Violation Notes: Returned to compliance on 05/25/2018. OBSERVATION: The UST tank information for all three diesel tanks is not current in CERS. Line item 490-58 is incorrectly list 794380-208 as the instead of 794390-420. Please verify line item 451-b for all three tanks for Striker Plate/ Bottom Protector. Any change of information must be updated in CERS within 30 days of the change. CORRECTIVE ACTION: Submit and maintain an accurate Tank information. Submit corrections by May 26, 2018.

Eval Notes:	Follow up for UST repair, discuss with contractor West Star. Arrive onsite to complete secondary containment testing for USPS facility. Penetration fitting in the piping and turbine sumps were in poor condition and require replacement, the penetration boots were replaced with similar boots and secondary containment testing was completed on the piping sump and the turbine sump. However, the secondary containment test boot for the piping did not pass testing and also required replacement, but the contractor did not have the replacement boots available and will order the replacement boots. Furthermore, during the site visit ACDEH found a piping sump for the backup generator inside the main post office facility was not monitored as required. Consequently, in the event of a release the release will not be detected at the earliest possible point. Moreover, in order to detect a release of into the secondary containment pipe transition sump a monitoring device must be installed.

Eval Notes: ACDEH staff complete a previously scheduled UST inspection for the USPS vehicle maintenance facility. The facility operates 3 diesel UST to fuel the postal service truck fleet and to supply a backup generator system located at the postal distribution center. Permission to complete the inspection was granted by facility representative Ernie Eugenio, maintenance manager. Facility has completed employee training annually as required, facility maintains a permit to operate from ACDEH and has updated CERS annually as required. During a previous annual monitoring system certification ACDEH noted that a fuel piping transition sump was not properly monitored as required by regulation; a stand alone sensor with a remote audible/visual alarm -not connected to the Veever Root UST monitoring system- was installed and tested. All violations noted during the inspection were corrected during the inspection and no further action is required at this time.

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 06/17/2016. Observations: chemical inventory onsite is not reflected in the CERS submittal as the 1000 gallon used oil above ground storage tank is not noted on the chemical inventory. Corrective Action: update the chemical inventory to include the 1000 gallon used oil AST and notify ACDEH when the chemical inventory has been updated. The violation was corrected during the inspection and no further action is required.

Violation Date: 04-06-2018
Citation: 23 CCR 16 2715(c) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(c)
Violation Description: Failure to comply with one or more of the following designated operator (DO) monthly inspection requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance

USPS - OAKLAND VMF (Continued) **S121792151**

has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(f)(2).

Violation Notes: Returned to compliance on 05/31/2018. OBSERVATION: The designated operator failed to document all the alarms from the attached alarm history on the October 2017 designated operator monthly inspection report(s) and failed to check that they were responded to appropriately. The missing alarms include: L9 UDC 2 Dispenser Pan fuel alarm on 10-18-17 and 10-17-17. Also the L8 UDC 1 Dispenser Pan fuel alarm on 10-18-17 . During the monthly inspection, the designated operator shall review the alarm history for the previous month, check that each alarm was documented and responded to appropriately, and attach a copy of the alarm history with documentation to the response to any alarms to the monthly report. The designated operator failed to check and note the correct test dates for the secondary containment test on the March 2018 through April 2017 designated operator monthly inspection report(s). The secondary containment test date listed in the D.O report is April 8, 2016 instead of 6-15-15. During the monthly [Truncated]

Eval Notes: Follow up for UST repair, discuss with contractor West Star. Arrive onsite to complete secondary containment testing for USPS facility. Penetration fitting in the piping and turbine sumps were in poor condition and require replacement, the penetration boots were replaced with similar boots and secondary containment testing was completed on the piping sump and the turbine sump. However, the secondary containment test boot for the piping did not pass testing and also required replacement, but the contractor did not have the replacement boots available and will order the replacement boots. Furthermore, during the site visit ACDEH found a piping sump for the backup generator inside the main post office facility was not monitored as required. Consequently, in the event of a release the release will not be detected at the earliest possible point. Moreover, in order to detect a release of into the secondary containment pipe transition sump a monitoring device must be installed.

Violation Date: 04-08-2016
Citation: 23 CCR 16 2636(f) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)
Violation Description: Failure to continuously monitor the interstitial space of the tank, piping and/or sumps sump such that the leak detection activates an audible/visual alarm when a leak is detected.
Violation Notes: Returned to compliance on 04/08/2016. Observation: 420 sensor in the interstitial space of UST 3 was removed for testing no float was present. The exterior of the sensor was oxidized and liquid was present on the sensor bell, indicating that residual liquid may be present in the UST interstitial space. The origin of the liquid is unknown and additional testing may be required to determine the source of the liquid. Corrective action: the 420 sensor float was repaired and approximately 200 ml of residual liquid was removed from the UST interstitial space. Violation was corrected during the inspection

Violation Description:	Failure to obtain permit to install, replace, repair, or modify part of the UST system containment or leak detection equipment.
Violation Notes:	Returned to compliance on 01/21/2017. Observations: a sensor fuel alarm was noted on 3/25/2016 and an automatic tank gage upgrade was completed. However, no notification or permit was obtained from ACDEH for this activity, and no work order or service recored is available in the file for ATG upgrade. Corrective action: Obtain a work order/service request from Weston Solutions to verify that all work was completed by a licensed and ICC certified contractor and provide the documentation to ACDEH.

Eval Notes: Follow up for UST repair, discuss with contractor West Star. Arrive onsite to complete secondary containment testing for USPS facility. Penetration fitting in the piping and turbine sumps were in poor condition and require replacement, the penetration boots were replaced with similar boots and secondary containment testing was completed on the piping sump and the turbine sump. However, the secondary containment test boot for the piping did not pass testing and also required replacement, but the contractor did not have the replacement boots available and will order the replacement boots. Furthermore, during the site visit ACDEH found a piping sump for the backup generator inside the main post office facility was not monitored as required. Consequently, in the event of a release the release will not be detected at the earliest possible point. Moreover, in order to detect a release of into the secondary containment pipe transition sump a monitoring device must be installed.

Eval Notes: ACDEH Completed a follow up inspection for secondary containment testing associated with the replacement of test boots for the flex pipe fuel supply and fuel return lines used to supply a backup generator system. Arrive onsite and meet with West Star, the UST contractor hired to replace and test the replacement boots. ACDEH observed testing of the replacement test boots, which passed a 5 psi pressure test, demonstrating the functionality of the secondary containment components. Moreover, during a previous site visit ACDEH observed a piping transition sump located inside the main mail processing building that did not have a monitoring sensor as required. The UST system must be constructed with a monitoring system capable of detecting entry of liquid into secondary containment. Failure of the UST system to be designed and constructed with a monitoring system capable of detecting the entry of the hazardous substance stored in the primary containment into the secondary [Truncated]

Eval Notes: ACDEH staff complete a previously scheduled UST inspection for the USPS vehicle maintenance facility. The facility operates 3 diesel UST to fuel the postal service truck fleet and to supply a backup generator system located at the postal distribution center. Permission to complete the inspection was granted by facility representative Ernie Eugenio, maintenance manager. Facility has completed employee training annually as required, facility maintains a permit to operate from ACDEH and has updated CERS annually as required. During a previous annual monitoring system certification ACDEH noted that a fuel piping transition sump was not properly monitored as required by regulation; a stand alone sensor with a remote audible/visual alarm -not connected to the Veever Root UST monitoring system- was installed and tested. All violations noted during the inspection were corrected during the inspection and no further action is required at this time.

Violation Description: Failure to notify the UPA 48 hours prior to testing.
Violation Notes: Returned to compliance on 05/24/2018. OBSERVATION: Owner/Operator did not notify the CUPA 48hours prior to testing. During the annual monitoring certification the dispensers, senor out and fail safe was not able to be tested due to not being able to authorize dispenser 4. The service technician stated that he would have to come back to the site complete the testing and that ACDEH would be notified. The test was completed on April 13, 2018, but ACDEH was not notified of the testing. CORRECTIVE ACTION: Ensure that the CUPA is provided 48 hours notification to the CUPA in the future.

Violation Date: 04-08-2016
Citation: HSC 6.7 25291 - California Health and Safety Code, Chapter 6.7, Section(s) 25291
Violation Description: Failure to install leak detection equipment correct for the type of system.
Violation Notes: Returned to compliance on 01/21/2017. Observations: Product conveyance piping for dispenser 3/4 is outside the footprint of the UDC mounting frame, and should a leak occur the fuel would may not be captured in the UDC. Corrective Action: relocate the product conveyance piping to be completely within the footprint of the UDC, thereby allowing any liquid that may be released to be captured within the UDC, and causing the electronic sensor in the UDC to alarm. Contact ACDEH prior to completing all piping replacement.

Violation Description:	Failure to comply with one or more of the following designated operator (DO) monthly inspection requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(f)(2).
Violation Notes:	Returned to compliance on 05/31/2018. OBSERVATION: The designated operator failed to document all the alarms from the attached alarm history on the October 2017 designated operator monthly inspection report(s) and failed to check that they were responded to appropriately. The missing alarms include: L9 UDC 2 Dispenser Pan fuel alarm on 10-18-17 and 10-17-17. Also the L8 UDC 1 Dispenser Pan fuel

Violations:

Site ID:	79565
Site Name:	USPS - Oakland VMF
Violation Date:	06-17-2016
Citation:	19 CCR 6.95 25508(a)(1) - California Code of Regulations, Title 19, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit the Business Activities Page and/or Business Owner Operator Identification Page.
Violation Notes:	Returned to compliance on 06/17/2016. Observations: primary facility contact lists Charley Simmons; however, Mr. Simmons retired in 3/2016 and has been replaced by Gary Pablo. Corrective Action: update CERS to reflect the correct primary emergency contact as Gary Pablo and notify ACDEH when the correction has been made to CERS. The violation was corrected during the inspection and no further action is required.

Citation: 23 CCR 16 2636(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(2)
Violation Description: Failure of the functional line leak detector (LLD) monitoring pressurized piping to meet one or more of the following requirements: Monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour leak at 10 p.s.i.g. and restrict or shut off the flow of product through the piping when a leak is detected.
Violation Notes: Returned to compliance on 04/06/2018. OBSERVATION: The T-1 Diesel (North), T-Diesel (Middle) and T-3 Diesel (South) line leak detectors failed to detect a leak when tested. All line leak detectors shall be capable of detecting a 3-gallon per hour leak at 10 psi. CORRECTIVE ACTION. The Service technician replaced the T-Diesel (Middle) line leak detector and T-3 Diesel (South) line leak detector The T-1 Diesel (North) line leak detector was adjusted. All line leak detectors were retested during the inspection and passed. This was corrected on site.

Eval Notes:	Follow up for UST repair, discuss with contractor West Star. Arrive onsite to complete secondary containment testing for USPS facility. Penetration fitting in the piping and turbine sumps were in poor condition and require replacement, the penetration boots were replaced with similar boots and secondary containment testing was completed on the piping sump and the turbine sump. However, the secondary containment test boot for the piping did not pass testing and also required replacement, but the contractor did not have the replacement boots available and will order the replacement boots. Furthermore, during the site visit ACDEH found a piping sump for the backup generator inside the main post office facility was not monitored as required. Consequently, in the event of a release the release will not be detected at the earliest possible point. Moreover, in order to detect a release of into the secondary containment pipe transition sump a monitoring device must be installed.

Eval Notes:	ACDEH Completed a follow up inspection for secondary containment testing associated with the replacement of test boots for the flex pipe fuel supply and fuel return lines used to supply a backup generator system. Arrive onsite and meet with West Star, the UST contractor hired to replace and test the replacement boots. ACDEH observed testing of the replacement test boots, which passed a 5 psi pressure test, demonstrating the functionality of the secondary containment components. Moreover, during a previous site visit ACDEH observed a piping transition sump located inside the main mail processing building that did not have a monitoring sensor as required. The UST system must be constructed with a monitoring system capable of detecting entry of liquid into secondary containment. Failure of the UST system to be designed and constructed with a monitoring system capable of detecting the entry of the hazardous substance stored in the primary containment into the secondary [Truncated]

Background Info:	Oakland Army Base (OARB) is situated near the eastern terminus of the San Francisco-Oakland Bay Bridge. OARB occupies approx- ima tely 422 acres and is bounded by the Southern Pacific Trans- port ation Company railroad tracks on the east, the Port of Oakland Au thority (formerly the Fleet and Industrial Supply Center Oakland) on the south, the Bay Bridge on the north, and the Oaklnd Outer Harbor on the west. From December 8, 1941 to September 30, 1999, OARB carried out it's mission in support activites for the sea, rail and land transportation of military personnel and material f or the U.S. Army. These activities included operation and mainte nance of facilities and equipment, industrial processes, preparat ion of vehicles for overseas ship- ment, storage of fuels, manage ment of wastes, cleaning operations, support of seagoing vessels, railroad rolling stock and trackage, trucking, wharf, and wareho using operations. In December 1995, OARB was placed on the BRAC IV list and design- ated for closure. OARB is scheduled to be t ransferred to the City of Oakland in 2001. The Oakland Base Reus e Authority (OBRA) which is the Local Reuse Authority (LRA) for t he base developed a reuse plan in July 1998. Environmental inve stigation and cleanup of OARB is being perform- ed in accordance with the BRAC Cleanup Plan (July 1996) which was revised and upda ted in January 1999. The California Department of Toxic Substanc es Control (DTSC) is the lead agency for the environmental restor ation as described in the Defense State Memorandum of Understandi ng (DSMOA). OARB is not on the U. S. Environmental Protection Ag ency's National Priorities List (NPL). The 26 BRAC parcels were grouped into 7 Operable Units (OU), initially identified accordi ng to types of operation and geo- graphic location. OU1 included Parcels 4 through 7 and 9 through 15, OU2 consisted entirely of P arcel 8, OU3 included Parcels 16 through 26, OU4 included parcels 1 through 3 (shoreline, wharves, and submerged land), OU5 was re served for no further action parcels, OU6 was for parcels that ha d unexpected conditions, and OU7 was a small contaminated area at the east end of Building 807 in Parcel 12. The Regional Water Quality Control Board (RWQCB) is the lead regulatory agency for c losure of underground fuel storage tanks (USTs) at OARB. USTs th at contained used oils/fuels and oil/ water separators are not pa rt of the UST program and are address- ed under the operable unit cleanup program as described above. Based on Risk Based Correcti

OAKLAND ARMY BASE (Continued) **S105481917**

ve Action (RBCA) evaluation, 4 of the 14 UST fuel sites have been
included in a program for further investigation and/or remediati
on. *** OPERABLE UNIT/SITE DESCRIPTION *** OU1 Operable Unit
1 covers 167 acres area with warehouses, a rail yard, open stora
ge area, parking lots, padre grounds administrative areas, wash p
latforms, maintenance shops, a printing plant and a plating shop.
OU1 consists of 11 parcels. OU2 Operable Unit 2 includes railr
oad engine maintenance, fueling and repair facilities. This is a
6.3 acres area at the northeastern border of the OARB. OU3 Oper
able Unit 3 is a 49.4 acres area at the southwestern end of OARB.
The area consists primarily of housing, housing support office
space, vehicle service areas and motor pool maintenance areas. O
U3 consists of 11 parcels. OU4 Operable Unit 4 consists of 127 a
cres with three parcels located at the northwestern end of OARB.
OU4 facilities include waterfronts, piers and cargo storage area
s. OU5 Operable Unit 5 is for three no further action parcels to
taling 35 acres. The area consists of support services, guest- h
ouse, child center, playground, theater, warehouses and Maritime
Street. OU6 Operable Unit 6 is reserved for funding any work rel
ated to basewide issues. The Army has not been using this operab
le unit for remedial and investigation activities. OU7 Operable
Unit 7 is a 300-foot by 600-foot area located****

covenant.

Completed Area Name: Basewide
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 04/24/2014
Comments: DTSC, City of Oakland, and Port of Oakland inspected the site on 3/5/14. DTSC found site activities consistent with the land use covenant.

Completed Area Name: Basewide
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 03/29/2010
Comments: The Port of Oakland submitted the 3/26/10 Annual Report pursuant to the "Covenant to Restrict Use of Property, Environmental Restriction" (LUC) for the Oakland United States Army Reserve Center #2, Parcel 18 and Subparcels 19 and 21, Former Oakland Army Base. DTSC conducted site inspection on 3/22/10; and the Port conducted site inspection on 3/22/10 and 3/26/10. The site was in full compliance with the LUC, Sections 4.01(a) through 4.01(d). The Port reported that no dewatering activities or violations of the LUC had occurred since the Port acquired the property on 6/29/07. The Port certified and attested to full compliance with the terms and conditions of the LUC. DTSC has reviewed and hereby concurs with the 3/26/10 Annual Report.

Comments: DTSC and the Army Reserve executed and recorded the Covenant to Restrict Use of Property, Environmental Restriction with the Alameda County Assessor’s Office on 6/29/07. The Covenant includes the following environmental restrictions and requirements: Sensitive land uses, including, but not limited to, residential housing, schools for persons under 18 years of age, day-care facilities for children, hospitals, and hospices are prohibited. Placement of Property soil outside of the Property boundary for any purpose is permitted only with the written approval of DTSC. The construction of groundwater wells and extraction of groundwater from new and/or existing wells for any purpose are permitted only with the written approval of DTSC. Construction dewatering activities are permitted subject to all applicable local and State requirements, including those of the California Regional Water Quality Control Board, for disposing of the liquid from dewatering activities.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

FINDS:

Registry ID: 110009528957

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

File Location:	All Files are on GeoTracker or in the Local Agency Database
Local Case Number:	RO0000019
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Diesel
Site History:	Three USTs and approximately 120 linear feet of piping were removed from the site on February 16, 1989. The tank pit was over-excavated with approximately 1,500 cubic yards of soil treated onsite removed from the excavation. One groundwater monitoring well was installed at the site in July 1996. Additional site investigations were in conducted in 2007 and 2008.

PORT OF OAKLAND (Continued) **S101580399**

https://ehgis.acgov.org/dehpublic/dehpublic.jsp. A geophysical survey conducted at the site on February 8, 1993 identified the presence of underground storage tanks (USTs). Four USTs were removed on September 22, 1993 by PTS Environmental. In 1994 and 1995, several borings and monitoring wells were installed at the site. Significantly elevated concentrations of petroleum hydrocarbons were detected in soil and over six feet of free product were detected in groundwater monitoring well MW-3. Active skimmers commenced operation in November 15, 1996 and ceased in May 2011. MW-8, was never sampled as it contained separate phase petroleum product. MW-8 was decommissioned due to railroad construction and was replaced by MW-8A on the general vicinity of the MW-8 well location. No separate phase petroleum product has been reported in the replacement well. Two additional wells (MW-6 and MW-7) were decommissioned as a result of Port improvements. Post development replacement wells were installed and free product removal restarted. ORC added to MW-4 in 2006 and a low vacuum systerm added in 2007 to recovery wells for enhanced recovery. Free product removal ceased on 6/07/2011. Since shutdown, separate phase petroleum product thickness has increased in six wells by up to 7.66 feet, Well screens for some wells always submerged and occasionally true for several other MWs. FP plume stability in question when FP may be above the well screen. Well MW-8 formerly located along the northern property boundary contained 1-foot separate phase petroleum product suggesting the plume is off site O2 measurements are >4% outside of plume area. . Metals include 880 mg/kg As, 680 mg/kg Pb and 600 mg/kg Zn; however, site s capped.

Status:	Completed - Case Closed
Status Date:	03/17/2017
Case Worker:	KEN
RB Case Number:	01-0969
Local Agency:	ALAMEDA COUNTY LOP
File Location:	All Files are on GeoTracker or in the Local Agency Database
Local Case Number:	RO0000187
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	For several years, the RO0000010 and RO0000187 case files were separately maintained, but contained the same set of data. Since the cases deal with different locations on the same site, a decision was made to administratively closed RO0000187 and incorporate it to RO0000010 in order to eliminate the duplication of effort, ACDEH case

PORT OF OAKLAND / NATION’S WAY TRANSPORT (Continued) **S102434179**

file RO0000187 was administratively closed with out public participation or issuance of a RAC on March 17, 2017. Any reports and data related to ACDEH case file RO0000187 after March 17, 2017 will be found in the RO0000010 case file. Two adjacent LUST facilities operated at the Port of Oakland along Seventh Street. One facility, identified as Port of Oakland, was occupied by Building C-401, addressed as 2227 Seventh Street. The second facility, identified as Port of Oakland / Nations Way Transport, was occupied by Buildings C-406 and C-407 and were addressed as 2225 Seventh Street. The 2227 Seventh Street property was occupied by four USTs were removed on September 23, 1993. Free phase product was observed floating on tank pit groundwater, resulting in Alameda County Environmental Health (ACEH) opening case file number RO0000010. The 2225 Seventh Street property was occupied by nine USTs, which were removed between March 1990 and August 1992. Free phase product was observed floating on tank pit groundwater, resulting in Alameda County Department of Environmental Health (ACDEH) opening case file number RO0000187. The Port of Oakland demolished the structures on both properties during port redevelopment, resulting in re-addressing the site as 651 Maritime Street and making it difficult to distinguish between the 2225 and 2227 Seventh Street facilities. For several years, the RO0000010 and RO0000187 case files were separately maintained, but contained the same set of data. In order to eliminate the duplication of effort, ACDEH case file RO0000187 has been made inactive as of 1/01/2015. Any reports and data related to ACDEH case file RO0000187 after 1/01/2015 will be found in the RO0000010 case file. Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at https://ehgis.acgov.org/dehpublic/dehpublic.jsp. The site contained nine USTs at 2255 Seventh St: 5x 20k-gal and 1x10k-gal diesel, 1x8k-gal gasoline, 1x6k-gal oil, and 1x2k-gal waste oil. the 10k-gal diesel UST failed a 1989 pressure test and was removed in July 1991. The 5x 20k-gal diesel, 1x8k-gal gasoline, and 1x6k-gal oil USTs were removed on 7/27/1992. Free product was noted floating on groundwater infiltraing into the tank pit. The 2k-gal waste oil was removed on 8/18/1992. A sheen was observed on groundwater infiltraing into the tank pit. Vacuum applied to FP recovery system on 7/31/2006 with premature FP removal discontinued on 6/07/2011 and increased TPH concentrations observed in wells, including down-gradient site boundary well MW-4, for one year following ceasing FP removal. Plume may be stabilized or decreasing; however, well screens for some wells always submerged and occasionally true for several other MWs. Well network delineating plume not old enough for 5-yrs of data, O2 measurements indicate much of the site is >4%. Methane generation from plume biodegradation is problematic for closure. 170,000 ug/M3 benzene reported in soil gas. Though metals include 880 mg/kg As, 680 mg/kg Pb and 600 mg/kg Zn, site is capped and an SMP is in place.

. Waste code: 151
. Waste name: Asbestos-containing waste

. Waste code: 181
. Waste name: Other inorganic solid waste

. Waste code: D008
. Waste name: LEAD

Historical Generators:

Date form received by agency:	02/10/1998
Site name:	RELIANCE PRODUCTS INC
Classification:	Small Quantity Generator

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

FINDS:

Registry ID: 110002920876

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The

1614 CAMPBELL ST (Continued) **1001217518**

EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

CA BOND EXP. PLAN:

Reponsible Party:	RWQCB REFERRAL SITE
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	The responsible parties will pay all costs associated with remedial investigations and cleanup activities under RWQCB oversight. There are no plans to utilize Bond funds for this site.
Site Description:	Southern Pacific, Oakland, is a large railyard, switching and maintenance facility located between the Outer Harbor and Inner Harbor of San Francisco Bay. The site includes two surface impoundments which are separated by approximately a one-half mile distance: an oil/water separator system for waste waters from the cleaning of rail cars and an inactive waste pond for wash waters from the interiors of tank cars (referred to as polychlorinated biphenyl (PCB) sludge pond). There is soil and groundwater contamination at each of the surface impoundment areas.
Hazardous Waste Desc:	This site has been contaminated by PCBs, polynuclear aromatics (PNAs), benzene, toluene, xylene, ethylbenzene, waste oils, solvents such as trichloroethylene (TCE) and dichloroethylene (DCE) and heavy metals such as lead and arsenic. Shallow ground water is contaminated by solvents.
Threat To Public Health & Env:	The waste impoundment area is fenced; however, direct contact would present a potential health threat. This site is located within one mile of the San Francisco Bay; a drainage ditch is underneath the site. Potential for migration of contaminants tothe Bay is low. Solvents are known to have migrated offsite (at least 200 feet from the site at 3-foot depth) and to shallow ground water. There are no known domestic wells within three miles of the site.
Site Activity Status:	Southern Pacific submitted a draft RAP to the RWQCB and DHS in April, 1988. The RWQCB has determined the RAP to be unacceptable and is requiring additional hydrogeologic and site characterization.

Background Info: Alexander’s Ragtime Auto Wreckers operated an auto wrecking facility at the 0.3 acre Site from approximately 1966 to 1987. Meyer Goldberg and Miriam Goldberg were owners of the Site during Alexander’s Ragtime Auto Wrecker’s operation at the Site. The Goldbergs sold the Site to the San Francisco Bay Area Rapid Transit District (BART) in 1987. The Site is located in an industrial neighborhood with residences and other commercial areas located less than one block away. Business activities in the area include manufacturing, food processing, warehousing and offices. Residential areas are located to the north and west of the the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 09/07/2006
Comments: Site screening concluded that contaminants remain in soil, soil gas, and groundwater at the site. Historical distributions of contaminants are generally consistent with on-site sources. Extent of contamination appears fairly stable. ACDEH continues to oversee cleanup at the site.

Case Worker: Not reported
RB Case Number: 01-2433
Local Agency: DEPARTMENT OF TOXIC SUBSTANCES CONTROL
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: 01510022
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Acetone, Other Solvent or Non-Petroleum Hydrocarbon, Polychlorinated biphenyls (PCBs), Arsenic,
Site History: Case is overseen by DTSC under Envirostor Case No. 01510022 (Smilo Chemical Company) This site is part of the Cypress Freeway Reconstruction Project. The site was formerly known as Smilo Chemical Company, which operated as a chemical repackaging company. It was later used as a truck repair facility in which the facility occupied approximately one third of the site. Also see listing in GeoTracker for Container Frieght (Case No. 01-2399) for related documents.

Local Case Number: 01420128
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Other Solvent or Non-Petroleum Hydrocarbon, Polychlorinated biphenyls (PCBs), Other Insecticides
Site History: The case is overseen by DTSC. Envirostor ID No. 01420128. The site is part of the Cypress Freeway Construction Project. Former site uses include a warehouse and distribution facility since 1967. Site activities consisted of unloading cargo from freight trains and transferring to trucks. Prior to this use, the site was owned by the Commissary Department of the Southern Pacific Railroad. It is not known what site activities took place when it was owned by the railroad. Caltrans purchased the site in 1994 in connection with reconstruction of the Cypress Freeway.

Background Info: The site is located along the edge of the Port of Oakland’s Outer Harbor. From 1958 to 1974, the site was occupied by the McGuire Chemical Company. McGurie blended, packaged and stored chemicals such as anti-freeze and various volatile organic chemicals (VOCs), including aromatic and chlorinated compounds. Potential contaminants at the site include: total petroleum hydrocarbons (TPH) as gasoline, diesel, and motor oil, tetrachloroethylene (PCE), trichloroethene (TCE), polynuclear aromatic hydrocarbons (PAHs), arsenic, and metals such as copper, nickel and lead. The chemicals were stored in above ground tanks. Investigations have found aromatic and chlorinated solvents in soil and groundwater in the former area of the above ground tanks. The site currently operates as a marine container terminal.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Background Info: Fleet and Industrial Supply Center Oakland (FISCO) is a former Navy facility that provided supplies and support services to fleet units and shore activities. The Navy established the site as the Naval Supply Depot in December 1941. Between 1990 and 1992, the Navy identified 99 potential sites of contamination. 25 of the potential sites were identified as Installation Restoration Sites for additional investigation and potential cleanup activities. Of those 25 sites, 11 sites were recommended for no further action and subsequently approved as no action sites in 1995. Of the remaining 14 installation Restoration sites, 4 were designated as no further action sites as a result of removal actions or investigation results and 10 were investigated further as part of the phase II Remedial Investigation. The remedial repsonse strategy implemented at FISCO has mirrored the Environmental Protection Agency's Superfund Accelerated Cleanup Model approach. This strategy has included the early identification and removal of contaminated media that pose risks to human health or the environment, or are sources of groundwater contamination. 4 removal actions have taken place at FISCO to address soil contamination and sources of groundwater contamin- ation. As a result of the early identification and removal strategy, no remaining areas of soil or ground water contamination require cleanup to reduce risks to human health or the environ- ment. On September 30, 1998, FISCO was disestablished as scheduled under the Defense Base Closure and Realignment Act of 1993. Governor Gray Davis determined that 201 acres of FISCO property are suitable for early transfer in May 1999. The Navy completed the transfer of the entire 531 acres of the former FISCO property to the Port of Oakland in June 1999. The area will be developed for intermodal marine terminal, railroad and truck cargo activities in accordance with the Vision 2000 Program.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Description:	The site is 3.08 acres and is located in the City of Oakland in Alameda County, CA. Two 10,000-gallon underground storage tanks (USTs), a pumping station, a diesel fuel dispenser, and two fill pipes were installed and used by the Santa Fe Land and Improvement Company prior to and after Department of Defense leased the property. The USTs were last used in June 1962 for diesel fuel storage and dispensing. A private individual currently owns the property and leases it to LDS Truck Lines and A.M. and S Transportation Company for use as a warehouse and truck distributing center.
Current Program:	Not reported
History:	On 15 October 1943, the War Department leased a total of 3.08 acres from the Santa Fe Land and Improvement Company. The 9th District's Transportation Officer used the site for warehousing facilities, trucking operations, and as a distribution center. The War Department terminated the lease on 15 June 1946 and the site reverted back to the Santa Fe Land and Improvement Company. In 1982 the property was sold to a private individual. There are no potential hazards related to previous DoD activities currently identified at this site.

Comments:	DTSC, City of Oakland, and Port of Oakland inspected the site on 2/27/15.
Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Correspondence
Completed Date:	09/28/2009
Comments:	DTSC has determined it is most cost effective to synchronize the review of the remedy for the City of Oakland Subaru with that of the review of the remedy for the Oakland Gateway Development Area, rather than to review the remedies separately for each site. The City of Oakland is the landowner for both the Subaru Lot and the northern portion of the Oakland Gateway Development Area. Since the City of Oakland will submit the draft five-year review report for the Oakland Gateway Development Area in May 2010, it is cost effective to combine the Subaru Lot s five-year review with that of the Oakland Gateway Development Area.
Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Land Use Restriction - Site Inspection/Visit
Completed Date:	01/20/2009
Comments:	Site inspection was conducted on 1/12/09 with the following results: The Site is vacant and there are no sensitive land uses at the Site (residential housing, schools, day-care facilities, hospitals, and hospices); No Site soil has been reused or moved outside of the Site boundary; There are no new groundwater wells constructed within the last year; There is no extraction of groundwater at the Site from new or existing wells for any purpose; and No dewatering activities have occurred on the property, there have been no violations of the Covenant, and no actions were needed by the City to ensure compliance with the Covenant.
Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Land Use Restriction - Site Inspection/Visit
Completed Date:	04/20/2010
Comments:	On March 22, 2010 DTSC, City of Oakland, and Port of Oakland inspected the Subaru Lot. DTSC found site activities consistent with the land use covenant.

CITY OF OAKLAND - SUBARU LOT (Continued) **S109034296**

Comments:	DTSC, City of Oakland, and Port of Oakland inspected the site on 1/29/13. DTSC found site activities consistent with the land use covenant.
Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Monitoring Report
Completed Date:	06/02/2015
Comments:	The City of Oakland certifies compliance with the environmental restrictions as specified in the November 18, 2004 Covenant to Restrict Use of Property, Environmental Restriction for the Subaru Lot (aka Former Parcels 6 and 7, Heroic War Dead United States Army Reserve Center).
Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	5 Year Review Reports
Completed Date:	08/29/2016
Comments:	DTSC reviewed the "Second Five-Year Review for the GDA and Subaru Lot" for the Gateway Development Area (GDA) and Subaru Lot at the former Oakland Army Base. DTSC makes the following determination: DTSC finds the implemented remedies including institutional controls continue to be protective of human health and the environment as intended by the 2002 Remedial Action Plan (RAP) for GDA and the 2004 Amendment to Final Remedial Action Plan for the Subaru Lot. No change in land use of the properties has occurred or is expected to occur since the remedies were implemented. The exposure assumptions, toxicity data, cleanup levels, and remedial action objectives (RAOs) used at the time of the remedy selection are still valid. The selected remedies and implemented remedial actions have met and continue to meet the RAOs in GDA and the Subaru Lot. DTSC recommends that post-surcharge and wicking groundwater monitoring be conducted to confirm the locations of the groundwater plumes in the subject RAP Sites so that the protectiveness of the selected remedies is not compromised.

Comments: The City of Oakland certifies compliance with the environmental restrictions as specified in the November 18, 2004 Covenant to Restrict Use of Property, Environmental Restriction for the Subaru Lot (aka Former Parcels 6 and 7, Heroic War Dead United States Army Reserve Center).

Completed Area Name: Basewide
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 08/22/2018
Comments: The Work Plan proposes soil sampling to access whether prior site activities have impacted the former suspect yard area.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 10/18/2018

CITY OF OAKLAND - SUBARU LOT (Continued) **S109034296**

Comments: DTSC has reviewed the Work Plan and has no comment. The Work Plan addresses the removal of shallow soil impacted with arsenic at concentrations above the Remediation Goal of 20 mg/kg.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction
Completed Date: 11/18/2004
Comments: The LUC for Parcels 6 and 7, also known as the Subaru lot, was recorded with the Alameda County Assessor’s Office on 11/18/04 for 19 acres. The property is restricted to industrial or commercial use, as there is residual contamniation insconsistent with sensitive uses.

Completed Area Name: Basewide
Completed Sub Area Name: Not reported
Completed Document Type: Annual Oversight Cost Estimate
Completed Date: 10/02/2014
Comments: The estimate includes DTSC oversight activity and Terradex costs.

Completed Area Name: Basewide
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 01/20/2009
Comments: The City of Oakland submitted an Annual Certification Report on 1/13/09 certifying compliance with the Covenant to Restrict Use of Property, Environmental Restriction. Site inspection was conducted on 1/12/09 with the following results: The Site is vacant and there are no sensitive land uses at the Site (residential housing, schools, day-care facilities, hospitals, and hospices); No Site soil has been reused or moved outside of the Site boundary; There are no new groundwater wells constructed within the last year; There is no extraction of groundwater at the Site from new or existing wells for any purpose; and No dewatering activities have occurred on the property, there have been no violations of the Covenant, and no actions were needed by the City to ensure compliance with the Covenant.

