I. INTRODUCTION

A. PURPOSE OF THE RESPONSES TO COMMENTS DOCUMENT

This report has been prepared to respond to comments submitted on the September 2003 Public Review Draft Environmental Impact Report (Draft EIR) for the proposed Uptown Mixed Use Project (Project). In addition, Chapter II of this document describes changes that have been made to the proposed Project after publication of the Draft EIR, and environmental effects that could result from these changes. The Draft EIR identifies the likely environmental consequences associated with implementation of the proposed Project.

This document responds to comments on the Draft EIR and makes revisions to the Draft EIR, as necessary, in response to these comments, to clarify any previous errors, omissions, or misinterpretations of material in the Draft EIR, or as a result of City-initiated revisions. Comments and responses on the proposed Project will be presented to the City Council for discussion and approval.

B. FINAL EIR

This document, together with the Draft EIR, constitutes the Final EIR for the proposed Project.

C. ENVIRONMENTAL REVIEW PROCESS

According to CEQA, lead agencies are required to consult with public agencies having jurisdiction over a proposed project, and to provide the general public with an opportunity to comment on the Draft EIR.

On February 26, 2003, a Notice of Preparation (NOP) was issued. The Draft EIR was made available for public review on September 19, 2003 and distributed to the State Clearinghouse (with a Notice of Completion) and local and State responsible and trustee agencies. The general public was advised of the availability of the Draft EIR through a public notice of availability in the local newspapers. In addition, the project site was posted with notices of availability, and notices were sent to property owners within 300 feet of the Project site. CEQA mandates a minimum 45-day public comment period on the Draft EIR, which ended on November 3, 2003.

Copies of all written and verbal comments received on the Draft EIR during the comment period are contained in this report.

The Final EIR will be considered for certification by the Planning Commission in early 2004. The proposed Project, Final EIR, and all comments will be presented to the City Council, at which time the City Council will consider a recommendation from the Community and Economic Development Committee regarding the approval of the proposed Disposition and Development Agreement (DDA) for the Project. After the DDA is approved, the Project Sponsor will submit an application for planning entitlements. These entitlements may include: a General Plan Amendment and Rezoning to accommodate the proposed public park; a Preliminary Development Plan for the Planned Unit Development of the entire Project; a Final Development Plan for each phase of the Project; a Major Conditional Use Permit for creation of a new park, and for demolition of a facility containing rooming units; Design Review; and a Subdivision Map.

D. DOCUMENT ORGANIZATION

This Response to Comments document consists of the following chapters:

- *Chapter I: Introduction*. This chapter discusses the purpose and organization of this Final EIR.
- *Chapter II: Revisions to the Project Description.* This chapter describes changes made to the proposed Project after publication of the Draft EIR and the environmental impacts associated with these changes.
- *Chapter III: List of Commenting Agencies, Organizations, and Individuals*. This chapter contains a list of agencies, organizations, and individuals who submitted written comments or offered verbal comments on the Draft EIR.
- *Chapter IV: Comments and Responses*. This chapter contains reproductions of all comment letters received on the Draft EIR, as well as summaries of verbal comments offered on the document. A written response for each CEQA-related comment received during the review period is provided.
- *Chapter V: Draft EIR Text Revisions.* Corrections to the Draft EIR that are necessary in light of comments received and responses provided, or necessary to clarify any errors, omissions or misinterpretations, are contained in this chapter.
- *Chapter VI: Mitigation Monitoring and Reporting Program*. This chapter contains the mitigation monitoring and reporting program for the proposed project, based on the mitigation measures contained in the Final EIR.
- *Chapter VII: Report Preparation.* A summary of those involved in report preparation is provided in this chapter.

II. REVISIONS TO THE PROJECT DESCRIPTION

Since publication of the Uptown Mixed Use Project Draft Environmental Impact Report (Draft EIR) in September 2003, the proposed Project has undergone a minor modification. This chapter describes recent minor changes to the proposed Project and evaluates the potential environmental impacts associated with these changes. This evaluation confirms that changes to the proposed Project would not result in any additional development or new significant environmental impacts (i.e., impacts not addressed in the Draft EIR). The total number of parking spaces, residential units, and commercial square footage that would be developed as part of the proposed Project (listed in Table III-1 of the Draft EIR) would not change as a result of these changes. These relatively minor modifications to the proposed Project are addressed briefly below.

A. REVISIONS TO THE PROJECT DESCRIPTION

Revisions to the proposed Project include the removal of an existing parcel from the Project site and inclusion within the Project site of two new parcels (together comprising Block 8a) that are contiguous to existing Block 8, and the removal of the roadway between the Fox Theater and the Project site. Figure II-1 shows the revised block configuration within the Project site and surrounding land uses. Either Block 8 or Block 8a would be utilized as a relocation site for the Sears Auto Center. This relocation was included in the Draft EIR; therefore, the addition of Block 8a to the Project site would not change the overall development scenario evaluated in the Draft EIR.

1. Removal of Block 9

Block 9, which is bordered by 22nd Street to the north, parking uses to the east and south, and Telegraph Avenue to the west, is now no longer included in the Project site. Block 9, which currently contains the Giant Burger restaurant and associated parking, was previously proposed as the preferred relocation site for the Sears Auto Center. Sears Auto Center is currently located within Block 4 of the Project site. Block 9 was withdrawn from the Project site due to the potential acquisition of an alternate relocation site for the auto center.

2. Inclusion of Block 8a

The new parcels that would be added to the Project site (Block 8a) are bordered by 21st Street to the north, the Paramount Theater to the east, surface parking to the south, and Telegraph Avenue to the west. Block 8a is contiguous to Block 8. Block 8a currently contains two commercial buildings and associated surface parking. Blocks 8 and 8a are proposed as alternate relocation sites for the Sears Auto Center. As described on page 45 of the Draft EIR, the (relocated) Sears Auto Center would include approximately 10,000 square feet of retail space and 50 on-site parking spaces. The retail building is anticipated to be one-story in height. The auto center would be built on either Block 8 or Block 8a. Therefore, if Sears Auto Center is constructed on Block 8, no construction would occur on Block 8a; if the auto center is built on Block 8a, no construction would occur on Block 8. Relocation of the auto center to Block 8a would involve demolition of the two existing buildings within the block. The total number of parking spaces, residential units, and commercial square footage that

Figure II-1: Changes to the Project Site

8 x 11 B&W

would be developed as part of the proposed Project (listed in Table III-1 of the Draft EIR) would not change as a result of the addition of Block 8a to the Project site.

3. Elimination of Street Proposed Between Block 6 and the Fox Theater

The 100-foot-wide street originally proposed between Block 6 of the Project site and the Fox Theater would be removed as part of the revisions to the proposed Project. However, the 50-foot-wide area immediately to the west of the Fox Theater would be retained for future loading and unloading activities.

B. POTENTIAL ENVIRONMENTAL IMPACTS OF DEVELOPMENT ON BLOCK 8A

The following discussion describes the environmental impacts that could occur as a result of the inclusion of Block 8a into the proposed Project. No adverse environmental impacts would result from the exclusion of Block 9 from the Project site. As noted previously, this change to the proposed Project could only result in a change in location of the Sears Auto Center (the Sears Auto Center could be relocated to Block 8a); the overall buildout scenario, including the total amount of commercial space developed as part of the Project, would not change as a result of these changes to the proposed Project. This discussion is divided into the environmental topics that were addressed in detail in the Draft EIR.

1. Land Use

The types of land use impacts (all of which are less than significant) that would occur as a result of revisions to the proposed Project are already addressed in the Draft EIR. Development of the Sears Auto Center on Block 8a would not impair travel from one side of the community to another or remove an existing means of access to public or private streets. Therefore, the inclusion of Block 8a into the Project site would not physically divide an existing community. No physical characteristics that would be associated with the auto center, such as car traffic and moderate levels of noise resulting from vehicle repair, would represent a fundamental conflict with surrounding land uses, including the Paramount Theater. The Paramount Theater is located in an urban mixed-use neighborhood and is surrounded by a variety of land uses. The auto center would not diminish the function of the Paramount Theater as an arts and entertainment venue. Auto-related uses are conditionally permitted within Block 8a, which is designated as Central Business District in the City of Oakland General Plan and Central Core Commercial (C-55) and Downtown Residential Space Combining Zone in the City of Oakland Planning Code. The development of an auto center on the site would not conflict with any land use plans or regulations.

2. Population, Employment and Housing

Similar to the proposed Project as discussed in the Draft EIR, the inclusion of Block 8a into the Project site would not result in the development of housing and associated population growth. No housing units or permanent residents are currently located within the block. Therefore, revisions to the proposed Project would not displace housing units or people.

3. Hydrology and Water Quality

Construction of the Sears Auto Center on Block 8a could result in environmental impacts that have already been identified in the Draft EIR, including degradation of water quality and extraction of contaminated dewatering effluent. The hydrology and water quality impacts resulting from the development of Block 8a would not be more severe than impacts associated with development of the auto center on Block 8. Block 8a is covered with impervious surfaces. Therefore, development of the auto center on the site would not interfere with groundwater recharge, alter flood patterns, or cause water-related erosion or siltation.

4. Transportation, Circulation and Parking

Vehicular traffic and new bus and rail users that would be generated by the Sears Auto Center are already identified in the traffic and transit analysis included in the Draft EIR. Development of the Sears Auto Center on Block 8a would not result in more vehicle or transit trips, or in different traffic circulation patterns, than would be associated with the construction of the auto center on other portions of the Project site. In addition, construction on Block 8a would not create design hazards associated with a design feature. Standards for egress and ingress on the Project site would be subject to the same City standards as development on Block 8 and would not pose a safety risk to motor vehicles, pedestrians, or bicyclists.

5. Air Quality

Moving the Sears Auto Center to Block 8a would not alter the air quality impacts associated with the proposed Project, which are discussed in the Draft EIR. As noted above, this change to the proposed Project would not increase the number of anticipated vehicular trips, nor would related construction-period air emissions vary from the proposed Project. Therefore, the development of the auto center on Block 8a would not result in the emission of additional pollutants that were not accounted for in the Draft EIR.

6. Noise

Construction-period and operational noise impacts that could result from the development of the Sears Auto Center on Block 8a are already addressed in the Draft EIR. This revision to the proposed Project would not expose sensitive receptors to unacceptable levels of noise. Noise generated by the Sears Auto Center on Block 8a is anticipated to be similar to noise generated at other auto-oriented businesses in Downtown Oakland. In general, such businesses result in moderate daytime noise levels associated with the movement of motor vehicles and mechanical work on vehicles. These moderate noise levels would not affect the functioning of the Paramount Theater as a performing arts venue. The Paramount Theater contains interior insulation to reduce exterior noise, and generally hosts events during the evening, after operations at the auto center would cease for the day.

7. Hazards and Hazardous Materials

It is anticipated that Block 8a contains soil and groundwater contamination that could pose a threat to construction workers and the general public. In addition, the existing buildings on the Block were built prior to 1980 and are expected to contain lead and asbestos. Therefore, development of the Sears Auto Center on Block 8a could release hazardous materials into the environment. However, these same impacts and associated mitigation measures are addressed in the Draft EIR. The implementation of mitigation measures in the Draft EIR would reduce hazards-related impacts from development of Block 8a to a less-than-significant level.

8. Utilities and Infrastructure

Construction of the Sears Auto Center on Block 8a would not increase the amount of commercial space or parking that would be developed as part of the proposed Project. Therefore, no additional water and energy consumption or wastewater and solid waste generation would occur as a result of changes to the proposed Project. The utilities and infrastructure impact analysis in the Draft EIR is unchanged by the addition to the Project site of Block 8a. The utility lines that would serve Block 8a have adequate capacity to accommodate wastewater and water needs associated with the auto center.

9. Historic Architectural, Archaeological and Paleontological Resources

The two buildings within Block 8a are not listed on the City of Oakland’s Local Register of Historic Resources and are not considered historic resources pursuant to CEQA because they do not meet the applicable criteria. The two buildings within the block are located at the following addresses: 2022 Telegraph Avenue and 2040 Telegraph Avenue. The one-story structure located at 2022 Telegraph Avenue was constructed in 1948 and has not been rated by the Oakland Cultural Heritage Survey (OCHS). Although this building is older than 50 years old, staff from the OCHS has indicated that the structure does not meet the standards for historic resources, pursuant to *CEQA Guidelines* section 15064.5.[1] The two-story building located at 2040 Telegraph Avenue was constructed in 1960 and also does not meet CEQA criteria for a significant historic resource. Therefore, the demolition of these buildings would not adversely affect historic architectural resources. Similar to the rest of the Project site, ground-disturbing activities associated with construction of the Sears Auto Center on Block 8a could adversely affect unidentified cultural resources. However, this impact is addressed in the Draft EIR. Mitigation measures recommended in the Draft EIR would reduce this potential impact to a less-than-significant level. The surroundings of the Paramount Theater have been substantially altered since its construction. Therefore, although development of the auto center on Block 8a would alter the architectural context of the Paramount Theater, it would not substantially affect the historic integrity of the theater or the theater’s eligibility for listing on the California Register of Historic Resources.

10. Aesthetic Resources

Revisions to the proposed Project would not result in new aesthetic resources-related impacts that are not already addressed in the Draft EIR. Block 8a contains no scenic vistas or scenic resources. The block is currently characterized by surface parking and commercial land uses. The development of the auto center and ancillary parking would result in the construction of land uses that are similar to those that currently exist within the block. Therefore, this revision to the proposed Project would not result in a substantial adverse impact to the visual character of the site. Implementation of Mitigation Measures AES-1 and AES-2 in the Draft EIR would ensure that the visual quality of the auto center is consistent with surrounding uses, and that the building would not generate a substantial amount of light and glare.

---

[1] Marvin, Betty, 2003. Planner III, City of Oakland Community and Economic Development Agency. Personal communication with LSA Associates, Inc. December 19.

11. Wind

The Sears Auto Center is expected to be approximately one story high and would therefore not substantially increase wind speeds in Downtown Oakland. No new wind-related impacts would result beyond those already addressed in the Draft EIR.

12. Shade and Shadow

Because the Sears Auto Center is expected to be approximately one story high, it would not cast new shadow on the Paramount Theater or other surrounding uses. The theater is already subject to shadow from the two existing buildings within Block 8a. No new shade and shadow-related impacts would result beyond those already addressed in the Draft EIR.

C. SUMMARY

The inclusion of Block 8a into the Project site, and the potential use of this block for the relocation of the Sears Auto Center, would not result in new or more severe significant environmental impacts that have not been addressed in the Draft EIR. The block contains no identified historic resources or other environmental factors that could be substantially damaged by development activities. The Sears Auto Center is already accounted for in the buildout scenario of the proposed Project. Therefore, this revision to the proposed Project would not increase the amount of development that would occur as part of Project implementation. Similarly, the removal of Block 9 would not lead to any adverse effects.

III. LIST OF COMMENTING AGENCIES, ORGANIZATIONS AND INDIVIDUALS

Written comments were submitted to the City of Oakland during the public review period on the Draft EIR by the following agencies, organizations and individuals. The comments are grouped by the affiliation of the commenting entity as follows: (A) federal, State, regional, and local agencies; (B) organizations; (C) individuals; and (D) public hearing commentators. The comment letters are listed alphabetically by commentor within each section.

A. FEDERAL, STATE, REGIONAL, AND LOCAL AGENCIES

A1 AC Transit; Kathleen Kelly, Deputy General Manager, Service Development Department; November 3, 2003

A2 City of Alameda, Gregory Fuz, Planning and Development Director, November 3, 2003 *(Note: This letter was received by the City of Oakland via fax on November 12, 2003, nine days following the close of the public comment period.)*

A3 Alameda County Congestion Management Agency; Diane Stark, Senior Transportation Planner; November 3, 2003

A4 East Bay Municipal Utility District; William R. Kirkpatrick, Manager of Water Distribution Planning; November 3, 2003

B. ORGANIZATIONS

B1 Chinese Historical Society of America; Lorraine Dong, Ph.D., President/CEO; November 3, 2003

IV. COMMENTS AND RESPONSES

This chapter includes a reproduction of each comment letter submitted or verbal comment offered during the public comment period on the Draft EIR, grouped by the affiliation of the commenting entity as follows: (A) federal, State, regional and local agencies; (B) organizations; and (C) individuals. Individuals who spoke at the Public Hearing before the Planning Commission, or the two meetings of the Landmarks Preservation Advisory Board are included in group (D). The comments are numbered consecutively following the A, B, C, or D designation. The letter number (for example A1, the first agency comment letter) is shown in a box in the upper right-hand corner of each page of the letter. Specific comments on the Draft EIR are annotated in the margin of each letter according to the following code:

Federal, State, Regional, and Local Agencies:	Letter Number A# and Comment #
Organizations:	Letter Number B# and Comment #
Individuals:	Letter Number C# and Comment #
Public Hearing Comments	D# and Comment #

When cross-referenced in the text, the comment is referred to as A#-# where the number following the letter refers to the comment letter number, and the number following the hyphen refers to the comment number within that letter. For example, comment C5-8 refers to the eighth comment within the fifth letter submitted by an individual.

Persons who had a comment on the Draft EIR during the public hearing or Landmarks Preservation Advisory Board meetings are listed in Section D, in order of appearance at the hearings.

Letters received during the public comment period on the Draft EIR are provided in their entirety in the following pages. Each letter is immediately followed by responses keyed to the specific comments.

Comments on the Draft EIR addressed a variety of topical areas. However, a large number of comments focused on two specific issues: (1) the potential of the Project site to contain unidentified cultural resources, especially archaeological resources associated with a historic Chinatown community that may have been located on or near the Project site; and (2) impacts associated with the displacement of businesses, specifically small businesses, from the Project site. In order to consolidate responses to questions and comments on each of these topics, and to address these concerns comprehensively, two master responses are provided below. Master Response M-1 discusses comments regarding unidentified cultural resources that could be uncovered within the Project site; Master Response M-2 discusses comments regarding the displacement of businesses from the Project site.

MASTER RESPONSE M-1
Unidentified Cultural Resources within the Project Site

Page 213 of the Draft EIR identifies two types of archaeological deposits that could be uncovered within the Project site during the construction period: (1) prehistoric deposits (i.e., deposits associated with native tribes living in the Bay Area prior to European settlement); and (2) historic deposits (i.e., deposits associated with settlement of the area). Based on a preliminary archaeological resources sensitivity assessment, it was determined that the Project site has a low-to-moderate likelihood of containing *prehistoric* archaeological deposits and a high likelihood of containing *historic* archaeological deposits (as stated in the last paragraph on page 213 of the Draft EIR). The following discussion addresses questions and comments offered in regard to the Draft EIR in each of these areas.

Prehistoric Resources

The Draft EIR includes the results of background research to identify: (1) recorded prehistoric cultural resources within and adjacent to the Project site; and (2) the potential for unidentified prehistoric cultural resources within or adjacent to the Project site. This background research included a records search at the Northwest Information Center at Sonoma State University, Rohnert Park, California, which is the official state repository of cultural resource records and reports for Alameda County; and a review of environmental, ethnographic, and historical literature. Based on the results of the background research, it was determined that, as described above, there is a low-to-moderate likelihood that the Project site contains prehistoric archaeological resources. It was determined, however, that such resources, if they exist, may be impacted by Project-related activities, resulting in a potentially significant impact. Mitigation Measures HIST-2 and HIST-3 in the Draft EIR have been successfully used on numerous similar occasions throughout California to reduce impacts to prehistoric resources to a less-than-significant level. These measures would require a pre-construction program be developed and implemented to help better identify the extent that unique resources may exist on the Project site and avoidance or mitigation (as specified in *CEQA Guidelines* section 21083.2) of any unique resources that are encountered as part of the project. Thus, the authors have used a conservative approach by specifying and recommending two mitigation measures that would be triggered should unique archaeological resources be identified during project implementation.

Historic Resources

The analysis in the Draft EIR identified potentially significant Project-related impacts to historic archaeological resources based on the significance criteria established by the City of Oakland. This analysis addresses the possibility that the proposed Project could adversely affect potentially significant archaeological remains associated with the historic Chinese settlement that may have been located within or in the vicinity of the Project site. The fourth paragraph on page 214 of the Draft EIR references research indicating that a Chinese neighborhood existed on the east side of San Pablo Avenue between 19th Street and Thomas L. Berkley Way (20th Street) in the 1870s. The Draft EIR identifies potential impacts to archaeological remains associated with this settlement as significant, and recommends mitigation measures to reduce this potential impact to a less-than-significant level should any significant resources be encountered during project construction.

Page 220 of the Draft EIR (Impact and Mitigation Measure HIST-2) has been revised to more specifically address some of the concerns raised, especially those comments on the Draft EIR that assert the possible presence of a historic Chinese settlement at or near the Project site. The revisions include a provision that requires consultation with established Chinese-American community groups in regard to treatment of any identified significant archaeological resources. The revisions to the Draft EIR specifically provide additional discussion related to: (1) the presence of a historic Chinese settlement along San Pablo Avenue between 19th and 20th Streets; (2) the potential that significant archaeological deposits that are associated with Chinese settlement may be identified within the Project site; 3) the forced upheavals and discrimination that characterized the Chinese-American experience in much of California in the late 1800s; and 4) that significant archaeological resources, such as back-filled privies and wells, may be uncovered within the site.

Page 220 of the Draft EIR is revised as shown below:

> **Impact HIST-2: Ground disturbing activities for the construction of subterranean parking structures, building foundations, and underground sewer and utility facilities could adversely impact cultural resources. (S)**
>
> ~~Native Americans are known to have occupied and used the Project area vicinity, and in the historical American period residential and commercial use of all portions of the Project area was intensive and varied. These activities may have resulted in unidentified archaeological deposits that may qualify as historical or unique archaeological resources under CEQA. Project-related ground-disturbing activities may potentially disturb these deposits, which may result in a significant adverse effect to historical or archaeological resources under CEQA. Mitigation measures can reduce these effects to less-than-significant levels.~~ Native Americans are known to have occupied areas in the vicinity of the Project site. In the historical American period, residential and commercial use of all portions of the Project site was intensive and varied. A historical Chinese community has been documented on the east side of San Pablo Avenue, northeast of the intersection of 20th and San Pablo Avenues, and east of San Pablo Avenue between 19th and 20th Avenues. These areas of the documented Chinese community are within or near the Project site. There is a high potential for Project ground-disturbing activities to encounter archaeological deposits associated with the remains of the Chinese community. These deposits could be significant for their association with early Chinese-American history in Oakland and other urban West Coast settings. These deposits, if intact, may contain information about the economic, social, and religious lifeways of a Chinese-American community in an era in which the Chinese in California were subjected to de facto and institutional displacement, discrimination, and oppression. These conditions often resulted in only minimal documentation of lifeways, which increases the information value of archaeological deposits.
>
> If encountered during ground disturbing activities, these deposits may qualify as historic or unique archaeological resources pursuant to *CEQA Guidelines* section 15064.5 and CEQA section 21083.2, respectively. Disturbance of historic or unique archaeological resources could be considered a significant impact. The following two-part mitigation measure would reduce these potential impacts to less-than-significant levels. The purpose of this expanded mitigation measure is to: (1) identify historic or unique archaeological resources prior to the start of ground-disturbing Project activities; and (2) assess the likelihood that Project activities could adversely affect potentially significant

deposits, and take the steps necessary to protect and treat the resources so the impact is decreased to a less-than-significant level. Implementation of this mitigation strategy will also help avoid unnecessary delays in site preparation and construction.

> ~~Mitigation Measure HIST-2: A qualified archaeologist[1] shall monitor all ground-disturbing activities in the Project area until, in the archaeologist's opinion, a depth has been reached at which potentially significant archaeological deposits are unlikely to occur.~~
>
> ~~Should an archaeological deposit be encountered by Project activities, the monitor shall be empowered to halt construction in the vicinity of the find. Construction activities shall be redirected and a qualified archaeologist shall: 1) evaluate the archaeological deposit to determine if it meets the CEQA definition of a historical or archaeological resource; and 2) make recommendations about the treatment of the deposit, as warranted. If the deposit does not meet the CEQA definition of a historical or archaeological resource, then no further study or protection of the deposit is necessary. If the deposit does meet the CEQA definition of a historical or archaeological resource, then it shall be avoided by Project activities. If avoidance is not feasible, then effects to the deposit shall be mitigated through a data recovery strategy developed by the evaluating archaeologist. Mitigation of impacts to significant archaeological deposits through data recovery will recover scientifically valuable information. This mitigation may include, but is not limited to, a thorough recording of the resource on DPR Form 523 records, or archaeological excavation. If archaeological excavation is the only feasible method of data recovery, then such excavation shall conform to the provisions of CEQA Guidelines §15126.4(b)(3)(C).~~
>
> Mitigation Measure HIST-2a: A pre-construction archaeological testing program shall be implemented to help identify whether historic or unique archaeological resources exist within the Project site. Examples of potential historic or unique archaeological resources that could be identified within the Project site include: back-filled wells; basements of buildings that pre-date Euro-American buildings that were constructed on the Project site; and backfilled privies. For these resources to be considered significant pursuant to CEQA, they would have to have physical integrity *and* meet at least one of the criteria listed in *CEQA Guidelines* section 15064.5(a)(3) (for historic resources) and/or CEQA section 21083.2(g) (for unique archaeological resources). These criteria include: association with events that have made a significant contribution to the broad patterns of California history and cultural heritage; association with the lives or persons important in our past; embodiment of the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; yield, or may likely yield, information important in prehistory or history; contains information needed to answer important scientific research questions and be subject to a demonstrable public interest in that

---

~~[1] "Qualified" is defined as meeting the professional standards established by the Secretary of the Interior. These standards can be found at: http://www2.cr.nps.gov/laws/ProfQual83.htm.~~

information; have a special and particular quality such as being the oldest of its type or the best available example of its type; or be directly associated with a scientifically recognized important prehistoric or historic event or person.

The testing program, in conjunction with a sensitivity study,[2] shall use a combination of subsurface investigation methods (including backhoe trenching, augering, and archaeological excavation units, as appropriate). The purpose of the testing program is to: (1) identify the presence and location of potentially-significant archaeological deposits; (2) determine if such deposits meet the definition of a historical resource or unique archaeological resource under section 21083.2(g) of the CEQA statutes; (3) guide additional archaeological work, if warranted, to recover the information potential of such deposits; and (4) refine the archaeological monitoring plan.

If historic or unique archaeological resources associated with the Chinese community are identified within the project site and are further determined to be unique, the City shall consult with representatives of an established local Chinese-American organization regarding the potential use of the archaeological findings for interpretive purposes.

Mitigation Measure HIST-2b: Archaeological monitoring of ground-disturbing construction in the Project area shall be conducted, as appropriate and if necessary, based on the results of the pre-construction testing program and the potential for encountering unidentified archaeological deposits. Upon completion of the pre-construction testing program specified in Mitigation Measure HIST-2a, the extent of archaeological monitoring during Project construction will be assessed, and the scope and frequency of the monitoring required by this mitigation measure shall be based on the findings of this assessment. Monitoring shall be conducted by a cultural resource professional approved by the City who meets the Secretary of the Interior's Professional Qualifications Standards for Prehistoric and Historical Archaeology.

Should an archaeological deposit be encountered during Project activities, the City in consultation with the monitor shall halt construction in the vicinity of the find. Construction activities shall be redirected and a qualified archaeologist in consultation with the City shall: (1) evaluate the archaeological deposit to determine if it has the potential to meet the CEQA definition of a historical or unique archaeological resource; and (2) make recommendations about the treatment of the deposit, as warranted. If the deposit does not meet the CEQA

---

[2] A cultural resources sensitivity study is done to assess the possibility of cultural resources at a specific location. The sensitivity study typically entails a review of: (1) the locations of known cultural resources in the general vicinity, (2) the records documenting the resources, (3) the nature of those resources, (4) the environmental setting of the location being analyzed, and (5) the historical documentation of the location being analyzed. Based on this information an assessment is made as to whether there is a low, moderate, or high probability of a cultural resource at the specific location in question. For example, if most of the prehistoric sites in an area are on level land, adjacent to the mouth of a creek where it enters a marsh, and the location being analyzed has no water nearby and is on very steep slope, there is a low probability of a prehistoric archaeological site. Or, if historical documents indicate that there have been a variety of buildings and land uses at the location being analyzed, there is a high probability of historical archaeological sites at the location.

definition of a historical or unique archaeological resource, then no further study or protection of the deposit is necessary. If the deposit does meet the CEQA definition of a historical or unique archaeological resource, then it shall be avoided to the extent feasible by Project activities. If avoidance is not feasible, then adverse effects to the deposit shall be mitigated as specified in CEQA section 21083.2. This mitigation may include, but is not limited to, a thorough recording of the resource on DPR Form 523 records, or archaeological data recovery excavation. If data recovery excavation is warranted, *CEQA Guidelines* section 15126.4(b)(3)(C), which requires a data recovery plan prior to data recovery excavation, shall be followed. If the significant identified resources are unique archaeological resources, mitigation of these resources shall be subject to the limitations on mitigation measures for unique archaeological resources identified in CEQA sections 21083.2(c) through 21083.2(f).

Upon completion of such archaeological monitoring, evaluation, or data recovery mitigation, the archaeologist shall prepare a report documenting the methods, results, and recommendations of the investigation, and submit this report to the NWIC. Public displays of the findings of archaeological recovery excavation(s) of historical or unique resources shall be prepared. As appropriate, brochures, pamphlets, or other media, shall be prepared for distribution to schools, museums, libraries, and – in the case of Chinese-American archaeological deposits – Chinese-American organizations. (LTS)

MASTER RESPONSE M-2

Displacement of Small Businesses From the Project Site

Implementation of the proposed Project would result in the displacement of several businesses from the Project site and the development of approximately 43,000 square feet of commercial space within the Project site. The City would provide assistance to businesses and tenants that would be relocated as a result of the proposed Project, in accordance with State Redevelopment Law. In addition, the Project's effects on small businesses will be considered by decision-makers when they review the merits of the Project. The Draft EIR states (see page 74) that there are approximately 247 jobs provided by current uses within the Project site. It is anticipated that the existing jobs on the Project site would be relocated within the proposed commercial space wherever feasible, and other jobs would be relocated within the Project vicinity or the greater City of Oakland.

Business relocations do not fall under the definition of environmental impacts in CEQA and therefore are not required to be discussed in detail in the Draft EIR. *CEQA Guidelines* section 15064 states: "Economic or social changes resulting from the Project shall not be treated as significant effects on the environment." In addition, *CEQA Guidelines* section 15131 indicates that the socioeconomic effects of a project should not be considered significant environmental impacts in and of themselves: "Economic effects of a project shall not be treated as significant effects on the environment. An EIR may trace a chain of cause and effect from a proposed decision on a project through anticipated economic or social changes resulting from the Project to physical changes caused in turn by the economic or social changes. The intermediate economic or social changes need not be analyzed in any detail greater than necessary to trace the chain of cause and effect. The focus of the analysis shall be on the physical changes."

At the time of this report and as analyzed in the Draft EIR, environmental impacts that would result from the relocation of businesses from the Project site, based on the information available, are remote and speculative. In short, there is not a clear chain of cause and effect that connects the relocation of businesses to definite environmental impacts, such as traffic, air pollution, or the destruction of wildlife habitat. Additionally, given the availability of commercial space in Oakland and the number of businesses potentially displaced by the project, it is reasonable to conclude that most businesses will relocate to existing available commercial space. Therefore, the relocation of businesses, including small businesses, from the Project site, is not considered a significant environmental impact, and is not analyzed in detail in the Draft EIR.

In addition, there is no evidence to suggest that the development of retail space along Telegraph Avenue would detract from the viability of existing businesses along Broadway or other commercial streets in Downtown Oakland. On the contrary, the proposed Project, which would result in a large increase in the stable residential population within the Project site, is expected to benefit existing businesses in Downtown Oakland, including those along Broadway.

Re: Draft Environmental Impact Report (EIR), Uptown Mixed Use Project

Dear Ms. Warner:

Thank you for the opportunity to comment on the Draft Environmental Impact Report for the Uptown Mixed Use Project.

The project is located within the blocks bounded by 18th Street on the south, 21st Street on the north, Telegraph Avenue on the east and San Pablo Avenue on the west. The Fox Theatre is not part of the project, which consists of approximately 1,000 apartments, 270 condominiums, 1,050 beds of student/faculty housing, 43,000 square feet of commercial space, a 25,000 square foot public park, and 1,959 parking spaces.

Overall Comments

Uptown presents as strong an opportunity as exists in Oakland to do transit-oriented development. The site is at the center of the East Bay transit network and adjacent to the core of Downtown Oakland. Because the proposed project is primarily housing, it would result in customers for Downtown businesses, pedestrian life on evenings and weekends, and "reverse commute" transit riders. We are also pleased that the project would develop the site intensely--it is a textbook location for high-density housing. This is particularly beneficial for a site that is now primarily used for parking. The Uptown project is only four blocks from AC Transit's General Office, so this would very much be development in our own neighborhood.

Our comments relate to existing and planned transit--especially the Bus Rapid Transit (BRT) project and Rapid Bus service, which is proposed for Telegraph Avenue immediately adjacent to the project. The expected presence of the BRT has implications for siting of uses--especially the Sears Auto Center--and for the design of the project.

1 Given these issues, we are also concerned about the inappropriately large amount of parking that is proposed for the project. As a result, we have suggested a new mitigation, as well as modifications to existing mitigations, which are represented through *italics*.

Transit Capacity

2 We note that the EIR estimates that peak period loads on AC Transit buses in Downtown Oakland will rise less than 3% as a result of this project. We accept that this impact is deemed not to be significant.

Current Transit Service

As the discussion on pp. 91-93 indicates, the Uptown site is served by numerous bus lines. The site is within a few blocks of the best served area of the AC Transit district.

Figure IV.D-3 does not illustrate all of the most recent changes:

- Line 19 operates through the Alameda tubes, via 7th/8th, Broadway and 11th/12th to West Oakland, Emeryville, and West Berkeley;
- Line 50 operates through the Alameda tubes and on the same route as the 19, but terminates at 11th & Martin Luther King. This route segment will be re-designated the 63 in December.
- Line 88 operates from Lake Merritt BART to North Berkeley BART via. 11th/12th, Market St., and Sacramento St.;
- Line 14 does not operate on 11th/12th, but on 14th St., where it also shown.
- Line 82/82L no longer operates on 14th St., but on 11th/12th St., where it also shown

Transit Service as of December, 2003

3 AC Transit will modify its service to Downtown Oakland as of December, 2003. The most important change will be elimination of line 58/58X. Alternative service from MacArthur Boulevard to Downtown Oakland will be provided by Line NL, which will operate along 20th Street between Harrison and San Pablo. Late night owl service to San Francisco currently provided by the A line will be provided by line NL in December. Service will remain along all other routes now being served, although in some instances, route numbers will change.

Bus Rapid Transit and Longer Range Plans

AC Transit is planning to develop a Bus Rapid Transit (BRT) line and Rapid Bus service from Berkeley to San Leandro that will operate adjacent to the project along Telegraph Avenue between 20th and 21st Streets. Coming from the north, the line is planned to operate along Telegraph Avenue, turn left at 20th Street, and right at Broadway. The BRT is designed to provide high speed, high frequency, high capacity service on key East Bay transit corridors. The project is currently undergoing environmental review.

We are working closely with the City of Oakland to design a station on 20th Street between Broadway and Telegraph. We hope that this station will not only allow for pleasant, efficient bus operations and passenger comfort, but will also serve as an attractive public amenity for the Uptown area. We also appreciate the fact that no garage entrances are planned along the BRT route. **3 cont.**

Sears Auto Center Site
Because of the planned BRT station on 20th Street, we strongly recommend that the Sears Auto Center be relocated to the preferred site of 22nd & Telegraph. The alternate site at 20th & Telegraph would be adjacent to this station. The two uses would be incompatible, with the Auto Center generating a high volume of vehicles that could conflict with the high volume of AC Transit buses using 20th Street. In addition, an auto repair center does not represent a transit-friendly use for passengers waiting at 20th Street. Placing an auto repair use on such a prominent corner would be inappropriate urban design. **4**

Transit Mitigations
Mitigation Measure AIR-2 outlines a number of transit, services, and bicycle/pedestrian measures that the City *may* (emphasis added) require the Project to implement. We believe that the transit and bicycle/pedestrian measures--such as designing buildings to facilitate transit access (Transit Measure ii)--are achievable and important. The EIR should state that they *shall* be required, to assure that they are implemented.

We would also suggest modifying Transit Measure I to read as follows: *Construct transit facilities such as bus turnouts/bus bulbs, benches, shelters, and other needed facilities, with the review and approval of AC Transit.* AC Transit will be operating a wider range of bus types than we do now, and it is important that all transit-related facilities be fully functional for all of our vehicle types. **5**

Bus Service and Project Design
The project should also take note of the buses that will be operating on 20th Street between Broadway and San Pablo. While the BRT line will have turned, Lines 15, 72/72M/72R, and NL are all planned to operate on this block. Together, these buses are planned to operate 17 trips per hour in each direction during weekday daytime periods. The project appears to have only one garage access driveway from this block of 20th Street, which should reduce conflicts. The developers should take note of this high level of bus activity in designing the project. **6**

Parking Provided
AC Transit commends the fact that the Uptown project proposes a lower level of parking than many recent Downtown Oakland projects. However, we believe that the proposed amount of parking is too large, given the project's characteristics and its location at a primary transit hub.

The project proposes to provide one parking space per unit, and one parking space for every two beds in the college residence. Oakland's S-15 zoning regulations, which apply to BART stations outside of Downtown Oakland, allow as little as .5 spaces per **7** unit. Uptown has more transit service and more destinations within walking distance than the S-15 BART stations, making it easier for people to live in Uptown without a car. The higher requirement on Uptown seems inconsistent. The EIR forecasts that 60% of units will be studios or one-bedroom units. These units would be occupied by small households with lower car ownership rates than the parking requirement has accommodated. We suggest that the parking ratio--particularly for apartment units--be lowered.

In addition, the provision of one parking space for every two beds in the college residence is excessive. Rates of car ownership by residents in dorms at the University of California Berkeley are substantially lower than this. Berkeley students living at the Uptown site would not normally be able to drive to campus, because the University does not provide parking spaces for students except under special circumstances. UC Berkeley students can also ride AC Transit for free by showing their student identification cards. The Bus Rapid Transit project discussed above will provide fast transit directly from Uptown to the Berkeley campus. These parking and Class pass policies, in addition to the myriad transit options that will be available, further reduce the likelihood of students owning cars. The parking ratio for these beds should be lowered substantially.

7
cont.

To the extent that these parking spaces are available during the daytime, they will tend to attract auto-driving commuters. As the EIR notes, the 1,620 spaces that would be built under this project are more than the existing 1,242 spaces. Commuter use is undesirable and inconsistent with Oakland's stated planning goals. However, nothing in the project as described would prevent this use from happening.

Reducing the parking requirement would reduce the cost of the project, making it more financially feasible. It could also reduce traffic to the site and reduce the requirement for traffic mitigations.

Parking Charges Mitigation
It is widely acknowledged that charging for parking helps limit parking demand. This EIR includes no mitigations requiring parking charges. Therefore we propose the following mitigation:

- *All parking created pursuant to this EIR shall be charged for at market rates, as determined by the City of Oakland. Any tenant leasing parking shall pay for that parking separately from its rent/lease payment, and no tenant shall be compelled to lease parking.*

Signal Cycle Lengths
The EIR states that increased traffic will require changes to signal timing at Telegraph & William, and Harrison & Grand. We assume that the signal cycles at these locations would be extended, although the EIR does not specify that. Since AC Transit operates at both of these locations, we should be consulted about signal cycle changes. Such changes can be helpful or harmful for bus operations. They also generally create delay

8

for pedestrians--an undesirable outcome. Additionally, on Telegraph Avenue, substantial changes in signal timing are planned as part of the Bus Rapid Transit project. Therefore, any changes in signal timing on Telegraph related to the Uptown project should be coordinated with the BRT. **8 cont.**

AC Transit looks forward to working with Oakland to facilitate the development of Uptown as a model transit-friendly area. If you have any questions about this letter, please contact Nathan Landau, Senior Transportation Planner, at 891-4792.

Sincerely,

Kathleen Kelly

COMMENTOR A1
AC Transit; Kathleen Kelly, Deputy General Manager, Service Development Department; November 3, 2003

A1-1: As documented in the Draft EIR and indicated in the comment, the proposed Project provides parking to meet the minimum requirements of the City's Zoning Code. It should be noted that the City's parking standards have been established to meet minimum demand and take account of the Central Downtown location and the availability of transit options within the Downtown area. The over- or under-provision of parking is not considered an environmental impact in and of itself, and mitigation measures are not required, because parking would not directly result in substantial adverse physical impacts, such as air pollution, traffic, or land use incompatibility. Vehicle trip generation is associated with Project uses, not the provision of parking. All of the potential impacts from the Project's vehicle trip generation are fully discussed in the Draft EIR chapters on traffic, air quality, and noise. Parking demand and supply will be reviewed and considered by the Project decision makers as each Project phase is approved. AC Transit's comments pertaining to parking will be considered at that time.

A1-2: This comment indicates that AC Transit agrees with the EIR's finding that the Project would not result in a significant impact to transit systems or levels of service. No further response is necessary.

A1-3: Figure IV.D-3, Existing Transit Network, has been revised to illustrate the most recent changes to the AC Transit Network and is included in Chapter V of this document.

The comments regarding changes to Downtown Oakland transit service, and Bus Rapid Transit and Rapid Bus Service are noted. No revision to the Draft EIR is necessary as recent changes in this transit network (implemented after research was complete for the Draft EIR) do not significantly change the analysis or the findings related to transit included in the Draft EIR. The Project will still not exceed the significance criterion: generate added transit ridership that would increase transit ridership by 3 percent at bus stops where the average load factor with the Project in place would exceed 125 percent over a peak 30-minute period.

A1-4: The siting of an auto center adjacent to a BRT station would not represent a significant land use impact in and of itself; auto-oriented uses and transit stations are not intrinsically incompatible. The auto center would not necessarily restrict the functioning of the BRT station more than any other land use. Access and egress to the auto center and the BRT station will be considered by the City prior to site plan approval for the auto center as part of its standard site plan review and approval process which will require the site plan to comply with typical standards and requirements. Such standards and requirements would ensure that vehicles entering and leaving the auto center would not adversely affect the operation of AC Transit vehicles and will be imposed by the City's standard process. As such, this potential impact is not considered significant and no mitigation measures are required.

Per AC Transit's request, Mitigation Measure AIR-2 has been revised as shown below, to require implementation of the listed measures and provide for review and comment of proposed transit facility improvements by AC Transit.

A1-5: Page 159 of the Draft EIR is revised as follows:

> Mitigation Measure AIR-2: To the extent permitted by law, the Uptown Project shall be required to implement Transportation Control Measures (TCMs) as recommended by the BAAQMD. ~~However, the City of Oakland will implement as feasible on the basis that this Project is an infill mixed-used development project that in and of itself supports many Smart Growth Principals.~~ Measures that the City ~~may~~ shall require the Project to implement, or that are already proposed as part of the Project, include the following:
>
> - *Transit Measures:* (i) Construct transit facilities such as bus turnouts/bus bulbs, benches, shelters, ~~etc.~~ and other needed facilities subject to the review and comment of AC Transit. (Effectiveness 0.5 percent - 2 percent of all trips, BAAQMD *CEQA Guidelines*); (ii) Design and locate buildings to facilitate transit access (e.g., locate building entrances near transit stops, eliminate building setbacks, etc.) (Effectiveness 0.1 percent - 0.5 percent of all trips, BAAQMD *CEQA Guidelines*).

A1-6: The comment does not address the adequacy of the EIR; no further response is necessary. The City and Project developer will consider this information as the public review of the Project proceeds.

A1-7: Refer to Response to Comment A1-1. The City will consider AC Transit's preference for a reduction in the total amount of proposed parking and a requirement that all parking be charged for at current market rates as part of its consideration of the Project's merits. The provision of parking as proposed by the Project does not result in any significant impacts pursuant to CEQA. As a result, no mitigation measures that address parking are warranted.

A1-8: Mitigation Measure TRANS-1 requires the City to prepare a signal optimization and timing plan for all intersections in the area bounded by San Pablo Avenue, Grand Avenue, Telegraph Avenue and 17th Street. AC Transit currently operates bus and rapid bus service, and is studying the implementation of BRT service in this area. The City of Oakland will consult with AC Transit during the preparation of this plan to ensure that signal optimization mitigates the Project's impacts and optimizes the flow of automobiles and buses through the area.

Mitigation Measure TRANS-1 beginning on page 123 of the Draft EIR is revised as follows:

> Mitigation Measure TRANS-1: Optimization of the signal timing at the intersection of San Pablo and Thomas L. Berkley Way (20th Street) would improve function to LOS D in the PM peak hour. This intersection functions as an integrated

signal system with other intersections in the downtown area. To mitigate the Project's impact at this location and others, the City shall prepare a signal optimization and coordination plan for the area bounded by San Pablo Avenue, Grand Avenue, Telegraph Avenue, and 17th Street prior to Project occupancy. The plan shall address the timing and equipment requirements, as necessary for all of the signalized intersections located within this area. The Project sponsor shall fund its fair share cost of the preparation of this plan and the implementation of the signal timing program. Implementation of the signal optimization program may also involve the purchase and installation of interconnection hardware (i.e. modems, microwave antennas, etc). The City of Oakland will consult with AC Transit during preparation of the plan.

Given that the Project sponsor is responsible for only a portion of this mitigation measure, implementation of this set of improvements will be funded fully by one or a combination of the following means:

1. The Project sponsor shall fully fund the costs of the signalization improvements and shall be reimbursed through other fair-share contributions as future projects ~~occur~~ that exceed ~~fall within~~ the City's thresholds of significance occur.

2. The City, at its ~~their~~ sole discretion, shall establish a Traffic Improvement Program and concurrent Traffic Impact Fee Ordinance to fund the mitigation measure.

3. The Redevelopment Agency, at its ~~their~~ sole discretion, shall contribute funds to the costs of implementation. (LTS)

The implementation of Mitigation Measure TRANS-1, as revised, would not lead to any new or more severe impacts.

FILE COPY

Ms. Claudia Cappio
Development Director, City of Oakland
250 Frank H. Ogawa Plaza, Suite 3330
Oakland, CA 94612

Subject: Comments on Uptown Mixed Use Project Draft EIR

Dear Ms. Cappio:

Thank you for the opportunity to comment on the Uptown Mixed Use Project Draft EIR Draft EIR ("Uptown EIR"). Over the course of the last few years, the City of Alameda has received numerous requests from the City of Oakland to conduct detailed and comprehensive traffic analyses of traffic conditions in Downtown Oakland and the potential effects of development on existing conditions in Downtown Oakland. In response to these requests, the City of Alameda has accumulated an extensive database of existing and projected traffic conditions throughout downtown Oakland. This database is continually updated using City of Oakland traffic studies, the Alameda County Congestion Management Agency (CMA) regional traffic model, and ongoing in-field observations.

In recent months, the City of Alameda and the City of Oakland have had extensive discussions about the existing and projected traffic problems at the "gateways" to Oakland, which are also used by Alameda residents and businesses. We received written communications from both former City Manager Robert Bobb and former Planning Director Leslie Gould claiming that the City of Alameda underreported potential impacts at these critical locations. In contrast to the City of Oakland's stated concerns to the City of Alameda about these future traffic conditions and the impact of traffic on Oakland Chinatown, the City of Oakland's Uptown EIR future year ("baseline") projections (which includes full build out of Alameda Point) fails to recognize most of these well-known problems, fails to evaluate the project's contribution to these problems, fails to take any responsibility for the additional traffic that the proposed project's approximately one thousand residential units will contribute to these well-know problem areas, and utterly fails to acknowledge or even consider the impact of the development on the Chinatown community. It appears that the Uptown EIR includes a number of faulty assumptions, which have resulted in a underreporting of significant impacts to the transportation system that is shared by all of the cities in Alameda County.

In the interest of providing the public with consistent information about the state of our shared transportation system, please provide written clarification on the following specific concerns about the Uptown EIR.

Planning and Building Department

2263 Santa Clara Avenue, Room 190
Alameda, CA 94501
510 748.4530 • Fax 510 748.4593 • TDD 510 522.7538

1. **Adequacy of Projected Traffic, Air, and Noise Impact Analysis.** The Alameda County Congestion Management Agency recently informed the City of Alameda that the land use data provided for the CMA Model 2002 update by ABAG is flawed. Without a valid data base, all of the future year traffic, air and noise projections for 2005 and 2025 in the Uptown EIR are flawed. Even if the City of Oakland, corrected the inaccuracies for the TAZs within Oakland, all of the inaccuracies for all of the neighboring jurisdictions must also be corrected to ensure valid traffic model results for the shared, regional roadway system. Without valid traffic model results for 2005 and 2025, non of the EIR conclusions regarding 2005 and 2025 traffic, air quality, or noise impacts can be considered adequate or valid because they all depend upon valid traffic data from the CMA model. **1**

2. **Land Use and Transportation Element EIR:** According to page 39 of the Draft EIR, the Uptown EIR tiers off of the Land Use and Transportation Element EIR (LUTE EIR). The LUTE EIR identifies a number of impacts that result from the "downtown showcase" projects, which include the Uptown Mixed Use Project site. Specifically, the LUTE EIR correctly identifies impacts from Oakland development at the intersection of 12th and Brush. (This intersection currently backs up onto I-24 on a regular basis in the AM peak hour, as predicted in the 1996 LUTE EIR.) The LUTE EIR, the City of Oakland City Center EIR, and the City of Oakland Housewives Market EIR commit the City of Oakland to mitigations to eliminate this significant impact to a level of less than significant. To date, the City of Oakland has ignored its responsibilities and commitments adopted in these Mitigation Monitoring Program for these Oakland EIRs and allowed this significant impact to occur. As described in the LUTE EIR, the Uptown Mixed Use project is partially responsible for this impact. Therefore, the Uptown EIR must acknowledge this impact and include a mitigation to rectify the ongoing problems at 12th and Brush.

   It should be noted, that the continuing congestion at this gateway to Oakland, causes traffic headed to Jack London Square and Alameda to use alternative routes to access the Tubes and the Jack London Square. Many of these alternative routes require driving through Oakland Chinatown, which could be avoided if Oakland had met its commitments to mitigate this impact from past developments. **2**

3. **Significant Unavoidable Impacts associated with the LUTE EIR.** The LUTE EIR identifies a series of significant unavoidable transportation impacts associated with downtown development, which specifically includes the Uptown Project. Significant unavoidable impacts were identified for a number of locations. The two most important to Alameda include:

   - SR 24 in the AM and PM peak hour, which is major regional freeway used by Oakland and Alameda residents and business, and

- SR 260 (Webster-Posey Tubes).

Although the Uptown EIR tiers off of the LUTE EIR, it fails to acknowledge these significant unavoidable impacts associated with Uptown development. These impacts must be acknowledged in the Uptown EIR and new, the current Oakland City Council must make updated statements of overriding consideratioı for the Uptown Project. The Uptown EIR must therefore be revised and recirculated to include these significant unavoidable impacts.

The court stated in *Communities for a Better Environment v. California Resources Agency (2002)* 103 Cal. App. 4th 98 122-125 that:

> *"The requirement of a statement of overriding considerations is central to CEQA's role as a public accountability statute; it requires public officials, in approving environmentally detrimental projects, to justify their decisions based on counterbalancing social, economic or other benefits, and to point to substantial evidence..."*
>
> *"Even though a prior EIR's analysis of environmental effects may be subject to being incorporated in a later EIR for a later, more specific project, the responsible public officials must still go on record and explain specifically why they are approving the later project despite its significant unavoidable impacts."*

2
cont.

State of California Public Resource Code Section 21159.25 (commonly referred to as Assembly Bill 436) does not allow the City of Oakland to bypass this fundamental principle of the California Environmental Quality Act. If the City of Oakland wishes to tier off of the LUTE EIR, it must also acknowledge the significant unavoidable impacts associated with development consistent with the LUTE EIR and must make new statements of overriding considerations for each of these projects, including the Uptown Mixed Use Project. These significant impacts must be acknowledged in a revised and recirculatated Uptown EIR, so that the public has a complete understanding of the full range of impacts associated with the City of Oakland development plans.

Thank you for your consideration of our concerns. We look forward to working cooperatively with the City of Oakland to identify solutions, funding mechanisms, and shared responsibility for improving our shared transportation system.

Sincerely,

Greg Fuz (GAT)

COMMENTOR A2
City of Alameda; Gregory Fuz, Planning and Development Director; November 3, 2003

Note: This letter was received by the City of Oakland via fax on November 12, 2003, nine days following the close of the public comment period.

A2-1: This response addresses the concerns raised about the effects of the recently revised ABAG employment allocations on the results of the transportation analyses in the *Uptown Mixed-use Project EIR*. Subsequent to the preparation of the Draft EIR, the Alameda County Congestion Management Agency (ACCMA) informed the Draft EIR authors that it had discovered a number of inaccuracies in the allocation of employment within some Bay Area jurisdictions. The ACCMA indicated that the employment totals by jurisdiction, population totals by jurisdiction and the allocation of population by jurisdiction were found to be correct; however, for some cities, the employment was misallocated geographically.

When notified of the inaccuracies in the model data, the Draft EIR authors conducted a detailed investigation of the model land-use inputs used to prepare the study's transportation forecasts. This investigation identified the following:

- The Uptown DEIR uses the City of Oakland's updated cumulative land-use database and, therefore, does not rely upon the ACCMA information for land-uses within the City of Oakland. Because of this update to the land use forecasts within the City of Oakland, any inaccuracies within the ACCMA information for Oakland would not have been used in the DEIR. References in the Draft EIR to the ACCMA model have been modified to indicate that the model has been updated to reflect the cumulative land use forecasts of the City of Oakland. These numerous text changes are not listed below, but are included in Chapter V, Draft EIR Text Revisions.
- The land-use forecasts for the Cities of Alameda, Emeryville and Piedmont, are accurate, and in some cases conservatively high.
- While the allocation of employment for other cities may be inaccurate, the employment totals for those jurisdictions are correct.

As a result of this investigation, the Draft EIR authors concluded no evidence suggested that the potential misallocation of employment at substantial distance from the Project site would substantially alter the forecasts or conclusions of the Draft EIR.

Appendix A-1 provides a detailed response to those concerns and makes three main points. First, the response explains that the recently identified inaccuracies in the original ABAG employment allocations do not affect the land use data for Oakland that were used in the transportation analyses, as the allocations of Oakland employment are not based on the ABAG data. Second, the validity of the Oakland land use data supports the adequacy and validity of the EIR transportation analyses and forecasts given the importance of the Oakland land use data to those analyses and their results. Third, the response provided in Appendix A-1 explains that possible revisions to the allocations of employment in other cities in Alameda County outside of the EIR study area would not substantially change the EIR conclusions drawn from the recent transportation model analyses. Please refer to Appendix A-1 for a detailed response.

A2-2: The LUTE EIR was used as the basis to prepare this Focused EIR under the provisions of section 21159.25 of the CEQA statutes. Although section 21159.25 exempts this Project from the requirement to analyze cumulative impacts, given that the project triggered an analysis under the ACCMA requirements (100 or more PM peak hour trips), a cumulative traffic analysis was prepared. In order to provide a complete informational document, this cumulative analysis was included. The analysis is based on growth projections that are more current and accurate than the projections prepared for the 1998 LUTE EIR. In part, this increased accuracy stems from the data obtained from the 2000 Census, which presents an extensive and much more current database than the information used in the LUTE EIR, where the base year was extrapolated from the 1990 census. Additionally, the LUTE EIR analyzed years 2005 and 2015 consistent with the ACCMA 1997 requirements. The ACCMA now requires analysis of years 2010 and 2025. Finally, the cumulative analysis was prepared for a particular project, thereby increasing the specificity of the impact analysis. As a result, the analysis impacts included in the Uptown Transportation Study superceded what was included in the LUTE EIR.

The Uptown Transportation Study uses the current land use forecasts for population and employment of the City of Oakland and the ACCMA, and not the forecasts developed for the LUTE EIR. Current land use forecasts included in the Uptown study are greater than those evaluated in the LUTE EIR, as detailed in Appendix A-2 of this document, thus, the conclusions of the current study are conservative in that they reflect a more accurate, updated, and worst-case scenario than that prepared for the LUTE EIR.

The ACCMA model (updated to reflect the cumulative land use forecasts of the City of Oakland) does not forecast that any Project traffic will pass through the intersection of 12th Street/Brush Street. Uptown related regional traffic using area freeways, such as I-980, I-880, SR 24 and I-580, will use other ramps to access the Project site. Specifically, the I-980 ramps at 17th, 18th and 19th Streets are expected to serve the bulk of Uptown freeway traffic. To a lesser extent, the Grand Avenue ramps with I-880, I-80 and I-580 are also expected to serve some Uptown related regional freeway traffic. Any Project traffic that may want to travel to or from the City of Alameda is expected to use local City of Oakland streets such as Webster and Franklin to complete their trips. Since no Uptown related traffic is anticipated to pass through the 12th Street/Brush Street intersection, it was not identified for inclusion in the Draft EIR. While the authors of the Draft EIR recognize that even though not forecasted through the model, as a practical matter some small number of Project related trips may pass through the 12th Street/Brush Street intersection. However, such a small number of trips will not result in a significant project or cumulative impact at this location; therefore it was not included in the study.

All signalized intersections in the cities of Oakland, Alameda, Emeryville, and Berkeley were tested and screened for inclusion in the Uptown EIR Transportation Study. Non-signalized intersections in the vicinity of the project site were also screened. The study includes all intersections which satisfied the following two criteria:

- Intersections to which the Project would add 50 or more peak hour trips; and

- Inside the downtown area, the intersection was identified as operating at LOS D or worse, or, outside of the downtown area, the intersection was identified as operating at LOS C or worse.

It is at these intersections where the Project could result in a significant adverse impact. The Project's trip distribution was developed using the ACCMA model. Forty intersections in and around downtown Oakland were found to satisfy these criteria. The intersection screening service level criteria were developed based on the City's significance criteria which identify impacts inside of the downtown area at LOS E or worse (as set forth in the General Plan LUTE policies), and impacts outside of the downtown area at LOS D or worse.

The transportation study evaluates all freeway facilities requested for analysis by the ACCMA and Caltrans through the EIR scoping process. These facilities include I-980, SR 24, I-580 and I-880. The project was found to add the greatest amount of traffic to I-980; however, this addition was not found to constitute a significant adverse impact. The project was not found to significantly impact any of the analysis freeway segments under the methodology and criteria of both the City of Oakland and Caltrans (all freeway facilities were evaluated using both methodologies). It is reasonable to assume that the analysis of freeway facilities further a field, would not identify new project impacts.

In addition to freeway facilities, all intersections in the City of Alameda were screened for inclusion in the Draft EIR, based on the methodology described in Response To Comment B3-7. No intersections in Alameda were found to satisfy the Draft EIR screening criteria.

The Uptown Transportation Study, which, as explained above, provides a more current, comprehensive, and project-specific analysis than what is included in the LUTE EIR, only identifies one significant and unavoidable impact (at the intersection of Frontage Road and West Grand Avenue). Based on this updated analysis and the identified significance criteria, no other project or cumulative significant and unavoidable impacts related to traffic are anticipated to result from implementation of the Uptown Project. Therefore, there is no need to acknowledge such impacts in the Uptown Draft EIR. The City of Oakland will consider the appropriate findings when it considers certification of the Uptown EIR and the requested development approvals.

Community and Economic Development Agency
Planning Division
250 Frank H. Ogawa Plaza, Suite 3330
Oakland, CA 94612

SUBJECT: Comments on the Draft Environmental Impact Report for the Uptown Mixed Use Development Project in the City of Oakland (Case Number ER03-0007)

Dear Ms. Warner:

Thank you for the opportunity to comment on the City of Oakland's Draft Environmental Report (DEIR) on the Uptown Mixed Use Development Project. The project would consist of construction of approximately 1,000 apartments and 270 condominiums, 1,050 student beds/faculty units, 43,000 square feet of commercial space, 1,959 parking spaces and a 25,000 square foot public park. The project site is located on a nine block, 15-acre site in the Uptown District of the City of Oakland, and is bounded by Thomas L. Berkley Way (20th Street) on the north, Telegraph Avenue on the east, 18th Street on the south, and San Pablo Avenue on the west. It does not include the Fox Theater.

The ACCMA respectfully submits the following comments:

- Page 123-134, Mitigation Measures TRANS-1 2, 4, 6, 7, 8, 9, 10, 12, 13, 14: Payment f funds towards preparing and implementing a signal optimization and coordination n for the project area:
    - What mechanism will the City use to obtain a fair share of the payment for the costs of implementing this mitigation measure?
    - When will the project sponsor make this payment? Will it be triggered to discretionary project approvals? If so, which ones? Will it be made when the entire development is approved or will it be phased over time?
    - If the City establishes a Traffic Improvement Program with a concurrent Traffic Impact Fee Ordinance and this occurs after project approval, how and when will the City collect the project proponent's fair share of the cost of traffic signalization improvements?
    - If the Redevelopment Agency decides to contribute funds to the costs of implementation of signalization improvements, how would this affect the City's determination and collection of the project proponent's fair share of these improvements?

1

Ms. Lynn Warner
November 3, 2003

- Page 124, Impact TRANS-3 and Page 133, Impact TRANS-11, Need to widen intersection of Grand Avenue and Frontage Road/West to address LOS F and vehicle delay in the PM peak hour in 2010 and 2025: Both of these Impacts are identified as Significant and Unavoidable due to inability to make improvements on another agency's (Caltrans) jurisdiction. **2**
    - Please confirm whether you have contacted Caltrans to determine whether they have any improvement plans for this area. If so, a mitigation measure should be added that the project sponsor should contribute their fair share of these improvements. This measure should include the mechanism and timing for such fund collection.

- Page 106, Planned Transportation Improvements considered by the City of Oakland: **3**
    - Is the reconfiguration of Telegraph Avenue between 16th Street and Thomas L. Berkley Way (20th Street) assumed in the traffic impact analysis?
    - If it is assumed, what funding source would pay for this and what date is this project expected to be constructed?

Once again, thank you for the opportunity to comment on this Draft EIR. Please do not hesitate to contact me at 510/836-2560 ext. 13 if you require additional information.

Sincerely,

Diane Stark
Sr. Transportation Planner

file: Chron
CMP - Environmental Review Opinions - Responses - 2003

COMMENTOR A3
Alameda County Congestion Management Agency; Diane Stark, Senior Transportation Planner; November 3, 2003

A3-1: Mitigation Measure TRANS-1 describes the information, analysis, and process that needs to be included in the signal optimization and coordination plan prepared by the City. The types of questions included in this specific comment will be addressed in the plan which will be required to be prepared prior to the City's issuance of a building occupancy permit pursuant to the Mitigation Monitoring and Reporting Program included in Chapter V of this document. The plan would include: a mechanism to ensure fair share payments for implementing Mitigation Measure TRANS-1; guidelines regarding when the fair share payments shall be made; a method to be used for collecting fair share payments from project proponents; and a strategy for determining fair share payments in the event that the Redevelopment Agency contributes funds toward the mitigation measure. It is important to note that none of the identified transportation impacts are projected to occur until at least the year 2010 and several will not occur until 2025. The signal optimization and coordination plan will include requirements to ensure that necessary signal improvements are funded and implemented as necessary to mitigate these future year impacts.

A3-2: Caltrans has been contacted, and reports that no improvement is planned at the intersection of Grand Avenue/Frontage Road/I-880 Ramps.[3]

A3-3: The reconfiguration of Telegraph Avenue between 16th Street and Thomas L. Berkley Way (20th Street) is included in the year 2010 and 2025 intersection level of service analyses. Construction of the reconfiguration project is expected to begin in October of 2005. Construction is expected to last seven to nine months. The Project will be funded by approximately $1.8 million from Measure B and approximately $1.2 from Local Tax Increment funding from the Redevelopment Agency.[4]

EAST BAY
MUNICIPAL UTILITY DISTRICT

RECEIVED
NOV 3 2003
City of Oakland
Planning & Zoning Division

November 3, 2003

Claudia Cappio, Director of Planning and Zoning
City of Oakland Planning Division
250 Frank H. Ogawa Plaza, Suite 3330
Oakland, CA 94612

Dear Ms Cappio:

Re: Draft Environmental Impact Report – Uptown Mixed Use Project

The East Bay Municipal Utility District (EBMUD) appreciates this opportunity to review and comment on the Draft Environmental Impact Report (EIR) for the Uptown Mixed Use Project in the City of Oakland. EBMUD has the following comments on the Draft EIR.

On pages 179 - 192, Section G, Hazards and Hazardous Materials, addresses the potential for contaminated soils or groundwater to be present within the project site boundaries. The project sponsor should be aware that EBMUD will not install pipeline in contaminated soil or groundwater (if groundwater is present at any time during the year at the depth piping is to be installed) that must be handled as a hazardous waste, or that may be hazardous to the health and safety of construction or maintenance personnel wearing Level D personal protective equipment. Nor will EBMUD install pipeline in areas where groundwater contaminant concentrations exceed specified limits for discharge to sanitary sewer systems or sewage treatment plants.

Applicants for EBMUD services requiring excavation in contaminated areas must submit copies of all known, existing information regarding soil and groundwater quality within or adjacent to the project boundary and a legally sufficient, complete and specific written remedial plan establishing the methodology, planning and design of all necessary systems for the removal, treatment, and disposal of all identified contaminated soil and/or groundwater. EBMUD will not design the installation of pipelines until such time as soil and groundwater quality data and remediation plans are received and reviewed and will not install pipelines until remediation has been carried out and documentation of the effectiveness of the remediation has been received and reviewed. If no soil or groundwater quality data exists or the information supplied by the applicant is insufficient, EBMUD may require the applicant to perform sampling and analysis to characterize the soil being excavated and groundwater that may be encountered during excavation or perform such sampling and analysis itself at the applicants expense. **1**

On page 193, paragraph 6, "The East Bayshore Water Project" should be replaced with "East Bayshore Recycled Water Project". **2**

EBMUD
80
YEARS
1923-2003

375 ELEVENTH STREET . OAKLAND . CA 94607-4240 . (510) 835-3000

3 On page 194, paragraph 1, replace the sentence, "As of 2001, EBMUD's water supply was insufficient . . ." with "In 1993, EBMUD adopted a long-term Water Supply Management Program (WSMP) that serves as a planning guide to the provision of a reliable high-quality water supply to the EBMUD service area through year 2020. The WSMP identified that, during severe multi-year droughts, EBMUD would be unable to meet its customers need for water with its existing source supply, the Mokelumne River, without imposing extreme rationing measures. The 1993 WSMP resulted in two principal options for meeting EBMUD's projection for a supplemental water supply: additional surface or underground storage and additional surface water. Development of an additional surface for EBMUD use may be possible by either enlarging the existing storage at Pardee Reservoir and/or by utilizing EBMUD's Sacramento River contract entitlement."

4 On page 194, paragraph 4, replace the first sentence " The Project site is served . . ." with "The Project site is served by pipelines in the existing streets that range in size from 4 to 12 inches." Please delete the second sentence, "These lines and associated minor . . .", because the stated flow rate is not available. Also delete the last sentence, "The minimum flow standards for lines serving . . .", as they are inconsistent with the typical fire flow requirements specified by the local fire departments. The project sponsor should verify the required fire flow for this project with the City of Oakland's Fire Department.

5 On page 198, paragraph 1, second sentence, replace the daily demand of 329,000 gpd to 365,000 gpd as indicated in the Water Supply Assessment provided to the City of Oakland on August 13, 2003.

