograph showing lead concentrations in historical soil samples is attached with this report as Figure 2 and a Site Aerial Photograph showing lead concentrations in soil samples collected from boreholes S1 through S9 is attached with this report as Figure 3.

All drilling was performed by VTS Drilling LLC of Hayward, California (VTS) using Geoprobe dual tube direct push methods with a Macrocore barrel sampler lined with transparent PVC sleeves. Boreholes S1 through S9 were each drilled to a total depth of 5.0 feet bgs.

The soil from the boreholes was logged in the field in accordance with standard geologic field techniques and the Unified Soil Classification System (USCS), and was evaluated with a Photoionization Detector (PID) equipped with a 10.6 eV bulb that was calibrated with a 100 parts per million (ppm) isobutylene standard. The soil was also evaluated for other evidence of contamination such as odors, staining, and discoloration. No elevated PID values, odors, staining, or discoloration were detected in the boreholes. Copies of the boring logs for boreholes S1 through S9 are attached with this report in Appendix A.

Groundwater was not encountered during the drilling of boreholes S1 through S9. Soil samples were collected from boreholes S1 through S9 by cutting the Macrocore barrel sampler PVC liner in 6-inch long sections and sequentially covering the ends of the sections of PVC liner with Teflon sheets and plastic endcaps.

All of the boreholes were sampled at depths of 0.5, 1.0, 2.0, and 3.0 feet bgs. Following evaluation and collection the soil samples were labeled and placed into a cooler pending delivery to the laboratory. Chain of custody procedures were observed for all sample handling.

Hand Augering and Groundwater Sample Collection

P&D personnel oversaw hand augering at locations GW3 through GW9 on May 31, 2018 and at locations GW10 and GW11 on October 13, 2018, (see Figures 4 through 7) for the collection of groundwater grab samples to evaluate the presence of VOCs in groundwater and metals at specific locations in groundwater at the subject site. All hand augering was performed by VTS using a 2.75-inch outside diameter hand auger. Boreholes GW3 through GW9 were all hand augered to a total depth of 11.5 feet bgs and boreholes GW10 and GW11 were hand augered to a total depth of 10.0 feet bgs.

Groundwater was first encountered in boreholes GW3, GW4, GW5, GW6, GW7, GW8, GW9, GW10, and GW11 at depths of approximately 9.5, 9.5, 9.5, 11.0, 8.5, 9.0, 9.0, 9.0, and 9.0 feet bgs, respectively. Following verification of the presence of groundwater in each borehole a temporary 1-inch diameter slotted PVC pipe was placed into the borehole. One groundwater grab sample was collected from each of the boreholes using new ¼-inch outside diameter polyethylene tubing and a peristaltic pump with silicone tubing in the pump rollers. The sample was discharged directly from the discharge tubing into 40-milliliter Volatile Organic Analysis (VOA) vials that contained hydrochloric acid and also into unpreserved 1-liter amber glass containers which all were sealed with Teflon-lined screw caps. Groundwater from boreholes GW3 and GW4 was also collected into unpreserved 500 milliliter (mL) HDPE bottles for metals analysis. The VOA vials were overturned and tapped to ensure that no air bubbles were present, and the bottles were then labeled and transferred to a cooler with ice until they were transported to the laboratory. Chain of custody procedures were observed for all sample handling.

The soil from the boreholes was logged in the field in accordance with standard geologic field techniques and the USCS, and was evaluated with a PID equipped with a 10.6 eV bulb that was calibrated with a 100 ppm isobutylene standard. The soil was also evaluated for other evidence of contamination such as odors, staining, and discoloration. No elevated PID values, odors, staining, or discoloration were detected in the boreholes. The shallowest depth at which groundwater was subsequently encountered in boreholes GW3, GW4, GW5, GW6, GW7, GW8, GW9, GW10, and GW11 prior to grouting the boreholes was at depths of 6.3, 7.0, 6.7, 6.9, 6.8, 6.8, 6.9, 9.4, and 9.4 feet bgs, respectively. Copies of the boring logs for boreholes GW3 through GW11 are attached with this report in Appendix A. Boreholes GW3 through GW9 were grouted on May 31, 2018 and boreholes GW10 and GW11 were grouted on October 13, 2018 with neat cement using the temporary PVC casing as a tremie pipe.

All drilling and sampling equipment was cleaned with an Alconox solution followed by a clean water rinse prior to use in each borehole, and all temporary PVC casing and tubing used for sample collection was new and unused. All soil and rinse water generated during subsurface investigation was stored in labeled 55-gallon drums at the site pending characterization and proper disposal.

Soil Gas Well Construction and Soil Gas Sample Collection

Six soil gas wells, designated as SG4 through SG9 were constructed on May 24, 2018; five soil gas wells, designated as SG10 through SG14 were constructed on October 13, 2018; and six soil gas wells, designated as SG15 through SG20 were constructed on November 19, 2018. Soil gas samples were collected from soil gas wells SG6 through SG9 on June 4 and 5, 2018, from soil gas wells SG4 and SG5 on September 6, 2018, from soil gas wells SG2, SG4, SG5, SG6, SG10 through SG14 on October 17 and 18, 2018, and from SG15 through SG18 and SG20 on December 10 and 15, 2018 using shrouds with helium tracer gas in accordance with procedures recommended in the following Department of Toxic Substances Control (DTSC) documents:

- July 2015 Advisory - Active Soil Gas Investigations.
- August 2015 - FAQ for the 2012 Active Soil Gas Investigations Advisory.
- October 2011 - Vapor Intrusion Guidance.
- October 2011 - Vapor Intrusion Mitigation Advisory.

The boreholes for the soil gas wells were each drilled to a depth of 7.0 feet bgs at locations SG4 through SG20 (see Figures 8 and 9) using a 3.5-inch outside diameter hand auger. The soil from the boreholes was logged in the field in accordance with standard geologic field techniques and the USCS, and was evaluated with a PID equipped with a 10.6 eV bulb that was calibrated with a 100 ppm isobutylene standard. The soil was also evaluated for other evidence of contamination such as odors, staining, and discoloration. No elevated PID values, odors, staining, or discoloration were detected in any of the boreholes.

Based on the presence of groundwater in the initial hand augered soil gas borehole (drilled at proposed location SG6 identified in the work plan), the initial borehole was designated as SG6A and no soil gas well was constructed in the borehole. An alternate borehole designated as SG6 was hand augered at a nearby location in an effort to determine if the groundwater encountered in the first borehole was localized or related to a buried utility, and a soil gas well designated as SG6 was constructed in the alternate borehole.

Groundwater was not encountered during hand augering in soil gas well boreholes SG4, SG5, and SG8 through SG20, and was encountered during hand augering in soil gas well boreholes SG6, SG6A (no soil gas well was constructed in borehole SG6A), and SG7 at depths of 6.7, 5.0, and 6.8 feet bgs, respectively. The shallowest depth at which groundwater was subsequently encountered in soil gas well boreholes SG4, SG5, SG6, SG6A, SG7, SG8 and SG9 was 5.5, 5.4, 5.9, 5.7, 5.6, 6.1 and 6.1 feet bgs, respectively. Copies of the boring logs for the soil gas well boreholes are attached with this report as Appendix A.

Each soil gas well was constructed with a sand filter pack in the bottom of the borehole consisting of #2/12 CEMEX sack sand between the depths of 7.0 and 5.0 feet bgs. A 0.250-inch outside diameter (0.187-inch inside diameter) Teflon tube measuring 7.0 feet in length with a HDPE filter at the bottom of the tube was placed in the center of the borehole during placement of the sand so that the HDPE filter. Based on the shallow depth of groundwater encountered in the soil gas well boreholes the HDPE filter was placed at a depth of 5.5 feet bgs. The annular space above the sand was filled with hydrated bentonite to a height of 0.5 feet above the top of the sand, and the remaining borehole annular space was filled with neat cement to approximately 0.5 feet below the ground surface. The top of the tubing for each soil gas well was enclosed with a Swagelok nut and plug, and the top of each soil gas well was enclosed in a well box with a lid secured with bolts.

Following construction, the soil gas wells were not sampled for a minimum of 48 hours. Additionally, not more than 0.5 inches of precipitation occurred during the five days prior to the sampling dates of June 4 and 5, 2018, September 6, 2018, October 17 and 18, 2018 and December 15, 2018 (see Appendix C).

Soil gas samples were collected using a manifold that was enclosed in a shroud provided by the laboratory. A helium tracer gas was introduced and maintained at a concentration of approximately 20 percent in the shroud during soil gas well purging and sampling in accordance with procedures identified in Appendix B. A manifold in the shroud connected the soil gas well to a well purging source (vacuum pump) and to a sampling Summa canister. The manifold was isolated with valves from the soil gas well, the purging source, and from the sampling Summa canister. Different valves on the manifold were opened during different operations associated with purging and sampling. A flow restrictor located in the manifold limited air flow from the soil gas well into the manifold at a nominal rate of 150 cubic centimeters (cc) per minute. The calculated purge volume for the soil gas wells is provided in Appendix B. Vacuum gages in the manifold on each of the soil gas side of the flow restrictor and on the sampling Summa canister side of the flow restrictor allowed vacuum to be monitored in the soil gas well and in the manifold during soil gas sample collection. An opening in the bottom of the shroud allowed the shroud to cover the soil gas well while still allowing access to the soil gas well through the bottom of the shroud.

The soil gas samples collected on June 4 and 5, 2018, September 6, 2018, and October 17 and 18, 2018 were collected in accordance with the following documents.

- July 2015 DTSC Active Soil Gas Investigations Advisory Appendix C Quantitative Leak Testing Using a Tracer Gas.
- September 2017 Enthalpy Analytical Field Guide for Use of the Helium Shrouds (see Appendix B).

The soil gas samples collected on December 10 and 15, 2018 were collected in accordance with the following documents.

- July 2015 DTSC Active Soil Gas Investigations Advisory Appendix C Quantitative Leak Testing Using a Tracer Gas.
- Standard Operating Procedures: MAI Helium Shroud During Soil Gas Sampling for Quantitative Leak Detection (see Appendix B).

The soil gas samples were collected in the following manner. A new shroud with a new soil gas sampling manifold with a 1-liter Summa sampling canister for each location was assembled in the shroud. At the time that the sampling manifold was assembled, the vacuum for the sample canister was verified with a vacuum gauge and recorded. Duplicate samples were collected on each of the three sample collection events in a shroud with a manifold that was constructed for the simultaneous collection of two soil gas samples in the same shroud.

Because the laboratory provided pre-assembled manifolds in shrouds with a vacuum for the June 4 and 5, 2018, September 6, 2018, and October 17 and 18, 2018 soil gas sampling events, it was not necessary to perform a shut in test prior to soil gas sampling. Shut in tests were performed for the manifold and sampling Summa assemblies for the December 10 and 15, 2018 sampling event. Following review of the manifold vacuum gage to verify that no unacceptable leaks were present in the manifold, a helium tracer gas was introduced into the shroud at a concentration of approximately 20 percent beginning a minimum of 5 minutes before purging the soil gas well. A default of three purge volumes of the tubing and filter pack were purged prior to sample collection. The purge time was calculated using a nominal flow rate provided by the manifold flow controller of 150 cc per minute. The shroud tracer gas concentration was monitored with a continuously operating helium detector and maintained at a concentration of approximately 20 percent and recorded during purging for the June 4 and 5, 2018, September 6, 2018, and October 17 and 18, 2018 soil gas sampling events. The shroud helium concentration was periodically monitored during the December 10 and 15, 2018 soil gas sampling event by using a syringe to draw shroud air through a helium detector .

An in-line helium detector located between the shroud and the vacuum source used for purging was monitored and recorded during purging to determine if the helium tracer gas was detected in the manifold during purging. No elevated helium concentrations were detected during purging, indicating that no leaks were detected during the purging process.

Following the completion of the soil gas well purging, the valve to the purge source was closed and the valve to the 1-liter Summa canister was opened for sample collection. The shroud tracer gas concentration was maintained at a concentration of approximately 20 percent and monitored as described above. Once the vacuum for the sample canister valve had decreased to 5 inches of mercury, the sample canister valve was closed. The pressure gage on the inlet side of the flow controller was monitored during sample collection to ensure that the vacuum applied to the soil gas well did not exceed 100 inches of water column. Vacuum did not exceed 100 inches of water column at any of the locations where soil gas samples were collected. During the June 4 and 5, 2018 soil gas sampling event the process was then repeated for soil gas sample collection using a second 1-liter Summa canister with the second soil gas sample identified by the soil gas well number followed by the letters REP based on the laboratory requiring a replicate sample for nitrogen analysis.

Following soil gas sample collection, a PID was connected to the soil gas well tubing to obtain a preliminary field value for the sample collection location. The soil gas Summa canister samples were stored in a box and promptly shipped to the laboratory for extraction and analysis. Chain of custody procedures were observed for all sample handling. Because of the presence of water in soil gas wells, soil gas samples were not collected at locations SG4 and SG5 during the June 4 and 5, 2018 soil gas sampling event, and were not collected from locations SG10, SG11, and SG19 during the December 10 and 15, 2018 soil gas sampling event. Measurements of vacuums, purging and equilibration time intervals, helium shroud concentrations, in-line helium detector readings during purging, and PID readings following soil gas sample collection were recorded on Soil Gas Sampling Data Sheets (see Appendix B).

All hand augering equipment was cleaned with an Alconox solution wash followed by a clean water rinse prior to use at each location. New Teflon tubing and a new filter were used for construction of each soil gas well. Clean, unused vacuum gages and a stainless steel sampling manifold were used at each sample collection location. All soil and rinse water generated during soil gas well construction was stored in 55-gallon drums at the site and labeled pending characterization and proper disposal.

Investigation-Derived Waste

All soil and rinse water generated during subsurface investigation was stored in labeled 55-gallon drums at the site pending characterization and proper disposal.

GEOLOGY AND HYDROGEOLOGY

Review of regional geologic maps from U. S. Geological Survey Professional Paper 943, "Flatland Deposits - Their Geology and Engineering Properties and Their Importance to Comprehensive Planning," by E. J. Helley and K. R. Lajoie, 1979, indicates that the subject site is underlain by Pleistocene beach and dune sand deposits (Merrit Sand) (Qps), which is described as loose well-sorted fine to medium sand. Immediately to the west of the western property boundary the subsurface materials are identified as Bay Mud (Qhbm), which is described as unconsolidated water-saturated dark plastic carbonaceous clay and silty clay.

The subsurface materials encountered in boreholes S1 through S9, GW3 through GW11, and SG4 through SG20 consisted of silty sand and silty clayey sand to the maximum depths explored of 11.5 feet bgs. Geologic cross sections for the site are provided in P&D’s March 23, 2018 Limited Subsurface Investigation Work Plan (document 0772.W2).

Groundwater was not encountered during drilling in boreholes S1 through S9 or during hand augering boreholes SG4, SG5, SG8, SG9, and SG15 through SG20. Groundwater was first encountered during hand augering in boreholes GW3, GW4, GW5, GW6, GW7, GW8, GW9, GW10, and GW11 at depths of 9.5, 9.5, 9.5, 11.0, 8.5, 9.0, 9.0, 9.0, and 9.0 feet bgs, respectively. Groundwater was not encountered during hand augering in soil gas well boreholes SG4, SG5, and SG8 through SG14, and was encountered during hand augering in soil gas well boreholes SG6, SG6A, and SG7 at depths of 6.7, 5.0, and 6.8 feet bgs, respectively. The shallowest depth at which groundwater was subsequently encountered in boreholes GW3, GW4, GW5, GW6, GW7, GW8, GW9, GW10, and GW11 was at depths of 6.3, 7.0, 6.7, 6.9, 6.8, 6.8, 6.9, 9.0, and 9.4 feet bgs, respectively. The shallowest depth at which groundwater was subsequently encountered in soil gas well boreholes SG4, SG5, SG6, SG6A (no soil gas well was constructed in borehole SG6A), SG7, SG8 and SG9 was 5.5, 5.4, 5.9, 5.7, 5.6, 6.1 and 6.1 feet bgs, respectively.

Review of Figure 1 shows that the ground surface elevation at the site is approximately 11 feet above sea level. The San Francisco Bay is located approximately 3,800 feet to the north and approximately 5,500 feet to the west of the subject site, and the Oakland Inner Harbor which is connected to the San Francisco Bay is located approximately 5,500 feet to the south of the subject site. Based on site vicinity topography and the proximity of surface water bodies the groundwater flow direction at the site is presumed to be westerly towards the San Francisco Bay.

WEATHER

No precipitation total exceeding 0.5 inches occurred for the 5 days preceding any of the soil gas sampling events or occurred on the days of any of the soil gas sampling events.

Weather data, including precipitation and barometric pressure for May 21 through June 20, 2018, August 23 through September 20, 2018, October 3 through November 1, 2018, and December 1 through 29, 2018, including the dates of soil gas sample collection, are provided in Appendix C.

The weather station is located north of the intersection of Marshall Street and Peabody Lane in Oakland at an elevation of 36 feet above sea level, approximately 2.7 miles to the north-northeast of the subject site. The subject site is located at an elevation of approximately 11 feet above sea level. An internet link to the weather station information is provided in Appendix C.

LABORATORY ANALYSIS

All of the soil and groundwater samples were analyzed at McCampbell Analytical, Inc. (McCampbell) in Pittsburg, California.

The soil samples were analyzed for total lead using EPA Method 6020.

The groundwater samples were analyzed for the following analytes:

- Total Petroleum Hydrocarbons as Gasoline (TPH-G) using EPA Method 5030B in conjunction with EPA Methods 8021B and modified 8015B.
- Total Petroleum Hydrocarbons as Diesel (TPH-D), Total Petroleum Hydrocarbons as Motor Oil (TPH-MO), and Total Petroleum Hydrocarbons as Bunker Oil (TPH-BO) using EPA Method 3510C in conjunction with EPA Method 8015B.
- VOCs including the petroleum compounds methyl-tert-butyl ether (MTBE), benzene, toluene, ethylbenzene, and xylenes (MBTEX), and naphthalene, and Halogenated Volatile Organic Compounds (HVOCs) including tetrachloroethene (PCE) and trichloroethene (TCE) using EPA Method 5030B in conjunction with EPA Method 8260B.
- The groundwater samples collected from boreholes GW3 and GW4 were additionally analyzed for CAM 17 metals using EPA Method E200.8.

The soil gas samples collected on December 10 and 15, 2018 were analyzed at McCampbell for the following analytes:

- VOCs including the petroleum compounds MBTEX and naphthalene, and HVOCs including PCE and TCE using EPA TO-15.
- Oxygen, Carbon Dioxide, and the tracer gas Helium using ASTM D1946-90.

All of the other soil gas samples were analyzed at Enthalpy Analytical in Berkeley, California (Enthalpy) for the following analytes:

- VOCs, including BTEX, PCE, TCE, cis-1,2-Dichloroethene (cis-1,2-DCE) , trans-1,2-Dichloroethene (trans-1,2-DCE), and vinyl chloride using EPA Method TO-15.
- Oxygen, Carbon Dioxide, and the tracer gas Helium using ASTM D1946-90.

Additionally, the soil gas samples collected on June 4, 2018 were analyzed at Enthalpy for Gasoline Range Organics (C6-C12) using EPA Method TO-3, and for nitrogen using ASTM D1946-90.

The shallow soil sample laboratory analytical results are summarized in Table 1, the borehole groundwater sample laboratory analytical results for Petroleum and VOCs are summarized in Table 2A, the borehole groundwater sample laboratory analytical results for Metals are summarized in Table 2B, the soil gas sample HVOC analytical results are summarized in Table 3A and non-HVOC analyte results are summarized in Table 3B. Copies of the laboratory analytical reports and chain of custody documentation for all of the samples are attached with this report in Appendix D.

DISCUSSION AND RECOMMENDATIONS

All known historical lead soil sample results are shown on Figure 2. Review of Table 1 shows that below a depth of 0.5 feet bgs all of the detected lead concentrations from boreholes S1 through S9 were below the SFRWQCB January 2019 residential soil Environmental Screening Level (ESL) value for lead of 80 milligrams per kilogram (mg/kg). Review of the boring logs in Appendix A for borings S1 through S9 shows that the elevated lead concentrations are limited to dark brown material that overlies brown silty sand.

Review of Table 2A shows that TPH-G, TPH-D, TPH-MO, TPH-BO, and VOCs were not detected in any of the groundwater samples from boreholes GW3 through GW11 with the following exceptions:

- TCE in sample GW5 at a concentration of 3.4 micrograms per Liter (ug/L).
- MTBE in sample GW7 at a concentration of 3.9 ug/L.
- PCE in sample GW10 at a concentration of 5.1 ug/L.
- TPH-D and TCE in sample GW11 detected at concentrations of 76 and 9.3 ug/L, respectively.

Only the detected PCE concentration in sample GW10 and the TCE concentrations in samples GW5 and GW11 exceed their respective SFRWQCB January 2019 Tier 1 groundwater ESL values. Similarly, the same detected PCE and TCE concentrations in GW10 and GW11 exceed their respective SFRWQCB January 2019 Table GW-3 groundwater vapor intrusion human health risk screening levels for groundwater with a residential land use (see Figure 4). Figure 4 also shows all detected analytes from locations GW1 and GW2 that were sampled in 2017. Review of Figure 4 shows that the extent of PCE and TCE in groundwater has been defined. Figure 5 shows all detected VOC groundwater concentrations exceeding SFRWQCB January 2019 Tier 1 groundwater ESL values (none of the petroleum groundwater concentrations at location GW1 exceeded Tier 1 groundwater ESL values).

Review of Table 2B shows that none of the detected metals in groundwater samples GW3 and GW4 exceed their respective SFRWQCB January 2019 Table GW-1 Groundwater Direct Exposure Human Health Screening Level MCL values (see Figure 6). The historical water quality results for metals for samples that were collected in 1999 are not considered to be dissolved metals concentrations (the 1999 groundwater metals results appear to be total metals concentrations) and for this reason are not included on Figure 6.