Completed Area Name: Basewide
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 04/20/2010
Comments: On March 22, 2010 DTSC, City of Oakland, and Port of Oakland inspected the Subaru Lot. DTSC found site activities consistent with the land use covenant.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 11/01/2012
Comments: DTSC approved the First Five-Year Review for the GDA and Subaru Lot for the Gateway Development Area (GDA) and Subaru Lot at the former Oakland Army Base with the following determination: DTSC finds the implemented remedies including institutional controls continue to be protective of human health and the environment as intended by the 2002 Remedial Action Plan for GDA and the 2004 Remedial Action Plan for the Subaru Lot. No change in land use of the properties has occurred or is expected to occur since the remedies were implemented.

CITY OF OAKLAND - SUBARU LOT (Continued) **S109034296**

With the exception total petroleum hydrocarbons (TPH), the exposure assumptions, toxicity data, cleanup levels, and remedial action objectives (RAOs) used at the time of the remedy selection are still valid. The selected remedies and implemented remedial actions have met and continue to meet the RAOs in GDA and the Subaru Lot. Due to the lack of project funding, the Regional Water Quality Control Board (RWQCB) has not been able to evaluate TPH cleanup levels. DTSC and RWQCB will address TPH RAOs once project funding resumes. DTSC has identified vapor intrusion as a new issue that would call into question the protectiveness of the remedy. On March 20, 2009, DTSC issued a letter modifying the 2002 Risk Management Plan (RMP) to address assessment of the vapor intrusion pathway at the Former Oakland Army Base Economic Development Conveyance Area. The modified RMP includes protocols for soil gas sampling and subsequent risk evaluation at all known volatile organic compound (VOC)-impacted areas that are collocated with new building construction, when specific planned land uses are determined for such areas. The current DTSC guidance on vapor intrusion does not impact the protectiveness of the remedies implemented at GDA or the Subaru Lot, but creates requirements for new location-specific screening and potential implementation of vapor intrusion mitigation measures in new construction, if needed, within VOC-impacted areas.

Completed Document Type: Correspondence
Completed Date: 09/28/2009
Comments: DTSC has determined it is most cost effective to synchronize the review of the remedy for the City of Oakland Subaru with that of the review of the remedy for the Oakland Gateway Development Area, rather than to review the remedies separately for each site. The City of Oakland is the landowner for both the Subaru Lot and the northern portion of the Oakland Gateway Development Area. Since the City of Oakland will submit the draft five-year review report for the Oakland Gateway Development Area in May 2010, it is cost effective to combine the Subaru Lot s five-year review with that of the Oakland Gateway Development Area.

Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	5 Year Review Reports
Completed Date:	08/29/2016
Comments:	DTSC reviewed the "Second Five-Year Review for the GDA and Subaru Lot" for the Gateway Development Area (GDA) and Subaru Lot at the former Oakland Army Base. DTSC makes the following determination: DTSC finds the implemented remedies including institutional controls continue to be protective of human health and the environment as intended by the 2002 Remedial Action Plan (RAP) for GDA and the 2004 Amendment to Final Remedial Action Plan for the Subaru Lot. No change in land use of the properties has occurred or is expected to occur since the remedies were implemented. The exposure assumptions, toxicity data, cleanup levels, and remedial action objectives (RAOs) used at the time of the remedy selection are still valid. The selected remedies and implemented remedial actions have met and continue to meet the RAOs in GDA and the Subaru Lot. DTSC recommends that post-surcharge and wicking groundwater monitoring be conducted to confirm the locations of the groundwater plumes in the subject RAP Sites so that the protectiveness of the selected remedies is not compromised.

Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 03/23/2009
Comments: On 3/23/09, DTSC approved the 2007 Annual Monitoring and Compliance Report (Annual Report) dated March 2008 for the Heroic War Dead East Bay Municipal Utility District (EBMUD) site, also known as the EBMUD West End Property. The Annual Report presents the results of the first bi-annual monitoring event conducted in July 2007, discusses soil disturbance activities, and serves as an annual report with site inspection summary pursuant to Section 4.02(d) of the Covenant to Restrict Use of Property, Environmental Restriction.

Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Public Notice
Completed Date:	04/18/2012
Comments:	DTSC issues the first public notice informing the community that DTSC is conducting a Five-Year Review for the EBMUD West End Property to review the current remedy for contaminated soil and groundwater.

Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Public Notice
Completed Date:	08/08/2012
Comments:	DTSC approved the Five-Year Review Report on June 28, 2012. The findings of the review confirm that the implemented remedy continues to be protective of human health and the environment and the cleanup levels have been successfully maintained. However, current standards have been adjusted and the notification area has been increased to include the Building 1064 yard. No change in land use of the property has occurred or is expected to occur. DTSC also requested that the most current lead protection standards be considered when evaluating exposure levels for on-site workers should the property be redeveloped.

Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Operations and Maintenance Plan Amendment
Completed Date:	07/11/2012
Comments:	EBMUD s 7/10/12 letter is generally consistent with what DTSC has been requesting as a result of the 2012 Five-Year Review. DTSC requested EBMUD to proceed in preparing a draft Operation and Maintenance Plan Amendment for review.

Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Operations and Maintenance Plan Amendment
Completed Date:	12/03/2012
Comments:	DTSC approved the Operation and Maintenance Plan with the following amendments: Added provisions for DTSC notification, review, and approval of soil disturbance activities at the Building 1064 yard, Updated the California Human Health Screening Level for lead when considering reuse of soil onsite, Revised the groundwater monitoring schedule as recommended by DTSC and the updated the lab analyses now performed by the EBMUD laboratory, Changed references from PV-18 PAH-impacted soil area to Building 1064 Yard , and Reduced inspection frequency from biannual to annual basis.

Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Monitoring Report
Completed Date:	10/13/2016
Comments:	This Annual Monitoring and Compliance Report (Report) discusses the following activities conducted in 2015 at EBMUD s West End Property, also known as the Heroic War Dead EBMUD : Inspection of the Property to ensure compliance with the Covenant to Restrict Use of Property, Environmental Restriction; Inspection of the engineered asphalt cap and one sampling event for the monitoring wells at the Building 1070 Yard; Soil disturbance, soil removal, or dewatering activities on the

HEROIC WAR DEAD EBMUD (Continued) **S105954429**

property during 2015; Final disposition of the soil and/or liquid, including copies of disposal manifests as appropriate; and Groundwater monitoring event and results.

Completed Area Name: Basewide
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 06/22/2017
Comments: DTSC approved the "Second Five-Year Review Report" with the following determination: DTSC finds the implemented remedy including institutional controls continues to be protective of human health and the environment. No change in land use of the property has occurred or is expected to occur since the remedy was implemented. Soils in the northwest corner of the Building 1084 Yard contain lead at concentrations exceeding the commercial/industrial California Human Health Screening Level of 320 mg/kg. EBMUD should not allow tenants, contractors, or staff to disturb soil in this area without prior DTSC notification. The Operation and Maintenance Plan should be revised to include disturbance to soil in the northwest corner of the Building 1084 Yard is prohibited without DTSC s written permission. Groundwater monitoring data collected over the past ten years indicate that leaching of lead from soil in the Building 1070 Yard continually to be minimal due to the effectiveness of the installed engineered asphalt cap. It may be possible to reduce the groundwater monitoring frequency to once every five years, coinciding with the frequency of the five-year review. EBMUD may propose amendment to the Operation and Maintenance Plan for DTSC s consideration.

Completed Document Type:	Land Use Restriction
Completed Date:	06/29/2007
Comments:	DTSC and the Army Reserve executed and recorded the Covenant to Restrict Use of Property, Environmental Restriction with the Alameda County Assessor's Office on 6/29/07. The Covenant includes the following environmental restrictions and requirements: Sensitive land uses, including, but not limited to, residential housing, schools for persons under 18 years of age, day-care facilities for children, hospitals, and hospices are prohibited. Intrusion of the cap and subsurface soil at the Building 1070 Yard is permitted only with the written approval of DTSC. Placement of Site soil outside of the Site boundary for any purpose is permitted only with the written approval of DTSC. Excavation or disturbance of Site soil deeper than 5 feet below ground surface is permitted only with the written approval of DTSC. Excavation or disturbance of soil at any depth in the vicinity of the Building 1064 Yard is permitted only with the written approval of DTSC. In emergency situation, the owner may excavate or disturb the Building 1064 Yard soil without prior DTSC approval. However, the owner must notify DTSC within twenty four (24) hours of such soil excavation or disturbance activity and manage the soil pursuant to the Operation and Maintenance (O&M) Plan. The construction of groundwater wells and extraction of groundwater from new and/or existing wells for any purpose are permitted only with the written approval of DTSC. Dewatering activities for any future construction are permitted subject to all applicable local and State requirements, including those of the California Regional Water Quality Control Board, for disposing of the liquid from dewatering activities.

Completed Date:	03/23/2009
Comments:	DTSC received the revised 2007 Annual Monitoring and Compliance Report (Annual Report) dated March 2008 for the Heroic War Dead East Bay Municipal Utility District (EBMUD) site, also known as the EBMUD West End Property. The Annual Report presents the results of the first bi-annual monitoring event conducted in July 2007, discusses soil disturbance activities, and serves as an annual report pursuant to Section 4.02(d) of the Covenant to Restrict Use of Property, Environmental Restriction. On October 30, 2008, DTSC provided

HEROIC WAR DEAD EBMUD (Continued) **S105954429**

comments on a previous draft report. DTSC has reviewed the revised Annual Report and the EBMUD s response letter dated March 17, 2009, and found the Annual Report and response letter satisfactory. DTSC hereby approves the 2007 Annual Report.

Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Monitoring Report
Completed Date:	12/06/2011
Comments:	DTSC reviewed the report and has no comment.

Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	5 Year Review Reports
Completed Date:	06/28/2012
Comments:	DTSC approved (a) the Five-Year Review Report and (b) the 2011 Annual Monitoring and Compliance Report, and made the following determination: DTSC finds the implemented remedy including institutional controls continues to be protective of human health and the environment. No change in land use of the property has occurred or is expected to occur since the remedy was implemented. The exposure assumptions, toxicity data, cleanup levels, and remedial action objectives used at the time of the remedy selection are still valid. DTSC requested the LeadSpread 8 be considered when evaluating exposure levels for on-site worker health and safety as well as for identifying site specific cleanup goals for lead-impacted soil at the time of property redevelopment DTSC requested EBMUD to modify the Operation and Maintenance Plan to apply stringent notification provisions for the PV-18 area to any soil disturbances in the Building 1064 yard.. DTSC identifies no other information that would call into question the protectiveness of the remedy.

Completed Document Type:	Monitoring Report
Completed Date:	07/24/2013
Comments:	The Annual Report discusses the following activities conducted in 2012: EBMUD conducted inspections of the property to ensure

HEROIC WAR DEAD EBMUD (Continued) **S105954429**

compliance with the Covenant and O&M Plan. No sensitive land uses, including, but not limited to, residential housing, schools for persons under 18 years of age, day-care facilities for children, hospitals, and hospices were observed on the property. No soil disturbance, excavation, or dewatering occurred on the property. EBMUD conducted inspections of the engineered asphalt cap at the Building 1070 Yard in April and October 2012. No significant cracks, settlement, or other flaws or damage to the cap were observed. Warning signs against intrusion of the cap or digging within the capped area were all clearly visible and in good condition. EBMUD conducted a groundwater sampling event at the Building 1070 Yard (wells FMW-1, FMW-2, FMW-3, FMW-4, EMW-4, MW-5, and MW-6) in April 2012. Lead in groundwater has not been detected in groundwater samples collected since the March 2008 sampling event. The seven groundwater monitoring wells appear to be functioning properly without the need for repair or maintenance.

Completed Info:

Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Consent Agreement
Completed Date:	04/07/2009
Comments:	EBMUD and DTSC entered into the Consent Agreement on 4/7/09. The purposes of this Agreement are (a) to bind EBMUD to comply with the Operation and Maintenance Plan approved by DTSC on September 29, 2008, which specifies inspection, soil management, groundwater monitoring, annual reporting, and five-year review requirements at the Site, and (b) to provide for reimbursement of DTSC’s oversight costs from EBMUD.
Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Land Use Restriction - Site Inspection/Visit
Completed Date:	03/23/2009
Comments:	On 3/23/09, DTSC approved the 2007 Annual Monitoring and Compliance Report (Annual Report) dated March 2008 for the Heroic War Dead East Bay Municipal Utility District (EBMUD) site, also known as the EBMUD West End Property. The Annual Report presents the results of the first bi-annual monitoring event conducted in July 2007, discusses soil disturbance activities, and serves as an annual report with site inspection summary pursuant to Section 4.02(d) of the Covenant to Restrict Use of Property, Environmental Restriction.
Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Land Use Restriction - Site Inspection/Visit
Completed Date:	08/09/2010
Comments:	DTSC prepared the Site Visit Summary for the 6/16/10 annual inspection of the Herioc War Dead EBMUD site.
Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Annual Oversight Cost Estimate
Completed Date:	09/26/2018
Comments:	The cost estimate projects hours to be incurred (by staff classification) for planned oversight activities in fiscal year 2018/2019, which starts July 1, 2018 and ends June 30, 2019, and identifies the personnel labor rates.
Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	*Correspondence - Received
Completed Date:	09/01/2011
Comments:	DTSC agrees that the temporary camper trailers usage, as described in EBMUD s July 12, 2011 and August 9, 2011 letters, is classified as a commercial use and not a restricted residential use pursuant to five conditions as specified in DTSC s August 31, 2011 letter.
Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Public Notice
Completed Date:	04/18/2012
Comments:	DTSC issues the first public notice informing the community that DTSC is conducting a Five-Year Review for the EBMUD West End Property to

HEROIC WAR DEAD EBMUD (Continued) **S105954429**

review the current remedy for contaminated soil and groundwater.

Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Public Notice
Completed Date:	08/08/2012
Comments:	DTSC approved the Five-Year Review Report on June 28, 2012. The findings of the review confirm that the implemented remedy continues to be protective of human health and the environment and the cleanup levels have been successfully maintained. However, current standards have been adjusted and the notification area has been increased to include the Building 1064 yard. No change in land use of the property has occurred or is expected to occur. DTSC also requested that the most current lead protection standards be considered when evaluating exposure levels for on-site workers should the property be redeveloped.

Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Operations and Maintenance Plan Amendment
Completed Date:	07/11/2012
Comments:	EBMUD s 7/10/12 letter is generally consistent with what DTSC has been requesting as a result of the 2012 Five-Year Review. DTSC requested EBMUD to proceed in preparing a draft Operation and Maintenance Plan Amendment for review.

Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Operations and Maintenance Plan Amendment
Completed Date:	12/03/2012
Comments:	DTSC approved the Operation and Maintenance Plan with the following amendments: Added provisions for DTSC notification, review, and approval of soil disturbance activities at the Building 1064 yard, Updated the California Human Health Screening Level for lead when considering reuse of soil onsite, Revised the groundwater monitoring schedule as recommended by DTSC and the updated the lab analyses now performed by the EBMUD laboratory, Changed references from PV-18 PAH-impacted soil area to Building 1064 Yard , and Reduced inspection frequency from biannual to annual basis.

Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Monitoring Report
Completed Date:	10/13/2016
Comments:	This Annual Monitoring and Compliance Report (Report) discusses the following activities conducted in 2015 at EBMUD s West End Property, also known as the Heroic War Dead EBMUD : Inspection of the Property to ensure compliance with the Covenant to Restrict Use of Property, Environmental Restriction; Inspection of the engineered asphalt cap and one sampling event for the monitoring wells at the Building 1070 Yard; Soil disturbance, soil removal, or dewatering activities on the property during 2015; Final disposition of the soil and/or liquid, including copies of disposal manifests as appropriate; and Groundwater monitoring event and results.

Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported

HEROIC WAR DEAD EBMUD (Continued) **S105954429**

Completed Document Type:	5 Year Review Reports
Completed Date:	06/22/2017
Comments:	DTSC approved the "Second Five-Year Review Report" with the following determination: DTSC finds the implemented remedy including institutional controls continues to be protective of human health and the environment. No change in land use of the property has occurred or is expected to occur since the remedy was implemented. Soils in the northwest corner of the Building 1084 Yard contain lead at concentrations exceeding the commercial/industrial California Human Health Screening Level of 320 mg/kg. EBMUD should not allow tenants, contractors, or staff to disturb soil in this area without prior DTSC notification. The Operation and Maintenance Plan should be revised to include disturbance to soil in the northwest corner of the Building 1084 Yard is prohibited without DTSC s written permission. Groundwater monitoring data collected over the past ten years indicate that leaching of lead from soil in the Building 1070 Yard continually to be minimal due to the effectiveness of the installed engineered asphalt cap. It may be possible to reduce the groundwater monitoring frequency to once every five years, coinciding with the frequency of the five-year review. EBMUD may propose amendment to the Operation and Maintenance Plan for DTSC s consideration.
Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Soils Management Plan
Completed Date:	03/28/2013
Comments:	In preparation of a new road construction, EBMUD plans to install six borings (i.e., B-5 through B-10), using 6-inch solid stem auger or 8-inch hollow-stem auger, to depths of 10 to 25 feet below ground surface. EBMUD will follow the amended November 2012 Operation and Maintenance Plan, Section 2.3.3, Site-Wide Risk Management Procedures when conducting the activities.
Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Soils Management Plan
Completed Date:	08/16/2013
Comments:	The work involves potholing to field locate underground utilities or other obstructions in five areas of the West End Property and Engineers Road. The work will include subtronic investigations and/or digging small holes up to 6-10 feet in depth. No soil will be removed from the site.
Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Soils Management Plan
Completed Date:	12/16/2013
Comments:	EBMUD plans to drill six exploratory borings on the site within the 1084 yard. Two borings will be approximately 20 feet deep; the other four borings will be 40 to 50 feet deep. EBMUD plans to test the generated soil, estimated to be approximately 2.7 cubic yards, in accordance with the Operation and Maintenance Plan for disposal determination.
Completed Area Name:	Basewide

Completed Date: 06/29/2007
Comments: DTSC and the Army Reserve executed and recorded the Covenant to

HEROIC WAR DEAD EBMUD (Continued) **S105954429**

Restrict Use of Property, Environmental Restriction with the Alameda County Assessor's Office on 6/29/07. The Covenant includes the following environmental restrictions and requirements: Sensitive land uses, including, but not limited to, residential housing, schools for persons under 18 years of age, day-care facilities for children, hospitals, and hospices are prohibited. Intrusion of the cap and subsurface soil at the Building 1070 Yard is permitted only with the written approval of DTSC. Placement of Site soil outside of the Site boundary for any purpose is permitted only with the written approval of DTSC. Excavation or disturbance of Site soil deeper than 5 feet below ground surface is permitted only with the written approval of DTSC. Excavation or disturbance of soil at any depth in the vicinity of the Building 1064 Yard is permitted only with the written approval of DTSC. In emergency situation, the owner may excavate or disturb the Building 1064 Yard soil without prior DTSC approval. However, the owner must notify DTSC within twenty four (24) hours of such soil excavation or disturbance activity and manage the soil pursuant to the Operation and Maintenance (O&M) Plan. The construction of groundwater wells and extraction of groundwater from new and/or existing wells for any purpose are permitted only with the written approval of DTSC. Dewatering activities for any future construction are permitted subject to all applicable local and State requirements, including those of the California Regional Water Quality Control Board, for disposing of the liquid from dewatering activities.

Completed Sub Area Name:	Not reported
Completed Document Type:	Soils Management Plan
Completed Date:	04/01/2009
Comments:	EBMUD plans to demolish Building 1101 and other related construction activities which will involve excavation and off-site disposal of approximately 6,850 cubic yards of soil. EBMUD also foresees dewatering of groundwater and accumulated liquid at the Building 1101 area. DTSC reviewed EBMUD s February 5, 2009 request letter and approved the request with the following reminder: 1. Please perform all soil and groundwater disturbance activities in accordance with the DTSC-approved Operation and Maintenance Plan dated September 2008, Section 2.3.3 regarding soil and liquid characterization, soil stockpiling, dust control, construction dewatering, health and safety, etc. 2. Please report the soil disturbance, soil removal, and dewatering activities, sampling data, final disposition of the soil and liquid with copies of manifests as appropriate, etc., in the upcoming annual report.

Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Operations and Maintenance Plan
Completed Date:	09/29/2008
Comments:	DTSC approved the Operation and Maintenance (O&M) Plan on 9/29/08. The O&M Plan specifies procedures for operation, monitoring, and maintenance of remedial actions implemented at the Heroic War Dead EBMUD. The plan outlines O&M procedures for: the Building 1070 Yard engineered asphalt cap, the Building 1070 Yard lead-impacted soil area, groundwater monitoring at the Building 1070 Yard area, the Building 1064 Yard PV-18 PAH-impacted soil area, and site-wide soil and groundwater/liquid management. The O&M Plan also contains requirements for annual reporting and Five-Year Reviews.

Completed Area Name:	Basewide
Completed Sub Area Name:	Not reported
Completed Document Type:	Monitoring Report
Completed Date:	03/23/2009
Comments:	DTSC received the revised 2007 Annual Monitoring and Compliance Report (Annual Report) dated March 2008 for the Heroic War Dead East Bay Municipal Utility District (EBMUD) site, also known as the EBMUD West End Property. The Annual Report presents the results of the first bi-annual monitoring event conducted in July 2007, discusses soil disturbance activities, and serves as an annual report pursuant to Section 4.02(d) of the Covenant to Restrict Use of Property, Environmental Restriction. On October 30, 2008, DTSC provided comments on a previous draft report. DTSC has reviewed the revised Annual Report and the EBMUD s response letter dated March 17, 2009, and found the Annual Report and response letter satisfactory. DTSC hereby approves the 2007 Annual Report.

Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 12/06/2011
Comments: DTSC reviewed the report and has no comment.

Completed Area Name: Basewide
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 06/28/2012
Comments: DTSC approved (a) the Five-Year Review Report and (b) the 2011 Annual Monitoring and Compliance Report, and made the following determination: DTSC finds the implemented remedy including institutional controls continues to be protective of human health and the environment. No change in land use of the property has occurred or is expected to occur since the remedy was implemented. The exposure assumptions, toxicity data, cleanup levels, and remedial action objectives used at the time of the remedy selection are still valid. DTSC requested the LeadSpread 8 be considered when evaluating exposure levels for on-site worker health and safety as well as for identifying site specific cleanup goals for lead-impacted soil at the time of property redevelopment DTSC requested EBMUD to modify the Operation and Maintenance Plan to apply stringent notification provisions for the PV-18 area to any soil disturbances in the Building 1064 yard.. DTSC identifies no other information that would call into question the protectiveness of the remedy.

Completed Document Type: Monitoring Report
Completed Date: 07/24/2013
Comments: The Annual Report discusses the following activities conducted in 2012: EBMUD conducted inspections of the property to ensure compliance with the Covenant and O&M Plan. No sensitive land uses, including, but not limited to, residential housing, schools for persons under 18 years of age, day-care facilities for children, hospitals, and hospices were observed on the property. No soil disturbance, excavation, or dewatering occurred on the property. EBMUD conducted inspections of the engineered asphalt cap at the

HEROIC WAR DEAD EBMUD (Continued) **S105954429**

	Building 1070 Yard in April and October 2012. No significant cracks, settlement, or other flaws or damage to the cap were observed. Warning signs against intrusion of the cap or digging within the capped area were all clearly visible and in good condition. EBMUD conducted a groundwater sampling event at the Building 1070 Yard (wells FMW-1, FMW-2, FMW-3, FMW-4, EMW-4, MW-5, and MW-6) in April 2012. Lead in groundwater has not been detected in groundwater samples collected since the March 2008 sampling event. The seven groundwater monitoring wells appear to be functioning properly without the need for repair or maintenance.

Background Info: OAB Heroic War Dead USAR, also known as the United States Army Re
serve Center, Oakland, is located near the eastern terminus of th
e San Francisco-Oakland Bay Bridge. Installation Restoration (IR
) Site 1 is located at the northwestern portion of the USAR Cente
r. The site consists of a wash rack (WR) which is a concrete pad
, a below-grade oil water separator (OWS), and the surrounding so
il. The WR/OWS is approximately 15-feet by 20-feet in dimension.
The site immediately surrounding the WR/OWS is unpaved and cove
red with soil and gravel. The previous owner, Oakland Army Base,
formerly used IR Site 1 to wash vehicles and engine components.
Operations ceased sometime prior to the USAR occupying the prope
rty in early 1970s. The USAR did not know of the existence of th
e WR/OWS until they were uncovered in 1994 during a grading opera
tion. The area has since been fenced to prevent unauthorized use
. Investigations reveal tha the soil contains concentrations of
petroleum hydrocarbons, metals, and volatile organic compounds (V
OCs) above regulatory guidelines. The shallow groundwater is als
o impacted with VOCs. From these results, it is surmised that th
e best course of action is to remove the WR/OWS and surrounding s
oil to minimize any further contamination to the groundwater. DT
SC has approved a Risk Assessment Workplan (RAW) for the removal
impacted soil and WR/OWS. The interim removal action would preve
nt any further degradation to the environment while aditional inv
estigation is conducted.

Site History:	From Envirostor: NO FURTHER ACTION (05/30/07): DTSC had approved the Remedial Investigation Report on 5/25/07 and inactivated the OAB Heroic War Dead USAR project on 5/30/07. The Army Reserve had requested DTSC to continue subsequent cleanup activities under a new project Oakland Army Reserve Exchange with a different funding source. Please go to Oakland Army Reserve Exchange for further project status. (Geotracker case # T10000001240) PROJECT INFORMATION: OAB Heroic War Dead USAR, also known as the United States Army Reserve Center, is located near the eastern terminus of the San Francisco-Oakland Bay Bridge. Installation Restoration (IR) Site 1 is located at the northwestern portion of the USAR Center. The site consists of a wash rack (WR) which is a concrete pad, a below-grade oil water separator (OWS), and the surrounding soil. The WR/OWS is approximately 15-feet by 20-feet in dimension. The site immediately surrounding the WR/OWS is unpaved and covered with soil and gravel. The previous owner, Oakland Army Base, formerly used IR Site 1 to wash vehicles and engine components. Operations ceased sometime prior to the USAR occupying the property in early 1970s. The USAR did not know of the existence of the WR/OWS until they were uncovered in 1994 during a grading operation. The area has since been fenced to prevent unauthorized use. Investigations reveal that the soil contains concentrations of petroleum hydrocarbons, metals, and volatile organic compounds (VOCs) above regulatory guidelines. DTSC had approved a Removal Action Workplan for the impacted soil and WR/OWS, and accepted the Removal Action Report. The Army Reserve also monitored the groundwater quality and prepared a Remedial Investigation Report.

Alternate Address: CYPRESS CORRIDOR
Alternate City,St,Zip: OAKLAND, CA 94607
Background Info: Site has been used as a railyard for approximately 90 years. Petroleum hydrocarbons and metals have been detected along the rail lines. An Imminent or Substantial Endangerment order was issued in June 1994 to Southern Pacific. In October 1997, the Remedial Investigation Report was approved. Investigations

SOUTHERN PACIFIC - DESERT RAILYARD (Continued) **S101272671**

mainly detected high boiling petroleum hydrocarbons (JB oil, motor oil or oil and grease) in the soil (fill material). Other chemicals such as lead, volatile organic compounds, polycyclic aromatic hydrocarbons, and pesticides were detected in isolated area of the Site at low concentrations. Chemicals detected in the groundwater included cis-1,2-dichloroethene and trichloroethene in isolated area.

Completed Sub Area Name:	Not reported
Completed Document Type:	Certification
Completed Date:	05/18/2010
Comments:	The Final Supplemental Site Characterization and Risk Evaluation Report summarized the results of site investigations and included a screening level risk evaluation. Based on the risk evaluation, it was concluded there is no significant human health risk with the current Site conditions and use, but there could be a significant risk should the site use change. A Land Use Covenant has been been put in place that restricts the use of the site. No further actions are required for the site except those required by the Land Use Covenant. Annual inspections are to be performed and inspection reports are to be submitted to DTSC.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	CEQA - Notice of Exemption
Completed Date:	01/05/2010
Comments:	DTSC determined that its approval of the Supplemental Site Characterization and Risk Evaluation Report, with the recommendation to place a land use covenant on the Site, was a Class 30 Categorical Exemption under the California Environmental Quality Act.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Land Use Restriction
Completed Date:	03/11/2010
Comments:	A Land Use Covenant was recorded with the Alameda County Recorder’s Office.

Completed Document Type: Certification
Completed Date: 05/18/2010
Comments: The Final Supplemental Site Characterization and Risk Evaluation Report summarized the results of site investigations and included a screening level risk evaluation. Based on the risk evaluation, it was concluded there is no significant human health risk with the current Site conditions and use, but there could be a significant risk should the site use change. A Land Use Covenant has been been put in place that restricts the use of the site. No further actions are required for the site except those required by the Land Use Covenant. Annual inspections are to be performed and inspection reports are to be submitted to DTSC.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Notice of Exemption
Completed Date: 01/05/2010
Comments: DTSC determined that its approval of the Supplemental Site Characterization and Risk Evaluation Report, with the recommendation

TKG CALIFORNIA STORAGE (Continued) **S108936104**

to place a land use covenant on the Site, was a Class 30 Categorical Exemption under the California Environmental Quality Act.

Comments: DTSC approved the Remedial Action Plan Amendment for the Subaru Lot on August 2, 2004.

Completed Area Name: P18+19+21
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Plan
Completed Date: 12/04/2006
Comments: DTSC approved the Remedial Action Plan Amendment for Parcel 18 and Subparcels 19 and 21 on December 4, 2006. The parcels total approximately 6.76 acres. The selected remedy is institutional controls that prohibit sensitive land uses, prohibit the construction of groundwater wells and the extraction of groundwater, and require implementation and enforcement plan compliance.

Completed Area Name: P18+19+21
Completed Sub Area Name: Not reported
Completed Document Type: Deed/LUR Enforcement & Implementation Plan
Completed Date: 06/29/2007
Comments: The Implementation and Enforcement Plan is Section 4.02 of the Covenant to Restrict Use of Property, Environmental Restriction. DTSC signed the Covenant on 5/21/07. The Army Reserve signed the Covenant on 6/21/07. The Army Reserve recorded the Covenant with the Alameda

OAKLAND ARMY RESERVE EXCHANGE (Continued) **S106965131**

County Assessor’s Office on 6/29/07.

Completed Area Name: P18+19+21
Completed Sub Area Name: Not reported
Completed Document Type: Finding of Suitability to Transfer
Completed Date: 06/29/2007
Comments: DTSC issued a conditional FOST Concurrence Letter to the Army Reserve on 6/14/07 stating that DTSC would concur with the subject FOST when: (a) the Army Reserve revise the environmental restriction in the FOST consistent with that in the Covenant to Restrict Use of Property, Environmental Restriction, and (b) execute the Covenant to Restrict Use of Property, Environmental Restriction, and recorded this covenant with the Alameda County Assessor s Office. The Army Reserve plans to transfer the parcels to the Port of Oakland by 6/29/07.

DTSC approved the

OAKLAND ARMY RESERVE EXCHANGE (Continued) **S106965131**

Notice of Determination on December 4, 2006 and filed the document with the State Clearinghouse on December 19, 2006.

Completed Area Name:	HWD
Completed Sub Area Name:	Not reported
Completed Document Type:	Environmental Assessment
Completed Date:	06/07/2007
Comments:	DTSC approved the Notice of Exemption for the Heroic War Dead United States Army Reserve Center, in Oakland, California. DTSC had considered the proposed project activities, and determined that the project activities would not cause a significant environmental effect. The bases for this determination were (a) the limited project scale in an industrially developed area and (b) the lack of potential resources due to prior land disturbance and current site use patterns. DTSC will file the Notice of Exemption with the State s Office of Planning and Research in the week of June 11, 2007.

Completed Area Name:	P6+7
Completed Sub Area Name:	Not reported
Completed Document Type:	Certification
Completed Date:	05/01/2009
Comments:	On August 2, 2004, DTSC approved the Amendment to Remedial Action Plan, which specified an institutional control remedy in a form of a land use covenant. The Army Reserve recorded the Covenant to Restrict Use of Property, Environmental Restriction on November 18, 2004 with the Alameda County Assessor s Office. Recordation of the covenant constitutes implementation of the remedial action. The Army Reserve and DTSC executed the Covenant to Restrict Use of Property, Environmental Restriction on November 18, 2004, which prohibits sensitive land uses, restricts construction of groundwater wells and the extraction of groundwater, and requires submittal of annual inspection reports. The City of Oakland and DTSC entered into a Consent Agreement identifying land use restrictions in the Covenant to Restrict Use of Property, Environmental Restriction. Specifically, the City of Oakland agreed to retain all inspection, certification, and reporting responsibilities as required in the Covenant, Section 4.02 and responsibility to pay all State costs associated with the administration of the Covenant pursuant to the California Code of Regulations, section 67391.1(h). The remedial action objectives were based on commercial and industrial land uses. Since residual chemicals in soil and groundwater at the site render the property not suitable for unrestricted use, five-year statutory reviews are required for this site.

Completed Document Type: Remedial Action Completion Report
Completed Date: 06/14/2007
Comments: Based upon existing information and DTSC’s oversight at Parcel 18 and Subparcels 19 and 21, DTSC has determined that the Army Reserve will have completed the required remedy pursuant to the RAP Amendment immediate upon execution and recordation of the "Covenant to Restrict Use of Property, Environmental Restriction." Covenant recordation is a required condition before the Army Reserve may transfer the subject property.

Completed Area Name: HWD
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 06/25/2009
Comments: On 6/25/09, DTSC completed the Remedial Action Certification for the "Heroic War Dead U.S. Army Reserve Center" site. The U.S. Army Reserve and East Bay Municipal Utility District implemented the remedy as selected in the Removal Action Workplan developed for the Heroic War Dead United States Army Reserve Center. Field cleanup activities included: (a) construction of an engineered asphalt cap over lead-impacted soil in the Building 1070 Yard; (b) construction of additional exploratory borings, test pits and an exploratory excavation in the Building 1064 Yard near the PV18 test pit area; and (c) installation of additional groundwater monitoring wells in the Building 1070 Yard. On 6/29/07, the Army Reserve recorded the "Covenant to Restrict Use of Property, Environmental Restriction" with the Alameda County Assessor s Office to establish land and groundwater use restrictions and require proper soil and groundwater management practices.