On page 198, paragraph 1, after the fourth sentence, please include "The City's dual plumbing ordinance requires that the project sponsor install dual plumbing systems within new project development for the appropriate use of recycled water from EBMUD's East Bayshore Recycled Water Project, as EBMUD plans to supply recycled water to the project site within the next ten years for landscape irrigation."

6 On page 198, paragraph 3, please delete the first two sentences. As noted in EBMUD's March 29, 2003 response to the Notice of Preparation (NOP) that is included in Appendix A-3 of the Draft EIR, main extensions (including pipeline replacements) and/or pipeline improvements may be required depending on metering and fire flow requirements.

7 On page 198, paragraph 4, please delete the second and third sentences. The stated fire flow requirements are inconsistent with those stated on page 194, paragraph 4 and are inconsistent with the typical fire flow requirements specified by the local fire departments.

8 On page 198, paragraph 5, please delete the second, third and fourth sentences, "Wastewater generated by the Project represents less than 0.2 percent of the MWWTP's secondary treatment capacity. This wastewater would be accommodated by the MWWTP, which is currently operating at 46 percent of its secondary treatment capacity. Therefore, wastewater generated by

the proposed project would be subject to both primary and secondary treatment and would not violate the wastewater treatment requirements of the San Francisco Bay Regional Water Quality Control Board." EBMUD's NOP response indicated that the Main Wastewater Treatment Plant (MWWTP) would have adequate dry weather capacity for the project, provided the wastewater meets the standards of EBMUD's Source Control Division. However, the ability of the MWWTP to treat wet weather flows from the project needs to be ascertained. EBMUD's response to the NOP very clearly requested specific language in the Draft EIR regarding confirmation of capacity with the City of Oakland in the sub-basin where the project is located. This language is not in the document. **8 cont.**

On page 199, paragraph 1, last sentence, the statement that "the proposed project would not require the construction of new wastewater treatment or transport facilities" is not correct. Treatment capacity needs to be confirmed by the City of Oakland as stated above, relevant to wet weather flows. Regarding transport facilities, the paragraph states that "Public Works agency staff have indicated that as part of the final public improvement plans for the Project, the conveyance system will be evaluated to confirm what repairs, if any, will be incorporated into the final public improvement plans and specifications." If this is not to be determined until a future date, then it cannot be definitively stated at this time that no conveyance work will be needed. **9**

If you have any questions concerning this response, please contact Marie Valmores, Senior Civil Engineer, Water Services Planning, at (510) 287-1084.

Sincerely,

WILLIAM R. KIRKPATRICK
Manager of Water Distribution Planning

COMMENTOR A4
East Bay Municipal Utility District; William R. Kirkpatrick, Manager of Water Distribution Planning; November 3, 2003

A4-1: Comment noted. Mitigation Measures HAZ-1a and HAZ-1c in the Draft EIR require the completion of an environmental investigation and the preparation of a Soil and Groundwater Management Plan, respectively, prior to the initiation of ground-disturbing activities within the Project site. Implementation of these measures would ensure that EBMUD workers or other construction personnel would not face health risks from soil or groundwater contamination during the installation of water or sewer lines. Data on soil and groundwater contamination within the Project site will be submitted to EBMUD prior to the installation of utility lines.

A4-2: Page 193 of the Draft EIR is revised as follows:

> The East Bayshore Recycled Water Project, which would provide up to 2.3 mgd of recycled water to residents in Alameda, Albany, Berkeley, Emeryville, and Oakland, is currently in the planning stage. The Project would involve the construction of new treatment and disinfection facilities at the EBMUD Main Wastewater Treatment Plant. The service area of the East Bayshore Recycled Water Project, which is anticipated to be completed prior to 2010, would include the Project site and its surroundings. In January 2002, the City adopted a water reuse ~~dual plumbing~~ ordinance, which requires new development to use recycled water provided by EBMUD, and to install dual plumbing systems if the use of recycled water is financially and technically feasible.

A4-3: Page of 194 of the Draft EIR is revised as follows:

> . . . mgd by 2020.[5] ~~As of 2001, EBMUD's water supply was insufficient to meet customer needs in multiple year droughts, even taking into account the implementation of water conservation and recycling programs.~~[6] In 1993 EBMUD adopted a long-term Water Supply Management Program (WSMP) that serves as a planning guide to the provision of a reliable high-quality water supply to the EBMUD service area through the year 2020. The WSMP identified that, during severe multi-year droughts, EBMUD would be unable to meet its customers' needs for water with its existing source supply, the Mokelumne River, without imposing extreme rationing measures. The 1993 WSMP resulted in two principal options for meeting EBMUD's projection for a supplemental water supply: additional surface or underground storage and additional surface water. Development of additional surface water for EBMUD use may be possible by either enlarging the existing storage at Pardee Reservoir and/or by utilizing EBMUD's Sacramento River

---

[5] East Bay Municipal Utility District, 2001. op. cit.

~~[6] Ibid.~~

contract entitlement. Water from the Sacramento River contract entitlement is anticipated to be available to EBMUD by 2007.

A4-4: Page 194 of the Draft EIR is revised as follows:

~~The Project site is served by 8-inch water lines along San Pablo Avenue and Telegraph Avenue.~~ The Project site is served by pipelines in the existing streets that range in size from 4 to 12 inches. ~~These lines, and associated minor water line connections, are anticipated to have an available capacity of over 5,000 gallons per minute (gpm).~~ The City Fire Department maintains minimum flow standards for pipelines serving residential and commercial uses. Prior to the construction of development projects in the City, project applicants are required to verify the capacity of water pipelines that would serve the Project to ensure they meet the Fire Department's minimum fire flow requirements. ~~The minimum flow standard for lines serving residential uses is 2,500 gpm; the minimum flow standard for lines serving commercial uses is 4,500 gpm.[7]~~

A4-5: Based on a detailed water demand analysis completed by Korve Engineering, it was determined that the proposed Project would result in an average daily demand for water of 329,000 gallons. Appendix B of this document contains these water demand calculations for the proposed Project.

Page 198 of the Draft EIR is revised as follows:

(1) Water. The proposed Project would require water for a variety of uses, including household uses, commercial uses, and irrigation of the proposed 25,000 square-foot park. Based upon anticipated uses within the Project site, implementation of the proposed Project would result in an average daily demand for water of 329,000 gpd (120,085,000 gallons per year) and a peak demand of 366,000 gpd.[8] ~~The anticipated daily water demand that would result from implementation of the proposed Project represents approximately 0.2 percent of average daily water demand within the EBMUD service area.~~ The proposed Project would be outfitted with water-conserving fixtures, as required by the Uniform Building Code, and would incorporate dual plumbing systems, to take advantage of available recycled water supplies. The City's water reuse ordinance requires that the Project sponsor install dual plumbing systems within the Project site for the appropriate use of recycled water from EBMUD's East Bayshore Recycled Water Project, as EBMUD plans to supply recycled water to the Project site within the next 10 years for landscape irrigation. Private, water-consuming lawns would not be developed as part of the proposed Project. Therefore, the proposed Project, which represents an efficient use of water, ~~would not~~ is not anticipated to require the construction of new water supply facilities. EBMUD representatives have given a preliminary indication that they can serve this Project's water demand. ~~, and the EBMUD Board will confirm that determination by the end of September 2003.~~ Overall

---

~~[7] Khalili, Amin, 2003. Korve Engineering. Personal communication with LSA Associates, Inc. July 24.~~

[8] Khalili, Amin, 2003. Korve Engineering. Personal communication with LSA Associates, Inc. July 24.

> water requirements are subject to negotiations with the Fire Department. EBMUD will make a determination as to the availability of water supplies and the need for system improvements until after the final water demands have been established.

A4-6: Page 198 of the Draft EIR is revised as follows:

> ~~The average daily water demand associated with the proposed Project would be approximately 228 gallons per minute, or approximately 4 percent of available water line capacity.~~[9] ~~Sufficient capacity exists to accommodate this increased demand, although select lines may need to be improved depending upon their age and condition.~~ On-site ~~L~~line improvements would be made ~~during~~ as part of the ~~Project construction period~~ construction of public improvements for the Project and are not anticipated to result in significant environmental impacts that are different or more severe than impacts that would result from construction of other components of the proposed Project. As noted in the EBMUD letter dated March 28, 2003 (in response to the NOP for the proposed Project), main extensions (including pipeline replacements) and/or pipeline improvements may be required depending on metering and flow requirements.

A4-7: Page 198 of the Draft EIR is revised as follows:

> Requirements for minimum water flow (for the purpose of fighting fires) at Project sites in the City are based on a review of hydrant locations, type of construction and access from public streets, along with other factors such as other life safety components in the building. These requirements are subject to negotiations with the Oakland Fire Department and will be established when Project design details have been finalized. ~~Typically, fire flow requirements are 2,500 gpm for residential uses, and 3,500 gpm for commercial uses. As noted in subsection a(3), Distribution Pipelines, water lines that serve the Project site are anticipated to have an available capacity of over 5,000 gpm.~~ Based on the anticipated capacity of water lines serving the Project site, and ~~correspondence~~ communication with EBMUD, it is ~~expected~~ anticipated that required ~~minimum~~ water flow would be available ~~within~~ at the Project site without a major upgrade of water lines.[10] As previously stated, the flow requirements are subject to negotiations with the Fire Department. EBMUD will make a determination of the availability of these flows following the determination of the required flows.

A4-8: Sewage capacity within the EBMUD system, including both hydraulic capacity and treatment capacity, is allocated among the communities and agencies that rely on EBMUD for wastewater treatment. The entity delivering sewage to EBMUD can use this capacity allocation in any way that they want, as long as the capacity allocation for a sub-basin is not exceeded. In the case of the proposed Project, the sub-basin allocation is controlled by the Oakland Department of Public Works. The availability of sub-basin

---

[9] ~~Ibid.~~

[10] Toothman, Robert, 2003. Korve Engineering. Personal communication with LSA Associates, Inc. September 2.; EBMUD, 2003. Personal communication with Brandon Whitehurst, Korve Engineering.

capacity is determined by the City within their existing agreement with EBMUD and is not based on the overall capacity of the treatment plant.

The Oakland Public Works Agency has indicated that adequate capacity exists within the sub-basin to accommodate wet weather flows resulting from the proposed Project. Calculations showing expected wastewater generation from the proposed Project are provided in Appendix B.

Page 198 and 199 of the Draft EIR is revised as follows:

> **(2) Wastewater**. Implementation of the proposed Project would result in the generation of approximately 280,000 gpd of wastewater.[11] ~~Wastewater generated by the proposed Project represents less than 0.2 percent of the MWWTP's secondary treatment capacity. This wastewater would be accommodated by the MWWTP, which is currently operating at 46 percent of its secondary treatment capacity. Therefore, wastewater generated by the proposed Project would be subject to both primary and secondary treatment and would not violate the wastewater treatment requirements of the San Francisco Bay Regional Water Quality Control Board. The wastewater lines that serve the Project site have a capacity of 1.35 mgd based on average existing wastewater flow (6,970 gpd), and could accommodate the increase in flow that would result from the proposed Project.[12]~~ The City of Oakland Public Works Department has confirmed that adequate hydraulic capacity exists in the new facilities that would be constructed as part of the Project and EBMUD's sanitary sewer system downstream from the Project site (sub-basin) to accommodate wet-weather flows resulting from implementation of the proposed Project. The Department of Public Works has also indicated that the wet weather flows associated with the improvements are within the sub-basin allocation for delivery to EBMUD. In addition, sanitary sewers that would be developed as part of the proposed Project would be adequately sized to accommodate wet weather flows. Therefore, adequate capacity exists to convey and treat wastewater that would be generated as part of the proposed Project~~.~~ ~~IPublic Works Agency staff have indicated that as part of the final public improvement plans for the Project, the conveyance system will be evaluated to confirm what repairs, if any, will be incorporated into the final public improvement plans and specifications. Therefore,~~ and implementation of the proposed Project would not require the construction of new wastewater treatment or transport facilities.

A4-9: Refer to Response to Comment A4-8.

Dear Ms. Warner,

I am writing this letter of concern on behalf of the Chinese Historical Society of America. Established in 1963, CHSA is the oldest not-for-profit organization dedicated to the promotion, education, and preservation of Chinese American history.

We have just been informed of the proposed Uptown Mixed Use Redevelopment Project (case file number ER 03-0007) that plans to demolish all the buildings for the area between San Pablo and Telegraph Avenues and between 21st and 18th Streets. With the understanding that this area might contain archaeological remains of Oakland Chinatown that existed anywhere between 1867 to 1894, CHSA urges the City of Oakland's Planning Division to stop the full-scale demolition of this area until measures are secured to ascertain the existence of such archaeological remains in order to preserve them for posterity. **1**

The City of Oakland has tried numerous times in the past to expel Chinese in the area for redevelopment reasons. The Uptown Project appears to be the continuation of a history that prejudices and ignores the existence of the Chinese in America, all in the name of redevelopment. If we want to rectify mistakes made in the past, then Oakland must take proactive steps to show everyone that it is not trying again to bury this historic Chinese American community permanently into oblivion.

Once again, the Chinese Historical Society of America urges you to acknowledge and preserve the historical significance of the area being proposed for demolition. We do not see any valid necessity for making this a "rush job" that might cause great regret in the future.

Sincerely,

Lorraine Dong, Ph.D.
President/CEO

Re: Draft Environmental Impact Review / Case File Number ER 03-0007

Dear Ms. Cappio and Ms. Warner:

The Lakeside Apartment Neighborhood Association (LANA) proposes that the preservation of the historic fabric of uptown and creative adaptive reuse solutions should be priorities in the Uptown Mixed-Use Project Draft Environmental Impact Report.

Therefore we request further study in the Draft Environmental Impact Report of the transition between existing structures and the proposed "Uptown" development to ensure the preservation of existing structures of all historic periods, whether 19th century buildings, the Western Power Building, Giant Burger (former Kwik Way) or the barbecue restaurant. **1**

Small businesses in Oakland should be fostered and integrated into the urban design, not threatened with eminent domain. Repeatedly I hear city officials and staff state that one of the objectives of "development" is to bring in small businesses to Oakland yet simultaneously thriving small businesses such as Revelli Tires, Autohaus car repair, etc. are threatened with eviction. **2**

Why should hard working small businesses that contribute to the City's taxes be removed to make room for developers that require public subsidies? Instead of "developments" that demonstrate a slash and burn philosophy of urban planning we support developers whose projects reflect vision, respect, and creative integration of the existing historic fabric.

In the October 15, 2003 Oakland City Planning Commission meeting Development Director, Ms. Claudia Cappio reported that the DEIR was available online. This information was not correct. **3**

The Jack London Square Draft Environmental Impact Report was posted on the City of Oakland's website. Why wasn't the Draft Environmental Report for the Uptown Mixed-Use Project, ER-0007, posted online? **3 cont.**

Respectfully submitted,

COMMENTOR B2

Lakeside Apartment Neighborhood Association; Cynthia L. Shartzer, Co-Chair; November 3, 2003

B2-1: The analysis in the Draft EIR of existing historic structures within the Project site is sufficient to allow for a reasoned assessment of the impacts of the proposed Project on these historic structures. All buildings within the Project site (with the possible exception of the Great Western Power Company Building) would be demolished as a result of Project implementation. Therefore, there was no analysis of the "transition" between proposed buildings and existing buildings. Impacts HIST-5 through Impact HIST-11 in the Draft EIR address demolition of historic structures within the Project site. Also refer to Responses to Comments B4-8 and B4-14.

B2-2: This comment refers to the merits of the proposed Project and not to the analysis or conclusions contained in the Draft EIR. This comment is noted and will be considered by the City and taken into account as review of the project proceeds.

B2-3: Due to a clerical oversight, the Draft EIR was not posted on the City's website during the public review period. However, the Draft EIR is currently available online and was always available in hard copy or on CD from the Oakland Community and Economic Development Agency. Pursuant to *CEQA Guidelines* section 15087(c)(5), the address of the location where the Draft EIR could be obtained was publicized in both the Oakland Tribune and in the Notice of Availability, and the Draft EIR itself was made available during the City's normal working hours.

Subject: Comments on the Uptown Mixed Use Project Draft Environmental Impact Report
Case No. ER03-0007
State Clearinghouse No. 2000052070

Dear Ms. Warner:

Thank you for providing us the opportunity to comment on the DEIR. We strongly support the goals of this Project to provide environmentally sustainable housing for people with a wide range of incomes. The community that we serve is well aware of the many benefits of living in the Downtown. Our community has one of the lowest rates of automobile ownership and a smaller proportion of our residents drive to work than almost anywhere else in the city.

Nonetheless, we are heavily impacted by traffic. As the DEIR points out on page 90, "Traffic signals on both Franklin and Webster are coordinated to facilitate through traffic on these two key roadways." **1**

The heavy use of Chinatown streets as thoroughfares creates an uncomfortable dilemma for our community when a project is proposed that does not take the quality of our environment into account. The Uptown Project has the potential to address Oakland's, including Chinatown's, urgent need for affordable housing accessible to transit. Unfortunately, the Uptown Project also will contribute to traffic patterns that have created hazardous conditions for Chinatown's many pedestrians.

We believe that the Environmental Impact Report can be a good opportunity for the Uptown Project to take full account of our environmental quality. In the comments that follow, we have pointed out where the DEIR has failed to do so, and urge revisions that will enable us to support the Uptown Project without reservations, as we would prefer.

We are available to help in any way we can.

Yours truly,

Jennie Ong
Oakland Chinatown
Chamber of Commerce

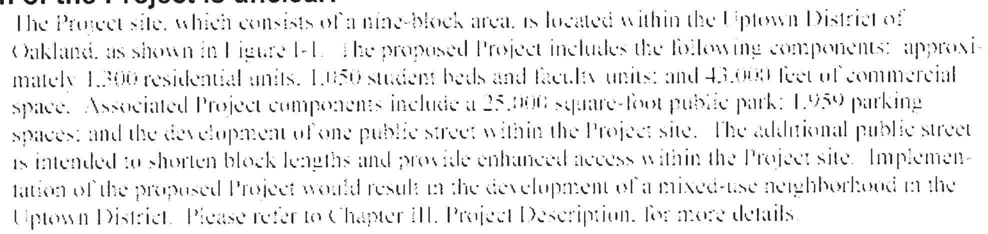
Attachment: Comments on Uptown DEIR

COMMENTS ON THE UPTOWN PROJECT DEIR

Definition of the Project is unclear:



> The Project site, which consists of a nine-block area, is located within the Uptown District of Oakland, as shown in Figure I-1. The proposed Project includes the following components: approximately 1,300 residential units, 1,050 student beds and faculty units; and 43,000 feet of commercial space. Associated Project components include a 25,000 square-foot public park; 1,959 parking spaces; and the development of one public street within the Project site. The additional public street is intended to shorten block lengths and provide enhanced access within the Project site. Implementation of the proposed Project would result in the development of a mixed-use neighborhood in the Uptown District. Please refer to Chapter III, Project Description, for more details.

The text above[1] distinguishes "proposed Project components" from "associated Project components," but without explanation. It appears that some components of the associated Project are public improvements (the park and the new street) but the reason for distinguishing between the Project and the parking is unclear, especially since the parking spaces are distributed throughout the Project area.

The status of Blocks 8 and 9 are also unclear. Table III-1[2] shows no development on Block 8. The text indicates that Block 8 is a fallback site for the Sears Auto Center.[3] Does this mean that Block 8 will be dropped from the Project if the Auto Center is rebuilt on Block 9, and vice versa? **2** Or will the site host additional development that is in some way associated with the Project? If it is reasonably foreseeable that both sites will be developed, the full development program must be evaluated in this EIR. In addition to concerns that piecemeal environmental review understates impacts, there is the possibility that the ninth block would be developed for a substantial amount of additional retail use to fully serve the new Uptown residential neighborhood. If it is foreseeable that the development of blocks 9 and 10 would result in a 9-block project with 25% or more retail use, the EIR must not rely on AB436 exemptions.

REQUESTS

1. Explain differences between Project components and associated Project components.

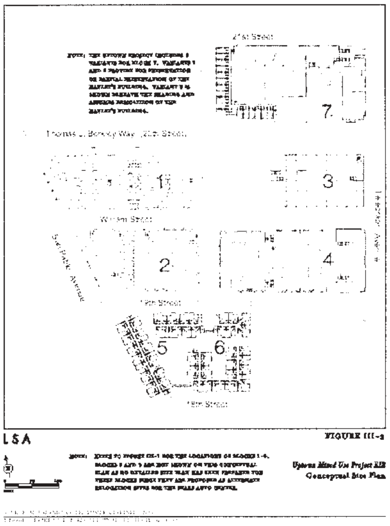
2. Provide information about the development of blocks 8 and 9 explain how the City expects to provide environmental review of the entire 9-block Project.

Mismatch between Intended Use of EIR and Level of Information Provided

The City intends to use this EIR "for all discretionary approvals necessary for the Project,"[4] which we must assume includes project level review of all entitlements. However the DEIR provides only a bare outline of the development program-for the Sears Auto Center (that it will **3** include "approximately 10,000 square feet of retail space for the auto center and 50 on-site parking spaces"). Neither block 8 nor block 9 is included in Figure III-2 illustrating the conceptual site plan.

---

[1] DEIR page 1
[2] Page 42
[3] page 45
[4] page 48



REQUEST

3.Provide project-level information about blocks 8 and 9 or commit to providing supplemental environmental review.

3 cont.

Application of AB 436 (Public Resources Code 21159.25 to Cumulative Analysis

The DEIR states that it includes an analysis of cumulative impacts even though provisions of AB436 exempt the this Focused EIR from that requirement.[5] We believe that the cumulative impacts analysis must comply with CEQA, even if it is not required by CEQA. A certified EIR containing an inadequate or inaccurate analysis could create misunderstanding and confusion, especially if cited in subsequent environmental review analyses.

4

Ensure that LUTE EIR mitigations are implemented by the Uptown Project.

Although this DEIR states that it incorporates mitigation measures required by the 1998 Land Use and Transportation Element EIR (LUTE EIR),[6] it appears that some have been overlooked.

5

LUTE Transportation Mitigations - Appendix A, for example, is uninformative about transportation mitigations[7] because it does not specify what the improvements are. The transportation mitigation in its entirety states:

> B.1: Implement roadway improvements and transit improvements to reduce congestion on arterial roadways.

REQUESTS

4.Describe the improvements to arterials that the City is committed to implementing, and report on the City's achievements since 1998, as determined by the mitigation monitoring process.

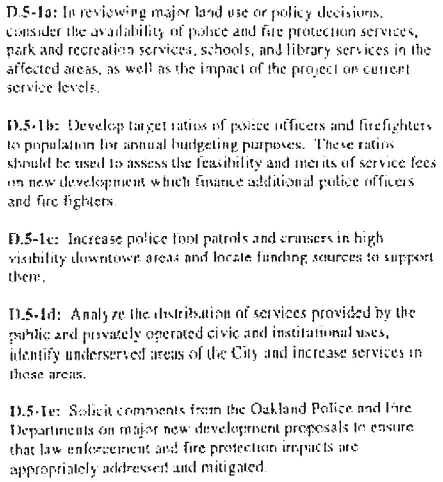
---

[5] page 3
[6] Page 3
[7] Appendix A, page S-2

> 5. Determine if traffic mitigations proposed for the Uptown Project might conflict or be inconsistent with improvements required by the LUTE EIR. We are particularly interested in an analysis of the combined effects – both direct and indirect –on Chinatown pedestrians and traffic patterns.

5 cont.

<u>LUTE Public Service Mitigations</u> - The scope of the Focused EIR[8] does not address public services impacts even thought the LUTE EIR requires analysis and further mitigation of such impacts as part of the approval process of major land use decisions in the Downtown.[9] These requirements must be incorporated into environmental review of project approvals. As a major project in the Downtown, the Uptown Project is required to address its effects on service levels citywide. For example, Mitigations D. 5 –1 a – e, copied below, require an analysis of the citywide impacts of the Project's demand for Police, Fire, Library, and Recreation services. (Some of these mitigations reappear in Mitigations D 6, 7, and 8.)



D.5-1a: In reviewing major land use or policy decisions, consider the availability of police and fire protection services, park and recreation services, schools, and library services in the affected areas, as well as the impact of the project on current service levels.

D.5-1b: Develop target ratios of police officers and firefighters to population for annual budgeting purposes. These ratios should be used to assess the feasibility and merits of service fees on new development which finance additional police officers and fire fighters.

D.5-1c: Increase police foot patrols and cruisers in high visibility downtown areas and locate funding sources to support them.

D.5-1d: Analyze the distribution of services provided by the public and privately operated civic and institutional uses, identify underserved areas of the City and increase services in those areas.

D.5-1e: Solicit comments from the Oakland Police and Fire Departments on major new development proposals to ensure that law enforcement and fire protection impacts are appropriately addressed and mitigated.

6

It is possible that the Notice of Preparation anticipated the necessity to include service impacts in the EIR: included on its list of Probable Environmental Effects is "utilities and service systems."[10] However, the DEIR Scope transforms this topic into "utilities and infrastructure,"[11] The Table of Contents takes this focus on facilities (to the exclusion of services) a step further by listing the topic as "Infrastructure and Utilities."

Concerns about the Project's potential impacts on City services are heightened by the fact that most of the property tax revenues generated will be dedicated to the Redevelopment Agency as tax increment funds which will not be able to pay for City services, not even for maintenance of new park associated with the Project.

---

[8] Pages 3 and 51
[9] Appendix A, page S-11
[10] Appendix A-2, Notice of Preparation page 3
[11] Page 51

In addition, the LUTE EIR suggests that a child care center should be included in projects such as Uptown that provides a substantial amount (40%)of family housing.

> **D.7-1d:** Where feasible and appropriate, encourage the inclusion of child care centers in major residential and commercial developments near transit centers, community centers, and schools. **6 cont.**

REQUEST

6. To ensure implementation of mitigations required by the LUTE EIR, expand the scope of the EIR to address Project impacts on City services.

Transportation Issues

Study Area – The Study Area includes intersections almost exclusively to the North of the Project[12] even though the map showing trip distribution allocates the greater proportion of local trips to the Project's south[13] - to Chinatown in particular.

7 Especially for the analyses of 2010 and 2025 conditions, with and without the Project (the cumulative traffic analysis), it is necessary to define a study area that is large enough to capture secondary impacts of the Project, including its contribution to congestion patterns that divert drivers from using direct routes. Chinatown streets are at particular risk from the combined effects of the Uptown Project, Jack London Square Redevelopment, and City of Alameda redevelopment.

REQUEST

7.Extend the Study Area to include intersections along Broadway, Franklin, Webster and Harrison streets in Chinatown.

Freeway segments – Impacts on the freeway system will extend to existing bottlenecks beyond the immediate junctions and ramps listed in Table IV.D-17.[14] Weekend conditions should also be included.

8 Limiting the portrayal of existing traffic on both regional and local roadways to weekday peak hour conditions gives an incomplete picture of baseline conditions that the Project could impact. Information should be added on daily traffic volumes since the spreading peak limits mitigation options. Weekend data is needed because congestion has become severe and is projected to get worse.

REQUESTS

8. Include the junction of 880, 80, and 580, junction of 880, 980, and 24, and the Bridge toll plaza in the analysis of existing conditions.

9.Provide data on daily conditions for both weekdays and weekends.

---

[12] Figure IV.D-2, page 87
[13] Table IV.D-8, page 110
[14] page 107

Trip Distribution

> (4) **Trip Distribution.** Vehicle trips forecast to be generated by the proposed Uptown Project were assigned to the surrounding transportation network based on a distribution pattern developed specifically for this study. The pattern is based on information from the ACCMA Model. Figure IV.D-8 illustrates the Project's anticipated trip distribution pattern.

The DEIR description[15] above on the trip distribution methodology withholds more information than it provides. No further information on the methodology is provided in Appendix E, which is comprised only of the LOS calculations. The lack of information about assumptions and methods used to distribute trips deprives the public of the opportunity to comment on these issues during the DEIR comment period.

The cursory reference to the trip distribution calculations is followed by an unfathomable diagram.[16] Nonetheless Figure IV.D-8 seems to indicate that Chinatown will receive more of the local traffic generated by the Project-– a total of 14% - than anywhere else. Yet there is no analysis of the impacts of this traffic on Chinatown intersections and pedestrian conditions. **9**

It also appears from the diagram that Project traffic in Chinatown will be making turns in areas of high pedestrian use, which could worsen existing pedestrian hazards, especially to sensitive populations of children and the elderly.

REQUEST

10. Analyze impacts of Project traffic on Chinatown traffic, air quality, and noise. Include an analysis of impacts that would exacerbate existing pedestrian safety problems. The analysis should not be limited to measuring increases in vehicle volume, but should consider the impacts on pedestrian safety of turning vehicles, and increases in delay for pedestrians waiting for signal changes.

Criteria of Significance - Although the list of significance criteria recognizes that hazards to pedestrians could be represent an impact, the definition is overly narrow in its exclusive focus on design features.

REQUEST

11. Due to the current unacceptably high rate of pedestrian collisions in Chinatown and the high proportion of the Project's local traffic that will be traveling through Chinatown that could aggravate the problems, the EIR needs to consider any potential increase in pedestrian hazard to be a significant impact, whether caused by the Project itself, or cumulatively with other development. **10**

Traffic Mitigations - The DEIR limits traffic mitigations to measures that increase traffic capacity and it ignores actions that would reduce the number of vehicle trips. The measures in general favor motorists, probably at the expense of pedestrians and bicyclists. Optimizing signal timing, as proposed in almost all of the traffic mitigations, is based on optimal conditions for drivers, not pedestrians. Although the DEIR concludes that there are no adverse impacts to the timing changes, it does not include an analysis that supports this conclusion in any instance where it is proposed: specifically, TRANS-1, 2, 4, 5, 6, 7, 8, 9, 10, 12, 13, and 14. The DEIR conducts the entire discussion about relieving increased delay for motorists as if pedestrians do share the streets. **11**

---

[15] page 109
[16] page 110

REQUEST

12. Analyze the impact on pedestrians' level of service of all proposed signal changes by analyzing increased delay for pedestrians crossing streets. **11 cont.**

Parking – Since the courts do not consider parking shortfalls (less than full demand) to be an environmental impact, and since the DEIR (properly) does not include a significance threshold for parking impacts, it is unclear why the document assumes that parking shortfalls could impact the environment. By considering parking shortfalls to be a potentially significant impact, the DEIR is able to present the Project's *excess* parking (it provides more parking than the City requires) as a virtue and avoid discussin its contribution to traffic congestion.

This Project has been represented to the public as a transit-friendly, anti-sprawl development. Its urban densities and proximity to transit surely enable it to become such, but that advantage is dissipated by the inclusion of 1,959 parking spaces plus street parking for a Project that is required only to have 1,620 spaces. The modal split assumptions used in the trip generation calculations (83% non-transit trips) appear to recognize that Project residents will drive their easily parked cars rather than take advantage of convenient transit. **12**

REQUEST

13. Estimate improvements to the rate of transit usage that could be achieved by a substantial reduction in the Project's parking.

Housing Issues

The DEIR states in the text[17] and tables[18] that the Project will develop 2,320 housing units, including 250 (10.8 %) affordable units. California Redevelopment Law requires 15% of new housing units to be affordable, although it does not require their inclusion within the project itself, or even the redevelopment project area.

However, the actual number of housing units (as defined by the Census) in the Project is unclear because the text refers also to student "beds". It is unclear how many housing units the 1,000 student "beds" will comprise. For example, if these beds are clustered around shared kitchen facilities, the number of units would probably be the number of kitchens. If the students take their meals independently, then the number of beds would be the number of rooms. **13**

It is also unclear whether the faculty units would be considered affordable under California Redevelopment Law.

REQUEST

14. Clarify the total number of housing units in the Project and the number that can be considered affordable under Redevelopment Law. If additional affordable units are required that will be developed off-site, analyze potential impacts they might generate.

---

[17] page 74

[18] page 75

Cultural Issues

Chinatown artifacts – The area where Oakland was settled by early Chinese residents (identified in the DEIR as San Pablo between 19th and 20th Streets[19]) should be fully characterized before excavation begins. The proposed mitigation of on-site archeologists is insufficient for a site where the probability of valuable artifacts is so great **14**

REQUEST

15. Include a full study of the site of early Chinese settlement in the Final EIR..

---

[19] page 214

COMMENTOR B3
Oakland Chinatown Coalition; Jennie Ong, Oakland Chinatown Chamber of Commerce and Sherry Hirota, Asian Health Services; November 3, 2003

B3-1: This comment expresses support for the goals of the proposed Project and provides an overview of the Coalition's specific comments on the Draft EIR detailed in the attachment to their letter and responded to below.

B3-2: "Project components" and "associated Project components" together make up the Project. The Draft EIR uses the phrase "associated Project components" to indicate portions of the Project that serve as ancillary uses to the proposed residential and commercial uses.

Page 1 of the Draft EIR is revised as follows to clarify the Project description:

> The Project site, which consists of a nine-block area, is located within the Uptown District of Oakland, as shown in Figure I-1. The proposed Project includes the following components: (1) approximately 1,300 residential units; (2) 1,050 student beds and faculty units; ~~and~~ (3) 43,000 feet of commercial space; ~~Associated Project components include a~~ (4) a 25,000 square-foot public park; (5) 1,959 parking spaces; and (6) the development of one public street within the Project site. The additional public street is intended to shorten block lengths and provide enhanced access within the Project site. Implementation of the proposed Project would result in the development of a mixed-use neighborhood in the Uptown District. Refer to Chapter III, Project Description, for more details.

As described in Chapter II of this document, Block 9 has been removed from the Project site and a new block (Block 8a) has been added to the Project site. Block 8a and Block 8 are alternate sites for the relocation of the Sears Auto Center. No net change in total development area would occur as a result of the addition of Block 8a to the Project site. If the Sears Auto Center is relocated to Block 8a, no construction will occur on Block 8 in association with the proposed Project. If the Sears Auto Center is relocated to Block 8, no construction will occur on Block 8a in association with the proposed Project. In no case would both Blocks be developed as part of the proposed Project (Section III, Project Description, of the Draft EIR includes development assumptions based on development on one block). Taking into account development on either Block 8a or Block 8, less than 25 percent of the total floor area of the Project would be used for retail. The Project therefore meets this specific eligibility criterion of CEQA section 21159.25 (AB 436). The comment includes reference to Blocks 9 and 10. The authors of this document have assumed that was an error and that the commentor intended to reference Blocks 8 and 9 since the Project does not include a Block 10. Refer to Response to Comment B3-3 regarding the level of environmental review that has been conducted for this nine-block project (note that only a total of eight blocks will be developed).

B3-3: Figure III-2, Conceptual Site Plan, indicates that "no detailed site plan has been prepared for (Blocks 8 and 9) since they are proposed as alternate relocation sites for the Sears

Auto Center." As noted by the commentor, approximately 10,000 square feet of retail space and 50 on-site parking spaces would be developed on either Block 8 or Block 9 (currently Block 8a, due to revisions to the proposed Project). This level of detail for the relocation of the Sears Auto Center is adequate to analyze the significant environmental impacts of this portion of the proposed Project. From these facts, the analysis of land use impact, traffic, noise, air quality, cultural, wind, visual, geology, and public services are possible as demonstrated in the Draft EIR. At the time that the application for relocation of the Sears Auto Center is reviewed by the City, if any of the criteria for subsequent environmental review are met under *CEQA Guidelines* section 15162, then the City would be required to prepare the appropriate environmental documentation.

B3-4: The Draft EIR includes a cumulative analysis for transportation, air quality, noise, and historical resources (Sections IV.D, IV.E, IV.F, and IV.I, respectively, of the Draft EIR). The cumulative analysis is provided in addition to the minimum requirements of Focused EIRs, as set forth in CEQA section 21159.25. The cumulative analysis provided for these topics is accurate and adequate based on the provisions of *CEQA Guidelines* section 15130 and 15183, which state that the discussion of cumulative impacts "shall reflect the severity of the impacts and their likelihood of occurrence, but the discussion need not provide as great detail as is provided for the effects attributable to the Project alone." A cumulative analysis for certain topical areas is included in the Draft EIR in the interest of presenting a comprehensive and current environmental evaluation of the proposed Project. The authors of the Draft EIR disagree that the analysis in the document is "inadequate or inaccurate." This statement does not refer to a specific, page, section, or topical theme in the Draft EIR, and therefore cannot be addressed in this response. These concerns on the part of the commentor seem to be raised in the following comments and are addressed in subsequent responses.

Page 3 of the Draft EIR is revised as follows:

> The EIR that was prepared and certified for the Land Use and Transportation Element (LUTE) of the Oakland General Plan has been used as one of the bases for this environmental review. Cumulative impacts and growth-inducing impacts in downtown Oakland have been analyzed in the General Plan LUTE EIR, and repeatedly in numerous EIRs completed for projects in the downtown area. The analysis included in Chapter IV.B, Population, Employment and Housing, of this EIR provides a confirmation that the proposed Uptown Project falls within the City's employment and population projections to the year 2025. Similarly, the LUTE EIR contained an analysis of alternatives and, pursuant to section 21159.25 of the CEQA statutes, no further consideration of alternatives is required. Both the LUTE EIR and this EIR identify mitigation measures to reduce or eliminate potentially significant environmental impacts. The LUTE EIR, which was certified by the Oakland City Council in 1998, is hereby incorporated by reference into this EIR.[13] In addition, to ensure a comprehensive analysis, <u>even though not required</u>

---

[13] The LUTE EIR is available for review at 250 Frank Ogawa Plaza, Suite 3330, Oakland, CA 94612. A summary of the LUTE EIR impacts and mitigation measures is provided in Appendix A of this EIR.

by CEQA section 21159.25, this focused EIR includes a cumulative analysis for potential impacts to transportation, air quality, noise, and historical resources.

B3-5: The transportation improvements that would be implemented as a result of the Uptown project (which is a project that falls within the LUTE program), are detailed in the Project Description (Chapter IV of Draft EIR) and the mitigation measures detailed in Chapter IV.D, Transportation, Circulation and Parking, of the Draft EIR. The information from the LUTE EIR included in Appendix A of the Draft EIR is provided for background informational purposes only.

B3-6: An Initial Study was completed for the proposed Project in February 2003. Public services, along with all the other CEQA-mandated environmental topics, were analyzed in the Initial Study. Based on this evaluation, which took into account the Community Services Analysis prepared for the General Plan LUTE EIR, the City determined that the proposed Project would not result in a significant impact to public services. The one significant unavoidable public services impact identified in the LUTE EIR was in regard to fire fighting service in the Oakland Hills, an area which is highly susceptible to wildland fires. Such an impact would not be affected by the proposed Project and similar urban infill projects, which are located in already-developed areas far from the urban fringe where wildland fires are most prone to occur. The rationale behind the City's finding that the proposed Project would not result in significant public services-related impacts is discussed on page 28 of the Initial Study. Therefore, public services, as an environmental topic, was "focused out" of the EIR analysis. Public services is a topic that is listed as one of the "environmental effects not likely to require further analysis" on page 4 of the NOP, which is included in Appendix A-3 of the Draft EIR.

The allocation of tax revenues and the provision (or lack thereof) of a child care center are not considered physical environmental impacts that must be analyzed in an EIR. A project's impact on public services is considered significant only if the project-related increase in demand for public services requires the provision of new or significantly altered service facilities, the construction of which may cause significant environmental impacts. As described in the Initial Study, the increase in demand for public services that would result from implementation of the proposed Project would not exceed this threshold of significance. The project is located in an already-developed urban site that is currently adequately served by all public service agencies and departments. Implementation of the proposed Project would not require public service providers to geographically expand their range of service. Therefore, the analysis of public services in the Draft EIR is considered to be adequate.

B3-7: All intersections in the Cities of Oakland, Emeryville, Berkeley and Alameda, which could potentially be affected by Project traffic, were tested and screened for inclusion in the Uptown Draft EIR Transportation Study. Those intersections which could potentially be significantly impacted by Project traffic were evaluated in detail in the Draft EIR. To identify intersections which could be impacted by Project traffic, a "pair of screening criteria" was developed, based on the significance criteria of the City of Oakland and the CMA (see Draft EIR pages 109 through 113 for significance criteria). All intersections which satisfy the following two screening criteria are included in the Draft EIR analysis:

- Intersections to which the project would add 50 or more peak hour trips; and
- Inside the downtown area, the intersection was identified as operating at LOS D or worse, or, outside of the downtown area, the intersection was identified as operating at LOS C or worse.

It is at these intersections where the Project could result in a significant adverse impact. It should also be noted that this screening approach is similar to criteria and methodologies commonly employed by other Bay Area jurisdictions. Forty intersections in and around downtown Oakland were found to satisfy these criteria. All forty of these intersections are evaluated in the Draft EIR.

Based on the City's significance criteria, a significant impact is identified when an intersection deteriorates to worse than LOS E inside of the downtown area and worse than LOS D outside of the downtown area. The addition of 50 or fewer trips to an intersection can not reasonably be expected to degrade a service level from LOS D or better to worse than LOS E (inside of the downtown area) or to degrade a service level from LOS C or better to worse than LOS D (outside of the downtown area).

On arterial roadways in the project study area, a net change of 50 or fewer trips would be within daily traffic fluctuations. Daily and peak hour traffic fluctuations of 5 percent or more are commonplace on these types of roadway facilities.[14] For comparison purposes, 50 trips would comprise roughly 1.9 percent of AM peak hour traffic at the intersection of Telegraph and West Grand Avenue, and approximately 1.6 percent of total traffic there during the PM peak hour. This is less than typical daily fluctuations in traffic, and less than the 3.0 percent increase necessary to constitute a significant impact on the CMA Metropolitan Transportation System according to the City of Oakland's significance standards (for facilities operating at LOS F in the baseline condition).

The Project's trip distribution was developed using the ACCMA travel demand model (updated to reflect the cumulative land use forecasts of the City of Oakland as described in Response to Comment A2-1). The ACCMA model does not forecast that a substantial number of Uptown related trips will use travel routes which pass through Chinatown. Specifically, Franklin, Webster, Harrison, 7th, 8th and 9th Streets through Chinatown are not anticipated to serve substantial levels of Uptown traffic, based on the ACCMA model, and were not identified for analysis in the Uptown Draft EIR. On average, Franklin, Webster and Harrison Streets are forecast to carry 10 to 15 Project trips in the morning peak hour and 10 to 15 Project trips in the evening peak hour. Such traffic volumes represent a small portion of the peak hour capacity (less than 1 percent) and existing traffic volumes on these routes. These small additions to peak hour traffic volumes are well within daily and hourly fluctuations in traffic on these facilities, and would not result in a measurable increase in vehicular delay.

B3-8: The weekday AM and PM peak hour conditions are evaluated in detail in the Uptown Draft EIR Transportation Study because it is during these periods that traffic conditions

---

[14] FHWA, Office of Information Management, Summary of National and Regional Travel Trends: 1970-1995, Washington DC. FHWA, U.S. Department of Transportation, 1996.

are the poorest throughout the study area, both on local and regional facilities. Due to its residential nature, traffic generation associated with the Project also peaks during the weekday morning and evening peak hours. Traffic levels on local roadways and regional freeways are generally lower during weekday off-peak periods and on weekends because these are non-commute times. In addition, the proposed Project generates less traffic during the weekday off-peak periods and on weekends. Because the study evaluates Project impacts and traffic operations during the "worst-case" weekday peak hours, all of the potential significant impacts and associated mitigation measures of the Project are likely captured.

The transportation study evaluates all freeway facilities requested for analysis by the ACCMA and Caltrans through the EIR scoping process. These facilities include I-980, SR 24, I-580 and I-880. The Project was found to add the greatest amount of traffic to I-980; however, this addition was not found to constitute a significant adverse impact. It is reasonable to assume that the analysis of freeway conditions on the weekend, or on additional freeway facilities farther away from the Project site, such as the Bay Bridge Toll Plaza, the SR 24/I-580/I-980 interchange or the I-880/I-580/I-80 interchange would not identify new Project impacts.

B3-9: Draft EIR Figure IV-D-8 presents the macroscopic Project trip distribution pattern, as predicted by the ACCMA model, revised to reflect the cumulative land use forecasts of the City of Oakland (all references to the CMA Model in the Draft EIR and Final EIR refer to the Model Update to reflect the cumulative land use forecasts of the City of Oakland, as described in RTC A2-1). Draft EIR Figures 4A and 4B, included in Appendix E of the Draft EIR and on the following pages for easy reference, present the project trip distribution at each intersection evaluated in the transportation study. The ACCMA model bases its travel demand projections on the locations of all trip "productions" and "attractions" within Alameda County and the greater nine county Bay Area. Thus, traffic associated with the Project's residential land uses has been assigned to the area's roadway and transit network based on the locations of potential origins and destinations, and logical circulation patterns on the local and regional street system. It is also important to note that the model's characteristics and land use interaction forecasts have been closely calibrated with existing traffic volumes and travel patterns. This calibration allows the model to forecast project trip distribution in a manner similar to that which occurs for existing residential land uses in the area.

The ACCMA model does not forecast that large volumes of Uptown related traffic will use travel routes which pass through Chinatown. Specifically, Franklin, Webster, Harrison, 7th, 8th and 9th Streets through Chinatown are not anticipated to serve substantial levels of Uptown traffic, based on the ACCMA model, and were not identified for analysis in the Uptown Draft EIR. On average, Franklin, Webster and Harrison Streets are each forecast to carry 10 to 15 Project trips in the morning peak hours and 10 to 15 Project trips in the evening peak hours. This amount of traffic represents a small portion of the peak hour capacity (less than 1 percent) and traffic volumes on these routes.[15] These small additions to peak hour traffic volumes are well within daily and hourly

fluctuations in traffic on these facilities, and would not result in a measurable increase in vehicular delay.

The City of Oakland recently initiated preparation of the Revive Chinatown Community Transportation Plan. The purpose of this plan will be to evaluate pedestrian and vehicular safety throughout the Chinatown area. This assessment will evaluate the cumulative impact of traffic associated with the Uptown project and all other development which may affect the Chinatown community. Since the Uptown project was not found to add significant levels of traffic to Chinatown roadways, this type of detailed pedestrian analysis and planning effort was not found to be necessary as part of the Uptown Transportation Study. In addition, an incremental increase in traffic on urban roadways has not been shown to adversely impact pedestrian safety.

B3-10: Refer to Response to Comment B3-9. The addition of small amounts of traffic to roadways has not been shown to result in a direct increase in pedestrian collisions. In fact, the addition of more traffic (and the concurrent overall reduction in traffic speed) may enhance pedestrian safety. Many factors contribute to pedestrian safety, including the availability of crosswalks, the timing of traffic lights, and the length of blocks. The Uptown project would not significantly contribute to any of these factors within Chinatown and is not considered significant.

B3-11: Mitigation Measure TRANS-1 calls for the development of a signal optimization and coordination plan for all signals in the area bounded by San Pablo Avenue, Grand Avenue, Telegraph Avenue and 17th Street. The optimization plan is necessary because of the numerous signal timing changes needed to adequately serve changing traffic conditions in downtown Oakland over the next twenty years. The optimization plan will likely identify different modifications at different intersections. Types of changes to individual traffic signals include: coordination, cycle length modifications and cycle split modifications. The precise signal timing changes are not known at this time, but in all cases minimum crossing times, as required by the City, will be maintained so that pedestrians can safely cross all affected intersections. No adverse significant impacts to pedestrians would result from signal optimization.

B3-12: Refer to Response to Comment A1-1. The provision of parking spaces does not necessarily reduce transit usage, or increase car commuting rates. Due to the location of the Project site in Downtown Oakland and in the vicinity of numerous transit stations, and the lack of parking in many municipalities in the inner Bay Area, it is expected that residents within the Project site would use alternate forms of transportation, including walking and transit. In addition, the proposed Project would generate a finite demand for parking; if this parking is not provided on-site, vehicle owners will look elsewhere for parking, exacerbating traffic and reducing the available supply of on-street parking.

B3-13: The U.S. Census defines a housing unit as “a single-family house, townhouse, mobile home or trailer, apartment, group of rooms, or single room that is occupied as a separate living quarters or, if vacant, is intended for occupancy as a separate living quarters."[16] Because the configuration and amenities of the rooms in the student housing building have not been finalized (i.e., the Project developer has not determined the number of beds per room, or whether rooms will have kitchens or be served by a common dining area), it is not possible to translate the number of proposed student beds into housing units. Therefore, the environmental analysis in the Draft EIR relies upon the number of student beds to determine environmental impacts. Using the gross number of student beds to evaluate environmental impacts enables a more precise impact analysis, considering that the number of housing units would be in flux depending upon the allocation of beds per room, which determines the number of occupants.

The Oakland Redevelopment Agency will require that the Project Sponsor provide at least 20 percent of the proposed rental units at levels that are affordable to very low income households earning 50 percent or less of the area's median income. In addition, 5 percent of the rental units must be affordable to households earning 120 percent or less of the area's median income. This requirement only applies to residential development occurring on Blocks 1, 2, 3, 4 and 6, as the development of those parcels will require Redevelopment Agency funding assistance. The Redevelopment Agency's affordability requirement pertaining to the percentage of rental units that would be affordable to very-low income households is in conformance with Redevelopment Law. No additional units would be developed outside of the Project site as part of the proposed Project.

Page 45 of the Draft EIR is revised as follows:

> At least 20~~5~~ percent of the rental units constructed as part of the proposed Project (excluding any development on Block 5, 7, 8, and 8a ~~student and faculty units, but including rental and condominium uses~~) will be affordable to very low income households earning 50 percent or less of the area's median income ~~would be priced at affordable levels~~. ~~At least 20 percent of the units would be affordable to households earning up to 50 percent of the Alameda County Median Income; 5~~ Five percent of the overall units would be affordable to households earning up to 120 percent of the area's median income. ~~Alameda County Median Income.~~

B3-14: Refer to Master Response M-1 on page 14 of this document.

RE: Draft Environmental Impact Report for the Uptown Project
Case File Number ER03-0004

Dear Ms. Henderson:

Oakland Heritage Alliance appreciates the opportunity to comment on the DEIR for the Uptown Project.

The first section of this letter pertains to the general process for the EIR and related meetings. The second section addresses historic and cultural resources.

OHA is leaving most comments on air quality, affordable housing, open space, parking, and transportation to others interested in these topics. We feel that these are important factors, which may have effects on historic areas, but are limiting this letter to the issues with which our organization is most familiar.

PART I: DEIR REVIEW AND APPROVALS

PHASED REVIEWS AND APPROVALS

1 Because the developer frankly admits that plans are somewhat uncertain for some of the parcels involved in this project, we object to the blanket approval of this EIR as a general green light to move forward on those components. AB 436 notwithstanding, there must be a clear, public mechanism for revisiting this project's environmental impacts as each phase of construction is contemplated, since the present project description leaves unanswered questions. There must be a review of the design features and project effects before each part of the project proceeds. These reviews must occur in public, such as before the Planning Commission, not behind closed doors in staff offices. While current staff may be highly competent, there is no guarantee of institutional memory, nor of the hoped-for high quality of review, in an era of severe budgetary restriction at the planning department.

We are particularly concerned about parcels 5, 7, 8 and 9, for which planned projects are extraordinarily ill-defined, which Forest City says they themselves may not design, develop, nor build, and

Office: 1418 Lakeside Drive, Oakland • (510) 763-9218 Voice/Fax
Mail: P. O. Box 12425 Oakland, California 94604
E-mail: info@oaklandheritage.org Web Site: www.oaklandheritage.org

which seem to pose the possibility of enormous effects on the surrounding historic buildings, on traffic, on density, on open space, on demand for public services, and on the economic viability of the project. These parcels should be singled out for either a revised draft or a supplemental EIR as they are more defined and the issues become clearer. This EIR is inadequate and incomplete in assessing their impacts upon the potentially important and known important historic resources. It may also be inadequate because the descriptions of the projects on these parcels, are so vague as to be meaningless. The high-rise and other planned buildings on these parcels require much further study. Why, when the developer clearly is most interested in the core area of residential construction on the two large blocks between 19th and Thomas Berkley Way, Telegraph and San Pablo, should this area be widened to incorporate areas which are already built upon and functioning? Redevelopment should not be viewed as carte blanche to demolish large tracts of occupied city blocks. Incremental private development is a better mechanism for making progress in these borderline areas. **1 cont.**

INSUFFICIENT DISTRIBUTION OF NOTICE FOR DEVELOPER-SPONSORED MEETINGS

Related public discussion meetings held this fall by the developers and attended by city staff were inadequately noticed, with resultant poor attendance. No flyers were left at area businesses for distribution to their customers; many uptown Broadway businesses were completely unaware of this project's progress, even though it may have enormous impacts upon them, and neighborhood organizations did not seem to know about the meetings, except for one or two immediately local ones and businesses impacted by the threat of eminent domain. The radius used for supposedly neighboring businesses was much too small. In addition, the meeting notices came out quite a bit too late for people to make plans to attend. OHA representatives found that we were spread thin trying to attend both the uptown meetings and the several other meetings and events which directly competed with it. This was most disappointing, particularly in comparison with earlier meetings which had approximately 10 times the turn out. We know that citizens of Oakland are interested in this project. We had asked repeatedly, months before, for projected dates for these meetings. **2**

DEIR INADEQUATE, INCOMPLETE IN THESE RESPECTS

The inadequacy of the mitigations for impacts on the historic and cultural resources should be remedied in the final EIR. There should be a clear statement of the mechanisms for further review of the ill-defined projects on parcels 5, 7, 8 and 9.

PART II: HISTORIC AND CULTURAL RESOURCES

Inadequately or not at all studied in this DEIR analysis, and subject to very significant impacts:

- THE GREAT WESTERN POWER BUILDING: DEMOLITION UNACCEPTABLE, IMPACTS POTENTIALLY TOO GREAT
  The demolition of this building is completely unacceptable to Oakland Heritage Alliance and its members. Particularly in view of its new ownership, with an owner who plans to do an attractive restoration of the facade, there is no excuse for planning any demolition on this site. The DEIR fails completely to discuss the impacts a large, as-yet-undesigned building, might have on the Great Wester Power Building. The EIR must address an appropriate and sensitive **3**

design, should a building go forward on the site, not just butting up against (and shading) the historic building, but relating to it in a sensitive and appropriate manner. Since this project is vague and not well worked out, it is almost impossible to address it. The entire block between 20th, 21st, San Pablo and Telegraph should be studied in a further focussed environmental review, with discussion of urban planning issues, impacts, mitigations, and proposed design criteria. **3 cont.**

The shade impacts seem to be severe, and the simple assertion that "the facade does not contain complex detailing" may not really be true, and does not excuse the impacts. The EIR must study an alternative that would be kinder to this building. **4**

OHA believes that other buildings on this block are worthy of study and retention, in order to to avoid the tendency for redevelopment districts to successively sprawl, demolish, and empty out regions of the city. Oakland's experience in this regard has been that areas of the city, once vacated and demolished (even with excellent intentions on all sides), tend to remain blighted and vacant for decades thereafter. There should be no demolitions permitted, and no pushing out of viable businesses, until absolutely necessary—once a project has been fully approved. **5**

Should the decision go forward to demolish the Great Western Power Building (which we would stoutly oppose), the proposed mitigations are far too weak to have much impact. We would propose that should such a demolition go forward there would need to be a really significant mitigation, such as a substantial funding of improvements to remaining historic buildings in the uptown area. **6**

The case has not been made for a necessity for any demolition on this block; the entire issue must be revisited with a supplemental focussed EIR. **7**

- **THE 19TH AND SAN PABLO DISTRICT: UNACCEPTABLE LOSSES**

Goals 1., 2., 7., 8., 11., and 16. (pages 41-42 of DEIR) could be served well by retaining some of the historically interesting buildings on the site. The small-scale buildings at 1958-60, 1966-68, 1972, 1998 San Pablo Avenue could be restored and retained as part of the planned development. This would provide a better transition between the project and the spectacular historic resources across San Pablo (See photo, page 211). It would reinforce the project's incorporation into the urban fabric, helping it to avoid that "plopped down" feeling, and would provide some interesting spaces for retail, community, live-work, or entertainment uses on a small scale. We have provided an attachment, showing how the buildings could fit in quite well with the planned scale of the proposed development on that block. Incorporate the buildings rather than demolishing them.

8

We question the wholesale demolition of the resources across the street in the area of the former Royal Hotel. We fail to understand the reasoning that the small buildings at 1958-1998 can be cheerfully included in an unnecessary demolition because they are part of a district in which, once they are demolished, enough historically important buildings would survive: "These remaining buildings include . . . primary contributors (the Hotel Royal. . .)" when the preparers of this EIR *know full well*, and mention a few pages later, that there is another proposed project which may result in the destruction of other significant buildings at that intersection, *including* the Hotel Royal (pp 226-227). This is like saying, when faced with two slowly sinking ships, that it's okay to dynamite one because the other one is still afloat, so one ship will still remain. And then the second ship sinks. It is absolutely not acceptable to demolish this whole area, in a continuation of the egregious losses that started with the unwarranted demolition of the former cathedral. There is a point at which redevelopment becomes highly destructive of the city's distinctiveness. Because it is incremental, it is easy to make the argument that no single step is doing any significant damage. But the damage is done, nonetheless. **8 cont.**

The mitigations are inadequate. Documentation doesn't really mitigate such losses. Establish a mitigation fund for improving buildings which are retained; consider establishment of some kind of protective zoning or historic district buffer zone to protect areas just to the north of this area, so that the historic Victorians, the First Baptist Church, and the YMCA can survive in a good relationship to each other, and continue to provide visual interest and a feel of connected historic fabric. **9**

We specifically requested that the DEIR look into the possibility of incorporating the small San Pablo buildings into the project; we regret the refusal to do so, and request that such an alternative be presented as part of the final EIR. In our scoping letter, we said, and we still believe that an adequate EIR must include:

> ". . . study alternatives that retain these buildings and the adjoining barbecue restaurant at the corner. These small but interesting buildings can provide visual transition into the project, integrate it better into existing streetscapes and encourage the creative reuse of historic buildings just outside the project area. New residents will appreciate these remnants of their neighborhood's past, and because of their relatively small footprint, it should be possible to include them in the site plan." **10**

One aspect of sustainability is to re-use extant buildings rather than turning them into landfill. We believe these buildings at 20th and San Pablo could provide a real opportunity to help knit the project into its context, and to provide some historic urban interest in the context of these huge blocks of new construction. It seems eminently possible to include them in the project.

- THE FOX OAKLAND THEATER: LEAVING SPACE FOR EXPANSION OF BACKSTAGE AREA

The EIR is incomplete in its remarks concerning the Fox Oakland Theater (page 230). Issues of potential conflict-of-use with adjoining residential properties must be addressed. Any adjacent use must take into consideration the possibility that truck loading and related theatrical activities might occur, including during the late night/early morning hours. This might bring up issues of: noise, pedestrian safety, ease of large truck access. The issues should be addressed now so that we do not build in an intolerable situation either for potential residents or for commercial users of the theater, should it be used for large productions. **11**

If the 50-foot-wide minimum area left behind the Fox Oakland Theater means that the site for the proposed mid-rise residential structure behind it needs to be moved west, it would be well worth doing so. The proposed high-rise at 18th and San Pablo is not adequately described, and thus should not control the surrounding land uses. Because the true size and scale of this imaginary high-rise are not known, there should be further study; a supplementary EIR should be prepared if and when more information about this project is available. There could be significant visual effects on the Fox Oakland Theater if this building were to be built to the full height contemplated in the DEIR, and we are concerned that it not provide an incongruous background to the Fox Oakland, when viewed from the East and North. The shade **12** impacts, Figure IV.L-9 through 12, upon the surrounding buildings, should be considered seriously as a reason to build a lower building. ***12 cont.***

- UPTOWN BROADWAY: RETAIL BUSINESSES AT RISK

  Missing from the EIR entirely is any discussion of the worrisome potential for the proposed project to draw energy and people from uptown Broadway businesses. It is surely an environmental effect to hasten the development of the Telegraph retail zone at the expense of Broadway. ***13***

- PARCEL 9: AN EXAMPLE OF "GOOGIE" ARCHITECTURE

  This site is described as an alternate location for the Sears auto center. We suggest that the extant "googie" hamburger stand is of value, and that it has not been addressed seriously in this DEIR. This building and its business occupant might be incorporated into a future development. This period of playful commercial architecture is just beginning to be appreciated and undergo a renaissance; it would be a mark of Oakland's sophistication to include it in the project rather than demolishing it, and the EIR should address this option. Wise promoters of Los Angeles's civic virtues have begun to capitalize on the presence of such home-grown California googie architecture; we can use buildings such as this one to help Oakland seem an attractive and accessible place. This style can prove attractive to just the young, vigorous people we seek to attract. ***14***

- VIEW IMPACTS

  Designs for new buildings in the vicinity of the former YMCA (no longer owned by YMCA) building (DEIR page 228) should be required to be sensitive to the view corridors, such that views of and from the building are not negatively impacted. Designs in its vicinity should be appropriate to their location near this historic resource. Figure IV.J-4 shows how this building could disappear from the incoming driver if the new buildings come far out to the sidewalk line and do not step back at all from the street. We request a simulation showing a better design solution. Similarly, the view down 20th St., shown as Figure IV.J-5, not only blocks the stack of the Western Power Building but makes an awkward neighbor to the former Magnin's building. The proposed residential tower on block 5 seems particularly ill-located and too tall. We believe that the mitigations in this section, page 257 are woefully inadequate. For this reason, we believe that a supplemental EIR should be required for the later phase, high-rise components of this project. The design mitigations are ridiculously sketchy, through no fault of the EIR preparers, because the projects remain so ill-defined. ***15***

- LONG TERM BUSINESSES ARE RESOURCES TOO.

  Missing from the EIR entirely is any discussion of the worrisome potential for the proposed project to draw energy and people from uptown Broadway businesses. It is surely an environmental effect to hasten the development of peripheral zones while sucking the life out of the central city. ***16***

  In this connection, the DEIR has completely omitted mention of an important potential resource: the currently-closed-off BART access to the basement of Sears, formerly Capwell's. At one time this was an active entrance, which fostered pedestrian traffic through the store, thus increasing the likelihood that people would see and experience what was in the store, and perhaps even purchase goods there. The EIR should study the potential reopening of this link between BART and Telegraph Ave. It was particularly helpful during stormy weather, when it was open, and provides a way to incorporate Sears into the project. ***17***

Moreover, it is outrageous that so much concern is expressed over the potential relocation of the Sears auto center, and so little over the small businesses on 20th Street (and those removed earlier by the city of Oakland redevelopment agency, at 20th and Telegraph). The history of Oakland in recent years would lead one to believe that locally-owned businesses are more likely to stay around than chain businesses (Carter Hawley Hale, K-Mart, Bank of America). Thus, we should support long time local businesses at least as much, and perhaps even more than national businesses, no matter how large they are. Small businesses are the workhorses of the local economy, yet the redevelopment agency persists in treating them in a somewhat cavalier fashion. **18**

- **SCENIC VISTAS, VISUAL CHARACTER, AESTHETIC RESOURCES**

We hold that views of historic buildings can also be scenic (page 242–243). In fact, one of the things Oakland has to offer is an unusual and number of unique and intact buildings of several periods; here in the uptown area we are lucky to have excellent examples of several different styles of architecture. The discussion on page 242 is completely inadequate in ignoring this. In the immediate vicinity of the project, we see a nationally-known example of terra cotta art deco, two excellent examples of early-twentieth century movie palace styles, the unusual Western Power Building, the quaint vernacular commercial buildings at 20th and San Pablo, the 1940s furniture showroom behind the ice rink, the "googie" building mentioned above, the former Mel's, and so on. These kinds of urban vistas set Oakland apart from some of our less interesting neighbors. **19**

The art deco Floral Depot is so prominent and well-known that it has appeared in magazines, is on various walking tours. A replica was built for the Florida Disney World; OHA has photos available of this amazing reconstruction. The proposed project should be required to have a good design relationship to the important buildings at its edges.

We appreciate the opportunity to comment on this Environmental Impact Report; we look forward to an improved and emended report, and to an excellent Uptown project that allows historic buildings to contribute to its success.

Sincerely,

Naomi Schiff

Naomi Schiff
Vice President—Preservation Action

COMMENTOR B4
Oakland Heritage Alliance; Naomi Schiff, Vice President – Preservation Action; November 3, 2003

B4-1: The commentor’s opinion is noted regarding the analysis of Blocks 5, 7, 8 and 9. Nonetheless, the EIR authors confirm that the environmental effects of the Project were analyzed commensurate with the level of Project detail available at the time the Draft EIR was published. The recommended mitigation measures in the Draft EIR take this available level of detail into account, and, at the design review stage for individual buildings, require that certain specified standards must be met to avoid or reduce to a level of insignificance any potential significant impacts. For instance, Mitigation Measure WIND-1 (page 261 of the Draft EIR) requires that the final designs of high-rise buildings on Blocks 5 and 7 be reviewed to ensure they are consistent with the specific wind-reducing guidelines that are detailed in the measure. Likewise, Mitigation Measure AES-2a (page 258 of the Draft EIR) requires that the City review the proposed exterior materials of Project buildings to ensure they do not result in additional daytime or nighttime glare.

The Draft EIR analyzed a maximum buildout scenario for the proposed Project. This maximum buildout scenario was utilized to account for all potential environmental effects that could occur as a result of Project implementation. The project description adequately specifies the information critical to assure adequate environmental review, including: number and location of housing units; total commercial square footage that would be developed; the proposed spatial layout of land uses; maximum building height; and the location of parking spaces and new streets. This information allows for a complete analysis of the environmental topics covered in this EIR. Specific building design information is not a necessary input for analysis for most of the environmental topics. As noted above, in those areas where the final design could result in potential impacts, such as wind or aesthetic impacts, the level of information about the Project provided in the Draft EIR is sufficient to evaluate the potential for these impacts to occur and for appropriate mitigation measures to be designed to ensure that significant impacts are avoided or reduced to a level of insignificance. CEQA requires that all potential significant impacts be identified at the earliest possible stage. Accordingly, the Draft EIR assesses the entirety of the proposed Project even though, as is often the case for large projects, detailed building designs have not yet been developed. In the future, if the Project undergoes substantial change that results in new significant environmental impacts or if it is determined that the final design of the buildings has the potential to result in new significant environmental impacts, these circumstances could result in subsequent environmental review in accordance with the provisions of CEQA and the *CEQA Guidelines*. Given that the EIR analyzes the project sponsor's projections for a maximum buildout scenario, it is possible that the final Project could result in less development (i.e. fewer parking spaces, less commercial space, fewer housing units) than analyzed in the EIR.

Once designs for the Project blocks are finalized, they will be evaluated during the City's process for design review and other necessary approvals to determine if they would result in significant environmental impacts that were not adequately analyzed in the Draft EIR. If final Project designs have the potential to result in significant environmental impacts not identified in the Draft EIR, they will be subject to additional environmental review. Therefore, when the designs for Blocks 5, 7, and 8 are finalized, they will be subject to additional evaluation (including design review and other approvals), and, if determined necessary, additional environmental review. However, based on the current level of detail available for the Project, the Project's effects in all environmental topical areas has been fully evaluated.

B4-2: The developer held community meetings on March 12, October 11, and October 13, 2003. Developer-initiated design and community workshops on the proposed Project are discretionary meetings that are beyond the purview of CEQA or the procedural requirements of the City of Oakland. Therefore, no additional response is necessary. As more detailed designs are developed and design review and other applications are filed, additional community meetings and public hearings may be scheduled, as required by the Zoning Code and Planning Commission.