Review of HVOC soil gas results in Table 3A and the non-HVOC soil gas results in Table 3B for soil gas samples collected from soil gas wells SG4 through SG20 in 2018 shows that the tracer gas helium was not detected in any of the soil gas samples with the exception of 1.1 percent detected in sample SG6 and duplicate SG6-DUP collected on October 17, 2018. The absence of helium in the soil gas samples indicates that atmospheric dilution of the soil gas samples is not a concern. The helium detected in the October 17, 2018 SG6 soil gas samples was equivalent to approximately 5.5 percent of the shroud helium concentration, indicating that these SG6 soil gas samples may have experienced atmospheric dilution. Samples were also collected at location SG6 on June 4, 2018 that did not have detectable tracer gas concentrations, and location SG6 is also surrounded by soil gas wells where soil gas samples were collected that did not have detectable tracer gas concentrations.

Review of Table 3B shows that oxygen was detected in all of the soil gas samples at concentrations ranging from 9.7 to 18 percent. Review of Tables 3A and 3B shows that the only analytes detected in soil gas at concentrations exceeding their respective SFRWQCB January 2019 Tier 1 soil gas ESL values were PCE, TCE and chloroform at the following locations:

- PCE at locations SG2, SG3, SG4, SG6, SG7, SG9, SG10, SG11 and SG12.
- TCE at locations SG2, SG5, and SG6.
- Chloroform at location SG17.

The source of the chloroform is unknown, and is assumed to be related to domestic water supply.

PCE soil gas sample results are shown in Figure 7 and TCE soil gas sample results are shown in Figure 8. Review of Figures 7 and 8 shows that the extent of PCE and TCE in soil gas has been defined for the subject site.

Based on the sample results P&D recommends that a Corrective Action Plan be prepared for development of the site for residential use.

DISTRIBUTION

A copy of this report will be uploaded to GeoTracker.

LIMITATIONS

This report was prepared solely for the use of Urban Designs, LLC. The content and conclusions provided by P&D in this assessment are based on information collected during our investigation, which may include, but not be limited to, visual site inspections; interviews with site owner, regulatory agencies and other pertinent individuals; review of available public documents; subsurface exploration and our professional judgment based on said information at the time of preparation of this document. Any subsurface sample results and observations presented herein are considered to be representative of the area of investigation; however, geological conditions may vary between boreholes and may not necessarily apply to the general site as a whole. If future subsurface or other conditions are revealed which vary from these findings, the newly revealed conditions must be evaluated and may invalidate the findings of this report.

This report is issued with the understanding that it is the responsibility of the owner, or his representative, to ensure that the information contained herein is brought to the attention of the appropriate regulatory agencies, where required by law. Additionally, it is the sole responsibility of the owner to properly dispose of any hazardous materials or hazardous wastes left onsite, in accordance with existing laws and regulations.

This report has been prepared in accordance with generally accepted practices using standards of care and diligence normally practiced by recognized consulting firms performing services of a similar nature. P&D is not responsible for the accuracy or completeness of information provided by other individuals or entities which is used in this report. This report presents our professional judgment based upon data and findings identified in this report and interpretation of such data based upon our experience and background, and no warranty, either express or implied, is made. The conclusions presented are based upon the current regulatory climate and may require revision if future regulatory changes occur.

Should you have any questions, please do not hesitate to contact us at (510) 658-6916.

Sincerely,

P&D Environmental, Inc.

NOTES:
TPH-G = Total Petroleum Hydrocarbons as Gasoline.
TPH-D = Total Petroleum Hydrocarbons as Diesel.
TPH-MO = Total Petroleum Hydrocarbons as Motor Oil.
TPH-BO = Total Petroleum Hydrocarbons as Bunker Oil.
MTBE = Methyl tertiary-butyl ether.
VOCs = Volatile Organic Compounds.
PCE = Tetrachloroethene.
TCE = Trichloroethene.
cis-1,2-DCE = cis-1,2-Dichloroethene.
1,1-DCA = 1,1-Dichloroethane.
1,1-DCE = 1,1-Dichloroethene.
1,1,1-TCA = 1,1,1-Trichloroethane.
ft bgs = feet below ground surface.
ND = Not detected.
a = Laboratory Note: Diesel range compounds are significant; no recognizable pattern.
ESL^1 = Environmental Screening Level, by San Francisco Bay – Regional Water Quality Control Board, updated January 2019, from Summary of Groundwater ESLs, GW Tier 1 ESL.
ESL^2 = Environmental Screening Level, by San Francisco Bay – Regional Water Quality Control Board, updated January 2019, from Table GW-3 – Groundwater Vapor Intrusion Human Health Risk Screening Levels. Residential Land Use. Cancer Risk.
ESL^3 = Environmental Screening Level, by San Francisco Bay – Regional Water Quality Control Board, updated January 2019, from Table GW-3 – Groundwater Vapor Intrusion Human Health Risk Screening Levels. Residential Land Use. Non-Cancer Hazard.
Results in bold exceed their respective ESL^1 values.
Underlined results exceed their respective ESL^2 values.
Italicized results exceed their respective ESL^3 values.
Results and ESL values, reported in micrograms per Liter (µg/L), unless otherwise indicated.

<u>Notes:</u>
Feet bgs = Feet Below Ground Surface.
TPH-G = Total Petroleum Hydrocarbons as Gasoline.
MEK = Methyl Ethyl Ketone (2-Butanone).
NA = Not Analyzed.
ND = Not Detected.
NR = Not Reported.
-- = No Value.
b = Laboratory Note: Estimated Value.
ESL= Environmental Screening Level, by San Francisco Bay – Regional Water Quality Control Board, updated January 2019, Soil Gas Tier 1 ESL from Summary of Vapor ESLs.
BOLDED concentrations exceed their respective ESL value.
Results and ESLs in micrograms per cubic meter (µg/m3), unless otherwise indicated.

PAGE 1 OF 1

BORING NO.: S1	**PROJECT NO.:** 0772	**PROJECT NAME:** The Phoenix - 801 Pine Street, Oakland	
BORING LOCATION: Approximately 97 ft. north and 67 ft. west of southeast corner of property		**ELEVATION AND DATUM:** None	
DRILLING AGENCY: VTS Drilling LLC	**DRILLER:** Glenn/Joel	**DATE & TIME STARTED:** 6/1/18 1016	**DATE & TIME FINISHED:** 6/1/18 1233
DRILLING EQUIPMENT: Geoprobe 7822 DT			
COMPLETION DEPTH: 5.0 Feet	**BEDROCK DEPTH:** Not Encountered	**LOGGED BY:** LKD	**CHECKED BY:** PMK
FIRST WATER DEPTH: Not Encountered	**NO. OF SAMPLES:** 4 Soil		

DEPTH (FT.)	DESCRIPTION	GRAPHIC COLUMN	BLOW COUNT PER 6"	WELL CONSTRUCTION LOG	PID	REMARKS
	0.0 to 0.3 ft. (3.5-inches) Concrete (FILL) 0.3 to 1.0 ft. Dark brown silty clayey sand (SM); moderately dense, moist. No Petroleum Hydrocarbon (PHC) or solvent odors. (0,60,40) 1.0 to 5.0 ft. Color change to brown, loose, moist. X X X X	FILL SM		No Well Constructed S1-0.5 at 0.5 ft. S1-1.0 at 1.0 ft. S1-2.0 at 2.0 ft. S1-3.0 at 3.0 ft.	0 0 0 0	Concrete cored, then borehole continuously cored from 0.3 to 5.0 ft. using a Geoprobe 7822 DT dual tube sampling system where the smaller 5.0-foot long 1.5-inch O.D. rods were placed inside 5-foot long 2.25-inch O.D. outer casing. The smaller rod was lined with a 5.0-foot long 1.75-inch O.D. transparent PVC tube.
5 10 15 20 25 30						The sand catcher was removed from the transparent PVC tube prior to soil sample collection. Water was not encountered during drilling. Borehole terminated at 5.0 ft. and borehole grouted with neat cement grout and a tremie pipe on 6/1/18. Mr. Marcelino Vialpando with Alameda County Public Works Agency onsite to observe and document grouting of the borehole. Drilling Notes: 1) Field estimates of percent gravel, sand, and fines are shown in parentheses. 2) Density determinations are qualitative and are not based on quantitative evaluation.

REMARKS

Borehole hand augered from 0.7 to 11.5 ft. using 2.75-inch O.D. hand auger.

Water encountered during augering at 9.5 ft. at 1413.

Temporary 1.0-inch diameter slotted PVC casing placed in borehole.

Water level measured at 9.2 ft. at 1422 and at 6.7 ft. at 1505.

Water sample GW5 collected at 1506 using a peristaltic pump and was collected directly from the discharge tubing. No odor or sheen on sample.

Water level was subsequently measured at 7.4 ft. at 1516.

Borehole grouted on 5/31/18 using neat cement grout and a tremie pipe.

Mr. Marcelino Vialpando with Alameda County Public Works Agency gave verbal permission to grout the borehole without his presence.

Drilling Notes:

1) Field estimates of percent gravel, sand, and fines are shown in parentheses.

2) Density determinations are qualitative and are not based on quantitative evaluation.

Enthalpy Analytical Field Guide For Use of the Helium Shrouds

ENTHALPY ANALYTICAL

Field Guide for Use of the

HELIUM SHROUDS

Table of Contents

Figures & Diagrams

Introduction

Sampling soil gas wells using Helium leak tracer is not inherently difficult using Enthalpy Analytical's equipment, but it is relatively unforgiving of mistakes. The equipment has been field tested and through these tests we've learned that good results necessitate reviewing this document and following the procedures specified here. We strongly encourage our clients to practice set-up, Helium charging the shroud, using the detectors, and breakdown prior to sample collection. We've seen a very strong correlation between a thorough equipment orientation and successful sampling events. User errors related to a lack of orientation and preparation are the primary root cause of sampling errors and equipment failures.

The equipment supplied by Enthalpy Analytical's Berkeley laboratory has been cleaned, assembled, and leak tested using both pressurized Helium and vacuum decay methods. The preparation of all sampling equipment and media has been thoroughly documented.

If you suspect the sampling equipment is damaged or not functional, before using it please inform your laboratory Project Manager by calling the lab at 510-486-0900. Used and returned damaged equipment will be assessed cost for repair and replacement. Please do not disassemble and reassemble sampling trains and shrouds. They have been critically cleaned, assembled and leak checked for your use without further need for alteration. By breaking connections in sampling trains, users invalidate the lab's cleaning and prep effort.

Use of and Care for the EA-Berkeley Helium Detectors

When used properly, these diffusion cell He detectors provide real time measurement of Helium concentration in air from 1% to 99% Helium to accuracies of 0.1%. Prior to delivery, the He detectors are calibrated and performance verified. If, upon initial check, you discover the He gauge is apparently not working properly, call your C&T project manager immediately; repair and replacement costs will be assessed for all sensors returned damaged to the lab.

Figure 1: Diffusion Cell (left) and Flow-Through cell (right) Helium Detectors

Battery Charges last 4 hours: Helium Detectors using rechargeable NiCd batteries are fully charged before leaving the lab and hold a charge for 4 hours of use. Turn detectors on for use and off immediately after use and you'll make it through a day's sampling event without losing charge. The lab does not supply rechargers to users because the Diffusion and Flow-Through types require different voltages; using the wrong charger damages the detectors.

3 position switch: **On** is up, **Off** is neutral and down.

Required use technique for accurate Helium tracer measurements: These He detectors are sufficiently durable for portable field use; however they are precision measurement devices unforgiving of mistreatment or abuse, accordingly:

- Keep the He detector clean at all times, particularly around the white diffusion membrane cell opening. Dirt on, or in, the diffusion cell well will compromise calibration and result in extra fees for cleaning and recalibration.
- The He detectors are shock sensitive. Dropping the gauges onto a hard surface from a height of 2' or more can compromise calibration and may irreversibly damage the sensor and cause replacement or maintenance cost assessments. Please store and transport the gauges in the foam lined box provided.
- Helium detectors are moisture sensitive, don't get them wet

Accepting Enthalpy's Helium detectors binds your firm to the following conditions of use:

- Replacement costs are $900 + applicable shipping costs and sales tax.
- Minimum diagnostic, recalibration, and maintenance charges for damaged sensors are $120.

1. SETTING UP the Equipment

Equipment Supplied by EA-Berkeley

The following equipment should be present in the supply kit provided from the lab:

a. Integral shroud box and sampling train with 3 port valve
b. Helium supply components a) Helium bottle(s) (one bottle supplies enough for 4 wells), b) Braided steel Helium transfer tube with male QT connectors and; 3) Helium supply regulator with female QT connector
c. Helium Detector: Diffusion cell type (4 hours use on one charge)
d. Helium Detector: Flow-Through type (4 hours use on one charge)
e. Male QT ¼" OD Teflon tubing connector for connecting in port on flow through Helium detector to Purge port on Shroud
f. QT Vacuum gauge
g. 1.4 liter Sample canisters, one for each sample to be taken, some users request an extra to cover any aborted sampling events, well relocations etc…
h. Graphite or Ceramic ferules for joining ¼" OD Teflon tubing to well, one provided in each shroud/train inside the nut in the open port of the 3 port valve used to connect the soil gas well to the train.

Equipment NOT supplied by EA-Berkeley:

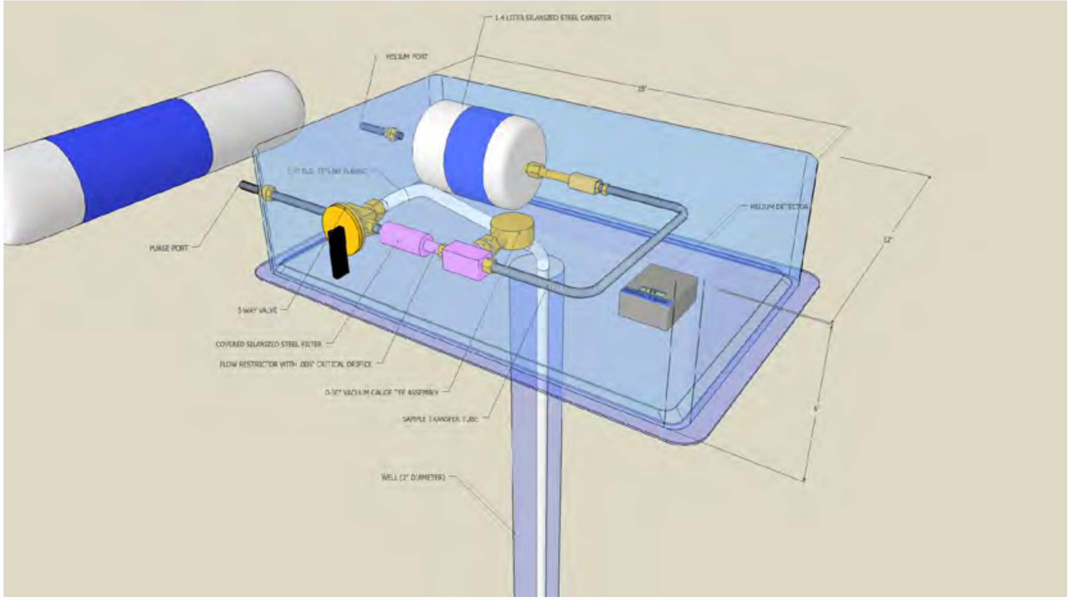
You will need the following items to complete your work; these items are not supplied by C&T unless specially requested:

a. Well purge suction source, alternatives available from the lab are: a) 50 ml disposable syringe with tubing adapters, b) evacuated 6 liter summa canister with 180 ml/min flow restrictor and filter, c) battery powered vacuum pump, d) 110V VAC powered vacuum pump
b. ½” x 9/16” open end combination wrench and one small crescent wrench. These are the tools needed to make compression fitting connections. C&T does not rent wrenches.
c. Extra Graphite or ceramic ferules as needed to insure you make a good well to train connection
d. ¼ OD Teflon tubing…Typically the well drillers have a lot of this stuff, if you need it
e. Knife (for cutting Teflon tubing)

1.1. **Position the shroud lid over the well.** Consistent Helium concentrations arise when the shrouds are used with the wellhead box lids provided. Some user protocols specify no box lid; in these cases, piling dirt around the edges of the box works to keep Helium inside the shroud. On windy days, a plastic windscreen employed either as a cover over the shroud or as an “air dam” has provided good results. We’ve experimented with using yoga mat material as “gaskets” for subslab sampling with mixed results.

If you’re using the lid, and we recommend you do, position the lid over the wellhead with the tubing arising through the hole in the lid. There is an audible snap when the lid is optimally attached.

Figure 2: Helium Tracer Shroud Components



1.2. Once the shroud lid is positioned over the well, check that the 3-way valve is in the ***off*** position and the train pressure gauge showing a vacuum.

This is your indication that the train is leak-free since leaving the lab and all you need do is make a tight connection from the well to the open port on the 3-way valve. If the 3-way valve is not in the ***off*** position as a result of some error in shipment, there may be no vacuum on the gauge. At this point, your sampling protocols will determine whether the train can be used or not.

All trains leave the lab holding vacuum with decay rates less than 5” in 12 hours. Many shroud trains have inconsequentially slow leaks; trains are stored more than 3 days since being shipped from the lab may have no vacuum showing on the gauge. In these cases, you can check the vacuum decay rate by connecting an extra canister to the train and observing the vacuum decay rate.

2. CONNECTING the Well to the Train 3-port Valve

2.1. To connect the soil gas well to the sampling train, you will be joining ¼” Teflon tubing to the 3-port valve. Either a ceramic or graphite ferule has been provided inside the nut on the open port of the 3-port valve for you to make this connection. The most important component in a compression fitting is the ferrule, which is prone to damage. Care should be used when installing it although if ceramic or graphite ferules become defective, it is easy to install a replacement.

A “straight” even tubing end in the ¼” OD Teflon tubing from the well to the 3-port valve is important to making a “tight” connection. Use a knife rather than scissors to cut the tubing at a 90 degree angle to the tube axis. Remove any “burrs” or irregularities in the tubing end before attempting the connection. Slip the nut over the tubing, then the ferule. The ferule should “point” toward the 3-port valve. Usually, it is not possible to install ferules “backwards”.

2.2. Keeping the 3 way valve in the ***off*** position, attach the well tubing to the open 3 way valve port. Avoid excessive force when tightening the nut. Over-tightening is the most common cause of leaks in compression fittings. If the nut is over-tightened, the ceramic or graphite ferrule frequently deforms, improperly causing the joint to fail. A good way to make these connections is to tighten the nut first by hand, until it is too difficult to continue, and then use a 9/16” open end wrench to tighten the nut with a full 360 degree turn; no more than a 1 and 1/4 turn should be needed to create a leak tight connection.

3. ATTACHING the Sample Canister to the Train

3.1. **Check the vacuum** in the sample canister using the QT Vacuum gauge, it should read -30” of Hg (full vacuum) if it reads less, use another sample canister.

3.2. While keeping the 3 way valve in the off position, attach the canister to the female QT fitting at the rear of the sampling train as follows:

  3.2.1. Pull the external sleeve of the female QT connector back to its stop, then
  3.2.2. Insert the male valve stem and allow the sleeve to return to its spring loaded position. When the QT connection is made the canister (male) valve is open to the train.
  3.2.3. Try to pull the canister off the train without retracting the female QT sleeve. A correctly made QT connection cannot be broken without retracting the sleeve on the female valve stem.

A word about Micro QT Fittings: Micro Quick connect valves (QT) offer superior performance and ease of use compared to alternative tubing connections and valves. QT fittings provide highly reliable leak free connections without tools especially for fittings that are made and broken frequently.

Fine sand and/or grit (such as dry bentonite) damages male and female QT valves and connections. Keep both male and female QT valve components scrupulously clean. Please use the orange or red plastic caps provided for the male QT fittings, they protect the valve stem while shipping and protect your sample during return shipment to the lab.

When removing or replacing orange plastic protective caps on the male QT fittings, push them straight on and pull then straight off the valve stem. Twisting the cap counterclockwise while removing or replacing on the valve stem can dissemble the valve stem causing vacuum and/or sample loss.

4. POSITIONING the Shroud over the Well

4.1. Position the diffusion Helium gauge out of the way on a portion of the lid that allows you a good view of the display with the shroud in place. Then invert the shroud assembly over the lid and snap lid into position.

4.2. With the shroud assembled in place, you should be able to view the vacuum gauge well enough to verify that vacuum is holding and you can see the Helium detector display. Our apologies for the opaque portions of the boxes, if you know of hard plastic boxes, with clear panels we'd love to learn about them.

5. CHARGING the Shroud with Helium

Enthalpy provides Aluminum lecture bottles filled with 300 psi Helium; each bottle of Helium contains 48 liters at atmospheric pressure, enough to easily supply 20% Helium atmospheres to 6 single Shrouds and 3 double shrouds. The amount of Helium used depends predominantly on wind and time required to sample the well, with experience, you'll use less Helium. Your protocol will specify the Helium concentration in the shroud. The following guidance is based on sampling under a 20-25% Helium in air atmosphere. Regardless of your target helium concentration, your objective

should be to maintain a steady concentration of Helium during the sampling event at levels above 10% Helium in air.