Completed Area Name: P18+19+21

Completed Document Type: Certification
Completed Date: 05/01/2009
Comments: On December 4, 2006, DTSC approved the Remedial Action Plan Amendment, which specified an institutional control remedy in a form of a land use covenant. The Army Reserve recorded the Covenant to Restrict Use of Property, Environmental Restriction on June 29, 2007 with the Alameda County Assessor s Office. Recordation of the covenant constitutes implementation of the remedial action. The Army Reserve and DTSC executed the Covenant to Restrict Use of Property, Environmental Restriction on June 29, 2007, which prohibits sensitive land uses, restricts construction of groundwater wells and the extraction of groundwater, and requires submittal of annual inspection reports. The Port of Oakland and DTSC entered into a Consent Agreement identifying land use restrictions in the Covenant to Restrict Use of Property, Environmental Restriction. Specifically, the Port of Oakland agreed to retain all inspection, certification, and reporting responsibilities as required in the Covenant, Section

OAKLAND ARMY RESERVE EXCHANGE (Continued) **S106965131**

4.02 and responsibility to pay all State costs associated with the administration of the Covenant pursuant to the California Code of Regulations, section 67391.1(h). The remedial action objectives were based on commercial and industrial land uses. Since residual chemicals in soil and groundwater at the site render the property not suitable for unrestricted use, five-year statutory reviews are required for this site. However, DTSC has determined that the Port of Oakland’s compliance with the annual inspection reporting requirements pursuant to the covenant would satisfy the five-year review requirement.

Completed Area Name: P18+19+21
Completed Sub Area Name: Not reported
Completed Document Type: Consent Order
Completed Date: 06/29/2007
Comments: On 6/29/07 the Army Reserve transferred Parcel 18 and Subparcels 19 and 21 at the former Oakland Army Base to the Port of Oakland. On 6/29/07 the Port of Oakland and DTSC signed the Consent Agreement, which binds the Port of Oakland to comply with the environmental restrictions for Parcel 18 and Subparcels 19 and 21 as necessary to protect human health and the environment. These environmental restrictions are consistent with the DTSC-approved 12/4/06 Amendment to Final Remedial Action Plan, Oakland Army Base, Oakland, California, for Former Parcel 18 and Subparcels 19 and 21, Oakland United States Army Reserve Center #2 .

Completed Document Type: Remedial Investigation / Feasibility Study
Completed Date: 05/29/2007
Comments: DTSC approved the Remedial Investigation/Feasibility Study Report (RI/FS) dated May 2007 for the Heroic War Dead U.S. Army Reserve Center. The RI/FS compiles, summarizes, and integrates the results of previous and current environmental studies conducted in order to identify remedial action objectives and a recommended remedial alternative for the property that is protective of human health and the environment. The work completed in support of this objective that has not previously been reported included the collection and analysis of soil samples from two areas of the property in September and October 2006 with impacts from lead and carcinogenic polynuclear aromatic hydrocarbons, screening to identify contaminants of concern, and performance of a Feasibility Study to evaluate potential remedial alternatives and to identify and describe recommended remedial actions for the entire 16-acre Heroic War Dead property.

Completed Document Type: Deed/LUR Enforcement & Implementation Plan
Completed Date: 06/29/2007
Comments: The Implementation and Enforcement Plan is Section 4.02 of the Covenant to Restrict Use of Property, Environmental Restriction. DTSC signed the Covenant on 6/18/07. The Army Reserve signed the Covenant on 6/21/07. The Army Reserve recorded the Covenant with the Alameda County Assessor’s Office on 6/29/07.

Completed Area Name: P6+7
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 06/14/2004
Comments: On 6/14/04, DTSC issued a fact sheet informing the public of the draft Amendment to the Final Remedial Action Plan Oakland Army Base (draft RAP Amendment) for the Subaru Lot and inviting the community to review and comment on the draft RAP Amendment.

Completed Area Name: HWD
Completed Sub Area Name: Not reported
Completed Document Type: Design/Implementation Workplan
Completed Date: 06/08/2007
Comments: DTSC approved the Remedial Design Work Plan for the Heroic War Dead United States Army Reserve Center, in Oakland, California. The plan details cleanup activities for the Building 1070 Yard at the Heroic War Dead site. The Army Reserve plans to complete cleanup activities in three weeks.

Completed Area Name: HWD
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 06/29/2007
Comments: Based upon existing information, DTSC’s oversight at the Heroic War Dead United States Army Reserve Center, and DTSC s review on the June 2007 Remedy Completion Report, DTSC has determined that the Army Reserve will have completed the required remedy pursuant to the Removal Action Workplan immediate upon execution and recordation of the "Covenant to Restrict Use of Property, Environmental Restriction" scheduled on 6/29/07. Covenant recordation is a required condition before the Army Reserve may transfer the subject property.

Completed Document Type: Environmental Assessment
Completed Date: 12/04/2006
Comments: DTSC approved the Remedial Action Plan Amendment for Parcel 18 and Subparcels 19 and 21 on December 4, 2006. The parcels total approximately 6.76 acres. The selected remedy is institutional controls that prohibit sensitive land uses, prohibit the construction of groundwater wells and the extraction of groundwater, and require

OAKLAND ARMY RESERVE EXCHANGE (Continued) **S106965131**

implementation and enforcement plan compliance. DTSC approved the Notice of Determination on December 4, 2006 and filed the document with the State Clearinghouse on December 19, 2006.

Completed Area Name:	HWD
Completed Sub Area Name:	Not reported
Completed Document Type:	Environmental Assessment
Completed Date:	06/07/2007
Comments:	DTSC approved the Notice of Exemption for the Heroic War Dead United States Army Reserve Center, in Oakland, California. DTSC had considered the proposed project activities, and determined that the project activities would not cause a significant environmental effect. The bases for this determination were (a) the limited project scale in an industrially developed area and (b) the lack of potential resources due to prior land disturbance and current site use patterns. DTSC will file the Notice of Exemption with the State s Office of Planning and Research in the week of June 11, 2007.

Completed Area Name:	P6+7
Completed Sub Area Name:	Not reported
Completed Document Type:	Certification
Completed Date:	05/01/2009
Comments:	On August 2, 2004, DTSC approved the Amendment to Remedial Action Plan, which specified an institutional control remedy in a form of a land use covenant. The Army Reserve recorded the Covenant to Restrict Use of Property, Environmental Restriction on November 18, 2004 with the Alameda County Assessor s Office. Recordation of the covenant constitutes implementation of the remedial action. The Army Reserve and DTSC executed the Covenant to Restrict Use of Property, Environmental Restriction on November 18, 2004, which prohibits sensitive land uses, restricts construction of groundwater wells and the extraction of groundwater, and requires submittal of annual inspection reports. The City of Oakland and DTSC entered into a Consent Agreement identifying land use restrictions in the Covenant to Restrict Use of Property, Environmental Restriction. Specifically, the City of Oakland agreed to retain all inspection, certification, and reporting responsibilities as required in the Covenant, Section 4.02 and responsibility to pay all State costs associated with the administration of the Covenant pursuant to the California Code of Regulations, section 67391.1(h). The remedial action objectives were based on commercial and industrial land uses. Since residual chemicals in soil and groundwater at the site render the property not suitable for unrestricted use, five-year statutory reviews are required for this site.

Completed Date:	06/14/2007
Comments:	Based upon existing information and DTSC’s oversight at Parcel 18 and Subparcels 19 and 21, DTSC has determined that the Army Reserve will have completed the required remedy pursuant to the RAP Amendment immediate upon execution and recordation of the "Covenant to Restrict Use of Property, Environmental Restriction." Covenant recordation is a required condition before the Army Reserve may transfer the subject property.
Completed Area Name:	HWD
Completed Sub Area Name:	Not reported
Completed Document Type:	Certification
Completed Date:	06/25/2009
Comments:	On 6/25/09, DTSC completed the Remedial Action Certification for the "Heroic War Dead U.S. Army Reserve Center" site. The U.S. Army Reserve and East Bay Municipal Utility District implemented the remedy as selected in the Removal Action Workplan developed for the Heroic War Dead United States Army Reserve Center. Field cleanup activities included: (a) construction of an engineered asphalt cap over lead-impacted soil in the Building 1070 Yard; (b) construction of additional exploratory borings, test pits and an exploratory excavation in the Building 1064 Yard near the PV18 test pit area; and (c) installation of additional groundwater monitoring wells in the Building 1070 Yard. On 6/29/07, the Army Reserve recorded the "Covenant to Restrict Use of Property, Environmental Restriction" with the Alameda County Assessor s Office to establish land and groundwater use restrictions and require proper soil and groundwater management practices.
Completed Area Name:	P18+19+21

Completed Date:	05/01/2009
Comments:	On December 4, 2006, DTSC approved the Remedial Action Plan Amendment, which specified an institutional control remedy in a form of a land use covenant. The Army Reserve recorded the Covenant to Restrict Use of Property, Environmental Restriction on June 29, 2007 with the Alameda County Assessor s Office. Recordation of the covenant constitutes implementation of the remedial action. The Army Reserve and DTSC executed the Covenant to Restrict Use of Property, Environmental Restriction on June 29, 2007, which prohibits sensitive land uses, restricts construction of groundwater wells and the extraction of groundwater, and requires submittal of annual inspection reports. The Port of Oakland and DTSC entered into a Consent Agreement identifying land use restrictions in the Covenant to Restrict Use of Property, Environmental Restriction. Specifically,

OAKLAND ARMY RESERVE EXCHANGE (Continued) **S106965131**

the Port of Oakland agreed to retain all inspection, certification, and reporting responsibilities as required in the Covenant, Section 4.02 and responsibility to pay all State costs associated with the administration of the Covenant pursuant to the California Code of Regulations, section 67391.1(h). The remedial action objectives were based on commercial and industrial land uses. Since residual chemicals in soil and groundwater at the site render the property not suitable for unrestricted use, five-year statutory reviews are required for this site. However, DTSC has determined that the Port of Oakland's compliance with the annual inspection reporting requirements pursuant to the covenant would satisfy the five-year review requirement.

Completed Document Type:	Remedial Investigation / Feasibility Study
Completed Date:	05/29/2007
Comments:	DTSC approved the Remedial Investigation/Feasibility Study Report (RI/FS) dated May 2007 for the Heroic War Dead U.S. Army Reserve Center. The RI/FS compiles, summarizes, and integrates the results of previous and current environmental studies conducted in order to identify remedial action objectives and a recommended remedial alternative for the property that is protective of human health and the environment. The work completed in support of this objective that has not previously been reported included the collection and analysis of soil samples from two areas of the property in September and October 2006 with impacts from lead and carcinogenic polynuclear aromatic hydrocarbons, screening to identify contaminants of concern, and performance of a Feasibility Study to evaluate potential remedial alternatives and to identify and describe recommended remedial actions for the entire 16-acre Heroic War Dead property.

Site History:	From Envirostor: The Oakland Army Reserve Exchange (Site) consists of three non-contiguous properties near the eastern terminus of the San Francisco-Oakland Bay Bridge. The Site includes (1) the Heroic War Dead United States Army Reserve Center at 2400 Engineer Road, Oakland, California, 16 acres, (2) former Base Realignment and Closure (BRAC) Parcels 6 and 7 (also known as the Subaru Lot), 19 acres, at the former Oakland Army Base, and (3) former BRAC Parcels 18 and portions of former BRAC Parcels 19 and 21, 6.76 acres, at the former Oakland Army Base. These areas total to approximately 42 acres. The United States Army Reserve is the property owner of the Site. The Headquarters, United States Army, 63D Regional Readiness Command in Los Alamitos, California is managing all operations at the Site. Previous site assessment and investigation efforts reveal that the Site is potentially impacted in soil and groundwater with metals, volatile organic compounds, semi-volatile organic compounds, pesticides, polychlorinated biphenyls, and total petroleum hydrocarbons. Detailed chemical data for the Site would be available upon completion of remedial investigation. The Site area was principally intertidal mudflats as late as the early 1930s. Landfilling activities created the land for the development of industrial, commercial, and military facilities. Since the mid-1930s, the Site vicinity has been used for industrial, shipping and maritime, and military and government agency facilities and activities. The Site is composed of office buildings, maintenance and storage buildings, and open lots used to support mission requirements for the Heroic War Dead United States Army Reserve Center. The current land use includes the following: United States Army Reserve administration, vehicle maintenance and repair operations, and medical equipment and vehicle storage activities. DTSC issued a Conditional Remedy Completion Letter for Parcels 6 and 7 in August 2004. On June 7, 2007, DTSC approved the Removal Action Workplan, Heroic War Dead United States Army Reserve Center, Oakland, California. The Army Reserve and the East Bay Municipal Utility District (EBMUD) implemented the remedy as selected in the Removal Action Workplan. The June 2007 Remedy Completion Report documents the field cleanup activities consisting of: (a) constructing an engineered asphalt cap over lead contaminated soil in the Building 1070 Yard, (b) advancing additional exploratory borings, test pits, and an exploratory excavation in the Building 1064 Yard near the PV18 test pit area, and (c) installing additional groundwater monitoring wells in the Building 1070 Yard. The Army Reserve and EBMUD implemented field cleanup activities in general accordance with the DTSC approved Remedial Design Work Plan dated June 2007 for the site. The Army Reserve recorded the Covenant to Restrict Use of Property, Environmental Restriction with the Alameda County Assessors Office on June 29, 2007. DTSC effectively approved the Remedy Completion Report on June 29, 2007. The Army Reserve transferred the Heroic War Dead to EBMUD on June 29, 2007; and former BRAC Parcels 18 and portions of former BRAC Parcels 19 and 21 to the Port of Oakland on June 29, 2007. DTSC and the Port of Oakland signed a Consent Agreement on June 29, 2007.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA’s Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

CA FID UST: Facility Inventory Database
The Facility Inventory Database (FID) contains a historical listing of active and inactive underground storage tank locations from the State Water Resource Control Board. Refer to local/county source for current data.

Date of Government Version: 10/31/1994	Source: California Environmental Protection Agency
Date Data Arrived at EDR: 09/05/1995	Telephone: 916-341-5851
Date Made Active in Reports: 09/29/1995	Last EDR Contact: 12/28/1998
Number of Days to Update: 24	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

CERS TANKS: California Environmental Reporting System (CERS) Tanks
List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs.

Date of Government Version: 10/22/2018	Source: California Environmental Protection Agency
Date Data Arrived at EDR: 10/23/2018	Telephone: 916-323-2514
Date Made Active in Reports: 11/30/2018	Last EDR Contact: 01/24/2019
Number of Days to Update: 38	Next Scheduled EDR Contact: 05/06/2019
	Data Release Frequency: Quarterly

Local Land Records

LIENS: Environmental Liens Listing
A listing of property locations with environmental liens for California where DTSC is a lien holder.

Date of Government Version: 11/29/2018	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 12/04/2018	Telephone: 916-323-3400
Date Made Active in Reports: 01/11/2019	Last EDR Contact: 02/27/2019
Number of Days to Update: 38	Next Scheduled EDR Contact: 06/17/2019
	Data Release Frequency: Varies

LIENS 2: CERCLA Lien Information
A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 12/12/2018	Source: Environmental Protection Agency

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

	Data Release Frequency: Annually

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association’s annual survey of hospitals.
Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.
Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.
Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics’ primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.
Private Schools

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AEI Consultants were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

NOTIFICATION OF INTENT

TO ENTER VOLUNTARY REMEDIAL ACTION AGREEMENT

To: California Department of Toxic Substances Control
San Francisco Bay Regional Water Quality Control Board

From: Teena Le, Environmental Health Technician
Alameda County Department of Environmental Health (ACDEH)

Date: November 14, 2017

This provides written notice that Alameda County Department of Environmental Health has received a request and intends to enter into a Voluntary Remedial Action Agreement with the responsible party pursuant to Health and Safety Code Section 101480 in approximately 10 working days.

The following information is provided:

(a) The name and address of the Responsible Party is Urban Designs LLC, 1201 Pine St. #151, Oakland, CA 94607

(b) The name and address of the site owner is California Department of Transportation, 111 Grand Ave, Oakland, CA 94612

(c) The Voluntary Remedial Action Agreement will apply to 800 Cedar St, Oakland, CA

(d) The purpose of the Remedial Action Agreement will be to investigate the extent of soil and groundwater contamination as a result of a release(s) from a gasoline station. Site is under contract and a mixed commercial/residential redevelopment is proposed.

URBAN DESIGNS, LLC

1.0 INTRODUCTION

This Construction Soil and Groundwater Management Plan (SGMP) has been prepared by P&D Environmental, Inc. of Oakland, California (P&D) on behalf of Urban Designs, LLC (Urban Designs) for earthwork activities associated with the redevelopment project of 800 Cedar Street in Oakland, California (***Figure 1***) with Alameda County Assessor Parcel Number (APN) 006-047-1 (the Site) for what is identified on the Alameda County parcel viewer page as 800 Cedar Street. Cedar Street no longer exists, and the site is bounded on the east by Pine Street. The Site is currently vacant with a concrete surface covering almost all of the property. The redevelopment project ("Project") consists of (1) demolition of the existing concrete cover; (2) grading and soil excavation for utilities, elevator shafts, and foundations; and (3) construction of multi-story, mixed-use residential buildings and landscaped areas.

1.1 Lead Regulatory Oversight Agency for Environmental Site Cleanup

Soil and groundwater at the Site has been impacted from historical land use practices on-Site and potentially off-Site. Alameda County Department of Environmental Health's (ACDEH) Local Oversight Program for Hazardous Materials Releases (LOP) is the lead regulatory oversight agency for the environmental investigation and cleanup actions at the Site under Site Cleanup Program Case (SCP) No. RO0003269. A separate LOP Case No. RO0000417 was historically associated with a former Underground Storage Tank (UST) release that was located on a portion of the former Phoenix Iron Works that is no longer a portion of the existing property.

Due to the presence soil and groundwater contamination at the Site corrective actions are necessary to safely prepare the Site for development. Corrective actions include: (1) on-Site consolidation of lead-contaminated soil; (2) capping lead impacted soil on-Site beneath building foundations, hardscape and/or clean fill; (3) installation of a vapor mitigation barriers; and (4) installation of trench plugs in utility trenches where required to mitigate vapor migration.

A Site map showing the historical locations of USTs is attached as ***Figure 2***. No ground floor plan is presently available for the project. A complete record of environmental Site investigations at the Site may be obtained in the case files for RO0003269 (i.e., available regulatory directives and correspondence, reports, analytical data, etc.) through review of both the State Water Resources Control Board's GeoTracker database, and the ACDEH website at http://www.acgov.org/aceh/index.htm.

1.2 SGMP Purpose & Objectives

This SGMP is designed to provide Urban Designs and the construction team with guidance for the proper handling and management of contaminated soil and groundwater during redevelopment activities.

The goals of this SGMP are to provide detailed information regarding known environmental conditions at the Site and establish a decision-making structure to assist the construction team in the identification and management of contaminated media, when and if they are encountered. The objectives of this SGMP are as follows:

- Communicate information to Site construction workers about Site environmental conditions;
- Present protocols for appropriate community protection;
- Present guidelines for health and safety precautions for on-Site workers who may access soil or groundwater that could contain residual chemicals of concern;
- Present notification and reporting requirements;
- Present protocols for management of known contaminated soil or extracted groundwater generated during Site redevelopment activities; and
- Present contingency procedures in the event that localized areas of unanticipated chemically-affected soil or other subsurface features of environmental concern are encountered during earthwork or excavation activities;

2.0 RESPONSIBILITY FOR SGMP IMPLEMENTATION

Representatives for the property Owner will oversee implementation of the SGMP at the Site. A copy of this SGMP will be maintained at the Site at all times. The Owner and General Contractor(s) will make all third-party subcontractors working at the Site aware of the requirements of the SGMP, and provide an electronic copy and hard-copy to all subcontractors that are performing activities covered by this SGMP and who may encounter suspect subsurface conditions during execution of their work.

The project Environmental Consultant will be present to assist the Owner and contractors with the implementation of this SGMP when ground-disturbing activities are being conducted in areas where contamination is known or suspected or when unknown conditions are encountered.

2.1 Activities Covered by the SGMP

The following activities constitute the work covered under this SGMP.

- **Subsurface Construction or Repair** – any activity occurring beneath the grade level of existing or future ground surface;
- **Utility Line Work** – any subterranean inspection, excavation, or repair of electrical, telephone, water, sanitary sewer or storm drains occurring within or outside of existing vaults (conducted prior to excavation); and

- **Other** – other subgrade activities not expressly listed a love (e.g., deep landscaping work, sub-slab work, etc.)

2.2 Project Construction Team Contact Information

Prior to the initiation of construction activities that are covered under this SGMP, the Owner will confirm the Owner's project representative and project Environmental Consultant listed below. Regular and 24-hour emergency contact information for these individuals will be confirmed and updated as necessary. A project contact sheet will be provided to the General Contractor and posted in an accessible and suitable location at the Site.

Project Role	Company Name	Name	Contact Information
Owner Representative	Urban Designs, LLC	David Schenker	(510) 588-5134; david@hollidaydevelopment.com
General Contractor	Cannon Constructors North, Inc.	Larry Pace	(415) 546-5500; LPace@cannongroup.com
Environmental Consultant	P&D Environmental, Inc.	Paul King	(510) 658-6916; paul.king@pdenviro.com

2.3 Worker Health and Safety

In addition to following the SGMP, each Contractor and subcontractor is responsible for the safety of its employee and Site visitors including but not limited to adherence to a health and safety plan and use of property-trained personnel:

- **Preparation of a Site-Specific Health and Safety Plan (HASP)**. A HASP will be prepared for the project in accordance with California Occupational Safety and Health Administration (CAL-OSHA) Construction Safety Orders within Title 8 of the California Code of Regulations (CCR). The General Contractor is responsible for notifying subcontractors and visitors of pertinent environmental conditions to ensure adequate protection for workers and visitors while on Site. Subcontractors may either adopt the General Contractor's HASP or prepare their own HASP. In the event that unanticipated conditions occur at the Site, the HASP will be modified accordingly.

- **Use of Properly-Trained Personnel**. Each contractor engaged in contact and management of contaminated soil or groundwater will use properly trained personnel in accordance CCR, Title 29, Part 1910.120 Hazardous Waste Operations and Emergency Response (HAZWOPER) standards.

2.4 Community Protection During Site Redevelopment

Land use in the vicinity of the Site is mixed commercial and residential. A map of the land use in the immediate vicinity of the Site is presented on ***Figure 1***. During the development of the Site, the Owner and contractors will implement measures to control potential risks to the surrounding community from fugitive dust emissions. These activities will be implemented when there is the potential for exposed soil to affect the nearby community. It is anticipated that following placement of hardscapes and building pads, air monitoring will not be required as there will not be exposed soil surfaces.

2.5 Agreement and Acknowledgement Statement

Prior to commencement of any Site activities that disturb the ground surface, the General Contractor and subcontractors of the Owner will read this plan and sign the Agreement and Acknowledgement Statement (***Appendix A***) to certify that they have read, understood and agreed to abide by its provisions.

3.0 AGENCY NOTIFICATION & REPORTING REQUIREMENTS

The Owner will notify the ACDEH and other agencies as applicable during Site development activities in accordance with the protocols described below.

3.1 ACDEH Notification

The Owner will notify the ACDEH and the ACDEH Certified Unified Program Agency (CUPA) during Site redevelopment activities in accordance with the protocols below.

3.1.1 Twenty-four (24) Hour Notification

The ACDEH will be notified within 24 hours of discovery if any of the following potentially hazardous conditions are encountered:

- Releases spills or releases of hazardous substances or petroleum hydrocarbons to soil or water that are considered, based on best professional judgment and/or physical evidence (including but not limited to olfactory, visual, field instrument, and lab data), to be an immediate threat to human health and the environment; and/or

- Discovery of unknown conditions (underground storage tanks, sumps, vaults, piping, etc.) or newly found contamination.

In the event of the discovery of USTs, vaults, hoists, & pipelines, the ACDEH CUPA must also be notified within 24 hours of the discovery.

3.1.2 Seventy-two (72) Hour Notification

The ACDEH will be notified 72 hours in advance of ground disturbing activities in areas of known contamination or suspected contamination.

3.1.3 ACDEH and CUPA Contact Information

The primary points of contact for the ACDEH LOP and CUPA are provided below. All agency notifications must be made by phone and email. An ACDEH contact sheet will be provided to the General Contractor and posted in an accessible and suitable location at the Site.

Drew York, ACDEH Case Worker	(510) 639-1276; Andrew.York@acgov.org
Paresh Khatri, ACDEH Program Manager	(510) 777-2478; paresh.khatri@acgov.org
ACDEH CUPA	(510) 567-6700 dehalamedacers@acgov.org

3.2 Other Agency Notification

In addition to the ACDEH notification requirements discussed above, other agency notifications may be required. Contact information for other agency notifications that may be required is provided below. Prior to the initiation of construction activities that are covered under this SGMP, the Owner will confirm the contact information listed below. An agency contact sheet will be provided to the General Contractor and posted in an accessible and suitable location at the Site.

Conditions Posing an Immediate Threat. For life-threatening or serous hazardous materials incidents, the following number will be contacted immediately upon discovery.	
Local police, fire and rescue services	911
Releases to Water. For spills or releases of hazardous substances or petroleum hydrocarbons to surface water, the following agencies will be contacted immediately upon discovery.	
National Spill Response Center	(800) 424-8802
United States Coast Guard – San Francisco Sector (if spill is going to reach navigable waters)	(415) 399-3547
California Office of Emergency Services	(800) 852-7550; (916) 845-8911
California Regional Water Quality Control Board – San Francisco Bay Region	(510) 622-2300
Local Emergency Response Agency	911
VOC-Impacted Soil. If VOC-impacted soil is discovered during Site grading activities, the following agency will be notified.	

Bay Area Air Quality Management District (BAAQMD)	(415) 749-4900
Dust Complaints. For dust complaints during ground disturbing activities, the following agencies will be notified.	
City of Oakland Building Department	(510) 238-3381
BAAQMD	800-334-ODOR (6367)

3.3 LMC Record Keeping & Reporting Requirements

All groundwater removal and soil excavation, disposal and import activities will be documented in daily field reports by the Contractor and/or Environmental Consultant and will kept at the Site and made available to ACDEH upon request. Documentation will include at a minimum the following, as applicable:

- **Groundwater** – volume of groundwater that is removed, characterization, treatment, and destination (transported to temporary holding tanks, used as dust suppression, and/or disposed of off-Site);

- **Underground Structures** – type, contents, characterization, and destination (abandoned in place or disposed of off-Site);

- **Impacted Soil** – origin, volume, characterization, and destination (transported to temporary soil locations within the Site, disposed of off-Site, and/or re-used on Site);

- **Imported Soil** – origin, volume, characterization, and destination (location on-Site);

- **Off-Site Disposal Records** – date, time, trucking company, driver and vehicles used for the trip, equipment decontamination and tarping, waste/material type, volume, copies of bills-of-lading, and hazardous waste manifests; and

- **Dust Complaint Logs** – time, name and contact information, complaint description, earthwork activities associated with complaint, and measures taken to mitigate dust;

- **Analytical Reports** – copies of waste characterization laboratory analytical results.

Following completion of the work covered by this SGMP, the Environmental Consultant will prepare a report for submittal to ACDEH that documents compliance with this SGMP including soil and/or groundwater sampling, removal and management of unknown structures, chemical analysis and proper disposal of contaminated materials and soil import. The report will include at a minimum the information described in Section 3.3 above.

4.0 ENVIRONMENTAL SITE CONDITIONS

Soil and groundwater has been impacted at the Site from historical Site use and potentially from off-Site sources. A summary of known environmental conditions in soil and groundwater is provided below. Tabulated results of analytical data with figures showing the sample collection locations are provided in ***Appendix B***. ***Figures 4 through 7*** of this SGMP show the locations of contaminants historically detected at the Site at concentrations exceeding regulatory agency screening levels. All historical borehole locations are shown in attached ***Figure 3***; historical locations of petroleum and PAHs detected in soil at concentrations exceeding Tier 1 screening levels are shown in attached ***Figure 4***; historical locations of lead detected in soil at concentrations exceeding Tier 1 screening levels are shown in attached ***Figure 5***; historical locations of Total Petroleum Hydrocarbons (TPH) and Volatile Organic Compounds (VOCs) detected in groundwater at concentrations exceeding Tier 1 screening levels are shown in attached ***Figure 6***; historical locations of metals detected in groundwater at concentrations exceeding Tier 1 screening levels are shown in attached ***Figure 7***; and the historical locations of VOCs detected in soil gas at concentrations exceeding Tier 1 screening levels are shown in attached ***Figure 8***.

4.1 Soil

The concrete cover at the Site is underlain by fine to medium sand and silty sand, with poorly graded sand encountered on the eastern portion of the Site and silty sand predominantly encountered in the western portion of the Site. Where both lithologies are encountered, the poorly graded sand overlies the silty sand. Known soil contamination includes the following:

- **Petroleum Impacts.** Elevated concentrations of petroleum-related compounds, detected as Total Recoverable Petroleum Hydrocarbons (TRPH), Total Petroleum Hydrocarbons as Diesel (TPH-D), and Total Petroleum Hydrocarbons as Motor Oil (TPH-MO) have been detected at concentrations exceeding Tier 1 soil screening levels at only a limited number of locations on the western side of the property at depths of 1.5 feet bgs or less (see ***Figure 4***). TRPH, TPH-D and TPH-MO have also been detected in soil at concentrations exceeding Tier 1 soil screening levels at locations to the west of the current property boundary (see ***Figure 4***). Petroleum related Volatile Organic Compounds (VOCs) such as Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX) have only been detected in soil at very low concentrations in soil (below Tier 1 soil screening level concentrations) during historical removal activities of a former gasoline and two former solvent Underground Storage Tanks (USTs). Polyaromatic Hydrocarbons (PAHs) have only been detected on-Site in soil at two locations in the western portion of the Site at a depth of 0.5 feet bgs at concentrations exceeding Tier 1 soil screening levels, at one location to the west of the existing property (see ***Figure 4***).

- **Lead Impacts.** Lead is encountered at concentrations exceeding the Tier 1 soil screening level at a limited number of locations at the Site at a depth of 0.5 to 1.0 feet bgs. Additionally, lead exceeding the Tier 1 soil screening level is encountered on the western edge of the property at one location at a depth of 3.0 feet bgs and at a second location at a depth of 7.0 feet bgs (see ***Figure 5***). During earthwork activities soil excavated to achieve Site grades and construct building foundations that contains lead concentrations exceeding Tier 1 soil screening levels will be consolidated on Site with on-Site burial beneath building foundations, hardscape, or clean fill material.

4.2 Groundwater

Unconfined groundwater has been encountered at depths of approximately 9 to 10 feet bgs. Petroleum hydrocarbons (TPH-D, TPH-MO and TPH Bunker Oil (TPH-BO)) and volatile organic compounds (benzene, trichloroethylene (TCE), and chloroform) are present in groundwater at concentrations exceeding Tier 1 groundwater screening levels beneath the eastern and southern portions of the Site (see ***Figure 6***). Additionally, dissolved metals (barium, beryllium, chromium, lead, and nickel) have also historically been detected at concentrations exceeding Tier 1 groundwater screening levels beneath the eastern and southern portions of the Site (see ***Figure 7***).

4.3 Discovery of Unexpected Conditions

Due to historical Site use as a commercial iron foundry, redevelopment activities may reveal unexpected conditions such as previously unidentified areas of contamination or underground structures such as USTs, vaults, hoists, sumps, maintenance pits, pipelines, etc. In the event that unexpected conditions are discovered during Site development that indicate the presence of contamination, the contractor is to stop work at the location of the discovery and notify the general contractor or the property owner of the discovered conditions. The area where the conditions have been discovered will be cordoned off and identified with caution tape and workers will be directed to not enter the area until the area has been evaluated by the general contractor or the owner and authorization has been provided by the general contractor or owner to resume work in the are identified with caution tape. Work may continue in the vicinity of the area identified with caution tape outside the area identified with caution tape.

See also section 6.3 below for procedures associated with discovery of unexpected conditions.

5.0 PRE-FIELD ACTIVITIES

The pre-field activities include a description of planning and organizational aspects of soil excavation required for excavation to begin.

5.1 Site Security and Access

During remedial activities, the Site will be secured to provide protection and safety to on-Site personnel and equipment, and to prevent unauthorized access to areas of remedial activity. A 6-foot high chain link fence exists around the perimeter of the Site and encloses the staging area and the work zones (*i.e.*, any exclusion, decontamination, and support zones). During non-working hours, the fencing will be fully closed and locked. During remedial activities, access will be restricted to authorized personnel only.

5.2 Traffic Control

Caution will be exercised during entrance and exiting of the work area to ensure safe and uninterrupted traffic flow. Entrance into and departure from the Site by trucks will be facilitated by a flagman, or comparable contractor personnel, as necessary. Once trucks have left the Site, they will follow specific haul routes to disposal facilities as described in the Transportation Plan, Section 5.3.5.

5.3 Excavation Permit

All necessary permits for removal activities, transportation, and/or air quality will be obtained prior to remediation. The permits will be kept on-Site and made available for inspection during working hours.

The procedures proposed for remediation activities will comply with federal, State and local rules and regulations, regardless of whether permit documents are required.

5.4 Notifications and Utility Clearance

The general contractor or owner will notify the Bay Area Air Quality Management District (BAAQMD) of excavation activities at least five days prior to implementation. In addition, the general contractor or owner will also notify ACDEH of the soil excavation activities at least 72 hours prior to commencing work. The proposed excavation areas will be marked in white paint prior to contacting Underground Service Alert (USA) at least 48 hours prior to excavating, as required by law. A private utility locating service will be contracted prior to conducting the field activities to mark and/or clear proposed excavation locations relative to the presence and/or marked locations of potential subsurface utilities.

6.0 SOIL MANAGEMENT

Redevelopment activities include grading of the Site. Site grading will include removing the top concrete cover of Site material (pavement, fill material) and excavating soil in conjunction with installation of utility trenches, elevator shafts, and building foundations. Lead-impacted soil will be excavated under the observation of the Environmental Consultant in the areas shown on ***Figure 5*** prior to completing general grading activities during Site redevelopment. Any excess soil generated during grading may be temporarily stockpiled on-Site and either re-distributed for re-compaction on-Site as part of Site grading activities, or transported off-Site for disposal.

All soil management and handling activities will be conducted in accordance with applicable federal, state, and local regulations. During implementation of the project other data may be collected for profiling purposes and to further refine the quantities and classification of potential waste materials that may be generated.

6.1 Excavation of TPH- and PAH-Contaminated Soil

TPH- and PAH-impacted soil at the Site exceeds residential human health risk-based screening levels at a limited number of locations (see ***Figure 4***). Excavation of TPH- and PAH-impacted soil will be conducted in the following general sequence:

- Develop staging areas, access paths for equipment, work zones, and decontamination areas for use during handling of contaminated soil to reduce the potential of tracking waste off-Site;

- Identify locations of perimeter air monitoring stations, as necessary, and begin monitoring to comply with BAAQMD regulations, the HASP, and the protocols in Section 10.0 of this SGMP;

- Excavate and stockpile soil for characterization or direct load onto trucks for appropriate off-Site disposal.