Public noticing and public hearings for the Project environmental documentation effort exceeded the requirements of CEQA. *CEQA Guidelines* section 15087(i) states: "Public hearings may be conducted on the environmental documents, either in separate proceedings or in conjunction with other proceedings of the public agency. Public hearings are encouraged, *but not required* as an element of the CEQA process" (emphasis added). Even though not required by CEQA, the City held both a scoping meeting (March 19, 2003) and a public hearing on the Draft EIR (October 15) as well as a public hearing before the Landmarks Preservation Advisory Board (October 6). These meetings were publicized in the Oakland Tribune and notices were mailed to: (1) all individuals who requested such notice; (2) all property owners within 300 feet of the Project site (including individuals within the Project site); and (3) the City's public agency mailing list, which includes over 25 public agencies, in excess of CEQA requirements. The scoping meeting and public hearing on the Draft EIR were both publicized more than three weeks before the respective meeting dates.

B4-3: The Oakland Heritage Alliance's comments regarding the Project's merits and the Alliance's desire to preserve the Great Western Power Building are noted. Impact HIST-5 detailed in the Draft EIR addresses impacts that future development could have on the Great Western Power Building if it is preserved.

B4-4: Shade created by the proposed Project will not significantly impact those elements of the Great Western Power Company building that render it eligible for the National Register of Historic Places. These elements, which include the building's arched façade, overscaled classical detailing, and 150-foot smokestack, would not be visually obscured by the additional shadows created by the Project. The building lacks complex color schemes or detailed façade elements that would be impacted by the introduction of shade, as described on page 277 of the Draft EIR.

B4-5: Buildings in the entire Project area, including the buildings referenced by this comment, were ranked as part of the Oakland Cultural Heritage Survey. The buildings referenced by this comment received an insufficient rank to qualify as significant or potentially significant, therefore Project impacts to these buildings under CEQA would be less than significant. The Project's consistency with the General Plan Historic Preservation Element policies will be reviewed at the time the merits of the Project are considered by City of Oakland decision-makers.

B4-6: Demolition of the Great Western Power Company Building, which is a local historic resource, was determined to be a significant unavoidable impact in the Draft EIR. Even with the implementation of all potential feasible mitigation measures, this impact would still be significant and unavoidable. *CEQA Guidelines* section 15126.4(a)(4)(A) states that a proposed mitigation measure should be "roughly proportional" to the impacts of the Project. Due to the age and deterioration of many of the remaining historic buildings in the Uptown District, a "substantial funding of improvements to remaining historic buildings" in the District would be very costly (in terms of a percentage of the total Project budget) and would not mitigate the CEQA impact to the Great Western Power Company Building. The City may consider, separate from the EIR and its recommended mitigation measures, requiring payment of pro-rata funds to restore historic buildings in the Uptown District as they have imposed similar conditions on other project approvals.

Mitigation Measure HIST-4a has been revised as detailed below to include a element that would require interpretative elements to be incorporated into the Project.

> Mitigation Measure HIST-4a *(Variant 1 and 2)*: The following measures shall be implemented to preserve information about the resource for further study:
>
> - Record the Great Western Power Company Building in accordance with the procedures of the Historical American Buildings Survey (HABS) through measured drawings, written histories, and large-format photographs;
> - Prepare a history of the Great Western Power Company Building that incorporates oral history, documentary research, and architectural information;
> - Prepare a brochure, regarding the building's historical association with one of three major early 20th century northern California power companies, to be made available at local libraries and museums;
> - Incorporate interpretive elements, such as signs and placards, into public areas and street frontages proposed as part of the Project.
> - If full demolition of the building occurs, salvage architectural elements from the building, including hardware, doors, paneling, fixtures, and equipment, and incorporate these elements into new construction; and
> - Curate all materials, notes, and reports at the OHR, and submit copies to the NWIC.

Even with extensive documentation, however, the demolition of the building or portions of the building would result in the loss of a historic resource that is associated with significant historical events and is an example of outstanding design and function. Therefore, the demolition or partial demolition of the building would remain a significant and unavoidable impact. (SU)

B4-7: This Draft EIR is not required to contain justification of the Project applicant's decision to demolish buildings within the Project site, but rather a reasoned evaluation of the environmental impacts resulting from such a proposed demolition. As described on page 45 of the Draft EIR, development on Block 7 would include the development of: (1) a 19-story student housing tower; (2) a five-story parking structure; and (3) a five-story faculty housing building. As described on page 47 of the Draft EIR, implementation of the proposed Project would require the demolition of all existing structures on Blocks 1 through 7, with the possible exception of the Great Western Power Company Building. The environmental impacts of the proposed Project on Block 7 have been analyzed and are addressed in numerous sections of the Draft EIR. Impacts (and associated mitigation measures) HIST-4a, HIST-4b, HIST-4b, HIST-5, WIND-1a, and WIND-1b specifically apply to proposed development on Block 7.

B4-8: The demolition of the contributory buildings to the 19th and San Pablo Commercial District, in concert with the proposed demolition of other district contributors as part of the Thomas L. Berkley Square project, has been identified as a potential cumulative impact in the Draft EIR. The text of the Draft EIR has been revised to provide a more detailed discussion about the potential impacts to this district.

Page 213 of the Draft EIR is revised as shown below:

- *19th and San Pablo Commercial District (ASI)*

The 19th and San Pablo Commercial District is a Victorian/late 19th, early 20th century commercial district consisting of 12 buildings on all or part of twelve blocks in the Central Oakland neighborhood. <u>Eight of the 12 buildings are contributors to the district, including the buildings located at 630-42 20th Street; 1901-15 San Pablo Avenue; 1917-23 San Pablo Avenue; 1939-63 San Pablo Avenue; 1958-60 San Pablo Avenue; 1966-68 San Pablo Avenue; 1972 San Pablo Avenue; and 2000-8 San Pablo Avenue.</u> Most of the district lies northwest and outside of the Project area. It includes early 20th century commercial, Italianate commercial, and Beaux Arts-derivative buildings. The dates of contributing buildings range from the 1870s to the 1940s. Currently, the surrounding areas consist of commercial, residential, and transportation uses. Three of the four buildings identified as PDHPs within the Project area (1958-60 San Pablo Avenue, 1966-68 San Pablo Avenue, and 1972 San Pablo Avenue) are contributors to this district. The 19th and San Pablo Commercial District is listed as an ASI by the OCHS.[17]

---

[17] City of Oakland Planning Department, Oakland Cultural Heritage Survey, 2000, 1983-85, and 1994-95, op. cit.

Pages 226 and 227 of the Draft EIR are revised as shown below:

Impacts to Historic Districts. ~~The~~ Because the 19th and San Pablo Commercial District is not currently designated as a Preservation District, it is currently not considered a historical resource under CEQA. ~~For the purposes of CEQA~~ Thus, according to the significance criteria utilized by the City of Oakland, the proposed Project ~~will~~ would not cause a significant adverse impact to the 19th and San Pablo Commercial District.

However, ~~for the purposes of CEQA,~~ to account for the possibility of this District being elevated to Preservation District status and to provide the most ~~an extra~~ conservative analysis, the following impact assessment treats the 19th and San Pablo Commercial District ~~could be impacted by the proposed Project if: 1) the district is~~ as if it had been elevated to Preservation District status~~(a type of Designated Historic Property); and 2) the four PDHPs identified in Impact HIST-5 are demolished. However, this impact would be less than significant because the remaining majority of contributing properties would still retain enough of the district's character-defining elements to convey its historical significance. Buildings remaining after Project implementation will include the Hotel Arcade, the Hanifin Block, and the Dalziel Block. These remaining buildings include all of the district's primary contributors (the Hotel Royal, Hotel Arcade, and the Hanifin Block), which will continue to retain the district's major character defining elements that reflect turn-of-the-century commercial development in Oakland. These buildings represent styles that include Italianate, Beaux Arts-derived, and Classical Revival. They maintain the grandness of scale and ornamentation that characterize what the OCHS described as the "visually distinctive/turn-of-the-century commercial district." The retention of these distinctive buildings allows the district to continue to convey the historical significance of late 19th, early 20th century commerce in Oakland.~~, which would qualify contributing or potentially-contributing properties within such a district as historical resources under CEQA.[18]

Impact HIST-7: Project demolition and construction could adversely impact the setting of the 19th and San Pablo Commercial District. (~~S~~LTS)[19]

~~If~~ For the purposes of CEQA, the 19th and San Pablo Commercial District ~~receives a Preservation District designation, the Project may result in a significant impact to the district's setting. However, OCHS documentation indicates that the district's integrity of setting has been diminished by surrounding uses that "differ in use and visual coherence" from the district's contributing buildings. Therefore, the Project's effects on the setting of the 19th and San Pablo Commercial District~~

---

[18] Elevation of the 19th and San Pablo Commercial District to Preservation District status is a discretionary measure that could only occur after a number of actions are complete, including nomination of the District by a qualified individual or land owner, as well as approval by the Planning Commission and City Council. Even so, attainment of Preservation District status would not prohibit the demolition of contributing structures within the District.

[19] This change in the designated significance of the impact does not affect the findings or analysis contained in the Draft EIR. This revision was made to correct a text error in the Draft EIR. The discussion following this designation in the Draft EIR clearly indicated that Impact HIST-7 was less-than-significant.

~~would not significantly impair the district's integrity~~ could be adversely impacted by the proposed Project if: 1) the district is elevated to Preservation District status (a type of Designated Historic Property); and 2) the three contributing PDHPs located at 1958-60 San Pablo Avenue, 1966-68 San Pablo Avenue, and 1972 San Pablo Avenue as identified in Impact HIST-6 are demolished. However, this project-level impact would not be considered significant as it would only result in the demolition of three of the District's eight contributing buildings and the remaining contributing buildings would still retain enough of the District's character-defining elements to convey its historical significance. Buildings remaining after Project implementation would include the Hotel Arcade, the Hanifin Block, and the Dalziel Block. These remaining buildings, which are located on blocks outside of the Project area, include all of the District's primary contributors (the Hotel Royal, Hotel Arcade, and the Hanifin Block). These primary contributors will continue to retain the District's major character-defining elements that reflect turn-of-the-century commercial development in Oakland. These buildings represent styles that include Italianate, Beaux Arts-derived, and Classical Revival. They maintain the grandness of scale and ornamentation that characterize what the OCHS described as the "visually distinctive/turn-of-the-century commercial district." The three contributing PDHPs within the project site are less character-defining then the other contributing buildings within the District. The retention of the remaining distinctive buildings would allow the District to continue to convey the historical significance of late 19th, early 20th century commerce in Oakland. Thus the project's impact to this District would be considered less-than-significant and not require any mitigation.

> Mitigation Measure HIST-7**:** No mitigation measure is necessary to address this ~~the~~ less-than-significant impact. (LTS)

Impact HIST-8: Project demolition and construction could result in a significant cumulative impact on the 19th and San Pablo Commercial District. (S)

The demolition of the ~~four PDHPs~~ three PDHPs located at 1958-60 San Pablo Avenue, 1966-68 San Pablo Avenue, and 1972 San Pablo Avenue identified in Impact HIST-~~5~~ 6 may result in a significant cumulative impact when considered with ~~other projects that causing related impacts~~ the Thomas L. Berkley Square project. The Thomas L. Berkley Square Project, located across Thomas L. Berkley Way (20th Street) from Project Block #1, proposes the demolition of two contributing properties of the 19th and San Pablo Commercial District (the Hotel Royal Building and the California Peanut Company Building). The impact of the Uptown Mixed-Use Project, while ~~incremental~~ less than significant when considered alone, will contribute to a cumulatively significant impact when considered with the impacts of the Thomas L. Berkley Square Project. If both projects are implemented as proposed, ~~six~~ five of ~~nine~~ eight contributing buildings (63%) of the 19th and San Pablo Commercial District will be demolished. This would result in a significant~~, unavoidable~~ cumulative impact to the 19th and San Pablo Commercial.

Implementation of the following mitigation measure, which involves preserving the PDHPs that contribute to the 19th and San Pablo Commercial District, if it determined to be feasible would avoid the Project's cumulative adverse impact to the District.

> Mitigation Measure HIST-8a: If feasible, the three PDHPs that contribute to the 19th and San Pablo Commercial District (located at 1958-60 San Pablo Avenue, 1966-68 San Pablo Avenue, and 1972 San Pablo Avenue) shall be preserved in their existing condition or rehabilitated and incorporated into the proposed Project. Any modifications to the exterior of the buildings that may be proposed as part of their rehabilitation shall be developed in consultation with the Planning Department and a qualified historic preservation architect to determine an appropriate treatment strategy that preserves the important historic qualities of the structures. (LTS)

The implementation of Mitigation Measure HIST-8a would reduce the cumulative loss of contributing district buildings from 5 out of 8 (63%), to 2 out of 8 (25%). The Project sponsor and the City are in the process of determining whether or not it is feasible to preserve these buildings. If the City makes a determination that it is not feasible to preserve these buildings, the buildings may be demolished as part of the proposed project and a significant unavoidable impact would result.

> Mitigation Measure HIST-8b: If the City determines that preservation of the three PDHPs that contribute to the 19th and San Pablo Commercial District (located at 1958-60 San Pablo Avenue, 1966-68 San Pablo Avenue, and 1972 San Pablo Avenue) is not feasible, the City shall inform the applicant for the Thomas L. Berkley Square Project of the potential cumulative impact prior to the implementation of the Uptown Mixed-Use Project. The City shall consult with both project applicants to establish a fair division of responsibility to fund mitigation measures to preserve information about the 19th and San Pablo Commercial District for future study. These mitigation measures shall include the following:
>
> - Record the 19th and San Pablo Commercial District in accordance with the procedures of HABS through measured drawings, written histories, and large-format photographs;
> - Prepare a history of the 19th and San Pablo Commercial District that incorporates oral history, documentary research, and architectural information; this history could utilize non-written media and production techniques, including video photography;
> - Prepare a brochure, regarding the district's historical association with turn-of-the-century Oakland commerce, to be made available at local libraries and museums;

- Salvage architectural elements from the buildings proposed for demolition, including hardware, doors, paneling, fixtures, and equipment, and incorporate these elements into new construction; and
- Curate all materials, notes, and reports at the OHR, and submit copies to the NWIC.

Even with extensive documentation, however, a cumulative impact will result from the demolition of ~~66~~ 63 percent of the 19th and San Pablo Commercial District's contributing buildings. This loss of contributing buildings will materially affect the district's ability to convey its historical significance, which will result in a significant, unavoidable cumulative impact. (SU)

B4-9: Refer to Response to Comment B4-8. The mitigation measure for impacts to the San Pablo and 19th Commercial District contains standard mitigation methods for minimizing impacts to architectural resources (e.g., large-format photographs, oral history, history brochure, salvaged architectural elements, archival management of documentation; interpretive public display of the resource's significance, etc.). The establishment of a preservation fund or buffer zone are not necessary to address any of the CEQA impacts identified in the EIR; these are policy issues that the City may consider at its discretion, as part of or separate from consideration of this Project.

B4-10: Refer to Response to Comment B4-8. As described on page 1 of the Draft EIR, the Draft EIR is a Focused EIR prepared pursuant to CEQA section 21159.25 (also referred to as AB 436). In such an EIR, no discussion is required of alternatives to the Project, cumulative impacts of the Project, or growth inducing impacts of the Project. Therefore, the Draft EIR is not required to include an evaluation of Project alternatives. Nonetheless, preservation of these buildings is included as a mitigation measure. The City and the Project sponsor are examining the feasibility of this mitigation measure. The buildings referenced by the comment or have been assigned status rankings by the OCHS, and do not meet the CEQA definition of historical resources. Therefore, the demolition of these buildings as part of the proposed Project will not result in a significant impact to historical resources under CEQA.

B4-11: The discussion of the Fox Oakland Theater on page 230 of Section IV.I, Historic Architectural, Archaeological and Paleontological Resources, is only intended to address the proposed Project's impacts on the historic significance of the Fox Oakland Theater. The Project's effects on adjacent uses including the Fox Oakland Theater were considered in other topical sections, including Land Use and Noise. However, based on the significance criteria utilized for each of these topics, it was determined that the proposed Project would not result in any significant impacts to surrounding land uses, including the Fox Oakland Theater as it currently exists.

Consideration of the Uptown Project's impacts on the Fox Oakland Theater in a future condition that would be subject to discretionary approval by the City of Oakland is not required to be considered pursuant to CEQA. Section 15126.2, Consideration and Discussion of Significant Environmental Impacts, of the *CEQA Guidelines* states that:

> *An EIR shall identify and focus on the significant environmental effects of the proposed project* [i.e., the Uptown Project]. *In assessing the impact of a proposed project on the environment, the lead agency should normally limit its examination to changes in the existing physical conditions in the affected area as they exist at the time the notice of preparation is published, or where no notice of preparation is published, at the time environmental analysis is commenced.*

At the time the NOP was issued (February 26, 2003), the Fox Oakland Theater was not operating as a performing arts venue. The reestablishment of performing arts venues would require discretionary approval(s) from the City of Oakland when such a project is proposed. Therefore, consideration of such a project at this time would be speculative and not consistent with the requirements of CEQA since the theater is not currently operating as such and approval of such a project would be dependent upon a variety of factors, including community and political support, and the allocation and availability of necessary public funding. However, the following discussion is included to provide some information about what impacts could result from implementation of a future project that involved reestablishment of the Fox Oakland Theater as a performing arts venue.

There is no “inherent” or “intrinsic” land use conflict associated with siting residential uses next to the theater even if it were to operate as a performing arts venue (in the future). In San Francisco, for instance, multi-story apartment buildings coexist with theater buildings in many of the City’s most vibrant neighborhoods. The success of a mixed-use district is often enhanced by such a juxtaposition of land uses.

Reestablishment of the theater as a performing arts venue could result in periods of significant operational noise, if theater uses involve loading and unloading activity between the hours of 10:00 p.m. and 7:00 a.m. Such impacts could adversely affect residential uses that will be developed as part of the Uptown Project. The City of Oakland’s Noise Ordinance identifies maximum allowable operational noise levels (L_{max}) at the property line of receiving land uses. The L_{max} for receiving residential uses is 80 dBA between 7 a.m. and 10 p.m. and 65 dBA between 10 p.m. and 7 a.m. Reestablishment of the Fox Oakland Theater could result in L_{max} of up to 75 dBA at the proposed residential uses within Block 5. Such noise levels would not exceed the 80 dBA daytime noise threshold, but would exceed the 65 dBA nighttime noise threshold.

To initiate theater operations, the Fox Oakland Theater would be required to procure a Conditional Use Permit from the City. Depending upon the theater’s intended hours of loading and unloading, the City may impose conditions of approval that would reduce the L_{max} experienced at the property line of the Uptown Mixed Use Project site to levels that are below the thresholds identified in the City of Oakland Noise Ordinance. These conditions of approval may include the construction of structural features, such as a sound barrier, that reduce maximum noise levels. The conditions of approval imposed by the City would ensure that residents living within the Uptown Project would not be exposed to unacceptable nighttime noise levels.

Pedestrian access into the Project site from 18th Street would be via sidewalks along the proposed street between the theater and Block 6. Theater operations would not compromise pedestrian safety. In addition, the 50-foot-wide reserve area adjacent to the theater would ensure that normal theater operations, including truck access, could occur without adversely affecting surrounding uses.

B4-12: The Draft EIR, based on Project details that were available at the time the document was prepared, anticipates that the proposed Project design would be refined prior to approval of a Final Development Plan for each phase of the Project. Mitigation Measure AES-1 is designed to ensure that the final design of proposed high rise buildings would not adversely affect the architectural character of the Uptown District. All aspects of these buildings that could result in significant environmental impacts have been analyzed in the Draft EIR. As noted in Response to Comment B4-1, if the Project undergoes substantial change that results in new significant adverse impacts, it could be subject to subsequent environmental review, pursuant to the provisions of *CEQA Guidelines* section 15162.

The size and scale of the proposed high-rise building on Block 5 are reflected in the visual simulations for the proposed Project that are included in the Draft EIR. Specifically, Figures IV.J-6, IV.J-7, and IV.J-8 depict the 19-story tower on Block 5. These visual simulations represent the maximum height of the structure as presented in the Draft EIR. The 19-story tower would be separated from the Fox Theater by buildings of five stories which would provide a visual transition between the Fox Theater and the proposed high-rise building, and would ensure that the visual character of the theater is not adversely affected by the proposed Project. As described on page 277 of the Draft EIR, implementation of the proposed Project would not cause shadows to be cast on the Fox Theater. This condition is verified by the shadow simulations prepared for the Project, which are provided as Figures IV.L-1 through IV.L-12 of the Draft EIR.

B4-13: Refer to Master Response M-2 on page 18 of this document.

B4-14: The Kwik Way site has been removed from the Project area (see Chapter II of this document). As a result, this building will not be demolished or otherwise adversely affected by the proposed Project.

B4-15: Visual simulations of the proposed Project were prepared to illustrate the appearance of the proposed buildings and their relationship to the street. Preparing visual simulations that recommend new design treatments where no significant environmental effects would occur, as recommended by the commentor, is not required by CEQA. Instead, CEQA requires the lead agency to recommend mitigation measures only when a project would result in a significant environmental impact. Although the viewsheds down Thomas L. Berkley Way (20th Street) and Telegraph Avenue (Figures IV.J-5 and IV.J-4) include the Fox Theater, the former YMCA building, and the I. Magnin building, they also include less scenic elements, such as parking lots, modern light posts, and post-war office buildings. Therefore, these viewsheds are not considered to be "scenic," and the introduction of additional structures as substitutes for less scenic elements of these viewsheds would not constitute a significant adverse impact to a scenic resource. The redevelopment of vacant lots and surface parking areas that would occur as a result of the proposed Project would result in a beneficial effect on visual character in the Uptown District, because it would assist in the restoration of the historic urban development pattern of uninterrupted blocks.

The placement of high rise buildings next to medium-sized buildings does not, in and of itself, represent a significant impact to visual resources. In many major urban centers, including Oakland, the construction of high-rise towers next to lower-rise buildings has created a more interesting and complex visual environment that results in varied silhouettes along the skyline. Mitigation Measure AES-1 would ensure that the proposed architectural treatment of Project buildings is visually consistent with surrounding buildings. This mitigation measure requires physical changes to the proposed Project and is considered adequate to reduce the proposed Project's impact on visual resources to a less-than-significant level.

B4-16: Refer to Master Response M-2 on page 18 of this document.

B4-17: The BART access referred to by the commentor is not within the Project site or part of the proposed Project. The reopening of this access is not required to reduce a significant environmental effect of the Project. No further response is needed. However, this comment will be considered by the decision-makers during the review of the merits of the Project.

B4-18: Refer to Master Response M-2 on page 18 of this document.

B4-19: Refer to Response to Comment B4-15. As described in that response, although the viewsheds along streets around the Project site contain a variety of buildings, including historic structures such as the Fox Theater, YMCA, and the I. Magnin buildings, these views are not considered to be "scenic." The architectural landmarks mentioned in the comment would not be adversely affected by implementation of the proposed Project, as described on page 228 of the Draft EIR.

Re: Comments on DEIR for Uptown Mixed-Use Project (Case No: ER03-0007)

Dear Ms. Wamer:

We are writing on behalf of the Sierra Club, including approximately 5,000 members who are residents and property owners in Oakland. We support infill, mixed-use, relatively dense development within existing urbanized areas that encourages transit use, walking, and bicycling and that minimizes private automobile use. We believe that infill development will help to counteract sprawl and improve the environment and the quality of life for all Bay Area residents.

The relativity dense mixed-use proposal for Uptown Oakland has the potential for revitalizing Oakland's urban core and invigorating the Uptown Entertainment District. Its location near a regional transit node is propitious. The Entertainment District can draw from the whole region, and residents of the proposed project can have access to the region without cars. However, the site planning must be such that residents can have quiet enjoyment of their homes while others are enjoying the lively arts. The possible conflict between these uses has not been addressed in the DEIR. **1**

A key issue of concern to us is that location of the open space should also be studied as part of the site planning. This may be considered a design issue rather than a comment on the Environmental Report, but the location and design of the open space will significantly affect the social environment of this new community. The present location of the planned open space might be appropriate in a suburban community surrounded by similar residential uses. But that is not the case with the Uptown project.

Safe open spaces are ones that can be completely viewed by a cruising police car. We strongly recommend consideration of a linear park along Telegraph Avenue from 19th to 20th St. This would be a defensible space and also a potential festival space for the Entertainment District. Placing the open space along Telegraph Avenue bordered by mid-rise mixed-use structures on the west between the lower rise residences and the entertainment area would create a buffer between the two uses. Oakland does not have anywhere near the problem of panhandlers and the homeless sleeping on benches and in doorways that San Francisco has. **2**

A wide "piazza" along Telegraph Avenue with cafes, restaurants, book and record stores, and a market hall would create an exciting pedestrian destination. It would give a sense of place, an outdoor living room, for both the residential community and visiting theatergoers. This "piazza" would be lively with students, day and night, if the graduate student housing is built at 20th and Telegraph. In fact, this adjacent open space would make the site more attractive for student housing.

In summary, relocation of the open space along Telegraph Avenue should be studied for the following reasons:

- It would be safer, day and night, and so encourage use.
- It would encourage commercial development along Telegraph Ave.
- Students would have a place to meet and socialize.
- It would provide a festival space for the entertainment district.
- It can resolve the possible conflict between residential and entertainment uses.
- An attractive space adjacent to public transit will encourage the use of transit.
- It would take advantage of our Mediterranean climate and encourage outdoor activities.

2 cont.

Thank you for your consideration of the Sierra Club's views on this important project. We commend the City of Oakland for encouraging new infill development of this kind, which can make an important difference in the vitality and attractiveness of Oakland.

COMMENTOR B5
Sierra Club, Northern Alameda Regional Group; Joyce Roy, Co-Chair, Conservation Committee and William J. Smith, Co-Chair, Conservation Committee; November 3, 2003

B5-1: A detailed noise analysis was completed for the proposed Project, and is discussed in Section IV.F., Noise, of the Draft EIR. This noise evaluation indicates that construction activities, local traffic, and on-site stationary sources could result in the generation of noise that would exceed acceptable noise thresholds. However, with the implementation of recommended Mitigation Measures NOISE-1, NOISE-2, and NOISE-3, noise within the Project site would be reduced to a less-than-significant level. Noise impacts resulting from the use of the Fox Theater as a performing arts venue would be less than significant, as described in Response to Comment B4-11. Arts and residential uses are considered to be compatible land uses, and are located in close proximity to one another in many successful urban neighborhoods.

B5-2: Comment noted. The location of the proposed open space area is not directly related to a discrete physical environmental impact, and design suggestions such as those offered in the comment do not serve to reduce any forecast adverse environmental impact. As such, changes to the Draft EIR are not necessary. These comments regarding the location of the park will be considered by City of Oakland decision-makers during review of the merits of the Project.

Lynn Warner, Planner IV
City of Oakland
Community and Economic Development Agency
Planning Division
250 Frank Ogawa Plaza, Suite 3330
Oakland, CA 94612

Dear Ms. Warner:

In 1998, the Oakland City Council adopted a Sustainable Community Development Initiative, with the goal of promoting social equity, environmental responsibility, and economic vitality in City and private projects. At the heart of downtown Oakland, the Uptown Mixed Use Project will bring more than 2,500 new residents to an area now characterized by parking lots. Ensuring that Uptown is developed sustainably would demonstrate the City's ongoing commitment to these principles.

In the Uptown draft environmental impact report, the developers note that as an infill, transit-oriented project, Uptown is consistent with Oakland's Sustainable Development Initiative. This is certainly true. However, Urban Ecology believes that the EIR and Uptown Partners should make a specific and verifiable commitment toward employing environmentally sustainable building and design techniques. 1

Urban Ecology has prepared a list of six low-cost or no-cost strategies that can significantly reduce construction-related waste and improve the quality of life for future residents of Uptown. In addition, these techniques are logical means for the developers to mitigate significant environmental impacts of the project, particularly in relation to air pollution, water quality, hazardous materials, and aesthetic resources.

The current Uptown proposal has improved significantly since it was first introduced. While it is important to move the project along, it is equally important to make sure it is done right. Urban Ecology believes that a greener Uptown will benefit everyone, and we hope that resource-efficient building strategies will be incorporated into the final EIR.

Sincerely,

Nathan James

6 Steps Towards a Greener Uptown

"Green Buildings" are structures that are built, renovated, operated, or reused in an ecological and resource-efficient manner. They are a major contribution to improving environmental sustainability and they can be used in the marketing and public relations effort for new development. Employing green building techniques in a prominent project like the Uptown development is powerful way to demonstrate the City of Oakland's commitment to sustainability. Using these six no-cost or low-cost strategies would significantly reduce waste and toxicity for the City of Oakland and improve the quality of life of the new residents of Uptown:

1. **Reduce Water Usage for Landscaping by 50%**
   Reducing water consumption reduces maintenance expenses as well as decreasing the strain on California's fragile water resources. By specifying plant species with low water needs that are appropriate for Northern California's dry climate, Forest City could significantly reduce water used for landscaping and the amount of pollutants that run off into Bay Area water streams. Another landscape strategy that effectively reduces water consumption and costs is the installation of highly efficient drip irrigation systems.

2. **Use Low-Emitting Building Materials**
   Poor indoor air quality, caused by the offgassing of chemicals found in many building materials, contributes to high levels of respiratory disease in American children. Specifying low-emitting and formaldehyde-free paint, wood finishes, adhesives, sealants, insulation, carpets, and boards decreases the amount of toxic compounds in the air of the homes of future Uptown residents. Forest City should demonstrate to the City of Oakland that it plans to incorporate these low-emitting materials in the Uptown Development.

3. **Exceed Title 24 Energy Standards by 15%**
   Although California's Title 24 energy performance standards are some of the strongest in the nation, the City of Oakland supports development projects that exceed these standards. Improving energy efficiency is an economically effective choice for the residents of the new Uptown development: lowering utility expenses allows tenants to enjoy minimized financial burdens for years to come. There is a wide range of techniques that improve energy efficiency, but first steps usually involve adding wall and ceiling insulation, installing double-glazed or low-emissivity (low-E) windows, and upgrading to efficient household appliances. Other options to consider include plumbing for natural gas heating, providing hard-wiring for compact fluorescent light bulbs, and adding overhangs to south-facing windows. The Uptown project could be even more energy efficient with the installation of solar water heaters and photovoltaic panels.

4. **Divert 75% of Construction Waste from Landfills**
   Construction waste, such as wood, drywall, metal, concrete, dirt, and cardboard, fill millions of cubic feet of California's landfills each year. Managing this construction waste can be as simple as identifying the types and quantities of waste that will be available and contacting local recycling facilities, youth build programs, or community build groups (like Habitat for Humanity) to identify the conditions required for recycling or donating construction materials. Generally, space at the construction site also needs to be allocated for recycling collection.

5. **Use Recycled Content Materials for Construction**
   Four common ways to incorporate recycled construction materials in a project are: re-using form boards when pouring concrete, using recycled content siding ("hardboard"), using concrete with flyash, and using recycled content rubble for backfill around building foundations. Additionally, many interior building materials like gypsum board, linoleum flooring, and carpeting are now produced with recycled content. On a related note, the substitution of engineered lumber for solid sawn lumber significantly decreases a building's impact on the Bay Area's old growth forests, since engineered lumber uses smaller-diameter and faster-growing plantation trees. Forest City should demonstrate its commitment to sustainability for the City of Oakland by resolving to specify recycled content materials in the Uptown Development.

6. **Provide Views and Natural Daylighting in 75% of Indoor Spaces**
   Giving Uptown residents access to natural light and views will dramatically improve their quality of life, and also reduce their energy demands, since they will less often need to turn on electric lights. Effective daylighting strategies often include skylights and clerestory windows, which provide natural light from above, and vertically-oriented windows, which offer an even distribution of light across a room.

Notes and Further Resources

Goal 1: Reduce Water Usage for Landscaping by 50%

a. The East Bay Municipal Utility District publishes *Water Conserving Plants and Landscapes for the Bay Area*, an award-winning resource for selecting drought-tolerant plants. For a copy, send $15 to EBMUD Water Conservation Division, 2130 Adeline Street, Oakland, CA 94607-4240.

Goal 2: Use Low-Emitting Building Materials

a. The "Green Seal" program is an independent, non-profit certification system for green building products. They produce and regularly update lists of low-emitting paints and coatings, and offer investigative reports about particleboard, fiberboard, and lighting fixtures. These lists and reports can be found at http://www.greenseal.org/

Goal 3: Exceed Title 24 Energy Standards by 15%

a. More information about California's Title 24 Standards can be found at http://www.energy.ca.gov/title24/index.html

b. The City of Oakland's Energy Efficient Design (EEDA) Program offers free assistance in energy reduction for new construction projects. Contact Christine Vance at (510) 482-4420 or see www.oaklandenergypartnership.com for more details.

Goal 4: Divert 75% of Construction Waste from Landfills

a. To obtain a building permit for new construction in Oakland, applicants are required to submit a Waste Reduction & Recycling Plan (WRRP) that demonstrates how the project will reuse or recycle 50% or more of all construction and demolition debris.

b. Many Bay Area developers find that recycling construction waste ends up costing less than the transportation and dumping fees to take it to landfills on the urban fringe.

c. Projects that deliver loads to facilities that are specifically designed to receive, sort, and recycle mixed construction and demolition debris are eligible for a $10/ton rebate from the Alameda County Waste Management Authority. Contact Tom Padia at (510) 614-1699 or tpadia@stopwaste.org for further details.

d. For more information, contact Patrick Hayes, Recycling Specialist at the City of Oakland Public Works Department, at (510) 238-6920 or phayes@oaklandnet.com

Goal 5: Use Recycled Content Materials for Construction

a. The State of California Integrated Waste Management Board maintains a list of recycled-content building materials. The searchable database, along with other reference materials, is available for free at http://www.ciwmb.ca.gov/condemo/

b. The Alameda County Waste Management Authority maintains a list of locally available green building materials, http://www.stopwaste.org/Resource_Guide.pdf

Goal 6: Provide Natural Daylighting in 75% of Indoor Spaces

a. The California Public Utilities Commission's Energy Design Resources program offers many resources to help with designing for daylight. See http://www.energydesignresources.com for more information.

The City of Oakland's Sustainability Coordinator offers free technical assistance programs to help implement these or other green building strategies. For more information, please contact Carol Misseldine at (510) 238-6808 or cmisseldine@oaklandnet.com

URBAN ECOLOGY

COMMENTOR B6
Urban Ecology; Nathan James; November 3, 2003

B6-1: *CEQA Guidelines* section 15126.4(a)(3) states: "Mitigation measures are not required for effects which are not found to be significant." Although the six goals listed by the commentor could enhance the sustainability of the proposed Project, these measures do not relate to and would not reduce any of the Project's significant environmental impacts. In addition, the proposed Project already includes provisions for the incorporation of drought-tolerant plantings, the reduction of construction waste, and the utilization of natural light to illuminate building interiors. Nonetheless, the recommended sustainability goals are noted and will be considered by the Project applicant and City of Oakland decision-makers during the review of the merits of the Project.

Re: Uptown Mixed-Use Project Environmental Impact Report

Dear Ms. Lynn Warner:

My name is Chungkei Tony Fung. I am the operating owner of The Autohouse Car Repair on 565 20th Street. I also own the property of 565 20th Street. We have been at this location since 1992. Besides being a full service garage, we are also a State certified Smog Check Station. In the proposed map, my property is in block 1 of the Uptown Mixed-Use Project. In this Drafted Environmental Impact Report, there is no mention of environmental impact of relocation of the existing small business like mine.

In the beginning of the year, Community and Economic Development Agency opened the dialogue of acquisition of my property. I was told by different sources, that we would not be relocated within the proximity of this project because of the recent change in zoning. Most of my clients work in the downtown office buildings or travel by BART. Therefore, the survival of my business is location depended. And my present location is ideal. If I were relocated away from the downtown office buildings and from BART, I would virtually be forced out of business. And it will be detrimental for my family and myself.

1

I feel strongly that it is to the best interest of the Uptown Mix-Use Project, the community and the City of Oakland to include the existing business like ours in the overall planning. We believe that we are providing a vital service to the community and tax revenue to the city and the county. This proposed project adds 1000 apartments and 1050 student living units. These residents need auto repair service. It would have negative environmental impact to exclude us from this project.

2

This letter is an addition to my verbal comments at the public meeting by Oakland Planning Commission conducted on October 15, 2003 in Hearing Room #1 in City Hall.

Sincerely,

Chungkei Tony Fung, Owner
The Autohouse Car Repair
565 20th Street

Subject: Uptown Mixed Use Project DEIR

Ms. Cappio:

As I indicated in the October 15 planning commission hearing, I want to again express my concerns about traffic and pedestrian safety impacts the Uptown Mixed Use Project will have on Oakland Chinatown.

The absence of intersections in the heart of Chinatown has to be addressed given the importance of Chinatown streets for local and regional travel. As indicated in the Uptown Mixed Use Project DEIR, Chinatown streets are recognized as being an integral part of the circulation network for this project (9% of local traffic through Chinatown with an additional 3% along Lower Broadway). 1

It is necessary and prudent to study and measure the cumulative impacts this project as well as the impacts that the Jack London Square Redevelopment and Alameda Point projects will contribute. Only by doing so will we have a workable means to formulate and execute mitigation measures for this Oakland neighborhood.

Respectfully submitted,

Colland Jang, City of Oakland Planning Commissioner

Re: Uptown Mixed Use Project
Environmental Impact Report

We are a certified small local business with offices at 593 20th Street, Oakland, CA. Our firm has been in the City of Oakland doing business since 1996, and earlier when the undersigned and other colleagues were with a Disabled Veteran Business Enterprise. We do City of Oakland projects and other public and private projects.

The proposed Uptown Development, if implemented, will affect our ability to remain functional and some City projects will likely be affected. The Environmental Impact Report does not address the presence nor does it address the impact on our business and other businesses on 20th Street. This is unprofessional and is in direct contradiction to the City's policy of encouragement of small business. **1**

When the property transferred hands from the then landlord to the City, we were offered the first choice in buying the property. We did not choose to take the opportunity in view of the uncertainty. The project has now it seems has become a reality and our opportunity to procure was a missed one.

We hereby lodge our protest over the negligent and insufficient report. We would appreciate discussing the impact on our business, financially and otherwise, and the steps for the mitigation thereof.

Sincerely,

Shamir K. Mondle, P.E.

To: Warner, Lynn
Subject: Comments on Uptown Mixed-Use Project

Historic Properties and Archaeological Artifacts:

A graduate student has brought to my attention the fact that historic Chinatown was at the site in the 1860s (17th and Telegraph) and the city made them relocate after a major fire to San Pablo between 19th and 20th in the 1880s. She states that the buildings on San Pablo slated for demolition might be part of this historic Chinatown and that there might be valuable artifacts of that culture in the vicinity of those buildings. It therefore appears appropriate that we look for an opportunity to relocate at least one of those wooden buildings below 20th on San Pablo (perhaps somewhere in the current Chinatown area) that could then be used to exhibit whatever artifacts might be uncovered. If this is not feasible, we should, at minimum, excavate carefully so that artifacts are not destroyed and make then available for the public either at the Asian Cultural Center or other existing city facility that could exhibit them to retain the cultural heritage of the Chinese population at that time which was evidently displaced several times by the city. There is no mention in the report at all about this aspect of the area's history. **1**

Traffic Circulation:

Trans-11 "Significant Unavoidable" impacts is the term applied to the area at the West Grand, Frontage Road and Mandela freeway entrance. Another new large development with equal or more units is proposed for the West Oakland area in the near future at Central Station between 10th and West Grand on Wood and Frontage Road. There is no cumulative analysis for this problem. In fact there appears to be no cumulative impact analysis at all in this document. Since the writers of the document claim that it would be too costly and complicated to widen the CALTRANS Road, nothing is proposed. Instead, it appears appropriate that the developer should contribute to a fund with the developer of the Central Station site to add to CALTRANS funds to expand that roadway which already has severe backups at rush hour. **2**

Thank you,

Nancy J. Nadel
Vice Mayor
City Council District 3

COMMENTOR C4

Nancy J. Nadel, Vice Mayor, City Council District 3; November 3, 2003

C4-1: Refer to Master Response M-1 on page 14 of this document.

C4-2: The transportation analysis of the Year 2025 plus Project condition provides a cumulative analysis for the proposed Uptown project. The scenario includes all anticipated cumulative population and employment changes in and around the City of Oakland to the horizon year 2025, in addition to traffic associated with the proposed Project. For the Central Station project in West Oakland, a combination of office, commercial, and live/work activities was included in the projections, since the proposed residential project for this site is not currently permitted by the General Plan or Zoning Ordinance. In this cumulative scenario, the intersection of West Grand Avenue/Frontage Road/I-880 Ramps was found to operate at LOS F. As discussed in the Draft EIR, the mitigation for the poor service level at this intersection would require the widening of the existing elevated structure. Widening of the structure would require the acquisition of additional right of way, and the reconstruction of the aerial I-880/I-80 connector located above the intersection. These changes would be very costly and are deemed economically infeasible at this time. In addition, the intersection is within the jurisdiction of Caltrans and not under the City of Oakland's control. Caltrans does not have an improvement planned for this intersection, and has no mechanism to receive funding from the Uptown developer. For these reasons, the impact is considered significant and unavoidable. However, it remains feasible to improve this intersection and the City may choose to work with Caltrans in the future to fund and implement these improvements.

Re: Case File Number ER 03-0007, Uptown Mixed Use Project

The Uptown Mixed Use Project Draft Environmental Impact Report (dated September 2003) is incomplete and inadequate in evaluating the historic and archaeological resources in the project area and proposed inadequate mitigations.

The DEIR (p. 214) reports "research indicates that the east side of San Pablo Avenue between 19th and 20th Streets was a Chinese neighborhood during the 1870s, and archaeological deposits that may exist from this period have the potential to provide information" regarding research questions that, as described, would make it an important cultural resource under CEQA and a significant cultural resource under the National Register of Historic Places criteria for evaluation.

First, the DEIR is incomplete and inadequate in its assessment of early Chinese and Chinese American settlements in the project area. Some of Oakland's pioneering Chinese and Chinese Americans in 1867 established a settlement centered on the east side of San Pablo between 19th and 20th Streets (Chow 1974:116). This was after they had been burned out of Oakland's very first Chinatown at 17th and Telegraph, and prohibited by the city from rebuilding. Another city-driven relocation effort in 1869, only partially successful, resulted in the Uptown Chinatown centered at 19th/20th Street and San Pablo producing a related settlement centered at San Pablo and 22nd Street (see attached map). Research shows these early Chinatowns in the Uptown San Pablo area existed from 1867 through at least 1876 (Baker 1914:203-4), and perhaps through 1894 (*Oakland Enquirer* April 7, 1894). Preliminary research with an 1877 photo of the area suggests the buildings in the Uptown Chinatown may have looked like the two-story wooden building shown in the attached photo.

After a second relocation effort in the late 1870s/early 1880s--Chow notes Oakland city fathers again worked to remove Chinese and Chinese American residents from the Uptown Chinatown area in order to redevelop the newly-valuable area for profit--new wooden buildings were constructed in the Uptown project area. Some of these buildings survive intact, and some survive in remodeled form. The project area's buildings and likely archaeological deposits provide a unique opportunity to learn about the early Uptown Chinatowns at this 1880s time of transition and contestation. **1**

Archaeological resources that could characterize these early Uptown Chinatowns would be immensely significant. Such likely-existing resources could include wells or cisterns, refuse pits, latrines, architectural elements, and property-improving elements such as drainage features. The documentary record has so far revealed extremely little about these Uptown Chinatowns beyond their existence. [1] Potential Uptown Chinatown

---

[1] The accounts so far come from numerous politicians, persons involved in real estate development, and newspaper editors, who described the Uptown Chinatown in terms of it being a blight, but as they also used 'blight' to refer to 'the Chinese' in general, this is a characterization of the speakers/writers and not the Uptown Chinatown (e.g. *Oakland Tribune* March 13, 1875; Baker 1914: 203-4).

archaeological remains may be considered an important cultural resource under CEQA by virtue of their being

(1) associated with an event or person of recognized significance in California and American history;
(2) able to provide information which is both of demonstrable public interest and useful in addressing scientifically consequential and reasonable or archaeological research questions;
(3) at least 100 years old and [potentially] possessing substantial stratigraphic integrity;
(4) involves important research questions that historical research has shown can be answered only with archaeological methods.

1 cont.

Potential Uptown Chinatown archaeological remains may be qualify as a significant cultural resource for the National Register of Historic Places, by virtue of their being

(1) associated with events that have made a significant contribution to the broad patterns of our history;
(2) associated with the lives of persons significant in our past;
(3) potentially likely to yield information important in prehistory or history.

Such potential archaeological deposits may likely also qualify for the City of Oakland Local Register Listings, as outlined in the DEIR (p.215), and the California Register of Historical Resources, and therefore be "considered be considered historical resources for the purposes of CEQA review."

2

Second, the DEIR reports the project area has "a high likelihood of containing historical archaeological deposits (p.213)." Yet the DEIR is inadequate in that it does not convey that it is very probable the ground-disturbing activities associated with the Uptown Project may encounter significant, intact archaeological deposits eligible for listing on the California Register of Historical Resources and the National Register of Historic Places. Documentary evidence and the results of archaeological monitoring in the immediate vicinity of the project area—i.e. two blocks from the Uptown project—indicate that the Uptown project area may contain such significant, intact archaeological deposits. Reports on file at the Northwest Information Center related to this archaeological monitoring project record the high potential this area has demonstrated for containing significant, intact archaeological deposits. The reported on project—which, like the Uptown Project, would disturb historic and more-recently remodeled buildings—hadn't been predicted to still have "soils containing historical materials (NIC file report, 1994:61; see also 34-5). With that prediction of no archaeological remains, the mitigation implemented was to merely have a Qualified archaeologist monitor the demolition and construction's ground disturbing activities. [2] Contrary to expectations, the archaeological monitor found intact archaeological deposits in the immediate vicinity of the Uptown project. He discovered **multiple intact archaeological features and numerous artifacts even below basements of historic buildings, and on properties where 19th-century buildings had been replaced in the mid-20th century**. [3]

---

[2] Curiously, this mitigation for an area anticipated **not** to have archaeological remains is the same mitigation the Uptown DEIR proposes for an area it reports to have "a **high likelihood** of containing historical archaeological deposits (p.213)."

[3] The large quantity of intact archaeological deposits discovered reveals soil bores were an inadequate method of assessing the presence or absence of intact historical archaeological deposits in the immediate vicinity of the Uptown Project (NIC file reports). The Uptown EIR therefore should not propose soil bores as the discovery method for archaeological mitigation planning.

From all indications, the planned Uptown construction area is likely to contain intact and significant archaeological deposits relating to early Chinese and Chinese American pioneers in Oakland. Yet not only are the proposed mitigations appallingly inadequate, Chinese American descendent groups, historical groups, and other potential stakeholders seem not to have been contacted for EIR-scoping comments. The DEIR public comment period should therefore be extended and/or a semi-final EIR should be prepared. **2 cont.** **3**

The DEIR is inadequate also in regard to "prehistoric", or Native American archaeological resources. The DEIR (p. 214) states that a few blocks away from the Uptown project, construction of a building foundation intruded on prehistoric archaeological site CA-ALA-22 and uncovered the burial of a Native Californian person. An archaeological resources investigation prepared for a project in the immediate vicinity of the Uptown project area reported "several [Native Californian] sites" have been recorded "within a three-quarter mile radius (p.13 of 1994 report on file at NIC)." Again, the Uptown DEIR itself notes both that "prehistoric archaeological sites have been recorded in the Project area" and "Several Ohlone villages in the vicinity of the Project area were still inhabited prior to the Peralta land grant." Given the numerous recorded Native Californian sites, were Native American / Native Californian groups contacted for DEIR-scoping comments? How was it determined that "the Project area has a low-to-moderate likelihood of containing prehistoric archaeological deposits (DEIR p.213)"? Given the unexpected presence of intact historical archaeological deposits in the immediate vicinity of the project, might the DEIR be underestimating (and therefore preparing inadequate mitigations for) encountering prehistoric archaeological remains in the project area? **4**

More extensive mitigations must be considered for the likely archaeological deposits, including mitigation measures that would include well-planned archaeological discovery and characterization studies of the area in advance of demolition- or construction-related ground-disturbing activities. (The Anthropological Studies Center associated with Sonoma State University has been very successful in efficiently completing such archaeological mitigations.) Descent groups and other stakeholders should be contacted and their input taken seriously in the early planning stages. A mitigation should be considered to provide for a resource center or small museum in the area of the Uptown Chinatowns to let old and new community members commemorate and learn more about Oakland's Chinese pioneers and other Uptown predecessors. This could be a real community-builder and anchor in this new development, adding immeasurable value to the project.

Proposed mitigation measures that do not include measures to mitigate the impacts on archaeological remains (e.g. HIST-8, p.227) are inadequate and completely unacceptable.

Finally, the DEIR is inadequate in its assessment of the importance of the above-ground historic resources. To give just one example, in discussing Impact HIST-7 (DEIR p.226), proposed demolition and construction of four Potential Designated Historic Properties in the 19th and San Pablo Commercial District, the DEIR states "the district's integrity of setting has been diminished by surrounding uses that 'differ in use and visual coherence' from the district's contributing buildings" and "[t]herefore, the Project's effects on the setting of the 19th and San Pablo Commercial District would not significantly impair the district's integrity." It seems difficult to take seriously an argument that if the surroundings of an historic district have subsequently been rebuilt with different uses, the district does not have integrity. The integrity of a historic district with PDHP buildings up to 120 years old and still in their original location seems instead to be emphasized by their age and integrity of location. **5**

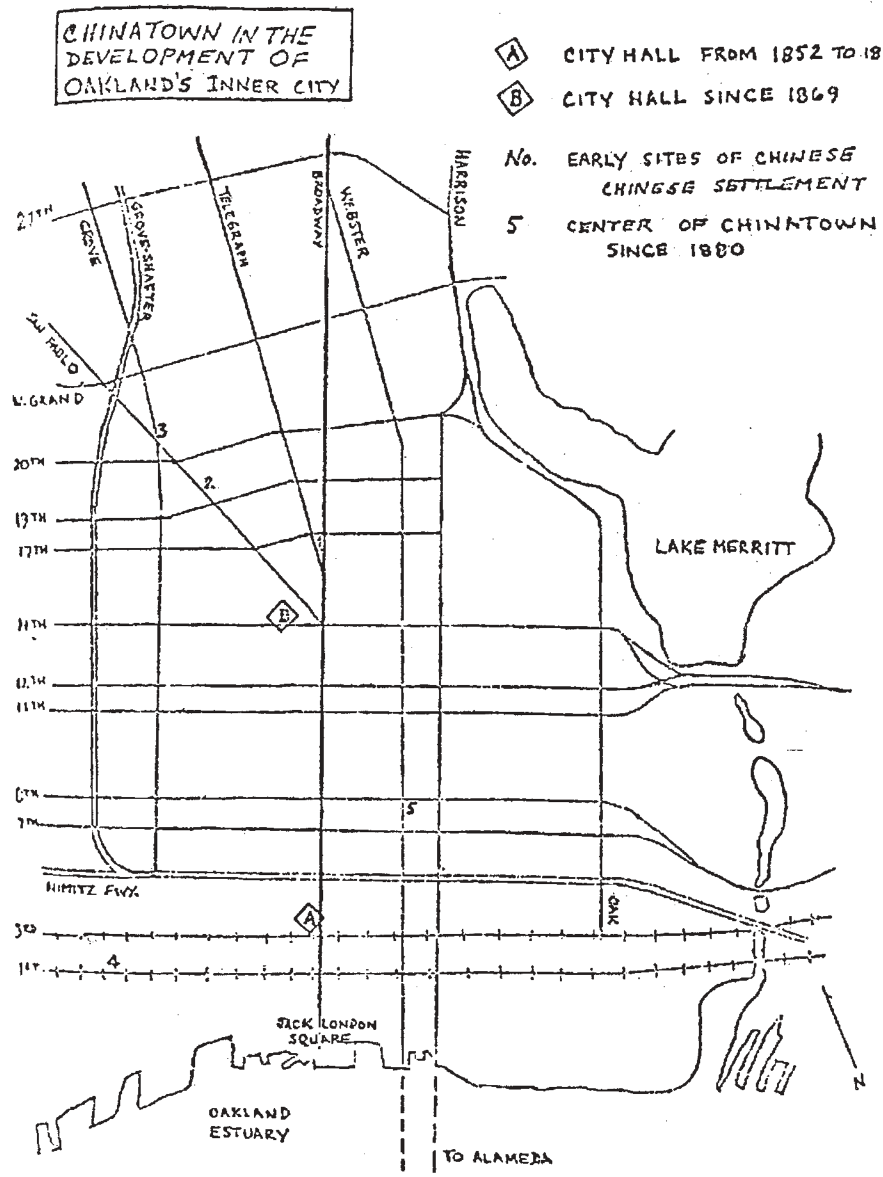
The numbers 2 and 3 on the map below indicate 19th-century Chinese settlements centered at San Pablo Ave and 19th Street, and San Pablo and 22nd Street, respectively. These Uptown Chinatowns were established in 1867 and continued at least through 1876, and possibly through 1894. (Subsequent research reveals additional historic Chinese settlements in Oakland's inner city not depicted on this map.) —AN



Chow, Willard T. (1974). *The Reemergence of an Inner City: The Pivot of Chinese Settlement in the East Bay Region of the San Francisco Bay Area*. Ph.D. thesis, Georgraphy Department, University of California, Berkeley. Map 5, page 118

Copies of Chow's dissertation are available at the Oakland Public Libraries and libraries of the University of California, Berkeley.

Preliminary research with an 1877 photo of the Uptown area suggests the buildings in the Uptown Chinatown may have looked similar to this one. The photo above was published as a postcard in about 1910. (Source: Oakland Public Library Oakland History Room)

COMMENTOR C5
Anna Naruta, Historical Archaeologist; November 2, 2003

C5-1: Refer to Master Response M-1 on page 14 of this document.

C5-2: Refer to Master Response M-1 on page 14 of this document.

C5-3: The Draft EIR utilizes the results generated by personal contacts and background research to determine the baseline environmental conditions within and adjacent to the Project area. The following organizations were contacted, by letter and follow-up telephone calls, for their input and concerns about the proposed Project: Oakland Heritage Alliance; City of Oakland Landmarks Preservation Advisory Board; City of Oakland Planning Department; Oakland Cultural Heritage Survey (OCHS); and the California Native American Heritage Commission. Background archival research and literature review resulted in predictive assessments for prehistoric and historical archaeological deposits within the Project area. This combination of public contact and baseline research established the scope, content, and focus of the Draft EIR with respect to potential environmental impacts.

Please also see Master Response M-1 on page 14 of this document, which revises and supplements the text in this regard. The revisions made to Mitigation Measure HIST-2 (detailed in Master Response M-1 on page 14 of this document) requires consultation with members of the Chinese-American community in regard to the treatment of archaeological materials associated with historic Chinese communities if such resources are identified within the Project site.

C5-4: Refer to Master Response M-1 on page 14 of this document.

C5-5: The discussion on pages 226 and 227 of the Draft EIR have been revised to provide a more detailed discussion about the Project's potential impacts to the 19th and San Pablo Commercial District. Refer to Response to Comment B4-8.

C5-6: There is no known evidence that the photo shown in the attachment to this comment letter is actually a photo of the Uptown area. In fact, it is shown in the recently published book, *Oakland: A Photographic Journey,* as a photo of a building that existed in the 1890s in the area currently known as Chinatown (Webster and 7th Streets).

October 31, 2003

Dear Lynn Warner,

I am a small Business owner in the Uptown/Forest City Development. My business is Revelli Tire Company at 571-20th, Street, Oakland where I have provided tire, brake and front end service myself since 1959(45 years). My father bought the business in 1949, so it 's been in our family for 55years in Jan. 04.
The Draft Environmental Report is deficient because it fails to mitigate in any manner the detrimental effects of this proposed project on a small business like mine.
The Draft Environmental Report fails to define any meaningful project or public purpose for that undefined project. **1**
My business is a longtime neighborhood fixture and there is no basis for an undefined project to eliminate my business operations.
There is no alternative, equal space nearby so therefore I would lose my job,lose my business,and the means to support my family.
This letter is in addition to my verbal comments at the public meeting conducted by the Oakland Planning Commission Hearing on Oct .15, 2003 in Hearing Room # 1 at City Hall.

Thank You,

John M. Revelli

COMMENTOR C6
John M. Revelli, Owner, Revelli Tire Company; October 31, 2003

C6-1: Chapter III, Project Description, of the Draft EIR meets the criteria outlined in *CEQA Guidelines* section 15124 for the required components of a project description, including a statement of objectives that contains the underlying purpose of the Project. Pages 41 and 42 of the Draft EIR contain several Project objectives that define the Project's underlying purpose, including: redevelop blighted, underutilized sites; create a vibrant mixed-use neighborhood; construct market-rate and affordable housing; and provide opportunities to strengthen local-serving businesses by developing ground-floor commercial space. Chapter III of the Draft EIR thus adequately defines the Project and its purpose.

The relocation of businesses from the Project site is not considered an environmental impact in and of itself. The comments pertaining to the personal impacts on the business owner are noted. Refer to Master Response M-2 on page 18 of this document.

Re: Comments on the Uptown Mixed-Use Redevelopment Project DEIR

Dear Ms. Warner:

I have been asked to comment on the draft EIR for the above referenced project. I am an archaeologist with over 30 years experience in urban settings in Northern California. I was the archaeologist charged with recovering the remains of San Jose's first Chinatown (1850-1887) when the Fairmont Hotel and Silicon Valley Financial Center buildings were constructed. These buildings were on the site of an extensive Chinese American community not dissimilar to the early Oakland community. In the area of a single large urban block, we found dozens of significant historic archaeological features. Only the extensive pre-project planning that identified the potential archaeological deposits and developed a program for systematic recovery when discoveries were made prevented significant delays in these projects. Without a similar level of planning, you will undoubtedly face delays and problems during the construction of the proposed project.

Archaeological monitoring can be an appropriate approach to the recovery of archaeological features, but considerable planning is required for the monitoring process to succeed. Several examples of factors that must be considered:

1. Monitoring must be adequate to the magnitude of the project.
2. The monitor must be able to stop excavation in areas where discoveries are made.
3. The Project Archaeologist must be able to commit additional resources as soon as discoveries are made.
4. Recovery of archaeological features needs to be undertaken efficiently in order to avoid project delays.
5. Lack of cooperation from the project sponsor will only increase the cost of archaeology and the amount of delay from archaeological recovery processes.

If these factors are not fully considered, the project will not proceed efficiently, historic resources will be unnecessarily damaged or lost, and a part of the historic fabric of Oakland will be rent.

I strongly encourage a reexamination of the archaeological monitoring program to insure that adequate attention has been paid to the identification and recovery of archaeological features in a timely and efficient manner. Any other approach assures either the loss of important cultural sites, or unnecessary delays in construction of the project.

1

122 American Alley, Suite A Petaluma, California 94952
(707) 762-2573 ☎ FAX (707) 762-1791

It is possible to undertake this project with no delays due to archaeological or historic discoveries, and to still find and recover any encountered features or sites. Any other approach will absolutely insure additional expenses, time delays, negative publicity, and a host of other problems.

I emphasize again that casually assuming that the presence of an archaeological monitor will adequately address the potential problems is an approach absolutely guaranteed to cause delays and problems. When problems surface, additional delays will ensue as decisions are made and approaches developed. Thorough archaeological planning prior to initiation of earth disturbing activities will insure a minimum of surprises during the construction project.

1 cont.

Thank you for this opportunity to comment on the draft EIR for this project. If I can answer any questions, please contact me at 707-762-2573.

Sincerely,

William Roop
Partner, ARS

COMMENTOR C7
William Roop, Partner, Archaeological Resource Service; November 3, 2003

C7-1: Refer to Master Response M-1 on page 14 of this document. As described in that response, Mitigation Measure HIST-2 has been revised to incorporate many of the commentor's recommendations, including: acknowledgement of the presence of a historic Chinese settlement, and the potential for associated archaeological materials within the Project site; the need for pre-construction planning in regard to testing for archaeological material; and the need for the monitor to be able to halt construction activities if archaeological deposits are encountered during the Project construction period.

Subject: CAUTION NEEDED ON UPTOWN MIXED USE REDEVELOPMENT PROJECT (ER 03-0007)

TO: Lynn Warner, City of Oakland Planning Department
CC: Councilmembers Danny Wan, Jean Quan, Henry Chang
RE: UPTOWN MIXED-USE REDEVELOPMENT PROJECT, Case File No. ER 03-0007

I am alarmed that the "Forest City Project" could cause the demolition of parts of Old Chinatown, with roots back to the 1860's---without meaningful wider-ranging and legal considerations. Unfortunately, many American cities, as well as foreign nations, have learned from horrible mistakes that the "Demolition of History" is irreversible and detrimental to community/ economic vitality. In the relatively youthful west coast of the United States, we have far fewer historic resources to chronicle our lineage. Especially for Chinese America, the few significant historical resources, which exemplify the difficult journey to American enculturization and success, should be preserved.

From a Developer's perspective, preservation of history can increase the value of the project. This has been proven, over and over again, in Washington DC, Shanghai, Jerusalem, Paris, San Francisco...... The incorporation of old historic architecture into the Uptown Development Project would build on, rather than dismantle, the historical values that strengthen community and economic values. For example, even Marysville---a small California Town--- is working to restore the old Bok Kai Taoist Temple (1880) and its old Chinatown as a Chinese Cultural Village. Washington DC is currently expanding its Chinatown. Historic Boston, Philadelphia, Williamsburg, Savannah, Charleston etc. revive the historical elements that attract visitors and economic vitality. 1

The old Oakland Chinatown in the uptown San Pablo area has orgins in the 1860's. Ironically, past governmental agencies have attempted to dismantle Chinatowns for political reasons and special interests. It would be so tragic to lose these vestiges of Chinese American history now, after staving off political attacks for so many decades.

Aside from just good urban planning and sensitivity to cultural history, national, state and local planning/ zoning historical codes need to be considered. Old Oakland Chinatown is definitely eligible for the National Register of Historic Places. Oakland's history is one its unique attributes that is being gradually lost. Oakland must reinforce the historic resources that give it a sense of Place, while many critics have cited "There is no there, there". Well, there are historical roots there---and these are the basis for building a stronger sense of community.

Many organizations can provide extensive information about the historical value of Old Oakland Chinatown, e.g. the National Trust for Historic Preservation, San Francisco Architectural Heritage, California Preservation Foundation, numerous Oakland community organizations, Chinese Historical Society of America...... Please incorporate a wider range of participation into the planning and EIR process.

Feel free to contact me for any assistance at (415)-557-4759.

Regards,
Howard Wong, AIA

Oakland, CA 94612

Dear Ms. Warner:

I oppose any razing of the historical Chinatowns on 17th and Telegraph and San Pablo between 29th and 29th street. All efforts were not made to inform interested parties.

The developers' own DEI Report notest the project area has "a high likelihood of containing historical archaeological deposits (p. 213)." Despite this, the developers plan to raze the area with only an archaeologist to watch their destruction of these important artifacts. **1**

Every possible efforts should be made to preserve the Chinese and Chinese American pioneer's artifacts by allowing trained professionals to remove them prior to demolition and redevelopment. The developers should provide funds to rehab the 1883 building to preserve as a historical site. **2**

Sincerely,
Ann G. Yee

COMMENTOR C9
Ann G. Yee; November 3, 2003

C9-1: The proposed Project does not include the demolition of buildings at 17th Street and Telegraph Avenue, which is located outside of the Project site. For the purposes of responding to this comment, it is assumed the commentor intended to say that she opposes the razing of buildings between 20th and 19th Streets along San Pablo Avenue (29th Street and San Pablo Avenue is also outside of the Project site). This comment is addressed in more detail in Response to Comment B1-1.

Efforts to notify individuals, businesses, agencies, and organizations regarding the environmental documentation effort for the Project exceeded the requirements of CEQA. Refer to Response to Comment B4-2.

C9-2: Refer to Master Response M-1 on page 14 of this document. The Muller Tailor-Rankin Plumbing shop at 1972 San Pablo Avenue is the “1883 building” referenced by the commentor. The building was constructed in 1883 and has a “C” rating from the OCHS. It is a PDHP, but is not considered to be a historic resource pursuant to CEQA. See Response to Comment B4-8 which provides a detailed discussion regarding the Project’s potential impacts to existing buildings on San Pablo.

D. VERBAL COMMENTS

The Planning Commission held a Public Hearing on October 15, 2003 to accept verbal comments on the Draft EIR from agencies, organizations or interested individuals. The comments presented at the hearing are summarized and enumerated in attachment D1 and written responses follow.

The Landmarks Preservation Advisory Board discussed the Draft EIR during two of its meetings. The comments presented by each board member are outlined and enumerated in Letter D2 and written responses follow.

Planning Commission Hearing
D1

COMMENTATORS AT THE OAKLAND CITY PLANNING COMMISSION PUBLIC HEARING FOR THE UPTOWN MIXED USE PROJECT

October 15, 2003; Hearing Room 1, City Hall, 1 Frank H. Ogawa Plaza, Oakland

Public individuals spoke first, followed by Planning Commissioners.

Public Individuals

John Revelli. Introduced himself as the owner of Revelli Tires on 20th Street. Made the following comments:

- The EIR did not contain a discussion of the impacts of the Project on small businesses.
- Revelli Tires is a family-run business and has been so for 45 years.
- Revelli Tires is dependent upon its location, which is in close proximity to BART; therefore, for the business to remain viable, it would have to be relocated to within 1 block of a BART station. However, a relocation would be a hardship because John Revelli is the sole owner/operator of the business. 1
- The Uptown Project should be built around Revelli Tires and should leave the business intact.
- He will also submit his comments in written form.

Tony Fung. Introduced himself as the owner of the full-service garage and smog station within the Project site. Made the following comments:

- The EIR did not mention the environmental impacts that would result from the relocation of businesses within the Project site.
- Due to the lack of available sites, CEDA would not be able to relocate businesses within the vicinity of the Project site. 2
- His business is dependent upon being in close proximity to a BART station, and he will be forced out of business if he is relocated.
- The Uptown Project should incorporate his business; residents within the Project site will require the services of a garage and smog station.

Julia Liou. Introduced herself as a representative of the Oakland Chinatown Coalition and other Chinatown-based organizations. Made the following comments:

- The Chinatown community is concerned about cumulative impacts on neighborhoods around the Uptown Project site.
- 9 percent of Project trips will go through Chinatown, but the EIR does not include detailed analysis of the Project's impacts on the Webster/Posey Tubes intersections. 3
- The EIR needs to better analyze the cumulative effects of the Project on Chinatown (including the effects of Jack London Square projects). Chinatown is one of the Bay Area's 52 most impoverished communities.

Anna Naruta. Made the following comments:

- The EIR needs to better analyze the cumulative impacts of the Project on surrounding communities. 4
- She supports Joyce Roy's March 28 letter, which stated that the Project should be integrated into the Uptown entertainment district. 5
- The Project should preserve historic resources within the Project site, including the 19th and San Pablo Commercial District and the Rankin Plumbing building, which is 120 years old. 6
- The public park should front on Telegraph Avenue.

- Historic buildings within the Project site are small, and are generally located on the periphery of the Project site (e.g., Navlet's), and so could be easily incorporated into the Project. **6 cont.**
- Two previous Chinatown settlements (dating as far back as 1869) were located within and in close proximity to the Project site on 19th Street and San Pablo Avenue, and 22nd Street and San Pablo Avenue. These communities should be discussed in the EIR in more detail.
- Mitigation measures should be included that reduce impacts to archaeological resources associated with these communities. Page 213 of the EIR states that there is a low to moderate chance that archeological resources will be uncovered on the site. Due to the extensive history of the Project site, there is a high likelihood that unidentified archaeological resources are located on the site. The EIR should address these cultural resources that are likely to be present within the site. Oakland General Plan Policy 4.1 mandates protection of underground cultural resources. **7**

Erin Beales. Introduced himself as the new owner of Navlet's. Made the following comments: **8**
- Navlet's as an architectural resource is underrated in the EIR; the building should really be rated an A. The building has been restored to its original 1924 condition (the signs and glass windows have been restored).
- Navlet's contains architectural details and a three-tone paint job that would be obscured by shade. **9**

Steve Lowe. Made the following comments:
- The public park should be relocated to Telegraph Avenue, so that it will be subject to more surveillance. The City should look at park location alternatives. **10**
- A park belongs in the heart of Oakland's retail center, and could have a role similar to Union Square in San Francisco.