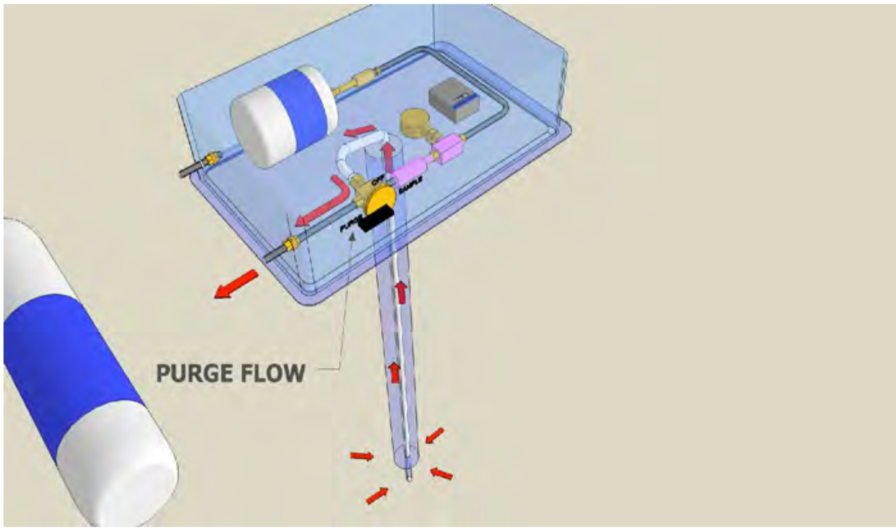
5.1. Locate and assemble the Lecture bottle, Helium transfer line, and the gas supply regulator. Tighten the brass nut attaching the regulator to the bottle one half turn past finger tight with a crescent or 9/16" open end wrench. The regulator is preset to deliver Helium at ideal pressure; ***you need not adjust the regulator***. Add Helium to the shroud by opening and closing the valve at the top of the bottle. Attach the Helium transfer line using the QT fittings at the regulator and at the Helium port on the shroud.

5.2. To provide Helium flow, slowly open the lecture bottle valve by twisting ***counterclockwise*** about ¼ turn.

5.3. Deliver 10 lbs of Helium at a time to the ***single*** shroud and 20 lbs to the ***double***. The diffusion cell Helium detector will respond in about 30 seconds to the new concentration. Unstable Helium detector readings reflect turbulent gas mixing inside the shroud. Plug holes between the shroud and the surface, use plastic sheeting to create an "air dam" or take other measures to air movement around the shroud and thus turbulence inside the shroud.

5.4. Monitor the Helium concentration displayed on the gauge in the shroud for about a minute in single shrouds, 90 seconds or longer in doubles. Under ideal conditions, 40 psi from the bottle will charge a single shroud to 25% helium concentration; double shrouds will require 80 psi. 25% Helium concentrations are maintained in the lab (zero wind) for 6-10 minutes. You may add more helium while purging and sampling. We suggest 10 psi increments for singles and 20 psi for doubles by opening the lecture bottle valve ¼ turn. We suggest users record/document the Helium concentration in the shroud at a minimum of 2 minute intervals during sampling.

Figure 3: Purge Flow Diagram



6. PURGE TESTING the Well under Helium

This test will help you establish the integrity of the well and the train to well connection. If no Helium is detected in the purge gas flow using this technique, one can assume the well is tight to breakthrough, and the train connections are all tight, and thus there will be no Helium detected in the sample that goes to the lab.

6.1. While getting the Helium concentration established, assemble the well purge train. Place the inline Helium detector between the shroud and whatever device (evacuated canister, syringe, or vacuum pump) that you're using to provide purge suction.

6.2. With the Helium atmosphere established in the shroud at 20% or more, and the purge system ready to operate, begin purging by moving the 3 way valve selector position to ***Purge*** and then establishing suction on the purge line.

6.3. Observe the inline Helium detector display while applying suction on the purge line. If you've purged enough vapors from the well to represent the entire volume of the path from the surface (under Helium atmosphere) to the distal end of the sampling tube and back up the tube and through the detector without detecting any Helium, your well shows signs of integrity and you may have a good leak free sample.

CA-DTSC guidance provides the opinion that a 5% ambient air dilution is inconsequential to sample integrity. When sampling under a 20% Helium in air atmosphere, 1% Helium detected in the purge gas represents a 5% ambient air sample dilution.

7. SAMPLING the Well under Helium

After you've completed purging the well, verify the reading on the Vacuum gauge of the train is -30 inches and that you have a steady state concentration of Helium between 20-25%, and then begin sampling by moving the 3 way selector valve to the ***Sample*** position.

Monitor the Helium concentration in the shroud by recording the reading on the diffusion cell detector inside the shroud every other minute or so. Add Helium from the bottle as needed to maintain a steady state concentration of Helium under the shroud.

Figure 4: Sampling Flow Diagram

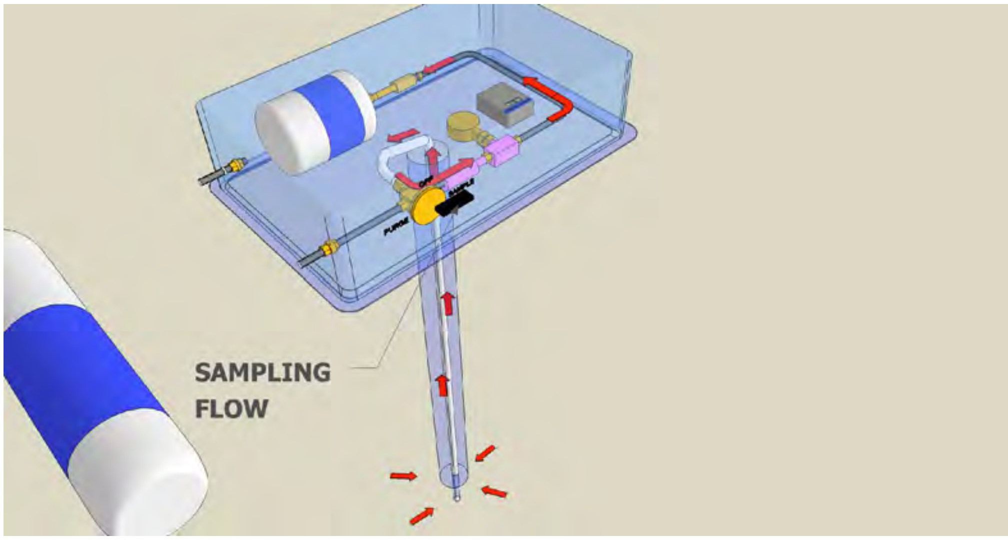


Figure 5: Dual Depth Well Sampling Shroud

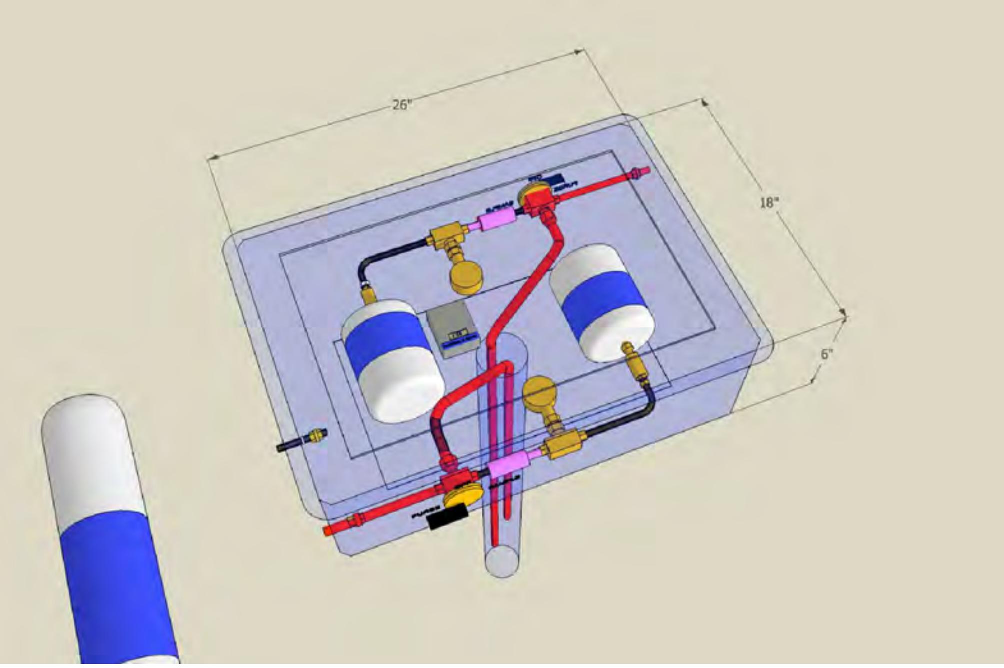

Standard Operating Procedures: MAI Helium Shroud During Soil Gas Sampling for Quantitative Leak Detection

Standard Operating Procedure:

MAI Helium Shroud during Soil Gas Sampling for Quantitative Leak Detection

1. Scope and Application

1.1 The purpose of the Helium shroud technique is to detect leaks during the soil gas sampling procedure.

2. Summary

2.1 The shroud is placed over the borehole to be tested & infused with helium at low pressure. The shroud does NOT need to be gas tight, just rich with Helium vapor. Compared to other liquid leak check compounds such as propanol(s) or Freons, Helium does not interfere with the target compound measurements and hence eliminates the need for sample dilutions, which results in better reporting limits. If there is a leak that comprises less than 5% of the sample, Helium content can be quantitatively analyzed, and the leak dilution factor can be determined during the laboratory analysis after soil gas sampling. A leak of less than 5% is considered an acceptable leak as specified in March 2010 DTSC soil gas sampling guidelines.

2.2 Use of the Helium shroud with an MAI designed soil gas manifold has the following capabilities.

2.2.1 Borehole seal integrity. Surface air intrusion can be checked in real-time, so that sampling can be aborted as wanted.

2.2.2 The Helium shroud can be used with MAI supplied purge can, user-supplied vacuum pump, or a manual syringe.

2.2.3 Allows shut-in-test for verification of leak free manifold.

2.2.4

- Quantitative measurement of Helium content within shroud, which combined with lab analysis of Helium content in sample can, allows quantitative evaluation of leak and assessment of < 5% DTSC criteria.
- Rotameter and vacuum gauges allow assessment of DTSC defined low permeability soils and provide the needed flow/ vacuum measurements required for compliant sampling.
- MAI's specially designed sampling manifolds offer the option for split sampling upon request. Simultaneous duplicate TO15 and sequential TO15 followed by TO17 sorbent tube (ST).
- MAI's special design optionally allows for simultaneous sampling of a borehole at 2 different depths.
- Allows visual monitoring of shroud helium content via helium meter.
- Sample technician friendly: allows flood or trickle/maintenance helium input.

2.3 MAI's helium shroud is covered with a secured flexible plastic sheet that functions as the lid. Handling of the equipment inside the shroud is done through the sheet. Practice before field sampling is encouraged for a successful sampling experience.

3. Equipment & Supplies

3.1 All the necessary devices needed for a complete soil gas sampling process with Helium as leak check compound are provided by MAI. Complete basic kit includes: Helium tank, Helium meter, small pump, purge can with Rota meter attached, cork borehole barriers, sample cans and manifolds. (See figure 1.)

3.2 The following equipment listed below is provided by MAI.

3.2.1. Six-liter plastic shroud box with lid of plastic sheeting. There are five connection ports located on the sidewalls of the shroud. They are labeled respectively as Port #1, Port #2, Port #3, Port #4 and Port #5 (See figure 1).

a. Port #1 is for attaching the Purge can/ a vacuum pump to the sample train.

b. Port #2 is the connection of the air pump to the shroud. The air pump facilitates the stabilization of the Helium concentration at 20%.

c. Port #3 connects the Helium meter to the shroud for monitoring Helium content in the shroud.

d. Port #4 allows a reading of Helium in the borehole, when borehole integrity test is needed, as well as a purged volume determination with a syringe

e. Port #5 connects the Helium shroud to the Helium supply tank.

f. Two inch diameter opening for borehole access.

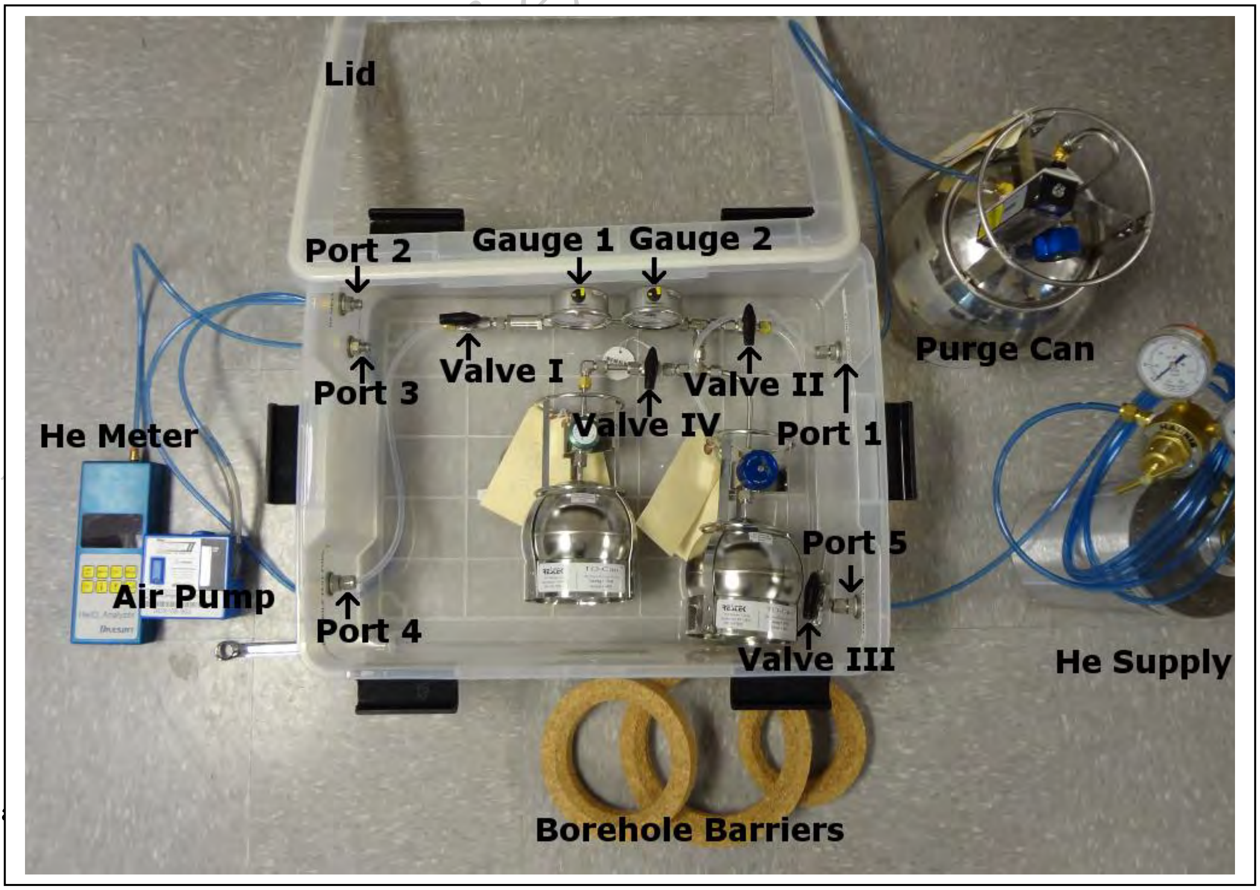

Figure 1. MAI designed Helium Shroud

3.2.2 A 2.24-liter Helium (99.995%) cylinder with a regulator set at 10 psi. Check the pressure gauge on Helium tank prior to sampling. If the pressure gauge reads less than 100 psi, then the Helium tank must be replaced.

3.2.3 A superior Helium meter, which measures Helium/Oxygen concentrations from 0% to 100% with ± 0.1% accuracy. The connection ports on the helium meter have been labeled for your convenience. A fully charged Helium meter should last up to 10 hours. *Note: To obtain an accurate reading on the Helium meter, the sampler must use the 60 mL syringe and give a quick pull on the plunger. (Pulling 60 mL of air through within a second is sufficient.)

3.2.4 The 60mL syringe is used to provide suction and force the airflow through the Helium meter or to quantify the "purged volume"

3.2.5 One Sensidyne pump set at 1250mL/min for maintaining a stable 20 %(±2%) Helium concentration in the shroud.

3.2.6 One 6-liter purge canister with Rota meter attached as suction/evacuation source for leak testing, well purging and a check for low permeability soils.

3.2.7 Cork shroud stabilizers of various sizes are included to level/stabilize the helium shroud.

3.2.8 An additional 1-liter sample canister can be provided for the optional TO17 sampling in order to:

a) to provide vacuum to pull sample through.
b) to allow calculation of the volume pulled through.
c) analyze for Helium as a leak check compound

The helium shroud may be reused for multiple borehole sites. However, due to potential cross contamination between borehole sampling, each borehole tested requires a separate certified 1-liter sample canister and certified sampling manifold. As there is no helium shroud tubing that contacts the sample upstream of the manifold; all Teflon tubing is reused.

4. Sampling Media

4.1 MAI's sampling manifold, which includes the following:

a. 3-way valveI on the borehole side of the manifold. The tapered end of the valve points to its connection direction.
b. A stainless steel 7-micron particle filter.
c. Vacuum gauge #1 reads the borehole side pressure.
d. A stainless steel flow restrictor.
e. Vacuum gauge #2 reads the sampling canister pressure and indicates when to stop sampling
f. Optional split sample attachment.
g. 2-way valve turns on/off the access to the purge can.

4.2 A 1-liter certified sample canister

4.3 An optional thermal desorption tube (sorbent tube) for TO-17 (MAI routinely includes naphthalene in TO15).

4.4 An optional split sample manifold attachment

   a. for simultaneous TO15 duplicate
   b. for serial TO15 and TO17 sorbent tube
   c. Optional second manifold for dual depth simultaneous sampling.

4.5 The soil gas manifold is leak checked in the lab prior to preparation for distribution. DO NOT DISASSEMBLE SOIL GAS MANIFOLD IN ANYWAY. Any damage to the equipment during sampling will incur repair fees.

5. Procedure

5.1 Assemble the shroud

5.1.1 Place cork shroud stabilizer over wellhead (various sizes provided for convenience and shroud stabilization)

5.1.2 Position shroud box so 'borehole access' is over borehole/borehole barrier, ensure well sampling tube rises up through wellhead and gasket into helium shroud box.

5.1.3 Position sampling manifold and sample canister(s) in shroud and make necessary connections.

Note: Optimally, to reduce contamination, cut surface section of well tubing before connecting to Valve I.

5.1.4 Connect the well tubing to 3-way valve I (the port that is perpendicular to the manifold) Tighten the nut over the tubing to make a good seal but do not over tighten as brass ferrules can easily shear Teflon tubing.

5.1.5 Connect the port 4 tubing to the remaining end of Valve I on the manifold. (the port in line with the manifold)

5.1.6 Connect Valve II to the tubing of port1

5.1.7 Connect purge can to Port #1 on the outside of the shroud box

5.1.8 Helium supply line is connected to Port #5.

5.1.9 Helium meter is initially connected to Port #3 for testing Helium concentration in the shroud. Prior to sampling, to conduct well integrity test for helium content, connect helium meter to Port 4.

5.1.10 Connect air pump to Port #2.

5.2 Charge the shroud with Helium

5.2.1 Initial Charge

5.2.1.1 Place plastic sheet loosely over box and secure with lid and lid clamps. Ensure a loose fit for valve manipulation. Ensure there are no gaps between the plastic sheet and lid. It is NOT necessary to adjust regulator pressure for helium supply bottle; it is preset at 10 Psi by MAI to sustain a constant 250mL/min helium flow to shroud and optimized for maintaining a 20% helium concentration. Turn 3-way valve III to 'flood' position (tapered end of the valve points to the nearest shroud wall) for initial Helium charge, which takes less than 5 seconds to is needed to reach a 20% Helium concentration. Briefly kneading the plastic cover post helium "flood" will expedite a 20% Helium equilibrium within the shroud.

5.3 Sampling train volume estimation.

- MAI has estimated sampling train volumes for multiple sampling configurations. Volume estimates are calculated from manifold's Valve I to the source of suction. They are listed here for sampler's convenience:
- Single sample configuration: 18.8 mL
- Duplicate sample configuration: 20.6 mL
- Serial TO15 and TO17 with Helium sample canister: 20 mL
- Serial TO15 and TO17 without Helium canister: 18.8 mL

5.4 Maintaining Helium Concentration in Shroud

5.4.1 After initial "flood" of helium (about 5 sec), turn Valve III to 'low purge' position (tapered end of valve –with arrow– will point toward far shroud wall/Port 1). The helium tank is set at 250 mL/min helium flow, used in conjunction with an air pump at the opposing side of the shroud; pulling 1.25 mL/min out of the shroud will roughly maintain a 20% helium concentration within the shroud.

Note: Initial helium concentration will be much higher than 20%, however it will stabilize in roughly 5 min.

5.4.2 Monitor helium concentration within shroud regularly throughout sampling process to assure it is maintained at 20% helium (±2%). To do this, simply attach the 60mL syringe to the outlet on the meter and quickly pull 60mL, repeat two times (total of three pulls). It is recommended to record the helium concentration within the shroud once every minute (April 2012 DTSC Advisory).

5.4.3 Maintain helium at 20% concentration for five minutes before beginning sampling process.

5.5 Shut In test

5.5.1 The purpose of this test is to detect leaks in the above-ground sampling apparatus.

5.5.2 A six liter evacuated canister is employed as the vacuum source for the Shut-In test and the Leak test. A Rota meter attached to the purge can monitors flow rate, Gauge 1 (left side) on the manifold indicates vacuum level of well in negative inches of mercury (- inHg).

5.5.3 Ensure sampling container(s) and Valve I are closed (Valve I is closed when perpendicular to manifold); open Purge Can valve, then open 2-way Valve II (Valve II open when in line with manifold).

5.5.4 Once vacuum gauges read -30 inHg (or 100 inH20) close Purge Can valve. Verify absence of a significant leak by monitoring vacuum gauges on sampling manifold for a loss of vacuum for AT LEAST ONE MINUTE.