- Environmental consultant will collect discrete confirmation soil samples from locations where TPH- and PAH-impacted soil has been removed in accordance with the Site Remedial Action Plan to confirm that impacted soil has been removed. Areas where impacted soil has been excavated will not be filled without written authorization from the general contractor or owner.

6.2 Excavation of Lead-Contaminated Soil

Lead-impacted soil at the Site exceeds residential human health risk-based screening levels at a limited number of locations (see ***Figure 5***). Excavation of lead-impacted soil will be conducted in the following general sequence:

- Develop staging areas, access paths for equipment, work zones, and decontamination areas for use during handling of contaminated soil to reduce the potential of tracking waste off-Site;

- Identify locations of perimeter air monitoring stations, as necessary, and begin monitoring to comply with BAAQMD regulations, the HASP, and the protocols in Section 10.0 of this SGMP;

- Remove lead-impacted soil that requires consolidation to locations that have been designated for on-Site consolidation.

- The environmental consultant will collect discrete confirmation soil samples from locations where lead-impacted soil has been removed in accordance with the Site Remedial Action Plan to confirm that lead-impacted soil has been removed. Areas where lead-impacted soil have been excavated will not be filled without written authorization from the general contractor or owner.

6.3 Contingency Measures for Previously Unidentified Suspect Soils

The following contingency measures will be implemented in the event that previously unidentified suspected chemically-affected soil is identified during Site excavation. All contingency measures will be conducted by HAZWOPER-trained environmental professionals in accordance with the HASP.

Additionally, as a precaution, the Environmental Consultant will be present during excavation and grading activities in areas of historical underground storage tanks, subsurface anomaly detections, and deeper soil contamination (as shown on ***Figures 2 and 5***) in the event that unexpected contamination or subsurface structures are encountered.

6.3.1 Identification of Contaminated Soil

The Contractor will be instructed to report indicators of contaminated soil, in particular, petroleum hydrocarbons. The three primary physical indicators of petroleum-related contamination in soil include staining, sheen, and petroleum-like odor, as described below:

- **Staining:** Generally, soil that is impacted with petroleum hydrocarbons exhibits gray, black or green staining, although other contaminants and natural conditions may also cause staining.

- **Sheen:** Sheen is another indication of petroleum contamination. Soil exhibiting sheen may appear shiny and reflective. Sheens from heavily impacted soil may appear iridescent with rainbow-like colors.

- **Odor:** Soil impacted with petroleum products, volatile organics, and other types of contamination may release vapors when exposed to the atmosphere. These vapors can be interpreted as an odor. Odor can be subjective, and inhalation of vapors from impacted soil is harmful to human health. Therefore, odor is considered a qualitative field indicator and should not be used for continuous screening of soil.

If soil exhibiting evidence of contamination is encountered during excavation, the Contractor will cease excavation activities in the area and notify the general contractor, the property owner, or the Environmental Consultant within 24 hours. The Contractor will not conduct any work in the area of concern or replace any known or suspected contaminated soil in the excavation area without prior approval by either the general contractor or the property owner. The general contractor or the property owner will not provide authorization for work within the suspected contaminated area without authorization from the ACDEH.

6.3.2 Preliminary Assessment

Preliminary assessment of the previously unidentified suspect soil will include confirmation that access control measures installed by the General Contractor are adequate to provide necessary protection to on-Site workers and the public during the evaluation phase. Confirmation will consist of visual assessment of the installed barriers as well as monitoring of the air outside the control area.

Air sampling will be conducted around the perimeter of the secured area using a combination photoionization detector (PID) meter to measure volatile organic compounds (VOCs) in the breathing zone and a lower explosive limit (LEL)/oxygen (O_2) meter to measure concentrations of combustible gases and available oxygen. If the air sampling suggests that the control measures are improperly positioned to provide necessary protection to on-Site workers, the barriers will be relocated as necessary.

The Environmental Consultant will conduct a preliminary assessment to determine if the previously unidentified suspect soil is considered a significant risk to human health or the environment. If field observations suggest that the suspect conditions are *de minimis* and: (1) do not present a threat to human health or the environment; or (2) would generally not be subject of an enforcement action if brought to the attention of appropriate governmental agencies; then the Environmental Consultant will terminate the contingency plan process and release the suspect areas to the General Contractor.

6.3.3 Evaluation of Previously Unidentified Suspect Soil

If conditions in the suspect area are not considered *de minimis*, the Environmental Consultant will notify the ACDEH on behalf of the Owner within 24-hours of discovery and evaluate the nature and extent of the potentially chemically-affected soil in accordance with the protocols below.

- **In-Situ Soil Samples.** An in-situ soil sample will be collected from the same location and depth as the previously unidentified suspect soil and at 1-foot below this depth. Additional samples will also be collected at the same depths at a minimum of four step-out locations to assess soil conditions around the suspect sample location. The four step-out locations will be located approximately 5 feet to the north, south, east, and west of the suspect sample location. The dimensions of the area of evaluation can be adjusted to a larger dimension vertically and horizontally based on the size of the impacted area. Each sample will be collected as a relatively undisturbed sample using a stainless steel tube and observed for evidence of odors and staining and screened for VOCs using a PID. If any of the in-situ soil samples show evidence of odors and staining or VOCs are detected above 10 parts per million by volume (ppmv) then environmental sample(s) will be retained for analyses.

- **Stockpiled Soil Samples.** If previously unidentified suspect soil is stockpiled on-Site, discrete samples will be obtained for off-Site disposal using stainless steel tubes at a frequency and for analytes specified by the disposal facility. For re-use at the Site soil samples will be collected at a frequency and for analysis as specified in the Department of Toxic Substances Control (DTSC) *Information Advisory – Clean Imported Fill Material* (2001). .

- **Laboratory Analysis.** Following soil sample collection, the containers will be labeled for identification and immediately placed in a chilled, thermally insulated cooler containing ice. The cooler containing the samples will then be delivered under chain-of-custody protocol to a state-certified laboratory. Any sample compositing will be performed at the laboratory. Laboratory analysis will be performed in accordance with requirements set forth by the disposal facility. For consideration for re-use of the soil at the Site, the following laboratory analysis:
    - TPH-G using EPA Method 5030B in conjunction with modified EPA Method 8015B.
    - TPH-D and TPH-MO using EPA Method 3550 in conjunction with modified EPA Method 8015B.
    - VOCs (including MTBE, benzene, toluene, ethylbenzene, and xylenes (MBTEX), and fuel oxygenates and lead scavengers, and naphthalene) using EPA Method 8260B.
    - SVOCs (including PAHs) using EPA Method 8270C.
    - Organochlorine Pesticides by EPA Method 8081.
    - PCBs by EPA Method 8082.
    - CAM 17 metals using EPA Method 6020.
    - If necessary, extractable metals tests (i.e., leaching test including waste extraction test [WET] and/or toxicity characteristic leaching procedure [TCLP] procedures) will be conducted on the samples with elevated total metals concentrations to establish if the soils are hazardous based on their leaching characteristics.

After the evaluation is complete, the Environmental Consultant will provide the Owner, General Contractor and the ACDEH with conclusions regarding potential risks of the suspect material to human health and the environment as well as recommendations for proper management of the affected soil. All soil removal and soil re-use work will be approved by the ACDEH prior to implementation. If VOC-affected soil is encountered, notification will be provided to BAAQMD as required in the guidelines and notification requirements set by Regulation 8, Rule 40 of the BAAQMD Rules and Regulations for aeration of contaminated soil.

6.4 Reuse of Concrete & Soil Importation

Reuse of crushed concrete or use of imported fill material will be characterized and approved by ACDEH prior to being placed at the Site in accordance with the DTSC *Information Advisory – Clean Imported Fill Material* (2001) and the New Jersey Department of Environmental Protection *Guidance for Characterization of Concrete and Clean Material Certification for Recycling* (updated January 12, 2010). Discrete samples will be collected from the import source for characterization and specific laboratory analyses will be based on the fill source characteristics. The analytical results of the import soil samples will be compared to applicable screening criteria to evaluate whether the material is suitable for import to the Site.

7.0 CONTINGENCY MEAUSURES FOR DISCOVERY OF UNEXPECTED UNDERGROUND STRUCTURES

If any previously unidentified or unknown underground structures including tanks, vaults, sumps, containment structures, separators, or piping that has previously contained or has the potential to contain hazardous materials is encountered during Site grading activities, the contractor will provide notification to the general contractor or owner so that the general contractor, owner, or Environmental Consultant can provide notification to the ACDEH and CUPA within 24-hours of the discovery and consulted on appropriate next steps. USTs may be identified during grading and Site excavation activities by the presence of vent pipes that extend above the ground surface, product distribution piping that leads to the UST, fill pipes, backfill materials, or the underground structure itself. Other buried structures may not have features that extend above ground surface, and could be discovered only after contact with construction equipment.

The removal or burying of any of these structures without prior acknowledgement and approval form ACDEH is prohibited. Discovered structures will be assessed as follows:

- The structure will be inspected to assess whether it contains any indication of chemical residuals or free-phase liquids other than water. This assessment will be conducted by the Environmental Consultant, and will be based on visual evidence and the results of vapor monitoring using a PID. Under no circumstances will any personnel enter an unknown subsurface structure at any time. If chemicals are not indicated within the structure by the above-referenced means and with ACDEH approval the structure may be removed or abandoned in place in a safe manner by the contractor;

- If liquids or solids are present within the structure, measures will be taken to contain the liquids to avoid spills to the subsurface. Samples will be collected and submitted to a California-certified laboratory for analysis. Liquids or solids may be temporarily drummed, or liquids may be collected by vacuum truck, while analysis is pending. Based on analytical results, the liquids or solids will be disposed of under the direction of the Environmental Consultant in accordance with all applicable environmental laws and disposal requirements;

- If contaminated liquid or solids are present in the structure, the structure will be inspected for physical integrity following removal of the contaminated media. The Environmental Consultant will document the results of this inspection, including an estimation of the volume and former use of the structure.

- If the physical inspection of the structure suggests that chemicals may have been released to the underlying soils additional environmental investigations of the underlying soils will be conducted to assess whether a release sufficient to warrant removal has occurred.

- If, based on the opinion of the Environmental Consultant and ACDEH, it is assessed that the structure is intact, that subsurface releases of the chemicals to the underlying soils likely did not occur, and no free-phase liquids or chemical residues remain inside, removal of the structure may not be required for environmental reasons.

- Otherwise, with ACDEH approval, the structure will be excavated and disposed of at the direction of the Environmental Professional. Once the structure is removed, soils adjacent to and beneath the structure will be assessed for contamination through visual observation and organic vapor analysis and the results documented. If soils are determined to be "contaminated" with VOCs in the context of BAAQMD Rule 8-40, the appropriate response will be determined in consultation with ACDEH.

ACDEH may require further response actions based on the discovery of hazardous materials that pose an unreasonable risk to human health and safety or the environment.

8.0 GROUNDWATER MANAGEMENT

Groundwater at the Site is typically encountered at depths 9 to 10 feet bgs. As the excavation is at most approximately 6 feet (for elevator pits), construction dewatering is not anticipated. If dewatering of an excavation will be necessary during construction activities, a wastewater discharge permit will be obtained from the East Bay Municipal Utility District (EBMUD) for discharging water encountered during construction activities to the sanitary sewer system. Alternatively, water removed from the ground will be containerized and evaluated for alternate disposal methods that will be approved by the ACDEH prior to implementation.

If dewatering effluent is to be discharged to the storm drain, a National Pollutant Discharge Elimination System (NPDES) permit from the Regional Water Quality Control Board. Permits will be obtained from the City of Oakland Public Works Department and/or the East Bay Municipal Utility District (EBMUD) if dewatering effluent is discharged to the City of Oakland sanitary sewer system.

Chemical testing will be performed in accordance with the receiving facility's requirements prior to discharge. If concentrations exceed the limits established for the discharge point, the dewatering effluent will either will be (1) transported off-Site for disposal at a licensed disposal facility or (2) treated and discharged following sampling and analysis to confirm the success of treatment.

9.0 WASTE MANAGEMENT

9.1 Soil Characterization Prior to Off-Site Disposal

Soil that has been pre-characterized by in-situ soil testing and is intended for off-Site disposal can be loaded directly into trucks for transport to the receiving facility once the appropriate off-Site disposal location acceptance approval has been provided. Some soil may need to be placed in temporary on-Site stockpiles because: (1) they require further characterization prior to off-Site disposal; (2) short-term storage is necessary until haul trucks are available to transport the soil off-Site for disposal; or (3) the need for processing or sorting prior to landfilling. If soil is not adequately characterized to directly load and haul then it may be necessary to stockpile and sample. Stockpiled soil will be characterized as required by the receiving facility.

Soil considered for re-use at the Site will be tested in accordance with methods described in section 6.3.3 of this SGMP. In the event very elevated data are found in a four-point composite sample, the Environmental Consultant may elect, in consultation with the Owner, to have the four individual subsamples analyzed for that specific compound in an attempt to isolate the soils containing the highest concentrations for disposal evaluation.

9.2 Soil Stockpile Management

Soil that is placed in temporary stockpiles will be well maintained at all times to prevent run-on/runoff and fugitive dust emissions. All stockpiled soil will be placed on impermeable plastic sheeting (minimum 6-mil-thick) with a berm around the perimeter of the stockpile. The plastic sheeting and berm will prevent the runoff of soil and potential contaminants to surrounding areas. The berm will be constructed with hay bales, dimensional lumber, or other equivalent methods. The bottom plastic sheeting will be lapped over the berm materials, and the soil stockpile will be covered with plastic sheeting to prevent erosion or leaching of contaminants to underlying soil and prevent exposure to precipitation and wind. Plastic sheeting that covers the soil stockpile will be secured using sand bags or equivalent. Following removal, the soil stockpile area will be restored to a pre-stockpile condition. Residual plastic or debris will also be disposed of following stockpile removal.

9.3 Decontamination Procedures

In order to prevent residual contamination from leaving the Site by construction equipment and personnel during remedial excavation activities, the following decontamination procedures will be followed:

- Prior to loading excavated materials into trucks, plastic sheeting will be placed on the ground such that any spilled material will be prevented from contacting the ground surface. Upon completion of loading, any debris will be placed in the transportation vessel and the plastic sheeting will be reused, or disposed of.

- To minimize the spread of contaminated soil, equipment will be cleaned prior to movement out of active work zones. The equipment wheels/tires will be cleaned over plastic sheeting by means of shovels and stiff-bristled brooms or brushes or by power washing until they are fully cleaned. Upon completion of cleaning, any debris will be placed in the appropriate transportation vessel, fluids will be containerized, and the plastic sheeting will be folded and disposed of. The rinsate water will be distributed over contaminated soil (to be exported) for dust control purposes. Equipment exiting the Site will be inspected and logged for compliance with the Site decontamination requirements.

- Personal protective equipment, such as disposable coveralls, will be removed and discarded in the contamination reduction zone. In order to decontaminate reusable items such as work boots, a two-stage decontamination process will be used. This process will include washing in a detergent solution with a stiff-bristled brush and rinsing in clean water. The rinsate water will be distributed over contaminated soil (to be exported) for dust control purposes.

9.4 Off-Site Soil Disposal & Transportation Plan

Following acceptance of the excavated soil at an appropriate-licensed disposal facility, the soil will be loaded in licensed haul trucks (such as end-dumps or transfers) and transported off the Site following appropriate California and Federal waste manifesting procedures. The appropriate waste manifest documentation will be provided to truck drivers hauling the affected soil off-Site.

Transportation equipment will be chosen to safely transport the expected volumes of soil, taking into consideration the types of roads to be traveled and their loading capacity. Routine truck maintenance and repairs will be performed at the contractor's premises prior to picking up loads of waste material from the Site.

As each truck is filled, an inspection will be made to verify that the waste soil is securely covered, to the extent practicable, and that the tires of the haul trucks are reasonably free of accumulated soil prior to leaving the Site. During loading, dust and odor emissions will be monitored and mitigated as necessary. During transportation, the hauling trucks will be equipped to fully cover all soil and debris, such as with a heavy tarpaulin. A street sweeper will be made available, as needed, to keep the loading area clean. The soil will be wetted, as necessary, to reduce the potential for dust generation during loading and transportation activities.

A detailed log of the loads hauled from the Site will be maintained. The log will include, at a minimum, the date and the time trucks were loaded and off-loaded, the destination, size (volume and weight) of the load, description of contents, name and signature of the hauler, and name and signature of the contractor's representative. The waste will be off-loaded for treatment or disposal in a manner consistent with current Federal, State, and local regulations. Shipments of hazardous waste will be tracked with the appropriate hazardous waste manifests.

9.4.1 Off-Site Disposal Facilities

If soil is classified as hazardous waste by State and Federal standards, it will be disposed of at a licensed and approved hazardous waste disposal facility.

If soil is classified as non-hazardous waste by State and Federal standards, it will likely be disposed of at a Class II licensed landfill facility such as:

- Waste Management's Altamont Landfill in Livermore, California;
- Republic Services' Vasco Road Landfill in Livermore or Keller Canyon Landfill in Pittsburg, California;
- Waste Connections' Potrero Hills Landfill in Suisun City, California: or
- Republic Services' Forward Landfill in Manteca, California.

9.4.2 Transportation Plan

All transportation activities will be performed in strict compliance with all regulations and ordinances. Hauling contractor(s) used to transport non-hazardous or hazardous waste will be fully licensed and permitted by the State of California. For hazardous waste haulers, the selected transportation company will be certified by the State of California as a hazardous waste hauler, and appropriately permitted to haul contaminated waste material. All Department of Transportation (DOT) and California Highway Patrol (CHP) safety regulations will be strictly followed by both hazardous and non-hazardous waste haulers.

Transportation routes will be developed to minimize transporting the affected soil through residential areas. The affected soil will be transported via surface streets to the closest suitable freeway, which is Interstate 880. The proposed routes for transportation to and on Interstate 880 will be established upon selection of the appropriate landfill(s).

9.5 Wastewater and Groundwater Management Protocols

Wastewater generated during Site redevelopment, such as decontamination liquids, will be temporarily stored on-Site. Decontamination water will be profiled and transported to an appropriate disposal or recycling facility, or will be distributed over contaminated soil (to be exported) for dust control purposes.

If a saturated zone is encountered during earthwork activities that produces accumulated water, the water will be temporarily containerized on-Site.. Holding tanks will be staged on the existing hardscape (i.e. concrete or asphalt) where feasible.

Collected wastewater and groundwater will be transferred into a vacuum truck, pumper truck, totes, 55-gallon steel drums, or other appropriate vessel for off-Site transportation and disposal.

9.6 Spill Response Plan

In the event of a spill, the Contractor will be responsible and prepared to respond in a safe and efficient manner, specific to the particular spill situation. Standards will be set and consistent procedures will be used for handling of spills, whether they are on-Site spills or spills occurring during transportation. Haulers will have an Emergency Spill Contingency Plan (ESCP) to ensure that all drivers and dispatchers know their responsibilities in the unlikely event that an accidental spill occurs while transporting contaminated material off-Site. The drivers and dispatchers will be required to know the procedures for emergency spill response. The ESCP will meet or exceed all Federal, State, and County regulations currently in effect. The provisions of the ESCP will be strictly adhered to, in order to ensure continued protection of the public safety and the environment. The HASP will address the handling of on-Site spills.

10.0 Dust and Odor Emissions

During excavation activities, depending on soil and weather conditions, there is potential to generate airborne dust and fugitive emissions. Standard dust and fugitive emissions control measures will be followed during the ground disturbing activities to comply with OSHA and BAAQMD rules and accomplish the following goals:

- Reduce the potential for health impacts to workers;
- Reduce the potential for health impacts to facility neighbors;
- Prevent violations of ambient air quality standards;
- Minimize nuisance dust complaints from facility neighbors; and
- Minimize the migration of contaminants adhered to fugitive dust particles outside the Site.

10.1 Erosion, Dust, and Odor Control Measures

Once the pre-construction ground surface is stripped from the Site, the exposed soil will become susceptible to erosion by wind and water. Therefore, erosion control measures and dust control measures will be in place before construction begins. Emission (dust) control measures will at a minimum comply with those established by OSHA and the BAAQMD for construction-related activities. Dust control measures will be based on "Best Management Practices" and will be used throughout all phases of construction.

10.1.1 Construction Mitigation Measures

The following basic construction mitigation measures will be implemented in accordance with recommendations for all proposed projects in the BAAQMD California Environmental Quality Act Air Quality Guidelines (BAAQMD, 2017):

- All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) will be watered two times per day;
- All haul trucks transporting soil, sand, or other loose material off-Site will be covered;
- All visible mud or dirt track-out onto adjacent public roads will be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited;
- All vehicle speeds on unpaved roads will be limited to 15 miles per hour (mph);
- All roadways, driveways, and sidewalks to be paved will be completed as soon as possible. Building pads will be laid as soon as possible after grading unless seeding or soil binders are used;
- Idling times will be minimized either by shutting equipment off when not in use or by reducing the maximum idling time to 5 minutes (as required by the California airborne toxics control measure CCR Title 13, Section 2485). Clear signage will be provided for construction workers at all access points;
- All construction equipment will be maintained and properly tuned in accordance with manufacturer‘s specifications. All equipment will be checked by a certified mechanic and determined to be running in proper condition prior to operation; and
- A publicly visible sign with the telephone number and person to contact at the Lead Agency regarding dust complaints will be posted. This person will respond and take corrective action within 48 hours. The BAAQMD’s phone number will also be visible to ensure compliance with applicable regulations.

Dust level monitoring of air will be conducted to evaluate the potential exposure to Site personnel and to off-Site downwind receptors. The presence of airborne dust will be evaluated through the use of real time personal sampling equipment and perimeter air sampling. If the difference between the upwind and downwind dust monitoring levels exceeds 50 micrograms per cubic meter ($\mu g/m^3$), additional dust control methods (i.e., applying additional water to disturbed areas) will be implemented.

10.1.2 Dust Suppression Measures

If dust is excessive, some or all of the following mitigation procedures may be implemented:

- Active areas adjacent to residences may need to be kept damp at all times.
- Apply water or (non-toxic) soil stabilizers to unpaved access roads, parking areas, and staging areas.
- Sweep (with water sweepers) paved access roads, parking areas, and staging areas.
- Cover or otherwise stabilize exposed soil stockpiles.
- Suspend construction activities that cause visible dust plumes and odors to extend beyond the limits of the Site.

10.1.3 Odor and Vapor Suppression Measures

By controlling the dust as described above, the emission of odor and vapors will be reduced to levels that likely will not pose a risk to the health of the public and Site workers. The water spray used to control dust will also significantly reduce the emissions of any potential volatiles that may be present in the soil. The selective loading and transportation of impacted soils could minimize the use of soil stockpiling, further reducing potential emissions of volatiles. Any active stockpile of contaminated soil or exposed excavation left overnight at the Site will be properly covered with plastic so emissions of volatiles will be minimized.

If odor is excessive and vapor emissions are detected, some or all of the following mitigation procedures may be implemented:

- Use of chemical suppressants mixed with water and applied using various applications such as spray or mist;
- Use of plastic sheeting to cover the sidewalls of open excavations during non-active remedial activities will minimize the migration of VOCs and odors;
- Alternative work sequencing, such that excavation of soil with potential odor during mid- day or afternoon (during hot weather) is avoided;
- Any highly odorous soil could be segregated and placed inside a roll-off bin equipped with a lid. This will minimize the amount of highly odorous soil during loading; and
- Balancing the excavation with transportation so that the need for large stockpiles is reduced.

Other emissions include exhaust from remediation equipment. The equipment proposed for the Site redevelopment will be maintained properly so that exhaust emissions will be within acceptable standards.

10.2 Air Monitoring

To the extent feasible, the presence of airborne contaminants will be evaluated through the use of portable monitoring equipment. Information gathered will be used to ensure the adequacy of the levels of protection being employed at the Site, and may be used as the basis for upgrading or downgrading levels of personal protection, at the discretion of the Site Safety Officer. In addition, this sampling equipment will be utilized to monitor the potential for the migration of contaminants off-Site (i.e. fence line monitoring). Such monitoring will incorporate off-Site receptor type, wind direction, work tasks being performed, etc.

The following air sampling equipment will be utilized for Site monitoring:

- Personal sampling pumps with appropriate sample collection media; and
- Dust monitors.

The above instruments will serve as the primary instruments for personal exposure monitoring. They will be utilized to fully characterize potential employee exposure and the need for equipment upgrades/downgrades.

10.2.1 Integrated Industrial Hygiene Sampling

Integrated Industrial Hygiene (IH) sampling for airborne contaminants and dust will be conducted during the excavation process and/or loading operation. This IH sampling will be performed to properly characterize potential employee exposures and/or to establish baseline levels. Sampling may include personnel monitoring and fence line sampling. The duration of such monitoring will be determined based upon analytical results, regulatory requirements, etc.

10.2.2 Real-Time Air Monitoring During Excavation of Contaminated Soil

Dust monitoring will also be conducted to characterize the potential for exposure to Site personnel during excavation of contaminated soil using a direct-reading dust monitor. Continuous monitoring will also be performed during operations that have not previously been characterized. After initial Site screening, monitoring will be conducted periodically or anytime Site conditions might be altered (i.e. weather, drilling, excavation, spills, etc.).

Results of monitoring information will be recorded, and will include time, date, location operations, and any other conditions that may contribute to potential exposures. Maintenance and calibration information will be maintained and made available upon request. The monitoring equipment will be calibrated in accordance with the manufacturer's specifications, and the records of such maintained with the project HASP.

Real-time air monitoring for respirable dust will be performed during the first three days of excavation of contaminated soil. The objective of the perimeter air-monitoring program is to protect the health and safety of the nearby community and to document the effectiveness of the dust control measures.

The Site Health and Safety Officer will determine the air monitoring locations based on Site operations and the location of areas that could be adversely impacted by air emissions. In general, real-time monitoring will be conducted downwind and around the perimeter of relevant activities. Monitoring locations will be documented on a monitoring log, along with any concentrations detected.

The dust standard will be based on the PM10 ambient air quality standards adopted by BAAQMD, which specifies a ceiling level of no more than 50 micrograms per cubic meter ($\mu g/m^3$) difference between upwind and downwind sampling locations. The ceiling level of 50 $\mu g/m^3$ represents the Bay Area 24-hour time-weighted average standard for 10 micron diameter particulate matter (the PM10 24-hour standard).

The perimeter of the work area will be monitored while excavation of contaminated soil is being conducted. If any readings exceed action levels, work will be stopped, engineering controls will be implemented and the work and monitoring schedule will be adjusted until background level concentrations are achieved.

Real-time dust monitors will be used to measure mass concentrations of airborne dust and provide respirable dust, expressed as concentration of particulates smaller than 10 microns (PM10) correlated measurements. A handheld respirable air monitor (mini-RAM) will be used to provide real-time data on total dust levels as PM10. Real-time worker dust monitoring will be performed continuously during work activities where soil disturbance is anticipated, downwind of active excavations. Measurements of real-time and time-weighted averages (TWA) of airborne particulate concentrations will be recorded using a Monitoring Instruments for the Environment, Inc. (MIE) RAM, model PDR-1000 (miniRAM) or equivalent equipment. The miniRAM measures the concentration of airborne particulate matter using a high sensitivity nephelometer (photometer) using a light scatter sensor. The sensitivity of the miniRAM is reported to range from 0.001 milligrams per cubic meter (mg/m3) to 400 mg/m3. The miniRAM will be calibrated daily in the supplied calibration pouch.

Real-time monitoring will consist of the following activities:

- Determine the predominant wind direction;
- Place one instrument upwind of Site operations for ambient sampling;
- Place one or more instrument(s) downwind of Site operations, at the Site Perimeter;
- Position the instrument probe near the normal breathing zone and monitor for approximately five minutes after instrument readings have stabilized; and

- Record the following observations and readings in real-time:
    - Location;
    - Time;
    - Site activity;
    - Readings;
    - Visual observations of dust;
    - Site conditions, including current weather conditions; and
    - Odors and/or other miscellaneous observations.

11.0 STORM WATER MANAGEMENT

Other environmental controls may be required in the event that anticipated conditions at the Site change. In the event that remediation activities occur during the rainy season, then water management procedures will be implemented in addition to probable modifications of other plans, such as the HASP. The following procedures will be implemented at the Site during the rainy season:

- The weather forecast will be monitored. During the days heavy rain is forecasted, remediation activities may be stopped;

- The boundary of the remediation area will be properly bermed to prevent storm water from entering or leaving the remediation area;

- Storm water entering the remediation area from non-impacted areas and storm water originating within the excavated area will be pumped to settlement tanks and treated prior to discharge under permit;

- The excavation will be conducted in small sections so that the exposed excavated area can be covered immediately if heavy rains occur;

- Procedures will be used to prevent wet soil from sticking to the tires of trucks used to haul soil off Site. These procedures may include plastic sheeting at the loading area, a tire wash at Site egress paths, and/or a stabilized gravel construction entrance; and

- Plastic sheeting will be used extensively to cover the area of excavation during non-working hours.

In general, the excavation will be kept as dry as possible in order to minimize the waste generated and the backfilling (as necessary) of the excavation. Storm water best management practices (BMPs) will be followed in accordance with the contractors Storm Water Pollution Prevention Plan (SWPPP) to be prepared for the Site. The BMPs for the Site development activities should include: use of fiber rolls; inlet protection; stabilized construction entrance; landscape and paving; street cleaning and catch basin cleaning.

Notes:

1. Analyses conducted in general accordance with the U.S. Environmental Protection Agency Method listed. DHS-LUFT = Department of Health Services Leaking Underground Tank Manual method.
2. Sample depths reported in approximate meters (m) / feet (ft) below the ground surface.
3. Concentrations reported in milligrams per kilogram.
4. ND = not detected in concentrations exceeding the listed reporting limit.
5. VOCs = volatile organic compounds. SVOCs = semivolatile organic compounds. TPHg = total petroleum hydrocarbons as gasoline. TPHd = total petroleum hydrocarbons as diesel. TRPH = total recoverable petroleum hydrocarbons.
6. Soil samples labeled as follows: boring no.-depth-sample tube no. with 1 being from the bottom. Ex.: P1-0.5': boring P-1, 0.5-foot depth.

Notes:
1. Metals analyses conducted in general accordance with U.S. Environmental Protection Agency (EPA) Methods 6010 and 7471.
2. Sample depths reported in approximate meters (m) / feet (ft) below the ground surface.
3. Concentrations reported in milligrams per kilogram.
4. ND = not detected in concentrations exceeding the listed reporting limit.
5. Soil samples labeled as follows: boring no.-depth. Ex.: P1-0.5': boring P-1, 0.5-foot depth.
6. TTLC = Total Threshold Limit Concentration.
7. 10X STLC = 10 times the Soluble Threshold Limit Concentration. Values listed in milligrams per liter.
8. PRG = preliminary remediation goal established for the Cypress area of investigation by the Office of Scientific Affairs. PRG for chromium is for trivalent chromium.
9. Bold results equal or exceed 10X STLC values. Bold and italics results equal or exceed the TTLC. Underlined results equal or exceed the PRG.

P-26	0.15	0.5	70	**10**	
TTLC			1,000		
STLC				5.0	
TCLP					5.0
Reporting Limit			1.0	0.050	0.050

Notes:

1. TTLC = total threshold limit concentration. STLC = soluble threshold limit concentration. WET = waste extraction test. TCLP = toxicity characteristic leaching procedure.
2. Sample depths reported in approximate meters (m) / feet (ft) below the ground surface.
3. WET conducted in general accordance with California Title 22 procedures. TCLP extraction and metal analyses conducted in general accordance with U.S. Environmental Protection Agency methods.
4. Total metal results reported in milligrams per kilogram. WET and TCLP results reported in milligrams per liter.
5. ND = not detected in concentrations exceeding the listed reporting limit.
6. Soil samples labeled as follows: boring no.-depth. Ex.: P1-0.3 - boring P-1, 0.3-meter depth.
7. Bold values exceed the TTLC, STLC, or TCLP.

Reporting Limits		0.05	0.05	5.0	0.002 to 0.0071	0.01 to 0.05

Notes:

1. Analyses conducted in general accordance with the U.S. Environmental Protection Agency Method listed. DHS-LUFT = Department of Health Services Leaking Underground Tank Manual method.
2. Sample types: GW = groundwater grab sample. ER = equipment rinse sample.
3. Concentrations reported in milligrams per liter (mg/l).
4. ND = not detected in concentrations exceeding the listed reporting limit.
5. VOCs = volatile organic compounds. SVOCs = semivolatile organic compounds.
   TPHg = total petroleum hydrocarbons as gasoline. TPHd = total petroleum hydrocarbons as diesel.
   TRPH = total recoverable petroleum hydrocarbons.
6. Groundwater samples labeled as follows: boring no.-GW. Ex.: P-1-GW for the groundwater sample collected from boring P-1.

Notes:

1. Metals analyses conducted in general accordance with U.S. Environmental Protection Agency (EPA) Methods 6010 and 7471. TDS analysis conducted in general accordance with EPA Method 160.1.
2. Sample type: GW = groundwater grab sample. ER = equipment rinse sample.
3. Concentrations reported in milligrams per liter.
4. TDS = total dissolved solids.
5. Bold results exceed drinking water standard levels.
6. ND = not detected in concentrations exceeding the listed reporting limit.
7. Groundwater samples labeled as follows: boring no.-GW. Ex.: P-1-GW for the groundwater sample collected from boring P-1.
8. CA MCL = California primary maximum contaminant level (MCL). CA 2 MCL = California secondary MCL. US MCL = U.S. primary MCL. US 2 MCL = U.S. secondary MCL.

SUBJECT: LIMITED SUBSURFACE INVESTIGATION REPORT
(GW1, GW2, and SG1 Through SG3)
Former Phoenix Iron Works
800 Pine Street
Oakland, CA

Dear Mr. Holliday:

P&D Environmental, Inc. (P&D) has prepared this report documenting a limited subsurface investigation performed at 800 Pine Street in Oakland, California (historically known as 800 Cedar Street, however Cedar Street no longer exists). The purpose of the investigation was to perform a limited evaluation of the presence of Volatile Organic Compounds (VOCs) that were historically detected at the subject site. A total of two boreholes, designated as GW1 and GW2, were hand augered to depths of 10.2 and 10.0 feet below the ground surface (bgs), respectively, on August 10 and 11, 2017 for groundwater grab sample collection. Additionally, three soil gas wells, designated as SG1, SG2, and SG3 were installed on August 10, 2017 with the collection of soil gas samples from the soil gas wells for the evaluation of VOCs in soil gas at the site on August 14, 2017.