Joyce Roy. Identified herself as a representative of the Sierra Club and an Oakland resident. Made the following comments:
- The Project needs to reference the fact that the Uptown District is primarily an entertainment district. **11**
- The Project is not consistent with the objectives of the Uptown Redevelopment Plan. **12**
- The proposed park should be in a more public place to take advantage of good views of the Uptown District and Downtown, and to separate housing from surrounding areas. This park could energize the area, and provide a separation between conflicting land uses. **13**
- She will also submit her comments in written form.

Naomi Schiff. Identified herself as a member of the Oakland Heritage Alliance. Made the following comments:
- Historic buildings could be incorporated into the Project at 20th Street and San Pablo Avenue. **14**
- The DEIR is incomplete for the following reasons: it does not analyze alternatives that include the preservation of on-site historic buildings; it does not analyze the design sensitivity of historic properties surrounding the Project site; Block 7 was not adequately analyzed. **15**
- A greater distance needs to be maintained behind the Fox Theater. **16**
- The hamburger stand on Block 9, which is an excellent example of "googie" architecture, should be maintained as part of the Project. **17**
- She will also submit her comments in written form.

John Chapman. Identified himself as a representative of the Livable Communities Initiative. Made the following comments:

- The Project combines economy, environment, social equity and civic engagement, represents a good plan for the revitalization of the district, and combats sprawl.
- The EIR should talk about the benefits of the Project, which include the provision of housing near jobs and transit, the clean-up of on-site contamination, the provision of transit opportunities, the reduction of obesity, and the recycling of land. **18**

Sanjiv Handa. Identified himself as a representative of the East Bay News Service. Made the following comments:

- The City does not have the capabilities to deal with neighborhood impacts that would be caused by the proposed student housing on Block 7. **19**
- Politicians neglect Oakland residents and quality-of-life issues. **20**

<u>Planning Commissioners</u>

Anne Mudge. Made the following comments:

- It would be useful if the EIR included a map that shows proposed uses transposed on zoning designations. **21**
- On page 49, SBC and PG&E are designated as "Other Agencies" when in fact they aren't permitting agencies. **22**
- The EIR needs to include additional discussion of the relocation of businesses from the Project site. **23**
- It is hard to tell from the EIR which buildings are proposed for demolition. Figure IV.I-1 should show these buildings. **24**

Mark McClure. Made the following comments:

- The EIR should include more information and analysis regarding relocation of businesses from the Project site. **25**
- The EIR should include alternatives that include different park locations. **26**

Colland Jang. Made the following comments:

- The study intersections analyzed in the EIR should include those in Chinatown and the Broadway corridor. **27**
- The intersection of Broadway and 5th Street is operating at LOS F. Why wasn't this intersection subject to detailed analysis in the EIR. **28**
- Are there detailed plans for Block 7 (if so, this is unclear in the EIR)? **29**
- Why does the EIR only consider alternatives for Block 7?
- The EIR should include alternatives that include 20th Street and San Pablo Avenue (historic resources). **30**

Michael Lighty. Made the following comments:

- The EIR needs to be more explicit in regard to what buildings would be demolished within the Project site. **31**
- Historic buildings, especially those fronting on San Pablo Avenue and the Great Western Power Company Building, should be incorporated into the Project to give it character. **32**
- The quality of the park space would be improved by moving it to Telegraph Avenue. **33**
- The Project's impacts on pedestrian safety and traffic volumes in Chinatown should be quantified. **34**

Nicole Franklin. Made the following comments:

- The Project includes 43,000 square feet of commercial space. Performing arts and entertainment uses should be incorporated into this space to provide for after-hours activity. 35
- Why are there no population, employment and housing impacts? One would assume that impacts would result from such a large number of people moving Downtown. 36

Clinton Killian. Made the following comments:

- The intersections shown in Figure IV.D-2, Study Intersections, are not representative of all the intersections that would be affected by the Project.
- Why were no intersections in West Oakland analyzed except for West Grand? 37
- Intersections between East Adams Point and the Lakeshore District and Downtown Oakland should be analyzed.
- Figure IV.D-8, Project Trip Distribution, is incomplete: West Grand would be affected by the Project, especially when you take into account regional trips. 38
- The EIR should analyze the impacts of the Project on the Paramount.

COMMENTOR D1
City of Oakland Planning Commission Public Hearing
October 15, 2003

D1-1: Mr. Revelli submitted his comments in writing. Refer to Response to Comment C6-1.

D1-2: Mr. Fung submitted his comments in writing. Refer to Responses to Letter C1. Also refer to Master Response M-2 on page 18 of this document.

D1-3: Written comments were received from the Oakland Chinatown Coalition which include more detailed comments related to each of the topics Ms. Liou raised at the hearing. Refer to Responses to Comments B3-4 and B3-9.

D1-4: Refer to Response to Comment B3-4.

D1-5: This comment refers to the proposed Project, not to the analysis or conclusions contained in the Draft EIR. Comment is noted and no additional response is necessary.

D1-6: Refer to Responses to Comments B4-8 and C9-2.

D1-7: See Master Response M-1 on page 14 of this document.

D1-8: The historic architectural resources analysis in the Draft EIR utilizes the architectural ratings of the Oakland Cultural Heritage Survey (OCHS). The OCHS rankings are based on the graduated system set forth in the *Historic Preservation Element* of the City’s General Plan. The OCHS rating for the Great Western Power Company Building (Navlet’s) is B+2+, indicating that the structure is a Property of Major Importance that contributes to an Area of Secondary Importance. The building does not have a contingency rating, indicating that even if the building is restored to a historic condition, its OCHS rating would not increase. Therefore, the OCHS rating adequately reflects the current condition of the Great Western Power Company Building. No revisions to the Draft EIR are necessary.

D1-9: As described on page 277 of the Draft EIR, the Great Western Power Company Building is currently under shadow during mornings in the winter, spring, and fall, and afternoons in the winter. Implementation of the proposed Project would cast shade on portions or all of the structure for the majority of the year, with the exception of late afternoons in the spring and fall. However, the Great Western Power Company Building is located in an urban setting (in which shade is a pre-existing component of the building’s architectural context), and is characterized by massive façade elements that would not be obscured by shade. Although the proposed Project could make it harder to discern some of the building’s coloration and smaller architectural details during certain times of the year, it would not compromise the historic architectural integrity of the structure. Shade is a natural element of the urban setting of the Great Western Power Company Building.

D1-10: This comment refers to the proposed Project, not to the analysis or conclusions contained in the Draft EIR. Comment is noted and no additional response is necessary.

D1-11: The authors of the Draft EIR disagree with the commentor's statement that the Uptown District is primarily an entertainment District. Page 37 of the Draft EIR states that although historically the Uptown District was a popular shopping and entertainment district, the neighborhood currently contains a mixture of uses. Although two major theaters are located in the Uptown District, other land uses, including parking, commercial, and residential, predominate. No revisions to the Draft EIR are necessary.

D1-12: The authors of the Draft EIR disagree with the commentor's conclusion that the proposed Project is not consistent with the Central District Urban Renewal Plan (also known as the Uptown Redevelopment Plan). As described on page 70 of the Draft EIR, the proposed Project is consistent with the major objectives of the Plan, including the re-establishment of residential areas, utilization of transit nodes, and the provision of infrastructure.

D1-13: This comment refers to the proposed Project, not to the analysis or conclusions contained in the Draft EIR. Comment noted and no additional response is necessary.

D1-14: Refer to Response to Comment B4-8.

D1-15: Refer to Responses to Comments B4-7, B4-8, B4-10 and B4-15.

D1-16: The Fox Theater Master Plan Report (Volume Three), prepared by Hardy Holzman Pfeiffer Associates in 2001, describes five rehabilitation alternatives for the theater. Each alternative includes a designated 40-foot-wide loading/support area adjacent to the western side of the theater. This area would allow for three 55-foot long trucks with semi-trailers to park and off-load simultaneously into the backstage storage area. This space is considered necessary for the Fox Theater to sustain a performing arts program. Therefore, the 50-foot-wide loading/support area behind the Fox Theater that is proposed as part of the Project would be adequate to allow for such loading and unloading.

D1-17: Refer to Response to Comment B4-14.

D1-18: A discussion of the benefits of the proposed Project, including the redevelopment of an underutilized site, the construction of infill housing, and the development of dense uses adjacent to transit stations, is found on numerous pages of the Draft EIR, including: 66, 69, 74, and 243.

D1-19: The commentor is likely referring to impacts that could result from the introduction of a large number of students into a small geographic area, namely: litter, occasional boisterous behavior, and associated noise. Students on Block 7 would be subject to the same ordinances that govern personal behavior throughout Oakland, and the same punishments for violating noise and litter regulations. Although it is conceivable that additional police officers would be needed to occasionally patrol the vicinity of Block 7 due to the large number of students living in the area, this would not represent a significant environmental impact pursuant to CEQA and the City's criteria of significance because the Project would not require new police facilities to be built. It is also likely that conditions and agreements pertaining to public safety and the provision of adequate security personnel by the Project operator will be considered by decision-makers during the review of the student housing portion of the Project. Therefore, no revisions to the Draft EIR are necessary.

D1-20: This comment does not address the adequacy of the EIR. Comment noted and no additional response is necessary.

D1-21: A map showing proposed land uses transposed over zoning designations will be prepared by City staff prior to Project approval.

D1-22: Table III-4 on page 49 of the Draft EIR is revised as follows:

Table III-4: Required Permits and Approvals

Lead Agency	**Permit/Approval**
City of Oakland Planning Commission City Council Redevelopment Agency	• Major Conditional Use Permit for creation of a new park ~~a project over 100,000 square feet in size~~ and for ~~D~~demolition of rooming ~~Single Residency Occupancy (SRO~~) units • Design Review • Planned Unit Development (preliminary and final) • Minor Conditional Use Permits or Variances, if determined necessary once detailed plans are submitted • Redevelopment Agency actions, including a Disposition and Development Agreement and acquisition of land • Subdivision Maps to combine parcels, create new parcels or create condominiums, if proposed • ~~DDA~~ • General Plan Amendment and Rezoning to designate proposed park as open space
Responsible Agencies	
East Bay Municipal Utility District (EBMUD)	• Approval of water line, water hookups and review of water needs
California Department of Transportation (Caltrans)	• Approval of plans and encroachment permit for improvements located within the State right-of-way; improvements within the public right-of-way; excavation for utilities; clean-up of contamination; condemnation of property (if required); and traffic improvements (including re-paving, re-striping, signal improvements, street lights, and signal optimization)
California Regional Water Quality Control Board (RWQCB)	• National Pollutant Discharge Elimination System (NPDES) permit for stormwater discharge • Approval and oversight of required remediation plans
Other Agencies	
~~SBC (prev. Pacific Bell)~~	~~• Approval of communication line improvements and connection permits~~
~~Pacific Gas & Electric PG&E)~~	~~• Approval of natural gas improvements and connection permits~~
California Department of Toxic Substances Control (DTSC)	• Approval and oversight of the plan
Bay Area Air Quality Management District (BAAQMD)	• Permitting of asbestos abatement activities

Source: LSA Associates, Inc., 2003.

D1-23: Refer to Master Response M-2 on page 18 of this document.

D1-24: Figure III-3, Proposed Demolition, has been added after page 47 of the Draft EIR; as shown in Chapter V of this document.

Page 47 of the Draft EIR is revised as follows:

7. Demolition and Construction

Demolition activities would include the removal of all existing structures on Blocks 1 through 7, including approximately 20 buildings, with the possible exception of the Great~~er~~ Western Power Company Building (also known as Navlet's Florist and Nursery). <u>Proposed building demolition is shown in Figure III-3.</u> The Project applicant is proposing the following three variants in regard to the Great Western Power Company Building:

D1-25: Refer to Master Response M-2 on page 18 of this document.

D1-26: No environmental impacts are associated with the proposed park location. The City and project applicant may consider alternative park locations as part of the Project's design review process. Refer to Response to Comment B5-2.

D1-27: Refer to Responses to Comments A2-2, B3-7, B3-8, B3-9 and C2-1.

D1-28: Refer to Response to Comment B3-7 which explains the screening of intersections that was undertaken as part of the Uptown traffic study. The intersection of Broadway and 5th Street was screened out and not addressed in the Draft EIR as it was determined that the Uptown project would not significantly affect this intersection.

D1-29: The development proposed for Block 7 is described on page 45 of the Draft EIR. Also refer to Responses to Comments B4-1 and B4-7.

D1-30: Pursuant to section 21159.25 of the CEQA Statutes, a Focused EIR is not required to contain an alternatives analysis. The mitigation measure for Impact HIST-8 has been revised to include preservation of some of the buildings located on San Pablo Avenue. Refer to Responses to Comments B4-8 and B4-10.

D1-31: Refer to Response to Comment D1-24.

D1-32: This comment refers to the proposed Project, not to the analysis or conclusions contained in the Draft EIR; no additional response is necessary. Also refer to Response to Comment B4-8.

D1-33: This comment refers to the proposed Project, not to the analysis or conclusions contained in the Draft EIR; no additional response is necessary. Refer to Response to Comment B5-2.

D1-34: Refer to Response to Comment B3-9.

D1-35: This comment refers to the proposed Project, not to the analysis or conclusions contained in the Draft EIR; no additional response is necessary.

D1-36: A population or job increase is not an environmental impact in and of itself. The City of Oakland criteria of significance on page 74 of the Draft EIR dictate that a project would have a significant population, employment and housing impact only if it would: (1) induce substantial population growth; (2) displace a substantial number of housing units; or (3) displace substantial numbers of people. Because the population and job growth associated with the proposed Project is consistent with growth anticipated in the City's Land Use and Transportation Element of the General Plan and are well within the growth projected by the City's cumulative scenario and ABAG's projections for Oakland over the next 5 years, Project-related growth would not be considered substantial. In addition, the demolition of a relatively small number of SRO units would not displace a substantial number of housing units or people; all residents within the Project site would be relocated. The proposed Project would result in the development of 250 units of affordable housing, a net beneficial housing impact.

D1-37: The amount of traffic that the proposed Project would add to each of the intersections in West Oakland was evaluated in detail. The proposed Project would add small amounts of traffic to West Oakland arterials such as 7th Street, 14th Street and 18th Street; however, the intersections along these roadways would not meet the Draft EIR's screening criteria (refer to Response to Comment B3-7). Because the project would not substantially adversely affect these intersections, they were not analyzed in the Draft EIR. It should also be noted that Draft EIR's intersection screening criteria was satisfied for many intersections along West Grand Avenue in West Oakland, and these intersections were evaluated in detail in the study.

D1-38: Blocks 8 and 8a, which are adjacent to the Paramount Theater, are proposed as alternate sites for the relocation of the Sears Auto Center. The Sears Auto Center is anticipated to be a one-story building that would not conflict in any way with the functioning or historic integrity of the Paramount Theater. As described on page 277 of the Draft EIR, implementation of the proposed Project would cast shadows on the Paramount Theater in mid-winter when the sun is low on the horizon; however, this impact would not occur during the majority of the year, and would not substantially obscure the façade of the theater. As described in Section IV.A, Land Use, of the Draft EIR, the proposed Project would benefit cultural venues in Downtown Oakland by introducing a permanent residential population to the Uptown District.

Subject: Landmarks Preservation Advisory Board – Comments on Draft Environmental Impact Report for Uptown Mixed Use Project Environmental Impact Report

Dear Ms. Cappio:

At its regular meeting of October 6, 2003, the Landmarks Preservation Advisory Board (LPAB) considered the Draft Environmental Impact Report (DEIR) for the Uptown Mixed Use Project Environmental Impact Report. The LPAB discussed the DEIR and directed the Uptown DEIR sub-committee to prepare a letter incorporating the Board's comments and concerns, as outlined below.

Board Member Dreyfuss

- Demolition or partial demolition of the old power company building would constitute a serious and unavoidable impact, even with mitigations that are proposed.
- The EIR should include an alternative that includes the preservation of the power building. **1**
- The proposed tall project on parcel #7 would have an impact on the YMCA building and the power building. An alternative of a low-rise building should be explored at both parcels #7 and #3. **2**

- The DEIR did not address project impacts on the existing visual connection between the uptown entertainment district and cathedral district. This project cuts those districts off from each other visually and this should be addressed in the EIR. A possible mitigation is to limit height of buildings on parcels #7 and #3 to low-rise buildings. **3**
- Disagrees with survey ratings on the 1966, 1972 San Pablo. The consultant should review ratings on both of these buildings. **4**
- The DEIR states that there would be a serious unavoidable impact on the San Pablo commercial district due to demolition of four buildings on San Pablo. Explore an alternative that includes retention of the buildings along that street front. **5**

Board Member Bliss

- *Additional Possible Mitigation for demolition of the Great Western Power Building:* Recommend contribution to commercial improvement façade program as an additional possible mitigation measure for the demolition of the power building possibility, explored in the DEIR. However, this would not reduce impact to less than significant. **6**
- EIR should address impact on Kwik Way from proposal to relocate Sears Tire Store (Block 8 vs. Block 9). Kwik Way does qualify as a Historic Resource under 15064.5(a)(3)(A)(2)(C). **7**

Board Member Armstrong

- Needs to see alternative that explores possibility of saving of buildings along San Pablo Avenue addressed in EIR. **8**

Board Member Hooks

- Agrees with Board Member Dreyfuss on most of his comments
- Preserving buildings makes sense – particularly power building. Feels less strongly about other buildings. However, as a backdrop for the development of parcels 1 through 6, it seems important to save them.
- Suggests an additional mitigation for the impact on San Pablo District and historic Chinese settlements by creating a film of the district describing what is was like, including first person interviews. **9**

Board Member Gilmartin

- The EIR should refer to Historic Preservation Element (HPE) policies in the Land Use Policies Section. The policies outline preferred City practices in regard to treatment of historic buildings and should be given appropriate consideration. **10**
- Policies in the HPE (3.6 and others) advise that City assisted projects should be designed to avoid adverse impacts on historic structures. The proposed project is so large in scale that it seems impacts to the Great Western building are avoidable and the project can still achieve its objectives while avoiding adverse impacts on this building. **11**

- The EIR accurately states that mitigations identified do not make up for loss of resource like the Great Western Power building. It is still a Significant and Unavoidable impact.
- Not in support of reusing and salvaging building parts for reuse in new buildings. Recommend deleting this portion of Mitigation Measure HIST-8. They should be put in a salvage yard for use on older buildings. **12**
- PDHP's could be reused. Should be analyzed and considered by project sponsor. Also, consider allowing buildings to be moved if they could continue to be part of the district by being moved. Restate Mitigation to include that moving them within the district, if possible, would be less of an impact. **13**
- Questioned whether the Fox can function as a performing arts venue, be seismically upgraded and meet exiting requirements with a 50 ft. setback as proposed. Has this been analyzed, if not it should. **14**

Two members of the public commented on the DEIR during the Public Hearing. The Board Secretary has included their comments for convenience in addressing all EIR comments. Inclusion of public comments is not intended to indicate agreement or acceptance with them by the Landmarks Board. Public comments are outlined below:

Speakers:

Naomi Schiff, Oakland Heritage Alliance

- The new owner of the power building is interested in rehabbing it. It is not reasonable to tear it down.
- The same owner has purchased two buildings to the west of the power building. There have been early conversations with owner about the possibility of relocating those two buildings into the uptown project to consolidate a charming older building group on San Pablo with the extant Victorian buildings. Please give us your thoughts on that. **15**
- The buildings on San Pablo while not historic resources under CEQA could provide a transition between the project and the old fabric of the City around it, particularly the Italianates and the hotel.
- Since the buildings along San Pablo have such small footprints, the developer might come up with a way to treat that block and retain those buildings. **16**
- The extant garages on 20th Streets should be looked at because they are still inhabited by small businesses, which might be destroyed by this project. Look at small business' longstanding value to the uptown area. **17**
- Consider impacts on buildings not within the project:
    - Don't discount the Kwik Way burger place, a discreet parcel to the north. **18**
    - The Fox – leave enough space behind the Fox so that whatever happens there can be accommodated. **19**
    - Consider impacts on the Floral Depot. **20**

Anna Naruta

- Supports OHA remarks.
- Location of one of oldest Chinatowns in Oakland is in this project area. **21**
- The buildings along San Pablo Avenue have small footprints and could be used to show transitions of the history of the city, along with interpretive exhibits. **22**

Please contact Joann Pavlinec, Secretary to the LPAB, at (510) 238-6344 if you have any questions regarding the above comments. Thank you for the opportunity to comment.

Sincerely,

Una Gilmartin /J.P.

Una Gilmartin, Chair
Landmarks Preservation Advisory Board

COMMENTOR D2
Comment Letter from the Landmarks Preservation Advisory Board
October 21, 2003

D2-1: The commentor's statement, that partial or total demolition of the Great Western Power Company Building would be an unavoidable impact (even with mitigation), is consistent with the findings of the Draft EIR as expressed in Impacts HIST-4a and HIST-4b. The proposed Project includes a variant (Variant 3) that would include preservation of the structure. This variant is discussed on pages 221 and 224 of the Draft EIR.

D2-2: Proposed development of Block 7 would adversely affect the historic settings of both the YMCA Building and the Great Western Power Company Building. However, as described on page 228 of the Draft EIR, although the proposed 19-story tower on Block 7 would alter views of the YMCA Building from the south, it would not compromise the characteristics of the YMCA Building that determine its eligibility for the California Register. Therefore, Block 7 development would result in a less-than-significant impact on the YMCA Building. Impact HIST-5 in the Draft EIR addresses the impact of new construction on the Great Western Power Company Building. Implementation of Mitigation Measure HIST-5 could reduce this impact to a less-than-significant level through the documentation of the Great Western Power Company's urban setting, and the evaluation of proposed buildings' design to ensure that, pursuant to *CEQA Guidelines* section 15064.5, they will not materially alter in an adverse manner: (1) those physical characteristics of the building that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register of Historical Resources; or (2) those physical characteristics that account for the building's inclusion in a local register of historic resources pursuant to section 5020.1(k) of the Public Resources Code or its identification in a historical resources survey meeting the requirements of section 5024.1(g) of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or 3) those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for inclusion in the California Register of Historical Resources as determined by the lead agency for the purposes of CEQA . Discussion of the impacts of Block 7 development on the Great Western Power Company Building is found on page 224 and 225 of the Draft EIR.

D2-3: Page 228 of the Draft EIR contains a discussion of the effects of the proposed Project on the Cathedral District. Although implementation of the proposed Project would alter views of the Cathedral District from the south, it would not substantially change the characteristics of individual buildings within the District in such a way that their California Register significance (or the significance of the District as a whole) would be compromised. The visual connection between the Cathedral District and the Uptown Entertainment District is currently undermined by the wide expanse of parking uses and vacant lots that comprise the majority of the Project site. Moreover, the integrity of the Cathedral District has been somewhat compromised by the demolition of the cathedral in 1993, as well as other contributing buildings as a result of the 1989 earthquake.

However, by developing an urban neighborhood that is similar in scale to surrounding neighborhoods, including Oakland City Center, the proposed Project would enhance the visual connection between the two Districts. CEQA requires mitigation only for significant environmental impacts. Therefore, no additional mitigation is required.

D2-4: The ratings for the buildings at 1966-68 San Pablo Avenue and 1972 San Pablo Avenue are based on current Oakland Cultural Heritage Survey (OCHS) documentation, as provided by the City of Oakland. As described in the Draft EIR text, each of these buildings received a ranking of “secondary importance” in 2000. In addition, three of these buildings were identified as contributors to the 19th and San Pablo Commercial District, described in OCHS documentation as an Area of Secondary Importance. Also refer to Responses to Comments B4-8, B4-9 and B4-10.

D2-5: Refer to Responses to Comments B4-8, B4-9 and B4-10.

D2-6: Refer to Response to Comment B4-6.

D2-7: Refer to Response to Comment B4-14.

D2-8: Refer to Response to Comment B4-8, B4-9 and B4-10.

D2-9: The City will consider the use of video photography as a potential media for documenting the 19th and San Pablo Commercial District. Mitigation Measure HIST-8 has been revised to include a reference to video photography. Refer to Response to Comment B4-8 or Chapter V of this document to see the revisions to Mitigation Measure HIST-8a.

D2-10: Pages 215 and 216 list the policies in the City General Plan Historic Preservation Element that pertain to environmental review under CEQA and the proposed Project. These policies were used to evaluate the significance of impacts to historic buildings within and adjacent to the Project site.

D2-11: The proposed Project includes a variant (Variant 3) that would include preservation of the Great Western Power Company Building. This variant is discussed on pages 221 and 224 of the Draft EIR.

D2-12: The recommendation for the salvage and reuse of architectural features is a common element of architectural mitigation measures, and is used to retain some of the feeling and association of the former building at its original location. However, this reuse is a matter of design and architectural character within the new structures, not a CEQA issue. This comment is noted and will be considered by the decision-makers during the design review process for the Project.

D2-13: Refer to Response to Comment B4-8. As stated on page 225 of the Draft EIR, the Project applicant is willing to publish advertisements in local newspapers to notify the public of the buildings’ availability for relocation.

D2-14: Refer to Responses to Comments B4-11 and D1-16.

D2-15: Demolition of the Great Western Power Company Building is considered a significant unavoidable impact in the Draft EIR. Refer to pages 221 to 224 of the Draft EIR for additional discussion.

D2-16: This comment refers to the proposed Project, not to the analysis or conclusions contained in the Draft EIR; no additional response is necessary.

D2-17: Refer to Master Response M-2 on page 18 of this document.

D2-18: Refer to Response to Comment B4-14.

D2-19: Refer to Responses to Comments B4-11 and D1-16.

D2-20: The Draft EIR addresses potential Project impacts to historical architectural properties adjacent to the Project area, including the Oakland Floral Depot. The Project will not result in significant adverse effects to those elements of the Oakland Floral Depot, specifically the Art Deco-influenced architecture, that rendered it eligible for listing on the National Register of Historic Places. As described on page 228 of the Draft EIR, the Oakland Floral Depot's existing integrity of setting and feeling are compromised by surrounding contrasting development that has resulted in a varied mix of urban uses.

D2-21: Refer to Master Response M-1 on page 14 of this document.

D2-22: This comment refers to the proposed Project, not to the analysis or conclusions contained in the Draft EIR; no additional response is necessary. Refer to Response to Comment B4-8.

Comments from the Landmarks Preservation Advisory Board - November 3, 2003 Meeting, on the Uptown Mixed Use Project Draft Environmental Impact Report:

Anna Naruta, Historical Archeologist, Oakland resident: Ms. Naruta addressed potential archaeological resources associated with Uptown Chinatowns, based on findings of resources close to the area slated for the uptown mixed use development project. Research indicates that two blocks from the proposed project area, there had been previous archaeological monitoring projects. In those project areas, the existing buildings were historic structures with basements (dug into the earth) and also some mid-20th century replacements. They actually found, in each area, remains even below the basements and in those areas associated with the mid-20th century buildings that had replaced historic buildings. This gives characterizing information indicating how likely it is that it can be expected that the uptown mixed use project will also encounter significant archaeological remains. Therefore, the mitigations in the Draft EIR need to be extended. Page 213 of the Draft EIR states that the project area has a likely hood of containing historical archaeological deposits. The next page states some of the deposits are likely to be associated with early Chinatown settlements and may be of use in answering important research questions. The proposed mitigation of just having an archeological monitor, which may be appropriate when you don't expect to have any archeological remains, is inadequate. **1**

Steve Lowe: Has concerns regarding the Uptown Mixed Use Project and how it is currently configured. He stated that the project is wrongly configured with respect to the location of the park. The developers have stated that there would be some kind of forthcoming community dialogue to figure out where the park should be. Currently, it is in the middle of the project facing 20th Street. Many believe that it should be out on Telegraph, the heart of the area. Locating the park along Telegraph would provide a view corridor from the Fox Theatre to Navalets and would also incorporate views of the existing wonderful historic facades mixed with views of the new development. To deny that view, erodes the idea having a real center. **2**

COMMENTOR D3
Landmarks Preservation Advisory Board Meeting
November 3, 2003

D3-1: Refer to Master Response M-1 on page 14 of this document.

D3-2: This comment refers to the proposed Project, not to the analysis or conclusions contained in the Draft EIR. Refer to Response to Comment B5-2.

V. DRAFT EIR TEXT REVISIONS

This chapter presents all instances where text, tables or figures from the Draft EIR have been revised in response to comments raised during the public review. Revised text is indicated by underline text. Text deleted from the Draft EIR is shown in ~~strikeout~~. Page numbers correspond to the page numbers of the Draft EIR. This Responses to Comments document, in conjunction with the Draft EIR, constitutes the Final EIR.

Page 1 is revised as follows:

> The Project site, which consists of a nine-block area, is located within the Uptown District of Oakland, as shown in Figure I-1. The proposed Project includes the following components: (1) approximately 1,300 residential units; (2) 1,050 student beds and faculty units; ~~and~~ (3) 43,000 feet of commercial space; ~~Associated Project components include a~~ 4) a 25,000 square-foot public park; (5) 1,959 parking spaces; and (6) the development of one public street within the Project site. The additional public street is intended to shorten block lengths and provide enhanced access within the Project site. Implementation of the proposed Project would result in the development of a mixed-use neighborhood in the Uptown District. Please refer to Chapter III, Project Description, for more details.

Page 3 is revised as follows:

> The EIR, which was prepared and certified for the Land Use and Transportation Element (LUTE) of the Oakland General Plan, is used as one of the bases for this environmental review. Cumulative impacts and growth-inducing impacts in downtown Oakland have been analyzed in the General Plan LUTE EIR, and repeatedly in numerous EIRs completed for projects in the downtown area. The analysis included in Chapter IV.B, Population, Employment and Housing, of this EIR provides a confirmation that the proposed Uptown Project falls within the City's employment and population projections to the year 2025. Similarly, the LUTE EIR contained an analysis of alternatives and, pursuant to Public Resources Code section 21159.25, no further consideration of alternatives is required. Both the LUTE EIR and this EIR identify mitigation measures to reduce or eliminate potentially significant environmental impacts. The LUTE EIR, which was certified by the Oakland City Council in 1998, is hereby incorporated by reference into this EIR.[1] In addition, to ensure a comprehensive analysis, this focused EIR includes a cumulative analysis for potential impacts to transportation, air quality, noise, and historical resources.

Page 8 is revised as follows:

- Historic Architectural Resources (Great Western Power Company Building and 19th and San Pablo Commercial District)

Page 10, Table II-1, Summary of Impacts and Mitigation Measures, is revised as shown on the following page:

Page 45 is revised as follows:

> At least 20~~5~~ percent of the rental units constructed as part of the proposed Project (excluding any development on Block 5, 7, 8, and 8a ~~student and faculty units, but including rental and condominium uses~~) will be affordable to very low income households earning 50 percent or less of the area's median income ~~would be priced at affordable levels~~. ~~At least 20 percent of the units would be affordable to households earning up to 50 percent of the Alameda County Median Income; 5~~ Five percent of the overall units would be affordable to households earning up to 120 percent of the area's median income. ~~Alameda County Median Income.~~

Table II-1: Summary of Impacts and Mitigation Measures

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
A. LAND USE			
The Project would not result in any significant impacts related to land use.			
B. POPULATION, EMPLOYMENT AND HOUSING			
The Project would not result in any significant impacts related to population, employment, and housing.			
C. HYDROLOGY AND WATER QUALITY			
HYD-1: Construction activities for the Project could result in degradation of water quality in Lake Merritt and the Bay by reducing the quality of storm water runoff.	S	HYD-1**:** The applicant shall prepare and implement a Storm Water Pollution Prevention Plan (SWPPP) designed to reduce potential impacts to surface water quality through the construction and life of the Project. The SWPPP would act as the overall program document to provide measures to mitigate significant water quality impacts associated with implementation of the Project. The SWPPP shall include specific and detailed Best Management Practices (BMPs) required to mitigate significant construction-related pollutants. These controls shall include practices to minimize the contact of construction materials, equipment, and maintenance supplies (e.g., fuels, lubricants, paints, solvents, adhesives) with storm water. The SWPPP shall specify properly designed centralized storage areas that keep these materials out of the rain. An important component of the storm water quality protection effort will be the education of the site supervisors and workers. To educate on-site personnel and maintain awareness of the importance of storm water quality protection, site supervisors shall conduct regular tailgate meetings to discuss pollution prevention. The frequency of the meetings and required personnel attendance list shall be specified in the SWPPP. The SWPPP shall specify a monitoring program to be implemented by the construction site supervisor, and must include both dry and wet weather inspections. City of Oakland personnel shall conduct regular inspections to ensure compliance with the SWPPP.	LTS

Table II-1 *continued*

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
HYD-1 *continued*		BMPs to reduce erosion of exposed soil may include, but are not limited to: soil stabilization controls, watering for dust control, perimeter silt fences, placement of hay bales, and sediment basins. The potential for erosion is generally increased when grading occurs during the rainy season, as disturbed soil can be exposed to rainfall and storm runoff. If grading must be conducted during the rainy season, the primary BMPs selected shall focus on erosion control, that is, keeping sediment on the site. End-of-pipe sediment control measures (e.g., basins and traps) shall be used only as secondary measures. Access to and egress from the construction site shall be carefully controlled to minimize off-site tracking of sediment (this BMP is particularly important since much of the earthwork will involve loading trucks for off-site transport of soil excavated for the below-ground parking structures). Vehicle and equipment wash down facilities shall be designed to be accessible and functional both during dry and wet conditions. The SWPPP shall be reviewed for completeness by the City of Oakland, Public Works Agency, Environmental Services Division prior to approval of grading plans.	
HYD-2: Post-construction operation of the Project could result in degradation of water quality in Lake Merritt due to a net decrease in the quality of storm water runoff.	S	HYD-2**:** The applicant shall comply with the requirements of the 2003 Alameda County *Stormwater Management Plan* and/or the RWQCB Revised Order 01-024 (NPDES Permit No. CAS029718), as appropriate, based on the timing of construction. As applicable, the applicant shall incorporate measures to mitigate potential degradation of runoff water quality from all portions of the completed development, including roof and sidewalk runoff. The final design team for the Project should include all applicable measures from *Start at the Source*, Design Guidance Manual for Stormwater Quality Protection, which may include, but not be limited to pervious pavements, hybrid parking lots, vegetated swales, biofilters, roof drainage to landscaped areas, minimization of directly connected impervious surfaces, and infiltration islands. The Project compliance with requirements for post-construction stormwater controls shall be reviewed by the City of Oakland, Public Works Agency, Environmental Services Division prior to approval of grading plans.	LTS

Table II-1 *continued*

Environmental Impacts	**Level of Significance Without Mitigation**	**Mitigation Measures**	**Level of Significance With Mitigation**
HYD-3: Dewatering effluent may contain contaminants and if not properly managed could cause impacts to the environment.	S	HYD-3**:** The SWPPP shall include requirements for the proper management of dewatering effluent as necessary to mitigate significant impacts to the environment. The Hazards section of this DEIR (Mitigation Measure HAZ-1b) addresses and mitigates potential impacts associated with health and safety impacts to site workers and the public associated with the dewatering effluent. At minimum, all dewatering effluent will be contained prior to discharge to allow the sediment to settle out, and filtered, if necessary, to ensure that only clear water is discharged to the storm or sanitary sewer system. Alternatively, effluent can be hauled off-site by tanker truck for disposal. Based on the historical land uses at the Project site and groundwater sampling of the existing network of monitoring wells, it is possible that groundwater underlying each of the parcels has been impacted by chemical releases. All dewatering effluent will be analyzed by a State-certified laboratory for the suspected pollutants (at minimum, petroleum hydrocarbons, solvents, and metals) prior to discharge. Based on the results of the analytical testing and the concentrations of pollutants identified, if any, the applicant will dispose of the water in one (or more) of the following ways: a) Discharge the water to the storm drain under permit from the RWQCB. It is unlikely that the RWQCB would allow discharge of any untreated dewatering effluent that contained detectable concentrations of chemical pollutants and that for these types of discharges, alternative disposal options may be required; b) Discharge the water to the sanitary sewer system under permit from the East Bay Municipal Utilities District; c) Haul the water to a licensed off-site disposal facility for treatment and disposal under appropriate manifest. The Project proponent shall demonstrate to the City of Oakland, Planning and Development Department that appropriate permits have been acquired prior to discharge of any dewatering effluent.	LTS

Table II-1 *continued*

Environmental Impacts	**Level of Significance Without Mitigation**	**Mitigation Measures**	**Level of Significance With Mitigation**
D. TRANSPORTATION, CIRCULATION AND PARKING			
TRANS-1: The addition of Project traffic to the Year 2010 Baseline condition would result in a significant adverse impact at the intersection of San Pablo Avenue/Thomas L. Berkley Way (20th Street). The intersection was identified as operating at LOS C in the Year 2010 No Project Condition in the PM peak hour. The addition of Project traffic would result in the intersection operating at LOS F in the PM peak hour.	S	TRANS-1: Optimization of the signal timing at the intersection of San Pablo and Thomas L. Berkley Way (20th Street) would improve function to LOS D in the PM peak hour. This intersection functions as an integrated signal system with other intersections in the downtown area. To mitigate the Project's impact at this location and others, the City shall prepare a signal optimization and coordination plan for the area bounded by San Pablo Avenue, Grand Avenue, Telegraph Avenue, and 17th Street prior to Project occupancy. The plan shall address the timing and equipment requirements, as necessary for all of the signalized intersections located within this area. The Project sponsor shall fund its fair share cost of the preparation of this plan and the implementation of the signal timing program. Implementation of the signal optimization program may also involve the purchase and installation of interconnection hardware (i.e. modems, microwave antennas, etc). The City of Oakland will consult with AC Transit during preparation of the plan. Given that the Project sponsor is responsible for only a portion of this mitigation measure, implementation of this set of improvements will be funded fully by one or a combination of the following means: 1. The Project sponsor shall fully fund the costs of the signalization improvements and shall be reimbursed through other fair-share contributions as future projects ~~occur~~ that exceed ~~fall within~~ the City's thresholds of significance occur. 2. The City, at its ~~their~~ sole discretion, shall establish a Traffic Improvement Program and concurrent Traffic Impact Fee Ordinance to fund the mitigation measure. 3. The Redevelopment Agency, at its ~~their~~ sole discretion, shall contribute funds to the costs of implementation.	LTS
TRANS-2: The addition of Project traffic to the Year 2010 Baseline condition would result in a significant adverse impact at the intersection of Telegraph Avenue/19th Street. The intersection was identified as operating at LOS D in the Year 2010 No Project Condition in the AM and PM peak hours. The addition of Project traffic would result in the intersection operating at LOS F in both the AM and PM peak hours.	S	TRANS-2: Optimization of the signal timing at the intersection of Telegraph and 19th Street would improve the function to LOS C in both the AM or PM peak hours. Preparation and implementation of the signal optimization and coordination plan detailed in Mitigation Measure TRANS-1 will ensure that this impact is reduced to a less-than-significant level.	LTS

Table II-1 *continued*

Environmental Impacts	**Level of Significance Without Mitigation**	**Mitigation Measures**	**Level of Significance With Mitigation**
TRANS-3: In the 2010 No Project and Plus Project scenarios, the Frontage Road/West Grand Avenue intersection would operate at LOS F in the PM peak hour. The Project would cause the total intersection delay for the critical movements to increase by two or more seconds and result in a significant impact.	S	TRANS-3: Widen the intersection to add a second exclusive left turn lane in the eastbound direction and an exclusive right turn lane in the westbound direction. The intersection would operate at LOS D in the PM peak hour with these improvements. The intersection of Frontage Road and West Grand Avenue is located on an elevated structure which is within the jurisdiction of Caltrans. The proposed mitigation measures would require the widening of the existing elevated structure and modification of the traffic signal. The second exclusive left turn lane in the eastbound direction and the exclusive right turn lane in the westbound direction should each be 300 feet in length with a 90-foot taper. Widening of the existing structure would require additional support columns and the acquisition of right of way underneath the structure. In addition, the connector from Interstate 880 to Interstate 80 structure exists above this intersection. Columns supporting this elevated connector may have to be relocated to widen the Frontage Road/West Grand Avenue intersection. At this time, the implementation of this mitigation measure would not be economically feasible. Because this intersection is located outside of the City of Oakland's jurisdiction and because it is not economically feasible, it is significant and unavoidable.	SU
TRANS-4: In the PM peak hour, the San Pablo/27th Street intersection would operate at LOS E in the Year 2025 No Project and Year 2025 Plus Project scenarios. The Project would cause the total intersection average vehicle delay to increase by six or more seconds.	S	TRANS-4: Optimization of the signal timing at the intersection of San Pablo and 27th Street would improve function to a LOS D in the PM peak hour. Preparation and implementation of the signal optimization and coordination plan detailed in Mitigation Measure TRANS-1 will ensure that this impact is reduced to a less-than-significant level.	LTS
TRANS-5: The addition of Project traffic to the Year 2025 Baseline condition would result in a significant adverse impact at the intersection of San Pablo Avenue/West Grand Avenue. The intersection was identified as operating at LOS F in the Year 2025 No Project Condition in the PM peak hour. The addition of Project traffic would cause the total intersection average vehicle delay to increase by two or more seconds.	S	TRANS-5: Optimization of the signal timing at the intersection of San Pablo and West Grand Avenue would improve the function to a LOS E in the PM peak hour. Preparation and implementation of the signal optimization and coordination plan detailed in Mitigation Measure TRANS-1 will ensure that this impact is reduced to a less-than-significant level.	LTS

Table II-1 *continued*

Environmental Impacts	**Level of Significance Without Mitigation**	**Mitigation Measures**	**Level of Significance With Mitigation**
TRANS-6: The addition of Project traffic to the Year 2025 Baseline condition would result in a significant adverse impact at the intersection of San Pablo Avenue/Thomas L. Berkley Way (20th Street). The intersection was identified as operating at LOS C in the Year 2025 No Project Condition in the PM peak hour. The addition of Project traffic would result in the intersection operating at LOS F.	S	TRANS-6: Optimization the signal timing at the intersection of San Pablo and Thomas L. Berkley Way (20th Street). By optimizing the signal timing splits, the intersection would improve the function to a LOS D in the PM peak hour. Preparation and implementation of the signal optimization and coordination plan detailed in Mitigation Measure TRANS-1 will ensure that this impact is reduced to a less-than-significant level.	LTS
TRANS-7: The addition of Project traffic to the Year 2025 Baseline condition would result in a significant adverse impact at the intersection of Telegraph Avenue/West Grand Avenue. The intersection was identified as operating at LOS E in the Year 2025 No Project Condition in the AM peak hour. The addition of Project traffic would cause an increase in the average delay for critical movements to increase by more than six seconds in the AM peak hour.	S	TRANS-7: Optimization of the signal timing and changing the cycle length to 65 seconds at this intersection would mitigate the delay that would result from the proposed Project. Preparation and implementation of the signal optimization and coordination plan detailed in Mitigation Measure TRANS-1 will ensure that this impact is reduced to a less-than-significant level.	LTS
TRANS-8: With the Project, the Telegraph Avenue/Thomas L. Berkley Way (20th Street) intersection LOS would degrade from LOS E to LOS F in the AM peak hour. In the PM peak hour, the Telegraph Avenue/Thomas L. Berkley Way (20th Street) intersection would operate at LOS F in the Year 2025 No Project and Year 2025 Plus Project scenarios.	S	TRANS-8: Optimization of the signal timing in the AM peak hour and changing the cycle length to 70 seconds at this intersection would mitigate the Projects increase in delay. Preparation and implementation of the signal optimization and coordination plan detailed in Mitigation Measure TRANS-1 will ensure that this impact is reduced to a less-than-significant level.	LTS
TRANS-9: The Telegraph Avenue/William Street intersection would operate at LOS F in the PM peak hour in the Year 2025 No Project and Year 2025 Plus Project scenarios. The Project would cause the total intersection average delay to increase by two or more seconds. In addition, the Project would increase average delay for the critical movements by four or more seconds.	S	TRANS-9: Changing the cycle length to 80 seconds and optimizing signal timing would improve the function of this intersection to LOS C in the PM peak hour. By optimizing the signal timing splits and changing the signal cycle, the Projects increase in delay would be mitigated. Preparation and implementation of the signal optimization and coordination plan detailed in Mitigation Measure TRANS-1 will ensure that this impact is reduced to a less-than-significant level.	LTS

Table II-1 *continued*

Environmental Impacts	**Level of Significance Without Mitigation**	**Mitigation Measures**	**Level of Significance With Mitigation**
TRANS-10 The addition of Project traffic to the Year 2025 Baseline condition would result in a significant adverse impact at the Telegraph Avenue/19th Street intersection. With the Project, the intersection LOS would degrade from LOS E to LOS F in the AM peak hour. In the PM peak hour, the Telegraph Avenue/19th Street intersection would operate at LOS F in the Year 2025 No Project and Year 2025 Plus Project scenarios. In addition, the Project would increase average delay for the critical movements by four or more seconds in the PM peak hour. Both of these changes are considered to be significant adverse impacts based on City standards.	S	TRANS-10: The Project shall provide for the following two improvements. • Optimize the signal timing at the intersection of Telegraph and 19th Street. Since this intersection also functions as part of an integrated signal system in downtown Oakland, Mitigation Measure TRANS-1~~B~~ shall also be implemented. • Restripe the westbound 19th Street approach to provide two exclusive through lanes and an exclusive right turn lane. With these improvements, the intersection would operate at LOS C in the AM peak hour and LOS E in the PM peak hour. The restriping of the westbound 19th Street approach to the intersection to provide two exclusive through lanes and an exclusive right turn lane would require the elimination of six metered parking spaces on the northern side of 19th Street between Telegraph and Broadway. With the existing roadway width available the two through lanes would each be 11 feet wide and the right turn lane would be 10 feet wide, which would satisfy City standards of 10-foot lanes. Metered parking would remain on the southern side of 19th Street.	LTS
TRANS-11 The Frontage Road/West Grand Avenue intersection would operate at LOS F in the AM and PM peak hours in Year 2025 No Project and Year 2025 plus Project conditions. The Project would cause the total intersection average vehicle delay to increase by two or more seconds in the AM and PM peak hours. In addition, the Project would increase in average delay for critical movements by four or more seconds.	S	TRANS-11: Widen the eastbound approach to accommodate two left turn lanes, two through lanes, and a right turn lane. Widen the southbound approach would need to accommodate a right turn lane, a left turn lane, and a shared through/right turn lane. In addition, the northbound approach should be converted from a left turn lane, a through lane, and a shared through/right turn lane to a left turn lane, a shared through/right turn lane, and a right turn lane. With the proposed improvements, the intersection would operate at LOS C in the AM peak hour and LOS D in the PM peak hour.	SU

Table II-1 *continued*

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
TRANS-11 *continued*		The intersection of Frontage Road and West Grand Avenue is located on an elevated structure which is within the jurisdiction of Caltrans. The proposed mitigation measures would require the expansion of the existing elevated structure and modification of the traffic signal. Widening of the existing structure would require additional support columns and the acquisition of right of way underneath the structure. In addition, the connector from Interstate 880 to Interstate 80 structure exists above this intersection. Columns supporting this elevated connector may have to be relocated to pursue the widening of the Frontage Road/West Grand Avenue intersection. The implementation of this mitigation measure would not be economically feasible. Because this intersection is located outside of the City of Oakland's jurisdiction and because it is not economically feasible, it is significant and unavoidable.	
TRANS-12: The addition of Project traffic at the Mandela Parkway/West Grand Avenue intersection would cause the service level to degrade from LOS D in the Year 2025 No Project Condition to LOS E in the Year 2025 with Project Condition during the PM peak hour.	S	TRANS-12: Changing the cycle length to 110 seconds, providing protected left turn phases on the eastbound and westbound approaches, and optimizing the signal timing would improve the function of this intersection to a LOS D in the PM peak hour. Preparation and implementation of the signal optimization and coordination plan detailed in Mitigation Measure TRANS-1 will ensure that this impact is reduced to a less-than-significant level.	LTS
TRANS-13: The Harrison/Grand Avenue intersection was found to operate at LOS E in the Year 2025 No Project and Year 2025 with Project Conditions during the PM peak hour. The Project would cause an increase in the average delay for critical movements by more than six seconds in the PM peak hour.	S	TRANS-13: Changing the cycle length to 110 seconds and optimizing the signal timing splits would mitigate the Project's impact. Preparation and implementation of the signal optimization and coordination plan detailed in Mitigation Measure TRANS-1 will ensure that this impact is reduced to a less-than-significant level.	LTS
TRANS-14: In the PM peak hour, the Castro Street/17th Street /I-980 Off-Ramp intersection would operate at LOS E in the Year 2025 No Project and Year 2025 Plus Project scenarios. The Project would cause an increase in the average delay for the critical movements of six or more seconds.	S	TRANS-14: Optimization of the intersection's signal timing at this intersection would improve the function of this intersection to operate at LOS D in the PM peak hour. Preparation and implementation of the signal optimization and coordination plan detailed in Mitigation Measure TRANS-1 will ensure that this impact is reduced to a less-than-significant level.	LTS

Table II-1 *continued*

Environmental Impacts	**Level of Significance Without Mitigation**	**Mitigation Measures**	**Level of Significance With Mitigation**
E. AIR QUALITY			
AIR-1: Activities associated with demolition, site preparation and construction would generate short-term emissions of criteria pollutants, including suspended and inhalable particulate matter and equipment exhaust emissions.	S	AIR-1: Implementation of the following mitigation measures would reduce this impact to a less-than-significant level. • The basic and enhanced control measures listed in Table IV.E-9 shall be implemented during construction of the proposed Project. • Any temporary haul roads to the soil stockpile area shall be routed away from existing neighboring land uses. Any temporary haul roads shall be surfaced with gravel and regularly watered to control dust or treated with an appropriate dust suppressant. • Water sprays shall be utilized to control dust when material is being added or removed from the stockpile. When the stockpile is undisturbed for more than 1 week, the storage pile shall be treated with a dust suppressant or crusting agent to eliminate wind-blown dust generation. • All neighboring properties located within 500 feet of property lines shall be provided with the name and phone number of a designated construction dust control coordinator who will respond to complaints within 24 hours by suspending dust-producing activities or providing additional personnel or equipment for dust control as deemed necessary. The phone number of the BAAQMD pollution complaints contact shall also be provided. The dust control coordinator shall be on-call during construction hours. The coordinator shall keep a log of complaints received and remedial actions taken in response. This log shall be made available to City staff upon its request. The above mitigation measures include all feasible measures for construction emissions identified by the BAAQMD. According to the District's threshold of significance for construction impacts, implementation of the measures would reduce construction impacts of the proposed Project to a less-than-significant level.	LTS

Table II-1 *continued*

Environmental Impacts	**Level of Significance Without Mitigation**	**Mitigation Measures**	**Level of Significance With Mitigation**
AIR-2: Development of the Uptown Project would result in increased regional emissions of criteria air pollutants exceeding BAAQMD Thresholds.	S	AIR-2: To the extent permitted by law, the Uptown Project shall be required to implement Transportation Control Measures (TCMs) as recommended by the BAAQMD. ~~However, the City of Oakland will implement as feasible on the basis that this Project is an infill mixed-used development project that in and of itself supports many Smart Growth Principals.~~ Measures that the City ~~may~~ shall require the Project to implement, or that are already proposed as part of the Project, include the following: • *Transit Measures:* (i) Construct transit facilities such as bus turnouts/bus bulbs, benches, shelters, ~~etc.~~ and other needed facilities subject to the review and comment of AC Transit. (Effectiveness 0.5 percent - 2 percent of all trips, BAAQMD *CEQA Guidelines*); (ii) Design and locate buildings to facilitate transit access (e.g., locate building entrances near transit stops, eliminate building setbacks, etc.) (Effectiveness 0.1 percent - 0.5 percent of all trips, BAAQMD *CEQA Guidelines*). • *Services Measures:* (i) Provide on-site shops and services for employees, such as cafeteria, bank/ATM, dry cleaners, convenience market, etc. (Effectiveness 0.5 percent - 5 percent of work trips, BAAQMD *CEQA Guidelines*); (ii) Provide on-site child care, or contribute to off-site childcare within walking distance. (Effectiveness 0.1 percent - 1 percent of work trips, BAAQMD *CEQA Guidelines*).	SU

Table II-1 *continued*

Environmental Impacts	**Level of Significance Without Mitigation**	**Mitigation Measures**	**Level of Significance With Mitigation**
AIR-2 *continued*		• *Bicycle and Pedestrian Measures:* (i) Provide secure, weather-protected bicycle parking for employees (Effectiveness 0.5 percent - 2 percent of work trips, BAAQMD *CEQA Guidelines*); (ii) Provide safe, direct access for bicyclists to adjacent bicycle routes (Effectiveness 0.5 percent - 2 percent of work trips, BAAQMD *CEQA Guidelines*); (iii) Provide showers and lockers for employees bicycling or walking to work (Effectiveness 0.5 percent – 2 percent of work trips, BAAQMD *CEQA Guidelines*); (iv) Provide secure short-term bicycle parking for retail customers or non-commute trips (Effectiveness 1 percent – 2 percent of non-work trips, BAAQMD *CEQA Guidelines*); (v) Provide direct, safe, attractive pedestrian access from Planning Area to transit stops and adjacent development (Effectiveness 0.5 percent - 1.5 percent of all trips, BAAQMD *CEQA Guidelines*). Implementation of the measures detailed above would help minimize this impact, but not reduce it to a less-than-significant level. Therefore, Impact AIR-2 will remain significant and unavoidable.	
F. NOISE			
NOISE-1: Noise levels from construction activities may range up to 91 dBA L_{max} at the nearest land uses to the Project site for limited time periods during the duration of construction for certain activities such as pile driving or the use of other heavy equipment..	S	NOISE-1a: Standard construction activities shall be limited to between 7:00 a.m. and 7:00 p.m. Monday through Friday. No construction activities shall be allowed on weekends until after the buildings are enclosed without prior authorization of the Building Services and Planning Divisions of the Community and Economic Development Agency.	LTS

Table II-1 *continued*

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
NOISE-1 *continued*		NOISE-1b: To reduce daytime noise impacts due to construction, to the maximum feasible extent, the City shall require the applicant to develop a site-specific noise reduction program, subject to city review and approval, which includes the following measures: • Signs shall be posted at the construction site that include permitted construction days and hours, a day and evening contact number for the job site, and a day and evening contact number for the City in the event of problems; • An on-site complaint and enforcement manager shall be posted to respond to and track complaints; • A pre-construction meeting shall be held with the job inspectors and the general contractor/on-site Project manager to confirm that noise mitigation and practices are completed prior to the issuance of a building permit (including construction hours, neighborhood notification, posted signs, etc.); • Equipment and trucks used for Project construction shall utilize the best available noise control techniques (e.g., improved mufflers, equipment redesign, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds, wherever feasible); • Impact tools (e.g., jack hammers, pavement breakers, and rock drills) used for Project construction shall be hydraulically or electrically powered wherever possible to avoid noise associated with compressed-air exhaust from pneumatically powered tools. However, where use of pneumatic tools is unavoidable, an exhaust muffler on the compressed-air exhaust shall be used; this muffler can lower noise levels where feasible, which could achieve a reduction of 5 dBA. Quieter procedures shall be used, such as drills rather than impact equipment, whenever feasible; and • Stationary noise sources shall be located as far from sensitive receptors as possible, and they shall be muffled and enclosed within temporary sheds, or insulation barriers or other measures shall be incorporated to the extent feasible.	

Table II-1 *continued*

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
NOISE-1 *continued*		NOISE-1c: If pile-driving occurs as part of the Project, it shall be limited to between 8:00 a.m. and 4:00 p.m., Monday through Friday, with no pile driving permitted between 12:30 and 1:30 p.m. No pile driving shall be allowed on Saturdays, Sundays, or holidays.	
		NOISE-1d: To further mitigate potential pile-driving and/or other extreme noise-generating construction impacts, a set of site-specific noise attenuation measures shall be completed under the supervision of a qualified acoustical consultant. This plan shall be submitted for review and approval by the City to ensure that maximum feasible noise attenuation is achieved. These attenuation measures shall include as many of the following control strategies as feasible and shall be implemented prior to any required pile-driving activities: • Implement “quiet” pile-driving technology, where feasible, in consideration of geotechnical and structural requirements and conditions; • Erect temporary plywood noise barriers around the entire construction site; • Utilize noise control blankets on the building structure as it is erected to reduce noise emission from the site; • Evaluate the feasibility of noise control at the receivers by temporarily improving the noise reduction capability of adjacent buildings; and • Monitor the effectiveness of noise attenuation measures by taking noise measurements. • A third-party peer review, paid for by the applicant, shall be required to assist the City in evaluating the feasibility and effectiveness of the noise reduction plan submitted by the applicant. • A special inspection deposit is required to ensure compliance with the noise reduction plan. The amount of deposit shall be determined by the Building Official and the deposit shall be submitted by the project sponsor concurrent with submittal of the noise reduction plan.	

Table II-1 *continued*

Environmental Impacts	**Level of Significance Without Mitigation**	**Mitigation Measures**	**Level of Significance With Mitigation**
NOISE-1 *continued*		NOISE-1e: A process with the following components shall be established for responding to and tracking complaints pertaining to pile-driving construction noise: • A procedure for notifying City Building Division staff and Oakland Police Department; • A list of telephone numbers (during regular construction hours and off-hours); • A plan for posting signs on-site pertaining to complaint procedures and who to notify in the event of a problem; • Designation of a construction complaint manager for the Project; and • Notification of neighbors within 300 feet of the Project construction area at least 30 days in advance of pile-driving activities. Construction period impacts would still occur with implementation of the measures detailed above. However, because they would be short-term in duration, the City considers this a less-than-significant impact.	
NOISE-2: Local traffic will generate long-term noise levels exceeding *Normally Acceptable* and *Conditionally Acceptable* noise levels on the Project site.	S	NOISE-2: Once the project design is finalized and the location of specific uses are determined, the project applicant shall have an acoustical analysis prepared that details noise reduction requirements and noise insulation features necessary to achieve acceptable interior and exterior noise levels. The requirements shall be sufficient to achieve a minimum of 45 dBA for all interior building spaces and shall achieve either Normally Acceptable or Conditionally Acceptable ranges for exterior uses according to the applicable land use category as set forth in Table IV.F-4. Measures to reduce the interior noise levels may include: • To meet the City’s 45 dBA CNEL interior noise standard, building facade upgrades will be required for building located along Telegraph Avenue. All windows facing Telegraph Avenue must have a sound transmission class (STC) of 31 or greater.	LTS

Table II-1 *continued*

Environmental Impacts	**Level of Significance Without Mitigation**	**Mitigation Measures**	**Level of Significance With Mitigation**
NOISE-2 *continued*		• All of the proposed buildings on the project site shall be designed and constructed with ventilation systems, to achieve the indoor fresh-air ventilation requirements specified in Chapter 35 of the Uniform Building Code, to achieve the 45 dBA CNEL interior noise standard.	
		Measures to reduce the exterior noise levels may include: • The inclusion of plexiglass enclosures for outdoor patio and balcony areas at a height of 5 feet (i.e., to shield balconies and or outdoor patio areas) would provide 5dBA or more in noise reduction for outdoor use areas.	
		Implementation of the above mitigation measure would reduce this impact to a less-than-significant level by achieving, at a minimum, *Conditionally Acceptable* noise levels.	
NOISE-3: Long-term stationary noise sources on the Project site could potentially generate noise levels in excess of the thresholds set in Section 17.120.050 of the City's Planning Code.	S	NOISE-3: The following measures are required for the operations of the proposed Project: • All on-site stationary noise sources shall comply with the standards listed in Section 17.120.050 of the City's Planning Code; and • Loading docks or loading areas and noise-generating equipment associated with the retail uses will be located as far as practical from all existing and planned residential properties.	LTS
		Implementation of the above mitigation measure would reduce the impact to below a level of significance.	

Table II-1 *continued*

Environmental Impacts	**Level of Significance Without Mitigation**	**Mitigation Measures**	**Level of Significance With Mitigation**
G. HAZARDS AND HAZARDOUS MATERIALS			
HAZ-1: Development of the Project could expose construction workers and/or the general public to hazardous materials from contaminated soil and groundwater during construction activities.	S	HAZ-1a: Prior to issuing any grading, demolition or building permits for the proposed Project affecting Project site Blocks 3 through 9, an environmental investigation shall be conducted at the site by a qualified environmental professional. The environmental investigation shall implement appropriate sampling recommendations presented in previously conducted Phase I site assessment(s) prepared for the Project site, as summarized in Table IV.G-3, in order to adequately characterize subsurface conditions of the site. Environmental investigation workplans shall be submitted to the City of Oakland and RWQCB for review and approval. Information from the environmental investigation shall be used to develop and implement site-specific health and safety plans for construction workers and best management practices (e.g., dust control, storm water runoff control, etc.) appropriate to protect the general public.	LTS
		HAZ-1b: Prior to issuing any grading, demolition, or building permit for the proposed Project, a site-specific Health and Safety Plan (HSP) shall be prepared by a qualified industrial hygienist. At a minimum, the HSP shall summarize information collected in environmental investigations for the Project site, including soil and groundwater quality data; establish soil and groundwater mitigation and control specifications for grading and construction activities, including health and safety provisions for monitoring exposure to construction workers; provide procedures to be undertaken in the event that previously unreported contamination is discovered; incorporate construction safety measures for excavation activities; establish procedures for the safe storage and use of hazardous materials at the Project site, if necessary; provide emergency response procedures; and designate personnel responsible for implementation of the Plan. The HSP shall be designed to prevent potential exposures to construction workers above established OSHA Permissible Exposure Limits. The Plan shall be submitted to the City of Oakland for review and approval.	

Table II-1 *continued*

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
HAZ-1 *continued*		HAZ-1c: Prior to issuing any grading, demolition, or building permit for the proposed Project, a Soil and Groundwater Management Plan (Plan) shall be prepared. The Plan shall include procedures for managing soils and groundwater removed from the site to ensure that any excavated soils and/or dewatered groundwater with contaminants are stored, managed, and disposed of safely, in accordance with applicable regulations. The Plan will incorporate notification and dust mitigation requirements of the BAAQMD (including Title 17, CCR Section 93105). Dewatering procedures will incorporate regulatory requirements for groundwater discharge to storm or sanitary sewers, as outlined in Mitigation Measure HYD-3. The Plan shall be submitted to the City of Oakland and RWQCB for review and approval and shall be implemented throughout all phases of Project development.	
HAZ-2: Development of blocks with soil and/or groundwater contamination could expose future residents and workers to potentially hazardous concentrations of contaminants.	S	HAZ-2a: Covenants, codes, and restrictions for the proposed Project shall strictly prohibit the use of groundwater at the Project site for drinking, irrigation, or industrial purposes. Any dewatering activities required at the Project site following construction activities shall be required to be carried out under the Soil and Groundwater Management Plan prepared for the Project (Mitigation Measure HAZ-1c).	LTS
		HAZ-2b: Prior to issuing any permits for construction within the Project site, a Human Health Risk Assessment (HHRA) shall be conducted and/or updated by a qualified environmental professional. This HHRA shall employ methodology from the *City of Oakland Urban Land Redevelopment: Guidance Document* for the Oakland Risk Based Corrective Action (RBCA) program to evaluate potential health risks from petroleum hydrocarbons, metals, solvents, and other volatile organic compounds in soils and groundwater. Depending on the findings of the HHRA, recommendations may be made for administrative or engineering controls to minimize public exposure to hazardous materials, if warranted. These controls could potentially include vapor barriers for building foundations, encapsulation of the site with building foundations and paved parking surfaces to prevent exposure to soils, and implementation of an Operations and Maintenance Plan to insure prescribed controls are implemented and maintained. The controls shall ensure that any potential added health	

Table II-1 *continued*

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
HAZ-2 *continued*		risks to future site users are reduced to a cumulative risk of less than 1 x 10^{-5} (a calculated risk of 1 in 100,000 persons exposed) for carcinogens and a cumulative hazard index of 1.0. The HHRA shall be submitted to the City of Oakland and RWQCB for review and approval.	
HAZ-3: Improper use or transport of hazardous materials during construction activities could result in releases affecting construction workers and the general public.	S	HAZ-3**:** The implementation of Mitigation Measure HAZ-1b would require a Site Safety Plan/Soil and Groundwater Management Plan (Plan). The Plan will establish procedures for the safe storage and use of hazardous materials at the Project site, if necessary; provide emergency response procedures; and designate personnel responsible for implementation of the Plan. No other mitigation is required.	LTS
HAZ-4: Demolition of buildings that contain lead-based paint and asbestos-containing building materials would release airborne lead and asbestos particles, which may adversely affect construction workers and the public.	S	HAZ-4: All asbestos-containing materials shall be abated by a certified asbestos abatement contractor in accordance with construction worker health and safety regulations and the regulations and notification requirements of the Bay Area Air Quality Management District (BAAQMD) (29 CFR 1926.1101; 40 CFR 61 and 152; Title 8 CCR Section 1529; BAAQMD Regulation 11, Rule 2). The removal and disposal of lead-based paint within the Project site shall be completed in accordance with federal and State construction worker health and safety regulations (29 CFR, Part 1926.62; Title 8, CCR Section 532.1; CDHS Training, Certification and Workpractices Rule).	LTS
HAZ-5: Development of the Project could result in hazardous emissions or the handling of hazardous materials, substances, or waste within ¼-mile of a proposed school.	S	HAZ-5: Implementation of existing regulatory requirements for school siting, and preparation and implementation of a Site Safety Plan/Soil and Groundwater Management Plan (Mitigation Measure HAZ-1b) and lead and asbestos regulations (Mitigation Measure HAZ-4) would reduce this impact to a less-than-significant level. No additional mitigation is required.	LTS
H. UTILITIES AND INFRASTRUCTURE			
The Project would not result in any significant impacts related to infrastructure and utilities.			