Note: No movement on either gauge for ONE MINUTE is sufficient to proceed (during this time, see "6. Leak Test" below, and perform the Leak test before proceeding here). If there is a noticeable leak *of the sampling train during the Shut-In test, REPLACE the manifold and REPEAT the Shut-In test of the new manifold.*

5.5.5 If no significant leak is detected; Valve I and purge can valve are reopened and soil permeability is noted.

Note: Two criteria MUST be met; sample flow of at least 100mL/min AND borehole vacuum of -7.35 inHg are required to proceed. If these conditions are not met, damage to MAI equipment may occur at the expense of the sampler. Please see the "Sampling" section of this document for sampling procedure when the aforementioned criteria are not met.

5.6 Leak Test

5.6.1 The purpose of this test is to determine if ambient air is introduced into the sample during collection

5.6.2 The MAI Helium Shroud design allows for the Leak test to be performed while the Shut-In test is in progress. The Leak test is performed to verify a gas-tight connection between the borehole tubing and the manifold as well as confirm a good grout "seal" prior to sample collection.

5.6.3 It is used for shallow wells to determine if there is high permeability between the sub-surface sample tubing and the ground surface. This test is useful only if sampling will be aborted if a borehole leak is detected.

5.6.4 While waiting the "one minute" time requirement of the Shut-In test, attach helium meter to end of blue tubing on Port 4.

5.6.5 Using 60mL syringe take a helium reading of the borehole; attach syringe to outlet of meter and give a quick pull on the plunger. (Pulling 60 mL of air through within a second is sufficient.) Repeat 2 times to get an accurate reading.

5.6.6 If shroud is charged to 20% (±2%) helium and meter reads < 1% helium in well, borehole seals pass DTSC< 5% leak criteria.

5.7 Purge Volume Test

5.7.1 *Note: There are several procedures for determining well volume and purging well volume. Please refer to the* April 2012 DTSC Advisory section 4.2.3 – 4.3 *for more information. An accepted method is listed below; however, this method may not be appropriate for all wells and may not always apply.*

5.7.2 Turn 3-way Valve I so it is perpendicular to the manifold (pointing towards Port 4). Attach 60 mL syringe to end of blue tubing attached to outside of shroud box at Port 4.

5.7.3 Using the supplied 60mL syringe, pull suction on borehole sampling tube until plunger resistance is felt, noting final volume evacuated. The default purge volume is three times that of the well tubing volume (April 2012 DTSC Advisory

5.8 Sampling

5.8.1 After Shut-In test, Leak test, and purge volume procedures have been completed and helium concentration is maintained at 20% (±2%); ensure 3-way Valve I is perpendicular to manifold (pointing towards Port 4) and therefore allowing sampling from well.

5.8.2 Conventional TO15 summa sample collection procedures are now used. Generally, sample collection ceases when Gauge 2 (located on the sample canister side) reads approximately -5 inHg. **At 150ml/min a 1L summa will fill in approximately six minutes**. During sampling monitor helium concentration regularly.

5.8.3 DTSC recommends samples not be collected if down hole vacuum (Gauge 1) registers < -7.35 inHg (-100 inches of water), or flow falls below 100ml/min, indicating soil permeability is too low.

5.8.4 If low permeability is observed, close sampling can from sampling train IMMEDIATELY to prevent excessive moisture from entering into sampling canister, as this will invalidate the sample.

5.8.5 If soil is observed as low permeability soil, special sampling procedures are required as outlined in April 2012 DTSC Advisory App D.

5.8.6 If borehole vacuum reaches < -7.35 inHg, sampling should be suspended by closing valve on sampling can. After a few minutes, soil gas will replenish borehole and vacuum will gradually dissipate (refer to Gauge 1 located on borehole side of manifold for vacuum reading during this time). Sampling may resume after soil gas replenishes.

5.8.7 Once vacuum decreases, and sampling resumes, it is imperative that the sampler closely monitors borehole pressure as it may drop below -7.35 inHg again. If this occurs, repeat the 'shut' to 'replenish', then 'sample' cycle until sampling is completed. Length of replenish time depends on permeability of soil.

5.9 Optional Sampling Step

5.9.1 Sequential TO15 and TO17 sampling:

Naphthalene may be required to be sampled using TO17 sorbent tubes and a helium shroud. A modified set up for split sampling can be used, which consists of one TO15 sample can, a sorbent tube (ST), a TO17 purge/sample can, an additional 2-way valveIV and a 75ml/min flow restrictor, the latter two items are both located on the 'split sample attachment'. The TO17 ST is located between the 2-way valveIV/flow restrictor and the purge/sample can. This configuration is ideal for the following:

5.9.1.1 Restricts flow to the prescribed 50-100ml/minute (DTSC stipulation)

5.9.1.2 Allows naphthalene to be collected on the ST

5.9.1.3 Helps determine collected air STP volume that has passed thru the ST by lab measurement of the sample can initial and final pressur

5.9.1.4 Collects sample for helium leak check analysis in that branch's sample can.

5.9.2 Installation of TO17 sorbent tube also requires the sampling flow direction is the same as indicated on the tube body. Naphthalene cannot be desorbed from the tube if collected at the wrong end of the tube. Teflon (TFE) ferrules are used for connections on the ST. Use of metal ferrules are strictly prohibited for connecting TO17 ST as they permanently damage the tube, Such damage will be billed to sampler.

5.9.3 An alternative TO-17 sampling technique, using the above set up but without the helium shroud & without the second pristine purge can, can be performed by using IPA wetted rags as the leak check and a vacuum pump or 'used' purge can suction. IPA needs to be added to analytical the target list.

5.9.4 Duplicate TO15 sampling. Simultaneous duplicate sampling can be achieved by connecting an additional 1-liter canister to the manifold. The designated 'split sample attachment' must be used. Note: When TO17 ST sampling is needed, 2-way valveIV is in 'off' position during the shut in test. The valve is only turned on for sampling TO17 ST. On the contrary, 2-way valveIV is 'on' for the shut in test during simultaneous TO15 sampling.

6.0 Disconnect and move to the next site

6.1 After sample collection; close valve to sample canister, close valve on helium Supply, remove shroud lid, and detach borehole tubing from sample manifold.

6.2 Carefully label and remove sample manifold(s), canister(s) or sorbent tube(s) from shroud and ready the sampling apparatuses for shipment to McCampbell Analytical Inc.

6.3 Place the attached purge can, helium tank, 60 mL syringe, helium meter, air pump and tools into the shroud body, carefully remove the shroud and its contents from the borehole and collect the borehole seals/stabilizers and place them into the shroud box.

6.4 The shroud is now ready for transport to next borehole: the helium shroud, helium supply tank, helium meter, air pump, syringes and purge can are reusable. However, a clean certified manifold and sampling canister are needed for sampling the next well site.

6.5 When the sampling apparatuses are shipped to McCampbell Analytical Inc., TO-15 (or client specific target list) helium should be requested for analysis. Be sure to fill out Chain of Custody (COC) as completely as possible. All serial numbers of the equipment used for the sampling event need to be recorded on the COC.

Soil Gas Purge Volume Calculations

7.0 feet tubing, 12 inch sand interval, 6 inches hydrated bentonite interval above sand

Soil Gas Purge Volume Calculations

One Purge Volume is calculated as the volume of the tubing interior plus the volume of the sand interval of the borehole.

The tubing interior volume is calculated as follows:

V tubing = pi x (r x r) x h, where pi = 3.14, r = 0.187 in/2, and h = 7.0 ft.

V tubing = 3.14 x (0.0935 x 0.0935) x (7 ft. x 12 in./ft) = 2.31 cubic inches.

The sand interval volume is calculated as follows:

V sand interval = pi x (r x r) x h x porosity, where pi = 3.14, r = 3.5 in./2, h = 12 in., and porosity = 0.35

V sand interval = 3.14 x (1.75 x 1.75) x 12 x 0.35 40.39 cubic inches.

The total volume for one purge volume is V tubing + V sand interval, where

V total = 2.31 cubic inches + 40.39 cubic inches = 42.69 cubic inches.

To convert to cubic centimeters:

V total = 42.69 cubic inches x 16.39 cubic centimeters/cubic inches = 699.8 cubic centimeters.

The total volume to be purged is 3 purge volumes.

V purge total = 699.8 cubic centimeters x 3 2099 cubic centimeters.

The flow controller has a nominal flow rate of 150 cubic centimeters per minute.

The purge time is calculated as follows:

T purge = 2099 cubic centimeters/ 150 cubic centimeters per minute = 14.00 minutes.

Converting the purge time to seconds, 14.00 minutes x 60seconds/ minute = 840 seconds.

Notes:

🟨 Yellow hi-lite indicates data entry required.
🟦 Blue hi-lite indicates values are calculated or automatically updated.

Sand interval is 1 ft from 5 to 6 ft bgs, filter is at center of sand pack, 0.5 ft hydrated bentonite above sand, then neat cement to surface.

About This Weather Station

Weather Station ID: KCAOAKLA34

Station Name: Triple Point

Latitude / Longitude: N 37 ° 50 ' 51 ", W 122 ° 17 ' 10 "

Elevation: 36

City: Oakland

State: CA

Hardware: other

Software: Cumulus v3.0.0

Laboratory Analytical Reports and Chain of Custody Documentation

- **McCampbell Workorder #1806040 - Shallow Soil Samples from Locations S1 Through S9 Lead Results**
- **McCampbell Workorder #1806063 - Borehole Groundwater Samples GW3 Through GW9 Results**
- **McCampbell Workorder #1810751 - Borehole Groundwater Samples GW10 and GW11 Results**
- **Enthalpy Analytical Workorder #300421 - Soil Gas Samples SG6, SG6-DUP, and SG7 Through SG9 Results**
- **Enthalpy Analytical Workorder #302994 - Soil Gas Samples SG4, SG5, and SG5-DUP Results**
- **Enthalpy Analytical Workorder #304310 - Soil Gas Samples SG2, SG4, SG5, SG6, SG6-DUP, and SG10 Through SG14 Results**
- **McCampbell Workorder #1812906 - Soil Gas Samples SG15 Through SG17, SG20, and SG 20 DUP Results**
- **McCampbell Workorder #1812907 - Soil Gas Sample SG18 Results**

McCampbell Analytical, Inc.

"When Quality Counts"

Analytical Report

WorkOrder: 1806040

Report Created for: P & D Environmental

55 Santa Clara Ave, Ste.240
Oakland, CA 94610

Project Contact: Lindsey Deschenes
Project P.O.:
Project: 0772; The Phoenix

Project Received: 06/01/2018

Analytical Report reviewed & approved for release on 06/08/2018 by:

Yen Cao

Yen Cao
Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

NELAP ACCREDITED TNI LABORATORY

Glossary of Terms & Qualifier Definitions

Client: P & D Environmental
Project: 0772; The Phoenix
WorkOrder: 1806040

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 μm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Quality Control Qualifiers

F10	MS/MSD outside control limits. Physical or chemical interferences exist due to sample matrix.

Sample Receipt Checklist

Client Name: **P & D Environmental**
Project: **0772; The Phoenix**

WorkOrder №: **1806040** Matrix: Soil
Carrier: Lorenzo Perez (MAI Courier)

Date and Time Received: **6/1/2018 16:15**
Date Logged: **6/1/2018**
Received by: Lilly Ortiz
Logged by: Lilly Ortiz

Chain of Custody (COC) Information

Chain of custody present?	Yes ☑	No ☐	
Chain of custody signed when relinquished and received?	Yes ☑	No ☐	
Chain of custody agrees with sample labels?	Yes ☑	No ☐	
Sample IDs noted by Client on COC?	Yes ☑	No ☐	
Date and Time of collection noted by Client on COC?	Yes ☑	No ☐	
Sampler's name noted on COC?	Yes ☑	No ☐	
COC agrees with Quote?	Yes ☐	No ☐	NA ☑

Sample Receipt Information

Custody seals intact on shipping container/cooler?	Yes ☐	No ☐	NA ☑
Shipping container/cooler in good condition?	Yes ☑	No ☐	
Samples in proper containers/bottles?	Yes ☑	No ☐	
Sample containers intact?	Yes ☑	No ☐	
Sufficient sample volume for indicated test?	Yes ☑	No ☐	

Sample Preservation and Hold Time (HT) Information

All samples received within holding time?	Yes ☑	No ☐	NA ☐
Samples Received on Ice?	Yes ☐	No ☑	
Sample/Temp Blank temperature	Temp:		NA ☑
Water - VOA vials have zero headspace / no bubbles?	Yes ☐	No ☐	NA ☑
Sample labels checked for correct preservation?	Yes ☑	No ☐	
pH acceptable upon receipt (Metal: <2; 522: <4; 218.7: >8)?	Yes ☐	No ☐	NA ☑
UCMR Samples:			
pH tested and acceptable upon receipt (200.8: ≤2; 525.3: ≤4; 530: ≤7; 541: <3; 544: <6.5 & 7.5)?	Yes ☐	No ☐	NA ☑
Free Chlorine tested and acceptable upon receipt (<0.1mg/L)?	Yes ☐	No ☐	NA ☑

"When Quality Counts"

Analytical Report

WorkOrder: 1806063

Report Created for: P & D Environmental

55 Santa Clara Ave, Ste.240
Oakland, CA 94610

Project Contact: Lindsey Deschenes
Project P.O.:
Project: 0772; The Phoenix 801 Pine Street Oakland, CA

Project Received: 06/01/2018

Analytical Report reviewed & approved for release on 06/11/2018 by:

Jennifer Lagerbom
Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

1534 Willow Pass Rd. Pittsburg, CA 94565 ♦ TEL: (877) 252-9262 ♦ FAX: (925) 252-9269 ♦ www.mccampbell.com

Glossary of Terms & Qualifier Definitions

Client:	P & D Environmental
Project:	0772; The Phoenix 801 Pine Street Oakland, CA
WorkOrder:	1806063

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 μm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Analytical Qualifiers

F	Sample was filtered upon arrival to the lab

Glossary of Terms & Qualifier Definitions

Client: P & D Environmental
Project: 0772; The Phoenix 801 Pine Street Oakland, CA
WorkOrder: 1806063

Quality Control Qualifiers

F1	MS/MSD recovery and/or RPD is out of acceptance criteria; LCS validates the prep batch.

Glossary of Terms & Qualifier Definitions

Client: P & D Environmental
Project: 0772; The Phoenix 801 Pine St. Oakland, CA
WorkOrder: 1810751

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 μm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Glossary of Terms & Qualifier Definitions

Client: P & D Environmental
Project: 0772; The Phoenix 801 Pine St. Oakland, CA
WorkOrder: 1810751

Analytical Qualifiers

S	Surrogate spike recovery outside accepted recovery limits
c4	Surrogate recovery outside of the control limits due to coelution with another peak(s) / cluttered chromatogram.
c12	Surrogate recovery outside of the control limits
e2	Diesel range compounds are significant; no recognizable pattern

Quality Control Qualifiers

F2	LCS/LCSD recovery and/or RPD is out of acceptance criteria.

NOTES:
- **STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).**
- **MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.**

Sample Receipt Checklist

Client Name:	**P & D Environmental**	Date and Time Received	**10/15/2018 16:00**
Project:	**0772; The Phoenix 801 Pine St. Oakland, CA**	Date Logged:	**10/15/2018**
		Received by:	Julia Danielsson
WorkOrder №:	**1810751** Matrix: Water	Logged by:	Julia Danielsson
Carrier:	Lorenzo Perez (MAI Courier)		

Chain of Custody (COC) Information

Chain of custody present?	Yes ☑	No ☐	
Chain of custody signed when relinquished and received?	Yes ☑	No ☐	
Chain of custody agrees with sample labels?	Yes ☑	No ☐	
Sample IDs noted by Client on COC?	Yes ☑	No ☐	
Date and Time of collection noted by Client on COC?	Yes ☑	No ☐	
Sampler's name noted on COC?	Yes ☑	No ☐	
COC agrees with Quote?	Yes ☐	No ☐	NA ☑

Sample Receipt Information

Custody seals intact on shipping container/cooler?	Yes ☐	No ☐	NA ☑
Shipping container/cooler in good condition?	Yes ☑	No ☐	
Samples in proper containers/bottles?	Yes ☑	No ☐	
Sample containers intact?	Yes ☑	No ☐	
Sufficient sample volume for indicated test?	Yes ☑	No ☐	

Sample Preservation and Hold Time (HT) Information

All samples received within holding time?	Yes ☐	No ☐	NA ☑
Samples Received on Ice?	Yes ☑	No ☐	
	(Ice Type: WET ICE)		
Sample/Temp Blank temperature	Temp: 3.3°C		NA ☐
Water - VOA vials have zero headspace / no bubbles?	Yes ☑	No ☐	NA ☐
Sample labels checked for correct preservation?	Yes ☑	No ☐	
pH acceptable upon receipt (Metal: <2; 522: <4; 218.7: >8)?	Yes ☐	No ☐	NA ☑
UCMR Samples:			
pH tested and acceptable upon receipt (200.8: ≤2; 525.3: ≤4; 530: ≤7; 541: <3; 544: <6.5 & 7.5)?	Yes ☐	No ☐	NA ☑
Free Chlorine tested and acceptable upon receipt (<0.1mg/L)?	Yes ☐	No ☐	NA ☑

CASE NARRATIVE

Laboratory number:	**300421**
Client:	**P&D Environmental**
Project:	**0772**
Location:	**801 Pine Streets Oakland, Ca.**
Request Date:	**06/06/18**
Samples Received:	**06/06/18**

This data package contains sample and QC results for five air samples, requested for the above referenced project on 06/06/18. The samples were received cold and intact.

Volatile Organics in Air by MS (EPA TO-15):
No analytical problems were encountered.

Volatile Organics in Air GC (ASTM D1946-90 and EPA TO-3):
Gasoline range organics C6-C12 was detected between the MDL and the RL in the method blank for batch 260467. No other analytical problems were encountered.

COOLER RECEIPT CHECKLIST

Curtis & Tompkins, Ltd.

Login # 300421 Date Received 06/06/18 Number of coolers 0
Client PDE Project 0772

Date Opened 06/06/18 By (print) BNL (sign)
Date Logged in ↓ By (print) ↓ (sign) ↓
Date Labeled ↓ By (print) ↓ (sign) ↓

1. Did cooler come with a shipping slip (airbill, etc) YES [✓ NO]
Shipping info

2A. Were custody seals present? .... ☐ YES (circle) on cooler on samples ☑ NO
How many Name Date

2B. Were custody seals intact upon arrival? YES NO [✓ N/A]

3. Were custody papers dry and intact when received? [✓ YES] NO

4. Were custody papers filled out properly (ink, signed, etc)? [✓ YES] NO

5. Is the project identifiable from custody papers? (If so fill out top of form) [✓ YES] NO

6. Indicate the packing in cooler: (if other, describe)

☐ Bubble Wrap ☐ Foam blocks ☐ Bags ☐ None
☐ Cloth material ☑ Cardboard ☐ Styrofoam ☐ Paper towels

7. Temperature documentation: * Notify PM if temperature exceeds 6°C

Type of ice used: ☐ Wet ☐ Blue/Gel ☑ None Temp(°C)

☐ Temperature blank(s) included? ☐ Thermometer# ☐ IR Gun#

☐ Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? YES [✓ NO]
If YES, what time were they transferred to freezer?

9. Did all bottles arrive unbroken/unopened? [✓ YES] NO

10. Are there any missing / extra samples? YES [✓ NO]

11. Are samples in the appropriate containers for indicated tests? [✓ YES] NO

12. Are sample labels present, in good condition and complete? [✓ YES] NO

13. Do the sample labels agree with custody papers? [✓ YES] NO

14. Was sufficient amount of sample sent for tests requested? [✓ YES] NO

15. Are the samples appropriately preserved? YES NO [✓ N/A]

16. Did you check preservatives for all bottles for each sample? YES NO [✓ N/A]

17. Did you document your preservative check? (pH strip lot#) YES NO [✓ N/A]

18. Did you change the hold time in LIMS for unpreserved VOAs? YES NO [✓ N/A]

19. Did you change the hold time in LIMS for preserved terracores? YES NO [✓ N/A]

20. Are bubbles > 6mm absent in VOA samples? YES NO [✓ N/A]

21. Was the client contacted concerning this sample delivery? YES [✓ NO]
If YES, Who was called? By Date:

COMMENTS

CASE NARRATIVE

Laboratory number:	**302994**
Client:	**P&D Environmental**
Project:	**0772**
Location:	**801 Pine Streets Oakland, Ca.**
Request Date:	**09/06/18**
Samples Received:	**09/06/18**

This data package contains sample and QC results for three air samples, requested for the above referenced project on 09/06/18. The samples were received cold and intact.

Volatile Organics in Air by MS (EPA TO-15):
High ICAL percent RSD (relative standard deviation) was observed for n-heptane in the calibration analyzed 08/28/18 16:53; affected data was qualified with "b". High responses were observed for acrolein and styrene in the ICV analyzed 08/29/18 12:27; affected data was qualified with "b". Low responses were observed for acrolein and styrene in the ICV analyzed 08/27/18 14:45; affected data was qualified with "b". High response was observed for 2-hexanone; affected data was qualified with "b". High responses were observed for many analytes in the CCV analyzed 09/12/18 21:58; affected data was qualified with "b". Low responses were observed for a number of analytes in the CCV analyzed 09/11/18 12:47; affected data was qualified with "b". Low recoveries were observed for a number of analytes in the BS/BSD for batch 263342; the associated RPDs were within limits, and these low recoveries were not associated with any reported results. High recoveries were also observed for a number of analytes in the BSD for batch 263342; the associated RPDs were within limits, and these analytes were not detected at or above the RL in the associated samples. High recoveries were observed for many analytes in the BS/BSD for batch 263397; the associated RPDs were within limits. High RPD was observed for acrolein; this analyte was not detected at or above the RL in the associated samples. No other analytical problems were encountered.