A Site Location Map is attached as Figure 1 and a Site Aerial Photograph showing the sample collection locations is attached as Figure 2. All work was performed under the direct supervision of a professional geologist.

BACKGROUND

A search of the State Water Resources Control Board's (SWRCB) Geotracker website lists the subject site address as 888 Cedar Street and as an active Leaking Underground Storage Tank (LUST) site. There are no documents associated with the Geotracker case for the subject site, except for a directive letter from the Alameda County Department of Environmental Health (ACDEH) dated July 3, 2008 outlining Geotracker upload requirements for the site.

A search of the ACDEH Local Oversight Program's (LOP) website shows various miscellaneous historical documents and correspondence including the following documents:

- Preliminary Endangerment Assessment (PEA) Volume II for 800 Cedar Street dated November 1993 and prepared by On-Site Technologies (OST),

- Underground Storage Tank Closure Report for Cypress "B" Freeway Reconstruction Project - Phoenix 800 Area "T" dated November 27, 1995 and prepared by OGISO Environmental.

Review of the November 1993 PEA shows that OST reports that the site is located along a portion of the then proposed reconstruction of the I-880 Cypress structure by the California Department of Transportation (Caltrans). The original Cypress structure was demolished following its collapse during the Loma Prieta Earthquake in 1989. Additionally, the PEA identifies the following company names and past site activities:

- The Dunn Cracker Co. from approximately 1889 to 1902,
- California Bedding & Upholstery Co. from approximately 1902 to 1912,
- A soap factory from some period of time between 1912 and 1931,
- California Fireworks from approximately 1923 to 1927,
- Independent Iron Works from 1924 to approximately 1960,
- Pine Iron Works from some unknown time until 1990,
- J&A Machine shop from 1985 through at least the date of the PEA,
- Phoenix Iron Works from approximately 1970 through at least the date of the PEA,
- Michael Bondi Metal Design from 1985 through at least the date of the PEA,
- Cypress Auto Parts from 1970 through at least the date of the PEA, and
- Ivan's Auto Body, Unknown Plastic Bag Co., Vennell Steel, and Terminal Manufacturing were located at the subject site at unknown dates and for unknown durations.

A search of the Department of Toxic Substances Control (DTSC) Envirostor website shows that the site is listed as a Voluntary Cleanup site located at 800 Cedar Street and as an Inactive open case as of September 3, 2010. The Envirostor summary page for the site lists only diesel as a potential contaminant of concern and only soil for a potentially impacted media. The Envirostor summary page also states that the site is part of the Cypress Freeway Reconstruction Project as well as having been historically used as an iron works plant that occupied the entire block bounded by Shorey, 9th, Pine, and Cedar (no longer exists) Streets. When the iron works plant went out of business, the building was subdivided into 5 bays and subsequently leased to commercial tenants including machine shops, iron works, auto parts dismantlers, and other manufacturing. The subject site building is reported to have been demolished in July 1995. The former location of Cedar Street (west side of subject site) is shown on Figure 2.

Envirostor also mentions the approval of proposed excavation of 104 cubic yards of soil on January 13, 1998 and the last available activity listed is dated February 27, 2012 and states that sampling activities were complete and that results were expected in 60 days. Among the documents on Envirostor were the following:

- Site Investigation Report for Highway 880, Cypress Reconstruction - Area 4 dated August 28, 1992 and prepared by Geo/Resource Consultants, Inc.,
- Sampling and Analysis Plan Phase II Soil Investigation for 800 Cedar Street dated July 14, 2011 and prepared by Northgate Environmental Management, Inc. (Northgate)

Other documents obtained and reviewed by P&D are as follows:

- Site Investigation Report for 800 Cedar Street dated March 8, 2000 and prepared by IT Corporation,
- Phase II Soil Investigation Report for 800 Cedar Street dated November 9, 2011 and prepared by Northgate,
- Soil Stockpile Sampling Report for 800 Cedar Street dated December 31, 2013 and prepared by Geocon Consultants, Inc.

FIELD ACTIVITIES

Prior to performing field activities, drilling permits W2017-0632 and W2017-0633 were obtained from Alameda County Public Works Agency (ACPWA), site access was arranged, the drilling locations were marked with white paint, Underground Service Alert was notified for underground utility location, a health and safety plan was prepared, and notification of the drilling dates was provided to ACPWA.

Continuous Coring and Groundwater Sample Collection

P&D personnel oversaw hand augering at locations GW1 and GW2 on August 10 and 11, 2017, respectively, (see Figure 2) for the collection of groundwater grab samples to evaluate the presence of VOCs in groundwater at the subject site.

All hand augering was performed by IMX, Inc. of Oakland, California (IMX) using a 3.5-inch outside diameter hand auger. Borehole GW1 was hand augered on August 10, 2017 to a total depth of 10.2 feet bgs and borehole GW2 was hand augered on August 11, 2017 to a total depth of 10.0 feet bgs.

The soil from the boreholes was logged in the field in accordance with standard geologic field techniques and the Unified Soil Classification System (USCS), and was evaluated with a Photoionization Detector (PID) equipped with a 10.6 eV bulb that was calibrated with a 100 parts per million (ppm) isobutylene standard. The soil was also evaluated for other evidence of contamination such as odors, staining, and discoloration. No elevated PID values, odors, staining, or discoloration were detected in the boreholes. Copies of the boring logs are attached with this report in Appendix A.

Groundwater was first encountered in boreholes GW1 and GW2 at depths of approximately 8.2 and 8.7 feet bgs, respectively. Following verification of the presence of groundwater in each borehole a temporary 1-inch diameter slotted PVC pipe was placed into the borehole. One groundwater grab sample was collected from each of boreholes GW1 and GW2 directly from the discharge tubing into 40-milliliter Volatile Organic Analysis (VOA) vials that contained hydrochloric acid and also into unpreserved 1-liter amber glass containers which all were sealed with Teflon-lined screw caps. The VOA vials were overturned and tapped to ensure that no air bubbles were present, and the bottles were then labeled and transferred to a cooler with ice until they were transported to the laboratory. Chain of custody procedures were observed for all sample handling. No odor or sheen was detected on the water purged from either of the boreholes or on any of the water samples. No subsequent water levels were measured.

Boreholes GW1 and GW2 were grouted on August 10 and 11, 2017, respectively, with neat cement using the temporary PVC casing as a tremie pipe. All drilling and sampling equipment was cleaned with an Alconox solution followed by a clean water rinse prior to use in each borehole, and all temporary PVC casing and tubing used for sample collection was new and unused. All soil generated during subsurface investigation was stored in a 55-gallon drum at the site and labeled pending characterization and proper disposal.

Soil Gas Well Construction and Soil Gas Sample Collection

Three soil gas wells, designated as SG1 through SG3 were constructed on August 10, 2017 and soil gas samples were collected on August 14, 2017 in accordance with procedures recommended in the following DTSC documents:

- July 2015 Advisory - Active Soil Gas Investigations.
- August 2015 - FAQ for the 2012 Active Soil Gas Investigations Advisory.
- October 2011 - Vapor Intrusion Guidance.
- October 2011 - Vapor Intrusion Mitigation Advisory.

The soil gas wells were constructed each to a depth of 6 feet bgs at locations SG1 through SG3 (see Figure 2) with a 3.5-inch outside diameter hand auger. The soil from each boring was logged in the field in accordance with standard geologic field techniques and the USCS, and all of the soil from the boreholes was evaluated with a PID as described above for boreholes GW1 and GW2. No elevated PID values were measured and no petroleum hydrocarbon odors were noted in the soil from any of the hand augered soil gas well boreholes.

Copies of the boring logs for the soil gas well boreholes are attached with this report as Appendix A.

Each soil gas well was constructed with a 1-foot long filter pack in the bottom of the borehole consisting of #2/12 Lonestar sack sand. A 0.250-inch outside diameter (0.187-inch inside diameter) polyethylene tube with a HDPE filter at the bottom of the tube was placed in the center of the borehole during placement of the sand so that the HDPE filter was located in the center of the sand interval. The annular space above the sand was filled with hydrated bentonite to a height of 0.5 feet above the top of the sand, and the remaining borehole annular space was filled with neat cement to approximately 0.5 feet below the ground surface. The top of the tubing for each soil gas well was enclosed with a Swagelok nut and the top of each soil gas well was enclosed in a well box with a lid secured with bolts.

Following construction, the soil gas wells were not sampled for a minimum of 48 hours. Additionally, no precipitation occurred during the five days prior to the sampling date of August 14, 2017.

A soil gas sampling manifold with a 1-liter Summa canister as the sampling canister for each location (see Figure 3) was assembled in a shroud consisting of a 35-gallon Rubbermaid bin that had been modified by cutting viewing ports into the sides of the shroud and covering the viewing ports with transparent polycarbonate sheets. A hole measuring approximately two inches square in the bottom of the shroud allowed the shroud to cover the soil gas well while still allowing access to the soil gas well through the bottom of the shroud. At the time that the sampling manifold was assembled, the vacuum for the sample canister was verified with a vacuum gauge and recorded.

Prior to sampling each soil gas well, a 10 minute shut-in test of the sampling manifold was performed by closing the valve located between the filter and the pressure gauge, opening the purge canister valve, and recording the manifold system vacuum (see Figure 3). Following successful verification of the manifold shut-in test, a default of 3 purge volumes was purged prior to sample collection. The purge time was calculated using a nominal flow rate provided by the flow controller of 150 cubic centimeters per minute. A copy of the purge volume calculation sheet is attached with this report as Appendix B.

Following completion of the soil gas well purging, a lid was placed onto the shroud and a tracer gas 1,1-Difluoroethane (DFA) was sprayed into the shroud interior for one second through a tube connected to a hole in the side of the shroud. Gloves in the lid of the shroud were used to open the sample canister valve. An air sample was collected from the shroud atmosphere to quantify the shroud tracer gas concentration while the soil gas sample was being collected. The shroud atmosphere sample was collected into a Tedlar bag that was placed into a vacuum chamber with the Tedlar bag inlet connected to a new piece of polyethylene tubing that was inserted into the shroud atmosphere through a hole in the side of the shroud. Following completion of Tedlar bag shroud air sample collection the Tedlar bag was placed in a cooler with the lid closed pending delivery to the laboratory.

Once the vacuum for the sample canister valve had decreased to 5 inches of mercury, the gloves in the lid of the bin were used to close the sample canister valve. The pressure gage on the inlet side of the flow controller (see Figure 3) was monitored during sample collection to ensure that the vacuum applied to the soil gas well did not exceed 100 inches of water.

One duplicate soil gas sample was collected into a 1-liter Summa canister from soil gas well SG2 using a stainless steel sampling tee for the Summa canisters using methods described above. Following soil gas sample collection, a PID was connected to the polyethylene tubing to obtain a preliminary field value for the sample collection location. The soil gas Summa canister samples were stored in a box and promptly shipped to the laboratory for extraction and analysis. Chain of custody procedures were observed for all sample handling. Measurements of vacuums, purging and equilibration time intervals, and PID readings were recorded on Soil Gas Sampling Data Sheets which are included with this report as Appendix B.

All hand augering equipment was cleaned with an Alconox solution wash followed by a clean water rinse prior to use at each location. New polyethylene tubing and a new filter were used for each soil gas well construction. Clean, unused vacuum gages and a stainless steel sampling manifold were used at each sample collection location. All soil generated during soil gas well construction was stored in a 55-gallon drum at the site and labeled pending characterization and proper disposal.

Investigation-Derived Waste Disposal

On August 14, 2017 one soil sample was collected from the drum containing soil that originated from boreholes drilled at the site on August 10 and 11, 2017. The soil sample was collected into a 2-inch diameter, 6-inch long stainless steel tube so that the tube was completely filled. The ends of the tube were sequentially covered with aluminum foil and plastic endcaps, the tube was labeled and then stored in a cooler with ice pending delivery to the laboratory for analysis. Chain of custody procedures were observed for all sample handling.

On August 30, 2017 one 55-gallon drum of soil was removed from the site as hazardous waste by Big Sky Enterprises (Big Sky) of Benicia, California for disposal at the US Ecology landfill in Beatty, Nevada using uniform hazardous waste manifest 010606361 FLE based on the detected lead concentrations in the soil sample collected from the drum. A copy of the uniform hazardous waste manifest is attached with this report as Appendix C.

GEOLOGY AND HYDROGEOLOGY

Review of regional geologic maps from U. S. Geological Survey Professional Paper 943, "Flatland Deposits - Their Geology and Engineering Properties and Their Importance to Comprehensive Planning," by E. J. Helley and K. R. Lajoie, 1979, indicates that the subject site is underlain by Pleistocene beach and dune sand deposits (Merrit Sand) (Qps), which is described as loose well-sorted find to medium sand. Immediately to the west of the western property boundary the subsurface materials are identified as Bay Mud (Qhbm), which is described as unconsolidated water-saturated dark plastic carbonaceous clay and silty clay.

The subsurface materials encountered in boreholes GW1, GW2, and SG1 through SG3 consisted of silty sand and silt to the total depth explored of 10.2 feet bgs.

Groundwater was first encountered during drilling in boreholes GW1 and GW2 at a depth of approximately 8.2 and 8.7 feet bgs, respectively. Groundwater was not encountered in boreholes SG1 through SG3.

Review of Figure 1 shows that the ground surface elevation at the site is approximately 11 feet above sea level. The San Francisco Bay is located approximately 3,800 feet to the north and approximately 5,500 feet to the west of the subject site, and the Oakland Inner Harbor which is connected to the San Francisco Bay is located approximately 5,500 feet to the south of the subject site. Based on site vicinity topography and the proximity of surface water bodies the groundwater flow direction at the site is presumed to be westerly towards the San Francisco Bay.

WEATHER

No precipitation occurred during the two weeks preceding the August 14, 2017 soil gas sample collection event, and no precipitation occurred on the day of sampling or through August 23, 2017. Weather data, including precipitation and barometric pressure for August 1 through 23, 2017, including the date of soil gas sample collection (August 14, 2017) are provided in Appendix D.

The weather station is located on Toll Plaza Beach in Oakland at an elevation of 0 feet above sea level, approximately 1.5 miles to the north-northwest of the subject site. The subject site is located at an elevation of approximately 15 feet above sea level. An internet link to the weather station information is provided in Appendix D.

LABORATORY ANALYSIS

Groundwater samples GW1 and GW2 were analyzed at McCampbell Analytical, Inc. (McCampbell) in Pittsburg, California for the following analytes:

- Total Petroleum Hydrocarbons as Gasoline (TPH-G) using EPA Method 5030B in conjunction with EPA Methods 8021B and 8015B.
- Total Petroleum Hydrocarbons as Diesel (TPH-D), Total Petroleum Hydrocarbons as Motor Oil (TPH-MO), and Total Petroleum Hydrocarbons as Bunker Oil (TPH-BO) using EPA Method 3510C and 3630C in conjunction with EPA Method 8015B.
- VOCs including the petroleum compounds methyl-tert-butyl ether (MTBE), benzene, toluene, ethylbenzene, and xylenes (MBTEX), and naphthalene, and Halogenated Volatile Organic Compounds (HVOCs) including tetrachloroethene (PCE) and trichloroethene (TCE) using EPA Method 5030B in conjunction with EPA Method 8260B.

The soil gas samples and shroud air samples were all analyzed at K Prime, Inc. in Santa Rosa, California (K Prime). The soil gas samples were analyzed for VOCs using EPA Method TO-15, and for the tracer gas DFA using EPA Method TO-3. Additionally, the shroud air samples were analyzed for the tracer gas DFA using EPA Method TO-3.

The soil sample collected from the drum of soil generated from borehole drilling was analyzed at McCampbell for the following analytes:

- TPH-G using EPA Method 5030B in conjunction with EPA Methods 8021B and 8015B.
- TPH-D and TPH-MO using EPA Method 3550B in conjunction with EPA Method 8015B.
- VOCs using EPA Method 5030B in conjunction with EPA Method 8260B.
- CAM 17 Metals using EPA Methods 3050B/6020.
- WET lead using CA Title 22 and EPA Method 6020.
- TCLP lead using EPA Methods 1311/3010 and EPA Method 6020.

The borehole groundwater grab sample laboratory analytical results are summarized in Table 1, the soil gas sample laboratory analytical results are summarized in Table 2A, and the shroud air sample results are summarized in Table 2B. Copies of the laboratory analytical reports and chain of custody documentation for all of the samples are attached with this report in Appendix E.

DISCUSSION AND RECOMMENDATIONS

Review of Table 1 shows that no VOCs were detected in either groundwater sample GW1 or GW2 except for PCE in sample GW2 at a concentration of 2.1 micrograms per Liter (ug/L). The only other analytes detected were TPH-D, TPH-MO, and TPH-BO in sample GW1 at concentrations of 63, 120, and 130 ug/L, respectively. None of the detected analyte concentrations in groundwater samples GW1 and GW2 exceed their respective San Francisco Regional Water Quality Control Board's (SFRWQCB) February 2016 (Revision 3) Tier 1 groundwater Environmental Screening Levels (ESLs) or their respective SFRWQCB February 2016 (Revision 3) Table GW-3 groundwater vapor intrusion human health risk screening levels for shallow groundwater with a sand scenario and residential land use.

Review of Table 2A shows that the tracer gas DFA was not detected in any of the soil gas samples, indicating that atmospheric dilution of the soil gas samples is not a concern. BTEX was not detected in any of the samples except for toluene in samples SG1, SG2, and duplicate SG2 DUP at concentrations of 4.11, 10.6, and 10.4 micrograms per cubic meter (ug/m^3), respectively. The following VOCs were also detected:

- PCE was detected in samples SG2, SG2 DUP, and SG3 at concentrations of 28.6, 28.2, and 42.6 ug/m^3, respectively.
- TCE was detected in sample SG2 and duplicate SG2 DUP at concentrations of 447 and 441 ug/m^3, respectively.
- Chloroform was detected in samples SG1, SG2, SG2 DUP, and SG3 at concentrations of 82.5, 132, 128, and 14.8 ug/m^3, respectively.
- Trichlorofluoromethane was detected in samples SG1 and SG3 at concentrations of 16.3 and 6.01 ug/m^3, respectively.
- Methylene chloride and 1,1,1-Trichloroethane were detected in soil gas sample SG3 at concentrations of 4.27 and 21.3 ug/m^3, respectively.

None of the detected analyte concentrations in any of the soil gas samples exceed their respective SFRWQCB February 2016 (Revision 3) Table SG1 subslab/soil gas vapor intrusion human health risk screening levels for a commercial/industrial land use scenario, however, the detected TCE concentrations in SG2 and SG2 DUP, and the chloroform concentrations detected in SG1, SG2, and SG2 DUP all exceed their respective Table SG1 subslab/soil gas vapor intrusion human health risk screening levels for a residential land use scenario.

LIMITATIONS

This report was prepared solely for the use of Holliday Development, LLC. The content and conclusions provided by P&D in this assessment are based on information collected during our investigation, which may include, but not be limited to, visual site inspections; interviews with site owner, regulatory agencies and other pertinent individuals; review of available public documents; subsurface exploration and our professional judgment based on said information at the time of preparation of this document. Any subsurface sample results and observations presented herein are considered to be representative of the area of investigation; however, geological conditions may vary between boreholes and may not necessarily apply to the general site as a whole. If future subsurface or other conditions are revealed which vary from these findings, the newly revealed conditions must be evaluated and may invalidate the findings of this report.

This report is issued with the understanding that it is the responsibility of the owner, or his representative, to ensure that the information contained herein is brought to the attention of the appropriate regulatory agencies, where required by law. Additionally, it is the sole responsibility of the owner to properly dispose of any hazardous materials or hazardous wastes left onsite, in accordance with existing laws and regulations.

This report has been prepared in accordance with generally accepted practices using standards of care and diligence normally practiced by recognized consulting firms performing services of a similar nature. P&D is not responsible for the accuracy or completeness of information provided by other individuals or entities which is used in this report. This report presents our professional judgment based upon data and findings identified in this report and interpretation of such data based upon our experience and background, and no warranty, either express or implied, is made. The conclusions presented are based upon the current regulatory climate and may require revision if future regulatory changes occur.

Should you have any questions, please do not hesitate to contact us at (510) 658-6916.

Sincerely,

P&D Environmental, Inc.

Notes:

Feet bgs = Feet Below Ground Surface.

PCE = Tetrachloroethene.

TCE = Trichloroethene.

cis-1,2-DCE = cis-1,2-Dichloroethene.

1,1,1-TCA = 1,1,1-Trichloroethane.

DFA = 1,1-Difluoroethane. (tracer gas)

ND = Not Detected.

Percent Shroud = The ratio of tracer gas concentration detected in the soil gas sample to the tracer gas concentration detected in the shroud air sample, expressed as a percentage.

ESL[1] = Environmental Screening Level, by San Francisco Bay – Regional Water Quality Control Board, updated February 2016 (Revision 3), from Table SG1 – Subslab/Soil Gas Vapor Intrusion: Human Health Risk Levels for Residential Land Use.

ESL[2] = Environmental Screening Level, by San Francisco Bay – Regional Water Quality Control Board, updated February 2016 (Revision 3), from Table SG1 – Subslab/Soil Gas Vapor Intrusion: Human Health Risk Levels for Commercial/Industrial Land Use.

BOLDED concentrations exceed their respective ESL[1] value.

Results and ESLs in micrograms per cubic meter (µg/m3), unless otherwise indicated.

Table 2B
Summary of Shroud Air Sample Analytical Results

Sample ID	Sample Date	DFA, #
SG1 DFA	8/14/2017	1,072,468.3
SG2 DFA	8/14/2017	71,587.93
SG3 DFA	8/14/2017	3,079,631.9

<u>Notes:</u>

= 1,1-Difluoroethane (DFA) used as leak detection compound for TO-15 analysis.

Results in micrograms per cubic meter (ug/m^3), unless otherwise indicated.

APPENDIX B

Purge Volume Calculations and Soil Gas Sampling Data Sheet

Report 0772.R1
7.5 feet tubing, 12 inch sand interval, 12 inches hydrated bentonite interval above sand

Soil Gas Purge Volume Calculations

One Purge Volume is calculated as the volume of the tubing interior plus the volume of the sand interval of the borehole.

The tubing interior volume is calculated as follows:

V tubing = pi x (r x r) x h, where pi = 3.14, r = 0.187 in/2, and h = 7.5 ft.

V tubing = 3.14 x (0.0935 x 0.0935) x (7.5 ft. x 12 in./ft) = 2.47 cubic inches.

The sand interval volume is calculated as follows:

V sand interval = pi x (r x r) x h x porosity, where pi = 3.14, r = 3.5 in./2, h = 12 in., and porosity = 0.35

V sand interval = 3.14 x (1.75 x 1.75) x 12 x 0.35 40.39 cubic inches.

The total volume for one purge volume is V tubing + V sand interval, where

V total = 2.47 cubic inches + 40.39 cubic inches = 42.86 cubic inches.

To convert to cubic centimeters:

V total = 42.86 cubic inches x 16.39 cubic centimeters/cubic inches = 702.5 cubic centimeters.

The total volume to be purged is 3 purge volumes.

V purge total = 702.5 cubic centimeters x 3 2107 cubic centimeters.

The flow controller has a nominal flow rate of 150 cubic centimeters per minute.

The purge time is calculated as follows:

T purge = 2107 cubic centimeters/ 150 cubic centimeters per minute = 14.05 minutes.

Converting the purge time to seconds, 14.05 minutes x 60seconds/ minute = 843 seconds.

Notes:

🟨 Yellow hi-lite indicates data entry required.
🟦 Blue hi-lite indicates values are calculated or automatically updated.

Sand interval is 1 ft from 5 to 6 ft bgs, filter is at center of sand pack, 1.0 ft hydrated bentonite above sand, then neat cement to surface.

SOIL GAS SAMPLING DATA SHEET

UNIFORM HAZARDOUS WASTE MANIFEST

1. Generator ID Number: CAC 002 925 789

2. Page 1 of 1

3. Emergency Response Phone: 510-541-2128

4. Manifest Tracking Number: 010606361 FLE

GENERATOR

5. Generator's Name and Mailing Address
Holiday Development, LLC
1201 Pine Street
Oakland, CA 94607

Generator's Site Address (if different than mailing address)
800 Pine Street
Oakland, CA 94607

Generator's Phone: 510-286-5393

6. Transporter 1 Company Name: Big Sky Environmental Solutions
U.S. EPA ID Number: CAL000346010

7. Transporter 2 Company Name:
U.S. EPA ID Number:

8. Designated Facility Name and Site Address
US Ecology
Highway 95 12 miles south of
Beatty NV 89003

U.S. EPA ID Number: NVT330010000

Facility's Phone: 775-553-2203

9a. HM	9b. U.S. DOT Description (including Proper Shipping Name, Hazard Class, ID Number, and Packing Group (if any))	10. Containers No.	10. Containers Type	11. Total Quantity	12. Unit Wt./Vol.	13. Waste Codes		
	1. UN 3077, Hazardous Waste Solid, 9, PG111 (Soil Impacted with Lead)	001	DM	350	P	D008	352	
	2.							
	3.							
	4.							

14. Special Handling Instructions and Additional Information

9B2 ERG 9B4 ERG
EMERGENCY CONTACT JEFF RHODES

15. **GENERATOR'S/OFFEROR'S CERTIFICATION:** I hereby declare that the contents of this consignment are fully and accurately described above by the proper shipping name, and are classified, packaged, marked and labeled/placarded, and are in all respects in proper condition for transport according to applicable international and national governmental regulations. If export shipment and I am the Primary Exporter, I certify that the contents of this consignment conform to the terms of the attached EPA Acknowledgment of Consent.
I certify that the waste minimization statement identified in 40 CFR 262.27(a) (if I am a large quantity generator) or (b) (if I am a small quantity generator) is true.

Generator's/Offeror's Printed/Typed Name: David Schenker
Signature:
Month 8 Day 30 Year 17

INT'L

16. International Shipments ☐ Import to U.S. ☐ Export from U.S. Port of entry/exit:
Transporter signature (for exports only):
Date leaving U.S.:

TRANSPORTER

17. Transporter Acknowledgment of Receipt of Materials
Transporter 1 Printed/Typed Name: Jeff Rhodes
Signature:
Month 08 Day 30 Year 17

Transporter 2 Printed/Typed Name:
Signature:
Month Day Year

DESIGNATED FACILITY

18. Discrepancy
18a. Discrepancy Indication Space ☐ Quantity ☐ Type ☐ Residue ☐ Partial Rejection ☐ Full Rejection

Manifest Reference Number:

18b. Alternate Facility (or Generator)
U.S. EPA ID Number:
Facility's Phone:

18c. Signature of Alternate Facility (or Generator)
Month Day Year

19. Hazardous Waste Report Management Method Codes (i.e., codes for hazardous waste treatment, disposal, and recycling systems)

1.	2.	3.	4.

20. Designated Facility Owner or Operator: Certification of receipt of hazardous materials covered by the manifest except as noted in Item 18a
Printed/Typed Name:
Signature:
Month Day Year

EPA Form 8700-22 (Rev. 3-05) Previous editions are obsolete.

Glossary of Terms & Qualifier Definitions

Client: P & D Environmental
Project: 0772; Phoenix Iron Works 800 Pine Street Oakland, CA 94607
WorkOrder: 1708573

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Glossary of Terms & Qualifier Definitions

Client: P & D Environmental
Project: 0772; Phoenix Iron Works 800 Pine Street Oakland, CA 94607
WorkOrder: 1708573

Analytical Qualifiers

S	Surrogate spike recovery outside accepted recovery limits
b1	Aqueous sample that contains greater than ~1 vol. % sediment
c2	Surrogate recovery outside of the control limits due to matrix interference.
e2	Diesel range compounds are significant; no recognizable pattern
e7	Oil range compounds are significant

NOTES:
- **STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).**
- **MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.**

RAK by TJ 8/24/2017

SUBJECT: LABORATORY RESULTS FOR YOUR PROJECT 0772

Enclosed please find K Prime's laboratory reports for the following samples:

SAMPLE ID	TYPE	DATE	TIME	KPI LAB #
SG1 DFA	AIR	8/14/2017	11:02	157540
SG2 DFA	AIR	8/14/2017	14:28	157541
SG3 DFA	AIR	8/14/2017	11:57	157542

The above listed sample group was received on 8/17/2017 and tested as requested on the chain of custody document.

Please call me if you have any questions or need further information.
Thank you for this opportunity to be of service.

"When Quality Counts"

Analytical Report

WorkOrder: 1708699

Report Created for: P & D Environmental

55 Santa Clara, Ste.240
Oakland, CA 94610

Project Contact: Paul King
Project P.O.:
Project Name: 0772; Phoenix Iron Works

Project Received: 08/15/2017

Analytical Report reviewed & approved for release on 08/24/2017 by:

Angela Rydelius,
Laboratory Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: P & D Environmental
Project: 0772; Phoenix Iron Works
WorkOrder: 1708699

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 μm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Glossary of Terms & Qualifier Definitions

Client:	P & D Environmental
Project:	0772; Phoenix Iron Works
WorkOrder:	1708699

Analytical Qualifiers

e2	Diesel range compounds are significant; no recognizable pattern
e7	Oil range compounds are significant

Quality Control Qualifiers

F13	Indigenous sample results too high for a representative matrix spike analysis.

Glossary of Terms & Qualifier Definitions

Client: P & D Environmental
Project: 0772; Phoenix Iron Works
WorkOrder: 1708699 A

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 μm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

1.0 INTRODUCTION AND SCOPE OF SERVICES

This report presents the results of a Phase II Soil Investigation performed by Northgate Environmental Management, Inc. (Northgate) for the City of Oakland (the City) at 800 Cedar Street in Oakland, California (the Site). The Site consists of an approximate five acre vacant parcel located on the west side of Pine Street between 9th Street and Shorey Street in Oakland and is owned by the California Department of Transportation (Caltrans). The Site has historically been identified as 800 Cedar Street. However, reconfiguration of Interstate 880 in Oakland has removed Cedar Street at this location. The parcel is identified as Assessor's Parcel Number (APN) 006-047-001 in Alameda County. A Site Location Map is shown on Figure 1.

The work is being performed for the City under Brownfield Assessment Grant (BAG) Number 2B-00T18101-0 for both hazardous substances and petroleum hydrocarbons, issued by the United States Environmental Protection Agency (USEPA) for the West Oakland Development Area. The work was performed in accordance with the following documents:

- *Quality Assurance Project Plan, West Oakland Development Area, Oakland, California*, Northgate, September 8, 2009 (the QAPP), and
- *Sampling and Analysis Plan, Phase II Soil Investigation, APN 006-047-001 (800 Cedar Street), Oakland, California*, Northgate, July 14, 2011 (the SAP).

The purpose of this Phase II Soil Investigation is to:

- Define the extent of semi-volatile organic compound (SVOC) and petroleum hydrocarbon soil contamination in specific areas of the Site that were identified in previous investigations;
- Further evaluate elevated lead concentrations detected in soil at the Site; and
- Evaluate the potential need for remediation or additional evaluation of risk at the Site.

The scope of work for this investigation included the following services:

- Collecting soil samples from 13 borings advanced at the Site;
- Selectively analyzing soil samples for 17 metals, total extractable petroleum hydrocarbons (TEPH), and SVOCs; and
- Preparing this report.

2.0 BACKGROUND

2.1 Site Description

The Site consists of an approximate five acre (600 feet by 400 feet) parcel of land located on the west side of Pine Street, between 9th Street and Shorey Street in Oakland, California. The Site is almost entirely covered by the remnant concrete slab of a former building. The Site is currently owned by Caltrans, and is used for construction material storage.

The Site is located in an area of mixed residential and commercial development. The Site is bordered on the north by 9th Street, across which are residences and industrial warehouse buildings. The Site is bordered on the east and south by Pine Street and Shorey Streets, followed by residences. The Site is bordered along the west by an access ramp for Interstate 880. Figure 1 shows the Site location and Figure 2 (Site Plan) shows a current aerial view of the Site overlain by the approximate Site boundary as it existed in the early 1990s, along with historical features identified in previous environmental investigation reports. Figure 2 also shows historical soil borings where elevated concentrations of total petroleum hydrocarbons (TPH) and/or SVOCs have been detected in soil, as well as the locations of the soil borings installed during this current investigation.

2.2 Previous Investigations and Regulatory Involvement

The Site is currently regulated by the State of California Environmental Protection Agency, Department of Toxic Substances Control (DTSC), under a Voluntary Cleanup Agreement (VCA), as amended twice in 1996, and once each in 1997, 1999 and 2002. USEPA is the agency overseeing the BAG for the Site.

Multiple investigations and remedial activities have been performed at the Site since 1990. The following investigation reports have been prepared for the Site:

- Geo/Resource Consultants, Inc. (GRC), 1992. *Site Investigation Report – Area 4, Department of Transportation T.O. Number: 04-192201-01, Highway 880, Cypress Reconstruction, Oakland, California,* August 1992.
- On-Site Technologies, 1993. *Preliminary Endangerment Assessment, Phoenix 800, 800 Cedar Street, Oakland, California,* November 1993.
- IT Corporation, 2000. *Site Investigation Report, Soil and Groundwater Investigation, Former Phoenix Iron Works Facility, 800 Cedar Street, Oakland, California,* dated March 8, 2000.

The key issues identified in these reports are as follows:

- Historically, the Site was used for a variety of purposes between 1920 and the present, including auto parts manufacturing, steel and ironworks fabrication, and fireworks manufacturing.
- One diesel and one gasoline underground storage tank (UST) located on the western side of the Site were removed sometime between 1995 and 1997, and a total of 800 cubic yards of soil were excavated and disposed of as part of the UST removals.
- Soil sampling performed at the Site during the tank removals indicated up to 17,000 parts per million (ppm) of lead and 44 ppm of arsenic in soil in the southwest corner of the former Phoenix Iron Works property, which is now outside the current Site property boundary. Soil excavation was initiated to remove these elevated metals concentrations, and during this excavation, two solvent-containing USTs (approximately 250 gallons and 10 gallons) and a settling sump were encountered. A total of 3,300 cubic yards of soil were excavated and disposed of as part of this remedial action (IT, 2000).
- Soil sampling performed in 1999 indicated that shallow soil along the western edge of the Site contains total recoverable petroleum hydrocarbons (TRPH) in excess of 1,000 ppm. This area was previously identified as containing “black-stained sand”, and was previously characterized by soil sampling in borings P-25, P-26 and P-8 (see Figure 2).
- The 1999 soil sampling indicated two boring locations (borings P-16 and P-19 on Figure 2) with elevated SVOC concentrations in shallow soil samples, and the presence of elevated lead concentrations in shallow soil at multiple locations across the Site.