Table II-1 *continued*

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
I. HISTORIC ARCHITECTURAL, ARCHAEOLOGICAL AND PALEONTOLOGICAL RESOURCES			
HIST-1: Ground-disturbing activities for the construction of subterranean parking structures, building foundations, and underground sewer and utility facilities could adversely impact paleontological resources.	S	HIST-1a: A paleontological resources monitoring plan shall be developed in consultation with a qualified paleontologist prior to Project-related ground-disturbing activities. This monitoring plan shall incorporate the findings of Project-specific geotechnical investigations to identify the location and depth of deposits that have a high likelihood of containing paleontological resources and that may be encountered by Project activities. This information will indicate the depth of overlying non-sensitive soils (i.e., artificial fill and prior disturbance) within the Project area to allow a more effective determination of where paleontological monitoring is appropriate.	LTS
		HIST-1b: A qualified paleontologist shall monitor all ground-disturbing activity that occurs at depths within the Project area determined to be sensitive in the paleontological monitoring plan. Monitoring shall continue until, in the paleontologist's opinion, significant, nonrenewable paleontological resources are unlikely to occur. In the event that paleontological resources are encountered during excavation, all work within 50 feet of the find shall be redirected until the monitor has evaluated the situation and provided recommendations for the protection of, or mitigation of adverse effects to, significant paleontological resources. Mitigation for impacts to significant paleontological resources shall include thorough documentation of the find and its immediate context to recover scientifically-valuable information. Upon completion of paleontological monitoring, a monitoring report shall be prepared. This scope of this report shall be approved by the City, but at a minimum the report will document the methods, results, and recommendations of the monitoring paleontologist.	
HIST-2: Ground-disturbing activities for the construction of subterranean parking structures, building foundations, and underground sewer and utility facilities could adversely impact cultural resources .	S	~~HIST-2: A qualified archaeologist shall monitor all ground-disturbing activities in the Project area until, in the archaeologist's opinion, a depth has been reached at which potentially significant archaeological deposits are unlikely to occur.~~	LTS

Table II-1 *continued*

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
HIST-2 *continued*		~~Should an archaeological deposit be encountered by Project activities, the monitor shall be empowered to halt construction in the vicinity of the find. Construction activities shall be redirected and a qualified archaeologist shall: 1) evaluate the archaeological deposit to determine if it meets the CEQA definition of a historical or archaeological resource; and 2) make recommendations about the treatment of the deposit, as warranted. If the deposit does not meet the CEQA definition of a historical or archaeological resource, then no further study or protection of the deposit is necessary. If the deposit does meet the CEQA definition of a historical or archaeological resource, then it shall be avoided by Project activities. If avoidance is not feasible, then effects to the deposit shall be mitigated through a data recovery strategy developed by the evaluating archaeologist. Mitigation of impacts to significant archaeological deposits through data recovery will recover scientifically-valuable information. This mitigation may include, but is not limited to, a thorough recording of the resource on DPR Form 523 records, or archaeological excavation. If archaeological excavation is the only feasible method of data recovery, then such excavation shall conform to the provisions of CEQA Guidelines §15126.4(b)(3)(C).~~	

Table II-1 *continued*

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
HIST-2 *continued*		HIST-2a: A pre-construction archaeological testing program shall be implemented to help identify whether historic or unique archaeological resources exist within the Project site. Examples of potential historic or unique archaeological resources that could be identified within the Project site include: back-filled wells; basements of buildings that pre-date Euro-American buildings that were constructed on the Project site; and backfilled privies. For these resources to be considered significant pursuant to CEQA, they would have to have physical integrity *and* meet at least one of the criteria listed in *CEQA Guidelines* section 15064.5(a)(3) (for historic resources) and/or CEQA section 21083.2(g) (for unique archaeological resources). These criteria include: association with events that have made a significant contribution to the broad patterns of California history and cultural heritage; association with the lives or persons important in our past; embodiment of the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; yield, or may likely yield, information important in prehistory or history; contains information needed to answer important scientific research questions and be subject to a demonstrable public interest in that information; have a special and particular quality such as being the oldest of its type or the best available example of its type; or be directly associated with a scientifically recognized important prehistoric or historic event or person. The testing program, in conjunction with a sensitivity study, shall use a combination of subsurface investigation methods (including backhoe trenching, augering, and archaeological excavation units, as appropriate). The purpose of the testing program is to: (1) identify the presence and location of potentially-significant archaeological deposits; (2) determine if such deposits meet the definition of a historical resource or unique archaeological resource under section 21083.2(g) of the CEQA statutes; (3) guide additional archaeological work, if warranted, to recover the information potential of such deposits; and (4) refine the archaeological monitoring plan.	

Table II-1 *continued*

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
HIST-2 *continued*		If historic or unique archaeological resources associated with the Chinese community are identified within the project site and are further determined to be unique, the City shall consult with representatives of an established local Chinese-American organization regarding the potential use of the archaeological findings for interpretive purposes.	
		HIST-2b: Archaeological monitoring of ground-disturbing construction in the Project area shall be conducted, as appropriate and if necessary, based on the results of the pre-construction testing program and the potential for encountering unidentified archaeological deposits. Upon completion of the pre-construction testing program specified in Mitigation Measure HIST-2a, the extent of archaeological monitoring during Project construction will be assessed, and the scope and frequency of the monitoring required by this mitigation measure shall be based on the findings of this assessment. Monitoring shall be conducted by a cultural resource professional approved by the City who meets the Secretary of the Interior's Professional Qualifications Standards for Prehistoric and Historical Archaeology. Upon completion of such archaeological monitoring, evaluation, or data recovery mitigation, the archaeologist shall prepare a report documenting the methods, results, and recommendations of the investigation, and submit this report to the NWIC. Public displays of the findings of archaeological recovery excavation(s) of historical or unique resources shall be prepared. As appropriate, brochures, pamphlets, or other media, shall be prepared for distribution to schools, museums, libraries, and – in the case of Chinese-American archaeological deposits – Chinese-American organizations.	

Table II-1 *continued*

Environmental Impacts	**Level of Significance Without Mitigation**	**Mitigation Measures**	**Level of Significance With Mitigation**
HIST-3: Ground-disturbing activities for the construction of subterranean parking structures, building foundations, and underground sewer and utility facilities could disturb human remains, including those interred outside of formal cemeteries.	S	HIST-3: Should human remains be encountered by Project activities, construction activities shall be halted and the County Coroner notified immediately. If the human remains are of Native American origin, the Coroner must notify the Native American Heritage Commission (NAHC) within 24 hours of this identification, and a qualified archaeologist should be contacted to evaluate the situation. The NAHC will identify a Native American Most Likely Descendent (MLD) to inspect the site and provide recommendations for the proper treatment of the remains and associated grave goods. The archaeologist shall recover scientifically-valuable information, as appropriate and in accordance with the recommendations of the MLD. Upon completion of such analysis, as appropriate, the archaeologist shall prepare a report documenting the methods and results of the investigation. This report shall be submitted to the NWIC.	LTS
HIST-4a *(Variant 1: Demolition; Variant 2: Partial Demolition)*: The proposed Project may result in full or partial demolition of the Great Western Power Company Building, which is a local historical resource.	S	HIST-4a *(Variant 1 and 2)*: The following measures shall be implemented to preserve information about the resource for further study: • Record the Great Western Power Company Building in accordance with the procedures of the Historical American Buildings Survey (HABS) through measured drawings, written histories, and large-format photographs; • Prepare a history of the Great Western Power Company Building that incorporates oral history, documentary research, and architectural information; • Prepare a brochure, regarding the building's historical association with one of three major early 20th century northern California power companies, to be made available at local libraries and museums; • Incorporate interpretive elements, such as signs and placards, into public areas and street frontages proposed as part of the Project.	SU

Table II-1 *continued*

Environmental Impacts	**Level of Significance Without Mitigation**	**Mitigation Measures**	**Level of Significance With Mitigation**
HIST-4 *continued*		• If full demolition of the building occurs, salvage architectural elements from the building, including hardware, doors, paneling, fixtures, and equipment, and incorporate these elements into new construction; and • Curate all materials, notes, and reports at the OHR, and submit copies to the NWIC. Even with extensive documentation, however, the demolition of the building or portions of the building would result in the loss of a historic resource that is associated with significant historical events and is an example of outstanding design and function. Therefore, the demolition or partial demolition of the building would remain a significant and unavoidable impact.	
HIST-4b *(Variant 3: Preservation)*: Modification and reuse of the Great Western Power Company Building could adversely affect a historical resource.	S	HIST-4b *(Variant 3)*: Any modifications to the exterior of the building that may be proposed as part of its preservation and reuse shall be developed in consultation with staff at the Planning Department and a qualified historic preservation architect to determine an appropriate treatment strategy. In the event that this measure is determined feasible and is implemented, Mitigation Measure HIST-5 shall also be implemented to ensure that development on the adjacent properties does not adversely impact the building’s integrity.	SU

Table II-1 *continued*

Environmental Impacts	**Level of Significance Without Mitigation**	**Mitigation Measures**	**Level of Significance With Mitigation**
HIST-5 *(Variant 3)*: Site clearance within the Project area adjacent to the Great Western Power Company Building could adversely impact a historical resource.	S	HIST-5 *(Variant 3)*: The following two-part mitigation measure shall be implemented: • The building's urban setting on the portion of Block 7 fronting Thomas L. Berkley Way (20th Street) shall be documented prior to Project implementation. At a minimum, this documentation shall include panoramic streetscape photographs and an interpretive display that shall provide an overview of the former urban context and describe how this context contributed to the building's significance. This information shall be presented in an on-site display at the preserved Great Western Power Company Building to enable a viewer to easily associate the former setting with the existing building (i.e., panoramic streetscape photographs to show the building within the former street frontage). Upon completion of this documentation, a copy of all notes, photographs, and analysis shall be archived at the OHR and submitted to the NWIC. • The City shall ensure that the designs for new adjacent buildings are evaluated with respect to minimizing setting impacts on the historic resource. Project buildings adjacent to the Great Western Power Company Building shall be designed in a manner that minimizes inappropriate differences in mass and scale, if feasible. For example, designs could call for adjacent buildings to step-up to the height of the tallest Project element north of 20th Street, thereby reducing a potentially abrupt contrast between new buildings and the two-story Great Western Power Company Building. If the designs for the adjacent buildings follow the Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for the Preservation of Historic Buildings, then the Project will have a less-than-significant impact, pursuant to CEQA §15064.5(b)(3).	LTS

Table II-1 *continued*

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
HIST-6: Site clearance within the Project area could adversely impact four Potential Designated Historic Properties (PDHPs) in the Project area.	LTS	HIST-6: If the relocation of the PDHPs proposed for demolition on the Project site is not feasible, the buildings shall be documented at a level of detail commensurate with their local importance. At a minimum, this effort shall include photo-documentation, as well as local oral history about the past uses and occupants of the buildings. This documentation shall be planned in consultation with OCHS in order to: 1) identify those qualities that support and justify the property's local significance; and 2) efficiently record and disseminate such information in a way that most effectively offsets the loss of such buildings. At the completion of this documentation, all notes, photographs, and analysis shall be archived at the OHR, and a complete copy shall be submitted to the NWIC.	LTS
HIST-7: Project demolition and construction could adversely impact the setting of the 19th and San Pablo Commercial District.	~~S~~ LTS	HIST-7: No mitigation measure is necessary to address this ~~the~~ less-than-significant impact.	LTS
HIST-8: Project demolition and construction could result in a significant cumulative impact on the 19th and San Pablo Commercial District.	S	HIST-8a: If feasible, the three PDHPs that contribute to the 19th and San Pablo Commercial District (located at 1958-60 San Pablo Avenue, 1966-68 San Pablo Avenue, and 1972 San Pablo Avenue) shall be preserved in their existing condition or rehabilitated and incorporated into the proposed Project. Any modifications to the exterior of the buildings that may be proposed as part of their rehabilitation shall be developed in consultation with the Planning Department and a qualified historic preservation architect to determine an appropriate treatment strategy that preserves the important historic qualities of the structures.	LTS
		HIST-8b: If the City determines that preservation of the three PDHPs that contribute to the 19th and San Pablo Commercial District (located at 1958-60 San Pablo Avenue, 1966-68 San Pablo Avenue, and 1972 San Pablo Avenue) is not feasible, the City shall inform the applicant for the Thomas L. Berkley Square Project of the potential cumulative impact prior to the implementation of the Uptown Mixed-Use Project. The City shall consult with both project applicants to establish a fair division of responsibility to fund mitigation measures to preserve information about the 19th and San Pablo Commercial District for future study. These mitigation measures shall include the following:	SU

Table II-1 *continued*

Environmental Impacts	**Level of Significance Without Mitigation**	**Mitigation Measures**	**Level of Significance With Mitigation**
HIST-8 *continued*		• Record the 19th and San Pablo Commercial District in accordance with the procedures of HABS through measured drawings, written histories, and large-format photographs; • Prepare a history of the 19th and San Pablo Commercial District that incorporates oral history, documentary research, and architectural information; this history could utilize non-written media and production techniques, including video photography; • Prepare a brochure, regarding the district's historical association with turn-of-the-century Oakland commerce, to be made available at local libraries and museums; • Salvage architectural elements from the buildings proposed for demolition, including hardware, doors, paneling, fixtures, and equipment, and incorporate these elements into new construction; and • Curate all materials, notes, and reports at the OHR, and submit copies to the NWIC. Even with extensive documentation, however, a cumulative impact will result from the demolition of ~~66~~ 63 percent of the 19th and San Pablo Commercial District's contributing buildings. This loss of contributing buildings will materially affect the district's ability to convey its historical significance, which will result in a significant, unavoidable cumulative impact.	
HIST-9: Site clearance within the Project area could adversely impact historical buildings resources inventoried by the OCHS.	LTS	HIST-9: No mitigation measure is necessary to address this ~~the~~ less-than-significant impact.	LTS
HIST-10: The construction of Project buildings could adversely impact historic architectural resources adjacent to the Project area.	LTS	HIST-10: No mitigation measure is necessary to address this ~~the~~ less-than-significant impact.	LTS
HIST-11: The proposed Project could impact the setting of the Fox Oakland Theater.	LTS	HIST-11: No mitigation measure is necessary to address this less-than-significant impact.	LTS
HIST-12: The proposed Project could impact the operations of the Fox Oakland Theater and, therefore, indirectly impact its architectural qualities.	LTS	HIST-12: No mitigation measures is necessary for this less-than-significant impact.	LTS

Table II-1 *continued*

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
HIST-13: The enhancement of streetscape features and lighting on streets fronting the Project area may impact historical resources, including elements of the Uptown Shopping/ Entertainment Historic District and the Fox Oakland Theater.	S	HIST-13: Prior to Project initiation, the plan for the enhancement of street features and lighting on Telegraph Avenue shall be reviewed by planning staff to ensure that it conforms to the *Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for the Preservation of Historic Buildings.* Conformance with these guidelines will ensure that these improvements are compatible with nearby historical resources, and will mitigate potential Project effects to less-than-significant levels.	LTS
J. AESTHETIC RESOURCES			
AES-1: The proposed Project would alter the intrinsic architectural character of the Project site and its surroundings.	S	AES-1: The following measures shall be incorporated into the final Project design: • Create streetscape vitality and enhance the pedestrian experience through detailed treatment of building facades, including entryways, fenestration, and signage, and through the use of carefully chosen building materials, texture, and color. • Design of building facades shall include sufficient articulation and detail to avoid the appearance of blank walls or box-like forms. • Exterior materials utilized in construction of new buildings, as well as site and landscape improvements, shall be high quality and shall be selected for both their enduring aesthetic quality and for their long term durability. • Ensure that the architectural and landscape treatment of the proposed parking structure promotes human scale and pedestrian activity. • Detailed designs for the public park shall be developed. The design shall emphasize the public nature of the space and pedestrian comfort. The plaza design shall consider sun/shade patterns during mid-day hours throughout the year. The plaza design shall be sensitively integrated with the streetscape.	LTS

Table II-1 *continued*

Environmental Impacts	Level of Significance Without Mitigation	Mitigation Measures	Level of Significance With Mitigation
AES-2: The proposed development would provide additional sources of nighttime lighting in the downtown.	S	AES-2a: The specific reflective properties of Project building materials shall be assessed by the City during Design Review as part of the Project's Development Standards, Procedures and Guidelines. Design review shall ensure that the use of reflective exterior materials is minimized and that proposed reflective material would not create additional daytime or nighttime glare.	LTS
		AES-2b: Specific lighting proposals shall be reviewed and approved by the City prior to installation. This review shall ensure that any outdoor night lighting for the Project is down shielded and would not create additional nighttime glare.	
K. WIND			
WIND-1: Construction of 19-story buildings on Blocks 5 and 7 could result in wind speeds of over 36 mph.	S	WIND-1a: The final design of the high-rise buildings on Blocks 5 and 7 shall be in accordance with one or more of the following design guidelines. In addition, as part of the design review process for these high-rise buildings, a qualified wind consultant shall ensure the Project is designed in accordance with these guidelines: • Align long axis of each building along a northwest-southeast alignment to reduce exposure of the wide faces of the building to westerly or southeasterly winds. • West or southeasterly building faces shall be articulated and modulated through the use of architectural devices such as surface articulation; variation; variation of planes, wall surfaces, and heights; and the placement of setbacks and other similar features. • Utilize properly-located landscaping that mitigates high winds. Porous materials (e.g., vegetation, hedges, screens, latticework, perforated metal), which offer superior wind shelter compared to solid surfaces, shall be used. • Avoid narrow gaps between buildings where westerly or southeasterly winds could be accelerated; or • Avoid breezeways or notches at the upwind corners of the building.	LTS

Table II-1 *continued*

Environmental Impacts	**Level of Significance Without Mitigation**	**Mitigation Measures**	**Level of Significance With Mitigation**
WIND-1 *continued*		WIND-1b: A qualified wind consultant shall review and evaluate the final design of the high-rise buildings on Blocks 5 and 7, and shall determine whether incorporated design features would reduce wind impacts to a less-than-significant level. If the wind consultant determines that these design features would reduce wind impacts to a less-than-significant level (i.e., less than 36 mph), no further mitigation would be required. If the wind consultant determines that significant adverse wind impacts could occur, models of the proposed Blocks 5 and 7 buildings shall be subject to wind tunnel testing to determine if the buildings would result in uncomfortable or hazardous winds. The wind consultant shall work with the Project architect to develop further building design modifications that would reduce wind impacts to a less-than-significant level (i.e., standard of less than 36 mph).	
L. SHADE AND SHADOW			
The Project would not result in any significant impacts related to shade and shadows.			

Page 47, Figure III-3, has been added to the Draft EIR, as shown on the following page.

Page 47 is revised as follows:

7. Demolition and Construction

Demolition activities would include the removal of all existing structures on Blocks 1 through 7, including approximately 20 buildings, with the possible exception of the Great~~er~~ Western Power Company Building (also known as Navlet's Florist and Nursery). Proposed building demolition is shown in Figure III-3. The Project applicant is proposing the following three variants in regard to the Great Western Power Company Building:

Page 49 is revised as follows:

Table III-4: Required Permits and Approvals

Lead Agency	**Permit/Approval**
City of Oakland Planning Commission City Council Redevelopment Agency	• Major Conditional Use Permit for creation of a new park ~~a project over 100,000 square feet in size~~ and for ~~D~~demolition of rooming ~~Single Residency Occupancy (SRO~~) units • Design Review • Planned Unit Development (preliminary and final) • Minor Conditional Use Permits or Variances, if determined necessary once detailed plans are submitted • Redevelopment Agency actions, including a Disposition and Development Agreement and acquisition of land • Subdivision Maps to combine parcels, create new parcels or create condominiums, if proposed • ~~DDA~~ • General Plan Amendment and Rezoning to designate proposed park as open space
Responsible Agencies	
East Bay Municipal Utility District (EBMUD)	• Approval of water line, water hookups and review of water needs
California Department of Transportation (Caltrans)	• Approval of plans and encroachment permit for improvements located within the State right-of-way; improvements within the public right-of-way; excavation for utilities; clean-up of contamination; condemnation of property (if required); and traffic improvements (including re-paving, re-striping, signal improvements, street lights, and signal optimization)
California Regional Water Quality Control Board (RWQCB)	• National Pollutant Discharge Elimination System (NPDES) permit for stormwater discharge • Approval and oversight of required remediation plans
Other Agencies	
~~SBC (prev. Pacific Bell)~~	~~• Approval of communication line improvements and connection permits~~
~~Pacific Gas & Electric (PG&E)~~	~~• Approval of natural gas improvements and connection permits~~
California Department of Toxic Substances Control (DTSC)	• Approval and oversight of the plan
Bay Area Air Quality Management District (BAAQMD)	• Permitting of asbestos abatement activities

Figure III-3: Proposed Demolition

8x11

Page 69 is revised as follows:

> **(2) Significant Land Use Impacts**. Implementation of the proposed Project would not result in any significant land use ~~related public policy~~ impacts.

Page 92, Figure IV.D-3, has been revised as shown on the following page.

Page 108 is revised as follows:

> **(2) Mode Split**. The modal split for trips generated by the proposed Project was developed based on information from the ACCMA model, updated to reflect the cumulative land use forecasts of the City of Oakland. Approximately 83 percent of all trips would be vehicular trips. BART and AC Transit are expected to serve 62 and 38 percent of the transit trips, respectively. The modal split predicted by the ACCMA model (all references to the Alameda County Congestion Management Agency (ACCMA) model in this document refer to the model, as updated to reflect the cumulative land use forecasts of the City of Oakland) is likely conservative relative to the number of vehicle trips to be generated by the Project. Due to the location and type of Project proposed, it is likely that a higher split to transit will occur; however, the conservative prediction of the model~~, updated to reflect the cumulative land use forecasts of the City of Oakland~~ is used in the analysis.

Page 109 is revised as follows:

> **(4) Trip Distribution**. Vehicle trips forecast to be generated by the proposed Uptown Project were assigned to the surrounding transportation network based on a distribution pattern developed specifically for this study. The pattern is based on information from the ACCMA Model updated to reflect the cumulative land use forecasts of the City of Oakland. Figure IV.D-8 illustrates the Project's anticipated trip distribution pattern.

Page 112, Table 18 footnotes, are revised as follows:

> [a] The ITE "Apartment" land use category 220 was used to complete the trip generation forecast for the "student and faculty housing" use.
>
> [b] Transit trips are estimated to be 16 percent of all non-student residential trips generated by the proposed Project and 25 percent of the student trips. BART and AC transit are estimated to serve 62 and 38 percent of Project transit trips, respectively, based on the ACCMA's model, updated to reflect the cumulative land use forecasts of the City of Oakland.
>
> [c] 15 percent of the retail trips are assumed to be internal linked trips.

Page 116, Table 20, Note 1, is revised as follows:

> Note: 1. Traffic volumes in the Year 2010 No Project scenario are based on the ACCMA's model, updated to reflect the cumulative land use forecasts of the City of Oakland.

Figure IV.D-3: Existing Transit Network

8 x 11 B&W

Page 118 is revised as follows:

(2) Year 2010 Traffic Operations. Based on the Alameda County Congestion Management Agency's (ACCMA) Countywide Transportation Demand Model's forecasts, updated to reflect the cumulative land use forecasts of the City of Oakland, increases in traffic levels at each study intersection were estimated. Figures 5a and 5b in Appendix E illustrate the Year 2010 Baseline traffic volumes without the proposed Project. The Year 2010 Baseline traffic volumes were developed based on growth factors developed from the ACCMA model data, updated to reflect the cumulative land use forecasts of the City of Oakland, and reflect the increase in traffic from all planned development that would impact the study area. Figures 6a and 6b in Appendix E present the AM and PM peak hour Project traffic volumes at the 40 study intersections. The Project traffic volumes were developed by assigning the peak hour Project traffic presented in Table IV.D-18 to the study intersections based on the Project traffic distribution pattern illustrated in Figure IV.D-8. Figures 6a and 6b in Appendix E illustrate the Year 2010 Baseline plus Project traffic volumes.

Page 121, Table 23, Note 1, is revised as follows:

Note: 1. Traffic volumes in the Year 2010 No Project scenario are based on the ACCMA's model, updated to reflect the cumulative land use forecasts of the City of Oakland.

Page 123 is revised as follows:

Mitigation Measure TRANS-1: Optimization of the signal timing at the intersection of San Pablo and Thomas L. Berkley Way (20th Street) would improve function to LOS D in the PM peak hour. This intersection functions as an integrated signal system with other intersections in the downtown area. To mitigate the Project's impact at this location and others, the City shall prepare a signal optimization and coordination plan for the area bounded by San Pablo Avenue, Grand Avenue, Telegraph Avenue, and 17th Street prior to Project occupancy. The plan shall address the timing and equipment requirements, as necessary for all of the signalized intersections located within this area. The Project sponsor shall fund its fair share cost of the preparation of this plan and the implementation of the signal timing program. Implementation of the signal optimization program may also involve the purchase and installation of interconnection hardware (i.e. modems, microwave antennas, etc). The City of Oakland will consult with AC Transit during preparation of the plan.

Given that the Project sponsor is responsible for only a portion of this mitigation measure, implementation of this set of improvements will be funded fully by one or a combination of the following means:

1. The Project sponsor shall fully fund the costs of the signalization improvements and shall be reimbursed through other fair-share contributions as future projects ~~occur~~ that exceed ~~fall within~~ the City's thresholds of significance occur.

2. The City, at its ~~their~~ sole discretion, shall establish a Traffic Improvement Program and concurrent Traffic Impact Fee Ordinance to fund the mitigation measure.

3. The Redevelopment Agency, at its ~~their~~ sole discretion, shall contribute funds to the costs of implementation. (LTS)

Page 125 is revised as follows:

(3) Year 2025 Traffic Operations. Traffic increases for each study intersection were estimated based on the Alameda County Congestion Management Agency's (ACCMA) Countywide Transportation Demand Model, updated to reflect the cumulative land use forecasts of the City of Oakland. The "Year 2025 No Project" traffic volumes are shown in Figures 7a and 7b in Appendix E. The "Year 2025 With Project Traffic" volumes are illustrated in Figures 8a and 8b in Appendix E. This cumulative scenario includes all development contemplated in the study area.

Page 128, Table 27, Note 1, is revised as follows:

Note: 1. Traffic volumes in the Year 2010 No Project scenario are based on the ACCMA's model, updated to reflect the cumulative land use forecasts of the City of Oakland.

Page 133 is revised as follows:

Mitigation Measure TRANS-10: The Project shall provide for the following two improvements.

- Optimize the signal timing at the intersection of Telegraph and 19th Street. Since this intersection also functions as part of an integrated signal system in downtown Oakland, Mitigation Measure TRANS-1~~B~~ shall also be implemented.
- Restripe the westbound 19th Street approach to provide two exclusive through lanes and an exclusive right turn lane.

Page 159 of the Draft EIR is revised as follows:

Mitigation Measure AIR-2: To the extent permitted by law, the Uptown Project shall be required to implement Transportation Control Measures (TCMs) as recommended by the BAAQMD. ~~However, the City of Oakland will implement as feasible on the basis that this Project is an infill mixed-used development project that in and of itself supports many Smart Growth Principals.~~ Measures that the City ~~may~~ shall require the Project to implement, or that are already proposed as part of the Project, include the following:

- *Transit Measures:* (i) Construct transit facilities such as bus turnouts/bus bulbs, benches, shelters, ~~etc.~~ and other needed facilities with the review and comment of AC Transit. (Effectiveness 0.5 percent - 2 percent of all trips, BAAQMD *CEQA Guidelines*); (ii) Design and locate buildings to facilitate transit access (e.g., locate building entrances near transit stops, eliminate building setbacks, etc.) (Effectiveness 0.1 percent - 0.5 percent of all trips, BAAQMD *CEQA Guidelines*).

Page 193 is revised as follows:

The East Bayshore Recycled Water Project, which would provide up to 2.3 mgd of recycled water to residents in Alameda, Albany, Berkeley, Emeryville, and Oakland, is currently in the planning stage. The Project would involve the construction of new treatment and disinfection facilities at the EBMUD Main Wastewater Treatment Plant. The service area of the East Bayshore Recycled Water Project, which is anticipated to be completed prior to 2010, would include the Project site and its surroundings. In January 2002, the City adopted a water reuse ~~dual plumbing~~ ordinance, which requires new development to use recycled water provided by EBMUD, and to install dual plumbing systems if the use of recycled water is financially and technically feasible.

Page of 194 is revised as follows:

. . . mgd by 2020.[1] ~~As of 2001, EBMUD's water supply was insufficient to meet customer needs in multiple year droughts, even taking into account the implementation of water conservation and recycling programs.[2]~~ In 1993 EBMUD adopted a long-term Water Supply Management Program (WSMP) that serves as a planning guide to the provision of a reliable high-quality water supply to the EBMUD service area through the year 2020. The WSMP identified that, during severe multi-year droughts, EBMUD would be unable to meet its customers' needs for water with its existing source supply, the Mokelumne River, without imposing extreme rationing measures. The 1993 WSMP resulted in two principal options for meeting EBMUD's projection for a supplemental water supply: additional surface or underground storage and additional surface water. Development of additional surface water for EBMUD use may be possible by either enlarging the existing storage at Pardee Reservoir and/or by utilizing EBMUD's Sacramento River contract entitlement. Water from the Sacramento River contract entitlement is anticipated to be available to EBMUD by 2007.

Page 194 is revised as follows:

~~The Project site is served by 8-inch water lines along San Pablo Avenue and Telegraph Avenue.~~ The Project site is served by pipelines in the existing streets that range in size from 4 to 12 inches. ~~These lines, and associated minor water line connections, are anticipated to have an available capacity of over 5,000 gallons per minute (gpm).~~ The City Fire Department maintains minimum flow standards for pipelines serving residential and commercial uses. Prior to the construction of development projects in the City, project applicants are required to verify the capacity of water pipelines that would serve the Project to ensure they meet the Fire Department's minimum fire flow requirements. ~~The minimum flow standard for lines serving residential uses is 2,500 gpm; the minimum flow standard for lines serving commercial uses is 4,500 gpm.[3]~~

[1] East Bay Municipal Utility District, 2001. op. cit.

~~[2] Ibid.~~

~~[3] Khalili, Amin, 2003. Korve Engineering. Personal communication with LSA Associates, Inc. July 24.~~

Page 198 is revised as follows:

> **(1) Water**. The proposed Project would require water for a variety of uses, including household uses, commercial uses, and irrigation of the proposed 25,000 square-foot park. Based upon anticipated uses within the Project site, implementation of the proposed Project would result in an average daily demand for water of 329,000 gpd (120,085,000 gallons per year) and a peak demand of 366,000 gpd.[4] ~~The anticipated daily water demand that would result from implementation of the proposed Project represents approximately 0.2 percent of average daily water demand within the EBMUD service area.~~ The proposed Project would be outfitted with water-conserving fixtures, as required by the Uniform Building Code, and would incorporate dual plumbing systems, to take advantage of available recycled water supplies. The City's water reuse ordinance requires that the Project sponsor install dual plumbing systems within the Project site for the appropriate use of recycled water from EBMUD's East Bayshore Recycled Water Project, as EBMUD plans to supply recycled water to the Project site within the next 10 years for landscape irrigation. Private, water-consuming lawns would not be developed as part of the proposed Project. Therefore, the proposed Project, which represents an efficient use of water, ~~would not~~ is not anticipated to require the construction of new water supply facilities. EBMUD representatives have given a preliminary indication that they can serve this Project's water demand. ~~, and the EBMUD Board will confirm that determination by the end of September 2003.~~ Overall water requirements are subject to negotiations with the Fire Department. EBMUD will make a determination as to the availability of water supplies and the need for system improvements until after the final water demands have been established.

Page 198 is revised as follows:

> ~~The average daily water demand associated with the proposed Project would be approximately 228 gallons per minute, or approximately 4 percent of available water line capacity.~~[5] ~~Sufficient capacity exists to accommodate this increased demand, although select lines may need to be improved depending upon their age and condition.~~ On-site ~~L~~line improvements would be made ~~during~~ as part of the ~~Project construction period~~ construction of public improvements for the Project and are not anticipated to result in significant environmental impacts that are different or more severe than impacts that would result from construction of other components of the proposed Project. As noted in the EBMUD letter dated March 28, 2003 (in response to the NOP for the proposed Project), main extensions (including pipeline replacements) and/or pipeline improvements may be required depending on metering and flow requirements.

Page 198 is revised as follows:

> Requirements for minimum water flow (for the purpose of fighting fires) at Project sites in the City are based on a review of hydrant locations, type of construction and access from public streets, along with other factors such as other life safety components in the building.

---

[4] Khalili, Amin, 2003. Korve Engineering. Personal communication with LSA Associates, Inc. July 24.

~~[5] Ibid.~~

These requirements are subject to negotiations with the Oakland Fire Department and will be established when Project details have been finalized. ~~Typically, fire flow requirements are 2,500 gpm for residential uses, and 3,500 gpm for commercial uses. As noted in subsection a(3), Distribution Pipelines, water lines that serve the Project site are anticipated to have an available capacity of over 5,000 gpm.~~ Based on the anticipated capacity of water lines serving the Project site, and ~~correspondence~~ communication with EBMUD, it is ~~expected~~ anticipated that required ~~minimum~~ water flow would be available ~~within~~ at the Project site without a major upgrade of water lines.[6] As previously stated, the flow requirements are subject to negotiations with the Fire Department. EBMUD will make a determination of the availability of these flows following the determination of the required flows.

Page 198 is revised as follows:

(2) Wastewater. Implementation of the proposed Project would result in the generation of approximately 280,000 gpd of wastewater.[7] ~~Wastewater generated by the proposed Project represents less than 0.2 percent of the MWWTP's secondary treatment capacity. This wastewater would be accommodated by the MWWTP, which is currently operating at 46 percent of its secondary treatment capacity. Therefore, wastewater generated by the proposed Project would be subject to both primary and secondary treatment and would not violate the wastewater treatment requirements of the San Francisco Bay Regional Water Quality Control Board. The wastewater lines that serve the Project site have a capacity of 1.35 mgd based on average existing wastewater flow (6,970 gpd), and could accommodate the increase in flow that would result from the proposed Project.~~[8] The City of Oakland Public Works Department has confirmed that adequate hydraulic capacity exists in the new facilities that would be constructed as part of the Project and EBMUD's sanitary sewer system downstream from the Project site (sub-basin) to accommodate wet-weather flows resulting from implementation of the proposed Project. The Department of Public Works has also indicated that the wet weather flows associated with the improvements are within the sub-basin allocation for delivery to EBMUD. In addition, sanitary sewers that would be developed as part of the proposed Project would be adequately sized to accommodate wet weather flows. Therefore, adequate capacity exists to convey and treat wastewater that would be generated as part of the proposed Project~~. IPublic Works Agency staff have indicated that as part of the final public improvement plans for the Project, the conveyance system will be evaluated to confirm what repairs, if any, will be incorporated into the final public improvement plans and specifications. Therefore,~~ and implementation of the proposed Project would not require the construction of new wastewater treatment or transport facilities.

Page 213 is revised as shown below:

- *19th and San Pablo Commercial District (ASI)*

The 19th and San Pablo Commercial District is a Victorian/late 19th, early 20th century commercial district consisting of 12 buildings on all or part of twelve blocks in the Central Oakland neighborhood. Eight of the 12 buildings are contributors to the district, including the buildings located at 630-42 20th Street; 1901-15 San Pablo Avenue; 1917-23 San Pablo Avenue; 1939-63 San Pablo Avenue; 1958-60 San Pablo Avenue; 1966-68 San Pablo Avenue; 1972 San Pablo Avenue; and 2000-8 San Pablo Avenue. Most of the district lies northwest and outside of the Project area. It includes early 20th century commercial, Italianate commercial, and Beaux Arts-derivative buildings. The dates of contributing buildings range from the 1870s to the 1940s. Currently, the surrounding areas consist of commercial, residential, and transportation uses. Three of the four buildings identified as PDHPs within the Project area (1958-60 San Pablo Avenue, 1966-68 San Pablo Avenue, and 1972 San Pablo Avenue) are contributors to this district. The 19th and San Pablo Commercial District is listed as an ASI by the OCHS.

Page 220 is revised as shown below:

Impact HIST-2: Ground disturbing activities for the construction of subterranean parking structures, building foundations, and underground sewer and utility facilities could adversely impact cultural resources. (S)

~~Native Americans are known to have occupied and used the Project area vicinity, and in the historical American period residential and commercial use of all portions of the Project area was intensive and varied. These activities may have resulted in unidentified archaeological deposits that may qualify as historical or unique archaeological resources under CEQA. Project-related ground-disturbing activities may potentially disturb these deposits, which may result in a significant adverse effect to historical or archaeological resources under CEQA. Mitigation measures can reduce these effects to less-than-significant levels.~~ Native Americans are known to have occupied areas in the vicinity of the Project site. In the historical American period, residential and commercial use of all portions of the Project site was intensive and varied. A historical Chinese community has been documented on the east side of San Pablo Avenue, northeast of the intersection of 20th and San Pablo Avenues, and east of San Pablo Avenue between 19th and 20th Avenues. These areas of the documented Chinese community are within or near the Project site. There is a high potential for Project ground-disturbing activities to encounter archaeological deposits associated with the remains of the Chinese community. These deposits could be significant for their association with early Chinese-American history in Oakland and other urban West Coast settings. These deposits, if intact, may contain information about the economic, social, and religious lifeways of a Chinese-American community in an era in which the Chinese in California were subjected to de facto and institutional displacement, discrimination, and oppression. These conditions often resulted in only minimal documentation of lifeways, which increases the information value of archaeological deposits.

If encountered during ground disturbing activities, these deposits may qualify as historic or unique archaeological resources pursuant to *CEQA Guidelines* section 15064.5 and CEQA section 21083.2, respectively. Disturbance of historic or unique archaeological resources could be considered a significant impact. The following two-part mitigation measure would reduce these potential impacts to less-than-significant levels. The purpose of this expanded mitigation measure is to: (1) identify historic or unique archaeological resources prior to the start of ground-disturbing Project activities; and (2) assess the likelihood that Project activities could adversely affect potentially significant deposits, and take the steps necessary to protect and treat the resources so the impact is decreased to a less-than-significant level. Implementation of this mitigation strategy will also help avoid unnecessary delays in site preparation and construction.

> ~~Mitigation Measure HIST-2: A qualified archaeologist[9] shall monitor all ground-disturbing activities in the Project area until, in the archaeologist's opinion, a depth has been reached at which potentially significant archaeological deposits are unlikely to occur.~~
>
> ~~Should an archaeological deposit be encountered by Project activities, the monitor shall be empowered to halt construction in the vicinity of the find. Construction activities shall be redirected and a qualified archaeologist shall: 1) evaluate the archaeological deposit to determine if it meets the CEQA definition of a historical or archaeological resource; and 2) make recommendations about the treatment of the deposit, as warranted. If the deposit does not meet the CEQA definition of a historical or archaeological resource, then no further study or protection of the deposit is necessary. If the deposit does meet the CEQA definition of a historical or archaeological resource, then it shall be avoided by Project activities. If avoidance is not feasible, then effects to the deposit shall be mitigated through a data recovery strategy developed by the evaluating archaeologist. Mitigation of impacts to significant archaeological deposits through data recovery will recover scientifically-valuable information. This mitigation may include, but is not limited to, a thorough recording of the resource on DPR Form 523 records, or archaeological excavation. If archaeological excavation is the only feasible method of data recovery, then such excavation shall conform to the provisions of CEQA Guidelines §15126.4(b)(3)(C).~~
>
> Mitigation Measure HIST-2a: A pre-construction archaeological testing program shall be implemented to help identify whether historic or unique archaeological resources exist within the Project site. Examples of potential historic or unique archaeological resources that could be identified within the Project site include: back-filled wells; basements of buildings that pre-date Euro-American buildings that were constructed on the Project site; and backfilled privies. For these resources to be considered significant pursuant to CEQA, they would have to have physical integrity *and* meet at least one of the criteria listed in *CEQA Guidelines* section 15064.5(a)(3) (for historic resources) and/or CEQA section 21083.2(g) (for unique archaeological resources). These criteria include: association with events that have made a significant contribution to the broad patterns of California history and cultural heritage; association with the lives or persons important in our past; embodiment of the distinctive characteristics of a type, period,

---

~~[9] "Qualified" is defined as meeting the professional standards established by the Secretary of the Interior. These standards can be found at: http://www2.cr.nps.gov/laws/ProfQual83.htm.~~

region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; yield, or may likely yield, information important in prehistory or history; contains information needed to answer important scientific research questions and be subject to a demonstrable public interest in that information; have a special and particular quality such as being the oldest of its type or the best available example of its type; or be directly associated with a scientifically recognized important prehistoric or historic event or person.

The testing program, in conjunction with a sensitivity study,[10] shall use a combination of subsurface investigation methods (including backhoe trenching, augering, and archaeological excavation units, as appropriate). The purpose of the testing program is to: (1) identify the presence and location of potentially-significant archaeological deposits; (2) determine if such deposits meet the definition of a historical resource or unique archaeological resource under section 21083.2(g) of the CEQA statutes; (3) guide additional archaeological work, if warranted, to recover the information potential of such deposits; and (4) refine the archaeological monitoring plan.

If historic or unique archaeological resources associated with the Chinese community are identified within the project site and are further determined to be unique, the City shall consult with representatives of an established local Chinese-American organization(s) regarding the potential use of the archaeological findings for interpretive purposes.

Mitigation Measure HIST-2b: Archaeological monitoring of ground-disturbing construction in the Project area shall be conducted, as appropriate and if necessary, based on the results of the pre-construction testing program and the potential for encountering unidentified archaeological deposits. Upon completion of the pre-construction testing program specified in Mitigation Measure HIST-2a, the extent of archaeological monitoring during Project construction will be assessed, and the scope and frequency of the monitoring required by this mitigation measure shall be based on the findings of this assessment. Monitoring shall be conducted by a cultural resource professional approved by the City who meets the Secretary of the Interior's Professional Qualifications Standards for Prehistoric and Historical Archaeology.

Should an archaeological deposit be encountered during Project activities, the City in consultation with the monitor shall halt construction in the vicinity of the find. Construction activities shall be redirected and a qualified archaeologist in consultation with the City shall: (1) evaluate the archaeological deposit to determine if it has the potential to meet the CEQA definition of a historical or unique archaeological resource;

---

[10] A cultural resources sensitivity study is done to assess the possibility of cultural resources at a specific location. The sensitivity study typically entails a review of: (1) the locations of known cultural resources in the general vicinity, (2) the records documenting the resources, (3) the nature of those resources, (4) the environmental setting of the location being analyzed, and (5) the historical documentation of the location being analyzed. Based on this information an assessment is made as to whether there is a low, moderate, or high probability of a cultural resource at the specific location in question. For example, if most of the prehistoric sites in an area are on level land, adjacent to the mouth of a creek where it enters a marsh, and the location being analyzed has no water nearby and is on very steep slope, there is a low probability of a prehistoric archaeological site. Or, if historical documents indicate that there have been a variety of buildings and land uses at the location being analyzed, there is a high probability of historical archaeological sites at the location.

and (2) make recommendations about the treatment of the deposit, as warranted. If the deposit does not meet the CEQA definition of a historical or unique archaeological resource, then no further study or protection of the deposit is necessary. If the deposit does meet the CEQA definition of a historical or unique archaeological resource, then it shall be avoided to the extent feasible by Project activities. If avoidance is not feasible, then adverse effects to the deposit shall be mitigated as specified in CEQA section 21083.2. This mitigation may include, but is not limited to, a thorough recording of the resource on DPR Form 523 records, or archaeological data recovery excavation. If data recovery excavation is warranted, *CEQA Guidelines s*ection 15126.4(b)(3)(C), which requires a data recovery plan prior to data recovery excavation, shall be followed. If the significant identified resources are unique archaeological resources, mitigation of these resources shall be subject to the limitations on mitigation measures for unique archaeological resources identified in CEQA sections 21083.2(c) through 21083.2(f).

Upon completion of such archaeological monitoring, evaluation, or data recovery mitigation, the archaeologist shall prepare a report documenting the methods, results, and recommendations of the investigation, and submit this report to the NWIC. Public displays of the findings of archaeological recovery excavation(s) of historical or unique resources shall be prepared. As appropriate, brochures, pamphlets, or other media, shall be prepared for distribution to schools, museums, libraries, and – in the case of Chinese-American archaeological deposits – Chinese-American organizations. (LTS)

Page 223 is revised as follows:

Mitigation Measure HIST-4a *(Variant 1 and 2)*: The following measures shall be implemented to preserve information about the resource for further study:

- Record the Great Western Power Company Building in accordance with the procedures of the Historical American Buildings Survey (HABS) through measured drawings, written histories, and large-format photographs;
- Prepare a history of the Great Western Power Company Building that incorporates oral history, documentary research, and architectural information;
- Prepare a brochure, regarding the building's historical association with one of three major early 20th century northern California power companies, to be made available at local libraries and museums;
- Incorporate interpretive elements, such as signs and placards, into public areas and street frontages proposed as part of the Project.
- If full demolition of the building occurs, salvage architectural elements from the building, including hardware, doors, paneling, fixtures, and equipment, and incorporate these elements into new construction; and
- Curate all materials, notes, and reports at the OHR, and submit copies to the NWIC.

Even with extensive documentation, however, the demolition of the building or portions of the building would result in the loss of a historic resource that is associated with significant historical events and is an example of outstanding design and function.

> Therefore, the demolition or partial demolition of the building would remain a significant and unavoidable impact. (SU)

Page 225 is revised to delete the following sentence which was included inadvertently:

> ~~However, if it is not feasible to minimize material impairment of the resource, then the impact would remain significant and unavoidable. (SU)~~

Pages 226 and 227 of the Draft EIR are revised as shown below:

> **Impacts to Historic Districts**. ~~The~~ Because the 19th and San Pablo Commercial District is not currently designated as a Preservation District, it is currently not considered a historical resource under CEQA. ~~For the purposes of CEQA~~ Thus, according to the significance criteria utilized by the City of Oakland, the proposed Project ~~will~~ would not cause a significant adverse impact to the 19th and San Pablo Commercial District.
>
> However, ~~for the purposes of CEQA,~~ to account for the possibility of this District being elevated to Preservation District status and to provide the most ~~an extra~~ conservative analysis, the following impact assessment treats the 19th and San Pablo Commercial District ~~could be impacted by the proposed Project if: 1) the district is~~ as if it had been elevated to Preservation District status~~(a type of Designated Historic Property); and 2) the four PDHPs identified in Impact HIST-5 are demolished. However, this impact would be less than significant because the remaining majority of contributing properties would still retain enough of the district's character-defining elements to convey its historical significance. Buildings remaining after Project implementation will include the Hotel Arcade, the Hanifin Block, and the Dalziel Block. These remaining buildings include all of the district's primary contributors (the Hotel Royal, Hotel Arcade, and the Hanifin Block), which will continue to retain the district's major character defining elements that reflect turn-of-the-century commercial development in Oakland. These buildings represent styles that include Italianate, Beaux Arts-derived, and Classical Revival. They maintain the grandness of scale and ornamentation that characterize what the OCHS described as the "visually distinctive/turn-of-the-century commercial district." The retention of these distinctive buildings allows the district to continue to convey the historical significance of late 19th, early 20th century commerce in Oakland.~~, which would qualify contributing or potentially-contributing properties within such a district as historical resources under CEQA.[11]
>
> **Impact HIST-7: Project demolition and construction could adversely impact the setting of the 19th and San Pablo Commercial District. (~~S~~LTS)[12]**

---

[11] Elevation of the 19th and San Pablo Commercial District to Preservation District status is a discretionary measure that could only occur after a number of actions are complete, including nomination of the District by a qualified individual or land owner, as well as approval by the Planning Commission and City Council. Even so, attainment of Preservation District status would not prohibit the demolition of contributing structures within the District.

[12] This change in the designated significance of the impact does not affect the findings or analysis contained in the Draft EIR. This revision was made to correct a text error in the Draft EIR. The discussion following this designation in the Draft EIR clearly indicated that Impact HIST-7 was less-than-significant.

If For the purposes of CEQA, the 19th and San Pablo Commercial District receives a Preservation District designation, the Project may result in a significant impact to the district's setting. However, OCHS documentation indicates that the district's integrity of setting has been diminished by surrounding uses that "differ in use and visual coherence" from the district's contributing buildings. Therefore, the Project's effects on the setting of the 19th and San Pablo Commercial District would not significantly impair the district's integrity could be adversely impacted by the proposed Project if: 1) the district is elevated to Preservation District status (a type of Designated Historic Property); and 2) the three contributing PDHPs located at 1958-60 San Pablo Avenue, 1966-68 San Pablo Avenue, and 1972 San Pablo Avenue as identified in Impact HIST-6 are demolished. However, this project-level impact would not be considered significant as it would only result in the demolition of three of the District's eight contributing buildings and the remaining contributing buildings would still retain enough of the District's character-defining elements to convey its historical significance. Buildings remaining after Project implementation would include the Hotel Arcade, the Hanifin Block, and the Dalziel Block. These remaining buildings, which are located on blocks outside of the Project area, include all of the District's primary contributors (the Hotel Royal, Hotel Arcade, and the Hanifin Block). These primary contributors will continue to retain the District's major character-defining elements that reflect turn-of-the-century commercial development in Oakland. These buildings represent styles that include Italianate, Beaux Arts-derived, and Classical Revival. They maintain the grandness of scale and ornamentation that characterize what the OCHS described as the "visually distinctive/turn-of-the-century commercial district." The three contributing PDHPs within the project site are less character-defining then the other contributing buildings within the District. The retention of the remaining distinctive buildings would allow the District to continue to convey the historical significance of late 19th, early 20th century commerce in Oakland. Thus the project's impact to this District would be considered less-than-significant and not require any mitigation.

> Mitigation Measure HIST-7**:** No mitigation measure is necessary to address this ~~the~~ less-than-significant impact. (LTS)

Impact HIST-8: Project demolition and construction could result in a significant cumulative impact on the 19th and San Pablo Commercial District. (S)

The demolition of the ~~four PDHPs~~ three PDHPs located at 1958-60 San Pablo Avenue, 1966-68 San Pablo Avenue, and 1972 San Pablo Avenue identified in Impact HIST-~~5~~ 6 may result in a significant cumulative impact when considered with ~~other projects that causing related impacts~~ the Thomas L. Berkley Square project. The Thomas L. Berkley Square Project, located across Thomas L. Berkley Way (20th Street) from Project Block #1, proposes the demolition of two contributing properties of the 19th and San Pablo Commercial District (the Hotel Royal Building and the California Peanut Company Building). The impact of the Uptown Mixed-Use Project, while ~~incremental~~ less than significant when considered alone, will contribute to a cumulatively significant impact when considered with the impacts of the Thomas L. Berkley Square Project. If both projects are implemented as proposed, ~~six~~ five of ~~nine~~ eight contributing buildings (63%) of the 19th and San Pablo Commercial District will be demolished. This would result in a significant~~, unavoidable~~ cumulative impact to the 19th and San Pablo Commercial.

Implementation of the following mitigation measure, which involves preserving the PDHPs that contribute to the 19th and San Pablo Commercial District, if it determined to be feasible would avoid the Project's cumulative adverse impact to the District.

> Mitigation Measure HIST-8a: If feasible, the three PDHPs that contribute to the 19th and San Pablo Commercial District (located at 1958-60 San Pablo Avenue, 1966-68 San Pablo Avenue, and 1972 San Pablo Avenue) shall be preserved in their existing condition or rehabilitated and incorporated into the proposed Project. Any modifications to the exterior of the buildings that may be proposed as part of their rehabilitation shall be developed in consultation with the Planning Department and a qualified historic preservation architect to determine an appropriate treatment strategy that preserves the important historic qualities of the structures. (LTS)

The implementation of Mitigation Measure HIST-8a would reduce the cumulative loss of contributing district buildings from 5 out of 8 (63%), to 2 out of 8 (25%). The Project sponsor and the City are in the process of determining whether or not it is feasible to preserve these buildings. If the City makes a determination that it is not feasible to preserve these buildings, the buildings may be demolished as part of the proposed project and a significant unavoidable impact would result.

> Mitigation Measure HIST-8b: If the City determines that preservation of the three PDHPs that contribute to the 19th and San Pablo Commercial District (located at 1958-60 San Pablo Avenue, 1966-68 San Pablo Avenue, and 1972 San Pablo Avenue) is not feasible, the City shall inform the applicant for the Thomas L. Berkley Square Project of the potential cumulative impact prior to the implementation of the Uptown Mixed-Use Project. The City shall consult with both project applicants to establish a fair division of responsibility to fund mitigation measures to preserve information about the 19th and San Pablo Commercial District for future study. These mitigation measures shall include the following:

- Record the 19th and San Pablo Commercial District in accordance with the procedures of HABS through measured drawings, written histories, and large-format photographs;
- Prepare a history of the 19th and San Pablo Commercial District that incorporates oral history, documentary research, and architectural information; this history could utilize non-written media and production techniques, including video photography;
- Prepare a brochure, regarding the district's historical association with turn-of-the-century Oakland commerce, to be made available at local libraries and museums;
- Salvage architectural elements from the buildings proposed for demolition, including hardware, doors, paneling, fixtures, and equipment, and incorporate these elements into new construction; and
- Curate all materials, notes, and reports at the OHR, and submit copies to the NWIC.

> Even with extensive documentation, however, a cumulative impact will result from the demolition of ~~66~~ 63 percent of the 19th and San Pablo Commercial District's contributing buildings. This loss of contributing buildings will materially affect the district's ability to convey its historical significance, which will result in a significant, unavoidable cumulative impact. (SU)

Page 227 is revised as follows:

> Mitigation Measure HIST-9: No mitigation measure is necessary to address this ~~the~~ less-than-significant impact. (LTS)

Page 228 is revised as follows:

> Mitigation Measure HIST-10: No mitigation measure is necessary to address this ~~the~~ less-than-significant impact. (LTS)

VI. MITIGATION MONITORING AND REPORTING PROGRAM

This Mitigation Monitoring and Reporting Program (MMRP) has been formulated based upon the findings of the Environmental Impact Report (EIR) prepared for the Uptown Mixed Use Project (Project). The MMRP, which is found in Table V-1 of this section, lists mitigation measures recommended in the EIR for the proposed Project and identifies mitigation monitoring requirements.

This MMRP has been prepared to comply with the requirements of State law (Public Resources Code Section 21081.6). State law requires the adoption of an MMRP when mitigation measures are required to avoid significant impacts. The MMRP is intended to ensure compliance during implementation of the project.

The MMRP is organized in a matrix format. The first column identifies the mitigation measure. The second column, entitled "Implementation Procedure," refers to the procedures associated with implementation of the mitigation measure. The third column, entitled "Monitoring Responsibility," refers to the agency responsible for ensuring that the mitigation measure is implemented. The fourth column, entitled "Monitoring and Reporting Action," refers to the way in which the responsible agency will monitor implementation of the mitigation measure. The fifth column, entitled "Monitoring Schedule," refers to when monitoring will occur. The sixth column, "Non Compliance Sanction," refers to the agency action undertaken if mitigation is not implemented. The last column will be used by the lead agency to document the person who verified the implementation of the mitigation measure and the date on which this verification occurred.

Table V-1: Mitigation Monitoring and Reporting Program

Mitigation Measures	Implementation Procedure	Monitoring Responsibility	Monitoring and Reporting Action	Monitoring Schedule	Non-Compliance Sanction	Verification of Compliance
HYDROLOGY AND WATER QUALITY						
HYD-1**:** The applicant shall prepare and implement a Storm Water Pollution Prevention Plan (SWPPP) designed to reduce potential impacts to surface water quality through the construction and life of the Project. The SWPPP would act as the overall program document to provide measures to mitigate significant water quality impacts associated with implementation of the Project. The SWPPP shall include specific and detailed Best Management Practices (BMPs) required to mitigate significant construction-related pollutants. These controls shall include practices to minimize the contact of construction materials, equipment, and maintenance supplies (e.g., fuels, lubricants, paints, solvents, adhesives) with storm water. The SWPPP shall specify properly designed centralized storage areas that keep these materials out of the rain. An important component of the storm water quality protection effort will be the education of the site supervisors and workers. To educate on-site personnel and maintain awareness of the importance of storm water quality protection, site supervisors shall conduct regular tailgate meetings to discuss pollution prevention. The frequency of the meetings and required personnel attendance list shall be specified in the SWPPP. The SWPPP shall specify a monitoring program to be implemented by the construction site supervisor, and must include both dry and wet weather inspections. City of Oakland personnel shall conduct regular inspections to ensure compliance with the SWPPP. BMPs to reduce erosion of exposed soil may include, but are not limited to: soil stabilization controls, watering for dust control, perimeter silt fences, placement of hay bales, and sediment basins. The potential for erosion is generally increased when grading occurs during the rainy season, as disturbed soil can be exposed to rainfall and storm runoff. If grading must be conducted during the rainy season, the primary BMPs selected shall focus on erosion control, that is, keeping sediment on the site. End-of-pipe sediment control measures (e.g., basins and traps) shall be used only as secondary measures. Access to and egress from the construction site shall be carefully controlled to minimize off-site tracking of sediment (this BMP is particularly important since much of the earthwork will involve loading trucks for off-site transport of soil excavated for the below-ground parking structures). Vehicle and equipment wash down facilities shall be designed to be accessible and functional both during dry and wet conditions. The SWPPP shall be reviewed for completeness by the City of Oakland, Public Works Agency, Environmental Services Division prior to approval of grading plans.	Applicant shall prepare and implement a Storm Water Pollution Prevention Plan (SWPPP) which includes specific and detailed Best Management Practices (BMPs). The SWPPP shall specify a monitoring program to be implemented by the construction site supervisor.	City of Oakland, Public Works Agency, Environmental Services Division.	1) Review the SWPPP for completeness. 2) Conduct regular inspections to ensure compliance with the SWPPP.	1) Prior to the approval of grading plans. 2) Regularly throughout the Project construction period (as deemed appropriate by the Public Works Agency).	1) No approval of grading plans. 2) City issues corrective action or stop work order if compliance with SWPPP does not occur.	*Verified by:* *Date:*
HYD-2**:** The applicant shall comply with the requirements of the 2003 Alameda County *Stormwater Management Plan* and/or the Regional Water Quality Control Board (RWQCB) Revised Order 01-024 (NPDES Permit No. CAS029718), as appropriate, based on the timing of construction. As applicable, the applicant shall incorporate measures to mitigate potential degradation of runoff water quality from all portions of the completed development, including roof and sidewalk runoff. The final design team for the Project should include all applicable measures from *Start at the Source*, *Design Guidance Manual for Stormwater Quality Protection*, which may include, but not be limited to pervious pavements, hybrid parking lots, vegetated swales, biofilters, roof drainage to landscaped areas, minimization of directly connected impervious surfaces, and infiltration islands. The Project compliance with requirements for post-construction stormwater controls shall be reviewed by the City of Oakland, Public Works Agency, Environmental Services Division prior to approval of grading plans.	Applicant shall comply with the requirements of the 2003 Alameda County *Stormwater Management Plan* and/or the RWQCB Revised Order 01-024 (NPDES Permit No. CAS029718), as appropriate. This compliance shall include the incorporation of all applicable measures from *Start at the Source, Design Guidance Manual for Stormwater Quality Protection* designed to improve the quality and reduce the quantity of runoff from the Project site, as detailed in the mitigation measure. The measures shall be detailed in the permitted grading and building plans.	City of Oakland, Public Works Agency, Environmental Services Division.	Review final project plans to ensure compliance with the applicable requirements for post-construction stormwater controls.	Prior to the approval of grading and/or building plans.	No approval of a grading or building permit.	*Verified by:* *Date:*

Table V-1 *continued*

Mitigation Measures	Implementation Procedure	Monitoring Responsibility	Monitoring and Reporting Action	Monitoring Schedule	Non-Compliance Sanction	Verification of Compliance
HYD-3**:** The SWPPP shall include requirements for the proper management of dewatering effluent as necessary to mitigate significant impacts to the environment. The Hazards section of this DEIR (Mitigation Measure HAZ-1b) addresses and mitigates potential impacts associated with health and safety impacts to site workers and the public associated with the dewatering effluent. At minimum, all dewatering effluent will be contained prior to discharge to allow the sediment to settle out, and filtered, if necessary, to ensure that only clear water is discharged to the storm or sanitary sewer system. Alternatively, effluent can be hauled off-site by tanker truck for disposal. Based on the historical land uses at the Project site and groundwater sampling of the existing network of monitoring wells, it is possible that groundwater underlying each of the parcels has been impacted by chemical releases. All dewatering effluent will be analyzed by a State-certified laboratory for the suspected pollutants (at minimum, petroleum hydrocarbons, solvents, and metals) prior to discharge. Based on the results of the analytical testing and the concentrations of pollutants identified, if any, the applicant will dispose of the water in one (or more) of the following ways: a) Discharge the water to the storm drain under permit from the RWQCB. It is unlikely that the RWQCB would allow discharge of any untreated dewatering effluent that contained detectable concentrations of chemical pollutants and that for these types of discharges, alternative disposal options may be required; b) Discharge the water to the sanitary sewer system under permit from the East Bay Municipal Utilities District; c) Haul the water to a licensed off-site disposal facility for treatment and disposal under appropriate manifest. The Project proponent shall demonstrate to the City of Oakland, Planning and Development Department that appropriate permits have been acquired prior to discharge of any dewatering effluent.	1) Applicant shall include requirements for the proper management of dewatering effluent in the SWPPP, as specified in the mitigation measure. 2) Procure the appropriate permits needed for the discharge of dewatering effluent.	City of Oakland Community and Economic Development Agency, Environmental Services Division.	1) Review the SWPPP to ensure it includes requirements for the proper management of dewatering effluent. 2) Verify that the applicant has received the necessary permits for the discharge of dewatering effluent.	1) Prior to the approval of grading permit. 2) Prior to the initiation of dewatering within the project site.	1) No approval of grading permit. 2) City issues corrective action or stop work order if necessary permits have not been procured.	*Verified by:* *Date:*
TRANSPORTATION, CIRCULATION AND PARKING						
TRANS-1: Optimization of the signal timing at the intersection of San Pablo and Thomas L. Berkley Way (20th Street) would improve function to LOS D in the PM peak hour. This intersection functions as an integrated signal system with other intersections in the downtown area. To mitigate the Project's impact at this location and others, the City shall prepare a signal optimization and coordination plan for the area bounded by San Pablo Avenue, Grand Avenue, Telegraph Avenue, and 17th Street prior to Project occupancy. The plan shall address the timing and equipment requirements, as necessary for all of the signalized intersections located within this area. The Project sponsor shall fund its fair share cost of the preparation of this plan and the implementation of the signal timing program. Implementation of the signal optimization program may also involve the purchase and installation of interconnection hardware (i.e. modems, microwave antennas, etc). The City of Oakland will consult with AC Transit during preparation of the plan. Given that the Project sponsor is responsible for only a portion of this mitigation measure, implementation of this set of improvements will be funded fully by one or a combination of the following means: 1. The Project sponsor shall fully fund the costs of the signalization improvements and shall be reimbursed through other fair-share contributions as future projects that exceed the City's thresholds of significance occur. 2. The City, at its sole discretion, shall establish a Traffic Improvement Program and concurrent Traffic Impact Fee Ordinance to fund the mitigation measure. 3. The Redevelopment Agency, at its sole discretion, shall contribute funds to the costs of implementation.	1) City Public Works Agency, Traffic Engineering Division, shall prepare a signal optimization and coordination plan for the area bounded by San Pablo Avenue, Grand Avenue, Telegraph Avenue, and 17th Street. 2) The project shall fund its fair share cost of the preparation and implementation of the signal optimization and coordination plan. 3) City Public Works Agency, Traffic Engineering Division, shall implement the measures of the plan from 2010 to 2025, as necessary, to address cumulative impacts.	1) City of Oakland Community and Economic Development Agency, Planning Division. 2) City of Oakland Community and Economic Development Agency, Planning Division. 3) City of Oakland Community and Economic Development Agency, Planning Division.	1) Verify that the signal optimization and coordination plan has been prepared and that it meets the standards listed in the mitigation measure. 2) Verify that the applicant funds its fair share cost of the preparation and implementation of the signal optimization and coordination plan. 3) Ensure plan measures are being implemented.	1) Prior to occupancy of the Project. 2) Prior to occupancy of the Project. 3) From 2010 to 2025.	No approval of occupancy permit.	*Verified by:* *Date:*
TRANS-2: Optimization of the signal timing at the intersection of Telegraph and 19th Street would improve the function to LOS C in both the AM or PM peak hours. Preparation and implementation of the signal optimization and coordination plan detailed in Mitigation Measure TRANS-1 will ensure that this impact is reduced to a less-than-significant level.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	*Verified by:* *Date:*

Table V-1 *continued*

Mitigation Measures	**Implementation Procedure**	**Monitoring Responsibility**	**Monitoring and Reporting Action**	**Monitoring Schedule**	**Non-Compliance Sanction**	**Verification of Compliance**
TRANS-3: Widen the intersection to add a second exclusive left turn lane in the eastbound direction and an exclusive right turn lane in the westbound direction. The intersection would operate at LOS D in the PM peak hour with these improvements. The intersection of Frontage Road and West Grand Avenue is located on an elevated structure which is within the jurisdiction of Caltrans. The proposed mitigation measures would require the widening of the existing elevated structure and modification of the traffic signal. The second exclusive left turn lane in the eastbound direction and the exclusive right turn lane in the westbound direction should each be 300 feet in length with a 90-foot taper. Widening of the existing structure would require additional support columns and the acquisition of right of way underneath the structure. In addition, the connector from Interstate 880 to Interstate 80 structure exists above this intersection. Columns supporting this elevated connector may have to be relocated to widen the Frontage Road/West Grand Avenue intersection. At this time, the implementation of this mitigation measure would not be economically feasible. Because this intersection is located outside of the City of Oakland's jurisdiction and because it is not economically feasible, it is significant and unavoidable.	*No monitoring or reporting measures are provided for this mitigation measures since it has been determined to be infeasible at this time.*					
TRANS-4: Optimization of the signal timing at the intersection of San Pablo and 27th Street would improve function to a LOS D in the PM peak hour. Preparation and implementation of the signal optimization and coordination plan detailed in Mitigation Measure TRANS-1 will ensure that this impact is reduced to a less-than-significant level.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	*Verified by:* *Date:*
TRANS-5: Optimization of the signal timing at the intersection of San Pablo and West Grand Avenue would improve the function to a LOS E in the PM peak hour. Preparation and implementation of the signal optimization and coordination plan detailed in Mitigation Measure TRANS-1 will ensure that this impact is reduced to a less-than-significant level.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	*Verified by:* *Date:*
TRANS-6: Optimization of the signal timing at the intersection of San Pablo and Thomas L. Berkley Way (20th Street). By optimizing the signal timing splits, the intersection would improve the function to a LOS D in the PM peak hour. Preparation and implementation of the signal optimization and coordination plan detailed in Mitigation Measure TRANS-1 will ensure that this impact is reduced to a less-than-significant level.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	*Verified by:* *Date:*
TRANS-7: Optimization of the signal timing and changing the cycle length to 65 seconds at this intersection would mitigate the delay that would result from the proposed Project. Preparation and implementation of the signal optimization and coordination plan detailed in Mitigation Measure TRANS-1 will ensure that this impact is reduced to a less-than-significant level.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	*Verified by:* *Date:*
TRANS-8: Optimization of the signal timing in the AM peak hour and changing the cycle length to 70 seconds at this intersection would mitigate the Project's increase in delay. Preparation and implementation of the signal optimization and coordination plan detailed in Mitigation Measure TRANS-1 will ensure that this impact is reduced to a less-than-significant level.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	*Verified by:* *Date:*
TRANS-9: Changing the cycle length to 80 seconds and optimizing signal timing would improve the function of this intersection to LOS C in the PM peak hour. By optimizing the signal timing splits and changing the signal cycle, the Project's increase in delay would be mitigated. Preparation and implementation of the signal optimization and coordination plan detailed in Mitigation Measure TRANS-1 will ensure that this impact is reduced to a less-than-significant level.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	*Verified by:* *Date:*

Table V-1 *continued*

Mitigation Measures	**Implementation Procedure**	**Monitoring Responsibility**	**Monitoring and Reporting Action**	**Monitoring Schedule**	**Non-Compliance Sanction**	**Verification of Compliance**
TRANS-10: The Project shall provide for the following two improvements. • Optimize the signal timing at the intersection of Telegraph and 19th Street. Since this intersection also functions as part of an integrated signal system in downtown Oakland, Mitigation Measure TRANS-1 shall also be implemented. • Restripe the westbound 19th Street approach to provide two exclusive through lanes and an exclusive right turn lane. With these improvements, the intersection would operate at LOS C in the AM peak hour and LOS E in the PM peak hour. The restriping of the westbound 19th Street approach to the intersection to provide two exclusive through lanes and an exclusive right turn lane would require the elimination of six metered parking spaces on the northern side of 19th Street between Telegraph and Broadway. With the existing roadway width available the two through lanes would each be 11 feet wide and the right turn lane would be 10 feet wide, which would satisfy City standards of 10-foot lanes. Metered parking would remain on the southern side of 19th Street.	1) Refer to Mitigation Measure TRANS-1. 2) City Public Works Agency, Traffic Engineering Division shall restripe the westbound 19th Street approach to Telegraph Avenue to provide two exclusive through lanes and an exclusive right turn lane.	1) Refer to Mitigation Measure TRANS-1. 2) City of Oakland Community and Economic Development Agency, Planning Division.	1) Refer to Mitigation Measure TRANS-1. 2) Verify that the westbound 19th Street approach has been restriped.	1) Refer to Mitigation Measure TRANS-1. 2) Prior to occupancy of the Project.	1) Refer to Mitigation Measure TRANS-1. 2) Work with the City Public Works Agency to ensure the improvement is implemented.	*Verified by:* *Date:*
TRANS-11: Widen the eastbound approach to accommodate two left turn lanes, two through lanes, and a right turn lane. Widen the southbound approach would need to accommodate a right turn lane, a left turn lane, and a shared through/right turn lane. In addition, the northbound approach should be converted from a left turn lane, a through lane, and a shared through/right turn lane to a left turn lane, a shared through/right turn lane, and a right turn lane. With the proposed improvements, the intersection would operate at LOS C in the AM peak hour and LOS D in the PM peak hour. The intersection of Frontage Road and West Grand Avenue is located on an elevated structure which is within the jurisdiction of Caltrans. The proposed mitigation measures would require the expansion of the existing elevated structure and modification of the traffic signal. Widening of the existing structure would require additional support columns and the acquisition of right of way underneath the structure. In addition, the connector from Interstate 880 to Interstate 80 structure exists above this intersection. Columns supporting this elevated connector may have to be relocated to pursue the widening of the Frontage Road/West Grand Avenue intersection. The implementation of this mitigation measure would not be economically feasible. Because this intersection is located outside of the City of Oakland's jurisdiction and because it is not economically feasible, it is significant and unavoidable.	Refer to Mitigation Measure TRANS-3.	Refer to Mitigation Measure TRANS-3.	Refer to Mitigation Measure TRANS-3.	Refer to Mitigation Measure TRANS-3.	Refer to Mitigation Measure TRANS-3.	*Verified by:* *Date:*
TRANS-12: Changing the cycle length to 110 seconds, providing protected left turn phases on the eastbound and westbound approaches, and optimizing the signal timing would improve the function of this intersection to a LOS D in the PM peak hour. Preparation and implementation of the signal optimization and coordination plan detailed in Mitigation Measure TRANS-1 will ensure that this impact is reduced to a less-than-significant level.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	*Verified by:* *Date:*
TRANS-13: Changing the cycle length to 110 seconds and optimizing the signal timing splits would mitigate the Project's impact. Preparation and implementation of the signal optimization and coordination plan detailed in Mitigation Measure TRANS-1 will ensure that this impact is reduced to a less-than-significant level.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	*Verified by:* *Date:*
TRANS-14: Optimization of the intersection's signal timing at this intersection would improve the function of this intersection to operate at LOS D in the PM peak hour. Preparation and implementation of the signal optimization and coordination plan detailed in Mitigation Measure TRANS-1 will ensure that this impact is reduced to a less-than-significant level.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1.	Refer to Mitigation Measure TRANS-1. Table V-1 *continued*

Mitigation Measures	Implementation Procedure	Monitoring Responsibility	Monitoring and Reporting Action	Monitoring Schedule	Non-Compliance Sanction	Verification of Compliance
AIR QUALITY						
AIR-1: Implementation of the following mitigation measures would reduce this impact to a less-than-significant level. • The basic and enhanced control measures listed in Table IV.E-9 shall be implemented during construction of the proposed Project. • Any temporary haul roads to the soil stockpile area shall be routed away from existing neighboring land uses. Any temporary haul roads shall be surfaced with gravel and regularly watered to control dust or treated with an appropriate dust suppressant. • Water sprays shall be utilized to control dust when material is being added or removed from the stockpile. When the stockpile is undisturbed for more than 1 week, the storage pile shall be treated with a dust suppressant or crusting agent to eliminate wind-blown dust generation. • All neighboring properties located within 500 feet of property lines shall be provided with the name and phone number of a designated construction dust control coordinator who will respond to complaints within 24 hours by suspending dust-producing activities or providing additional personnel or equipment for dust control as deemed necessary. The phone number of the BAAQMD pollution complaints contact shall also be provided. The dust control coordinator shall be on-call during construction hours. The coordinator shall keep a log of complaints received and remedial actions taken in response. This log shall be made available to City staff upon its request. The above mitigation measures include all feasible measures for construction emissions identified by the BAAQMD. According to the District's threshold of significance for construction impacts, implementation of the measures would reduce construction impacts of the proposed Project to a less-than-significant level.	Applicant shall implement the construction period air quality control measures described in the mitigation measure.	City of Oakland Community and Economic Development Agency, Building Services Division.	Make regular visits to the Project site to ensure that all dust-control mitigation measures are being implemented, and verify that a designated construction dust control coordinator is on-call during construction periods.	Ongoing throughout the Project construction period.	City issues corrective action or stop work order if construction period dust control measures have not been implemented.	*Verified by:* *Date:*
AIR-2: To the extent permitted by law, the Uptown Project shall be required to implement Transportation Control Measures (TCMs) as recommended by the BAAQMD. Measures that the City shall require the Project to implement, or that are already proposed as part of the Project, include the following: • *Transit Measures:* (i) Construct transit facilities such as bus turnouts/bus bulbs, benches, shelters, and other needed facilities subject to the review and comment of AC Transit. (Effectiveness 0.5 percent - 2 percent of all trips, BAAQMD *CEQA Guidelines*); (ii) Design and locate buildings to facilitate transit access (e.g., locate building entrances near transit stops, eliminate building setbacks, etc.) (Effectiveness 0.1 percent - 0.5 percent of all trips, BAAQMD *CEQA Guidelines*). • *Services Measures:* (i) Provide on-site shops and services for employees, such as cafeteria, bank/ATM, dry cleaners, convenience market, etc. (Effectiveness 0.5 percent - 5 percent of work trips, BAAQMD *CEQA Guidelines*); (ii) Provide on-site child care, or contribute to off-site childcare within walking distance. (Effectiveness 0.1 percent - 1 percent of work trips, BAAQMD *CEQA Guidelines*).	Applicant shall implement appropriate TCMs, based on consultation with the City.	City of Oakland Community and Economic Development Agency, Planning Division.	Ensure that TCMs determined to be necessary by the City are incorporated into the Major Conditional Use Permit for the Project.	Prior to approval of the Major Conditional Use Permit.	No approval of the Major Conditional Use Permit.	*Verified by:* *Date:*

Table V-1 *continued*

Mitigation Measures	Implementation Procedure	Monitoring Responsibility	Monitoring and Reporting Action	Monitoring Schedule	Non-Compliance Sanction	Verification of Compliance
• *Bicycle and Pedestrian Measures:* (i) Provide secure, weather-protected bicycle parking for employees (Effectiveness 0.5 percent - 2 percent of work trips, BAAQMD *CEQA Guidelines*); (ii) Provide safe, direct access for bicyclists to adjacent bicycle routes (Effectiveness 0.5 percent - 2 percent of work trips, BAAQMD *CEQA Guidelines*); (iii) Provide showers and lockers for employees bicycling or walking to work (Effectiveness 0.5 percent – 2 percent of work trips, BAAQMD *CEQA Guidelines*); (iv) Provide secure short-term bicycle parking for retail customers or non-commute trips (Effectiveness 1 percent – 2 percent of non-work trips, BAAQMD *CEQA Guidelines*); (v) Provide direct, safe, attractive pedestrian access from Planning Area to transit stops and adjacent development (Effectiveness 0.5 percent - 1.5 percent of all trips, BAAQMD *CEQA Guidelines*). Implementation of the measures detailed above would help minimize this impact, but not reduce it to a less-than-significant level. Therefore, Impact AIR-2 will remain significant and unavoidable.						
NOISE						
NOISE-1a: Standard construction activities shall be limited to between 7:00 a.m. and 7:00 p.m. Monday through Friday. No construction activities shall be allowed on weekends until after the buildings are enclosed without prior authorization of the Building Services and Planning Divisions of the Community and Economic Development Agency.	Construction contractor shall limit construction activities to between 7:00 a.m. and 7:00 p.m. Monday through Friday.	Community and Economic Development Agency, Building Services and Planning Division.	Make regular visits to the Project site to ensure that construction activities are restricted to 7:00 a.m. and 7:00 p.m. Monday through Friday.	Ongoing throughout Project Construction Period.	City issues corrective action or stop work order if construction activities occur outside of the restricted time zone.	*Verified by:* *Date:*
NOISE-1b: To reduce daytime noise impacts due to construction, to the maximum feasible extent, the City shall require the applicant to develop a site-specific noise reduction program, subject to city review and approval, which includes the following measures: • Signs shall be posted at the construction site that include permitted construction days and hours, a day and evening contact number for the job site, and a day and evening contact number for the City in the event of problems; • An on-site complaint and enforcement manager shall be posted to respond to and track complaints; • A pre-construction meeting shall be held with the job inspectors and the general contractor/on-site Project manager to confirm that noise mitigation and practices are completed prior to the issuance of a building permit (including construction hours, neighborhood notification, posted signs, etc.); • Equipment and trucks used for Project construction shall utilize the best available noise control techniques (e.g., improved mufflers, equipment redesign, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds, wherever feasible); • Impact tools (e.g., jack hammers, pavement breakers, and rock drills) used for Project construction shall be hydraulically or electrically powered wherever possible to avoid noise associated with compressed-air exhaust from pneumatically powered tools. However, where use of pneumatic tools is unavoidable, an exhaust muffler on the compressed-air exhaust shall be used; this muffler can lower noise levels where feasible, which could achieve a reduction of 5 dBA. Quieter procedures shall be used, such as drills rather than impact equipment, whenever feasible; and • Stationary noise sources shall be located as far from sensitive receptors as possible, and they shall be muffled and enclosed within temporary sheds, or insulation barriers or other measures shall be incorporated to the extent feasible.	Applicant shall develop a site-specific noise reduction program that includes the measures detailed in Mitigation Measure NOISE-1b.	Community and Economic Development Agency, Building Services and Planning Division.	Review and approve the site-specific noise reduction program.	Prior to approval of a grading or building permit.	No approval of a grading or building permit.	