Volatile Organics in Air GC (ASTM D1946-90):
No analytical problems were encountered.

REMARKS:

SAMPLE RECEIPT CHECKLIST

ENTHALPY

Section 1: Login # 302994 Client: PDE

Date Received: 09/06/18 Project: 0772

Section 2: Samples received in a cooler? o Yes, how many? ______ [✓ No] (skip Section 3 below)

If no cooler Sample Temp (°C): ______ using IR Gun # o A, or o B

o Samples received on ice directly from the field. Cooling process had begun

If in cooler: Date Opened ______ By (print) ______ (sign) ______

Shipping info (if applicable) ______

Are custody seals present? o No, or o Yes. If yes, where? o on cooler, o on samples, o on package

o Date: ______ How many ______ o Signature, o Initials, o None

Were custody seals intact upon arrival? o Yes o No o N/A

Section 3: Important : Notify PM if temperature exceeds 6°C or arrive frozen.

Packing in cooler: (if other, describe) Box

o Bubble Wrap, o Foam blocks, o Bags, o None, o Cloth material, [✓ Cardboard], o Styrofoam, o Paper towels

o Samples received on ice directly from the field. Cooling process had begun

Type of ice used : o Wet, o Blue/Gel, o None Temperature blank(s) included? ☐ Yes, ☐ No

Temperature measured using o Thermometer ID: ______, or IR Gun # o A o B

Cooler Temp (°C): #1: ______, #2: ______, #3: ______, #4: ______, #5: ______, #6: ______, #7: ______

Section 4:	YES	NO	N/A
Were custody papers dry, filled out properly, and the project identifiable	X		▨
Were Method 5035 sampling containers present?		X	▨
If YES, what time were they transferred to freezer? ______	▨	▨	▨
Did all bottles arrive unbroken/unopened?	X		▨
Are there any missing / extra samples?	X		▨
Are samples in the appropriate containers for indicated tests?	X		▨
Are sample labels present, in good condition and complete?	X		▨
Does the container count match the COC?	X		
Do the sample labels agree with custody papers?	X		▨
Was sufficient amount of sample sent for tests requested?	X		▨
Did you change the hold time in LIMS for unpreserved VOAs?			X
Did you change the hold time in LIMS for preserved terracores?			X
Are bubbles > 6mm absent in VOA samples?			X
Was the client contacted concerning this sample delivery?		X	▨
If YES, who was called? ______ By ______ Date: ______	▨	▨	▨

Section 5:	YES	NO	N/A
Are the samples appropriately preserved? (if N/A, skip the rest of section 5)			
Did you check preservatives for all bottles for each sample?			▨
Did you document your preservative check?			▨

pH strip lot# ______, pH strip lot# ______, pH strip lot# ______

Preservative added:

o H2SO4 lot# ______ added to samples ______ on/at ______

o HCL lot# ______ added to samples ______ on/at ______

o HNO3 lot# ______ added to samples ______ on/at ______

o NaOH lot# ______ added to samples ______ on/at ______

This data package has been reviewed for technical correctness and completeness. Release of this data has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature which applies to this PDF file as well as any associated electronic data deliverable files. The results contained in this report meet all requirements of NELAP and pertain only to those samples which were submitted for analysis. This report may be reproduced only in its entirety.

CASE NARRATIVE

Laboratory number:	**304310**
Client:	**P&D Environmental**
Project:	**0772**
Location:	**801 Pine Streets Oakland, Ca.**
Request Date:	**10/18/18**
Samples Received:	**10/18/18**

This data package contains sample and QC results for ten air samples, requested for the above referenced project on 10/18/18. The samples were received cold and intact.

Volatile Organics in Air by MS (EPA TO-15):
No analytical problems were encountered.

Volatile Organics in Air GC (ASTM D1946-90):
No analytical problems were encountered.

COOLER RECEIPT CHECKLIST

Curtis & Tompkins, Ltd.

Login # 304310 Date Received 10/18/18 Number of coolers 0
Client RPE Project 0772

Date Opened 10/18/18 By (print) BNL (sign)
Date Logged in ↓ By (print) ↓ (sign)
Date Labeled ↓ By (print) ↓ (sign) ↓

1. Did cooler come with a shipping slip (airbill, etc) YES [✓ NO]
Shipping info

2A. Were custody seals present? .... ☐ YES (circle) on cooler on samples ☑ NO
How many Name Date

2B. Were custody seals intact upon arrival? YES NO [✓ N/A]

3. Were custody papers dry and intact when received? [✓ YES] NO

4. Were custody papers filled out properly (ink, signed, etc)? [✓ YES] NO

5. Is the project identifiable from custody papers? (If so fill out top of form) [✓ YES] NO

6. Indicate the packing in cooler: (if other, describe)

☐ Bubble Wrap ☐ Foam blocks ☐ Bags ☐ None
☐ Cloth material ☑ Cardboard ☐ Styrofoam ☐ Paper towels

7. Temperature documentation: * Notify PM if temperature exceeds 6°C

Type of ice used: ☐ Wet ☐ Blue/Gel ☑ None Temp(°C)

☐ Temperature blank(s) included? ☐ Thermometer# ☐ IR Gun#

☐ Samples received on ice directly from the field. Cooling process had begun

8. Were Method 5035 sampling containers present? YES [✓ NO]
If YES, what time were they transferred to freezer?

9. Did all bottles arrive unbroken/unopened? [✓ YES] NO

10. Are there any missing / extra samples? YES [✓ NO]

11. Are samples in the appropriate containers for indicated tests? [✓ YES] NO

12. Are sample labels present, in good condition and complete? [✓ YES] NO

13. Do the sample labels agree with custody papers? [✓ YES] NO

14. Was sufficient amount of sample sent for tests requested? [✓ YES] NO

15. Are the samples appropriately preserved? YES NO [✓ N/A]

16. Did you check preservatives for all bottles for each sample? YES NO [✓ N/A]

17. Did you document your preservative check? (pH strip lot#) YES NO [✓ N/A]

18. Did you change the hold time in LIMS for unpreserved VOAs? YES NO [✓ N/A]

19. Did you change the hold time in LIMS for preserved terracores? YES NO [✓ N/A]

20. Are bubbles > 6mm absent in VOA samples? YES NO [✓ N/A]

21. Was the client contacted concerning this sample delivery? YES [✓ NO]
If YES, Who was called? By Date:

COMMENTS

Detections Summary for 304310

Results for any subcontracted analyses are not included in this summary.

McCampbell Analytical, Inc.

"When Quality Counts"

Analytical Report

WorkOrder: 1812906

Report Created for: P & D Environmental

55 Santa Clara Ave, Ste.240
Oakland, CA 94610

Project Contact: Paul King
Project P.O.:
Project: 0772; The Phoenix

Project Received: 12/17/2018

Analytical Report reviewed & approved for release on 12/27/2018 by:

Christine Askari
Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: P & D Environmental
Project: 0772; The Phoenix
WorkOrder: 1812906

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 μm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TZA	TimeZone Net Adjustment for sample collected outside of MAI's UTC.
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

j1:

TO-15 ANALYSIS

All summa canisters are EVACUATED 5 days after the reporting of the results. Please call or email if a longer retention time is required.

Polymer (Tedlar) bags are not recommended for TO15 samples. The disadvantages are listed in Appendix B of the DTSC Active Soil Gas Advisory of July 2015.

1812906-004A	SG 20	SoilGas	TO15 w/ Helium, O2, CO2	1	1L Summa	☐	12/15/2018 18:59	5 days		☐	
1812906-005A	SG 20 DUP	SoilGas	TO15 w/ Helium, O2, CO2	1	1L Summa	☐	12/15/2018 18:59	5 days		☐	

NOTES:
- **STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).**
- **MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.**

REMARKS: PID values are in ppmv after sample collection. PID calibrated with a 100 ppmv isobutylene standard.
Detection Limits to be equal to or less than Feb 2016 SFRWQCB Residential Soil gas ESLs.

Sample Receipt Checklist

Client Name: **P & D Environmental**
Project: **0772; The Phoenix**
WorkOrder №: **1812906** Matrix: SoilGas
Carrier: Lorenzo Perez (MAI Courier)

Date and Time Received **12/17/2018 16:30**
Date Logged: **12/18/2018**
Received by: Kena Ponce
Logged by: Kena Ponce

Chain of Custody (COC) Information

Chain of custody present?	Yes ☑	No ☐	
Chain of custody signed when relinquished and received?	Yes ☑	No ☐	
Chain of custody agrees with sample labels?	Yes ☑	No ☐	
Sample IDs noted by Client on COC?	Yes ☑	No ☐	
Date and Time of collection noted by Client on COC?	Yes ☑	No ☐	
Sampler's name noted on COC?	Yes ☑	No ☐	
COC agrees with Quote?	Yes ☐	No ☐	NA ☑

Sample Receipt Information

Custody seals intact on shipping container/cooler?	Yes ☐	No ☐	NA ☑
Shipping container/cooler in good condition?	Yes ☑	No ☐	
Samples in proper containers/bottles?	Yes ☑	No ☐	
Sample containers intact?	Yes ☑	No ☐	
Sufficient sample volume for indicated test?	Yes ☑	No ☐	

Sample Preservation and Hold Time (HT) Information

All samples received within holding time?	Yes ☑	No ☐	NA ☐
Samples Received on Ice?	Yes ☐	No ☑	
Sample/Temp Blank temperature	Temp:		NA ☑
Water - VOA vials have zero headspace / no bubbles?	Yes ☐	No ☐	NA ☑
Sample labels checked for correct preservation?	Yes ☑	No ☐	
pH acceptable upon receipt (Metal: <2; Nitrate 353.2/4500NO3: <2; 522: <4; 218.7: >8)?	Yes ☐	No ☐	NA ☑
UCMR Samples:			
pH tested and acceptable upon receipt (200.8: ≤2; 525.3: ≤4; 530: ≤7; 541: <3; 544: <6.5 & 7.5)?	Yes ☐	No ☐	NA ☑
Free Chlorine tested and acceptable upon receipt (<0.1mg/L)?	Yes ☐	No ☐	NA ☑

Analytical Report

WorkOrder:	1812907
Report Created for:	P & D Environmental
	55 Santa Clara Ave, Ste.240 Oakland, CA 94610
Project Contact:	Paul King
Project P.O.:	
Project:	0772; The Phoenix
Project Received:	12/17/2018

Analytical Report reviewed & approved for release on 12/27/2018 by:

Christine Askari
Project Manager

Glossary of Terms & Qualifier Definitions

Client: P & D Environmental
Project: 0772; The Phoenix
WorkOrder: 1812907

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 μm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TZA	TimeZone Net Adjustment for sample collected outside of MAI's UTC.
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Glossary of Terms & Qualifier Definitions

Client: P & D Environmental
Project: 0772; The Phoenix
WorkOrder: 1812907

Analytical Qualifiers

j1	See attached narrative

Quality Control Qualifiers

F2	LCS/LCSD recovery and/or RPD/RSD is out of acceptance criteria.

Case Narrative

Client:	P & D Environmental	**Work Order:**	1812907
Project:	0772; The Phoenix	December 27, 2018	

j1:

TO-15 ANALYSIS

All summa canisters are EVACUATED 5 days after the reporting of the results. Please call or email if a longer retention time is required.

Polymer (Tedlar) bags are not recommended for TO15 samples. The disadvantages are listed in Appendix B of the DTSC Active Soil Gas Advisory of July 2015.

Oakland, California 94607
AEI Project No. 402500

Dear Jamie Hiteshew:

AEI Consultants is pleased to provide the *Phase I Environmental Site Assessment* of the above referenced property. This assessment was authorized and performed in accordance with the scope of services engaged.

We appreciate the opportunity to provide services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (925) 746-6028 or jasmith@aeiconsultants.com.

Sincerely,

Jeremy Smith

TABLE OF CONTENTS

TABLE OF APPENDICES

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by Urban Designs, LLC to conduct a Phase I ESA in conformance with AEI's contract and the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at Site bounded by 9th Street (north), Pine Street (east), Shorey Street (south), Frontage Road (west), Oakland, Alameda County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

Pertinent subject property information is noted below:

PROPERTY INFORMATION	
Site Address(es)	Site bounded by 9th Street (north), Pine Street (east), Shorey Street (south), Frontage Road (west), Oakland, Alameda County, California 94607
Property ID (APN or Block/Lot)	6-47-1
Location	Southwest of 9th Street, northwest of Pine Street, west of Frontage Road, and northeast of Shorey Street
Property Type	Vacant Land
SITE AND BUILDING INFORMATION	
Approximate Site Acreage/Source	4.65/Client
Number of Buildings	None
Building Construction Date(s)	N/A
Building Square Footage (SF)/Source	N/A/N/A
Number of Floors/Stories	N/A
Basement or Subgrade Area(s)	None identified
Number of Units	One
Additional Improvements	None
On-site Occupant(s)	Vacant
Current On-site Operations/Use	None
Current Use of Hazardous Substances	None identified
REGULATORY INFORMATION	
Regulatory Database Listing(s)	Envirostor, VCP, HAZNET, US Brownfields, RCRA-SQG, FINDS, ECHO, Historic Cortese (x 2), CPS-SLIC, CERS (x 2), Alameda County CS (x 2), Historic UST, LUST, SWEEPS UST, CA FID UST

A chronological summary of historical subject property information is as follows:

Date Range	Subject Property Description and Use (Historical Addresses)	Source(s)
Prior to 1889	Unknown use/Data failure; refer to Section 1.6.1	Aerial photographs, Sanborn maps, agency records
1889-1902	Various residential structures/Residential use	Sanborn maps
1912	Various residential structures and a bedding & upholstering facility/Residential and industrial use	Sanborn map

Date Range	Subject Property Description and Use (Historical Addresses)	Source(s)
1920s-1995	Prior industrial building/Various industrial tenants	Aerial photographs, Sanborn maps, agency records
1995-Present	Unimproved land	Aerial photographs, city directories, site observation

Based on a review of historical sources, the subject property was identified to consist of residential structures from at least 1889 until 1902. By 1912, the California Bedding & Upholstering Co. was located on the northern portion of the subject property. Beginning in the 1920s, the subject property was developed with industrial structures and occupied for a variety of industrial uses including auto parts manufacturing, steel and ironworks fabrication, and fireworks manufacturing. All structures were demolished by 1995, and the subject property has since been unimproved land. The subject property was initially portion of a larger parcel which extended towards the west; the western portion of the subject property was developed with the existing freeway and frontage road.

The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
Northeast	9th Street followed by: Salvage yard/warehouse (no visible address) Trapeze Arts / Velocity Circus (1829 9th Street) Residence (903 Pine Street)	SEMS-Archive, Envirostor (1832 Shorey Street)
Southeast	Pine Street followed by residences (multiple addresses), unimproved lots, and Art Studios (800 Pine Street)	None identified
Southwest	Shorey Street followed by St. Luke's Missionary Church (767 Pine Street) and unimproved land	Response, Envirostor, CERS (Shorey Street) EDR Historic Auto (1807 Shorey Street)
West	Frontage Road and Highway 880 (Nimitz Freeway)	Envirostor, VCP (1823 Shorey Street)

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

FINDINGS

Recognized Environmental Condition (REC) is defined by the ASTM Standard Practice E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

- The subject property was formerly utilized for a variety of industrial purposes between 1920 and the 1990s, including auto parts manufacturing, steel and ironworks fabrication, and fireworks manufacturing. The subject property was formerly a portion of the Phoenix Iron Works plant that occupied the entire block bounded by Shorey, 9th, Pine, and Cedar Streets. The Phoenix facility previously extended towards the southwest; this area was subsequently used for construction of the Cypress Freeway and the existing Frontage Road. Multiple environmental investigations have been conducted at the subject property beginning in 1992. Five USTs were removed from the subject property and the former portion of the subject property, now the adjacent property to the west. Soil and groundwater has been impacted from historical industrial use and from off-site sources. Elevated concentrations of petroleum-related compounds, including TRPH, TPHd, and TPHmo have been detected at concentrations exceeding screening levels (RWQCB ESLs) on the western portion of the subject property, with TRPH and TPHmo at maximum concentrations of 1,100 mg/kg and 990 mg/kg, respectively. Lead was detected in soil at concentrations exceeding residential ESLs along the western portion of the subject property, at a maximum concentration of 1,690 mg/kg.

Petroleum hydrocarbons and VOCs are present in groundwater at concentrations exceeding ESLs beneath the eastern and southern portions of the subject property, with TPHmo, TCE, chloroform, and PCE detected at maximum concentrations of 120 µg/L, 140 µg/L, 23 µg/L, and 5.1 µg/L, respectively. Additionally, dissolved metals have historically been detected at concentrations exceeding ESLs beneath the eastern and southern portions of the subject property. TCE and chloroform have been detected in soil gas samples at maximum concentrations of 4,000 µg/m^3 and 2,600 µg/m^3 , respectively.

The subject property was formerly managed as a DTSC Envirostor case, with Caltrans as the responsible party. In November 2017, the responsible party, identified as Urban Designs LLC, entered into a Voluntary Remedial Action Agreement with with ACDEH as the regulatory oversight agency. The purpose of the Voluntary Remedial Action Agreement is to investigate the extent of soil, groundwater, and soil gas contamination and to facilitate the redevelopment of the subject property with a 316-unit residential development. The most recent document in the ACDEH file is a *Limited Subsurface Investigation Report*, prepared by P & D Environmental, Inc. and dated February 14, 2019. The report documents the results of data gaps sampling conducted in 2018, and recommends the preparation of a Corrective Action Plan for redevelopment of the subject property for residential use. The release of hazardous substances and petroleum products to the subsurface of the subject property is considered a recognized environmental condition. In addition, VOCs in the subsurface may present a health hazard to future residential receptors at the subject property, if not addressed by corrective action or engineering controls.

Controlled Recognized Environmental Condition (CREC) is defined by the ASTM Standard Practice E1527-13 as a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

- AEI did not identify evidence of CRECs during the course of this assessment.

Historical Recognized Environmental Condition (HREC) is defined by the ASTM Standard Practice E1527-13 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

- AEI did not identify evidence of HRECs during the course of this assessment.

Other Environmental Considerations (OEC) warrant discussion, but do not qualify as RECs as defined by the ASTM Standard Practice E1527-13. These include, but are not limited to, de minimis conditions and/or environmental considerations such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

- AEI did not identify evidence of Other Environmental Considerations during the course of this assessment.

CONCLUSIONS, OPINIONS, AND RECOMMENDATIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) of Site bounded by 9th Street (north), Pine Street (east), Shorey Street (south), Frontage Road (west), Oakland, Alameda County, California, the *subject property*. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

AEI did not identify evidence of RECs or CRECs in connection with the property except for those previously identified in the Findings section. AEI recommends the following:

- In accordance with the Voluntary Remedial Action Agreement, the responsible party should continue to abide by regulatory directives until such time that case closure is achieved, and appropriate corrective action and engineering controls should be implemented to prevent unacceptable health risks to future residents of the subject property.

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I Environmental Site Assessment performed in conformance with AEI's contract and scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at Site bounded by 9th Street (north), Pine Street (east), Shorey Street (south), Frontage Road (west), Oakland, Alameda County, California (Appendix A: Figures and Appendix B: Property Photographs).

1.1 SCOPE OF WORK

The purpose of the Phase I ESA is to assist the client in identifying potential RECs, in accordance with ASTM E1527-13, associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal, and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

1.2 ADDITIONAL SERVICES

Other Environmental Considerations such as ACMs, LBP, lead in drinking water, radon, mold, and wetlands can result in business environmental risks for property owners which may disrupt current or planned operations or cash flow and are generally beyond the scope of a Phase I assessment as defined by ASTM E1527-13. Based upon the agreed-on scope of services this ESA did not include subsurface or other invasive assessments, business environmental risks, or other services not specifically identified and discussed herein.

1.3 SIGNIFICANT ASSUMPTIONS

The following assumptions are made by AEI in this report. AEI relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow, unless otherwise specified by on-site well data or well data from the subject property or nearby sites, is inferred from contour information depicted on the USGS topographic maps. AEI assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.4 LIMITATIONS

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this assessment apply strictly to the environmental regulations and property conditions existing at the time the assessment was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: ACMs, radon, LBP, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-13.

If requested by the client, these non-scope issues are discussed herein. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under CERCLA. ASTM Standard Practice E1527-13 and the United States EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

1. 42 U.S.C. § 9601(35)(B), referenced in the ASTM Standard Practice E1527-13.
2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
3. 42 U.S.C. § 9601(40) and 42 U.S.C. § 9607(q).

The Phase I Environmental Site Assessment is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, current subject property use, and observations and conditions that existed on the date and time of the property reconnaissance.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

AEI's limited radon screening, if included, is intended to provide a preliminary screening to evaluate the potential presence of elevated radon concentrations at the site. The proposed scope is not intended to define the full extent of the presence of radon at the subject property. As such, the results should be used for lending purposes only. The recommendations and conclusions presented as a result of the limited preliminary radon screening apply strictly to the property conditions existing at the time the sampling was performed. The sample analytical results are only valid for the time, place, and condition of the site at the time of collection and AEI does not warrant that the results will be repeatable or are representative of past or future conditions.

1.5 LIMITING CONDITIONS/DEVIATIONS

The performance of this assessment was limited by the following:

- The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.
- The subject property owner or key site manager was not interviewed during this assessment. Based on information obtained from other sources, including agency records, this limiting condition is not expected to alter the overall findings of this assessment.