A detailed summary of these prior investigations is provided in the SAP, and in the *Site Investigation Summary Report, APN 006-047-001 (800 Cedar Street), Oakland, California,* (Northgate, 2011).

The City of Oakland Redevelopment Agency is considering purchasing this property from Caltrans. The City of Oakland Redevelopment Agency is evaluating potential commercial redevelopment options for the Site, although the exact redevelopment use for the Site is not known at this time. The purpose of this investigation is to evaluate the extent of TEPH and SVOCs at selected locations at the Site and to provide additional data regarding the presence of metals in shallow soil at the Site.

3.0 SOIL INVESTIGATION

3.1 Investigation Methods

Northgate performed soil sampling at the Site on August 11, 2011. Prior to sampling, Northgate notified Underground Service Alert (USA, ticket #0260009) and contracted with a private utility locator to scan each boring location with utility locating equipment to ensure the boring locations were clear of any underground utilities. Following the scanning, 13 soil borings (NG-1 through NG-13) were advanced to depths of 5 feet below the ground surface (bgs) for soil sample collection. Approximate boring locations are shown on Figure 2. Permit number W2011-0062 for the borings, obtained from the Alameda County Public Works Department, is presented in Appendix A.

The borings were advanced using a track mounted direct-push GeoProbe drill rig. A continuous soil core was collected from each boring in clear acetate liners. The acetate liner was opened at multiple intervals, and the soils were screened for the possible presence of volatile aromatic compounds using a photoionization detector (PID). Soil lithology observations for each boring were recorded in the field notes.

Soil samples were collected for chemical analysis at approximate depths of 1, 3, and 5 feet bgs in each boring. Samples were collected by cutting 6 inch lengths of the acetate liners from the continuous cores, sealing the 6 inch segments with Teflon tape and plastic caps, labeling the samples and storing them on ice in a cooler. Samples were transported to the analytical laboratory (Torrent Laboratories of Milpitas, California) under chain-of-custody control. Duplicate soil samples were collected at 1 foot bgs from borings NG-2, NG-3, NG-7, NG-10, and NG-13. Boring locations for duplicate sample collection were chosen at locations where either soil discoloration was observed or to provide geographic coverage across the Site.

Soil samples collected from borings NG-1 through NG-5 were analyzed for the following constituents:

- Total petroleum hydrocarbons as motor oil (TPH-mo) and diesel (TPH-d) using EPA Method 8015; and
- 17 metals using EPA Method 6010/7471.

Soil samples collected from borings NG-6 through NG-13 were analyzed for the following constituents:

- SVOCs using USEPA Method 8270; and
- 17 metals using USEPA Method 6010/7471.

All drilling equipment was steam-cleaned prior to use at each boring location. After completion of sampling activities, all borings were backfilled with neat cement in accordance with the Alameda County Public Works Agency, Water Resources Section permit requirements and with oversight from the Alameda County Public Works Agency Water Resources inspector. Soil cuttings were used to fill the top 2 feet of boring NG-5 (located on bare soil).

3.2 Subsurface Conditions

Subsurface soils encountered at the Site consisted primarily of a gravelly sandy fill underlain by well graded sand. Subsurface conditions were similar at all of the borings. Groundwater was not encountered in any of the borings.

3.3 Soil Screening Levels

Analytical results from the soil samples were evaluated using the following screening levels:

- California Human Health Screening Levels (CHHSLs) for both residential and commercial/industrial land use;
- Regional Water Quality Control Board (RWQCB) Environmental Screening Levels (ESLs) Table A-1, Residential Land Use, Groundwater is a Current or Potential Source of Drinking Water (RWQCB 2008);
- RWQCB ESLs Table A-2, Commercial/Industrial Land Use, Groundwater is a Current or Potential Source of Drinking Water (RWQCB 2008);
- RWQCB ESLs Table K-3, Direct Exposure Soil Screening Levels, Construction/Trench Worker Exposure Scenario (RWQCB 2008);
- The City of Oakland’s Urban Land Redevelopment Program (ULRP) Survey of Background Metal Concentration Studies; and
- Total Threshold Limit Concentrations (TTLCs) for characterization of hazardous waste.

Additional information regarding each of these screening levels is provided below.

The CHHSLs were developed by the Office of Environmental Health Hazard Assessment (OEHHA) on behalf of California Environmental Protection Agency (Cal/EPA) and are based on an excess lifetime cancer risk of 10^{-6} and a hazard quotient of 1.0 for noncancer health effects. The CHHSLs were developed using standard exposure assumptions and chemical toxicity values published by the USEPA and Cal/EPA. Under most circumstances the presence of a chemical in soil at concentrations below the corresponding CHHSLs can be assumed to not pose a significant health risk to people who may live (residential CHHSLs) or work (commercial/industrial CHHSLs) at the site. The presence of a chemical at concentrations in excess of a CHHSL does not necessarily indicate that adverse impacts to human health are occurring or will occur, but suggests that further evaluation of potential human health concerns is warranted (Cal/EPA, 2005).

The RWQCB presents ESLs in their guidance document *Screening for Environmental Concerns at Sites with Contaminated Soil and Groundwater* (RWQCB, 2008) for multiple site use scenarios and for different media. For site characterization studies such as the present investigation, ESLs are used as a general screening guide to determine whether additional investigation, remedial actions, or risk assessment may be required. The presence of a chemical at a concentration above an ESL does not necessarily indicate that adverse impacts to human health or the environment are occurring, but rather, indicate that a potential for adverse risk may exist and that additional evaluation may be warranted. Neither the ESLs nor the CHSSLs are regulatory cleanup standards, and they are intended to be used for screening evaluation only.

In some cases, particularly with respect to metals such as arsenic and vanadium, both the CHSSLs and the RWQCB residential and commercial/industrial ESLs are lower than the naturally occurring regional background concentrations. In these cases, generally accepted background concentrations are used for evaluation. The City of Oakland's ULRP has developed a Survey of Background Metal Concentration Studies, and values from this table were included as screening levels for the soil analytical results for metals.

The TTLCs are used to define material as a hazardous or non-hazardous waste for landfill disposal purposes and do not necessarily have any relation to health risk evaluation. However, these levels are used to evaluate the volume of soil that may require disposal as hazardous waste and are included as screening levels in this report.

3.4 Soil Analytical Results

Soil sample analytical results are presented in Tables 1, 2, 3, and 4. Laboratory analytical reports are presented in Appendix B. Analytical results for each of the analyte groups are discussed below.

3.4.1 Total Petroleum Hydrocarbons

A total of 17 soil samples (including two duplicate samples) collected from four different soil borings were analyzed for TPH-d and TPH-mo. TPH-d and TPH-mo analytical results are presented in Table 1 and on Figure 3. As shown in Table 1, TPH-d was detected in two samples; sample NG-1-1.0 at a concentration of 630 milligrams per kilogram (mg/kg) and sample NG-2-1.0 at a concentration of 4.4 mg/kg. The TPH-d result from sample NG-2-1.0 was reported by the lab to be not typical of the diesel standard pattern. The NG-1-1.0 TPH-d concentration exceeds the 83 mg/kg ESL for both residential and commercial/industrial land use, but was well below the 4,200 mg/kg ESL for construction/trench worker exposure.

TPH-mo was detected in 11 of the 17 samples at concentrations ranging from 4.8 to 2,700 mg/kg. The TPH-mo result from sample from NG-1-5.0 (13 mg/kg) was reported by the lab to be atypical of the motor oil standard pattern. Two of these samples (NG-1-1.0 and NG-3-1.0 duplicate) exceeded the 370 mg/kg ESL for residential land use. Sample NG-1-1.0 (2,700 mg/kg) exceeds the 2,500 mg/kg ESL for commercial/industrial land use. All of the sample concentrations were well below the 3,700 mg/kg ESL for construction/trench worker exposure.

3.4.2 17 Metals Analytical Results

A total of 28 soil samples (including two duplicate samples) collected from 13 different borings were analyzed for 17 metals. Analytical results for metals are shown in Table 2. Beryllium, molybdenum, selenium, and thallium were not detected above the laboratory Practical Quantitation Limits (PQLs) in any of the samples. With the exception of arsenic, cadmium, and lead, metals concentrations were below their respective residential CHHSLs in all of the samples.

Arsenic was detected in 16 samples at concentrations ranging from 1.7 to 65 mg/kg. All of these reported concentrations exceed the residential CHHSL of 0.07 mg/kg and the commercial/industrial CHHSL of 0.24 mg/kg. However, only two of the measured concentrations (17 mg/kg in NG-2-1.0 and 65 mg/kg in NG-1-3.0) were above the RWQCB ESL for construction worker/trench worker exposure of 15 mg/kg. The City of Oakland ULRP indicates naturally-occurring background concentrations of 1.8 - 31 mg/kg for arsenic in soil. All of the detected values were less than the TTLC of 500 mg/kg.

Cadmium was detected in four of the samples at concentrations of 1.7 to 4.9 mg/kg. Three of the reported concentrations exceeded the residential CHHSL of 1.7 mg/kg, but none of the reported concentrations were above the commercial/industrial CHHSL of 7.5 mg/kg, the RWQCB ESL for construction worker/trench worker exposure of 39 mg/kg, or the TTLC of 100 mg/kg.

Lead was detected in all of the samples, at concentrations ranging from 1.3 to 2,900 mg/kg. Lead analytical results are shown graphically on Figure 4. Lead concentrations in 11 of the samples exceeded the 80 mg/kg residential CHSSL, and six of these samples (NG-2-1.0 at 640 mg/kg; NG-2-1.0 duplicate at 340 mg/kg; NG-3-1.0 at 350 mg/kg; NG-5-1.0 at 520 mg/kg; NG-10-1.0 at 460 mg/kg; and NG-13-1.0 at 2,900 mg/kg) exceeded the 320 mg/kg commercial/industrial CHHSL. The only sample that exceeded the 1,000 mg/kg TTLC for lead was NG-13-1.0, with a concentration of 2,900 mg/kg of lead. Nine samples (NG-1-1.0, NG-2-1.0, NG-2-1.0-D, NG-3-1.0, NG-5-1.0, NG-6-1.0, NG-10-1.0, NG-11-1.0, and NG-13-1.0-D) were analyzed for soluble lead using the Waste Extraction Test (WET) to classify the soil for hazardous waste landfill disposal. Seven of the samples (NG-1-1.0, NG-2-1.0, NG-2-1.0-D, NG-3-1.0, NG-6-1.0, NG-10-1.0, and NG-13-1.0-D) contained soluble lead above the Soluble Threshold Limit Concentration (STLC) of 5 mg/kg, with NG-13-1.0-D having the highest concentration of soluble lead (520 milligrams per liter, mg/L).

3.4.3 SVOC Analytical Results

A total of 28 samples (including three duplicates) collected from eight soil borings were analyzed for SVOCs. Analytical results for SVOCs are shown in Table 3. Fluoranthene and pyrene were the only SVOCs detected above the laboratory PQLs, and these chemicals were only detected in one sample, NG-6-1.0 (21 mg/kg fluoranthene and 25 mg/kg pyrene). Both of these detections were below their respective residential and commercial/industrial ESLs.

3.5 Quality Assurance/Quality Control

Soil samples were collected following sampling protocols and quality assurance/quality control (QA/QC) procedures outlined in the SAP. QC objectives include *precision*, a measure of mutual agreement among individual measurements of the same property; *accuracy*, the agreement of a measurement with the accepted reference value; *representativeness*, the degree to which sample distribution falls within the statistical bounds of a population; *completeness*, a measure of the amount of valid data obtained compared to what was planned; and *comparability*, the confidence with which one data set can be compared to another. QC procedures are designed to increase or improve data quality and to help interpret discrepancies in results. Sampling QA/QC procedures were followed with respect to equipment, field procedures, sample containers, decontamination, storage, holding times, and field QC sampling. Chain-of-custody forms were completed for all samples, and samples were preserved according to the analytical method requirements. Torrent Laboratory in Milpitas, California performed the analyses and is state-certified for the methods listed. All samples were preserved according to the analytical methods requirements, all analyses were performed according to standard methods, and all sample holding times and preservation requirements were met. Analytical results were reported for all values above the PQL.

Northgate collected the following duplicate samples for analysis:

- For TPH-d and TPH-mo: NG-2-1.0/NG-2-1.0-D and NG-3-1.0/NG-3-1.0-D;
- For 17 metals: NG-2-1.0/NG-2-1.0-D and NG-13-1.0/NG-13-1.0-D; and
- For SVOCs: NG-7-1.0/NG-7-1.0-D, NG-7-1.0/NG-7-1.0-D and NG-13-1.0/NG-13-1.0-D.

Comparison of primary and duplicate sample results using the relative percent difference (RPD) between the duplicate sample results is used to assess the precision of the test data. Typically, an RPD of 50% or less is considered acceptable for soil samples. Table 4 presents the duplicate sample results, and the RPD calculations for each of the analyses. RPD calculations cannot be performed for samples where the analytical result is non-detect. Because the duplicate samples did not contain detectable concentrations of SVOCs above the PQL, SVOCs are not included in Table 4.

The results presented in Table 4 indicate that over half of the duplicate analyses had RPDs that were greater than 50%. This high RPD is likely due to the natural heterogeneity of the soil samples.

Several QA/QC analyses were performed by the analytical laboratory. Method blanks were analyzed for each analytical method performed to assess the level of contamination introduced by the laboratory. Results of the method blank analyses were all non-detect, with the exception of TPH-d and TPH-mo, reported at 0.86 and 2.2 mg/kg in the method blank sample. Results of the method blank analyses for SVOCs were all non-detect, with the exception of dimethyl phthalate and diethylphthalate, reported at 0.47 and 0.28 mg/kg. Several metals were also reported at very low-level concentrations in the method blank samples for soil.

Surrogate recoveries were performed in which selected samples were spiked with a known concentration of contaminant (laboratory control spike [LCS] and laboratory control spike duplicate [LCSD]) and the percent recovery was calculated to assess the accuracy of the analytic method. Surrogate recoveries and the RPD between duplicate results - calculated to assess the precision of the data - were all within the acceptable ranges, with the following exceptions:

- The percent recoveries for pyrene for one analytical batch were outside of laboratory control limits but were within the percent RPD limits.
- The percent recoveries for barium, copper and zinc for one analytical batch were outside of laboratory control limits, but the associated LCS/LCSD percent recoveries and percent RPDs were within the laboratory control limits.
- The spikes for the matrix spike/matrix spike duplicate (MS/MSD) for lead were not recoverable.

The laboratory stated that no corrective actions were required based on these QA/QC results. Details regarding the QA/QC results are provided in the Case Narrative in the laboratory analytical report, which is included in Appendix B.

4.0 CONCLUSIONS AND RECOMMENDATIONS

The soil sampling performed during this investigation was intended to supplement prior investigation work at the Site. The prior investigation work indicated the following:

- Elevated concentrations of lead (above the 80 mg/kg residential CHSSL and in many cases, above the 320 mg/kg commercial/industrial CHSSL) were detected in shallow soil samples from across the Site. There was no apparent pattern to these elevated lead concentrations, with the exception that they were confined to the upper 1 to 3 feet of soil.
- The only area of TPH-impacted soil at the Site was limited to the northwest portion of the Site, and was labeled as a "black-stained sand area".

Results from the current soil investigation were consistent with the results from these prior investigations, and indicated the following:

- Elevated concentrations of lead, in excess of the 80 mg/kg residential CHSSL, are present across the Site in the upper 1 foot of soil. Soil samples that were collected from a depth of 3 feet bgs consistently had concentrations of lead below this CHSSL and were typically below 20 mg/kg. Eleven of the 28 samples analyzed for lead during this investigation contained lead above the residential land use CHHSL of 80 mg/kg. Six of these samples contained lead above the commercial/industrial land use CHSSL of 320 mg/kg. Nine of the 1 foot depth samples were analyzed for soluble lead using the WET, and seven of these samples exceeded the 5 mg/L STLC for lead, indicating that if this soil is to be disposed of at a landfill, it may have to be disposed of as hazardous waste. Additional evaluation of soluble lead would be required to determine if the soil would be classified as a RCRA or Federal hazardous waste.
- The area of TPH-impacted soil in the northwest portion of the Site that had previously been delineated as a "black-stained sand area" is relatively limited and is confined to the upper 1 to 2 feet of soil. Three of the five sampling locations in this area had soil samples at a depth of 1 foot that contained concentrations of TPH-mo in excess of 100 mg/kg, but the maximum concentration of TPH-mo detected in a sample below 1 foot was 14 mg/kg.
- The elevated concentrations of SVOCs that were previously detected in soil borings P-16 and P-19 appear to be of limited extent. SVOCs were only detected in 1 of 27 samples collected from 8 borings surrounding these two borings, and fluoranthene and pyrene were the only SVOCs detected. These SVOCs were present at concentrations well below their residential and commercial/industrial land use ESLs.

Based upon these data and data from prior investigations at the Site, it appears that the primary hazardous substance present at the Site is lead in shallow soil, and the elevated lead concentrations appear to be confined to the upper 1-2 feet at the Site. Based on a Site area of 240,000 square feet, the volume of impacted soil may be as much as 18,000 cubic yards. The lead appears to be soluble, based upon the WET analysis results, and these soluble lead concentrations may result in this soil being classified as hazardous waste if the soil is excavated and removed from the Site. Almost the entire Site is capped by concrete, and therefore, the lead does not appear to currently present a human health risk. However, we recommend some form of remedial action be implemented in order to redevelop the Site. Suitable alternatives include:

1. Selective excavation and off-site disposal of soil containing lead above commercial land use standards.
2. Selective excavation and on-site encapsulation of soil containing lead above commercial land use standards.
3. On-site treatment of soil containing elevated concentrations of lead in order to reduce the solubility or bio-availability (toxicity) of lead, in order to re-use the soil in a commercial land use setting.

We recommend that all soil containing lead above the residential land use CHSSL be excavated and removed from the Site if the Site will be redeveloped for residential land use.

The extent of TPH-impacted soil in the northwest corner of the Site appears to be relatively limited. Soil containing TPH above commercial land use standards could be excavated and removed from the Site. However, TPH is not a hazardous chemical by itself. Historical analytical results from the Site have demonstrated that the more hazardous substances associated with TPH, such as benzene, toluene and naphthalene, are not present in the soil in this area. Under these circumstances, it may be appropriate to leave the TPH-impacted soil in place. We recommend that regulatory discussions to establish Site-specific cleanup goals be initiated before any remedial efforts are started at the Site. Additionally, if soils are left on Site with concentrations of contaminants above the unrestricted (residential) land use screening levels, a soil management plan should be prepared to outline procedures for managing the impacted soil.

5.0 LIMITATIONS

The purpose of a soil quality investigation is to reasonably characterize existing Site conditions based on the results of a limited target subsurface investigation. In performing such a study, it is understood that a balance must be struck between a reasonable inquiry into the Site conditions and an exhaustive analysis of each conceivable environmental characteristic. The following paragraphs discuss the assumptions and parameters under which such an opinion is rendered.

No investigation is thorough enough to describe all environmental conditions of interest at a given Site. If conditions have not been identified during the study, such findings should not, therefore, be construed as a guarantee of the absence of such conditions at the Site, but rather as the result of the services performed within the scope, limitations, and cost of the work performed.

We are unable to report on or accurately predict events that may change the Site conditions after the described services are performed, whether occurring naturally or caused by external forces. We assume no responsibility for conditions we were not authorized to evaluate or conditions not generally recognized as predictable when services were performed.

Environmental conditions may exist at the Site that cannot be identified solely by visual observation. Where subsurface exploratory work was performed, our professional opinions are based in part on interpretation of data from discrete sampling locations that may not represent actual conditions at unsampled locations.

APPENDIX A
BORING PERMITS

Alameda County Public Works Agency - Water Resources Well Permit

399 Elmhurst Street
Hayward, CA 94544-1395
Telephone: (510)670-6633 Fax:(510)782-1939

Application Approved on: 02/10/2011 By jamesy

Permit Numbers: W2011-0062
Permits Valid from 08/10/2011 to 08/17/2011

Application Id: 1297297504974
City of Project Site: Oakland
Site Location: 800 Cedar St, Oakland, CA
Project Start Date: 02/23/2011
Completion Date: 02/24/2011
Extension Start Date: 08/10/2011
Extension End Date: 08/17/2011
Extension Count: 1
Extended By: priest

Assigned Inspector: Contact Steve Miller at (510) 670-5517 or stevem@acpwa.org

Applicant: Northgate Environmental Mgt. - Adam Klein
300 Ogawa Plaza, Ste 510, Oakland, CA 94612
Phone: 510-839-0688 x215
Property Owner: City of Oakland c/o Gopakumar Nair, Envr.
Services Div.
250 Frank Ogawa Plaza, Ste 5301, Oakland, CA 94612
Phone: 510-238-5361
Client: ** same as Property Owner **

	Total Due:	$265.00
Receipt Number: WR2011-0033	**Total Amount Paid:**	$265.00
Payer Name : Northgate	Paid By: CHECK	**PAID IN FULL**

Works Requesting Permits:

Borehole(s) for Investigation-Environmental/Monitorinig Study - 15 Boreholes
Driller: RSI - Lic #: 802334 - Method: DP

Work Total: $265.00

Specifications

Permit Number	Issued Dt	Expire Dt	# Boreholes	Hole Diam	Max Depth
W2011-0062	02/10/2011	05/24/2011	15	3.00 in.	15.00 ft

Specific Work Permit Conditions

1. Backfill bore hole by tremie with cement grout or cement grout/sand mixture. Upper two-three feet replaced in kind or with compacted cuttings. All cuttings remaining or unused shall be containerized and hauled off site. The containers shall be clearly labeled to the ownership of the container and labeled hazardous or non-hazardous.

2. Boreholes shall not be left open for a period of more than 24 hours. All boreholes left open more than 24 hours will need approval from Alameda County Public Works Agency, Water Resources Section. All boreholes shall be backfilled according to permit destruction requirements and all concrete material and asphalt material shall be to Caltrans Spec or County/City Codes. No borehole(s) shall be left in a manner to act as a conduit at any time.

3. Permittee shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend and save the Alameda County Public Works Agency, its officers, agents, and employees free and harmless from any and all expense, cost, liability in connection with or resulting from the exercise of this Permit including, but not limited to, properly damage, personal injury and wrongful death.

4. Applicant shall contact Steve Miller for an inspection time at (510) 670-5517 or email to stevem@acpwa.org at least five (5) working days prior to starting, once the permit has been approved. Confirm the scheduled date(s) at least 24 hours prior to drilling.

5. Copy of approved drilling permit must be on site at all times. Failure to present or show proof of the approved permit

application on site shall result in a fine of $500.00.

6. Prior to any drilling activities onto any public right-of-ways, it shall be the applicants responsibilities to contact and coordinate a Underground Service Alert (USA), obtain encroachment permit(s), excavation permit(s) or any other permits required for that City or to the County and follow all City or County Ordinances. It shall also be the applicants responsibilities to provide to the Cities or to Alameda County a Traffic Safety Plan for any lane closures or detours planned. No work shall begin until all the permits and requirements have been approved or obtained.

7. Permit is valid only for the purpose specified herein. No changes in construction procedures, as described on this permit application. Boreholes shall not be converted to monitoring wells, without a permit application process.

APPENDIX B
LABORATORY ANALYTICAL REPORTS

Northgate Environmental Management Inc.

Fax: (510) 839-4350

RE: 800 Cedar St. , Oakland, CA

Work Order No.: 1108085 Rev: 1

Dear Adam Klein:

Torrent Laboratory, Inc. received sample(s) on August 11, 2011 for the analyses presented in the following Report.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc. is certified by the State of California, ELAP #1991. If you have any questions regarding these test results, please feel free to contact the Project Management Team at (408)263-5258; ext 204.

Patti Sandrock

August 19, 2011
Date

Date: 8/19/2011

Client: Northgate Environmental Management Inc.

Project: 800 Cedar St. , Oakland, CA

Work Order: 1108085

CASE NARRATIVE

No issues encountered with the receiving, preparation, analysis or reporting of the results associated with this work order.

Analytical Comments for method S_8270C, 1108085-028 MS/MSD, QC Analytical Batch ID 406344, Note:The % recoveries for Pyrene are outside of laboratory control limits but are within % RPD limits. The associated LCS/LCSD % recoveries and % RPD are within limits. No corrective action required.

Analytical Comments for method S_6010B, 1108085-015 MS/MSD, QC Analytical Batch ID 406312, Note:The % recoveries for Barium, Copper and Zinc are outside of laboratory control limits. The associated LCS/LCSD % recoveries and % RPD are within limits. No corrective action required.

Analytical Comment for S)6010B, Note:The spikes in the MS/MSD for Lead are not recoverable. The sample concentration is greater than 4X the spike concentration. No corrective action is required.

REVISIONS:

Per client request, STLC analysis added to several samples.

Note: Extraction of 50 g sample / 500g 0.2M Sodium Citrate Solution was performed according to wet extraction procedure (WET) which was rotated in a rotary shaker for 48 hours.

STLC:Extraction started on 8/22/11 @2:45 PM and ended on 8/24/11 @2:45 PM.

Sample 1108085-041 (NG-13-1.0) TTLC and STLC ratio was outside of acceptance limits. TTLC results was 2900 mg/Kg while STLC was 520 mg/L. The ratio for TTLC to STLC should not be greater than 10:1 in a normal, homogeneous sample. As a result, the TTLC was re-prepared in triplicate and yielded the following results:

4600 mg/Kg
3400 mg/Kg
5600 mg/Kg

These wide ranges of results are indicative of a heterogeneous sample. Because only 1 - 2 grams is used in TTLC preparation while a minimum 50 grams is used in STLC preparation, the STLC data is likely the most representative value for this sample.

Data for the triplicate analyses can be reported upon client request.

Rev 1 (8/29/11)

SAMPLE RESULTS

Report prepared for: Adam Klein
Northgate Environmental Management Inc.

Date Received: 08/11/11
Date Reported: 08/19/11

Client Sample ID:	NG-13-1.0 D	**Lab Sample ID:**	1108085-042A
Project Name/Location:	800 Cedar St. , Oakland, CA	**Sample Matrix:**	Soil
Project Number:	1204.18		
Date/Time Sampled:	08/11/11 / 12:10		
Tag Number:	800 Cedar St		

The results shown below are reported using their MDL.

Parameters:	Analysis Method	Prep Date	Date Analyzed	DF	MDL	PQL	Results	Lab Qualifier	Unit	Analytical Batch	Prep Batch
Pyridine	SW8270C	8/18/11	08/18/11	10	100	99.0	ND		mg/Kg	406344	3432

Laboratory Qualifiers and Definitions

DEFINITIONS:

Accuracy/Bias (% Recovery) - The closeness of agreement between an observed value and an accepted reference value.

Blank (Method/Preparation Blank) -MB/PB - An analyte-free matrix to which all reagents are added in the same volumes/proportions as used in sample processing. The method blank is used to document contamination resulting from the analytical process.

Duplicate - a field sample and/or laboratory QC sample prepared in duplicate following all of the same processes and procedures used on the original sample (sample duplicate, LCSD, MSD)

Laboratory Control Sample (LCS ad LCSD) - A known matrix spiked with compounds representative of the target analyte(s). This is used to document laboratory performance.

Matrix - the component or substrate that contains the analyte of interest (e.g., - groundwater, sediment, soil, waste water, etc)

Matrix Spike (MS/MSD) - Client sample spiked with identical concentrations of target analyte (s). The spiking occurs prior to the sample preparation and analysis. They are used to document the precision and bias of a method in a given sample matrix.

Method Detection Limit (MDL) - the minimum concentration of a substance that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero

Practical Quantitation Limit (PQL) - a laboratory determined value at 2 to 5 times above the MDL that can be reproduced in a manner that results in a 99% confidence level that the result is both accurate and precise. PQLs reflect all preparation factors and/or dilution factors that have been applied to the sample during the preparation and/or analytical processes.

Precision (%RPD) - The agreement among a set of replicate/duplicate measurements without regard to known value of the replicates

Surrogate (S) or (Surr) - An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. Surrogates are used in most organic analysis to demonstrate matrix compatibility with the chosen method of analysis

Tentatively Identified Compound (TIC) - A compound not contained within the analytical calibration standards but present in the GCMS library of defined compounds. When the library is searched for an unknown compound, it can frequently give a tentative identification to the compound based on retention time and primary and secondary ion match. TICs are reported as estimates and are candidates for further investigation.

Units: the unit of measure used to express the reported result - **mg/L** and ***mg/Kg*** (equivalent to PPM - parts per million in **liquid** and ***solid***), **ug/L** and ***ug/Kg*** (equivalent to PPB - parts per billion in **liquid** and ***solid***), **ug/m3**, ***mg.m3***, **ppbv** and ***ppmv*** (all units of measure for reporting concentrations in air), **%** (equivalent to 10000 ppm or 1,000,000 ppb), **ug/Wipe** (concentration found on the surface of a single Wipe usually taken over a 100cm2 surface)

LABORATORY QUALIFIERS:

B - Indicates when the anlayte is found in the associated method or preparation blank
D - Surrogate is not recoverable due to the necessary dilution of the sample
E - Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument (unless otherwise noted) Values reported with an E qualifier should be considered as estimated.
H- Indicates that the recommended holding time for the analyte or compound has been exceeded
J- Indicates a value between the method MDL and PQL and that the reported concentration should be considered as estimated rather the quantitative
NA - Not Analyzed
N/A - Not Applicable
NR - Not recoverable - a matrix spike concentration is not recoverable due to a concentration within the original sample that is greater than four times the spike concentration added
R- The % RPD between a duplicate set of samples is outside of the absolute values established by laboratory control charts
S- Spike recovery is outside of established method and/or laboratory control limits. Further explanation of the use of this qualifier should be included within a case narrative
X -Used to indicate that a value based on pattern identification is within the pattern range but not typical of the pattern found in standards. Further explanation may or may not be provided within the sample footnote and/or the case narrative.

Sample Receipt Checklist

Client Name: Northgate Environmental Management Inc.
Project Name: 800 Cedar St. , Oakland, CA
Work Order No.: 1108085

Date and Time Received: 8/11/2011 16:35
Received By: NK
Physically Logged By: NG
Checklist Completed By: NG
Carrier Name: First Courier

Chain of Custody (COC) Information

Chain of custody present?	Yes
Chain of custody signed when relinquished and received?	Yes
Chain of custody agrees with sample labels?	Yes
Custody seals intact on sample bottles?	Not Present

Sample Receipt Information

Custody seals intact on shipping container/cooler?	Not Present
Shipping Container/Cooler In Good Condition?	Yes
Samples in proper container/bottle?	Yes
Samples containers intact?	Yes
Sufficient sample volume for indicated test?	Yes

Sample Preservation and Hold Time (HT) Information

All samples received within holding time?	Yes			
Container/Temp Blank temperature in compliance?	Yes	Temperature:	5	°C
Water-VOA vials have zero headspace?	No VOA vials submitted			
Water-pH acceptable upon receipt?

Go ahead and run the STLC/WET test for Lead on the samples listed previously on a standard turn around.
Thanks,
Kevin

Hi Kevin,
Yes, we can add WET test on the requested samples and we will analyze the samples on HOLD for CAM 17.
I will have sales department help you with the pricing.

Thank you!

Kind Regards,
Guergana

1.0 SUMMARY

This report presents the results of a Phase I Environmental Site Assessment (ESA) performed by Northgate Environmental Management, Inc. (Northgate) at Assessor's Parcel Number (APN) 006-047-001 in Oakland, Alameda County, California (the Site). The Site consists of an approximate five acre parcel, a portion of which has historically been identified as 800 Cedar Street. The Site is vacant and almost entirely covered by the remnant concrete slab of a former building. The Site is currently owned by the California Department of Transportation (Caltrans). A Site Location Map is shown on Figure 1 and a Site Plan is shown on Figure 2. This Phase I ESA has been funded by the City of Oakland through the USEPA Brownfields assessment grant for West Oakland. The purpose of this Phase I is to assist the property owner in assessing environmental conditions at the Site.

Our review indicates that the Site has historically been utilized for a variety of industrial purposes between 1920 and the present, including auto parts manufacturing, steel and ironworks fabrication, and fireworks manufacturing. 800 Cedar Street is listed on the RCRA-SQG, FINDS, VCP, HAZNET, and ENVIROSTOR databases related to the historic use, storage, and release of hazardous materials on the Site. Two underground storage tanks (USTs), one diesel and one gasoline, were removed from the western side of the Site sometime between 995 and 1997, and a total of 800 cubic yards of soil were excavated and disposed of as part of the UST removals. Soil sampling performed at the Site during the tank removals indicated up to 17,000 parts per million (ppm) of lead and 44 ppm of arsenic in soil in the southwest corner of the former Phoenix Iron Works property, which is now outside the current Site property boundary (currently beneath Frontage Road/I-880). Soil excavation was initiated to remove these elevated metals concentrations, and during the excavation, two solvent-containing USTs (approximately 250 gallons and 10 gallons) and a settling sump were encountered. A total of 3,300 cubic yards of soil were excavated and disposed of as part of this remedial action (IT, 2000). Soil sampling performed in 1999 indicated that shallow soil along the western edge of the Site contains total recoverable petroleum hydrocarbons (TRPH) in excess of 1,000 ppm. This area was previously identified as containing "black-stained sand". The 1999 soil sampling indicated two boring locations with elevated concentrations of semi-volatile organic compounds (SVOCs) in shallow soil samples, and the presence of elevated lead concentrations in shallow soil at multiple locations across the Site. The Department of Toxic Substance Control (DTSC) is listed as the lead agency for oversight. The Site status is listed on the Envirostor database maintained by the DTSC as inactive and requiring evaluation as of September 3, 2010.

Our review did not indicate the presence of off-Site contamination sources that are known to have impacted the subject Site. However, the Site is located in an area of heavy industrial land use, and we could not rule out the possibility that low-level groundwater contamination is present on a regional basis, including beneath the subject Site, related to these off-Site contamination sources.

In Northgate's professional opinion, an appropriate level of inquiry has been made into the previous ownership and uses of the property consistent with good commercial and customary practice in an effort to minimize liability. In summary, our review did not indicate the presence of Recognized Environmental Conditions associated with the Site, except for the following:

- The Site is listed on a number of State, Federal, and local regulatory agency databases related to the historic use, storage, and release of hazardous materials at the Site. Previous environmental testing on the Site has indicated the presence of elevated concentrations of lead and SVOCs in shallow soil at multiple locations across the Site. Additionally, elevated levels of TRPH and "black-stained sand" were reported in the northwest section of the property. The Site status is currently listed as inactive, requiring evaluation, on the Envirostor database maintained by the DTSC.