Table V-1 *continued*

Mitigation Measures	Implementation Procedure	Monitoring Responsibility	Monitoring and Reporting Action	Monitoring Schedule	Non-Compliance Sanction	Verification of Compliance
NOISE-1c: If pile-driving occurs as part of the Project, it shall be limited to between 8:00 a.m. and 4:00 p.m., Monday through Friday, with no pile driving permitted between 12:30 and 1:30 p.m. No pile driving shall be allowed on Saturdays, Sundays, or holidays.	Construction contractor shall limit pile driving to between 8:00 a.m. and 4:00 p.m., Monday through Friday, and no pile driving shall occur between 12:30 and 1:30 p.m. or on Saturdays, Sundays, or holidays.	Community and Economic Development Agency, Building Services and Planning Division.	Make regular visits to the Project site to ensure that pile driving is limited to the hours specified in Mitigation Measure NOISE-1c.	Ongoing throughout Project Construction Period.	City issues corrective action or stop work order if pile driving occurs outside of the restricted time zone.	
NOISE-1d: To further mitigate potential pile-driving and/or other extreme noise-generating construction impacts, a set of site-specific noise attenuation measures shall be completed under the supervision of a qualified acoustical consultant. This plan shall be submitted for review and approval by the City to ensure that maximum feasible noise attenuation is achieved. These attenuation measures shall include as many of the following control strategies as feasible and shall be implemented prior to any required pile-driving activities: • Implement "quiet" pile-driving technology, where feasible, in consideration of geotechnical and structural requirements and conditions; • Erect temporary plywood noise barriers around the entire construction site; • Utilize noise control blankets on the building structure as it is erected to reduce noise emission from the site; • Evaluate the feasibility of noise control at the receivers by temporarily improving the noise reduction capability of adjacent buildings; and • Monitor the effectiveness of noise attenuation measures by taking noise measurements. • A third-party peer review, paid for by the applicant, shall be required to assist the City in evaluating the feasibility and effectiveness of the noise reduction plan submitted by the applicant. • A special inspection deposit is required to ensure compliance with the noise reduction plan. The amount of deposit shall be determined by the Building Official and the deposit shall be submitted by the project sponsor concurrent with submittal of the noise reduction plan.	Applicant shall prepare and implement a set of site-specific noise attenuation measures under the supervision of a qualified acoustical consultant. These attenuation measures shall include as many of the control strategies listed in Mitigation Measure NOISE-1d as feasible. Applicant shall submit a special inspection deposit to the City.	Community and Economic Development Agency, Building Services and Planning Division.	Review and approve the site-specific noise attenuation measures submitted by the Project applicant. Verify that the Applicant has submitted a special inspection deposit.	Prior to approval of a grading or building permit.	No approval of a grading or building permit.	
NOISE-1e: A process with the following components shall be established for responding to and tracking complaints pertaining to pile-driving construction noise: • A procedure for notifying City Building Division staff and Oakland Police Department; • A list of telephone numbers (during regular construction hours and off-hours); • A plan for posting signs on-site pertaining to complaint procedures and who to notify in the event of a problem; • Designation of a construction complaint manager for the Project; and • Notification of neighbors within 300 feet of the Project construction area at least 30 days in advance of pile-driving activities. Construction period impacts would still occur with implementation of the measures detailed above. However, because they would be short-term in duration, the City considers this a less-than-significant impact.	Applicant shall devise and implement a system for responding to and tracking complaints pertaining to pile-driving construction noise which includes the measures listed in Mitigation Measure NOISE-1e.	Community and Economic Development Agency, Building Services and Planning Division.	Verify that a system for responding to and tracking noise complaints has been developed by the Applicant.	Prior to approval of a grading or building permit.	No approval of a grading or building permit.	
NOISE-2: Once the project design is finalized and the location of specific uses are determined, the project applicant shall have an acoustical analysis prepared that details noise reduction requirements and noise insulation features necessary to achieve acceptable interior and exterior noise levels. The requirements shall be sufficient to achieve a minimum of 45 dBA for all interior building spaces and shall achieve either Normally Acceptable or Conditionally Acceptable ranges for exterior uses according to the applicable land use category as set forth in Table IV.F-4.	Applicant shall prepare an acoustical analysis that details noise reduction requirements and noise insulation features necessary to achieve acceptable interior and exterior noise levels. Applicant shall incorporate all recommended features into the Project.	City of Oakland Community and Economic Development Agency, Building Services Division.	Review building plans for the Project and verify that noise reduction features have been incorporated.	Prior to approval of a building permit.	No approval of a building permit.	*Verified by:* *Date:*

Table V-1 *continued*

Mitigation Measures	Implementation Procedure	Monitoring Responsibility	Monitoring and Reporting Action	Monitoring Schedule	Non-Compliance Sanction	Verification of Compliance
Measures to reduce the interior noise levels may include: • To meet the City's 45 dBA CNEL interior noise standard, building facade upgrades will be required for building located along Telegraph Avenue. All windows facing Telegraph Avenue must have a sound transmission class (STC) of 31 or greater. • All of the proposed buildings on the project site shall be designed and constructed with ventilation systems, to achieve the indoor fresh-air ventilation requirements specified in Chapter 35 of the Uniform Building Code, to achieve the 45 dBA CNEL interior noise standard. Measures to reduce the exterior noise levels may include: • The inclusion of plexiglass enclosures for outdoor patio and balcony areas at a height of 5 feet (i.e., to shield balconies and or outdoor patio areas) would provide 5dBA or more in noise reduction for outdoor use areas. Implementation of the above mitigation measure would reduce this impact to a less-than-significant level by achieving, at a minimum, *Conditionally Acceptable* noise levels.						
NOISE-3: The following measures are required for the operations of the proposed Project: • All on-site stationary noise sources shall comply with the standards listed in Section 17.120.050 of the City's Planning Code; and • Loading docks or loading areas and noise-generating equipment associated with the retail uses will be located as far as practical from all existing and planned residential properties. Implementation of the above mitigation measure would reduce the impact to below a level of significance.	1) Applicant shall comply with the standards listed in Section 17.120.050 of the City's Planning Code. 2) Applicant shall ensure that noise-generating areas and equipment are located as far as practical from all existing and proposed residential uses.	1) Community and Economic Development Agency, Building Services and Planning Division. 2) Community and Economic Development Agency, Building Services and Planning Division.	1) Make regular visits to the Project site to verify compliance with noise regulations. 2) Review building plans for the Project to ensure that proposed noise-generating uses are as far from sensitive uses as practical.	1) Regularly throughout operation of the Project, at intervals deemed appropriate by the City. 2) Prior to approval of a building permit.	1) City issues corrective action. 2) No approval of a building permit.	*Verified by:* *Date:*
HAZARDS AND HAZARDOUS MATERIALS						
HAZ-1a: Prior to issuing any grading, demolition or building permits for the proposed Project affecting Project site Blocks 3 through 9, an environmental investigation shall be conducted at the site by a qualified environmental professional. The environmental investigation shall implement appropriate sampling recommendations presented in previously conducted Phase I site assessment(s) prepared for the Project site, as summarized in Table IV.G-3, in order to adequately characterize subsurface conditions of the site. Environmental investigation workplans shall be submitted to the City of Oakland and RWQCB for review and approval. Information from the environmental investigation shall be used to develop and implement site-specific health and safety plans for construction workers and best management practices (e.g., dust control, storm water runoff control, etc.) appropriate to protect the general public.	Applicant shall ensure the preparation of an environmental investigation by a qualified environmental professional. The environmental investigation shall adequately characterize subsurface conditions within the Project site, as described in the mitigation measure, and its shall be used to develop and implement a health and safety plan for construction workers and best management practices.	City of Oakland, Public Works Agency, Environmental Services Division.	Review the construction plan to ensure it includes adequate health and safety measures to protect construction workers from subsurface hazardous materials.	Prior to approval of a grading or building permit.	No approval of a grading or building permit.	*Verified by:* *Date:*

Table V-1 *continued*

Mitigation Measures	Implementation Procedure	Monitoring Responsibility	Monitoring and Reporting Action	Monitoring Schedule	Non-Compliance Sanction	Verification of Compliance
HAZ-1b: Prior to issuing any grading, demolition, or building permit for the proposed Project, a site-specific Health and Safety Plan (HSP) shall be prepared by a qualified industrial hygienist. At a minimum, the HSP shall summarize information collected in environmental investigations for the Project site, including soil and groundwater quality data; establish soil and groundwater mitigation and control specifications for grading and construction activities, including health and safety provisions for monitoring exposure to construction workers; provide procedures to be undertaken in the event that previously unreported contamination is discovered; incorporate construction safety measures for excavation activities; establish procedures for the safe storage and use of hazardous materials at the Project site, if necessary; provide emergency response procedures; and designate personnel responsible for implementation of the Plan. The HSP shall be designed to prevent potential exposures to construction workers above established OSHA Permissible Exposure Limits. The Plan shall be submitted to the City of Oakland for review and approval.	Applicant shall prepare a site-specific HSP which meets the requirements listed in the mitigation measure. The HSP shall be designed to prevent potential exposures to construction workers above established OSHA Permissible Exposure Limits.	City of Oakland, Public Works Agency, Environmental Services Division.	Review and approve the HSP.	Prior to approval of the demolition, grading, or building permit.	No approval of the demolition, grading, or building permit.	*Verified by:* *Date:*
HAZ-1c: Prior to issuing any grading, demolition, or building permit for the proposed Project, a Soil and Groundwater Management Plan (Plan) shall be prepared. The Plan shall include procedures for managing soils and groundwater removed from the site to ensure that any excavated soils and/or dewatered groundwater with contaminants are stored, managed, and disposed of safely, in accordance with applicable regulations. The Plan will incorporate notification and dust mitigation requirements of the BAAQMD (including Title 17, CCR Section 93105). Dewatering procedures will incorporate regulatory requirements for groundwater discharge to storm or sanitary sewers, as outlined in Mitigation Measure HYD-3. The Plan shall be submitted to the City of Oakland and RWQCB for review and approval and shall be implemented throughout all phases of Project development.	Applicant shall prepare and implement a Soil and Groundwater Management Plan, as specified in the mitigation measure, to ensure that any excavated soils and/or dewatered groundwater with contaminants are stored, managed, and disposed of safely, in accordance with applicable regulations.	City of Oakland, Public Works Agency, Environmental Services Division; Regional Water Quality Control Board (RWQCB).	Review and approve the Soil and Groundwater Management Plan.	Prior to approval of a demolition, grading, or building permit.	No approval of a demolition, grading, or building permit.	*Verified by:* *Date:*
HAZ-2a: Covenants, codes, and restrictions for the proposed Project shall strictly prohibit the use of groundwater at the Project site for drinking, irrigation, or industrial purposes. Any dewatering activities required at the Project site following construction activities shall be required to be carried out under the Soil and Groundwater Management Plan prepared for the Project (Mitigation Measure HAZ-1c).	1) Applicant shall include provisions in the covenants, codes, and restrictions for the Project that prohibit the use of groundwater at the Project site for drinking, irrigation, or industrial purposes. 2) Applicant shall ensure that dewatering activities are carried out under the Soil and Groundwater Management Plan prepared for the Project.	1) City of Oakland, Public Works Agency, Environmental Services Division. 2) Refer to Mitigation Measure HAZ-1c.	1) Review the covenants, codes, and restrictions to ensure that the use of groundwater is prohibited. 2) Refer to Mitigation Measure HAZ-1c.	1) Prior to approval of Final Map. 2) Refer to Mitigation Measure HAZ-1c.	1) No approval of Final Map. 2) Refer to Mitigation Measure HAZ-1c.	*Verified by:* *Date:*
HAZ-2b: Prior to issuing any permits for construction within the Project site, a Human Health Risk Assessment (HHRA) shall be conducted and/or updated by a qualified environmental professional. This HHRA shall employ methodology from the *City of Oakland Urban Land Redevelopment: Guidance Document* for the Oakland Risk Based Corrective Action (RBCA) program to evaluate potential health risks from petroleum hydrocarbons, metals, solvents, and other volatile organic compounds in soils and groundwater. Depending on the findings of the HHRA, recommendations may be made for administrative or engineering controls to minimize public exposure to hazardous materials, if warranted. These controls could potentially include vapor barriers for building foundations, encapsulation of the site with building foundations and paved parking surfaces to prevent exposure to soils, and implementation of an Operations and Maintenance Plan to insure prescribed controls are implemented and maintained. The controls shall ensure that any potential added health risks to future site users are reduced to a cumulative risk of less than 1 x 10^{-5} (a calculated risk of 1 in 100,000 persons exposed) for carcinogens and a cumulative hazard index of 1.0. The HHRA shall be submitted to the City of Oakland and RWQCB for review and approval.	Applicant shall prepare and/or update a HHRA for the Project site that meets the requirements outlined in the mitigation measure.	City of Oakland, Public Works Agency, Environmental Services Division; Regional Water Quality Control Board (RWQCB).	Review and approve the HHRA.	Prior to approval of the demolition permit.	No approval of the demolition permit.	*Verified by:* *Date:*

Table V-1 *continued*

Mitigation Measures	Implementation Procedure	Monitoring Responsibility	Monitoring and Reporting Action	Monitoring Schedule	Non-Compliance Sanction	Verification of Compliance
HAZ-3**:** The implementation of Mitigation Measure HAZ-1b would require a Site Safety Plan/Soil and Groundwater Management Plan (Plan). The Plan will establish procedures for the safe storage and use of hazardous materials at the Project site, if necessary; provide emergency response procedures; and designate personnel responsible for implementation of the Plan. No other mitigation is required.	Refer to Mitigation Measure HAZ-1b.	Refer to Mitigation Measure HAZ-1b.	Refer to Mitigation Measure HAZ-1b.	Refer to Mitigation Measure HAZ-1b.	Refer to Mitigation Measure HAZ-1b.	*Verified by:* *Date:*
HAZ-4: All asbestos-containing materials shall be abated by a certified asbestos abatement contractor in accordance with construction worker health and safety regulations and the regulations and notification requirements of the Bay Area Air Quality Management District (BAAQMD) (29 CFR 1926.1101; 40 CFR 61 and 152; Title 8 CCR Section 1529; BAAQMD Regulation 11, Rule 2). The removal and disposal of lead-based paint within the Project site shall be completed in accordance with federal and State construction worker health and safety regulations (29 CFR, Part 1926.62; Title 8, CCR Section 532.1; CDHS Training, Certification and Work Practices Rule).	Applicant shall remove asbestos and lead-containing substances from the Project site in accordance with all applicable regulations. Plans for the abatement of these materials shall be incorporated into the construction plan.	City of Oakland, Public Works Agency, Environmental Services Division.	Review the construction plan for the Project to ensure that asbestos and lead will be removed from the Project site in a way that is consistent with hazardous materials regulations.	Prior to approval of the construction plan.	No approval of the construction plan.	*Verified by:* *Date:*
HAZ-5: Implementation of existing regulatory requirements for school siting, and preparation and implementation of a Site Safety Plan/Soil and Groundwater Management Plan (Mitigation Measure HAZ-1b) and lead and asbestos regulations (Mitigation Measure HAZ-4) would reduce this impact to a less-than-significant level. No additional mitigation is required.	Refer to Mitigation Measure HAZ-1b and HAZ-4.	Refer to Mitigation Measure HAZ-1b and HAZ-4.	Refer to Mitigation Measure HAZ-1b and HAZ-4.	Refer to Mitigation Measure HAZ-1b and HAZ-4.	Refer to Mitigation Measure HAZ-1b and HAZ-4.	*Verified by:* *Date:*
HISTORIC ARCHITECTURAL, ARCHAEOLOGICAL AND PALEONTOLOGICAL RESOURCES						
HIST-1a: A paleontological resources monitoring plan shall be developed in consultation with a qualified paleontologist prior to Project-related ground-disturbing activities. This monitoring plan shall incorporate the findings of Project-specific geotechnical investigations to identify the location and depth of deposits that have a high likelihood of containing paleontological resources and that may be encountered by Project activities. This information will indicate the depth of overlying non-sensitive soils (i.e., artificial fill and prior disturbance) within the Project area to allow a more effective determination of where paleontological monitoring is appropriate.	Applicant shall prepare a paleontological resources monitoring plan that meets the requirements listed in the mitigation measure.	City of Oakland Community and Economic Development Agency, Planning Division.	Review and approve the paleontological resources monitoring plan.	Prior to approval of a grading or building permit.	No approval of a grading or building permit.	*Verified by:* *Date:*
HIST-1b: A qualified paleontologist shall monitor all ground-disturbing activity that occurs at depths within the Project area determined to be sensitive in the paleontological monitoring plan. Monitoring shall continue until, in the paleontologist's opinion, significant, nonrenewable paleontological resources are unlikely to occur. In the event that paleontological resources are encountered during excavation, all work within 50 feet of the find shall be redirected until the monitor has evaluated the situation and provided recommendations for the protection of, or mitigation of adverse effects to, significant paleontological resources. Mitigation for impacts to significant paleontological resources shall include thorough documentation of the find and its immediate context to recover scientifically-valuable information. Upon completion of paleontological monitoring, a monitoring report shall be prepared. This scope of this report shall be approved by the City, but at a minimum the report will document the methods, results, and recommendations of the monitoring paleontologist.	1) Applicant shall retain a paleontologist to monitor ground-disturbing activity within the Project site, as described in the mitigation measure. 2) Work within 50 feet of any paleontological finds shall halt in the event that such resources are identified. 3) If paleontological resources are identified within the Project site, the paleontologist shall evaluate the resources and provide recommendations regarding the protection of, or mitigation of adverse effects to, significant paleontological resources. A monitoring report shall be prepared if impacts to paleontological resources will be mitigated.	1) City of Oakland Community and Economic Development Agency, Planning Division. 2) City of Oakland Community and Economic Development Agency, Planning Division. 3) City of Oakland Community and Economic Development Agency, Planning Division.	1) Receive notice that a paleontologist has been retained. 2) Verify that work is suspended if paleontological resources are found. 3) Review the paleontological resources monitoring report, if one is prepared.	1) Prior to approval of a grading or building permit. 2) During Project construction. 3) During Project construction.	1) No approval of a grading or building permit. 2) City issues corrective action or stop work order. 3) City issues corrective action.	*Verified by:* *Date:*

Table V-1 *continued*

Mitigation Measures	**Implementation Procedure**	**Monitoring Responsibility**	**Monitoring and Reporting Action**	**Monitoring Schedule**	**Non-Compliance Sanction**	**Verification of Compliance**
HIST-2a: A pre-construction archaeological testing program shall be implemented to help identify whether historic or unique archaeological resources exist within the Project site. Examples of potential historic or unique archaeological resources that could be identified within the Project site include: back-filled wells; basements of buildings that pre-date Euro-American buildings that were constructed on the Project site; and backfilled privies. For these resources to be considered significant pursuant to CEQA, they would have to have physical integrity *and* meet at least one of the criteria listed in *CEQA Guidelines* section 15064.5(a)(3) (for historic resources) and/or CEQA section 21083.2(g) (for unique archaeological resources). These criteria include: association with events that have made a significant contribution to the broad patterns of California history and cultural heritage; association with the lives or persons important in our past; embodiment of the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; yield, or may likely yield, information important in prehistory or history; contains information needed to answer important scientific research questions and be subject to a demonstrable public interest in that information; have a special and particular quality such as being the oldest of its type or the best available example of its type; or be directly associated with a scientifically recognized important prehistoric or historic event or person. The testing program, in conjunction with a sensitivity study, shall use a combination of subsurface investigation methods (including backhoe trenching, augering, and archaeological excavation units, as appropriate). The purpose of the testing program is to: (1) identify the presence and location of potentially-significant archaeological deposits; (2) determine if such deposits meet the definition of a historical resource or unique archaeological resource under section 21083.2(g) of the CEQA statutes; (3) guide additional archaeological work, if warranted, to recover the information potential of such deposits; and (4) refine the archaeological monitoring plan. If historic or unique archaeological resources associated with the Chinese community are identified within the project site and are further determined to be unique, the City shall consult with representatives of an established local Chinese-American organization(s) regarding the potential use of the archaeological findings for interpretive purposes.	1) Applicant shall retain an archaeologist to implement a pre-construction archaeological testing program, as described in the mitigation measure. 2) Archaeologist shall prepare a research design if date recovery is deemed necessary. 3) Applicant shall consult with representatives of the Chinese-American community regarding the potential use of archaeological findings.	1) City of Oakland Community and Economic Development Agency, Planning Division. 2) City of Oakland Community and Economic Development Agency, Planning Division. 3) City of Oakland Community and Economic Development Agency, Planning Division.	1) Receive notice that an archaeologist has been retained. 2) Verify that a research design is prepared. 3) Verify that the appropriate groups have been contacted regarding archaeological findings within the Project site.	1) Prior to approval of a grading permit. 2) Prior to approval of a grading permit 3) During Project construction.	1) No approval of the grading permit. 2) No approval of the grading permit. 3) No approval of the grading permit.	*Verified by:* *Date:*
HIST-2b: Archaeological monitoring of ground-disturbing construction in the Project area shall be conducted, as appropriate and if necessary, based on the results of the pre-construction testing program and the potential for encountering unidentified archaeological deposits. Upon completion of the pre-construction testing program specified in Mitigation Measure HIST-2a, the extent of archaeological monitoring during Project construction will be assessed, and the scope and frequency of the monitoring required by this mitigation measure shall be based on the findings of this assessment. Monitoring shall be conducted by a cultural resource professional approved by the City who meets the Secretary of the Interior's Professional Qualifications Standards for Prehistoric and Historical Archaeology. Upon completion of such archaeological monitoring, evaluation, or data recovery mitigation, the archaeologist shall prepare a report documenting the methods, results, and recommendations of the investigation, and submit this report to the NWIC. Public displays of the findings of archaeological recovery excavation(s) of historical or unique resources shall be prepared. As appropriate, brochures, pamphlets, or other media, shall be prepared for distribution to schools, museums, libraries, and – in the case of Chinese-American archaeological deposits – Chinese-American organizations.	1) Applicant shall retain an archaeologist to monitor ground-disturbing activity within the Project site, as described in the mitigation measure. 2) Archaeologist shall halt work in the vicinity of the archaeological resource until findings can be made regarding whether the resource meets the CEQA definition of an archaeological or historic resource. 3) If identified archaeological resources meet CEQA criteria for archaeological or historic resources, they shall be avoided by construction activities. If avoidance is not feasible, then effects to the deposit shall be mitigated through a data recovery strategy developed by the evaluating archaeologist, as described in the mitigation measure. This report shall be submitted to the NWIC.	1) City of Oakland Community and Economic Development Agency, Planning Division. 2) City of Oakland Community and Economic Development Agency, Planning Division. 3) City of Oakland Community and Economic Development Agency, Planning Division.	1) Receive notice that an archaeologist has been retained. 2) Verify that work is suspended if archaeological resources are found. 3) Review and approve the archaeological resources mitigation plan, if one is prepared.	1) Prior to approval of the grading permit. 2) During Project construction. 3) During Project construction.	1) No approval of the grading permit. 2) City issues corrective action or stop work order. 3) City issues corrective action.	

Table V-1 *continued*

Mitigation Measures	Implementation Procedure	Monitoring Responsibility	Monitoring and Reporting Action	Monitoring Schedule	Non-Compliance Sanction	Verification of Compliance
HIST-3: Should human remains be encountered by Project activities, construction activities shall be halted and the County Coroner notified immediately. If the human remains are of Native American origin, the Coroner must notify the Native American Heritage Commission (NAHC) within 24 hours of this identification, and a qualified archaeologist should be contacted to evaluate the situation. The NAHC will identify a Native American Most Likely Descendent (MLD) to inspect the site and provide recommendations for the proper treatment of the remains and associated grave goods. The archaeologist shall recover scientifically-valuable information, as appropriate and in accordance with the recommendations of the MLD. Upon completion of such analysis, as appropriate, the archaeologist shall prepare a report documenting the methods and results of the investigation. This report shall be submitted to the NWIC.	1) Construction activity shall halt and the County Coroner shall be notified if human remains are uncovered. 2) Applicant shall notify the appropriate authorities and retain an archaeologist to recover scientifically-valuable information about the human remains and to prepare a report for submission to the NWIC.	1) City of Oakland Community and Economic Development Agency, Planning Division. 2) City of Oakland Community and Economic Development Agency, Planning Division.	1) Verify that work is suspended if human remains are found. 2) Verify that the appropriate authorities are notified about the presence of human remains.	1) During Project construction. 2) During Project construction.	1) City issues corrective action or stop work order. 2) City issues corrective action.	*Verified by:* *Date:*
Mitigation Measures HIST-4a, HIST-4b, and HIST-5 shall be implemented based on the adopted Project variant involving the Great Western Power Company Building. The following three variants are proposed: 1) demolition of the Great Western Power Company Building (Variant 1); 2) partial demolition of the Great Western Power Company Building (Variant 2); and 3) preservation of the Great Western Power Company Building (Variant 3).						
HIST-4a *(Variant 1 and 2)*: The following measures shall be implemented to preserve information about the resource for further study: • Record the Great Western Power Company Building in accordance with the procedures of the Historical American Buildings Survey (HABS) through measured drawings, written histories, and large-format photographs; • Prepare a history of the Great Western Power Company Building that incorporates oral history, documentary research, and architectural information; • Prepare a brochure, regarding the building's historical association with one of three major early 20th century northern California power companies, to be made available at local libraries and museums; • Incorporate interpretive elements, such as signs and placards, into public areas and street frontages proposed as part of the Project. • If full demolition of the building occurs, salvage architectural elements from the building, including hardware, doors, paneling, fixtures, and equipment, and incorporate these elements into new construction; and • Curate all materials, notes, and reports at the OHR, and submit copies to the NWIC. The City may also consider requiring payment of pro-rata funds to restore historic buildings in the Uptown District to further reduce this impact. Even with extensive documentation, however, the demolition of the building or portions of the building would result in the loss of a historic resource that is associated with significant historical events and is an example of outstanding design and function. Therefore, the demolition or partial demolition of the building would remain a significant and unavoidable impact.	Applicant shall preserve historic information about the Great Western Power Company Building, as described in the mitigation measure.	City of Oakland Community and Economic Development Agency, Planning Division.	Verify that the historic preservation measures detailed in the mitigation measure are implemented.	Prior to approval of the demolition permit.	No approval of the demolition permit.	*Verified by:* *Date:*
HIST-4b *(Variant 3)*: Any modifications to the exterior of the building that may be proposed as part of its preservation and reuse shall be developed in consultation with staff at the Planning Department and a qualified historic preservation architect to determine an appropriate treatment strategy. In the event that this measure is determined feasible and is implemented, Mitigation Measure HIST-5 shall also be implemented to ensure that development on the adjacent properties does not adversely impact the building's integrity.	Applicant shall retain a qualified historic preservation architect to work with the Planning Division to develop an appropriate treatment strategy for the preservation and reuse of the Great Western Power Company Building.	City of Oakland Community and Economic Development Agency, Planning Division.	Ensure that agreed-upon plans for the modification of the Great Western Power Company Building are incorporated into the Project.	Prior to approval of a building permit.	No approval of a building permit.	*Verified by:* *Date:*

Table V-1 *continued*

Mitigation Measures	**Implementation Procedure**	**Monitoring Responsibility**	**Monitoring and Reporting Action**	**Monitoring Schedule**	**Non-Compliance Sanction**	**Verification of Compliance**
HIST-5 *(Variant 3)*: The following two-part mitigation measure shall be implemented: • The building's urban setting on the portion of Block 7 fronting Thomas L. Berkley Way (20th Street) shall be documented prior to Project implementation. At a minimum, this documentation shall include panoramic streetscape photographs and an interpretive display that shall provide an overview of the former urban context and describe how this context contributed to the building's significance. This information shall be presented in an on-site display at the preserved Great Western Power Company Building to enable a viewer to easily associate the former setting with the existing building (i.e., panoramic streetscape photographs to show the building within the former street frontage). Upon completion of this documentation, a copy of all notes, photographs, and analysis shall be archived at the OHR and submitted to the NWIC. • The City shall ensure that the designs for new adjacent buildings are evaluated with respect to minimizing setting impacts on the historic resource. Project buildings adjacent to the Great Western Power Company Building shall be designed in a manner that minimizes inappropriate differences in mass and scale, if feasible. For example, designs could call for adjacent buildings to step-up to the height of the tallest Project element north of 20th Street, thereby reducing a potentially abrupt contrast between new buildings and the two-story Great Western Power Company Building. If the designs for the adjacent buildings follow the *Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for the Preservation of Historic Buildings*, then the Project will have a less-than-significant impact, pursuant to CEQA §15064.5(b)(3). However, if it is not feasible to minimize material impairment of the resource, then the impact would remain significant and unavoidable.	1) Applicant shall document the urban setting of the Great Western Power Company Building, as specified in the mitigation measure. 2) The Planning Division shall ensure that the design of the buildings adjacent to the Great Western Power Company Building is consistent with the *Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for the Preservation of Historic Buildings*.	1) City of Oakland Community and Economic Development Agency, Planning Division. 2) City of Oakland Community and Economic Development Agency, Planning Division.	1) Verify that the urban setting of the Great Western Power Company Building is documented. 2) Review the building permit application to verify that proposed buildings adjacent to the Great Western Power Company Building would not materially impair the historic integrity of the structure.	1) Prior to approval of a building permit. 2) Prior to approval of a building permit.	1) No approval of a building permit. 2) No approval of a building permit.	*Verified by:* *Date:*
HIST-6: If the relocation of the PDHPs proposed for demolition on the Project site is not feasible, the buildings shall be documented at a level of detail commensurate with their local importance. At a minimum, this effort shall include photo-documentation, as well as local oral history about the past uses and occupants of the buildings. This documentation shall be planned in consultation with OCHS in order to: 1) identify those qualities that support and justify the property's local significance; and 2) efficiently record and disseminate such information in a way that most effectively offsets the loss of such buildings. At the completion of this documentation, all notes, photographs, and analysis shall be archived at the OHR, and a complete copy shall be submitted to the NWIC.	Applicant shall document the PDHPs proposed for demolition if relocation is not feasible, as described in the mitigation measure. This documentation shall be submitted to the OHR and the NWIC.	City of Oakland Community and Economic Development Agency, Planning Division.	Review the documentation of the PDHPs.	Prior to approval of a demolition permit.	No approval of a demolition permit.	*Verified by:* *Date:*
HIST-7: No mitigation measure is necessary to address the less-than-significant impact.	N/A	N/A	N/A	N/A	N/A	N/A
HIST-8a: If feasible, the three PDHPs that contribute to the 19th and San Pablo Commercial District (located at 1958-60 San Pablo Avenue, 1966-68 San Pablo Avenue, and 1972 San Pablo Avenue) shall be preserved in their existing condition or rehabilitated and incorporated into the proposed Project. Any modifications to the exterior of the buildings that may be proposed as part of their rehabilitation shall be developed in consultation with the Planning Department and a qualified historic preservation architect to determine an appropriate treatment strategy that preserves the important historic qualities of the structures.	1) Applicant shall incorporate the three PDHPs listed in the mitigation measure into the final Project design. 2) The Planning Division and a qualified historic preservation architect shall review the plans for the reuse of the PDHPs and shall make recommendations, if necessary, to alter the plans to preserve the important historic qualities of the buildings. 3) Applicant shall revise the plans for reuse of the PDHPs per the recommendations of the Planning Division and the qualified historic preservation architect.	1) Community and Economic Development Agency, Building Services and Planning Division 2) Community and Economic Development Agency, Building Services and Planning Division 3) Community and Economic Development Agency, Building Services and Planning Division	1) Review the final building plans to ensure they incorporate the PDHPs. 2) Forward recommendations on alteration of the PDHPs to the Applicant. 3) Review the final building plans to verify that recommendations to preserve the historical qualities of the PDHps have been incorporated.	1) Prior to approval of a grading or building permit. 2) Prior to approval of a grading or building permit. 3) Prior to approval of a grading or building permit.	1) No approval of a grading or building permit. 2) No approval of a grading or building permit. 3) No approval of a grading or building permit.	*Verified by:* *Date:*

Table V-1 *continued*

Mitigation Measures	**Implementation Procedure**	**Monitoring Responsibility**	**Monitoring and Reporting Action**	**Monitoring Schedule**	**Non-Compliance Sanction**	**Verification of Compliance**
HIST-8b: If the City determines that preservation of the three PDHPs that contribute to the 19th and San Pablo Commercial District (located at 1958-60 San Pablo Avenue, 1966-68 San Pablo Avenue, and 1972 San Pablo Avenue) is not feasible, the City shall inform the applicant for the Thomas L. Berkley Square Project of the potential cumulative impact prior to the implementation of the Uptown Mixed-Use Project. The City shall consult with both project applicants to establish a fair division of responsibility to fund mitigation measures to preserve information about the 19th and San Pablo Commercial District for future study. These mitigation measures shall include the following: • Record the 19th and San Pablo Commercial District in accordance with the procedures of HABS through measured drawings, written histories, and large-format photographs; • Prepare a history of the 19th and San Pablo Commercial District that incorporates oral history, documentary research, and architectural information; this history could utilize non-written media and production techniques, including video photography; • Prepare a brochure, regarding the district's historical association with turn-of-the-century Oakland commerce, to be made available at local libraries and museums; • Salvage architectural elements from the buildings proposed for demolition, including hardware, doors, paneling, fixtures, and equipment, and incorporate these elements into new construction; and • Curate all materials, notes, and reports at the OHR, and submit copies to the NWIC. Even with extensive documentation, however, a cumulative impact will result from the demolition of 63 percent of the 19th and San Pablo Commercial District's contributing buildings. This loss of contributing buildings will materially affect the district's ability to convey its historical significance, which will result in a significant, unavoidable cumulative impact.	The Planning Division shall consult with the applicants of the proposed Project and the Thomas L. Berkley Square Project to establish a fair division of responsibility to fund mitigation measures to preserve information about the 19th and San Pablo Commercial District for future study.	City of Oakland Community and Economic Development Agency, Planning Division.	Ensure the Applicant funds a fair share of the mitigation measures to reduce cumulative impacts to the 19th and San Pablo Commercial District.	Prior to approval of a demolition permit.	No approval of a demolition permit.	*Verified by:* *Date:*
HIST-9: No mitigation measure is necessary to address this less-than-significant impact.	N/A	N/A	N/A	N/A	N/A	N/A
HIST-10: No mitigation measure is necessary to address this less-than-significant impact.	N/A	N/A	N/A	N/A	N/A	N/A
HIST-11: No mitigation measure is necessary to address this less-than-significant impact.	N/A	N/A	N/A	N/A	N/A	N/A
HIST-12: No mitigation measure is necessary for this less-than-significant impact.	N/A	N/A	N/A	N/A	N/A	N/A
HIST-13: Prior to Project initiation, the plan for the enhancement of street features and lighting on Telegraph Avenue shall be reviewed by planning staff to ensure that it conforms to the *Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for the Preservation of Historic Buildings.* Conformance with these guidelines will ensure that these improvements are compatible with nearby historical resources, and will mitigate potential Project effects to less-than-significant levels.	Planning Division shall review the plan for the enhancement of street features and lighting on Telegraph Avenue to ensure that it conforms to the *Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for the Preservation of Historic Buildings.*	City of Oakland Community and Economic Development Agency, Planning Division.	Ensure that the plan for the enhancement of street features and lighting on Telegraph Avenue conforms to the *Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for the Preservation of Historic Buildings.*	Prior to the implementation of the Telegraph Avenue street features and lighting plan.	Planning Division issues corrective action.	*Verified by:* *Date:*

Table V-1 *continued*

Mitigation Measures	Implementation Procedure	Monitoring Responsibility	Monitoring and Reporting Action	Monitoring Schedule	Non-Compliance Sanction	Verification of Compliance
AESTHETIC RESOURCES						
AES-1: The following measures shall be incorporated into the final Project design: • Create streetscape vitality and enhance the pedestrian experience through detailed treatment of building facades, including entryways, fenestration, and signage, and through the use of carefully chosen building materials, texture, and color. • Design of building facades shall include sufficient articulation and detail to avoid the appearance of blank walls or box-like forms. • Exterior materials utilized in construction of new buildings, as well as site and landscape improvements, shall be high quality and shall be selected for both their enduring aesthetic quality and for their long term durability. • Ensure that the architectural and landscape treatment of the proposed parking structure promotes human scale and pedestrian activity. • Detailed designs for the public park shall be developed. The design shall emphasize the public nature of the space and pedestrian comfort. The plaza design shall consider sun/shade patterns during mid-day hours throughout the year. The plaza design shall be sensitively integrated with the streetscape.	Applicant shall incorporate the design features and recommendations listed in the mitigation measure into the final Project design.	City of Oakland Community and Economic Development Agency, Planning Division.	Verify that the design features and recommendations listed in the mitigation measure are incorporated into the design review application for the Project.	Prior to approval of a building permit.	No approval of a building permit.	*Verified by:* *Date:*
AES-2a: The specific reflective properties of Project building materials shall be assessed by the City during Design Review as part of the Project's Development Standards, Procedures and Guidelines. Design review shall ensure that the use of reflective exterior materials is minimized and that proposed reflective material would not create additional daytime or nighttime glare.	Planning staff shall assess the reflective properties of Project buildings to ensure that the Project will not create additional daytime or nighttime glare.	City of Oakland Community and Economic Development Agency, Planning Division.	Ensure that any recommendations that staff or the Design Review Committee makes in regard to reflective materials are incorporated into the Project.	Prior to approval of a building permit.	No approval of a building permit.	*Verified by:* *Date:*
AES-2b: Specific lighting proposals shall be reviewed and approved by the City prior to installation. This review shall ensure that any outdoor night lighting for the Project is down shielded and would not create additional nighttime glare.	Planning staff shall assess proposed lighting of Project buildings and streets to ensure that the Project will not create additional nighttime glare.	City of Oakland Community and Economic Development Agency, Planning Division.	Ensure that any recommendations that staff or the Design Review Committee makes in regard to lighting are incorporated into the Project.	Prior to approval of a building permit.	No approval of a building permit.	*Verified by:* *Date:*
WIND						
WIND-1a: The final design of the high-rise buildings on Blocks 5 and 7 shall be in accordance with one or more of the following design guidelines. In addition, as part of the design review process for these high-rise buildings, a qualified wind consultant shall ensure the Project is designed in accordance with these guidelines: • Align long axis of each building along a northwest-southeast alignment to reduce exposure of the wide faces of the building to westerly or southeasterly winds. • West or southeasterly building faces shall be articulated and modulated through the use of architectural devices such as surface articulation; variation; variation of planes, wall surfaces, and heights; and the placement of setbacks and other similar features. • Utilize properly-located landscaping that mitigates high winds. Porous materials (e.g., vegetation, hedges, screens, latticework, perforated metal), which offer superior wind shelter compared to solid surfaces, shall be used. • Avoid narrow gaps between buildings where westerly or southeasterly winds could be accelerated; or • Avoid breezeways or notches at the upwind corners of the building.	Applicant shall retain a qualified wind consultant to determine if the Project is in compliance with the guidelines listed in the mitigation measure.	City of Oakland Community and Economic Development Agency, Planning Division.	Ensure that the Project is designed in compliance with the wind-reducing guidelines in the mitigation measure.	Prior to approval of a building permit.	No approval of a building permit.	*Verified by:* *Date:*

Table V-1 *continued*

Mitigation Measures	Implementation Procedure	Monitoring Responsibility	Monitoring and Reporting Action	Monitoring Schedule	Non-Compliance Sanction	Verification of Compliance
WIND-1b: A qualified wind consultant shall review and evaluate the final design of the high-rise buildings on Blocks 5 and 7, and shall determine whether incorporated design features would reduce wind impacts to a less-than-significant level. If the wind consultant determines that these design features would reduce wind impacts to a less-than-significant level (i.e., less than 36 mph), no further mitigation would be required. If the wind consultant determines that significant adverse wind impacts could occur, models of the proposed Blocks 5 and 7 buildings shall be subject to wind tunnel testing to determine if the buildings would result in uncomfortable or hazardous winds. The wind consultant shall work with the Project architect to develop further building design modifications that would reduce wind impacts to a less-than-significant level (i.e., standard of less than 36 mph).	1) Applicant shall retain a qualified wind consultant to review and evaluate the final design of the high-rise buildings on Blocks 5 and 7, and determine whether incorporated design features would reduce wind impacts to a less-than-significant level. 2) If the wind consultant determines that buildings on Blocks 5 and 7 could result in significant wind-related impacts, the Applicant shall subject models of the proposed buildings to wind tunnel testing. Based on the results of this testing, the applicant shall incorporate design modifications into the Project that would reduce wind impacts to a less-than-significant level.	1) City of Oakland Community and Economic Development Agency, Planning Division. 2) City of Oakland Community and Economic Development Agency, Planning Division.	1) Review the written findings of the wind consultant. 2) Review project plans to ensure they are consistent with the recommendations of the wind consultant.	1) Prior to approval of a building permit. 2) Prior to approval of a building permit.	1) No approval of a building permit. 2) No approval of a building permit.	*Verified by:* *Date:*

APPENDIX A-1

REVISIONS TO ABAG EMPLOYMENT ALLOCATIONS ARE NOT ANTICIPATED TO SUBSTANTIALLY CHANGE EIR CONCLUSIONS FROM TRANSPORTATION MODEL ANALYSES

This response addresses the concerns raised about the effects of the recently revised ABAG employment allocations on the results of the transportation analyses in the *Uptown Mixed-use Project EIR*. The text that follows responds to those concerns and makes three main points. First, the response explains that the recently identified inaccuracies in the original ABAG employment allocations do not affect the land use data for Oakland as the allocations of Oakland employment are not based on the ABAG data. Second, the validity of the Oakland land use data supports the adequacy and validity of the EIR transportation analyses and forecasts given the importance of the Oakland land use data to those analyses and their results. Third, the response goes on to explain that possible revisions to the allocations of employment in other cities in Alameda County outside of the EIR study area are not anticipated to substantially change the EIR conclusions drawn from the recent transportation model analyses.

ACCMA REVIEW OF MODEL LAND USE DATA IS CURRENTLY UNDERWAY IN LIGHT OF RECENTLY REVISED EMPLOYMENT ALLOCATIONS FROM ABAG

Since the transportation analysis for the *Uptown EIR* was completed, the Association of Bay Area Governments (ABAG) found problems with its allocations of *Projections 2002* employment data to Census Tracts within cities in the region, and recently issued revised employment allocations. Citywide employment totals for jurisdictions remain the same as those originally provided by ABAG.[1] The *Projections 2002* household and population totals for jurisdictions and the allocations of households and population to Census Tracts within jurisdictions remain unchanged and are not affected by the recent ABAG revisions to the allocations of employment. The Alameda County Congestion Management Agency (ACCMA) is currently in the process of reviewing the employment data in the ACCMA model and revising the employment allocations in the model for those situations affected by the ABAG revisions.

---

[1] Per communications with ABAG staff on October 23, 2003 (Hing Wong) and November 3, 2003 (Brian Kirking). Conversations with ABAG staff indicated that the Census Tract allocations of employment were revised because of problems with the methodology originally used to allocate *Projections 2002* employment to Census Tracts within cities. ABAG staff also indicated that employment totals for cities were not affected and should remain the same as the totals in the original data. (Analyses of the revised Census Tract allocations from ABAG show only small differences in employment totals for some cities as calculated for the revised Census Tract files compared to totals calculated for the original Census Tract files and totals in the ABAG *Projections 2002* publication.)

OAKLAND LAND USE DATA FOR TRANSPORTATION MODEL ANALYSES ARE NOT AFFECTED BY REVISED EMPLOYMENT ALLOCATIONS FROM ABAG

Oakland Land Use Data in ACCMA Model are Based on Local Allocations, Not the ABAG Allocations

The land use database for Oakland included in the ACCMA Travel Model was developed by the City of Oakland and its consultant, Hausrath Economics Group (HEG), and submitted to the ACCMA in January 2003 in response to the transmittal of preliminary land use data for city input and review prior to inclusion in the ACCMA's Travel Model 2002 (completed and released May 2003). Extensive work was done in Oakland to track and update growth assumptions and the locations of specific projects and development sites for use in the allocation of growth to traffic analysis zones (TAZs) throughout the city. Development projects, plans, and other changes were identified and updated based on input from City of Oakland and Port of Oakland staffs and on analysis of economic, demographic, and real estate market data and trends.

The land use database developed by the City of Oakland and submitted to the ACCMA for use in its Travel Model 2002 reflects the City's allocation of growth to Oakland TAZs based on extensive local information and analysis, as described above. The Oakland land use data are not based on the ABAG allocations of *Projections 2002* employment and households within the city. Although developed locally, the citywide totals for employment and households in Oakland are similar to and within one percent of the ABAG citywide totals for Oakland, as required by the ACCMA.

The recent revisions in ABAG's allocations of employment to Census Tracts within cities do not affect the Oakland employment data in the ACCMA model. That is because those data are not based on the original ABAG allocations of *Projections 2002* employment. The Oakland employment allocations are based on more extensive and in-depth local information and analysis than can be done across the region by ABAG.

Oakland Cumulative Growth Scenario Used in EIR Transportation Analyses is also Based on Local Allocations, Not the ABAG Allocations

As described in Appendix D of the EIR, much of the cumulative analysis in the *Uptown EIR* assumes Oakland's cumulative growth scenario and land use database as updated for the *Uptown EIR* instead of the land use data in the ACCMA Model 2002. The updated cumulative growth scenario for Oakland builds on the land use database in the ACCMA model. Compared to the land use in that model, the cumulative growth scenario as updated for the *Uptown EIR* includes more specificity about the Uptown project and updated assumptions (through June 2003) for other development projects, primarily those in downtown Oakland surrounding the Uptown project. In addition, the totals for Oakland's cumulative growth scenario are not constrained to fall within one percent of the ABAG totals for Oakland, if higher projections are justified by recent and expected future development projects and other anticipated changes in land use, employment, and households/housing in Oakland. As described in Appendix D, the *Uptown EIR* growth scenario for Oakland is very similar to the projections and land use database in the ACCMA Model 2002, and slightly more conservative, as total employment in Oakland under the Uptown scenario exceeds the ACCMA/ABAG total for 2025 by more than one percent.[2]

The allocation of employment in Oakland's cumulative growth scenario as updated for the *Uptown EIR* builds on that developed for the ACCMA model land use database. Differences reflect updated conditions through June 2003 as well as the location of some additional growth. Like the land use data in the ACCMA model, the employment data in Oakland's growth scenario are allocated to locations within the City based on extensive local information and analyses and not on the ABAG allocations of *Projections 2002* employment. Thus, the recent ABAG revisions to the allocations of employment within cities do not affect the Oakland employment data in the *Uptown EIR* cumulative growth scenario.

Communications With ACCMA Confirm that Oakland Land Use Data are Not Affected by Revised Employment Allocations from ABAG

Communications with the ACCMA since the release of the revised ABAG employment allocations have confirmed that Oakland supplied the ACCMA with its own land use data for use in the Travel Model 2002, and that the Oakland data allocated employment and household growth within Oakland based on in-depth local information and analysis and not the ABAG *Projections 2002* allocations. Thus, the Oakland employment data in the ACCMA model are not being revised as a result of the recently revised employment allocations from ABAG.[3]

Validity of Oakland Land Use Data Supports Adequacy and Validity of EIR Transportation Analyses

The results of the EIR transportation analyses and model forecasts are most sensitive to the land use data for Oakland. This is because of the location of the Uptown project in Oakland and the focus of the EIR transportation analyses on the Uptown Study Area including and surrounding the project. The study area is defined to include the proposed Project site and 40 study intersections in surrounding locations in Oakland (see pps. 85-88 of the *Draft EIR*). In addition, the transportation analysis also focuses on the regional and local street networks in Oakland that serve the Project site.

As the land use data for Oakland are based on in-depth local information and analyses and not the ABAG allocations (as described above), the recently revised employment allocations from ABAG do not affect the Oakland land use data in the ACCMA Model 2002 or in Oakland's cumulative growth scenario as updated for the *Uptown EIR*. The validity of the Oakland land use data supports the adequacy and validity of the EIR transportation analyses and forecasts, given the importance of the Oakland land use data to those analyses and their results.

The allocation of growth to TAZs in the Uptown Study Area is particularly important to the EIR transportation analysis because of the intersection and other localized analyses focused on assessing the impacts of the Project. The allocation of growth to TAZs outside the study area becomes less

---

[2] Also see Response to Comment A2-2 for more explanation of the *Uptown EIR* growth scenario and of how it compares to other growth scenarios and projections.

[3] Communications with ACCMA staff (Jean Hart and Diane Stark) on November 3, 2003, November 4, 2003, and during the first part of December 2003. This is further confirmed in the December 22, 2003 letter from the ACCMA (Diane Stark) to the City of Oakland regarding ACCMA review of the revised *Projections 2002* employment allocations from ABAG.

important to the EIR analysis as the distance from the study area and Project site increases. Through the workings of the travel model, traffic from activity in areas outside of Oakland is combined onto major routes and freeways that may travel through the study area and affect the EIR forecasts and impact analyses. Because of this aggregation process, the allocation of activity to specific TAZs in areas outside of Oakland is much less important to the EIR transportation analysis than the allocation of activity to TAZs within the study area and the rest of Oakland. Since the detailed land use databases for Oakland TAZs are not affected by the ABAG revisions nor are the employment and population totals for jurisdictions outside of Oakland, the EIR's forecasts and analyses of impacts appear adequate. Further, they are not likely to be substantially affected by possible future changes in the allocations of employment to TAZs in other jurisdictions outside of Oakland as may result from ACCMA's current model review process. This issue is discussed further below.

Possible Revisions to Employment Allocations Outside of Oakland are not Anticipated to Substantially Change EIR Conclusions

The ACCMA's current model review process could result in changes to the allocations of employment within other Alameda County cities outside of Oakland as a result of ABAG's recently revised employment allocations. However, such changes are not anticipated to substantially change the EIR conclusions drawn from the transportation model analyses for several reasons. First, as described above, the results of the EIR transportation analyses and model forecasts are most sensitive to the land use data for Oakland which are not affected by the changes in the ABAG data. Second, through the workings of the travel model, traffic from activity in other cities is incorporated into the EIR analyses focused on the Uptown Study Area, after having been aggregated onto streets, major routes, and freeways that may travel through the study area. Because employment totals for other cities have not been revised by ABAG, the *amount of traffic* associated with that employment also will not be affected. Possible changes in the allocation of employment in other cities, however, could affect the *allocation of associated traffic* to major routes and freeways, although such effects are moderated and can be negated by the model's aggregation process of combining traffic for numerous TAZs and Census Tracts onto a relatively limited number of major routes and freeways.[4] Third, although not anticipated to be substantial, the potential effects of possible changes in the allocation of employment in other cities are primarily associated with nearby communities that border Oakland, particularly the central areas of Oakland, including Emeryville, Piedmont, Alameda, and possibly Berkeley and San Leandro. Possible changes in the allocation of employment in other cities are much less likely to have effects on the *Uptown EIR* transportation forecasts and analyses because of their further distances from the study area.

---

[4] The transportation model's process of combining traffic for different areas onto major routes could moderate or negate the effects of possible different allocations of employment and associated traffic in several ways. One is that by combining traffic from different smaller areas onto one or more major travel routes serving the larger area, the possible effects of different employment allocations to Census Tracts and TAZs can be negated if the traffic from those Census Tracts and TAZs ends up on the same routes regardless of where the employment is allocated. (In other words, less traffic for some TAZs can be offset by more traffic in other TAZs nearby.) Another is that by combining traffic from different areas onto major travel routes, differences in the allocation of traffic for one or more cities can be small when combined with the traffic from Oakland and other cities not affected by changes. This is particularly relevant because the Project site and Uptown Study Area are located in Oakland (which is not affected by the ABAG revisions), and because of Oakland's large size relative to its neighbors (which results in over 60 percent of the TAZs in the Inner East Bay being located in Oakland).

Considerations Relevant to Nearby Cities of Emeryville, Piedmont, and Alameda

Although the ACCMA model review process is still underway, it is possible that there will be only limited or no changes in the allocations of employment in the nearby cities of Emeryville, Piedmont, and Alameda.

The City of Emeryville includes only one Census Tract within its boundaries. As a result, ABAG's revised allocations of employment to Census Tracts do not affect the allocation of employment in Emeryville. Thus, the revised ABAG employment allocations do not affect the land use data in the ACCMA model for Emeryville.

The City of Piedmont has very little employment within its borders, and includes only two Census Tracts. The City provided local inputs for the land use data currently in the ACCMA Model 2002 that substantially changed the employment allocations based on the original ABAG data. Thus, it is not anticipated that the recent ABAG revisions will affect the land use data in the ACCMA model for Piedmont.

Communication with the City of Alameda around the time that the ABAG revisions were released indicated that Alameda had provided local inputs for the land use data currently in the ACCMA Model 2002. As a result, City of Alameda staff did not anticipate that the revised ABAG data would require changes to the employment allocations in the land use database for Alameda. It also was noted by City of Alameda staff that the ABAG projections are considered to be conservative for analysis purposes by the City of Alameda, as they incorporate higher growth than anticipated locally, independent of where the employment is located.[5]

Considerations Relevant to Nearby Cities of Berkeley and San Leandro

The ABAG revisions reflect changes in the allocation of employment within the cities of Berkeley and San Leandro that could affect the allocations of employment for those cities in the land use database in the ACCMA model once the current review process is completed.[6] Such changes in the allocation of employment could affect the allocation of traffic, resulting in more traffic in some locations and less traffic in other locations. Overall, the net effects on the results of the EIR transportation analysis are not anticipated to be substantial for all of the reasons described at the beginning of this subsection above. They include: the fact that the EIR analyses are most sensitive to the land use data for Oakland which are not affected by the changes in the ABAG data; the negating or moderating effects of the travel model's process of combining traffic for smaller areas onto major routes serving the larger area; and the fact that possible differences in the allocations of employment throughout Berkeley and San Leandro can occur in Census Tracts and TAZs that are a substantial distance from the Uptown Study Area that is the focus of the EIR impact analysis.

APPENDIX A-2

APPENDIX A-2
UPDATED CUMULATIVE LAND USE SCENARIO

UPTOWN EIR IS MORE UP-TO-DATE AND MORE CONSERVATIVE THAN LUTE EIR

Extensive work continues to be done in Oakland to update and refine the cumulative growth assumptions and land use database used for transportation modeling and impact analyses in Oakland EIRs. The updated cumulative growth scenario and land use database prepared for the *Uptown EIR* as of June 2003 incorporated the most current assumptions about growth and development in Oakland. The growth assumptions for the *Uptown EIR* analyses are more current and more conservative than those reflected by the ABAG projections for Oakland and included in the Alameda County CMA Travel Model. The *Uptown EIR* growth scenario and land use database also update the growth assumptions in the *Land Use and Transportation Element (LUTE) EIR* and provide a more conservative scenario with higher growth and development than the *LUTE EIR*.

The following summarizes the updated cumulative growth scenario and land use database developed for the *Uptown EIR*, drawing from the more detailed description in Appendix D of the EIR. It also compares the updated growth scenario to that from the *LUTE EIR*, highlighting the more up-to-date and more conservative basis for cumulative analysis in the *Uptown EIR*.

BACKGROUND ON NEED FOR CUMULATIVE GROWTH SCENARIO AND USE OF FORECAST-BASED APPROACH

Need for the Cumulative Growth Scenario

The cumulative growth scenario for Oakland was developed and is updated primarily for use in the cumulative transportation analyses in Oakland EIRs. The growth scenario was originally prepared in 2000 after analyses indicated that the growth projections from ABAG as incorporated into the Alameda County Congestion Management Agency (CMA) travel demand model did not reflect the level of growth and development occurring in Oakland. Those projections also did not reflect the locations of growth for future development projects under construction, approved, proposed, and reasonably foreseeable for Oakland. Since the cumulative growth scenario for Oakland was originally developed, it continues to be updated and refined for EIR analyses and planning efforts, and to incorporate newly released 2000 Census data and new projections series from ABAG. The updated scenario prepared for the *Uptown Mixed-use Project EIR* represents the tenth version of the cumulative scenario.

Totals for the cumulative growth scenario for Oakland are now relatively similar to recent ABAG projections, as the Oakland data has provided input to ABAG. However, Oakland's cumulative growth scenario continues to be used in EIR analyses and planning efforts as it provides more specificity about growth and development occurring in Oakland and can be updated for specific EIR and planning purposes, as was done for the *Uptown EIR*.

Forecast-Based Approach that Incorporates Foreseeable Future Development Projects

The cumulative growth scenario and land use database for Oakland is developed using a forecast-based approach, *i.e.*, an approach based on regional forecasts of economic activity and demographic trends. The cumulative growth scenario also considers recent and anticipated future development projects in Oakland as well as other changes in land use, employment, and population. Development projects and other changes are identified and updated based on input from City of Oakland and Port of Oakland staffs and on analysis of economic, demographic, and real estate market data and trends. Anticipated future development projects are identified and updated to include approved, proposed, and potential development projects reasonably foreseeable over the next 20 to 25 years.

The growth that could be accommodated by recent and expected future development projects and other changes in land use, employment, and population is evaluated within the context of regional economic and demographic trends and projections. The ABAG projections provide the reference for citywide and county totals for future years. The list of development projects and other changes provide the ability to relate individual projects to the citywide context. The amount of growth represented by development projects and other changes is “fit” within the ABAG projections, to the extent possible. Citywide totals are increased above the ABAG projections if justified by recent and expected future development projects and other anticipated changes. The locations of specific projects and development sites are used for the allocation of growth to subareas and traffic analysis zones (TAZs) within the city. (Transportation analyses using the CMA’s travel model require inputs at the TAZ level.)