1.6 DATA FAILURE AND DATA GAPS

According to ASTM E1527-13, data gaps occur when the Environmental Professional is unable to obtain information required by the Standard, despite good faith efforts to gather such information. Pursuant to ASTM E1527-13, only significant data gaps, defined as those that affect the ability of the Environmental Professional to identify RECs, need to be documented.

Data failure is one type of data gap. According to ASTM E1527-13, data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Pursuant to ASTM E1527-13, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier, or periods of five years or greater.

1.6.1 DATA FAILURE

The following data failure was identified during the course of this assessment:

Data Failure	The earliest historical resource obtained during this assessment was a Sanborn map from 1889 indicating that the subject property was developed with residences. The lack of historical sources for the subject property dating back to first developed use represents historical data source failure. However, as it is assumed that the subject property would have been previously used for residential purposes, if not undeveloped, this data failure is not expected to significantly alter the findings of this assessment.
Information/Sources Consulted	City directories, Sanborn fire insurance maps, aerial photographs, agency records

1.6.2 SIGNIFICANT DATA GAPS

AEI did not identify significant data gaps which affected our ability to identify RECs.

1.7 RELIANCE

All reports, both verbal and written, are for the benefit of Urban Designs, LLC. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns. Reliance is provided in accordance with AEI's contract and Terms and Conditions executed by Urban Designs, LLC on March 12, 2019. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

2.0 SITE AND VICINITY DESCRIPTION

2.1 SITE LOCATION AND DESCRIPTION

PROPERTY INFORMATION	
Site Address(es)	Site bounded by 9th Street (north), Pine Street (east), Shorey Street (south), Frontage Road (west), Oakland, Alameda County, California 94607
Property ID (APN or Block/Lot)	6-47-1
Location	Southwest of 9th Street, northwest of Pine Street, west of Frontage Road, and northeast of Shorey Street
Property Type	Vacant Land
SITE AND BUILDING INFORMATION	
Approximate Site Acreage/Source	4.65/Client
Number of Buildings	None
Building Construction Date(s)	N/A
Building Square Footage (SF)/Source	N/A/N/A
Number of Floors/Stories	N/A
Basement or Subgrade Area(s)	None identified
Number of Units	One
Additional Improvements	None
On-site Occupant(s)	Vacant
Current On-site Operations/Use	None
Current Use of Hazardous Substances	None identified
REGULATORY INFORMATION	
Regulatory Database Listing(s)	Envirostor, VCP, HAZNET, US Brownfields, RCRA-SQG, FINDS, ECHO, Historic Cortese (x 2), CPS-SLIC, CERS (x 2), Alameda County CS (x 2), Historic UST, LUST, SWEEPS UST, CA FID UST

2.2 ON-SITE UTILITIES

Utility	Source/System Information
Heating System	N/A
Cooling System	N/A
Potable Water	N/A
Sewage Disposal/Treatment	N/A

The subject property is unimproved land; no active heating or cooling systems are located on the subject property, and no domestic water or sanitary service is provided.

2.3 SITE AND VICINITY CHARACTERISTICS

The subject property is located in a mixed commercial and industrial area of Oakland, California. The immediately surrounding properties consist of the following:

Direction	Tenant/Use (Address)	Regulatory Database Listing(s)
Northeast	9th Street followed by: Salvage yard/warehouse (no visible address) Trapeze Arts / Velocity Circus (1829 9th Street) Residence (903 Pine Street)	SEMS-Archive, Envirostor (1832 Shorey Street)
Southeast	Pine Street followed by residences (multiple addresses), unimproved lots, and Art Studios (800 Pine Street)	None identified
Southwest	Shorey Street followed by St. Luke's Missionary Church (767 Pine Street) and unimproved land	Response, Envirostor, CERS (Shorey Street) EDR Historic Auto (1807 Shorey Street)
West	Frontage Road and Highway 880 (Nimitz Freeway)	Envirostor, VCP (1823 Shorey Street)

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

2.4 PHYSICAL SETTING

Geologic Unit: Description/Source	Qm: Merritt Sand, described as beach or near-shore deposits of slightly clayey, silty sand/USGS and United States Department of the Interior
Soil Series: Description/Source	Urban Land/USDA Soil Survey Based on a review of the USDA Soil Survey for the area of the subject property, the soils in the vicinity of the subject property are classified as Urban Land. The Urban Land designation indicates that more than 85 percent of the original soils have been disturbed or covered by paved surfaces, buildings or other structures. Due to the variability of the soil material, on-site investigation would be required to determine the specific soil composition at the subject property.
Groundwater Flow Direction/Source	West/Topographic map interpretation
Estimated Depth to Groundwater/ Source	Eight to 10 feet bgs/Site-specific groundwater monitoring
Surface waters on the subject property or adjacent sites	None

Note: Groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

3.0 HISTORICAL REVIEW OF SITE AND VICINITY

Reasonably ascertainable standard historical sources as outlined in ASTM Standard E1527-13 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historical city directories, Sanborn fire insurance maps, and agency records, is as follows:

Date Range	Subject Property Description and Use (Historical Addresses)	Source(s)
Prior to 1889	Unknown use/Data failure; refer to Section 1.6.1	Aerial photographs, Sanborn maps, agency records
1889-1902	Various residential structures/Residential use	Sanborn maps
1912	Various residential structures and a bedding & upholstering facility/Residential and industrial use	Sanborn map
1920s-1995	Prior industrial building/Various industrial tenants	Aerial photographs, Sanborn maps, agency records
1995-Present	Unimproved land	Aerial photographs, city directories, site observation

Based on a review of historical sources, the subject property was identified to consist of residential structures from at least 1889 until 1902. By 1912, the California Bedding & Upholstering Co. was located on the northern portion of the subject property. Beginning in the 1920s, the subject property was developed with industrial structures and occupied for a variety of industrial uses including auto parts manufacturing, steel and ironworks fabrication, and fireworks manufacturing. All structures were demolished by 1995, and the subject property has since been unimproved land. The subject property was initially portion of a larger parcel which extended towards the west; the western portion of the subject property was developed with the existing freeway and frontage road.

Environmental concerns associated with the historical industrial use of the subject property are discussed in Section 4.1.

If available, copies of historical sources are provided in the report appendices.

3.1 AERIAL PHOTOGRAPHS

AEI reviewed aerial photographs of the subject property and surrounding area. A search was made of the EDR collection of aerial photographs. Aerial photographs were reviewed for the following years:

Year(s)	Subject Property Description	Adjacent Site Descriptions
1939	Developed with multiple industrial- and residential-type structures	NORTHEAST: Roadway followed by industrial-type structures and apparent dwellings SOUTHEAST: Roadway followed by apparent dwellings SOUTHWEST: Roadway followed by apparent dwellings WEST: Railroad tracks followed by unimproved land
1946	Developed with an industrial-type structure, with the southwestern portion unimproved land	NORTHEAST: No significant changes visible SOUTHEAST: No significant changes visible SOUTHWEST: No significant changes visible WEST: Developed with warehouse-type structures and railways
1958, 1963, 1968, 1975, 1982, 1993	Developed with an industrial-type structure, which extends towards the west	NORTHEAST: No significant changes visible SOUTHEAST: No significant changes visible SOUTHWEST: No significant changes visible WEST: No significant changes visible
1998	Unimproved land, with an apparent storage yard on the northwestern portion	NORTHEAST: Roadway followed by warehouse-type structures and dwellings SOUTHEAST: No significant changes visible SOUTHWEST: No significant changes visible WEST: Developed with the existing freeway and frontage road
2005, 2009, 2012, 2016	Unimproved land	NORTHEAST: No significant changes visible SOUTHEAST: No significant changes visible SOUTHWEST: No significant changes visible WEST: No significant changes visible

Environmental concerns associated with the historical industrial use of the subject property are discussed in Section 4.1.

3.2 SANBORN FIRE INSURANCE MAPS

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of the EDR collection of Sanborn Fire Insurance maps.

The following maps were reviewed:

Year(s)	Subject Property Description (Listed Address)	Adjacent Site Descriptions
1889	Depicted as developed with multiple dwellings on the northeastern portion, with the remaining area depicted as unimproved land or vacant lots; Chase Street bisects the subject property in an approximate northwest-southeast direction	NORTHEAST: 9th Street followed by dwellings and vacant lots SOUTHEAST: Pine Street followed by dwellings SOUTHWEST: Division Street and Shorey Street followed by dwellings WEST: Vacant lots and railroad tracks followed by San Francisco Bay
1902	Additional dwellings are depicted near the central portion of the subject property; no other significant changes depicted	NORTHEAST: 9th Street followed by the Standard Oil Co. and dwellings SOUTHEAST: No significant changes depicted SOUTHWEST: No significant changes depicted WEST: No significant changes depicted
1912	Depicted as developed with the California Bedding & Upholstering Co. on the northern portion, dwellings on the northeastern portion, and scattered dwellings and unimproved land on the southern portion	NORTHEAST: 9th Street followed by the Standard Oil Co. and dwellings SOUTHEAST: No significant changes depicted SOUTHWEST: No significant changes depicted WEST: No significant changes depicted
1951, 1952	Depicted as developed with the Independent Iron Works Limited facility, including an erection shop, sheet metal shop, drafting shop, and portions of warehouses	NORTHEAST: 9th Street followed by warehouses, a blacksmith shop, and dwellings SOUTHEAST: No significant changes depicted SOUTHWEST: No significant changes depicted WEST: Railroad tracks are depicted adjacent to the northern portion, with the remaining Independent Iron Works Limited building adjacent to the southern portion
1957, 1958, 1961	No significant changes depicted	NORTHEAST: No significant changes depicted SOUTHEAST: No significant changes depicted SOUTHWEST: Shorey Street followed by dwellings and an auto repair facility WEST: No significant changes depicted
1970	No significant changes depicted	NORTHEAST: 9th Street followed by the Irving Subway Grating Company, warehouse, and dwellings beyond SOUTHEAST: No significant changes depicted SOUTHWEST: No significant changes depicted WEST: No significant changes depicted

Environmental concerns associated with the historical industrial use of the subject property are discussed in Section 4.1.

3.3 CITY DIRECTORIES

A search of historical city directories was conducted for the subject property at the Oakland Public Library. The following table summarizes the results of the city directory search.

Year(s)	Address - Occupant Listed
1973	Addresses not listed
1978, 1983	888 Cedar Street - XXXX
1987, 1993	800 Cedar Street - Gregs Mechanical Services, J & A Machine Shop
1998, 2003, 2008, 2013	Addresses not listed

If listed above, XXXX indicates that the address is valid but there is no occupancy information available.

AEI did not identify potential environmental concerns in association with the historical use of the subject property during the city directory review.

3.4 HISTORICAL TOPOGRAPHIC MAPS

Based on the quality of information obtained from other sources, historical topographic maps were not reviewed as a part of this assessment.

3.5 CHAIN OF TITLE

Based on the quality of information obtained from other sources, a chain of title search was not performed as part of this assessment.

4.0 REGULATORY AGENCY RECORDS REVIEW

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous substance use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to AULs, defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested.

4.1 LOCAL ENVIRONMENTAL HEALTH DEPARTMENT AND/OR STATE ENVIRONMENTAL AGENCY

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Alameda County Department of Public Health (ACDEH)	March 15, 2019	Website/Email	Ms. Yvonne Cummings	Records discussed below

The subject property, identified as The Phoenix at 800 Pine Street and Phoenix Iron Works at 888 Cedar Street, is identified on the ACDEH LOP database. In addition, various addresses associated with the subject property are identified on the RWQCB Geotracker database and the DTSC Envirostor database. Documentation from all three agencies was reviewed during the course of this assessment, and discussed below. Pertinent documentation reviewed included:

Phase I Environmental Site Assessment, 800 Cedar Street, APN 006-047-001, prepared by Northgate Environmental Management, Inc. (December 16, 2011)

Phase II Soil Investigation Report, 800 Cedar Street, APN 006-047-001, prepared by Northgate Environmental Management, Inc. (November 9, 2011)

Limited Subsurface Investigation Report, Former Phoenix Iron Works, 800 Pine Street, Oakland, CA, prepared by P & D Environmental, Inc. (September 5, 2017)

Soil and Groundwater Management Plan, Urban Designs, LLC, 800 Cedar Street, Oakland, CA, prepared by P & D Environmental, Inc. (December 1, 2017)

Limited Subsurface Investigation Report, The Phoenix, 801 Pine Street, Oakland, CA, prepared by P & D Environmental, Inc. (February 14, 2019)

The subject property was formerly utilized for a variety of industrial purposes between 1920 and the 1990s, including auto parts manufacturing, steel and ironworks fabrication, and fireworks manufacturing. The subject property was formerly a portion of the Phoenix Iron Works plant that occupied the entire block bounded by Shorey, 9th, Pine, and Cedar Streets. The Phoenix facility previously extended towards the southwest; this area was subsequently used for construction of the Cypress Freeway and the existing Frontage Road. Multiple environmental investigations have been conducted at the subject property beginning in 1992. Five USTs were removed from the subject property and the former portion of the subject property, now the adjacent property to the west. Soil and groundwater has been impacted from historical industrial use and from off-site sources. Elevated concentrations of petroleum-related compounds, including TRPH, TPHd, and TPHmo have been detected at concentrations exceeding screening levels (RWQCB ESLs) on the western portion of the subject property, with TRPH and TPHmo at maximum concentrations of 1,100 mg/kg and 990 mg/kg, respectively. Lead was detected in soil at concentrations exceeding residential ESLs along the western portion of the subject property, at a maximum concentration of 1,690 mg/kg.

Petroleum hydrocarbons and VOCs are present in groundwater at concentrations exceeding ESLs beneath the eastern and southern portions of the subject property, with TPHmo, TCE, chloroform, and PCE detected at maximum concentrations of 120 µg/L, 140 µg/L, 23 µg/L, and 5.1 µg/L, respectively. Additionally, dissolved metals have historically been detected at concentrations exceeding ESLs beneath the eastern and southern portions of the subject property. TCE and chloroform have been detected in soil gas samples at maximum concentrations of 4,000 µg/m^3 and 2,600 µg/m^3 , respectively.

The subject property was formerly managed as a DTSC Envirostor case, with Caltrans as the responsible party. In November 2017, the responsible party, identified as Urban Designs LLC, entered into a Voluntary Remedial Action Agreement (VRAA) with with ACDEH as the regulatory oversight agency. The purpose of the VRAA is to investigate the extent of soil, groundwater, and soil gas contamination and to facilitate the redevelopment of the subject property with a 316-unit residential development. The most recent document in the ACDEH file is a *Limited Subsurface Investigation Report*, prepared by P & D Environmental, Inc. and dated February 14, 2019. The report documents the results of data gaps sampling conducted in 2018, and recommends the preparation of a Corrective Action Plan for redevelopment of the subject property for residential use. The release of hazardous substances and petroleum products to the subsurface of the subject property is considered a recognized environmental condition. In addition, VOCs in the subsurface may present a health hazard to future residential receptors at the subject property, if not addressed by corrective action or engineering controls.

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
California Environmental Protection Agency (Cal/EPA)	March 25, 2019	Website	https://siteportal.calepa.ca.gov	The subject property, identified as Phoenix Iron Works at 888 Cedar Street and The Phoenix at 801 Pine Street, is identified on the Cal/EPA CERS database. Additional information is provided above.

4.2 FIRE DEPARTMENT

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Oakland Fire Department (OFD)	March 15, 2019	Telephone	N/A	No hazardous materials records on file

4.3 BUILDING DEPARTMENT

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Oakland Building Department (OBD)	March 22, 2019	Office visit	N/A	Records discussed below

Records Summary

Year(s)	Owner/Applicant	Description of Permit and Building Use
1995	N/A	Demolish Phoenix Iron Works
1995	N/A	Relocate three homes to 800 Cedar Street
2018	N/A	Multiple soil boring permits

Evidence indicating current or prior use or storage of hazardous substances was not on file for the subject property with the OBD.

4.4 PLANNING DEPARTMENT

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Oakland Planning Department (OPD)	March 22, 2019	Office visit	N/A	No evidence indicating the existence of AULs on file for the subject property

4.5 ASSESSOR'S OFFICE

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
Alameda County Assessor's Office	March 22, 2019	Office visit	N/A	Information obtained is discussed below

Records Summary

APN	6-47-1
Acreage	5.5 acres
Construction Date	N/A
Building Square Footage	N/A
Current Owner	State of California
Additional Information	The acreage appears to include the portion of the former parent parcel now occupied by the freeway and frontage road; the current subject property is approximately 4.65 acres.

4.6 OTHER AGENCIES SEARCHED

Agency	Date Contacted	Method of Contact	Name & Title of Contact	Agency Response
CA State Water Resources Control Board (SWRCB) GeoTracker	March 21, 2019	Website	N/A	The subject property, identified as The Phoenix at 801 Pine Street, is identified on the Geotracker database; additional information is provided in Section 4.1.
CA Department of Toxic Substances Control (DTSC) Hazardous Waste Tracking System (HWTS)	March 25, 2019	Website	N/A	Records discussed below
CA DTSC Envirostor	March 21, 2019	Website	N/A	The subject property, identified as Dept of Transportation at 800 Cedar Street, is identified on the Envirostor database; additional information is provided in Section 4.1.
Bay Area Air Quality Management District (BAAQMD)	March 15, 2019	Website	Ms. Rochelle Reed	No records on file

The subject property is identified on the HWTS as follows:

- Caltrans was issued EPA ID CAC001029656, which is listed as inactive as of October 25, 2000. Approximately 9.4 tons of alkaline solution, organic waste, and empty containers were generated under this EPA ID in 1995.
- Department of Transportation was issued EPA ID CAC001479328, which is listed as inactive as of October 2000. Approximately 1,8 tons of contaminated soil from site clean-up was generated under this EPA ID in 2000.
- Caltrans, District 4 Environmental was issued EPA ID CAC002888702, which is listed as inactive as of March 2017. No RCRA hazardous waste was generated under this EPA ID.
- Greg Walker was issued EPA ID CAL000018992, which is listed as inactive as of June 1995. No RCRA hazardous waste was generated under this EPA ID.
- Caltrans was issued EPA ID CAR000011692, which is listed as inactive as of June 1998. No RCRA hazardous waste was generated under this EPA ID.

4.7 OIL AND GAS WELLS

Agency	Date Referenced	Resource	Oil or gas wells located within 500 feet of the subject property
California Department of Oil, Gas & Geothermal Resources (CA DOGGR)	March 22, 2019	CA DOGGR Map	No

4.8 OIL AND GAS PIPELINES

Agency	Date Referenced	Resource	Pipelines located within 500 feet of the subject property
National Pipeline Mapping System (NPMS)	March 22, 2019	NPMS Public Map Viewer	No

4.9 STATE ENVIRONMENTAL SUPERLIENS

In accordance with our approved scope of services, AEI did not assess whether the subject property is subject to any state environmental superliens.

4.10 STATE PROPERTY TRANSFER LAWS

In accordance with our approved scope of services, AEI did not assess whether the subject property is subject to any state property transfer laws.

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted EDR to conduct a search of publicly available information from federal, state, tribal, and local databases containing known and suspected sites of environmental contamination and sites of potential environmental significance. Data gathered during the current regulatory database search is compiled by EDR into one regulatory database report. Location information for listed sites is designated using geocoded information provided by federal, state, or local agencies and commonly used mapping databases with the exception of "Orphan" sites. Due to poor or inadequate address information, Orphan sites are identified but not geocoded/mapped by EDR, rather, information is provided based upon vicinity zip codes, city name, and state. The number of listed sites identified within the approximate minimum search distance from the federal and state environmental records database listings specified in ASTM Standard E1527-13 is summarized in Section 5.1, along with the total number of Orphan sites. A copy of the regulatory database report, which includes detailed descriptions of the databases noted below, is included in Appendix C of this report.

In determining if a listed site is a potential environmental concern to the subject property, AEI generally applies the following criteria to classify the site as lower potential environmental concern: 1) the site only holds an operating permit (which does not imply a release), 2) the site's distance from, and/or topographic position relative to, the subject property, and/or 3) the site has recently been granted "No Further Action" by the appropriate regulatory agency.

Regulatory database listings associated with the subject property, adjacent site(s) and/or nearby sites of concern that were determined to warrant additional discussion are identified and further discussed in Section 5.1.

5.1 RECORDS SUMMARY

Database	Search Distance (Miles)	Listings Within Search Distance	Subject Property	Adjacent Site(s)	Other Nearby Sites of Concern
NPL	1.0	1			
DELISTED NPL	0.5	0

Facility Name	Department of Transportation / 800 Cedar Street / Caltrans / The Phoenix / Pep Boys / Phoenix Iron Works
Address	800 Cedar Street / 801 Pine Street / 1818 Shorey Street / 888 Cedar Street
Distance & Direction	Subject Property
Hydrologic Position	N/A
Databases Listed	Envirostor, VCP, HAZNET, US Brownfields, RCRA-SQG, FINDS, ECHO, Historic Cortese (x 2), CPS-SLIC, CERS (x 2), Alameda County CS (x 2), Historic UST, LUST, SWEEPS UST, CA FID UST
Comments	The Envirostor and VCP listings pertains to the former VCP for the subject property, which has been superseded by the existing VRRA between Urban Designs, LLC and ACDEH. The LUST, CPS-SLIC, and Historic Cortese listings pertain to the current and former release cases. The RCRA and HAZNET listings indicates the subject property generated hazardous waste; additional information regarding quantities and hazardous waste streams is provided in Section 4.6. The US Brownfields listing indicates the City of Oakland was provided a grant under the Brownfields Assessment Cooperative Agreement to conduct Phase I and Phase II Site Assessments; these documents are discussed in Section 4.1. The SWEEPS UST, CA FID UST, and Historic UST listings pertain to the former USTs at the subject property. As discussed in Section 4.1, The release of hazardous substances and petroleum products to the subsurface of the subject property is considered a recognized environmental condition. Additional information regarding historical and ongoing site assessment and remedial action at the subject property is provided in Section 4.1.