In addition, our review revealed the following issue of potential environmental concern:

- The Site is located in an area of historic industrial land use, and several sites with known soil and groundwater contamination are present in close proximity to the subject Site. We could not rule out the possibility that migration of contaminants from these off-Site sources may have impacted soil or groundwater quality beneath the Site.

We recommend that additional investigation be performed to:

- Evaluate current soil and groundwater quality conditions at the Site;
- Define the extent of SVOC and petroleum hydrocarbon soil contamination in specific areas of the Site that were identified in previous investigations;
- Further evaluate elevated lead concentrations detected in soil at the Site; and
- Evaluate the potential need for remediation or additional evaluation of risk at the Site.

2.0 INTRODUCTION

This report presents the results of a Phase I ESA performed by Northgate at APN 006-047-001 in the City of Oakland, Alameda County, California. The Site has historically been identified as 800 Cedar Street. However, reconfiguration of Interstate 880 in Oakland has removed Cedar Street at this location. The Site consists of an approximate five acre vacant parcel of land located west of Pine Street between 9th Street and Shorey Street. A Site Location Map is shown on Figure 1 and a Site Plan is shown on Figure 2.

2.1 Purpose

The purpose of this investigation has been to identify and evaluate the presence of Recognized Environmental Conditions at the Site. The term "Recognized Environmental Conditions" means the presence, or likely presence of hazardous substances or petroleum products on the Site under conditions that indicate an existing release, a past release, or a material threat of a release of hazardous materials or petroleum products into structures on the subject Site; or into the ground, groundwater, or surface water of the subject property. The term includes hazardous substances or petroleum products even under conditions in compliance with existing laws. The term is not intended to include de minimus conditions that generally do not present a material risk of harm to public health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Northgate has endeavored to perform the ESA in general conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) E-1527-05, *Standard Practice for Environmental Site Assessments* and the U.S. EPA *All Appropriate Inquiry* guidelines. It is understood that the City of Oakland is assisting the current property owner (Caltrans) with evaluating potential commercial redevelopment options for the Site, although the exact redevelopment use for the Site is not known at this time.

2.2 Detailed Scope of Services

This Phase I ESA included the following services:

- Review of readily available information regarding the history of the subject Site, including historic aerial photographs, maps, previous reports, and other information, and discussions with individuals familiar with the subject Site, if available;
- Review of environmental lien documents obtained for the subject Site;
- Reconnaissance of the subject Site and near vicinity;

- Review of readily available regulatory agency publications and files, and discussions with regulatory officials, as applicable;
- Evaluation of Recognized Environmental Conditions, development of conclusions, and recommendations, as appropriate; and
- Preparation of this report.

2.3 Limitations and Exceptions

2.3.1 Limitations

The purpose of an environmental assessment is to reasonably evaluate the potential for, or actual impact of, past practices on a given site area. In performing an environmental assessment, it is understood that a balance must be struck between a reasonable inquiry into the environmental issues and an exhaustive analysis of each conceivable issue of potential concern. No investigation is thorough enough to absolutely rule out the presence of hazardous materials at a given site. If hazardous conditions have not been identified during the assessment, such a finding should not be construed as a guarantee of the absence of such materials on the Site, but rather as the result of the services performed within the scope, limitations, and cost of the work performed.

Environmental conditions may exist at the subject Site that cannot be identified by visual observation. Where subsurface work was performed, our professional opinions are based in part on interpretation of data from discrete sampling locations that may not represent actual conditions at unsampled locations.

Except where there is express concern of our client, or where specific environmental contaminants have been previously reported by others, naturally occurring toxic substances, potential environmental contaminants inside buildings, or contaminant concentrations that are not of current environmental concern may not be reflected in this document.

Where the scope of services is limited to interview and/or review of readily available reports and literature, any conclusions and/or recommendations are necessarily based largely on information supplied by others, the accuracy or sufficiency of which may not be independently reviewed by Northgate.

Any opinions and/or recommendations presented apply to subject Site conditions existing at the time of performance of services. We are unable to report on, or accurately predict, generally unforeseeable events that may impact the subject Site following performance of services, whether occurring naturally or caused by external forces. Therefore, we cannot assume responsibility for such events or their impact. We also cannot assume responsibility for changes in environmental standards, practices, or regulations.

2.3.2 Exceptions

It should be noted that the time intervals between some historical information sources may exceed five years, due to the availability of such records. However, in our opinion, this does not significantly impact our ability to evaluate historic land use conditions at the Site. There were no other limiting conditions.

2.4 User Reliance

This report has been funded by the City of Oakland through the USEPA Brownfields Assessment Grant for West Oakland. The purpose of the Phase I is to assist the current property owner (Caltrans) in assessing environmental impacts and evaluating potential redevelopment options for the Site. Others may not rely on the information contained in this report without the express written consent of Northgate.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The subject Site is identified as APN 006-047-001 in Alameda County, California. The Site is also identified as 800 Cedar Street in the City of Oakland.

3.2 Site and Vicinity General Characteristics

The Site consists of an approximate five acre (600 feet by 400 feet) parcel of land located on the west side of Pine Street, between 9th Street and Shorey Street in Oakland, California. The Site is almost entirely covered by the remnant concrete slab of a former building. The Site is currently used for equipment and supplies storage by Caltrans.

The Site is located in an area of mixed residential and commercial development. The Site is bordered on the north by 9th Street, across which are residences and industrial warehouse buildings. The Site is bordered on the east by Pine Street and on the south by Shorey Street, followed by residences. The Site is bordered along the west by an access ramp for Interstate 880. Figure 1 shows the Site location. Figure 2 shows a current aerial view of the Site overlain by the approximate Site boundary as it existed in the early 1990s, along with historical features identified in previous environmental investigation reports (discussed in Section 5.6 below).

3.3 Geology and Groundwater

According to the U.S. Geologic Survey Topographic Map of the Oakland West Quadrangle, the subject Site is situated at an elevation of approximately 11 feet above sea level. On a regional basis, surface topography slopes down to the southwest. The nearest surface water is the Oakland Inner Harbor and the Oakland Middle Harbor, located approximately ¾-mile to the south of the subject Site.

According to Helley and Graymer (1997), the area of the subject Site is underlain by Merritt Sand, which consists of fine-grained, well sorted, well-drained eolian deposits of Pleistocene and Holecene age. Subsurface materials encountered in borings previously advanced at the Site consist of artificial fill (gravelly sand/clay with brick, glass, and wood debris) to depths of up to 6 feet below the ground surface (bgs), followed by Bay Mud up to 8 feet bgs, and silty/clayey sand up to 13 feet bgs. These materials are in turn, underlain by the Temescal Formation consisting of silty clay with zones of shells and sand, and the Alameda Formation, a mixture of gravel, sand, silt, and clay with occasional shells and organic material, to a total depth of 160 feet bgs.

The investigation performed by Geo/Resource Consultants, Inc. (GRC) in 1992 encountered silty sand and sand to a depth of 27 feet bgs at the Site. Groundwater measured in one of the borings was encountered at a depth of 7.2 feet bgs. Information contained in unpublished engineering reports for properties in the vicinity of the Site indicates that the local groundwater flow direction is predominantly to the southwest.

3.4 Current Use of the Property

The subject Site is currently a vacant parcel of land that is almost entirely covered by the remnant concrete slab of a former building. A portion of the Site is currently used for construction materials storage by Caltrans. Information presented in a 1993 Preliminary Endangered Assessment (PEA; On-Site Technologies, 1993) indicates that the Site was used for a variety of purposes between 1920 and the present, including auto parts manufacturing, steel and ironworks fabrication, and fireworks manufacturing.

3.5 Description of Structures, Roads, Sewage, and Potable Water Sources

The Site is currently a vacant lot. A remnant concrete slab of a former building is present across most of the Site. No other structures are present on the Site at this time. The Site is served by East Bay Municipal Utility District water service and City of Oakland sewer service. According to the Alameda County Public Works Agency, one monitoring well is historically identified at the Site. The record indicates that this 2-inch diameter well was drilled to a depth of 27 feet bgs in June of 1992. The recorded coordinates locate the well on the northwest portion of the Site (north of the well box observed during site reconnaissance and discussed in Section 6.0 below). However, the Public Works Agency could not locate any additional information regarding this well and it is unclear whether this well was properly destroyed.

3.6 Current Uses of Adjoining Properties

The Site is located in an area of mixed residential and commercial development. The Site is bordered on the north by 9th Street, followed by residences and industrial warehouses. The Site is bordered on the east by Pine Street and on the south by Shorey Street, followed by residences. An access ramp for Interstate 880 is located along the western border of the Site.

4.0 USER PROVIDED INFORMATION

4.1 Environmental Liens or Activity and Use Limitations

Northgate reviewed an environmental lien report for APN 006-047-001, provided by Environmental Data Resources (EDR), a regulatory database research firm. As indicated in the report, presented in Appendix A, no environmental liens or activity and use limitations of record were found.

4.2 Valuation Reduction for Environmental Issues

Northgate has not been informed of any known valuation reduction for environmental issues.

4.3 Owner, Property Manager, and Occupant Information

The subject Site is currently owned and managed by Caltrans. The Site is currently used for construction materials storage.

4.4 Specialized Knowledge

The City of Oakland does not have any specialized knowledge about the Site.

4.5 Reason for Performing the Phase I ESA

This Phase I ESA has been funded by the City of Oakland through the USEPA Brownfields Assessment Grant for West Oakland. The purpose of the Phase I is to assist the property owner in assessing environmental conditions at the Site and evaluating potential redevelopment options.

5.0 RECORDS REVIEW

5.1 Standard Environmental Record Sources

To determine if the subject Site has documented environmental concerns, or if other sites with documented environmental concerns exist within the search radii of the subject Site prescribed by the *All Appropriate Inquiry*, Northgate reviewed a summary of regulatory agency databases prepared by EDR. In addition, where appropriate, we reviewed local regulatory agency files for additional specific information regarding sites identified in the EDR report judged to be of possible concern to the subject Site. The EDR report presenting a summary of the agency databases reviewed and a map showing the location of the identified sites, is provided as Appendix B. The results of the database search and follow-up agency file review are summarized below.

5.1.1 Subject Site

The subject Site is listed as **Caltrans** on the RCRA-SQG, FINDS, VCP, HAZNET, and ENVIROSTOR databases, and is listed as **Phoenix 800 Property** on the FINDS database. The listings are related to historical chemical use and storage at the Site and Site investigation and contamination clean-up activities, which are discussed in detail in Section 5.6 below.

5.1.2 Surrounding Area

Federal NPL Site List (NPL, Proposed NPL): One site is listed on the NPL list within a 1-mile radius of the subject Site: **Amco Chemical**, located at 1414 Third Street, is approximately 0.61 miles southeast of the Site. This property was occupied by AMCO Chemical Corporation until December 1989. The site was listed on the National Priorities List on July 1, 2004 and the U.S. Environmental Protection Agency (EPA) has since conducted soil, soil gas, and groundwater investigations on the property. Groundwater flow beneath the site varies from southwest to south seasonally. The groundwater contamination plume has been well defined and is reportedly restricted to the area in the vicinity of the site. Based on our review, this site does not appear to represent a significant potential threat to soil or groundwater quality at the subject Site, given its distance from the subject Site and the defined boundaries of the contaminant plume beneath the site.

National Priority List Deletions (Delisted NPL): No sites are listed within a 1-mile radius of the subject Site.

Federal CERCLIS List (CERCLIS, Federal Facility): Two sites are listed on the CERCLIS list within a 0.5-mile radius of the subject Site: **Gaines Property**, located at 1795 11th Street, is approximately 0.19 miles northeast of the Site, and the **US Army Oakland Army Base**, located at

Bldg-1 Alaska Street, is approximately 0.41 miles northwest of the Site. The **US Army Oakland Army Base** does not appear to represent a significant potential threat to soil or groundwater quality at the subject Site, given its distance (greater than ¼-mile) and topographic location (cross-gradient) from the subject Site.

Gaines Property is a vacant lot previously utilized to store automobiles, drums, pressurized gas containers, and other miscellaneous equipment. Surface soil samples collected around 1997 found lead concentrations of up to 28,000 parts per million (ppm). Stored debris along with 485 cubic yards of contaminated soil were removed from the site and disposed at approved landfills in 2003. Upon completion of remediation activities, the DTSC certified that the property was cleaned up to unrestricted residential standards and deemed that no further action was necessary. Based on the remedial activities completed at the site, it does not appear to represent a significant potential threat to soil or groundwater quality at the subject Site.

CERCLIS NFRAP List (CERC-NFRAP): Three sites are listed within a 0.5-mile radius of the subject Site: **Batavia Property**, located at 1832 9th Street, is approximately 0.06 miles northeast of the Site. **West Recycler Bin Storage**, located at 1405 Wood Street, is approximately 0.39 miles northeast of the Site. **Lot at 530-542 Lewis Street**, approximately 0.41 miles southeast of the Site, is located at 530-542 Lewis Street. With the exception of **Batavia Property**, these sites do not appear to represent a significant threat to soil or groundwater quality at the subject Site given their distance (greater than ¼-mile) and/or topographic location (down-gradient) from the subject Site.

The **Batavia Property** has historically been occupied by office buildings, a printing facility for logos and grain bags, storage of drilling equipment, boats, and vehicles, and the storage of polyethylene resin and polyethylene sheets. One of the two buildings on the property was demolished in April 1998 and the other is presently vacant. A drive-by site inspection performed by the DTSC in 1997 noted drums and containers in poor condition as well as ground staining and chemical odors. However, a follow-up inspection in 1998 did not identify any staining, odors, or drums at the site. Based on the lack of any documented releases or spills, the site received a no further action status from the DTSC on August 25, 1998. Given the status of the site and lack of any documented contamination issues, this site does not appear to represent a significant threat to soil or groundwater quality at the subject Site.

RCRA Corrective Action Report (CORRACTS): No sites are listed within a 1-mile radius of the subject Site

RCRA-permitted Treatment, Storage and Disposal Facilities (RCRA-TSDF): No sites are listed within a 0.5-mile radius of the subject Site.

Federal RCRA Generators List (RCRA-LQG, SQG, CESQG): Six sites are listed as small-quantity generators within a 0.25-mile radius of the subject Site. Based on our review, these sites do not appear to represent a significant potential threat to soil or groundwater quality at the subject

Site given their topographic locations (down-gradient or cross-gradient) in relation to the subject Site and the lack of any documented contamination issues.

Federal Institutional / Engineering Controls Site List (US INST/ENG CONTROLS): No sites are listed within a 0.5-mile radius of the subject Site.

State and Tribal Equivalent NPL (RESPONSE): Eleven sites are listed within a 1-mile radius of the subject Site. With the exception of the sites discussed below, none of the sites appear to represent a significant potential threat to soil or groundwater quality at the subject Site, given their distance (greater than ¼-mile) and topographic location (down-gradient or cross-gradient) in relation to the subject Site. The **Gaines Property**, located at 1795 11th Street, is discussed under the CERCLIS listing above.

Jenkins Auto Wreckers, located at 1778 10th Street, is approximately 0.15 miles east-northeast. This property operated as an auto storage and wrecking yard between 1964 and 1994. Stained and oil-saturated soils were observed during a DTSC site inspection performed in 1996. Shallow soil samples collected during a 2002 Phase II investigation contained elevated levels of petroleum hydrocarbons, polychlorinated biphenyls (PCBs), and heavy metals (AEI, 2002). A groundwater sample collected during the same investigation contained elevated concentrations of benzene and xylenes. An environmental investigation performed by Northgate at a portion of the 10th street property reported elevated levels of petroleum hydrocarbons, metals, and PCBs in shallow soil on the eastern portion of the site (Northgate, 2010). Low to moderate levels of petroleum hydrocarbons as oil and low levels of VOCs were observed in groundwater beneath the site. Based on our review, the contaminants found in shallow soil at this site do not appear to represent a significant threat to soil or groundwater quality at the subject Site. However, we could not rule out the possibility that contaminants reported in groundwater beneath the Jenkins Auto Wreckers could be present on a regional basis, including beneath the subject Site.

State and Tribal Equivalent CERCLIS (ENVIROSTOR): Forty-six sites are listed within a 1-mile radius of the subject Site. With the exception of the sites discussed below, none of the remaining sites appear to represent a significant threat to soil or groundwater quality at the subject Site given their topographic location (cross-gradient or down-gradient) and/or relative distance (greater than ¼-mile) from the subject Site.

Amco Chemical, located at 1414 Third Street, is discussed under the NPL listing above. **Batavia Property**, located at 1832 9th Street, is discussed under the CERC-NFRAP listing above. **Gaines Property**, located at 1795 11th Street, is discussed under the CERCLIS listing above.

State and Tribal Landfill / Solid Waste Disposal Sites List (SWF/LF): No sites are listed within a 0.5-mile radius of the subject Site.

State and Tribal Leaking Storage Tank Sites (LUST/SLIC/Alameda County CS/Indian LUST): Eighteen sites are listed on the LUST database, five sites are listed on the SLIC database, and 15 sites are listed on the Alameda County CS database within a 0.5-mile radius of the subject Site. With the exception of the sites discussed below, none of the remaining sites appear to represent a significant threat to soil or groundwater quality at the subject Site based on their topographic location (cross-gradient or down-gradient) and/or their relative distance (greater than ¼-mile) from the subject Site. However, given the large number of LUST sites in the area, we could not rule out the possibility that groundwater contamination could be present on a regional scale in the area, including beneath the subject Site.

Bonnelli Enterprises, located at 1111 Pine Street, is approximately 0.20 miles northeast of the subject Site. Odorous and discolored soil was observed during the removal of a 500 gallon underground gasoline storage tank at Bonnelli Enterprises in September 1993. The tank pit was over-excavated to remove the contaminated soil and a second tank was discovered in close proximity. Tank #2 appeared to have been closed in place and filled with sand. Groundwater seeping into the excavation pit exhibited a sheen. Limited over-excavation of contaminated soil was conducted in 1993. However, soil removal had to be terminated due to possible impact to a nearby structure and the presence of utility lines. A letter issued by the Alameda County Environmental Health Services indicated that no further action is required based on the remediation efforts that were completed. Based on our review and the topographic location in relation to the subject Site (down-gradient), this property does not appear to represent a significant potential threat to soil or groundwater quality at the subject Site.

Pacific Cannery Lofts, located at 1111-1119 Pine Street, is approximately 0.20 miles northeast of the subject Site. Four USTs (containing gasoline and heating or bunker oil) were removed during previous site remediation and redevelopment activities. Petroleum hydrocarbons, lead, and polycyclic aromatic hydrocarbons (PAHs) were detected in soil, and petroleum hydrocarbon impacted groundwater was present beneath the site. Remediation activities performed at the site between 2006 and 2008 included removal of lead and PAH affected soil and groundwater remediation to reduce the mass of petroleum present beneath the site. Any remaining contaminants were expected to attenuate over time and a No Further Action status was granted by the RWQCB on January 9, 2008 (RWQCB, 2008). Given the documented remedial actions, this site does not appear to represent a significant potential threat to soil or groundwater quality at the subject Site.

14th St Apartments @ Central Station, located at 1801 14th Street, is approximately 0.40 miles northeast of the Site. Several environmental investigations performed on or near the site indicated the presence of petroleum hydrocarbons, metals, and PAHs in soil at the site, at depths ranging from surface soil to 8.5 feet bgs (Amec, 2009). Based on the proposed redevelopment plan for the site, direct contact with surface soil was determined to be the only potential human health risk. In March of 2008, three feet of soil were excavated from all proposed landscape areas and were moved beneath the proposed building footprint. Although soil contamination is present at this site, it does not appear to represent a significant potential threat to soil or groundwater quality at the subject Site due to the documented remedial activities.

<u>State and Tribal Registered Storage Tanks (UST/AST/Indian UST/ FEMA UST)</u>: One site is listed on the AST database within a 0.25-mile radius of the subject Site: **West Oakland Yard**, located at 1851 Fifth Street, is approximately 0.25 miles southwest of the Site and is listed for a 51,050

gallon aboveground storage tank (AST). Given the down-gradient location of this site, it does not appear to represent a significant potential threat to soil or groundwater quality at the subject Site.

State and Tribal Voluntary Cleanup Sites (VCP/Indian VCP): Twelve sites are listed on the VCP database within a 0.5-mile radius of the subject Site: None of the listed sites appear to represent a significant threat to soil or groundwater quality at the subject Site given their topographic location (down-gradient) and/or relative distance (greater than ¼-mile) in relation to the subject Site.

Local Brownfield Lists (US Brownfields): One site is listed within a 0.5-mile radius of the subject Site: **Willow Park**, located at 1386 Willow Street, is approximately 0.4 miles east-northeast of the subject Site. Part of the property was historically used for automobile garages, a multi-tenant residential structure, and the storage of miscellaneous objects and vehicles between 1900 and 1977, at which point it was developed into a recreational park. The property is contaminated with lead due to historical land use activities. A No Further Action status was granted to the site by the DTSC on June 8, 2005 following the completion of remediation activities performed by the City of Oakland in early 2000s. Although the exact scope of remedial work performed was not readily available for review, this site does not appear to represent a significant potential threat to soil or groundwater quality at the subject Site given its closure status.

Local Landfill / Solid Waste Disposal Lists (Debris Region 9, ODI, WMUDS/SWAT, SWERCY Indian ODI): No sites are listed within a 0.5-mile radius of the subject Site.

Local Hazardous Waste / Contaminated Sites (Hist Cal-Sites, SCH, Toxic Pits): Eight sites are listed on the Hist Cal-Sites database within a 1-mile radius of the subject Site. Two sites were listed on the Toxic Pits database within 1-mile of the subject Site. With the exception of the sites discussed below, none of the remaining sites appear to represent a significant threat to soil or groundwater quality at the subject Site given their distance (greater than ¼-mile) and/or topographic location (cross-gradient or down-gradient) from the subject Site.

The **Amco Chemical**, **Gaines Property**, and **Oakland Army Base–Early Transfer** sites are discussed under the NPL, CERCLIS, RESPONSE listings above, respectively.

Local Land Records (LUCIS, DEED): One site is listed on the DEED database within a 0.5-mile radius of the subject Site: **Oakland Army Base**, located at 2475-D West 12th Street, is approximately 0.41 miles northwest of the subject Site. Given the topographic location and relative distance from the subject Site, this site does not appear to represent a significant potential threat to soil or groundwater quality at the subject Site.

Local Registered Storage Tank Lists (CA FID, HIST UST, SWEEPS UST): Five sites are listed on the CA FID UST database, seven sites are listed on the HIST UST database, and eight sites are listed on the SWEEPS UST database within a 0.5-mile radius of the Site. With the exception of the properties discussed below, none of the remaining sites appear to represent a significant threat to soil or groundwater quality at the subject Site given their distance (greater than ¼-mile) and/or topographic location (cross-gradient or down-gradient) from the subject Site.

Phoenix Iron Works, located at 888 Cedar Street, is associated with the subject Site, and is discussed in Section 5.6 below. **Bonnelli Enterprises**, located at 1111 Pine Street, is discussed under the LUST listing above. **Adelphi Aluminum Co.**, is also listed at 111 Pine Street, this listing appears to be associated with the Bonnelli Enterprises property discussed under the LUST listing above.

Globe Metals Co., located at 1820 10th Street, is approximately 0.13 miles northeast of the subject Site. According to the Geotracker website maintained by the RWQCB, a leak was reported at the site in 1994. Lead is noted to be the contaminant of concern. The site is currently listed as open but inactive as of June 2, 2009. Additional records for this site were not readily available. Given that some type of release appears to be documented, we could not rule out the possibility that contaminants from this property could potentially migrate in groundwater to the subject Site.

<u>Other Ascertainable Records Listed by EDR</u>: The EDR report indicates the presence of one site listed on the Department of Defense (DOD) database within a 1-mile radius of the Site: the **Oakland Army Base** is located 0.43 miles northwest of the subject Site. This status of this military site is listed as closed. Given the closure status and the relative distance (greater than ¼-mile) and topographic location (cross-gradient) from the subject Site, the site is not considered a significant potential threat to soil or groundwater quality at the subject Site.

One site is listed on the FUDS database within a 1-mile radius of the Site: the **Army-Navy Distributing Center** is located 0.93 miles northeast of the Site. This property previously included two 10,000-gallon diesel USTs associated with a fueling station, which were utilized until 1962. The property was sold to a private individual in 1982 and was then utilized as a warehouse and truck distribution center by a transportation company. No potential hazards have been identified at this site in relation to previous Department of Defense activities. Given the site's relative distance (greater than ½-mile) and lack of documented releases, it does not appear to represent a significant potential threat to soil or groundwater quality at the subject Site.

One site is listed on the Bond Expenditure Plan (Ca Bond Exp. Plan) database within 1-mile of the Site: **Southern Pacific Transportation Co.**, located at 1707 Wood Street, is approximately 0.55 miles northeast of the Site. This site does not appear to represent a significant potential threat to soil or groundwater quality at the subject Site, given its distance (greater than ½-mile) in relation to the subject Site.

Four sites are listed on the Cortese and 20 sites are listed on the HIST CORTESE databases with a 0.5-mile radius of the Site. With the exception of **Jenkins Auto Wreckers** (discussed under the RESPONSE listing above), Phoenix Iron Works (discussed in Section 5.6 below), **Globe Metals Company** (discussed under the CA FID listing above), and **Bonnelli Enterprises** (discussed under the LUST listing above), none of these sites appear to represent a significant potential threat to soil or groundwater quality at the subject Site given their topographic location (cross-gradient or down-gradient) and/or distance (greater than ¼-mile) in relation to the subject Site.

Seven sites are listed within a 1-mile radius of the Site on the Notify 65 database. Based on our review, none of these properties appear to represent a significant potential threat to soil or groundwater quality at the Site given their distance (greater than ¼-mile) and/or topographic location (down-gradient or cross-gradient) in relation to the subject Site.

Two sites are listed on the EDR Proprietary Historical Auto Stations database within 0.25 miles of the subject Site. **Edo S Automotive**, located at 1807 Shorey Street, is approximately 0.08 miles south of the Site. **Dahl Saml**, located at 1775 7th Street, is approximately 0.17 miles south of the subject Site. Given the relative location (down-gradient) and the lack of any documented issues, these sites do not appear to represent a significant threat to soil or groundwater quality at the subject Site.

Nine sites are listed on the EDR Proprietary Historical Cleaners database within 0.25 miles of the subject Site. Based on our review, none of these sites appear to represent a significant threat to soil or groundwater quality at the subject Site given their topographic location (cross-gradient or down-gradient) in relation to the subject Site.

5.2 Additional Environmental Record Sources

Northgate contacted local regulatory agencies for information regarding the use or storage of hazardous materials at the subject Site. Northgate reviewed files at any agency maintaining a file for the subject Site. The following agencies were contacted for information regarding the use or storage of hazardous materials at the Site:

- City of Oakland Community and Economic Development Agency (CEDA) – Planning and Zoning Division, Building Services;
- City of Oakland Fire Department, Fire Prevention Bureau;
- East Bay Municipal Utility District; and
- Alameda County Department of Environmental Health.

5.2.1 City of Oakland Community and Economic Development Agency (CEDA) Building, Planning and Zoning Divisions

The Planning and Zoning Divisions have no records pertaining to the subject Site. The Building Department records consisted of several permit documents from 1995 related to demolition of the Phoenix Iron Works structures and relocation of houses from 714 Pine Street as well as 1815 and 1817 Shorey Streets to the 800 Cedar Street property. A building permit document from 1990 indicated a proposed new metal warehouse for the 888 Cedar Street address. It is not clear whether any of these modifications occurred since additional records were not readily available. None of the reviewed records indicated use or storage of hazardous materials at the Site.

5.2.2 City of Oakland Fire Department, Fire Prevention Bureau

The Fire Prevention Bureau does not maintain any files for the subject Site (800 Cedar Street).

5.2.3 East Bay Municipal Utility District (EBMUD)

An EBMUD technician stated that the subject Site is served by EBMUD sewer and water service.

5.2.4 Alameda County Department of Environmental Health – Local Oversight Program (LOP)

The LOP maintains numerous records pertaining to historical environmental investigations at the subject Site. Those reports are discussed in detail under section 5.6 below.

5.3 Radon

Information provided by EDR (Appendix B) indicates that indoor air samples collected at 49 sites in Alameda County by the U. S. Environmental Protection Agency (U.S. EPA) had an average radon concentration of 0.776 picocuries per liter (pCi/L) on the first floor level, -0.400 pCi/L on the second floor level, and 1.338 pCi/L at the basement level. None of the samples contained more than 4 pCi/L. According to EDR, Alameda County is designated as Federal Radon Zone 2 (indoor average less than 4 pCi/L but greater than or equal to 2 pCi/L).

The State of California Division of Drinking Water and Environmental Management maintains a database of radon test results indicating that out of 3 samples collected in the zip code 94607, no samples exceeded 4 pCi/L. The California Department of Health Services and the U. S. EPA recommend that some form of mitigation be conducted for houses with indoor air radon concentrations of 4 pCi/L or greater.

5.4 Land Use History

Information on historical land use at the Site and adjacent area was evaluated by reviewing historic aerial photographs, maps, and other documents. A summary of our investigation findings is presented below.

5.4.1 Aerial Photographs

Northgate reviewed historic aerial photographs of the Site for the years 1939, 1946, 1959, 1965, 1975, 1982, 1993, 1998, and 2005 obtained from EDR. A summary of our aerial photograph review is presented below. Copies of select aerial photographs are provided in Appendix C.

Date: 1939	**Scale:** 1”= 555’
Site Description: The subject Site is bisected by a street that extends in an east-west direction across the Site. The northern half of the Site is bisected by an additional road extending to 9th Street on the northern property boundary. The northwestern portion of the Site contains a large structure that appears to be a warehouse or industrial facility. The northeastern corner of the Site contains residential development. The southern portion of the Site consists of a large warehouse or industrial building in the southeastern area and vacant land in the southwestern area with some small structures that may be residential buildings.	
North:	9th Street followed by commercial and industrial buildings and some residential development.
South:	Shorey Street, followed by residential and commercial development then a rail yard.
East:	Pine Street followed by residential development.
West:	Cedar Street followed by vacant land and railroad tracks.

Date: 1946	**Scale:** 1”= 655’
Site Description: The subject Site is covered with a large, industrial structure. The streets previously bisecting the Site and the previous structures on the Site are no longer present.	
North:	9th Street followed by commercial and industrial buildings and some residential development.
South:	Shorey Street, followed by residential and commercial development then a rail yard.
East:	Pine Street followed by residential development.
West:	Cedar Street followed by a commercial development, railroad tracks, and commercial and residential development father west.

Date: 1959	**Scale:** 1”= 555’
Site Description: The subject Site is covered with a large, industrial structure. Parking rows are located along the eastern and western sides of the structure.	
North:	9th Street followed by commercial and industrial buildings and some residential development.
South:	Shorey Street, followed by residential and commercial development then a rail yard.
East:	Pine Street followed by residential development.
West:	Cedar Street followed by several small industrial or commercial buildings, a roadway, railroad tracks, and commercial and residential development father west.

Date: 1965	**Scale: 1”= 333’**
Site Description: The subject Site is covered with a large, industrial structure. A row of parking is located along the eastern side of the structure.	
North:	9th Street followed by commercial and industrial buildings and some residential development.
South:	Shorey Street, followed by residential and commercial development then a rail yard.
East:	Pine Street followed by residential development.
West:	Cedar Street followed by an industrial or commercial building, a roadway, railroad tracks, and commercial and residential development father west.

Date: 1975	**Scale:** 1”= 550’
Site Description: The subject Site is covered with a large, industrial structure.	
North:	9th Street followed by commercial and industrial buildings and some residential development.
South:	Shorey Street, followed by residential and commercial development then a rail yard.
East:	Pine Street followed by residential development.
West:	Cedar Street followed by several industrial or commercial buildings, a roadway, railroad tracks, and commercial and residential development father west.

Date: 1982	**Scale:** 1”= 690’
Site Description: The subject Site is covered with a large, industrial structure.	
North:	9th Street followed by commercial and industrial buildings and some residential development.
South:	Shorey Street, followed by residential and commercial development then a rail yard.
East:	Pine Street followed by residential development.
West:	Cedar Street followed by several industrial or commercial building, a roadway, railroad tracks, and commercial and residential development father west.

Date: 1993	**Scale:** 1”= 604’
Site Description: The subject Site is covered with a large, industrial structure.	
North:	9th Street followed by industrial buildings and some residential development.
South:	Shorey Street, followed by residential and commercial development then a rail yard.
East:	Pine Street followed by residential development.
West:	Cedar Street followed by vacant land, a roadway, railroad tracks, and residential and commercial development farther west.

Date: 1998	**Scale:** 1”= 666’
Site Description: The Site consists of a vacant parcel that is almost entirely covered by the remnant concrete slab of a former building. A small structure is located in the northwest corner of the Site.	
North:	9th Street followed by industrial buildings and some residential development.
South:	Shorey Street, followed by residential and commercial development, Interstate 880, and a rail yard.
East:	Pine Street followed by residential development.
West:	Access road for Interstate 880 followed by Interstate 880, railroad tracks, and residential and commercial development farther west.

Date: 2005	**Scale:** 1”= 604’
Site Description: The Site consists of a vacant parcel that is almost entirely covered by the remnant concrete slab of a former building.	
North:	9th Street followed by industrial buildings and some residential development.
South:	Shorey Street, followed by residential and commercial development, Interstate 880, and a rail yard.
East:	Pine Street followed by residential development.
West:	Access road for Interstate 880 followed by Interstate 880, railroad tracks, and residential and commercial development farther west.

5.4.2 Sanborn Maps

Northgate reviewed Sanborn fire insurance maps for the Site obtained from EDR for the years 1889, 1902, 1912, 1951, 1952, 1957, 1958, 1961, 1967, and 1970. Copies of the Sanborn Maps are provided in Appendix D. Information from the Sanborn maps is summarized below.

1889	Chase Street crosses east-west through the center of the Site and New Street extends in a north to south direction in the center of the northern portion of the Site between Chase Street and 9th Street. The northern portion of the property is occupied by residential development and vacant lots. The southern portion of the Site is mostly vacant, with shed and storage in the central portion of this area.
North:	9th Street followed by vacant lots and various commercial and residential developments.
South:	Division Street, followed by a triangular lot with a small structure, Short Street, and residential development.
East:	Pine Street followed by residential development.
West:	Cedar Street and railroad tracks followed by residential development.

1902	Chase Street crosses east-west through the center of the Site and New Street extends in a north to south direction in the center of the northern portion of the Site between Chase Street and 9th Street. The northern portion of the property is occupied by residential development and vacant lots. The southern portion of the Site is mostly vacant, with some residential structures, a storage area, and a tank in the area.
North:	9th Street followed by Standard Oil Company and various commercial and residential developments.
South:	Division Street, followed by a triangular lot with a small structure, Short Street, and residential development.
East:	Pine Street followed by residential development.
West:	Cedar Street and railroad tracks followed by residential development.