UPDATED CUMULATIVE GROWTH SCENARIO

Initial Work Leads to Decision to Update Scenario for Uptown EIR

Early work for the *Uptown EIR* included review and comparison of the land use database used for the *General Plan LUTE EIR* with the more recent cumulative growth scenarios and land use databases for Oakland. Based on that review, the decision was made to complete a new growth scenario update specifically for the *Uptown EIR* and to complete a new cumulative transportation analysis using the updated growth scenario and land use database. Additional scope of work was undertaken to update the cumulative scenario to make sure that the growth and land use assumptions used for the *Uptown EIR* analyses incorporated the most current assumptions about growth and development in Oakland and the rest of the region. The analysis included particular attention to updating assumptions for growth and development in downtown Oakland, including the areas surrounding the Uptown Project.

Cumulative Growth Scenario for Uptown Project EIR

The cumulative growth scenario for the City of Oakland, as developed and updated for the *Uptown Project EIR* is shown in Table 1. Appendix D in the EIR, “Cumulative Growth Scenario for Oakland As Prepared for Use in the *Uptown Project EIR*”, describes the scenario in more detail as well as the approach and assumptions used. The growth scenario uses a 2000 base year and future analysis years of 2010 and 2025, consistent with the analysis years in the Alameda County CMA travel model.

Table 1: Updated Cumulative Growth Scenario for Oakland, as of June 2003

	2000[a]	2010	2025	Growth, 2000-2025
Households	150,790	158,910	169,010	+18,220
Household Population[b]	392,310	417,120	434,560	+42,250
Total Population[b]	399,480	425,550	443,200	+43,720
Employed Residents[b]	174,740	194,040	225,680	+50,940
Total Employment	185,160	215,050	247,500	+62,340
Manufacturing	17,810	18,470	20,120	+2,310
Other[c]	74,040	84,400	93,500	+19,460
Retail	23,720	27,440	30,700	+6,980
Service	69,590	84,740	103,180	+33,590

[a] Households, household population, total population, and employed residents are from the 2000 Census.

[b] Projections for 2010 and 2025 incorporate changes in demographic characteristics of the population in the existing housing stock in Oakland as evidenced in persons per household and employed persons per household factors from ABAG *Projections 2002*. The demographic characteristics of residents of new housing to be built in Oakland by 2010 and 2025 are based on those same ABAG factors or are estimated using special factors that better reflect the anticipated population in new housing, for TAZs with little or no housing in 2000 of the types being built (as the ABAG factors are based on the existing population in 2000).

[c] Includes employment in finance, insurance, real estate (FIRE); government; construction; transportation, communications, and utilities (TCU); wholesale; and agriculture and mining.

Source: Hausrath Economics Group based on approach and methodology described in Appendix D.

Comparisons with LUTE EIR and CMA/ABAG Projections

Table 2 compares the *Uptown EIR* growth scenario for Oakland with the growth assumptions from the *LUTE EIR* and with the ABAG projections. As shown and described below, the *Uptown EIR* growth scenario provides the most up-to-date and most conservative scenario of future growth compared to the *LUTE EIR* scenario and the ABAG projections.

- **Comparison to *LUTE EIR*:** The growth assumptions for the *LUTE EIR* were derived from ABAG *Projections '96* and identified a base year of 1995 and growth through 2015. The *Uptown EIR* growth scenario uses a 2000 base year and extends further into the future, to 2025. In addition, the *Uptown EIR* scenario incorporates 2000 Census data released since the *LUTE EIR* was prepared, and current assumptions through June 2003 for recent and anticipated future growth and development in Oakland.

  As shown in Table 2, the updated *Uptown EIR* cumulative scenario includes higher total employment (247,500 jobs compared to 208,836 jobs) and higher total households (169,010 households compared to 156,077 households) in Oakland compared to the *LUTE EIR* scenario. The *Uptown EIR* scenario also reflects higher rates of future growth in Oakland compared to the *LUTE EIR* scenario, for both employment and households.

- **Comparison to ABAG/CMA Projections:** The updated *Uptown EIR* cumulative scenario is similar to the ABAG *Projections 2002* for Oakland and the ABAG projections as incorporated into the Alameda County CMA travel model for use in EIR transportation analyses (identified as CMA/ABAG *P2002* in Table 2). As shown in Table 2, total households in Oakland are very similar under both the *Uptown EIR* scenario and the CMA/ABAG projections, while total employment for the *Uptown EIR* scenario is slightly higher than under the CMA/ABAG projections. More comparisons between the *Uptown EIR* scenario and the CMA/ABAG projections are provided in Appendix D in the *Uptown EIR*.

SUBJECT: Oakland Uptown Project
Sanitary Sewers - Wet Weather Capacity

PROJECT NO. 803057x0

Sewage capacity within the EBMUD system, including both hydraulic capacity and treatment capacity, is allocated among the communities and agencies that deliver sewage to EBMUD. The entity delivering sewage to EBMUD can use this capacity allocation in any way that they want as long as the capacity allocation for a sub-basin is not exceeded. In the case of the Uptown Project, the sub-basin allocation is controlled by the Oakland Public Works Agency. The availability of sub-basin capacity is determined by the City within their existing agreement with EBMUD and is not based on the overall capacity of the treatment plant. I verified this information with Maura Bonarens of EBMUD by telephone on 11/17/03.

Our sewer capacity calculations for the project area are included in this transmittal. This information was transmitted to Gus Amerzheni of DPW In August. I re-sent the information to him in November. He subsequently sent me an e-mail dated November 17 indicating that adequate capacity exists within the sub-basin to accommodate wet weather flows. The e-mail is included in this transmittal. Gus indicates that adequate capacity exists within the system to handle the proposed project flows, and agrees that our on-site configuration also has adequate capacity. It is my understanding that this is the only determination that needs to be made, and is also the only determination that is relevant to our project. EBMUD does not make this determination. Adequate capacity is available for our project.

Please call me if you have questions.

Gus's response confirming the availability of sanitary sewer capacity is attached. We have adequate capacity. There is an existing manhole at our proposed point of connection. This should resolve sanitary sewer questions.

Bob,
Here are my comments re sewer capacity for the Oakland Uptown project.

1. The existing sewer in 20th Street between Telegraph and San Pablo is a 5' brick sewer, lined with PVC lining system. Any connection to this system should be made via an existing manhole. No direct connection to this line will be allowed.
2. Based on your attached SS loads and proposed connection configuration to the existing sewer in 20th Street, there is enough capacity in the system to handle the proposed project.
3. This email pertains only to sewer capacity, as you requested over the phone, and is not a complete EIR review comments.

> A copy of my email from last August with the loads and hydraulic calculations for the Oakland Uptown Project are attached. These are the most recent calculations. The point of connection to the DPW system will be to an existing 5 foot diameter brick sewer in 20th Street between Telegraph and San Pablo. This sewer runs down 20th and turns north on San Pablo.

Gus,

The revised sewage and hydraulic calculations for the Oakland Uptown Project are attached. Please note that there are two spreadsheets, the demands are on sheet one and the hydraulics are on sheet two. My apologies for not getting this to you last week - we had some internal confusion about who was going to send it. I will call you tomorrow to set up a time when we can meet and discuss.

Thanks,

Bob Toothman

2 2.25 average persons per dwelling unit and 450 square feet per employee based on current City and County of San Francisco assumptions for Hunters Point Redevelopment project

3 100 gpd/person based on current City and County of San Francisco assumptions for Hunters Point Redevelopment project

4 Discharge including inflow/infiltration is four times peak sanitary discharge

APPENDIX B-3

APPENDIX B-3

Appendix B-3 Oakland Uptown Project
Water Demands
December 17, 2003

Domestic Water Demand	
Demand Rate (Gallons per Capita per Day):	125
Persons per Dwelling Unit:	2.35
Dwelling Units:	1120
Average Daily Demand (Gallons per Day):	329,000
Average Daily demand (GPM):	228
Average Daily demand (CFS):	0.51
Peaking Flow Factor:	1.6
Peak Domestic Water Demand (GPM)	366
Peak Domestic Water Demand (CFS)	0.81
Required Fire Flows	
Minimum Fire Flow, Residential, (GPM)	TBD
Minimum Fire Flow, Commercial, (GPM)	TBD
Minimum Fire Flow, Commercial, (CFS)	TBD
Maximum Water Demand (GPM)	**TBD**
Maximum Water Demand (CFS)	**TBD**

Notes:

1. Maximum water demand is the sum of peak domestic demand and fire flow requirements.
2. Average Daily Sewage Flow = 85% Average Daily Water Demand.
3. Fire flows ae subject to negotiations with the Fire Departnment and are To Be Determined
4. The adequacy of the existing system to meet maximum demands will be determined by EBMUD based on the peak domestic demand indicated and the fire flow demand.
5. The proposed development will be served by existing off-site 8 inch water mains in San Pablo Avenue and Telegraph Avenue. New 8 inch water mains are proposed in 19th Street and William Street.
6. The existing off-site water system supplying the development appears to have adequate capacity to meet the indicated demands. Some improvements to the existing off-site system may be required due to the age and condition of the existing system. Preliminary discussions with EBMUD indicate that adequate water will made be available for the development (Brandon whitehurst communication with EBMUD).

APPENDIX A-1

REVISIONS TO ABAG EMPLOYMENT ALLOCATIONS ARE NOT ANTICIPATED TO SUBSTANTIALLY CHANGE EIR CONCLUSIONS FROM TRANSPORTATION MODEL ANALYSES

This response addresses the concerns raised about the effects of the recently revised ABAG employment allocations on the results of the transportation analyses in the *Uptown Mixed-use Project EIR*. The text that follows responds to those concerns and makes three main points. First, the response explains that the recently identified inaccuracies in the original ABAG employment allocations do not affect the land use data for Oakland as the allocations of Oakland employment are not based on the ABAG data. Second, the validity of the Oakland land use data supports the adequacy and validity of the EIR transportation analyses and forecasts given the importance of the Oakland land use data to those analyses and their results. Third, the response goes on to explain that possible revisions to the allocations of employment in other cities in Alameda County outside of the EIR study area are not anticipated to substantially change the EIR conclusions drawn from the recent transportation model analyses.

ACCMA REVIEW OF MODEL LAND USE DATA IS CURRENTLY UNDERWAY IN LIGHT OF RECENTLY REVISED EMPLOYMENT ALLOCATIONS FROM ABAG

Since the transportation analysis for the *Uptown EIR* was completed, the Association of Bay Area Governments (ABAG) found problems with its allocations of *Projections 2002* employment data to Census Tracts within cities in the region, and recently issued revised employment allocations. Citywide employment totals for jurisdictions remain the same as those originally provided by ABAG.[1] The *Projections 2002* household and population totals for jurisdictions and the allocations of households and population to Census Tracts within jurisdictions remain unchanged and are not affected by the recent ABAG revisions to the allocations of employment. The Alameda County Congestion Management Agency (ACCMA) is currently in the process of reviewing the employment data in the ACCMA model and revising the employment allocations in the model for those situations affected by the ABAG revisions.

---

[1] Per communications with ABAG staff on October 23, 2003 (Hing Wong) and November 3, 2003 (Brian Kirking). Conversations with ABAG staff indicated that the Census Tract allocations of employment were revised because of problems with the methodology originally used to allocate *Projections 2002* employment to Census Tracts within cities. ABAG staff also indicated that employment totals for cities were not affected and should remain the same as the totals in the original data. (Analyses of the revised Census Tract allocations from ABAG show only small differences in employment totals for some cities as calculated for the revised Census Tract files compared to totals calculated for the original Census Tract files and totals in the ABAG *Projections 2002* publication.)

OAKLAND LAND USE DATA FOR TRANSPORTATION MODEL ANALYSES ARE NOT AFFECTED BY REVISED EMPLOYMENT ALLOCATIONS FROM ABAG

Oakland Land Use Data in ACCMA Model are Based on Local Allocations, Not the ABAG Allocations

The land use database for Oakland included in the ACCMA Travel Model was developed by the City of Oakland and its consultant, Hausrath Economics Group (HEG), and submitted to the ACCMA in January 2003 in response to the transmittal of preliminary land use data for city input and review prior to inclusion in the ACCMA's Travel Model 2002 (completed and released May 2003). Extensive work was done in Oakland to track and update growth assumptions and the locations of specific projects and development sites for use in the allocation of growth to traffic analysis zones (TAZs) throughout the city. Development projects, plans, and other changes were identified and updated based on input from City of Oakland and Port of Oakland staffs and on analysis of economic, demographic, and real estate market data and trends.

The land use database developed by the City of Oakland and submitted to the ACCMA for use in its Travel Model 2002 reflects the City's allocation of growth to Oakland TAZs based on extensive local information and analysis, as described above. The Oakland land use data are not based on the ABAG allocations of *Projections 2002* employment and households within the city. Although developed locally, the citywide totals for employment and households in Oakland are similar to and within one percent of the ABAG citywide totals for Oakland, as required by the ACCMA.

The recent revisions in ABAG's allocations of employment to Census Tracts within cities do not affect the Oakland employment data in the ACCMA model. That is because those data are not based on the original ABAG allocations of *Projections 2002* employment. The Oakland employment allocations are based on more extensive and in-depth local information and analysis than can be done across the region by ABAG.

Oakland Cumulative Growth Scenario Used in EIR Transportation Analyses is also Based on Local Allocations, Not the ABAG Allocations

As described in Appendix D of the EIR, much of the cumulative analysis in the *Uptown EIR* assumes Oakland's cumulative growth scenario and land use database as updated for the *Uptown EIR* instead of the land use data in the ACCMA Model 2002. The updated cumulative growth scenario for Oakland builds on the land use database in the ACCMA model. Compared to the land use in that model, the cumulative growth scenario as updated for the *Uptown EIR* includes more specificity about the Uptown project and updated assumptions (through June 2003) for other development projects, primarily those in downtown Oakland surrounding the Uptown project. In addition, the totals for Oakland's cumulative growth scenario are not constrained to fall within one percent of the ABAG totals for Oakland, if higher projections are justified by recent and expected future development projects and other anticipated changes in land use, employment, and households/housing in Oakland. As described in Appendix D, the *Uptown EIR* growth scenario for Oakland is very similar to the projections and land use database in the ACCMA Model 2002, and slightly more conservative, as total employment in Oakland under the Uptown scenario exceeds the ACCMA/ABAG total for 2025 by more than one percent.[2]

The allocation of employment in Oakland's cumulative growth scenario as updated for the *Uptown EIR* builds on that developed for the ACCMA model land use database. Differences reflect updated conditions through June 2003 as well as the location of some additional growth. Like the land use data in the ACCMA model, the employment data in Oakland's growth scenario are allocated to locations within the City based on extensive local information and analyses and not on the ABAG allocations of *Projections 2002* employment. Thus, the recent ABAG revisions to the allocations of employment within cities do not affect the Oakland employment data in the *Uptown EIR* cumulative growth scenario.

Communications With ACCMA Confirm that Oakland Land Use Data are Not Affected by Revised Employment Allocations from ABAG

Communications with the ACCMA since the release of the revised ABAG employment allocations have confirmed that Oakland supplied the ACCMA with its own land use data for use in the Travel Model 2002, and that the Oakland data allocated employment and household growth within Oakland based on in-depth local information and analysis and not the ABAG *Projections 2002* allocations. Thus, the Oakland employment data in the ACCMA model are not being revised as a result of the recently revised employment allocations from ABAG.[3]

Validity of Oakland Land Use Data Supports Adequacy and Validity of EIR Transportation Analyses

The results of the EIR transportation analyses and model forecasts are most sensitive to the land use data for Oakland. This is because of the location of the Uptown project in Oakland and the focus of the EIR transportation analyses on the Uptown Study Area including and surrounding the project. The study area is defined to include the proposed Project site and 40 study intersections in surrounding locations in Oakland (see pps. 85-88 of the *Draft EIR*). In addition, the transportation analysis also focuses on the regional and local street networks in Oakland that serve the Project site.

As the land use data for Oakland are based on in-depth local information and analyses and not the ABAG allocations (as described above), the recently revised employment allocations from ABAG do not affect the Oakland land use data in the ACCMA Model 2002 or in Oakland's cumulative growth scenario as updated for the *Uptown EIR*. The validity of the Oakland land use data supports the adequacy and validity of the EIR transportation analyses and forecasts, given the importance of the Oakland land use data to those analyses and their results.

The allocation of growth to TAZs in the Uptown Study Area is particularly important to the EIR transportation analysis because of the intersection and other localized analyses focused on assessing the impacts of the Project. The allocation of growth to TAZs outside the study area becomes less

---

[2] Also see Response to Comment A2-2 for more explanation of the *Uptown EIR* growth scenario and of how it compares to other growth scenarios and projections.

[3] Communications with ACCMA staff (Jean Hart and Diane Stark) on November 3, 2003, November 4, 2003, and during the first part of December 2003. This is further confirmed in the December 22, 2003 letter from the ACCMA (Diane Stark) to the City of Oakland regarding ACCMA review of the revised *Projections 2002* employment allocations from ABAG.

important to the EIR analysis as the distance from the study area and Project site increases. Through the workings of the travel model, traffic from activity in areas outside of Oakland is combined onto major routes and freeways that may travel through the study area and affect the EIR forecasts and impact analyses. Because of this aggregation process, the allocation of activity to specific TAZs in areas outside of Oakland is much less important to the EIR transportation analysis than the allocation of activity to TAZs within the study area and the rest of Oakland. Since the detailed land use databases for Oakland TAZs are not affected by the ABAG revisions nor are the employment and population totals for jurisdictions outside of Oakland, the EIR's forecasts and analyses of impacts appear adequate. Further, they are not likely to be substantially affected by possible future changes in the allocations of employment to TAZs in other jurisdictions outside of Oakland as may result from ACCMA's current model review process. This issue is discussed further below.

Possible Revisions to Employment Allocations Outside of Oakland are not Anticipated to Substantially Change EIR Conclusions

The ACCMA's current model review process could result in changes to the allocations of employment within other Alameda County cities outside of Oakland as a result of ABAG's recently revised employment allocations. However, such changes are not anticipated to substantially change the EIR conclusions drawn from the transportation model analyses for several reasons. First, as described above, the results of the EIR transportation analyses and model forecasts are most sensitive to the land use data for Oakland which are not affected by the changes in the ABAG data. Second, through the workings of the travel model, traffic from activity in other cities is incorporated into the EIR analyses focused on the Uptown Study Area, after having been aggregated onto streets, major routes, and freeways that may travel through the study area. Because employment totals for other cities have not been revised by ABAG, the *amount of traffic* associated with that employment also will not be affected. Possible changes in the allocation of employment in other cities, however, could affect the *allocation of associated traffic* to major routes and freeways, although such effects are moderated and can be negated by the model's aggregation process of combining traffic for numerous TAZs and Census Tracts onto a relatively limited number of major routes and freeways.[4] Third, although not anticipated to be substantial, the potential effects of possible changes in the allocation of employment in other cities are primarily associated with nearby communities that border Oakland, particularly the central areas of Oakland, including Emeryville, Piedmont, Alameda, and possibly Berkeley and San Leandro. Possible changes in the allocation of employment in other cities are much less likely to have effects on the *Uptown EIR* transportation forecasts and analyses because of their further distances from the study area.

---

[4] The transportation model's process of combining traffic for different areas onto major routes could moderate or negate the effects of possible different allocations of employment and associated traffic in several ways. One is that by combining traffic from different smaller areas onto one or more major travel routes serving the larger area, the possible effects of different employment allocations to Census Tracts and TAZs can be negated if the traffic from those Census Tracts and TAZs ends up on the same routes regardless of where the employment is allocated. (In other words, less traffic for some TAZs can be offset by more traffic in other TAZs nearby.) Another is that by combining traffic from different areas onto major travel routes, differences in the allocation of traffic for one or more cities can be small when combined with the traffic from Oakland and other cities not affected by changes. This is particularly relevant because the Project site and Uptown Study Area are located in Oakland (which is not affected by the ABAG revisions), and because of Oakland's large size relative to its neighbors (which results in over 60 percent of the TAZs in the Inner East Bay being located in Oakland).

Considerations Relevant to Nearby Cities of Emeryville, Piedmont, and Alameda

Although the ACCMA model review process is still underway, it is possible that there will be only limited or no changes in the allocations of employment in the nearby cities of Emeryville, Piedmont, and Alameda.

The City of Emeryville includes only one Census Tract within its boundaries. As a result, ABAG's revised allocations of employment to Census Tracts do not affect the allocation of employment in Emeryville. Thus, the revised ABAG employment allocations do not affect the land use data in the ACCMA model for Emeryville.

The City of Piedmont has very little employment within its borders, and includes only two Census Tracts. The City provided local inputs for the land use data currently in the ACCMA Model 2002 that substantially changed the employment allocations based on the original ABAG data. Thus, it is not anticipated that the recent ABAG revisions will affect the land use data in the ACCMA model for Piedmont.

Communication with the City of Alameda around the time that the ABAG revisions were released indicated that Alameda had provided local inputs for the land use data currently in the ACCMA Model 2002. As a result, City of Alameda staff did not anticipate that the revised ABAG data would require changes to the employment allocations in the land use database for Alameda. It also was noted by City of Alameda staff that the ABAG projections are considered to be conservative for analysis purposes by the City of Alameda, as they incorporate higher growth than anticipated locally, independent of where the employment is located.[5]

Considerations Relevant to Nearby Cities of Berkeley and San Leandro

The ABAG revisions reflect changes in the allocation of employment within the cities of Berkeley and San Leandro that could affect the allocations of employment for those cities in the land use database in the ACCMA model once the current review process is completed.[6] Such changes in the allocation of employment could affect the allocation of traffic, resulting in more traffic in some locations and less traffic in other locations. Overall, the net effects on the results of the EIR transportation analysis are not anticipated to be substantial for all of the reasons described at the beginning of this subsection above. They include: the fact that the EIR analyses are most sensitive to the land use data for Oakland which are not affected by the changes in the ABAG data; the negating or moderating effects of the travel model's process of combining traffic for smaller areas onto major routes serving the larger area; and the fact that possible differences in the allocations of employment throughout Berkeley and San Leandro can occur in Census Tracts and TAZs that are a substantial distance from the Uptown Study Area that is the focus of the EIR impact analysis.

---

[5] Communication with City of Alameda Planning Department staff (Andrew Thomas), November 5, 2003. Also see note 3 in Appendix D of the *Uptown EIR* regarding earlier communication with the City of Alameda.

[6] Per review of revised ABAG data by Hausrath Economics Group as of December 2003, and communication with ACCMA staff (Diane Stark) in early December.

APPENDIX A-2
UPDATED CUMULATIVE LAND USE SCENARIO

UPTOWN EIR IS MORE UP-TO-DATE AND MORE CONSERVATIVE THAN LUTE EIR

Extensive work continues to be done in Oakland to update and refine the cumulative growth assumptions and land use database used for transportation modeling and impact analyses in Oakland EIRs. The updated cumulative growth scenario and land use database prepared for the *Uptown EIR* as of June 2003 incorporated the most current assumptions about growth and development in Oakland. The growth assumptions for the *Uptown EIR* analyses are more current and more conservative than those reflected by the ABAG projections for Oakland and included in the Alameda County CMA Travel Model. The *Uptown EIR* growth scenario and land use database also update the growth assumptions in the *Land Use and Transportation Element (LUTE) EIR* and provide a more conservative scenario with higher growth and development than the *LUTE EIR*.

The following summarizes the updated cumulative growth scenario and land use database developed for the *Uptown EIR*, drawing from the more detailed description in Appendix D of the EIR. It also compares the updated growth scenario to that from the *LUTE EIR*, highlighting the more up-to-date and more conservative basis for cumulative analysis in the *Uptown EIR*.

BACKGROUND ON NEED FOR CUMULATIVE GROWTH SCENARIO AND USE OF FORECAST-BASED APPROACH

Need for the Cumulative Growth Scenario

The cumulative growth scenario for Oakland was developed and is updated primarily for use in the cumulative transportation analyses in Oakland EIRs. The growth scenario was originally prepared in 2000 after analyses indicated that the growth projections from ABAG as incorporated into the Alameda County Congestion Management Agency (CMA) travel demand model did not reflect the level of growth and development occurring in Oakland. Those projections also did not reflect the locations of growth for future development projects under construction, approved, proposed, and reasonably foreseeable for Oakland. Since the cumulative growth scenario for Oakland was originally developed, it continues to be updated and refined for EIR analyses and planning efforts, and to incorporate newly released 2000 Census data and new projections series from ABAG. The updated scenario prepared for the *Uptown Mixed-use Project EIR* represents the tenth version of the cumulative scenario.

Totals for the cumulative growth scenario for Oakland are now relatively similar to recent ABAG projections, as the Oakland data has provided input to ABAG. However, Oakland’s cumulative growth scenario continues to be used in EIR analyses and planning efforts as it provides more specificity about growth and development occurring in Oakland and can be updated for specific EIR and planning purposes, as was done for the *Uptown EIR*.

Forecast-Based Approach that Incorporates Foreseeable Future Development Projects

The cumulative growth scenario and land use database for Oakland is developed using a forecast-based approach, *i.e.*, an approach based on regional forecasts of economic activity and demographic trends. The cumulative growth scenario also considers recent and anticipated future development projects in Oakland as well as other changes in land use, employment, and population. Development projects and other changes are identified and updated based on input from City of Oakland and Port of Oakland staffs and on analysis of economic, demographic, and real estate market data and trends. Anticipated future development projects are identified and updated to include approved, proposed, and potential development projects reasonably foreseeable over the next 20 to 25 years.

The growth that could be accommodated by recent and expected future development projects and other changes in land use, employment, and population is evaluated within the context of regional economic and demographic trends and projections. The ABAG projections provide the reference for citywide and county totals for future years. The list of development projects and other changes provide the ability to relate individual projects to the citywide context. The amount of growth represented by development projects and other changes is “fit” within the ABAG projections, to the extent possible. Citywide totals are increased above the ABAG projections if justified by recent and expected future development projects and other anticipated changes. The locations of specific projects and development sites are used for the allocation of growth to subareas and traffic analysis zones (TAZs) within the city. (Transportation analyses using the CMA’s travel model require inputs at the TAZ level.)

UPDATED CUMULATIVE GROWTH SCENARIO

Initial Work Leads to Decision to Update Scenario for Uptown EIR

Early work for the *Uptown EIR* included review and comparison of the land use database used for the *General Plan LUTE EIR* with the more recent cumulative growth scenarios and land use databases for Oakland. Based on that review, the decision was made to complete a new growth scenario update specifically for the *Uptown EIR* and to complete a new cumulative transportation analysis using the updated growth scenario and land use database. Additional scope of work was undertaken to update the cumulative scenario to make sure that the growth and land use assumptions used for the *Uptown EIR* analyses incorporated the most current assumptions about growth and development in Oakland and the rest of the region. The analysis included particular attention to updating assumptions for growth and development in downtown Oakland, including the areas surrounding the Uptown Project.

Cumulative Growth Scenario for Uptown Project EIR

The cumulative growth scenario for the City of Oakland, as developed and updated for the *Uptown Project EIR* is shown in Table 1. Appendix D in the EIR, “Cumulative Growth Scenario for Oakland As Prepared for Use in the *Uptown Project EIR*”, describes the scenario in more detail as well as the approach and assumptions used. The growth scenario uses a 2000 base year and future analysis years of 2010 and 2025, consistent with the analysis years in the Alameda County CMA travel model.

Table 1: Updated Cumulative Growth Scenario for Oakland, as of June 2003

	2000[a]	2010	2025	Growth, 2000-2025
Households	150,790	158,910	169,010	+18,220
Household Population[b]	392,310	417,120	434,560	+42,250
Total Population[b]	399,480	425,550	443,200	+43,720
Employed Residents[b]	174,740	194,040	225,680	+50,940
Total Employment	185,160	215,050	247,500	+62,340
Manufacturing	17,810	18,470	20,120	+2,310
Other[c]	74,040	84,400	93,500	+19,460
Retail	23,720	27,440	30,700	+6,980
Service	69,590	84,740	103,180	+33,590

[a] Households, household population, total population, and employed residents are from the 2000 Census.

[b] Projections for 2010 and 2025 incorporate changes in demographic characteristics of the population in the existing housing stock in Oakland as evidenced in persons per household and employed persons per household factors from ABAG *Projections 2002*. The demographic characteristics of residents of new housing to be built in Oakland by 2010 and 2025 are based on those same ABAG factors or are estimated using special factors that better reflect the anticipated population in new housing, for TAZs with little or no housing in 2000 of the types being built (as the ABAG factors are based on the existing population in 2000).

[c] Includes employment in finance, insurance, real estate (FIRE); government; construction; transportation, communications, and utilities (TCU); wholesale; and agriculture and mining.

Source: Hausrath Economics Group based on approach and methodology described in Appendix D.

Comparisons with LUTE EIR and CMA/ABAG Projections

Table 2 compares the *Uptown EIR* growth scenario for Oakland with the growth assumptions from the *LUTE EIR* and with the ABAG projections. As shown and described below, the *Uptown EIR* growth scenario provides the most up-to-date and most conservative scenario of future growth compared to the *LUTE EIR* scenario and the ABAG projections.

- **Comparison to *LUTE EIR*:** The growth assumptions for the *LUTE EIR* were derived from ABAG *Projections '96* and identified a base year of 1995 and growth through 2015. The *Uptown EIR* growth scenario uses a 2000 base year and extends further into the future, to 2025. In addition, the *Uptown EIR* scenario incorporates 2000 Census data released since the *LUTE EIR* was prepared, and current assumptions through June 2003 for recent and anticipated future growth and development in Oakland.

  As shown in Table 2, the updated *Uptown EIR* cumulative scenario includes higher total employment (247,500 jobs compared to 208,836 jobs) and higher total households (169,010 households compared to 156,077 households) in Oakland compared to the *LUTE EIR* scenario. The *Uptown EIR* scenario also reflects higher rates of future growth in Oakland compared to the *LUTE EIR* scenario, for both employment and households.

- **Comparison to ABAG/CMA Projections:** The updated *Uptown EIR* cumulative scenario is similar to the ABAG *Projections 2002* for Oakland and the ABAG projections as incorporated into the Alameda County CMA travel model for use in EIR transportation analyses (identified as CMA/ABAG *P2002* in Table 2). As shown in Table 2, total households in Oakland are very similar under both the *Uptown EIR* scenario and the CMA/ABAG projections, while total employment for the *Uptown EIR* scenario is slightly higher than under the CMA/ABAG projections. More comparisons between the *Uptown EIR* scenario and the CMA/ABAG projections are provided in Appendix D in the *Uptown EIR*.

Table 2: Comparison of Uptown EIR Growth Scenario, Lute EIR Growth Scenario, and ABAG Projections for City of Oakland

	1990	1995	2000	2010	2015	2025

SUBJECT: Oakland Uptown Project
Sanitary Sewers - Wet Weather Capacity

PROJECT NO. 803057x0

Sewage capacity within the EBMUD system, including both hydraulic capacity and treatment capacity, is allocated among the communities and agencies that deliver sewage to EBMUD. The entity delivering sewage to EBMUD can use this capacity allocation in any way that they want as long as the capacity allocation for a sub-basin is not exceeded. In the case of the Uptown Project, the sub-basin allocation is controlled by the Oakland Public Works Agency. The availability of sub-basin capacity is determined by the City within their existing agreement with EBMUD and is not based on the overall capacity of the treatment plant. I verified this information with Maura Bonarens of EBMUD by telephone on 11/17/03.

Our sewer capacity calculations for the project area are included in this transmittal. This information was transmitted to Gus Amerzheni of DPW In August. I re-sent the information to him in November. He subsequently sent me an e-mail dated November 17 indicating that adequate capacity exists within the sub-basin to accommodate wet weather flows. The e-mail is included in this transmittal. Gus indicates that adequate capacity exists within the system to handle the proposed project flows, and agrees that our on-site configuration also has adequate capacity. It is my understanding that this is the only determination that needs to be made, and is also the only determination that is relevant to our project. EBMUD does not make this determination. Adequate capacity is available for our project.

Please call me if you have questions.

Gus's response confirming the availability of sanitary sewer capacity is attached. We have adequate capacity. There is an existing manhole at our proposed point of connection. This should resolve sanitary sewer questions.

Bob,
Here are my comments re sewer capacity for the Oakland Uptown project.
1. The existing sewer in 20th Street between Telegraph and San Pablo is a 5' brick sewer, lined with PVC lining system. Any connection to this system should be made via an existing manhole. No direct connection to this line will be allowed.
2. Based on your attached SS loads and proposed connection configuration to the existing sewer in 20th Street, there is enough capacity in the system to handle the proposed project.
3. This email pertains only to sewer capacity, as you requested over the phone, and is not a complete EIR review comments.

Gus,

The revised sewage and hydraulic calculations for the Oakland Uptown Project are attached. Please note that there are two spreadsheets, the demands are on sheet one and the hydraulics are on sheet two. My apologies for not getting this to you last week - we had some internal confusion about who was going to send it. I will call you tomorrow to set up a time when we can meet and discuss.

Thanks,

Bob Toothman

4 Discharge including inflow/infiltration is four times peak sanitary discharge

APPENDIX B-3

Appendix B-3 Oakland Uptown Project
Water Demands
December 17, 2003

Domestic Water Demand	
Demand Rate (Gallons per Capita per Day):	125
Persons per Dwelling Unit:	2.35
Dwelling Units:	1120
Average Daily Demand (Gallons per Day):	329,000
Average Daily demand (GPM):	228
Average Daily demand (CFS):	0.51
Peaking Flow Factor:	1.6
Peak Domestic Water Demand (GPM)	366
Peak Domestic Water Demand (CFS)	0.81
Required Fire Flows	
Minimum Fire Flow, Residential, (GPM)	TBD
Minimum Fire Flow, Commercial, (GPM)	TBD
Minimum Fire Flow, Commercial, (CFS)	TBD
Maximum Water Demand (GPM)	**TBD**
Maximum Water Demand (CFS)	**TBD**

Notes:

1. Maximum water demand is the sum of peak domestic demand and fire flow requirements.
2. Average Daily Sewage Flow = 85% Average Daily Water Demand.
3. Fire flows ae subject to negotiations with the Fire Departnment and are To Be Determined
4. The adequacy of the existing system to meet maximum demands will be determined by EBMUD based on the peak domestic demand indicated and the fire flow demand.
5. The proposed development will be served by existing off-site 8 inch water mains in San Pablo Avenue and Telegraph Avenue. New 8 inch water mains are proposed in 19th Street and William Street.
6. The existing off-site water system supplying the development appears to have adequate capacity to meet the indicated demands. Some improvements to the existing off-site system may be required due to the age and condition of the existing system. Preliminary discussions with EBMUD indicate that adequate water will made be available for the development (Brandon whitehurst communication with EBMUD).

Re: Draft Environmental Impact Report (EIR), Uptown Mixed Use Project

Dear Ms. Warner:

Thank you for the opportunity to comment on the Draft Environmental Impact Report for the Uptown Mixed Use Project.

The project is located within the blocks bounded by 18th Street on the south, 21st Street on the north, Telegraph Avenue on the east and San Pablo Avenue on the west. The Fox Theatre is not part of the project, which consists of approximately 1,000 apartments, 270 condominiums, 1,050 beds of student/faculty housing, 43,000 square feet of commercial space, a 25,000 square foot public park, and 1,959 parking spaces.

Overall Comments
Uptown presents as strong an opportunity as exists in Oakland to do transit-oriented development. The site is at the center of the East Bay transit network and adjacent to the core of Downtown Oakland. Because the proposed project is primarily housing, it would result in customers for Downtown businesses, pedestrian life on evenings and weekends, and "reverse commute" transit riders. We are also pleased that the project would develop the site intensely--it is a textbook location for high-density housing. This is particularly beneficial for a site that is now primarily used for parking. The Uptown project is only four blocks from AC Transit's General Office, so this would very much be development in our own neighborhood.

Our comments relate to existing and planned transit--especially the Bus Rapid Transit (BRT) project and Rapid Bus service, which is proposed for Telegraph Avenue immediately adjacent to the project. The expected presence of the BRT has implications for siting of uses--especially the Sears Auto Center--and for the design of the project.

Given these issues, we are also concerned about the inappropriately large amount of parking that is proposed for the project. As a result, we have suggested a new mitigation, as well as modifications to existing mitigations, which are represented through *italics.* **1**

Transit Capacity
We note that the EIR estimates that peak period loads on AC Transit buses in Downtown Oakland will rise less than 3% as a result of this project. We accept that this impact is deemed not to be significant. **2**

Current Transit Service
As the discussion on pp. 91-93 indicates, the Uptown site is served by numerous bus lines. The site is within a few blocks of the best served area of the AC Transit district.

Figure IV.D-3 does not illustrate all of the most recent changes:

- Line 19 operates through the Alameda tubes, via 7th/8th, Broadway and 11th/12th to West Oakland, Emeryville, and West Berkeley;
- Line 50 operates through the Alameda tubes and on the same route as the 19, but terminates at 11th & Martin Luther King. This route segment will be re-designated the 63 in December.
- Line 88 operates from Lake Merritt BART to North Berkeley BART via. 11th/12th, Market St., and Sacramento St.;
- Line 14 does not operate on 11th/12th, but on 14th St., where it also shown.
- Line 82/82L no longer operates on 14th St., but on 11th/12th St., where it also shown

Transit Service as of December, 2003
AC Transit will modify its service to Downtown Oakland as of December, 2003. The most important change will be elimination of line 58/58X. Alternative service from MacArthur Boulevard to Downtown Oakland will be provided by Line NL, which will operate along 20th Street between Harrison and San Pablo. Late night owl service to San Francisco currently provided by the A line will be provided by line NL in December. Service will remain along all other routes now being served, although in some instances, route numbers will change. **3**

Bus Rapid Transit and Longer Range Plans
AC Transit is planning to develop a Bus Rapid Transit (BRT) line and Rapid Bus service from Berkeley to San Leandro that will operate adjacent to the project along Telegraph Avenue between 20th and 21st Streets. Coming from the north, the line is planned to operate along Telegraph Avenue, turn left at 20th Street, and right at Broadway. The BRT is designed to provide high speed, high frequency, high capacity service on key East Bay transit corridors. The project is currently undergoing environmental review.

We are working closely with the City of Oakland to design a station on 20th Street between Broadway and Telegraph. We hope that this station will not only allow for pleasant, efficient bus operations and passenger comfort, but will also serve as an attractive public amenity for the Uptown area. We also appreciate the fact that no garage entrances are planned along the BRT route. **3 cont.**

Sears Auto Center Site

Because of the planned BRT station on 20th Street, we strongly recommend that the Sears Auto Center be relocated to the preferred site of 22nd & Telegraph. The alternate site at 20th & Telegraph would be adjacent to this station. The two uses would be incompatible, with the Auto Center generating a high volume of vehicles that could conflict with the high volume of AC Transit buses using 20th Street. In addition, an auto repair center does not represent a transit-friendly use for passengers waiting at 20th Street. Placing an auto repair use on such a prominent corner would be inappropriate urban design. **4**

Transit Mitigations

Mitigation Measure AIR-2 outlines a number of transit, services, and bicycle/pedestrian measures that the City *may* (emphasis added) require the Project to implement. We believe that the transit and bicycle/pedestrian measures--such as designing buildings to facilitate transit access (Transit Measure ii)--are achievable and important. The EIR should state that they *shall* be required, to assure that they are implemented. **5**

We would also suggest modifying Transit Measure I to read as follows: *Construct transit facilities such as bus turnouts/bus bulbs, benches, shelters, and other needed facilities, with the review and approval of AC Transit.* AC Transit will be operating a wider range of bus types than we do now, and it is important that all transit-related facilities be fully functional for all of our vehicle types.

Bus Service and Project Design

The project should also take note of the buses that will be operating on 20th Street between Broadway and San Pablo. While the BRT line will have turned, Lines 15, 72/72M/72R, and NL are all planned to operate on this block. Together, these buses are planned to operate 17 trips per hour in each direction during weekday daytime periods. The project appears to have only one garage access driveway from this block of 20th Street, which should reduce conflicts. The developers should take note of this high level of bus activity in designing the project. **6**

Parking Provided

AC Transit commends the fact that the Uptown project proposes a lower level of parking than many recent Downtown Oakland projects. However, we believe that the proposed amount of parking is too large, given the project's characteristics and its location at a primary transit hub.

7 The project proposes to provide one parking space per unit, and one parking space for every two beds in the college residence. Oakland's S-15 zoning regulations, which apply to BART stations outside of Downtown Oakland, allow as little as .5 spaces per unit. Uptown has more transit service and more destinations within walking distance than the S-15 BART stations, making it easier for people to live in Uptown without a car. The higher requirement on Uptown seems inconsistent. The EIR forecasts that 60% of units will be studios or one-bedroom units. These units would be occupied by small households with lower car ownership rates than the parking requirement has accommodated. We suggest that the parking ratio--particularly for apartment units--be lowered.

In addition, the provision of one parking space for every two beds in the college residence is excessive. Rates of car ownership by residents in dorms at the University of California Berkeley are substantially lower than this. Berkeley students living at the Uptown site would not normally be able to drive to campus, because the University does not provide parking spaces for students except under special circumstances. UC Berkeley students can also ride AC Transit for free by showing their student identification cards. The Bus Rapid Transit project discussed above will provide fast transit directly from Uptown to the Berkeley campus. These parking and Class pass policies, in addition to the myriad transit options that will be available, further reduce the likelihood of students owning cars. The parking ratio for these beds should be lowered substantially.

7 cont.

To the extent that these parking spaces are available during the daytime, they will tend to attract auto-driving commuters. As the EIR notes, the 1,620 spaces that would be built under this project are more than the existing 1,242 spaces. Commuter use is undesirable and inconsistent with Oakland's stated planning goals. However, nothing in the project as described would prevent this use from happening.

Reducing the parking requirement would reduce the cost of the project, making it more financially feasible. It could also reduce traffic to the site and reduce the requirement for traffic mitigations.

Parking Charges Mitigation
It is widely acknowledged that charging for parking helps limit parking demand. This EIR includes no mitigations requiring parking charges. Therefore we propose the following mitigation:

- *All parking created pursuant to this EIR shall be charged for at market rates, as determined by the City of Oakland. Any tenant leasing parking shall pay for that parking separately from its rent/lease payment, and no tenant shall be compelled to lease parking.*

Signal Cycle Lengths
The EIR states that increased traffic will require changes to signal timing at Telegraph & William, and Harrison & Grand. We assume that the signal cycles at these locations would be extended, although the EIR does not specify that. Since AC Transit operates at both of these locations, we should be consulted about signal cycle changes. Such changes can be helpful or harmful for bus operations. They also generally create delay

8

for pedestrians--an undesirable outcome. Additionally, on Telegraph Avenue, substantial changes in signal timing are planned as part of the Bus Rapid Transit project. Therefore, any changes in signal timing on Telegraph related to the Uptown project should be coordinated with the BRT. **8 cont.**

AC Transit looks forward to working with Oakland to facilitate the development of Uptown as a model transit-friendly area. If you have any questions about this letter, please contact Nathan Landau, Senior Transportation Planner, at 891-4792.

Sincerely,

Kathleen Kelly

Subject: Comments on Uptown Mixed Use Project Draft EIR

Dear Ms. Cappio:

Thank you for the opportunity to comment on the Uptown Mixed Use Project Draft EIR Draft EIR ("Uptown EIR"). Over the course of the last few years, the City of Alameda has received numerous requests from the City of Oakland to conduct detailed and comprehensive traffic analyses of traffic conditions in Downtown Oakland and the potential effects of development on existing conditions in Downtown Oakland. In response to these requests, the City of Alameda has accumulated an extensive database of existing and projected traffic conditions throughout downtown Oakland. This database is continually updated using City of Oakland traffic studies, the Alameda County Congestion Management Agency (CMA) regional traffic model, and ongoing in-field observations.

In recent months, the City of Alameda and the City of Oakland have had extensive discussions about the existing and projected traffic problems at the "gateways" to Oakland, which are also used by Alameda residents and businesses. We received written communications from both former City Manager Robert Bobb and former Planning Director Leslie Gould claiming that the City of Alameda underreported potential impacts at these critical locations. In contrast to the City of Oakland's stated concerns to the City of Alameda about these future traffic conditions and the impact of traffic on Oakland Chinatown, the City of Oakland's Uptown EIR future year ("baseline") projections (which includes full build out of Alameda Point) fails to recognize most of these well-known problems, fails to evaluate the project's contribution to these problems, fails to take any responsibility for the additional traffic that the proposed project's approximately one thousand residential units will contribute to these well-know problem areas, and utterly fails to acknowledge or even consider the impact of the development on the Chinatown community. It appears that the Uptown EIR includes a number of faulty assumptions, which have resulted in a underreporting of significant impacts to the transportation system that is shared by all of the cities in Alameda County.

In the interest of providing the public with consistent information about the state of our shared transportation system, please provide written clarification on the following specific concerns about the Uptown EIR.

Planning and Building Department

2263 Santa Clara Avenue, Room 190
Alameda, CA 94501
510 748.4530 • Fax 510 748.4593 • TDD 510 522.7538

1. **Adequacy of Projected Traffic, Air, and Noise Impact Analysis.** The Alameda County Congestion Management Agency recently informed the City of Alameda that the land use data provided for the CMA Model 2002 update by ABAG is flawed. Without a valid data base, all of the future year traffic, air and noise projections for 2005 and 2025 in the Uptown EIR are flawed. Even if the City of Oakland, corrected the inaccuracies for the TAZs within Oakland, all of the inaccuracies for all of the neighboring jurisdictions must also be corrected to ensure valid traffic model results for the shared, regional roadway system. Without valid traffic model results for 2005 and 2025, non of the EIR conclusions regarding 2005 and 2025 traffic, air quality, or noise impacts can be considered adequate or valid because they all depend upon valid traffic data from the CMA model. 1

2. **Land Use and Transportation Element EIR:** According to page 39 of the Draft EIR, the Uptown EIR tiers off of the Land Use and Transportation Element EIR (LUTE EIR). The LUTE EIR identifies a number of impacts that result from the "downtown showcase" projects, which include the Uptown Mixed Use Project site. Specifically, the LUTE EIR correctly identifies impacts from Oakland development at the intersection of 12th and Brush. (This intersection currently backs up onto I-24 on a regular basis in the AM peak hour, as predicted in the 1996 LUTE EIR.) The LUTE EIR, the City of Oakland City Center EIR, and the City of Oakland Housewives Market EIR commit the City of Oakland to mitigations to eliminate this significant impact to a level of less than significant. To date, the City of Oakland has ignored its responsibilities and commitments adopted in these Mitigation Monitoring Program for these Oakland EIRs and allowed this significant impact to occur. As described in the LUTE EIR, the Uptown Mixed Use project is partially responsible for this impact. Therefore, the Uptown EIR must acknowledge this impact and include a mitigation to rectify the ongoing problems at 12th and Brush.

   It should be noted, that the continuing congestion at this gateway to Oakland, causes traffic headed to Jack London Square and Alameda to use alternative routes to access the Tubes and the Jack London Square. Many of these alternative routes require driving through Oakland Chinatown, which could be avoided if Oakland had met its commitments to mitigate this impact from past developments. 2

3. **Significant Unavoidable Impacts associated with the LUTE EIR.** The LUTE EIR identifies a series of significant unavoidable transportation impacts associated with downtown development, which specifically includes the Uptown Project. Significant unavoidable impacts were identified for a number of locations. The two most important to Alameda include:

   - SR 24 in the AM and PM peak hour, which is major regional freeway used by Oakland and Alameda residents and business, and

- SR 260 (Webster-Posey Tubes).

Although the Uptown EIR tiers off of the LUTE EIR, it fails to acknowledge these significant unavoidable impacts associated with Uptown development. These impacts must be acknowledged in the Uptown EIR and new, the current Oakland City Council must make updated statements of overriding consideratio for the Uptown Project. The Uptown EIR must therefore be revised and recirculated to include these significant unavoidable impacts.

The court stated in *Communities for a Better Environment v. California Resources Agency (2002)* 103 Cal. App. 4th 98 122-125 that:

> *"The requirement of a statement of overriding considerations is central to CEQA's role as a public accountability statute; it requires public officials, in approving environmentally detrimental projects, to justify their decisions based on counterbalancing social, economic or other benefits, and to point to substantial evidence..."*

> *"Even though a prior EIR's analysis of environmental effects may be subject to being incorporated in a later EIR for a later, more specific project, the responsible public officials must still go on record and explain specifically why they are approving the later project despite its significant unavoidable impacts."*

2 cont.

State of California Public Resource Code Section 21159.25 (commonly referred to as Assembly Bill 436) does not allow the City of Oakland to bypass this fundamental principle of the California Environmental Quality Act. If the City of Oakland wishes to tier off of the LUTE EIR, it must also acknowledge the significant unavoidable impacts associated with development consistent with the LUTE EIR and must make new statements of overriding considerations for each of these projects, including the Uptown Mixed Use Project. These significant impacts must be acknowledged in a revised and recirculatated Uptown EIR, so that the public has a complete understanding of the full range of impacts associated with the City of Oakland development plans.

Thank you for your consideration of our concerns. We look forward to working cooperatively with the City of Oakland to identify solutions, funding mechanisms, and shared responsibility for improving our shared transportation system.

Sincerely,

Greg Fuz (GA7)

SUBJECT: Comments on the Draft Environmental Impact Report for the Uptown Mixed Use Development Project in the City of Oakland (Case Number ER03-0007)

Dear Ms. Warner:

Thank you for the opportunity to comment on the City of Oakland's Draft Environmental Report (DEIR) on the Uptown Mixed Use Development Project. The project would consist of construction of approximately 1,000 apartments and 270 condominiums, 1,050 student beds/faculty units, 43,000 square feet of commercial space, 1,959 parking spaces and a 25,000 square foot public park. The project site is located on a nine block, 15-acre site in the Uptown District of the City of Oakland, and is bounded by Thomas L. Berkley Way (20th Street) on the north, Telegraph Avenue on the east, 18th Street on the south, and San Pablo Avenue on the west. It does not include the Fox Theater.

The ACCMA respectfully submits the following comments:

- Page 123-134, Mitigation Measures TRANS-1 2, 4, 6, 7, 8, 9, 10, 12, 13, 14: Payment f funds towards preparing and implementing a signal optimization and coordination n for the project area:
    - What mechanism will the City use to obtain a fair share of the payment for the costs of implementing this mitigation measure?
    - When will the project sponsor make this payment? Will it be triggered to discretionary project approvals? If so, which ones? Will it be made when the entire development is approved or will it be phased over time?
    - If the City establishes a Traffic Improvement Program with a concurrent Traffic Impact Fee Ordinance and this occurs after project approval, how and when will the City collect the project proponent's fair share of the cost of traffic signalization improvements?
    - If the Redevelopment Agency decides to contribute funds to the costs of implementation of signalization improvements, how would this affect the City's determination and collection of the project proponent's fair share of these improvements? **1**

- Page 124, Impact TRANS-3 and Page 133, Impact TRANS-11, Need to widen intersection of Grand Avenue and Frontage Road/West to address LOS F and vehicle delay in the PM peak hour in 2010 and 2025: Both of these Impacts are identified as Significant and Unavoidable due to inability to make improvements on another agency's (Caltrans) jurisdiction.
  - Please confirm whether you have contacted Caltrans to determine whether they have any improvement plans for this area. If so, a mitigation measure should be added that the project sponsor should contribute their fair share of these improvements. This measure should include the mechanism and timing for such fund collection. **2**

- Page 106, Planned Transportation Improvements considered by the City of Oakland:
  - Is the reconfiguration of Telegraph Avenue between 16th Street and Thomas L. Berkley Way (20th Street) assumed in the traffic impact analysis?
  - If it is assumed, what funding source would pay for this and what date is this project expected to be constructed? **3**

Once again, thank you for the opportunity to comment on this Draft EIR. Please do not hesitate to contact me at 510/836-2560 ext. 13 if you require additional information.

Sincerely,

Diane Stark
Sr. Transportation Planner

EAST BAY MUNICIPAL UTILITY DISTRICT

RECEIVED
NOV 3 2003
City of Oakland
Planning & Zoning Division

November 3, 2003

Claudia Cappio, Director of Planning and Zoning
City of Oakland Planning Division
250 Frank H. Ogawa Plaza, Suite 3330
Oakland, CA 94612

Dear Ms Cappio:

Re: Draft Environmental Impact Report – Uptown Mixed Use Project

The East Bay Municipal Utility District (EBMUD) appreciates this opportunity to review and comment on the Draft Environmental Impact Report (EIR) for the Uptown Mixed Use Project in the City of Oakland. EBMUD has the following comments on the Draft EIR.

On pages 179 - 192, Section G, Hazards and Hazardous Materials, addresses the potential for contaminated soils or groundwater to be present within the project site boundaries. The project sponsor should be aware that EBMUD will not install pipeline in contaminated soil or groundwater (if groundwater is present at any time during the year at the depth piping is to be installed) that must be handled as a hazardous waste, or that may be hazardous to the health and safety of construction or maintenance personnel wearing Level D personal protective equipment. Nor will EBMUD install pipeline in areas where groundwater contaminant concentrations exceed specified limits for discharge to sanitary sewer systems or sewage treatment plants.

Applicants for EBMUD services requiring excavation in contaminated areas must submit copies of all known, existing information regarding soil and groundwater quality within or adjacent to the project boundary and a legally sufficient, complete and specific written remedial plan establishing the methodology, planning and design of all necessary systems for the removal, treatment, and disposal of all identified contaminated soil and/or groundwater. EBMUD will not design the installation of pipelines until such time as soil and groundwater quality data and remediation plans are received and reviewed and will not install pipelines until remediation has been carried out and documentation of the effectiveness of the remediation has been received and reviewed. If no soil or groundwater quality data exists or the information supplied by the applicant is insufficient, EBMUD may require the applicant to perform sampling and analysis to characterize the soil being excavated and groundwater that may be encountered during excavation or perform such sampling and analysis itself at the applicants expense. **1**

On page 193, paragraph 6, "The East Bayshore Water Project" should be replaced with "East Bayshore Recycled Water Project". **2**

375 ELEVENTH STREET . OAKLAND . CA 94607-4240 . (510) 835-3000

Recycled Paper

On page 194, paragraph 1, replace the sentence, "As of 2001, EBMUD's water supply was insufficient . . ." with "In 1993, EBMUD adopted a long-term Water Supply Management Program (WSMP) that serves as a planning guide to the provision of a reliable high-quality water supply to the EBMUD service area through year 2020. The WSMP identified that, during severe multi-year droughts, EBMUD would be unable to meet its customers need for water with its existing source supply, the Mokelumne River, without imposing extreme rationing measures. The 1993 WSMP resulted in two principal options for meeting EBMUD's projection for a supplemental water supply: additional surface or underground storage and additional surface water. Development of an additional surface for EBMUD use may be possible by either enlarging the existing storage at Pardee Reservoir and/or by utilizing EBMUD's Sacramento River contract entitlement." **3**

On page 194, paragraph 4, replace the first sentence " The Project site is served . . ." with "The Project site is served by pipelines in the existing streets that range in size from 4 to 12 inches." Please delete the second sentence, "These lines and associated minor . . .", because the stated flow rate is not available. Also delete the last sentence, "The minimum flow standards for lines serving . . .", as they are inconsistent with the typical fire flow requirements specified by the local fire departments. The project sponsor should verify the required fire flow for this project with the City of Oakland's Fire Department. **4**

On page 198, paragraph 1, second sentence, replace the daily demand of 329,000 gpd to 365,000 gpd as indicated in the Water Supply Assessment provided to the City of Oakland on August 13, 2003.

On page 198, paragraph 1, after the fourth sentence, please include "The City's dual plumbing ordinance requires that the project sponsor install dual plumbing systems within new project development for the appropriate use of recycled water from EBMUD's East Bayshore Recycled Water Project, as EBMUD plans to supply recycled water to the project site within the next ten years for landscape irrigation." **5**

On page 198, paragraph 3, please delete the first two sentences. As noted in EBMUD's March 29, 2003 response to the Notice of Preparation (NOP) that is included in Appendix A-3 of the Draft EIR, main extensions (including pipeline replacements) and/or pipeline improvements may be required depending on metering and fire flow requirements. **6**

On page 198, paragraph 4, please delete the second and third sentences. The stated fire flow requirements are inconsistent with those stated on page 194, paragraph 4 and are inconsistent with the typical fire flow requirements specified by the local fire departments. **7**

On page 198, paragraph 5, please delete the second, third and fourth sentences, "Wastewater generated by the Project represents less than 0.2 percent of the MWWTP's secondary treatment capacity. This wastewater would be accommodated by the MWWTP, which is currently operating at 46 percent of its secondary treatment capacity. Therefore, wastewater generated by **8**

8 cont. the proposed project would be subject to both primary and secondary treatment and would not violate the wastewater treatment requirements of the San Francisco Bay Regional Water Quality Control Board." EBMUD's NOP response indicated that the Main Wastewater Treatment Plant (MWWTP) would have adequate dry weather capacity for the project, provided the wastewater meets the standards of EBMUD's Source Control Division. However, the ability of the MWWTP to treat wet weather flows from the project needs to be ascertained. EBMUD's response to the NOP very clearly requested specific language in the Draft EIR regarding confirmation of capacity with the City of Oakland in the sub-basin where the project is located. This language is not in the document.

9 On page 199, paragraph 1, last sentence, the statement that "the proposed project would not require the construction of new wastewater treatment or transport facilities" is not correct. Treatment capacity needs to be confirmed by the City of Oakland as stated above, relevant to wet weather flows. Regarding transport facilities, the paragraph states that "Public Works agency staff have indicated that as part of the final public improvement plans for the Project, the conveyance system will be evaluated to confirm what repairs, if any, will be incorporated into the final public improvement plans and specifications." If this is not to be determined until a future date, then it cannot be definitively stated at this time that no conveyance work will be needed.

If you have any questions concerning this response, please contact Marie Valmores, Senior Civil Engineer, Water Services Planning, at (510) 287-1084.

Sincerely,

WILLIAM R. KIRKPATRICK
Manager of Water Distribution Planning

Dear Ms. Warner,

I am writing this letter of concern on behalf of the Chinese Historical Society of America. Established in 1963, CHSA is the oldest not-for-profit organization dedicated to the promotion, education, and preservation of Chinese American history.

We have just been informed of the proposed Uptown Mixed Use Redevelopment Project (case file number ER 03-0007) that plans to demolish all the buildings for the area between San Pablo and Telegraph Avenues and between 21st and 18th Streets. With the understanding that this area might contain archaeological remains of Oakland Chinatown that existed anywhere between 1867 to 1894, CHSA urges the City of Oakland's Planning Division to stop the full-scale demolition of this area until measures are secured to ascertain the existence of such archaeological remains in order to preserve them for posterity. **1**

The City of Oakland has tried numerous times in the past to expel Chinese in the area for redevelopment reasons. The Uptown Project appears to be the continuation of a history that prejudices and ignores the existence of the Chinese in America, all in the name of redevelopment. If we want to rectify mistakes made in the past, then Oakland must take proactive steps to show everyone that it is not trying again to bury this historic Chinese American community permanently into oblivion.

Once again, the Chinese Historical Society of America urges you to acknowledge and preserve the historical significance of the area being proposed for demolition. We do not see any valid necessity for making this a "rush job" that might cause great regret in the future.

Sincerely,

Lorraine Dong

Re: Draft Environmental Impact Review / Case File Number ER 03-0007

Dear Ms. Cappio and Ms. Warner:

The Lakeside Apartment Neighborhood Association (LANA) proposes that the preservation of the historic fabric of uptown and creative adaptive reuse solutions should be priorities in the Uptown Mixed-Use Project Draft Environmental Impact Report.

Therefore we request further study in the Draft Environmental Impact Report of the transition between existing structures and the proposed "Uptown" development to ensure the preservation of existing structures of all historic periods, whether 19th century buildings, the Western Power Building, Giant Burger (former Kwik Way) or the barbecue restaurant. 1

Small businesses in Oakland should be fostered and integrated into the urban design, not threatened with eminent domain. Repeatedly I hear city officials and staff state that one of the objectives of "development" is to bring in small businesses to Oakland yet simultaneously thriving small businesses such as Revelli Tires, Autohaus car repair, etc. are threatened with eviction. 2

Why should hard working small businesses that contribute to the City's taxes be removed to make room for developers that require public subsidies? Instead of "developments" that demonstrate a slash and burn philosophy of urban planning we support developers whose projects reflect vision, respect, and creative integration of the existing historic fabric.

In the October 15, 2003 Oakland City Planning Commission meeting Development Director, Ms. Claudia Cappio reported that the DEIR was available online. This information was not correct. 3

The Jack London Square Draft Environmental Impact Report was posted on the City of Oakland's website. Why wasn't the Draft Environmental Report for the Uptown Mixed-Use Project, ER-0007, posted online? **3 cont.**

Subject: Comments on the Uptown Mixed Use Project Draft Environmental Impact Report
Case No. ER03-0007
State Clearinghouse No. 2000052070

Dear Ms. Warner:

Thank you for providing us the opportunity to comment on the DEIR. We strongly support the goals of this Project to provide environmentally sustainable housing for people with a wide range of incomes. The community that we serve is well aware of the many benefits of living in the Downtown. Our community has one of the lowest rates of automobile ownership and a smaller proportion of our residents drive to work than almost anywhere else in the city.

Nonetheless, we are heavily impacted by traffic. As the DEIR points out on page 90, "Traffic signals on both Franklin and Webster are coordinated to facilitate through traffic on these two key roadways."

1

The heavy use of Chinatown streets as thoroughfares creates an uncomfortable dilemma for our community when a project is proposed that does not take the quality of our environment into account. The Uptown Project has the potential to address Oakland's, including Chinatown's, urgent need for affordable housing accessible to transit. Unfortunately, the Uptown Project also will contribute to traffic patterns that have created hazardous conditions for Chinatown's many pedestrians.

We believe that the Environmental Impact Report can be a good opportunity for the Uptown Project to take full account of our environmental quality. In the comments that follow, we have pointed out where the DEIR has failed to do so, and urge revisions that will enable us to support the Uptown Project without reservations, as we would prefer.

We are available to help in any way we can.

Yours truly,

Jennie Ong
Oakland Chinatown
Chamber of Commerce

Asian Health Services

Attachment: Comments on Uptown DEIR

COMMENTS ON THE UPTOWN PROJECT DEIR

Definition of the Project is unclear:

> The Project site, which consists of a nine-block area, is located within the Uptown District of Oakland, as shown in Figure I-1. The proposed Project includes the following components: approximately 1,300 residential units, 1,050 student beds and faculty units; and 43,000 feet of commercial space. Associated Project components include a 25,000 square-foot public park; 1,959 parking spaces; and the development of one public street within the Project site. The additional public street is intended to shorten block lengths and provide enhanced access within the Project site. Implementation of the proposed Project would result in the development of a mixed-use neighborhood in the Uptown District. Please refer to Chapter III, Project Description, for more details.

The text above[1] distinguishes "proposed Project components" from "associated Project components," but without explanation. It appears that some components of the associated Project are public improvements (the park and the new street) but the reason for distinguishing between the Project and the parking is unclear, especially since the parking spaces are distributed throughout the Project area.

The status of Blocks 8 and 9 are also unclear. Table III-1[2] shows no development on Block 8. The text indicates that Block 8 is a fallback site for the Sears Auto Center.[3] Does this mean that Block 8 will be dropped from the Project if the Auto Center is rebuilt on Block 9, and vice versa? Or will the site host additional development that is in some way associated with the Project? If it is reasonably foreseeable that both sites will be developed, the full development program must be evaluated in this EIR. In addition to concerns that piecemeal environmental review understates impacts, there is the possibility that the ninth block would be developed for a substantial amount of additional retail use to fully serve the new Uptown residential neighborhood. If it is foreseeable that the development of blocks 9 and 10 would result in a 9-block project with 25% or more retail use, the EIR must not rely on AB436 exemptions. **2**

REQUESTS

1.Explain differences between Project components and associated Project components.

2. Provide information about the development of blocks 8 and 9 explain how the City expects to provide environmental review of the entire 9-block Project.

Mismatch between Intended Use of EIR and Level of Information Provided

The City intends to use this EIR "for all discretionary approvals necessary for the Project,"[4] which we must assume includes project level review of all entitlements. However the DEIR provides only a bare outline of the development program-for the Sears Auto Center (that it will include "approximately 10,000 square feet of retail space for the auto center and 50 on-site parking spaces"). Neither block 8 nor block 9 is included in Figure III-2 illustrating the conceptual site plan. **3**

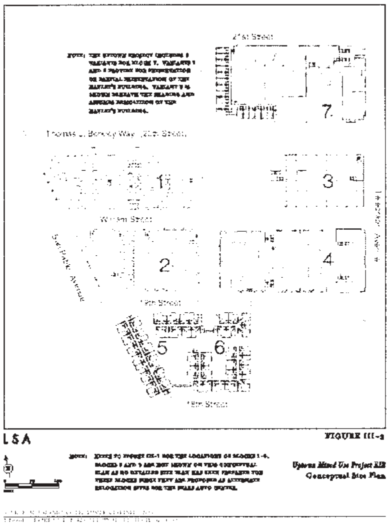
[2] Page 42
[3] page 45
[4] page 48



LSA

FIGURE III-2

Uptown Mixed Use Project EIR
Conceptual Site Plan

REQUEST

3.Provide project-level information about blocks 8 and 9 or commit to providing supplemental environmental review. **3 cont.**

Application of AB 436 (Public Resources Code 21159.25 to Cumulative Analysis

The DEIR states that it includes an analysis of cumulative impacts even though provisions of AB436 exempt the this Focused EIR from that requirement.[5] We believe that the cumulative impacts analysis must comply with CEQA, even if it is not required by CEQA. A certified EIR containing an inadequate or inaccurate analysis could create misunderstanding and confusion, especially if cited in subsequent environmental review analyses. **4**

Ensure that LUTE EIR mitigations are implemented by the Uptown Project.

Although this DEIR states that it incorporates mitigation measures required by the 1998 Land Use and Transportation Element EIR (LUTE EIR),[6] it appears that some have been overlooked.

LUTE Transportation Mitigations - Appendix A, for example, is uninformative about transportation mitigations[7] because it does not specify what the improvements are. The transportation mitigation in its entirety states: **5**

> B.1: Implement roadway improvements and transit improvements to reduce congestion on arterial roadways.

REQUESTS

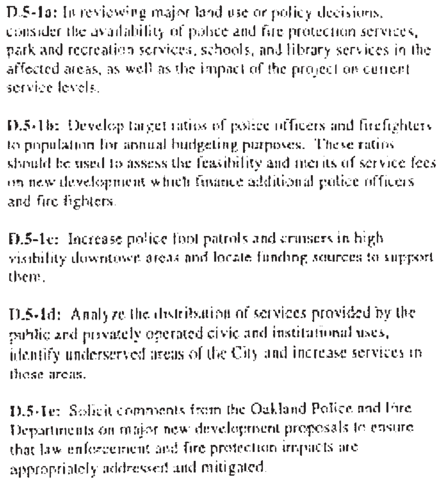
4.Describe the improvements to arterials that the City is committed to implementing, and report on the City's achievements since 1998, as determined by the mitigation monitoring process.

---

[5] page 3
[6] Page 3
[7] Appendix A, page S-2

5. Determine if traffic mitigations proposed for the Uptown Project might conflict or be inconsistent with improvements required by the LUTE EIR. We are particularly interested in an analysis of the combined effects – both direct and indirect –on Chinatown pedestrians and traffic patterns. **5 cont.**

6 LUTE Public Service Mitigations - The scope of the Focused EIR[8] does not address public services impacts even thought the LUTE EIR requires analysis and further mitigation of such impacts as part of the approval process of major land use decisions in the Downtown.[9] These requirements must be incorporated into environmental review of project approvals. As a major project in the Downtown, the Uptown Project is required to address its effects on service levels citywide. For example, Mitigations D. 5 –1 a – e, copied below, require an analysis of the citywide impacts of the Project's demand for Police, Fire, Library, and Recreation services. (Some of these mitigations reappear in Mitigations D 6, 7, and 8.)