Facility Name	Batavia Property
Address	1832 Shorey Street
Distance & Direction	Adjacent to the east
Hydrologic Position	Up-gradient
Databases Listed	SEMS-Archive, Envirostor

Comments	These listings pertain to the adjacent property to the east, across 9th Street. According to these listings, a Preliminary Assessment / Site Inspection (PA/SI) was conducted by EPA in 1997; no contamination was found. DTSC certified the investigation as complete with no further action in 1998. Based on the lack of a documented release, the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	Vacant Auto Repair
Address	Shorey Street
Distance & Direction	Adjacent to the southwest
Hydrologic Position	Down-gradient
Databases Listed	Response, Envirostor, CERS
Comments	These listings are assumed to pertain to the adjacent property to the southwest, across Shorey Street, which has since been redeveloped with the Nimitz Freeway and Frontage Road. According to these listings, a site screening was conducted in 1994; no contaminants were found. DTSC certified the investigation as complete with no further action in 1994. Based on the lack of a documented release, the inferred direction of groundwater flow, and redevelopment of this property. the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	Eds Automotive
Address	1807 Shorey Street
Distance & Direction	Adjacent to the southwest
Hydrologic Position	Down-gradient
Databases Listed	EDR Historic Auto
Comments	This listing pertains to a property adjacent to the southwest, across Shorey Street, which has since been redeveloped with the Nimitz Freeway and Frontage Road. According to this listing, this tenant occupied this location in 1967. Based on the lack of a documented release, the inferred direction of groundwater flow, and redevelopment of this property. the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

Facility Name	B & A Auto Dismantlers
Address	1823 Shorey Street
Distance & Direction	Adjacent to the southwest
Hydrologic Position	Down-gradient
Databases Listed	Envirostor, VCP

Comments	These listings pertain to the adjacent property to the southwest, across Shorey Street. This area has since been used for construction of the Nimitz Freeway and Frontage Road. According to these listings, soil and groundwater investigations conducted in December 1992 found elevated concentrations of petroleum hydrocarbons and lead. Approximately 670 cubic yards of soil was excavated and transported for off-site disposal. This area was subsequently redeveloped with the existing frontage road. DTSC certified the remediation as complete with no further action in January 1997. Based on the case closure, the inferred direction of groundwater flow, and redevelopment of this property. the review of regulatory agency files for this site was not deemed necessary, and the site is not expected to represent a significant environmental concern.

5.2 VAPOR MIGRATION

AEI reviewed reasonably ascertainable information for the subject and nearby properties, including a regulatory database, files for nearby release sites, and/or historical documentation, to determine if potential vapor-phase migration concerns may be present which could impact the subject property.

Potential vapor migration concerns for the subject property are discussed in Section 4.1.

6.0 INTERVIEWS AND USER PROVIDED INFORMATION

6.1 INTERVIEWS

Pursuant to ASTM E1527-13, the following interviews were performed during this assessment in order to obtain information indicating RECs in connection with the subject property.

6.1.1 OWNER AND KEY SITE MANAGER

Relation to Property	Name	Date Interviewed	Method of Contact	Year First Associated w/ Property	Notes
Owner/Owner Representative	State of California	N/A	N/A	N/A	Not interviewed; refer to Section 1.5
Key Site Manager	N/A	N/A	N/A	N/A	No Key Site Manager identified

Interview Summary

Question	Owner (Representative) Response/ Comment	Key Site Manager Response/ Comment
Do you have any knowledge of USTs, clarifiers or oil/water separators, sumps, or other subsurface features?	N/A	N/A
Do you have any knowledge of previous environmental investigations conducted on site?	N/A	N/A
Do you have any knowledge of current or past industrial operations and/or other operations which would involve the use of hazardous substances and/or petroleum products?	N/A	N/A
Are you aware of any known plans for site redevelopment or change in site use?	N/A	N/A
Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?	N/A	N/A
Are you aware of any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property?	N/A	N/A
Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?	N/A	N/A
Are you aware of any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality?	N/A	N/A
Additional information provided:	N/A	N/A

6.1.2 PAST OWNERS, OPERATORS, AND OCCUPANTS

AEI did not attempt to interview past owners, operators, and occupants of the subject property because information from these sources would likely be duplicative of information already obtained from other sources.

6.1.3 INTERVIEW WITH OTHERS

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this report.

6.2 USER PROVIDED INFORMATION

User provided information is intended to help identify the possibility of RECs in connection with the subject property. According to ASTM E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), certain items should be researched by the prospective landowner or grantee, and the results of such inquiries may be provided to the Environmental Professional. The responsibility for qualifying for LLPs by conducting the inquiries ultimately rests with the User, and providing the information to the Environmental Professional would be prudent if such information is available.

The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.

Question	Response/ Comment
1. Environmental liens that are filed or recorded against the property (40 CFR 312.25) Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?	Yes - Although not a lien, User referred to Notice and Memorandum of Environmental Contamination
2. Activity and use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and vi)). Did a search of recorded land title records (or judicial records where appropriate) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?	No
3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28). Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	No
4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29). Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	Yes

Question	Response/ Comment
5. Commonly known or reasonably ascertainable information about the property (40 CFR 312.30). Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example: (a) Do you know the past uses of the property? (b) Do you know of specific chemicals that are present or once were present at the property? (c) Do you know of spills or other chemical releases that have taken place at the property? (d) Do you know of any environmental cleanups that have taken place at the property?	Yes - User referred to documentation from ACHD
6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31). Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?	Yes - User referred to documentation from ACHD

6.3 PREVIOUS REPORTS AND OTHER PROVIDED DOCUMENTATION

No prior reports or other relevant documentation in association with the subject property was made available to AEI during the course of this assessment.

6.4 ENVIRONMENTAL LIEN SEARCH

In accordance with our approved scope of services, an environmental lien search was not performed as part of this assessment.

7.0 SITE RECONNAISSANCE

Site Reconnaissance Date	March 22, 2019
AEI Site Assessor(s)	Erik Brown
Property Escort(s)/ Relationship(s) to Property	AEI was not escorted during the site reconnaissance
Units/Areas Observed	All exterior areas
Area(s) not accessed and reason(s)	None
Other Physical Constraints	None

Reconnaissance Findings Summary

Feature	Observed on Subject Property (see Section 7.1)	Observed on Adjacent Property (see Section 7.2)
Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use		
Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)		
Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use		
Unidentified Substance Containers	✓	
Electrical or Mechanical Equipment Likely to Contain Fluids		✓
Interior Stains or Corrosion		
Strong, Pungent, or Noxious Odors		
Pools of Liquid		
Drains, Sumps, and Clarifiers		✓
Pits, Ponds, and Lagoons		
Stained Soil or Pavement		
Stressed Vegetation		
Solid Waste Disposal or Evidence of Fill Materials		
Waste Water Discharges		
Wells		
Septic Systems		
Biomedical Wastes		
Other	✓	

7.1 SUBJECT PROPERTY RECONNAISSANCE FINDINGS

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

UNIDENTIFIED SUBSTANCE CONTAINERS

Substance/Waste (size/ quantity)	Container Condition	Location	Secondary Containment	Staining/Spills
Presumed soil cuttings (55-gallon drum/4)	Southeastern portion of subject property	On concrete pad	No	No

The four drums were located on the southeastern portion of the subject property, and were labeled as nonhazardous waste. The labeling on the drums was faded and illegible. The drums are presumably soil cuttings from environmental and/or geotechnical investigations conducted at the subject property. The drums appeared to be intact, with no signs of leaks or stains. The drums should be profiled and disposed of accordingly.

OTHER

Miscellaneous trash and debris was observed at various locations on the subject property. The trash and debris appeared to consist of household trash, mattresses and box springs, and dilapidated furniture. No hazardous substances were observed at the subject property.

7.2 ADJACENT PROPERTY RECONNAISSANCE FINDINGS

During the site reconnaissance, AEI observed the items listed in the above Reconnaissance Findings Summary table, which are further discussed below.

ELECTRICAL OR MECHANICAL EQUIPMENT LIKELY TO CONTAIN FLUIDS

Toxic PCBs were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR, Part 761, there are three categories for classifying such equipment: <50 ppm of PCBs is considered "Non-PCB"; between 50 and 500 ppm is considered "PCB-Contaminated"; and >500 ppm is considered "PCB-Containing". Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Transformers

The management of potential PCB-containing transformers is the responsibility of the local utility or the transformer owner. Actual material samples need to be collected to determine if transformers are PCB-containing.

Several pole-mounted transformers were observed on the adjacent sites during the site reconnaissance. No spills, staining, or leaks were observed on or around the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

DRAINS, SUMPS, AND CLARIFIERS

Several storm drains were observed in the parking areas of the adjacent properties and adjacent roadways. AEI did not observe evidence of hazardous substances or petroleum products in the vicinity of the drains. Based on the use of the drains solely for storm water runoff, the presence of the drains is not expected to represent a significant environmental concern.

8.0 NON-ASTM SERVICES

8.1 ASBESTOS-CONTAINING BUILDING MATERIALS

The subject property is currently vacant land or lacks structures. Consequently, no building components containing suspect asbestos containing materials were identified during the site inspection.

8.2 LEAD-BASED PAINT

The subject property is currently vacant land or lacks structures. Consequently, AEI did not observe building components likely to contain suspect LBP during the site reconnaissance.

8.3 RADON

Radon is a naturally-occurring, odorless, and invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

The United States EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three radon zones, with Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action Limit of 4.0 pCi/L. It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the EPA recommends site specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not requested as part of this assessment. According to the US EPA, the radon zone level for the area is Zone 2, which has a predicted average indoor screening level between 2 pCi/L and 4 pCi/L, equal to or below the action level of 4 pCi/L set forth by the US EPA.

8.4 MOLD

The subject property is currently vacant land or lacks structures. Consequently, mold was not addressed as part of this assessment.

9.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

PINE ST EAST ,SHOREY ST SOUTH ,FRONTAGE RD WEST
OAKLAND, CA 94607

COORDINATES

Latitude (North):	37.8097030 - 37˚ 48' 34.93''
Longitude (West):	122.3033680 - 122˚ 18' 12.12''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	561322.1
UTM Y (Meters):	4184724.8
Elevation:	13 ft. above sea level

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/12/2018 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/12/2018 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/13/2018 has revealed that there are 4 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent NPL

CA RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the CA RESPONSE list, as provided by EDR, has revealed that there are 18 CA RESPONSE sites within approximately 1 mile of the target property.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control’s (DTSC’s) Site Mitigation and Brownfields Reuse Program’s (SMBRP’s) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 01/28/2019 has revealed that there are 70 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

CA SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the CA SWF/LF list, as provided by EDR, has revealed that there are 2 CA SWF/LF sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

CA CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA CPS-SLIC list, as provided by EDR, has revealed that there are 9 CA CPS-SLIC sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

CA Alameda County CS: A listing of contaminated sites overseen by the Toxic Release Program (oil and groundwater contamination from chemical releases and spills) and the Leaking Underground Storage Tank Program (soil and ground water contamination from leaking petroleum USTs).

A review of the CA Alameda County CS list, as provided by EDR, and dated 01/09/2019 has revealed that there are 22 CA Alameda County CS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board’s Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 17 CA UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Local Land Records

CA DEED: The use of recorded land use restrictions is one of the methods the DTSC uses to protect the public from unsafe exposures to hazardous substances and wastes .

A review of the CA DEED list, as provided by EDR, and dated 12/03/2018 has revealed that there are 4 CA DEED sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 6 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Summary Details:

Conditions at Proposal April 30, 2003): The AMCO Chemical site AMCO) is part of a 0.83-acre property at 1414 Third Street in a mixed residential and light industrial area of Oakland, California. The property is bordered on the north by a vacant lot, on the west by residences, on the east by Nelson Mandela Parkway, and on the south by Third Street. A recently constructed elevated portion of the Interstate-880 I-880) freeway is located immediately across Third Street from the property.The property at 1401 Third Street) was historically occupied by Bobo s Junkyard. From the 1960s to 1989, the

AMCO CHEMICAL (Continued) **1001115054**

AMCO site was occupied by AMCO Chemical Company. AMCO operated a chemical distribution facility that included a warehouse, railroadspur, above-ground tanks, underground tanks, and drums used to transfer and store raw materials. In July 1988, the Oakland Fire Department observed leaking/rotting drums on the property. A subsequent emergency response investigation by AlamedaCounty and the U.S. Coast Guard revealed greater than 100 full and empty 5- and 55-gallon weathered drums in an open area behind AMCO Chemical s main building. Stenciled labels on the drums indicated that the contents included acetone; 1,1,1-trichloroethane 1,1,1-TCA); methyl ethyl ketone; and dry-cleaning solvent. From 1989 to November 1998, DC Metals operated a scrap metal yard on the site. Cable Moore, Inc., currently uses the site for cable storage. Structures remaining on site include an office building, warehouse, and two small storage buildings. In June 1995, a construction crew noted odors at the intersection of Third Street and Nelson Mandela Parkway, while excavating a trench needed to relocate an underground electrical line in preparation for a freeway project. Subsequent subsurface investigation by California Department of Transportation Caltrans), DC Metals, and EPA revealed the presence of volatile organic compounds VOCs) including vinyl chloride in soil, soilgas, and shallow ground water at the AMCO site, beneath Third Street, and at the 1401 Third Street property former Bobo s Junkyard). On December 5, 1996, the EPA Emergency Response Office initiated a removal action at the AMCO site that involved the construction of a ground water and soil vapor extraction SVE) treatment system. The EPA treatment system collection trench was excavated from December 5 through December 20, 1996. By December 23, 1996, the trench had been lined with a silt curtain, filled with gravel, and covered with a tarp. Cement was poured to permanently cover the trench on January 8, 1997. The treatment system operated from January 1997 through July 1998 and extracted approximately 7,000 pounds of VOCs, approximately 40 pounds of which were vinyl chloride. Operation of the system ceased in July 1998, due to community concern over the potential for a release of dioxins from the thermal oxidation unit. On December 5 and 14, 1996, during construction of the treatment system collection trench, the EPA On-Scene Coordinator observed shimmering vapors emanating from the open trench. SUMMA tm) canister sampling indicated the presence of vinyl chloride; methylene chloride; 1,1,1-trichloroethane TCA); and trichloroethene TCE) in the immediate area of the trench. In addition, one SUMMA canister sample collected from in front of a residence adjacent to the site contained TCE. The EPA conducted several sampling events on and adjacentto the AMCO site between 1997 and 2000. VOCs continued to be detected in soil, soil gas, and ground water on site. In September 1999, SUMMA canister samples were collected from the crawl spaces of three residences located adjacent to the site. Vinyl chloride was detected in the three crawl spaces at 0.02 to 0.045 parts per billion by volume ppbv). There are 626 people living within a quarter of a mile of the source. There are also approximately three workers on site. Status September 2003):EPA is considering various alternatives for this site. The description of the site release) is based on information available at the time the site was evaluated with the HRS. The description may change as additional information is gathered on the sources and extent of contamination. See 56 FR 5600, February 11, 1991, or subsequent FR notices. For more information about the ha ardous substances identified in this narrative summary, including general information regarding the effects of exposure to these substances on human health, please see the Agency for Toxic Substances and Disease Registry ATSDR) ToxFAQs. ATSDR ToxFAQs can be found on the Internet at http://www.atsdr.cdc.gov/toxfaq.html or by telephone at 1-888-42-ATSDR or 1-888-422-8737.

Background Info: The site was occupied by AMCO Chemical Corp. until December 1989. DTSC inspected the site on August 4, 1988. An order to Fence and Post the site was issued on August 8, 1988. On February 24, 1989 a Report of Violation was issued to correct violations related to leakage of hazardous waste from piping and containers; storage of hazardous waste in deteriorated or otherwise corroded conditions; and unlabeled waste containers. Soil and groundwater located outside of the site boundary were sampled by Caltrans and Southern Pacific Railroad. Elevated levels of VOC’s (vinyl chloride,1,1-DCE,PCE,1,1,1-TCA, 1,2-DCE), acetone, toluene and xylene have been found in soil and/or groundwater.

Case Type:	Cleanup Program Site
Case Worker:	DY
Local Agency:	ALAMEDA COUNTY LOP
RB Case Number:	Not reported
File Location:	Local Agency
Potential Media Affected:	Soil, Soil Vapor, Under Investigation
Potential Contaminants of Concern:	Tetrachloroethylene (PCE), Trichloroethylene (TCE), Lead
Site History:	This case applies to one address located at 800 Pine Street in Oakland (APN: 6-47-1). The Alameda County Parcel Viewer page indicates the property as 800 Cedar Street, however, Cedar Street no longer exists. Currently, the site is managed under Alameda County Department of Environmental Health (ACDEH) case RO0003269, however, a separate LOP Case No. RO0000417 was historically associated with a former UST release that was located on a portion of the parcel that is no longer a part of the existing property. This site was formerly managed as a Department of Toxic Substances Control (DTSC) case, Phoenix 800 Property, Envirostor ID 01330037. On November 21, 2017 the responsible party entered into a Voluntary Remedial Action Program Agreement with ACDEH, with concurrence from the DTSC, to provide regulatory oversight for a proposed redevelopment project. The site is currently a vacant lot with a concrete slab from a former building covering the majority of the property. The site is located in a mixed residential and commercial area boarded by Pine Street and Shorey Street to the east and south, respectively. The site is bordered to the north by 9th Street and the west by an access ramp for Interstate 880 (I-880). The site lies at an elevation of approximately 15 feet above mean sea level. Historical data indicates the groundwater has been observed at approximately 5 to 7 feet below ground surface (bgs). Historically the site has generally been occupied by industrial facilities including steel and iron fabrication, fireworks manufacturing, and auto parts manufacturing. Sanborn Fire Insurance maps indicated from approximately 1912 to 1931, Independent Iron Works operated in the southern half of the site and California Fireworks Company operated in the northwestern portion of the site. Independent Iron Works reportedly occupied the entire site from 1924 to 1960s to manufacture steel products. Between 1970 and 1994 the site was owned by Phoenix Properties, which operated Phoenix Iron Works on the western property boundary site. Based on review of historical documents, additionally industrial activities under Phoenix Properties were conducted on portions of the site including; Stoltz/Bond Metal Shop in the central portion, Pine Iron Works in the southeastern portion, and Cypress Auto Salvage Warehouse on the eastern portion. In 1994 the property was purchased by California Department of Transportation (Caltrans) which used the property for temporary storage of construction material. At the time of Caltrans acquisition, the site contained an industrial warehouse constructed on a concrete slab. In 1995 the warehouse structure, which encompassed the entire site, was removed leaving the concrete slab in place. Construction activities were also conducted in the southwestern corner of the site for the frontage road during re-alignment of I-880.

CERS Description:	Hazardous Waste Generator

Violations:

Site ID:	15535
Site Name:	California Waste Solutions 1819
Violation Date:	02-28-2017
Citation:	22 CCR 15 66265.192(a) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(a)
Violation Description:	Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer prior to placing the tank system in service. The written assessment shall state that, the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed to meet the regulation.
Violation Notes:	Returned to compliance on 09/18/2017. "OBSERVATION: Owner/Operator does not have a tank assessment for the 500 gallon convault used oil, 120 gallon public used oil tank, and 300 gallon public used oil tanks. The owner or operator of a hazardous waste tank shall obtain a written assessment reviewed and certified by an independent, qualified, professional engineer, registered in California attesting that the system has sufficient structural integrity, is acceptable for the transferring, storing, and treating of hazardous waste, and that the tanks and containment system are suitably designed. " "CORRECTIVE ACTION: Immediately have an assessment prepared for the the 500 gallon convault used oil, 120 gallon public used oil tank, and 300 gallon public used oil tanks. Submit a schedule showing when this will be accomplished to the CUPA 30 days from now.
Violation Division:	Alameda County Environmental Health

CALIFORNIA WASTE SOLUTIONS 1819 (Continued) **S121747269**

Site ID:	15535
Site Name:	California Waste Solutions 1819
Violation Date:	03-01-2017
Citation:	HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description:	Failure to adequately and accurately describe in the SPCC Plan the physical layout of the facility.
Violation Notes:	Returned to compliance on 09/21/2017. OBSERVATION: Failure to prepare and implement SPCC. Facility stores over 1,320 gallons in their baler hydraulic oil tanks and 55 gallon drums, but do not have a SPCC Plan. There is no SPCC Plan to review. CORRECTIVE ACTION: Prepare and implement SPCC. ACDEH has provided a blank copy of the Tier I template. Provide a copy to ACDEH within 30 days once completed and implemented.

Violation Program:	APSA
Violation Source:	CERS

Site ID:	15535
Site Name:	California Waste Solutions 1819
Violation Date:	02-28-2017
Citation:	22 CCR 15 66265.194 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.194
Violation Description:	Failure of the operator for placing wastes or treatment reagents in a tank system that could cause the tank , its ancillary equipment, or the secondary containment system to rupture, leak, corrode, or otherwise fail; and for not using appropriate controls and practices to prevent spills and overflows from tank or secondary containment systems. (Uncovered tanks shall be operated to ensure at least 60 centimeters (2 feet) of freeboard, unless the tank is equipped with a containment structure).
Violation Notes:	Returned to compliance on 09/27/2017. "OBSERVATION: The aboveground 500 gallon convault used oil tank does not have a working overfill gage or alarm. All waste tanks should be constructed to prevent overfilling of the tank. CORRECTIVE ACTION: Install a compatible device to prevent overfilling the tank.