1912	Chase Street crosses east-west through the center of the Site and New Street extends in a north to south direction in the center of the northern portion of the Site between Chase Street and 9th Street. The northwest corner of the property is occupied by California Bedding and Upholstery Company. The northeastern corner of the property is occupied by residential development. The southern portion of the Site is mostly vacant, with some residential structures in the area.
North:	9th Street followed by Standard Oil Company and various commercial and residential developments.
South:	Division Street, followed by a triangular lot with a small structure, Short Street, and residential development.
East:	Pine Street followed by residential development.
West:	Cedar Street and railroad tracks followed by residential development.

1951	The northwestern portion of the Site is occupied by an Erection Shop and Welding company, Independent Iron Works Ltd., steel storage, and a tool room. The southwestern portion of the parcel is occupied by a truck repair facility, a machine shop, an electrical shop, and a warehouse. The eastern portion of the Site is occupied by a sheet metal shop.
North:	9th Street followed by various industrial companies and residential development.
South:	Shorey Street followed by an additional Independent Iron Works Ltd. structure and residential development.
East:	Pine Street followed by residential development.
West:	Cedar Street and spur tracks, followed by railroad tracks, vacant structures.

1952	The northwestern portion of the Site is occupied by an Erection Shop and Welding company, Independent Iron Works Ltd., steel storage, and a tool room. The southwestern portion of the parcel is occupied by a truck repair facility, a machine shop, an electrical shop, and a warehouse. The eastern portion of the Site is occupied by a sheet metal shop.
North:	9th Street followed by various industrial companies and residential development.
South:	Shorey Street followed by an additional Independent Iron Works Ltd. structure and residential development.
East:	Pine Street followed by residential development.
West:	Cedar Street and spur tracks, followed by railroad tracks, vacant structures.

1957	The northwestern portion of the Site is occupied by an Erection Shop and Welding company, Independent Iron Works Ltd., steel storage, and a tool room. The southwestern portion of the parcel is occupied by a truck repair facility, a machine shop, an electrical shop, and a warehouse. The eastern portion of the Site is occupied by a sheet metal shop.
North:	9th Street followed by various industrial companies and residential development.
South:	Shorey Street followed by an additional Independent Iron Works Ltd. structure and residential development.
East:	Pine Street followed by residential development.
West:	Cedar Street and spur tracks, followed by railroad tracks, a structural steel storage yard, sand blasting and spray painting areas, a glass storage building, and a storage structure.

1958	The northwestern portion of the Site is occupied by an Erection Shop and Welding company, Independent Iron Works Ltd., steel storage, and a tool room. The southwestern portion of the parcel is occupied by a truck repair facility, a machine shop, an electrical shop, and a warehouse. The eastern portion of the Site is occupied by a sheet metal shop.
North:	9th Street followed by various industrial companies and residential development.
South:	Shorey Street followed by an additional Independent Iron Works Ltd. structure and residential development.
East:	Pine Street followed by residential development.
West:	Cedar Street and spur tracks, followed by railroad tracks, a structural steel stock yard, sand blasting and spray painting areas, a glass storage building, and a used machinery storage structure.

1961	The northwestern portion of the Site is occupied by Vinnell Steel Company, steel storage, and a tool room. The southwestern portion of the parcel is occupied by a truck repair facility, a machine shop, an electrical shop, and a warehouse. The eastern portion of the Site is occupied by a sheet metal shop.
North:	9th Street followed by various industrial companies and residential development.
South:	Shorey Street followed by an additional Vinnell Steel Company structure and residential development.
East:	Pine Street followed by residential development.
West:	Cedar Street and spur tracks, followed by railroad tracks, a structural steel stock yard, sand blasting and spray painting areas.

1967	The northwestern portion of the Site is occupied by Vinnell Steel Company, steel storage, and a tool room. The southwestern portion of the parcel is occupied by a truck repair facility, a machine shop, an electrical shop, and a warehouse. The eastern portion of the Site is occupied by a sheet metal shop.
North:	9th Street followed by various industrial companies and residential development.
South:	Shorey Street followed by an additional Vinnell Steel Company structure and residential development.
East:	Pine Street followed by residential development.
West:	Cedar Street and spur tracks, followed by railroad tracks, a structural steel stock yard, sand blasting and spray painting areas.

1970	The northwestern portion of the Site is occupied by Phoenix Iron Works, steel storage, and a tool room. The southwestern portion of the parcel is occupied by a truck repair facility, a machine shop, an electrical shop, and a warehouse. The eastern portion of the Site is occupied by a sheet metal shop.
North:	9th Street followed by Irving Subway Grating Company, industrial and residential development.
South:	Shorey Street followed by residential and industrial development.
East:	Pine Street followed by residential development.
West:	Cedar Street and spur tracks, followed by railroad tracks, a structural steel stock yard, sand blasting and spray painting areas.

5.4.3 Topographic Maps

Northgate reviewed historic topographic maps for the Site obtained from EDR for the years 1895, 1915, 1948, 1949, 1959, 1968, 1973, and 1980. Copies of the topographic maps are provided in Appendix E. Information from the topographic maps is summarized below.

Quadrangle: San Francisco	Scale: 1:62500	Series: 15 Minute
1895:	No specific features are shown on the subject Site or adjoining properties. A large rail yard is mapped to the south. A small inlet from the San Francisco Bay is present to the southwest.	
1915:	No specific features are shown on the subject Site or adjoining properties. Multiple rail lines are located in the vicinity of the Site.	
1948: *(1:50000)*	The subject Site and adjoining properties are shown as general urban land use, with no specific features depicted. Several rail lines are shown to the south and west of the Site.	

Quadrangle: Oakland West	Scale: 1:24000	Series: 7.5 Minute
1949:	The Site is almost entirely covered by a large structure. The surrounding area is shown as general urban land use. Several rail lines are located along the southern and western boundaries of the Sites. A Naval reservation is located southwest of the Site and an Army reservation is mapped west of the Site. Numerous new structures are mapped in the vicinity of the rail yard, located south of the Site.	

1959:	No specific features are shown on the subject Site. The Site and surrounding areas are mapped as urban land use. Schools are now mapped to the northeast and east of the Site. The Nimitz Freeway is located to the east. Several small structures are now mapped to the east and south of the Site.
1968:	The Site is once again shown with a large structure covering the Site. Several new structures are located to the north, south, and west of the Site. A roadway is now mapped north of the Site connecting West Grand to Interstate 880.
1973:	The general vicinity of the subject Site appears the same as in the previous map. Several structures have been removed and added south of the property.
1980:	The general vicinity of the subject Site appears the same as in the previous map. Several large structures west of the Site at the Oakland Outer Harbor have been removed from the map.

5.4.4 City Directories

A search of available city directories was performed by EDR at approximate five-year intervals from 1920 through 2006. A summary of the listings for the Site and nearby properties is shown in the table below. The complete city directory summary provided by EDR is presented as Appendix F.

Address	Date	Listing
Site		
800 Cedar Street	1991-1992	Mechanical services, machine shop, and "Young Bill."
Nearby Properties		
1778 10th Street	1967-2006	Auto wrecker
1820 10th Street	1928-1943	Trucking and freight systems companies, a metal company, Baptist church, California Waste Solutions Inc.
2520 - 2630 10th Street	1928-1943	County purchasing agent hall of records and residences.
1752-1798 9th Street	1967-2006	Residences

Address	Date	Listing
1819-1846 9th Street	1933-2006	Auto body and repair shops, environmental drilling service company, trapeze arts company, "Serian Orthdx," "Cap International," a towing company, "Katsulakis John T May ilk Jenny Wren Stores," and machinery and excavator companies.
1754-1796 8th Street	1967-1967	Residences and Alpha Omega Foundation.
1738-1779 Chase Street	1928-2006	Residences, "All State Supply Company," surveyor, car cleaning company, tire and brake services, construction company, auto repair companies, metal polishing plating and body repair shop, steel fabricators, and "Del Sarto Maurice Lab H."
1769 Goss Street	1928-2006	Residences and car cleaner
852-880 McElroy Street	1943-2006	Residences
708-779 Pine	1925-1986	Shoe shine parlor, residences, accountant, a trucking company, and a Baptist church.
800-886 Pine	1925-1991	Residences, an iron works company, a photography business, and an auto salvage and used auto parts company.
903-942 Pine	1925-1991	Residences and "Randomsky Salvage Company."
1001-1009 Pine	1925-1970	Residences and auto wrecker.
751- 790 Pine Avenue	1928-2006	Residences and a manufacturing company.
808-890 Pine Avenue	1928-2006	Residences and "Laborers Union Local 304."

5.5 Interviews

Northgate received a completed owner questionnaire completed by Mr. Chris Wilson of the Caltrans Environmental Division as a representative of the property owner. According to Mr. Wilson's responses, the subject Site and adjoining properties have historically been utilized for industrial activities. Mr. Wilson noted that stained soil, vent/fill pipes, and underground or aboveground storage tanks have previously been observed at the subject Site. Mr. Wilson also noted that environmental site assessments have been performed at the subject Site in the past. Those reports are discussed in detail in Section 5.6 below.

5.6 Previous Reports

A PEA report, prepared by On-Site Technologies in 1993, indicates that the Site was used for a variety of purposes between 1920 and the present, including auto parts manufacturing, steel and ironworks fabrication, and fireworks manufacturing. Table 2.2.1 of the PEA provides a list of the businesses and dates of operation at the Site. Table 2.3.1 of the PEA provides a list of hazardous substances that were historically used at the Site. In general, very little is known about the materials used at the Site, with the exception of the following businesses:

- Cypress Auto Parts - oxygen, acetylene, gasoline and waste oil, operated from an unknown time until the time of the PEA (1993);
- Pine Iron Works - paint, naphtha, paint thinner and waste oil used onsite, operated from an unknown time until 1990; and
- Phoenix Iron Works - two USTs, operation from approximately 1970 until the time of the PEA (1993).

The PEA was prepared for Caltrans, in consultation with DTSC in response to DTSC's determination that PEA reports were required for properties located along the proposed reconstruction alignment for the Highway 880/Cypress Freeway construction following the 1989 Loma Prieta Earthquake. Information in the PEA indicates that in May 1990, the property owner (Phoenix Properties) contracted with BEC, Inc. to perform Phase I and Phase II environmental assessments at the Site. Five soil borings were advanced to depths of 5.5 to 11.5 feet bgs across the Site, and 11 soil samples were collected and submitted for laboratory analysis. Five soil samples analyzed for total petroleum hydrocarbons as gasoline (TPHg), total petroleum hydrocarbons as diesel (TPHd), and benzene, toluene, ethylbenzene, and xylene (BTEX) did not contain these analytes above the laboratory method reporting limits (MRLs). Four of the samples and one additional soil sample analyzed for volatile organic compounds (VOCs) and SVOCs did not contain contaminants above the laboratory MRLs. Five different soils were found to contain low levels of metals, with the exception of one soil sample (PP-6, located in the southwestern corner of the Site) which contained a total lead concentration of 52 milligrams per kilogram (mg/kg), and soluble lead (analyzed using the Waste Extraction Test) of 2.26 milligrams per liter (mg/l).

In June 1992, Caltrans contracted with Georesource Consultants, Inc. to perform a limited field investigation at the Site, related to the Highway 880/Cypress reconstruction. Three borings for soil sample collection were advanced at the Site in the vicinity of the USTs and a hydropunch groundwater sample was also collected from one of these borings. A total of seven soil samples from these borings were analyzed for TPHg, TPHd and total recoverable petroleum hydrocarbons. Five of these samples were below the laboratory MRLs for these analytes. Two of the samples (PP800/H-1 at depths of 1.5 and 4 feet bgs) contained TPHg at concentrations of 10 and 17 mg/kg, and TPHd at concentrations of 1,600 and 2,400 mg/kg. The groundwater sample did not contain TPHg or TPHd above the laboratory MRLs (GRC, 1992).

In 1993, Caltrans contracted with On-Site Technologies to prepare a PEA and perform limited soil and groundwater sampling at the Site. Three soil borings for soil and groundwater sample collection were advanced at the Site to depths of 9 to 11 feet bgs, in the vicinity of the USTs. One soil sample from each boring was analyzed for TPHg and VOCs, two soil samples from each boring were analyzed for SVOCs, and four samples from each boring were analyzed for TPHd. All of these samples were below laboratory MRLs for these analytes. One groundwater sample collected from each boring was analyzed for TPHg, TPHd, VOCs and selected metals (cadmium, chromium, lead, nickel and zinc). The groundwater samples were below laboratory MRLs for TPHg, VOCs, and cadmium. TPHd was measured in the samples at 0.14 to 0.26 mg/l along with low levels of the remaining metals (On-Site Technologies, 1993).

In 1994, Caltrans entered into a Voluntary Cleanup Agreement (VCA) with DTSC for the Cypress Freeway Reconstruction Project and East Bay Municipal Utility District Sewer Line Realignment in Oakland and Emeryville, California. The reconstruction project consisted of 34 separate properties, including the 800 Cedar Street property. The VCA was subsequently amended twice in 1996, and once each in 1997, 1999 and 2002.

Sometime between 1995 and 1997 two USTs were removed from the Site (IT, 2000), although Northgate was not able to obtain reports that identified the exact date of the tank removals. Discolored soil was observed after the diesel UST was removed, and a total of 800 cubic yards of soil were excavated and disposed of as part of the UST removals.

Additional soil sampling performed at the Site during this time indicated up to 17,000 ppm of lead and 44 ppm of arsenic were present in soil samples in the southwest corner of the former Phoenix Iron Works property. Soil excavation was initiated to remove these elevated metals concentrations, and during this excavation, two solvent-containing USTs (approximately 250 gallons and 10 gallons) and a settling sump were encountered. A total of 3,300 cubic yards of soil were excavated and disposed of as part of this remedial action.

In 1999, IT Corporation performed a field investigation at the Site that included drilling 26 soil borings for collection and analysis of soil samples, and collection and analysis of grab groundwater samples from 15 of the borings. Soil borings were arranged in a regular grid pattern across the Site, and most of the borings were advanced to 11.5 feet bgs. A total of 95 soil samples were submitted for chemical analysis for TPHg, TPHd, TRPH, VOCs, SVOCs and 17 metals. Fifteen groundwater samples were analyzed for these same constituents and were also analyzed for total dissolved solids (TDS). Based upon the results of the soil metals analyses, selected samples were also analyzed for soluble metals. Analytical results from these samples indicated the following:

- TPHg and TPHd were not detected above the MRLs in any of the samples. TRPH was detected in 37 of the 95 soil samples, with concentrations ranging from 60 mg/kg to 1,200 mg/kg, although only three of these samples had concentrations in excess of 320 mg/kg.
- VOCs were detected in 11 of the 95 soil samples, with trichloroethene (TCE), tetrachloroethene (PCE) and styrene as the only VOCs that were detected. The maximum VOC concentration was 0.028 mg/kg TCE.
- SVOCs were detected in 2 of the 95 soil samples. The maximum SVOC concentration detected was 13 mg/kg benzo(a)pyrene.
- Antimony, molybdenum, selenium, silver and thallium were not detected above the MRLs in any of the 95 samples. The remaining metals were detected in at least one of the samples.
- Nine soil samples that contained lead at 10 times the Soluble Threshold Limit Concentration (STLC) of 5 mg/l were analyzed for soluble lead using the Waste Extraction Test (WET), and 10 soil samples that contained lead at 20 times the STLC of 5 mg/l were analyzed for soluble lead using the Toxicity Characteristic Leaching Procedure (TCLP). Seven samples analyzed using the WET exceeded the STLC of 5 mg/l and ranged between 6.2 and 35 mg/l. Two soil samples analyzed using the TCLP method exceeded the STLC of 5 mg/l with concentrations of 17 and 60 mg/l. The WET is typically used for characterization of soil for waste disposal according to California

standards, while the TCLP is typically used for characterization of soil for waste disposal according to Federal standards.

- TPHg, TPHd and TRPH were not detected above the MRLs in any of the 15 groundwater samples.
- VOCs were detected in 8 of the 15 groundwater samples, with 8 different VOCs detected, including benzene, toluene and TCE.
- SVOCs were not detected above the MRLs in any of the 15 groundwater samples.
- Antimony, arsenic, cadmium, molybdenum, selenium, silver and thallium were not detected above the MRLs in any of the 15 groundwater samples. The remaining metals were detected in at least one of the samples.
- TDS concentrations for the 15 groundwater samples ranged from 287 mg/l to 1,312 mg/l.

6.0 SITE RECONNAISSANCE

Current Site conditions were observed during a reconnaissance of the Site and near vicinity performed by Northgate on October 10, 2011. Photographs from the reconnaissance are attached to the end of this report.

6.1 Methodology and Limiting Conditions

The Site reconnaissance was performed by traversing the Site by foot. Northgate was not escorted during the reconnaissance. There were no limiting conditions.

6.2 General Site and Vicinity Conditions

The subject Site is located along the western side of Pine Street, between 9th and Shorey Streets, in Oakland, Alameda County, California. The Site consists of an approximate 5-acre parcel most of which is currently a vacant lot covered by the remnant concrete slab from a historic industrial building (Photograph 1). The northern portion of the Site is currently used for construction materials storage. At the time of our Site Reconnaissance, the Site contained numerous large-diameter metal piping as well as a crane (Photographs 2 and 3). Various household waste, paint cans, unmarked 5-gallon buckets, electronic waste, tires, and wood debris were observed throughout the Site (Photographs 4 through 7). The remnant concrete slab is intersected by numerous rail tracks and several vault-type chambers (Photograph 8).

A damaged, 1-inch diameter well was observed in the southwest corner of the Site (Photograph 9) as well as remnants of a second well which were removed from the ground and were observed along the southern Site boundary (Photograph 10).

An auto repair garage located across 9th Street from the Site is currently utilizing the area adjacent to the northern Site boundary for vehicle parking (Photograph 11). Several warehouse buildings utilized for circus and trapeze schools, as well as residences are located north of the Site along 9th Street. A sound barrier wall for Interstate 880 is located along the western Site boundary (Photograph 12). Residences are present to the east and south of the Site, across Pine and Shorey Streets, respectively (Photographs 12 and 13).

7.0 PHASE I ESA CONCLUSIONS AND RECOMMENDATIONS

The Phase I ESA was conducted to identify and evaluate the potential presence of Recognized Environmental Conditions within the Site and near vicinity that may affect on-Site soil and groundwater quality. The Site consists of a vacant five acre parcel almost entirely covered by the remnant concrete slab of a former industrial building. The Site is identified as APN 006-047-001 in Oakland, Alameda County, California, and has historically been identified as 800 Cedar Street.

Our review indicates that the Site has historically been used for a variety of industrial purposes between 1920 and the present, including auto parts manufacturing, steel and ironworks fabrication, and fireworks manufacturing. 800 Cedar Street is listed on the RCRA-SQG, FINDS, VCP, HAZNET, and ENVIROSTOR databases related to historic use, storage, and release of hazardous materials on the Site. Two underground storage tanks (USTs), one diesel and one gasoline, located on the western side of the Site were removed sometime between 995 and 1997, and a total of 800 cubic yards of soil were excavated and disposed of as part of the UST removals. Soil sampling performed at the Site during the tank removals indicated up to 17,000 ppm of lead and 44 ppm of arsenic in soil in the southwest corner of the former Phoenix Iron Works property, which is now outside the current Site property boundary (beneath Frontage Road/I-880). Soil excavation was initiated to remove these contaminants, and during the excavation, two solvent-containing USTs (approximately 250 gallons and 10 gallons) and a settling sump were encountered. A total of 3,300 cubic yards of soil were excavated and disposed of as part of this remedial action (IT, 2000). Soil sampling performed in 1999 indicated that shallow soil along the western edge of the Site contains total recoverable petroleum hydrocarbons (TRPH) in excess of 1,000 ppm. This area was previously identified as containing “black-stained sand”. The 1999 soil sampling indicated two boring locations with elevated SVOC concentrations in shallow soil samples, and the presence of elevated lead concentrations in shallow soil at multiple locations across the Site. DTSC is listed as the lead agency for oversight. The Site status is listed on the Envirostor database maintained by the DTSC as inactive and requiring evaluation as of September 3, 2010.

Our review did not indicate the presence of off-Site contamination sources that are known to have impacted the subject Site. However, the Site is located in an area of heavy industrial land use, and we could not rule out the possibility that low-level groundwater contamination is present on a regional basis, including beneath the subject Site, related to these off-Site contamination sources.

In Northgate’s professional opinion, an appropriate level of inquiry has been made into the previous ownership and uses of the property consistent with good commercial and customary practice in an effort to minimize liability. In summary, our review did not indicate the presence of Recognized Environmental Conditions associated with the Site, except for the following:

- The Site is listed on a number of State, Federal, and local regulatory agency databases related to the historic use, storage, and release of hazardous materials at the Site. Previous environmental testing on the Site indicated the presence of elevated concentrations of lead and SVOCs in multiple locations across the Site. Additionally, elevated levels of TRPH and “black-stained sand” were reported in the northwest section of the property. The Site status is currently listed as inactive, requiring evaluation, on the Envirostor database maintained by the DTSC.

In addition, our review revealed the following issue of potential environmental concern:

- The Site is located in an area of historic industrial land use, and several sites with known soil and groundwater contamination are present in proximity to the subject Site. We could not rule out the possibility that migration of contaminants from these off-Site sources may have impacted soil or groundwater quality beneath the Site.

We recommend additional investigation to:

- Evaluate current soil and groundwater quality conditions at the Site;
- Define the extent of SVOC and petroleum hydrocarbon soil contamination in specific areas of the Site that were identified in previous investigations;
- Further evaluate elevated lead concentrations detected in soil at the Site; and
- Evaluate the potential need for remediation or additional evaluation of risk at the Site.

9.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312, and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Dennis Laduzinsky, C.E.G., R.E.A.
Principal

Qualifications of the Environmental Professional are provided as Appendix G.

The EDR Environmental LienSearch™ Report

The EDR Environmental LienSearch Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

v.

PHOENIX PROPERTIES, a California General Partnership, et al.,

Defendants.

No. 731654-0

Parcels 1, 2 and 3

FINAL ORDER OF CONDEMNATION

It appearing to the court that plaintiff has compensated the defendants entitled thereto the sums of money assessed by the Judgments in Condemnation entered in this proceeding; and

It further appearing to the court that plaintiff was authorized to take possession on May 20, 1994.

NOW, THEREFORE, IT IS HEREBY ORDERED, ADJUDGED AND DECREED that the real property situated in the County of Alameda, State of California, and more particularly described as follows, be condemned to plaintiff for State highway purposes, in fee simple absolute, unless a lesser estate is described:

//

//

//

//

//

//

//

//

//

//

//

//

//

//

//

//

//

//

//

//

//

//

//

//

//

//

PARCEL 1 (50127-1):

For freeway purposes, that real property described as PARCEL A and PARCEL B below:

PARCEL A:

Being Lots 16 to 22 inclusive, Block 36, Map of Land on Oakland Point, [Rail-Road Ferry Landing] City of Oakland, Tract 406, filed May 24, 1864, Map Book 5, Page 33, Alameda County Records, described as follows:

COMMENCING at the point of intersection of the northern line of Goss Street with the eastern line of Cedar Street, as said streets are shown on the map herein referred to; thence easterly along said line of Goss Street, 105 feet 7 1/2 inches; thence northerly parallel with said line of Cedar Street, 100 feet 4 1/2 inches; thence westerly parallel with said line of Goss Street 25 feet; thence northerly parallel with said line of Cedar Street 50 feet; thence westerly parallel with said line of Goss Street 80 feet 7 1/2 inches to the eastern line of Cedar Street; thence southerly along said line of Cedar Street 150 feet 4 1/2 inches to the point of commencement.

//

//

//

//

//

//

//

PARCEL B:

Portion of Block 521, Boardman's Map of Oakland and Vicinity, filed April 23, 1883, Map Book 17, Page 14, Alameda County Records, described as follows:

Beginning at the southeasterly corner of Shorrey [Short] Streets and Cedar Street; thence easterly along the southerly line of Shorey [Short] Streets 80 feet and 7 1/2 inches; thence at right angles southerly 50 feet and 4 1/2 inches; thence at right angles westerly 80 feet and 7 1/2 inches to the easterly line of Cedar Street; thence at right angles northerly along the 1st named line 50 feet and 4 1/2 inches to the point of beginning.

//

//

//

//

//

//

//

//

//

//

//

//

//

//

//

PARCEL 2 (50106-1):

For freeway purposes, that real property described as follows:

The land referred to herein is situated in the State of California, County of Alameda, City of Oakland, and is described as follows:

That certain piece of Parcel of land bounded on the northeast by the southwest line of 9th Street, as said street now exists; bounded on the northwest by the southeast line of Cedar Street, as said street now exists; bounded on the southeast by the northwest line of Pine Street, as said street now exists; and bounded on the southwest by the northeast line of Shorey Street, as said street now exists.

//

//

//

//

//

//

//

//

//

//

//

//

//

//

PARCEL 3 (50109-1):

For freeway purposes, that real property described as follows:

Beginning at the intersection of the northeasterly line of Eighth Street with the northwesterly line of Cedar Street, in said City of Oakland; thence North 31° 58' 44" East along said northeasterly line of Cedar Street, 881.82 feet to a point which is 43.50 feet southeasterly measured at right angles from center line of eastward main tract of Southern Pacific Railroad Company, between Oakland and Martinez; thence South 46° 53' 29" West parallel with and distant 50 feet southeasterly measured at right angles from center line of said eastward main tract, 600.00 feet; thence leaving said parallel line South 43° 21' 26" West 155.07 feet; thence South 47° 37' 16" West, 155.77 feet to a point on the northeasterly line of said Eighth Street; thence South 58° 01' 16" East, along said northeasterly line of Eighth Street 227.00 feet to the point of beginning.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

800 CEDAR STREET
OAKLAND, CA 94607

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 03/31/2011 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 02/25/2011 has revealed that there are 2 CERCLIS sites within approximately 0.5 miles of the target property.

USARMY OAKLAND ARMY BASE	***BLDG-1 ALASKA STREET***	***NW 1/4 - 1/2 (0.406 mi.)***	***X76***	***271***

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 02/25/2011 has revealed that there are 3 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/15/2011 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, and dated 08/09/2011 has revealed that there are 11 RESPONSE sites within approximately 1 mile of the target property.

ENVIROSTOR: The Department of Toxic Substances Control’s (DTSC’s) Site Mitigation and Brownfields Reuse Program’s (SMBRP’s) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/09/2011 has revealed that there are 46 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 08/09/2011 has revealed that there are 18 LUST sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

EDR PROPRIETARY RECORDS

EDR Proprietary Records

EDR Historical Auto Stations: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

A review of the EDR Historical Auto Stations list, as provided by EDR, has revealed that there are 2 EDR Historical Auto Stations sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System
California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:

Conditions at Proposal April 30, 2003): The AMCO Chemical site AMCO) is part of a 0.83-acre property at 1414 Third Street in a mixed residential and light industrial area of Oakland, California. The property is bordered on the north by a vacant lot, on the west by residences, on the east by Nelson Mandela Parkway, and on the south by Third Street. A recently constructed elevated portion of the Interstate-880 I-880) freeway is located immediately across Third Street from the property.The property at 1401 Third Street) was historically occupied by Bobo s Junkyard. From the 1960s to 1989, the AMCO site was occupied by AMCO Chemical Company. AMCO operated a chemical distribution facility that included a warehouse, railroadspur, above-ground tanks, underground tanks, and drums used to transfer and store raw materials. In July 1988, the Oakland Fire Department observed leaking/rotting drums on the property. A subsequent emergency response investigation by AlamedaCounty and the U.S. Coast Guard revealed greater than 100 full and empty 5- and 55-gallon weathered drums in an open area behind AMCO Chemical s main building. Stenciled labels on the drums indicated that the contents included acetone; 1,1,1-trichloroethane 1,1,1-TCA); methyl ethyl ketone; and dry-cleaning solvent. From 1989 to November 1998, DC Metals operated a scrap metal yard on the site. Cable Moore, Inc., currently uses the site for cable storage. Structures remaining on site include an office building, warehouse, and two small storage buildings. In June 1995, a construction crew noted odors at the intersection of Third Street and Nelson Mandela Parkway, while excavating a trench needed to relocate an underground electrical line in preparation for a freeway project. Subsequent subsurface investigation by California Department of Transportation Caltrans), DC Metals, and EPA revealed the presence of volatile organic compounds VOCs) including vinyl chloride in soil, soilgas, and shallow ground water at the AMCO site, beneath Third Street, and at the 1401 Third Street property former Bobo s Junkyard). On December 5, 1996, the EPA Emergency Response Office initiated a removal action at the AMCO site that involved the construction of a ground water and soil vapor extraction

AMCO CHEMICAL (Continued) **1001115054**

SVE) treatment system. The EPA treatment system collection trench was excavated from December 5 through December 20, 1996. By December 23, 1996, the trench had been lined with a silt curtain, filled with gravel, and covered with a tarp. Cement was poured to permanently cover the trench on January 8, 1997. The treatment system operated from January 1997 through July 1998 and extracted approximately 7,000 pounds of VOCs, approximately 40 pounds of which were vinyl chloride. Operation of the system ceased in July 1998, due to community concern over the potential for a release of dioxins from the thermal oxidation unit. On December 5 and 14, 1996, during construction of the treatment system collection trench, the EPA On-Scene Coordinator observed shimmering vapors emanating from the open trench. SUMMA tm) canister sampling indicated the presence of vinyl chloride; methylene chloride; 1,1,1-trichloroethane TCA); and trichloroethene TCE) in the immediate area of the trench. In addition, one SUMMA canister sample collected from in front of a residence adjacent to the site contained TCE. The EPA conducted several sampling events on and adjacentto the AMCO site between 1997 and 2000. VOCs continued to be detected in soil, soil gas, and ground water on site. In September 1999, SUMMA canister samples were collected from the crawl spaces of three residences located adjacent to the site. Vinyl chloride was detected in the three crawl spaces at 0.02 to 0.045 parts per billion by volume ppbv). There are 626 people living within a quarter of a mile of the source. There are also approximately three workers on site. Status September 2003):EPA is considering various alternatives for this site. The description of the site release) is based on information available at the time the site was evaluated with the HRS. The description may change as additional information is gathered on the sources and extent of contamination. See 56 FR 5600, February 11, 1991, or subsequent FR notices. For more information about the ha ardous substances identified in this narrative summary, including general information regarding the effects of exposure to these substances on human health, please see the Agency for Toxic Substances and Disease Registry ATSDR) ToxFAQs. ATSDR ToxFAQs can be found on the Internet at http://www.atsdr.cdc.gov/toxfaq.html or by telephone at 1-888-42-ATSDR or 1-888-422-8737.

Background Info: The site was occupied by AMCO Chemical Corp. until December 1989. DTSC inspected the site on August 4, 1988. An order to Fence and Post the site was issued on August 8, 1988. On February 24, 1989 a Report of Violation was issued to correct violations related to leakage of hazardous waste from piping and containers; storage of hazardous waste in deteriorated or otherwise corroded conditions; and unlabeled waste containers. Soil and groundwater located outside of the site boundary were sampled by Caltrans and Southern Pacific Railroad. Elevated levels of VOC's (vinyl chloride,1,1-DCE,PCE,1,1,1-TCA, 1,2-DCE), acetone, toluene and xylene have been found in soil and/or groundwater.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 08/09/1996
Comments: Completed Remedial Action. As part of the Cypress construction project, the entire site was excavated to a depth of 15 to 20 feet as part of the construction of the 7th Street undercrossing. All contaminated soil was removed and the underlying groundwater was dewatered. No further remedial work was required.

Completed Document Type: Site Screening
Completed Date: 05/04/1993
Comments: Completed Site Screening. Earlier site investigations indicated surface soil contamination. Another investigation was conducted in October 1992 in conjunction with CalTrans activities and revealed presence of the following contaminants in soil: Total Revocerable Petroleum Hydorcarbons (TRPH) as high as 6,350 ppm; and lead as high as 161 ppm. Groundwater samples also showed TRPH as high as 2.6 ppm.

B & A AUTO DISMANTLERS (Continued) **S102008243**

Surface soil staining was also noted during sampling activities.

Completed Document Type:	Remedial Investigation / Feasibility Study
Completed Date:	07/03/1995
Comments:	Completed RIFS.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	05/04/1993
Comments:	Completed Site Screening. The site is a currently operating wrecking yard and is fully occupied by abandoned cars, parts, and debris. Earlier site investigation indicated surface soil contamination. Subsequent field investigation conducted in October 1992 in conjunction with CalTrans activities revealed the presence of total recoverable petroleum hydrocarbons (TPRH) as high as 138,000 ppm. Approximate volume of contaminated soil is 950 cubic yards. Additional site characterization is necessary.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Certification
Completed Date:	10/17/1997
Comments:	Certified Site. Remediation goals were met for all contaminants. After remediation activities were completed, the site was further excavated by Caltrans to a minimum of 15 feet for the construction of the 7th Street undercrossing.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Voluntary Cleanup Agreement
Completed Date:	05/10/1994
Comments:	Signed VCA.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 12/27/2005
Comments: RA Certification approved.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Design/Implementation Workplan
Completed Date: 01/19/1996
Comments: DES approved for soil removal and groundwater monitoring network.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Plan
Completed Date: 08/14/1995
Comments: RAP required hotspot soil removed and groundwater monitored.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 12/07/1994
Comments: Approval of Remedial Action Options Report, dated December 27, 1994.The purpose of this investigation was to address the DTSC concerns regarding the November 1993 PEA which include: (1) confirmation of the removal of 5 underground storage tanks and associated piping; (2) assessment of the presence of contaminants in the soils in the area of the former waste oil tank; and (3) assessment of contaminants in the ground water beneath the site. Additional soil and groundwater samples confirmed similar levels and types of contaminants.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 11/22/1993
Comments: Aproval of PEA, dated May 1993. Soil and groundwater contamination found.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation / Feasibility Study
Completed Date: 07/03/1995
Comments: RIFS approved. Site investigation activities, performed prior to the 5/10/1994 VCA, were reported in the Site Investigation Report Area 2 dated August 1992. The RI/FS was approved on July 3, 1995 when the Remedial Action Plan Was approved for public review.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 08/02/2001
Comments: The removal action consisted of excavation and off-site disposal of

CHURCH'S FRIED CHICKEN (Continued) **S102008249**

approximately 2,480 cubic yards of soil contaminated with petroleum hydrocarbons (as gasoline, diesel and total hydrocarbons),benzene, toluene, ethyl benzene, xylenes, lead, nickel and arsenic. The soil was excavated down to 10 feet below ground surface where groundwater was encountered and excavation was stopped.