D.5-1a: In reviewing major land use or policy decisions, consider the availability of police and fire protection services, park and recreation services, schools, and library services in the affected areas, as well as the impact of the project on current service levels.

D.5-1b: Develop target ratios of police officers and firefighters to population for annual budgeting purposes. These ratios should be used to assess the feasibility and merits of service fees on new development which finance additional police officers and fire fighters.

D.5-1c: Increase police foot patrols and cruisers in high visibility downtown areas and locate funding sources to support them.

D.5-1d: Analyze the distribution of services provided by the public and privately operated civic and institutional uses, identify underserved areas of the City and increase services in those areas.

D.5-1e: Solicit comments from the Oakland Police and Fire Departments on major new development proposals to ensure that law enforcement and fire protection impacts are appropriately addressed and mitigated.

It is possible that the Notice of Preparation anticipated the necessity to include service impacts in the EIR: included on its list of Probable Environmental Effects is "utilities and service systems."[10] However, the DEIR Scope transforms this topic into "utilities and infrastructure,"[11] The Table of Contents takes this focus on facilities (to the exclusion of services) a step further by listing the topic as "Infrastructure and Utilities."

Concerns about the Project's potential impacts on City services are heightened by the fact that most of the property tax revenues generated will be dedicated to the Redevelopment Agency as tax increment funds which will not be able to pay for City services, not even for maintenance of new park associated with the Project.

---

[8] Pages 3 and 51
[9] Appendix A, page S-11
[10] Appendix A-2, Notice of Preparation page 3
[11] Page 51

6 cont.

In addition, the LUTE EIR suggests that a child care center should be included in projects such as Uptown that provides a substantial amount (40%)of family housing.

> **D.7-1d:** Where feasible and appropriate, encourage the inclusion of child care centers in major residential and commercial developments near transit centers, community centers, and schools.

REQUEST

6. To ensure implementation of mitigations required by the LUTE EIR, expand the scope of the EIR to address Project impacts on City services.

Transportation Issues

7

Study Area – The Study Area includes intersections almost exclusively to the North of the Project[12] even though the map showing trip distribution allocates the greater proportion of local trips to the Project's south[13] - to Chinatown in particular.

Especially for the analyses of 2010 and 2025 conditions, with and without the Project (the cumulative traffic analysis), it is necessary to define a study area that is large enough to capture secondary impacts of the Project, including its contribution to congestion patterns that divert drivers from using direct routes. Chinatown streets are at particular risk from the combined effects of the Uptown Project, Jack London Square Redevelopment, and City of Alameda redevelopment.

REQUEST

7.Extend the Study Area to include intersections along Broadway, Franklin, Webster and Harrison streets in Chinatown.

8

Freeway segments – Impacts on the freeway system will extend to existing bottlenecks beyond the immediate junctions and ramps listed in Table IV.D-17.[14] Weekend conditions should also be included.

Limiting the portrayal of existing traffic on both regional and local roadways to weekday peak hour conditions gives an incomplete picture of baseline conditions that the Project could impact. Information should be added on daily traffic volumes since the spreading peak limits mitigation options. Weekend data is needed because congestion has become severe and is projected to get worse.

REQUESTS

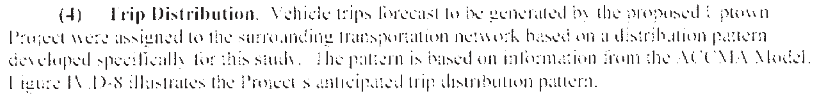
8. Include the junction of 880, 80, and 580, junction of 880, 980, and 24, and the Bridge toll plaza in the analysis of existing conditions.

9.Provide data on daily conditions for both weekdays and weekends.

---

[12] Figure IV.D-2, page 87
[13] Table IV.D-8, page 110
[14] page 107

Trip Distribution



(4) **Trip Distribution.** Vehicle trips forecast to be generated by the proposed Uptown Project were assigned to the surrounding transportation network based on a distribution pattern developed specifically for this study. The pattern is based on information from the ACCMA Model. Figure IV.D-8 illustrates the Project's anticipated trip distribution pattern.

The DEIR description[15] above on the trip distribution methodology withholds more information than it provides. No further information on the methodology is provided in Appendix E, which is comprised only of the LOS calculations. The lack of information about assumptions and methods used to distribute trips deprives the public of the opportunity to comment on these issues during the DEIR comment period.

The cursory reference to the trip distribution calculations is followed by an unfathomable diagram.[16] Nonetheless Figure IV.D-8 seems to indicate that Chinatown will receive more of the local traffic generated by the Project-– a total of 14% - than anywhere else. Yet there is no analysis of the impacts of this traffic on Chinatown intersections and pedestrian conditions. **9**

It also appears from the diagram that Project traffic in Chinatown will be making turns in areas of high pedestrian use, which could worsen existing pedestrian hazards, especially to sensitive populations of children and the elderly.

REQUEST

10. Analyze impacts of Project traffic on Chinatown traffic, air quality, and noise. Include an analysis of impacts that would exacerbate existing pedestrian safety problems. The analysis should not be limited to measuring increases in vehicle volume, but should consider the impacts on pedestrian safety of turning vehicles, and increases in delay for pedestrians waiting for signal changes.

Criteria of Significance - Although the list of significance criteria recognizes that hazards to pedestrians could be represent an impact, the definition is overly narrow in its exclusive focus on design features.

REQUEST

11. Due to the current unacceptably high rate of pedestrian collisions in Chinatown and the high proportion of the Project's local traffic that will be traveling through Chinatown that could aggravate the problems, the EIR needs to consider any potential increase in pedestrian hazard to be a significant impact, whether caused by the Project itself, or cumulatively with other development. **10**

Traffic Mitigations - The DEIR limits traffic mitigations to measures that increase traffic capacity and it ignores actions that would reduce the number of vehicle trips. The measures in general favor motorists, probably at the expense of pedestrians and bicyclists. Optimizing signal timing, as proposed in almost all of the traffic mitigations, is based on optimal conditions for drivers, not pedestrians. Although the DEIR concludes that there are no adverse impacts to the timing changes, it does not include an analysis that supports this conclusion in any instance where it is proposed: specifically, TRANS-1, 2, 4, 5, 6, 7, 8, 9, 10, 12, 13, and 14. The DEIR conducts the entire discussion about relieving increased delay for motorists as if pedestrians do share the streets. **11**

---

[15] page 109

[16] page 110

REQUEST

12. Analyze the impact on pedestrians' level of service of all proposed signal changes by analyzing increased delay for pedestrians crossing streets. **11 cont.**

Parking – Since the courts do not consider parking shortfalls (less than full demand) to be an environmental impact, and since the DEIR (properly) does not include a significance threshold for parking impacts, it is unclear why the document assumes that parking shortfalls could impact the environment. By considering parking shortfalls to be a potentially significant impact, the DEIR is able to present the Project's *excess* parking (it provides more parking than the City requires) as a virtue and avoid discussin its contribution to traffic congestion.

This Project has been represented to the public as a transit-friendly, anti-sprawl development. Its urban densities and proximity to transit surely enable it to become such, but that advantage is dissipated by the inclusion of 1,959 parking spaces plus street parking for a Project that is required only to have 1,620 spaces. The modal split assumptions used in the trip generation calculations (83% non-transit trips) appear to recognize that Project residents will drive their easily parked cars rather than take advantage of convenient transit. **12**

REQUEST

13. Estimate improvements to the rate of transit usage that could be achieved by a substantial reduction in the Project's parking.

Housing Issues

The DEIR states in the text[17] and tables[18] that the Project will develop 2,320 housing units, including 250 (10.8 %) affordable units. California Redevelopment Law requires 15% of new housing units to be affordable, although it does not require their inclusion within the project itself, or even the redevelopment project area.

However, the actual number of housing units (as defined by the Census) in the Project is unclear because the text refers also to student "beds". It is unclear how many housing units the 1,000 student "beds" will comprise. For example, if these beds are clustered around shared kitchen facilities, the number of units would probably be the number of kitchens. If the students take their meals independently, then the number of beds would be the number of rooms. **13**

It is also unclear whether the faculty units would be considered affordable under California Redevelopment Law.

REQUEST

14. Clarify the total number of housing units in the Project and the number that can be considered affordable under Redevelopment Law. If additional affordable units are required that will be developed off-site, analyze potential impacts they might generate.

---

[17] page 74
[18] page 75

Cultural Issues

Chinatown artifacts – The area where Oakland was settled by early Chinese residents (identified in the DEIR as San Pablo between 19th and 20th Streets[19]) should be fully characterized before excavation begins. The proposed mitigation of on-site archeologists is insufficient for a site where the probability of valuable artifacts is so great **14**

REQUEST

15. Include a full study of the site of early Chinese settlement in the Final EIR..

RE: Draft Environmental Impact Report for the Uptown Project
Case File Number ER03-0004

Dear Ms. Henderson:

Oakland Heritage Alliance appreciates the opportunity to comment on the DEIR for the Uptown Project.

The first section of this letter pertains to the general process for the EIR and related meetings. The second section addresses historic and cultural resources.

OHA is leaving most comments on air quality, affordable housing, open space, parking, and transportation to others interested in these topics. We feel that these are important factors, which may have effects on historic areas, but are limiting this letter to the issues with which our organization is most familiar.

PART I: DEIR REVIEW AND APPROVALS

PHASED REVIEWS AND APPROVALS

Because the developer frankly admits that plans are somewhat uncertain for some of the parcels involved in this project, we object to the blanket approval of this EIR as a general green light to move forward on those components. AB 436 notwithstanding, there must be a clear, public mechanism for revisiting this project's environmental impacts as each phase of construction is contemplated, since the present project description leaves unanswered questions. There must be a review of the design features and project effects before each part of the project proceeds. These reviews must occur in public, such as before the Planning Commission, not behind closed doors in staff offices. While current staff may be highly competent, there is no guarantee of institutional memory, nor of the hoped-for high quality of review, in an era of severe budgetary restriction at the planning department. **1**

We are particularly concerned about parcels 5, 7, 8 and 9, for which planned projects are extraordinarily ill-defined, which Forest City says they themselves may not design, develop, nor build, and which seem to pose the possibility of enormous effects on the surrounding historic buildings, on traffic, on density, on open space, on demand for public services, and on the economic viability of the project. These parcels should be singled out for either a revised draft or a supplemental EIR as they are more defined and the issues become clearer. This EIR is inadequate and incomplete in assessing their impacts upon the potentially important and known important historic resources. It may also be inadequate because the descriptions of the projects on these parcels, are so vague as to be meaningless. The high-rise and other planned buildings on these parcels require much further study. Why, when the developer clearly is most interested in the core area of residential construction on the two large blocks between 19th and Thomas Berkley Way, Telegraph and San Pablo, should this area be widened to incorporate areas which are already built upon and functioning? Redevelopment should not be viewed as carte blanche to demolish large tracts of occupied city blocks. Incremental private development is a better mechanism for making progress in these borderline areas. **1 cont.**

INSUFFICIENT DISTRIBUTION OF NOTICE FOR DEVELOPER-SPONSORED MEETINGS

Related public discussion meetings held this fall by the developers and attended by city staff were inadequately noticed, with resultant poor attendance. No flyers were left at area businesses for distribution to their customers; many uptown Broadway businesses were completely unaware of this project's progress, even though it may have enormous impacts upon them, and neighborhood organizations did not seem to know about the meetings, except for one or two immediately local ones and businesses impacted by the threat of eminent domain. The radius used for supposedly neighboring businesses was much too small. In addition, the meeting notices came out quite a bit too late for people to make plans to attend. OHA representatives found that we were spread thin trying to attend both the uptown meetings and the several other meetings and events which directly competed with it. This was most disappointing, particularly in comparison with earlier meetings which had approximately 10 times the turn out. We know that citizens of Oakland are interested in this project. We had asked repeatedly, months before, for projected dates for these meetings. **2**

DEIR INADEQUATE, INCOMPLETE IN THESE RESPECTS

The inadequacy of the mitigations for impacts on the historic and cultural resources should be remedied in the final EIR. There should be a clear statement of the mechanisms for further review of the ill-defined projects on parcels 5, 7, 8 and 9.

PART II: HISTORIC AND CULTURAL RESOURCES

Inadequately or not at all studied in this DEIR analysis, and subject to very significant impacts:

- **THE GREAT WESTERN POWER BUILDING: DEMOLITION UNACCEPTABLE, IMPACTS POTENTIALLY TOO GREAT**
  The demolition of this building is completely unacceptable to Oakland Heritage Alliance and its members. Particularly in view of its new ownership, with an owner who plans to do an attractive restoration of the facade, there is no excuse for planning any demolition on this site. The DEIR fails completely to discuss the impacts a large, as-yet-undesigned building, might have on the Great Wester Power Building. The EIR must address an appropriate and sensitive **3**

design, should a building go forward on the site, not just butting up against (and shading) the historic building, but relating to it in a sensitive and appropriate manner. Since this project is vague and not well worked out, it is almost impossible to address it. The entire block between 20th, 21st, San Pablo and Telegraph should be studied in a further focussed environmental review, with discussion of urban planning issues, impacts, mitigations, and proposed design criteria. **3 cont.**

The shade impacts seem to be severe, and the simple assertion that "the facade does not contain complex detailing" may not really be true, and does not excuse the impacts. The EIR must study an alternative that would be kinder to this building. **4**

OHA believes that other buildings on this block are worthy of study and retention, in order to to avoid the tendency for redevelopment districts to successively sprawl, demolish, and empty out regions of the city. Oakland's experience in this regard has been that areas of the city, once vacated and demolished (even with excellent intentions on all sides), tend to remain blighted and vacant for decades thereafter. There should be no demolitions permitted, and no pushing out of viable businesses, until absolutely necessary—once a project has been fully approved. **5**

Should the decision go forward to demolish the Great Western Power Building (which we would stoutly oppose), the proposed mitigations are far too weak to have much impact. We would propose that should such a demolition go forward there would need to be a really significant mitigation, such as a substantial funding of improvements to remaining historic buildings in the uptown area. **6**

The case has not been made for a necessity for any demolition on this block; the entire issue must be revisited with a supplemental focussed EIR. **7**

- **THE 19TH AND SAN PABLO DISTRICT: UNACCEPTABLE LOSSES**

Goals 1., 2., 7., 8., 11., and 16. (pages 41-42 of DEIR) could be served well by retaining some of the historically interesting buildings on the site. The small-scale buildings at 1958-60, 1966-68, 1972, 1998 San Pablo Avenue could be restored and retained as part of the planned development. This would provide a better transition between the project and the spectacular historic resources across San Pablo (See photo, page 211). It would reinforce the project's incorporation into the urban fabric, helping it to avoid that "plopped down" feeling, and would provide some interesting spaces for retail, community, live-work, or entertainment uses on a small scale. We have provided an attachment, showing how the buildings could fit in quite well with the planned scale of the proposed development on that block. Incorporate the buildings rather than demolishing them.

We question the wholesale demolition of the resources across the street in the area of the former Royal Hotel. We fail to understand the reasoning that the small buildings at 1958-1998 can be cheerfully included in an unnecessary demolition because they are part of a district in which, once they are demolished, enough historically important buildings would survive: "These remaining buildings include . . . primary contributors (the Hotel Royal. . .)" when the preparers of this EIR *know full well*, and mention a few pages later, that there is another proposed project which may result in the destruction of other significant buildings at that intersection, *including* the Hotel Royal (pp 226-227). This is like saying, when faced with two slowly sinking ships, that it's okay to dynamite one because the other one is still afloat, so one ship **8** will still remain. And then the second ship sinks. It is absolutely not acceptable to demolish this whole area, in a continuation of the egregious losses that started with the unwarranted demolition of the former cathedral. There is a point at which redevelopment becomes highly destructive of the city's distinctiveness. Because it is incremental, it is easy to make the argument that no single step is doing any significant damage. But the damage is done, nonetheless. **8 cont.**

The mitigations are inadequate. Documentation doesn't really mitigate such losses. Establish a mitigation fund for improving buildings which are retained; consider establishment of some kind of protective zoning or historic district buffer zone to protect areas just to the north of this area, so that the historic Victorians, the First Baptist Church, and the YMCA can survive in a good relationship to each other, and continue to provide visual interest and a feel of connected historic fabric. **9**

We specifically requested that the DEIR look into the possibility of incorporating the small San Pablo buildings into the project; we regret the refusal to do so, and request that such an alternative be presented as part of the final EIR. In our scoping letter, we said, and we still believe that an adequate EIR must include:

> ". . . study alternatives that retain these buildings and the adjoining barbecue restaurant at the corner. These small but interesting buildings can provide visual transition into the project, integrate it better into existing streetscapes and encourage the creative reuse of historic buildings just outside the project area. New residents will appreciate these remnants of their neighborhood's past, and because of their relatively small footprint, it should be possible to include them in the site plan." **10**

One aspect of sustainability is to re-use extant buildings rather than turning them into landfill. We believe these buildings at 20th and San Pablo could provide a real opportunity to help knit the project into its context, and to provide some historic urban interest in the context of these huge blocks of new construction. It seems eminently possible to include them in the project.

- THE FOX OAKLAND THEATER: LEAVING SPACE FOR EXPANSION OF BACKSTAGE AREA

The EIR is incomplete in its remarks concerning the Fox Oakland Theater (page 230). Issues of potential conflict-of-use with adjoining residential properties must be addressed. Any adjacent use must take into consideration the possibility that truck loading and related theatrical activities might occur, including during the late night/early morning hours. This might bring up issues of: noise, pedestrian safety, ease of large truck access. The issues should be addressed now so that we do not build in an intolerable situation either for potential residents or for commercial users of the theater, should it be used for large productions. **11**

If the 50-foot-wide minimum area left behind the Fox Oakland Theater means that the site for the proposed mid-rise residential structure behind it needs to be moved west, it would be well worth doing so. The proposed high-rise at 18th and San Pablo is not adequately described, and thus should not control the surrounding land uses. Because the true size and scale of this imaginary high-rise are not known, there should be further study; a supplementary EIR should be prepared if and when more information about this project is available. There could be significant visual effects on the Fox Oakland Theater if this building were to be built to the full height contemplated in the DEIR, and we are concerned that it not provide an incongruous background to the Fox Oakland, when viewed from the East and North. The shade **12** impacts, Figure IV.L-9 through 12, upon the surrounding buildings, should be considered seriously as a reason to build a lower building. **12 cont.**

- **UPTOWN BROADWAY: RETAIL BUSINESSES AT RISK**
  Missing from the EIR entirely is any discussion of the worrisome potential for the proposed project to draw energy and people from uptown Broadway businesses. It is surely an environmental effect to hasten the development of the Telegraph retail zone at the expense of Broadway. **13**

- **PARCEL 9: AN EXAMPLE OF "GOOGIE" ARCHITECTURE**
  This site is described as an alternate location for the Sears auto center. We suggest that the extant "googie" hamburger stand is of value, and that it has not been addressed seriously in this DEIR. This building and its business occupant might be incorporated into a future development. This period of playful commercial architecture is just beginning to be appreciated and undergo a renaissance; it would be a mark of Oakland's sophistication to include it in the project rather than demolishing it, and the EIR should address this option. Wise promoters of Los Angeles's civic virtues have begun to capitalize on the presence of such home-grown California googie architecture; we can use buildings such as this one to help Oakland seem an attractive and accessible place. This style can prove attractive to just the young, vigorous people we seek to attract. **14**

- **VIEW IMPACTS**
  Designs for new buildings in the vicinity of the former YMCA (no longer owned by YMCA) building (DEIR page 228) should be required to be sensitive to the view corridors, such that views of and from the building are not negatively impacted. Designs in its vicinity should be appropriate to their location near this historic resource. Figure IV.J-4 shows how this building could disappear from the incoming driver if the new buildings come far out to the sidewalk line and do not step back at all from the street. We request a simulation showing a better design solution. Similarly, the view down 20th St., shown as Figure IV.J-5, not only blocks the stack of the Western Power Building but makes an awkward neighbor to the former Magnin's building. The proposed residential tower on block 5 seems particularly ill-located and too tall. We believe that the mitigations in this section, page 257 are woefully inadequate. For this reason, we believe that a supplemental EIR should be required for the later phase, high-rise components of this project. The design mitigations are ridiculously sketchy, through no fault of the EIR preparers, because the projects remain so ill-defined. **15**

- **LONG TERM BUSINESSES ARE RESOURCES TOO.**
  Missing from the EIR entirely is any discussion of the worrisome potential for the proposed project to draw energy and people from uptown Broadway businesses. It is surely an environmental effect to hasten the development of peripheral zones while sucking the life out of the central city. **16**

  In this connection, the DEIR has completely omitted mention of an important potential resource: the currently-closed-off BART access to the basement of Sears, formerly Capwell's. At one time this was an active entrance, which fostered pedestrian traffic through the store, thus increasing the likelihood that people would see and experience what was in the store, and perhaps even purchase goods there. The EIR should study the potential reopening of this link between BART and Telegraph Ave. It was particularly helpful during stormy weather, when it was open, and provides a way to incorporate Sears into the project. **17**

18 Moreover, it is outrageous that so much concern is expressed over the potential relocation of the Sears auto center, and so little over the small businesses on 20th Street (and those removed earlier by the city of Oakland redevelopment agency, at 20th and Telegraph). The history of Oakland in recent years would lead one to believe that locally-owned businesses are more likely to stay around than chain businesses (Carter Hawley Hale, K-Mart, Bank of America). Thus, we should support long time local businesses at least as much, and perhaps even more than national businesses, no matter how large they are. Small businesses are the workhorses of the local economy, yet the redevelopment agency persists in treating them in a somewhat cavalier fashion.

- **SCENIC VISTAS, VISUAL CHARACTER, AESTHETIC RESOURCES**

19 We hold that views of historic buildings can also be scenic (page 242–243). In fact, one of the things Oakland has to offer is an unusual and number of unique and intact buildings of several periods; here in the uptown area we are lucky to have excellent examples of several different styles of architecture. The discussion on page 242 is completely inadequate in ignoring this. In the immediate vicinity of the project, we see a nationally-known example of terra cotta art deco, two excellent examples of early-twentieth century movie palace styles, the unusual Western Power Building, the quaint vernacular commercial buildings at 20th and San Pablo, the 1940s furniture showroom behind the ice rink, the "googie" building mentioned above, the former Mel's, and so on. These kinds of urban vistas set Oakland apart from some of our less interesting neighbors.

The art deco Floral Depot is so prominent and well-known that it has appeared in magazines, is on various walking tours. A replica was built for the Florida Disney World; OHA has photos available of this amazing reconstruction. The proposed project should be required to have a good design relationship to the important buildings at its edges.

We appreciate the opportunity to comment on this Environmental Impact Report; we look forward to an improved and emended report, and to an excellent Uptown project that allows historic buildings to contribute to its success.

Sincerely,

Naomi Schiff

Re: Comments on DEIR for Uptown Mixed-Use Project (Case No: ER03-0007)

Dear Ms. Wamer:

We are writing on behalf of the Sierra Club, including approximately 5,000 members who are residents and property owners in Oakland. We support infill, mixed-use, relatively dense development within existing urbanized areas that encourages transit use, walking, and bicycling and that minimizes private automobile use. We believe that infill development will help to counteract sprawl and improve the environment and the quality of life for all Bay Area residents.

The relativity dense mixed-use proposal for Uptown Oakland has the potential for revitalizing Oakland's urban core and invigorating the Uptown Entertainment District. Its location near a regional transit node is propitious. The Entertainment District can draw from the whole region, and residents of the proposed project can have access to the region without cars. However, the site planning must be such that residents can have quiet enjoyment of their homes while others are enjoying the lively arts. The possible conflict between these uses has not been addressed in the DEIR. **1**

A key issue of concern to us is that location of the open space should also be studied as part of the site planning. This may be considered a design issue rather than a comment on the Environmental Report, but the location and design of the open space will significantly affect the social environment of this new community. The present location of the planned open space might be appropriate in a suburban community surrounded by similar residential uses. But that is not the case with the Uptown project.

Safe open spaces are ones that can be completely viewed by a cruising police car. We strongly recommend consideration of a linear park along Telegraph Avenue from 19th to 20th St. This would be a defensible space and also a potential festival space for the Entertainment District. Placing the open space along Telegraph Avenue bordered by mid-rise mixed-use structures on the west between the lower rise residences and the entertainment area would create a buffer between the two uses. Oakland does not have anywhere near the problem of panhandlers and the homeless sleeping on benches and in doorways that San Francisco has. **2**

A wide "piazza" along Telegraph Avenue with cafes, restaurants, book and record stores, and a market hall would create an exciting pedestrian destination. It would give a sense of place, an outdoor living room, for both the residential community and visiting theatergoers. This "piazza" would be lively with students, day and night, if the graduate student housing is built at 20th and Telegraph. In fact, this adjacent open space would make the site more attractive for student housing.

In summary, relocation of the open space along Telegraph Avenue should be studied for the following reasons:

- It would be safer, day and night, and so encourage use.
- It would encourage commercial development along Telegraph Ave.
- Students would have a place to meet and socialize.
- It would provide a festival space for the entertainment district.
- It can resolve the possible conflict between residential and entertainment uses.
- An attractive space adjacent to public transit will encourage the use of transit.
- It would take advantage of our Mediterranean climate and encourage outdoor activities.

2
cont.

Thank you for your consideration of the Sierra Club's views on this important project. We commend the City of Oakland for encouraging new infill development of this kind, which can make an important difference in the vitality and attractiveness of Oakland.

Lynn Warner, Planner IV
City of Oakland
Community and Economic Development Agency
Planning Division
250 Frank Ogawa Plaza, Suite 3330
Oakland, CA 94612

Dear Ms. Warner:

In 1998, the Oakland City Council adopted a Sustainable Community Development Initiative, with the goal of promoting social equity, environmental responsibility, and economic vitality in City and private projects. At the heart of downtown Oakland, the Uptown Mixed Use Project will bring more than 2,500 new residents to an area now characterized by parking lots. Ensuring that Uptown is developed sustainably would demonstrate the City's ongoing commitment to these principles.

In the Uptown draft environmental impact report, the developers note that as an infill, transit-oriented project, Uptown is consistent with Oakland's Sustainable Development Initiative. This is certainly true. However, Urban Ecology believes that the EIR and Uptown Partners should make a specific and verifiable commitment toward employing environmentally sustainable building and design techniques. **1**

Urban Ecology has prepared a list of six low-cost or no-cost strategies that can significantly reduce construction-related waste and improve the quality of life for future residents of Uptown. In addition, these techniques are logical means for the developers to mitigate significant environmental impacts of the project, particularly in relation to air pollution, water quality, hazardous materials, and aesthetic resources.

The current Uptown proposal has improved significantly since it was first introduced. While it is important to move the project along, it is equally important to make sure it is done right. Urban Ecology believes that a greener Uptown will benefit everyone, and we hope that resource-efficient building strategies will be incorporated into the final EIR.

Sincerely,

Nathan James

6 Steps Towards a Greener Uptown

"Green Buildings" are structures that are built, renovated, operated, or reused in an ecological and resource-efficient manner. They are a major contribution to improving environmental sustainability and they can be used in the marketing and public relations effort for new development. Employing green building techniques in a prominent project like the Uptown development is powerful way to demonstrate the City of Oakland's commitment to sustainability. Using these six no-cost or low-cost strategies would significantly reduce waste and toxicity for the City of Oakland and improve the quality of life of the new residents of Uptown:

1. **Reduce Water Usage for Landscaping by 50%**
   Reducing water consumption reduces maintenance expenses as well as decreasing the strain on California's fragile water resources. By specifying plant species with low water needs that are appropriate for Northern California's dry climate, Forest City could significantly reduce water used for landscaping and the amount of pollutants that run off into Bay Area water streams. Another landscape strategy that effectively reduces water consumption and costs is the installation of highly efficient drip irrigation systems.

2. **Use Low-Emitting Building Materials**
   Poor indoor air quality, caused by the offgassing of chemicals found in many building materials, contributes to high levels of respiratory disease in American children. Specifying low-emitting and formaldehyde-free paint, wood finishes, adhesives, sealants, insulation, carpets, and boards decreases the amount of toxic compounds in the air of the homes of future Uptown residents. Forest City should demonstrate to the City of Oakland that it plans to incorporate these low-emitting materials in the Uptown Development.

3. **Exceed Title 24 Energy Standards by 15%**
   Although California's Title 24 energy performance standards are some of the strongest in the nation, the City of Oakland supports development projects that exceed these standards. Improving energy efficiency is an economically effective choice for the residents of the new Uptown development: lowering utility expenses allows tenants to enjoy minimized financial burdens for years to come. There is a wide range of techniques that improve energy efficiency, but first steps usually involve adding wall and ceiling insulation, installing double-glazed or low-emissivity (low-E) windows, and upgrading to efficient household appliances. Other options to consider include plumbing for natural gas heating, providing hard-wiring for compact fluorescent light bulbs, and adding overhangs to south-facing windows. The Uptown project could be even more energy efficient with the installation of solar water heaters and photovoltaic panels.

4. **Divert 75% of Construction Waste from Landfills**
   Construction waste, such as wood, drywall, metal, concrete, dirt, and cardboard, fill millions of cubic feet of California's landfills each year. Managing this construction waste can be as simple as identifying the types and quantities of waste that will be available and contacting local recycling facilities, youth build programs, or community build groups (like Habitat for Humanity) to identify the conditions required for recycling or donating construction materials. Generally, space at the construction site also needs to be allocated for recycling collection.

5. **Use Recycled Content Materials for Construction**
   Four common ways to incorporate recycled construction materials in a project are: re-using form boards when pouring concrete, using recycled content siding ("hardboard"), using concrete with flyash, and using recycled content rubble for backfill around building foundations. Additionally, many interior building materials like gypsum board, linoleum flooring, and carpeting are now produced with recycled content. On a related note, the substitution of engineered lumber for solid sawn lumber significantly decreases a building's impact on the Bay Area's old growth forests, since engineered lumber uses smaller-diameter and faster-growing plantation trees. Forest City should demonstrate its commitment to sustainability for the City of Oakland by resolving to specify recycled content materials in the Uptown Development.

6. **Provide Views and Natural Daylighting in 75% of Indoor Spaces**
   Giving Uptown residents access to natural light and views will dramatically improve their quality of life, and also reduce their energy demands, since they will less often need to turn on electric lights. Effective daylighting strategies often include skylights and clerestory windows, which provide natural light from above, and vertically-oriented windows, which offer an even distribution of light across a room.

Notes and Further Resources

Goal 1: Reduce Water Usage for Landscaping by 50%

a. The East Bay Municipal Utility District publishes *Water Conserving Plants and Landscapes for the Bay Area*, an award-winning resource for selecting drought-tolerant plants. For a copy, send $15 to EBMUD Water Conservation Division, 2130 Adeline Street, Oakland, CA 94607-4240.

Goal 2: Use Low-Emitting Building Materials

a. The "Green Seal" program is an independent, non-profit certification system for green building products. They produce and regularly update lists of low-emitting paints and coatings, and offer investigative reports about particleboard, fiberboard, and lighting fixtures. These lists and reports can be found at http://www.greenseal.org/

Goal 3: Exceed Title 24 Energy Standards by 15%

a. More information about California's Title 24 Standards can be found at http://www.energy.ca.gov/title24/index.html

b. The City of Oakland's Energy Efficient Design (EEDA) Program offers free assistance in energy reduction for new construction projects. Contact Christine Vance at (510) 482-4420 or see www.oaklandenergypartnership.com for more details.

Goal 4: Divert 75% of Construction Waste from Landfills

a. To obtain a building permit for new construction in Oakland, applicants are required to submit a Waste Reduction & Recycling Plan (WRRP) that demonstrates how the project will reuse or recycle 50% or more of all construction and demolition debris.

b. Many Bay Area developers find that recycling construction waste ends up costing less than the transportation and dumping fees to take it to landfills on the urban fringe.

c. Projects that deliver loads to facilities that are specifically designed to receive, sort, and recycle mixed construction and demolition debris are eligible for a $10/ton rebate from the Alameda County Waste Management Authority. Contact Tom Padia at (510) 614-1699 or tpadia@stopwaste.org for further details.

d. For more information, contact Patrick Hayes, Recycling Specialist at the City of Oakland Public Works Department, at (510) 238-6920 or phayes@oaklandnet.com

Goal 5: Use Recycled Content Materials for Construction

a. The State of California Integrated Waste Management Board maintains a list of recycled-content building materials. The searchable database, along with other reference materials, is available for free at http://www.ciwmb.ca.gov/condemo/

b. The Alameda County Waste Management Authority maintains a list of locally available green building materials, http://www.stopwaste.org/Resource_Guide.pdf

Goal 6: Provide Natural Daylighting in 75% of Indoor Spaces

a. The California Public Utilities Commission's Energy Design Resources program offers many resources to help with designing for daylight. See http://www.energydesignresources.com for more information.

The City of Oakland's Sustainability Coordinator offers free technical assistance programs to help implement these or other green building strategies. For more information, please contact Carol Misseldine at (510) 238-6808 or cmisseldine@oaklandnet.com

Re: Uptown Mixed-Use Project Environmental Impact Report

Dear Ms. Lynn Warner:

My name is Chungkei Tony Fung. I am the operating owner of The Autohouse Car Repair on 565 20th Street. I also own the property of 565 20th Street. We have been at this location since 1992. Besides being a full service garage, we are also a State certified Smog Check Station. In the proposed map, my property is in block 1 of the Uptown Mixed-Use Project. In this Drafted Environmental Impact Report, there is no mention of environmental impact of relocation of the existing small business like mine.

In the beginning of the year, Community and Economic Development Agency opened the dialogue of acquisition of my property. I was told by different sources, that we would not be relocated within the proximity of this project because of the recent change in zoning. Most of my clients work in the downtown office buildings or travel by BART. Therefore, the survival of my business is location depended. And my present location is ideal. If I were relocated away from the downtown office buildings and from BART, I would virtually be forced out of business. And it will be detrimental for my family and myself. **1**

I feel strongly that it is to the best interest of the Uptown Mix-Use Project, the community and the City of Oakland to include the existing business like ours in the overall planning. We believe that we are providing a vital service to the community and tax revenue to the city and the county. This proposed project adds 1000 apartments and 1050 student living units. These residents need auto repair service. It would have negative environmental impact to exclude us from this project. **2**

This letter is an addition to my verbal comments at the public meeting by Oakland Planning Commission conducted on October 15, 2003 in Hearing Room #1 in City Hall.

Sincerely,

Chungkei Tony Fung, Owner
The Autohouse Car Repair

Cappio, Claudia

From: Colland@aol.com
Sent: Monday, November 03, 2003 3:03 PM
To: ccappio@oaklandnet.com
Subject: Uptown Mixed Use Project DEIR

Ms. Cappio:

As I indicated in the October 15 planning commission hearing, I want to again express my concerns about traffic and pedestrian safety impacts the Uptown Mixed Use Project will have on Oakland Chinatown.

The absence of intersections in the heart of Chinatown has to be addressed given the importance of Chinatown streets for local and regional travel. As indicated in the Uptown Mixed Use Project DEIR, Chinatown streets are recognized as being an integral part of the circulation network for this project (9% of local traffic through Chinatown with an additional 3% along Lower Broadway). 1

It is necessary and prudent to study and measure the cumulative impacts this project as well as the impacts that the Jack London Square Redevelopment and Alameda Point projects will contribute. Only by doing so will we have a workable means to formulate and execute mitigation measures for this Oakland neighborhood.

Respectfully submitted,

Colland Jang, City of Oakland Planning Commissioner

Re: Uptown Mixed Use Project
<u>Environmental Impact Report</u>

We are a certified small local business with offices at 593 20th Street, Oakland, CA. Our firm has been in the City of Oakland doing business since 1996, and earlier when the undersigned and other colleagues were with a Disabled Veteran Business Enterprise. We do City of Oakland projects and other public and private projects.

The proposed Uptown Development, if implemented, will affect our ability to remain functional and some City projects will likely be affected. The Environmental Impact Report does not address the presence nor does it address the impact on our business and other businesses on 20th Street. This is unprofessional and is in direct contradiction to the City's policy of encouragement of small business. **1**

When the property transferred hands from the then landlord to the City, we were offered the first choice in buying the property. We did not choose to take the opportunity in view of the uncertainty. The project has now it seems has become a reality and our opportunity to procure was a missed one.

We hereby lodge our protest over the negligent and insufficient report. We would appreciate discussing the impact on our business, financially and otherwise, and the steps for the mitigation thereof.

Sincerely,

Shamir K. Mondle, P.E.

Subject: Comments on Uptown Mixed-Use Project

Historic Properties and Archaeological Artifacts:

A graduate student has brought to my attention the fact that historic Chinatown was at the site in the 1860s (17th and Telegraph) and the city made them relocate after a major fire to San Pablo between 19th and 20th in the 1880s. She states that the buildings on San Pablo slated for demolition might be part of this historic Chinatown and that there might be valuable artifacts of that culture in the vicinity of those buildings. It therefore appears appropriate that we look for an opportunity to relocate at least one of those wooden buildings below 20th on San Pablo (perhaps somewhere in the current Chinatown area) that could then be used to exhibit whatever artifacts might be uncovered. If this is not feasible, we should, at minimum, excavate carefully so that artifacts are not destroyed and make then available for the public either at the Asian Cultural Center or other existing city facility that could exhibit them to retain the cultural heritage of the Chinese population at that time which was evidently displaced several times by the city. There is no mention in the report at all about this aspect of the area's history. **1**

Traffic Circulation:

Trans-11 "Significant Unavoidable" impacts is the term applied to the area at the West Grand, Frontage Road and Mandela freeway entrance. Another new large development with equal or more units is proposed for the West Oakland area in the near future at Central Station between 10th and West Grand on Wood and Frontage Road. There is no cumulative analysis for this problem. In fact there appears to be no cumulative impact analysis at all in this document. Since the writers of the document claim that it would be too costly and complicated to widen the CALTRANS Road, nothing is proposed. Instead, it appears appropriate that the developer should contribute to a fund with the developer of the Central Station site to add to CALTRANS funds to expand that roadway which already has severe backups at rush hour. **2**

Re: Case File Number ER 03-0007, Uptown Mixed Use Project

The Uptown Mixed Use Project Draft Environmental Impact Report (dated September 2003) is incomplete and inadequate in evaluating the historic and archaeological resources in the project area and proposed inadequate mitigations.

The DEIR (p. 214) reports "research indicates that the east side of San Pablo Avenue between 19th and 20th Streets was a Chinese neighborhood during the 1870s, and archaeological deposits that may exist from this period have the potential to provide information" regarding research questions that, as described, would make it an important cultural resource under CEQA and a significant cultural resource under the National Register of Historic Places criteria for evaluation.

First, the DEIR is incomplete and inadequate in its assessment of early Chinese and Chinese American settlements in the project area. Some of Oakland's pioneering Chinese and Chinese Americans in 1867 established a settlement centered on the east side of San Pablo between 19th and 20th Streets (Chow 1974:116). This was after they had been burned out of Oakland's very first Chinatown at 17th and Telegraph, and prohibited by the city from rebuilding. Another city-driven relocation effort in 1869, only partially successful, resulted in the Uptown Chinatown centered at 19th/20th Street and San Pablo producing a related settlement centered at San Pablo and 22nd Street (see attached map). Research shows these early Chinatowns in the Uptown San Pablo area existed from 1867 through at least 1876 (Baker 1914:203-4), and perhaps through 1894 (*Oakland Enquirer* April 7, 1894). Preliminary research with an 1877 photo of the area suggests the buildings in the Uptown Chinatown may have looked like the two-story wooden building shown in the attached photo.

1

After a second relocation effort in the late 1870s/early 1880s--Chow notes Oakland city fathers again worked to remove Chinese and Chinese American residents from the Uptown Chinatown area in order to redevelop the newly-valuable area for profit--new wooden buildings were constructed in the Uptown project area. Some of these buildings survive intact, and some survive in remodeled form. The project area's buildings and likely archaeological deposits provide a unique opportunity to learn about the early Uptown Chinatowns at this 1880s time of transition and contestation.

Archaeological resources that could characterize these early Uptown Chinatowns would be immensely significant. Such likely-existing resources could include wells or cisterns, refuse pits, latrines, architectural elements, and property-improving elements such as drainage features. The documentary record has so far revealed extremely little about these Uptown Chinatowns beyond their existence. [1] Potential Uptown Chinatown

---

[1] The accounts so far come from numerous politicians, persons involved in real estate development, and newspaper editors, who described the Uptown Chinatown in terms of it being a blight, but as they also used 'blight' to refer to 'the Chinese' in general, this is a characterization of the speakers/writers and not the Uptown Chinatown (e.g. *Oakland Tribune* March 13, 1875; Baker 1914: 203-4).

archaeological remains may be considered an important cultural resource under CEQA by virtue of their being

(1) associated with an event or person of recognized significance in California and American history;
(2) able to provide information which is both of demonstrable public interest and useful in addressing scientifically consequential and reasonable or archaeological research questions;
(3) at least 100 years old and [potentially] possessing substantial stratigraphic integrity;
(4) involves important research questions that historical research has shown can be answered only with archaeological methods.

1 cont. Potential Uptown Chinatown archaeological remains may be qualify as a significant cultural resource for the National Register of Historic Places, by virtue of their being

(1) associated with events that have made a significant contribution to the broad patterns of our history;
(2) associated with the lives of persons significant in our past;
(3) potentially likely to yield information important in prehistory or history.

Such potential archaeological deposits may likely also qualify for the City of Oakland Local Register Listings, as outlined in the DEIR (p.215), and the California Register of Historical Resources, and therefore be "considered be considered historical resources for the purposes of CEQA review."

2 Second, the DEIR reports the project area has "a high likelihood of containing historical archaeological deposits (p.213)." Yet the DEIR is inadequate in that it does not convey that it is very probable the ground-disturbing activities associated with the Uptown Project may encounter significant, intact archaeological deposits eligible for listing on the California Register of Historical Resources and the National Register of Historic Places. Documentary evidence and the results of archaeological monitoring in the immediate vicinity of the project area—i.e. two blocks from the Uptown project—indicate that the Uptown project area may contain such significant, intact archaeological deposits. Reports on file at the Northwest Information Center related to this archaeological monitoring project record the high potential this area has demonstrated for containing significant, intact archaeological deposits. The reported on project—which, like the Uptown Project, would disturb historic and more-recently remodeled buildings—hadn't been predicted to still have "soils containing historical materials (NIC file report, 1994:61; see also 34-5). With that prediction of no archaeological remains, the mitigation implemented was to merely have a Qualified archaeologist monitor the demolition and construction's ground disturbing activities.[2] Contrary to expectations, the archaeological monitor found intact archaeological deposits in the immediate vicinity of the Uptown project. He discovered **multiple intact archaeological features and numerous artifacts even below basements of historic buildings, and on properties where 19th-century buildings had been replaced in the mid-20th century**.[3]

---

[2] Curiously, this mitigation for an area anticipated **not** to have archaeological remains is the same mitigation the Uptown DEIR proposes for an area it reports to have "a **high likelihood** of containing historical archaeological deposits (p.213)."

[3] The large quantity of intact archaeological deposits discovered reveals soil bores were an inadequate method of assessing the presence or absence of intact historical archaeological deposits in the immediate vicinity of the Uptown Project (NIC file reports). The Uptown EIR therefore should not propose soil bores as the discovery method for archaeological mitigation planning.

2 cont.

From all indications, the planned Uptown construction area is likely to contain intact and significant archaeological deposits relating to early Chinese and Chinese American pioneers in Oakland. Yet not only are the proposed mitigations appallingly inadequate, Chinese American descendent groups, historical groups, and other potential stakeholders seem not to have been contacted for EIR-scoping comments. The DEIR public comment period should therefore be extended and/or a semi-final EIR should be prepared. **3**

The DEIR is inadequate also in regard to "prehistoric", or Native American archaeological resources. The DEIR (p. 214) states that a few blocks away from the Uptown project, construction of a building foundation intruded on prehistoric archaeological site CA-ALA-22 and uncovered the burial of a Native Californian person. An archaeological resources investigation prepared for a project in the immediate vicinity of the Uptown project area reported "several [Native Californian] sites" have been recorded "within a three-quarter mile radius (p.13 of 1994 report on file at NIC)." Again, the Uptown DEIR itself notes both that "prehistoric archaeological sites have been recorded in the Project area" and "Several Ohlone villages in the vicinity of the Project area were still inhabited prior to the Peralta land grant." Given the numerous recorded Native Californian sites, were Native American / Native Californian groups contacted for DEIR-scoping comments? How was it determined that "the Project area has a low-to-moderate likelihood of containing prehistoric archaeological deposits (DEIR p.213)"? Given the unexpected presence of intact historical archaeological deposits in the immediate vicinity of the project, might the DEIR be underestimating (and therefore preparing inadequate mitigations for) encountering prehistoric archaeological remains in the project area? **4**

More extensive mitigations must be considered for the likely archaeological deposits, including mitigation measures that would include well-planned archaeological discovery and characterization studies of the area in advance of demolition- or construction-related ground-disturbing activities. (The Anthropological Studies Center associated with Sonoma State University has been very successful in efficiently completing such archaeological mitigations.) Descent groups and other stakeholders should be contacted and their input taken seriously in the early planning stages. A mitigation should be considered to provide for a resource center or small museum in the area of the Uptown Chinatowns to let old and new community members commemorate and learn more about Oakland's Chinese pioneers and other Uptown predecessors. This could be a real community-builder and anchor in this new development, adding immeasurable value to the project.

Proposed mitigation measures that do not include measures to mitigate the impacts on archaeological remains (e.g. HIST-8, p.227) are inadequate and completely unacceptable.

Finally, the DEIR is inadequate in its assessment of the importance of the above-ground historic resources. To give just one example, in discussing Impact HIST-7 (DEIR p.226), proposed demolition and construction of four Potential Designated Historic Properties in the 19th and San Pablo Commercial District, the DEIR states "the district's integrity of setting has been diminished by surrounding uses that 'differ in use and visual coherence' from the district's contributing buildings" and "[t]herefore, the Project's effects on the setting of the 19th and San Pablo Commercial District would not significantly impair the district's integrity." It seems difficult to take seriously an argument that if the surroundings of an historic district have subsequently been rebuilt with different uses, the district does not have integrity. The integrity of a historic district with PDHP buildings up to 120 years old and still in their original location seems instead to be emphasized by their age and integrity of location. **5**

October 31, 2003

Dear Lynn Warner,

I am a small Business owner in the Uptown/Forest City Development. My business is Revelli Tire Company at 571-20th, Street, Oakland where I have provided tire, brake and front end service myself since 1959(45 years). My father bought the business in 1949, so it 's been in our family for 55years in Jan. 04.
The Draft Environmental Report is deficient because it fails to mitigate in any manner the detrimental effects of this proposed project on a small business like mine.
The Draft Environmental Report fails to define any meaningful project or public purpose for that undefined project. **1**
My business is a longtime neighborhood fixture and there is no basis for an undefined project to eliminate my business operations.
There is no alternative, equal space nearby so therefore I would lose my job,lose my business,and the means to support my family.
This letter is in addition to my verbal comments at the public meeting conducted by the Oakland Planning Commission Hearing on Oct .15, 2003 in Hearing Room # 1 at City Hall.

Thank You,

John M. Revelli

Re: Comments on the Uptown Mixed-Use Redevelopment Project DEIR

Dear Ms. Warner:

I have been asked to comment on the draft EIR for the above referenced project. I am an archaeologist with over 30 years experience in urban settings in Northern California. I was the archaeologist charged with recovering the remains of San Jose's first Chinatown (1850-1887) when the Fairmont Hotel and Silicon Valley Financial Center buildings were constructed. These buildings were on the site of an extensive Chinese American community not dissimilar to the early Oakland community. In the area of a single large urban block, we found dozens of significant historic archaeological features. Only the extensive pre-project planning that identified the potential archaeological deposits and developed a program for systematic recovery when discoveries were made prevented significant delays in these projects. Without a similar level of planning, you will undoubtedly face delays and problems during the construction of the proposed project.

Archaeological monitoring can be an appropriate approach to the recovery of archaeological features, but considerable planning is required for the monitoring process to succeed. Several examples of factors that must be considered:

1. Monitoring must be adequate to the magnitude of the project.
2. The monitor must be able to stop excavation in areas where discoveries are made.
3. The Project Archaeologist must be able to commit additional resources as soon as discoveries are made.
4. Recovery of archaeological features needs to be undertaken efficiently in order to avoid project delays.
5. Lack of cooperation from the project sponsor will only increase the cost of archaeology and the amount of delay from archaeological recovery processes.

If these factors are not fully considered, the project will not proceed efficiently, historic resources will be unnecessarily damaged or lost, and a part of the historic fabric of Oakland will be rent.

I strongly encourage a reexamination of the archaeological monitoring program to insure that adequate attention has been paid to the identification and recovery of archaeological features in a timely and efficient manner. Any other approach assures either the loss of important cultural sites, or unnecessary delays in construction of the project. 1

It is possible to undertake this project with no delays due to archaeological or historic discoveries, and to still find and recover any encountered features or sites. Any other approach will absolutely insure additional expenses, time delays, negative publicity, and a host of other problems.

I emphasize again that casually assuming that the presence of an archaeological monitor will adequately address the potential problems is an approach absolutely guaranteed to cause delays and problems. When problems surface, additional delays will ensue as decisions are made and approaches developed. Thorough archaeological planning prior to initiation of earth disturbing activities will insure a minimum of surprises during the construction project.

1 cont.

Thank you for this opportunity to comment on the draft EIR for this project. If I can answer any questions, please contact me at 707-762-2573.

Sincerely,

William Roop
Partner, ARS

Subject: CAUTION NEEDED ON UPTOWN MIXED USE REDEVELOPMENT PROJECT (ER 03-0007)

TO: Lynn Warner, City of Oakland Planning Department
CC: Councilmembers Danny Wan, Jean Quan, Henry Chang
RE: UPTOWN MIXED-USE REDEVELOPMENT PROJECT, Case File No. ER 03-0007

I am alarmed that the "Forest City Project" could cause the demolition of parts of Old Chinatown, with roots back to the 1860's---without meaningful wider-ranging and legal considerations. Unfortunately, many American cities, as well as foreign nations, have learned from horrible mistakes that the "Demolition of History" is irreversible and detrimental to community/ economic vitality. In the relatively youthful west coast of the United States, we have far fewer historic resources to chronicle our lineage. Especially for Chinese America, the few significant historical resources, which exemplify the difficult journey to American enculturization and success, should be preserved.

From a Developer's perspective, preservation of history can increase the value of the project. This has been proven, over and over again, in Washington DC, Shanghai, Jerusalem, Paris, San Francisco...... The incorporation of old historic architecture into the Uptown Development Project would build on, rather than dismantle, the historical values that strengthen community and economic values. For example, even Marysville---a small California Town--- is working to restore the old Bok Kai Taoist Temple (1880) and its old Chinatown as a Chinese Cultural Village. Washington DC is currently expanding its Chinatown. Historic Boston, Philadelphia, Williamsburg, Savannah, Charleston etc. revive the historical elements that attract visitors and economic vitality. **1**

The old Oakland Chinatown in the uptown San Pablo area has orgins in the 1860's. Ironically, past governmental agencies have attempted to dismantle Chinatowns for political reasons and special interests. It would be so tragic to lose these vestiges of Chinese American history now, after staving off political attacks for so many decades.

Aside from just good urban planning and sensitivity to cultural history, national, state and local planning/ zoning historical codes need to be considered. Old Oakland Chinatown is definitely eligible for the National Register of Historic Places. Oakland's history is one its unique attributes that is being gradually lost. Oakland must reinforce the historic resources that give it a sense of Place, while many critics have cited "There is no there, there". Well, there are historical roots there---and these are the basis for building a stronger sense of community.

Many organizations can provide extensive information about the historical value of Old Oakland Chinatown, e.g. the National Trust for Historic Preservation, San Francisco Architectural Heritage, California Preservation Foundation, numerous Oakland community organizations, Chinese Historical Society of America...... Please incorporate a wider range of participation into the planning and EIR process.

Feel free to contact me for any assistance at (415)-557-4759.

Regards,
Howard Wong, AIA

Dear Ms. Warner:

I oppose any razing of the historical Chinatowns on 17th and Telegraph and San Pablo between 29th and 29th street. All efforts were not made to inform interested parties.

The developers' own DEI Report notest the project area has "a high likelihood of containing historical archaeological deposits (p. 213)." Despite this, the developers plan to raze the area with only an archaeologist to watch their destruction of these important artifacts. 1

Every possible efforts should be made to preserve the Chinese and Chinese American pioneer's artifacts by allowing trained professionals to remove them prior to demolition and redevelopment. The developers should provide funds to rehab the 1883 building to preserve as a historical site. 2

Sincerely,
Ann G. Yee

Planning Commission Hearing
D1

COMMENTATORS AT THE OAKLAND CITY PLANNING COMMISSION PUBLIC HEARING FOR THE UPTOWN MIXED USE PROJECT

October 15, 2003; Hearing Room 1, City Hall, 1 Frank H. Ogawa Plaza, Oakland

Public individuals spoke first, followed by Planning Commissioners.

Public Individuals

John Revelli. Introduced himself as the owner of Revelli Tires on 20th Street. Made the following comments:
- The EIR did not contain a discussion of the impacts of the Project on small businesses.
- Revelli Tires is a family-run business and has been so for 45 years.
- Revelli Tires is dependent upon its location, which is in close proximity to BART; therefore, for the business to remain viable, it would have to be relocated to within 1 block of a BART station. However, a relocation would be a hardship because John Revelli is the sole owner/operator of the business. 1
- The Uptown Project should be built around Revelli Tires and should leave the business intact.
- He will also submit his comments in written form.

Tony Fung. Introduced himself as the owner of the full-service garage and smog station within the Project site. Made the following comments:
- The EIR did not mention the environmental impacts that would result from the relocation of businesses within the Project site.
- Due to the lack of available sites, CEDA would not be able to relocate businesses within the vicinity of the Project site. 2
- His business is dependent upon being in close proximity to a BART station, and he will be forced out of business if he is relocated.
- The Uptown Project should incorporate his business; residents within the Project site will require the services of a garage and smog station.

Julia Liou. Introduced herself as a representative of the Oakland Chinatown Coalition and other Chinatown-based organizations. Made the following comments:
- The Chinatown community is concerned about cumulative impacts on neighborhoods around the Uptown Project site.
- 9 percent of Project trips will go through Chinatown, but the EIR does not include detailed analysis of the Project's impacts on the Webster/Posey Tubes intersections. 3
- The EIR needs to better analyze the cumulative effects of the Project on Chinatown (including the effects of Jack London Square projects). Chinatown is one of the Bay Area's 52 most impoverished communities.

Anna Naruta. Made the following comments:
- The EIR needs to better analyze the cumulative impacts of the Project on surrounding communities. 4
- She supports Joyce Roy's March 28 letter, which stated that the Project should be integrated into the Uptown entertainment district. 5
- The Project should preserve historic resources within the Project site, including the 19th and San Pablo Commercial District and the Rankin Plumbing building, which is 120 years old. 6
- The public park should front on Telegraph Avenue.

- Historic buildings within the Project site are small, and are generally located on the periphery of the Project site (e.g., Navlet's), and so could be easily incorporated into the Project. **6 cont.**
- Two previous Chinatown settlements (dating as far back as 1869) were located within and in close proximity to the Project site on 19th Street and San Pablo Avenue, and 22nd Street and San Pablo Avenue. These communities should be discussed in the EIR in more detail.
- Mitigation measures should be included that reduce impacts to archaeological resources associated with these communities. Page 213 of the EIR states that there is a low to moderate chance that archeological resources will be uncovered on the site. Due to the extensive history of the Project site, there is a high likelihood that unidentified archaeological resources are located on the site. The EIR should address these cultural resources that are likely to be present within the site. Oakland General Plan Policy 4.1 mandates protection of underground cultural resources. **7**

Erin Beales. Introduced himself as the new owner of Navlet's. Made the following comments: **8**

- Navlet's as an architectural resource is underrated in the EIR; the building should really be rated an A. The building has been restored to its original 1924 condition (the signs and glass windows have been restored).
- Navlet's contains architectural details and a three-tone paint job that would be obscured by shade. **9**

Steve Lowe. Made the following comments:

- The public park should be relocated to Telegraph Avenue, so that it will be subject to more surveillance. The City should look at park location alternatives. **10**
- A park belongs in the heart of Oakland's retail center, and could have a role similar to Union Square in San Francisco.

Joyce Roy. Identified herself as a representative of the Sierra Club and an Oakland resident. Made the following comments:

- The Project needs to reference the fact that the Uptown District is primarily an entertainment district. **11**
- The Project is not consistent with the objectives of the Uptown Redevelopment Plan. **12**
- The proposed park should be in a more public place to take advantage of good views of the Uptown District and Downtown, and to separate housing from surrounding areas. This park could energize the area, and provide a separation between conflicting land uses. **13**
- She will also submit her comments in written form.

Naomi Schiff. Identified herself as a member of the Oakland Heritage Alliance. Made the following comments:

- Historic buildings could be incorporated into the Project at 20th Street and San Pablo Avenue. **14**
- The DEIR is incomplete for the following reasons: it does not analyze alternatives that include the preservation of on-site historic buildings; it does not analyze the design sensitivity of historic properties surrounding the Project site; Block 7 was not adequately analyzed. **15**
- A greater distance needs to be maintained behind the Fox Theater. **16**
- The hamburger stand on Block 9, which is an excellent example of "googie" architecture, should be maintained as part of the Project. **17**
- She will also submit her comments in written form.

John Chapman. Identified himself as a representative of the Livable Communities Initiative. Made the following comments:

- The Project combines economy, environment, social equity and civic engagement, represents a good plan for the revitalization of the district, and combats sprawl.
- The EIR should talk about the benefits of the Project, which include the provision of housing near jobs and transit, the clean-up of on-site contamination, the provision of transit opportunities, the reduction of obesity, and the recycling of land. **18**

Sanjiv Handa. Identified himself as a representative of the East Bay News Service. Made the following comments:
- The City does not have the capabilities to deal with neighborhood impacts that would be caused by the proposed student housing on Block 7. **19**
- Politicians neglect Oakland residents and quality-of-life issues. **20**

Planning Commissioners

Anne Mudge. Made the following comments:
- It would be useful if the EIR included a map that shows proposed uses transposed on zoning designations. **21**
- On page 49, SBC and PG&E are designated as "Other Agencies" when in fact they aren't permitting agencies. **22**
- The EIR needs to include additional discussion of the relocation of businesses from the Project site. **23**
- It is hard to tell from the EIR which buildings are proposed for demolition. Figure IV.I-1 should show these buildings. **24**

Mark McClure. Made the following comments:
- The EIR should include more information and analysis regarding relocation of businesses from the Project site. **25**
- The EIR should include alternatives that include different park locations. **26**

Colland Jang. Made the following comments:
- The study intersections analyzed in the EIR should include those in Chinatown and the Broadway corridor. **27**
- The intersection of Broadway and 5th Street is operating at LOS F. Why wasn't this intersection subject to detailed analysis in the EIR. **28**
- Are there detailed plans for Block 7 (if so, this is unclear in the EIR)? **29**
- Why does the EIR only consider alternatives for Block 7?
- The EIR should include alternatives that include 20th Street and San Pablo Avenue (historic resources). **30**

Michael Lighty. Made the following comments:
- The EIR needs to be more explicit in regard to what buildings would be demolished within the Project site. **31**
- Historic buildings, especially those fronting on San Pablo Avenue and the Great Western Power Company Building, should be incorporated into the Project to give it character. **32**
- The quality of the park space would be improved by moving it to Telegraph Avenue. **33**
- The Project's impacts on pedestrian safety and traffic volumes in Chinatown should be quantified. **34**

Nicole Franklin. Made the following comments:

- The Project includes 43,000 square feet of commercial space. Performing arts and entertainment uses should be incorporated into this space to provide for after-hours activity. **35**
- Why are there no population, employment and housing impacts? One would assume that impacts would result from such a large number of people moving Downtown. **36**

Clinton Killian. Made the following comments:

- The intersections shown in Figure IV.D-2, Study Intersections, are not representative of all the intersections that would be affected by the Project.
- Why were no intersections in West Oakland analyzed except for West Grand? **37**
- Intersections between East Adams Point and the Lakeshore District and Downtown Oakland should be analyzed.
- Figure IV.D-8, Project Trip Distribution, is incomplete: West Grand would be affected by the Project, especially when you take into account regional trips. **38**
- The EIR should analyze the impacts of the Project on the Paramount.

Subject: Landmarks Preservation Advisory Board – Comments on Draft Environmental Impact Report for Uptown Mixed Use Project Environmental Impact Report

Dear Ms. Cappio:

At its regular meeting of October 6, 2003, the Landmarks Preservation Advisory Board (LPAB) considered the Draft Environmental Impact Report (DEIR) for the Uptown Mixed Use Project Environmental Impact Report. The LPAB discussed the DEIR and directed the Uptown DEIR sub-committee to prepare a letter incorporating the Board's comments and concerns, as outlined below.

Board Member Dreyfuss

- Demolition or partial demolition of the old power company building would constitute a serious and unavoidable impact, even with mitigations that are proposed.
- The EIR should include an alternative that includes the preservation of the power building. **1**
- The proposed tall project on parcel #7 would have an impact on the YMCA building and the power building. An alternative of a low-rise building should be explored at both parcels #7 and #3. **2**

- The DEIR did not address project impacts on the existing visual connection between the uptown entertainment district and cathedral district. This project cuts those districts off from each other visually and this should be addressed in the EIR. A possible mitigation is to limit height of buildings on parcels #7 and #3 to low-rise buildings. **3**
- Disagrees with survey ratings on the 1966, 1972 San Pablo. The consultant should review ratings on both of these buildings. **4**
- The DEIR states that there would be a serious unavoidable impact on the San Pablo commercial district due to demolition of four buildings on San Pablo. Explore an alternative that includes retention of the buildings along that street front. **5**

Board Member Bliss

- *Additional Possible Mitigation for demolition of the Great Western Power Building:* Recommend contribution to commercial improvement façade program as an additional possible mitigation measure for the demolition of the power building possibility, explored in the DEIR. However, this would not reduce impact to less than significant. **6**
- EIR should address impact on Kwik Way from proposal to relocate Sears Tire Store (Block 8 vs. Block 9). Kwik Way does qualify as a Historic Resource under 15064.5(a)(3)(A)(2)(C). **7**

Board Member Armstrong

- Needs to see alternative that explores possibility of saving of buildings along San Pablo Avenue addressed in EIR. **8**

Board Member Hooks

- Agrees with Board Member Dreyfuss on most of his comments
- Preserving buildings makes sense – particularly power building. Feels less strongly about other buildings. However, as a backdrop for the development of parcels 1 through 6, it seems important to save them.
- Suggests an additional mitigation for the impact on San Pablo District and historic Chinese settlements by creating a film of the district describing what is was like, including first person interviews. **9**

Board Member Gilmartin

- The EIR should refer to Historic Preservation Element (HPE) policies in the Land Use Policies Section. The policies outline preferred City practices in regard to treatment of historic buildings and should be given appropriate consideration. **10**
- Policies in the HPE (3.6 and others) advise that City assisted projects should be designed to avoid adverse impacts on historic structures. The proposed project is so large in scale that it seems impacts to the Great Western building are avoidable and the project can still achieve its objectives while avoiding adverse impacts on this building. **11**

- The EIR accurately states that mitigations identified do not make up for loss of resource like the Great Western Power building. It is still a Significant and Unavoidable impact.
- Not in support of reusing and salvaging building parts for reuse in new buildings. Recommend deleting this portion of Mitigation Measure HIST-8. They should be put in a salvage yard for use on older buildings. **12**
- PDHP's could be reused. Should be analyzed and considered by project sponsor. Also, consider allowing buildings to be moved if they could continue to be part of the district by being moved. Restate Mitigation to include that moving them within the district, if possible, would be less of an impact. **13**
- Questioned whether the Fox can function as a performing arts venue, be seismically upgraded and meet exiting requirements with a 50 ft. setback as proposed. Has this been analyzed, if not it should. **14**

Two members of the public commented on the DEIR during the Public Hearing. The Board Secretary has included their comments for convenience in addressing all EIR comments. Inclusion of public comments is not intended to indicate agreement or acceptance with them by the Landmarks Board. Public comments are outlined below:

Speakers:

Naomi Schiff, Oakland Heritage Alliance

- The new owner of the power building is interested in rehabbing it. It is not reasonable to tear it down.
- The same owner has purchased two buildings to the west of the power building. There have been early conversations with owner about the possibility of relocating those two buildings into the uptown project to consolidate a charming older building group on San Pablo with the extant Victorian buildings. Please give us your thoughts on that. **15**
- The buildings on San Pablo while not historic resources under CEQA could provide a transition between the project and the old fabric of the City around it, particularly the Italianates and the hotel.
- Since the buildings along San Pablo have such small footprints, the developer might come up with a way to treat that block and retain those buildings. **16**
- The extant garages on 20th Streets should be looked at because they are still inhabited by small businesses, which might be destroyed by this project. Look at small business' longstanding value to the uptown area. **17**
- Consider impacts on buildings not within the project:
    - Don't discount the Kwik Way burger place, a discreet parcel to the north. **18**
    - The Fox – leave enough space behind the Fox so that whatever happens there can be accommodated. **19**
    - Consider impacts on the Floral Depot. **20**

Anna Naruta

- Supports OHA remarks.
- Location of one of oldest Chinatowns in Oakland is in this project area. **21**
- The buildings along San Pablo Avenue have small footprints and could be used to show transitions of the history of the city, along with interpretive exhibits. **22**

Please contact Joann Pavlinec, Secretary to the LPAB, at (510) 238-6344 if you have any questions regarding the above comments. Thank you for the opportunity to comment.

Sincerely,

Una Gilmartin/J.P.

Una Gilmartin, Chair
Landmarks Preservation Advisory Board

Comments from the Landmarks Preservation Advisory Board - November 3, 2003 Meeting, on the Uptown Mixed Use Project Draft Environmental Impact Report:

Anna Naruta, Historical Archeologist, Oakland resident: Ms. Naruta addressed potential archaeological resources associated with Uptown Chinatowns, based on findings of resources close to the area slated for the uptown mixed use development project. Research indicates that two blocks from the proposed project area, there had been previous archaeological monitoring projects. In those project areas, the existing buildings were historic structures with basements (dug into the earth) and also some mid-20th century replacements. They actually found, in each area, remains even below the basements and in those areas associated with the mid-20th century buildings that had replaced historic buildings. This gives characterizing information indicating how likely it is that it can be expected that the uptown mixed use project will also encounter significant archaeological remains. Therefore, the mitigations in the Draft EIR need to be extended. Page 213 of the Draft EIR states that the project area has a likely hood of containing historical archaeological deposits. The next page states some of the deposits are likely to be associated with early Chinatown settlements and may be of use in answering important research questions. The proposed mitigation of just having an archeological monitor, which may be appropriate when you don't expect to have any archeological remains, is inadequate. **1**

Steve Lowe: Has concerns regarding the Uptown Mixed Use Project and how it is currently configured. He stated that the project is wrongly configured with respect to the location of the park. The developers have stated that there would be some kind of forthcoming community dialogue to figure out where the park should be. Currently, it is in the middle of the project facing 20th Street. Many believe that it should be out on Telegraph, the heart of the area. Locating the park along Telegraph would provide a view corridor from the Fox Theatre to Navalets and would also incorporate views of the existing wonderful historic facades mixed with views of the new development. To deny that view, erodes the idea having a real center. **2**