Eval Notes: Onsite to conduct the Hazardous Waste Generator Inspection at California Waste Solutions 1819 - 1819 10th Street. Oakland, CA. Met with Site Operations Supervisor, Douglas Duong, Glen Hulsenberg, Jean Paul Cosentino. Facility is a Recycling Collection facility that accepts recycling through municipal recycling under residential and commercial. Generator accepts used oil from the public through their recycling collection. Generator has 120 gallon and 300 gallon used oil tanks that are specifically for public oil, whereas there is a 500 gallon convault AST for their maintenance shop used oil. They are separated on a bill of lading by Safety Klean. After reviewing the used oil bill of ladings, the generator meets the Large Quantity status for both the public oil and their own maintenance oil separately. Generator does NOT have a Title 22 Hazardous Waste Tank Assessment for their aboveground used oil tanks.

CALIFORNIA WASTE SOLUTIONS 1819 (Continued) **S121747269**

Violation Description: Failure of the operator for placing wastes or treatment reagents in a tank system that could cause the tank , its ancillary equipment, or the secondary containment system to rupture, leak, corrode, or otherwise fail; and for not using appropriate controls and practices to prevent spills and overflows from tank or secondary containment systems. (Uncovered tanks shall be operated to ensure at least 60 centimeters (2 feet) of freeboard, unless the tank is equipped with a containment structure).
Violation Notes: Returned to compliance on 09/27/2017. "OBSERVATION: The aboveground 500 gallon convault used oil tank does not have a working overfill gage or alarm. All waste tanks should be constructed to prevent overfilling of the tank. CORRECTIVE ACTION: Install a compatible device to prevent overfilling the tank.

Citation: HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description: Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler’s operations that requires modification to any portion of the business plan.
Violation Notes: Returned to compliance on 05/19/2017. OBSERVATION: The facility has not submitted the Hazardous Materials Inventory Chemical Description page for 920 gallons of used oil, 120 gallons of ATF, 120 gallons of Hydraulic fluid, 90 gallons of glass cleaner, >1000 cubic feet of Oxygen, and >1000 cubic feet of propane to the CUPA. Motor oils shall be reported separately according to the type and grade of oil. CORRECTIVE ACTION: Complete and submit the Hazardous Materials Inventory Chemical Description page for all materials listed above electronically in the California Environmental Reporting System (CERS).

Eval Notes:	Onsite to conduct the Hazardous Waste Generator Inspection at California Waste Solutions 1819 - 1819 10th Street. Oakland, CA. Met with Site Operations Supervisor, Douglas Duong, Glen Hulsenberg, Jean Paul Cosentino. Facility is a Recycling Collection facility that accepts recycling through municipal recycling under residential and commercial. Generator accepts used oil from the public through their recycling collection. Generator has 120 gallon and 300 gallon used oil tanks that are specifically for public oil, whereas there is a 500 gallon convault AST for their maintenance shop used oil. They are separated on a bill of lading by Safety Klean. After reviewing the used oil bill of ladings, the generator meets the Large Quantity status for both the public oil and their own maintenance oil separately. Generator does NOT have a Title 22 Hazardous Waste Tank Assessment for their aboveground used oil tanks.

CALIFORNIA WASTE SOLUTIONS 1819 (Continued) **S121747269**

Violation Date:	02-28-2017
Citation:	22 CCR 15 66265.192(a) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(a)
Violation Description:	Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer prior to placing the tank system in service. The written assessment shall state that, the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed to meet the regulation.
Violation Notes:	Returned to compliance on 09/18/2017. "OBSERVATION: Owner/Operator does not have a tank assessment for the 500 gallon convault used oil, 120 gallon public used oil tank, and 300 gallon public used oil tanks. The owner or operator of a hazardous waste tank shall obtain a written assessment reviewed and certified by an independent, qualified, professional engineer, registered in California attesting that the system has sufficient structural integrity, is acceptable for the transferring, storing, and treating of hazardous waste, and that the tanks and containment system are suitably designed. " "CORRECTIVE ACTION: Immediately have an assessment prepared for the the 500 gallon convault used oil, 120 gallon public used oil tank, and 300 gallon public used oil tanks. Submit a schedule showing when this will be accomplished to the CUPA 30 days from now.

Violation Date: 02-28-2017
Citation: 22 CCR 15 66265.194 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.194
Violation Description: Failure of the operator for placing wastes or treatment reagents in a tank system that could cause the tank , its ancillary equipment, or the secondary containment system to rupture, leak, corrode, or otherwise fail; and for not using appropriate controls and practices to prevent spills and overflows from tank or secondary containment systems. (Uncovered tanks shall be operated to ensure at least 60 centimeters (2 feet) of freeboard, unless the tank is equipped with a containment structure).
Violation Notes: Returned to compliance on 09/27/2017. "OBSERVATION: The aboveground 500 gallon convault used oil tank does not have a working overfill gage or alarm. All waste tanks should be constructed to prevent overfilling of the tank. CORRECTIVE ACTION: Install a compatible device to prevent overfilling the tank.

Violation Date: 03-01-2017
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to provide the following training to all oil-handling personnel: 1. Operation and maintenance of equipment to prevent discharges. 2. Discharge procedure protocols. 3. Applicable pollution control laws, rules, and regulations. 4. General facility operations. 5. Contents of the SPCC Plan.
Violation Notes: Returned to compliance on 09/28/2017. OBSERVATION: Failure to prepare and implement SPCC. Facility stores over 1,320 gallons in their baler hydraulic oil tanks and 55 gallon drums, but do not have a SPCC Plan. There is no SPCC Plan to review. CORRECTIVE ACTION: Prepare and implement SPCC. ACDEH has provided a blank copy of the Tier I template. Provide a copy to ACDEH within 30 days once completed and implemented.

commercial. Generator accepts used oil from the public through their recycling collection. Generator has 120 gallon and 300 gallon used oil tanks that are specifically for public oil, whereas there is a 500 gallon convault AST for their maintenance shop used oil. They are separated on a bill of lading by Safety Klean. After reviewing the used oil bill of ladings, the generator meets the Large Quantity status for both the public oil and their own maintenance oil separately. Generator does NOT have a Title 22 Hazardous Waste Tank Assessment for their aboveground used oil tanks.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or

W.O. RIP TRACK (Continued) **S101624391**

dischargers having waste storage systems with land disposal such as dairy waste ponds.

Background Info:	The Gaines Site is a vacant lot located in a mixed residential/ commercial/industrial neighborhood. It has been used to store automobiles, drums, pressurized gas containers and other miscellaneous equipment. Surface samples collected found lead as high as 28,000 parts per million (ppm). No volatile or semivolatile organic compounds were detected at significant levels.
Comments Date:	02092003
Comments:	A Removal Action Workplan was approved in February 2003 which
Comments Date:	02092003
Comments:	required the removal of all soil containing metals above
Comments Date:	02092003
Comments:	residential standards.
Comments Date:	06271997
Comments:	Site Screening prepared under the US EPA Grant indicates that
Comments Date:	06271997
Comments:	further assessment of this Site is needed.
Comments Date:	08012002
Comments:	DTSC issued an Imminent and Substantial Endangerment Order to
Comments Date:	08012002
Comments:	property owner.
Comments Date:	08311998
Comments:	DTSC concluded that further assessment was needed and recommended
Comments Date:	08311998
Comments:	that a site inspection be conducted by the City of Oakland.
Comments Date:	09192003
Comments:	In June and July 2003, DTSC’s remediation contractor conducted a
Comments Date:	09192003
Comments:	Removal Action which consisted of excavation, consolidation and
Comments Date:	09192003
Comments:	offsite disposal of 485 cubic yards of lead-contaminated soil

GAINES PROPERTY (Continued) **1001212406**

Comments Date: 09192003
Comments: and debris to a Class I landfill. In September 2003, DTSC
Comments Date: 09192003
Comments: approved the Completion Report for the Removal Action. DTSC
Comments Date: 09192003
Comments: certified that the property has been cleaned to unrestricted

. Waste code:	D001
. Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
. Waste code:	D008

FINDS:

Registry ID: 110002807730

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Background Info: ase which wil be redeveloped by the City of Oakland with a variety of commercial and industrial uses as part of the Gateway Development Area. Also, close to 185 acres (plus roughly 56 acres of submerged lands) will be developed by the Port of Oakland for maritime, rail and other port activities as part of the Port Development Area. No residential uses will be allowed on the former Oakland Army Base property under the Amended Reuse Plan. The Amended Reuse Plan, draft RAP, and draft RMP are analyzed in the former Oakland Army Base Area Redevelopment Environmental Impact Report pursuant to the California Environmental Quality Act. The Army has been conducting site environmental investigations and selected remedial actions since 1989. DTSC is the primary agency overseeing the investigation and cleanup of the former Oakland Army Base, and the Regional Water Qulaity Control Board, San Francisico Bay Region regulates the removal and closure of petroleum fuel tanks. The Army’s remedial activities have included removal of above ground petroleum storage tanks (ASTs) and underground petroleum storage tanks (USTs), excavation of contaminated soil and removed petroleum hydrocarbons from monitoring wells at former tank locations, excavation of pesticide-containing soil from the off-site wetlands area, and replacement of many transformers and electrical equipment containing polychlorinated biphenyls (PCBs).
On August 6, 2003, Governor Davis approved Early Transfer of the former Oakland Army Base to the City of Oakland. The U.S. Army requested that the State of California approve the deferral of remediation of hazardous substance contamination and approve the transfer of the 363.5 acre base to the Oakland Base Reuse Author- ity and the City of Oakland acting by and through the Oakland Redevelopment Agency via an Economic Development Conveyance process. The City of Oakland will begin remediation of hazardous substances in soil and groundwater as required in the Remedial Action Play (RAP). The early transfer advances economic development for Oakland and the region by integrating redevelopment with remediation. The RAP identifies preferred alternatives at seven sites which have been fully investigated and characterized for release of hazardous substances and for which remediation would proceed upon final approval of the RAP. The Risk Management Plan (RMP), which is an appendix to the RAP, addresses all other areas of known or potential contamination, which may not yet have been fully investigated or characterized. The RMP specifies health protective measures that must be follwed during and after redevelopment at these locations. The RMP includes protocols for conducting inspections,

OAKLAND GATEWAY DEVELOPMENT AREA (Continued) **S106568695**

performing routine sampling, maintaining institutional and engineering controls, elevating RMP location to RAP sites as appropriate, and fulfilling reporting obligations. The former Oakland Army Base comprises of approximately 425 acres. Much of the base property was originally tidal flats or shallow open water. During the first half of 1900s, the area was filled to create the land subsequently acquired by the Army 1941. The former Oakland Army Base served as a major Army cargo port and warehousing facility from 1941 until it was closed under the Base Realignment and Closure program on September 30, 1999. Army activities supported the former Oakland Army Base's primary military mission as a distribution center and included maintaining and fueling railroad locomotive engines and trucks that transported cargo, draining fluids from vehicles for overseas shipment, and repairing and servicing vehicles equipment, and base facilities. The Amended Draft final Reuse Plan for the Oakland Army Base, Dated July 23, 2001 (Amended Reuse Plan), incoudes about 189 acres of the former Oakland Army B

Case Type:	Cleanup Program Site
Case Worker:	MEJ
Local Agency:	Not reported
RB Case Number:	01S0556
File Location:	All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected:	Soil, Under Investigation
Potential Contaminants of Concern:	Arsenic, Lead, Polynuclear aromatic hydrocarbons (PAHs), Total Petroleum Hydrocarbons (TPH)
Site History:	The Wood Streets Zoning District is made up of several parcels, with several different owners, totaling 29 acres. A majority of the parcels are located along Wood Street between 10th Street and West Grand Avenue in a mixed industrial-commercial zone. The 1880 shoreline passes through one-third of the site, there is fill material on the site. Soil and groundwater investigations were

STATION HOUSE SOUTH CONDOMINIUMS (CENTRAL STATION/WOOD STREE (Continued) **S121475984**

conducted between 1997 and 2005, finding: lead, arsenic, petroleum hydrocarbons, polynuclear aromatic hydrocarbons and chlorinated solvents. The site is currently a vacant lot.

File Location:	All Files are on GeoTracker or in the Local Agency Database
Local Case Number:	RO0000016
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	In November 1991, one 5,000-gallon gasoline UST, two 10,000-gallon diesel USTs, one 750-gallon waste-oil UST, dispensers, and associated piping were removed from the site and replaced with two diesel USTs and one aboveground WOT. Elevated petroleum hydrocarbons were reported in soil collected from the excavation sidewalls. In June 1992, one 10,000-gallon diesel UST was removed. Groundwater contained 72,000 a%g/L TPHd. Monitoring wells were installed in 1994. Free product was observed in MW-4 in the June 2002 monitoring event. Free product bailing and adsorbent socks were deployed. Groundwater monitoring discontinued in 2003. The site was evaluated for case closure under the State Water Resources Control Board Low-Threat Underground Storage Tank Closure Policy and was closed on May 20, 2014. Based upon the information available in our files to date, no

US POSTAL SERVICE - BUILDING M (Continued) **S100947861**

further investigation or cleanup for the fuel leak case is necessary at this time. Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at: http://ehgis.acgov.org/dehpublic/dehpublic.jsp.

Case Type: Cleanup Program Site
Case Worker: Not reported
Local Agency: ALAMEDA COUNTY LOP
RB Case Number: Not reported
File Location: Local Agency Warehouse
Potential Media Affected: Not reported
Potential Contaminants of Concern: Waste Oil / Motor / Hydraulic / Lubricating
Site History: In 2009 the Postal Service installed an elevator which required an excavation of approximately 15 feet square by 10 feet deep. During the excavtion fuel odors and stanied soil were encountered. Subsequent soil sampling was performed on April 23, 2009 and May 12, 2009. The maximum detected concentrations were 12,000 ppm TPHd, 400 ppm TPHg, 430 ppm TPHmo, 11 ppm naphthalene, and 3.4 ppm arsenic. While groundwater was said to be encountered between 10 and 10.5 feet in the excavation, no sample was collected. The case is currently inactive.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order

US POSTAL SERVICE - BUILDING M (Continued) **S100947861**

should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes:	Returned to compliance on 07/13/2018. OBSERVATION: A complete business plan has not been received by the CUPA. The hazardous materials inventory page does not include the diesel or the sulfuric acid in the gel cell batteries. The hydraulic oil largest container size is listed as 55 gallons instead of 120 gallons and the max daily amount is listed as 1 gallon instead of 565 gallons. The used ink largest container size is listed as 1 gallon instead of 55 gallons and the max daily amount is listed as 1 gallon instead of 55 gallons. The refrigerant gas R134a largest container size is listed 26 pounds instead of 30 pounds and max daily amount is listed as 1 pound instead of 150 pounds. The Refrigerant R12 max daily amount is not accurate. The Refrigerant Gas R-22 max daily amount is not accurate. The Refrigerant gas R-408A max daily amount is not accurate. The Refrigerant R410A max daily amount is not accurate. CORRECTIVE ACTION: Complete and submit the Hazardous Materials Inventory Chemical

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-17-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Completed a previously scheduled inspection for a USPS vehicle maintenance facility. Hazardous waste at the facility includes 1-1000 gallon used oil AST serviced on bi-weekly basis by Evergreen Env., 1-200 gallon used coolant AST 1-55 gallon drum of spent absorbent, used oil filters, 2-55 gallon drums of oil liquid from the oil water separator and 1-55 gallon drum of aerosol can treated as universal waste. The EPA generator ID # was reactivated during the inspection and weekly hazardous waste storage area inspections are completed and documented. All violations noted during the inspection were corrected during the inspection.

Site Name: USPS - Oakland VMF
Violation Date: 06-17-2016
Citation: 19 CCR 6.95 25508(a)(1) - California Code of Regulations, Title 19, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit the Business Activities Page and/or Business Owner Operator Identification Page.
Violation Notes: Returned to compliance on 06/17/2016. Observations: primary facility contact lists Charley Simmons; however, Mr. Simmons retired in 3/2016 and has been replaced by Gary Pablo. Corrective Action: update CERS to reflect the correct primary emergency contact as Gary Pablo and notify ACDEH when the correction has been made to CERS. The violation was corrected during the inspection and no further action is required.

Violation Date: 04-08-2016
Citation: 23 CCR 16 2666 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2666
Violation Description: Failure to maintain entry fitting such that it properly seals to the containment.
Violation Notes: Returned to compliance on 01/21/2017. Observations: penetration fittings into the north and middle turbine sumps are not liquid tight and in bad condition, with visible disintegration of the fittings in evidence. Corrective action: penetration fittings in the north and middle UST turbine sumps with visible signs of disintegration must be replaced, with a permit from ACDEH.

	Section(s) 2715
Violation Description:	Failure to comply with one or more of the designated operator monthly inspection requirements: failed to inspect the monthly alarm history report; attach a copy of the alarm history; failed to inspect for the presence of liquid or debris in the spill container/spill bucket and under dispenser containment; failed to inspect the under dispenser containment to ensure that monitoring equipment is placed in the proper position; failure to inspect for liquid or debris in the containment sump where an alarm occurred or for which there is no record of a service visit; or failure to check that all testing and maintenance has been completed and documented.
Violation Notes:	Returned to compliance on 01/21/2017. Observations: the facility has an incomplete record for the required monthly designated operator inspections reports. Corrective action: monthly designated operator inspections are required to be documented and a copy of the inspection shall be maintained onsiite for review during the annual UST monitoring system certification

Citation:	23 CCR 16 2636(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(2)
Violation Description:	Failure of the functional line leak detector (LLD) monitoring pressurized piping to meet one or more of the following requirements: Monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour leak at 10 p.s.i.g. and restrict or shut off the flow of product through the piping when a leak is detected.
Violation Notes:	Returned to compliance on 04/06/2018. OBSERVATION: The T-1 Diesel (North), T-Diesel (Middle) and T-3 Diesel (South) line leak detectors failed to detect a leak when tested. All line leak detectors shall be capable of detecting a 3-gallon per hour leak at 10 psi. CORRECTIVE ACTION. The Service technician replaced the T-Diesel (Middle) line leak detector and T-3 Diesel (South) line leak detector The T-1 Diesel (North) line leak detector was adjusted. All line leak detectors were retested during the inspection and passed. This was corrected on site.

Site Name: USPS - Oakland VMF
Violation Date: 04-06-2018
Citation: 23 CCR 16 2644.1(a)(4) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2644.1(a)(4)
Violation Description: Failure to notify the UPA 48 hours prior to testing.
Violation Notes: Returned to compliance on 05/24/2018. OBSERVATION: Owner/Operator did not notify the CUPA 48hours prior to testing. During the annual monitoring certification the dispensers, senor out and fail safe was not able to be tested due to not being able to authorize dispenser 4. The service technician stated that he would have to come back to the site complete the testing and that ACDEH would be notified. The test was completed on April 13, 2018, but ACDEH was not notified of the testing. CORRECTIVE ACTION: Ensure that the CUPA is provided 48 hours notification to the CUPA in the future.

Site Name: USPS - Oakland VMF
Violation Date: 04-08-2016
Citation: HSC 6.7 25291 - California Health and Safety Code, Chapter 6.7, Section(s) 25291
Violation Description: Failure to install leak detection equipment correct for the type of system.

USPS - OAKLAND VMF (Continued) **S121792151**

Violation Notes: Returned to compliance on 01/21/2017. Observations: Product conveyance piping for dispenser 3/4 is outside the footprint of the UDC mounting frame, and should a leak occur the fuel would may not be captured in the UDC. Corrective Action: relocate the product conveyance piping to be completely within the footprint of the UDC, thereby allowing any liquid that may be released to be captured within the UDC, and causing the electronic sensor in the UDC to alarm. Contact ACDEH prior to completing all piping replacement.

Violation Date: 04-06-2018
Citation: 23 CCR 16 2715(c) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(c)
Violation Description: Failure to comply with one or more of the following designated operator (DO) monthly inspection requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect

USPS - OAKLAND VMF (Continued) **S121792151**

	for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(f)(2).
Violation Notes:	Returned to compliance on 05/31/2018. OBSERVATION: The designated operator failed to document all the alarms from the attached alarm history on the October 2017 designated operator monthly inspection report(s) and failed to check that they were responded to appropriately. The missing alarms include: L9 UDC 2 Dispenser Pan fuel alarm on 10-18-17 and 10-17-17. Also the L8 UDC 1 Dispenser Pan fuel alarm on 10-18-17 . During the monthly inspection, the designated operator shall review the alarm history for the previous month, check that each alarm was documented and responded to appropriately, and attach a copy of the alarm history with documentation to the response to any alarms to the monthly report. The designated operator failed to check and note the correct test dates for the secondary containment test on the March 2018 through April 2017 designated operator monthly inspection report(s). The secondary containment test date listed in the D.O report is April 8, 2016 instead of 6-15-15. During the monthly [Truncated]

Citation:	23 CCR 16 2636(f) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)
Violation Description:	Failure to continuously monitor the interstitial space of the tank, piping and/or sumps sump such that the leak detection activates an audible/visual alarm when a leak is detected.
Violation Notes:	Returned to compliance on 04/08/2016. Observation: 420 sensor in the interstitial space of UST 3 was removed for testing no float was present. The exterior of the sensor was oxidized and liquid was present on the sensor bell, indicating that residual liquid may be present in the UST interstitial space. The origin of the liquid is unknown and additional testing may be required to determine the source of the liquid. Corrective action: the 420 sensor float was repaired and approximately 200 ml of residual liquid was removed from the UST interstitial space. Violation was corrected during the inspection

Citation:	22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description:	Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes:	Returned to compliance on 08/01/2018. OBSERVATION: Signed copies of manifest from the designated facility for the past 3 years were not found on site. Signed copies of manifest not found on site: - 006447893SKS - 005507969SKS - 005370205SKS - 005371129SKS - 004787420SKS Hazardous waste generators shall retain copies of all manifests signed off by the disposal facility and all receipts used in a consolidated manifesting procedure on site for three years and have them readily available for review. CORRECTIVE ACTION: Immediately locate a copy of all manifests and receipts for the last three years, maintain them on site, and submit copies to the CUPA with 30 days.
